## SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

## 1. SUMMARY OF CONCLUSIONS

Ramboll US Corporation (Ramboll)<sup>1</sup> was retained by Alexandria Real Estate Equities, Inc. (ARE) to perform a Phase I Environmental Site Assessment (ESA) of the Prestone Printing Co., Inc. (Prestone or the "Company") property located at 47-50 30<sup>th</sup> Street in Long Island City, Queens, New York (herein referred to as the "facility," or the "site"). Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 2.1).

### 1.1 Site Summary

Prestone leases (from a related entity) and operates a printing facility in Long Island City, Queens, New York. The approximately 1.52-acre site is improved with an approximately 52,500-square-foot building.

The site was formerly vacant undeveloped land from as early as 1898 to at least 1915; by 1936 the northern portion of the site was occupied by East River Mill and Lumber Company and operated as a lumber yard, while the southern portion contained a small building that was occupied by Acme Shellac Products. By 1947, a building was constructed in the center of the site and the building at the southern end of the site had been expanded. By 1950, an addition had been constructed to the central building, and by 1970, the central building had been expanded to the north and the building at the southern end had been expanded and now was connected to the central building. According to the 2005 Phase I Report, a refrigerator warehouse operated from approximately 1936 to 1950; the Standard Wine and Liquor Company operated from approximately 1950 to 1970; an office and warehouse for Phillips A. Hunt Chemical Corporation operated from approximately 1977 to 1983. Although the Sanborn Maps continue to identify the Phillips A. Hunt Chemical Corporation at the site, according to the 2005 Phase I Report, the Milton Paper Company commenced operations at the site in 1983 and operated until Prestone commenced operations in 2006.

### 1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site at 47-50 30<sup>th</sup> Street in Long Island City, New York in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in 6.2 of this report. This assessment has revealed the following REC in connection with the site:

- **Groundwater Contamination and Soil Vapor Intrusion.** Groundwater at the site is known to contain concentrations of volatile organic compounds (VOCs) that exceed the New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (TOGS) 1.1.1 Class GA groundwater quality standards. Specifically, tetrachloroethylene (PCE) has been detected in groundwater at concentrations up to 170 ug/L. The investigative activities conducted to date have not delineated the extent of the PCE or identified the source. As described in Section 4.1.2, Ramboll notes that the adjoining property to the north is a drycleaning facility; while this property is not listed on databases indicative of a release, it is possible that dry cleaning chemicals (chlorinated solvents) have migrated to the site. In addition, based on soil vapor intrusion sampling conducted in 2018, indoor air was found to contain concentrations of PCE up to

---

<sup>1</sup> Ramboll was previously known as Ramboll Environ US Corporation and ENVIRON International Corporation.

1,700 ug/m<sup>3</sup> and trichloroethylene (TCE) up to 98 ug/m<sup>3</sup>. Based on the presence of PCE in groundwater, and PCE and TCE in indoor air, Ramboll characterizes this finding as a REC.

### 1.3 Other Findings

Although not considered RECs, Ramboll identified the following other findings. The term “other finding” is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Former Underground Storage Tank (UST).** A 3,000-gallon fuel oil UST was abandoned in place prior to 2005. No closure information was provided pertaining to this UST. It is possible that this UST was closed in place prior to the 1990s and prior to the enactment of specific tank closure requirements. However, the area of the abandoned UST was investigated as part of a 2005 Phase II investigation and no significant impacts associated with the former UST were identified.
- **Historic Fill.** During a 2005 Phase II investigation, soils at the site were found to contain concentrations of several semi-volatile organic compounds (SVOCs) above the NYSDEC Recommended Soil Cleanup Values at the time (benzo[a]anthracene, chrysene, benzo[b]fluoranthene, benzo[k]fluoranthene, benzo[a]pyrene, dibenz[a,h]anthracene, and indeno[1,2,3-cd]pyrene). According to the 2005 Phase II Report, these residual concentrations are representative of historic fill.
- **Past Operations at the Site.** The site has been used for various purposes since the early 1960s. Prior operations have included the East River Mill and Lumber Company (1920s or 1930s to 1940s), Acme Shellac Products (1920s or 1930s to 1940s), the Standard Wine and Liquor Company (1940s to 1970s), the Phillips A. Hunt Chemical Corporation (1970s to 1980s), the Milton Paper Company (1980s to 2000s), and Preston Press (2000s to present). These former operations may have included the use of petroleum products, and other chemicals. Additionally, these historical operations (i.e., those conducted between site development in the 1920s or 1930s and the early 1980s) predated the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. In addition to the former UST and historic fill described above, the facility contained floor drains with unidentifiable discharge points in the western portion of the site. Although areas of the site have been investigated as part of the 2005 Phase II investigation and the 2018 subsurface and soil vapor intrusion investigations, and some impacts to soil, groundwater and vapor intrusion issue have been identified, as described above, absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that other historical spills or releases of chemicals or petroleum products may have adversely affected the soil and groundwater conditions at the site.

A discussion of historical RECs and de minimis conditions identified during this review (if any) is presented in Section 6.1 of this report.

### 1.4 Non-Scope Considerations

Ramboll’s scope of work also included a limited evaluation of potential presence of asbestos-containing materials (ACMs), water intrusion/mold, lead-based paint (LBP) and radon.

- **Asbestos-Containing Materials (ACMs).** The building at the site was constructed prior to the 1980s, after which asbestos was generally phased out of use in many building material applications. Based on the age of the building, it is possible the ACMs may be present in the building materials at the site. Concurrently with the preparation of this report, Ramboll conducted a Hazardous Building Material Inspection (HBMI), which identified asbestos in aircell pipe wrap

(approximately 150 linear feet), building joint caulk (approximately 15 linear feet) and assumed the roofing materials contained asbestos.

- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, the facility has not experienced problems with water intrusion.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building, it is possible that lead-based paint was used historically on facility structures. Concurrently with the preparation of this report, Ramboll conducted a HBMI that identified lead-based paint and lead-based translucent glaze on structural steel beams, steel roof drain leader pipes, blue overhead doors and the yellow painted components on the building exterior.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 3, which has average indoor basement radon levels less than 2 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the Federal Area Radon Information for Queens database, the average radon value of 81 basements was 0.970 pCi/L.

## 2. INTRODUCTION

### 2.1 Purpose

Ramboll was retained by Alexandria Real Estate Equities, Inc. to conduct a Phase I ESA of the Prestone property located in New York, New York. Ramboll's assessment was conducted in connection with a potential purchase of the property. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

"The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

### 2.2 Scope of the Assessment

Ramboll completed the following tasks, consistent with the ASTM Standard, during its Phase I ESA of the property:

- A visit to the site by William Holm, Matthew Sweet, and Eleanor Seery of Ramboll on December 27, 2018 to observe the exterior and interior features of the site and to identify the uses and conditions specified in the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with the following individual (year of initial hire at the site indicated in parentheses): Steve Amoroso, Press Room Supervisor (2005). The aforementioned individual is referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by EDR, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the subject site, as well as properties near the subject site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - The United States Environmental Protection Agency's (USEPA's) EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The New York Spills database, which contains site specific information for facilities in New York State.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources, including (where available) historical topographic maps and aerial photographs, city directories, and Sanborn Maps, to develop a history of the previous uses of the site and surrounding area.
  - Historical and site-specific information obtained from the following local agencies: New York City Department of Building and New York City Department of Finance. Ramboll also requested

information from the New York City Department of Health (NYCDOH), New York City Fire Department (FDNY), and the New York City Department of Environmental Protection (NYCDEP). Records returned by NYCDEP include a list of chemicals in use at the facility. NYCDOH reported no records. A response has not yet been received from FDNY pertaining to the site.

- A Freedom of Information Law (FOIL) request to the New York State Department of Environmental Conservation (NYSDEC) for information related to the site that is listed databases noted in Section 8.2.1 of the ASTM Standard. A records search returned a Petroleum Bulk Storage (PBS) Program application for UST closure, a limited site assessment by PAL Environmental Services Inc. confirming tank closure, and a PBS Program Facility Information Report.
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report and in the previous environmental reports for the site, as listed below.
  - An Environmental Lien and Other Activity and Use Limitations (AUL) search prepared by EDR.
- A review of documents provided to Ramboll by facility personnel, including environmental permits, waste manifests, off-site waste disposal information, correspondence with regulatory agencies, facility-prepared plans and procedures, and chemical use information. In addition, Ramboll was provided with the following previous environmental assessment report[s], which are included as Appendix D:
  - Phase I Report, prepared by Whitestone Associates, Inc., dated August 16, 2005 (the "2005 Phase I Report"),
  - Phase II Site Investigation, prepared by Whitestone Associates, Inc., dated September 27, 2005 (the "2005 Phase II Report"),
  - Limited Soil Vapor Intrusion & Soil Sampling Summary Report, prepared by Preferred Environmental Services, dated April 23, 2018 (the "2018 Limited Soil Vapor Intrusion Letter Report"), and
  - Subsurface Investigation Report, Prepared by Impact Environmental, dated October 19, 2018 (the 2018 Subsurface Investigation Report).
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and ARE in December 2018.

### **2.3 Significant Assumptions**

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics

surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the subject site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

## **2.4 Reliance and General Limitations**

This report has been prepared for the exclusive use of Alexandria Real Estate Equities, Inc. and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's best professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect ACMs must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Ramboll did perform a visual assessment for ACMs and comments in this report regarding the condition of building materials at the site, including suspect ACMs, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards. In addition, Ramboll did a limited evaluation for lead-based paint (based solely on the age of the building), radon (based solely on review of EDR database), and water intrusion/mold (based solely on information provided by the facility personnel).

Other issues considered outside the scope of the ASTM Standard and this review include, lead in drinking water, wetlands, polychlorinated biphenyls (PCBs) in building materials, cultural and historic resources, ecological resources, endangered species, and high voltage power lines.

### 3. SITE DESCRIPTION

#### 3.1 Site Setting

Prestone leases and operates a printing facility located at 47-50 30<sup>th</sup> Street in Long Island City, Queens County, New York (the "site" "property" or the "facility"). The approximately 1.52-acre site is located within New York City (Figure 1).

The site is described on the New York City tax map as Queens Borough, block 115, lot 187 and owned by Prestone Realty LLC (a related entity).

The site is developed with an approximately 52,500-square-foot building, which extends nearly to the boundaries of the lot. The single-story building houses printing, storage, and office operations (Figure 2). Prestone also leases a parking area from the Metropolitan Transportation Authority right-of-way that exists immediately south of the site.

One sub-tenant (Masterpiece Printers) leases a small printing and office space in the northeastern portion of the building and conducts operations similar to Prestone.

The site is accessed from 30<sup>th</sup> Street at the eastern site boundary. The leased parking lot is located in the southwestern portion of the site and a loading dock is present along 29<sup>th</sup> Street at the western site boundary. An abandoned rail spur is located between the western site boundary and 29<sup>th</sup> Street. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

<b>Table 1: Physical Setting and Utility Information</b>		
<b>Conditions</b>	<b>Source</b>	<b>Description</b>
<b>Topography</b>		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 16 feet near the northeast corner to 13 feet near the southwest corner.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the west. Regional topography slopes gently downward to the west toward Dutch Kills, which discharges into Newtown Creek prior to discharge into the East River.
<b>Hydrology</b>		
Surface Water Runoff	Visual observations	Runs off paved surfaces into the street. Roof leaders reportedly discharge via sub-slab piping to the municipal sewer.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	Dutch Kills, located approximately 300 feet west of the site. Dutch Kills discharges into Newtown Creek (located approximately 2,300 feet southwest of the site), which ultimately discharges into the East River (located approximately 6,400 feet west of the site).

<b>Table 1: Physical Setting and Utility Information</b>		
<b>Conditions</b>	<b>Source</b>	<b>Description</b>
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The northern portion of the site is located within the 100-year flood zone; the remaining areas of the site are located within the 500-year flood zone.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site.
<b>Geology and Hydrogeology</b>		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map; 2018 Subsurface Investigation Report	Based on the topographic and information contained in the 2018 Subsurface Investigation Report shallow groundwater likely flows to the west towards Arthur Kill. However, Ramboll notes that a groundwater elevation survey was not performed as part of the 2018 Subsurface Investigation.
Depth to Groundwater	2018 Subsurface Investigation	Groundwater was encountered at approximately 10 feet below ground surface during the 2018 Subsurface Investigation.
On-site Wells	Facility personnel; Visual observations; 2018 Subsurface Investigation.	There are no production or injection wells on-site. Temporary monitoring wells were installed at the site during the 2018 Subsurface Investigation, as described further below.
Nearest Groundwater Supply Wells	Database report	There are 42 federally registered wells present within one mile of the site; none are registered as public supply wells. No private or municipal wells are located within one mile of the site.
Geologic Conditions	2018 Subsurface Investigation	Soil at the site consists of historic fill to approximately 8 feet below grade surface (bgs) that overlays brown to dark brown fine to coarse sand with some gravel and trace silt.
<b>Site Utility Information</b>		
Heating and Cooling Equipment	Facility personnel	Heating and cooling is provided by 11 natural-gas fired heating ventilation and air conditioning (HVAC) units.
Electricity Supplier	Facility personnel	Consolidated Edison and Great Eastern Energy.
Natural Gas Supplier	Facility personnel	Consolidated Edison.
Use of Fuel Oil for Building Heat	Facility personnel	No current use of fuel oil reported.

<b>Table 1: Physical Setting and Utility Information</b>		
<b>Conditions</b>	<b>Source</b>	<b>Description</b>
Water Supplier	Facility personnel	NYC Water Board.
Sanitary Sewer	Facility personnel	New York Water Board.
Septic Systems	Facility personnel	No current or former septic systems reported.
Notes: FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory * - Source was provided in the environmental database report.		

### 3.2 Current Use of Site

#### 3.2.1 Current Operations

Prestone employs approximately 80 individuals in printing operations. According to the facility’s Facility Information Form (FIF), the listed North American Industry Classification System (NAICS) code is 323110 *Commercial Printing (except Screen and Books)*<sup>2</sup> the corresponding Standard Industrial Classification (SIC) code is 2754 *Commercial Printing, Not Elsewhere Classified (NEC)*. The major operations conducted at the facility are described in more detail below.

- *Receiving* – Prestone receives inks, fountain solution, cleaning chemicals and paper at a loading dock located along 29<sup>th</sup> street, which are transferred to the southern portion of the building and also stored at points of use throughout the facility.
- *Printing* - Prestone conducts printing operations on two large sheet fed presses and one small sheet fed press that are located in the southern portion of the facility. These presses are equipped with individual fountain solution combination units that dilute fountain solution with water prior to use in each press. Prestone also conducts printing operations on three digital presses located in the central and eastern portions of the site.
- *Finishing* – After printing, Prestone finishes products on numerous cutting, folding and assembly machines located in the central and northern portions of the facility. These processes do not use chemicals, with the exception of limited amounts of glue.
- *Masterpiece Printers* – Masterpiece Printers, a subtenant located in the northeastern portion of the building, conducts operations similar to Prestone’s and is equipped with three sheet fed presses.
- *Ancillary Operations* – The facility performs packaging, shipping and administrative operations, none of which involve the use of significant quantities of chemicals. In addition, Prestone conducts the following activities in support of the major operations:
  - Operation of three air compressors equipped with an oil water separator.
  - Operation of two parts washer units, containing a petroleum-based degreaser.

<sup>2</sup> A formal determination of the most appropriate SIC/NAICS code for the site was beyond the scope of Ramboll’s review.

- Transfer of raw materials and finished products two electric pallet jacks and one electric forklift; the units are serviced on-site by outside contractors.
- Preparation of aluminum plates for the sheet-fed presses on a laser imaging Kodak Platesetter and associated developer.

Raw materials used at the site include inks (approximately 400 pounds per month), fountain solution concentrate (approximately six 5-gallon containers per month), plate developer (less than one 5-gallon pail per month), cleaning solvent (less than one 55-gallon drum per month), glue (approximately 150 pounds per month), paper and aluminum plates.

According to facility personnel, Prestone's operations have remained generally consistent during its period of occupancy at the facility.

According to facility personnel, no chlorinated solvents are currently used at the facility and the use of such chemicals would not be expected based on the nature of current site operations. Facility personnel were not aware of any historical use of chlorinated solvents at the site; however, Prestone has only occupied the site since 2005, and chemical use prior to that time is unknown.

### **3.2.2 Waste Management**

Hazardous wastes are not routinely generated at the site, other than the generation of limited amounts of universal wastes (e.g., fluorescent light bulbs, batteries). The facility formerly disposed of hazardous developer (corrosive waste) and was registered as a Conditionally Exempt Small Quantity Generator (CESQG) and Small Quantity Generator (SQG)<sup>3</sup> (generator number NYD072731730) under the Resource Conservation and Recovery Act (RCRA).

Nonhazardous waste generated at the site consists of general trash, used oil, waste paint, and paint related solvents. General facility trash is collected in a compactor and two dumpsters located at the loading dock prior to removal offsite by Filco Carting. The used oil, waste paints and paint-related solvents, are collected in drums and totes that are stored in the southern portion of the building until off-site shipment by Clean Venture/CycleChem to permitted waste management facilities.

### **3.2.3 Wastewater and Storm Water**

Sanitary wastewater, which includes wastewater from bathroom areas, is discharged to the municipal sanitary sewer system.

Although the facility does not generate significant quantities of process wastewater. Ramboll noted the presence of two slop sinks in the southern portion of the facility, and two slop sinks and floor drain in the central portion of the facility and three air compressors equipped with an oil water separator. According to facility personnel, these features discharge to the municipal sanitary sewer line.

Storm water at the site runs off paved surfaces into the street. Roof leaders reportedly discharge via sub-slab piping to the municipal sewer.

### **3.2.4 Air Emissions**

Air emissions from the facility are limited to combustion products resulting from the operation of the site's natural-gas-fired comfort heating system, and volatile organic compounds (VOCs) from printing operations. There are no air pollution control devices at the site.

---

<sup>3</sup> The Hazardous Waste Generator Improvements Rule, issued in November 2016 and effective May 30, 2017, changed the classification of hazardous waste generators of less than 100 kilograms/month from CESQGs to Very Small Quantity Generators (VSQGs). New York has not authorized the Hazardous Waste Generator Improvements Rule as of the date of this report and thus may continue to use the CESQG classification.

### 3.3 Current Uses of Adjoining Properties

The site is located in a mixed commercial and industrial land use area. The nearest residential area is located approximately 1,700 feet southeast of the site. Based on discussions with facility personnel, Ramboll’s visual observations from the site boundary and public rights-of-way, and a limited review of publicly available information, a general evaluation of the current use of adjacent properties was developed, as described Table 2.

<b>Table 2: Current Use of Adjacent Properties</b>		
<b>Direction</b>	<b>Property/Land Use</b>	<b>Ramboll’s Observations</b>
North	An unnamed ally, beyond which Angel Bright Cleaners, a dry cleaner.	No apparent exterior manufacturing or chemical storage operations were observed.
West	29 <sup>th</sup> Street, beyond which is Hunter’s Point Recycling (southeast), a construction material recycler; and Broadway Stages (east and northeast), a movie studio.	Bays of construction waste (gravel and concrete) were observed at Hunter’s Point Recycling.
South	Hunters Point Avenue, beyond which is Federal Express Warehouse.	No apparent exterior manufacturing or chemical storage operations were observed.
East	Shapeways, a 3D printing company.	No apparent exterior manufacturing or chemical storage operations were observed.
<p>Notes:</p> <p>During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the subject site. Ramboll did not enter the neighboring properties.</p>		

## 4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

### 4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in December 2018 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the site, as specified by the ASTM standard.<sup>4</sup> A copy of the environmental database search report is presented in Appendix B.

#### 4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database provider (see Appendix B) database. The site is listed on several environmental databases, as discussed in Table 3.

<b>Table 3: Summary of Environmental Database Listings for the Site</b>	
<b>Summary of Information Contained in Database</b>	<b>Ramboll’s Comments</b>
Prestone Press LLC is listed in the Resource Conservation and Recovery Act (RCRA) database as a small quantity generator (SQG) of hazardous waste. The site was formerly listed under the name Philip A. Hunt Chemical Corp. as a non-generator of hazardous waste in January 2007, January 2006, and August 1999 and a large quantity generator (LQG) of hazardous waste in November 1980. The site was inspected in 1990; no violations were reported.	The listing does not suggest a contamination concern to the site. Wastes generated at the site are further discussed in Section 3.2.2.
Prestone Press LLC is listed on the Underground Storage Tank (UST) database as having one 3,000 gallon storage tank that is closed in place. The tank was closed on March 15, 2018.	USTs are further discussed in Section 5.2.2.
Notes: * The site is also listed on the following other databases related to regulatory compliance: Enforcement and Compliance History Online (ECHO) and Facility Index System/Facility Registration System (FINDS). Listings on these databases, by themselves, are not necessarily indicative of contamination.	

As detailed above, the site is listed on certain databases for which the ASTM Standard specifies that a review of pertinent files or regulatory records be conducted. Certain of these listings (i.e., RCRA, and UST) are not indicative of a release or contamination concern. Based on the available information, these listings are not indicative of a release or contamination concern.

#### 4.1.2 Database Review for Surrounding Properties

There are several listings in the database report for off-site properties within applicable ASTM search radii. Several of these listings (i.e., RCRA hazardous waste generators, USTs, ASTs, Historical Auto Stations, compliance listings), by themselves, are not necessarily indicative of a contamination concern and, therefore, are not discussed herein and were not further evaluated for purposes of this assessment. A number of properties appear on databases indicating potential contamination concerns

<sup>4</sup> EDR uses the term “radii” to refer to the ASTM terminology “approximate minimum search distance” in the environmental database report.

(i.e., LUST/LTANKS, Landfill/Solid Waste Facility, SPILLS, Drycleaners). Of the properties representing a potential environmental concern, Ramboll has discussed in Table 4 below only 1) facilities that are located adjoining to the site; and 2) properties that are located potentially upgradient of the site and have not been issued regulatory closure for all listings of concern.

<b>Table 4: Summary of Pertinent Database Listings for Off-Site Properties</b>		
<b>Listing Name or Address and Location Relative to the Subject Site</b>	<b>Summary of Information Contained in Database</b>	<b>Ramboll's Comments</b>
<b>Listings for Adjoining Sites <sup>1</sup></b>		
Angel Bright Cleaners (adjoining to the north)	The property is listed on the Drycleaner database and the EDR Historical Drycleaner database. Drycleaning operations have been performed as it was registered as a drycleaner in August 7, 2011. There is no indication of a known release in the listing.	Based on Ramboll's observations, the adjoining property is a dry cleaner facility. Operations are currently active and present a potential concern to the site. The matter is further discussed in section 6.1.
30-10 48 <sup>th</sup> Street (Adjoining to the east)	The property is listed in the Leaking Underground Storage Tanks (LTANKS) database for a release of three gallons of petroleum discovered in 1994 during a tank failure. The spill ID is 9312132. The matter was granted regulatory closure in January 1994, but no details are provided as to the extent of contamination or remedial actions taken (if any).	Because the matter has been granted regulatory closure and based on the limited amount of material released and the distance to the subject site, this matter is unlikely to present a concern to the site.
30-15 48 <sup>th</sup> Avenue (Adjoining to the east)	The property is listed in the SPILLS database for a release of 60 gallons of #2 fuel oil discovered when an oil line broke and spilled oil into the boiler room in January 1996. The spill ID is 9512395. The matter was granted regulatory closure in January 1996, but no details are provided as to the extent of contamination or remedial actions taken (if any).	Because the matter has been granted regulatory closure by the state agency, it is reasonable to assume that the matter was appropriately evaluated in accordance with regulations in place at the time, and that remaining contamination, if any, is localized and unlikely to migrate at significant levels onto the site. Thus, this closed off-site listing does not appear to represent a significant concern to the site.

**Table 4: Summary of Pertinent Database Listings for Off-Site Properties**

<b>Listing Name or Address and Location Relative to the Subject Site</b>	<b>Summary of Information Contained in Database</b>	<b>Ramboll's Comments</b>
Hunters Point Avenue Bridge (Adjoining to the south)	The Hunters Point Avenue Bridge property is listed on the NY SPILLS database for a release of an unknown amount of an unknown material in June 2003. The spill ID is 0303368. The matter was granted regulatory closure in June 2003.  The property is also listed for another release of an unknown amount of raw sewage in February 1987. The spill ID is 8700459. The matter was granted regulatory closure in February 1987.	Because the matter has been granted regulatory closure by the state agency, it is reasonable to assume that the matter was appropriately evaluated in accordance with regulations in place at the time, and that remaining contamination, if any, is localized and unlikely to migrate at significant levels onto the subject site. Thus, this closed off-site listing does not appear to represent a significant concern to the site.
Hunters Point Recycling Inc (Adjoining to the south)	The property is listed in the Solid Waste Facility (SWF) database as active. The property accepts concrete, rock, clean soil, non-ferrous metals and unadulterated wood.	Based on Ramboll's observation, the adjoining recycling property does not present a contamination concern to the site.

Notes:

- <sup>1</sup> Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. The discussion of adjoining and non-adjoining properties does not include (if applicable) listings for certain databases that are (by themselves) not necessarily indicative of a contamination concern (e.g., compliance listings without indication of a release or chemical mishandling, such as RCRA hazardous waste generators or registered storage tanks). Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are immediately adjacent, even if separated by a road or other physical barrier.
- <sup>2</sup> As noted in Table 1, shallow groundwater beneath the site likely flows to the southwest. Within this section, Ramboll did not discuss any off-site non-adjoining property that is listed on a database indicative of a contamination concern but for which regulatory closure has been issued, as the issuance of regulatory closure suggests that impacts to the site from the noted off-site property are unlikely. Finally, Ramboll did not discuss any off-site non-adjoining property that is presumed to be downgradient or cross gradient of the site. This analysis was based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, but a hazardous material can migrate in the groundwater in a generally downgradient direction; however, the direction of groundwater flow may be affected by localized topographic, hydraulic, and hydrogeologic conditions.
- <sup>3</sup> The RGA databases are EDR proprietary databases that identify prior versions of the database in which a site was listed.

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these properties could not be readily mapped by the third-party provider. Because the location of these sites with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the

unmapped properties identified by the third-party provider; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

## 4.2 Historical Uses of the Site and Adjacent Properties

### 4.2.1 Past Uses of the Site

The site was formerly vacant undeveloped land from as early as 1898 to at least 1915; by 1936 the northern portion of the site was occupied by East River Mill and Lumber Company and operated as a lumber yard, while the southern portion contained a small building that was occupied by Acme Shellac Products. By 1947, a building was constructed in the center of the site and the building at the southern end of the site had been expanded. By 1950, an addition had been constructed to the central building, and by 1970, the central building had been expanded to the north and the building at the southern end had been expanded and now was connected to the central building. According to the 2005 Phase I Report, a refrigerator warehouse operated from approximately 1936 to 1950; the Standard Wine and Liquor Company operated from approximately 1950 to 1970; an office and warehouse for Phillips A. Hunt Chemical Corporation operated from approximately 1977 to 1983. Although the Sanborn Maps continue to identify the Phillips A. Hunt Chemical Corporation at the site, according to the 2005 Phase I Report, the Milton Paper Company commenced operations at the site in 1983 and operated until Prestone commenced operations in 2006.

A summary of Ramboll’s key observations from the available historical sources is presented in Table 5.

