benefiting Lot 4 permitting access to Purves Street across Lot 23. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR). Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business. Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site. Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup

**PURVES STREET DEVELOPMENT (Continued)**

**S116550039**

objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

MAP FINDINGS

**PURVES STREET DEVELOPMENT (Continued)**

**S116550039**

**Site Description:** Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162).  
**Site Features:** The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23.  
**Current Zoning and Land Use:** The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR).  
**Past Use of the Site:** In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business.  
**Geology and Hydrogeology:** Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

**Env Problem:** **Nature and Extent of Contamination:** Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm,

chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 493090

Site Description: Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162).  
Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23.  
Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR).  
Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business.  
Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.  
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and

disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 493090

Site Description: Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162). Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR). Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business. Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to

coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Env Problem:

Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR). Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business. Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site. Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater

**PURVES STREET DEVELOPMENT (Continued)**

**S116550039**

Site Description:

Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162).

Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23.

Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR). Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business.

Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem:

Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use.

Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm,

chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem:

Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Description:

This site has transitioned to the BCP. See site C241061. Location: The Site is located in an urban area of Long Island City, Queens at 32-00 Skillman Avenue and is surrounded by mixed commercial, industrial and residential uses. The former ACCO Brands, Inc. (ACCO) facility is bounded by Skillman Avenue and the Sunnyside Rail Yard to the north; 32nd Place to the east; Queens Blvd. to the south; and Van Dam Street to the west. Surrounding land uses include multi-family residential properties, community and educational institutions, and various commercial, industrial, and retail uses. Site Features: The Site is approximately 0.72 acres in size and consists of the footprint of the basement of the on-site 1.8 acre 3-story building. Current Zoning and Land Use: The site is located in an industrial zoned area and is zoned M1-4. The upper floors of the Site are currently used for commercial and light industrial purposes, the basement is unoccupied, and a penthouse which houses a private racquet club, fitness center, spa and restaurant occupies the rooftop of the Site. Past Use of the Site: The facility was constructed in 1950 and ACCO (or its predecessor corporations) occupied the facility from 1952 to 1999. The site was reportedly occupied by several automotive service centers and gasoline stations prior to 1950.

During their occupancy of the facility, ACCO manufactured staplers and stapler components. Paints, thinners, solvents and cleaners were used as part of the manufacturing process and have led to site contamination. Wastes generated included paint filters, sludge, rags, and paint. Operable Units: The Site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU-1) is the on-Site source area in the basement of the building. Operable unit 2 (OU-2) consists of the off-Site dissolved groundwater plume and associated soil vapor. Site Geology and Hydrogeology: The site is underlain by silty sand with varying amounts of gravel, silts and clays. Soil borings indicate a laterally pervasive low permeability layer beneath the entire footprint of and to the west of the Site. Parts of the low permeability layer, which dips to the south-southeast, are compromised by a layer of organic peat. TCE has been detected in the shallow, intermediate and deep aquifer zones at the Site. Depth to groundwater in the shallow aquifer is approximately 10 ft. below grade with a flow to the northwest. Depth to groundwater in the intermediate aquifer is 35 ft. below grade with a flow to the west-northwest. Depth to groundwater in the deep aquifer is 60 ft. below grade with a flow to the north-northwest.

Env Problem:

This site has transitioned to the BCP. See site C241061. Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. OU-1 Soil Based upon investigations conducted to date, the primary contaminant of concern for soil is trichloroethene (TCE) that was identified in the soil in an unlined pit in the basement of the facility. The extent of impacted soils is confined to the western half of the footprint of the basement. Concentrations of TCE found in soil on site ranged from 56.9 parts per million (ppm) to 256 ppm, which exceeds the soil cleanup objectives (SCO) for the protection of groundwater (0.47 ppm) and restricted residential use (21 ppm). Data does not indicate any off-site impacts in soil related to this site. OU-1 Groundwater TCE was encountered in shallow groundwater samples collected at approximately 15 ft. below ground surface (bgs), intermediate groundwater samples collected approximately at 32 ft. bgs and deep groundwater samples collected at approximately 49 ft. bgs. Concentrations of TCE in shallow groundwater on-site ranged from 108 parts per billion (ppb) to 129,000 ppb, which exceeds the groundwater standard of 5 ppb. Concentrations of TCE found in intermediate groundwater on-site ranged from 2.1 ppb to 417,000 ppb and in deep groundwater on-site ranged from 700 ppb to 1,280 ppb. Maximum groundwater contaminant concentrations are encountered in the western half of the Site. High concentrations of contaminants above groundwater standards are migrating off-site (see below). OU-1 Soil Vapor The maximum sub-slab soil vapor concentration of TCE found in samples collected beneath the on-site building were 160,000 ug/m<sup>3</sup> in the eastern portion of the basement and 260,000 ug/m<sup>3</sup> in the northern portion of the basement. Actions were needed to address soil vapor intrusion and as a result a previously-installed soil vapor extraction system was converted to a vapor mitigation system in the on-site building. Contaminated soil vapor is migrating off-site (see below). OU-2 Groundwater TCE was encountered in shallow, intermediate

and deep groundwater samples. Depth to groundwater is approximately 10 ft. bgs in the shallow aquifer, approximately 35 ft. bgs in the intermediate aquifer, and approximately 60 ft. bgs in the deep aquifer. Maximum concentrations of TCE found in; shallow off-site groundwater samples was 140,000 ppb, in intermediate off-site groundwater samples was 45,800 ppb and in deep off-site groundwater samples was 65 ppb. Approximate plume length is 500 ft. down-gradient from the site towards east. OU-2 Soil Vapor Off-site studies of soil vapor intrusion were conducted at several locations. Concentrations of TCE in sub-slab and indoor air samples collected at two off-site locations during the Remedial Investigation exceeded the recommended action levels as established by NYSDOH and vapor mitigation systems have been installed in these buildings.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with a building and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A soil vapor extraction system was installed beneath the on-site building, which prevents vapors beneath the slab from entering the building. Sub-slab depressurization systems (systems that ventilate/remove the air beneath the building) have been installed in off-site buildings to prevent inhalation of site contaminants in indoor air due to soil vapor intrusion.

believed that oil was pumped in from delivery due to wrong fill. Oil has reoccured in well. CSL sent to Mgmt. Agent. 5/10/07- DECP iper spoke w. owner. He informed me there is no way oil was delivered to MW. In that case lines or tank may be leaking. He will test tank and lines and perform subsurface investigation. 7/20/07- DEC Piper recieved tank test results. Tank failed Inspection revealed a hole on top of tank. Samples were collected through bottom of tank though are clean of VOC and slight SVOCs. 2/3/08- DEC Piper spoke w. Don Carlo Env. Borings were completed around tank. and along street. Street samples were clean though boring made by others showed contamination. Adjacent boring were clean. Piper instructed Danny Sing to have proposal generated to clean and inspect tank and perform borings though bottom. 4/16/08- DEC Piper - I met Don Carlo, Danny Sing and Ted Yen on site. I explained to them that product was discovered in the mw-11 adjacent of the fill. The tank failed a tightness test and samples were collected from the ends of the tank. Further investigation is needed. Two borings down to groundwater will be completed adjacent to fill, and three boring will be conducted through the bottom of the tank. A third boring and gw sample will be collected in the boiler room which is downgradient of the tank. I recieved additional boring results. Soil and groundwater were below tagm. No free product was observed. Tank was slurried after inspection. Based on work to date, this spill is closed. See e--docs if warranted."

Remarks:

"CALLER HAS FOUND OIL FLOATING IN TOP OF THE WELLS DURING A QUARTERLY SAMPLING EVENT. ONE WELL WAS AFFECTED AND IS NEAR THE BOILER ROOM OF THE BUILDING. UNKNOWN AS TO HOW THE PRODUCT GOT INTO THE WELL AND SMELLS LIKE A FUEL OIL MATERIAL. HAS NOT BEEN EXCATED IT YET."

Record Updated Date:  
Update By:  
Site Description:

11/13/2017  
JHOCONNE

Location: The Site is located in an urban area of Long Island City, Queens at 32-00 Skillman Avenue and is surrounded by mixed commercial, industrial and residential uses. The former ACCO Brands, Inc. (ACCO) facility is bounded by Skillman Avenue and the Sunnyside Rail Yard to the north; 32nd Place to the east; Queens Blvd. to the south; and Van Dam Street to the west. Surrounding land uses include multi-family residential properties, community and educational institutions, and various commercial, industrial, and retail uses.

Site Features: The Site is approximately 0.72 acres in size and consists of the footprint of the basement of the on-site 1.8 acre 3-story building. Current Zoning and Land Use: The site is located in an industrial zoned area and is zoned M1-4. The upper floors of the Site are currently used for commercial and light industrial purposes, the basement is unoccupied, and a penthouse which houses a private racquet club, fitness center, spa and restaurant occupies the rooftop of the Site. Past Use of the Site: The facility was constructed in 1950 and ACCO (or its predecessor corporations) occupied the facility from 1952 to 1999. The site was reportedly occupied by several automotive service centers and gasoline stations prior to 1950. During their occupancy of the facility, ACCO manufactured staplers and stapler components. Paints, thinners, solvents and cleaners were used as part of the manufacturing process and have led to site contamination. Wastes generated included paint filters, sludge, rags, and paint. Operable Units: The Site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU-1) is the on-Site source area in the basement of the building. Operable unit 2 (OU-2) consists of the off-Site dissolved groundwater plume and associated soil vapor. Site Geology and Hydrogeology: The site is underlain by silty sand with varying amounts of gravel, silts and clays. Soil borings indicate a laterally pervasive low permeability layer beneath the entire footprint of and to the west of the Site. Parts of the low permeability layer, which dips to the south-southeast, are compromised by a layer of organic peat. TCE has been detected in the shallow, intermediate and deep aquifer zones at the Site. Depth to groundwater in the shallow aquifer is approximately 10 ft. below grade with a flow to the northwest. Depth to groundwater in the intermediate aquifer is 35 ft. below grade with a flow to the west-northwest. Depth to groundwater in the deep aquifer is 60 ft. below grade with a flow to the north-northwest.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. OU-1 Soil Based upon investigations conducted to date, the primary contaminant of concern for soil is trichloroethene (TCE) that was identified in the soil in an unlined pit in the basement of the facility. The extent of impacted soils is confined to the western half of the footprint of the basement. Concentrations of TCE found in soil on site ranged from 56.9 parts per million (ppm) to 256 ppm, which exceeds the soil cleanup objectives (SCO) for the protection of groundwater (0.47 ppm) and restricted residential use (21 ppm). Data does not indicate any off-site impacts in soil related to this site.

EPA ID Number

SWINGSTELL, LLC (Continued)

U000407641

OU-1 Groundwater TCE was encountered in shallow groundwater samples collected at approximately 15 ft. below ground surface (bgs), intermediate groundwater samples collected approximately at 32 ft. bgs and deep groundwater samples collected at approximately 49 ft. bgs. Concentrations of TCE in shallow groundwater on-site ranged from 108 parts per billion (ppb) to 129,000 ppb, which exceeds the groundwater standard of 5 ppb. Concentrations of TCE found in intermediate groundwater on-site ranged from 2.1 ppb to 417,000 ppb and in deep groundwater on-site ranged from 700 ppb to 1,280 ppb. Maximum groundwater contaminant concentrations are encountered in the western half of the Site. High concentrations of contaminants above groundwater standards are migrating off-site (see below). OU-1 Soil Vapor The maximum sub-slab soil vapor concentration of TCE found in samples collected beneath the on-site building were 160,000 ug/m3 in the eastern portion of the basement and 260,000 ug/m3 in the northern portion of the basement. Actions were needed to address soil vapor intrusion and as a result a previously-installed soil vapor extraction system was converted to a vapor mitigation system in the on-site building. Contaminated soil vapor is migrating off-site (see below). OU-2 Groundwater TCE was encountered in shallow, intermediate and deep groundwater samples. Depth to groundwater is approximately 10 ft. bgs in the shallow aquifer, approximately 35 ft. bgs in the intermediate aquifer, and approximately 60 ft. bgs in the deep aquifer. Maximum concentrations of TCE found in; shallow off-site groundwater samples was 140,000 ppb, in intermediate off-site groundwater samples was 45,800 ppb and in deep off-site groundwater samples was 65 ppb. Approximate plume length is 500 ft. down-gradient from the site towards east. OU-2 Soil Vapor Off-site studies of soil vapor intrusion were conducted at several locations. Concentrations of TCE in sub-slab and indoor air samples collected at two off-site locations during the Remedial Investigation exceeded the recommended action levels as established by NYSDOH and vapor mitigation systems have been installed in these buildings.

located in the Special Long Island City Mixed Use Paired District (M1-5/R9) and is currently used as a construction field office and materials storage space. Adjoining parcels and surrounding area are used for commercial, residential and industrial purposes. Past Use of the Site: Historical operations at the site included a garage with petroleum bulk storage (1922 to 1936), a warehouse (1947 to 1994) and an automotive parts shop (1994 to 2006). Site Geology and Hydrogeology: The site property sits at an elevation of about 15 feet above mean sea level (msl), and the surrounding area slopes gradually to the south towards the Dutch Kills. The site is located in a developed area of Queens that is generally covered with roads, walkways and buildings. Subsurface strata beneath the site consists of fill material generally characterized by brown, fine- to coarse-grained sand with varying amounts of silt, gravel, concrete, brick, glass, ash, coal, and slag extending to depths of about 2 to 7 feet bgs. The fill material is underlain by native soil generally consisting of medium-dense fine-grained silty sand with varying amounts of gravel and clay. Bedrock is anticipated to be present at a depth of about 40 to 50 feet bgs. The site is underlain by Ravenswood Granodiorite, which generally consists of gray sillimanite-garnet-microcline gneiss. Groundwater was encountered from about 15 to 17 feet bgs and is inferred to flow toward the north-northwest because of the property's proximity to the Metropolitan Transit Authority (MTA) subway tunnel beneath Jackson Avenue, which is actively being dewatered.

Env Problem:

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

DEC Memo: "04/13/10-Hiralkumar Patel. as oil was found on water in subway tunnel underneath the subject building, asked building manager to do tank test on a 2,000 gal #2 oil tank. 2:00 PM:- visited site. met Mr. Sokol, property manager. Eastmond did fill line test and it failed. asked Mr. Sokol, to seal fill port to prevent further release. fill port at the site is about 15 ft away from the area where oil found seeping into subway tunnel. asked Mr. Sokol to do tank only test also to confirm no leak from tank. Court Square LLC. \*\*property owner\*\* c/o Fisher Associates \*\*management office\*\* Carnegie Hall Tower 152 West 57th Street, 12th Floor New York, NY 10019 Attn.: Benny Sokol \*\*property manager\*\* Ph. (212) 315-3390 Ext. 214 (O) (347) 273-0998 (C) Fax (212) 937-8814 email: bsokol@fisherassoc.net  
04/15/10-Hiralkumar Patel. received email from Mr. Sokol (at 6:53 PM on 04/13/10) with their insurance company info. Hub International \*\*insurance broker\*\* contact: Cynthia Chin PH. (212) 338-2858 10:09 AM:- spoke with Mr. Sokol. Eastmond is at the site to do tank only test and then will expose the fill line. asked Mr. Sokol to wait for excavation along fill line as may need approval from MTA. 10:14 AM:- spoke with Haroon in System Safety at MTA. Haroon mentioned that contractor doesn't need any approval from MTA for sidewalk breaking or fill line repair. asked Haroon to send someone to the site to guide contractor if deeper excavation is required (due to proximity to the subway structure). Haroon Aslam \*\*spill case manager in MTA\*\* PH. (646) 252-3607 (646) 252-5777 email: haroon.aslam@nyct.com 10:18 AM:- spoke with Mr. Sokol. asked him to finish tank only test first and expose fill line. informed Mr. Sokol that no deeper excavation should be performed until MTA approves the work. 11:45 AM:- visited site. met Mr. Sokol and Haroon. eastmond crew was working to test tank. spoke with Rene at Eastmond. they have applied for DOT permit and expect to start work on 04/19/10. inspected track area with Mr. Sokol and Haroon. area was in same condition with little more oil than previous site visit. some odors at the end of platform in leak area. Haroon asked to contact Rajen Udeshi at MTA about approval for excavation near subway structure. 04/16/10-Hiralkumar Patel. 9:38 AM:- sent email to Mr. Sokol with Mr. Udeshi's contact info. Rajen Udeshi Capital Program Management 2 Broadway, 7th Floor New York, NY 10004 Ph. (646) 252-3673 email: rajen.udeshi@nyct.com  
04/16/10-Hiralkumar Patel. 11:01 AM:- received email from Mr. Sokol. after installing new fill and vent line and repairing manhole on tank, Eastmond tested tank system and it passed the test. Mr. Sokol will submit test result, once available. 04/19/10-Hiralkumar Patel. 11:55 AM:- spoke with Jen at MTA. they haven't got fingerprint sample results back yet. 12:47 PM:- received email from Mr. Sokol. they spoke with MTA who approved to excavated up to four feet without any engineer report. so Eastmond will expose old fill line tomorrow. Mr. Sokol also mentioned that their insurance company has hired Tetra Tech. 2:51 PM:- received message from Sandra from Tetra Tech. Sandra Gaurin Tetra Tech EM Inc. Ph. (973) 384-9799 (O) (973) 659-9996 Ext.

245 (201) 572-0835 (C) Fax (973) 659-1287 email: sandra.gaurin@tetrattech.com 3:20 PM:- left message for Ms. Gaurin. 04/20/10-Hiralkumar Patel. 2:15 PM:- visited site. met Ms. Gaurin, Mr. Sokol and Rene. Eastmond crew exposed old fill line. when contractor tried to pull out fill line from ground, fill line separated in two pieces from coupling. no broken threads observed on pipe and looks like fill line was not properly installed. found that piece of fill line towards building was anchored in ground at coupling joint. piece of fill line towards building was corroded but no holes found. corrosion holes found in piece of fill line towards sidewalk. fresh oil found under fill line. asked Ms. Gaurin to get DOT and MTA permits before further work. Eastmond will cover excavation with plastic and then backfill with clean sand as need permit for further work. Eastmond collected two soil samples (from same area) for fingerprint and age analysis. inspected subway track area with Ms. Gaurin. found oil on tracks. asked Ms. Gaurin to submit claim number and insurance claim handler's information. asked Mr. Sokol to submit tank test result. 04/23/10-Hiralkumar Patel. received email from Ms. Gaurin (at 5:24 PM on 04/21/10) with contact info for project manager at insurance company. Ms. Gaurin is preparing work plan for further work and asked whether groundwater sample from temporary geoprobe is sufficient for initial groundwater quality check or permanent well is required. Dawn Krigstin Ironshore Environmental \*\*insurance carrier\*\* Ph. (646) 826-6785 email: Dawn.Krigstin@Ironshore.com spoke with Ms. Gaurin and informed her that permanent well is not required right now, but will be required if finds groundwater contamination in groundwater sample via temporary geoprobe. 04/23/10-Hiralkumar Patel. received email from Mr. Sokol (at 7:51 PM on 04/22/10) with tank test result. 12:34 PM:- received email from Jen from MTA including result of fingerprint analysis. sample collected from subway track area was found #2 oil. 04/26/10-Hiralkumar Patel. 10:18 AM:- received call from Mr. Daniels, environmental person at Chartis insurance which is second insurance company for the site. Mr. Daniels mentioned that both insurance companies are involved in project. asked Mr. Daniels to submit insurance claim project manager's info and clear information about who is going to handle entire cleanup project. Larry Daniels Chartis Insurance AIG Ph. (201) 631-7233 (O) (917) 783-6035 (C) Fax (201) 631-5053 email: larry.daniels@chartisinsurance.com 11:03 AM:- received email from Tanya Crawford, analyst working on insurance claim at Chartis. Tanya Crawford \*\*analyst\*\* Chartis 101 Hudson Street 29th Floor Jersey City, NJ 07302 Ph. (201) 631-7158 Fax (866) 467-3498 email: tanya.crawford@chartisinsurance.com Chartis Claim Number: 182-111535 1:11 PM:- received email from Mr. Sokol with copy of delivery record from 01/07/08 to 04/01/10. 3:43 PM:- received email from Mr. Sokol with sample results. fingerprint analysis indicates #2 oil and found heavy VOC contamination in soil sample. 04/27/10-Hiralkumar Patel. 4:01 PM:- after discussion with DEC Austin, as fingerprint analysis results match (#2 oil) and proximity of the subject site to the impacted subway area, spill #: 1000435 will be closed and investigated under spill #: 1000528. 3:03 PM:- received email from Mr. Daniels and Ms. Gaurin requesting copy of MTA's fingerprint analysis result. 04/28/10-Hiralkumar Patel. 11:05 AM:- sent email to Mr. Daniels and Ms. Gaurin with copy of MTA's fingerprint analysis result. 11:08 AM:- sent letter to Mr. Sokol requiring soil delineation along remote fill line, endpoint samples and at least one groundwater sample near source area. letter emailed

to Mr. Sokol, Ms. Aslam, Mr. Udeshi, Ms. Gaurin, Mr. Krigstin, Mr. Daniels and Ms. Crawford. 05/21/10-Hiralkumar Patel. 1:29 PM:- left message for Ms. Gaurin inquiring updates. 3:59 PM:- received email from Ms. Gaurin. she got drawings from MTA and now will prepare work plan for soil investigation. will submit work plan to DEC and MTA for approval next week. will apply for NYC DOT permit on 05/24/10. 06/01/10-Hiralkumar Patel. received email from Ms. Gaurin (at 9:13 AM on 05/28/10) requesting deadline extension. 11:00 AM:- received call from Ms. Gaurin. she mentioned that currently they are preparing work plan and will submit by end of 06/04/10. she requested 45 days extension as work plan needs to be reviewed/approved by DEC and MTA and also they need permit from DOT. based on available information, approved her request. 06/08/10-Hiralkumar Patel. 10:31 AM:- received work plan from Ms. Gaurin. proposes to install 12 soil borings to a depth of 10-15 ft bg. will collect two soil samples (highest PID and deepest dry) from each boring. will install one temporary well point to collect groundwater water in area where old fill line was located. will collect one more soil sample from the deepest visually impacted material for a forensic fingerprint analysis to find date of the release. work plan is not acceptable as doesn't include work schedule and also site map included in work plan doesn't include the site address and location of old fill line. 06/10/10-Hiralkumar Patel. 1:03 PM:- received email from Jen from MTA. she confirmed that no more oil leak found on tracks. she asked for updates. 1:32 PM:- sent email to Jen informing that the department is currently reviewing the work plan for subsurface investigation. 1:36 PM:- spoke with Ms. Gaurin. asked her to submit revised work plan including timeline for report submission and general site map showing the subject site, old fill line and proposed boring locations. 06/16/10-Hiralkumar Patel. 4:34 PM:- received email from Ms. Gaurin with revised work plan. she proposes to submit report by end of 08/16/10. 06/17/10-Hiralkumar Patel. 2:21 PM:- sent work plan approval letter to Mr. Sokol requiring to submit report by end of 08/16/10. letter emailed to Mr. Udeshi, Mr. Aslam, Ms. Gaurin, Mr. Krigstin and Ms. Crawford. 07/27/10-Hiralkumar Patel. 11:38 AM:- received email from Ms. Gaurin. she mentioned that they have got required NYCDOT permits, but still waiting for approval from MTA. they are revising engineered drawings for MTA this week and hopefully will be in the field on August 9th. due to delay in getting approval from MTA, Ms. Gaurin requested deadline extension, for report submission, till 09/16/10. 07/28/10-Hiralkumar Patel. 11:25 AM:- sent email to Ms. Gaurin approving her request to submit report by 09/16/10. email copied to Mr. Sokol. 08/04/10-Hiralkumar Patel. 11:18 AM:- received email from Ms. Gaurin. she confirmed that work will start on 08/09/10. Francis Ronquillo (cell # 619-602-1745) from tetrattech will supervise the field activities. 09/07/10-Hiralkumar Patel. 2:20 PM:- left message for Ms. Gaurin. 4:16 PM:- received message from Ms. Gaurin. she is preparing report and will submit by 09/16/10. she mentioned that contamination found in soil samples and free product found on water. 09/16/10-Hiralkumar Patel. 4:24 PM:- received investigation report from Ms. Gaurin. abstract: - GPR survey indicated another line along the previously excavated remote fill line, which was later found as cable line - installed 12 soil borings to depth of 10-15 ft bg - soil under the sidewalk was poorly graded sandy soil with very little gravel - soil samples were collected either at highest PID reading or deepest dry - one temporary well installed in proximity of the source area - found free product on water sample from temporary well -

groundwater was encountered at approx. 15 ft bg - one soil sample was collected at 11 ft depth from boring TTB-1 (closer to source area) forensic fingerprint analysis (results will be submitted once available) - no contamination found in borings installed near the building foundation wall (south side), but contamination found towards the street curb (towards subway) (north side) - recommends further delineation in east and west direction soil analyticals:

	TTB-1	TTB-2	TTB-5	TTB-6
TTB-7 3-5 ft 3-5 ft 5-6 ft 6-7 ft 4-6 ft				
Toluene	4,990	16,600	2,130	
Ethylbenzene	3,000	12,500	2,160	
Xylene	20,400	85,600	13,300	17,200
Naphthalene	14,200	13,700	2,330	20,900
TTB-8	TTB-9	TTB-10	4-6 ft 6-8 ft 5-6.5 ft	
Toluene	5,490	13,500		
Ethylbenzene	3,420	11,300		
Xylene	32,100	7,580	66,700	
Naphthalene	16,300	5,790		

09/20/10-Hiralkumar Patel. after discussing with DEC Austin, case transferred to DEC Vadim due to groundwater contamination and impact to the MTA tunnel. \*\*refer to spill # 1000435 also.\*\* 11/8/10 - reassigned from Tibbe to JMOCONE - sent email to TetraTech (Gaurin) asking for reports/work plans submitted but not reviewed (JOC) 01/14/11 - spoke with Sandra Gaurin, Tetrattech. She will prepare and provide two separate documents: work plan for installing permanent well at location of former temp to allow removal of free product in the short term; separate work plan for delineation of contam soil and gw - to be written as dynamic work plan - will include some means to evaluate whether oil migrated down along outside front (north side) of building where fill line enters building; same along inside of wall (basement has soil floor); will include sensitive receptor survey; recognized that MTA approval is needed for all work due to proximity of subway (JOC) 11/28/11 - Raphael Ketani. I reviewed the Tetra Tech Inc. 11/23/11 response letter to the DEC 10/11/11 letter commenting on the additional Site Investigation Work Plan and the Interim Remedial Measure Work Plan dated April 2010. The letter described the tentative work schedule. During this week, the NYCDOT permit applications are supposed to be processed. I spoke to Sandra Gaurin (gor-in) of Tetra Tech (973) 630-8040 about this. She said that some changes were required. So the applications were resubmitted. She is hopeful that the applications will finally be accepted so that December 12 field activities can commence. I also asked her why Tetra Tech was going to use the Membrane Inter Phase screening. She said that this was Mr. O'Connell's suggestion so that Tetra Tech doesn't have to go back and forth with doing many rounds of soil sampling and taking many soil samples that need to be sent off for analysis. She said that the vapor analysis from the penetration points will tell them where the worst contamination is. I told her that the DEC will still require that soil end points be taken after all of the soil that can be excavated has been removed. She said that she expected to do in-situ treatment due to the close location to the subway. I asked her what type of building was being serviced by the fuel system. She said that it's a residential/commercial building near the court house. The letter also dealt with vertical delineation of the contamination and soil and

**COURT PLAZA (Continued)**

**S110309405**

groundwater sampling. I approved the 11/23/11 Tetra Tech letter in an e-mail to Ms. Gaurin. 12/5/11 - Raphael Ketani. Ms. Gaurin (973) 630-8040 sent me an e-mail. The MIP investigation will take place between 12/19 and 12/22, and the recovery well installation will take place on 1/3/12. 3/7/12 - Raphael Ketani. Today I received the TetraTech March 2012 Remedial Investigation Report. The soil and groundwater were sampled on 12/21/11. Four MIPS and two soil borings (SB-1 and SB-2) were installed. MIP-1 was installed next to the old fuel line. MIP-2 was 15 feet southwest of MIP-1 and MIP-4 was 6 feet to the northeast. The soil results for MIP-2 did not have any VOC exceedences and no BNA (bases-neutral-acid) hits. The soil results for MIP-4 at 9 feet bgs were: 3360 ppb ethylbenzene, 5310 ppb toluene, and 59,300 ppb total xylenes. The deeper soil results for MIP-4 had only one exceedence, 945 ppb of total xylenes. The great majority of the soil contamination at MIP-1 was in the 10.5 foot to 12 foot interval. These results were up to: 10,800 ppb ethylbenzene, 6240 ppb toluene, 67,100 ppb total xylenes, 23,700 ppb naphthalene, and 284 ppb benzene. There were no significant detections for the BNA analytes. The other MIP results and the results from the regular soil borings were either without exceedences or non-detect. A groundwater sample was taken at MIP-3, which is about 35 away from the old fuel line. The results were entirely non-detect. The RIR also included the figures from the 2010 soil testing and sampling. The testing and sampling locations defined the limits of the investigation area. The results indicated that there were significant exceedences at TTB-1, 2, 5, 6, 8 and 10. I spoke to Ms. Gaurin (973) 630-8040 about the RIR. I told her that soil removal or remediation should take place at the locations of MIP-1, MIP-4, and TTB-1, 2, 5, 6, 8 and 10. I also told her that the groundwater sample which was taken at MIP-3 didn't reflect the groundwater conditions near the spill site as it was too far away (about 35 feet distance). Ms. Gaurin said that there had been a few inches of product on the water table, but it had disappeared. I asked her why the MIP-3 sampling didn't find the product. She responded that the MTA had been collecting the product that had seeped into the subway. So she assumed it had all gone there. I told her that the DEC didn't believe that this was true and that there should be some product near the old fuel pipe. I asked Ms. Gaurin to submit a work plan for excavating the contaminated soil in the affected areas. She said that excavation couldn't be done as there were too many utilities. I then told her to try treatment solutions. She said that she wasn't sure they would work. Lastly, I told Ms. Gaurin to submit a site plan showing where the utilities are in relationship to the MIP locations and the TTB locations. She said that she will. In the end, I determined that soil treatment and the installation of a well right next to MIP-1 would be necessary. I sent an e-mail to Ms. Gaurin (973) 630-8040 stating that the second investigation had been inadequate regarding the delineation of the soil contamination. I mentioned in the e-mail that high soil contamination was found at TTB-1, 2, 5, 6, 8 and 10, and at MIP-1 and MIP-4. I also stated that borings should have been performed extending away from these locations until the limit of the soil contamination had been found. Lastly, I asked for a scaled drawing showing where all of the utilities were. Ms. Gaurin responded by e-mail that the TTB series of borings were meant for only internal TetraTech use in order to evaluate the MIP responses. That is why they were in the appendices. She also stated that they were performed in 2010 and don't reflect current conditions. 12/11/12 - Raphael

Ketani. Ms. Gaurin (973) 630-8040 called to say that she just recently realized that the DEC hadn't been sent the information that was requested some time ago. She said that the project manager had left and so things came to a standstill regarding the project. She will send the DEC the information very soon. 12/24/12 - Raphael Ketani. I reviewed the Addendum to the Remedial Investigation Report dated April 2012 and revised December 2012. The information in the revised Addendum confirmed the results of the earlier March 2012 Remedial Investigation Report and contained additional data. The additional information and data consisted of the fact that only 4 Membrane Interface Probe MIP locations could be installed due to the presence and density of the utilities. In the Addendum, it is stated that there is universal refusal at 20 feet bgs. However, it is not mentioned whether this is due to the presence of the subway tunnel. Also, the silt content of the soil markedly increased from about 14 to 15 feet bgs. Again, this may be due to the method of subway tunnel construction - the silt acting as a protective layer from ground vibration from the street above. Groundwater recovery was limited to 11 to 14 feet bgs. MIP-1 had a strong Flame Ionization Detection (FID) response at 12 feet, but less below 12.5 feet. MIP-2 near the former TTB-5 location had an FID response starting at 5 feet with the strongest response at 10 to 12 feet bgs. The response declined below this horizon. MIP-3, which is 35 feet to the west of the former fill pipe location, had lower FID responses than MIP-2 at 12 and 16 feet below grade. MIP-4 near the former location of TTB-10 had FID responses starting at 6.5 feet bgs. There was no FID response at 12 feet bgs. Soil impacts appear to diminish to the west. A soil sample taken where the fill line had entered the building did not indicate contamination. There were no reports of product in the subway since the line was replaced during April 2010. There were significant VOC exceedences at TTB-1, 2 and 5 to 10 (but not at TTB-4 and 11 to 13). There were also significant VOC exceedences at the locations of MIP-1, MIP-4. This implies that there is still high soil contamination along the west and north sides of the 15 foot by 15 foot main impact area. The highest soil contamination was found between 3 feet and 8 feet bgs. VOC groundwater results were high at TTGW-1 (15 feet bgs). The groundwater sample which was taken at MIP-3 didn't reflect the groundwater conditions near the spill site as it was too far away (about 35 feet distance). TetraTech recommended allowing Monitored Natural Attenuation to remediate the remaining contamination. They would also conduct groundwater monitoring. 12/26/12 - Raphael Ketani. A letter was drafted and submitted to Hassan Hussein, EE III and supervisor of Unit C in Region 2, for his review. In the letter, the DEC requested that a method be determined for remediating the soil contamination at TTB-1, 2 and 5 to 10, and at MIP-1 and MIP-4. It was also requested that they find a way to reduce the VOC contamination in the groundwater. Court Square LLC was given until January 18, 2013 to submit a remedial action work plan. The latest ownership information for 5 Court Square (block and lot 81 and 9) is: Court Square LLC, c/o Fisher Associates Real Estate, 152 West 57th Street, 12th Floor, NY, 10019. 12/27/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 1/18/2013 - Raphael Ketani. I received the January 2013 Remedial Action Work Plan and began my review. 1/23/13 - Raphael Ketani. I finished my review of the RAWP. TetraTech will use RegenoOx to reduce or remove the soil contamination at TTB-1, 2, 5 and 10 and MIP-1 and MIP-4. Seven temporary injection points will be installed 10 feet apart. About

**COURT PLAZA (Continued)**

**S110309405**

1440 lbs. of solution will be injected between 3 to 8 feet below grade. ORC Advanced will be used to remediate the groundwater at TT-GW1. They will inject 120 lbs. of solution at 4 temporary points. The solution will be injected between 15 and 20 feet below grade. Two sampling events will be performed on a quarterly basis after the injections are completed. Soil and groundwater samples will be taken from 4 temporary points within the injection area. The soil and groundwater samples will be tested for VOCs and SVOCs. The work schedule will be submitted after they get approvals from the NYC DOT and the MTA. The Remedial Action Report will be submitted after the treatments and sampling are completed. CP-51 standards will be used to compare the soil results. TOGS 1.1.1 standards will be used to compare the groundwater results. I found the RAWP to be deficient for the following reasons: (1) they intend to address the soil contamination at TTB-1, 2, 5 and 10. However, the DEC's letter approving the revised April 2012 Remedial Investigation Report Addendum (Revised December 2012) dated 12/27/12 instructed Court Square LLC to remediate the soil contamination at TTB-1, 2 and 5 TO 10, not 5 and 10. (2) there is no discussion regarding the siltyiness of the soil and its impact on the movement of the solution (3) the site is near the subway tunnel, will the MTA only give approval to the injections if the solution is in a weak form? if so, then the solution may not be effective (4) Figure 2 - Treatment Area Map = the actual solution injection locations are not shown Additionally, Court Square LLC must consider the following before the injections take place: (1) they need to comply with the Federal underground injection control (UIC) regulations. Also, they should review the DEC guidance (IGP-22); (2) information is needed regarding the dosing of the solutions (i.e. mass of chemical per mass of VOCs and SVOCs); (3) how will the conditions in the subsurface be keptoxic? (4) it is recommended that groundwater be extracted from the proposed injecton area to minimize displacement of the dissolved plume. The pre-extracted water could be used to prepare the treatment solutions; (5) how will the treatment solutions be prevented from migrating off site? are there downgradient control wells? A response letter was drafted for the review of Mr. Hussein. The letter stated the above deficiencies and listed the 5 above pre-injection items. The submission of a revised Remedial Action Work Plan was requested with a due date for the work plan of March 1, 2013. Mr. Hussein approved the letter and it was sent out. 3/1/13 - Raphael Ketani. Ms. Gaurin (973) 630-8040 sent an e-mail requesting an extension of the submission deadline for the work plan to March 15, 2013. She said that they needed to get additional contractor quotes. I granted the extension. 3/21/13 - Raphael Ketani. I received and reviewed the revised Remedial Action Work Plan dated March 2013. Tetra Tech plans to inject the treatment solutions at the 10 locations indicated in the DEC 1/25/13 letter. These are TTB-1, TTB-2, TTB-5 to TTB-10 and MIP-1 and MIP-4. About 1440 lbs. of RegenOx will be injected at a depth of 3 to 8 feet bgs. A 5% solution will be used. There will be two rounds of injections two weeks apart. About 120 lbs. of ORC Advanced will be injected into the saturated zone at 15 to 20 feet bgs at the locations TTGW-1, TTB-5 to TTB-7 and TTB-9. The treatment solutions will be allowed to work for 9 to 12 months. After this period of time, there will be two rounds of confirmatory soil and groundwater sampling on a quarterly basis. The samples will be tested for VOCs and SVOCs. If the MTA doesn't approve the plan, then excavation will take place in order to remove the contamination. A

USEPA form 40 CFR Part 144 will be submitted to the EPA. I approved the revised work plan in an e-mail to Ms. Gaurin and indicated that the DEC would like the work to proceed as soon as possible. 5/15/13 - Raphael Ketani. I tried to contact Ms. Gaurin (973) 630-8040 regarding progress at the site, but could only leave a voice message and send an e-mail. Later, Ms. Gaurin sent me an e-mail stating: We submitted draft engineering drawings to the MTA just after receiving your approval and we only heard back from them last week. We need to pick up the marked up copies of our drawings and address their comments. Then we will resubmit the drawings for review/approval which may take MTA several weeks. We will contact you as soon as we receive MTA approval and are ready to schedule the injection. 8/23/13 - Raphael Ketani. I hadn't received any correspondences from Ms. Gaurin regarding progress at the site. Therefore, I sent her an e-mail requesting an update. 8/24/13 - Raphael Ketani. Ms. Gaurin sent me an e-mail today stating that Tetra Tech received the comments on the drawings from the MTA. Tetra Tech intends to resubmit the drawings with the responses to the comments sometime during September 2013. Until the drawings are finalized, a drilling contractor will not be retained or scheduled. It is expected that no work will take place until October or later. 10/18/13 - Raphael Ketani. I tried to contact Ms. Gaurin (973) 630-8040 by phone in order to receive a progress update. However, I could only leave a phone message. Therefore, I sent her an e-mail requesting information. Ms. Gaurin responded back with the following e-mail: We have sent back the revised drawings and received a voice mail requesting the marked up copies being sent back to them. It is our understanding that these copies were submitted to them with the revised drawings, we don't have these anymore in the office and we left several voice mails to MTA to that effect. No responses to date from them, we asked them to review the revised drawings without the marked up and provide approval to proceed. I don't know what else to state, I will call again to try to make things progress at some point. 10/30/13 - Raphael Ketani. Ms. Gaurin sent me an e-mail stating that she had called the MTA and they told her they will re-start their review of the plans again. 11/1/13 - Raphael Ketani. Ms. Gaurin sent me an e-mail stating that she had just received a phone call from the MTA approving their remediation plan. She will contact the drilling company very soon. 2/13/14 - Raphael Ketani. As there has been no contact from Ms. Gaurin (973) 630-8040 in some months, I sent her an e-mail wherein I requested a progress update. Later, Ms. Gaurin sent me the following e-mail: I thought I had send you the proposed dates for the two rounds of injection at the site. They were both completed in December and we have scheduled the first performance sampling event for March 11, 2014. The next sampling event will be scheduled in June 2014 after which we will submit the results of both rounds of sampling and any conclusion on the performance of the injection. 5/20/14 - Raphael Ketani. I sent Ms. Gaurin (973) 630-8040 an e-mail requesting the March 11, 2014 sampling results. Later, Ms. Gaurin sent me the April 2014 analytical results report. I reviewed the report. The post injections soil VOC results were such that the samples from TTB-14 and MIP-2 were completely non-detect. The sample for TTB-5 had 9 non-detects and 6 low hits. MILP-4 had 6 non-detects, 8 low hits and 1 low exceedence. TTB-12 had 3 non-detects, 10 low hits and 3 low to moderate exceedences. TTB-1 and TTB-6 had 5 and 4 low to moderate exceedences, respectively, and many low hits. The exceedences with the highest concentrations were

**COURT PLAZA (Continued)**

**S110309405**

1,2,4-trimethylbenzene to 24.5 ppm, naphthalene to 17.6 ppm and total xylenes to 21.5 ppm. Soil BNA analyses were non-detect for the great majority of analytes. However, MIP-2MS and MIP-2MSD had 1.1 ppm exceedences for the benzo series of analytes and their combustion products. There was only 1 groundwater sample analyzed. The majority of the groundwater VOC results were non-detect, except for 2-methylnaphthalene at 2200 ppb, fluorene at 320 ppb, naphthalene at 180 ppb and some low hits. The next round of groundwater sampling will take place during June 17 and 18, 2014. 8/20/14 - Raphael Ketani. As there has been no contact from Ms. Gaurin (973) 630-8040 regarding progress at the site, I sent her an e-mail requesting an update. 8/27/14 - Raphael Ketani. Today I talked to Paul Stewart of Advanced Cleanup Technologies (516) 441-5800, ext 103. He said that the property was going to be sold. He did not state whether he represented the prospective buyer. However, he wanted to know the present environmental conditions beneath the site. I read the case notes to him regarding the April 2014 soil and groundwater sampling results. I told him that I wasn't sure what more could be done to lower the soil analytical concentrations as there were many utilities in the area and the subway tunnel was very nearby. He thanked me for the information and the conversation ended. 9/9/14 - Raphael Ketani. I reviewed the TetraTech 7/2/14 soil and groundwater analytical report. The samples had been taken during 6/17/14. Soil VOCs were either non-detect or very low hits for the samples from MIP-2, TTB-5 and MIP-4. The sample from TTB-1 (next to the source - the fill line) had 7 low to high exceedences. The sample from TTB-6 had 1 moderate and 1 high exceedence. TTB-12 had 3 low to high exceedences. For the soil SVOCs, the results were almost entirely non-detect. The groundwater VOCs consisted of 4 exceedences, but only the total xylenes was deemed significant at 212 ppb. The groundwater SVOCs were 74.2 ppb naphthalene, 2 low exceedences and several low hits. There were high iron and manganese hits for the groundwater. 9/12/14 - Raphael Ketani. I had a phone conversation with Ms. Gaurin (973) 630-8040 regarding the latest soil and groundwater analytical results. I commented to her that the results for the soil were still high at TTB-1. She said that this boring was performed right at the old fill line. She said that there was a quarter size hole in the old pipe and this is why the oil leaked out and why the contamination is much higher here than elsewhere on site. However, she also said that there is no oil on the water table. I asked her which treatment chemical was used. She said that it was ORC as the subway tunnel is too close for persulfate and the MTA wouldn't approve its use. I asked her whether she felt the ORC had done its job and whether another treatment round would help. She said that the last time they did the injections, some of the ORC flowed quickly through the soil and into the basement of the building. The basement is in bad shape with many cracks. I asked her whether digging could take place. Ms.Gaurin commented that there were many utilities in the affected area. So the workers would have to use shovels to dig around the electrical and gas utilities. I told her this sounded dangerous and that the Department would not ask Tetra Tech to do such work. Also, I commented, I didn't believe that Con Ed would like the idea of people getting so close to their utilities. Next, I stated that I would present the spill case to my supervisor, Mr. Hussein, for closure. However, I needed an analytical summary table for the soil and groundwater results. Ms. Gaurin stated that she will send me one with everything. With that, the conversation ended. 9/15/14 - Raphael

Ketani. Mr. Gaurin ((973) 630-8040/sandra.gaurin@tetrattech.com) sent me the Excel data tables for the soil and groundwater data for the various locations from August 2010 to June 2014. The soil VOC tables show high (PPM) exceedences of the CP-51 unrestricted residential (UR)soil standards for samples taken during 2010 and 2011. A comparison of the March 2014 and June 2014 results show a mixed response to the ORC treatment application which took place during December 2013. In other words, some analyte concentrations fell while others increased. The soil SVOC tables show very few analyte exceedences of the CP-51 UR standards accompanied by some low hits for most locations. The results for March 2014 and June 2014 were almost entirely non-detect, but the MIP-2MS and MIP-2MSD results were strangely higher even though the MIP-2 results were all non-detect. The groundwater VOC tables show a few very high exceedences of the TOGS 1.1.1 standards for the 2010 results and all non-detects for the 2011 results. However, the March and June 2014 results 5 low to high exceedences with the June results being generally slightly lower. The groundwater SVOC tables show low to high results for the sample taken in 2010, but no hits for the 2011 results. March 2014 post injection results had one high exceedence and a number of low hits. The June 2014 results had two low exceedences and a small number of low hits. The reasons for the variation in the soil and groundwater results were not clear. It may be that another round of ORC injections is necessary in order to bring down the soil results. 9/17/14 - Raphael Ketani. A closure meeting took place today. Staff attending the meeting requested additional information from the consultant, Ms. Gaurin, regarding the excavation of the contaminated soil below the old fill pipe. So, I sent Ms. Gaurin ((973) 630-8040/sandra.gaurin@tetrattech.com) an email requesting this information. 9/18/14 - Raphael Ketani. Ms. Gaurin responded and sent me pictures of the fill line dig out and other activities, a work proposal from A.L. Eastmond, a map with VOC and SVOC exceedences and a Tetra Tech letter consisting of a 2010 field report. One of the pictures showed a seep of oil and water which had entered the MTA G Line subway tunnel at the passenger platform. White absorbent pads were visible under the third rail. In her 4/20/10 letter to IronShore Environmental, she stated that 200 gals. of oil and water were removed on the same day. I contacted A.L. Eastmond (718)378-3000 and spoke to Neal Tomasetti, project manager. He said that he didn't remember the job, but that he will look into the files back to 2010 and send me any information he has regarding the dig out of the contamination. 9/22/14 - Raphael Ketani. A closure meeting took place amongst Region 2 DER staff. The outcome of the meeting was that staff denied the request to close the spill case. Instead, they asked to see the MTA inspection reports for the oil spill location in the tunnel and a map showing where the seep was in relationship to 5 Court Square. 9/23/14 - Raphael Ketani. As of today, I have not heard back from Mr. Tomasetti. I tried calling him again, but could only leave a voice message. Next, I contacted Francine Maibauer (646) 252-5768/francine.maibauer@nyct.com and asked her for the MTA inspection reports for the part of the G Line tunnel that was next to 5 Court Square. I also asked her for a map showing the location of the seep in relationship to 5 Court Square. She said that she will send an inspector out to check and see whether there is any more seepage of oil and she will also send the map. 9/29/14 - Raphael Ketani. Mr. Tomasetti called me back. He said that the only document he had in the site file was the original spill report form. 9/30/14 -

Raphael Ketani. During a meeting with staff from the NYCT, Ms. Maibauer informed me that the subway station inspection had not yet taken place. She said that she will send her inspector, Daniel Yu, into the station platform area to look for any oil seeps this week. 10/9/14 - Raphael Ketani. Mr. Yu (646) 252-5763 called me to inquire regarding what type of information the DEC wanted as a result of the station inspection. I told Mr. Yu to send the DEC a picture of the seep, determine whether oil is still coming in, measure the seep distance from the station entrance and to submit a map to scale showing the location of the in relationship to 5 Court Square. Mr. Yu said that he will go to the station tomorrow and conduct his inspection. 10/17/14 - Raphael Ketani. I spoke to Mr. Yu today regarding his inspection of the G subway line Court Square platform area and its walls. He said that he made his inspection on 10/10/14, but he didn't see anything that looked like oil on the wall nearest 5 Court Square or at the base of the wall. However, he did see a large rust stain at the tunnel (northeast) end of the wall. His PID meter registered 0.50 ppm to 0.80 ppm VOCs in the platform area ambient air. However, he said that this was normal. He will send the DEC a report concerning his inspection. Subsequent to his inspection, I made my own site inspection at 9:30AM. I located the store at 5 Court Square and found the new fill port, which was next to the neighboring store with the red border. I measured the distance from the grating in front of the red bordered store to the fill port. This distance was 11 feet. I then went down to the platform to look at the wall nearest to 5 Court Square. I took 8 pictures of the site and the platform area. I could see the large rust stain on the wall, but this stain was under the grating that was furthest from the fill port. The wall under the grating nearest the fill port had some light staining. The wall under the fill port was clean and there was no sign that oil was sitting at the base of the wall (see pictures). The rest of the wall looked clean. There were no oil odors in the ambient platform air. After this, I left the site. 10/28/14 - Raphael Ketani. Staff at the DEC met to discuss the information in the case file as it regards the remediation of the spill. The results of the inspection by Mr. Yu and myself were also discussed. Based upon all of the information together, Mr. Hussein agreed that with closing the spill case. The spill case was officially closed today, 10/28/14. The residual soil contamination was determined not to be a threat to the public or the environment."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was

VOUGHT Sent tank test failure letter to Varderame. 11/15/2002 ARS 11/14/2003-Vought-Reviewed report dated 6/26/03 from Verderame Realty (Bruce Bauer 718-786-1100). Site will no longer be using oil and will be converting to gas. Closure of a 2000-gallon #2 fuel oil UST and collection of post excavatin endpoint samples by Bluestone Environmental (Andrew Cozzi 732-469-5188). The UST excavation base was at approximately 8 to 8.5 feet below the concrete floor . The soil in the excavation was a fill that consisted of dark brown sand with construction debris such as bricks and pieces of concrete . Five soil samples were submitted for analyses for 8260/8270. Soil analyticals show two 1,3,5-trimethylbenzene exceedances up to 9110ppb, benzo(a)anthracene up to 1010ppb, benzo(a)pyrene up to 631ppb, benzo(b)fluoranthene up to 1110ppb, benzo(k)fluoranthene up to 579ppb, and chrysene up to 1210ppb. These exceedances are attributable to fill material. Spill closed by Vought after conference with DEC Rommel."