<b>Table 5: Summary of Key Observations from Historical Sources for the Subject Site</b>	
<b>Historical Source</b>	<b>Key Observations Regarding Site History</b>
Sanborn Maps (1898, 1915, 1936, 1947, 1950, 1970, 1977, 1979, 1980, 1985, 1986, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005, 2006)	The 1898 and 1915 maps depict the site as an unoccupied, undeveloped city block cross-cut by Anable Avenue. The 1936 map indicates that the site was divided into four lumber yards, operated by East River Mill and Lumber Company. Additionally, the southern tip of the block is labeled “Shellac products” and segmented into three buildings, one of which is labeled “mixing.” The 1947 map depicts, in the center of the site, one large rectangular building labeled as a refrigerator warehouse. The southern shellac products facility is labeled “miscellaneous storage.” According to the 1950 map, the large center building operated as a wholesale liquor facility at this time. The 1970 map depicts three buildings, aligned north to south, taking up the entirety of the site. The northernmost and center buildings are rectangular, and the southernmost building is irregularly shaped. All three are labeled “Standard Wine and Liquor Company,” with the northern building operating as a liquor warehouse. In the 1977 through 2006 maps, the three buildings are labelled “Philip A. Hunt Chemical Corporation,” with the exception of the 1996 map, which depicts the site as unlabeled.
Aerial Photographs (1924 – 2017)	The site appears as undeveloped in the 1924 photograph, and appears to be an empty vegetated lot. The 1941 photograph shows the site as segmented into four small rectangular lots that strike east to west. In the 1951 photo, the site comprises a large rectangular building in the center of the site bordered to the north by a small rectangular lot. The southern portion of the site in the 1951 and 1954 photographs appears to have several small rectangular buildings, but it is difficult to determine due to the quality of the photographs. The photographs from 1961 to 2017 depict a single large building occupying the site. A narrow strip of land used for parking borders the site in these photographs.

<b>Table 5: Summary of Key Observations from Historical Sources for the Subject Site</b>	
<b>Historical Source</b>	<b>Key Observations Regarding Site History</b>
Topographic Maps (1897 – 2017)	No development is depicted on the maps until 1947, which depicts a single structure in the shape of the building currently present on the site.
City Directory Abstracts (1945, 1950, 1962, 1967, 1970, 1976, 1983, 1991, 2000, 2005)	1945: Pabst Sales Company 1950: Lagerloef Birger B, Standard Wine & Liquor Company Inc 1962: Lagerloef Birger B, Standard Wine & Liquor Company Inc 1967: Standard Wine & Liquor Company Inc 1970: Lagerloef Birger B, Standard Wine & Liquor Company Inc 1976: Sales & Service Department, Hunt Philip A Chemical Corporation, Sales & Service Department 1983: Hunt Philip A Chemical Corporation, Philip A Hunt Chemical Corporation, Sales & Service Department 1991: Milton paper Co Inc 2000: 48 <sup>th</sup> Ave Ints From, Milton paper Co Inc 2005: Milton Paper Co, Vanguard Paper
Lien search report	The lien search report indicates that Prestone Realty LLC acquired the site in 2005 from Milton Paper Company Inc. No liens or activity and use limitations (AULs) are associated with the site.
New York City Fire Department (FDNY)	Ramboll submitted a FOIL request to FDNY regarding spills, releases, tanks, and other environmental concerns. A response has not been received at the time of the writing of this report.
New York City Department of Buildings (DOB)	DOB files indicate that an equipment work permit was filed to excavate for a new lower level in the building in 2006.
Notes: <sup>1</sup> In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.	

#### **4.2.2 Past Uses of Adjacent Properties**

The properties in the vicinity of the site have been used for industrial purposes, since as early as the 1930s. Notable operations on surrounding properties include the following: to the north heating equipment warehousing, wine bottling, chemical warehousing, paper storage and drycleaning operations; to the east lofts and offices, shipping services, and printing; to the west, pumice stone and sponges, pipe manufacturing, Hunter’s point steel and construction debris recycling, and to the south electric storage warehousing. According to Sanborn maps, these operations began in the 1930s and continue through the present.

### 4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 6.

<b>Table 6: Local Agency Information for the Site</b>	
<b>Agency Contacted / Document Reviewed</b>	<b>Information Obtained</b>
New York City Department of Finance Automated City Register Information System (ACRIS)	New York City Department of Finance provided an online Digital Tax Map. The site is described on the NYC Digital Tax Map as Block 115, Lot 187. Additional documents provided on the NYC Department of Finance through the Automated City Register Information System (ACRIS), included deeds, lease contracts, and other agreements dating back to 1982. The earliest deed, dated October 1983, indicates a transfer of ownership from Mapeg Realty Corporation to Diana Properties, Inc. Diana Properties Inc. sold the property to the NYC Industrial Development Agency in 1985, which sold it to Milton Paper Company, Inc. in 2001.
New York City Building Department (NYCDOB)	The New York City Building Department (DOB) website provided a property profile for the subject site. The property profile indicates that the property (Lot 115, Block 187) is associated with one additional address, 48-20 30 <sup>th</sup> Street. There are seven dismissed DOB violations.
Lien and Activity and Use Limitation (AUL) Search Report	According to a lien and activity and use limitation (AULs) search report provided by EDR, there are no liens or AULs associated with the site.
New York City Zoning and Land Use Map (ZoLa)	Based on a review of the NYC ZoLa Map, the site is zoned as "M3-2" (Manufacturing).
New York City Fire Department (FDNY)	Ramboll submitted a FOIL request to the FDNY requesting information pertaining to UST closures and emergency/environmental responses at the site. As of the date of this report, a response had not been received from the FDNY.
New York City Department of Environmental Protection (NYCDEP)	Ramboll submitted a FOIL request to NYCDEP requesting information pertaining to UST closures and emergency/environmental responses at the site. Records returned by NYCDEP include a list of chemicals in use at the facility.
New York City Department of Health (NYCDOH)	Ramboll requested records from NYCDOH for information regarding soil or groundwater investigations, USTs, LUSTs, hazardous materials inspections, or violations/permits for the property. NYCDOH reported that no records related to the Site were located.
New York State Department of Environmental Conservation (NYSDEC)	Ramboll requested records from NYSDEC for information regarding soil or groundwater investigations, USTs, LUSTs, hazardous materials inspections, or violations/permits for the property. Records returned by NYSDEC include a PBS Program application for UST closure, a limited site assessment by PAL Environmental Services Inc. confirming tank closure, and a PBS Program Facility Information Report.

#### 4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, the following prior environmental assessment, sampling, or remediation activities have been conducted at the site:

- **2005 Phase I Environmental Site Assessment.** A Phase I ESA was conducted at the site by Whitestone in 2005, in association with a prior property acquisition by Prestone and a related entity. Pertinent historical and site-related information contained in the 2005 Phase I report has been incorporated into other sections of this report. The 2005 Phase I report identified the following RECs:
  - Former industrial/manufacturing use by ACME and Philip Chemical included use of hazardous and potentially hazardous chemicals,
  - A former 3,000-gallon fuel oil underground storage tank (UST) was abandoned in place at the eastern portion of the building at the site,
  - Floor drains with unidentifiable discharge points,
  - Storage room in the western portion of the building was reportedly identified as the "explosion room," and
  - The presence of a commercial dry cleaner adjacent to the northern property boundary.
- **2005 Phase II Environmental Site Assessment.** A Phase II Site Investigation was conducted at the site by Whitestone in 2005, in connection with the 2005 Phase I Report. The Phase II Report included the following tasks: an evaluation of the discharge point(s) of the floor drains utilizing water and dye, and the advancement of six soil borings with collection of soil samples from each boring.
  - Non-toxic dye was used in an attempt to identify the discharge point of the floor drains; according to the 2005 Phase II Report, the dye was not observed in the stormwater management system or the sanitary sewer system and the discharge point could not be determined.
  - Two of the six soil borings were advanced in the area of the former UST. The remaining four soil borings were advanced in the 'explosion room' located in the western portion of the site; this room contains the floor drains. Soils all six borings were screened with a Photo Ionization Detector (PID) probe and a sample from each boring was collected and analyzed for volatile compounds (VOCs) and semi-volatile compounds (SVOCs). The samples collected from the vicinity of the UST did not exhibit concentrations of VOCs or SVOCs in excess of the NYSDEC Recommended Soil Cleanup Values at the time. The samples collected from the vicinity of the explosion room exhibited concentrations of several SVOCs above the NYSDEC Recommended Soil Cleanup Values at the time (benzo[a]anthracene, chrysene, benzo[b]fluoranthene, benzo[k]fluoranthene, benzo[a]pyrene, dibenz[a,h]anthracene, and indeno[1,2,3-cd]pyrene). The 2005 Phase II report concluded that these concentrations were representative of historic fill.
  - Three groundwater samples were collected from the borings (one adjacent to the UST and two adjacent to the floor drains) and analyzed for volatile and semi-volatile compounds. The groundwater sample collected adjacent to the UST exhibited a concentrations of benzo[a]athracene and chrysene above the NYSDEC Groundwater Standard at the time. One of the two groundwater samples collected from the explosion room exhibited a concentration of benzo[a]anthracene above the NYSDEC Groundwater Standard at the time. These matters are further discussed below.

- **2018 Limited Soil Vapor Intrusion.** A Limited Soil Vapor Intrusion investigation was conducted at the site by Preferred Environmental Services in 2018. The investigation included the collection of one sub-slab soil vapor sample, one indoor air sample, and one proximate soil sample; all three samples were collected from the northern portion of the facility adjacent to the adjoining property to the north (drycleaner). The sub-slab vapor sample exhibited a concentration of tetrachloroethylene (PCE) at 17,000 ug/m<sup>3</sup> and the indoor sample exhibited a concentration of PCE of 1,700 ug/m<sup>3</sup>; these concentrations exceed the NYSDOH mitigation guidance value of 30 ug/m<sup>3</sup> and immediate action level of 300 ug/m<sup>3</sup>. Trichloroethene (TCE) was also identified at a concentrations of 98 ug/m<sup>3</sup> (sub-slab) and 15 ug/m<sup>3</sup> (indoor) above the mitigation guidance value and immediate action value of 2 and 20 ug/m<sup>3</sup> respectively. The sample collected from the soil boring did not exhibit concentrations of any VOCs or SVOCs above the Commercial or Industrial Use Soil Cleanup Objectives (SCOs). These matters are further discussed below.
- **2018 Subsurface Investigation.** A Subsurface Investigation was conducted at the site by Impact Environmental in 2018. The investigation included the advancement of two soil borings, three temporary groundwater well points, three sub-slab soil vapor samples and three indoor air samples. One sample was collected from each soil boring and analyzed for VOCs, the samples did not exhibit concentrations of VOCs above the method detection limit (MDL) for any VOC. Samples collected from the temporary wells were analyzed for VOCs, the samples exhibited concentrations of PCE at concentrations up to 170 ug/L, which are above the NYSDEC TOGS 1.1.1 Class GA groundwater quality standards. The indoor air quality samples identified PCE at concentrations up to 562 ug/m<sup>3</sup> and concentrations of TCE up to 3.8 ug/m<sup>3</sup> in indoor air. These matters are further discussed below.

#### 4.5 User-Provided Information

Ramboll provided ARE with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user did not provide any information that was not otherwise obtained and reviewed by Ramboll.

## 5. SITE RECONNAISSANCE

### 5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on December 27, 2019. During the site visit, observations of both the interior of the building and exterior portions of the site were made to evaluate if any RECs, as defined in Section 2, are present. Ramboll did not observe the roof of the building.

### 5.2 General Site Setting and Observations

Ramboll made observations concerning all the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 7. Additional information regarding observed and historical items is provided in the sections following the table.

<b>Table 7: Summary of Site Reconnaissance Observations</b>		
<b>ASTM Section</b>	<b>Issue</b>	<b>Observation</b>
<b>Interior and Exterior Issues</b>		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	<b>Present</b> (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Section 5.2.2) Formerly Present Absent
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	<b>Present</b> (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	Absent
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Absent
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.3) Possible

<b>Table 7: Summary of Site Reconnaissance Observations</b>		
<b>ASTM Section</b>	<b>Issue</b>	<b>Observation</b>
<b>Interior Issues</b>		
9.4.3.1	Heating/cooling systems	<b>Present</b> (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	<b>Present</b> (see Section 5.2.4)
9.4.3.3	Floor drains and interior sumps	<b>Present</b> (see Section 3.2.3)
<b>Exterior Issues</b>		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	<b>Present</b> (see Section 5.2.5)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	<b>Present</b> (see section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	<b>Present</b> (see Table 1)
9.4.4.7	Septic systems or cesspools	Absent
<b>Non-Scope Considerations</b>		
N/A	Asbestos Containing Materials	see Section 5.2.6
N/A	Lead-Based Paint	see Section 5.2.7
N/A	Water Intrusion	see Section 5.2.8

<b>Table 7: Summary of Site Reconnaissance Observations</b>		
<b>ASTM Section</b>	<b>Issue</b>	<b>Observation</b>
N/A	Polychlorinated Biphenyls	see Section 5.2.3
N/A	Radon	see Section 5.2.9
<p>Notes:</p> <p>Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.</p> <p>See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.</p> <p>Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.</p> <p>N/A – Not applicable.</p>		

### 5.2.1 Hazardous Substances and Petroleum Products

The primary chemicals used at the site include inks, fountain solution concentrate (approximately six 5-gallon containers per month), plate developer (less than one 5-gallon pail per month), cleaning solvent (less than one 55-gallon drum per month), glue (approximately 150 pounds per month), paper and aluminum plates.

Chemical storage at the site is limited; inks, fountain solution concentrate, and plate developer are stored in retail sized containers (10-gallons or less) in the southern portion of the site and at points of use. Cleaning solvent is stored in 55-gallon drums located in the southern portion of the site. Glue is stored in boxes. Ink, developer and solvent wastes are stored in drums in the southern portion of the sites and general facility trash is stored in one hydraulic compactor and two dumpsters located adjacent to the loading dock.

Facility personnel were not aware of any significant spills or releases of materials at drum and container storage areas. While dedicated secondary containment was not provided for all the drums and containers, Ramboll did not observe evidence of significant spills or uncontrolled releases from these storage areas, other than minor staining in some interior and paved (i.e., exterior hydraulic compactor) areas.

### 5.2.2 Underground Storage Tanks

There was formerly a 3,000-gallon fuel oil UST located in the eastern portion of the building at the site. The tank was reportedly abandoned in place by ABC Tank Cleaning & Repairing Inc., prior to the enactment of specific tank closure requirements. As such, there was no confirmatory soil samples were collected during the closure of this tank. Subsequent sampling was conducted around the abandoned tank, as discussed on Section 4.4.

### 5.2.3 Polychlorinated Biphenyls

Facility personnel were not aware of on-site equipment that is known to contain polychlorinated biphenyls (PCBs). Underground transformers are present in a subgrade vault along 30<sup>th</sup> street, which are reportedly beyond the site boundary that ends at approximately the building face. The units are owned by the utility. Facility personnel did not know whether the transformers contained PCBs.

The installation date of the units is unknown and may predate the 1979 federal ban on the manufacture of PCBs, it is possible that the transformer oil contains PCBs. In addition, because the building was constructed prior to the 1979 federal ban on the manufacture of PCBs, it is possible that electrical equipment, such as capacitors, contain PCBs.

Ramboll observed no indication of leaks or releases from electrical equipment during the site visit.

#### **5.2.4 Stains or Corrosion on Interior Floors, Walls, or Ceilings**

Ramboll observed minor floor and wall staining within the main building. Ink stains were observed throughout the main building adjacent to storage areas, and at the base of the presses. Staining was also present within the slop sinks and the floor drain located in the central portion of the site. Although concrete floors were worn, Ramboll did not observe significant cracking; in addition, according to facility personnel, the floor drain, and slop sinks are routed to the municipal sewer.

#### **5.2.5 Stained Soil or Pavement**

Ramboll observed minor pavement staining in the loading dock area along the eastern exterior wall of the building; the staining appeared to be consistent with minor drips or spillage from the hydraulic unit on the facility's trash compactor. Pavement in the vicinity of the observed staining appeared to be in good condition, with no evidence of cracking.

#### **5.2.6 Asbestos-Containing Materials**

The building at the site was constructed prior to the 1980s, after which asbestos was generally phased out of use in many building material applications. Based on the age of the building, it is possible the ACMs may be present in the building materials at the site. Concurrently with the preparation of this report, Ramboll conducted a Hazardous Building Material Inspection (HBMI), which identified asbestos in aircell pipe wrap (approximately 150 linear feet), building joint caulk (approximately 15 linear feet) and assumed the roofing materials contained asbestos.

#### **5.2.7 Water Intrusion/Mold**

Ramboll did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, the facility has not experienced problems with water intrusion.

#### **5.2.8 Lead-Based Paint**

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building, it is possible that lead-based paint was used historically on facility structures. Concurrently with the preparation of this report, Ramboll conducted a HBMI that identified lead-based paint and lead-based translucent glaze on structural steel beams, steel roof drain leader pipes, blue overhead doors and the yellow painted components on the building exterior.

#### **5.2.9 Radon**

Based on information included in the environmental database report, the site is located in an area categorized as Zone 3, which has average indoor basement radon levels less than 2 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the

Federal Area Radon Information for Queens database, the average radon value of 81 basements was 0.970 pCi/L.

## 6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Prestone Printing Co., Inc property located at 47-50 30<sup>th</sup> Street in Long Island City, New York in February 2019. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 8 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

### 6.1 Findings, Opinions, and Conclusions

#### 6.1.1 Recognized Environmental Conditions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Prestone property located at 47-50 30<sup>th</sup> Street Long Island City, New York. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property, except the following:

- **Groundwater Contamination and Soil Vapor Intrusion.** Groundwater at the site is known to contain concentrations of VOCs that exceed the NYSDEC TOGS 1.1.1 Class GA groundwater quality standards. Specifically, PCE has been detected in groundwater at concentrations up to 170 ug/L. The investigative activities conducted to date have not delineated the extent of the PCE or identified the source. As described in Section 4.1.2, Ramboll notes that the adjoining property to the north is a drycleaning facility; while this property is not listed on databases indicative of a release, it is possible that dry cleaning chemicals (chlorinated solvents) have migrated to the site. In addition, based on soil vapor intrusion sampling conducted in 2018, indoor air was found to contain concentrations of PCE up to 1,700 ug/m<sup>3</sup> and TCE up to 98 ug/m<sup>3</sup>. Based on the presence of PCE in groundwater, and PCE and TCE in indoor air, Ramboll characterizes this finding as a REC.

#### 6.1.2 Other Findings

In addition to the REC discussed above, the following additional findings related to potential contamination concerns were identified:

- **Former UST.** A 3,000-gallon fuel oil UST was abandoned in place prior to 2005. No closure information was provided pertaining to this UST. It is possible that this UST was closed in place prior to the 1990s and prior to the enactment of specific tank closure requirements. However, the area of the abandoned UST was investigated as part of a 2005 Phase II investigation and no significant impacts associated with the former UST were identified.
- **Historic Fill.** During a 2005 Phase II investigation, soils at the site were found to contain concentrations of several SVOCs above the NYSDEC Recommended Soil Cleanup Values at the time (benzo[a]anthracene, chrysene, benzo[b]fluoranthene, benzo[k]fluoranthene, benzo[a]pyrene, dibenz[a,h]anthracene, and indeno[1,2,3-cd]pyrene). According to the 2005 Phase II Report, these residual concentrations are representative of historic fill.
- **Past Operations at the Site.** The site has been used for various purposes since the early 1960s. Prior operations have included the East River Mill and Lumber Company (1920s or 1930s to 1940s), Acme Shellac Products (1920s or 1930s to 1940s), the Standard Wine and Liquor Company (1940s to 1970s), the Phillips A. Hunt Chemical Corporation (1970s to 1980s), the Milton Paper Company (1980s to 2000s), and Preston Press (2000s to present). These former operations may have included the use of petroleum products, and other chemicals. Additionally,

these historical operations (i.e., those conducted between site development in the 1920s or 1930s and the early 1980s) predated the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. In addition to the former UST and historic fill described above, the facility contained floor drains with unidentifiable discharge points in the western portion of the site. Although areas of the site have been investigated as part of the 2005 Phase II investigation and the 2018 subsurface and soil vapor intrusion investigations, and some impacts to soil, groundwater and vapor intrusion issue have been identified, as described above, absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that other historical spills or releases of chemicals or petroleum products may have adversely affected the soil and groundwater conditions at the site.

### 6.1.3 De Minimis Conditions

*De minimis* conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Pavement Staining.** Ramboll observed minor pavement staining in the loading dock area along the eastern exterior wall of the building; the staining appeared to be consistent with minor drips or spillage from the hydraulic unit on the facility's trash compactor. Pavement near the observed staining appeared to be in good condition, with no evidence of cracking. As such, Ramboll considers this matter to represent a *de minimis* condition.
- **Floor Staining.** Ramboll observed minor floor and wall staining within the main building. Ink stains were observed throughout the main building adjacent to storage areas, and at the base of the presses. Staining was also present within the slop sinks and the floor drain located in the central portion of the site. Although concrete floors were worn, Ramboll did not observe significant cracking; in addition, according to facility personnel, the floor drain, and slop sinks are routed to the municipal sewer. As such, Ramboll considers this matter to represent a *de minimis* condition.

## 6.2 Non-Scope Considerations

Ramboll's scope of work also included a limited evaluation of potential presence of asbestos-containing materials (ACMs), water intrusion/mold, lead-based paint (LBP) and radon.

- **Asbestos-Containing Materials (ACMs).** The building at the site was constructed prior to the 1980s, after which asbestos was generally phased out of use in many building material applications. Based on the age of the building, it is possible the ACMs may be present in the building materials at the site. Concurrently with the preparation of this report, Ramboll conducted a Hazardous Building Material Inspection (HBMI), which identified asbestos in aircell pipe wrap (approximately 150 linear feet), building joint caulk (approximately 15 linear feet) and assumed the roofing materials contained asbestos.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. At the time of the site visit, Ramboll did not observe any areas of water damage or infiltration. In addition, facility personnel reported that no flooding has occurred at the site.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building,

it is possible that lead-based paint was used historically on facility structures. Concurrently with the preparation of this report, Ramboll conducted a HBMI that identified lead-based paint and lead-based translucent glaze on structural steel beams, steel roof drain leader pipes, blue overhead doors and the yellow painted components on the building exterior.

- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 3, which has average indoor basement radon levels less than 2 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the Federal Area Radon Information for Queens database, the average radon value of 81 basements was 0.970 pCi/L.

### 6.3 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Due to extended age of the site, it was not possible to interview representatives dating back to the site's first developed industrial use in the 1920s or 1930s. However, Ramboll conducted interviews with representatives of Prestone with tenure at the site dating back to 2005 and reviewed other historical sources regarding former uses of the property.
- Ramboll did not observe the roof of the building.
- As of the date of this report, Ramboll has not received a response from the New York City Fire Department.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

## 7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

### **REC - Recognized Environmental Condition:**

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

### **CREC - Controlled Recognized Environmental Condition:**

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

### **HREC - Historical Recognized Environmental Condition:**

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

### ***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

### **Data Gap / Significant Data Gap:**

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

*Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.*

## **APPENDIX B ENVIRONMENTAL DATABASE REPORT**

### **NOTES ON ENVIRONMENTAL DATABASE REPORT**

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology “approximate minimum search distance” to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in December 2018. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

NY RGA HWS..... Recovered Government Archive State Hazardous Waste Facilities List  
NY RGA LF..... Recovered Government Archive Solid Waste Facilities List

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 11/14/2018 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 15 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/09/2018 has revealed that there are 19 NY SHWS sites within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/30/2018 has revealed that there are 5 NY SWF/LF sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### **State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/16/2018 has revealed that there are 53 NY LTANKS sites within approximately 0.5 miles of the target property.

### **State and tribal registered storage tank lists**

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 25 NY UST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### ***State and tribal voluntary cleanup sites***

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 2 NY VCP sites within approximately 0.5 miles of the target property.

#### **Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 10/16/2018 has revealed that there are 17 NY Spills sites within approximately 0.125 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 59 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there is 1 US AIRS site within approximately 0.001 miles of the target property.

## EXECUTIVE SUMMARY

**FINDS:** The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 08/07/2018 has revealed that there is 1 FINDS site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

## EXECUTIVE SUMMARY

EPA Id: NYP004842577

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2018 has revealed that there are 2 NY VAPOR REOPENED sites within approximately 1 mile of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 7 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V

 DEC Memo: "06/14/06 - See e-docs for Con Ed report detailing cleanup and closure. 163746. 12-APR-2006 1019HRS. UG EAST PLANNER O. JELOVIC, EMPLOYEE NO. 38389, WHILE ON LOCATION OVERSEEING CONTRACTORS IN MH3418, LOCATED ON THE N/W/C OF 30TH ST & HUNTERS PT. BLVD, REPORTS FINDING APPX 2 OZ OF DIELECTRIC FLUIC ON APPX . 50 GALS OF WATER IN THE STRUCTURE FROM AN UNIDENTIFIED FEEDER. NO FIRE OR SMOKE INVOLVED, NO INJURIES RELATED TO THE SPILL, NO SEWERS, WATERWAYS OR PRIVATE PROPERTY AFFECTED. SPILL APPEARS TO BE CONTAINED TO THE STRUCTURE. MR. JELOVIC STATES THE FEEDER IS OOOZING DIELECTRIC OIL FROM A DETERIORATED SPOT IN THE ARMOR. HE CANNOT DETERMINE THE RATE. THE WATER IS STANDING STILL, THERE IS NO MOVEMENT. HE IS UNABLE TO IDENTIFY THE PRESENCE OF ANY SUMPS , SEWER CONNECTIONS, OR SUBSTANTIAL CRACKS IN THE STRUCTURE, AT THIS TIME. THERE IS A CREW ENROUTE WHICH WILL SAMPLE THE SPILL. THIS FEEDER IS LIVE, AND HE STATES HE WILL BE D -FAULTING THE STRUCTURE. HE WILL UPDATE WITH THE TAG NUMBERS AND CHAIN OF CUSTODY ASAP. BORCHERDINGC 12-APR-2006 1216HRS. UG MECHANIC BEASLEY REPORTS SAMPLE HAS BEEN TAKEN AND WILL BE TRANSPORTED TO ASTORIA LAB FOR ANALYSIS, MARKED PRIORITY E ON CC NO. DD16819. THE STRUCTURE ALSO HAS BEEN D FAULTED ON TAG NO. 03807. BORCHERDINGC "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Second and third tank test performed by Federal Electrical Supply Corporation (718-729-5700). The reason for spill report was initial tank test failure. As a result of failure vent line, fill line, suction line and return line were replaced by Petroleum Tank Cleaners. Tank was tested again on 2-6-2002 and failed again because testers failed to close off return line to day tank. Tank and system was tested for third time and passed on 2-14-2002. Isaac Mungra and Anthony (PTC) confirmed that there was no soil or groundwater contamination. Tank tests and repair invoices were

DEC Memo: "The spill is consolidated under spill 17-11603. 6/13/2018 - Feng - Duty Desk. Spoke to Stephanie Pollert of Impact Environmental. There is a pre-existing spill 17-11603 which is managed by Kumar Patel. They then had a tank test and it failed. The tank is now isolated. There is still oil inside the tank, about 6 inches. Confirmed that the oil depth has no change so it is not actively leaking. They had done soil borings around the tank area. Product is found in the monitoring wells, in thickness of 4 inches. The RIR is submitted to Kumar Patel yesterday. Talked to K. Patel and the spill is consolidated under spill 17-11603. Stephanie Pollert 631-269-8800"

Remarks: "tightness test failure"

1,2,4-Trimethylbenzene-----57-----670-----34  
1,3,5-Trimethylbenzene-----12-----160-----12  
Naphthalene-----92-----360-----86 the Phase II  
report includes an unscaled site map. based on site location,  
groundwater may be travelling towards northwest to the Dutch Kills  
Basin. boring SB-1, SB-2 and SB-4 were installed in almost straight  
line with SB-1 in southeast portion of the site (south of UST  
location), SB-3 in center (northwest of UST location) and SB-4 in  
west-central section of the site. PID values shows highest detection  
in SB-1 (494.5 ppm) and lowest in SB-4 (96.7 ppm). also lab report  
shows detection of petroleum VOCs in samples from SB/GW-1 and  
SB/GW-2. Phase II report indicates visual evidence of free-phase  
product in purged groundwater from SB-1 and SB-3. 2:00 PM:- sent  
letter to Mr. Troy requiring immediate PBS renewal/tank tightness  
test (documents due on 04/20/18) and soil delineation/determination  
of site-specific groundwater flow direction (report due on 06/08/18).  
letter emailed to Mr. Troy and Stephanie. 04/19/18-Hiralkumar Patel.  
received email from Stephanie (at 10:56 AM on 04/17/18). she  
mentioned that the earliest tank tightness test can be scheduled on  
04/23/18. 9:59 AM:- received call from Stephanie. she mentioned that  
PBS renewal application is ready and can be submitted today, but due  
to scheduling conflicts, they can test tank system on 04/23/18.  
informed Stephanie that it will be OK to submit tank test result and  
PBS renewal application on 04/23/18. 04/30/18-Hiralkumar Patel.  
received email from Stephanie (at 4:42 PM on 04/27/18) including a  
RIWP. work plan proposes installation of total of five permanent and  
two temporary 2-inch monitoring wells to a depth of 15 ft bg. four  
soil samples and seven groundwater samples will be collected for lab  
analysis. wells will be surveyed to define site-specific groundwater  
flow direction. the work plan does not include reason for not  
collecting soil samples during installation of each well and site map  
submitted is not to scale. 1:48 PM:- left message for Stephanie. 1:53  
PM:- received call from Stephanie. inquired her about tank test  
result. she mentioned that the tank had failed a tightness test. the  
tank currently holds about 1 inch of sludge and will not be filled up  
until fixed. informed Stephanie that soil samples must be collected  
from highest PID and deepest dry location from each borehole. also  
asked her to install a permanent monitoring well (instead of  
temporary well) at proposed location outside western building wall.  
Stephanie mentioned that there are storage shelves located within the  
building and actual well location may need be adjusted based on  
available space. asked her to submit a revised work plan. 2:08 PM:-  
spoke with Mr. Troy and inquired him about reason for not reporting  
tank test failure. he mentioned that Impact Env. was informed about  
test failure. he will call back after discussing with Greg at Impact.  
2:42 PM:- received call from Mr. Troy and Greg. Greg mentioned that  
tank test failure was not reported as testing contractor did not  
provide test result until 04/27/18. asked Greg to report tank test  
failure to DEC hotline. informed him that the new spill case will be

**S121984327**

closed administratively and managed under the subject spill case. Greg stated that the tank has approx. 6 inches of product. asked Mr. Troy to seal fill port to prevent misdelivery and remove remaining product from the tank immediately, unless product level is steady within the tank. also asked him to investigate entire tank system, including piping, to locate leak in the system and investigate/remediate any petroleum lease from the failed portion of the tank system. Greg stated that the tank will be closed in-place after required investigation/remediation. 2:56 PM:- received email from Stephanie including letter report from tank testing company. the tank is 6 ft in diameter and 21.5 ft long. the tank had 195 gal of oil at the time of testing. the tank top is 21 inches below surface. 05/01/18-Hiralkumar Patel. received email from Stephanie (at 4:50 PM on 04/30/18) including a revised work plan. revised work plan includes collection of soil samples from each borehole from highest PID and deepest dry zone. work plan proposes report submission within 90 days of completion of proposed field activities. 05/04/18-Hiralkumar Patel. 2:04 PM:- received email from Stephanie. Impact Env. was onsite from 5/1 to 5/3 completing installation of monitoring wells and conducting soil and groundwater sampling. the contents of the tank appear stable, the level has not changed since the tank tightness test was conducted last week (6 inches, measured on 4/23/18 and again on 5/1/18). soil and temporary groundwater sampling has been completed, and results will be available next week. the permanent monitoring wells were installed successfully, and will be surveyed/developed/sampled. 05/30/18-Hiralkumar Patel. 2:42 PM:- received email from Thomas Schutzer from Impact Env. he mentioned that they are drafting remedial investigation report and developing basis for remedial action plan. the fill and vent lines to the UST have been sealed with concrete to prevent inadvertent refill. 06/13/18-Hiralkumar Patel. received email from Stephanie (at 4:41 PM on 06/12/18) including remedial investigation report. summary: - tank system test conducted on 04/23/18 and system failed - approx. 6 inches of product was measured in the bottom of the UST - product level was confirmed steady - plugged exterior fill and vent lines to prevent further oil deliveries - installed seven (7) soil borings (SB-5 to SB-11) to a depth of 15 ft bg, except borings SB-5 (to 20 ft bg), SB-6 (to 25 ft bg) and SB-8 (to 20 ft bg) - underlying overburden consisted of dark brown to black stained coarse sand with gravel - coarse stained sand was encountered from 1 to 6 ft bg - dark brown, grey and stained silty fine sands were observed from 6 to 15 ft bg - confining layers consisting of fine silts and clays mixed with wood were observed at borings SB-6 and SB-8 between 10 and 20 ft bg, indicating a potential zone of perched groundwater - high PID readings were noted in multiple borings: 1) between 105 to 598 ppm from 8 to 20 ft depth in SB-5, with maximum at groundwater interface at 15 ft bg, 2) between 141 to 430 ppm from 7 to 18 ft depth in SB-6, with maximum at 7 ft bg, 3) 422 ppm at 14 ft bg in SB-7, 4) between 112 to 586 ppm from 12 to 18 ft depth in SB-8, with maximum at groundwater interface at 13 ft bg, 5) between 213 and 280 ppm from 6 to 13 ft depth in SB-11, with maximum at 6 ft bg - evidence of product sheen was observed at SB-8 between 15-20 ft bg (well MW-2 was installed in boring SB-8 and free phase product found in the well) ----- - total of 12 soil samples were collected: two samples from each of SB-5 through SB-9, and one from each of SB-10 and SB-11 - installed two (2) temporary (TGW-1 and TGW-2) and five (5) permanent monitoring wells (MW-1 through MW-5) with 10 ft of

MAP FINDINGS

COMMERCIAL BUSINESS (Continued)

S121984327

screen - monitoring wells are 2 inch in diameter - well TGW-1 was installed to a depth of 18 ft bg - well TGW-2 was installed to a depth of 25.20 ft bg - permanent wells were installed to depths of ranging from approx. 15 to 25 ft bg - based on well gauging events, average depth to water across the site was observed at 7.85 ft bg ----- groundwater flow direction appears to be towards the west-northwest ----- 6.8 inches of free product found in well MW-2 ----- collected five groundwater samples: groundwater sample was not collected from MW-2 (due to presence of product) and MW-1 (which was damaged and obstructed by soil after installation) ----- found minor contamination in groundwater sample from TGW-1 (max. 120 ppb of Naphthalene, 54 ppb of MTBE) ----- soil analyticals (in ppb):

concludes that the out-of-service UST is the presumed source of contamination in soil and groundwater, and recommends decommissioning of tank by either abandonment or removal, installation of well at the tank location, replacement of damaged well MW-1 and then VEFRing of impacted well(s). 12:12 PM:- sent email to Mr. Tory/Greg and asked them to provide spill # for tank system test failure, as discussed on 04/30/18. 12:16 PM:- received email from Stephanie. she did not reported tank system test failure as under the impression that DEC office was going to generate spill #. 12:17 PM:- sent email to Stephanie and informed her the regional office did not generate spill # and asked her to call hotline. 12:24 PM:- received email from Stephanie including spill # 1802851 for tank system test failure. spill # 1802851 was reported with today's date, but system test was conducted on 04/23/18. corrected spill date in the spill report for 1802851. 06/14/18-Hiralkumar Patel. 11:01 AM:- spoke with Stephanie. asked her about depth of tank's invert. she mentioned that during tank test, the tank's bottom was noted at approx. 7.5 ft bg where groundwater was noted during remedial investigation. asked Stephanie to submit groundwater depth data and well construction logs. informed her that based on review of all available information, the department requires the following: 1. reinstallation of well MW-1 2. additional monitoring wells: one in area between existing wells MW-1 and MW-5, and another along southern property line in area between existing wells TGW-1 and MW-2 3. collection of product sample from MW-2 (and any other wells with product) for fingerprint analysis 4. immediate removal of free phase product from well(s) 5. weekly well gauging and product removal until an alternate remedial method is accepted or

**COMMERCIAL BUSINESS (Continued)**

**S121984327**

determined that gauging/product recovery is not needed 6. removal of remaining product from the UST 11:23 AM:- sent email to Stephanie summarizing above discussion and including a site map indicating general area where additional wells should be installed. email copied to Mr. Troy and Greg. 06/20/18-Hiralkumar Patel. 8:55 AM:- spoke with Stephanie. they are on-site today to re-install well MW-1 and collect product sample for fingerprint analysis. she is still waiting for approval for installation of additional monitoring wells. 10:30 AM:- visited site with DEC Sekhon. met Stephanie and Tom from Impact Env. crew installed replacement well MW-1. wells MW-1 and MW-2 were gauged. approx. 10 inches of product was noted in well MW-2. thin layer of product noted in well MW-1 also. found patches on building floor indicating possible location of supply line. Stephanie mentioned that the building was equipped with multiple overhead oil burners and oil was supplied using a pump on a support column located near the tank. the tank has two fill line: remote fill port at street curb and a direct fill line. asked Stephanie to collect product sample for fingerprint analysis. newly installed well will be sampled next week. Tom Schutzer Impact Env. Ph. (201) 268-5686 Ext. 110 (412) 577-8200 (C) email: tschutzer@impactenvironmental.com 07/03/18-Hiralkumar Patel. received email from Stephanie (at 4:15 PM on 07/02/18). they have cleaned out tank and removed approx. 206 gals of product. she mentioned that both wells have been found to have product. they are monitoring product levels and conducting recovery activities. 9:37 AM:- sent email to Stephanie and asked her to provide further details about recovery methods and frequency. also asked her to submit a plan/schedule, by the end of 07/13/18, for installation of additional monitoring wells to completely delineate groundwater impact. asked her to submit revised remedial investigation report. email copied to Greg, Tom, Mr. Troy and Jodi Ehren (crowjo@aol.com). 08/13/18-Hiralkumar Patel. 12:20 PM:- received email from Stephanie including updates. she mentioned that one additional well (MW-6) has been installed and they have conducted two manual product recovery events, a pump test and an EFR event. she will provide tank removal schedule soon. 08/20/18-Hiralkumar Patel. 12:09 PM:- spoke with Stephanie. asked her to submit missing well logs in previously submitted remedial investigation report. also inquired her about additional downgradient well. she mentioned that currently they are focusing on removing the UST which may occur in next two weeks. she will provide tank removal schedule, once finalized. 08/22/18-Hiralkumar Patel. received email from Stephanie (at 5:11 PM on 08/21/18). she mentioned that tank removal work will begin on 08/23/18. received email from Stephanie (at 5:34 PM on 08/21/18) including logs for all wells installed at the site. as per the logs, groundwater was found at 8.5 ft bg in all wells indicating no groundwater flow at the site. also, screen in few wells are below water table (screen from 10 to 20 ft, but GW at 8.5 ft bg). also length and depth intervals for riser/sealer/filter pack/screen does not match in well logs. 08/29/18-Hiralkumar Patel. 1:53 PM:- left message for Stephanie inquiring update about tank removal. 2:03 PM:- sent email to Stephanie and asked her to submit revised well logs. 09/05/18-Hiralkumar Patel. 12:06 PM:- received email from Stephanie. she mentioned that the 4,500-gallon fuel oil UST has been excavated and removed. upon removal, the tank was discovered as having a concrete liner. the concrete liner required manual removal prior to cutting the steel tank in sections. endpoint samples were collected and have been submitted for analysis. as a proactive measure, eight

**COMMERCIAL BUSINESS (Continued)**

**S121984327**

(8) horizontal wells were installed within the excavation pit above the groundwater interface which will be utilized to treat the surrounding subsurface soils and underlying groundwater impacted from the leaking UST. no groundwater was encountered within the excavation. prior to backfilling, bioremediation solution was applied to soil to aid the process. Stephanie mentioned that the manual product removal and enhanced fluid recovery events have been conducted and will continue as planned to remove additional free-floating product. 09/19/18-Hiralkumar Patel. received email from Stephanie (at 4:25 PM on 09/18/18) including hydrographs of the most recent groundwater and product data, and UST removal letter for PBS registration. to date, 4 manual product recovery events and 3 enhanced fluid recovery events have been conducted. Stephanie mentioned that Impact Env. is planning to use soil vapor extraction concurrently with microbial application to remediate the soil and groundwater surrounding the tank grave. they will base the remedial design on pilot testing, monitoring and continued product recovery events. results of pilot study will be included in the work plan. tank removal report and remedial action work plan will be submitted soon. as per UST removal letter included in PBS registration, several deterioration (i.e. corrosion, pitting, holes) were observed in the sidewalls of the tank. fill and vent lines were cut and permanently sealed with concrete. 09/28/18-Hiralkumar Patel. 2:651 PM:- sent email to Stephanie and asked her to submit missing well logs (requested on 06/14/18), tank closure report, report for investigation/interim remedial measures conducted since May 2018 and well gauging data in tabular format (in addition to hydrographs). email copied to Mr. Troy, Greg Mendez-Chicas (gmendez-chicas@impactenvironmental.com) and Donald Peters (dpeters@impactenvironmental.com). 10/04/18-Hiralkumar Patel. received email from Stephanie (at 1:21 PM on 10/03/18) including well construction logs and well location map (including existing and proposed wells). she mentioned that Impact will install additional wells and continue manual product recovery. they are proposing 4 new wells at this time: two (2) recovery wells, one (1) Injection well, and one (1) SVE well. the next phase of field activities will include pilot testing, and IRM utilizing SVE to enhance removal of free product and provide optimum conditions for bioremediation. as per submitted well logs, screen was installed below water table in wells MW-3, MW-4 and MW-5. these three wells were installed on sidewalk. well MW-3 and MW-4 on 30th Street sidewalk and well MW-5 on 29th Street sidewalk. but diagram in well logs represents wrong information as it shows groundwater within screen interval. 10/09/18-Hiralkumar Patel. 11:52 AM:- received email from Donald from Impact. he mentioned that Impact is drilling additional wells today and are continuing with weekly manual product recovery activities. current work scope includes the installation of two (2) additional recovery wells, one (1) bioaugmentation injection test well and one (1) soil vapor extraction test well. in addition, time permitting, will install the downgradient delineation well MW-7. the interim plan of action includes continuation of the manual product recovery activities on a weekly basis and the completion of remediation pilot testing to assess both SVE and potentially petroleum degrading microbe injection as long-term remedial options. the corrective action plan will include the results of these activities and will detail recommendations for long-term remediation based on the results. 10/10/18-Hiralkumar Patel. 2:05 PM:- spoke with Donald at

**S121984327**

Impact and asked him to submit following by the end of 10/24/18: - revised logs for wells MW-3, MW-4 and MW-5 (either corrected diagram or highlighted notes indicating water table above screen) - report including tank removal activities (scaled site map including tank and sampling locations, endpoint soil/groundwater sample results, site observations and disposal manifests), work summary for installation of well MW-1R, and well gauging data (in tabular format with depth to water, depth to product and product thickness) also informed him that existing wells MW-3, MW-4 and MW-5 need to be either adjusted or reinstalled with proper screen depth. Donald mentioned that a corrective action plan will be submitted upon receipt of pilot study results. informed Donald that the project will be transferred to remediation group once corrective action plan received. 2:24 PM:- sent email to Donald summarizing above discussion. email copied to Stephanie and Greg. 2:49 PM;- sent email to Donald and asked him to include result of subsurface investigation along underground section of piping that was not removed during tank removal. email copied to Stephanie and Greg. \*\*needed investigation along underground section of fill/vent.\*\* \*\*needs revised well logs for MW-3, MW-4 and MW-5.\*\* \*\*remedial investigation report on desktop. waiting for well logs.\*\* \*\*PBS renewal due on 04/20/18.\*\* DEC requires: 1) PBS renewal, 2) delineation of contamination \*\*site map with sample analyticals on hard drive.\*\*"

Remarks: "cleanup pending"

Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Historical Generators:

Date form received by agency: 09/12/2006  
Site name: L I C BUSINESS CTR/FACTORY BLDG  
Classification: Small Quantity Generator

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: F002
- . Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLORO BENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**COMMERCIA PROPERTY (Continued)**

**S107789272**

Received call from Mr. Khouri. as per him, they found problem with fill line and after repair they did test again and system passed the test. asked him to send me letter report stating cause of problem and observations. Mr. Kasper from Midcounty Mechanical came to office to drop off tank test results and letter. as per letter, they have excavated the top of the tank and performed a test and found a leak on the vent line where it passes through the foundation wall to the outside of the building. replaced vent line and tested again and system passed the test. based on tank test results, case is closed. NFA sent out to Mr. Khouri."

Remarks: "PBS No: 2-31174 -PBS No. not found in UIS, may be invalid. REMOVING LINES AND DOING PRESSURE TEST"

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F001

. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002

. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**FINDS:**

Registry ID: 110009464098

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: "03/20/12-Hiralkumar Patel. DEC Paul and DEC Hussein went to the site for inspection and found free product on water in former heating oil tank location on Lot 1. DEC Paul asked for site visit. 2:00 PM:- visited site with DEC Vought. met with Gregory Wyka from ELM Group. inspected excavation of former heating oil tanks on lot 1. found layer of product on water and impacted soils at the groundwater interface. DEC Paul asked Gregory to report a new spill number based on findings of product on water. informed Gregory that the department requires complete delineation and remediation of petroleum contamination. Gregory Wyka The ELM Group Ph. (212) 962-4301 Ext. 304 (646) 895-3320 (C) Fax (212) 962-4302 email: gwyka@elminc.com Aurora Contractors, Inc. Ph. (631) 981-3785 3:51 PM:- a spill report created as wasn't reported by RP yet. 29-01 Borden Realty Co., LLC. \*\*property owner\*\* c/o Parkwill Management Corp. \*\*management company\*\* 60 East 56th Street, 7th Floor New York, NY 10022 Attn.: Robert Corroon \*\*property owner\*\* Ph. (212) 751-4620 Ext. 103 email: rcorroon@ix.netcom.com 03/21/12-Hiralkumar Patel. 12:33 PM:- spoke with Greg at ELM. he mentioned that after yesterday's site visit, work has been stopped as need to clarify some issues. he mentioned that as per approved work plan, they were not planning to excavate too deep below water table and were planning to use on-site soil to backfill the excavation, if not contaminated. asked him to contact

**FORMER NATIONAL ENVELOPE CORPORATION (Continued)**

**S110612090**

DEC Hussein regarding use of on-site soil to backfill the excavation. he mentioned that they were planning to excavation 2-4 ft below the water table. informed him that the Department requires complete delineation of contamination and excavation depth can be determined based on results of soil/groundwater samples. they have put absorbent pads on water in excavation. he asked to contact Mimi Raygorodetsky. 12:42 PM:- spoke with Mimi at ELM. informed her that the Department require complete delineation and remediation of contamination. Mimi mentioned that they were planning to excavate to feasible limit and collect endpoint samples. she also mentioned that they are planning to bring a frac tank on-site to pump contaminated water from excavation. agreed with her plan and informed Mimi that based on endpoint samples, the department may require additional investigation. asked her to send an email with description of the cleanup plan and a work schedule. discussed with DEC Austin. 2:55 PM:- sent letter to Mr. Corroon requiring removal of petroleum product from excavation, soil/gw delineation and endpoint samples. asked him to submit report by 04/30/12. letter emailed to DEC Paul, DEC Austin, DEC Oliva, DEC Hussein, DEC Ross and Mimi. 3:25 PM:- received call from Mimi. she mentioned that vacuum truck will be on-site tomorrow. they will continue excavation of contaminated material. 4:04 PM:- received call from Mimi and requested a site meeting. scheduled a site visit at 10 AM tomorrow. 03/22/12-Hiralkumar Patel. 10:00 AM:- visited site. met with Mimi, Greg and Mr. Corroon. vacuum truck was on-site. due to spill in bronx, left site before contractor begun excavation. Mimi will send update. 12:25 PM:- received email from Mimi. they dewatered teh pit and then excavated contaminated soil under water table. they dug to approx. 16 to 18 feet below grade (about 6 to 8 feet below the water table) and found clay layer with organic matter. it was light brown in color and exhibited no odor or PID readings. collected endpoint samples. 03/26/12-Hiralkumar Patel. received email from Mimi (at 6:21 PM on 03/23/12). she wanted to confirmed that petroleum contamination issue related to spill #: 1008547 and 1114115 will be handled in spills and DEC Ross will manage chlorinated solvent and PCB contamination. also she wanted to confirm that the department's letter dated 03/21/12 orerule the previous approval for petroleum related issue. 03/28/12-Hiralkumar Patel. 1:17 PM:- left message for Mimi. 04/02/12-Hiralkumar Patel. 3:49 PM:- received message from Mimi. they received lab data and will submit tomorrow. 04/03/12-Hiralkumar Patel. 4:21 PM:- received email from Mimi including results of endpoint samples. she is still waiting for results of E1, endpoint sample collected at 18 ft bg. reviewed sample results. it is missing results of sidewall samples E2, E3 and E4 also. SVOC contamination found in some samples. need to reivev data of other samples. 4:40 PM:- sent email to Mimi and asked to submit missing data prior to any discussion. 04/04/12-Hiralkumar Patel. 11:14 AM:- received email from Greg including a revised map with sampling depths. 04/10/12-Hiralkumar Patel. 4:40 PM:- received email from Mimi including result of sample E1, which was collected at 18 ft bg. reviewed available endpoint sample results. no VOCs found in any samples, but some SVOCs found. SVOC compounds were found below 3,300 ppb in most of the samples, except sample E9 (max 15,000 ppb Chrysene) and E13 (max 11,000 ppb Benzo(b)flouranthene). samples E9 and E13 were the endpoint bottom samples collected at 11 ft bg. another sample E1 was collected at 18 ft bg via test pit through excavation bottom. 04/11/12-Hiralkumar Patel. received call from Mimi

and Greg. Mimi mentioned that south sidewall samples E2, E3 and E4 were composited in sample EC1. she also mentioned that after collecting endpoint bottom samples E9 through E13, they did test pit in middle of excavation and collected sample E1 from 18 ft bg. 04/12/12-Hiralkumar Patel. discussed with DEC Austin. based on following, he mentioned that no further investigation is needed: - as there is no Naphthalene found in endpoint samples, other SVOC compounds could be result of backfill material - SVOC compounds were found in other part of property during investigation in Dec. 2010 - oil and water from tank excavation was pumped out 3:28 PM:- sent email to Mimi and asked to submit a final closure report. email copied to Greg and Mr. Corroon. 04/23/12-Hiralkumar Patel. 11:16 AM:- spoke with Mimi. asked her if any product appeared on water after initial pump out. she mentioned that after excavating soil contamination and collecting soil sample at 18 ft depth, they left excavation open for couple of hours to let water recharge. at that point, no product was observed on water and they collected water sample. asked her to submit a final closure report. 05/23/12-Hiralkumar Patel. 10:21 AM:- sent email to Mimi inquiring about tank closure report. email copied to Greg and Mr. Corroon. 10:23 AM:- received email from Mimi. the report is complete and currently being reviewed by their client. will submit report shortly, once reviewed. 06/27/12-Hiralkumar Patel. 2:56 PM:- spoke with Mimi. she mentioned that due to some conflicts between onwer and ELM group, report was not submitted, but she is finalizing the report and will submit in couple of days. 07/13/12-Hiralkumar Patel. received tank removal/spill closure report. based on available information, case closed. 3:29 PM:- sent spill closure letter to Mr. Corroon. letter emailed to Mr. Corroon, Mimi and DEC Hassan. \*\*refer to spill #: 1008547 also.\*\*"

Remarks:

"Petroleum product on water and contaminated soil observed in excavation of former heating oil tanks."

DEC Memo: "11/16/10-Hiralkumar Patel. 10:09 AM:- left message for Mimi.  
11/22/10-Hiralkumar Patel. 2:00 PM:- left message for Mimi. 3:57 PM:-  
received call from Mimi. she mentioned that site has a large vacant  
industrial building. currently, a potential tenant is looking to rent  
this place and hired Langan for environmental investigation. Langan  
installed borings around previously abandoned two 5,000 gal #4 oil  
USTs. during boring work, heavily contaminated soil (with strong  
petroleum odors/high PID readings/staining) was encountered between 4  
to 8 ft depth. Langan installed a temporary well and collected soil,  
groundwater and soil-vapor sample. ELM Group is working for property  
owner. Mimi is waiting for lab data from Langan which will probably  
be available by next week. based on results of recent sampling, ELM  
group will develop a work plan for complete delineation and  
remediation. 29-01 Borden Realty Co., LLC. \*\*property owner\*\* c/o  
Parkwill Management Corp. \*\*management company\*\* 60 East 56th Street,  
7th Floor New York, NY 10022 Attn.: Robert Corroon \*\*property owner\*\*  
Ph. (212) 751-4620 Ext. 103 email: rcorroon@ix.netcom.com Michael  
Burke Langan Ph. (212) 479-5413 12/30/10-Hiralkumar Patel. 10:11 AM:-  
left message for Mimi. 10:18 AM:- left message for Michael. 10:24  
AM:- spoke with Mr. Corroon. he owns the property. currently, site  
has one story warehouse building. Mr. Corroon is renting this place  
and new tenant will demolish the existing building and redevelop. Mr.  
Corroon refuse to provide info about future use. asked Mr. Corroon to  
provide complete contact info of the future tenant. Mr. Corroon  
mentioned that they own property for long time and they abandoned  
two 5,000 gal tanks about 7 years ago. during recent investigation,  
oily soil found near the boiler at 5-6 ft depth. Mr. Corroon suspects  
an old drywell in the area. asked Mr. Corroon to submit available  
reports for environmental investigation. 11:39 AM:- received email  
from Mr. Corroon. they are still negotiating the lease agreement and  
will provide futuer tenant's info, once lease is signed.  
01/05/11-Hiralkumar Patel. 10:33 AM:- left message for Mr. Corroon to  
submit report(s). 01/10/11-Hiralkumar Patel. 12:38 PM:- received  
message from Mr. Corroon. he will talk to Keith at ELM group and ask  
to submit documents. 01/20/11-Hiralkumar Patel. 12:52 PM:- received  
call from Mr. Corroon. he will submit documents by 01/24/11.  
01/21/11-Hiralkumar Patel. 3:57 PM:- received call from Mimi. she

**S110612090**

mentioned that due to confidentiality agreement between the owner and future tenant, they can not release the full Langan report, but will include work summary in their report. Mimi mentioned that during field work, they found high PID, staining and product on top of 1 inch diameter piezometer installed in boring, but no contamination found in soil or groundwater samples. Mimi will submit report on 01/24/11. 01/25/11-Hiralkumar Patel. received email from Mimi (at 5:40 PM on 01/24/11). she mentioned that owner is reviewing the report and she will send report by tomorrow. 4:16 PM:- received call from Mike from Langan. they did Phase I and Phase II investigations. asked him to submit copies of these reports. he will talk to his client and will send copies, if gets approval. 01/26/11-Hiralkumar Patel. 2:12 PM:- received letter report from Mimi including summary of reports prepared by Langan. 3:14 PM:- sent email to Mimi. asked her to submit complete Phase I and Phase II reports, prepared by Langan, for review. 3:27 PM:- received email from Keith from ELM. they got approval to release Langan's reports and will submit tomorrow. 01/31/11-Hiralkumar Patel. 11:00 AM:- received copy of Phase I and Phase II reports. abstract of Phase I: - prepared a Phase I for two properties: 29-01 Borden Ave (Block/Lot: 292/1) and 29-10 Hunters Point Ave (Block/Lot: 292/27) - Dutch Kills to the west of the property - Lot 1 is improved with an approx. 172,000 sq. ft. 1-story manufacturing building and Lot 27 is improved with an approx. 161,480 sq. ft. 1-story manufacturing building - both buildings are vacant - abandoned, generally east-west oriented railroad tracks are located in an overgrown vegetated area between the buildings - proposed development will include the demolition of existing structures and the construction of a FedEx warehouse/distribution facility - proposed design includes a one-story steel frame building with mezzanine level - a new 132,000 sq. ft. building will be located in the eastern section of the site - the first floor will consist of a 10-inch concrete slab that will be used primarily for vehicle parking and a partial mezzanine level will be used primarily as office and mechanical shop - the western section of the site will be paved parking area which extends to the western property line along the Dutch Kills - Lot 1 was occupied by Radio Engineering Laboratories from 1962-1970, by Warner Lambert Co., Inc-American Chiclet Division from 1977-1986, Waldes Truarc Inc. (a retaining ring manufacturer) in 1991 and Acosta Artdeco (concrete precast facility), Mountain Air Mechanical Inc. (cooling and heating sales and servicing) in 2005 - Lot 27 was occupied by the National Envelope corp. from approx. 1981-2006 less than ----- - black staining was observed in the main interior loading dock of the building at Lot 1 - black staining on the wall of the boiler room in building at Lot 27 - the center of the property (an area between two lots) was excavated to construct a basin with access to the Dutch Kills - the basin was filled in for development purposes between 1900 and 1924 - hazardous waste was generated at the site between 1994-2007 - on RCRA database, the subject property was listed as a large quantity generator in 1994-1996 and a small quantity generator from 2000-2007 in relation to waste generated at National Envelope at 29-10 Hunters Point Ave (Lot 27) less than ----- - waste types included non-listed ignitable wastes, unknown waste, PCE and silver less than ----- - eight violation related to generation of hazardous waste were issued by US EPA to National Envelope (EPA ID# NYD001344886) between 1998 and 2007 (one on 10/06/1998, three on 05/19/2000 and four on 05/09/2007) less than ----- - according to USGS maps,