Remarks: "tank test failure - it will be cleaned and retested next week "

Acres: 2.5  
Date Record Added: 11/30/2000  
Date Record Updated: 06/28/2016  
Updated By: KALEWAND  
Site Description: Location: The site is located in Queens County, on Jackson Ave between Orchard Street to the east, Queens Blvd. to the west and Long Island Railroad rail yard to the south. A subway (E,G,R,V) runs underneath Jackson Avenue bordering the site to the north. Site Features: Prior to demolition, the 2.5 acre site consisted of 9 buildings and associated parking areas. The property is currently being redeveloped. Current Zoning and Land Use: The site is zoned M1-6/R10 (Manufacturing and Residential) under the special Long Island City Mixed Use District. According to the NYC Department of City Planning website, The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Historical Uses: The site had formerly been used for chemical manufacturing. From 1901-1978, West Chemical Co. owned the property and manufactured commercial and disinfectant products such as disinfectants, insecticides, soaps, floor wax, and paper products dispensing machines. Manufacturing operations employed various chemical substances including creosote, coal and acids, cresylic acids, degreasing solvents, iodine, and assorted oils and pesticides. Metal plating and gasoline filling operations were also conducted at the property. In November 1978 Outlet City acquired title to the property from West Chemical. During Outlet City's ownership, a flea market and various vendor operations were operated at the property. Previous investigations in the late 1980's and early 1990's led to the property entering the Voluntary Cleanup Program. The Voluntary Agreement was terminated in August 2015. Site Geology and Hydrogeology: Site geology consists of sand and silt at varying depths. Bedrock (gneiss) encountered at depths from elevation 10 North American Vertical Datum (NAVD) to -30 NAVD. Groundwater is approximately 8-10ft below grade. Remediation Status: Remediation of Outlet City will be addressed under the Brownfield Cleanup Program (BCP). Refer to Queens Plaza Residential Development - Site A (C241105) and Queens Plaza Residential Development - Site B (C241151). For offsite contamination, refer to Queens Plaza Residential Development - Site A Offsite (C241105A) and Queens Plaza Residential Development - Site B Offsite (C241151A).  
Env Problem: Nature and Extent of Contamination: The site is contaminated with creosote, petroleum, and solvents. Both soil and groundwater are affected. The majority of the contamination is located in Areas D and E where a large scale creosote spill took place. Total on-site VOC s (Volatile Organic Compounds) including both chlorinated hydrocarbons and petroleum constituents are present in groundwater from non-detect - 30,000ppb. Total on-site SVOC s (Semi-Volatile Organic Compounds) are present in groundwater from non-detect to over 100,000ppb. An initial off-site investigation was completed in 2013. Contamination, both VOCs and SVOCs has migrated off-site to the west and north. Due to flooding event caused by a homeless person removing piping in Building 10 to sell for scrap, the monitoring well in the narrow strip of land between the on-site buildings and the Sunnyside Yard could not be sampled.  
Health Problem: Exposures to contaminated groundwater is not expected because the

area is served by public water. Soils contaminated with tetrachloroethene are beneath the site, however, exposure to this soil is not expected because the site is capped with asphalt. Indoor air samples collected in a portion of the on-site building contained levels of tetrachloroethene that exceeded the New York State Department of Health Guideline for tetrachloroethene in Indoor Air. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion into structures near the site.

bound by: multi-story mixed-use commercial and residential buildings followed by Hunter Street to the north; vacant property and a ramp connecting Queens Boulevard to Thomson Avenue, followed by multi-story commercial buildings and 42nd Road to the east; Jackson Avenue followed by a one-story commercial use building to the south; and 43rd Avenue followed by a multi-story mixed-use commercial and residential building to the west. Site Features: The vacant lot is about 9,200 square feet in area (+0.211 acres). Current Zoning and Land Use: The proposed brownfield site is a vacant lot located in the Special Long Island City Mixed Use Paired District (M1-5/R9). The site is undergoing CEQR and ULURP to transfer air rights from the adjacent New York City Department of Transportation (NYCDOT) easement to the proposed brownfield site, which will likely result in the assignment of an E-Designation from the Department of City Planning. The lot is used to stage construction materials and equipment. The adjoining parcels are used for mixed-use commercial and residential purposes, as well as for industrial purposes, with the surrounding area generally consisting of residential, commercial, and industrial use. Past Use of the Site: Historical operations at the proposed brownfield site included a hand laundry in 1936 and a gasoline station and auto repair shop from 1945 to 2015. The site has been fenced and vacant since 2015. Site Geology and Hydrogeology The site sits at an elevation of about 15 feet above mean sea level (msl), and the surrounding area slopes gradually to the south towards the Dutch Kills. The site is located in a developed area that is generally covered with roads, walkways and buildings. The subsurface strata beneath the proposed brownfield site consists of a layer of fill material generally characterized by medium- to fine-grained sand with varying amounts of gravel extending to depths of about 7 to 15 feet below grade surface (bgs). The fill material is underlain by native soil generally consisting of silty sand with varying amounts of clay. Bedrock was not encountered during the previous investigations, but is anticipated to be present at a depth of about 40 to 50 feet bgs. The site is underlain by Ravenswood Granodiorite, which generally consists of gray sillimanite-garnet-microcline. Groundwater was encountered from about 14 to 16 feet bgs and generally flows to the southwest towards Jackson Avenue.

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

is located at 28-18 Jackson Avenue in Long Island City (Queens County). This site is a rectangle-shaped parcel bounded on the north by Jackson Avenue; to the west and south by Queens Plaza Residential Development Site A (C241105); and to the east by New York City Transit subway electrical switching station. Site Features: Prior to demolition in late 2014, the site contained one 5-story building. The site is currently unoccupied and under construction; the northern half of the property will be developed into a 45-story residential building. The building straddles both the Queens Plaza Residential Development Site A property and the Queens Plaza Residential Development Site A Off-Site property. Current Zoning and Land Use: The site is currently unoccupied and under development. The site is zoned M1-6/R10 (Manufacturing and Residential) under the special Long Island City Mixed Use District. According to the NYC Department of City Planning website, The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Past Use of the Site: The site was historically occupied by a blacksmith, wagon and carpenter shops in the 19th century. The now razed 5-story brick building was built circa 1915 and was occupied primarily by commercial occupants including a battery and ignition service, a paint store, a restaurant, a liquor store and an exterminator. The site was also used for residential purposes from the 1960s to the 1990s. Site Geology and Hydrogeology: A surface fill layer approximately 5 - 10 feet thick is present on-site. The fill is a mixture of sand, silt and gravel with traces of brick, cinders, concrete, cobbles, and wood. The fill is underlain by silty sand with lenses of silt and clay. Additionally, a glacial till layer is present over much of the site beginning from approximately 20 feet below grade and extends to the top of bedrock. Bedrock consists un-weathered to moderately-weathered gray gneiss at depths ranging from 10 - 40 feet below grade. Groundwater flow is to the southwest and is approximately 10 - 12 feet below grade.

Env Problem:

Nature and Extent of Contamination Prior to Remediation: A large creosote release on the adjacent site (Site No. C241105: Queens Plaza Residential Development Site A) caused soil and groundwater contamination. Based on the remedial investigation, the primary contaminants of concern are Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs) related to the creosote release however chlorinated VOCs, metals and pesticides contamination were present. Non-Aqueous Phase Liquid is present on-site. Soil: Total VOCs in soil range from non-detect to 165 parts per million (ppm). Multiple compounds exceeded unrestricted-use soil cleanup objectives (SCOs) but only two compounds exceeded their restricted residential soil cleanup objectives (RRSCOs): benzene at 6.6 parts per million or ppm (RRSCO of 4.8 ppm) and 1,2-dichloroethane at 5.6 ppm (RRSCO of 3.1 ppm). Total SVOCs in soil range from non-detect to over 2,000 ppm. Compounds exceeding their RRSCO's include dibenzofuran up to 146 ppm (RRSCO of 59 ppm) and naphthalene up to 796 ppm (RRSCO of 100 ppm). Several metals exceeded their unrestricted-use SCOs but none exceeded their RRSCOs. Pesticides and PCBs were not detected over unrestricted-use SCOs. Groundwater: Total VOCs, including both chlorinated and petroleum compounds, are present in groundwater from 5,000 - 20,000 parts per billion (ppb). Compounds detected exceeding Ambient Water Quality Standards and Guidance

QUEENS PLAZA RESIDENTIAL DEVELOPMENT-SITEA-OFFSITE (Continued)

S120706177

Values include xylene up to 5,160 ppb (compared to a standard of 5 ppb) and 1,2-dichloroethane up to 1,930 ppb (compared to a standard of 5 ppb). Total SVOCs are present in groundwater from 7,000 - 50,000 ppb. Compounds detected exceeding Ambient Water Quality Standards and Guidance Values include 2,4-dimethylphenol up to 32,100 ppb (compared to a standard of 1 ppb) and naphthalene up to 6,720 ppb (compared to a guidance value of 10 ppb). The pesticides beta-BHC and 4,4'-DDT were detected in groundwater above the AWQSGVs. Beta-BHC was detected at 0.12 ppb (compared to a standard of 0.04 ppb) and 4,4'-DDT was detected at 0.31 ppb (compared to a standard of 0.2 ppb). Soil Vapor: Petroleum and chlorinated VOCs were detected in soil vapor. For example, the petroleum-VOC benzene was detected up to 4,060 micrograms per cubic meter (ug/m3) and the chlorinated-VOC tetrachloroethene was detected up to 53 ug/m3. Post-Remediation: Remediation at the site is complete. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (hydraulic control/containment, subsurface barriers, soil cover/cap) of the remedy will be operated and maintained under the SMP.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description:

Location: The site is located at 28-02/ 28-30 Jackson Avenue in Long Island City, Queens County and is approximately 0.470 acres in size. The site is bounded by Jackson Avenue to the north, Orchard Street to the west, a related off-site property known as Queens Plaza Residential Development Site A Off-site (Site No. C241105A) to the east and by another Brownfield Cleanup Program (BCP) site known as Queens Plaza Residential Development - Site B (Site No. C241151) to the south. Site Features: Currently a multi-tenant high-rise residential apartment building with ground floor commercial space is under construction. Current Zoning and Land Use: The site is currently unoccupied and under development. The site is zoned M1-6/R10 (Manufacturing and Residential) under the special Long Island City Mixed Use District. According to the NYC Department of City Planning website, The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Past Use of the site: The West Chemical Company operated at the site from the early 1900 s until their closure in 1977. The company manufactured commercial and household products such as disinfectants, insecticides, soaps, floor wax and paper product dispensing machines. Bulk quantities of pine oil, mineral oil, hydrochloric acid, cresylic acid, tar acid, caustic potash, terpene solvent, Shell E-407 solvent, ortho nitro toluene, kerosene and creosote were stored and used on-site. In 1978, property ownership was transferred to the Modell Company and used for commercial purposes under the company name Outlet City. Multiple previous environmental investigations were conducted on-site since the mid-1980's leading up to the property owner at the time, Outlet City, signing Voluntary Cleanup Agreements with the Department on February 10, 1997 and again on April 18, 2001. The site entered the BCP on August 3, 2007 by TST LIC Development, LLC as a potential purchaser of the property. The former West Chemical/ Outlet City property now consists of two BCP sites: Queens Plaza Residential Development Site A (Site No. C241105) and Queens Plaza Residential Development Site B (Site No. C241151). Site Geology and Hydrogeology: A surface fill layer approximately 5 - 10 feet thick is present on-site. The fill is a mixture of sand, silt and gravel with traces of brick, cinders, concrete, cobbles, and wood. The fill is underlain by silty sand with lenses of silt and clay. Additionally, a glacial till layer is present over much of the site beginning from approximately 20 feet below grade and extends to the top of bedrock. Bedrock consists un-weathered to moderately-weathered gray gneiss at depths ranging from 10 - 40 feet below grade. Groundwater flow is to the southwest and is approximately 10 - 12 feet below grade.

Env Problem:

Nature and Extent of Contamination Prior to Remediation: A large on-site creosote release in the 1950's caused extensive soil and groundwater contamination. Based on the previous investigations of the property while in the Voluntary Cleanup Program, the primary contaminants of concern are Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs) related to the creosote release however chlorinated VOCs, metals and pesticides contamination were present. Also, both Light Non-Aqueous Phase Liquid (LNAPL) and Dense Non-Aqueous Phase Liquid (DNAPL) were present on-site.

Groundwater: Total VOC s in groundwater range from 55 - 25,000 parts per billion (ppb). Compounds detected exceeding Ambient Water Quality Standards and Guidance Values (AWQSGVs) include benzene up to 4,100 ppb (compared to a groundwater standard of 1 ppb) and 1,2-dichloroethane up to 4,320 ppb (compared to a groundwater standard of 0.6 ppb). Total SVOCs in groundwater range from 10 - 112,000 ppb. Compounds detected exceeding AWQSGVs include naphthalene up to 9,100 ppb (compared to a groundwater guidance value of 10 ppb), and 2-methylphenol up to 8,940 ppb (compared to a groundwater standard of 1 ppb). Several metals were detected over AWQSGVs including arsenic up to 102 ppb (compared to a groundwater standard of 25 ppb) and lead up to 152 ppb (compared to a groundwater standard of 25 ppb). Pesticides and Polychlorinated Biphenyls (PCBs) were not analyzed for in groundwater. During the remedial investigation, contaminated groundwater was confirmed to be migrating off-site. Soil: Total VOCs in soil range from non-detect to 400 parts per million (ppm). Compounds exceeding their restricted-residential soil cleanup objectives (RRSCOs) include xylene up to 190 ppm (RRSCO of 100 ppm) and benzene up to 9.5 ppm (RRSCO of 4.8 ppm). Total SVOCs in soil range from non-detect to 7,000 ppm. Compounds exceeding their RRSCO's include acenaphthene up to 390 ppm (RRSCO of 100 ppm) and naphthalene up to 2,500 ppm (RRSCO of 100 ppm). Several metals exceeded their RRSCO s including copper up to 3,330 ppm (RRSCO of 270 ppm) and lead up to 2,190 ppm (RRSCO of 400 ppm). The only pesticide detected above RRSCOs was alpha-BHC at 0.93 ppm (RRSCO of 0.48 ppm). PCB s were not detected in soil above RRSCOs. Soil Vapor: Sub-slab and indoor air samples were collected in two on-site buildings. Petroleum VOCs were detected however no standards, criteria and guidance values exist for these compounds. No chlorinated VOCs were detected. Significant Threat Determination: The site was determined to represent a significant threat to public health and the environment. Post-Remediation: Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (containment/ capture wells, vapor mitigation, soil cover/ cap) of the remedy will be operated and maintained under the SMP.

Health Problem:

Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U154

. Waste name: METHANOL (I)

. Waste code: U239

. Waste name: BENZENE, DIMETHYL- (I,T)

Site Description: Location: The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28. Current Zoning and Land Use: The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet

southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.

Env Problem: Nature and Extent of Contamination: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The concentration of xylene has been reduced from a maximum of 105,000 ppb to 63 ppb in the most recent sampling round.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

Site Code: 55924

Site Description: Location: The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28. Current Zoning and Land Use: The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is approximately 25-30 feet below ground surface.

Env Problem: Nature and Extent of Contamination: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging

system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The concentration of xylene has been reduced from a maximum of 105,000 ppb to 63 ppb in the most recent sampling round.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

**FINDS:**

Registry ID: 110001581075

**Environmental Interest/Information System**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

 Site Description:

Location: The Queens Plaza Residential Development - Site B Off-site is located in an urban area surrounding 28-10 Jackson Avenue in Long Island City. This site is the off-site project for Site No. C241151: Queens Plaza Residential Development - Site B and includes the surrounding land in all directions excluding three properties (Site No. C241105: Queens Plaza Residential Development, Site No. C241105A Queens Plaza Residential Development - Offsite and C241169: Queens Plaza Residential Development - Site C). The precise boundaries of this site will be identified after the remedial investigation has been conducted. This site was divided into two operable units (OUs) for administrative reasons. The operable units will be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination.

OU-01 represents off-site areas to the east, west and north. OU-02 represents the LIRR property to the south. Current Zoning and Land Use: This area of Long Island City is zoned M1-6/R10 (Manufacturing and Residential) under the special Long Island City Mixed Use District. According to the NYC Department of City Planning website, The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Site Geology/Hydrogeology: Based on the information collected on Site No. C241151, depth to bedrock varies from approximately 5 - 50 feet below grade (fbg) and consists predominantly of gray gneiss with varying degrees of weathering. Surface soils consist of a fill layer approximately 4 12 feet in thickness. This fill is a mixture of fine to medium sand, with some silt and gravel and traces of brick, cinders, concrete, cobbles, and wood. The fill is underlain by silty sand and glacial deposits followed by a layer of fine sand with intermittent seams of silt and clay. The groundwater table ranges from approximately 3 to 12 fbg over the site. Based on groundwater elevation data collected in 2014, groundwater appears to flow west, south and north.

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo: "Spill occurred from/onto Outlet City, Inc. (V00081). The Voluntary site consists of several large abandoned buildings. Prior to 1978, the site was known as West Chemical Company. The site is predominately contaminated with creosote. Spill occurred water being discharged from a pipe inside one of the abandoned buildings on-site. The leak could be due to disrepair or vandalism. Water eventually flooded the southernmost part of the site adjacent to the Sunnyside Yard (specifically LIRR property). The flood extended onto the LIRR by approximately 60ft. Spoke with: Gloria G. Russo, LEED Green Associate Manager Environmental Planning & Compliance Corporate Safety & Training Department Long Island Rail Road 144-41 94th Avenue JCC Building, MC 1944 Jamiaca, NY 11435 Tel 347-494-6034 Cell 516-369-4889 Refer to C241151A: Queens Plaza Residential Development Site B off-site 5/21/13 - required work plan to investigate Spill within 30 days July 12, 2013 - approved work plan to investigate the flooded area (both on-site and off-site) LIRR and Outlet City need an access agreement to implement Department's plan to investigate the Spill area (350ft by 70ft) through surface soil sampling October 2013 - Outlet City currently has no environmental consultant to implement the approved work plan and no plan to May 2013 - Haggerty: The BCA to remediate the on-site contamination at Outlet City (formerly West Chemical) was executed 5/20/14. The remediation of off-site contamination at this time is under negotiation between the Volunteer and Outlet City"

Remarks: "Watre pipe broke on a prior contaminated site and it feared that water is spreading contamination. Mike Haggarty of DEC Spills is

Site Description:

Location: The former Roehr Chemicals facility is located in an urban area at 52-20 37th Street, Long Island City, Queens, at the corner of Starr Avenue. Roehr Chemicals operated four buildings on five lots described as Queens County Tax Map Block 310, Lots 1, 8, 23, 24 and 28. The Site is identified as Block 310, Lot 28. Current Zoning and Land Use: The site is located in a mixed-use area with industrial, commercial and residential uses. The Long Island Expressway (Interstate 495) is located about 1200 feet north of the site. Calvary Cemetery is located immediately east of the site across 37th Street, and Newtown Creek is located approximately 1750 feet southwest of the site. Site Features: The site consists of a one story building on a 100 feet x 100 feet property. The building is presently used as a warehouse for storing packing boxes, and the adjacent partial yard is used for storage and parking. Past Uses of the Site: On this site bulk pharmaceuticals and pharmaceutical intermediates were manufactured from 1957 to 1991. Several VOCs, such as xylene, benzene and diethyl-ketone, were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. Lot 28 contained the main building and has been the focus of the investigation and remediation. Other lots that were part of Roehr Chemical (Block 310, Lots 1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. Geology and Hydrogeology: Groundwater flows to the southwest, toward Cavalry Cemetery and eventually toward Newtown Creek. Groundwater is

MAP FINDINGS

Env Problem: approximately 25-30 feet below ground surface. Nature and Extent of Contamination: Prior to Remediation, the Remedial Investigation/Feasibility Study (RI/FS) found groundwater contaminated with xylene and acetone. The RI showed an elongate and narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Post-Remediation - The remedial actions taken to date have adequately addressed the significant threat posed to the environment by the contamination. The remedial actions included the operation of a soil vapor extraction and air sparging system with groundwater monitoring. With the operation of a AS/SVE system, the groundwater concentrations of site related contaminants were reduced to non-detect levels in most wells. The AS part of the remedial system has been pulsed and the SVE was shut off in June 2013. It was determined that a significant reduction in groundwater concentrations of xylene and ethylbenzene have been achieved. The concentration of xylene has been reduced from a maximum of 105,000 ppb to 63 ppb in the most recent sampling round.

Health Problem: People are not expected to contact contaminated soil because buildings and pavement cover most of the site. People may contact contaminated soils if they dig below surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply system that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are not needed to address the potential for soil vapor intrusion in on or off-site structures.

 Site Description:

Location: The site is a narrow plot of land perpendicular to Jackson Avenue in Long Island City (Queens County) approximately 150 feet west of Queens Boulevard. The site is bordered by Jackson Avenue to the north and surrounded by Queens Plaza Residential Development - Site B (Site No. C241151) on the east, west and south. Site Features: Prior to excavation under the approved IRM, the site is covered by asphalt and concrete sidewalks. Current Zoning and Land Use: The Site is located in the Special Long Island City Mixed Use District and is zoned M1-6/R-10 (manufacturing and residential). According to the NYC Planning website, the Special Long Island City Mixed Use District

"promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills." Past Use of the Site: Prior to November 18 2014, the property was a dedicated NYC street operated by the NYCDOT. Previously known as Barn Street from 1898 to 1936 and West Street from 1947 to 2014. Site Geology and Hydrogeology: The subsurface soils consist of a fill layer approximately 6 to 8 feet in thickness. The fill is a mixture of fine to medium sand, with some silt and gravel and traces of brick, concrete and cobbles. The fill is underlain by silty sand and glacial deposits followed by a layer of fine sand with intermittent seams of silt and clay. Bedrock is present at approximately 33 to 50 ft. bg. Depth to the groundwater table is approximately 8 ft. bg. at the site. Regional groundwater flow to the southwest.

Env Problem: As of April 2016, all soil within the top 15 feet below grade which exceeded restricted-residential Soil Cleanup Objectives (SCOs) was removed and properly disposed of off-site. A Site Management Plan (SMP) will be implemented to managed remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. Prior to remediation, soil and groundwater samples were collected for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), pesticides and metals. Contamination encountered on-site appeared related to historic urban fill: Soil: No VOCs exceeded restricted-residential soil cleanup objectives (RRSCOs) Several SVOCs exceeded RRSCOs in soil. For example, benzo(a)anthracene was detected up to 3 parts per million (ppm) and the benzo(b)fluoranthene was detected up to 3 ppm (the RRSCO for both compounds is 1 ppm). Two metals exceeded RRSCOs. One sample for mercury at 0.84 ppm (the RRSCO is 0.81ppm). One sample for lead at 1,900 ppm (the RRSCO is 400 ppm). PCBs and pesticides were not detected above RRSCOs. Groundwater: One groundwater sample was collected on-site. VOC, SVOC, PCB and pesticide concentrations were below groundwater standards. The metals iron, manganese and sodium exceeded groundwater standards. No soil vapor data was submitted.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D008  
. Waste name: LEAD

. Waste code: F003  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110070243874

Environmental Interest/Information System  
ETHANOL FACILITY/GASOLINE AND DIESEL PRODUCERS

Registry ID: 110000323178

Environmental Interest/Information System  
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

**AIR EMISSIONS CLASSIFICATION UNKNOWN**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "10/05/09-HRAHMED-Spoke to Rickey Fernandez of Getty Petroleum (718 361-9806). As per him, 5 gal spilled due to mistake of a driver during refueling of his truck. Spilled on concrete and then went to a drain which leads to a containment bucket. They put some speedy dry on the concrete and a contractor will come to vac the containment bucket. This case is closed. "  
Remarks: "gas went into a containment drain; clean has taken place"

DEC Memo: "08/18/08 - LZ The June 16, 2008, quarterly monitoring report covering March- May of 2008 shows no LNAPL in any of six monitoring wells. Total BTEX were found from 0.00 to 26 ppb; MTBE up to 2 ppb; total SVOCs up to 747 ppb. As requested by the Department to complete its files, Tyree Brothers Environmental Services, Inc., sent a report, dated April 27, 2005, containing results of removal of contaminated soil and water from vicinity of the 2,000-gallon tank. About 24.22 tons of soil were removed and six borings conducted to install monitoring wells. Soil analyzes indicate elevated contamination at some locations: for example, at MW-2, total xylenes (2,390 ppb); at MW-6, acetone (247 ppb); at MW-1, chrysene (509 ppb); and contaminated groundwater that has shown improved quality over years (data in subsequent reports). The spill case is closed.  
03/25/08 - LZ Prepared by Tyree Organization, the quarterly monitoring report for the period December 2007-February 2008 does not reveal LNAPL in any of seven gauged monitoring wells; no MTBE was detected; total SVOCs concentrations varied from non-detected to 509 ppb; total BTEX was from non-detected to 34 ppb. 12/30/07 - Zielinski The December 18, 2007, quarterly monitoring report for September-November 2007 shows that no LNAPL was detected in any of six monitoring wells. Total BTEX was in the range from non-detect to 51.68 ppb, MTBE in the range from non-detect to 2.56 ppb, total SVOCs from 0.00 ppb to 257.84 ppb. Gauging was performed monthly, and absorbent material was placed in all monitoring wells. 09-19-07 - Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period June-August 2007 does not reveal LNAPL in any of seven gauged monitoring wells. Also, no MTBE was detected. Total BTEX: 56.19 ppb(MW-6) the results show that since August 2005, concentrations of benzene, toluene, and total xylenes have been diminished. 03/09/07 - Zielinski The March 9, 2007, quarterly

S104953029

monitoring report for December 2006-February 2007 shows that LNAPL was detected in Well 3(7 wells present). Total BTEX was in the range from nondetect to 48.37 ppb, MTBE in the range from nondetect to 5.94 ppb(eDocs). 12/15/06 - Zielinski Prepared by Tyree Organization, a quarterly monitoring report for the period September-November 2006 shows that Well 3 contained LNAPL. Also, total BTEX ranged from nondetect to 141.51 ppb, MTBE ranged from nondetect to 3.96 ppb, and total semivolatiles from 12.83 to 57.54 ppb. Thus, these numbers indicate that concentration of contaminants has been decreased since summer of 2006. 10/18/06 - Zielinski A quarterly monitoring report for the period July-September 2006, prepared by Tyree Organization, 208 Route 109, Farmingdale, NY 11735, indicates that: - free product was detected in well #3. Six other wells do not indicate any presence of LNAPL - total BTEX was in range of non-detect to 257.56 ppb - total SVOC was in range of 1.43 to 392.44 ppb The facility continues remediation by employing a passive bailer in well #3. 1/31/05-Vought-Spoke to Ed Waldron (Tyree) and spill amount is 800-1000 gallons for a 1000 gallon fuel oil UST. Tank was removed and is in soil. Soil excavation is continuing. Waldron wanted to know when to stop digging. Vought instructed to dig to groundwater and arranged site visit for 2/3/05 at 10am. 11/8/2005 - Investigation plan was approved. Six GW monitoring wells were installed. Two wells have free product. Weekly pump out is performed by Tyree. Stipulation Agreement will be issued."

DEC Memo: "3/5/07 - Raphael Ketani. I called up Fred Cornell of Sims Hugoneu (cell (201) 739-9687). He said that the barge had been sitting overnight when it sunk. He suspects there is a hole in the hull, but he doesn't know for sure. He said that, sometimes, when the tug boat operator pushes a barge, he hits or bumps into something. The barge didn't contain oil or oil holding tanks. It is a non-motorized barge. It just had scrap metal and this was unloaded. There is no sheen from the barge. The Coast Guard has been notified. The barge will be refloated and repaired. I asked him why this was called into the Spill Response Hotline when there was no oil in or on the barge. He said that he was just being cautious about the incident. Based upon my conversation with Mr. Cornell and the information above, I am closing the spill case."

Remarks: "BARGE SUNK AND NO SHEEN AT THIS TIME AND UNLOADING SCRAP METAL FROM BARGE AT THIS TIME;"

Quantity: .00  
Units: G  
Recovered: .00  
Oxygenate: Not reported

Spill Number/Closed Date: 9805015 / 1998-07-22  
Facility ID: 9805015  
Facility Type: ER  
DER Facility ID: 87815  
Site ID: 98749  
DEC Region: 2  
Spill Cause: Equipment Failure  
Spill Class: C4  
SWIS: 4101  
Spill Date: 1998-07-22  
Investigator: SMMARTIN  
Referred To: Not reported  
Reported to Dept: 1998-07-22  
CID: 366  
Water Affected: Not reported  
Spill Source: Tank Truck  
Spill Notifier: Responsible Party  
Cleanup Ceased: Not reported  
Cleanup Meets Std: False  
Last Inspection: Not reported  
Recommended Penalty: False  
UST Trust: False  
Remediation Phase: 0  
Date Entered In Computer: 1998-07-22  
Spill Record Last Update: 1998-07-23  
Spiller Name: JIM CAREY  
Spiller Company: CASTLE OIL CORPORATION  
Spiller Address: 290 LOCUST AVENUE  
Spiller Company: 001  
Contact Name: JIM CAREY  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was  
MARTINKAT "

Remarks: "CALLER REPORTING THAT THE LINE FROM THE TRUCK FAILED, SPILLING  
PRODUCT. SPILL CREW IS ENROUTE, PRODUCT IS CONTAINED."

All Materials:

Site ID: 98749  
Operable Unit ID: 1062928  
Operable Unit: 01  
Material ID: 319770  
Material Code: 0001A  
Material Name: #2 fuel oil  
Case No.: Not reported  
Material FA: Petroleum  
Quantity: 15.00  
Units: G  
Recovered: 15.00

required.(sr) 06/25/12 Rec'd Work Plan to investigate the horizontal and vertical extent of subsurface petroleum impacts.(sr) 08/07/12 LNAPL delineation work completed, summary report will be sent to DEC shortly.(sr) 02/06/13 Remedial Investigation Report in edocs.The site is an active scrap metal recycling facility located at the confluence of Dutch Kills and Newtown Creek.The Dutch Kills is located to the west of the site.Newtown Creek is located to the south of the site, property to the north is rail road track operated by LIRR.The adjoining properties to the east of the site are utilized by others for commercial and or industrial operations.Spill was identified when the pressure test of the underground line failed(AST 150,000 gallon).Leak was identified.Franklin Company disconnected the feed and return line.Integral Engineering performed remedial investigation.Twenty five soil borings and twenty one monitoring wells were installed through out the site.Monitoring wells were installed in soil borings with significant impacts and visible LNAPL at the groundwater interface.Five permanent monitoring wells were installed in phase I.Petroleum impacted soil/fill was observed in SB-6/MW-2 at 7-10 ft bgs in the northern corner of the Site, adjacent to the rip-rap bulkhead along the Dutch Kills Basin. Three separate plumes of LNAPL are present at the site.Plume A consists of weathered and biodegraded diesel fuel, located to the northwest of AST and west of the underground pipeline trench in the vicinity of MW-1(3.81ft), MW-2(2.28ft), MW-9(0.11 ft), MW-10(0.37 ft), MW-11(0.38ft) and MW-13(2.62ft). Plume A is believed to be downgradient of the source of the diesel fuel release. Plume B consists of weathered and biodegraded diesel fuel, concentrated in the former pipeline trench, in the vicinity of MW-19(0.12 ft) and MW-20(0.28 ft).Plume B is also appears to be result of an additional segments of corroded and impaired pipings.There are no active sources for Plume A and Plume B as the underground pipelines were removed. Plume C consists of a more viscous and highly weathered unidentified LNAPL in the vicinity of MW-15(0.50 ft) and MW-16(0.43 ft). The following wells are identified with no LNAPL and are being used to illustrate the outer limits of Plume A, B and C:MW-3, MW-4, MW-5, MW-6, MW-7, MW-8, MW-12, MW-14, MW-17, MW-18, MW-21. Ground water was encountered at depth of 5 ft bgs throughout the site. Recovery effort was performed on Plume A to remove product and monitor for product recharge to evaluate the optimal locations for long term recovery efforts. Plume area A appears to be the greatest available volume of recoverable LNAPL. The proposed IRM includes installation of recovery wells and electric belt skimmers. Three recovery wells(RW-1, RW-2 and RW-3)were installed in Plume A. Additional recovery wells/belt skimmers setups are anticipated for plume B and C as part of the IRM. 03/01/13 Rec'd email from Kevin Mccarthy(212-962-439x314) regarding Offsite investigation on LIRR proerty.They are checking the issue with their attorney.(sr) 3/12/14-Vought-DEC Rahman received email from DEC Ian Beilby dated 3/11/14 that Hi Sharif, Any new progress on this investigation? I checked edocs but it looks like there has been no activity in the past year. DEC Rahman forwarded email to Vought and Vought spoke to DEC Demeo and spill to be assigned to DEC Mahat. 4/2/14-Vought-Sent email to DEC Beilby with cc to DEC Mahat that Ian, The case has been reassigned to Santosh Mahat (cc'd above) and you may also reach him at 718-482-4038. Thanks. Spill reassigned from Rahman to Mahat. 9/3/14: Mahat DEC Mahat contacted Mr. Kevin McCarty @ 212-962-4303 inquiring more information about the current status of the remediation actions. Mr. McCarty mentioned that the remediation

**SIMS METAL MANAGEMENT (Continued)**

**S111836487**

is still going on and he is recovering free products from couple of recovery wells. He is using belt skimmer to collect free products. A report is due from November 2012-present day. 9/25/14 TJD Spill #1405728 associated with housekeeping was identified during inspection of facility as part of Newtown Creek/Dutch Kills sheen trackdown investigation on 8/26/14. Spill of waste oil was observed following the acceptance and dumping of debris reported to have been brought to the facility by NYC Housing Authority. The spill was cleaned immediately by facility personnel. Above spill note is for reference only as surface spill is not directly related to reported AST tightness test failure and subsequent removal of AST and installation of monitoring well network and recovery system. DEC REQUIRE : 1. Need all laboratory data from monitoring well even with no product well. 2. Measure Groundflow direction 3. Dissolved GW sampling at plume edge wells 4. Monitoring recovery wells by dispenser line - Deleniation. 5/20/15: Mahat DEC Mahat received an email update from James L'Esperance ( Integral ). Santosh, Sims has just informed me that they plan on commencing work on the stormwater basin at their Queens facility tomorrow. This work will involve excavating soil from the area of Spill #12-00318, as discussed during our site meeting and in the Remedial Action Letter submitted in April. Sims intends on starting the work tomorrow. I m anticipating that the work will last 2-4 weeks. Integral will have a geologist on-site during all excavation activities. Please feel free to give me a call to discuss if you have any questions. Thanks, James James L'Esperance Integral Consulting Inc. - www.integral-corp.com 61 Broadway, Suite 1601 - New York, NY 10007 Tel: 212.440.6708 - Cell: 646.285.4808 - Fax: 212.962.4302 8/6/15: Mahat DEC Mahat received an email from the contractor regarding the backfill material: Email: Santosh, Here s the information on the imported recycled concrete fill that we discussed. Allocco Recycling is a NYSDEC registered C&D facility. This material will be used as backfill beneath pavement. Let me know if there s anything else you need. Thanks! James L'Esperance The backfill documents has been uploaded on D2 for reference. 8/13/15: Mahat Site Visit: DEC Mahat and DEC Omar visited the site during the side wall sample collection. All collected sampled will be analyzed for the EPA 8260 and EPA 8270. A complete report will be forwarded to the Department one the results is published. 8/18/15: Mahat DEC Mahat request Mr. L'Esperance to provide a weekly report on the site: Here an update: Weekly Progress Report for SIMS Metal Management (Queens) August 18, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 In May 2015, SIMS Metal Management (SMM) began excavating the area of open spill #12-00318 down to approximately 5 ft bgs as part of their plans to install a storm water retention basin. Due to space restrictions on-site, the excavation is being performed in several stages. Two soil stockpiles (COMP-1 and COMP-2) were generated and separated based on the degree of contamination from visual and olfactory inspection, as well as measuring volatiles with a PID. Soil from COMP-2 was significantly more impacted than soil from COMP-1. Waste characterization samples were collected in mid-June, and the soil was removed from the Site upon approval from Clean Earth New Jersey (CENJ). Material from COMP-1 (approximately 30 cubic yards) was transported to CENJ of Carteret in mid July. Material from COMP-2 (approximately 240 cubic yards) was transported to the same facility from July 29-31. On August 5, SMM s contractor (NOVA) began installing supports and sheathing within the excavation. On August 13, Integral (James L

**SIMS METAL MANAGEMENT (Continued)**

**S111836487**

Esperance and Stacey Ng) collected a total of ten sidewall endpoint samples outside of the sheathing, representing the material to be left in place. All soil samples will be analyzed for CP-51 list VOCs (via USEPA Method 8260C) and SVOCs (via USEPA Method 8270D), in accordance with the Remedial Action Letter, dated April 16, 2015. A groundwater bottom sample will be collected once all of the sheathing is installed and all material is removed from the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). Please let me know if you have any questions. Thanks, James 8/24/15: Mahat Weekly Update: Weekly Progress Report for SIMS Metal Management (Queens) August 24, 2015 30-27 Greenpoint Avenue, LIC, NY Spill # 12-00318 Last week, the contractor (NOVA) completed the installation of sheathing around the extents of the excavation. This week, the remaining material will be excavated, sampled, and characterized for disposal as another pile (COMP-3). The water bottom sample is tentatively scheduled for Monday, August 31. Please let me know if you have any questions. Thanks, James 8/28/15: Mahat DEC Mahat received an email informing the water bottom sample will be taken on August 31, 2015. Result of the samples will be forwarded to the Department for review. 9/1/15: Mahat DEC Mahat received another update on the case: Update: Last week, SMM s contractor (NOVA), began excavating the remaining material left in the footprint of the future retention basin. From Aug. 24-27, NOVA removed approximately 1,000-1,300 cubic yards of material and stockpiled the soil to the southwest of the excavation. Large wood debris and impacted boulders/concrete were taken to an approved facility for proper disposal. On Friday, Aug. 28, NOVA completed removing all required material, at which point, Integral collected waste characterization samples according to the sampling protocol for Clean Earth of New Jersey (CENJ). This stockpile is referred to as COMP-3 and will remain covered on-site until approval from CENJ. Upon receipt of the results from the lab analysis, CENJ will provide trucks to begin hauling material off-site to its facility in Carteret, NJ. This is expected to begin sometime during the week of September 7, 2015. Yesterday, Aug. 31, Integral returned to site to collect the bottom endpoint groundwater sample. We anticipate receiving analytical results next week. 9/4/15: Mahat DEC Mahat received endpoint sample those were collected from the side walls and bottom of the excavation. All laboratory result has been uploaded on D2 for reference. All collected wall samples are Below CP 51 guidance value. GW water sample was below TOGS standards with exception of Naphthalene, Benzo(b)fluranthene, Cherysene and Indeno are slightly above TOGS Standard. Based on the laboratory result, no further remedial action is warranted on the excavated area. However, there are 6 1" monitoring well that needed GW samples. James will collect water sample from those MW and analyzed for EPA 8260 and EPA 8270 for the confirmation. More remediation plan will be drafted once the result is out. DEC is waiting for sample report. 9/15/15: Mahat DEC Mahat sent an email to Mr. L'Esperance: Email: James, I have reviewed the site map and soil samples submitted on 9/4/15. Almost all soil samples are below CP 51 guidance values. There is nothing to discuss on this portion of the site for further remediation unless GW sample is opposite. The Department is also interested to know the current status of the former underground pipeline that runs behind the building. Feel free to contact me if you have any questions or concerns. Ps. we can conduct a conference call once GW result is out.