**S110612090**

the subject property is relatively flat and the surrounding area slopes gently towards the west - groundwater at the site is approx. 8 ft bg and is presumed to flow west towards the Dutch Kills - the subject site was not listed in the drycleaner database; however, one dry cleaner was identified 900 ft east, northeast of the site and is no longer in operation less than ----- - 1898 Sanborn Map: the subject property is undeveloped; a proposed slip of the Dutch Kills extends through the center of the property - 1915 Sanborn Map: the subject site unchanged, except that the proposed slip is now labeled a basin - 1970 Sanborn Map: Lot 1 is improved with a one-story building constructed between 1956 and 1957 that is occupied by Radio Engineering Laboratories, Inc.; Lot 27 is improved with a one-story building, including a loft, offices and an electrical appliance warehouse, constructed between 1951 and 1952; the basin connected to the Dutch Kills was filled and the center of the property is occupied by railroad tracks that run east-west and then curve southeast along 30th street less than ----- - according to sanborn maps, the basin was apparently filled in the late 1940s for development purposes; however, based on 1924 aerial photograph, the basin was filled some time before 1924 - as per 1962 City Directory, Lot 1 was listed as AmerTran Transformers Division of Radio Engineering Lab less than ----- - as per 1983 City Directory, Lot 1 was listed as Warner Lambert Company, which is a manufacturer of pharmaceuticals, gum, and candy - as per 1991 City Directory, Lot 1 was listed as Waldes Truarc Inc. (a retaining ring manufacturer) - multiple saw cut markings and steel plates observed in both buildings (indicating old sub-surface pits, drainage pit, hydraulic lifts etc.) - on lot 27, bank of four slop sinks (which is roller wash sink area) is located immediately east of the boiler room at the western extent of the manufacturing floor. sections of piping below the sinks were broken; however, a drain below one of the sinks discharged into a bucket fixed into the concrete floor less than ----- - additional slop sink is located, on lot 27, along the northern wall near the center of the building (this sink in area close to ink storage). slop sink drained through a hose into an area below 2 ft by 3 ft metal plate - the loading dock in Lot 1 contains two approx. 10 ft by 20 ft concrete pads, two 8 inch by 8 inch dry wells, and four steel plates ranging in size from 2 ft by 2 ft to 2 ft by 3 ft in the eastern portion of the loading dock; as per owner's representative, these area may be related to a decommissioned UST - two fill ports and two vent pipes were observed along the southern exterior wall of the building on Lot 1 - a fill port and vent pipe were observed along the center of the western exterior wall in the parking lot adjacent to the boiler room in Lot 27 abstract of Phase II: - groundwater measurements recorded during the Phase II ranged from 6 to 11 ft bg and are likely influenced by tidal fluctuations of the Dutch Kills - conducted geophysical survey; confirmed location of 20,000 gal UST in western portion of the building on Lot 27 and identified two approx. 5,000 gal USTs in the central southernmost portion of the building on Lot 1 - scattered geophysical anomalies, indicative of unconsolidated soil, were identified throughout the site - installed 12 soil borings (SB1 through SB12) to depths ranging from 12 to 16 ft bg - two soil samples were collected per boring, except SB2 where recovery was limited - soil was observed to be historic urban fill material predominately of brown or grey-brown medium to fine sand with some silt, gravel, brick, wood and concrete - fill material extended into groundwater, upto 16 ft bg - petroleum-related odors and staining,

1: 29-01 Borden Ave: - alternate addresses for 29-01 Borden Ave (Lot  
1): 29-01 to 29-25 Borden Ave, 49-52 to 49-70 30th Street - PBS #: 2-304263. as per PBS record, site has two 5,000 gal USTs closed-in place. these USTs were installed in Apr. 1957 and closed in July 2006 and were being used to store #4 oil. as per record, these tanks were tested on 01/28/03. - no other spills found for lot 1. 2. Lot 27:  
29-10 Hunters Point Ave - alternate address: none - PBS #: 2-311774. as per PBS record, site has one 20,000 gal #2 oil UST in-service. UST installed in Jun 1952 and tested on 05/13/06. - spills on property: 9604370, 0102148, 0209638 and 0601095 - spill #: 9604370 was reported on 07/01/1996 due to 75 gal #2 oil spill during delivery due to defective gauge. case closed. - spill #: 0102148 was reported on 05/25/2001 due to tank test failure. case was closed based on passing retest result on 06/11/01. - spill #: 0209638 was reported on 12/19/2002 by FDNY due to findings of an unknown amount of ink spilled into Dutch Kills. as per DEC Zhao, a drain discharge found into Kills and dye test was planned (either by NYS DLE, NYC DEP or Coast Guard). spill closed. - spill #: 0601095 was reported on 04/28/2006 due to tank test failure. case was closed based on passing retest result. 3:33 PM:- sent email to Keith at ELM. asked him to send details about violation issued to National Envelope by EPA.

**FORMER NATIONAL ENVELOPE CORPORATION (Continued)**

**S110612090**

email copied to Mike at Langan. 4:10 PM:- received call from Mimi. discussed project with Mimi and Keith. Mimi requested that Langan should not be included on any future correspondence. informed her that Langan was included as they prepared Phase I and Phase II reports, but as Langan works for potential tenant, agreed with Mimi's request. she will contact Langan to get more details about EPA violations issued to National Envelope. during discussion, asked Mimi to confirm integrity of the 20,000 gal tank by having tank tightness test (which is due in May 2011). also informed her that the department requires complete delineation of soil and groundwater (if applicable) contamination around the two 5,000 gal USTs in Lot 1, site-specific groundwater flow direction (via installation of minimum of three permanent at least 4 inch wells) and tidal survey. also informed her that if owner choose to remove the previously abandoned 5,000 gal USTs from Lot 1 then the wells may not be needed based on endpoint sample results. asked Mimi to provide following information by 02/11/11: - details about EPA violation on Lot 27 - schedule for tightness test for 20,000 gal UST on Lot 27 - whether soil/gw investigation or tanks removal on Lot 1 4:38 PM:- received email from Mike from Langan. Mike mentioned that EDR report only indicate about number of violations and its categories and doesn't have any further details. EPA violations were issued for the following categories: - pre-transport - preparedness and prevention - state statute or regulation - general - manifest 02/07/11-Hiralkumar Patel. 11:26 AM:- received call from Mimi. she spoke with Mr. Corroon. she mentioned that the 20,000 gal UST will be tested soon to confirm its integrity. she also mentioned that they are planning to do some geoprobes to delineate the contamination and will remediate the area when the existing building will be demolished. informed her that if building demolition occurs by end of April 2011 then the Department can wait for remediation at that time, otherwise owner has to start remediation in May 2011. informed her that the property owner has to submit written document confirming that the remediation will start by May 2011 (whether building demolished or not). informed Mimi that the new building foundation must not be poured in contaminated zone until remediation is completed or a remedial action plan is approved. no CBS record found on any lot. DEC Vought will check haz-waste databases for any record. 2/15/11-Vought-Site also referred to Section A due to concentrations of up to 5880ug/m3 PCE found in soil vapor samples. Site was formerly occupied by National Envelope who left site (and also had documented on-site use of solvents). DEC Spills unit is currently managing investigation and remediation of #6 free product found at on-Site USTs. Owner is currently seeking to sell property to Federal Express so that they may demolish onsite structures and construct new onsite distribution center. A full file review needs to be performed to aid in site classification. 3/9/11-Vought-Meeting with RHWRE to discuss possible transfer of chlorinated solvent issue to another PM in Section A due to heavy workload. 03/21/11-Hiralkumar Patel. 4:33 PM:- sent email to Mimi inquiring update. 03/22/11-Hiralkumar Patel. 4:29 PM:- received email from Mimi. she mentioned that owner is still discussing about either investigation now or tank removal when building demolition occurs. Mimi will call back by next week with confirmed answer. 04/05/11-Hiralkumar Patel. received email from Mimi (at 6:27 PM on 04/01/11). she mentioned that on-site building will be demolished in 8-9 months and at that point, old UST and associated contamination will be removed. discussed with DEC Austin about delineation of

soil/gw contamination and high PCE/TCE in soil-vapor samples. Austin asked to send email with brief discription about the project for possible transfer to Section A due to PCE/TCE concentration and historical use of chlorinated solvents on site. 2:49 PM:- sent email to DEC Austin with site description. 04/06/11-Hiralkumar Patel. 9:09 AM:- received response from DEC Jane indicating that as no contamination found in soil or groundwater samples, site would not require any further investigation under the superfund program. she mentioned that the department may require investigation if, during future work (petroleum investigation/remediation), any additional data is generated that identifies chlorinated solvents in soil or groundwater. discussed with DEC Austin. he asked for further investigation regarding chlorinated solvents. he asked to find out location of chlorinated solvent storage, operation, discharge points, drain structures etc. he mentioned that if the property owner doesn't know about storage/use/discharge location of chlorinated solvents, then the department requires soil/groundwater sampling on both lots with multiple borings/wells. 1:49 PM:- left message for Mimi. 1:51 PM:- left message for Mr. Corroon. 2:09 PM:- sent email Mimi and Mr. Corroon informing that the department requires further investigation of petroleum and chlorinated solvent contamination. asked them to call back to discuss further. 3:48 PM:- received call from Mimi. informed her that as building demolition would occur after 9 months, petroleum remediation would not occur for another year and the department does not agree with this time frame. as such the department requires complete delineation of petroleum contamination. also discussed about chlorinated solvent issue. Mimi mentioned that the property's insurance company is covering all issues except petroleum so any investigation under the spill number will be paid by property owner. and owner wants to investigate chlorinated solvent issue under other program so they can get coverage from insurance company. Mimi asked to send copy of regulation which allows spills section to require investigation of non-petroleum substance. discussed with DEC Austin. he mentioned that the department, not the spills section, requires the investigation of chlorinated solvent contamination. he mentioned that if responsible party refuse to do such investigation and inquires about authority of spills section, then case will be referred to legal. 4:18 PM:- left message for Mimi. 4:59 PM:- received message from Mimi. 04/07/11-Hiralkumar Patel. 10:46 AM:- received message from Mr. Corroon. 04/08/11-Hiralkumar Patel. 10:35 AM:- left message for Mimi. 04/11/11-Hiralkumar Patel. 11:57 AM:- received call from Mimi and Keith from ELM. Mimi asked about regulation for PCE investigation. informed Mimi that the department (not the spill section) requires PCE investigation and all DEC rules/regulation applies in this matter. informed her that after getting preliminary data, this case may be transferred to other section. Mimi mentioned that after findings of PCE use on property and PCE concentration in soil vapor samples, they did further investigation to locate locations of chemical storage/process/discharge/drains etc. and now instead of collecting soil samples, they wants to use other technique which reads only halogenated compounds in soil and groundwater during delineation work. this way they don't need to wait for lab results. asked Mimi to submit details about this technique so can be discussed with supervisor. Mimi also inquired about delineation of petroleum contamination. as discussed earlier, approved Mimi's request for visual delineation via geoprobe and not requiring soil/groundwater

sampling as it is #6 oil and expecting to see stained soil if area is contaminated. 04/13/11-Hiralkumar Patel. 9:56 AM:- received message from Mr. Corroon. 04/14/11-Hiralkumar Patel. 2:05 PM:- spoke with Mr. Corroon. informed him about required investigation for petroleum as well as chlorinated solvent. during conversation Mr. Corroon mentioned that currently they don't have any insurance so there is no issue about covering cost of chlorinated spill investigation. 04/22/11-Hiralkumar Patel. received email from Mimi (at 7:16 PM on 04/21/11) including soil vapor contour map. she mentioned that heavy PCE contamination in soil-vapor samples were found on western side in southern lot (Lot 1), but as per Phase I, chlorinated solvent was used in northern building only (Lot 27). Mimi proposed visual observation of both properties, potential geophysical survey on western portion of the two properties and delineation of chlorinated solvent contamination around potential release points. she proposed to collect soil sample with most significant evidence of impact (PID/staining/odor etc.), if present or else collection of soil sample right above the water table. she also proposed collection of groundwater sample if contamination observed in boring. 04/29/11-Hiralkumar Patel. discussed proposed PCE investigation method with DEC Austin. before approving sampling strategy, Austin asked to inspect the site to find out possible PCE release areas (storage/process/discharge/drains/pit/damaged floor/stains etc.). 2:46 PM:- sent email to Mimi and asked her to schedule a site visit with full access to every rooms on property. email copied to Keith and Mr. Corroon. 05/03/11-Hiralkumar Patel. scheduled a site visit at 11 AM tomorrow. 05/04/11-Hiralkumar Patel. 11:00 AM:- visited site. met with Mr. Corroon, Keith (ELM) and Kenny (Midcounty Mechanical). Kenny mentioned that his company was contracted since 1971 to maintain/service electrical/mechanical parts. Kenny Midcounty Mechanical Ph. (347) 386-2891 email: midcountymechanical@verizon.net Kenny mentioned that the company was primarily making plain envelopes (cutting papers, applying glue and fold it). national envelope was also using three printing machines to print some utility company envelopes. three parallel printing machines were located in central western portion of lot 27 starting with one machine close to western foundation wall and close to 20,000 gal UST. former boring SB1 installed in parking lot, in area on other side of western foundation wall. no contamination found in boring SB1. as per Kenny, the company was storing ink in about 5-6 55 gal drum. inspected drum storage area, which is located close to former boring SB8. found sewage injection pit not far from the ink storage area. as per Kenny, all the drains inside the building is connected to this sewage injection pit and from this pit, sewage pumped out into city sewer system (pump was needed as city sewer is at higher elevation than pit inside the building). Kenny mentioned that about 6-7 years ago, company changed from oil based ink to water based ink. the former boring SB8 was installed in area between the ink storage and sewage injection pit. as no soil/groundwater/soil-vapor contamination found in SB-08, Keith mentioned that no further investigation is needed in former ink storage area. also inspected a machine shop where internal machines were being repaired. no sign of spills (odor or stain on concrete) observed in machine shop area. while discussing about EPA violations, Kenny mentioned that company received EPA violations due to illegal discharge of roller wash waste into city sewer system. inspected roller wash sink area. Kenny mentioned that workers were dumping roller washing waste into sewer system but was stopped after EPA's

**S110612090**

violation. during inspection, found pit in floor and found paper waste into the pit. Kenny mentioned that there was a paper waste compactor located on this pit. there was no use of any chemical in the pit. this pit was found closer to loading area closer to former boring SB2. inspected area of former 5,000 gal USTs in Lot 1. Kenny mentioned that their company changed from oil to gas heating system. Kenny remembers that both 5,000 gal tanks were cleaned and tested tight prior to abandoning in place. found two concrete pads where old boilers were located. found a dry well pit (0.5 ft by 0.5 ft) adjacent to both boiler pads. Kenny suspect that oil found in SB7 could be result of oil dumping into two dry well pits. Keith will conduct a geoprobe investigation to delineation petroleum contamination. based on observations during the site visit, asked Keith to investigate in three areas: area around SB3, roller washing sink and area along the drain structure from the roller wash sink. also suggest him to conduct a soil-vapor delineation starting from SB3. Keith will discuss with his supervisor and submit work plan next week. asked Kenny to submit documents regarding testing of 5,000 gal tanks prior to abandoning. 4:49 PM:- sent email to Kenny and asked him to submit documents regarding cleaning/testing/abandoning of two 5,000 gal USTs in Lot 1. email copied to Keith and Mr. Corroon. 05/19/11-Hiralkumar Patel. 2:03 PM:- spoke with Mimi. they are currently reviewing the work plan and once client approves it, she will submit work plan by 05/23/11. 05/20/11-Hiralkumar Patel. 4:08 PM:- received email from Mimi. she hasn't got chance to review the work plan. she will send work plan soon after client's review. 05/24/11-Hiralkumar Patel. 11:06 AM:- spoke with Keith and asked him to submit work plan by 05/31/11. 06/01/11-Hiralkumar Patel. received work plan from Keith (at 1:08 PM on 05/31/11). abstract: - two 5,000 gal USTs on Lot 1 were closed-in-place on 07/27/06 - as per tanks closing firm, both tanks were pressure tested prior to closure and both tanks passed the test, but no documentation is available - two drains (or dry wells) were noted within the boiler room slab that appear to connect together with piping - there is an outflow pipe in one of the drains that leads to an unknown discharge point less than ----- - proposes to advance four soil borings to a depth of 12 ft bg, in the boiler room, in the vicinity of former boring SB7: one to the east, one to the west, one to the northeast and one to the northwest - soil samples from borings around SB7 will not be analyzed in a lab - highest concentration of TCE detected in soil was 55 ppb at 2-4 ft bg in SB3 and in groundwater was 4.9 ppb in TMW2 - two highest concentrations in soil-vapor samples, are located within the lot 1 building - the vapor concentration gradient increases in the direction of SV3, suggesting that any source for chlorinated solvents might be west of SV3 - even though several potential release points exist on lot 27, the chlorinated solvent contamination investigation focuses on the western loading dock/parking area in lot 1, west of SV3 - proposes installation of three soil borings in the parking lot to the west of SV3 - two soil samples (one with highest PID and one from six-inch interval above groundwater interface) and one groundwater sample will be collected from each boring in area of former SV3 and samples will be analyzed for chlorinated compounds via EPA method 8260B and 8260C the submitted work plan is not acceptable as requires investigation in following areas also: - soil/gw delineation on south side of the former boring SB7 - soil/gw investigation at the discharge point of an outflow pipe from one of the drain (dry well) in boiler room on lot 1 (area near former boring

TCE-----3.2-----51-----5.3-----3.6-----3.7-----5.  
0-----5.7-----4.4 TCE in groundwater samples (in ppb):  
-----TMW2-----TMW3 TCE-----4.9-----1.3 06/08/11-Hiralkumar Patel. discussed with DEC Austin requesting case transfer to section A due to former on-site ink (which contains chlorinated solvents) use, former EPA violations, improper discharge of a waste water to on-site drains, shallow soil samples with TCE contamination, sub-slab (6 inches below floor) soil-vapor samples contaminated with TCE and PCE. Austin asked for case summary. 06/14/11-Hiralkumar Patel. 11:36 AM:- sent email to DEC Austin with case summary. DEC Austin discussed case with DEC Paul. as the site was listed as large quantity generator of hazardous waste, Austin asked to contact DEC Hussein for further information regarding the site. 06/15/11-Hiralkumar Patel. 1:57 PM:- sent email to DEC Hussein requesting further information regarding RCRA violations and other RCRA issues. 06/21/11-Hiralkumar Patel. 10:37 AM:- spoke with DEC Hussein. he mentioned that there is no open case against National Envelope, but they have large file. he asked to come and check file for any information. 06/27/11 after discussing with DEC Austin, DEC Hassan and DEC Linda Ross, case transferred to DEC Ross. 7/25/2011-Linda Ross Meeting at Region 2 headquarters. Sign up sheet is electronically filed. Attendees Linda Ross-DEC Paul John-DEC Keith Brodock, ELM Robert Corroon, Owner, COO Richard Zirinsky Associates Michael Bogin, Esq. for Owner Jordan Barringer, DEC intern Erick Kraemer, DEC intern Lou Oliva, Esq. DEC Hassan Hussein-DEC Planning to demolish the two buildings and remove the slabs. The buildings were built in the 1950s. Federal Express (Fed Ex) is planning a sorting facility for the site. Fed Ex wants the facility to be operational by the holiday season 2012. There will be a new building built for the site, with a new slab and a parking garage. Lot 1-Boiler room-2 4,000 gallon #4 fuel oil tanks which have been closed in place-they passed their last tightness test. Therefore, not sure where the DNAPL in area is from. The DNAPL did not have any analytical exceedances. Might be severely weathered. There are two floor drains in the boiler room. Additional soil sampling is proposed for the boiler room and to delineate the CVOC soil vapor beneath the slab beneath part of the building. The CVOC soil vapor is separate from the boiler room DNAPL. Lot 27 (former National Envelope)- There is a 2,000 gallon UST, still in place. DEC discussed that a Closure Plan is necessary for the hazardous waste storage area. Clean closure is required and there needs to be a public notice. Sewer testing is also required for the sewer injection pit since there were discharges to the sewer and possible the sewer injection pit. Entire Site - Discussed the possibility of putting a vapor barrier and sub-slab depressurization system in the new Fed Ex building - LR to contact Health Depart and discuss. Relevant guidance document is CP-51 and for other constituents will use industrial numbers from Part 375. Demolition and asbestos removal are planned for the end of August. Agree for site visit for next day at 1:00 pm

on site. 7/26/2011 Site visit 1:00 pm Attendees Hassan Hussein, DEC-photos taken Linda Ross, DEC Bob Corroon, Owner Keith Bradock, ELM Walk through the two buildings, first, 29-01 Bordon Avenue and second National Envelope 29-10 Hunters Point Avenue. First Building (29-01 Bordon Avenue-Lot 1) has a subslab vapor issue that exceeds the NYS Department of Health guidelines. Agreed to collect two soil samples out side of the loading docks near the high vapor reading to determine if there was a relase of VOCs to the soil in this area. The additional requested boring is in the train track area which is heavily treed and it would be difficult to get a rig in for sampling, so a soil sample will be taken below the organic debris with a hand sampling device. This sample will only be analyzed for VOCs to determine the source of the VOC vapor. Looked at the corrosion around the steel beams discussed in Phase I. The cement floor was intact and unstained and so no pathway to soil and groundwater is expected. The boiler room which had the DNAPL with no analytical exceedances was discussed and it was agreed that the two floor drains will be sampled for VOCs and an additional boring will be placed to the north of the floor drains. Second Building (29-10 Hunters Point Avenue-Lot 27, former National Envelope)needs a closure plan for the hazardous waste storage area. Staining in the hazardous waste storage area. Discussed how the sewer injection pit and the sewer needs to have a leak test to see if there was a release to soil and groundwater on th site. If there is a leak in either the sewer or the sewer injection pit, additional delineation may be required. 8/2/2011 Monthly Internal Progress Report for July 2011 prepared by L.Ross:Internal meeting was held on June 27, 2011 with Kumar Patel and Randy Austin to transfer the site to Linda Ross. This is a spill site that will be redeveloped for a Federal Express facility. Fed Ex will be renting the property. There is a petroleum contaminated area and TCE vapor area. The site needs additional study regarding the sewer system pathway and greater delineation of contamination. On July 5, 2011 the Spills unit contacted the Former National Envelope team to inform them that the new project manager is Linda Ross. A meeting was held on Monday, July 25, 2011 to discuss the site. The meeting notes and signup sheet are listed in the DEC notes and Edoc. OGS, DER and the site owner, consultant and attorney attended the meeting. The topics covered were: introductions, overview of the proposed redevelopment, review of the environmental investigations to date and discussion of proposed work plan. On July 26, 2011 Hassan Hussein and Linda Ross performed a site walkthrough to discuss sampling locations and to see the interiors of the buildings. On July 26, 2011 ELM the site consultant submitted an engineering drawing and a brief discussion of the air exchange. On July 28, 2011 ELM asked questions via email regarding the investigation work plan. 03/20/12-Hiralkumar Patel. DEC Paul and DEC Hussein went to the site for inspection and found free product on water in former heating oil tank location on Lot 1. DEC Paul asked for site visit. 2:00 PM:- visited site with DEC Vought. met with Gregory Wyka from ELM Group. inspected excavation of former heating oil tanks on lot 1. found layer of product on water and impacted soils at the groundwater interface. DEC Paul asked Gregory to report a new spill number based on findings of product on water. informed Gregory that the department requires complete delineation and remediation of petroleum contamination. Gregory Wyka The ELM Group Ph. (212) 962-4301 Ext. 304 (646) 895-3320 (C) Fax (212) 962-4302 email: gwyka@elminc.com 3:51 PM:- a spill report (# 1114115) created as wasn't reported by RP yet. 4-27-12 - Hassan Hussein

received a letter from Dawn Hetrick of NYSDOH regarding vapor intrusion at the Borden Ave site. 5-23-12 - Hassan Hussein received a letter from Michael Burke date 5-23-12 responding to DEC letter of September 16, 2011. 5-23-12 - Hassan Hussein responded Michael Burke's letter of 5-23-12 in an email correspondence. 6-01-12 - Hassan Hussein received an email from Michael Burke containing another copy of the 5-23-12 letter and additional information on the proposed Stego Wrap vapor barrier. Hassan responded with an email to Mr. Burke explaining that he will review the submitted information and get back to him some time following week. Later the same day, Mr. Burke sent a copy of his email to Dawn Hetrick of NYSDOH. Dawn responded with an email that same day explain the DOH concerns and explained what she will follow up with NYCDEP to get further guidance on the city's review procedure. 6-08-12 - Hassan Hussein completed his review of Michael Burke's 6/1/12 submittal. Hassan also sent Dawn Hetrick email on 6/8/12 asking her if she has an update. She responded with an update regarding her efforts to contact the city and explained that the approach taken by the company is reasonable. 6-08-12 - Hassan Hussein sent Michael Burke an email approving the proposed approach outlined in his 5/23/12 letter. 10/5/12: Issued letter requiring completion of the second round of delineation proposed in the previously approved 11/17/11 workplan. Subsurface Investigation Report due 11/16/12. 12/11/12 - Carlson: Received phone message from Peter Zimmerman, 212-962-4308, 917-952-9068. He is the new project manager. Progress report to be submitted. 1/15/2013 - Carlson: Left voice message for Peter Zimmerman. Investigation report overdue. 2/1/13 - Carlson: Reviewed letter dated 1/24/13 - only one proposed reinstallation of MW1. DEC requires four wells as per 2011 workplan, left voice message for Peter Zimmerman. 2/4/13 - Carlson: Spoke to Peter Zimmerman, a two part workplan will be submitted, they will mobilize twice, first to reinstall MW-1, and then mobilize again to install delineation wells. 5/27/15 - Raphael Ketani. I am the new project manager for the spill case. The site used to be occupied by National Envelope, but is now a FED EX distribution facility. The two buildings which used to occupy the site were torn down several years ago. Michael Burke of Langan Engineering (212) 479-5582 was involved in the spill case. He mentioned that Mimi Raygorodetsky (212) 479-5441 and he were involved in the National Envelope/FED EX project manager for Langan. Mr. Burke added that Langan's involvement was only due diligence. Robert Corroon, Jr., Chief Operating Officer (212) 751-4620, x103, from Richard Zirinsky Associates. RZA is the corporate entity which owns the entire FED EX site. However, the two parcels which comprise the site are owned by the subsidiary companies 2901 Realty Co, LLC and 2910 Realty Co, LLC. There was a later spill opened for the site, #1114115, due to the discovery of contaminated soil and groundwater while removing a UST. It was managed by Kumar Patel of the Region 2 Spills Unit. It was closed on 7/13/12. According to the above case notes, the second round of contaminant delineation was never performed. 5/28/15 - Raphael Ketani. An orientation meeting took place today as planned. In attendance were Mr. Corroon of RZA, Keith Brodock, PE (212) 440-6702/cell (646) 895-3325, Hassan Hussein and myself. Initially, Mr. Brodock and Mr. Corroon described the site history and the remediation history. The site itself is bounded on the west by the Dutch Kills, on the south by Borden Avenue, on the east by 29th Street and on the north by Hunters Point Boulevard. The site consists of two separate lots. There used to be two buildings on the entire site. The southern