10/07/15: Mahat DEC Mahat received an email from Mr. L'Esperance: Email: Santosh, I ve just received the groundwater results for the trench wells at the site (see attached). MW-19 was not sampled because its cap and casing are damaged beyond repair. MW-21 was not sampled because it was dry at the time of sampling. Please let me know when you d like to discuss the results. Thanks, James 10/8/15: Mahat DEC Mahat sent an email to Mr. L'Espernace confirming further remediation on the site is not warranted by the Department. Email: James, Thank you for the info and update. The Department is satisfied with all the lab results. Please prepare a standard report for the closure of the spill case. Let me know if you have any questions or concerns. Santosh Mahat - Environmental Engineer DEC Mahat is waiting for a complete closure report for review. 2/9/16: Mahat DEC Mahat contacted Mr. L'Espernace inquiring about the status of the closure report. The report has been submitted to SIMS for a review. Once the report is done reviewing by SIMS rep. it will be forwarded to the Department. 4/12/16: Mahat DEC Mahat uploaded the closure report submitted to the Department. Based on the report, the Department does not warrant any further action on the site. Spill case is closed on NYSDEC Spill database. 4/25/16: Mahat e/c: A spill closure letter has been sent and uploaded on D2 for reference. 8/10/16: Mahat e/c: DEC Mahat received an email update from the consultant via email. He notified the Department that the free product has been detected MW-16. Email: Hi Jeff and Santosh,As discussed on Friday, 0.17 feet (about 2 inches) of separate-phase product was discovered in MW-16, which is a 1 well located in the former pipeline trench northeast of where the excavation occurred. The product was bailed out and the well re-gauged; no product was immediately detected. As discussed, Sims and Integral will bail the well every two days, and also gauge the well on a regular basis for the next two months. I ll keep both of you updated with the results of this exercise. Thanks, James Based on the email, the spill case has been re-opened and further investigation/action is required. As per the email, the consultant will be gauging the MW for another two months and bail MW every two days. 10/21/16 - Austin - Transferred from Santosh Mahat (transferred out of Spills unit)to Jeff Vought for continuance of the work - end 1/17/17-Vought-Received email from DEC Ian Bielby that Jeff, Sorry to bother you on this spill but I see this spill is reopened due to some reappearance of NAPL. I m trying to determine if there are potential impacts to newtown creek as a result of this information. Can you tell me whether there are any wells close to Newtown creek that have NAPL? Vought performed full D2 file review and produced Non-FOIL summary site plans. Vought noted that reports describe three LNAPL plumes (Plumes A, B, C) and Plume A was addressed via excavation of the entire plum to 5' below the water table. Plume B and C were addressed reportedly via hand bailing. Vought noted however that Plumes B and C were never delineated and also documentation does not specify how these plumes were remediated. 1/18/17-Vought-Sent letter to Simsmetal East LLC, approving of email proposal dated 8/10/16 and requiring submission of a RIWP including: 1)Product recovery data for well MW16 as per 8/10/16 Email from Integral 2)Delineation of soil and groundwater contamination of Plume C at MW-16 3)Submission of Historical IRM data for Plume C 4)quarterly sampling of wells surrounding Plume C. CC'd on letter were Intergral(L'Esperance), OGC Urda and DEC Bielby. Vought also added letter to D2. Vought sent email reply to DEC Bielby that Ian, You never need to apologize as you are never a bother lol. In response to your email query below,

**SIMS METAL MANAGEMENT (Continued)**

**S111836487**

and as I recently took over this project from Santosh (who has departed Spills), I have reviewed all available files in D2 and drafted up my usual technicolor Non-FOIL summary site plans which are attached above. To answer your question on potential impacts to Newtown Creek there were historical impacts to the Creek with a documented sheen in 2012 from what the reports call LNAPL Plume A . Furthermore data from this time also showed up to .5 of LNAPL in well MW-2 which was immediately adjacent to the Creek. In 2016, Plume A was entirely excavated to 5 feet below the water table as part of the installation of a new storm water retention basin. Endpoint samples from the Plume A excavation only showed minor detections of VOCs above Unrestricted SCOs and a bottom groundwater sample from the excavation only showed 85ppb benzene and 30ppb naphthalene. There were also two additional LNAPL plumes at the site (Plumes B and C) which were remediated via bailing of wells. Note that Plumes B and C are separated from the Creek by the remedial excavation of Plume A so it is unlikely that these plumes are currently impacting the Creek. Due to the disappearance of LNAPL from the site as well as minimal dissolved groundwater concentrations, the spill was closed on 4/25/16. On 8/10/16, we received an email from the consultant that .17 of LNAPL was observed in MW-16 which was identified as part of Plume C. In this email the consultant proposed manual bailing of the well and submission of a report. At that point the Department re-opened the Spill. As I have just reviewed the entire file, I am sending out a letter (attached above) to the consultant via separate email today (with a copy to you) requiring submission of a RIWP including: 1) Product recovery data for well MW16 (Plume C) 2) Delineation of soil and groundwater contamination of Plume C 3) Submission of Historical IRM LNAPL recovery data for Plume C 4) Quarterly sampling of wells surrounding Plume C. Hope this this helps and as always let me know if you need anything else, Thanks! 1/18/17-Vought-Sent email to Integral (L'Esperance) with cc to OGC Urda and DEC Beilby that James, I have taken over the above referenced spill from Santosh Mahat as he is no longer with the Spills Unit and as such I have reviewed all available reports for the site that are in our document system. I have attached the Department s spill reopening and requirement letter above and look forward to the submission of an RIWP that includes the requirements on the letter. An original of the letter is in the US mail to SIMS Metal East. Thanks. 1/19/17-Vought-Received email from Integral (Keith Brodock) with cc to OGC Urda, DEC Bielby, Integral (Corso/McCarty) that Hi Jeff, Katie Corso has taken over the SIMS project on our end, with support from Kevin McCarty (both copied here). (James L Esperance left Integral for a job at Northrup Grumman in California.) I will forward your email to Katie and Kevin, and one of them will be in touch. Please give me a ring if you need anything in the interim. Contact for Integral is: Kathryn Corso email: kcorso@integral-corp.com Ph: (212)440-6702 Cell:646-895-3325 Vought sent reply to Brodock with cc to all that Keith, Thanks for the quick reply and the new contact information for Integral. If Katie and Kevin have any questions and/or would like to discuss the Department s requirements, they can certainly call me. DEC Requires as per Consent Order, Resubmission of RIWP including: 1)Approval of proposal for IRM Product recovery from Plume B as per 8/10/16 email from Integral pending inclusion of 2)Delineation of Plumes B 3)Submission of IRM Reports showing recovery for Plume C. Installation of 4 recovery well at location. 4)Quarterly groundwater monitoring of

supply/return lines were found corroded. the faulty lines and the tank were removed from the site. multiple soil borings and groundwater monitoring wells were installed during subsurface investigation/remediation. three separate LNAPL plumes (A, B and C) were identified: - Plume A consists of weathered and biodegraded diesel fuel, located in the area to the north of and adjacent to the AST. this plume was remediated via product recovery using skimmers and excavation for installation of stormwater retention basin. - Plume B consists of weathered and biodegraded diesel fuel, concentrated in the former pipeline trench in the vicinity of wells MW-19 and MW-20 (near northeast corner of on-site building which is first building to the east of the former tank) - Plume C consists of a more viscous and highly weathered unidentified LNAPL, concentrated in the vicinity of the former pipeline trench in the vicinity of wells MW-15 and MW-16 (near northwest corner of on-site building which is second building to the east of the former tank) the spill case was closed on 04/25/2016 based on review of Spill Closure Report dated 02/10/16 (summarized above), but re-opened as product was noted again in existing well MW-16 (Plume C). on 01/18/2017, DEC Vought sent letter requiring delineation of Plume C, IRM data for Plume C and quarterly sampling of well around Plume C. 10:35 AM:- left message for Keith at Integral. 10:56 AM:- received call from Keith and Katie from Integral. Keith mentioned that no work has been conducted since case re-opening. asked Keith to send copy of IRM Report dated 06/10/13 (as incomplete report in file), Remedial Action Letter dated 04/16/15 (which is missing) and email dated 08/10/16 (if available). 12:02 PM:- left message for Mr. Cunningham. Prolerized Schiabo-Neu Company \*\*property owner as per NYC ACRIS\*\* (partnership of Hugo Neu & Sons, Inc., Proler International Corp. and Schiavone-Bonomo Corp.) Simsmetal East LLC. \*\*owner listed on PBS record\*\* One Linden Avenue East Jersey City, NJ 07305 Attn.: Craig Cunningham Ph. (201) 577-3200 / 3158 (201) 725-8515 email: craig.cunningham@simsmm.com 12:20 PM:- sent email to Mr. Cunningham including copy of letter dated 01/18/2017. asked him to immediately submit required information/documents. email copied to Keith and Katie. 12:25 PM:- received call from Mr. Cunningham and inquired him about required documents as per letter dated 01/18/17. he mentioned that Integral is doing groundwater monitoring. informed him about discussion with Keith/Kathryn (who mentioned that no remedial activities conducted by Integral at the site since case reopening) earlier today. asked Mr. Cunningham to schedule a site inspection and well gauging. 12:33 PM:- sent email to Mr. Cunningham and asked him to schedule a site inspection. informed him that all well locations should be clear for inspection/gauging. email copied to Keith and Katie. 1:50 PM:- received email from Katie including IRM Report and Remedial Action Letter. remedial action letter included proposed work for installation of stormwater retention basin. the IRM report is missing Appendix A (Well Gauging Data). 07/11/18-Hiralkumar Patel. 11:44 AM:- received email from Katie. she mentioned that their IT department look through James L Esperance s email archives, but did not find the email from August 10, 2016. also, she did not find the actual attachment A to the IRM report, but submitted the well gauging data from 2012-2014. reviewed well gauging data in IRM report. area of Plume A was remediated via excavation to install a stormwater retention basin. wells MW-19 and MW-20 were located in area of Plume B. during well monitoring between Aug. 2012 and Oct. 2014, product was not found in well MW-19 after Nov. 2013; and in well MW-20 after

Nov. 2012. wells MW-15 and MW-16 were located in area of Plume C. during well monitoring between Aug. 2012 and Oct. 2014, product was not found in well MW-15 after Sept. 2013 (except 2.5 in. in Nov. 2013); and in well MW-16 after Nov. 2013. 1:30 PM:- sent email to Katie and asked her to schedule a site inspection to gauge all existing wells. email copied to Keith. 07/26/18-Hiralkumar Patel. received email from Katie (at 1:57 PM on 07/25/18) including copy of email dated 08/10/16 (from James to DEC Vought/Mahat). Katie also confirmed site inspection at 10 AM on 08/02/18. 08/02/18-Hiralkumar Patel. 10:00 AM:- visited site with DEC Sekhon. met Keith (Integral), Katie (Integral), Eric Knorr (facility manager) and Mr. Cunningham. Mr. Cunningham mentioned that only one well MW-16 is left at the site and all other wells were either closed or destroyed. free phase product was noted outside a bailer previously placed in the 1-inch well. Katie mentioned that the well MW-16 has been gauged multiple times since detection of product in Aug. 2016. she also stated that product sample was collected from the well recently for fingerprint analysis. mixture of degraded diesel fuel and lubricating oil is found in the well. well MW-16 was gauged. groundwater was found at 5.5 ft bg, with 4 inches of product on top. a previously used utility vault was noted approx. five ft east of well MW-16 location. Mr. Cunningham mentioned that the concrete vault was taken out-of-service when they removed generator from the site. the concrete vault is approx. 6 ft deep. informed Mr. Cunningham/Keith that the Department requires further remediation at the site either by 1) replacing 1-in well with larger diameter well/adding more wells to the east (as there were no well to the east of MW-16 in past) and installation of belt skimmer, or 2) using existing vault for product recovery by drilling holes in vault's walls/floor to allow product accumulation, or 3) excavation/removal of contaminated material in the area of MW-16. Mr. Cunningham will discuss remedial options with property owner and will send a work plan. Eric Knorr Facility Manager PH. (718) 786-6031 (646) 531-0822 (C) email: eric.knorr@simsmm.com 12:03 PM:- received call from Keith. he mentioned that property owner has planned to use existing concrete vault for product recovery. he will submit plans for that. 2:14 PM:- received email from Katie including well gauging data and fingerprint analysis result. product sample was collected on 07/13/18 and results show that the sample contained a mixture of both diesel fuel oil (#2 fuel oil) and a lubricating, motor or waste oil. well MW-16 was gauged multiple times between July 2016 and Oct. 2017 and noted product between 0.03 ft and 0.55 ft (max. on 08/31/17). 09/20/18-Hiralkumar Patel. 9:49 AM:- received email from Katie. she mentioned that ConEd will inspect the vault and confirm it is abandoned. she is waiting for drawings for the oil recovery system. 10/12/18-Hiralkumar Patel. 12:44 AM:- sent email to Katie inquiring updates. 12:51 PM:- received email from Katie. she mentioned that ConEd has visited the site once, but they are due back again on 10/24. after this second site visit, SIMS hopes to get an answer from ConEd on whether they can use the manhole for oil recovery. \*\*site maps with well gauging data on H drive.\*\*"

 Record Updated Date: 05/04/2017  
 Update By: JHOCONNE  
 Site Description: Location: The site is comprised of an entire city block in Long Island City, Queens County, and is bounded by Jackson Avenue to the north, Davis Street to the east, Crane Street to the west and the Sunnyside Railroad tracks to the south. It is now identified on the local Tax Maps as Block 86, Lot 1 formerly Block 86 Lots 1, 6, 7, 8, 22 and Block 72, Lot 80. Site Features: The site is 2.92 acres in size. The site was previously occupied by twelve one- to five-story buildings and a parking lot. The buildings were demolished prior to the remediation which involved extensive excavation across the site to depths below 20 ft-bgs. The site is currently an active construction site where two towers totaling 48 stories are being erected. Current Zone and Land Use: The site is located in the Special Long Island City Mixed Use District, Queens Plaza Subdistrict, Area C, which is zoned special purpose M1-5/R7-3. This category of district promotes the development and expansion of the long standing mix of residential, commercial and industrial uses as found in its subdistricts. The general use at the site prior to demolition included manufacturing, clothing distribution, residential, artist studios, warehouse storage for street vendor carts, and other commercial uses. Past Use of the Site: The site was developed in the late 1800 s and primarily provided manufacturing, warehousing, and other commercial uses with some residential space at the north end of the block. Occupants included a brass foundry, in the northeast portion of the block from around 1915; water meter manufacturing, located on the west side of the block from approximately 1898 up to 1970 with a machine shop and independent

Env Problem:

power plant; utility warehousing, food warehouse, and plumbing warehouse. Site Geology and Hydrogeology: Soil at the site consists of a layer of fill material from the surface to approximately 11 to 18 feet below grade which has now been removed as part of the remedial excavation. The fill material consisted of fine to coarse grained sands with silt, gravel, cinders, brick, ash and debris. Below the fill material, there is a peat layer at depths ranging from 11 to 18 feet below grade most of which has now been excavated. This two to three foot thick confining layer consisted of peat overlying organic clay. Prior to dewatering operations which will continue until construction of the redevelopment reaches the sixth story, groundwater ranged from approximately four to eight feet below grade surface and flowed toward the east-northeast.

Prior to Remediation: Based on investigations conducted to date at the site, known contaminants including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals are present in the subsurface soil and groundwater. Soil and groundwater were also evaluated for PCBs and pesticides, though these contaminants were not present at concentrations that identified them as contaminants of concern. Soil - Soil sample results showed VOCs were detected in 27 of 111 soil samples above Unrestricted Use SCOs (UUSCOs). The highest concentrations detected were trichloroethylene (TCE) and cis-1,2-dichloroethylene (DCE) at 6,900 and 760 parts per million (ppm) respectively. Tetrachloroethylene (PCE) was detected at a maximum concentration of 2.5 ppm exceeding the UUSCOs. Vinyl chloride was detected at a maximum concentration of 4.8 ppm, which exceeds the UUSCO. SVOCs were also detected above UUSCOs in seven of 111 soil samples. Benzo(a)anthracene was the predominant contaminant ranging in concentration from 1.4 to 14 ppm. Benzo(a)pyrene was detected at 10 ppm, benzo(b)fluoranthene was detected at 12 ppm, chrysene was detected at 13 ppm, and ideno(1,2,3-cd)pyrene at 3.4 ppm (all above UUSCOs). Metals were detected in soil samples with concentrations exceeding UUSCOs in 36 of 114 samples including copper, lead, mercury, and zinc. Concentration of total lead detected ranged from 69 ppm to 2090 ppm; mercury ranged from 1.81 to 44 ppm well above their respective commercial use SCOs. Site-related soil contamination does not extend off-site based on data collected during the RI. Groundwater - VOCs detected above groundwater standards in 8 of 16 samples included benzene (6 parts per billion [ppb]), isopropylbenzene (100 ppb), TCE (45 ppb), cis-1,2-DCE (220 ppb), and vinyl chloride (130 ppb); the SCG level for these compounds is 5 ppb or lower. The SVOCs reported detections above groundwater standards in 4 of 8 monitoring wells included; benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene. The metals detected above class GA standards included the naturally-occurring aluminum, iron, magnesium, manganese and sodium. None of the site-related metals were detected in groundwater. Site-related groundwater contamination does not extend off-site based on data collected during the RI. Soil Vapor - Results of the soil vapor sampling reported concentrations of PCE at a maximum concentration of 233 micrograms per cubic meter (g/m3) and TCE at a maximum concentration of 3,590 g/m3 in a sub-slab sample. Indoor air samples had maximum reported concentrations of PCE at 9.76 g/m3 and TCE at 0.43 g/m3. Site-related soil vapor contamination does not extend off-site based on data collected during the RI.

Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were chlorinated

Health Problem: VOCs namely TCE, and petroleum related VOCs in both soil and groundwater and metals such as lead in soil. Remedial action has successfully achieved a Track 1 unrestricted use cleanup through excavation and removal of soil to a depth of 18 ft-bgs and below or 95,000 cubic yards along with extraction and treatment, prior to disposal, of some 66 million gallons of contaminated groundwater. Remedial actions are complete and have eliminated the potential for contact with site-related contaminants.

 Site Description:

Location: The 0.34 acre (14,664 square foot) site is located at 36-04 Review Avenue in the Borough of Queens, NY in an urban area. It is situated at the southwest corner of Review Avenue and Greenpoint Avenue. The site is bordered to the east by Review Avenue, to the south by industrial buildings owned by the same owner and occupied by the same operator, to the west by Railroad Avenue, and to the north by the approach to the Greenpoint Avenue Bridge. Site Features: The Site currently consists of a combination of one- and two-story industrial buildings totaling approximately 0.28 acres (12,390 square feet). The remainder of the site is paved parking for the building. Current Zoning and Land Use: The site is currently zoned as manufacturing M3-1 and is surrounded by warehouses and industrial uses. The nearest residential properties are located across the street to the east on Review Avenue. The site is currently occupied by Allied Extruders, a manufacturer of polyethylene and polypropylene film and bags. Past Use of the Site: Allied Extruders has occupied the site since approximately 1980. Prior to that time, the site was

occupied by numerous industrial uses including Eastern Distillery Company (alcoholic beverage distillery), Andrews Lead Company (a lead pipe and sheet metal manufacturer), Carbona Products Company (manufacturer of carbon tetrachloride dry cleaning chemicals), Foundry Chemicals Company (unknown chemical manufacturer) and Paragon Smelting Company (lead and metal smelter). In addition, there are a number of suspected underground storage tanks at the site. It is unknown what is or was stored in those tanks. Site Geology and Hydrogeology: Six soil borings conducted in early 2017 identified soil consisting mainly of dark brown fine silty sand and some clay down to 20 feet below ground surface (ft-bgs), which was the boring terminus. Groundwater was encountered between 5 and 20 ft-bgs, due to varying surface elevations. General flow is expected to be to the west towards Newtown Creek, which is located approximately 450 feet from the site.

Env Problem:

Nature and Extent of Contamination: A Phase II investigation was conducted in February 2017. Soils and groundwater were analyzed for volatile organic compounds (VOCs, semi-volatile organic compounds, metals, pesticides and PCBs. Contaminants of concern identified include petroleum and chlorinated VOCs including carbon tetrachloride (CCl4) and its daughter compound chloroform, trichloroethene (TCE), and 1,1,1-trichloroethane (TCA). Soil Samples were collected from 2 to 15 ft-bgs based on observations and field screening. Elevated concentrations of VOCs were detected in the soil samples, specifically CCl4 at a maximum concentration of 4500 parts per million (ppm), chloroform at a maximum concentration of 120 ppm, TCE at a maximum concentration of 700 ppm, and TCA at a maximum concentration of 1500 ppm. These concentrations all exceed the Protection of Groundwater SCOs and, with the exception of chloroform, exceed the Industrial Use SCOs. Groundwater CCl4 was detected at a maximum concentration of 15,000 parts per billion (ppb), chloroform at a maximum concentration of 8900 ppb, TCE at a maximum concentration of 3300 ppb, and TCA at a maximum concentration of 3600 ppb. In addition, other VOCs were detected at concentrations exceeding the applicable AGWS including 1,1-dichloroethane at 750 ppb, 1,1-dichloroethene at 250 ppb, and toluene at 3200 ppb. Soil Vapor No soil vapor samples were taken as part of the Phase II investigation. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

Health Problem:

As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. Manhattan Adhesives is currently an empty factory building that is located at the foot of the Greenpoint Ave., Bridge in Brooklyn. Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to undertake an investigation in 1986. An investigation has not found hazardous waste on-site.

Updated By: JXGRECO

Site Description: Location: The Quanta Resources Site is an approximately 2 acre parcel located at 37-80 Review Avenue. The site is bounded on the northeast by Review Avenue and on the southwest by the Southern Line of the Long Island Rail Road (LIRR). On the northwest it is bounded by an alley (Preston Street) that runs from Review Avenue to the LIRR tracks. On the southeast it is bounded by the property currently owned by Phoenix Beverages (an imported beer distributor). Farther to the northeast, across Review Avenue, is Calvary Cemetery. Farther to the northwest, across the alley, is the North Capasso property, also referred to as Review Avenue Development I (RAD1). Farther to the southwest, across the LIRR tracks, is the South Capasso property. Newtown Creek lies beyond the South Capasso property farther to the southeast approximately 450 feet from the site. Fencing bounds the property on all sides. Current Zoning and Land Use: The site is located within a highly industrialized area of Long Island City, Queens, New York. Zoning in this area is designated as heavy manufacturing. Site Features: The site has been inactive since being abandoned in November 1981. Tanks and several buildings remain on site. Past Uses of the Site: The Quanta Resources property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. A Consent Order was signed with numerous PRPs in May 2002 for the undertaking of investigation and remediation activities. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, PCBs, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. The Site was accepted into BCP. The BCA agreement was executed on 12/2/05 (see C241005). A PRAP was issued in June 2006. A PRAP Public Meeting was held on June 28, 2006 and the ROD was signed 2/9/07 requiring a \$15,560,000 remedy which includes an LNAPL recovery system. Remedial Design is underway. A number of potential LNAPL source areas existed on the Quanta Resources Site throughout its operational history, however, the primary suspected source area is the tank farm area located in the northeastern portion of the site. A New York City emergency remedial action removed approximately 640,000 gallons of waste oil from the property. Some of the waste oil contained tetrachloroethene, methyl chloride, 1,1,1-trichloroethane and trichloroethene. Sludge, waste oil, and diesel fuel, all contaminated with PCBs, were also removed from badly deteriorated leaking tanks and drums. As part of NYSDEC's Phase II Investigation, three on-site groundwater monitoring wells were installed. During installation it was discovered that there was a seven foot layer of oil lying above the groundwater table. See Site Code C241005 for post

**REVIEW AVENUE DEVELOPMENT II (Continued)**

**1000321850**

Env Problem: ROD updates.  
The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek. An RI/FS was completed. Soil and groundwater contamination has been confirmed. The primary contaminants of concern include petroleum hydrocarbons, chlorinated solvents, heavy metals and PAHs. Measurable LNAPL was found in 24 of 29 onsite and offsite monitoring wells. ROD signed 2/07. Site has transitioned into the Brownfield program. Site is now tracked as Review Avenue Development II - Site # C241089

Health Problem: Waste oil previously stored on-site has caused widespread contamination of groundwater and soils. Approximately 500,000 gallons of contaminated waste oil remains at the site, floating on the water table. The aquifer of concern is not used as a source for drinking water. Groundwater wells in this area of Queens are used only for commercial and industrial purposes. A fence surrounds the site restricting access and minimizing the potential for direct contact exposures to on-site contaminants. The potential exists for the floating oil plume to migrate into the nearby Newtown Creek which empties into the East River. Further investigation is required.

Site Description:

Location: The Former Quanta Resources Site, a.k.a. Review Avenue Development II Site (RAD II) is an approximately 1.8 acre parcel located at 37-80 Review Avenue, within a highly industrialized area of Long Island City, Queens, New York. This site is adjacent to the Review Avenue Development I (RAD I) (seperated only by Preston Alley which is a access alley/paper street). The Long Island Railroad tracks boarder the property along the southwest. Site Features: The site is a fenced, open gravel parking lot. All above ground and below ground tanks, structures, and buildings were removed as part of an interim remedial measure in 2008. Current Zoning/Uses: The RAD II site is currently being used as a parking lot. It is zoned for commercial and industrial uses. Historical Uses: The RAD II property and surrounding properties have been used for a variety of industrial purposes since the late 19th century. A Sanborn Fire Insurance Map from 1898 indicates that the site was partially occupied by vacant and dilapidated brick wrecks of an oil refinery. Available information indicates the earliest recorded actual owner of the property was American Agricultural Chemical Company. In 1931 the property was transferred to Triplex Oil. Triplex Oil used the property for refining of used crank case oil for approximately 40 years. From 1972 until 1980 the facility was operated by several different owners including Pentalic Corporation, Sea Lion Corporation, Ag-met Oil Service, Inc., Hudson Oil Refining Corp., and Portland Holding Corp. In 1980 Quanta Resources acquired the property, and used the property for the re-refining of used crankcase oil and other liquid recycling before filing for bankruptcy on October 6, 1981. The site has been inactive since being abandoned in November 1981. Site Geology and Hydrogeology: The site is underlain by several feet of urban fill. The fill overlies unconsolidated glacial deposits, predominately interbedded fine to course sand with some laterally discontinuous layers of silt and clay. Groundwater occurs at a depth of about 15 to 20 feet below ground surface. The general direction of groundwater flow is to the south-southwest, toward the Newtown Creek. A light non-aqueous phase liquid (LNAPL) is present at the water table under the site.

Env Problem:

Nature and Extent of Contamination: A viscous light non-aqueous phase liquid (LNAPL) is present at the watertable over the entire site. The LNAPL is a weathered petroleum. Groundwater flow is toward the south-southwest toward the Newtown Creek. The extent of the LNAPL has been delineated and it has not migrated beyond the Long Island Railway tracks downgradient. Known or suspected contaminants include: Petroleum, Chlorinated Solvents, other VOCs, and metals, impacting

An LNAPL collection and treatment system has been completed and is operating on-site. Significant Threat: The site presents a significant threat due to the soil and groundwater contamination, free product LNAPL plume and close proximity to Newtown Creek.</p> <p>Exposure to contaminated groundwater or soil is unlikely because the area is served by public water and access to the site is restricted by fencing. The potential for exposure via soil vapor intrusion off-site will be evaluated during the remedial design and will also be evaluated if new construction is planned on-site in the future.</p> <p>False</p> <p>False</p> <p>False</p> <p>False</p> <p>False</p> <p>Not reported</p> <p>Not reported</p> <p>40:43'56 / 73:56'10</p> <p>False</p> <p>7/1/2005 12:30:00 PM</p> <p>10/25/2013 3:36:00 PM</p> <p>BXANDERS</p> <p>Owner</p> <p>NNN</p> <p>David Kushner</p> <p>37-80 Review, LLC</p> <p>380 Lexington Avenue</p> <p>Suite 2020</p> <p>New York, NY 10168</p> <p>United States of America</p> <p>Applicant/Requestor</p> <p>P03</p> <p>DAVID KUSHNER</p> <p>DMJ Associates, LLC</p> <p>380 LEXINGTON AVENUE</p> <p>SUITE 2020</p> <p>NEW YORK, NY 10168</p> <p>United States of America</p> <p>Applicant/Requestor</p> <p>P03</p> <p>DAVID KUSHNER</p> <p>CRESSWOOD ENVIRONMENTAL CONSULTANTS, LLC</p> <p>380 LEXINGTON AVENUE</p> <p>SUITE 2020</p> <p>NEW YORK, NY 10168</p> <p>United States of America</p> <p>Applicant/Requestor</p> <p>P03</p> <p>David Kushner</p> <p>37-80 Review, LLC</p> <p>380 Lexington Avenue</p> <p>Suite 2020</p> <p>New York, NY 10168</p> <p>United States of America</p> <p>Not reported</p> <p>Not reported</p> <p>Not reported</p>

**FINDS:**

Registry ID: 110000701401

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Record Add:     06/25/2009  
 Record Upd:     05/23/2018  
 Updated By:     KGHale

**Site Description:** Location: The site is located at 460 Kingsland Avenue in the Greenpoint section of Brooklyn, New York (Figure 1). 460 Kingsland Avenue is located within a commercial/industrial area and is bordered by Newtown Creek to the east (which has served as an industrial water way for nearly 140 years), Kingsland Avenue to the west, Greenpoint Avenue (John Jay Byrne) Bridge to the north, and OU-4 to the south. To the east, Newtown Creek has been designated a Federal Superfund Site and is under the jurisdiction of the United States Environmental Protection Agency (USEPA). Site Features: The property is composed of an approximate 3.55-acre parcel, identified as Block 2612 Lot 20 on the Brooklyn tax map. Land surface elevations are approximately 7 feet above mean sea level (AMSL) within the southeastern portion of and gradually rise to approximately 11 feet (AMSL) within the northwestern portion of the site. Currently, the site contains two abutting one-story buildings. Current Zoning and Land Use: The property is zoned M3-1 for heavy manufacturing and industrial use. Exterior areas are paved and used for parking and storage. The site is subleased to numerous third parties for parking, storage, and for use as office space. Past Use of the Site: Historical maps indicate the site and surrounding areas were undeveloped marshlands until the late 1800s when the land was filled for industrial development. The northern portion of the site was operated by the Columbus Distilling Company and the Chris Cunningham Boiler Works from approximately 1892 to 1919. The southern portion of the site was operated by ExxonMobil s predecessors as part of a petroleum refinery operation from approximately 1892 to 1920. By approximately 1920, refinery operations had expanded to include the entirety of 460 Kingsland Avenue. The refinery operations within the site continued until 1966. Under ExxonMobil s former operations, 460 Kingsland Avenue also served as a petroleum bulk storage yard. An oil water separator (OWS) was located along southern site boundary. Based on a review of historic aerial photographs, the OWS appears to have been filled sometime between 1961 and 1966. In 1967, ExxonMobil s predecessors sold the property to a freight company and a trucking terminal was built, which currently remains on-site. On or about August 29, 1981, a former site owner reported that the bulkhead had collapsed into Newtown Creek, along with considerable amounts of fill/soil, asphalt parking lot and concrete curb stop. The bulkhead collapse was repaired with fill and a new steel sheet pile bulkhead was installed along the property. As documented in the Updated PCB Source Evaluation Report (September 7, 2012), PCB contamination in this area appears to be attributable to PCB-laden fill materials associated with the bulkhead reconstruction. Site Geology and Hydrogeology: The

**460 KINGSLAND AVENUE (Continued)**

**U003074537**

stratigraphic units underlying the site form three distinct hydrogeologic units; the shallow aquifer, the shallow confining unit, and, the regional aquifer. The shallow aquifer is primarily comprised of the saturated fill materials deposited above the historical creek and marsh sediments. The depth to groundwater in the shallow aquifer varies from approximately 1.5 to 8.5 feet below land surface (ft/bls) within the site and the saturated thickness of the shallow aquifer within the site is typically less than 10 feet. The shallow confining unit is made up of deposits from the historical creek and marsh sediments. Historically, marsh land and open water covered the entirety of 460 Kingsland Avenue. The shallow confining unit ranges in thickness from approximately 5 to 20 feet across the site. The shallow confining unit has very low groundwater movement rates such that, it isolates the shallow aquifer from the underlying regional aquifer. This causes confined or semi-confined conditions within the regional aquifer. The geology of the shallow confining unit is identified as a clay or peat material with varying levels of silt. The regional aquifer is found throughout the site below the shallow aquifer and shallow confining unit. It is made up of fine to medium grained sands, with varying amounts of silt and coarser materials and was found to be at least 10 to 15 feet in thickness. Groundwater movement is consistent in the regional aquifer compared to the shallow aquifer, due to the sand and silty sand material that comprise this layer.

Env Problem: Soil sampling indicates that hazardous waste disposal has occurred at the site. Groundwater sampling at the site indicates that PCBs may be present in the shallow groundwater at levels above the NYSAWQS. Additional site characterization is necessary to examine complete nature and extent in groundwater and soil and to determine if a significant amount of waste is present. Petroleum impacts are present in site in shallow and deeper soils, and in groundwater from former refining operations on and near the site.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was DEMEO 10/28/2003 - ROSSAN, DDO; Called FDNY Disp. 381, who confirmed that clean-up is been done by the Sanitation Dept. using Spedi-dri. and sand. Advised that the NYS-DEP be informed. FDNY called again to confirmed that amount of diesel spilled is 200 gallons. Discussed with Michelle, who decided to visit spill site. Ed. 10/29/03 Tipple conducted site visit//sand still on roadway//three drums of mostly liquid oil on site//called FDNY, located captain who responded, by the time the FD arrived, the truck responsible for the spill was long gone. Upon interviewing individuals who worked adjacent to the facility the truck was a dark green fuel iol truck, no one interviewed noticed the name of the company. NO RP IDENTIFIED. put drums on drum run. 11/13/03 TJD Containers emptied on 11/7/03 as part of R2 drum run. See spill #9930008. Spill closed."

Remarks: "cleanup in progress"

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL ALSO SEE LATER, CLOSED SPILL REPORT NO. 9403747. 10/10/95: This is additional information about material spilled from the translation of the old spill file: HEAVY FUEL OIL. 03/29/04 Related to Mobil Greenpoint spill Transferred from Miller to Rommel. 10/12/04 Received call from John Harrison, EcolSciences, Rockaway, NJ, 973-366-9500, representing potential buyer. Plans to FOIA the file. Rommel 3/4/05 - Mr. Arthur Max, a consultant representing the current owner called to inquire about what it takes to close out the case. His Number is 201-867-6777. Transfer it to Alex Zhitomirsky. - KST 3/31/2005 According to Arthur Max Yellow Freight pulled some tanks in 1994. They found and removed most of the soil contamination. DEC asked to remove more contamination around the perimeter. Woodward Clyde stated that due to the Mobil spill and high background contamination there is no point in removing more soil. Weintraub real estate company was hired by Yellow Freight. Alex Zhitomirsky requested on March 4, 2005, that the responsible party should submit documentation supporting their case to NYSDEC. AZ 9/26/2005 Conversation with Arthur Max. They want to buy this property and inquired what should be done in order to close this spill. I responded that site assessment should be performed. Gw wells installed at the property and along the perimeter of the property in

order to compare background contamination with the site contamination. AZ 1/17/2006 I left a message for Arthur Max. Investigation/delineation is pending. AZ 1/18/2006 I contacted Arthur Max (Weintraub, Casey - Realtors 201-876-6777). He informed me that they sold this property in November 2005 to Sagres, LLC 2 Galasso Place, Maspeth, NY 11378 718-456-1800(?) (they are in the same building as Galasso Trucking). I contacted Frank Galasso (partner) at 718-456-1800. He said that I should talk to Phil Galasso (partner) 516-965-7766. He will ask him to contact me ASAP. AZ 4/3/2006 I contacted Phil Galasso (Reveal New Sag LLC.) 516-965-7766. He will file for FOIL and have his consultant contact me. AZ 6/13/2006 I left a message for John Urda (DEC Legal) requesting his assistance with this case. AZ 6/14/2006 Jon Kolleeny recommended to refer this case to J. Urda. J. Urda recommended to send RP a short form STIP. J. Kolleeny supported this recommendation. A short form STIP was sent to Phil Galasso, Sagres LLC, 2 Galasso Place, Maspeth, NY 11378 AZ 6/27/2006 Received a message from Steve Russo (212-421-2150). Left a message for Steve Russo. AZ 6/27/2006 Conversation with Steve Russo, attorney for the owner (Reveal New Sag). He works for Sive Paget company (212-421-2150). They will send me report for review. I will get back to them when I review the report. AZ 6/28/2006 The report does not contain a map showing the locations of the old excavated tanks (15 USTs). No borings were installed near the old tank field. Fingerprint analyses were not attached. AZ 7/27/2006 Left a message for Steve Russo (Sive, Paget & Riesel). AZ 8/2/2006 Conversation with Steve Russo (212-421-2150). I conveyed to him that the report lacks essential information: borings/wells were not installed near the old tank field; there is no map showing the old excavated tanks (15 USTs), fingerprint analyses were not attached to the report. DEC requested new borings/wells installation, monitoring of the new wells and fingerprint analyses of the free phase. He will get back to me with a plan of action in a week. AZ 8/10/06 I sent e-mail to Steven Russo Sive, Paget & Riesel, P.C. at 460 Park Avenue New York, New York 10022 (212) 421-2150 confirming the additional items that should be submitted to DEC: 1. A sampling plan providing for the installation of groundwater wells and collection of soil samples proximate to the area where the former Yellow Freight USTs were excavated 2. Reflect the former UST location on the map or maps accompanying the supplemental sampling plan 3. Provide results of historic and new fingerprint analysis of petroleum, if any, collected from the newly installed monitoring wells or, if no free product is collected from the wells, from soil samples. AZ 1/31/2007 I contacted Steven Russo @ (212) 421-2150 (Sive, Paget & Riesel). Exxon Mobil is preparing an extensive sampling plan for this site which will be submitted within a month. He will send me fingerprint analyses and a map with tank locations. He will forward a sampling plan as soon as it will be available. AZ 2/6/2007 Received historical and current fingerprint analyses from Steve Russo. He stated that we are hoping to finalize access issues with Exxon Mobil in the next week so that a work plan to more fully investigate the site can be submitted shortly. AZ 4/13/2007 Received e-mail from Ed Hampston (DER Albany). He received proposed investigation plan (part of investigations associated with the former Mobil Refinery/Terminal from Exxon) and forwarded it to Reg. 2. E. Hampston will likely to request some of their borings go beyond the first impermeable layer they encounter (or nest wells) to see if there is deeper contamination. I reviewed the Exxon proposals

and discussed the work plan with Ed. I suggested increasing the number of wells (they initially suggested 3 wells), advancing wells at the locations of the former Yellow Freight tanks, advancing wells near the Exxon plume boundaries, performing fingerprint analyses on all samples, compiling detailed groundwater and soil plume maps. AZ 11/1/2007 Reviewed Investigation Report by Roux Associates dated August 2, 2007 and received on August 21, 2007. Nine soil borings and three new shallow aquifer wells and three new regional aquifer monitoring wells were completed. SVOC and metals were detected at concentrations greater than the NYSDEC Restricted Commercial Use Criteria in the shallow subsurface beneath the property. with the highest concentrations present in the vicinity of SB-4, SB-7, SB-9. PCBs were also detected at three soil borings with the highest concentrations observed at SB-6. Although petroleum staining was observed throughout the shallow subsurface, only globules of free product were observed at two locations that were associated historic petroleum storage operations. There were no observed visual impacts within the regional aquifer. VOC and SVOCs are present in groundwater above the NYSDEC AWQSGV within the shallow aquifer. PCB were detected in one location within the shallow aquifer at monitoring well KNW-4. Within the regional aquifer, only minor concentrations of petroleum and chlorinated compounds were observed in gw above the guidance level. According to the report, data indicated that the free product plume present within the regional aquifer beneath the Exxon Mobil Brooklyn Terminal to the south of the property does not extend to the north beneath the property. AZ 12-27-2007 Letters to Phil Galasso and Exxon Mobil were sent out by DEC (Ed Hampston - Central Office). The DEC letters required further investigation and remediation of the site. AZ 1-9-2008 Meeting with Philip Galasso (Revael New Sag), John Urda, Ed Hapston, Alan Michaels (by phone NYSDEC), Michael Bogin (Steve, Paget), Dan Buget. AZ 8-12-2008 The owner is proceeding with the sale of the property. The existing building will be demolished for a clean fill recycling operation. As part of the demo, they intend to dig out around the building footprint, and want to know if this will be enough to close the UST spill. I recommended taking the end point samples. Also, a work plan containing a site map with UST locations, hot spots (based on the previous investigations), the excavation area and proposed sampling locations should be submitted to DEC. I conveyed my suggestions to John Urda and Ed Hampston. AZ 10-27-2008 I have received an e-mail from Ed Hampston who forwarded a request for spill closure by Leggette, Brashears @ Graham. I e-mailed my response to John Urda and Ed Hampstead. AZ 10-29-2008 Conference call with John Urda and Michael Bogin. DEC requested that New Sag investigate and remediate area in front of the building at the locations of the former USTs (diesel, waste oil and heating oil tanks). According to September 19, 1994 closure report, waste oil tank had 3 holes and soil in the USTs area exhibited VOC exceedances. Also, VOC concentrations in the former USTs area exceeded the background concentrations. DEC ( Mike Mulqueen 2-27-1995) requested further investigation and remediation. AZ 1-8-2008 A conference call with Central office was held (V.Brevdo, J. Urda, Ed Hampston, Alan Michaels, Joseph White). The site was discussed. Central Office will work with Exxon Mobil to address PCB contamination. AZ 2/4/2009 A meeting was held among Alex Zhitomirsky, John Urda, Vadim Brevdo, Allan Michaels, Ed Hampston of DEC and Phil Galasso and Michael Bogin representing Mr. Galasso. Phil Galasso and Michael Bogin presented information that appears to support their conviction that PCB

contamination and remaining petroleum contamination plums are part of a greater Exxon Mobil plume (Greenpoint plume) and, therefore, should be investigated/remediated by Exxon Mobil. It was decided that Albany (Ed Hampston and Allan Michaels) will call a meeting with Exxon Mobil so the other party can present their case. If information presented by 460 Kingsland owners is confirmed then this spill number will be closed and referred to a main spill number of Greenpoint (Exxon Mobil)spill for further investigation/remediation. AZ 3-27-2009 After consultation with V. Brevdo, J. Urda and Ed Hampston this spill number is closed. According to Ed Hampston, all further activities for this site will be tracked under spill #8800244 (this is the spill Central Office has PIN attached). Ed Hampston intends to create a P site for 460 Kingsland. AZ "

**Site Description:**      Location: The site is located immediately south of the building located at 21-03 44th Avenue in Long Island City, Queens, NY. Site Features: The site includes the sidewalk/street area immediately above and in the vicinity of a reported broken sewer line near the location of three groundwater monitoring points placed on the sidewalk in front of the building at 21-03 44th Avenue. Current Zoning and Land Use: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road. Past Use of the Site: Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Contamination was thought to have entered the environment from a broken sewer pipe that connects the building at 21-03 44th Avenue and the main sewer line in the street. This hypothesis has since been shown to be incorrect. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

**Env Problem:**      Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in groundwater. Contravention of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l.

Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree. This contamination was thought to be emanating from a broken sewer line; however, this was disproven during the remedial investigation that was conducted in 2011. Significant Threat: While this site was initially determined to present a significant threat, that determination is no-longer valid, as the source(es) of contamination are located north of this site. Moreover, two sites immediately to the north have since entered the Brownfield Cleanup Program and remedies are underway to address them. Contamination at this site's location and to the south will be further assessed under the off-site portion of the Wills Building site (site ID No. C241143).

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Site Description: Location: The site is located at 21-03 44th Avenue in Long Island City, Queens, NY. Site Features: The site primarily consists of the building located at 21-03 44th Avenue, which is currently used as a taxi dispatch and a taxi medallion brokerage. Current Zoning/Uses: The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road. Historical Uses: Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south. Entered Brownfield Cleanup Program on February 10, 2014 as C241144.

Env Problem: Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in site groundwater. Exceedances of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree. Soil vapors beneath the building have been tested and are well above the NYSDOH guidance levels for PCE.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: This is new BCP application and pertains to the 21-03 44th Avenue property located in Long Island City, Queens County. This site is approximately .42 acres in size. Currently the property is vacant and future use is planned for commercial purposes. Suspected contaminants at this site are metals and SVOCs. This BCP application has been denied. A letter dated October 9, 2007 denying this BCP was sent to the requestor.

Env Problem:

area in the northern portion of the site contained a disposal structure that appeared to have received plating wastes. That area was reportedly remedied outside of any regulatory program by the previous site owner in 2005, when approximately 100 cubic yards of soil was excavated in two successive efforts to achieve a soil cleanup goal of 10 parts per million (ppm) for hexavalent chromium. Final endpoint sampling showed that the cleanup was successful, with the highest remaining hexavalent chromium concentration at 6.17 PPM. Because of the previous use of radium paint at the building, select soil and groundwater samples were analyzed for radium and it was not detected above naturally-occurring levels. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south. Nature and Extent of Contamination: Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (CVOCs), primarily tetrachloroethene (PCE), extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south. Hexavalent chromium is also present in site groundwater. As a result of that study's findings, two additional investigations were performed in an effort to characterize the site. In those investigations, soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Because of the previous use of radium paint at the building, select soil and groundwater samples were analyzed for radium and it was not detected above naturally-occurring levels. Soil: Studies have not detected VOCs above Unrestricted Use soil cleanup objectives (SCOs) in unsaturated site soils. The most recent investigation showed the presence of PCE at 6.9 ppm in one boring at the site; however, that boring was sampled beneath the groundwater table and it appears that the contamination detected may be attributed to the high levels of groundwater contamination known to be present in the vicinity of the building. Early studies showed soil contamination with hexavalent chromium in excess of 19,000 ppm (exceeding all use based SCOs) beneath a disposal structure in the northern portion of the building, that soil was removed during a self-directed remedial action by a previous site owner in 2005. Following the 2005 cleanup, the highest level of hexavalent chromium contamination detected was 6.17 PPM. This cleanup up was further verified in the most recent investigation, with a maximum detected concentration of hexavalent chromium of 6.4 ppm detected at a boring conducted at the area of the former disposal structure. While both levels exceed the Unrestricted Use SCO of 1 PPM, they are well below the Groundwater Protection SCO of 19 and the Restricted Residential SCO of 110 ppm. Several PAHs, including benzo(a)anthracene and benzo(a)pyrene, were found in a limited number of samples. While these compounds were found in excess of the Restricted Residential SCO, they were not at levels beyond those generally associated with historic fill. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Contaminants exceeding standards, criteria, and guidance in groundwater include PCE at 36,000 parts per billion (ppb) vs. a standard of 5 ppb and hexavalent chromium as high as 1,500 ppb vs. a standard of 50 ppb. Trichloroethylene, cis- 1,2-dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree.

21-03 44TH AVENUE (Continued)

S109826178

Off-site groundwater appears to be contaminated by hexavalent chromium related to the previous site use as a metal plating facility; however, a removal action undertaken by a previous site owner appears to have addressed the source, and contamination is expected to diminish with time. Groundwater monitoring will be undertaken in the Site Management phase to confirm the anticipated downward trend. Off-site groundwater is also contaminated with chlorinated solvents, but this appears to be from an up-gradient source, as up-gradient well concentrations generally exceed down gradient well concentrations, and no VOC source has ever been found on the site. Soil Vapor: The most frequently detected CVOCs in sub-slab samples were PCE, TCE, and 1,1,1-trichloroethane (1,1,1-TCA). At least one of these compounds was detected in five of the six sub-slab samples at elevated concentrations. Indoor air samples also detected similar CVOCs and actions were recommended to address soil vapor intrusion. The highest sub-slab concentration of PCE was 18,000 micrograms per cubic meter (ug/m3), and this was collocated with the highest indoor air concentration of 57 ug/m3 vs. the air guideline for PCE of 30 ug/m3. TCE was found as high as 5,700 ug/m3 in sub-slab soil vapors, and at a level of 2.4 ug/m3 in indoor air vs. the air guideline for TCE of 2 ug/m3, though this sample was not located in the vicinity of the highest sub-slab sample. 1,1,1-TCA was found at a high of 3,100 ug/m3 in sub-slab samples, and the collocated indoor air sample contained 18 ug/m3. All of the indoor air concentrations were at their highest in the first round of sampling, and concentrations of PCE and other CVOCs in subsequent sampling were either less than 1 ug/m3 or below detection limits. Data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem:

If people dig below the surface they may come into direct contact with contaminants in the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling has indicated that measures are needed to address exposures associated with soil vapor intrusion and mitigation measures are recommended to prevent soil vapor intrusion into the on-site building. Off-site contamination in soil vapor does not appear to be related to this site and will be addressed as part of the remedial activities for the Wills Building, Site #C241143, which is just north of the site.

**THE WILLS BUILDING (Continued)**

**S113916801**

surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 490427

Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Description: Location: The site is located in an urban area in the Long Island City neighborhood of Queens County at the corner of 43rd Avenue and 21st Street. Site Features: The site is a 1.11-acre parcel and is currently developed with a brick and steel-reinforced concrete 3-story building with a partial basement. Current Zoning and Land Use: The site is zoned M1-4, allowing for manufacturing. The building is currently fully occupied by numerous small businesses with

activities ranging from warehousing to light manufacturing work. The surrounding area consists mostly of commercial and industrial buildings, and the nearest residential buildings appear to be over 500 feet from the site. Past Use(s) of the Site: Past land uses include x-ray equipment manufacturing, cosmetic manufacturing, clothing manufacturing and uniform service companies. Site Geology and Hydrogeology: The property is relatively flat, with an approximate ground elevation of 19 feet above mean sea level. General topography in the area of the site slopes slightly to the west. The East River is located approximately 1/2 mile west of the site. Overburden materials are comprised of brown sands, silty sands, and trace amounts of fine gravel. Bedrock beneath the site has been encountered at approximately 20 feet below ground surface (bgs). Groundwater has been encountered in the overburden at approximately 12 feet bgs, and its flow is to the south. Bedrock groundwater appears to flow towards the west.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene and to a lesser extent, trichloroethene, in groundwater and soil vapor. The remedial action is successful in minimizing human contact with remaining contamination. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed in the on-site building to address soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Description: Location: Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York. Site Features: The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. Newtown Creek, which defines the border between Queens and Kings Counties, is located less than 0.5 mile south of the western portion of the Site. The Site is bordered by commercial/residential properties, with Northern Boulevard located to the north, 42nd Place located to the east, Thompson Avenue to the west, and Skillman Avenue located to the south. Current Zoning/Use: The Site is located in Manufacturing Zone (M1-1) and used as a railroad maintenance and storage facility. Historic Use: The Yard was originally constructed in the early 1900's by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later known as the Penn Central Transportation Company). On April 1, 1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. The Long Island Railroad (LIRR) is constructing tunnels through the Yard as part of its East Side Access (ESA)

project. An extensive cleanup program was completed in 1996 to remove PCB contaminated sediment from impacted sewer manholes with subsequent sampling to identify sewer segments and manholes with recurring PCB contaminated sediment impacts. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S and I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S and I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system (water and sediment) beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology: Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits, wetlands, or the Upper Pleistocene glacial deposits. The saturated Upper Pleistocene deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the Dutch Kills Creek and/or East River. In the deeper deposits, groundwater predominantly flows west across the Site.

Env Problem:

Nature and Extent of Contamination: Prior to Remediation: Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOC) were identified of concern (COCs). The following environmental exposure pathways and ecological risks have been identified for the Site: The Site poses an environmental threat associated with the potential impacts of contaminants to groundwater from soils impacted by the COC's. Continued migration of contaminated groundwater from off-site sources poses a potential environmental threat to on-site groundwater. Off-site sources will be addressed by remedial programs for the respective neighboring sites, as appropriate. There are no wetlands or other exposure pathways to fish and wildlife receptors in the Site. Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm.

MAP FINDINGS

**AMTRAK SUNNYSIDE YARD (Continued)**

**S103575644**

Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern (COCs), lead and total cPAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD). Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the COCs. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs (60 out of 786 samples); lead (52 out of 471); and cPAHs (31 out of 436). The maximum PCB concentration was 25,000 ppm; cPAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs viz. PCBs (13 of 455); lead (17 of 354) and cPAHs ( 18 of 376). The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and cPAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in 29 samples of sediment from the sewers at concentrations ranging from 0.053 ppm at MH-69 to 120 ppm at MH-6. PCB concentrations at MH-6 (one sample) and MH-38 (two samples) exceeded the 25 ppm NYSDEC-approved site specific soil cleanup level. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to a high of 83 ppb. Five of the unfiltered samples, one from MH-3, three from MH-6 and one from MH-40 exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples (MH-3) contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the COCs. Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010.

Health Problem: Groundwater in the area of the site is not used as a source of

Spiller Name: CHRIS BENSON  
Spiller Company: AMTRAK  
Spiller Address: 39-29 HONEYWELL ST  
Spiller Company: 999  
Contact Name: CHRIS BENSON  
DEC Memo: "02/14/12- Christian Benson from Amtrack sent the following email:  
Around appx 1500hrs, 13FEB12, while replacing fuel in a portable heating unit, an Amtrak employee noticed fuel leaking from the underside of the fuel tank. The employee notified their supervisor, who instructed them to bring it to the motor pool area, away from the track area. The employee tilted the unit upwards to move product away from the hole. Upon reaching the motor pool, the employee had to tilt the unit back down, allowing product to begin leaking again. It is now estimated that only 1.2 gallons were released as employees were able to remove remaining product from the tank and place into a separate drum. The spilled material was contained with absorbent boom, pads, and sand. Clean-up was completed the morning of 14FEB12, and all wastes were placed into a drum for disposal. S-200 product will be used to further ensure full remediation of the area. Product was only released on impermeable surface, no waterways or soil was affected. Spill Closed. "

Remarks: "Caller reporting a spill of 5 gallons of #1 fuel oil (kerosene) to concrete. Clean up is in progress."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was TIPPLE 7/9/07: Reassigned to Kartik Chanda (Chanda) 9/10/07: Kartik Chanda of DEC has reviewed this spill case and sent a letter to National Railroad Passenger, 400 West 31st St., 4th Floor, NY, NY 10001, Attn: Emma Cattafi requiring that the following information be submitted to DEC for review by 10/25/07: 1. An explanation of the cause of the tank/equipment failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/17/07: Chanda received a letter from Emma Cattafi, Senior Environmental Coordinator, Amtrak with enclosed: 1. Invoices from Eadtmond describing work performed. 2. Invoices and scope of work from CHES. 3. Soil sample analysis report. 4. Tightness test results. 5. Shipping paper for soil disposal. 11/19/07: Chanda reviewed soil sample analytical results and UST tightness test results for this spill and has the following comments: 1. On May 14, 2004, the oil was found during the soil excavation phase of a project to upgrade/ retrofit an existing 20,000-gallon UST. 2. Amtrak estimated a release of approximately 10 gallon of #2 fuel oil. 3. Clean Harbors Environmental Services(CHES) excavated the contaminated soil surrounding the tank. VOCs and SVOCs were not detected in soil analytical results. Kartik Chanda discussed with Joe Sun (NYSDEC) regarding the findings of the soil analytical results and based on the information presented to the Department, DEC closed this spill, dated 11/20/07. 11/21/07: Chanda sent an NFA letter to Ms.Emma Cattafi, Senior Environmental Coordinator, AMTRAK, by regular mail. Updated By: MJKOMORO

Site Description:

Location: The Site is located across multiple addresses in the Greenpoint section of Brooklyn, NY. The addresses for the Site include 257, 259, 263, & 269 Freeman Street and 230, 238, 242 Eagle Street. 269 Freeman Street is also known as 105 Provost Street. The Newtown Creek Water Pollution Control Plant (WPCP) is located directly east of the Site. Site Features: The original Site encompassed five separate buildings and three yards that occupy seven separate lots. The buildings are no more than 2 stories in height. The entire Site is approximately 1.2 acres in size. There are manufacturing buildings to the north, south and west of the Site. Current Zoning/Uses: The area (and properties) is zoned M3-1 which includes heavy manufacturing and industrial uses along with certain commercial uses. Properties on the site are currently used for the manufacturing of air conditioning duct work, a distribution center for paint and varnish, parking, and staging of various contracting equipment. - 263-269 Freeman and 242 Eagle Street are currently used for the manufacturing of air conditioning duct work and accessories - 238 Eagle street is currently used for the distribution of paint and varnish. - The Yard portion east of 238 Eagle Street is currently an unused dirt yard. Historical Uses: In the early 1900's the site was used as a cooperage for wooden barrel and cask production. From approximately 1942 to 1982, the property was occupied by Reliable Machine Company that had numerous paint spraying locations on the property. In 1982, Ney Smelting and Refining Company took ownership of the property in 1982 and renovated the buildings and used the property for smelting of lead, tin and zinc. Smelting operations ceased in 2003. Site Geology and Hydrogeology: Shallow boring logs indicate the Site overlies historic fill. The soil type below the fill is not known. Depth to groundwater is approximately 10 feet below grade and may be tidally influenced due to the close proximity to the Newtown Creek. Groundwater flow may also be affected by the adjacent Newtown Creek WPCP. Groundwater flow direction is estimated to be to the northeast Miscellaneous: There are no PBS, CBS records for the multiple addresses of the Site.

Env Problem:

The site is covered with multiple buildings and parking facilities. One small area of the site contains a dirt construction yard that is largely underlain by a concrete slab. The shallow subsurface soil is comprised of historic fill that contains building debris such as brick and concrete, ash, and soil. This material contains elevated concentrations of inorganics that are generally below allowable concentrations at industrial sites. SVOCs are also present in the soil at the site but also do not exceed standards for industrial areas. No VOCs were detected at levels that cause concern. Data from

TCLP analyses were all below hazardous waste thresholds. Groundwater is sporadically impacted by PCE and breakdown products. There is no continuous plume of impacted groundwater as would be observed if a source of PCE was present.

Site Description: Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011.

MAP FINDINGS

**FRESH CLEANERS & LAUNDRY INC (Continued)**

**1001125032**

Env Problem:

Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area. OU2 is the off-site area. For OU2, the off-site investigation area encompasses sidewalks along 29th Street from 39th Ave to 40th Road, along 30th Street from 39th Avenue to approximately 40th Ave, and along 40th Ave to 31st Street. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade. In the OU2 investigation area, groundwater ranged from 11 to 30 feet below grade, with deeper groundwater closer to 39th Street, and shallower groundwater near 40th Ave.

NATURE AND EXTENT OF CONTAMINATION: Prior to completion of remediation For OU1: On-Site Areas Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property, and the higher results were near the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. NYS was denied access to the building, and conducted an off-site investigation in February 2012. Elevated groundwater levels were found downgradient from the site (PCE 440 ppb, TCE 32 ppb). Soil: Soil samples in 2011, and later soil samples in 2014 found low level PCE contamination in soil. The highest soil sampled indicated 9.6 ppm PCE. The protection of groundwater standard and the unrestricted soil cleanup objective are both 1.3 ppm for PCE. Groundwater: Site groundwater was sampled in 2011, 2014 and 2016. The highest levels were obtained in 2011, with a maximum concentration of 1470 ppb PCE in groundwater. In 2014, the PCE concentrations ranged from 165-340 ppb. The most recent samples (2016) ranged from 44 to 200 ppb PCE. TCE was present at much lower levels (maximum of 14 ppb). The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Sub-slab soil vapor samples were taken in 2014. Results ranged up to 668,000 ug/m3 PCE and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Sub-slab samples in 2016 resulted in similar levels (up to 543,000 ug/m3 PCE and up to 3750 ug/m3 TCE). OU2 Off-Site Investigation Area Soil: Based on soil results from the 2012 off-site characterization, soil samples were not included in the off-site scope of work. Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 369 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were

**1001125032**

also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as monitor/mitigate.

Health Problem: People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site.

Site Description: LOCATION: This is an off-site investigation of the area downgradient of the Bridge Cleaners site, Site Number C241127, which located at 39-26 30th Street in Long Island City, an urban area. SITE FEATURES: The investigation area encompasses sidewalks along 29th Street from 39th Ave to 40th Road, along 30th Street from 39th Avenue to approximately 40th Ave, and along 40th Ave to 31st Street. CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The downgradient block also contains a limited number of residential buildings. Recent construction in the area includes a self-storage facility and hotels. HISTORICAL USES: This area of Long Island City has historically included mixed residential and light manufacturing. Formerly the area included a printing operation, commercial laundry and drycleaner, wire die manufacturer, gas station, and distribution points for a variety of products. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL, which is about 20 feet below land surface in the vicinity of the site. Soils in the

Env Problem:

area are expected to be primarily sand and silty sand. C241127A projects for the off-site portion of this site are being tracked under site 241127 OU2.

NATURE AND EXTENT OF CONTAMINATION: In October 2010, a property location in this block was identified as a potential site (P-site) due to soil vapor and groundwater results collected by an adjacent property owner. After unsuccessfully attempting to obtain access for a more thorough investigation, NYSDEC conducted a limited offsite investigation in February 2012. Groundwater and soil samples were taken. Based on this investigation, the Bridge Cleaners Site (C241127) was determined to be causing a significant threat to public health and the environment. The site entered the NYS Brownfield Cleanup Program and remained in the Program until December 2016. Groundwater: Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of tetrachloroethylene (PCE) and trichloroethylene (TCE) upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. The groundwater standard for both PCE and TCE is 5 ppb. Soil: One of 14 soil samples, at a side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade. Scope of Off-Site Investigation 2016: This 2016 Remedial Investigation will define the nature and extent of contamination emanating from the Bridge Cleaners Site in groundwater, soil vapor and any other parts of the environment that may be affected. Shallow and deep groundwater wells will be installed upgradient and downgradient of the Bridge Cleaners site (C241127). After well installation, two sets of samples will be collected. Based on the initial sampling, groundwater samples will be collected for Compound Specific Isotope Analysis (CSIA). This analysis will be used to determine whether the source of the Tetrachloroethene (PCE) and Trichloroethene (TCE) groundwater contamination is exclusively from the Bridge Cleaners site or from other sources in the immediate area. Eleven soil vapor samples will also be collected initially. After the results are obtained, the Department may request access from owners of eight structures along 29th Street for sub-slab and indoor air sampling. OU2 Off-Site Investigation Results Soil: Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 389 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. PCE and TCE were not observed in the 4 deep wells installed. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as mitigate. C241127A projects for the off-site portion of this site are being tracked under site 241127 OU2.

Health Problem:

People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a

Site Description:

Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and a courier service. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade.

Env Problem:

NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE) and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m<sup>3</sup> in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building, and provided results to DEC in November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade, and below the water table at 25.5 feet. In the first quarter of 2014, after entering the Brownfield Program, additional groundwater, soil and soil vapor samples were obtained from within the building. Five groundwater samples ranged from 165 to 340 ppb for PCE, and TCE concentrations from 2-7 ppb. Soil samples obtained from the same 5 locations did not exceed unrestricted soil cleanup objectives. Sub-slab soil vapor, however, ranged from approximately 20,000 ug/m<sup>3</sup> to 668,000 ug/m<sup>3</sup> below the slab (PCE) and up to 2140 ug/m<sup>3</sup> TCE. PCE in indoor air was 270 ug/m<sup>3</sup>. Based on the soil vapor results, there is a need to mitigate the building. In Nov 2014, a new consultant was hired by the BCP applicant. Soil in the NW corner of the building was found at 1.8-9.6 ppm (exceeding the protection of groundwater SCOs) for PCE (1.3ppm). An IRM design has been developed to address the source area.

Site name: CARBONA PRODUCTS CO  
Classification: Small Quantity Generator

. Waste code: D000  
. Waste name: Not Defined

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110013752313

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

FINDS:

Registry ID: 110000616539

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Site Description: LOCATION: The Greenpoint Manufacturing and Design Center (GMDC) property is located at 1155-1205 Manhattan Avenue which is an urban area of Brooklyn (Kings County) in New York City. SITE FEATURES: The property is nearly entirely covered by structures, with only one small area covered with other impervious material located along the northern edge of the property along Newtown Creek. There are eight contiguous four to six-story building on the property. The property borders Newtown Creek on the north side. CURRENT ZONING/USE: This property is currently in use for many separate commercial uses, primarily by small businesses and artisans. The surrounding uses are varied - the property adjacent to the west is indicated as having residential and commercial use but appears commercial; the properties to the east across Manhattan Avenue are indicated as being

factory/industrial uses, but appear to be commercial with residential above. HISTORICAL USE(s): The property has a long industrial/commercial history, but went through an extensive remedial effort overseen by local agencies in the 1990's. The property owners have done significant renovations on the buildings and have conducted at least two recent investigations which identified limited groundwater contamination, but did not identify any significant soil contamination.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Only two (of ten) temporary groundwater sampling wells located in the basement of the structure at 1155 Manhattan Avenue showed evidence of contamination. Each contained one chlorinated VOC slightly above standards. Tetrachloroethylene was identified at 21ppb; chloroform was identified at 12 ppb. Groundwater standards are 5 ppb and 7 ppb respectively. Soil samples from these borings were below unrestricted standards for the same compounds. Samples taken from permanent wells did not identify any VOC contamination. Based on professional judgment, the slight exceedances of groundwater standards, adjacent to the Newtown Creek Superfund Site, do not constitute a significant threat to the environment. No further investigations are warranted at this time. Site designation was changed from "P" to "N";

. Waste code: D000

. Waste name: Not Defined

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSLEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: F001

. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Program: HW  
Site Code: 58682  
Classification: Significant threat to the public health or environment - action required.  
Region: 2  
Acres: 1.1  
HW Code: 241016  
Record Add: 11/18/1999  
Record Upd: 07/26/2017  
Updated By: JHOCONNE

Site Description: Site Location: The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtrak s Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features: The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and is part of a long-term lease to Standard Motor Products. Current Zoning/Use(s): The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the building s roof. Past Uses of the Site: The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in 1990. Until March 2008, automobile parts and components at the site were primarily manufactured in the basement within recent years. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to off-site disposal at a licensed treatment, storage, and disposal (TSD) facility. Site Geology and Hydrogeology: The Site is underlain by the following units (in order by increasing depth): urban fill, Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level). The

groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs) but may be influenced by surface runoff that results in standing water across most of the Site during rain events. The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. Vertical groundwater movement is restricted by the Gardiners Clay where present or by the Precambrian bedrock which is considered to be the bottom hydrogeologic boundary of the groundwater flow system. The groundwater flow rate was estimated to be 0.78 feet/day.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs): (trichloroethane TCA, trichloroethene - TCE and other related chlorinated VOCs) and petroleum hydrocarbons in soil, and TCA and lead in groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area.

 Acres: 0.51  
 HW Code: 224129  
 Record Add: 10/28/2008  
 Record Upd: 04/10/2018  
 Updated By: SXDEWES

Site Description: Location: The 0.51 acre site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features: The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plant is located approximately 1/2 mile north of the site. Current Zoning/Use(s): The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, etc.). Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. The Meeker Avenue Plume Trackdown Site Characterization in the area of this site was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (approximately 138.5' below ground surface). Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 170,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 1,000,000 ppm (100%) in deep monitoring wells. Trichloroethene (up to 5,000 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each). - Soil PCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm). -Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 8,200,000 ug/m<sup>3</sup>, and in indoor air up to 170 ug/m<sup>3</sup>. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m<sup>3</sup>, and in indoor air up to 12 ug/m<sup>3</sup>. Significant Threat: The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public

water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

Spiller Address: 315 KINGSLAND AVE  
Spiller Company: 999  
Contact Name: SCOTT MCCABE  
DEC Memo: "6/9/2014: During investigation work being conducted at a State Superfund site (Former Spic and Span Cleaners, DEC Site ID No. 224129), a UST was discovered beneath the southern portion of a vacant warehouse during pre-clearing activities. DEC PM (Harrington) directed the standby consultant (URS Corporation) to call in a spill for this site. Soils surrounding the tank have been found to contain visual and olfactory evidence of petroleum contamination. (Harrington) 6/9/2014: H. Patel (DEC - Region 2) received spill from dispatch. Patel contacted D. Harrington (DEC PM - Central Office) to discuss the case, and subsequently assigned it to him. 6/16/2014: URS personnel have uncovered a portion of the UST located inside the property (vacant warehouse located at 315 Kingsland Avenue/260 Norman Avenue). Tank appears to be oriented long-way north to south, and is approximately 10' in length. Tank was approximately 14 below grade. Through a hole in the top of the tank, it was observed to be single-walled steel approximately 1/4 thick, and approximately 4' in diameter. There appears to be ~6 of an unidentified liquid at the bottom of the tank. Contents smelled like a mixture of weathered petroleum and solvents such as paint thinner or wood stripper. (Harrington) 6/17/2014: URS personnel collected a product sample from the UST and submitted it to the lab. Product will be analyzed for VOCs, SVOCs, PCBs, RCRA characteristics, viscosity, surface tension, and specific gravity. (Harrington) 11/21/2014: PM requested URS to generate report detailing the findings of investigation surrounding the UST inside the building. Report will include sampling results from soil and product samples, and a tank removal estimate. (Harrington) 12/26/2014: PM sent an e-mail to URS Corporation commenting on the draft UST data summary report for the work done inside the vacant building at 315 Kingsland Avenue. Numerous changes need to be made before the report can be finalized. (Harrington) 1/24/2015: PM sent an e-mail to URS Corporation approving the revised UST data summary report on 1/9/15. This report was distributed to interested parties (including Community Board 1 and Greenpoint branch of Brooklyn Public Library) on 1/21/15. (Harrington) 3/30/2015: PM sent an e-mail to URS Corp. requesting budget estimate for IRM regarding DNAPL recovery and oversight work related to the removal of the UST inside the building (which will be handled separately under response call-out with Island Pump and Tank). (Harrington) 5/18/2015: The Department sent a WA Issuance/Notice to Proceed letter to URS Corporation for the development of the Schedule 2.11 budget package regarding the IRM work assignment. This package is due to the Department in mid-June. (Harrington) 7/21/2015: DEC sent the WA Approval Letter to URS Corporation for the initiation of this IRM

work assignment. IRM covers both UST removal and DNAPL recovery at the site. Call-out for tank removal to be completed by PM shortly. (Harrington) 7/31/2015: DEC PM issues call-out 124051 to Island Pump and Tank (IPT) for the completion of UST removal within the abandoned warehouse building at 315 Kingsland Avenue/260 Norman Avenue. Site visit with IPT and URS to be completed week of August 17th. (Harrington) 8/19/2015: DEC PM conducted kick-off meeting with URS and IPT personnel regarding the UST removal from the site building. IPT to confirm the permits needed before initiating work. URS will be providing scope for structural support of roof to IPT shortly. (Harrington) 9/21/2015: IPT mobilizes to the site to complete tank pull. Wall pockets are cut into the south, east, and west walls for placement of structural steel to support the building roof. Bobcat, mini-excavator, scissor lift, and steel brought to the site. (Harrington) 9/22/2015: IPT places the structural steel beams (W12x30) in place (one east-west beam supported by east and west wall pockets, and two north-south beams supported by southern wall pockets and east-west beam). Roof made placement difficult as there is a 5 sag in the middle, as well as numerous sprinkler lines (one of which was cut and capped). (Harrington) 9/23/2015: IPT welds the steel beams together, and seals up the wall pockets with brick and mortar mix. The scissor lift is removed from the site. UST top is exposed at the southern end. There appears to be ~11 of liquid in the tank. It smells like a mix of gasoline and paint stripper. Vent and fill lines are noted heading east from the tank toward the sidewalk. Tank appears to be at an angle descending to the north. (Harrington) 9/24/2015: IPT vacuum truck removes 225 gallons of a Class 3 flammable liquid (ID Number 1993). Tank is removed from the ground and cleaned. There were a lot of holes in the tank bottom; leaks were minimized by clay soils beneath tank. Stained soils evident beneath tank. Soil samples collected by URS. IPT over-excavated the area and stockpiled contaminated soil for shipment off-site. (Harrington) 9/25/2015: IPT completed soil excavations in the UST area to the extent feasible given conditions. URS collected confirmatory samples. MJ Engineering and Land Surveying completed an updated survey of the building interior, UST location, sample locations, and excavation boundaries. (Harrington) 9/28/2015: IPT completes backfill of excavation with clean fill, then finishes by saw-cutting the rough edges in the floor and capping the backfill with a 6 layer of concrete (with wire mesh) to match the surrounding floor. IPT demobilizes from the site. (Harrington) 12/28/2015: IPT has submitted paperwork regarding their efforts to remove the UST at the property. This paperwork was approved in an e-mail to IPT. Reporting on the overall effort will be received from URS in late January-early February 2016. (Harrington) 3/4/2016: URS submitted the UST closure report. Confirmatory soil sampling indicates all contaminated soil has been removed from the site. Spill closed. (Harrington)"

Remarks: "Unknown UST (4'x10') discovered during test borings and contaminated soil found. DEC Dave Harrington out of Albany Ofc is aware and project manager. Cleanup is pending. Tank still in the ground."

Site Description: Empire State Varnish Company, Inc. is located at 38 Varick Street, Brooklyn, NY. The Property is situated along the east side of Varick Street approximately 200 feet from the corner of Bridgewater Street in the Greenpoint section of Brooklyn. The irregular shaped Property also fronts on Bridgewater Street. The Property is zoned M3-1 and consists of an approx. 30,000 sq. ft. lot improved with several small buildings utilized for the production of varnish and paint. Empire has been producing paint and varnish on-site since the 1930's. The production process involves heating and mixing natural or synthetic resins with a vegetable oil. This mixture is then cooled and blended with a volatile solvent in large kettles. The oils primarily used by Empire are soybean and linseed oils. The volatile solvent commonly used by Empire is mineral spirits. The mineral spirits were stored on-site in underground storage tanks until the early 1980's. The facility currently uses only aboveground tanks or 55-gallon drums to store raw materials or finished product on-site. A consent order was completed to close the site under RCRA. Since this site is located across from Exxon site (Greenpoint), Exxon showed interest in acquiring this property to extract the free product in groundwater migrating from their site. RCRA agreed to transfer the Empire site to DER to close the site under the remediation program. Consent order has been amended to transfer the responsibility to DER. Empire has submitted a closure plan and ROUX Associates has submitted a report with the details of their investigation. Closure activities begun in August 2007. All the underground and above ground tanks were removed along with the drums, containers, chemical equipments and other misc. items and disposed off-site. The soils excavated during the removal of USTs were sampled and properly disposed. The closure activities were completed in December 2007. The final closure report was submitted in February and was approved. The No Further Action letter was sent to the owner on February 29, 2008.

Env Problem: Other than physical hazards at the site there are no significant environmental hazards from this site. The groundwater at the site is contaminated but the contamination was contributed from the Exxon

Mobil (Greenpoint) spill. Recent investigation results indicate the presence of free product in groundwater at the site. Closure activities begun in August 2007. All the underground and above ground tanks were removed along with the drums, containers, chemical equipments and other misc. items and disposed off-site. The soils excavated during the removal of USTs were sampled and properly disposed. The closure activities were completed in December 2007. The final closure report was submitted in February and was approved. The No Further Action letter was sent to the owner on February 29, 2008. Now the ownership of the property is transferred to Exxon. The consultant for Exxon is installing extraction wells to remove the free product in the groundwater.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 11/14/2018	Source: EPA
Date Data Arrived at EDR: 11/27/2018	Telephone: N/A
Date Made Active in Reports: 12/07/2018	Last EDR Contact: 11/27/2018
Number of Days to Update: 10	Next Scheduled EDR Contact: 01/14/2019
	Data Release Frequency: Quarterly

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date Made Active in Reports: 12/07/2018	Last EDR Contact: 11/27/2018
Number of Days to Update: 10	Next Scheduled EDR Contact: 01/14/2019
	Data Release Frequency: Quarterly

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 11/14/2018

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 11/14/2018	Source: EPA
Date Data Arrived at EDR: 11/28/2018	Telephone: 800-424-9346

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (212) 637-3660
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 12/03/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019

Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (212) 637-3660
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 12/03/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 10/17/2018	Source: Department of the Navy
Date Data Arrived at EDR: 10/25/2018	Telephone: 843-820-7326
Date Made Active in Reports: 12/07/2018	Last EDR Contact: 10/15/2018
Number of Days to Update: 43	Next Scheduled EDR Contact: 02/25/2019
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/28/2018	Telephone: 703-603-0695
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 11/28/2018
Number of Days to Update: 17	Next Scheduled EDR Contact: 03/11/2019
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/28/2018	Telephone: 703-603-0695
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 11/28/2018
Number of Days to Update: 17	Next Scheduled EDR Contact: 03/11/2019
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **Federal ERNS list**

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/24/2018

Date Data Arrived at EDR: 09/25/2018

Date Made Active in Reports: 11/09/2018

## **State and tribal voluntary cleanup sites**

### VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

### ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

## ADDITIONAL ENVIRONMENTAL RECORDS

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

#### SWTIRE: Registered Waste Tire Storage & Facility List

A listing of facilities registered to accept waste tires.

Date of Government Version: 02/27/2018	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/06/2018	Telephone: 518-402-8694
Date Made Active in Reports: 06/08/2018	Last EDR Contact: 12/07/2018
Number of Days to Update: 63	Next Scheduled EDR Contact: 03/25/2019
	Data Release Frequency: No Update Planned

#### SWRCY: Registered Recycling Facility List

A listing of recycling facilities.

Date of Government Version: 09/30/2018	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 10/03/2018	Telephone: 518-402-8705
Date Made Active in Reports: 11/07/2018	Last EDR Contact: 07/06/2018
Number of Days to Update: 35	Next Scheduled EDR Contact: 10/15/2018
	Data Release Frequency: Quarterly

#### INDIAN ODI: Report on the Status of Open Dumps on Indian Lands

Location of open dumps on Indian land.

Date of Government Version: 12/31/1998	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/03/2007	Telephone: 703-308-8245
Date Made Active in Reports: 01/24/2008	Last EDR Contact: 10/25/2018
Number of Days to Update: 52	Next Scheduled EDR Contact: 02/11/2019
	Data Release Frequency: Varies

#### DEBRIS REGION 9: Torres Martinez Reservation Illegal Dump Site Locations

A listing of illegal dump sites location on the Torres Martinez Indian Reservation located in eastern Riverside County and northern Imperial County, California.

Date of Government Version: 01/12/2009	Source: EPA, Region 9
Date Data Arrived at EDR: 05/07/2009	Telephone: 415-947-4219
Date Made Active in Reports: 09/21/2009	Last EDR Contact: 10/22/2018
Number of Days to Update: 137	Next Scheduled EDR Contact: 02/04/2019
	Data Release Frequency: No Update Planned

#### ODI: Open Dump Inventory

An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Next Scheduled EDR Contact: 02/25/2019  
Data Release Frequency: Varies

### HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 03/01/2018

	Data Release Frequency: Quarterly

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 11/05/2018
Number of Days to Update: 88	Next Scheduled EDR Contact: 02/18/2019
	Data Release Frequency: Quarterly

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/08/2018	Telephone: 703-308-4044

## ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 08/13/2018	Source: EPA
Date Data Arrived at EDR: 10/04/2018	Telephone: 703-416-0223
Date Made Active in Reports: 11/16/2018	Last EDR Contact: 11/27/2018
Number of Days to Update: 43	Next Scheduled EDR Contact: 03/18/2019
	Data Release Frequency: Annually

## RMP: Risk Management Plans

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 08/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/22/2018	Telephone: 202-564-8600

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006  
Date Data Arrived at EDR: 03/01/2007  
Date Made Active in Reports: 04/10/2007

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 06/23/2017	Source: Department of Energy
Date Data Arrived at EDR: 10/11/2017	Telephone: 505-845-0011

	Data Release Frequency: No Update Planned

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Data Release Frequency: Varies

## HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/12/2018

Date Data Arrived at EDR: 11/14/2018

Date Made Active in Reports: 12/04/2018

Number of Days to Update: 20

Source: Department of Energy & Environmental Protection

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Longitude (West): 73.93839 - 73° 56' 18.20"  
Universal Tranverse Mercator: Zone 18  
UTM X (Meters): 589634.2  
UTM Y (Meters): 4510384.0  
Elevation: 11 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map: 5940597 BROOKLYN, NY  
Version Date: 2013  
  
North Map: 5940599 CENTRAL PARK, NY  
Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
3604970202F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
3604970089F	FEMA FIRM Flood data
3604970093F	FEMA FIRM Flood data
3604970206F	FEMA FIRM Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BROOKLYN	YES - refer to the Overview Map and Detail Map

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### **ROCK STRATIGRAPHIC UNIT**

Era: Mesozoic  
System: Cretaceous  
Series: Upper Cretaceous  
Code: uK (decoded above as Era, System & Series)

### **GEOLOGIC AGE IDENTIFICATION**

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

## OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Surficial Soil Types: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock  
very gravelly - loamy sand  
stratified  
sandy loam

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## WELL SEARCH DISTANCE INFORMATION

<u>DATABASE</u>	<u>SEARCH DISTANCE (miles)</u>

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Source: Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

### RADON

#### State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

# Certified Sanborn® Map Report

12/14/18

**Site Name:**

47-50 30th Street  
47-50 30th Street  
Long Island City, NY 11101  
EDR Inquiry # 5512171.3

**Client Name:**

Ramboll  
18100 Von Karman Avenue  
Irvine, CA 92612  
Contact: Ginger White

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

### Certified Sanborn Results:

Sanborn® Library search results

Certification #: 5D12-4B4F-97CB

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Ramboll (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

### Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **APPENDIX D**  
**PREVIOUS ENVIRONMENTAL REPORTS**

October 19, 2018

Mr. Ira Wechler  
Prestone Printing Co. Inc.  
47-50 30<sup>th</sup> Street  
Long Island City, NY 11101

Re: Subsurface Investigation Report  
47-50 30<sup>th</sup> Street, Long Island City, New York

Dear Mr. Wechler,

This letter report has been prepared by Impact Environmental Consulting, Inc. ("IEC") to present the findings of the subsurface investigation conducted between September 20, 2018 and September 21, 2018 at the above-referenced Site. This investigation work plan was designed to determine a potential source of soil, groundwater and soil vapor contamination, and evaluate current site-specific sub-slab soil vapor and indoor air exposure risks. This report objective is to provide a comprehensive evaluation of the investigative findings, inclusive of historic environmental reports, in order to develop, design and support the basis of remedial or mitigative measures that may be required.

### **Site Description and Background**

The Site is currently developed with a one-story commercial building (offices and warehouse). The building had previously been occupied by the Milton Paper Company, and prior to that was occupied a chemical warehouse and company (Philip A. Hunt Chemical Corporation). The current occupant is Prestone Printing Co., Inc. (Prestone), which provides traditional printing products, die cutting and binding services. A Phase I Environmental Site Assessment (ESA) was completed by Whitestone Associates Inc. (Whitestone) in August 2005, (**Attachment A**) which identified Recognized Environmental Concerns (RECs). RECs included 1) historical industrial/manufacturing uses; 2) a former 3,000-gallon fuel oil UST; 3) floor drains with unidentifiable discharge points; and 4) the presence of a commercial drycleaner situated on the contiguous property to the north. Based upon the results of the Phase I ESA, a Limited Phase II ESA was completed by Whitestone in September 2005 (**Attachment B**). Results of Whitestone's 2005 Phase II ESA investigation detected semi-volatile organic compounds (SVOCs) in soil at concentrations above New York State Department of Conservation (NYSDEC) Technical Administrative Guidance Memorandum (TAGM) 4046 Soil Cleanup Objectives. Said detected SVOC analytes are indicative of fill material

found throughout New York City and did not represent a condition that typically warrants further action assuming subsurface soils and groundwater are not disturbed by site redevelopment. Groundwater samples collected as part of the abovementioned Phase II ESA investigation detected volatile organic compounds (VOCs) and SVOCs in groundwater at concentrations exceeding NYSDEC class GA groundwater quality standards.

Preferred Environmental Services (PES) conducted a Limited Soil and Soil Vapor Intrusion (SVI) investigation in April of 2018 (**Attachment C**). Preferred Environmental Services concluded that soil vapor intrusion of chlorinated VOCs, specifically tetrachloroethene (PCE) and related degradation constituents appeared to be present within the Site building. Additional VOC analytes, other than dry-cleaning related VOCs were identified in indoor air; however, these non-chlorinated VOCs were likely associated with the use of current operational and cleaning chemicals.

## **SITE INVESTIGATION TASKS**

### **Soil Sample Collection**

Between September 20 and September 21, 2018, IEC advanced two (2) onsite soil borings (designated as soil boring B-1 and B-2) using direct push/percussion (GeoProbe 420M mobile drill rig) drilling machinery and appurtenances for soil sample collection. Each of the soil borings were advanced to a terminal depth of 15 feet below grade surface (bgs).