**FORMER NATIONAL ENVELOPE CORPORATION (Continued)**

**S110612090**

building was at 2901 Borden Avenue and was used by Radio Engineering Laboratory as a warehouse. They made personal radios for the public and the military and used dry transformers (no liquids or PCBs). The northern building had been used by National Envelope. Both buildings were completely removed and the present FED EX distribution center building was constructed in the eastern part of the entire site. The building is slab on grade, contains a vapor barrier underneath and has a high capacity ventilation system. Some years ago, two USTs were removed from the boiler room which was located in the southern building near the southwest corner of the entire property. It was found that one 5000 gal. tank had leaked, but the other 5000 gal. tank was intact. A spill was called in (#1114115), the remediation took place, and the case was closed on 7/13/12. To the north, a RCRA site was located along Hunters Point Boulevard near the northwest corner of the entire property. The material was cleaned up and the case was closed. Thus, the subject oil spill case is the only open case for the entire site. However, additional borings were done within the northern half of the site. PCB contaminated groundwater was discovered with the highest concentration at 0.654 ppb at the very southwestern corner of the northern half of the property. The soil samples also had PCBs. The area was resampled and again there were PCB results. The DEC sent a letter dated 1/24/13 requiring further delineation of the contamination. Mr. Brodock stated that he was not aware of any source on site for the PCBs. Mr. Hussein stated that there was an agreement that more data was needed. There was supposed to be new sampling and the installation of 2 new wells. He added that some companies who had occupied the buildings may have used PCBs, but this was uncertain. PCBs have a low affinity to water. He finished by stating that we needed to know where the PCBs had come from. Mr. Brodock said that he believed the PCBs were in the historic fill. He added that the western half of the northern parcel had been a turn around area of open water for the Dutch Kills and was later filled in. Mr. Corroon asked how one can know that the PCBs didn't come from the site. I responded that step out borings could be done from the edge of the Dutch Kills and continued inland to the edge of the FED EX building. This was, one could see the contamination concentration gradient of the PCBs. If the concentrations are highest near the Kills, then the source is the Kills. Mr. Brodock stated that all of the petroleum spills had been remediated. In the end, it was agreed that I would review the work plan that was previously approved by the DEC and the DEC's 1/24/13 letter and provide comments to Mr. Hussein. Then the DEC would let RZA and Integral know how to proceed. After the meeting, I reviewed spill case #0903437, Borden Avenue Bridge. In particular, I reviewed the total diesel range organics (DRO) concentrations and the PCB analytical results for the spill case that were contained in the Test America 6/29/09 analytical report. I did this in order to confirm whether the Dutch Kills could be a source of PCB contamination for the National Envelope/FED EX site. A sample of treatment system intake water from the Dutch Kills was analyzed. Two sediment samples (S-1 and S-2) were also analyzed, one from each coffer dam that had been constructed in the Kills itself. S-1 had 5,100,000 ppb of DRO and S-2 had 7,000,000 ppb of DRO. The PCBs tested for were: PCB-1242, PCB-1254 and PCB-1260. The treatment system intake water sample had 1.6 ppb, 2.3 ppb and 2.2 ppb of PCBs, respectively. S-1 had 590 ppb, 520 ppb and 760 ppb of PCBs, respectively. S-2 had 720 ppb, 1100 ppb and 890 ppb of PCBs, respectively. 5/29/15 - Raphael Ketani. I reviewed the ELM Group

**FORMER NATIONAL ENVELOPE CORPORATION (Continued)**

**S110612090**

11/15/11 and 11/17/11 Revised Work Plan: NAPL Delineation, CVOC Investigation and PCBs Investigation. Both versions of this latest work plan were the same word for word except for the first paragraph under the PCB Investigation section which described the details of the monitoring well construction. In the work plan, ELM states that they do not believe the sources of the CVOCs and PCBs are the result of on site activity. They add that the contaminants may be in the historical fill. In the ELM Group work plan, it is stated that the Langan Engineering 12/7/10 Phase II Report indicated the detection of PCBs at their well/boring TMW-2/SB2 in the very southwestern corner of the north parcel. The groundwater sample results were 0.654 ug/l for total PCBs. Well over the TOGS 0.09 ug/l limit. In light of this, ELM had planned on installing one boring/well, SB22/MW-1, near SB2. If PCBs would be detected in the groundwater, then borings/wells SB23/MW-2 to SB25/MW-4 would also be installed in the southwestern corner of the north parcel. The work plan also calls for installing borings SB13 to SB19 in the middle of the southern border of the entire property in order to investigate for NAPL and the installation of borings SB20 and SB21 in the southern quarter of the entire property in order to investigate for CVOCs. I also reviewed the DEC letter dated 10/5/12 to Mr. Carroon. The letter stated that as PCBs were detected in the groundwater at TMW-2 and MW-1, the Department required the installation of wells MW-2 to MW-4. Two soil samples were to be taken from each boring. One from the groundwater interface and a sample with the highest contamination. All soil samples and the subsequent groundwater samples were to be tested for PCBs, CVOCs, VOCs and SVOCs. 6/2/15 - Raphael Ketani. I received the Integral Consulting 1/24/13 letter. In the letter, it was stated that they would install SB22/ELM MW-1. They would look at the results from the soil and groundwater samples and see whether they validate the Conceptual Site Model (CSM). The idea behind the CSM is that the PCBs are confined to the Area of Interest (AOI). The installation of additional borings and wells will be evaluated based upon the analytical results. In consideration of my review of the 11/17/11 Revised Work Plan, the DEC 10/5/12 letter and the Integral 1/24/13 letter, I determined that installing borings/wells SB23/ELM MW-2 to SB24/ELM MW-4 was the best way to proceed. I sent Mr. Corroon [(212) 751-4620, x 103] and Mr. Brodock [(212) 440-6702/cell (646) 895-3325] an email today stating that the Department required that they conduct the work that is described in the approved 11/17/11 work plan and the DEC letter dated 10/5/12. I set a deadline of July 10, 2015 for the work to start. 6/3/15 - Raphael Ketani. Mr. Corroon sent an email agreeing with DEC's decision. 7/17/15 - Raphael Ketani. Mr. Brodock sent me an email today: We installed one well on July 10th, and are scheduled to install the other two wells on July 30th. We attempted to install all three wells last week, but were unable to access the two well locations closest to the bulkhead due to the small fence opening. We've rescheduled with the driller to bring a smaller rig which should fit into the 6.5 opening. I'll send another update after those wells are installed on July 30th. 12/15/15 - Raphael Ketani. As the well installation and results report was never received and as there have been no progress updates, I sent an email to Mr. Corroon and Mr. Brodock requesting the report and an update. A deadline of January 8, 2016 was set for the submission of the report. 1/14/16 - Raphael Ketani. Mr. Brodock (212) 440-6702/cell (646) 895-3325/kbrodock@integral-corp.com called to request an extension of the deadline for submitting the investigation report. He asked that

**FORMER NATIONAL ENVELOPE CORPORATION (Continued)**

**S110612090**

the due date be set to February 29th, 2016. I agreed to the deadline extension. 2/29/16 - Raphael Ketani. Mr. Brodock sent me an email requesting an extension of the report submission deadline to April 15. The reasons for his request were that the financial concerns regarding the project were resolved only last week on Wednesday (2/24/16). Now that they have been paid, they are now able to prepare the report. Mr. Brodock stated that they can now meet the April 15th deadline. I granted the extension of the deadline. 4/19/16 - Raphael Ketani. As the 4/15/16 deadline has come and gone without the submission of the investigation report, I sent an email to Mr. Brodock requesting the report and a progress update. 4/22/16 - Raphael Ketani. Mr. Brodock (kbrodock@integral-corp.com) responded to my 4/19/16 email. He stated that his client (FED EX) had authorized the generation of the report on 4/13/16. So he needs more time to prepare it and send it to the DEC. He suggested a submission date of no later than 4/27/16. I responded by email and stated that this was acceptable. 4/28/16 - Raphael Ketani. I reviewed the Integral Engineering 2015 PCB Investigation and Historic Fill Evaluation Report dated 4/27/16. Boring SB-25 was installed on 7/10/15 by AARCO Environmental Services Corp to 15 feet below grade. MW-1 was paved over and couldn't be found. SB-23 and SB-24 were installed to 15' and 13' below grade, respectively, on 7/30/15. One soil sample containing fill was taken from above the water table at SB-23. Two soil samples containing fill were taken from above the water table at 5.5'-6.5' and 8'-10' below grade at SB-24. The soils observed were sand, silt, clay and fill. There were no native soils. Groundwater was encountered at 7' and 11' below grade. Each location was turned into a well: SB-23 became MW-2; SB-24 became MW-3; SB-25 became MW-4. The soil samples were submitted to the lab for CVOC and PCB analyses. All of the results were well below the CP-51 standards for commercial and industrial sites. Groundwater was sampled on 8/12/15. Groundwater was determined to be 7.5' and 10.4' below the top of the casing. The results for PCE for samples taken from wells that were at or near the Dutch Kills were from non-detect to 0.88 ppb. The results for TCE from these same samples were from non-detect to 10 ppb. Cis-1,2-dichloroethene was from non-detect to 12 ppb. While there were exceedences of the TOGS 1.1.1 standards of 5 ppb for these analytes, the results were still very low. The PCB results were from non-detect to 2.57 ppb (Aroclor 1260) for the samples. Samples taken from wells at or near the Dutch Kills had hits of CVOCs and PCBs. While samples taken from wells inland to the east were entirely non-detect for CVOCs and PCBs. From the data in the report and the data in the other documents in the case file, I determined that the source of the CVOC and PCB contamination was the Dutch Kills and not the site. As the oil spill in the southern part of the site had been remediated and as the Dutch Kills appears to be the source of the CVOCs and PCBs in the fill and the groundwater, and as there are no sensitive receptors near the site and since the site is surrounded by commercial and industrial facilities, I determined that there was little or no risk to the public or the environment from any residual contamination in the fill under the site. Therefore, I closed the spill case effective today. A spill closure letter was sent to Robert F. Corroon, Jr., 29-01 Borden Realty Co., LLC, 60 East 56th Street, FL 9, NY, 10022-3342 (rc@parkwill.net). Mr. Brodock, Mr. Jordan Junion of Integral and Robert Zirinsky (partner at 29-01 Borden Realty; robertz50@aol.com) were copied. [More specifically, Robert Zirinsky works for Ralph Zirinsky Realty Co., which is a partial

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D035

. Waste name: METHYL ETHYL KETONE

. Waste code: F003

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**FINDS:**

Registry ID: 110004322867

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

It appears it was coming from a culvert adjacent of concrete plant. Higher concentrations (darker) were observed exiting culvert. Tide appeared to be coming in and keeping dye on NW corner of creek. Interviews with concrete plant reps revealed LIRR was on property Sun night asking to look at outfall. I spoke with GLoria Russo of LIRR. She informed me LIRR does not have property near there and that Sunnyside yard is owned by Amtrak. She has a call into a contact at the LIRR East side access to determine additional info. I spoke with Ms. Russo again, they have no contractors performing dye tests. Dye dissipated by 3/16/10. Closed. "  Remarks: "Unknown green dye in Newtown Creek coming from culvert. May be owned by Amtrak."

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: B002  
. Waste name: B002

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Site name: SCHICK TECHNOLOGIES INC  
Classification: Conditionally Exempt Small Quantity Generator

Date form received by agency: 07/14/1999  
Site name: SCHICK TECHNOLOGIES INC  
Classification: Small Quantity Generator

Date form received by agency: 05/08/1998  
Site name: SCHICK TECHNOLOGIES INC  
Classification: Large Quantity Generator

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 05/20/2010  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Not reported  
Date achieved compliance: Not reported  
Evaluation lead agency: State

Historical Generators:

Date form received by agency: 01/01/2006  
Site name: ANCHOR ENGRAVING CO INC  
Classification: Small Quantity Generator

Date form received by agency: 09/15/1992  
Site name: ANCHOR ENGRAVING CO INC  
Classification: Small Quantity Generator

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

**FINDS:**

Registry ID: 110004495001

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Small Quantity Generator

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

**FINDS:**

Registry ID: 110004565015

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: The 0.88-acre site is located at 27-10 49th Avenue in the Borough of Queens, NY in a commercial/urban area. It is situated at the southeast corner of 49th Avenue and 27th Avenue. The site is bordered to the east by the Dutch Kills, to the south by commercial property, to the west by 27th Avenue, and to the north by the 49th Avenue. The Dutch Kills is part of the Newtown Creek NPL site. Site Features: The site currently consists of a two-story warehouse with offices located on the first and second floor. The remainder of the site is paved parking for the building. Current Zoning and Land Use: The site is currently zoned as manufacturing M3-2 and is surrounded by warehouses and industrial uses. The nearest residential properties are located 0.54-miles east of the site. The site is currently vacant and rehabilitation is pending. Past Use of the Site: The site was developed with one small commercial building of unknown use, which was demolished sometime between 1954 and 1961. Sometime between 1961 and 1966, a larger building was developed on the subject property, was operated by Truck Sales & Services. The property has been owned by Kinloch Company Inc. since 1990. Black Bear Lubricants Inc., which mixed and packaged engine oils, hydraulic oils, gear lubricant, transmission oils, grease, and industrial lubricants on the property, operated on the property since at least 2000. Black Bear ceased operations in December 2017. Walter s Limousine Service and Carey Limousine both operated on the property since at least 2000. Walter s Limousine Service ceased operation sometime between 2005 and 2010. Carey Limousine is currently still in operation. Site Geology and Hydrogeology: A total of 45 shallow borings were advanced to depths

between four and 12 feet below the ground surface (bgs). The stratigraphy of the site, from the surface down, consists of approximately 9 feet of fill material containing brick, concrete, fly ash, slag, fine silty sands, clay, and fine gravels. This urban fill is underlain by native material consisting of fine to medium sands with some silt. Groundwater was encountered between 8 and 12-ft bgs. General flow was reported to be toward the east in the direction of the Dutch Kills. The Dutch Kills flows from the north toward the south.

Env Problem: Nature and Extent of Contamination: In late 2017 and early 2018, intrusive environmental investigation work was performed for a potential property transaction related to the site. Based on the petroleum contamination which was encountered Spill No. 1802299 was generated on 5/29/2018 by the owner's representatives. The focus of the remedial investigation was aimed at petroleum, as closed USTs, oil/water separators, hydraulic lifts and petroleum repackaging operations were known to have existed in the past. Soils and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and PCBs. Soil vapor and indoor air was analyzed for TO-15 contaminants. Contaminants of concern identified include chlorinated VOCs (including tetrachloroethene (PCE) and trichloroethene (TCE)), SVOCs, metals including barium and lead, and PCBs. Soil Samples were collected from 2 to 12-ft bgs based on observations and field screening. Elevated concentrations of CVOC PCE were detected in the soil samples with a maximum concentration of 61.6 parts per million (ppm). The maximum barium and lead concentrations were 1,310 and 3,850 parts per million respectively. These concentrations exceed the Protection of Groundwater SCOs and do not exceed commercial SCOs. Groundwater A total of four SVOCs were detected in groundwater. Chrysene was reported with a maximum concentration of 123 ppb, fluoranthene was reported at 652 ppb, phenanthrene was reported at 1,010 ppb and pyrene was reported at 721 ppb. A groundwater sample collected from a temporary well nearest the Dutch Kills had a reported total PCB concentration of 0.972 ppb. Soil Vapor Soil vapor concentrations of PCE ranged from 480 to 1,100 ug/m<sup>3</sup>. TCE ranged from 39 to 120 ug/m<sup>3</sup>. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

FINDS:

Registry ID: 110004402361

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**C F G AGSCB FALCHI LLC (Continued)**

**1001961579**

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
  
- . Waste code: F003
- . Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Registry ID: 110008111667

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number: C1  
Tank Id: 179577  
Material Code: 0003  
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
J02 - Dispenser - Suction Dispenser  
E00 - Piping Secondary Containment - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
F01 - Pipe External Protection - Painted/Asphalt Coating  
K00 - Spill Prevention - None  
C01 - Pipe Location - Aboveground  
I04 - Overfill - Product Level Gauge (A/G)  
Tank Location: 3  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - In Place  
Pipe Model: Not reported  
Install Date: 01/01/1972

Registry ID: 110070125565

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

DEC Memo: "8/6/12-Vought-Primary off-hours responder. Vought called Peter Jayaseaara (Ph:347-865-1291) and spoke to Joseph who noted that that approximately 500 gallons of #2 fuel oil was released from a 200-gallon #2 fuel oil AST in a vault and that the oil was leaking out of secondary containment vault and was impacted a drain in the boiler room in sub-basement of LaGuardia Community College. Jayaseaara noted that FDNY Hazmat was on-scene and that he also called Triumvirate Inc (response company) and they were enroute to the site. Vought called RSE and DEC Demeo (secondary responder) who performed site visit. This spill assigned to Vought as Demeo not an option in UIS (as Demeo recently transferred). Spill to be transferred to Demeo upon availability in UIS. 8/8/12-Vought-Spill transferred from Vought to DEC Demeo as now available as PM in UIS. 8/4/12 TJD Recall - 2K AST for emergency generator leaked from supply piping feeding 100 gallon day tank on roof of structure. Leaking piping was uncapped return line inside secondary containment. Estimated 1500 gallons of diesel fuel leaked inside secondary containment. Containment vault was not tight - allowed product to migrate into adjoining sub-basement rooms. Building personnel shut

power to affected areas of building which shut down transfer pump to rooftop day tank. Drainage trenches in basement had minor impacts due to migration of product - prior to DEC arrival absorbents were put in place to prevent further migration of product to sump pit. Facility owner retained Triumvirate Environmental for emergency cleanup - they responded with vac truck and recovered separate phase product from tank vault and affected adjoining rooms. DEC required trenches and sump pit to be cleaned prior to putting sump pump back in service. Needs follow-up inspection. 8/7/12 TJD Site inspection. DEC was contacted by Laguardia College EH&S personnel requesting reinspection as cleanup was reported to have been completed and required repairs had been made. At time of inspection, DEC met with EH&S Manager (Michael Spath from CUNY) and Triumvirate Environmental personnel. All required cleanup actions have been completed - affected concrete surfaces, trenches and sump pit have been degreased and pressure washed. Standing water in trenches and sump pit appear free of separate phase product and sheen. DEC authorized EH&S staff to return sump pump to service. As per Laguardia College personnel, 2K AST is to remain out of service as a determination is made regarding the need for this tank. Required cleanup actions have been completed. Awaiting closure documentation. 9/10/12 TJD File review. All required closure documentation has been received. A total of 6 drums (contaminated absorbents) and 5,237 gallons of oil/water mixture were recovered and properly disposed of as part of remedial process. No further action is required. Spill closed."

Remarks:

"2251 THE CALLER STATED A REPORT OF A LARGE SPILL WAS CAUSED BY A FAILED UNIT. WATER WAS IMPACTED. THE SPILL IS NOT CONTAINED. THE CLEAN UP IS PENDING THE CALLERS ARRIVAL ON SCENE. THE CALLER WILL UPDATE NYSDEC UPON ARRIVAL."

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: Yes  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Tank Info:

Tank Number: 001  
Tank Id: 26648  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)  
I05 - Overfill - Vent Whistle  
E00 - Piping Secondary Containment - None  
H00 - Tank Leak Detection - None  
J02 - Dispenser - Suction Dispenser  
A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
I01 - Overfill - Float Vent Valve  
K00 - Spill Prevention - None  
C01 - Pipe Location - Aboveground  
B00 - Tank External Protection - None  
F00 - Pipe External Protection - None  
L00 - Piping Leak Detection - None

3  
Tank Location:  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 02/02/1924  
Capacity Gallons: 5000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D007
- . Waste name: CHROMIUM

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

Date form received by agency: 02/15/1995

Site name: CLIPPER DIAMOND TOOL CO INC

Classification: Conditionally Exempt Small Quantity Generator

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018

. Waste name: BENZENE

. Waste code: F003

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS

Site name: FEDERAL EXPRESS  
Classification: Large Quantity Generator

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

**FINDS:**

Registry ID: 110004367541

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Site name: PUBLIC SERVICE TRUCK RENTING  
Classification: Unverified

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 06/23/1995

**FINDS:**

Registry ID: 110004568192

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110000838737

**Environmental Interest/Information System**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans

to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

**FINDS:**

Registry ID: 110004319274

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "Need to send a CSL 02/07/06. Feroze talked Mr.Alex 718-786-7438. He informed that they repaired the system and tested the tank. Test result passed. They will submit DEC the result soon.TTF is sent to: Alex Javich LIC Service Station 49-01 Vandam Street Long Island City. NY 11101. 02/14/06.Feroze, Mr.Bob Laga 718-762-5200 , Called & told me taht they replaced the vent line and tested the tank. The test is passed. He will submit the documents soon. 02/28/06 Feroze, received documents from The Franklin Company, NY (718-672-5200) that they removed and replaced the vent lines and tested the tanks again on 01/20/06. The tanks and sysyem passed the test. They also certified that the leak was in vent pipe and there was no siol contamination. The spill is closed."

Spiller Company: 999  
Contact Name: Not reported  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Miller to Rommel as per Rommel. 3/28/05 - also see 8804104. KST 12/29/05 Transferred to E. Hampston via Spills Initiative. Wrote letter to owner requesting update/information. 11/02/06 Reassigned to Sun.(MS) 12/18/06 Sun sent letter certified mail to Jean Satoski (LIC Service Station), 49-01 Van Dam Street, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07: 1. Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. North arrow and scale must also be included on the site plan. If no tank closure report was prepared or no subsurface investigation was conducted before, the Department requires the following be performed and submitted: 1. Submission of a Tank Closure & Site Assessment Including Soil and Groundwater Investigation Results. (JS/MS) 2/27/07: Based on TCR results Sun/Sellberg sent a letter to Alex Javic of LIC Service Station requiring additional investigation be performed, and a report sent to the DEC by 4/13/2007. Letter is as follows: The investigation at a minimum must include the installation of soil borings/wells: around the area of the the former nine (9) 550-gallon underground storage tanks. Groundwater monitoring wells should be installed to the south (former location of S6), east (former location of S1) and west (former location of S4) of this area and groundwater flow direction will be determined. During drilling, the soil must be screened continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading in each boring/well will be sent for EPA Method 8260/8270 analyses and the results will be sent to the Department. Following well installation, a water sample must be obtained and submitted for EPA Method 8260/8270 analyses. Note that MTBE must be included on all soil and groundwater analyses. Prior to drilling activities, all utilities must be located and marked out. A report summarizing the findings of the subsurface investigation including boring logs, soil and groundwater sample analyses, site plan, and conclusions and recommendations must be submitted to the Department by April 13, 2007. (JS/MS) 4/5/07: MS spoke to Jill Haimson of Preferred Environmental (516)647-4211. She will submit a SIWP by 4/16/07. (JS/MS) 4/24/07: DEC received and approved the SIWP. SIR to be submitted by 7/16/07. Sent letter certified mail to RP and faxed

same to consultant (Jill Haimson). (JS/MS) 6/6/07: MS called J. Haimson to check status of site investigation. Due to difficulties in obtaining on-site access, work had been delayed. SIR will be submitted later than original timeline.(JS/MS) 6/27/07: Preliminary results (field observations) were discussed by the DEC and the consultant via telephone on June 11th, and again on June 21st, 2007. RP is claiming an upgradient source to be the problem. (JS/MS) 9/21/07: An additional visit was done by the consultant in mid September to better assess surrounding properties as additional investigation is warranted. This investigation will include the evaluation of a suspected up-gradient source which may/may not be contributing to on-site groundwater contamination. (JS/MS) 10/18/07: Upon threat of legal action, Preferred finally submitted SIR (apparently RP had not given consent to submit?). DEC is currently reviewing. Onsite contamination exists in both soil and mainly groundwater across the site. Additional delineation will be necessary as well as possible ORC injection/treatment. (JS/MS) 11/14/07: Alex Javick met with JS and MS today to sign STIP and discuss remedial options. Plan is to start with ORC (iSOCS) - 6months, if not effective use chemical injection. Monitoring will take place quarterly. Submit signed stip to regional director on 11/15/07. (JS/MS) 11/26/07: STIP executed on 11/16/07 and returned on 11/21/07. Sent copy to owner via mail and consultant via email today. MS to discuss remediation details with Jill Haimson of Preferred. (JS/MS) 11/28/07: MS spoke to Jill. She will submit a RAP by 12/7/07 detailing use and placement of iSOCS as well as injection of regen-ox to boost remediation. (JS/MS) 12/17/07: DEC approved RAP as follows: ...The RAP proposes the application of Regen-Ox (manufactured by Regenesis) to address petroleum related soil and groundwater contamination at the site. In addition, Preferred proposed the installation of In-Situ submerged Oxygen Curtain (InFusionTM/iSOC) probes within four (4) onsite well locations. Pursuant to the Stipulation Agreement signed and dated effective November 16, 2007, the Department requires that within 45 days of the Department's approval of the RAP, Respondent shall implement the work outlined in the RAP. The Department approves the RAP with the following condition: Please specify the number, location and spacing between all proposed Regen-Ox injection points. RP has 45 days from RAP approval to perform the work outlined in the RAP. MS sent letter today to RP and will email Preferred tomorrow regarding injection points follow-up. (JS/MS) 1/17/08: Alex Javick in to meet about remedial systems. Will send STIP to Ms. Jean Satoski once received address from Mr. Javick. (JS/MS) 1/22/08: Stip #2 sent today to Ms Jean Satoski at 84 Gun Club Road, Northport, NY 11768. Signed stip is due by 2/5/08. Added following to original letter to include operator's cooperation and Ms. Satoski's roles as RP: Presently, the operator of your station has initiated the required actions to address the above and has been fully cooperating with the Department. However, according to Department records, you are the certified property owner of 49-01 Van Dam Street, LIC, NY 11101 and therefore, also a responsible party. Signed STIP is due by 2/5/08. (JS/MS) 2/27/08: Received signed Stip from Satoski. Signed by Regional Director, Region 2 (JS/MM) 3/4/08: Sent photocopy of executed Stip to Satoski. Informed J. Haimson from Preferred about executed stip signed by both parties. (JS/MM) 4/17/08: RAP not executed yet. Satoski and Javic have not agreed on payment. Sent out violation of stip letters. Waiting for responses. (JS/MM) 4/22/08: Called Javic,

**SPILL NUMBER 9107165 (Continued)**

**S106703575**

not in office. Expecting phone call today. (JS/MM) 5/18/08: Received already approved RAP from Preferred. (JS/MM) 6/23/08: No info received from Preferred. (JS/MM) 08/11/08: Transferred to Kolleny/Mandac (JK/MM) 12/12/08: Received Quarterly Groundwater Sampling/Baseline Sample Report from Bill Schlageter of Preferred Environmental dated 11-19-08. Under review. Next sampling event in December 2008. (JK/KG) 12/16/08: RAP implemented. May 28 and 29, 2008 - 14 wells were installed (4 groundwater monitoring wells, 4 solinst emitter wells, 6 chemical injection wells) July 24 and 25, 2008 - Regen-Ox injected into 6 injection wells August 21, 2008 - Solinst Waterloo Oxygen Emmitter Probes were installed in 4 wells September 8, 2008 - Groundwater samples were collected at MW-1, 2, 3, 4 and IW-1. Total VOCs: MW-1 2,192 ug/L, MW-2 11,950 ug/L, MW-3 19,898 ug/L, MW-4 7,963 ug/L, IW-1 3,070 ug/L IW-6 and E-2 were found to have product, 1.47 ft and 0.04 ft respectively. Wells are checked biweekly for product. If product is encountered it is hand bailed. Dissolved oxygen concentrations have increased since oxygen emmitters were installed. Next sampling event is scheduled for December 2008. (JK/KG) 12/18/08: Spoke with Bill Schalageter (Preferred Env.). I asked him about the well with 1.47 ft of product. He said Alex Javic is still checking the well twice a week. He is bailing the product and disposing of it into the waste oil tank on site. Bill said the product is about an inch to a couple of inches. He will send someone out within the next week to verify how many inches of product are in the well and will send me an email with the details. Based on the amount of product they will need to be more aggressive in removing the product. I suggested a vac truck. I also asked Bill to have the wells surveyed and include GW flow direction, gradient, and scale on the map. (JK/KG) 12/30/08: Spoke with Jill Haimson (Preferred Env.) about product in well. She will talk to Bill and find out if someone went to the site to gauge the product. She will email me the details. If no one went to the site she will have someone go this week. (JK/KG) 01/29/09: Have not received details about product in well or product recovery. Emailed Jill and Bill requesting an update. (JK/KG) 02/02/09: Rec'd following email from Schalageter on 1/29/08. Since we spoke, Preferred was out the site twice including a quarterly sampling event conducted January 23, 2009. During the first visit (January 5, 2009), approximately eight inches of product was present in well (IW-6), none was detected in any other of the wells. The product was bailed from IW-6 and disposed of, subsequent to bailing, Preferred gauged the wells for twenty minutes and no product recharge was observed. During the January 23, 2009 sampling event, approximately 4 inches of product was detected in IW-6, again no recharge of product was observed subsequent to removal. No product was detected in any of the other wells on January 23, 2009. A complete description of monitoring and sampling events will be provided in the Quarterly sampling report to be submitted upon receipt of sampling data. Please feel free to contact me with any questions or concerns. Regards, Bill (JK/KG) 02/03/09: Responded to Bill, After talking with Jon, please continue with product recovery on a regular basis. If the amount of product increases or doesn't appear to be decreasing, a more aggressive remedial measure will be necessary. Based on the VOC concentrations in MW-2 and MW-3, further delineation or more injections may be necessary. First, I will need to review the results of the latest sampling event (when they are ready). (JK/KG) 04/14/09: Rec'd pdf of Quarterly Groundwater Sampling Report on 4/13/09; under review. (JK/KG) 04/15/09: Rec'd hardcopy of