The probe-driven sampler consisted of a hollow probe that allowed soil to enter as it was advanced. Discrete soil samples were secured at the desired depths and were contained within a non-reactive transparent plastic sleeve that lined the hollow probe. The plastic sleeves were removed for subsequent inspection and sample aliquot acquisition. The locations of the abovementioned onsite soil borings were selected to obtain representative soil samples from the northern extent of the property, relative to the adjacent dry-cleaning operations:

- Soil Boring B-1: Said soil boring was installed within the northern portion of the Site building, approximately fifteen (15) feet south of the northern interior building wall, and approximately thirty (30) feet east of the western interior building wall.
- Soil Boring B-2: Said soil boring was installed within the northern portion of the Site building, approximately fifteen (15) feet south of the northern interior building wall, and approximately thirty (30) feet east of the eastern interior building wall.

A visual inspection of the soil samples recovered during the installation of the soil borings was conducted to identify the presence of gross chemical contamination and to classify the sample media. Color classifications were made in accordance with the Munsell Classification System. Gradation classifications were made in accordance with the Unified Soil Classification System.

Headspace field screening analyses was performed on each of the acquired soil samples utilizing a portable photo ionization detection (PID) meter to measure if hydrocarbon concentrations were present in isolated portions of the secured samples. Headspace analysis was conducted on each soil sample by partially filling a clean zip-lock bag and sealing it, thereby creating a void. To facilitate the detection of possible hydrocarbons contained within the headspace, the container was agitated for a period of 30 seconds. The probe of the PID was then injected through the bag into the headspace to measure the hydrocarbon concentrations present. For this investigation, the PID was calibrated to isobutylene span gas to yield total VOCs in parts per million by volume (ppmV). Results of the analysis were used to adjust the sample and analysis program to yield the most accurate and representative results.

Two (2) soil samples were collected for laboratory analysis; one (1) soil sample from each boring. The soil sample collected from soil boring B-1 was collected approximately between 6.5 and 7 feet bgs, and the soil sample collected from soil boring B-2 was collected approximately between 8 and 8.5 feet bgs. Said soil samples were transferred to laboratory-prepared glassware, placed within an iced cooler, and delivered by courier under industry standard chain of custody procedures to an ELAP-accredited environmental laboratory (Alpha Analytical Laboratories, Inc, located in Westboro, Massachusetts).

The locations of said soil borings are presented in **Plate 1**, and the associative boring-specific substratum is described within the Monitoring Well/Soil Boring Logs, presented in **Attachment D**.

### **Groundwater Investigation**

Three (3) temporary groundwater well points (well points identified as TW-1, TW-2, and TW-3) were installed by IEC using direct push/percussion (GeoProbe 420M mobile drill rig) drilling machinery and appurtenances, developed utilizing NYSDEC standard procedures and protocols, and sampled on September 20, 2018. The locations of said onsite temporary groundwater well points are as follows:

- Temporary Well Point TW-1 was installed within the footprint of soil boring B-1, located within the northern portion of the Site building, approximately fifteen (15) feet south of the northern interior building wall, and approximately thirty (30) feet east of the western interior building wall.
- Temporary Well Point TW-2 was installed within the footprint of soil boring B-2, located within the northern portion of the Site building, approximately fifteen (15) feet south of the northern interior building wall, and approximately thirty (30) feet east of the eastern interior building wall.
- Temporary Well Point TW-3 was installed within the southern section of the Site building, approximately thirty (30) feet north of the southern interior building wall and approximately one hundred (100) feet south of the northern interior building wall.

A representative groundwater sample was collected from each of the three temporary well points, once development of said temporary well points were completed. A decontaminated GeoProbe stainless steel sampling screen was installed to a terminal depth of 13 feet bgs. The onsite water table was encountered between 9.75 and 10.83 feet bgs, as confirmed utilizing a Solinst water level meter. A hand-oscillatory sample collection method was utilized to introduce groundwater directly from the tubing into the appropriate laboratory-supplied sample container. Representative groundwater samples were transferred to laboratory-prepared and preserved glassware, placed within an iced cooler, and delivered by courier under industry standard chain of custody procedures to Alpha Analytical Laboratories, Inc. The locations of the abovementioned temporary well points are presented in **Plate 1** and the associative Monitoring Well/Soil Boring Logs are presented within **Attachment D**.

### **Soil Vapor Sampling**

A soil vapor investigation was conducted by IEC on September 21, 2018 consisting of the collection of sub-slab vapor samples and relative indoor air samples, within the onsite building slab (slab on grade construction). The three (3) sub-slab sample locations are identified as SV-1, SV-2 and SV-3. Additionally, the three (3) indoor air quality samples, each associative to a single sub-slab vapor sampling location are identified as IA-1, IA-2 and IA-3. The locations of the sub-slab vapor sampling locations with associative indoor air sampling locations are as follows:

- Sub-Slab Vapor Sample SV-1/Indoor Air Sample IA-1: Temporary sub-slab vapor point SV-1 was installed within the northern portion of the Site building, approximately fifty (50) feet south of the northern interior building wall, and forty (40) feet east of the western interior wall. The associative indoor air sample, IA-1 was located within five (5) feet of temporary sub-slab vapor point SV-1.

- Sub-Slab Vapor Sample SV-2/Indoor Air Sample IA-2: Temporary sub-slab vapor point SV-1 was installed approximately thirty (30) feet south of sub-slab vapor point SV-1, within the center of the Site building. The associative indoor air sample, IA-2 was located within five (5) feet of temporary sub-slab vapor point SV-2.
- Sub-Slab Vapor Sample SV-3/Indoor Air Sample IA-3: Temporary sub-slab vapor point SV-1 was installed within the southern portion of the Site building, approximately fifty (50) feet north of the southern interior building wall, and twenty (20) feet east of the eastern interior building wall. The associate indoor air sample, IA-3 was located within five (5) feet of temporary sub-slab vapor point SV-3.

#### Installation of Semi-Permanent, Sub-Slab Vapor Sampling Points

One to two-inch diameter access holes were installed within the onsite building concrete slab, utilizing a rotary-hammer drill. Said sampling port borings were advanced through the building's concrete slab, approximately six (6) inches in thickness. Upon completion of the concrete boring work, a temporary soil vapor probe, each consisting of a four-inch long, stainless-steel rod with one-quarter-inch diameter Teflon-coated tubing, which was placed approximately two-inches below the concrete floor slab at each sub-slab vapor sampling location/boring. Decontaminated filter pack sand was utilized to fill the annular space to two-inches above the top of the steel rod. The remaining annular space atop the sand pack was filled with bentonite grout to prevent ambient air infiltration. It should be noted that during the time of sub-slab vapor/indoor air sample collection, flooring conditions were observed for cracks, penetrations and possible preferential pathways. Penetrations were observed within the foundation in the northernmost warehouse space along the northern and western interior building walls.

#### Sub-Slab Vapor / Indoor Air Sampling Procedures

After installation, the semi-permanent sub-slab vapor probes were allowed to equilibrate for a minimum of 24 hours after installation and prior to sample collection. Prior to initiating sample collection, a tracer gas test was performed at each sub-slab vapor point, to verify the integrity of each probe seal. The closed/sealed space around the sampling tube was formed utilizing an inverted container placed atop the ground at the point where the tubing exits the subsurface. The Teflon-coated tubing was run through an air-tight fitting installed on the top of the container, and tubing was run from the helium supply through another air-tight fitting on the side of the container. Helium (tracer gas) was introduced as a quality assurance/quality control measure to verify the integrity of the soil vapor probe seal. Once the atmosphere of the inverted container was enriched, a portable monitoring device was used to measure real-time from the sample probe for the presence of high concentrations (> 10%) of the tracer. The integrity of all three temporary sub-slab surface probes were confirmed and found intact. Prior to

initiating sample collection, each temporary sub-slab point was purged of a minimum of three tube volumes of soil vapor, with the resultant purge effluent concurrently evaluated for the presence of VOCs utilizing a photoionization detector (PID).

Upon completion of the tracer gas testing, a laboratory-supplied, 2.75-liter vacuum Summa canister was connected each temporary sub-slab vapor point. Sample collection was performed over an approximate 8-hour period governed by a laboratory-programmed flow regulator; said laboratory pre-programmed flow rate was set at 0.003 liters per minute (LPM), which is less than the maximum flow rate of 0.2 LPM as established in the October 2006 New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York document. The closed/sealed space around the sampling tube was formed utilizing an inverted container placed atop the ground at the point where the tubing exits the subsurface. The Teflon-coated tubing was run through an air-tight fitting installed on the top of the container, and tubing was run from the helium supply through another air-tight fitting on the side of the container. Helium (tracer gas) was introduced as a quality assurance/quality control measure to verify the integrity of the soil vapor probe seal. Once the atmosphere of the inverted container was enriched, a portable monitoring device was used to measure real-time from the sample probe for the presence of high concentrations (> 10%) of the tracer. The integrity of all four sub-slab surface probes were confirmed and found intact.

Three (3) indoor air samples were collected concurrently with the sub-slab vapor samples, with each indoor air sampled cited proximal to its respective sub-slab vapor sampling location. Said indoor air samples were collected to establish indoor air concentrations and background conditions at the Site. Indoor Air sample acquisition was performed utilizing 2.75-liter laboratory-supplied Summa canisters, each canister equipped with a laboratory-prepared flow regulator; said laboratory pre-programmed flow rate was set at 0.003 liters per minute (LPM) Each canister was set atop an approximate three-foot tall stand, table top or other infrastructure, with sample collection initiated over an approximate 8-hour period, concurrent with the sub-slab vapor sampling. The indoor air sample collection elevations were selected to represent air quality within typical breathing zone(s) (between three and five feet above slab grade, as specified within the abovementioned NYSDOH guidance document).

Upon completion of the sampling event, the sub-slab sampling implants were removed, and the holes and surfaces were repaired with concrete. The sub-slab vapor samples and associative indoor samples placed within a protective tote, and delivered by courier under industry standard chain of custody procedures to Alpha Analytical Laboratories, Inc. The temporary sub-slab vapor sampling point locations and associative indoor air sampling

locations are presented within the attached Soil Vapor Concentration Map (**Plate 1**) and the pre-sample purge screening results are summarized within the Vapor Intrusion Sample Logs presented in **Attachment D**.

## **SITE INVESTIGATION RESULTS**

### **Observed Geological and Hydrogeological Site Conditions**

#### ***Site Stratigraphy***

Soil encountered beneath the Site during this investigation were characterized to depths of approximately 15 fbg. In general, said soil consisted of historic fill material to approximately 8 feet bgs, overlying brown to dark brown, fine to coarse sand with some gravel and trace silt to 15 fbg. No evidence of staining and/or elevated PID readings were observed in the material retrieved from borings B-1 or B-2. Boring specific stratum is described within the Monitoring Well/Soil Boring Logs, presented in **Attachment D**.

#### ***Site Hydrogeology***

Water table elevations measured within the temporary onsite monitoring well points, were encountered at depths between 9.75 and 10.83 feet bgs. Free-phase contaminants (DNAPL/LNAPL) were not detected within the purged development groundwater evacuated from the onsite temporary monitoring well points. The measured and recorded depth to groundwater measurements are presented in **Attachment D**. A groundwater elevation survey was not performed as part of this investigation for the determination of groundwater flow beneath the Site; however, based upon the topographic map (USGS – Brooklyn Quadrangle) and the “USGS Groundwater Conditions on Long Island” map, regional groundwater flow direction is presumed to be west, towards Beaver Kill Creek.

#### ***Soil Sample Field Screening Results***

Headspace analyses of soil samples collected from soil borings B-1 and B-2 ranged between below the instrument (PID) detection limit (BDL) to a maximum measurement of 1.9 ppmV; said maximum measurement was from a soil sample collected from soil boring B-1 between 3 and 6 feet bgs. Headspace analysis results are presented within the Soil Boring Logs provided in **Attachment D**.

## **Laboratory Analytical Results**

### ***Soil Sample Analytical Results***

The laboratory-submitted soil samples were analyzed in accordance with United States Environmental Protection Agency (USEPA) Test Method 8260 for VOCs. The tabulated analytical summary tables are presented in **Table 1** and the associative laboratory analytical report is presented in **Attachment E**. Laboratory analyses performed on soil samples B-1 and B-2 did not detect VOCs in either sample, at concentrations above the laboratory's method detection limit (MDL).

### ***Groundwater Sample Analytical Results***

The laboratory-submitted groundwater samples were analyzed in accordance with United States Environmental Protection Agency (USEPA) Test Method 8260 for VOCs. The tabulated analytical summary tables are presented in **Table 2** and the associative laboratory analytical report is presented in **Attachment E**. The laboratory analyses performed on groundwater samples TW-1, TW-2 and TW-3 detected the following contaminants above NYSDEC TOGS 1.1.1 Class GA groundwater quality standards:

- TW-1: Tetrachloroethene (98 µg/l)
- TW-2: Tetrachloroethene (170 µg/l)

Additional VOCs were detected in groundwater samples TW-1 and TW-2, but at concentrations below NYSDEC TOGS 1.1.1 Class GA groundwater quality standards. VOCs were detected in groundwater sample TW-3, but at concentrations below NYSDEC TOGS 1.1.1 Class GA groundwater quality standards.

The groundwater analytical summary tables are included as **Table 2** and the laboratory analytical report is included in **Attachment E**.

### ***Sub-Slab Vapor and Indoor Air Analytical Results***

The laboratory-submitted sub-slab vapor and indoor air samples were analyzed in accordance with United States Environmental Protection Agency (USEPA) Test Method TO-15 for VOCs. The tabulated analytical summary tables are presented in **Table 1** and the associative laboratory analytical report is presented in **Attachment E**. Laboratory-detected volatile organics in indoor air samples collected during this investigation were compared to NYSDOH ambient air guidelines specified for ambient air, as cited within the abovementioned NYSDOH guidance document,

and within the September 2013 (Tetrachloroethene: 30 µg/m<sup>3</sup>) and August 2015 (Trichloroethene: 2 µg/m<sup>3</sup>) updates to said NYSDOH guidance document.

The following analytes were detected in indoor air samples at concentrations above NYSDOH ambient air concentrations:

Indoor Air Sample IA-1:

- Tetrachloroethene: 562 µg/m<sup>3</sup>
- Trichloroethene: 3.8 µg/m<sup>3</sup>

Indoor Air Sample IA-2:

- Tetrachloroethene: 446 µg/m<sup>3</sup>
- Trichloroethene: 2.9 µg/m<sup>3</sup>

The sub-slab vapor sample and associative indoor air sample analytical results were compared to the May 2017 revised decision matrices to the NYSDOH Final Guidance Document. Elevated concentrations of tetrachloroethene were identified in the following sub-slab vapor sample/associative indoor air sample comparative review:

NYSDOH Matrix Decision Matrix Description - Mitigation:

Said NYSDOH classification is based upon NYSDOH indoor air/sub-slab vapor decision matrices cited within the abovementioned document, to assist the NYSDEC with subsequent remedial actions/monitoring requirements by the potential responsible party/parties (PRP). As per the Department's decision matrix description, the Mitigation classification requires "the PRP to immediately minimize current or potential exposures associated with soil vapor intrusion". "Mitigation is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated."

Soil Vapor Sample SV-1/Indoor Air Sample IA-1:

- Tetrachloroethene (SV-1: 42,300 µg/m<sup>3</sup> – IA-1: 562 µg/m<sup>3</sup>)
- Trichloroethene (SV-1: 98.9 µg/m<sup>3</sup> – IA-1: 3.8 µg/m<sup>3</sup>)

NYSDOH Matrix Decision Matrix Description – Identify Source(s) and Resample or Mitigate:

Said NYSDOH classification is based upon NYSDOH indoor air/sub-slab vapor decision matrices cited within the abovementioned document, to assist the NYSDEC with subsequent remedial actions/monitoring requirements by the potential responsible party/parties (PRP). As per the Department's decision matrix description, the Identify Source(s) and Resample or Mitigate classification recommends "...that reasonable and practical actions be taken to identify the source(s) affecting the indoor air quality and that actions be implemented to reduce indoor air concentrations to within background ranges." and "In the event that indoor or outdoor sources are not readily identified or confirmed, resampling (which might include additional sub-slab vapor and indoor air sampling locations) is recommended to demonstrate that SVI mitigation actions are not needed."

Soil Vapor Sample SV-2/Indoor Air Sample IA-2:

- Tetrachloroethene (SV-2: 96.3  $\mu\text{g}/\text{m}^3$  – IA-2: 446  $\mu\text{g}/\text{m}^3$ )
- Trichloroethene (SV-2: not detected – IA-2: 2.9  $\mu\text{g}/\text{m}^3$ )

Soil Vapor Sample SV-3/Indoor Air Sample IA-3:

- Tetrachloroethene (SV-3: 39.4  $\mu\text{g}/\text{m}^3$  – IA-3: 20.6  $\mu\text{g}/\text{m}^3$ )

A tabulated summary of the reported laboratory results compared to applicable guidance criteria is presented in **Table 3** and **Table 4** and the laboratory analytical report is included in **Attachment E**.

## **CONCLUSIONS AND RECOMMENDATIONS**

Impact Environmental has performed a Subsurface Investigation at the Site in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. This investigation was conducted in response to evidence of RECs identified for the Site as well as previous subsurface investigations conducted at the Site. The associated investigation work consisted of the review and evaluation of historic environmental assessments and investigation conducted at the Site, and the sampling and analysis of subsurface soil, groundwater, sub-slab vapor and indoor air to further define the environmental quality of the Site:

- A review of the historic assessment and investigation documentation for the Site indicates that the subject Site currently manufactures printing products, provides die cutting and binding services, and was historically utilized for chemical-based operations and storage. Historic documents also indicate commercial dry-cleaning operations at the abutting property along the northern extent of the Site.

- Sub-slab soil collection, field screening and laboratory analyses were performed within the Site building. A total of three (3) borings were installed within the Site building to a terminal depth of approximately fifteen (15) feet below building slab grade and sampled as part of this investigation. The subsurface lithology encountered during this investigation appears to consist of historic fill material utilized within the region, which confirms the lithology encountered during historic subsurface investigations conducted at this Site. Field screening of the soil samples collected during this investigation indicated a maximum of 1.9 ppmV of volatile organics in soil vapor. Laboratory analyses performed on selected soil samples (as determined by field screening with a photoionization detector, concurrent with visual/olfactory inspection of the recovered material) did not detect volatile organics in said soil samples, at concentrations above the laboratory method detection limits.
- Groundwater samples were collected from temporary well points installed within the footprints of the abovementioned soil borings located proximal to the northern extent of the Site building, adjacent to the neighboring offsite commercial dry-cleaning facility. A third temporary well point was installed in a central location within the Site building. Groundwater samples were collected from each of the temporary well points and analyzed for volatile organics at an ELAP-accredited environmental laboratory. Elevated concentrations of tetrachloroethene, a commonly utilized dry-cleaning chlorinated solvent, were detected in groundwater samples collected adjacent to the northern extent of the Site, at concentrations above NYSDEC TOGS 1.1.1 Class GA groundwater quality standards.
- A sub-slab vapor/indoor sampling event was performed as part of this investigation. An inspection of the Site building interior was performed prior to said sub-slab vapor/indoor sampling event; chemicals identified during the inspection and utilized as part of the current Site operations did not indicate chlorinated volatile organics were components of chemicals utilized with current Site operations. Significant cracks were identified within the northern and western interior Site building walls.

Three (3) temporary sub-slab vapor probes were installed within the Site building's concrete slab; one probe installed within the northern section of the building, one within the central section of the building and the third installed within the southern section of the Site building. Sub-slab vapor sampling was performed concurrent with indoor air sampling, with dedicated indoor air assemblies staged approximately five (5) feet within its associative sub-slab vapor sampling location.

Laboratory results of the indoor air samples, specifically the sample locations at the northern (Sample ID: IA-1) and central (Sample ID: IA-2) detected concentrations of chlorinated volatile organics, specifically tetrachloroethene and trichloroethene (a direct degradation product of tetrachloroethene and also a main component in dry-cleaning “spot cleaning” solutions), above NYSDOH ambient air guideline concentrations. A comparison of the sub-slab vapor sampling results with the associative indoor air samples against the May 2017 revised NYSDOH decision matrices cited within the October 2006, NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York document indicate that tetrachloroethene and trichloroethene were detected in the sub-slab vapor sample and associative indoor air sample collected at/beneath the northern section of the Site building at concentrations that warrants mitigation, with additional investigative and potential mitigation to be performed within the central and southern sections of the Site building.

Based on the above investigation data and in our professional opinion, it appears that the neighboring dry-cleaning operations located immediately adjacent to the northern extent of the Site, appear to have impacted the environmental quality of the Site and a potentially defined human health exposure pathway within the Site building which requires further action. Our expanded recommendations are as follows:

- It is recommended to seal the Site building walls (observed cracks in northern and western interior walls) floor joints and floors to prevent against potential exposure risks from elevated chlorinated volatile organics detected beneath the building slab and reduce human exposure to said chlorinated volatile organics within indoor air.
- In addition, it is recommended to contact the Region 2 New York State Department of Environmental Conservation Spill Response office, to notify the Department of the investigation findings and proceed with Department-directed source identification, potential responsible party delegation and mitigation of impacts to the environmental quality of the Site. Please note that a Spill Case may be recorded, initially with the Subject Site, as a result of said notification.

Sincerely,  
**IMPACT ENVIRONMENTAL CLOSURES, INC**

Dear Mr. Adler:

Whitestone Associates, Inc. (Whitestone) is pleased to submit for your review the attached *Summary Report of Findings - Phase I Environmental Site Assessment* for the above-referenced property. Additional pertinent information (if any) received from regulatory agencies pursuant to *Freedom of Information Law* (FOIL) requests will be provided in a supplement to this report.

Please contact us with any questions or comments regarding the enclosed report.

Sincerely,

**WHITESTONE ASSOCIATES, INC.**

## SECTION 1.0 Summary of Findings

Whitestone Associates, Inc. (Whitestone) was retained by Prestone Printing to perform a Phase I Environmental Site Assessment (ESA) of the existing Milton Paper Company at 47-50 30<sup>th</sup> Street in Long Island City, Queens County, New York (hereinafter referred to as the "site" or the "subject property"). Investigatory activities were completed by Whitestone between July 13, 2005 and August 8, 2005. The site reconnaissance was conducted on July 21, 2005.

This document serves as the Phase I ESA report for this property. Because of the required turn-around time for this project, comprehensive responses to all New York State Department of Environmental Conservation (NYSDEC) and local requests for information pursuant to the *Freedom of Information Law* (FOIL) could not be included in this summary report. Additional pertinent information (if any) received from regulatory agencies pursuant to FOIL requests will be provided upon receipt in a supplement to this report.

Whitestone performed the Phase I ESA of the subject property in conformance with the scope and limitations of the American Society of Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (E1527-00). Any exceptions to or deletions from this practice are described in Section 8.3 of this report. This assessment has revealed evidence of *recognized environmental conditions* (RECs) in connection with the subject property including the following:

- ▶ The subject property historically has been utilized as a chemical warehouse and as a shellac company. These operations likely included the on-site storage and/or use of hazardous or potentially hazardous materials. Discharges of such materials/wastes potentially may have resulted in contamination of soil and/or groundwater at the subject property.
- ▶ One 3,000 gallon former fuel oil UST remains abandoned in place under the eastern portion of the site building. No environmental sampling reportedly was conducted during UST closure activities and potentially releases from this former UST may have impacted subsurface conditions at the subject property.
- ▶ Two floor drains were observed in a storage room located in the western portion of the site building. A site sketch provided in Lender Consulting Service's (LCS) November 17, 2004 Phase I ESA for the subject property identifies this room as "reported explosion room". This room may formerly have been utilized for the mixing and testing of chemicals associated with former site building tenant, Philip A. Hunt Chemical Corporation. Accordingly, the discharge point of these floor drains should be determined.

These RECs are documented more completely in the pages that follow -- as are recommendations for further evaluation and/or remediation.

## **SECTION 2.0 Introduction**

### **2.1 PURPOSE**

The purpose of this ESA is to provide an appropriate inquiry to the previous and current ownership and uses of the property consistent with the American Society of Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (E1527-00).

### **2.2 SCOPE OF SERVICES**

Whitestone's Scope of Services in connection with this ESA included the following components:

- ▶ a review of readily-available federal, state, and local records through electronic database searches and *Freedom of Information Law* (FOIL) document requests;
- ▶ a site reconnaissance and limited magnetics survey;
- ▶ Sanborn Fire Insurance Map, aerial photograph, historical topographic map, and City Directory Search evaluation and interpretation;
- ▶ interviews with knowledgeable representatives; and
- ▶ summary report generation.

### **2.3 SIGNIFICANT ASSUMPTIONS**

Whitestone assumes all information provided by the client, public officials, knowledgeable representatives, or others noted in this report to be factual unless otherwise contradicted or documented.

### **2.4 LIMITATIONS, EXCEPTIONS, SPECIAL TERMS, AND CONDITIONS**

The goal of an ESA is to identify recognized environmental conditions at the subject site. With this in mind, Whitestone seeks to investigate the presence or likely presence of hazardous substances or petroleum products on a property under conditions which indicate an existing release, a past release, or a material threat of a release to structures of the property or into the soils, groundwater, or surface water of the property. This assessment includes a discussion of hazardous substances and petroleum products which are present at the property and are in compliance with appropriate regulations governing their storage and use.

This Phase I ESA does not include an extensive evaluation of *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be subject to enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs, however, certain *Business Environmental Risks* (including RECs for which a No Further Action determination has been issued) and *de minimis* conditions as well as recommendations for further action, if appropriate, are summarized in Section 8.1.2 of this Phase I ESA report.

This ESA does not address the requirements of any federal, state, or local laws other than the appropriate provisions of the Comprehensive Environmental Response, Compensation and Liability Act's (CERCLA's or Superfund's) innocent landowner defense. This ESA is not considered to be an exhaustive environmental investigation of this property, but rather, should be used as a due diligence guide for the parties involved in this proposed property transfer.

## **2.5 RELIANCE**

Prestone Printing, its successors, representatives, and/or assigns may rely upon the findings and conclusions of this document. This document was prepared for the sole use of Prestone Printing, its successors, representatives, and assigns, and should not be relied upon by any third party without Whitestone's written consent.

## **SECTION 3.0 Site Description**

### **3.1 LOCATION AND DESCRIPTION**

The subject property is located at 47-50 30<sup>th</sup> Street Long Island City, Queens County, New York , Latitude 40.7415 North, Longitude 73.9381 West. The property is identified further as Block 115, Lot 187, and reportedly comprises 1.24 acres. The site location is shown in Figures 1 and 2 and illustrated in Appendix 1, Site Photographs.

### **3.2 SITE VICINITY AND GENERAL CHARACTERISTICS**

The subject property currently consists of an irregularly shaped, approximately 1.24 acre parcel encompassed by the Milton Paper Company. The site is bound by LaCholita to the north; Storage Warehouse, 48<sup>th</sup> Avenue, and Garvin Brown Construction Products beyond 30<sup>th</sup> Street to the east; New York Envelope Company beyond Hunter's Point Avenue to the south; and Hunt's Point Steel to the west.

### **3.3 CURRENT AND PAST USES OF THE PROPERTY**

The subject property currently is occupied by the Milton Paper Company consisting of a paper distribution warehouse and associated offices which have operated on the subject site since 1985. The Milton Paper Company receives paper products in bulk and distributes them to retailers and consumers.

According to historical sources reviewed by Whitestone, the subject property was vacant and undeveloped from at least 1898 until at least 1915. By 1936, the northern portion of the subject property was occupied by the East River Mill and Lumber Company and operated as a lumber yard and the southern portion of the subject property was occupied by Acme Shellac Products. By 1947, the original portion the current site building was constructed with additions completed by 1950 and 1970. The current site building had been utilized as a refrigerator warehouse sometime between 1936 and 1950, a liquor warehouse for Standard Wine and Liquor Company from at least 1950 through 1970 and as an office/warehouse for Philip A. Hunt Chemical Corporation from at least 1977 until approximately 1983.

### **3.4 DESCRIPTIONS OF STRUCTURES, ROADS, AND OTHER SITE IMPROVEMENTS**

#### **3.4.1 Existing Structures/Improvements/Roads**

The subject property currently is completely developed and consists of an approximately 54,000 square feet (footprint), one-story, brick structure occupied by the Milton Paper Company. The eastern portion of the site

building is utilized as office space and the northern, southern and western portions of the site building are utilized as warehouse space for the temporary storage of paper products. A warehouse room located in the western portion of the site building reportedly had been utilized as an “explosion room” (a room utilized for the testing and mixing of chemicals) by previous tenant Philip A. Hunt Chemical Corporation. Loading docks are situated along the southeastern portion of the site building.

### **3.4.2 Utilities**

The subject site currently is serviced by electricity, natural gas, public water and municipal sanitary sewer lines. A natural gas meter and electrical equipment were observed in the eastern portion of the site building. The building formerly utilized heating oil stored in a 3,000 underground storage tank (UST) located in the eastern portion of the site building. The site building reportedly was converted to natural gas service in 1986 and in 1992 the fuel oil UST was closed in place.

### **3.5 CURRENT AND PAST USES OF ADJOINING PROPERTIES**

The properties adjacent to the subject site include:

- ▶ LaCholita to the north;
- ▶ Storage Warehouse, 48<sup>th</sup> Avenue, and Garvin Brown Construction Products beyond 30<sup>th</sup> Street to the east;
- ▶ New York Envelope Company beyond Hunter’s Point Avenue to the south; and
- ▶ Hunt’s Point Steel to the west.

The subject property is located in an area of Long Island City, New York, which has historically consisted of a mix of warehousing and light industrial development. An increase in commercial development in the area of the subject property was observed between 1936 and 1947.

## **SECTION 4.0**

### **User Provided Information**

#### **4.1 TITLE RECORDS**

Based on a review of reasonably ascertainable recorded land title records, no environmental liens or activity and use limitations currently are recorded against the subject property (see Section 5.4.4).

#### **4.2 PRIOR/PENDING ENVIRONMENTAL LIENS OR ACTIONS**

In 1992, the subject property was issued a Notice of Violation (NOV) by the New York City Fire Department. The NOV stated that, due to conversion to natural gas service, fuel oil storage was no longer necessary on site and the site building's fuel oil UST must be removed or closed in place. The site is not listed as a Superfund lien site (see Appendix 2).

#### **4.3 SPECIALIZED KNOWLEDGE**

Prestone Printing has provided Whitestone with following documents concerning environmental conditions at the subject property:

- ▶ November 17, 2004 *Phase I Environmental Site Assessment* prepared by Lender Consulting Services, Inc. (LCS)

LCS's Phase I ESA of the subject property revealed that a 3,000 gallon fuel oil UST remains closed in place in the eastern portion of the site building and that former site operations conducted by Acme Shellac Products and Philip A. Hunt Chemical Corporation likely included the on-site storage and use of hazardous and potentially hazardous chemicals. A site sketch provided in this report identifies a warehouse room in the western portion of the site building as a "reported explosion room". The report also noted that the subject property is listed under former site tenant Philip A. Hunt Chemical Corp. on the RCRIS-SQG database as a small quantity generator of federally regulated hazardous wastes. LCS recommended a Phase II Site Investigation to assess subsurface impacts from historic site operations at the subject property and to characterize subsurface conditions in the vicinity of the former fuel oil UST abandoned in place at the subject property. LCS also recommended updating the subject property's RCRIS-SQG listing with the United States Environmental Protection Agency.

- ▶ December 13, 2004 *Report Addendum No. 1* prepared by LCS

This addendum to LCS's November 17, 2004 Phase I ESA states that LCS has received and reviewed a letter from the current site owner Stephen Verp. This letter reportedly maintained that the subject property

historically has been used as a warehouse and no manufacturing had taken place on site. LCS stated that this assessment was consistent with historical sources reviewed by LCS and concluded that no further investigations at the property were necessary. However, LCS also stated the possibility remained that impact soils could be encountered at the subject property.

#### **4.4 VALUATION REDUCTION FOR ENVIRONMENTAL ASSESSMENTS**

No evidence has been made available to Whitestone that the purchase price of the subject property is significantly less than the purchase price of comparable properties.

#### **4.5 OWNER, PROPERTY MANAGER AND OCCUPANT INFORMATION**

**Owner:** Milton Paper Company, Inc.  
47 - 50 30<sup>th</sup> Street  
Long Island City, New York 11101-3404

**Property Manager:** Milton Paper Company  
Stephen A. Verp, President  
47-50 30<sup>th</sup> Street  
Long Island City, New York 11101-3404  
Phone: (718) 784-5900  
Fax: (718) 609-0017

**Occupant:** Milton Paper Company

#### **4.6 REASON FOR PERFORMING PHASE I ESA**

The purpose of this ESA is to provide an appropriate inquiry to the previous and current ownership and uses of the property consistent with ASTM E1527-00 with the understanding that the property is to be purchased by Whitestone's client.

## SECTION 5.0 Records Review

In support of this Phase I ESA, Whitestone conducted a search of readily-available federal, state, and local public records to document, among other items, current and past site ownership and usage, and evidence (if any) of past or pending environmental corrective or enforcement actions at the property or nearby locations. To accomplish this, Whitestone performed a limited chain of title search, obtained a database records search, submitted *Freedom of Information Law* (FOIL) requests for pertinent data, and/or interviewed knowledgeable representatives.

### 5.1 STANDARD ENVIRONMENTAL RECORD SOURCES

Whitestone utilized the services of Environmental Data Resources, Inc. (EDR) to conduct an electronic search of the federal and state databases listed below (see Appendix 2). This search revealed that the subject property was identified on the following databases: **FINDS and RCRA-SQG**.

1. **Federal NPL Site List.** The National Priorities List (NPL), also known as the Superfund List, is USEPA's listing of uncontrolled or abandoned CERCLA hazardous waste sites. The database search and radius profile revealed no NPL sites located within one mile of the property.
2. **Federal CERCLIS List.** The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of known or suspected uncontrolled or abandoned hazardous waste sites which USEPA has investigated or is investigating for the release or threatened release of hazardous substances pursuant to CERCLA. No CERCLIS sites are present within a 0.5 mile radius of the property.
3. **Federal CERCLIS NFRAP Site List.** The CERCLIS list is a compilation of known or suspected uncontrolled or abandoned hazardous waste sites which USEPA has investigated or is investigating for the release or threatened release of hazardous substances pursuant to CERCLA. The subject property is not a CERCLIS-No Further Remedial Action Planned (NFRAP) site. No CERCLIS NFRAP sites are located within a 0.25 mile radius of the subject property.
4. **Federal RCRA CORRACTS Facility List.** The Corrective Action Report (CORRACTS) identifies hazardous waste handlers with Resource Conservation and Recovery Act (RCRA) corrective action activity. The database search identified four CORRACTS sites within a one mile radius of the property. The site nearest the subject property is identified as Active Steel Drum Company, Inc. located at 52 - 30 34<sup>th</sup> Street, Long Island City, New York approximately 0.4 mile southeast of the subject property. This facility is also identified on the FINDS and RCRA-SQG listings. According to the database report, this facility has been assigned a low-corrective action priority. Impacts to the subject property from this and the remaining facilities on the CORRACTS listing are not anticipated due to their distance from the subject property.

5. **Federal RCRA Non-CORRACTS TSD Facilities List.** The Resource Conservation and Recovery System (RCRIS) Treatment, Storage and Disposal (TSD) Facilities report contains information pertaining to permitted facilities which treat, store, or dispose of hazardous wastes. This report includes information traced by the RCRA Administrative Action Tracking System (RAATS). The radius revealed no RCRIS TSD sites and/or RAATS sites within a 0.5 mile radius of the property.
6. **Federal RCRA Small Quantity Generators (SQG) List.** The RCRIS SQG report contains information pertaining to facilities which either generate between 100 kg and 1,000 kg per month of RCRA hazardous waste or meet other applicable requirements of RCRA. **The subject property identified as Phillip A. Hunt Chemical Corporation located at 47 - 50 30<sup>th</sup> Street, Long Island City, New York is identified as a RCRIS-SQG site under EPA ID No. NYD072731730.** No spills or violations were reported in association with this listing. In addition, the radius profile revealed 34 RCRIS-SQG site within a 0.25 mile radius of the subject property. The site nearest the subject property is identified as Thypin Steel Building (former) located at 49 - 99 30<sup>th</sup> Street, Long Island City, New York approximately 0.1 mile south of the subject site. No spills or violations were reported in association with this listing. Impacts to the subject property from the facilities identified on the RCRIS-SQG are not anticipated due to the absence of outstanding violations and/or distance from the subject property.
7. **Federal RCRA Large Quantity Generator (LQG) List.** The RCRIS LQG report contains information pertaining to facilities which generate more than 1,000 kg per month of RCRA hazardous waste or meet other applicable requirements of RCRA. The radius profile revealed three RCRIS LQG sites within a 0.25 mile radius of the property. The site nearest the subject property, for which violations have been reported, is identified as Sirmos, Inc. located at 47 - 07 30<sup>th</sup> Place, Long Island City, New York approximately 0.1 mile north of the subject property. Five Generator All Requirements (over-sight) violations have been reported for this property. Compliance with these violations has been met in each case. No outstanding violations have been reported for the two remaining facilities identified on the RCRIS LQG listing. Accordingly, impacts to the subject site from these properties are not anticipated.
8. **Federal ERNS List.** The Emergency Response Notification System (ERNS) is a national computer database which stores information on the sudden and/or accidental release of hazardous substances, including petroleum, into the environment during the previous reporting year. No releases was reported by ERNS within a 0.05 mile radius of the property during this period.
9. **State-Equivalent NPL and CERCLIS Sites.** The State Hazardous Waste Site (SHWS) records are the State's equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties (PRPs). Five SHWS sites are located within a one mile radius of the property. The site nearest the subject property is identified at Roehr Chemicals, Inc. located at 52 - 20 37<sup>th</sup> Street, Long Island City, New York approximately 0.5 mile southeast of the subject site. This facility also is identified on the CERCLIS, NFRAP, FINDS, LTANKS, UST and RCRA-SQG listings. Impacts to the subject property from this and the remaining facilities on the SHWS listings are not anticipated due to their distance from the subject property.

10. **State Solid Waste Facilities/Landfill Sites.** The SWF/LS List is a listing of all active and inactive permitted waste disposal sites and processing facilities located in the State of New York. One SWF/LS site is located within a 0.5 mile radius of the property. The site is identified as Lori Contracting Processing Facility located at 35 - 15 Gale Avenue, Blissville, New York approximately 0.4 mile southeast of the subject property. According to the database report, this facility is no longer active. Impacts to the subject site from this site are not anticipated due to its distance from the subject property.
11. **State Leaking Underground Storage Tank List.** The LTANK list is a comprehensive listing of all *reported* leaking USTs in the State of New York. Forty-one LTANK sites have been reported within a 0.5 mile radius of the property including:

LTANK Site	Address	Release Date & Tank Description	Case Status
49-49 30 <sup>th</sup> Street Site	49-49 30 <sup>th</sup> Street, Long Island City, New York	January 1994 Fuel Oil Tank	Case Closed January 14, 1994
Jomeira Realty	47-20 30 <sup>th</sup> Street, Long Island City, New York	January 30, 2002 Fuel Oil Tank	Case Closed March 1, 2002
47-20 30 <sup>th</sup> Street Site	47-20 30 <sup>th</sup> Street, Long Island City, New York	December 31, 1987 Fuel Oil Tank	Case Closed November 1992
New York Envelope	29-10 Hunters Point Avenue, Long Island City, New York	May 25, 2002 Fuel Oil Tank	Active
ABCO Supply	47-70 31 <sup>st</sup> Street, Long Island City, New York	May 20, 1998 Fuel Oil Tank	Active

Impacts to the subject property from these and the remaining facilities identified on the LTANK listing may be possible due to their active case status and/or close proximity to the subject property.

12. **New Jersey Registered Storage Tank List.** The Registered Storage Tank list is a comprehensive listing of all *registered* USTs and ASTs in the State of New York. Twenty-four registered storage tank sites are located within a 0.25 mile radius of the property, the nearest of which include:

UST/AST Facility	Address	Number of USTs/ASTs	UST/AST Capacity (gallons)	Product
30-40 48 <sup>th</sup> Avenue site	30-40 48 <sup>th</sup> Avenue, Long Island City, New York	2	<u>Closed in Place</u> 1 x 4,500 1 x 5,000	Fuel Oil Fuel Oil

UST/AST Facility	Address	Number of USTs/ASTs	UST/AST Capacity (gallons)	Product
Thypin Steel Company, Inc.	49-49 30 <sup>th</sup> Street, Long Island City, New York	4	<u>Removed</u> 2 x 550 <u>Closed in Place</u> 1 x 4,000 <u>Not Reported</u> 1 x 2,000 (AST)	Unleaded Gasoline  Fuel Oil  Fuel Oil
49-29 30 <sup>th</sup> Place Realty, L.L.C.	49-29 30 <sup>th</sup> Place, Long Island City, New York	1	<u>Active</u> 1 x 10,000	Fuel Oil
IG Federal Electric Supply	47-20 30 <sup>th</sup> Street, Long Island City, New York	1	<u>Active</u> 1 x 4,500	Fuel Oil
29-10 Hunter's Point Avenue site	29-10 Hunter's Point Avenue, Long Island City, New York	1	<u>Active</u> 1 x 20,000	Fuel Oil

Impacts to the subject property from these facilities may be possible (if releases have occurred) due to their close proximity to the subject site.

13. **Hazardous Materials Information Reporting System.** HMIRS contains hazardous material spill incident information as reported to the Department of Transportation. The subject property is not listed as a HMIRS facility.
14. **PCB Activity Database System.** PADS identifies generators, transporters, commercial storage facilities and/or brokers, and disposers of PCBs who are required to notify USEPA of such activities. The subject property is not listed as a PADS site.
15. **Facility Index System.** FINDS contains both facility information and "pointers" to other sources that contain more detail. These include RCRIS; the permit compliance system (PCS); the Aerometric Information Retrieval System (AIRS); the FIFRA and TSCA Enforcement System (FATES); the FIFRA/TSCA Tracking System (FTTS); CERCLIS; DOCKET (enforcement docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); the Federal Underground Injection Control and Federal Reporting Data System; Surface Impoundments; TSCA Chemical and Commerce Information System; RCRA-J (Medical Waste Transporters/Disposers); TRIS, and TSCA. **The subject property is listed as a FINDS facility in association with its RCRIS-SQG listing.**

16. **Toxic Chemical Release Inventory System.** TRIS identifies facilities which are permitted to release toxic chemicals to the air, water, and land in reportable quantities under SARA Title III, Section 313. The subject property is not listed as a TRIS facility.
17. **The Federal Superfund Liens.** This list identifies properties which USEPA has the authority to file liens against in order to recover remedial action expenditures, or when the property owner receives notification of potential responsible party status. USEPA compiles a listing of filed notices of Superfund liens. The subject property is not listed as an NPL Liens site.
18. **Toxic Substances Control Act.** TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory List, including data on the production volume of these substances by plant site. The subject property is not listed as a TSCA site.
19. **Material Licensing Tracking System.** MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. The MLTS list is updated quarterly. The subject property is not listed as a MLTS site.
20. **Records of Decision.** ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup. No RODs are in effect for sites within a one mile radius of the property.
21. **Superfund (CERCLA) Consent Decrees.** Legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites are often memorialized in Consent Decrees. No Consent Decrees are reported for sites within a one mile radius of the property.
22. **Former Manufactured Gas (Coal Gas Site).** Historical coal gasification sites present a variety of potential environmental hazards. The subject property is not listed as a former coal gas site, and no former coal gas sites are located within a one mile radius of the subject site.
23. **Federal Reporting Data System.** FRDS provides information regarding public water supplies and their compliance with monitoring requirements, maximum contaminant levels, and other requirements of the Safe Drinking Water Act of 1986. No FRDS wells were reported within a two mile radius of the site (see Section 6.2.3.3).
24. **Area Radon Information.** A national database has been developed by USEPA which is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study includes data which have been supplemented by information collected at private sources such as universities and research institutions. Although no site-specific radon data is available for the subject property, the average radon activity for Queens County, New York is 0.620 picocuries per liter (pCi/L) for living areas and 0.970 pCi/L for basements. A total of 81 sites have been tested and reported for radon in Queens County with 3 percent of the sites experiencing radon levels in living areas exceeding USEPA's standard of 4.0 pCi/L. Seven percent of the sites tested had basement radon levels in excess of 4.0 pCi/L.

Based on the database record search, a total of 128 listed sites have been identified in the vicinity of the property. The database search also identified 42 "orphan" sites which could not be located electronically due to insufficient records. Upon initial evaluation of these sites and available information gathered by Whitestone, impact to the subject property by the off-site migration of contaminants from, or presence of hazardous substances at, nearby properties may be possible, however, impacts to the site from off site sources would remain the responsibility of the owner/operator of the site from which the contamination is emanating.

## **5.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES**

The following state and/or local regulatory agencies were contacted with a request to access files regarding the property pursuant to FOIL (see Appendix 3):

1. **New York State Department of Environmental Conservation**  
Robert McDonald, Freedom of Information Act Officer  
One Hunters Point Plaza  
47-40 21<sup>st</sup> Street  
Long Island City, New York 11101
2. **New York City Department of Environmental Protection**  
Marie A. Dooley, Assistant Counsel  
59-17 Junction Boulevard  
Corona, New York 11368
3. **New York City Department of Health**  
Renee Bryant, Records Access Officer  
125 Worth Street  
Room 604, Box 31  
New York, New York 10013

To date, two written responses have been received from the FOIL requests. A July 25, 2005 response from NYSDEC indicated that Whitestone's request was received and assigned FOIL Number R2-05-1185. A response will be received when the various divisions are done gathering files (if any). An August 2, 2005 response from the NYCDEP indicates that Whitestone's request currently is being reviewed by the Department and a response should be anticipated within 30 days. Additional pertinent information (if any) generated in response to these requests will be provided in a supplement to this report.

## **5.3 PHYSICAL SETTING SOURCES**

The United States Geological Survey (USGS) *7.5 Minute Topographic Quadrangles - Brooklyn, New York* dated 1947, 1956, 1967, 1979, and 1995 depicting the area on which the subject property is located are provided as Figures 1A through 1E. The 1956 through 1995 USGS maps do not identify individual structures

due to the urban setting of this area. The 1947 USGS map depicts a structure of similar size and location (footprint) to the current site building located on the subject property. All the USGS maps depict the site to be situated at an approximate elevation of 15 feet above mean sea level (msl).

#### **5.4 HISTORICAL USE INFORMATION (SUBJECT PROPERTY)**

##### **5.4.1 Aerial Photograph Evaluation**

Aerial photographs were not reviewed by Whitestone due to the extensive coverage of Sanborn Maps and the poor resolution of urban properties on typical aerial photographs.

##### **5.4.2 Fire Insurance Maps**

Sanborn Fire Insurance Maps are available for this property for the years 1898, 1915, 1936, 1947, 1950, 1970, 1977, 1979, 1980, 1985, 1986, 1988, 1989, 1991, 1992, 1993, 1994, 1995, and 1996. A summary of the pertinent features highlighted by the Sanborn Maps is outlined below. Copies of the Sanborn Fire Insurance Maps are included as Appendix 5 to this report.

**1898:** In 1898, the subject property appears vacant and undeveloped. The site was bound by vacant land to the north; vacant land beyond 30<sup>th</sup> Street (identified as Orton Street) to the east; vacant land beyond Hunter's Point Avenue to the south; and vacant land to the west.

**1915:** The conditions depicted in the 1915 Sanborn Map appear generally similar to those identified on the 1898 Sanborn map.

**1936:** By 1936, the northern portion of the subject property was occupied by the East River Mill and Lumber Company and was identified as a lumber yard. The central portion of the site was vacant and undeveloped and the southern portion of the site was occupied by Shellac Products Company. The site was bound by a warehouse structure to the north; vacant land and 48<sup>th</sup> Street beyond 30<sup>th</sup> Street to the east; railroad tracks and vacant land beyond Hunter's Point Avenue to the south; and warehouses to the west.

**1947:** By 1947, the original portion of the current site building had been constructed in the northern-central portion of the subject property and was occupied by a refrigerated warehouse. Otherwise, the conditions depicted on this 1947 Sanborn Map appear generally similar to those identified on the 1936 Sanborn Map.

**1950:** By 1950, the northern portion of the subject property was identified as a liquor warehouse and several commercial structures had been constructed beyond Hunter's Point Avenue to the south of the subject property. Otherwise, the conditions depicted in this 1950 Sanborn Map appear generally similar to those identified on the 1947 Sanborn Map.

**1970:** By 1970, the subject property was completely developed by a structure of similar size and location (footprint) to the current site building. The structure was identified as a liquor warehouse for the Standard Wine & Liquor Company. In addition, a commercial warehouse had been constructed beyond 30<sup>th</sup> Street to the east of the subject site and beyond Hunter's Point Avenue to the south of the subject site.

**1977:** By 1977, the subject property was identified as Philip A . Hunt Chemical Corporation. The eastern portion of the site building was identified as office space and the northern, southern and western portions of the site building are identified as warehouse space. The conditions surrounding the subject property appear generally similar to the conditions identified on the 1970 Sanborn Map.

**1979-96:** The conditions depicted in the 1979 through 1996 Sanborn Maps appear generally similar to those identified on the 1977 Sanborn Map.

### **5.4.3 Property Tax Files**

Property ownership information was not readily available from the Tax Assessor's office, however, site ownership information obtained from the City of New York Department of Building internet website indicated that the subject property currently is owned by Milton Paper Company located at 47-50 30<sup>th</sup> Street, Long Island City, New York. The subject property is identified as Block 115, Lot 187 with a street address of 47-50 30<sup>th</sup> Street. No further information was available from this website.

### **5.4.4 Limited Chain of Title Search**

A limited chain of title search was initiated in an attempt to determine past site usage and ownership. Deeds information provided by the Milton Paper Company indicated the following conveyances.

<b>Date</b>	<b>Grantor</b>	<b>Grantee</b>	<b>Book</b>	<b>Page</b>
July 11, 1947	Pabst Sales Company	MAEPEG Realty Company	5430	621
May 8, 1957	Universal Glass Products Company	MAEPEG Realty Company	6975	97
September 24, 1983	MAEPEG Realty Company	Diana Properties, Inc.	1591	1021
September 14, 1985	Diana Properties, Inc.	New York City Industrial Development Agency	1931	664
March 2, 2001	New York City Industrial Development Agency	Milton Paper Company	5850	362

#### **5.4.5 City Directory Search**

Whitestone utilized the services of the EDR to conduct a search of business directories for the years spanning 1922 through 2000. This search revealed the following occupants of the subject property address. A copy of the City Directory Search is included in Appendix 3:

- 1922:** Address Not Listed in Research Source
- 1934:** Address Not Listed in Research Source
- 1940:** Address Not Listed in Research Source
- 1945:** Pabst Sales Company
- 1950:** Lagerloef Birger B  
Standard Wine & Liquor Company, Inc.
- 1962:** Birger B. Lagerloef  
Standard Wine & Liquor Company, Inc.
- 1967:** Standard Wine & Liquor Company, Inc.
- 1970:** Birger B. Lagerloef  
Standard Wine & Liquor Company, Inc.
- 1976:** Philip A. Hunt Chemical Corporation  
Sales and Service Department
- 1983:** Philip A. Hunt Chemical Corporation  
Sales and Service Department
- 1991:** Milton Paper Company
- 1996:** Address Not Listed In Research Source
- 2000:** Milton Paper Company

#### **5.4.6 Additional Historical Sources**

In addition to the historical references discussed above, Whitestone also reviewed the following documents pertinent to the subject property and the subject area:

- ▶ November 17, 2004 *Phase I Environmental Site Assessment* prepared by Lender Consulting Services, Inc. (LCS)

LCS's Phase I ESA of the subject property revealed that a 3,000 gallon fuel oil UST remains closed in place in the eastern portion of the site building and that former site operations conducted by Acme Shellac Products and Philip A. Hunt Chemical Corporation likely included the on-site storage and use of hazardous and potentially hazardous chemicals. A site sketch provided in this report identifies a warehouse room in the western portion of the site building as a "reported explosion room". The report also noted that the subject property is listed under former site tenant Philip A. Hunt Chemical Corp. on the RCRIS-SQG database as a small quantity generator of federally regulated hazardous wastes. LCS recommended a Phase II Site Investigation to assess subsurface impacts from historic site operations at the subject property and to characterize subsurface conditions in the vicinity of the former fuel oil UST abandoned in place at the subject property. LCS also recommended updating the subject property's RCRIS-SQG listing with the United States Environmental Protection Agency.

- ▶ December 13, 2004 *Report Addendum No. 1* prepared by LCS

This addendum to LCS's November 17, 2004 Phase I ESA states that LCS has received and reviewed a letter from the current site owner Stephen Verp. This letter reportedly maintained that the subject property historically has been used as a warehouse and no manufacturing had taken place on site. LCS stated that this assessment was consistent with historical sources reviewed by LCS and concluded that no further investigations at the property were necessary. However, LCS also stated the possibility remained that impact soils could be encountered at the subject property.

## **5.5 HISTORICAL USE INFORMATION (ADJOINING PROPERTIES)**

The subject property is located in an area of Long Island City, New York, which historically has consisted of a mix of warehousing and light industrial development. An increase in commercial development in the area of the subject property was observed between 1936 and 1947.

## **SECTION 6.0**

### **Site Reconnaissance**

#### **6.1 METHODOLOGY AND LIMITING CONDITIONS**

Whitestone conducted a reconnaissance of accessible portions of the subject property on July 21, 2005. Existing site conditions and potential recognized environmental conditions (RECs) were photographed (see Appendix 1) and are documented below. Suggestions for the further investigation and/or remediation of the RECs identified in the following subsections are outlined in Section 8.0.

#### **6.2 GENERAL SITE SETTING**

Site location and description information is provided in Section 3.1 of this report.

##### **6.2.1 Current and Past Uses of the Property**

Current and past uses of the subject property are discussed in Sections 3.3 and 5.4 of this report.

##### **6.2.2 Current and Past Uses of Adjoining Properties and the Surrounding Area**

Current and past uses of adjoining properties and the surrounding area are discussed in Sections 3.5 and 5.4 of this report.

##### **6.2.3 Geological/Hydrogeological Characteristics**

###### **6.2.3.1 Topography/Geology**

The subject property relatively is flatlying with an average surface elevation of 15 feet above mean sea level (msl).

According to the State of New York, State Education Department, New York State Geological Survey, *Geologic Map of New York - Lower Hudson Sheet*, dated 1970, the subject site is located within the Coastal Plains Physiographic Province of New York. Specifically, the area reportedly is underlain by the Monmouth Group, Matawan Group, and Magothy Formation consisting of silty clay, sandy clay, sand, and gravel. Given the urban nature of the site vicinity, urban fill materials imported to establish current site grades likely overlie native soils in this area.

**6.2.3.2 Surface Water/Wetlands**

The subject property is completely developed and no surface water or vegetation indicative of wetland areas were observed on site. The subject property is not described on 2002 United States Fish and Wildlife Service National Wetlands Inventory Map as a mapped wetlands area. A wetlands survey/delineation was beyond the scope of this Phase I ESA investigation.

**6.2.3.3 Groundwater**

The nearest groundwater well for which public database information is available is located 0.1 mile from the site. The closest federal and/or state database wells north, south, east, and west of the site are characterized as follows:

Location	Distance to Site	Well Depth	Depth to Groundwater	Comments
North Quadrant	0.25 Mile	500 Ft.	Not Reported	USGS Well
South Quadrant	0.10 Mile	93 Ft.	Not Reported	USGS Well
East Quadrant	0.30 Mile	125 Ft.	Not Reported	USGS Well
West Quadrant	0.40 Mile	67 Ft.	Not Reported	USGS Well

None of the wells listed above are noted as having environmental violations or concerns associated with their usage or construction.

**6.2.4 Site Vicinity and Characteristics**

Information pertaining to existing site structures/improvements, utilities, roads, potable water supply and sewage disposal system is provided in Section 3.4 of this report.

**6.3 INTERIOR AND EXTERIOR OBSERVATIONS**

**6.3.1 Presence of Hazardous Materials - Interior Reconnaissance**

The following the hazardous and potentially hazardous materials and/or wastes were identified within the existing site structure and are summarized as follows:

Material	Quantity/ Container Size	Location	Condition	Evidence of Release (Yes/No)
Floor Patch	Six x Five Gallon Buckets One x 55 Gallon Drum	Warehouse	Good	No
Latex Paint	Four x Five Gallon Buckets	Warehouse	Fair	No
Sweeping Compound	Three x 170 Pound Drums	Warehouse	Good	No
Motor Oil	Four x One Quart Containers	Warehouse	Good	No
Industrial Batteries	Five Batteries	Warehouse	Good	No

Minor staining was observed within the warehouse portions of the site building. The staining appeared to be contained by the underlying concrete floor slab. In general, hazardous or potentially hazardous materials observed on site were stored in an environmentally sound manner. In addition, the subject property is listed as an RCRIS SQG site under a former tenant, Philip A. Hunt Chemical Corporation, in association with the on-site generation and off-site disposal of federally regulated hazardous waste.

The subject property historically has been utilized as a chemical warehouse and as a shellac company. These operations likely included the on-site storage and/or use of hazardous or potentially hazardous materials. Discharges of such materials/wastes potentially may have resulted in contamination of soil and/or groundwater at the subject property.

### 6.3.2 Presence of Hazardous Materials - Exterior Reconnaissance

The subject property is completely developed by the existing site building. No hazardous or potentially hazardous materials and/or wastes were observed along the boundaries of the immediately adjoining properties.

### 6.3.3 Storage Tanks/Pipelines

#### 6.3.3.1 Underground Storage Tanks (USTs)

As noted in Section 5.1, no UST(s) are registered at the subject site, however, one 3,000 gallon former fuel oil UST remains abandoned-in-place in the eastern portion of the site building. Records reviewed by Whitestone indicate that the UST was vacuum pumped and filled with sand by ABC Tank Cleaning & Repairing, Inc. in 1991. Documentation regarding soil sampling in conjunction with UST abandonment was provided to Whitestone.

#### **6.3.3.2 Aboveground Storage Tanks (ASTs)**

No indications of current or prior AST usage or installation were observed on-site during Whitestone's site reconnaissance.

#### **6.3.3.3 Septic Tanks**

The site building currently is serviced by municipal sanitary sewer lines and no surficial evidence of abandoned or in service septic systems was observed during Whitestone's site reconnaissance.

#### **6.3.3.4 Pipelines and Other Storage Vessels**

No product or non-utility pipelines or other storage vessels were observed during Whitestone's site reconnaissance.

#### **6.3.4 Indications of Polychlorinated Biphenyls (PCBs)**

Sites developed prior to 1980 may house oil-filled electrical, mechanical, hydraulic, or heat transfer equipment and/or fluorescent light ballasts containing polychlorinated biphenyls (PCBs). Suspect PCB equipment observed on site including fluorescent light ballasts observed throughout the site building and electrical equipment observed in the eastern portion of the site building.

#### **6.3.5 Asbestos Containing Materials (ACM)**

Structures pre-dating 1980 may have been built using asbestos containing construction or insulation materials. Given the age of the site building (constructed in 1947), ACM should be suspect.

#### **6.3.6 Lead Based Paints**

Structures pre-dating 1980 may be coated with lead based paints (LBP). Delaminating, peeling painted surfaces were not identified on site, however, given the age of the site building (constructed in 1947) LBP should be suspected.

#### **6.4 ADDITIONAL INTERIOR OBSERVATIONS**

Based on the interior site reconnaissance, review of records, and historical usage of the subject property, Whitestone has identified the following conditions which may impact future development of this property or present the potential for future environmental liability.

- ▶ Heating/Cooling: The site building currently is heated by natural gas. The office space located within the eastern portion of the site building is cooled by electrical air conditioning units. The warehouse space located in the northern, southern and western portions of the site building is not cooled. The site building formerly utilized heating oil stored in a 3,000 gallon UST located in the eastern portion of the site building for heating purposes.
- ▶ Stains or Corrosion: Minor petroleum staining was observed within the warehouse portions of the site building. The staining appeared to be contained by the underlying concrete floor slab
- ▶ Drains and Sumps: Two floor drains were observed in a storage room located in the western portion of the subject site. A site sketch provided in LCS's November 17, 2004 Phase I ESA for the subject property identifies this room as "reported explosion room". This room may formerly have been utilized for the mixing and testing of chemicals associated with former site building tenant, Philip A. Hunt Chemical Corporation. Accordingly, the discharge point of these floor drains should be determined.

## 6.5 ADDITIONAL EXTERIOR OBSERVATIONS

Based on the exterior site reconnaissance, review of records, and historical usage of the subject property and surrounding properties, Whitestone has identified the following conditions which may impact future development of this property or present the potential for future environmental liability.

- ▶ Pits, Ponds or Lagoons: Not Observed.
- ▶ Stained Soil or Pavement: Not Observed
- ▶ Stressed Vegetation: Not Observed.
- ▶ Solid Waste Disposal: Miscellaneous debris including glass, plastic, and cardboard litter were observed along the western exterior of the subject site.
- ▶ Waste Water: Not Observed.
- ▶ Wells: Not Observed.
- ▶ Septic Systems: The site building currently is serviced by municipal sanitary sewer lines and no surficial evidence of abandoned or in service septic systems was observed during Whitestone's site reconnaissance.
- ▶ Current/Past Agricultural Activity: Not Observed.
- ▶ Potential Off-Site Impacts/Concerns: Not Observed.

## **SECTION 7.0**

### **Interviews**

Telephone and/or in-person interviews conducted with the following public officials and knowledgeable site representatives are summarized below:

#### **SITE OWNER**

#### **Stephen A. Verp, President • Milton Paper Company**

Whitestone spoke with Stephen Verp during the July 21, 2005 site reconnaissance and on August 11, 2005 to obtain pertinent information regarding the subject property. Mr. Verp informed Whitestone that the site building currently is serviced by natural gas, electricity, public water, and municipal sanitary/sewer lines and that the site building formerly utilized heating oil, stored in a 3,000 gallon UST for heating purposes. In 1992, after receiving a Notice of Violation from the New York City Fire Department this UST was vacuum pumped, squeegee cleaned, and filled with sand. The UST remains abandoned-in-place in the eastern portion of the subject property. Mr. Verp informed Whitestone that the current site building is approximately 60 to 70 years old and previously had been occupied by a paper company, a liquor warehouse, and a chemical company. Mr. Verp could not provide information regarding the uses of the subject site prior to the current site building's construction. Mr. Verp informed Whitestone that the Milton Paper Company does not own any exterior portions of the site building including the railroad tracks located along the western exterior of the site building. Mr. Verp also stated that to the best of his knowledge, no manufacturing or chemical processing operations have been conducted on site. Mr. Verp also refuted the claim in LCS's Phase I ESA that a warehouse room located in the western portion of the site building had previously operated as an "explosion room".

Copies of Records of Communication for each of the telephone and/or in-person interviews listed above are included in Appendix 3.

## SECTION 8.0

### Findings, Conclusions, and Recommendations

Whitestone Associates, Inc. has performed a Phase I Environmental Site Assessment in general accordance with the scope and limitations of ASTM Standard Practice E1527-00 and the conditions of Section 2.2 of this report of the existing Milton Paper Company located at 47-50 30<sup>th</sup> Street in Long Island City, Queens County, New York. Phase I ESA activities identified several recognized environmental conditions (RECs) which warrant further consideration. These RECs and suggestions for their further investigation or remediation are outlined below.

#### 8.1 OPINION

##### 8.1.1 Summary of RECs

This assessment has revealed evidence of *recognized environmental conditions* (RECs) in connection with the subject property including the following:

- ▶ The subject property historically has been utilized as a chemical warehouse and as a shellac company. These operations likely included the on-site storage and/or use of hazardous or potentially hazardous materials. Discharges of such materials/wastes potentially may have resulted in contamination of soil and/or groundwater at the subject property.
- ▶ One 3,000 gallon former fuel oil UST remains abandoned in place under the eastern portion of the site building. No environmental sampling was reportedly conducted during UST closure activities and potentially releases from this former UST may have impacted subsurface conditions at the subject property.
- ▶ Two floor drains were observed in a storage room located in the western portion of the site building. A site sketch provided in Lender Consulting Services' (LCS) November 17, 2004 Phase I ESA for the subject property identifies this room as "reported explosion room". This room may formerly have been utilized for the mixing and testing of chemicals associated with former site building tenant, Philip A. Hunt Chemical Corporation. Accordingly, the discharge point of these floor drains should be determined.

Recommendations for further investigation and/or remediation of each of these RECs are outlined in Section 8.2.

### **8.1.2 Limited Evaluation of Business Environmental Risk**

Items that are not identified as RECs and do not warrant further investigation, however, may require limited corrective action include the following:

- ▶ Hazardous materials not intended for on-site reuse should be segregated, containerized, removed from the site, and disposed, recycled or reused off-site in accordance with federal and state waste management regulations.
- ▶ The subject property currently is listed on the RCRIS SQG database as a small quantity generator of federally regulated hazardous wastes. This listing is associated with former site waste management activities. The RCRIS SQG registration should be delisted through a notification to the USEPA.
- ▶ According to historical sources reviewed by Whitestone several structures formerly were situated on the subject property. Available information could not confirm whether these previous structures were connected to natural gas service or if alternative heating fuels such as coal, heating oil, propane, or electricity were used. If used on site, heating oil may have been stored in other USTs or ASTs in addition to the abandoned-in-place 3,000 gallon UST. The presence or absence of other abandoned on-site USTs from prior on-site structures has not been documented or refuted, and prior USTs may have been removed during previous site demolition efforts or may remain abandoned on site.
- ▶ The historic presence or absence of out-of-service septic systems associated with former site structures has not been confirmed or refuted. No surficial evidence of abandoned septic systems was observed during the site reconnaissance. Abandoned septic system components would likely have been removed or backfilled during past site development efforts. Septic system components encountered during site redevelopment would require proper closure pursuant to local health department guidelines. Closure of septic systems typically entails removing the contents for off-site disposal/treatment and filling the empty septic tank or cesspool with sand or concrete.
- ▶ Railroad spurs (reportedly located off site) travel along the western exterior of the subject property. Railroad tracks and historic rail operations can be a source of PCB and/or semi-volatile organic contamination in shallow or near surface soils. Additionally, the database search identified nearby listed sites. Releases/discharges associated with the railroad tracks or nearby listed sites could potentially impact conditions at the subject site, however, any such conditions would remain the responsibility of the owner operator of the site from which the contamination is emanating.
- ▶ Suspect PCB equipment observed on site including fluorescent light ballasts observed throughout the site building and electrical equipment observed in the eastern portion of the site building. If not intended for future use, the PCB content of this equipment should be verified prior to disposal.

- ▶ Structures pre-dating 1980 may have been built using asbestos containing construction or insulation materials. Given the age of the site building, (constructed in 1947) ACM should be suspect, therefore an ACM survey is recommended.
- ▶ Structures pre-dating 1980 may be coated with lead based paints (LBP). Delaminating, peeling painted surfaces were not identified on site, however given the age of the site building (constructed in 1947) LBP should be suspected.

## **8.2 CONCLUSIONS AND RECOMMENDATIONS**

The following activities are recommended to address the RECs listed in Section 8.1.

- ▶ A Phase II Site Investigation (SI) should be conducted at the subject property to determine if subsurface conditions have been impacted by historic site activities or the abandoned UST. The SI should include soil and groundwater investigations, in the abandoned UST area and in the vicinity of former hazardous material storage and handling areas. In addition, the discharge point of the two floor drains located in the western portion of the structure should be determined. In the event that the floor drains discharge to a drywell or septic tank, additional investigation will be required.

## **8.3 DEVIATIONS**

Whitestone has performed a Phase I Environmental Site Assessment of the subject property in conformance with the scope and limitations of ASTM Practice 1527-00. No exceptions to or deletions from this practice have been taken.

## **SECTION 9.0 Additional Services**

No additional services have been conducted in association with the Phase I ESA of the subject property.

## SECTION 10.0 Environmental Professionals

### 10.1 SIGNATURES

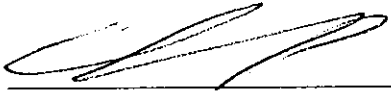

The following Whitestone personnel were responsible for conducting the Phase I ESA of the subject site and preparing the information presented herein.

#### SITE INSPECTOR:

  
\_\_\_\_\_  
Erik Colonna Romano  
Environmental Specialist  
Whitestone Associates, Inc.

8.16.05  
Date

#### PROJECT MANAGER:

  
\_\_\_\_\_  
Christopher Seib  
Environmental Services Manager  
Whitestone Associates, Inc.

8/16/05  
Date

### 10.2 QUALIFICATIONS

Resumes for the Whitestone environmental professionals responsible for this Phase I ESA are provided in Appendix 7 of this report.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

### TARGET PROPERTY INFORMATION

#### ADDRESS

47-50 30TH STREET  
LONG ISLAND CITY, NY 11101

#### COORDINATES

Latitude (North): 40.741500 - 40° 44' 29.4"  
Longitude (West): 73.938100 - 73° 56' 17.2"  
Universal Transverse Mercator: Zone 18  
UTM X (Meters): 589658.6  
UTM Y (Meters): 4510392.5  
Elevation: 13 ft. above sea level

### USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property: 40073-F8 BROOKLYN, NY  
Source: USGS 7.5 min quad index

### TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following government records. For more information on this property see page 6 of the attached EDR Radius Map report:

<u>Site</u>	<u>Database(s)</u>	<u>EPA ID</u>
HUNT PHILIP A CHEMICAL CORP 47-50 30TH ST LONG ISLAND CITY, NY 11101	RCRA-SQG FINDS	NYD072731730

### DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ( "reasonably ascertainable ") government records either on the target property or within the ASTM E 1527-00 search radius around the target property for the following databases:

### FEDERAL ASTM STANDARD

NPL..... National Priority List  
Proposed NPL..... Proposed National Priority List Sites

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### FEDERAL ASTM STANDARD

**CORRACTS:** CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/29/2005 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

**RCRAInfo:** RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act ( RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-LQG list, as provided by EDR, and dated 05/20/2005 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### STATE ASTM STANDARD

**SHWS:** The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, has revealed that there are 5 SHWS sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>

**SWF/LF:** The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
LORI CONTRACTING PROCESSING FA	35-15 GALE AVENUE	1/4 - 1/2SE	100	155

**LTANKS:** Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 05/02/2005 has revealed that there are 41 LTANKS sites within approximately 0.5 miles of the target property.

### STATE OR LOCAL ASTM SUPPLEMENTAL

**CBS AST:** Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 CBS AST site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
ANTHONY CONCRETE	47-17 27TH ST.	1/8 - 1/4 NW	J43	51

**SPILLS:** Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/02/2005 has revealed that there are 10 NY Spills sites within approximately 0.125 miles of the target property.

DEC Remarks: Spill cleanup being supervised under voluntary cleanup agreement. IRM is under review. Proposed work plan to enhance IRM submitted to DEC on March 28, 2000. The site was inspected by NYSDOH, and DEC to address elevated levels of VOAs. There is presence of ben ene in soils and groundwater, and seepage into basement level. There is significant amt of free product from historical spill of creosote solvent previously stored at site. DEC Ha Waste and DEC Spills working on remediation project. Also see spill no. 9600688 for further information.

Spill Cause: CALLER REPORTING THAT DURING SITE INVESTIGATION, MULTIPLE TYPES OF HAZARDOUS MATERIALS WERE FOUND IN SOIL SAMPLES. REQ DEC FOLLOW UP.

reet and Newtown Creek is located approximately 1,750 feet southwest of the site. Roehr Chemicals owned and operated four buildings on five lots - lots 1,8,23, and 28. Lot 28 contained the main building and has been the focus of the current investigation and remediation. Other lots (1, 8, 23, & 24) were investigated and closed in August 1992 under RCRA closure. The site is presently used as a warehouse for storing packing boxes. Roehr Chemical was a manufacturer of bulk pharmaceuticals and pharmaceutical intermediates such as diet pills, allergy pills and chemicals used in muscle relaxants. Several VOCs such as xylene, benzene and diethyl-ketone were used in the production of these items. During site operations involving the removal of spent xylene, a containment system failed, leaking xylene to the surrounding soil. This release contaminated at least 2,000 cubic yards of on-site soil with xylene. The site has been investigated through multiple phases from Preliminary Site Assessment (PSA) in 1994 to a Remedial Investigation/Feasibility Study (RI/FS), concluded in 2000. The groundwater was found contaminated with xylene and acetone. The RI showed a long narrow xylene plume leaving the site and entering the Calvary Cemetery. An off-site investigation was conducted in October 2000 to determine the impact of on-site contamination on the groundwater quality downgradient of the Calvary Cemetery. A series of geoprobe borings and four monitoring wells were installed along Review Avenue. Total xylenes in many of these wells were found to be at a maximum concentration of 19 ppb. Soil vapor extraction and air sparging systems installed in 1994 as Interim Remedial Measures (IRMs) were further expanded in 1999. A Record of Decision signed in March 2001 selected a No Further Action Remedy with continued Operation, Maintenance and Monitoring (OM&M) of the installed SVE/ AS system. These measures have reduced groundwater concentrations from a high of 105 ppm of xylenes to non-detect levels in most wells. Quarterly groundwater sampling continues under the OM&M program.

Health Problems Assessment :

On-site groundwater, surface water and soil contamination has been documented. Drinking water supplies are not impacted by contamination from this site. Drinking water contamination is unlikely as groundwater is not used as a potable supply within a five mile radius. Site access is controlled, limiting the potential for direct contact to contaminated surface soils to on-site workers. Indoor air sampling in homes immediately west of site did not indicate contamination warranting public health concerns. Soil and groundwater contamination continue to diminish as the remedial measure progresses.

Environmental Problems :

The remedial actions taken to date have adequately addressed significant threat posed by the contamination, and the site reclassification is under consideration. The continuing groundwater monitoring shows that groundwater concentrations of site related contaminants have reduced to non-detect levels in most wells. The installed system is being operated in an on and off pulsing sequence to assess if the reductions in groundwater contaminant levels are permanent or not.

Besides the Manhattan Adhesives factory, about 10 feet from the northeast wall is a manhole (not a sewer or drain) into which liquid waste was allegedly discharged. This waste came from a condemned oil storage site located at the intersection of Rt. 280, and the NJ Turnpike in NJ. The manhole is suspected of being the opening to an underground tank; however, the quantity of the waste allegedly dumped exceeds the capacity of most tanks. This information was obtained from the State Senate Committee on Crime and the Brooklyn District Attorney's office. Phase I State Superfund has been completed. A partial phase II investigation was completed during 1985 and recommended no further action. The Responsible Party has agreed to</p>

Waste type 9 :	Not reported
Waste quantity 9 :	UNKNOWN
Site Description :	<p>The site is an active maintenance and storage yard for train locomotives and passenger cars. Several investigations conducted prior to 1986 had found that PCBs were present in soils and a PCBs laden separate phase plume was also present near the former Engine Shop. A remedial investigation was later conducted in multiple phases under NYSDEC oversight pursuant to a consent order. Seventeen specific areas of concern (AOC) have been identified. PCBs, petroleum hydrocarbons, and lead are the main site-related contaminants of concern. Onsite soils, groundwater, and sewer sediments are contaminated with one or more of these contaminants. Chlorinated solvents are also present in on-site groundwater, but are believed to have originated off site. The sources of the PCBs are believed to be leaks from stationary transformers and locomotive-mounted transformers. The main sources of petroleum hydrocarbons are believed to be the diesel USTs and the various leaks and disposals over the years of the Yard activities. The consent order was modified in 1988 to divide the Yard into six operable units (OUs). The operable units (OUs) 1 and 2, the unsaturated soil under and around the High Speed Line building areas have been investigated and remediated. An RI for OU3 is underway. OU3 consists of the unsaturated soils, the free product plume, and underground structures in and around the former Engine House Area, known as AOC-1. Portions of OU-4 (remainder of the site) have been completed. The on-site sewer system (OU-5) and the groundwater/saturated soils (OU-6) were also investigated during the Phase II, but more work remains to be done. Interim Remedial Measures (IRMs) installed since 1990 have contained and recovered petroleum. These measures were discontinued in 1996. A new IRM consisting of a single collection trench was installed in late 1998 to recover the free petroleum. This IRM continues to operate on and off as permitted by ongoing Yard construction. The preliminary remedial plans for OU3 includes an IRM to excavate free product and contaminated soils. The Long Island Railroad (LIRR) is planning to construct tunnels through the Yard as part of its East Side Access (ESA) project. Impacts from the proposed construction remain to be assessed.</p>
Health Problems Assessment :	Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils.
Environmental Problems :	Soil and groundwater contamination by PCBs has been confirmed. A PCBs laden petroleum plume is also present in one portion of the site. The site has secured access. Exceedances of standards, criteria, and guidance include PCBs, metals (primarily lead), and SVOCs for soil; and metals and SVOCs for groundwater.

Site Description :

Standard Motor Products (SMP) is located in an urban area, on the southern side of Northern Boulevard, between 37th and 39th streets. SMP is in the business of producing automobile parts and components. Current manufacturing operations include metal fabrication and machining, plastic injection molding, and assembly. The building on site has been occupied by SMP since the mid 1900s. An investigation in 1990 was initiated after an oily sheen was observed in a puddled area on the southeast side of the property. Soil samples from this area revealed elevated levels of petroleum hydrocarbons and volatile organic compounds (VOCs), primarily 1,1,1-trichloroethane. Approximately 2,700 sq. ft. of soil was excavated to a depth of 18 inches and stockpiled on-site. Further investigation determined that soils in the area of the rear loading platform contained elevated levels of petroleum hydrocarbons and VOCs. Contaminated soils extended beyond the area excavated. Subsequent groundwater samples taken indicated contamination with 1,1,1-trichloroethane and lead. An investigation was performed by the owner and a Delisting Petition was submitted to the NYSDEC in 1994. This petition was denied. A Consent Order has been signed to develop and implement a Remedial Investigation/Feasibility Study (RI/FS). The RI/FS work plan was approved in October 2002. The first phase of the RI fieldwork began in November 2002 and the second phase was conducted in July 2003. A work plan for a supplemental investigation of soil gas and groundwater monitoring is currently being developed.

Health Problems Assessment : The site is situated in an urban and industrial area. On-site workers may contact contaminated surface soils that were not removed as part of a previous soil removal effort. Surface and subsurface soil samples were collected during the remedial investigation to delineate the nature and extent of soil contamination. Access to the site is restricted by fences and security personnel. Personnel gain access to the area of concern through a locked gate; thus limiting public exposure. Groundwater near the site is not used for potable water.

Environmental Problems : Significant levels of 1,1,1-trichloroethane, lead, and petroleum hydrocarbons have been found in groundwater and soil samples. The highest levels of groundwater contamination are adjacent to the loading dock at the back of the building. Groundwater flow is to the adjacent Amtrack property. A gas station upgradient of SMP (on the corner of Northern Blvd and 39th Street) is the source of the petroleum contamination in the groundwater.

 Site Description:

This site has been industrialized since 1891. It is surrounded by other industries and is located east of the Kosciuszko Bridge. Newtown Creek flows along the southern boundary of the facility. Phelps Dodge Refining Corporation used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at the Laurel Hill facility have been discontinued since 1983. In 1986, the Phelps Dodge Refining Corp. excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material in a chemical waste facility in Ohio.

**PHELPS DODGE REFINING CORPORATION (Continued)**

**S103350610**

The New York City Department of Environmental Protection completed a Remedial Investigation / Feasibility Study (RI/FS) in 1994 and indicated contamination on other areas of the site. Phelps Dodge entered into a new Consent Agreement for RI/FS and IRMs for this site. IRMs involving asbestos abatement, waste removal and building demolition were completed in October 2000. An RI/FS was completed in 2002 and a Record of Decision (ROD) was signed on January 23, 2003. The ROD divided the property into six Operable Units (OU-1 through OU-5 were land based and OU-6 for surface waters and sediments of Newtown Creek). The ROD selected a remedy including hotspot soil removal, capping of entire property, barrier wall along creeks, a groundwater extraction and disposal system and institutional controls. Hotspot soil removal portion of the remedy was completed in 2004. In 2004, Phelps Dodge sold the property to a developer, Sagres Partners, which has subdivided this property into various parcels and is proceeding with site redevelopment in phases. Capping of OU-1a is in progress and this parcel is being developed for a wholesale distributor. Phelps Dodge has completed design for barrier wall and groundwater treatment system. Construction is expected to begin early 2005. An RI/FS has commenced for the surface waters and sediments of creeks (OU-6) and a ROD is expected by the end of 2005.

**Health Problems Assessment :**

The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for exposures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water.

**Environmental Problems :**

The primary contaminants of concern at the site are heavy metals, including cadmium, chromium, copper, lead, mercury, and others, petroleum related hydrocarbons, and PCBs. Investigations indicate a plume of groundwater contaminated with metals exists underneath the property. Even though hot-spot soil removal has been completed, the property still contains elevated levels of heavy metal and semi-volatile contamination of soils. Under the ROD, these will be managed through placement of a site cover, a site management plan, and institutional controls. The property is fenced and secured and is undergoing remediation. A groundwater extraction and treatment system is being constructed. Sediments of Newtown and Maspeth Creeks are being investigated. Preliminary investigations indicate elevated levels of heavy metals in creek sediments.

## EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D009	MERCURY
D018	BENZENE
D035	METHYL ETHYL KETONE
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

U121	TRICHLOROMONOFUOROMETHANE

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Elapsed ASTM days:** Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

## FEDERAL ASTM STANDARD RECORDS

### **NPL: National Priority List**

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/28/05

Date Made Active at EDR: 05/16/05

Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 05/04/05

Elapsed ASTM days: 12

Date of Last EDR Contact: 05/04/05

### **CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System**

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/15/05

Date Made Active at EDR: 04/06/05

Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/22/05

Elapsed ASTM days: 15

Date of Last EDR Contact: 03/22/05

### **CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned**

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

## **RCRA:** Resource Conservation and Recovery Act Information

Source: EPA  
Telephone: 800-424-9346

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 05/20/05

Date of Last EDR Contact: 04/25/05

## **FEDERAL ASTM SUPPLEMENTAL RECORDS**

### **BRS:** Biennial Reporting System

Source: EPA/NTIS  
Telephone: 800-424-9346

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/01/01  
Database Release Frequency: Biennially

Date of Last EDR Contact: 04/15/05  
Date of Next Scheduled EDR Contact: 06/13/05

### **CONSENT:** Superfund (CERCLA) Consent Decrees

Source: Department of Justice, Consent Decree Library  
Telephone: Varies

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Database Release Frequency: Annually

Date of Last EDR Contact: 04/04/05  
Date of Next Scheduled EDR Contact: 07/04/05

**DELISTED NPL: National Priority List Deletions**

Source: EPA  
Telephone: N/A

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/28/05  
Database Release Frequency: Quarterly

Date of Last EDR Contact: 05/04/05  
Date of Next Scheduled EDR Contact: 08/01/05

**FINDS: Facility Index System/Facility Identification Initiative Program Summary Report**

Source: EPA  
Telephone: N/A

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/11/05  
Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/04/05  
Date of Next Scheduled EDR Contact: 07/04/05

**HMIRS: Hazardous Materials Information Reporting System**

Source: U.S. Department of Transportation  
Telephone: 202-366-4555

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/31/04  
Database Release Frequency: Annually

Date of Last EDR Contact: 04/19/05  
Date of Next Scheduled EDR Contact: 07/18/05

**MLTS: Material Licensing Tracking System**

Source: Nuclear Regulatory Commission  
Telephone: 301-415-7169

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/14/05  
Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/04/05  
Date of Next Scheduled EDR Contact: 07/04/05

**MINES: Mines Master Index File**

Source: Department of Labor, Mine Safety and Health Administration  
Telephone: 303-231-5959

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

## **NPL LIENS:** Federal Superfund Liens

Source: EPA  
Telephone: 202-564-4267

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91  
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 02/22/05  
Date of Next Scheduled EDR Contact: 05/23/05

## **PADS:** PCB Activity Database System

Source: EPA  
Telephone: 202-564-3887

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 03/30/05  
Database Release Frequency: Annually

Date of Last EDR Contact: 05/10/05  
Date of Next Scheduled EDR Contact: 08/08/05

## **DOD:** Department of Defense Sites

Source: USGS  
Telephone: 703-692-8801

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 10/01/03  
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 02/08/05  
Date of Next Scheduled EDR Contact: 05/09/05

## **UMTRA:** Uranium Mill Tailings Sites

Source: Department of Energy  
Telephone: 505-845-0011

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

Date of Government Version: 12/29/04  
Database Release Frequency: Varies

Date of Last EDR Contact: 03/22/05  
Date of Next Scheduled EDR Contact: 06/20/05

## **ODI:** Open Dump Inventory

Source: Environmental Protection Agency  
Telephone: 800-424-9346

An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

Date of Government Version: 06/30/85  
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 05/23/95  
Date of Next Scheduled EDR Contact: N/A

## **FUDS:** Formerly Used Defense Sites

Source: U.S. Army Corps of Engineers  
Telephone: 202-528-4285

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

**US ENG CONTROLS:** Engineering Controls Sites List

Source: Environmental Protection Agency

Telephone: 703-603-8867

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/10/05  
Database Release Frequency: Varies

Date of Last EDR Contact: 04/04/05  
Date of Next Scheduled EDR Contact: 07/04/05

**RAATS:** RCRA Administrative Action Tracking System

Source: EPA

Telephone: 202-564-4104

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95  
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 03/07/05  
Date of Next Scheduled EDR Contact: 06/06/05

**TRIS:** Toxic Chemical Release Inventory System

Source: EPA

Telephone: 202-566-0250

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/02  
Database Release Frequency: Annually

Date of Last EDR Contact: 03/22/05  
Date of Next Scheduled EDR Contact: 06/20/05

**TSCA:** Toxic Substances Control Act

Source: EPA

Telephone: 202-260-5521

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/02  
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 04/05/05  
Date of Next Scheduled EDR Contact: 06/06/05

## **STATE OF NEW YORK ASTM SUPPLEMENTAL RECORDS**

### **HSWDS:** Hazardous Substance Waste Disposal Site Inventory

Source: Department of Environmental Conservation

Telephone: 518-402-9564

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

**SPDES:** State Pollutant Discharge Elimination System  
Source: Department of Environmental Conservation  
Telephone: 518-402-8233

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

Date of Last EDR Contact: 04/04/05  
Date of Next Scheduled EDR Contact: 06/13/05

### **US BROWNFIELDS:** A Listing of Brownfields Sites

Source: Environmental Protection Agency  
Telephone: 202-566-2777

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 03/14/05  
Date of Next Scheduled EDR Contact: 06/13/05

## **US INST CONTROL:** Sites with Institutional Controls

Source: Environmental Protection Agency  
Telephone: 703-603-8867

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/10/05  
Database Release Frequency: Varies

Date of Last EDR Contact: 04/04/05  
Date of Next Scheduled EDR Contact: 07/04/05

## **INST CONTROL:** Registry of Institutional Controls

Source: Department of Environmental Conservation  
Telephone: 518-402-9553

Environmental Remediation sites that have institutional controls in place.

Date of Government Version: 05/16/05  
Database Release Frequency: Quarterly

Date of Last EDR Contact: 05/13/05  
Date of Next Scheduled EDR Contact: 08/22/05

## **OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

## **Electric Power Transmission Line Data**

Source: PennWell Corporation  
Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## **AHA Hospitals:**

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **Medical Centers: Provider of Services Listing**

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## **Nursing Homes**

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## **Public Schools**

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

## **Private Schools**

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

## **Daycare Centers: Day Care Providers**

Source: Department of Health

Telephone: 212-676-2444

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

## **New York State Wetlands**

Source: Department of Environmental Conservation

Telephone: 518-402-8961

Coverages are based on official New York State Freshwater Wetlands Maps as described in Article 24-0301 of the Environmental Conservation Law.