**SPILL NUMBER 9107165 (Continued)**

**S106703575**

QMR. Wells were surveyed; groundwater flow direction is to the southwest. Weekly product recovery will continue and the next quarterly event is scheduled for April 2009. Groundwater on 1/23/09: MW-1: BTEX - 1,422 ug/L, Total VOCs - 2,533 ug/L, MTBE - 170 ug/L MW-2: BTEX - 3,590 ug/L, Total VOCs - 4,909 ug/L, MTBE - 180 ug/L MW-3: BTEX - 15,150 ug/L, Total VOCs - 21,338 ug/L, MTBE - 2,700 ug/L MW-4: BTEX - 11,174 ug/L, Total VOCs - 21,425 ug/L, MTBE - 1,600 ug/L IW-1: BTEX - 1,715 ug/L, Total VOCs - 2,739 ug/L, MTBE - 280 ug/L IW-4: BTEX - 1,652 ug/L, Total VOCs - 2,501 ug/L, MTBE - 200 ug/L E-4: BTEX - 4,664 ug/L, Total VOCs - 8,201 ug/L, MTBE - 1,700 ug/L (JK/KG) 04/20/09: Spoke to Schlageter on 4/16/09. I asked him to include historical analytical data in future reports. We discussed the product in IW-6; he said it appears to be old gasoline and the station manager is still hand bailing it. The product is being disposed of in the on-site waste oil tank. I told Schlageter that the product can not be disposed of in the waste oil tank. Preferred has gauged the wells since the January sampling event. I asked him to send me the gauging data by Monday (4/20). (JK/KG) 04/28/09: Rec'd March gauging data (in eDocs). On 3/6 product in IW-6 was about 6 inches and on 3/27 it was about 0.25 inches. (JK/KG) 05/04/09: Letters sent to J. Satoski and A. Javik on 4/30/09. A more aggressive approach to product recovery should be implemented by using mobile vacuum extraction. A RAP should also be prepared and submitted. It should propose additional remedial actions, such as another round of RegenOx injections. The next QMR is due 6/19/09. (JK/KG) 05/07/09: Spoke to Mr. Javick, he said he doesn't have the money to pay for the cleanup. He was reminded that he signed the Stipulation Agreement and that a report is due in June. (JK/KG) 06/22/09: Rec'd call from Bill Schlageter. He said quarterly monitoring has not been performed and Mr. Javick is not willing to pay for the cleanup. I called Mr. Javick and he said Ms. Satoski will pay 100%. I then spoke to Ms. Satoski and she confirmed that she has agreed to pay for remediation of the site. She will advise Preferred to proceed with site work once some checks clear in her bank account. Preferred is prepared to submit a supplemental RAP. (JK/KG) 06/23/09: Rec'd Supplemental Remedial Action Work Plan dated 6/23/09 and submitted by Preferred Environmental. Under review. (JK/KG) 06/25/09: Rec'd revised SRAWP dated 6/24/09. SRAWP proposes additional injections of RegenOx into the existing on-site injection wells, monitoring of groundwater field parameters, continued groundwater treatment via in-situ emitter probes, continued quarterly groundwater monitoring, and submission of monitoring reports to NYSDEC. A round of groundwater samples will be collected from monitoring wells MW-1, MW-2, MW-3, and MW-4 prior to the RegenOx injections. If free-phase product is detected in well IW-6, the product will be removed using vacuum-enhanced fluid recovery prior to the injections. The SRAWP was approved and letters were sent to Satoski and Javick. The deadline for submission of a groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, is August 7, 2009. The deadline for submission of a report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results is September 25, 2009. Email for Satoski is williamtaggard@mac.com (JK/KG) 07/20/09: Rec'd the following email from Schlageter: We will be conducting the injection this week (Monday-Wednesday) at 49-01 Van Dam Street, LIC. Prior to the injection, the required pre-injection sampling will be conducted from monitoring wells. Bryan from our office will be on-site and as

always, you can contact me or Jill with any questions. Thank You, Bill (JK/KG) 08/31/09: Spoke to Haimson. She didn't realize a report with the results of the baseline sampling was due 8/7/09. The report will be prepared and submitted next week. (JK/KG) 09/30/09: Follow-up with Preferred as the groundwater monitoring report, with the results of the pre-injection samples from the four on-site monitoring wells, and the report summarizing the remedial injections and presenting the follow-up quarterly groundwater sampling results have not been submitted. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 03/23/2010: Received a pdf copy of Quarterly Monitoring Report for October 2009. DL to eDocs. Will review. AD 07/27/2010: Received an e-mail from Mr. Schlageter: Ainura: As we discussed, attached is the supplemental RAP for the above-referenced project. Please review and contact me to discuss. Thank you Bill William J. Schlageter Operations Manager/Senior Hydrogeologist Will review. AD 08/24/2010: Reviewed the supplemental work plan. It proposes to conduct EFR on a weekly basis for two months period on the site wells exhibiting a free product (wells IW-6 and E-4); to continue employment of 3 out of 4 oxygen emitters; to conduct monthly monitoring activities; to perform air sparging of aquifer; and once free product has been addressed, to rehabilitate and re-install emitter probe into E-4 and reconnect oxygen supply to this well. Discussed this work plan with J. Kolleeny of DEC. As it was noted, air sparging method usually combined with SVE to control vapors in unsaturated zone. Since SVE is not proposed here, implementation of air sparging alone is questionable. AD 08/26/2010: Called and spoke with B. Schlageter of Preferred. Requested to revise the work plan. AD 08/11/2010: Received a pdf copy of the 1st quarter 2010 GW monitoring report. DL the report to eDocs. AD 09/16/2010: Received an e-mail from Bill: Ms. Doronova: As we discussed, attached is the revised Supplement to the Remedial Action for the above-referenced property. The Supplemental action has been revised to omit the mobile air-sparg treatment upon your request. Please review and contact me with any comments. Upon your approval, we will implement the proposed action within one week. Thank you, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES Certified Port Authority of New York and New Jersey (PANYNJ), NYS and NYC Women-Owned Business Enterprise (WBE) 323 Merrick Avenue North Merrick, New York 11566 Tel: (516) 546-1100 ext. 22 Fax: (516) 213-8213 Cell: (917) 715-0752 www.preferredenv.com DL the work plan to eDocs. Will review. AD 09/17/2010: Reviewed the revised work plan. It proposes to conduct weekly VEFR on two site wells (IW-6 and E-4) which exhibit free product, for a period of two months. Operation and maintenance of three oxygen emitters at the site will continue on a monthly basis. Preferred also recommends to suspend quarterly GW monitoring for a six months. AD 09/20/2010: Discussed this WP with J. Kolleeny of DEC. AD 09/21/2010: Issued and sent an approval letter to Ms. Joan Satowski with the following comments: " Although Preferred requests that quarterly groundwater monitoring at the site be suspended for six months, the Department requires that quarterly groundwater monitoring continue; " Following completion of the VEFR events, quarterly groundwater monitoring data should be evaluated. If the results do not indicate significant improvement of groundwater quality at the site, and/or if free product continues to appear in the two affected wells, then an alternative remedial measure should be proposed to DEC. DI pdf copy of the letter to eDocs. AD 04/11/2011: Received an e-mail from Bill:

**SPILL NUMBER 9107165 (Continued)**

**S106703575**

Ainura: Attached is the quarterly sampling report for February 2011 for the above-referenced property. The report summarizes activities conducted from November 2010 through February 2011. Results of the quarterly sampling are favorable significant reduction of dissolved phase VOCs, however some residual free product remains present within IW-6. The next quarterly sampling is scheduled for May 2011. Please feel free to contact me with any questions. Thank you Bill William J. Schlageter DL the report to eDocs. Will review. AD 06/30/2011: Reviewed the report. It states that on February 2011 sampling, thirteen of the fourteen on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.49 ft). Floating product was also observed during the prior monitoring events in October 2010(.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). An absorbent pad was installed within IW-6 to address free product. Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. Depth to GW water ranged from 6.48 ft. (E-2) to 8.37 ft. (MW-4) bgs. Groundwater flow has historically been determined to have a westerly influence within both northwesterly and south westerly flows historically observed. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for on-site sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. The highest TVOCs was detected in MW-3 (7,625ug/L), which is located crossgradient of the tank farm and downgradient of the Luk Oil Station to the southeast. Concentrations of BTEX detected in groundwater samples ranged from 5,110 ug/L in the MW-3 to 61.5 ug/L in the MW-1 at an upgradient location, MTBE concentrations ranged from 17 ug/L in the IW-1 (crossgradient) location to 1,100 ug/L in the MW-3 location. Preferred states that TVOCs have dropped across the site by up to 94% and by more than 50% since the implementation of the supplemental remedial action. They report that MTBE concentrations have also significantly decreased across the site and conclude that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. The next quarterly sampling suppose to be conducted in May of 2011. AD 11/2011: Did not received ane reports. AD 01/12/2012: Called and spoke with B. Schlageter of Preferred. Requested to submit all missing reports for 2011. Later received an e-mail from him saying: Ms. Doronova: As we discussed attached is the report from October. Please note that due to construction at the station property, we were forced to delay the next sampling event sampling until January 2012. Further, although concentrations continue to decrease, we have identified that there is an off-site contribution to the groundwater impacts believed to be the Luk Oil property across Gale Avenue (currently AmeriGas ??) Owner is Leelimits Petroleum. We are petitioning to drop the sampling to a bi-annual schedule. Thank you, Bill DL the report to eDocs. Will review. AD 03/09/2012: Reviewed the report. It states that quarterly sampling activities resumed on August 2011 subsequent to the supplemental remedial efforts, which including VEFR activities and continued oxygen injection. The August 2011 quarterly sampling event included the following: " Measurement for floating product; " Measurement of water table elevation, temperature, and dissolved oxygen; " Purging and sampling of four monitoring wells, two injection wells and one emitter well; " Laboratory analysis of seven groundwater samples; and " Preparation

of summary report including data summary and a groundwater flow map. Groundwater flow in August of 2011 was determined to be to the northwest towards Newtown Creek. During the August 2011 sampling, thirteen (13) of the fourteen (14) on-site wells were observed to be free of floating product however, free product was observed in IW-6 during the February 2011 quarterly sampling event (.50 ft). Floating product was also observed during the prior monitoring events in February 2011 (.49 ft.), October 2010 (.06 ft), November 2010 (.02 ft), and December 2010 (.21 ft). Free product had previously been detected in the E-4 well location, however, product removal activities has successfully mitigated the free product. A total of seven (MW-1 through MW-4, IW-1, IW-4 and E-4) of the 14 on-site wells were selected for sampling. Gasoline-related VOCs were detected in all of the groundwater samples at concentrations exceeding NYSDEC SGVs. Concentrations of BTEX detected in groundwater samples ranged from 2,129 ug/L in the MW-4 to 54.1 ug/L in the MW-1. MTBE concentrations ranged from 220 ug/L in the MW-2 to 7.1 ug/L in the IW-1 location. The consultant states that August 2011 groundwater quality data was compared to the historic groundwater data developed for the property. To date since the initiation of remedial activities at the Subject Property, TVOCs have dropped by more than 61% since the last quarterly sampling event in February 2011. BTEX and MTBE concentrations have also significantly decreased across the site. This indicates that the RegenOx injection and oxygen emitters are successfully providing mitigation of the gasoline-related impacts. AD 09/19/2012: Sent an e-mail to B. Schlageter requiring submission of all missing reports. AD 12/2012: Did not receive the reports. Called and left a message. AD 02/2013: Spoke with B. Schlageter regarding reports submission. The property owner is very sick and Preferred did not visited the site for several months. He will get back with the site status update. AD 06/04/2013: Called and spoke with Bill of Preferred regarding this site. The site owner contacted them recently, so they are planning to start groundwater monitoring soon. Bill will look for unsubmitted reports and will give an update. AD 01/17/2014: Called and spoke with B. Schlageter of Preferred Env. No GW monitoring was done at the site since we spoke last time. Site owner was uncooperative. Requested to submit the most recent owner's contact information. Suggested to visit the site, sample all site wells and submit a summary report with conclusions and recommendations for further actions. AD 04/12/2016: Called and left a message to Mr. Joseph Macchia - who is listed as an authorized representative in PBS file. AD 04/13/2016: Called and spoke with Mr. William Tagert, (631-757-8829). He is a site owner's son. Because of his mother's health and old age, Mr. Tagert is looking after her business. Explained to him that the spill case is still open, and that he needs to contact environmental consultants to do a site current situation assessment. AD 04/14/2016: Received a call from Mr. Tagert. He said that he contacted Bill Schlageter from Preferred Environmental and scheduled site visit with sampling of wells. A report with conclusions and recommendations for further actions will be submitted to DEC. AD 04/26/2016: called and spoke with Mark of Preferred. He confirmed that his company gave a proposal to Mr. Tagert and is now waiting for his response. AD 02/08/2017: called and spoke with Mr. Tagert. He told me that he hired Preferred Env. again and they are planning to sample site wells. Called and left a message for Bill Schlageter. AD 09/27/2017: Called and spoke with Mr. Schlageter. He said that they performed GW sampling at the site in

March 2017 and sampled 6 wells. Requested to submit the report. It was submitted shortly via e-mail. Checked the report. The contaminant levels are dropped significantly according to the lab results in comparison to historical data. The most contaminated well MW-3 has 1,600 ppb of TVOCs (was 21,000ppb in 2009). Mr. Schlageter said that there are some issues with the payments from the site owner, so they did not propose any remediation at the site yet. AD 09/28/2017: called and left a message to Mr. Tagert. AD 09/29/2017: Received a call from Mr. Tagert. Discussed the site conditions. Mentioned that the contaminants levels dropped significantly and that additional rounds of sampling is needed to confirm down gradient trend, and that ORC socks or EFR should be considered for the site to expedite the cleanup. Mr. Tagert will contact Preferred Environmental to discuss further actions for the site. AD 11/2017: Called and left a message to Mr. Schlageter. AD 01/25/2018: Called and spoke with B. Schlageter regarding GW sampling report. They just got their results from the lab. The report will be submitted to DEC in two weeks. AD 04/18/2018: Called and left a message to Bill. AD 07/03/2018: Called and left a message to Mr. Schlageter. AD 08/02/2018: Called and left a message to Mr. Schlageter. Sent him an e-mail requesting GW sampling report submission. AD 08/09/2018: called and spoke with Mr. Schlageter. He will submit the report tomorrow, August 10th, 2018. AD "DISCOVERED IN TANK PULL"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste name: None

Date form received by agency: 10/16/1995

Site name: J MANHEIMER

Classification: Large Quantity Generator

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F004

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: CRESOLS AND CRESYLIC ACID, AND NITROBENZENE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**Environmental Interest/Information System**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND CROSS REF WITH # 8900343 & 9206718 2/11/2003 Sangesland reviewed a closure report prepared by Walden Associates (516-624-7200). Report states that the contaminated soil at this site was caused by a broken fill line. When this area was opened, the soil was heavily contaminated. The contractor excavated out an area 16ft x 36ft x 6ft (35 cubic yds of concrete debris & 102 tons of contaminated soil removed) End point samples - VOC's below TAGM, SVOC's slightly elevated. Status shifted to No Further Action. "

Database(s)

EDR ID Number  
EPA ID Number

**WARNER LAMBERT CO (Continued)**

**1000312930**

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 09/14/1995  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Not reported  
Date achieved compliance: Not reported  
Evaluation lead agency: EPA

FINDS:

Registry ID: 110004335782

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Date form received by agency: 04/07/2003

Site name: 2820 BORDEN AVENUE CORP

LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: F003

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

. Waste code: D000  
. Waste name: Not Defined

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Classification: Small Quantity Generator

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

**FINDS:**

Registry ID: 110004334015

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Tank Info:

Tank Number: 001  
Tank Id: 3153  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None  
C00 - Pipe Location - No Piping  
F00 - Pipe External Protection - None  
J02 - Dispenser - Suction Dispenser  
E00 - Piping Secondary Containment - None  
G03 - Tank Secondary Containment - Vault (w/o access)  
H00 - Tank Leak Detection - None  
I00 - Overfill - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
A00 - Tank Internal Protection - None  
K00 - Spill Prevention - None  
D00 - Pipe Type - No Piping

Tank Location: 6  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 12/17/1946  
Capacity Gallons: 10000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported

**FINDS:**

Registry ID: 110004360566

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was VOUGHT 10/10/95: This is additional information about material spilled from the translation of the old spill file: 14(550) TANKS C/SOIL. 12/10/96 MMM: TYREE PULLED TANKS, UPGRADED STATION AND DID INVESTIGATION. NO FREE PRODUCT LEFT ON GW. HIGH DISSOLVED BEING ADDRESSED WITH SVES SYSTEM. STIP RETURNED SIGNED.3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 12/17/2003-Vought-See closed diesel spill #0106824 at same location. 3/19/04-Vought-File review by vought: Summary of Underground Tank Removals (Tyree Org)-April 1994. Tanks removed as part of station rebuild activities . A total of eighteen underground storage tanks were cleaned and removed from the site. Twelve were gasoline USTs, two were diesel USTs, one was waste oil and the remaining three are of unknown contents. Groundwater at ten feet below grade. A total of 625 tons of soil was removed from the excavation. Five endpoint soil samples were collected. Method 8021 was inadvertently omitted from the analysis request . A soil vapor extraction trench was constructed along Van Dam street, two feet from the sidewalk so that the venting system would create a barrier for the potential migration of soil vapors based on the reported regional westerly groundwater flow . Four monitoring wells were installed as per DEC. One fuel oil tank remains to be removed and upon removal, one additional monitoring well will be installed. Soil analyticals from well installation show 7200ppb benzene(MW2), 72400ppb naphthalene(MW-2), 1435000ppb xylene(W-2), 2490ppb benzene(MW-4), 10770ppb xylene(MW-4). Groundwater Monitoring Report (Tyree Org)-1-16/95. A one thousand(1000) gallon fuel oil tank was removed in June 1995. A monitoring well, MW-5, was installed at this location in August . No free product was encountered. The groundwater flow direction comes onto the site from the north and travels southerly. Once on site, the water flow turns a little to the south-southeasterly direction . Groundwater analyticals show 105ppb benzene(MW-1), 3260ppb benzene(MW-2) and 86400ppb MTBE(MW-2). Report recommends installation of upgradient well and performance of a soil vapor extraction test. Letter from DEC(Mulqueen) to Getty(Ochotorena)-6/26/95. Stipulation Agreement sent to Getty. Stipulation Agreement from Getty-6/30/95. Stipulation signed by Getty. Corrective Action Plan from Tyree-10/5/95. Summary of Underground Fuel Oil tank Removal Activities-January 1996. Removal of one (1000-gallon) fuel oil UST. Five endpoint soil samples were collected for analysis. A groundwater sample will have to be collected to determine if the groundwater is protected . The background soil sampling will be performed once the location is reviewed by the DEC and sidewalk opening permits are obtained . Three Geoprobe borings will be performed. This location is reported to be

located in a former refinery . Soil analyticals show minor SVOC exceedences (646ppb benzo(a)anthracene, 595ppb benzo(a)pyrene). Quarterly Monitoring Reports from Tyree (October 1995 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the south. Groundwater analyticals show 145ppb benzene(W-1), 4150ppb benzene(W-2), 5.19ppb xylene(W-3), 437ppb toluene(W-5). Remedial Action Plan (Tyree Org)-July 1996. The soil is intermixed with occasional charred material up to 6 inch in diameter and ashy soil located at the north end of the site . Soil venting pilot test performed on 4/18/96. The results of monitoring and the well survey indicate that groundwater on site flows predominantley west . The groundwater flow was previously incorrectly shown to flow southerly . Surrounding area is commercial. Pilot test results indicate that an approximate radius of infulence between 16 and 22 feet can be achieved with an applied cacuum of 34 to 53 inches . Since the contamination is minimal and localized no groundwater remediation is proposed at this time . Quarterly Monitoring Reports from Tyree (April 1996 thru March 1996). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the east-southeast. Groundwater analyticals show 146ppb benzene(W-1), 793ppb benzene(W-2) and 437ppb toluene(W-5). Quarterly Monitoring Reports from Tyree (March 1996 thru December 2000). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 17ppb benzene(W-1) and 4ppb benzene(W-2). Remedial activities described as none . Letter from Tyree to DEC(Rommel)-6/15/01. Letter sent requesting removal of wells 3 and 4 from the monitoring/sampling regimen leaving wells 1, 2 and 5. These changes will be effected as of July 1, 2001. If there are any objections to these changes, please notify us in writing . Quarterly Monitoring Reports from Tyree (March 2001 thru June 2001). Five monitoring wells onsite. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 30ppb benzene(W-1) and 24ppb benzene(W-2). Remedial activities described as none . Quarterly Monitoring Reports from Tyree (July 2001 thru September 2001). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 31ppb benzene(W-2). Remedial activities described as none . Historical Data Compilation (Tyree Org)-December 2001. Compilation including request for no further action. Quarterly Monitoring Reports from Tyree (January 2002 thru December 2003). Three monitoring wells sampled. Groundwater at depth of 8-10' and flows to the west. Groundwater analyticals show 43.3ppb benzene(W-1) and 63ppb MTBE(W-2). Remedial activities described as none . 3/23/04-Vought-DEC requires: 1)groundwater samples from downgradient locations of W-1 and W-2 2)submission of a soil and groundwater remediation plan. Vought sent letter with requirements on 3/23/04. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/20/2005 - Feng - Geoprobe Investigation Report by Tyree, dated November 29, 2004. on 11/10/2004 Tyree did two (2) groundwater sampling, B-1 and B-2, downgradient to W-1 and W-2, and four (4) soil samples, B-3 to B-6, in the vicinity of the former gasoline tankfield as per DEC Vought's letter on 3/23/2004. Groundwater analyticals show that some VOCs and SVOCs were slightly high and exceeded TAGM 4046. and soil samples collected from B-3 to B-6 show slightly high VOCs in B-3. Based on this report, Tyree recommended further remediation at this site is not necessary. groundwater monitoring wells be sampled on a quarterly basis and be monitored for natural attenuation . 10/18/2005 - Feng - Quarterly Monitoring Report, by Tyree, 4/2005 -

6/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. 90ppb BTEX and 20ppb MTBE in W-1. keep monitoring. 11/2/2005 - Feng - Quarterly Monitoring Report, by Tyree, 7/2005 - 9/2005. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, increasing, 143ppb BTEX and 21ppb MTBE. W-2, 1 BTEX and 5 MTBE. W-3, 6 MTBE. 12/19/2005 - Feng - Quarterly Monitoring Report, by Tyree, 9/2005 - 11/2005. Active Lukoil gasoline retail/service station. 3 MWs onsite. downward trend in concentration. Groundwater flow in west direction. W-1, decreased and 68 ppb BTEX and 11 ppb MTBE. W-2, non-detected BTEX and 3 ppb MTBE. W-3, non-detected BTEX, 4 ppb MTBE. EFR on W-1, 0.01 gallon of gasoline has been removed. 05/25/06-Sun-Based on the Quarterly Monitoring Report, prepared by Tyree, dated April 6, 2006, Total BTEX ranged from Non-detect to 29 ppb, and MTBE concentrations ranged from 3 ppb to 9 ppb. No free product was detected in any monitoring wells. Based on these low concentrations of BTEX and MTBE and Sensitive Receptor Survey conducted for this site, the spill is closed and NFA letter will be issued. (Sun) "

Remarks: "REBUILDING STATION-SOIL WILL BE REMOVED & TRANSPORTED."

. Waste code: D000

. Waste name: Not Defined

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018

. Waste name: BENZENE

. Waste code: F002

. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

**FINDS:**

Registry ID: 110000894792

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate

Used oil transporter: No

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F001  
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U001  
. Waste name: ACETALDEHYDE (I)

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Historical Generators:**

Date form received by agency: 01/01/2006

Site name: COLAHAN SAUNDERS

Classification: Not a generator, verified

Date form received by agency: 05/15/2002

Site name: COLAHAN SAUNDERS

Classification: Conditionally Exempt Small Quantity Generator

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

**FINDS:**

Registry ID: 110012569283

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018  
. Waste name: BENZENE

. Waste code: F003  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

DEC Memo:

"09/05/06 -Zielinski This spill case reassigned from CO to Region 2. Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL C 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel. Spill transferred to Greco as part of Spills Closure Initiative in July, 2005. Contacted original callers company and determined the spill name and address was originally put into system incorrectly as 20-90 Review Ave. (also incorrectly listed as 20090 Review Ave.). Neither of the above addresses is an actual address in Queens County, however, 28-90 is, and 28-90 has two tanks similar to the ones referenced in the spill report. 28-90 is also a the home of a company that is a client of the tank test company which called in the tank test failures. Spill name and address were changed to 28-90 Review Ave. The company at that address is AA Truck Rental. JDG 8/3/05 Contacted Mr. PJ McDermott 718- 937-8611 at AA Trucking. Mr. McDermott is checking records and will get back to me. JDG 8/3/05 11/21/05 Tried to recontact Mr. McDermott, but he was unavailable. JDG 12/30/05 Tried to recontact Mr. McDermott, but he was unavailable. Left message. JDG 01/04/06 Insufficient documentation was received following several attempts. Have documentation that the tanks passed tightness tests in 1998, and were later closed in place in 1999, however, there is no record of a cleanup. Project needs further work, as release was characterized as requiring a major excavation. Should be returned to region 2 for further investigation at end of Spill Closure Initiative. 9/8/06 - Jon Greco of Central Office sent an email stating: Most recently, the owner's representative (Mr. Michael Paskoff, who has been performing tank tests at the site for many years, and it was his firm that called in the release 13 years ago) has asked that I close the spill, as it was called in solely due to an inconclusive tank test. He has copied me on a letter to the owner (Mr. Eric Roberts) and the letter reports that while the original tests were inconclusive, the tanks were retested later that day and were found to be tight. He goes on to say that no repairs were made and no excavations were performed by his firm. Finally, he claims the tests were observed by Inspector Goldman, of the NYC Fire Department. Reviewed PBS records, confirmed tank tested tight. Spills Closed. \_ KST "

Remarks: "INCONCLUSIVE TEST RESULT TO REPAIR & RETEST - CALLED AGAIN AT 1300 OTHER 4000 GAL TANK ALSO FAILED MAJOR EXCAVATION."