## GEOCHECK® - PHYSICAL SETTING SOURCE ADDENDUM

### TARGET PROPERTY ADDRESS

MILTON PAPER COMPANY  
47-50 30TH STREET  
LONG ISLAND CITY, NY 11101

### TARGET PROPERTY COORDINATES

Latitude (North):	40.741501 - 40° 44' 29.4"
Longitude (West):	73.938103 - 73° 56' 17.2"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	589658.6
UTM Y (Meters):	4510392.5
Elevation:	13 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map: 40073-F8 BROOKLYN, NY  
 General Topographic Gradient: General SW  
 Source: USGS 7.5 min quad index

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Target Property County</u> QUEENS, NY	FEMA Flood <u>Electronic Data</u> Not Available
---	---

Flood Plain Panel at Target Property: 3604970040B

3604970048B

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u> BROOKLYN	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
--	--

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

\* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### ROCK STRATIGRAPHIC UNIT

Era: Mesozoic  
 System: Cretaceous  
 Series: Upper Cretaceous  
 Code: uK (decoded above as Era, System & Series)

### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loamy sand  
silt loam  
sandy loam  
fine sandy loam

Surficial Soil Types: loamy sand  
silt loam  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: very gravelly - loamy sand  
unweathered bedrock  
stratified  
sandy loam

## ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

### **New York State Wetlands**

Source: Department of Environmental Conservation

Telephone: 518-402-8961

Coverages are based on official New York State Freshwater Wetlands Maps as described in Article 24-0301 of the Environmental Conservation Law.

## HYDROGEOLOGIC INFORMATION

### **AQUIFLOW<sup>R</sup> Information System**

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### **Geologic Age and Rock Stratigraphic Unit**

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### **STATSGO: State Soil Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

#### **PWS: Public Water Systems**

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### **PWS ENF: Public Water Systems Violation and Enforcement Data**

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### **USGS Water Wells: USGS National Water Inventory System (NWIS)**

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## STATE RECORDS

### New York Public Water Wells

Source: New York Department of Health  
Telephone: 518-458-6731

### New York Facility and Manifest Data

Source: NYSDEC  
Telephone: 518-457-6585  
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

## RADON

### State Database: NY Radon

Source: Department of Health  
Telephone: 518-402-7556  
Radon Test Results

### Area Radon Information

Source: USGS  
Telephone: 703-356-4020  
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

### EPA Radon Zones

Source: EPA  
Telephone: 703-356-4020  
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## OTHER

### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

## City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources*. *Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2, page 12.)

EDR's City Directory Abstract includes a search and abstract of available city directory data.

### City Directories

City directories have been published for cities and towns across the U.S. since the 1700s. Originally a list of residents, the city directory developed into a sophisticated tool for locating individuals and businesses in a particular urban or suburban area. Twentieth century directories are generally divided into three sections: a business index, a list of resident names and addresses, and a street index. With each address, the directory lists the name of the resident or, if a business is operated from this address, the name and type of business (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural areas and small towns. ASTM E 1527-00 specifies that a *"review of city directories (standard historical sources) at less than approximately five year intervals is not required by this practice."* (ASTM E 1527-00, Section 7.3.2.1, page 12.)

### NAICS (North American Industry Classification System) Codes

NAICS is a unique, all-new system for classifying business establishments. Adopted in 1997 to replace the prior Standard Industry Classification (SIC) system, it is the system used by the statistical agencies of the United States. It is the first economic classification system to be constructed based on a single economic concept. To learn more about the background, the development and difference between NAICS and SIC, visit the following Census website: <http://www.census.gov/epcd/www/naicsdev.htm>.

Please call EDR Nationwide Customer Service at  
1-800-352-0050 (8am-8pm EST)  
with questions or comments about your report.  
*Thank you for your business!*

## SUMMARY

- *City Directories:*

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2000. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 100 Feet of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

# **APPENDIX 7**

## **Inspector Qualifications**

# **CHRISTOPHER SEIB**

## **Environmental Services Manager**

### **EDUCATION:**

B.S., **Environmental Science**, Rutgers the State University of New Jersey, Cook College, 1999.

### **EXPERIENCE:**

Mr. Seib is well versed in ISRA compliance having worked with both environmental consultants and NJDEP's Site Remediation Branch. He has performed a significant number of Phase I Environmental Site Assessments and has assisted in the design and implementation of Preliminary Assessment, Remedial Investigation, and Remedial Action projects. Mr. Seib has participated in the remediation of underground storage tanks and is experienced in multimedia sampling for environmental purposes. He also has field supervised ACM and lead surveys in support of numerous Whitestone projects.

### **ENVIRONMENTAL SERVICES MANAGER • Whitestone Associates, Inc. • Watchung, New Jersey • January 2000 - Present.**

Mr. Seib has held a series of progressively responsible positions at Whitestone. He currently oversees a variety of environmental due diligence investigation services including Phase I Environmental Site Assessments, Phase II Site Investigations, and Phase III Remediation Management oversight for Whitestone's client base of industrial and manufacturing companies, engineers, realtors, attorneys, national retail and restaurant chains, private concerns, and public agencies. Mr. Seib is responsible for supervising environmental activities including data collection, assessment, and report generation.

### **Representative Experience:**

- ▶ Conducted Phase I Environmental Site Assessments and supervised ACM surveys at multiple proposed and/or existing Commerce Bank sites in New Jersey for a commercial property developer. Prepared reports of findings which included recommendations for further action/investigation and cost estimates for required abatement.
- ▶ Participated in large-scale remedial investigation/remedial action project at the Vineland Construction Company Site in Kearny, New Jersey. Oversaw installation of monitoring wells to facilitate soil and groundwater sampling and analyses. Collected multimedia samples, screened soil samples with an OVM, and logged field results.
- ▶ Supervised the installation of nine geoprobe borings to facilitate soil and groundwater sampling and analyses at an A&P site in Brooklyn, New York.
- ▶ Performed multiple Phase I Environmental Site Assessments for retail, commercial, and industrial properties throughout New Jersey, New York, Connecticut, and Massachusetts.

### **ASSOCIATE ENVIRONMENTAL SCIENTIST • Killiam Associates, Waste Management Division • Millburn, New Jersey • June 1999 - January 2000.**

Mr. Seib performed Phase I Environmental Site Assessments and prepared Remedial Cost Estimates for numerous properties including solid waste and energy businesses in New Jersey, New York, Connecticut,

### **WHITESTONE ASSOCIATES, INC.**

# **CHRISTOPHER SEIB**

## **EXPERIENCE (*Continued*):**

and Massachusetts. He also assisted in the performance of Preliminary Assessments and Site/Remedial Investigations in association with ISRA compliance.

Mr. Seib was directly responsible for identifying areas of environmental concern; designing Sampling and Analyses Plans; implementing Remedial Action Plans; interpreting analytical data; and preparing detailed reports.

## **REGULATORY COMPLIANCE INTERN • New Jersey Department of Environmental Protection, Division of Responsible Party Site Remediation • Bureau of Field Operations, Northern Office • May - June 1998.**

Mr. Seib assisted case managers in the assessment of Site Investigation and Remedial Action Reports. During his internship, Mr. Seib:

- ▶ Observed and reviewed soil and water sampling procedures, installation of monitoring wells, and sample analytical results.
- ▶ Conducted field inspections and prepared appropriate reports.
- ▶ Assured compliance with Department regulations, particularly the Technical Requirements for Site Remediation, N.J.A.C. 7:26E.
- ▶ Maintained database and reviewed reports for Homeowner Underground Storage Tank Pilot Program for Hudson and Bergen counties.
- ▶ Recommended cases for closure.
- ▶ Designed and maintained a regulation variation database.

## **SPECIAL TRAINING AND CERTIFICATIONS:**

- ▶ 40 Hour OSHA Health & Safety Training Course for Hazardous Waste Site Activities
- ▶ Confined Space Entry OSHA Certification

## **PROFESSIONAL ASSOCIATIONS:**

- ▶ Lake Parsippany Property Owners Association: Lake Restoration Committee, Dredging Committee
- ▶ Epsilon Chapter of the Delta Phi Fraternity at Rutgers University  
Treasurer, Rutgers Fraternity Council Representative, Rush Chair  
Recipient of the New Brunswick Mayor's Award for Community Service

# **ERIK COLONNA-ROMANO**

## **Environmental Scientist**

### **EDUCATION:**

B.A., **Anthropology** (Related Coursework: Biology; Chemistry; Environmental Anthropology, Geology, and Sociology; Geology), Tulane University, New Orleans, LA, 2003.

### **EXPERIENCE:**

Mr. Colonna-Romano is experienced in multimedia sampling for environmental purposes and has performed a variety due diligence investigations including Phase I Environmental Site Assessments (ESAs) and Phase II Site Investigations (SIs).

#### **ENVIRONMENTAL SCIENTIST • Whitestone Associates, Inc. • Watchung, New Jersey • April 2004 - Present.**

Mr. Colonna-Romano performs Phase I Environmental Site Assessments and Phase II Site Investigations for Whitestone's client base of industrial and manufacturing companies, engineers, realtors, attorneys, national retail and restaurant chains, private concerns, and public agencies. He is responsible for reviewing historical property data; conducting site inspections; collecting multimedia samples for laboratory analysis; evaluating and interpreting analytical data; and generating reports for review by Whitestone's senior staff scientists and environmental engineers.

#### **Representative Experience:**

- ▶ Perform Phase I ESAs and Phase II SIs in accordance with applicable ASTM E1527 and ASTM E1528 Standards for retail, commercial, and industrial properties throughout Whitestone's multi-state service region.
- ▶ Supervise the installation of geoprobe boring, monitoring well, and test pits to facilitate the collection of soil and groundwater samples.

#### **STAFF SCIENTIST • Roux Associates • West Deptford, New Jersey • May - September 2003.**

As an environmental staff scientist, Mr. Colonna-Romano was responsible for multimedia sample collection; sample management including chain-of-custody; reviewing analytical results; and generating field study reports and analytical data tables for senior staff scientists.

#### **Representative Experience:**

- ▶ Assisted in drilling groundwater monitoring wells. Operated a variety of pumps to purge water from installed wells. Determined depth to groundwater in wells, obtained water quality measurements (pH, conductivity, percent of dissolved oxygen, etc.), and collected groundwater samples for laboratory analyses.

## **ERIK COLONNA-ROMANO**

Page 2

### **EXPERIENCE (*Continued*):**

- ▶ Collected soil and sediment samples for laboratory analyses and performed field screening with a photoionization detector (PID) for evidence of volatile organic contamination.
- ▶ Logged sample collection and analyses activities and maintained project files. Streamlined workflow by effectively reorganizing the company's existing file structure.
- ▶ Coordinated sample collection and laboratory analyses to ensure projects remained on schedule.
- ▶ Served as a liaison to various state environmental agencies, customers, and management.

### **SPECIAL TRAINING AND CERTIFICATIONS:**

- ▶ 40 Hour OSHA Hazardous Waste Operations and Emergency Response Training (HAZWOPER) Certification.

### **PROFESSIONAL/PERSONAL ACHIEVEMENTS:**

- ▶ Participated in a city-wide Brownfields study in New Orleans, Louisiana. Study findings were provided to the Mayor's office.
- ▶ Designed and delivered training to colleagues, youth, and subordinates.
- ▶ Member of Tulane University Green Club.

Attention: Mr. Robert Adler

**Regarding: SUMMARY REPORT OF FINDINGS  
PHASE II SITE INVESTIGATION  
EXISTING MILTON PAPER COMPANY  
47-50 30<sup>th</sup> STREET  
LONG ISLAND CITY, QUEENS COUNTY, NEW YORK  
WHITESTONE PROJECT NO.: WJ05-8023**

Dear Mr. Adler:

Whitestone Associates, Inc. (Whitestone) conducted field activities associated with supplemental environmental due diligence investigation activities at the above-referenced site on August 30, 2005. The limited Phase II Site Investigation (SI) was conducted to assess subsurface conditions at the subject site through the collection and analyses of soil and groundwater samples in the vicinity of an abandoned 3,000 gallon former heating oil underground storage tank (UST), floor drains in the western portion of the site building, and in former hazardous materials storage/handling areas. The discharge points of the floor drains also were evaluated during the SI. A summary of Whitestone's activities, findings, conclusions, and recommendations associated with these efforts is presented in the sections that follow.

### **1.0 ENVIRONMENTAL CONDITIONS**

As documented in Whitestone's August 16, 2005 *Summary Report of Findings - Phase I Environmental Site Assessment (ESA)*, the subject site consists of an approximately 54,000 square feet (footprint), single-story building. The site building covers the entire subject property and currently is occupied by Milton Paper Company.

This SI was conducted to further evaluate the recognized environmental conditions (RECs) documented during Whitestone's Phase I ESA. The RECs evaluated during this limited SI are summarized as follows:

- ▶ The subject property historically has been operated as a chemical warehouse and shellac company. These operations likely included the on-site storage and/or use of hazardous or potentially hazardous

*Other Office Locations:*

■ CHALFONT, PA  
215.712.2700

■ STERLING, VA  
703.464.5858

■ EVERGREEN, CO  
303.670.6905

materials. Discharges of such materials/wastes potentially may have resulted in contamination of soil and/or groundwater at the subject property.

- ▶ One 3,000 gallon former fuel oil UST remains abandoned in place under the eastern portion of the site building. No environmental sampling reportedly was conducted during UST closure activities, and releases from this former UST may have impacted subsurface conditions at the subject property.
- ▶ Two floor drains were observed in a storage room located in the western portion of the site building. A site sketch provided in the November 17, 2004 Phase I ESA prepared by Lender Consulting Service (LCS) for the subject property identifies this room as "reported explosion room". This room formerly may have been utilized for the mixing and testing of chemicals associated with former site operations conducted by Philip A. Hunt Chemical Corporation.

## **2.0 SCOPE OF WORK AND LIMITATIONS**

The scope of this limited SI included the following tasks:

- ▶ conducting an evaluation of the discharge point(s) of floor drains utilizing water dye;
- ▶ advancing six borings with Geoprobe equipment to facilitate soil screening and select soil and groundwater sampling;
- ▶ logging and screening soils with a photoionization detector (PID) for the potential presence of volatile organic (VO) contamination;
- ▶ submitting soil samples collected from select borings for laboratory analyses for volatile organic compounds (VO) and semi-volatile organic compounds (SVO); and
- ▶ submitting groundwater samples collected from temporary wellpoints established in select borings for laboratory analyses for VO and SVO;

This SI was not intended to be an exhaustive evaluation of subsurface conditions at the subject property and was prepared for the sole use of Prestone Printing, Stadtmauer Bailkin, L.L.P., Citibank, N.A., New York City Industrial Development Agency, their successors, representatives, and assigns, and should not be relied upon by any third party without Whitestone's written consent.

## **3.0 FLOOR DRAIN EVALUATION**

Whitestone utilized a non-toxic water dye in attempt to determine the discharge points of the floor drains observed in the western portion of the site building. The dyed water was poured through the individual drains while potential outfalls (including the stormwater management system and sanitary sewer system) were monitored for the presence of the dye. The dyed water was not observed at the monitored potential outfalls, and the discharge point(s) of the floor drains could not be determined during this evaluation.

#### 4.0 SAMPLING METHODOLOGY

Two soil borings (SB-1 and SB-2) were advanced in the vicinity of the abandoned 3,000 gallon UST and four soil borings (SB-3 through SB-6) were advanced in the former "explosion room" at the western portion of the building. Two of the borings (SB-3 and SB-4) in this room were advanced adjacent to the floor drains.

The borings were advanced utilizing limited-access Geoprobe equipment subcontracted from Enviroprobe Services, Inc. Soil samples were collected as the borings were advanced. Samples were screened with a PID to identify the presence of VO contamination. Soil samples were collected from select borings from the intervals which exhibited the greatest potential for contamination based upon field screening and visual observations. Sampling equipment was decontaminated between successive uses. Temporary PVC wellpoints were placed in borings SB-1, SB-3 and SB-5 to facilitate the collection of groundwater samples. Soil boring logs are provided as Attachment A, and the site and boring locations are depicted on Figure 1 and Figure 2, respectively.

Six soil samples (8023-SB-1 through 8023-SB-6) were submitted to Integrated Analytical Laboratories, L.L.C. (IAL) of Randolph, New Jersey, a State-certified laboratory (NY Certification #11402), for VO and SVO analyses. Analytical results comprise Attachment B and are summarized in Table 1 (Soil and Groundwater Sampling Summary) and Table 2 (Soil Sampling and Analysis Data Summary). Three groundwater samples (8023-SB-1-GW, 8023-SB-3-GW and 8023-SB-5-GW) were collected and submitted to IAL for VO and SVO analyses. Groundwater analytical results are summarized in Table 3 (Groundwater Sampling and Analysis Data Summary).

#### 5.0 SI RESULTS AND SAMPLING AND ANALYSIS DATA SUMMARY

##### 5.1 Site Lithology

Six borings (SB-1 through SB-6) were completed at the subject site to maximum depths of 20.0 feet below ground surface (fbgs). The subsurface soil conditions encountered in the soil borings consisted of the following generalized strata in order of increasing depth.

**Surface Materials:** The borings conducted in the former "explosion room" (SB-3 through SB-6) encountered approximately six inches to eight inches of concrete then four inches to six inches of cork and then another four inches to six inches of concrete. Voids were documented below the slab in borings SB-4, SB-5 and SB-6. Borings SB-1 and SB-2 encountered approximately eight inches to 12 inches of concrete (floor slab).

**Fill Materials:** Fill materials were encountered beneath the surficial materials in each of the borings. The fill materials encountered generally consisted of brownish, grayish and olive colored coarse to fine sand with variable amounts of gravel, silt, clay and debris. The debris encountered in the borings consisted of processed gravel and wood. Each boring penetrated through the fill materials into natural soils at depths ranging from approximately nine fbgs to 12.0 fbgs.

**Sand:** Beneath the fill materials, the borings encountered natural sands that extended to boring termination depths of 20.0 fbgs. This stratum generally consisted of brownish and olive colored coarse to fine sand with variable amounts of gravel and silt.

**Groundwater:** Groundwater was encountered during the August 30, 2005 field investigation activities in each of the boring at depths ranging from approximately 10 fbgs to 10.5 fbgs.

A summary of boring installation and sampling data is presented in Table 1, and boring logs are presented in Attachment A.

### **5.2 Soil Sampling Results**

Soil borings SB-1 and SB-2 were advanced in the vicinity the abandoned 3,000 gallon former heating oil UST, borings SB-3 and SB-4 were advanced in the vicinity of the floor drains in the former "explosion room" in the western portion of the site building, and borings SB-5 and SB-6 were advanced throughout the former "explosion room". The analytical results for the soil samples did not document VO constituents at concentrations exceeding laboratory method detection limits (MDLs).

Analytical results for the soil samples documented select SVO constituents at concentrations exceeding laboratory MDLs in four of the six soil samples. Select SVO constituents were also detected at concentrations exceeding New York State Department of Environmental Conservation (NYSDEC) Recommended Soil Cleanup Objectives (RSCOs) in borings SB-4 and SB-6. The SVO concentrations detected in these soil samples only slightly exceed applicable NYSDEC guidance values and are typical of concentrations found in fill material in urban areas. Analytical results comprise Attachment B and are summarized in Table 2 (Soil Sampling and Analyses Data Summary).

### **5.3 Groundwater Sampling Results**

Groundwater samples were collected from temporary wellpoints installed in borings SB-1, SB-3 and SB-5. The VO constituent chloroform was detected at a concentration exceeding the laboratory MDL in the groundwater sample collected from boring SB-5, however, below NYSDEC's Groundwater Standard.

The groundwater samples collected from borings SB-1 through SB-3 documented select SVO constituents at concentrations exceeding laboratory MDLs. SVO constituents were also detected at concentrations exceeding NYSDEC Groundwater Standards in borings SB-1 and SB-3. Analytical results comprise Attachment B and are summarized in Table 3 (Groundwater Sampling and Analyses Data Summary).

## **6.0 CONCLUSIONS AND RECOMMENDATIONS**

Whitestone conducted limited SI activities on August 30, 2005 to evaluate subsurface conditions at the subject property. Conclusions and recommendations pertaining to the limited SI activities are summarized as follows:

- ▶ Soil sampling and analysis revealed the presence of select SVO constituents in borings SB-4 and SB-6 at concentrations exceeding NYSDEC RSCOs. The levels encountered generally are indicative of typical concentrations occurring in fill in urban and developed areas.
- ▶ Groundwater sampling revealed the presence of select SVO constituents in the samples collected from borings SB-1 and SB-3 at concentrations exceeding NYSDEC Groundwater Standards.

- ▶ The identified soil and groundwater exceedances of NYSDEC guidelines represent a condition that typically will not warrant further action assuming subsurface soils and groundwater will not be disturbed for site redevelopment. These exceedances should be reported to the NYSDEC, and the current results suggest that the fill conditions likely can be addressed by existing engineering controls (current building slab) or, possibly, institutional controls such as a deed restriction.
- ▶ Whitestone could not determine the discharge point(s) of the two floor drains observed in the western portion of the site building. These floor drains should be cleaned and grouted/sealed if not intended for future use. If documented in the future, the discharge point(s) should be evaluated to determine the potential for impacts to subsurface conditions.

Hopefully, this information will be helpful for site planning purposes. Please do not hesitate to contact us at (908) 668-7777 with any questions regarding these matters.

Sincerely,

**WHITESTONE ASSOCIATES, INC.**

Mr. Ira Wechsler  
Prestone Printing Co., Inc.

Re: **Limited Soil Vapor Intrusion & Soil Sampling Summary Report  
Prestone Printing Co., Inc.  
4750 30<sup>th</sup> Street, Long Island City, New York**

Dear Mr. Wechsler:

This report summarizes the findings of the Limited Soil Vapor Intrusion (SVI) and Soil Sampling Study conducted by Preferred Environmental Services (Preferred) on April 2 & 3, 2018, at the commercial property located at 4750 30<sup>th</sup> Street, Long Island City, New York (Subject Property) (**Figures 1 -3**). This Study was performed in order to evaluate Sub-Slab Soil Vapor and indoor air quality at the Subject Property. The SVI portion of the investigatory work was conducted in accordance with the requirements set forth in the October 2006 New York State Department of Health (NYSDOH) *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*.

## **Site Description and Background**

The Subject Property is currently improved with a one-story commercial building (offices and warehouse). The current occupant is a printing press, Prestone Printing Co., Inc. (Prestone). The building had previously been occupied by the Milton Paper Company, and prior to that was occupied a chemical warehouse and shellac company (Philip A. Hunt Chemical Corporation).

A Phase I Environmental Site Assessment (ESA) was completed by Whitestone Associates Inc. (Whitestone) in August 2005, which identified several Recognized Environmental Concerns (RECs). One such REC was the presence of an out-of-service (OOS) empty 3,000-gallon fuel oil Underground Storage Tank (UST) in the southern portion of the Subject Property. An additional REC was the identified presence of a former dry-cleaner situated adjacent to the Subject Property to the north. Based upon the results of this Phase I ESA, a Limited Phase II ESA was completed by Whitestone in September 2005 (**Attachment A**), which included the installation of six (6) soil borings (**Figure 4**); two (2) adjacent to the OOS UST, and four (4) in a storage room which was identified in a prior Phase I ESA.

The issue of former UST is being addressed by PAL Environmental Services. Preferred was engaged to perform a Limited SVI Study to assess subsurface soil vapor conditions relative to the REC posed by the former drycleaners' situated adjacent and to the north of the Subject Property, detailed below.

## **Soil Vapor Intrusion (SVI) Study - April 2 & 3, 2018**

Preferred conducted a limited SVI Study on April 2 and 3, 2018. The SVI Study included the collection of one (1) sub-slab soil vapor sample (SSV-1), one (1) indoor air sample (IA-1) and one (1) proximate soil sample (SB-1 at 1.5-2 feet bgs). Sample locations are depicted on **Figure 4**.

The sub-slab soil vapor sample was collected from a temporary soil vapor probe. In order to install the temporary vapor probe, Preferred cored through the concrete slab utilizing an electric powered rotary hammer drill to create a small diameter borehole, within which the vapor probe was installed. The temporary vapor probe was constructed of 3/8th-inch diameter food-grade polyethylene tubing installed two (2) -inches below

the concrete slab. The area surrounding the tubing at the point where it entered the concrete slab was sealed with hydrated bentonite to create an air-tight seal.

SSV-1 and IA-1 were collected from within the northern portion of the building which is utilized as a storage warehouse and process area for the printing press. A separate core apparatus was used to install a boring via a manually operated stainless steel hand auger for the collection of a soil sample. Soil boring (SB-1) was also installed within the northwestern portion of the building within the aforementioned warehouse and process area.

Prior to sampling, an NYSDOH Indoor Air Sampling Questionnaire and Inventory form (see Attachment B) was completed by Preferred's sampling personnel. It should be noted that no chemicals were observed to be stored on-site, however, it is known that cleaning solvents are used on most printing presses.

The SVI Sampling was conducted in accordance with the requirements set forth in the October 2006 NYSDOH Guidance for Evaluating Soil Vapor Intrusion. The annular space within the sub-slab vapor implant tubing was purged a minimum of one to three volumes of soil gas using a personal sampling pump. During purging and sampling, the flow rate did not exceed 0.2 liters per minute. A pre-set regulator and dedicated summa canister was used to procure each sub-slab or soil vapor sample. The regulator was set to collect the indoor sub-slab sample over a 24-hour period and ensured a flow rate less than 0.2 liters per minute. Sufficient volume was collected to achieve the detection limits required to evaluate the data relative to the October 2006 NYSDOH Guidance for Evaluating Soil Vapor Intrusion.

In addition, a helium tracer gas was introduced into the annular space between the SSV tubing and a sealed enclosure (in the form of a 5-gallon plastic bucket, sealed with hydrated bentonite) to confirm the seal between the SSV tubing and the slab floor. A helium detector was utilized to screen for the presence of helium in the sample tubing during collection. No helium was reported as detected. After collection, the SSV sample location was field screened with a Photoionization Detector (PID) to provide real time data; this information was recorded in the Soil Vapor Sample Log Sheet (see **Attachment B**).

Upon completion of the sample collection, the summa canisters were transported under strict chain-of-custody to an NYSDOH-ELAP certified laboratory (York Analytical Laboratories) for Volatile Organic Compound (VOC) analysis by EPA Method TO-15 low level methodology.

The Indoor Air (IA) Sample was also collected utilizing a pre-set air flow regulator and dedicated summa canister under appropriate vacuum. The canister associated with the sample was set at a height of 3 to 5 feet above relative grade surface elevation as to obtain a sample within the representative breathing zone. The IA sample was collected from a location proximate to the sub-slab soil vapor sample (see attached **Figure 4**). The regulator for the IA sample was set to collect the sample over a 24-hour period and calibrated to ensure a flow rate less than 0.2 liters per minute. As with the sub-slab vapor sample, sufficient volume was collected to achieve the detection limits required to evaluate the data relative to the October 2006 NYSDOH Guidance for Evaluating Soil Vapor Intrusion.

During sampling activities a sample log sheet was completed for each sample summarizing the following:

---

***Preferred Environmental Services***

323 Merrick Avenue • N. Merrick New York 11566  
Telephone: (516) 546-1100 • Facsimile: (516) 213-8156

- a. sample identification,
- b. date and time of sample collection,
- c. sampling depth/height,
- d. identity of samplers,
- e. sampling methods and devices,
- f. purge volumes,
- g. volume of soil vapor extracted,
- h. if canisters used, the vacuum before and after samples collected,
- I. apparent moisture content (dry, moist, saturated, etc.) of the sampling zone, and
- j. chain of custody protocols and records used to track samples from sampling point to analysis.

The SSV and IA samples were both submitted for laboratory analysis for VOCs by EPA Method TO-15 low level methodology. The summa canisters were transported under strict chain-of-custody to an NYSDOH-ELAP certified laboratory (York Analytical Laboratories). Laboratory data summary sheets are included as **Attachment C**.

### ***Soil Vapor Intrusion Sample Analytical Testing Results***

Although there are no standards or guidance values to evaluate the reported concentrations of VOCs in sub-slab vapor or outdoor air samples, the NYSDOH has established Indoor Air Guidance Values for three (3) non-aromatic compounds, tetrachloroethylene (PCE) at 30 ug/m<sup>3</sup>, trichloroethylene (TCE) at 2 ug/m<sup>3</sup>, and methylene chloride at 60 ug/m<sup>3</sup>. Additionally, a total of seven (7) related VOCs (vinyl chloride (Matrix C), carbon tetrachloride, trichloroethylene, 1,1-dichloroethene, and cis-1,2-Dichloroethene (Matrix A); and methylene chloride, 1,1,1 Trichloroethane (TCA) and Tetrachloroethylene (PCE) (Matrix B) have guidance values associated with the NYSDOH Soil Vapor/Indoor Air Decision Matrices, as established in the supplemental NYSDOH correspondence dated June 25, 2007 and updated May 2017.

These matrices were developed by the NYSDOH to allow for decision-making relative to actions required to be undertaken with respect to intrusion from sub-slab soil vapors into the interior of buildings. In addition to these select Air Guidance Values, the results of the laboratory analysis were also compared to NYSDOH recommended immediate action levels established in a correspondence dated August and September 2015. Finally, the analytical results were also compared to the Summary of Indoor and Outdoor Levels of VOCs from Fuel Oil Heated Homes in New York State 1997 to 2003 (unpublished NYSDOH, Bureau of Toxic Substances Assessment) as shown on **Table 1** relative to aromatic (petroleum-related) compounds (benzene, toluene, ethylbenzene and xylenes (BTEX).

As indicated in **Table 1**, several petroleum-related VOCs (e.g., 2-Butanone, 1,24-Trimethylbenzene, m/p-Xylene, etc.) were detected in the sub-slab soil vapor and indoor air samples. In addition to the petroleum-related VOCs, other chlorinated-solvent VOCs (e.g., cis-1,2-Dichloroethylene (DCE), PCE, TCE) were detected at elevated concentrations in the soil vapor sample (SSV-1) and/or the indoor air sample (IA-1). Generally, with respect to the potential for vapor intrusion, the NYSDOH considers the most significant VOCs to be these chlorinated solvent compounds (Carbon Tetrachloride, PCE and TCE).

---

### ***Preferred Environmental Services***

323 Merrick Avenue • N. Merrick New York 11566  
Telephone: (516) 546-1100 • Facsimile: (516) 213-8156

1,2,4-Trimethylbenzene was detected at elevated concentrations ( 550 ug/m<sup>3</sup> and 1,300 ug/m<sup>3</sup>) in both sub-soil vapor and indoor air samples, respectively. In addition, acetone was also detected at elevated concentrations (between 220 ug/m<sup>3</sup> and 390 ug/m<sup>3</sup>) in both samples. Other compounds were present such as chloroform and cyclohexane but no specific standards or guidance values are available relative to same. The use of these chemicals during normal business operation is likely the source of that detected in the indoor air samples.

Of most significance is that the analysis of the sub-slab soil vapor and indoor air samples reported PCE concentrations of 17,000 ug/m<sup>3</sup> in SSV-1, and 1,700 ug/m<sup>3</sup> in IA-1, respectively. TCE (a breakdown product of PCE) was also reported at a concentration of 98 ug/m<sup>3</sup> in SSV-1, and 15 ug/m<sup>3</sup> in IA-1, respectively. These two (2) compounds were present in the indoor air at concentrations in exceedance of the NYSDOH Immediate (PCE) or Guidance Value specific to indoor air (TCE). Further, it was confirmed that both of these compounds were present in the sub-slab soil vapor samples as well and reported at elevated concentrations.

### ***Evaluation of Air Analytical Results***

The concentrations of PCE and TCE, in the sub-slab soil vapor and IA samples were compared to the three (3) available NYSDOH Soil Vapor/Indoor Air Matrices A, B and C (**Attachment C**) included in the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York. These matrices were developed by the NYSDOH to allow for decision-making relative to actions required to be undertaken with respect to vapor intrusion from sub-slab soil vapors into the interior of buildings.

Based upon the reported concentrations of PCE (17,000 ug/m<sup>3</sup>) within the SSV-1 sample, compared to the indoor air concentrations of 1,700 ug/m<sup>3</sup> in the IA-1 sample, review of the NYSDOH Soil Vapor/Indoor Air Matrix B indicates that the NYSDOH recommends that “Mitigation”, be performed. Further, the concentrations of PCE (1,700 ug/m<sup>3</sup>) in indoor air is elevated above its associated NYSDOH recommended guidance value of 30 ug/m<sup>3</sup>, and immediate action level of 300 ug/m<sup>3</sup>.

Based upon the reported concentrations of TCE (98 ug/m<sup>3</sup>) within the SSV-1 sample, compared to the indoor air concentrations of 15 ug/m<sup>3</sup> in the IA-1 sample, review of the NYSDOH Soil Vapor/Indoor Air Matrix A indicates that the NYSDOH again recommends “Mitigation” be performed. Although this concentration of TCE is above its associated NYSDOH Recommended Air Guidance Value of 2 ug/m<sup>3</sup>, it is below the NYSDOH recommended immediate action level of 20 ug/m<sup>3</sup>.

Based upon the reported concentrations of Carbon Tetrachloride (0.52 ug/m<sup>3</sup>) within the SSV-1 sample, compared to the indoor air concentrations of 0.27 ug/m<sup>3</sup> in the IA-1 sample, review of the NYSDOH Soil Vapor/Indoor Air Matrix A indicates that the NYSDOH recommends “No Further Action.” Similarly, the reported concentrations of Cis-1,2 DCE (5 ug/m<sup>3</sup>) and Methylene Chloride (25 ug/m<sup>3</sup>) within the SSV-1 sample, compared to the indoor air concentrations, the NYSDOH Matrixes also recommends “No Further Action.”

It should be noted that the Subject Property currently operates as a commercial printing facility and although

Telephone: (516) 546-1100 • Facsimile: (516) 213-8156

active chemical use and/or storage was not observed during the conduct of this investigation, it is understood that printing-related chemicals are utilized within the premises. As the use of printing-related chemicals is common within the premises as part of site operations, detected concentrations of PCE and TCE in the indoor air within the commercial facility (IA-1) should also be compared to applicable OSHA Permissible Exposure Limits (PELs), of 200,00 parts per billion (ppb) for each compound.

### ***Soil Boring and Soil Sample Analytical Results***

One (1) soil boring (SB-1) was installed within the northwest corner of the building to assess the quality of soils underlying the concrete slab. A two-inch diameter coring drill was previously utilized to core through the concrete slab, and a manually operated stainless steel hand auger was utilized to advance the soil boring to a terminal depth of two (2) feet below grade surface (bgs), at which point refusal was encountered. Soils encountered within soil boring SB-1 consisted generally of gray to black medium-grained sand mixed with gravel. Soils within boring SB-1 were continuously logged and field screened for field evidence of environmental impacts (e.g., visual and olfactory evidence, along with screening for the presence of VOCs utilizing a PID). Groundwater was not encountered within the SB-1 borehole.

Field screening of soils within SB-1 noted very limited field evidence of environmental impacts (e.g., odors and staining, PID responses up to 10.5 Parts Per Million (PPM) Response Units (RUs)) noted starting just below the concrete slab, and extending to the terminal depth of the soil boring. One (1) soil sample (SB-1 at 1.5-2 feet bgs) was collected and submitted for laboratory analysis for VOCs by EPA Method 8260. The soil sample was transported under strict chain-of-custody to an NYSDOH-ELAP certified laboratory (York Analytical Laboratories). Laboratory data summary sheets are included as **Attachment C**.

The soil sample analytical results were compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Soil Cleanup Objectives (SCOs), specifically the Commercial and Industrial Use SCOs, as summarized in the attached **Table 2**. Three (3) VOCs were reported above their associated laboratory Method Detection Limits (MDLs) in sample SB-1 (1.5-2 feet bgs), including 1,2,4-Trimethylbenzene at 3.6 µg/kg, Acetone at 77 µg/kg, and PCE at 100 µg/kg; none of which were reported at concentrations exceeding their associated Commercial or Industrial Use SCOs.

### **Summary and Conclusions**

A limited Soil Vapor Intrusion Study was conducted on April 2 & 3, 2018, at the Prestone Printing Company located at 4750 30<sup>th</sup> Street, Long Island City, New York. A total of one (1) sub-slab soil vapor sample was collected, along with one (1) indoor air (IA) sample and one (1) soil sample. The analytical results of the two (2) samples were compared to the October 2006 NYSDOH Guidance for Evaluating Soil Vapor Intrusion. The analytical results of the one (1) soil sample were compared to the NYSDEC Part 375 SCOs.

Upon comparison of the results of the laboratory analysis of the SSV and IA sample to the NYSDOH Soil Vapor/Indoor Air Matrices 1 and 2 it was determined that NYSDOH's recommends mitigation of these concentrations due to exceedances of the NYSDOH "Immediate Action Level", specific to indoor air due to PCE. The concentrations of TCE (15 ug/m<sup>3</sup>) in indoor air is well above its associated NYSDOH Recommended Air Guidance Value of 2 ug/m<sup>3</sup>, but below the NYSDOH recommended Immediate Action

#### ***Preferred Environmental Services***

323 Merrick Avenue • N. Merrick New York 11566  
Telephone: (516) 546-1100 • Facsimile: (516) 213-8156

Level of 20 ug/m<sup>3</sup>. However, the elevated concentrations of PCE dictate the need for mitigation, in this instance.

The NYSDOH defines the need for mitigation as: *minimizing current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building-specific basis, taking into account building construction and operating conditions. Mitigation is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated.*

Based upon the comparison of the soil sample (SB-1 at 1.5-2 feet bgs) results to the NYSDEC Part 375 SCOs for Commercial and Industrial Use, no VOCs were reported at concentrations exceeding their applicable SCOs. Therefore, based upon this one (1) soil sample, which represents a very limited soil investigation as part of the SVI, no specific findings could be made relative to VOC-impacts in or to soil.

### Summary and Conclusions

The conduct of a limited Soil Vapor Intrusion Study at the Subject Property confirms that soil vapor intrusion of PCE and related breakdown chemicals appears to be occurring relative to the abutting property to the north, known to be operated as a dry-cleaner. Some of the chemical identified in indoor air are likely associated with the use of working quantities of cleaning chemicals.

However, based upon the concentrations of PCE identified in both indoor air and soil vapor, the NYSDOH regulatory indicates that immediate mitigation is recommended to be performed within the area tested. Based upon the limited nature of this investigation (only one (1) sub-slab and one (1) indoor air sample collected for laboratory analysis), prior to making any remedial/mitigation decisions, Preferred recommends that additional testing be conducted.

The notification requirements for occupants and tenants should be implemented by Preston until mitigation is completed. Preferred recommends that this report be submitted to the New York State Department of Environmental Conservation (NYSDEC) for their review and assistance in obtaining relief from the vapor intrusion that is occurring that may be attributed to the off-site property to the north. .

As always, please feel free to contact me with any questions or comments.

Sincerely,  
**PREFERRED ENVIRONMENTAL SERVICES**

**Notes:**

NYSDOH Study is the Summary of Indoor and Outdoor Levels of Volatile Organic Compounds From Fuel Oil Heated Home in NYS, 1997 to 2003.

The NYSDOH Air Guidelines Values are provided in the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York October 2006 and supplemental VOCs added in June 25, 2007 correspondence.

The NYSDOH Immediate Action Levels are provided in the NYDOH August and September 2015 correspondence.

ug/m<sup>3</sup> - micrograms per cubic meter

ND - Analyte not detected at concentration exceeding method detection limit

Highlighted Value indicates contaminant detected at elevated concentration and/or exceeding its NYSDOH Air Guidance Values and Immediate Action Levels

E - Indicates the analyte 's concentration exceeds the calibrated range of the instrument for that specific analysis.

IS-LO The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.

Attention: Mr. Robert Adler

**Regarding: SUMMARY REPORT OF FINDINGS  
PHASE II SITE INVESTIGATION  
EXISTING MILTON PAPER COMPANY  
47-50 30<sup>th</sup> STREET  
LONG ISLAND CITY, QUEENS COUNTY, NEW YORK  
WHITESTONE PROJECT NO.: WJ05-8023**

Dear Mr. Adler:

Whitestone Associates, Inc. (Whitestone) conducted field activities associated with supplemental environmental due diligence investigation activities at the above-referenced site on August 30, 2005. The limited Phase II Site Investigation (SI) was conducted to assess subsurface conditions at the subject site through the collection and analyses of soil and groundwater samples in the vicinity of an abandoned 3,000 gallon former heating oil underground storage tank (UST), floor drains in the western portion of the site building, and in former hazardous materials storage/handling areas. The discharge points of the floor drains also were evaluated during the SI. A summary of Whitestone's activities, findings, conclusions, and recommendations associated with these efforts is presented in the sections that follow.

### **1.0 ENVIRONMENTAL CONDITIONS**

As documented in Whitestone's August 16, 2005 *Summary Report of Findings - Phase I Environmental Site Assessment (ESA)*, the subject site consists of an approximately 54,000 square feet (footprint), single-story building. The site building covers the entire subject property and currently is occupied by Milton Paper Company.

This SI was conducted to further evaluate the recognized environmental conditions (RECs) documented during Whitestone's Phase I ESA. The RECs evaluated during this limited SI are summarized as follows:

- ▶ The subject property historically has been operated as a chemical warehouse and shellac company. These operations likely included the on-site storage and/or use of hazardous or potentially hazardous

*Other Office Locations:*

■ CHALFONT, PA  
215.712.2700

■ STERLING, VA  
703.464.5858

■ EVERGREEN, CO  
303.670.6905

materials. Discharges of such materials/wastes potentially may have resulted in contamination of soil and/or groundwater at the subject property.

- ▶ One 3,000 gallon former fuel oil UST remains abandoned in place under the eastern portion of the site building. No environmental sampling reportedly was conducted during UST closure activities, and releases from this former UST may have impacted subsurface conditions at the subject property.
- ▶ Two floor drains were observed in a storage room located in the western portion of the site building. A site sketch provided in the November 17, 2004 Phase I ESA prepared by Lender Consulting Service (LCS) for the subject property identifies this room as "reported explosion room". This room formerly may have been utilized for the mixing and testing of chemicals associated with former site operations conducted by Philip A. Hunt Chemical Corporation.

## **2.0 SCOPE OF WORK AND LIMITATIONS**

The scope of this limited SI included the following tasks:

- ▶ conducting an evaluation of the discharge point(s) of floor drains utilizing water dye;
- ▶ advancing six borings with Geoprobe equipment to facilitate soil screening and select soil and groundwater sampling;
- ▶ logging and screening soils with a photoionization detector (PID) for the potential presence of volatile organic (VO) contamination;
- ▶ submitting soil samples collected from select borings for laboratory analyses for volatile organic compounds (VO) and semi-volatile organic compounds (SVO); and
- ▶ submitting groundwater samples collected from temporary wellpoints established in select borings for laboratory analyses for VO and SVO;

This SI was not intended to be an exhaustive evaluation of subsurface conditions at the subject property and was prepared for the sole use of Prestone Printing, Stadtmauer Bailkin, L.L.P., Citibank, N.A., New York City Industrial Development Agency, their successors, representatives, and assigns, and should not be relied upon by any third party without Whitestone's written consent.

## **3.0 FLOOR DRAIN EVALUATION**

Whitestone utilized a non-toxic water dye in attempt to determine the discharge points of the floor drains observed in the western portion of the site building. The dyed water was poured through the individual drains while potential outfalls (including the stormwater management system and sanitary sewer system) were monitored for the presence of the dye. The dyed water was not observed at the monitored potential outfalls, and the discharge point(s) of the floor drains could not be determined during this evaluation.

#### 4.0 SAMPLING METHODOLOGY

Two soil borings (SB-1 and SB-2) were advanced in the vicinity of the abandoned 3,000 gallon UST and four soil borings (SB-3 through SB-6) were advanced in the former "explosion room" at the western portion of the building. Two of the borings (SB-3 and SB-4) in this room were advanced adjacent to the floor drains.

The borings were advanced utilizing limited-access Geoprobe equipment subcontracted from Enviroprobe Services, Inc. Soil samples were collected as the borings were advanced. Samples were screened with a PID to identify the presence of VO contamination. Soil samples were collected from select borings from the intervals which exhibited the greatest potential for contamination based upon field screening and visual observations. Sampling equipment was decontaminated between successive uses. Temporary PVC wellpoints were placed in borings SB-1, SB-3 and SB-5 to facilitate the collection of groundwater samples. Soil boring logs are provided as Attachment A, and the site and boring locations are depicted on Figure 1 and Figure 2, respectively.

Six soil samples (8023-SB-1 through 8023-SB-6) were submitted to Integrated Analytical Laboratories, L.L.C. (IAL) of Randolph, New Jersey, a State-certified laboratory (NY Certification #11402), for VO and SVO analyses. Analytical results comprise Attachment B and are summarized in Table 1 (Soil and Groundwater Sampling Summary) and Table 2 (Soil Sampling and Analysis Data Summary). Three groundwater samples (8023-SB-1-GW, 8023-SB-3-GW and 8023-SB-5-GW) were collected and submitted to IAL for VO and SVO analyses. Groundwater analytical results are summarized in Table 3 (Groundwater Sampling and Analysis Data Summary).

#### 5.0 SI RESULTS AND SAMPLING AND ANALYSIS DATA SUMMARY

##### 5.1 Site Lithology

Six borings (SB-1 through SB-6) were completed at the subject site to maximum depths of 20.0 feet below ground surface (fbgs). The subsurface soil conditions encountered in the soil borings consisted of the following generalized strata in order of increasing depth.

**Surface Materials:** The borings conducted in the former "explosion room" (SB-3 through SB-6) encountered approximately six inches to eight inches of concrete then four inches to six inches of cork and then another four inches to six inches of concrete. Voids were documented below the slab in borings SB-4, SB-5 and SB-6. Borings SB-1 and SB-2 encountered approximately eight inches to 12 inches of concrete (floor slab).

**Fill Materials:** Fill materials were encountered beneath the surficial materials in each of the borings. The fill materials encountered generally consisted of brownish, grayish and olive colored coarse to fine sand with variable amounts of gravel, silt, clay and debris. The debris encountered in the borings consisted of processed gravel and wood. Each boring penetrated through the fill materials into natural soils at depths ranging from approximately nine fbgs to 12.0 fbgs.

**Sand:** Beneath the fill materials, the borings encountered natural sands that extended to boring termination depths of 20.0 fbgs. This stratum generally consisted of brownish and olive colored coarse to fine sand with variable amounts of gravel and silt.

**Groundwater:** Groundwater was encountered during the August 30, 2005 field investigation activities in each of the boring at depths ranging from approximately 10 fbgs to 10.5 fbgs.

A summary of boring installation and sampling data is presented in Table 1, and boring logs are presented in Attachment A.

### **5.2 Soil Sampling Results**

Soil borings SB-1 and SB-2 were advanced in the vicinity the abandoned 3,000 gallon former heating oil UST, borings SB-3 and SB-4 were advanced in the vicinity of the floor drains in the former "explosion room" in the western portion of the site building, and borings SB-5 and SB-6 were advanced throughout the former "explosion room". The analytical results for the soil samples did not document VO constituents at concentrations exceeding laboratory method detection limits (MDLs).

Analytical results for the soil samples documented select SVO constituents at concentrations exceeding laboratory MDLs in four of the six soil samples. Select SVO constituents were also detected at concentrations exceeding New York State Department of Environmental Conservation (NYSDEC) Recommended Soil Cleanup Objectives (RSCOs) in borings SB-4 and SB-6. The SVO concentrations detected in these soil samples only slightly exceed applicable NYSDEC guidance values and are typical of concentrations found in fill material in urban areas. Analytical results comprise Attachment B and are summarized in Table 2 (Soil Sampling and Analyses Data Summary).

### **5.3 Groundwater Sampling Results**

Groundwater samples were collected from temporary wellpoints installed in borings SB-1, SB-3 and SB-5. The VO constituent chloroform was detected at a concentration exceeding the laboratory MDL in the groundwater sample collected from boring SB-5, however, below NYSDEC's Groundwater Standard.

The groundwater samples collected from borings SB-1 through SB-3 documented select SVO constituents at concentrations exceeding laboratory MDLs. SVO constituents were also detected at concentrations exceeding NYSDEC Groundwater Standards in borings SB-1 and SB-3. Analytical results comprise Attachment B and are summarized in Table 3 (Groundwater Sampling and Analyses Data Summary).

## **6.0 CONCLUSIONS AND RECOMMENDATIONS**

Whitestone conducted limited SI activities on August 30, 2005 to evaluate subsurface conditions at the subject property. Conclusions and recommendations pertaining to the limited SI activities are summarized as follows:

- ▶ Soil sampling and analysis revealed the presence of select SVO constituents in borings SB-4 and SB-6 at concentrations exceeding NYSDEC RSCOs. The levels encountered generally are indicative of typical concentrations occurring in fill in urban and developed areas.
- ▶ Groundwater sampling revealed the presence of select SVO constituents in the samples collected from borings SB-1 and SB-3 at concentrations exceeding NYSDEC Groundwater Standards.

- ▶ The identified soil and groundwater exceedances of NYSDEC guidelines represent a condition that typically will not warrant further action assuming subsurface soils and groundwater will not be disturbed for site redevelopment. These exceedances should be reported to the NYSDEC, and the current results suggest that the fill conditions likely can be addressed by existing engineering controls (current building slab) or, possibly, institutional controls such as a deed restriction.
- ▶ Whitestone could not determine the discharge point(s) of the two floor drains observed in the western portion of the site building. These floor drains should be cleaned and grouted/sealed if not intended for future use. If documented in the future, the discharge point(s) should be evaluated to determine the potential for impacts to subsurface conditions.

Hopefully, this information will be helpful for site planning purposes. Please do not hesitate to contact us at (908) 668-7777 with any questions regarding these matters.

Sincerely,

**WHITESTONE ASSOCIATES, INC.**

*Preferred Environmental Services*

323 Merrick Avenue • N. Merrick New York 11566  
Telephone: (516) 546-1100 • Facsimile: (516) 213-8156

**Photograph No. 1:** Front view of the Subject Property located at 4750 30<sup>th</sup> Street, Long Island City, NY

**Photographs Nos. 2 & 3:** Views of the sampling area in the northern portion of the Subject Property which included a storage warehouse and process line machinery for the printing press operations.

**Photograph Nos. 4 & 5:** The sub-slab vapor point was installed through the concrete slab of the main floor utilizing an electric-powered rotary hammer drill. Tubing was installed through the newly installed vapor point, and the point where the tubing entered the concrete slab was sealed with hydrated bentonite.

**Photographs No. 6:** View of the sampling set-up used for the sub-slab vapor samples. A 5-gallon bucket with two (2) holes drilled into the bottom and side (shown above) was used for the sub-slab vapor (SSV) sample, with a bentonite seal around the base of the bucket to prevent infiltration of ambient air.

**Photographs No. 7:** A required helium test was performed (with a helium detector, pictured above) to ensure the integrity of the sampling procedures.

**Photograph No. 8:** One (1) indoor air sample was also collected, proximate to the SSV sample location within the northern portion of the building. Both the indoor air sample and the SSV sample were collected with 6-liter Summa canisters utilizing a 24-hour regulator.

**Photograph Nos. 9 & 10:** In addition to the air samples collected, one (1) soil sample was collected from the northwest portion of the building. The soil sample was collected from a soil boring installed utilizing a manually operated stainless steel hand auger, in a location where a two-inch diameter coring drill borehole was installed through the concrete slab prior to Preferred's Soil Vapor Intrusion Study, by others.

NEW YORK STATE DEPARTMENT OF HEALTH  
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY  
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Matthew Caponi Date/Time Prepared 4.02.18

Preparer's Affiliation \_\_\_\_\_ Phone No. \_\_\_\_\_

Purpose of Investigation \_\_\_\_\_

1. OCCUPANT:

Interviewed: Y/N

Last Name: Wechsler First Name: Ira

Address: 4750 30th St, Long Island City

County: Queens

Home Phone: \_\_\_\_\_ Office Phone: (347) 468-7881

Number of Occupants/persons at this location ~100 Age of Occupants ~45

2. OWNER OR LANDLORD: (Check if same as occupant )

Interviewed: Y/N

Last Name: \_\_\_\_\_ First Name: \_\_\_\_\_

Address: \_\_\_\_\_

County: \_\_\_\_\_

Home Phone: \_\_\_\_\_ Office Phone: \_\_\_\_\_

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential  
Industrial

School  
Church

Commercial/Multi-use  
Other: \_\_\_\_\_

If the property is residential, type? (Circle appropriate response)

- |              |                 |                   |
|--------------|-----------------|-------------------|
| Ranch        | 2-Family        | 3-Family          |
| Raised Ranch | Split Level     | Colonial          |
| Cape Cod     | Contemporary    | Mobile Home       |
| Duplex       | Apartment House | Townhouses/Condos |
| Modular      | Log Home        | Other: _____      |

If multiple units, how many? \_\_\_\_\_

If the property is commercial, type?

Business Type(s) Commercial Printing

Does it include residences (i.e., multi-use)? Y /  N If yes, how many? \_\_\_\_\_

Other characteristics:

Number of floors 1

Building age ~1940s

Is the building insulated?  Y / N

How air tight? Tight /  Average / Not Tight

4. AIRFLOW

*Roof is, floor is not*

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Airflow near source

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Outdoor air infiltration

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Infiltration into air ducts

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other N/A
- c. Basement floor: concrete dirt stone other N/A
- d. Basement floor: uncovered covered covered with N/A
- e. Concrete floor: unsealed sealed sealed with Epoxy
- f. Foundation walls: poured block stone other \_\_\_\_\_
- g. Foundation walls: unsealed sealed sealed with \_\_\_\_\_
- h. The basement is: wet damp dry moldy N/A
- i. The basement is: finished unfinished partially finished N/A
- j. Sump present? Y N
- k. Water in sump? Y / N not applicable

Basement/Lowest level depth below grade: NA (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

None Present, cracks in walls

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- Hot air circulation
- Space Heaters
- Electric baseboard
- Heat pump
- Stream radiation
- Wood stove
- Hot water baseboard
- Radiant floor
- Outdoor wood boiler
- Other Forced H.A. Ducts

The primary type of fuel used is:

- Natural Gas
- Electric
- Wood
- Fuel Oil
- Propane
- Coal
- Kerosene
- Solar

Domestic hot water tank fueled by: \_\_\_\_\_

Boiler/furnace located in: Basement Outdoors Main Floor Other N/A

Air conditioning: Central A/C Window units Open Windows None

- j. Has painting/staining been done in the last 6 months? Y /  N Where & When? \_\_\_\_\_
- k. Is there new carpet, drapes or other textiles? Y /  N Where & When? \_\_\_\_\_
- l. Have air fresheners been used recently? Y /  N When & Type? \_\_\_\_\_
- m. Is there a kitchen exhaust fan? Y /  N If yes, where vented? \_\_\_\_\_
- n. Is there a bathroom exhaust fan?  Y /  N If yes, where vented? Roof
- o. Is there a clothes dryer? Y /  N If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y /  N When & Type? \_\_\_\_\_

Are there odors in the building? Y / N  
 If yes, please describe: ink

Do any of the building occupants use solvents at work? Y / N  
 (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? press wash

If yes, are their clothes washed at work? Y /  N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

- Yes, use dry-cleaning regularly (weekly)
- Yes, use dry-cleaning infrequently (monthly or less)
- Yes, work at a dry-cleaning service
- No  Unknown

Is there a radon mitigation system for the building/structure? Y /  N Date of Installation: \_\_\_\_\_  
 Is the system active or passive? Active/Passive

**9. WATER AND SEWAGE**

- Water Supply:  Public Water Drilled Well Driven Well Dug Well Other: \_\_\_\_\_
- Sewage Disposal:  Public Sewer Septic Tank Leach Field Dry Well Other: \_\_\_\_\_

**10. RELOCATION INFORMATION (for oil spill residential emergency)**

- a. Provide reasons why relocation is recommended: \_\_\_\_\_
- b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel
- c. Responsibility for costs associated with reimbursement explained? Y / N
- d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

None Present

First Floor: Background PID readings = ~9.4 ppm.

**Purpose and Results**

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 03, 2018 and listed below. The project was identified as your project: **4750 30 Street Long Island City**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

<u>York Sample ID</u>	<u>Client Sample ID</u>	<u>Matrix</u>	<u>Date Collected</u>	<u>Date Received</u>

## **General Notes for York Project (SDG) No.: 18D0049**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

**Approved By:**

**Benjamin Gulizia**  
Laboratory Director

**Date:** 04/10/2018

## Sample and Data Qualifiers Relating to This Work Order

SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

### Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias ) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

## Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 04, 2018 and listed below. The project was identified as your project: **47-50 30th Street LIC, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

## **General Notes for York Project (SDG) No.: 18D0119**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

**Approved By:**

**Benjamin Gulizia**  
Laboratory Director

**Date:** 04/11/2018

## Sample and Data Qualifiers Relating to This Work Order

QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
CCV-A	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>30% Difference for average Rf). This applies to detected analytes only.

### Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias ) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

**Purpose and Results**

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 04, 2018 and listed below. The project was identified as your project: **47-50 30th Street LIC, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

## **General Notes for York Project (SDG) No.: 18D0122**

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

**Approved By:**

**Benjamin Gulizia**  
Laboratory Director

**Date:** 04/11/2018

## Sample and Data Qualifiers Relating to This Work Order

QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
CCV-A	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>30% Difference for average Rf). This applies to detected analytes only.

### Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

---

# Soil Vapor/Indoor Air Matrix A

May 2017

**Analytes Assigned:**

Trichloroethene (TCE), *cis*-1,2-Dichloroethene (c12-DCE), 1,1-Dichloroethene (11-DCE), Carbon Tetrachloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )		
	< 0.2	0.2 to < 1	1 and above
< 6	1. No further action	2. No Further Action	3. IDENTIFY SOURCE(S) and RESAMPLE or MITIGATE
6 to < 60	4. No further action	5. MONITOR	6. MITIGATE
60 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

**No further action:** No additional actions are recommended to address human exposures.

**Identify Source(s) and Resample or Mitigate:** We recommend that reasonable and practical actions be taken to identify the source(s) affecting the indoor air quality and that actions be implemented to reduce indoor air concentrations to within background ranges. For example, if an indoor or outdoor air source is identified, we recommend the appropriate party implement actions to reduce the levels. In the event that indoor or outdoor sources are not readily identified or confirmed, resampling (which might include additional sub-slab vapor and indoor air sampling locations) is recommended to demonstrate that SVI mitigation actions are not needed. Based on the information available, mitigation might also be recommended when soil vapor intrusion cannot be ruled out.

**Monitor:** We recommend monitoring (sampling on a recurring basis), including but not necessarily limited to sub-slab vapor, basement air and outdoor air sampling, to determine whether concentrations in the indoor air or sub-slab vapor have changed and/or to evaluate temporal influences. Monitoring might also be recommended to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitoring is determined based on site-, building- and analyte-specific information, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated.

**Mitigate:** We recommend mitigation to minimize current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building-specific basis, taking into account building construction and operating conditions. Mitigation is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated.

**These general recommendations are made with consideration being given to the additional notes on page 2.**

## ADDITIONAL NOTES FOR MATRIX A

---

This matrix summarizes actions recommended to address current and potential exposures related to soil vapor intrusion. To use the matrix appropriately as a tool in the decision-making process, the following should be noted:

- [1] The matrix is generic. As such, it may be appropriate to modify a recommended action to accommodate analyte-specific, building-specific conditions (e.g., dirt floor in basement, crawl spaces, thick slabs, current occupancy, etc.), and/or factors provided in Section 3.2 of the guidance (e.g., current land use, environmental conditions, etc.). For example, collection of additional samples may be recommended when the matrix indicates "no further action" for a particular building, but the results of adjacent buildings (especially sub-slab vapor results) indicate a need to take actions to address exposures related to soil vapor intrusion. Mitigation might be recommended when the results of multiple contaminants indicate monitoring is recommended. Proactive actions may be proposed at any time. For example, the party implementing the actions may decide to install sub-slab depressurization systems on buildings where the matrix indicates "no further action" or "monitoring." Such an action might be undertaken for reasons other than public health (e.g., seeking community acceptance, reducing costs, etc.). However, actions implemented *in lieu* of sampling will typically be expected to be captured in the final engineering report and site management plan, and might not rule out the need for post-implementation sampling (e.g., to document effectiveness or to support terminating the action).
- [2] Actions provided in the matrix are specific to addressing human exposures. Implementation of these actions does not preclude investigating possible sources of soil vapor contamination, nor does it preclude remediating contaminated soil vapor or the source of soil vapor contamination.
- [3] Appropriate care should be taken during all aspects of sample collection to ensure that high quality data are obtained. Since the data are being used in the decision-making process, the laboratory analyzing the environmental samples must have current Environmental Laboratory Approval Program (ELAP) certification for the appropriate analyte and environmental matrix combinations. Furthermore, samples should be analyzed by methods that can achieve a minimum reporting limit of 0.20 microgram per cubic meter for indoor and outdoor air samples. For sub-slab vapor samples and dirt floor soil vapor samples, a minimum reporting limit of 1 microgram per cubic meter is recommended.
- [4] Sub-slab vapor and indoor air samples are typically collected when the likelihood of soil vapor intrusion is considered to be the greatest (i.e., worst-case conditions). If samples are collected at other times (typically, samples collected outside of the heating season), then resampling during worst-case conditions might be appropriate to verify that actions taken to address exposures related to soil vapor intrusion are protective of human health.
- [5] When current exposures are attributed to sources other than soil vapor intrusion, the agencies should be given documentation (e.g., applicable environmental data, completed indoor air sampling questionnaire, digital photographs, etc.) to support a proposed action other than that provided in the matrix box and to support agency assessment and follow-up.
- [6] The party responsible for implementing the recommended actions will differ depending upon several factors, including but not limited to the following: the identified source of the volatile chemicals, the environmental remediation program, and analyte-specific, site-specific and building-specific factors.

# Soil Vapor/Indoor Air Matrix B

May 2017

**Analytes Assigned:**

Tetrachloroethene (PCE), 1,1,1-Trichloroethane (111-TCA), Methylene Chloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

The analyses performed were specified by the client.

#### Volatile Organics

Any reported concentrations that are below 200 ug/kg may be low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** 30TH STREET LIC  
**Project Number:** 13123

**Lab Number:** L1838130  
**Report Date:** 10/03/18

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

The following analytes are not included in our Primary NELAP Scope of Accreditation:

### Westborough Facility

**EPA 624:** m/p-xylene, o-xylene

**EPA 8260C:** NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

**EPA 8270D:** NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**EPA 300:** DW: Bromide

**EPA 6860:** SCM: Perchlorate

**EPA 9010:** NPW and SCM: Amenable Cyanide Distillation

**SM4500:** NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

### Mansfield Facility

**SM 2540D:** TSS

**EPA 8082A:** NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

**Biological Tissue Matrix:** EPA 3050B

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Report Date:** 09/28/18

### Case Narrative (continued)

#### Volatile Organics in Air

Canisters were released from the laboratory on September 19, 2018. The canister certification results are provided as an addendum.

L1838188-01: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1838188-02, -03 results for Tetrahydrofuran should be considered estimated due to co-elution with a non-target peak.

L1838188-06: The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L1838188-04 and -05: The samples were re-analyzed on dilution in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Christopher J. Anderson

## GLOSSARY

### Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Report Format:** Data Usability Report

**Project Name:** 30TH STREET LIC  
**Project Number:** 13123

**Lab Number:** L1838188  
**Report Date:** 09/28/18

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

The following analytes are not included in our Primary NELAP Scope of Accreditation:

### Westborough Facility

**EPA 624:** m/p-xylene, o-xylene

**EPA 8260C:** NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

**EPA 8270D:** NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**EPA 300:** DW: Bromide

**EPA 6860:** SCM: Perchlorate

**EPA 9010:** NPW and SCM: Amenable Cyanide Distillation

**SM4500:** NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

### Mansfield Facility

**SM 2540D:** TSS

**EPA 8082A:** NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

**Biological Tissue Matrix:** EPA 3050B

## EDR Environmental Lien and AUL Search

## The EDR Environmental LienSearch™ Report

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

***Thank you for your business.***

Please contact EDR at 1-800-352-0050  
with any questions or comments.

BARGAIN AND SALE DEED  
WITH COVENANT AGAINST GRANTOR'S ACTS

transfer tax  
+ 29,000.00

MILTON PAPER COMPANY, INC.

as Seller

and

PRESTONE REALTY, LLC

as Purchaser

Premises:

47-50 30th Street  
Long Island City, New York

Section: 115

Lot: 187

Dated: October 25, 2005

BARGAIN AND SALE DEED  
(with covenants)

THIS INDENTURE, made as of the 25<sup>th</sup> day of October, 2005,

BETWEEN MILTON PAPER COMPANY, INC., a New York corporation ("Grantor"),  
and PRESTONE REALTY, LLC, a New York limited liability company ("Grantee");

WITNESSETH, that the Grantor, in consideration of Ten Dollars (\$10.00), lawful money of the United States, and other good and valuable consideration the receipt and sufficiency of which are hereby acknowledged paid by the Grantee to the Grantor, does hereby grant and release unto the Grantee, the heirs or successors and assigns of the Grantee forever:

All of Grantor's right, title and interest, in and to that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of and County of Queens, State of New York, commonly known as Long Island City, New York and more particularly described in Exhibit A attached hereto and incorporated herein for all purposes, together with all strips and gores, rights of way, privileges and appurtenances pertaining thereto, including any right, title and interest of Grantor in and to any street adjoining any portion of such property;

TOGETHER with the appurtenances and all the estate and rights of the grantor in and to said premises,

TO HAVE AND TO HOLD the premises granted unto the Grantee, the heirs or successors and assigns of the Grantee forever.

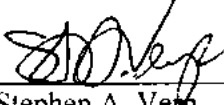

AND the Grantor covenants that the Grantor has not done or suffered anything whereby the said premises have been encumbered in any way whatever except as aforesaid;

AND the Grantor, in compliance with Section 13 of the Lien Law, covenants that the Grantor will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

**[Signature Page Follows]**

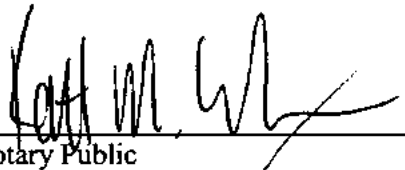

IN WITNESS WHEREOF, the Grantor has duly executed this deed the day and year first above written.

MILTON PAPER COMPANY, INC.

Legal Description

See attached.

## Legal Description

AMENDED 10/10/2005-ARF

ALL that certain plot, piece or parcel of land, situate, lying and being in the Borough and County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at a point on the westerly side of 30<sup>th</sup> Street (60 feet wide) distant 496 feet southerly from the corner formed by the intersection of the southerly side of 47<sup>th</sup> Avenue with the westerly side of 30<sup>th</sup> Street;

RUNNING THENCE westerly at right angles to the westerly side of 30<sup>th</sup> Street, 160 feet;

THENCE southerly parallel with the westerly side of 30<sup>th</sup> Street, 184.05 feet to a point of curve;

THENCE southeasterly on a curve the radius of which is 245 feet a distance of 298.04 feet measured along the arc of said curve to the westerly side of 30<sup>th</sup> Street;

THENCE northerly along the westerly side of 30<sup>th</sup> Street, 413.84 feet to the point or place of BEGINNING.

# FARSHAD RAZMDJOO

## Managing Principal

Farshad Razmdjoo is the Managing Principal of Ramboll's Southwest operations. He has over 30 years of experience in environmental consulting and engineering. Farshad currently manages a vast variety of consulting projects, including real estate and merger and acquisition due diligence, tenant environmental audits, environmental, health and safety audits, property decommissioning and redevelopment, remedial investigations, remedial action design and implementation, regulatory agency interaction, asbestos management programs, radon surveys, mold investigation and remediation programs and evaluations of lead in drinking water. In addition, he has developed and managed an environmental risk-management program for a major real estate investment trust. Farshad is highly experienced in working with federal and California environmental regulations and has a working knowledge of many other state and local regulatory requirements and agencies throughout the United States. Much of Farshad's past and current projects involve assessing environmental issues at commercial and industrial facilities throughout the North America, Europe, China, and India. For the past 24 years at Ramboll, Farshad has managed projects for representatives in real estate development companies, insurance companies, financial institutions, pension funds, institutional investors, private equities, real estate investment trusts, aerospace companies, industrial and manufacturing companies, and law firms.

Thames Polytechnic, London

## COURSES/CERTIFICATIONS

California General Engineering License

Nevada State Contractors Licenses

Certificate in Hazardous Materials Management, University of Irvine, California

National Registry of Environmental Professionals

## PROJECTS

### **Site Investigation and Remediation**

- Negotiated with the Santa Ana Regional Water Quality Control Board (SARWQCB) a reasonable path forward for a former manufacturing facility located in Irvine, California where soil and groundwater is impacted with volatile organic compounds (VOCs). Historically, considerable remediation had been performed on site by other consultants, which included excavation, and above ground soil treatment, soil vapor extraction, and groundwater pump and treat technologies. The site has been in a post remediation monitoring phase under the oversight of the SARWQCB. Post remediation monitoring indicated that overall, natural attenuation processes were reducing VOC concentrations over time. However, in 2013, the SARWQCB requested the responsible parties to consider evaluating additional remedial options to reduce concentrations of VOCs in one area of the site. Also a Membrane Interface Probe (MIP) investigation was performed in that area of the site.
- Using the data collected during the MIP investigation, Farshad directed the development of a limited and focused remedial program utilizing state of the art technology appropriate for the restrictive conditions which are present in the area of the site investigated (challenging geologic materials, limited access due to occupied buildings, roadways, neighboring properties, etc.). The SARWQCB approved the remedial plan that included injection of zero-valent iron into the shallow saturated zone to reduce VOCs in the area of concern. The remediation was completed during October and November 2014. A post monitoring program started in December 2014 is on-going.
- Directed the evaluation of potential off-site sources, and development of a site conceptual model for a facility in Vernon, California where chlorinated VOCs (CVOCs) were discovered in groundwater. Designed and managed investigation of soil, soil gas, and groundwater to evaluate potential sources, including use of compound-specific isotope analysis to help demonstrate that the CVOCs detected in soil gas are distinct from those detected in groundwater, and unrelated. Managed additional soil, soil gas, and groundwater investigation to delineate the CVOc impacts onsite. Based on the onsite investigation, a pilot study was designed to assess the efficacy of soil vapor extraction (SVE) to reduce CVOcs in the vadose zone (ground surface to approximately 180 feet below ground surface). The pilot study showed that SVE operations effectively reduced CVOc soil gas concentrations at all depths. The SVE pilot system was expanded and operated under a final Remedial Action Plan. The SVE system appeared to have reached asymptotic conditions and the SVE operation has been stopped and post remedial rebound testing is ongoing. The rebound testing results will be used to assess and negotiate site closure. All work is being implemented under the oversight of Los Angeles Regional Water Quality Control Board (LARWQCB).
- Assisted an owner of a former industrial facility in southern California that was significantly impacted by CVOcs in soil, soil gas, and groundwater. The scope of work included oversight of the remediation of the vadose zone with in situ thermal treatment and evaluation of human health risk assessments to assess various future redevelopment scenarios. The work was conducted under the oversight of the LARWQCB.
- Designed and managed the implementation of site characterizations, remediation, and human health risk assessments for an existing 75-acre commercial and light industrial center in Irvine, California under the oversight of the Orange County Health Care Agency (OCHCA) and the SARWQCB. The work was conducted for the property owner and involved performing appropriate site characterization to define the extent of CVOc releases in soil, soil gas, and groundwater from prior and existing tenants; one of which included a dry cleaning facility. The human health risk assessment considered site specific conditions and data to define risk based threshold concentrations deemed as acceptable concentrations in soil, soil gas, and groundwater for indoor worker receptors.

- Remediation involved injection of approximately 100,000 pounds of zero-valent iron in sixty direct push borings to create three separate permeable reactive barriers or treatment zones. The purpose of work was that each zone would chemically reduce chlorinated solvents in the “shallow zone” groundwater as it migrates through the permeable reactive barrier(s). Due to the low groundwater concentrations, Farshad was able to negotiate the elimination of post remediation groundwater monitoring. The project also involved collection of sub-slab and indoor air samples followed by installation and operation of a sub-slab vapor depressurization system and epoxy coating the interior floors to mitigate vapor intrusion. Post mitigation indoor air samples reported a reduction of indoor air concentrations by 100 times. Farshad successfully negotiated and obtained a “No Further Action” for the site with the concurrence from the SARWQCB.
- Managed a remedial investigation at a California Superfund site in Los Angeles County. The site was under a consent order from Cal-EPA Department of Toxic Substances Control at the time. The project involved performing RI/FS, conducting human health and ecological risk assessments, and preparing a remedial action plan.
- Managed, reviewed, and evaluated numerous Phase I and II reports associated with the acquisition of a 500-acre industrial park in Spokane, Washington. Prepared a report of findings including conclusions and recommendations for review by the client.
- Managed Phase I and II site assessments and estimation of remediation costs of six manufacturing plants in Costa Mesa (Orange County), Perris (Riverside County), Ontario (San Bernardino County), Somerton (Arizona), Alliance (Ohio), and Winter Heaven (Florida).
- Designed and managed a site investigation program to evaluate the nature and the extent of soil contaminated with PCE at a dry cleaning facility in Aliso Viejo, California. Based on the results, several remedial alternatives were evaluated and a risk assessment was performed. Based on the results of the risk assessment, site closure was obtained from OCHCA.
- Managed a remedial investigation/feasibility study (RI/FS) using CPT/HydroPunch and Geoprobe techniques, with installation of multi-level groundwater monitoring wells, evaluation and selection of a remedial alternative, and design and preparation of an interim remedial action plan for remediation of soil and groundwater contaminated with dense non-aquas phase liquid (DNAPL) at a former manufacturing facility in Oxnard, California. The first phase of remediation included the excavation and placement of approximately 11,000 cubic yards of impacted soil into vapor extraction cells for on-site treatment. Soil vapor and vertical and horizontal groundwater extraction wells were installed. The vapor and groundwater treatment systems included air stripping, ultra violet oxidation, and vapor and liquid granulated activated carbon. All work was conducted under oversight of LARWQCB and Ventura County Air Pollution Control District.
- Managed a groundwater investigation program at a former electronics manufacturing plant in Santa Ana, California. This included installation, development, and sampling of shallow groundwater monitoring wells and evaluation and interpretation of hydrogeological and analytical data. The investigation was performed under the regulatory oversight of the SARWQCB.
- For a multinational corporation at an orphan site in the San Francisco Bay Area, provided investigative and consulting services in support of regulatory case closure under the San Francisco Regional Water Quality Control Board’s (RWQCB) Low-Threat Chlorinated Solvent Site guidance. The site was in long-term post-remedial monitoring status when the client took active responsibility for the site. Following development and implementation of soil gas and indoor air quality investigations and an evaluation of potential human health risks, the RWQCB rescinded the cleanup order for the site and issued case closure.
- Provided consulting services to evaluate soil, soil vapor, and groundwater impacts at the Site located at 14657 Industry Circle, La Mirada, California. Ramboll was successful in demonstrating that the majority of groundwater impacts on the Site originated from an upgradient source. Through monitoring (4 years of groundwater monitoring and reporting) and evaluation of the remaining chemical of concern, Tetrahydrofuran, Ramboll was successful in attaining site closure using a detailed Conceptual Site Model and Health Risk Assessment to show that the groundwater at the site related to tetrahydrofuran posed no significant risk. The Regional Water Quality Control Board concurred with our assessment and issued a closure letter for the Site in September 2014.

### **Environmental Risk Management**

- Farshad has developed and managed an environmental risk management program for a major real estate investment trust (REIT). This REIT contained over 200 properties with 400 tenants with pharmaceutical and life science operations throughout the western and eastern United States, China, and India. As part of the environmental risk management program, an acquisition due diligence, an asbestos management program, a moisture intrusion and mold prevention response (MIMPR) program, and a tenant environmental audit (TEA) program were developed and implemented. A mold prevention and response plan, as outlined in the MIMPR, was prepared and implemented. More than 500 tenant exit audits for tenants vacating the properties were conducted in accordance with the TEA. An overall tenant environmental audit program has been developed.

### **Decontamination/Decommissioning**

- Managed the decontamination and decommissioning of a former biopharmaceutical research facility. A detailed survey of over 250 rooms was conducted, and radiological materials, hazardous chemicals, and potentially biologically hazardous substances were identified. Upon completion of the decontamination/decommissioning, the entire facility was cleaned and prepared for re-occupancy. Throughout the decommissioning process, Ramboll worked closely with State regulatory officials to demonstrate that all cleanup activities were in compliance with applicable regulations.
- Managed the acquisition due diligence and subsequent redevelopment of a former metal stamping facility in Santa Fe Springs, California. Under Farshad's direction, a Phase I ESA was completed and, based on the findings of the Phase I ESA, a targeted Phase II subsurface investigation was performed to evaluate areas of potential environmental concern that included soil gas, soil, and groundwater sampling. Farshad also assisted the client with closure activities for the site that included performing an assessment of building materials for polychlorinated biphenyls contamination, coordination and oversight of asbestos and lead-based paint surveys, groundwater monitoring well abandonment, post excavation soil sampling on removal of various subsurface features, and preparation of a soil management plan (SMP), to be implemented during redevelopment activities. Subsequently, a no further action letter was obtained from the Santa Fe Springs Fire Department.

### **Site Closure**

- Managed the preparation of a sampling and analysis plan evaluating the nature and extent of soil and groundwater contaminated with tetrachloroethene (PCE) at a dry cleaning facility in Santa Ana, California. Ramboll obtained closure for the site from the SARWQCB.

### **Litigation Support**

- Managed litigation support services related to the fate and transport of organic compounds in soil and groundwater, appropriate remedial alternatives, and cost associated for two facilities in southern California. The results of the evaluations were successfully used as part of the settlement negotiations with the opposing parties.

### **Due Diligence**

- Directed the due diligence process and estimating environmental liabilities for acquisition of a former aerospace manufacturing facility in Los Angeles, California under extremely tight deadline. The site has been impacted with various VOCs, total petroleum hydrocarbons, metals, emerging chemicals, and radioactive wastes. The assignment also included evaluation of methane, asbestos, lead-based paint, and indoor air quality. The work was conducted on behalf of the site's buyer, which planned to develop it into a commercial business park.
- Acted as point of contact and responsible Principal for several national real estate and development clients with properties throughout the United States. Farshad has completed over 1000 assignments supporting the clients in acquiring, managing, and disposing properties. Many of these assignments were undertaken and successfully completed under extreme time constraints.
- Farshad has managed over 30 international multi-site environmental assessments at over 200 industrial, manufacturing, and commercial facilities as a part of merger and acquisition environmental due diligence. These included evaluation of aerospace component manufacturing facilities, automotive manufacturing and distribution facilities, medical device manufacturing facilities, telecommunication facilities, and hardware store facilities. Work plans and subsequent Phase II soil and groundwater investigations were also completed for many of those assignments.

# THOMAS V FUSILLO

## Principal

Tom Fusillo has more than 30 years of experience in multidisciplinary environmental consulting to major corporations, law firms and financial institutions, with particular emphasis in industrial site evaluation and groundwater contamination, application of cost-effective remedial approaches, environmental due diligence and liability assessment, industrial site redevelopment and environmental regulatory compliance. He has directed and conducted environmental assessments of several hundred industrial facilities covering a wide range of industrial operations, as well as commercial and undeveloped properties. Tom has also designed and implemented site investigation and remediation programs at numerous industrial and commercial facilities, under federal programs and various state programs, including New Jersey's ISRA program, the Connecticut Transfer Act, the New York State Brownfield Cleanup Program and a number of state voluntary cleanup programs. In addition, he has provided technical litigation support for environmental matters.

Subsurface Evaluator Certification - New Jersey  
Certified Ground Water Professional, 1988  
OSHA 40-hour Health and Safety Training, Denver, CO, 1987

**PROJECTS****Phase I Environmental Assessments and Environmental Due Diligence**

- Conducted and directed Phase I environmental assessments and environmental compliance audits of over one thousand properties, including hazardous waste treatment, storage, and disposal facilities; chemical and pharmaceutical manufacturing and distribution facilities; printing facilities; electrical power generation and natural gas transmission facilities; and various manufacturing facilities, including steel mills, metal fabrication, plastics and flooring manufacturing, wire and cable manufacturing, furniture manufacturing and lumber processing, and motor and electronics manufacturing; as well as commercial and residential properties and undeveloped land parcels. Assisted purchasers, sellers, financial institutions, and attorneys in identifying, evaluating, and addressing potential liabilities related to property transfers. Projects have covered most states in the US, as well as Canada, Mexico, South America, Europe and Asia.

**New Jersey's Industrial Site Recovery Act**

- Directed compliance with the Environmental Cleanup Responsibility Act (ECRA) and the Industrial Site Recovery Act (ISRA) at over 50 sites in New Jersey for clients in various industries. Sites have included chemical manufacturing, storage, and distribution facilities; chemicals and plastics research and development laboratories; a resin and specialty chemicals manufacturing facility; a major pharmaceutical firm; a cutlery manufacturer; and printing and publishing facilities. Work has included conducting preliminary assessments, site investigations, and remedial investigations; preparing and implementing remedial action work plans; and providing guidance on ECRA/ISRA compliance issues.

**Site Investigation and Remediation under State Voluntary Cleanup Programs**

- Designed and implemented a soil and ground water investigation at a former pharmaceutical manufacturing facility that had been demolished and was being redeveloped as an office park. Developed a plan for performing a site-wide survey for potential low-level radiation resulting from past use and potential disposal of thorium compounds on-site. Utilized soil gas surveys and surface geophysical techniques to evaluate potential source areas for organic and inorganic contaminants. Implemented three phases of site investigation to delineate soil and ground water contamination by chlorinated solvents and aromatic hydrocarbons. Developed remedial action plan to address soil and ground water contamination.
- Designed and implemented a soil and ground water investigation at a former energy research facility to evaluate the extent of chlorinated solvent contamination in bedrock and overburden aquifers. Designed soil gas investigations to identify potential source areas of chlorinated solvents. Implemented two phases of ground water investigations, including packer testing of a deep bedrock well, delineation of the lateral and vertical extent of ground water contamination, and conceptual design of a ground water remediation system.

**Ground Water Investigations**

- Designed and implemented a detailed hydrogeologic study of a southern New Jersey chemical facility to define the distribution of chlorinated solvents in ground water and the extent of surface water/ground water interactions, including installation of 85 piezometers to perform detailed three-dimensional assessment of stream-aquifer interactions. Utilized soil gas surveys to assess potential

sources of contamination in former wastewater lagoons. Installed monitoring well networks in two aquifers to define the lateral and vertical extent of contamination in ground water. Directed development of remedial action plans for soil and ground water contamination by metals, petroleum hydrocarbons, and volatile organic compounds.

- Designed and implemented hydrogeologic and ground water contamination investigations at numerous other industrial and commercial facilities, including soil and soil gas sampling programs, monitoring well networks, and hydrogeologic evaluation.

#### **Resource Conservation and Recovery Act**

- Implemented a detailed RCRA ground water quality assessment at a precious metals manufacturing facility, including delineating the lateral and vertical extent of chlorinated solvent contamination in bedrock; characterizing potential source areas using soil gas sampling; and evaluating impacts of the discharge of contaminated ground water on a wetlands area.
- Directed the RCRA closure of an underground hazardous waste storage tank and a hazardous waste drum storage area at a precision gear manufacturing facility, including completing a ground water assessment and corrective action plan.
- Directed a regulatory status review of five landfills for a major waste disposal company.

#### **Superfund Sites**

- Directed on-site and off-site ground water investigations at a laboratory chemical manufacturing and packaging facility, where ground water contamination by chlorinated solvents is suspected to have impacted municipal well fields that are now on the National Priorities List. Developed strategies for addressing state and federal requirements for ground water investigations. Evaluated potential impacts on domestic wells and other receptors. Evaluated the effectiveness of the ground water remediation system in operation at the site. Directed preparation of remedial action work plan for additional ground water recovery and treatment systems.
- Provided technical guidance on the preparation of remedial design work plans for a Superfund site in Pennsylvania.
- Interpreted soil and water quality data at several Superfund sites to evaluate the extent and nature of soil, ground water, and surface water contamination.

#### **Underground Storage Tanks**

- Directed underground tank investigation, removal, and remediation projects, and prepared site investigation reports for several facilities. Utilized surface geophysics, soil gas and soil sampling, and ground water monitoring to evaluate potential releases from underground tanks. Directed integrity testing of underground tanks. Evaluated remedial options to address releases from underground tanks.

#### **State Regulatory Programs**

- Prepared Solid Waste Assessment Test (SWAT) submissions for two industrial waste disposal sites in California.
- Prepared Baseline Environmental Assessment for a commercial property in Michigan that contained contaminated fill material.
- Directed soil and ground water investigation and remediation at a former manufacturing facility at a New York state Superfund site.
- Directed investigation and remediation of soil and ground water contamination at a former electronics manufacturing facility in Pennsylvania under the state voluntary cleanup program.
- Directed investigation of ground water contamination with chlorinated solvents at a manufacturing facility in South Carolina.

**Environmental Litigation**

- Provided litigation support to a shopping center owner in cost recovery litigation with various tenants concerning ground water contamination resulting from dry cleaning and other operations at the shopping center. Reviewed soil gas and ground water data and prepared an expert affidavit concerning the sampling results and their implications concerning the potential sources of contamination.
- Provided litigation support to a printing company involved in litigation with several insurance companies for recovery of costs associated with the investigation and remediation of soil and ground water contamination by metals, petroleum hydrocarbons, and volatile organic compounds as part of compliance with ECRA/ISRA. Provided deposition testimony on the potential sources of contamination, proposed remedial measures, and costs for site remediation.
- Provided litigation support to an electronics manufacturing company involved in litigation with other owners and operators of a New Jersey industrial site concerning costs for investigation and remediation of soil and ground water contamination, primarily by chlorinated solvents. Prepared expert report and provided deposition testimony concerning the history of site activities, potential sources of contamination, the extent of contamination, and potential remediation costs.
- Provided litigation support to a fuel company involved in cost recovery litigation with other service station operators and a state turnpike authority concerning soil and ground water contamination at several service stations along a major state turnpike. Also provided litigation support in defending several toxic tort suits filed by residents adjacent to one service station whose domestic wells were allegedly contaminated due to releases of gasoline at the service station.
- Provided litigation support to an insurance company in defending a cost recovery suit concerning costs for investigating and remediating ground water contamination at two Superfund landfill sites.
- Provided litigation support to a pest control company involved in litigation with a site owner and several insurance companies concerning recovery of costs for investigating and remediating pesticide contamination of soil and ground water at a former pesticide storage site.
- Provided litigation support to a major state university pursuing cost recovery litigation against several insurance companies for costs to investigate and remediate pesticide contamination at an air field previously used for mixing pesticides and loading airplanes used for aerial spraying.
- Provided litigation support to a manufacturing facility regarding potential contamination associated with alleged improper waste disposal. Provided trial testimony.