DEC Memo: "3/94: MW-4 had a sheen of product. MW-1 had 7500 ppb, MW-2 had 9600 ppb and MW-3 had 350 ppb of benzene. 8/94: Installed MW-5,6 & 7. MW-4 had 0.19 ft of LPH. Depth to water 13 ft. The SVE system is operable and manifolded to MW-2,3 & 4. MW-1 had 3000 ppb, MW-2 had 5200 ppb, MW-3 had 360 ppb, MW-5 had 1400 ppb, MW-6 had 590 ppb and MW-7 had 24 ppb benzene. Sunoco will investigate and submit current tank test results. 12/10/2003 Reassigned from Tipple to Sun.  
02/03/2004-Sun-File Update by Sun: Quarterly Monitoring and Sampling Report (October through December 2003), by EnviroTrac (Anthony Fiorentine, 631-471-1500): On 11/08/2003, liquid phase hydrocarbons (LPH) were detected in MW-4 at a thickness of 0.20 feet (ft.). The depth to water ranged from 22.78 ft. (MW-6) to 26.00 ft. (MW-4) below the surface on 11/8/2003. Six (6) wells (MW-1,2, 3, 5, 6 & 7) were sampled on 11/8/2003. BTEX concentrations ranged from not detected (ND) in 3 of the 7 wells to 58,000 micrograms per liter (ug/l) (MW-2).MTBE concentrations ranged from ND (MW-3) to 3,800 ug/l (MW-7). On 11/8/2003 and 12/21/2003, a three percent Biosolve surfactant and water solution was injected into MW-4. MW-4 was then han surged with a surge block and groundwater was removed from a down-gradient well (MW-7) with a submersible pump. LPH was not detected during the December 2003 short term remediation event (STRE). 03/11/2004-Sun-File Update by Sun: On 03/10/2004, Sun sent a letter and Stipulation Agreement to Russell Hammond of Sunoco requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of March 31, 2004 for signing the Stipulation Agreement by the Respondent. 10/31/05: Project reassigned from Sun to Andersen. Enhanced fluid recovery and Biosolve application are being utilized in two hotspots, MW2 and MW4. 12/8/05: December 8 meeting between Sunoco, DEC, and EnviroTrac. Biosolve remediation is not very successful. EnviroTrac and Sunoco think that source may be present and plan to do soil borings to identify source. Soil is likely very heterogenous. Site is now a pay commuter parking lot, so work can only be done on weekends. 1/4/06: Reviewed the quarterly report dated January 2006. Six wells sampled on November 20, 2005. Trace amounts of LPH in MW-4. Max BTEX 28,300

(MW-2) and 560 ppb (MW-2). Biosolve last used in August 2005. 5/3/06: Reviewed the first quarterly 2006 report. Wells sampled on 1/21/06. LPH is present in MW 4 at a depth of 0.25 ft. Max BTEX 22,900 in MW2. Max MTBE 91 ppb in MW7. Sent RAP required letter, due 7/3/06. 8/18/06: Meeting on 8/17/06 with Sunoco, EAR, and NYSDEC. RAP submitted. Regenox will be used. Three monthly Regenox installations will be completed. Regenox will be injected into twelve temporary borings, with injection span the vertical interval 15 to 35 feet below grade. Monitoring wells will be gauged and sampled monthly during Regenox application. RAP approved. 10/20/06: First mobilization to drill borings for Regenox application will occur on 10/21/06 8am-4pm. 11/9/06: Second mobilization for Regenox application will occur on 11/11/06. 12/18/06: Sent email to Jamie Brown of EAR to followup on status of next quarterly report. Received email from Jamie Brown: The next report will be completed and submitted to you mid - January 2007. Please let me know if you have any other questions. 2/13/07: Emailed Jamie Brown to followup on the status of the next quarterly report. 2/20/07: Reviewed update report. Regenox in use. Wells sampled on 12/23/06. Max BTEX 58,900 ppb (MW4), max MTBE 220 ppb (MW7). LPH in MW2 at depth of 0.48 ppb. 3/23/07: Meeting on 3/22/07 with Sunoco, NYSDEC, and EnviroTrac. LPH appeared last quarter because the Regenox mobilized contaminants. The second phase of Regenox application may be scheduled for April 2007. 4/13/07: Regenox application scheduled for 4/14/07. 6/11/07: Received update report. Wells sampled on 3/24/07. Max BTEX 37,400 ppb (MW4), max MTBE 120 ppb (MW7). LPH in MW2 at a depth of 0.29 ft. Product recovered from MW2 and an absorbent sock put in well. Overall decrease in contaminant concentration. 10/12/07: Emailed Russell Hammond regarding overdue report. 10/16/07: Received email from Russell Hammond. Report will be submitted by the end of this week. 3/18/08: Reviewed October 2007 - December 2007 Project Status Report. Max BTEX 47,100 ppb (MW4). Max MTBE 140 ppb (MW2). When will the next phase of Regenox application occur? 3/19/08: Received email from Karen Waryas (Waryas@ENVIRO-ASMNT.COM): Phase 2 of the Regenox application at SUN-LIC32-32 occurred in April and May of 2007. It was mentioned in the June 2007 PSR, but regretfully was not put into the site history section of the September or December 2007 PSRs. I apologize for this oversight, and it will be remedied for future submissions. I put in an inquiry with my supervisor today as to when the third phase is expected to occur and will let you know as soon as I hear any information. 5/15/08 - Carlson: Reviewed January - March 2008 Project Status Report. Wells sampled on 3/22/08. Maximum BTEX concentration 23,600 ppb (MW2). Maximum MTBE concentration 74 ppb (MW2). Geochemical parameters are being monitored to evaluate progress of Regenox. When will third phase of Regenox occur? 9/4/08 - Carlson: Reviewed April - June 2008 Project Status Report. Wells sampled on 6/28/08. Maximum BTEX concentration 31,800 ppb (MW2). Maximum MTBE concentration 110 ppb (MW7). General increase in contaminant concentrations. When will third phase on Regenox application occur? 10/8/08 - Carlson: Meeting with Russell Hammond of Sunoco and Karen Waryas of EAR. Regenox won't be used again. Workplan for soil borings due by 10/30/08. A new RAP will be required afterwards. 11/5/08 - Carlson: Received email with Subsurface Summary letter. Email stated that a workplan will be submitted in two weeks. 12/22/08 - Carlson: Reviewed July 2008 - September 2008 Project Status Report. Wells sampled on 9/20/08. Maximum BTEX concentration 29,700 ppb (MW2). No mention of overdue workplan in report. Emailed

Karen to followup on workplan submittal. 12/29/08 - Carlson: Received email from Karen. Workplan will be submitted when Russell Hammond gets back from vacation. 1/8/09 - Carlson: Approved investigation workplan for installation of three soil borings. 1/28/09 - Carlson: Reviewed September 2008 - December 2008 Update Report. Wells sampled on 12/20/08. Maximum BTEX concentration 37,620 ppb (MW4). On-site borings will be completed. 1/29/09 - Carlson: Meeting with Sunoco and Envirotrac. 4/5/09 - Carlson: Received investigation letter-report dated April 8, 2009. Three soil borings installed. High soil impact in all borings. A workplan for additional soil delineation will be submitted by may 8th. 5/22/09 - Carlson: Reviewed update report. Wells sampled on 3/28/09. Maximum BTEX concentration 37,700 ppb (MW4). Maximum MTBE concentration 64 ppb (MW2). Workplan for additional delineation overdue. 6/1/09 - Carlson: Meeting held with Sunoco and EAR. 6/5/09 - Carlson: Reviewed work plan dated 5/29/09. Five soil borings proposed. Sent email requiring revision workplan with 1) deeper minimum boring depth to account for smear zone and 2) continuous sampling of entire boring for all on-site borings except SB1. Revised work plan due in 30 days. 8/6/09 - Carlson: Approved revised work plan. Investigation Report due in 90 days. 10/6/09 - Carlson: Reviewed update report. Wells sampled on June 27, 2009. High dissolved concentrations in MW2 and MW4. No update on work plan implementation provided. 12/3/09 - Carlson: Reviewed update report. Wells sampled on 9/19/09. Trace LNAPL in MW1. Maximum BTEX concentration 27,800 ppb (MW2). Investigation report overdue. 12/8/2009 - Carlson: Meeting with Sunoco. Upgradient source?, access issue on upgradient property. 3/18/2010 - Carlson: Received notification. Field work scheduled for 3/20/2010. 3/19/2010 - Carlson: Reviewed October 2009 - December 2009 Quarterly Update Report. LNAPL sheen in MW1 in October 2009. However, low dissolved concentrations in MW1 in December 2009. Field work cancelled, will probably be rescheduled for next Saturday. 4/7/2010 - Carlson: Received notification - field work scheduled for 4/7 and 4/10. 7/2/2010 - Carlson: Reviewed January - March 2010 update report and RIR. SB4 - SB 6 installed. Soil and gw impact in SB4. Three more borings will be installed, as per 7/17/09 work plan. 9/9/2010 - Carlson: Reviewed April - June 2010 Quarterly Report. SB- 7 - 9 installed. Soil impact in SB- 4, 7, 8, 9. Issued letter requiring work plan for installation of three monitoring wells at SB-4, SB-7, and to the south of SB-9, and one soil boring adjacent to MW1. Due 10/11/2010. 1/31/11 - Obligado - I reviewed an investigation workplan. The workplan didn't propose a well at SB7. I emailed a letter to Jaime Brown and Russel hammond requiring revised work plan with well at SB7. Due within 15 days. 3/30/11 - Obligado - I reviewed a revised work plan which incorporated the changes I requested. Sent approval letter. 11/28/11 - Carlson: Reviewed 2nd and 3rd Quarter 2011 Update Reports. MW8-10 installed. Groundwater impact in all three new monitoring wells. 11/30/11 - Carlson: Issued letter requiring an off-site delineation work plan and a remedial action plan by 1/13/2012. 2/10/2012 - Carlson: Reviewed December 2011 update report. Delineation workplan and RAWP to be submitted. 1/10/2013 - Reviewed 1Q2012 dated 4/2012, 2Q2012 dated 7/2012 and 3Q2012 dated 10/2012. DTW 22.57 (MW-7) to 28.44 (MW-8) on 9/15/2012. MW-6, 30 BTEX, 1.2 MTBE. MW-2, 25,100 BTEX, less than 140 MTBE. MW-9, 34,030 BTEX, less than 400 MTBE. MW-4, 18,399 BTEX, less than 250 MTBE. MW-8, 798 BTEX, less than 76 MTBE. MW-7, 2,790 BTEX, less than 100 MTBE. MW-1, 18.1 BTEX, less than 13 MTBE. MW-3, 10.3 BTEX, less than

21 MTBE. MW-10, 15,740 BTEX, less than 93 MTBE. 4/5/2013 - 4Q2012, 1/9/2013, by CGE. Groundwater sampled on 12/15/2012. DTW 22.87 (MW-7) to 28.62 (MW-8). NO LNAPL. MW-6, 96 BTEX. MW-9, 27,650 BTEX, less than 190 MTBE. MW-4, 23,210 BTEX, less than 280 MTBE. MW-8, 1,851 BTEX, less than 160 MTBE. MW-2, 24,220 BTEX, less than 62 MTBE. MW-7, 2,040 BTEX, 31 MTBE. MW-1, 22.4 BTEX, less than 9.0 MTBE. MW-10, 15,960 BTEX, less than 150 MTBE. 7/26/2013 - 1Q2013, 4/2013, by CGE. The monitoring was done on 3/23/2013. DTW 22.81 (MW-7) to 28.77 (MW-8). NO LNAPL. MW-6, 170 BTEX, 6.1 MTBE. MW-2, 21,780 BTEX, less than 76 MTBE. MW-9, 35,130 BTEX, less than 290 MTBE. MW-4, 22,684 BTEX, less than 270 MTBE. MW-7, 1,870 BTEX, less than 42 MTBE. MW-10, 10,440 BTEX, less than 110 MTBE. 06/27/2014: This spill case was transferred to A. Doronova. - AD 08/05/2014: Sent the following e-mail to Sunoco contact - Russell Hammond (e-mail: rhammond@sunocoinc.com) and copied to Anthony Fiorentine (afiorentine@cg-env.com): Dear Mr. Hammond: My name is Ainura Doronova. I am a NYSDEC project manager for the following spill cases, which were recently transferred to me: 1. Spill No. 1011266, 550 Humbolt Street, Brooklyn; 2. Spill No. 0913725, 1626 Steelwell Avenue, Brooklyn; 3. Spill No. 0809869, 42-02 21st Street, Queens; 4. Spill No. 0708451, 972 Remsen Avenue, Brooklyn; 5. Spill No. 0502868, 1781 Bay Ridge Parkway, Brooklyn; 6. Spill No. 0407558, 5 Flatbush Avenue, Brooklyn; 7. Spill No. 0304033, 805 65th Street, Brooklyn; 8. Spill No. 9909665, 175-33, Horace Harding Expressway, Queens; 9. Spill No. 9900619, 1650 Forest Avenue, Staten Island; 10. Spill No. 9808686, 188-06 Hillside Avenue, Queens; 11. Spill No. 9711173, 2310 Tillotson Avenue, Bronx; 12. Spill No. 9609282, 1781 Arthur Kill Rd., Staten Island; 13. Spill No. 9501327, 2701 Knapp Stret, Brooklyn; 14. Spill No. 8905358, 32-32 Queens Boulevard, New York; 15. Spill No. 8904831, 38-15 Queens Boulevard, Queens; 16. Spill No. 8904151, 161-15 46th Avenue, New York; 17. Spill No. 8808987, 135-45 Cross Bay Boulevard, Queens; 18. Spill No. 8706272. 2052 Victory Boulevard, Staten Island. From now on, please submit all your future documentation (letters, reports, work plans, RAPs) related to these spill cases to my attention. Please note, that you should submit one hard copy of the document (report/work plan) and e-copy on a CD by regular mail. Please, do not submit large size documents via e-mail, since we have limited storage capacity, so it should be used only for correspondence. Feel free to contact me if you have any questions. Thank you. Sincerely, Ainura Doronova Environmental Engineer 1 Division of Environmental Remediation NYS Department of Environmental Conservation Region 2 (718) 482-6453 AD 02/2015: Contacted Mr. Fiorentine regarding general sites meeting. Requested list of the Sunoco sites managed by Clean Globe Env. AD 03/20/2015: Received the following response from Mr. Fiorentine: Hello Ms. Doronova, Clean Globe Environmental is currently responsible for the following 11 Sunoco spill sites: " 2319 Tillotson Avenue, Bronx " 32 Highland Boulevard, Brooklyn " 805 65th Street, Brooklyn " 1781 Bay Ridge Parkway, Brooklyn " 161-15 46th Avenue, Flushing " 38-15 Queens Boulevard, Long Island City " 32-32 Queens Boulevard, Long Island City " 135-45 Cross Bay Boulevard, Ozone Park " 1650 Forest Avenue, Staten Island " 1781 Arthur Kill Road, Staten Island " 2052 Victory Boulevard, Staten Island Let me know if you have any dates that are free so that we may set up a meeting to review the status of these sites. Thank you , Tony Fiorentine Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax /

afioentine@cg-env.com 03/24/2015: The meeting is scheduled for April 23, 2015. AD 04/23/2015: DEC met with a Sunoco representative - Russel Hummond and Sunoco s consultants: Tony Fiorentino of Clean Globe Env. (CGE), and Todd Painter of Environmental Assessment and Remediation (EAR) to discuss the current status of each site, go over historical monitoring and recovery data, and discuss further actions to help expedite closure of the spills. DEC received updated remedial progress and monitoring reports. High-priority sites and potential spill closure candidates were discussed. Sunoco s consultants reported overall progress in reducing BTEX levels in soil and groundwater at the sites. It was agreed that reports recommending spill closure will be prepared for several sites. - A Site Status Report for a period from October through December 2014 was submitted to DEC on this meeting. Will review AD 06/10/2015: Reviewed the report. It states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The average depth to water was 24.97 feet and ranged from 22.65 feet (MW-7) to 28.72 (MW-8) ft. below top of casing on December 27, 2014. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on December 27, 2014. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 602. MW-10 was not accessible. It is behind a locked gate. GW data: During the December 27th sampling event, BTEX concentrations ranged from 3.1 (MW-3) to 28,200 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit in all wells sampled. The quarterly GW sampling will continue at the site. If GW quality in well MW-4 will not show improvement in the next sampling round, some actions need to be taken to expedite the cleanup. AD 08/04/2015: Received a first quarter 2015 report. Will review. AD 09/01/2015: Reviewed the 1st quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The average depth to water was 25.16 feet and ranged from 22.65 feet (MW-7) to 28.52 (MW-8) ft. below top of casing on March 28, 2015. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on March 28, 2015. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether (MTBE) via EPA method 602. MW-10 was not accessible. It is behind a locked gate. GW data: During the March 28th sampling event, BTEX concentrations ranged from 17.0 (MW-3) to 30,100 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit in all wells sampled. GW data from well MW-4 indicated increase in BTEX levels from 28,200 in December 2014 to 30,000 ug/L in March 2015. Will contact Clean Globe Env. AD 09/03/2015: Received a second quarter 2015 report. Will review. AD 10/13/2015: Reviewed the second quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during the June 13, 2015 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 22.60 feet (MW-7) to 28.42 (MW-8) ft. below top of casing on June 13, 2015. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on June 13, 2015. Samples were analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX) and methyl tert-butyl ether

(MTBE) via EPA method 602. MW-10 was not accessible. It is behind a locked gate. GW data: During the June 13th sampling event, BTEX concentrations ranged from 3.0 (MW-1 and MW-3) to 25,992 ug/L in MW-4 which is a decrease from March 2015 sampling data at 30,100 micrograms ug/L in this well. MTBE concentrations were below the detection limit in wells (MW-1, 2, 3, 4, 5, and 9) to 1,109 ug/L in MW-8. Area of groundwater contamination located in the central northern part of the site along the Queens Boulevard. TBTEX concentrations in this area are: 1. MW-2 - 20,100 ug/L; 2. MW-4 - 25,992 ug/L; 3. MW-9 - 16,010 ug/L. Some additional actions should be proposed for this part of the site to expedite the spill cleanup. Will call the consultant. Quarterly groundwater sampling will continue at the site. AD 03/10/2016: Received third and fourth quarters 2015 reports. Will review. AD 04/05/2016: Reviewed the third quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during September 26, 2015 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 23.09 feet (MW-6) to 28.69 (MW-8) ft. below top of casing on September 26, 2015. GW sampling: Ten (10) groundwater samples were collected (MW-1 through MW-10) on September 26, 2015. Samples were analyzed for volatile organic compounds on the CP-51 List via EPA Method 8260C. GW data: During the September 26th sampling event, BTEX concentrations ranged from ND (MW-3) to 22,277 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit for all the wells sampled (MW-1 through MW-10). Area of groundwater contamination located in the central northern part of the site along the Queens Boulevard. TBTEX concentrations in this area are: Well September June 2015 1. MW-2 - 13,850 ug/L 20,100 ug/L; 2. MW-4 - 22,277 ug/L 25,992 ug/L; 3. MW-9 - 13,412 ug/L 16,010 ug/L. 4. MW-10 6,830 ug/L NS Plans for the site include continuation of quarterly monitoring and sampling. The next sampling round is scheduled for December 2015. AD 04/28/2016: Reviewed the fourth quarter 2015 report. The report states that there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during December 19, 2015 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 23.38 feet (MW-6) to 28.81 (MW-8) ft. below top of casing on December 19, 2015. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on December 19, 2015. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the December 19th sampling event, BTEX concentrations ranged from ND (MW-3) to 22,277 micrograms per liter (ug/L) (MW-4). MTBE concentrations were below the detection limit for all the wells sampled (MW-1 through MW-10). Well December September June 2015 1. MW-2 - 21,030 ug/L 13,850 ug/L 20,100 ug/L; 2. MW-4 - 24,348 ug/L 22,277 ug/L 25,992 ug/L; 3. MW-9 - 18,600 ug/L 13,412 ug/L 16,010 ug/L. 4. MW-10 NS 6,830 ug/L NS The BTEX levels indicate fluctuating trend. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is a parking lot for commuter parking. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. The next sampling

S100145562

round is scheduled for March 2016. Future analysis will include volatiles on the CP-51 list by EPA Method 8260C. AD 01/2017: Called and spoke with Mr. Fiorentine regarding submission of all missing reports for Sunoco sites and scheduling an annual meeting to discuss the priority sites and further actions. AD 03/03/2017: Received a cluster of reports for the Sunoco sites for 2016. Will review. AD 03/20/2017: Reviewed the 1st quarter 2016 report. According to the report, there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during March 19, 2016 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 25.32 feet (MW-6) to 29.89 (MW-8) ft. below top of casing on March 19, 2016. GW sampling: Ten (10) groundwater samples were collected (MW-1 through MW-10) on March 19, 2016. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the March 19th sampling event, BTEX concentrations ranged from ND (MW-7) to 35,600 micrograms per liter (ug/L) (MW-2). MTBE concentrations were below the detection limit for all the wells sampled, except for well MW-7 with 160ug/L. Well December 2015 March 2016 (BTEX in ug/L) 1. MW-1 - 51 916 2. MW-2 - 21,030 35,600 3. MW-3 - 32 912 4. MW-4 - 24,348 29,128 5. MW-5 - 252 38 6. MW-6 - 1,229 223 7. MW-7 - 1,400 ND 8. MW-8 - 1,598 1,228 4. MW-9 - 18,600 28,610 5. MW-10 NS 8,110 The BTEX levels indicate in general an increasing trend. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is a parking lot for commuter parking. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. AD 03/22/2017: Available dates were discussed by all parties involved and the meeting was scheduled for April 20, 2017. AD 03/23/2017: Reviewed the 2nd quarter 2016 report. According to the report, there are ten (10) monitoring wells (MW-1 through MW-10) at the site. No free product was detected in any of the site wells during July 3, 2016 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 26.88 feet (MW-6) to 30.76 (MW-7) ft. below top of casing on July 3, 2016. GW sampling: Nine (9) groundwater samples were collected (MW-1 through MW-9) on July 3, 2016. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the July 3rd sampling event, BTEX concentrations ranged from ND (MW-7) to 36,724 micrograms per liter (ug/L) (MW-2). MTBE concentrations were below the detection limit for all the wells sampled, except for well MW-7 with 3 ug/L. MW-2 had the highest TVOCs with 43,579 ug/L. Well December 2015 March 2016 July 2016 (BTEX in ug/L) 1. MW-1 - 51 916 447 2. MW-2 - 21,030 35,600 33,100 3. MW-3 - 32 912 643 4. MW-4 - 24,348 29,128 36,724 5. MW-5 - 252 38 10 6. Southwest. Plans for the site include continuation of quarterly monitoring and sampling. AD 03/30/2017: Reviewed the 3rd quarter 2016 report. According to the report, there are ten (10) monitoring wells (MW-1 through MW-10) at the site. Free product was detected in monitoring wells: MW-4, MW-9 and MW-10 during September 30, 2016 sampling event. Liquid phase hydrocarbons (LPH) were last detected in monitoring well MW-10 on March 24, 2012 at 0.02 ft. The depth to water ranged from 27.67 feet (MW-6) to 32.51 (MW-8) ft. below top of casing on September 30, 2016. GW sampling: Seven (7) groundwater samples were collected (MW-1 through MW-7) on September 30, 2016. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the September 30th sampling event, BTEX concentrations ranged from ND (MW-7) to 60,800 micrograms per liter (ug/L). MTBE concentrations were below the detection limit for all the wells sampled. MW-2 had the highest TVOCs with 85,860 ug/L. Well December 2015 March 2016 July 2016 September (BTEX in ug/L) 1. MW-1 - 51 916 447 519 2. MW-2 - 21,030 35,600 33,100 60,800 3. MW-3 - 32 912 643 1,266 4. MW-4 - 24,348 29,128 36,724 FP 5. MW-5 - 252 38 10 2,889 6. MW-6 - 1,229 223 3,524 7,540 7. MW-7 - 1,400 ND ND ND 8. MW-8 - 1,598 1,228 1,542 895 4. MW-9 - 18,600 28,610 31,741 FP 5. MW-10 NS 8,110 NS FP The BTEX levels indicate an increasing trend in wells: MW-2, MW-3, MW-5 and MW-6. Wells: MW-4, MW-9 and MW-10 had LNAPL. Sensitive receptors: The surrounding area use is heavily industrial and commercial. Queens Boulevard is to the North and the MTA Subway elevated platform runs above the Boulevard. The current property use is a parking lot for commuter parking. The closest water body is a tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. Weekly site visits will be conducted to monitor and remove free product. AD 04/04/2017: Reviewed the 4th quarter 2016 report. According to the report, there are ten (10) monitoring wells (MW-1 through MW-10) at the site. Free product was detected in monitoring wells: MW-4, MW-9 and MW-10 during September 30, 2016 sampling event. As a result, weekly free product recovery events were conducted at the site since that time. Absorbent socks were used in the wells. LPH recovered during this period - 0.11 gallon. The depth to water ranged from 28.19 feet (MW-6) to 32.69 (MW-8) ft. below top of casing on December 3, 2016. GW sampling: Seven (7) groundwater samples were collected (MW-1 through MW-7) on December 30, 2016. Samples were analyzed for volatile organic compounds on the CP-51 list via EPA Method 8260C. GW data: During the December 3rd sampling event, BTEX concentrations ranged from ND (MW-7) to 28,800 micrograms per liter (ug/L). MTBE concentrations were below the detection limit for all the wells sampled. MW-2 had the highest TVOCs with 32,100 ug/L. Well December 2015 March 2016 July 2016 September December 2016(BTEX ppb) 1. MW-1 - 51 916 447 519 348 2. MW-2 - 21,030 35,600 33,100 60,800 28,800 3. MW-3 - 32 912 643 1,266 1,266 4. MW-4 - 24,348 29,128 36,724 FP FP 5. MW-5 - 252 38 10 2,889 3,083 6. tributary of Newtown Creek located approximately 2,000 feet to the Southwest. Plans for the site include continuation of quarterly monitoring and sampling. LNAPL recovery site visits will continue on a bi-weekly basis for the 1st quarter 2017. This will include well gauging of the 4 wells: MW-2, MW-4, MW-9 and MW-10. AD 04/20/2017: DEC had an annual meeting with a Sunoco representative and their consultants to discuss remedial progress at each site. High-priority sites and three potential spill closure candidates were discussed. Plans for additional investigation and/or remediation were discussed for priority sites with persistently high levels of contamination, and it was agreed that work plans will be submitted to DEC for review and approval within the next few months. Remediation and monitoring of these sites will continue on a regular basis. AD 05/31/2017: Received an e-mail from Mr. Fiorentine: Dear Ms. Doronova, Attached please find the Remedial Action Plan for the proposed work at the above referenced site. We would like to start this work as soon as possible so we ask that you reply with any comments or questions by the end of the week if possible. The product recovery portion of the RAP is already in progress. Thank you, Tony Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com Will review. AD 06/08/2017: Reviewed the work plan. CGE proposes to perform site remediation in two stages: First, as an interim remedial measure (IRM) to address the LNAPL present in monitoring wells MW-2, MW-3, MW-4, MW-9, and MW-10, CGE will perform Vacuum Enhanced Fluid Recovery (VEFR) events. The total gallons of liquid removed will be documented during each visit along with LNAPL thickness measurements before and after treatment. VEFR events will be scheduled on a weekly basis until LNAPL thickness in the effected wells decreases below 0.05 feet. In order to aid in the recovery of LNAPL, two additional wells, MW-11 and MW-12 will be installed in the former UST area. The wells will be constructed of 4 inch diameter PVC and will be 40 feet in total depth. Then, CGE will use In Situ Chemical Oxidation as the remedy for the site. It is anticipated that two or more treatments may be required to remediate petroleum compounds to acceptable levels. Therefore, this remedial action plan includes two treatments. The oxidant selected for this project is Sodium persulfate. The product that has been selected is Klozur. It is a form of sodium persulfate used in environmental applications and is manufactured by PeroxyChem. Approximately 6,800 pounds of Klozur will be used during this initial ISCO treatment. The initial treatment will consist of a minimum of 9 injection points approximately 20 feet apart. A geoprobe will be used to advance points into the subsurface. The rods of the geoprobe will be raised and lowered as the solution is injected into the subsurface at the impacted zones. The secondary treatment may vary in number of injection borings and or quantity of Klozur based on the observations and implementation of the initial treatment. Quarterly GW sampling and monitoring will continue at the site. The site plan with new wells locations is missing in the work plan. To call Mr. Fiorentine. AD 06/09/2017: Called and spoke with Mr. Fiorentine. Requested to submit the site plan with proposed wells locations. AD. 06/14/2017: Received the revised work plan. AD 06/15/2017: Issued and sent a RAP approval letter. AD 05/17/2018: Received the following e-mail from Mr. Fiorentine: Hi Ainura, Attached please find a letter describing proposed modifications to the approved RAWP for the above referenced site. We have increased the scope to include the installation of more wells, use of

surfactants for LNAPL recovery, and added an SVE component. Please review and let me know if you approve of the modifications. Thanks, Tony Anthony M. Fiorentine / Principal / CGE / P.O. Box 446, Kings Park, NY 11754 (631) 338-4170 mobile / (888) 454-5923 office & fax / afiorentine@cg-env.com Will review. AD 05/21/2018: CGE has prepared this letter to present modifications to the Remedial Action Work Plan (RAWP) that was approved on June 15, 2017. The modifications are due to developments regarding the site access and plans for site improvements. Previous plans to begin construction of a building on the site have been postponed. This has provided additional access for the treatment of impacted soils and groundwater at the site. This modification briefly describes additional efforts that are underway and planned. LNAPL Recovery: As per the approved RAWP, wells MW-11 and MW-12 were installed for delineation purposes and to assist with the recovery of light non-aqueous phase liquid (LNAPL). This RAWP modification includes the installation of an additional twenty (20) wells. The wells were constructed of 2-inch diameter PVC and were installed using Sonic drilling methods. The wells are generally installed to 40 feet total depth and have 20 feet of well screen and 20 feet of riser pipe. The purpose of the wells are to: 1. Assist with LNAPL recovery, 2. Delineate the horizontal extent of LNAPL, 3. Delineate the horizontal and vertical extent of soil impacts, 4. Delineate the horizontal extent of groundwater impacts, 5. Determine if up-gradient sources of impacts are present, and 6. Provide a network of wells to be utilized for remediation purposes including; Soil Vapor Extraction, VEFR Events, Injection of Surfactants, and Injection of ChemOx reagents. As per the approved RAWP, vacuum enhanced fluid recovery (VEFR) events have been implemented. This RAWP modification also includes the injection of PetroCleanze and RegenOx Part A into selected wells to assist with the recovery of LNAPL. VEFR events will continue following the injection of PetroCleanze and RegenOx Part A to recover LNAPL and impacted groundwater. This process will be repeated three (3) times or until no more than 0.05 ft. of LNAPL is measured in any of the wells. Once the LNAPL thickness is below 0.05 ft, the final remedy of Chemical Oxidation will be implemented as per the approved RAWP. A fact sheet for PetroCleanze is provided as an attachment. Soil Vapor Extraction: Also included in this RAWP modification, is the use of soil vapor extraction (SVE) as an additional interim remedial measure. The SVE will be utilized to remediate impacts in the vadose zone. Since there is no electric power on the site, a portable generator will be used as a source of electricity. No trenching and/or below grade piping is proposed at this time. The SVE system will consist of a regenerative blower connected to 2 vacuum hoses through a series of manifolds run above ground to selected wells. The exhaust from the blower will be connected to two (2) 500-pound vapor phase granular activated carbon vessels for treatment prior to discharge. It is anticipated that between 4 to 6 vacuum wells will be connected simultaneously to the SVE system. The generator will not be allowed to run unattended. Therefore, the SVE system operation will be limited to daytime hours 5 days per week. Additionally, as vapor concentrations diminish at individual wells, other wells will be substituted to optimize the vapor recovery rate. Schedule: The following schedule is based on anticipated LNAPL removal rates. Adjustments to the schedule or the number of rounds of injections may vary based on site conditions. Description of Work Completion Date: Inject PetroCleanze and RegenOx Part A & Conduct VEFR Events Round 1 - May 25, 2018 Inject

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Dt record added: 11/17/2015  
Dt rec updated: 06/22/2018  
Updated By: MXMAGLOI  
Site Code: 492842

Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil -

**S116550037**

Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 492842

Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use.

Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The

site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This

process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 492842

Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup

objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 492842

Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil

disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

Update By: JHOCONNE  
Site Description:

Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage.

S116550037

Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem:

Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.

Health Problem:

Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into

Site Description: Location: The site is located at 44-30 Purves Street in Long Island City, New York. The site is an irregular-shaped parcel and is denoted on New York City tax maps as Block 268, Lot 1 (formerly Lots 1, 26, 25, 24). The site is on the southern portion of the city block bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. It should be noted that the property immediately adjacent to the site is also in the BCP (see site no. C241164). Site Features: The site is approximately 0.62 acres in size and is currently vacant. It is currently covered with a concrete slab and overgrown vegetation. A retaining wall supports the Thomson Avenue and 44th Drive sidewalks. The sidewalk grade of Purves Street is at approximately site grade. The site was previously improved with multiple buildings and was used for various manufacturing and industrial purposes. Current Zoning and Land Use: The site is in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The zoning designation is M1-5/R9 (manufacturing with a residential overlay). The site has been vacant since around 2006. Past Use of the Site: The site most recently was used for automobile repair and carpet storage. Previous uses also include a chemical laboratory, a filter cleaner company, a hardware warehouse, a paper embossing company, a taxi repair facility, a controller manufacturing company, a pine chemical company, and a freight company. Site Geology and Hydrogeology: Depth to groundwater has been measured at 4.5 to 7 feet below ground surface and flows to the east-northeast toward Purves Street. The subsurface strata at the site consists of historic urban fill extending to depths from 1.5 to 11 feet below ground surface (bgs), underlain by sand with varying amounts of silt and gravel. Sandy silt to clayey silt was found underlying the sand layer, and the silt is underlain by clay and/or peat above bedrock. Decomposed and weathered rock was observed at depths from approximately 44 to 48 feet bgs. Gray and white schist bedrock was observed at depths ranging from approximately 44 to 61 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and soil disposal, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from northern, eastern, and southeastern excavation sidewall and from one UST removal excavation that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), and metals. Four documentation samples collected from the UST removal excavations were analyzed for Part 375 and TLC-listed VOCs and SVOCs only. Soil - Prior to remediation, SVOCs and metals were detected at

MAP FINDINGS

**44-30 PURVES STREET (Continued)**

**S118372411**

concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, benzo(a)anthracene was the only metal that was detected at concentrations above the RRUSCOs. Benzo(a)anthracene was detected at a maximum concentration of 1.89 ppm compared to the RRUSOC of 1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 745 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 88.5 ppm compared to the RRUSCO of 16 ppm; mercury detected at a maximum concentration of 11.9 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, metals were detected in groundwater at concentrations exceeding the ambient water quality standard (AWQS) include selenium detected at 17 ppb compared to the AWQS of 10 ppb. After the remediation, selenium was detected in document soil samples at concentrations that exceed its protection of groundwater soil cleanup objective (PGWSCO). The presence of selenium in groundwater is consistent with the quality of regional groundwater.

**Health Problem:** Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling will be completed to determine if soil vapor intrusion is a concern for off-site buildings.

11/06/06: Called Groundwater Environmental long Island City and talk to Ms. Heather, she said she will try to get the information regarding spill and will call me back. -QA 01/18/07: Mr. Vincent Moresca called from Groundwater Env'tl said he is not involved in this spill but he will find out information & if he gets any information he will call me back. -QA 02/06/07: Called Ms. Don Dought at 1-800-360-9405 Environmental office Long Island City. She was not available left message to call me back. -QA 08/31/07: Called Ms. Connie Ryan (Owner of building @ 34-02 Queens Boulevard, LIC), asked if she has any document regarding tank closure assesment or any tank tightness test rpt (For tank which is in service). I faxed letter to her that we need this info very urgently. -QA 09/04/07: Called Ms. Connie Ryan (Owner of the building 34-02 Queens Boulevard, LIC) at (212)645-7575 and said that contamination is coming from upgradient that is your building to Peske truck leasing 33-17 47th Avenue. She asked me to send letter from which we found that contamination is coming from north side of building. I faxed letter to her (which Mr. Tony Dellaria (Ground Water and Environmental Services, Inc.) had send to NYSDEC. -QA 09/05/07: Called Mr. Richard Alves (Ace Atlas Corp., Boiler & Tank Service Co.) at 718-497-3003 and asked to send documents regarding tank closure and soil sample rpt by fax ASAP. -QA 09/06/07: This spill case transferred from Q. Abidi to J. Kolleeny. Attended meeting with Jane O'Connell & Vadim Brevdo of DEC and reps of Con Edison (new property owner) and their consultant, Jacques Whitford - see attendance sheet in eDocs. JW recently did remedial and geotech investigation of site, summarized in 9/4/07 rpt in eDocs. DEC stated that available data do not conclusively point to off-site source, but suggest residual impacts to soil & GW from original on-site spill, and that Con Ed will be expected to address these impacts, in addition to including mitigation measures in their plans for on-site substation. I changed spill priority ranking from P0 to P1 due to high levels of BTEX in soil & GW. - J. Kolleeny 09/10/07: Received email from Kenneth Kaiser of Con Edison with Meeting Summary Notes for Sept. 6th meeting (in eDocs). - J. Kolleeny 11/16/07: Reviewed Conceptual Remediation Approach letter from Kenneth Kaiser of Con Ed, dated 11/06/07 (in eDocs). Letter summarizes DEC's outstanding concerns: (1) high soil VOCs in smear zone, 25-31 ft. bgs, in northern part of site; (2) high benzene in GW from wells in west-central part of site; (3) high soil VOCs at/below water table (and shallow at one boring location, to be excavated during construction) in east-central part of site. Letter states that Con Ed has rejected excavation as remedial approach due to running sands at site, making shoring unsafe and threatening impacts to structure on adjacent property to north. Instead, Con Ed proposes (1) Injection of modified Fenton's reagent (Isotec) across treatment area via 80 injection points, in 3 separate events to occur in Dec. '07, March and April '08; (2) installation of funnel & gate system bridging water table, to direct GW to treatment gate using activated carbon or similar method; (3) decommissioning of most wells (17), except 6 which would be used to evaluate Isotec before/during/after injections, these 6 wells would be decommissioned before start of construction activities in May '08; (4) Installation of 3 new wells in sidewalk along east side of 33rd Street to monitor remedial progress, one of which would be directly downgradient of gate ; (5) implementation of GW monitoring program to track remedial progress, expected to involve quarterly sampling/gauging for 2 years, with submission of annual monitoring report. Letter further states that

**1009218117**

upon DEC approval of conceptual approach, Con Ed will prepare RAWP. I sent approval letter to Ken Kaiser of Con Ed, cc to Greg DelMastro of Jacques Whitford, stating that if monitoring shows treatment gate not effective, allowing high levels of GW contam to leave site, an alternative approach such as pump & treat should be considered. Also asked that RAWP provide details of Isotec injections, including diagram of proposed injection locations, quantities to be injected and supporting calculations; asked for design drawings for funnel & gate system; asked that well installed downgrade of gate be sampled once at end of 30-day start up, before routine quarterly sampling begins, and asked that monitoring reports initially be submitted quarterly, which may be modified later based on progress (letter in eDocs). - J. Kolleeny 12/07/07: On 11/30/07, received email from Greg DelMastro of Jacques Whitford consultants, stating: Please find enclosed letter from Mr. Kenneth Kaiser of Consolidated Edison Co. of New York, Inc. responding to comments in your letter on Conceptual Remediation Approach dated Nov. 17, 2007. In addition, information has been provided regarding initial injection event at the Future Newtown Substation Site. Attached document, Conceptual Remediation Approach / Initial Injection Event dated 11/30/07 (in eDocs), included letter from Ken Kaiser of Con Ed describing injection event planned to start 12/10/07, involving 81 injection points with 500 gals of hydrogen peroxide-phosphoric acid-ferrous sulfate formula to be injected per point, with two injection intervals targeted between 27 and 44 ft bgs, plus site diagram showing proposed injection locations. Con Ed proposes two additional such events in Jan. and Feb. '08. I reviewed and on 12/5/07 sent email to Ken: Can you add to letter a brief discussion of nature of chemical reaction between catalyzed hydrogen peroxide formula, and discussion of any potential health, safety, and env'tal impacts associated with its use? (i.e., does it cause strong exothermic reaction, can reaction cause damage to any subsurface utilities or structures in area, are any dangerous fumes/vapors generated, etc., that type of thing.) If you can attach product information sheets, that would also be helpful. Also, injection plan diagram shows funnel wall & gate as if they exist, and I presume they do not as yet. Should they be shown on diagram as if they currently exist? I see you are planning to inject substantial amount of chemical oxidant, and injection grid looks very comprehensive, so I have no issues with that. If you can make these changes/additions quickly, I will get out an approval letter today or tomorrow, and you should be able to proceed on Dec. 10 as projected. On Dec. 6, '07, received email from Greg DelMastro with revised letter/work plan from Ken Kaiser (in eDocs). I reviewed and emailed approval letter (in eDocs) to Ken Kaiser, cc to Greg DelMastro. Also sent original letter by regular mail to Kaiser. - J. Kolleeny 01/25/08: Jacques Whitford RAWP report (hard copy and CD) hand-delivered. - J. Kolleeny. 01/30/08: Received email from Greg DelMastro of Jacques Whitford on 1/29/08 with attached pdf of revised pages for RAWP. Received hard copies on 1/30/08; inserted in report. - J. Kolleeny 02/01/08: Received call from Greg DelMastro of Jacques Whitford on 1/31/08, asking if I could expedite review of part of RAWP dealing with decommissioning of wells in preparation for site construction. Con Ed wants to maintain 6 wells at site for monitoring, until construction requires those wells to be abandoned, and they want to decommission all remaining wells (monitoring and air sparge/SVE) now, since they'll start another round of chem ox injections next week. While on phone with Greg, we went over past GW

**1009218117**

data and I requested that another 7 wells (in addition to 6 they want to save) be sampled now prior to decommissioning, to evaluate progress from first 2 rounds of chem ox injections, and said I saw no reason to decom well South-1 in sidewalk along south edge of site, so this well should be kept open. Greg agreed to revise well sampling/decommissioning plan and re-submit. On 2/1/08, received revised proposal (in eDocs), and sent back email approving plan (in eDocs). - J. Kolleeny 02/11/08: On 2/8/08, Ken Kaiser of Con Ed sent Monthly Progress Rpts for Dec.'07 and Jan.'08 (in eDocs), plus lab results for waste characterization samples collected from 2 locations in Jan.'08. Results for SB-5 showed significant VOC levels (TAGM 4046 exceedances). I emailed Ken asking for site plan showing waste charactzn sample locs and results of 2nd sample loc ( injection loc 2 ). On 2/11/08, received email from Ken with site plan (attached to Jan.'08 progress rpt in eDocs), saying results for 2nd location will be sent when available. - JK 02/14/08: Received email from Ken Kaiser of Con Ed with waste characterization soil sample results for Injection Location 2 (in eDocs), as I had requested. Results for sample from 23' to 28' below grade showed 19.8 ug/kg of benzene; no other VOCs or SVOCs detected. - JK 02/21/08: Received email on 2/19/08 from Greg DelMastro of Jacques Whitford with attached letter (in eDocs) saying that while trying to sample wells according to plan I approved on 2/1/08, they found EW-12 & MW-9 filled in with sand/silt. Letter argued cleaning out wells to obtain sample would be difficult or impossible; he recommended abandoning those wells. I looked at data, noted that MW-9 had some of highest GW contam levels at site. Spoke with Greg on 2/20/08, said I'd be willing to approve abandoning EW-12 but I'd like to see another GW sample from MW-9, and that Con Ed's haste to proceed with construction shouldn't be factor in determining all aspects of remediation (also asked that all correspondence about wells at site should have site plan showing well locs). I asked if they could try cleaning well to get GW sample, and if that's impossible, use direct push to get grab sample? Greg noted that they intend to do another sampling event in mid-March, and would it be possible to put off efforts for MW-9 until then, so they can finish up 3rd round of chem ox injections this week? I agreed this was OK, sent email (in eDocs) to Ken Kaiser of Con Ed stating: I have reviewed letter dated 2/19/08 from Gregory DelMastro of JW concerning GW sampling at site. Letter explains that 2 wells scheduled for sampling have become filled in with sand & silt, possibly as result of chem injection events, and cannot be sampled in their current state. Letter states that removal of sand/silt from these wells would be difficult, so Con Ed proposes that wells be eliminated from GW sampling task, overdrilled and abandoned. Proposal to remove well EW-12 from GW sampling program & abandon well is approved. However, well MW-9 had very high levels of dissolved-phase contam when last sampled in 2007, including 8,150 ug/L benzene, 2,750 ug/L ethylbenzene, 14,900 ug/L toluene, 16,030 ug/L total xylenes. This well should be re-sampled to determine current GW conditions and evaluate effectiveness of chem ox injections. DEC requests that efforts be made to rehabilitate well MW-9 so it can be sampled during next GW monitoring round, in mid-March '08. If well cannot be cleaned out and sampled, then you should propose alternate means to obtain GW sample from immediate vicinity of well MW-9. Please include site plan showing well locations with any future correspondence regarding GW monitoring. On 2/20/08, received email reply from Ken Kaiser: Thank you for quick review and response. We have discussed internally and

**CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued)**

**1009218117**

will attempt to clean out MW-9, re-develop and re-sample well. If this does not work, next step would be collection of GW sample using direct-push methods. We will keep you informed of progress. - J. Kolleeny 03/13/08: On 3/7/08, received email from Greg DelMastro of Jacques Whitford with attached monthly progress report for Feb. '08; report presented GW data for 2/13/08 sampling event, but no earlier GW data. On 3/10/08 I wrote back to DelMastro: Thanks for February progress report. Can report be modified to include GW analytical results from previous sampling event (August 2007?) for wells that were sampled in Feb. '08, so that results can be compared to evaluate any effect from chemical oxidation injections? Contaminant levels in recent GW results still seem very high to me and do not suggest much improvement as result of injections. Also, have past monthly progress reports been sent to me as hard copy, in addition to pdfs? If not, that's fine, but if so, can you please make requested change in presentation of GW data before sending out hard copy of Feb. '08 report? On 3/12/08, got email reply from DelMastro: Please find attached revised monthly progress report with GW analytical data from most recent (Feb. '08) GW sampling event and also data from past (July/August '07 and September '07) GW sampling events prior to chemical injection program. It appears from analytical data that GW beneath Site is reacting very well to chemical injections after completion of Injection Events 1 and 2. Reductions in VOC concentrations in GW, some significant, have occurred in wells MW-10, FN-11, MW-3, MW-11, EW-9, FN-8, and South-1. Some monitoring wells such as West-1, MW-5, EW-2, and EW-13 have shown increases. We believe that these wells too will show decreased concentrations in GW following final Round 3 chemical injection event. A hardcopy of progress report, attached analytical data, and map is being sent to you via mail. [Revised Feb. '08 Progress Rpt. is in eDocs] I sent email reply on 3/12/08: Thanks for revised monthly report. Although data seem mixed to me at this point, I see that contaminant levels have gone down in number of wells, and hopefully we'll see downward trends in all wells (those which still exist) in near future. - J. Kolleeny 03/26/08: Reviewed Jacques Whitford Jan. '08 RAWP and Jan. '08 Construction Specs document (both in eDocs). Rpt proposes 3 chem ox injection events, GW monitoring events to evaluate chem ox effectiveness prior to abandoning all wells for site construction, excavation of relatively shallow (compared to smear zone) contam soil from limited area around boring SB-5 (former fuel pumps area), and install'n of impermeable barrier wall and permeable reactive barrier system (funnel & gate system), utilizing activated carbon, on west side of site to treat contaminated GW before exiting site. Rpt also mentioned install'n of vapor barrier beneath planned on-site building, but did not provide any details or mention sub-slab depressurization system. On 3/14/08, contacted Greg DelMastro requesting revisions to rpt, and add'l info regarding vapor barrier, asking if there will also be a sub-slab depress'ztn system. Greg said JW is not handling vapor barrier issues, being handled by separate contractor to Con Ed, he will let Ken Kaiser of Con Ed know about my inquiry. Greg said he would send revised pages for rpt, plus CD with finalized pdf of RAWP & appendices. Received revised pages and CD on 3/21/08 from JW. Also on 3/21/08 received email from Ken Kaiser of Con Ed with attached pdfs of docs related to sub-slab depress system. I told him docs did not provide details of proposed vapor barrier. Visited site on 3/24/08 to observe limited soil excavation from former pumps area (boring SB-5 area), noticed some petroleum odors.

**1009218117**

Excavation was 20' x 20'. At target depth (28 ft. above SL) excavator created benches to slope excavation walls properly and allow field personnel to enter pit and collect end-point samples. They let pit air out, then collected 4 sidewall and one bottom sample; PID readings were 0.2 to 0.4 ppm (i.e., background levels). On 3/25/08 received email from Ken Kaiser of Con Ed with addt'l details of sub-slab system & vapor barrier, which will be Griffolyn Type-105 7-ply barrier, 15 mils thick, or approved equal (see info in eDocs). On 3/26/08 sent RAWP approval letter to Ken Kaiser of Con Ed, cc to Greg DelMastro of JW (in eDocs). - J. Kolleeny 04/02/08: On 3/31/08, received email from Greg DelMastro of Jacques Whitford with attached post-excavation sample results (in eDocs); email stated: Following your visit to Newtown SS site on March 24, 2008, Jacques Whitford on behalf of Con Edison collected post-excavation soil samples including four sidewall soil samples and one bottom soil sample within SB-5 Area (see attached map). Each soil sample was analyzed for TCL VOCs, TCL SVOCs, and TAL Metals as per RAWP. I have attached analytical soil data from this post-excavation soil sampling event (see attached). Con Edison concludes that only Floor sample contained a VOC (Total xylene) and SVOCs (Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and dibenzo (a,h)anthracene) above their respective TAGM 4046 RSCOs. Based on these VOC and SVOC Floor exceedences, Con Edison is planning on excavating an additional 4 feet vertically (if it is deemed safe by Site HSO) from Floor of SB-5 Area excavation on Tuesday, April 1, 2008. Once we excavate to this depth (elevation 24), we plan on collecting only one bottom soil sample from excavation and analyzing sample for TCL VOCs, TCL SVOCs, and TAL Metals as per RAWP. Based on previous sidewall analytical data, we propose that collection of addt'l sidewall samples is not warranted. Based on safety concerns, we intend to immediately backfill SB-5 Area up to elevation 33. I called Greg on 4/2/08 and he confirmed that they dug an addt'l 4 feet on 4/1/08, took one bottom sample. He was unsure about PID screening results, but said field tech detected no petroleum odors. Lab results pending. - J. Kolleeny 04/03/08: Received email from Greg DelMastro (Jacques Whitford) with attached pdf of Monthly Progress Report #4, March 2008 (in eDocs). Will review. - J. Kolleeny 04/07/08: On 4/4/08 received email from Greg DelMastro of Jacques Whitford with attached lab results of post-ex bottom sample after addt'l excavation on 4/1/08 (in eDocs); email stated: Please find attached post-excavation data associated with SB-5 Area at Future Newtown SS Site. I have also attached sampling location map illustrating where sample SB-5 Area, Floor was collected from, following addt'l removal of soil from Floor to Elevation 24 feet as per my e-mail of 3/31/08. I wrote back to Greg: Results look good, looks like bulk of contaminated material was removed. I'd like to request that future soil & GW result tables only list petroleum-related VOCs and SVOCs in attached tables (plus MTBE) [attached TAGM 4046 petroleum compound tables], and list other compounds only if they are detected. (I assume comprehensive list currently being reported is artifact of reporting format required by our Haz Waste unit?) This will make tables shorter and easier for me to review. On 4/7/08, Greg wrote back: We can make that change on future submittals to you. - J. Kolleeny 04/14/08: Received email from Greg DelMastro, Jacques Whitford, with attached revised data tables for March '08 Monthly Progress Report (in eDocs), as I had requested. - J. Kolleeny 04/15/08: Reviewed JW's Monthly Progress Report #4 (March '08, in eDocs), with revised soil and GW data tables. Soil

**CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued)**

**1009218117**

data from post-ex samples taken after limited soil excav in area of SB-5 show almost no residual contam. GW results for March sampling event show contam levels in some wells have decreased, while others are still high. In MW-9, total VOCs went from 45,380 ug/L on 9/11/07 to 31,435 ug/L on 3/27/08; MW-10 went from 24,667 ug/L on 9/11/07 to 5,743 ug/L on 2/14/08 to 340 ug/L on 3/27/08; FN-11 went from 6,128 ug/L on 9/11/07 to 916 ug/L on 2/14/08 to 235 ug/L on 3/27/08; however, EW-2 total VOCs went from 13,472 ug/L on 8/1/07 to 23,343 ug/L on 2/14/08 to 21,909 ug/L on 3/27/08; West 1 went from 8,656 ug/L on 9/11/07 to 5,940 ug/L on 2/15/08 to 5,121 ug/L on 3/27/08 (with benzene conc. of 7,930 ug/L, 5,490 ug/L and 4,970 ug/L, resp.). All on-site wells are now destroyed to make way for construction, although several perimeter (sidewalk) wells remain. - J. Kolleeny 05/19/08: Reviewed Jacques Whitford Monthly Progress Rpt #5 for April '08 (in eDocs), dated 5/8/08, rec'vd 5/13/08. Activities in April '08 included collection of bottom sample from deepened soil excavation in area of SB-5 (sample results for end-points collected from this area are provided, altho these results have been previously submitted); excavation of ~3,000 cubic yds of material for construction purposes; construction of decontamination pad for upcoming remedial activities; completion of site survey for upcoming remed activities; mobilized equipment for upcoming remed acts, e.g., for temp. sidewalk closure on 33rd st. and drill rig; CAMP performed between 4/1 and 4/30/08. Activities scheduled for May '08 include advancing grout holes adjacent to permeable reactive barrier, begin drilling for remed acts, e.g., drilling caisson for gate installation, delivery and install'n of Waterloo sheeting, CAMP implementation. Report states that remed action is ~70% complete. - J. Kolleeny 05/20/08: Visited site to observe install'n of cylindrical caisson. In light rain, contractor was trying to drive 47-foot long caisson (hollow concrete cylinder) into ground, w/ pneumatic hammer suspended from crane, but having great difficulty, making little progress, possibly needing larger hammer. Once caisson has been driven into ground, soil within will be removed, and GW treatment gate will be installed within caisson. See 2 photos in image folder. - JK 06/13/08: Received Jacques Whitford Monthly Progress Rpt #6, for May 2008 (in eDocs), by email from Greg DeMastro on 6/10/08, got hard copy on 6/12/08. Rpt mentions delivery of caisson to site, advancement of Waterloo sheeting along north wall of planned funnel impermeable barrier, and performance of CAMP throughout month. Rpt mentions that advancement of caisson has been difficult due to dense soils, and they are removing soil from within caisson as they try to install it to help advance it; they may also mobilize larger piece of equipment as alternate approach. Rpt states that remediation project is 85% complete; in June '08 Waterloo sheeting will be advanced along south wall of funnel, caisson installation will be completed and treatment cassette will be installed in caisson. - J. Kolleeny 07/22/08: Reviewed Jacques Whitford Monthly Progress Rpt #7, for June '08 (in eDocs), received as pdf by email on 7/8/08 and hard copy by regular mail on 7/10/08, plus CD with fieldwork photos (in eDocs). Progress rpt indicates Waterloo sheeting has been fully installed, caisson was successfully advanced to target depth, and treatment cassette was installed in caisson, with top manhole. Remaining tasks include grouting of sheeting interlocks, removal of caisson, and installation of 2 monitoring wells in sidewalk along 33rd Street, adjacent to treatment cassette. Also received draft Table of Contents of Final Engineering Report by email on 7/14/08, will review. - J. Kolleeny

**CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued)**

**1009218117**

08/15/08: On 7/24/08, spoke with Greg DelMastro of Jacques Whitford, suggesting that installation of wells in sidewalk along west side of site (east side of 33rd St.) be post-poned until after contractors do utility installation in that sidewalk; otherwise, wells would be destroyed by contractors, and also delaying submission of Final Engineering Report until after well installations. I agreed this made sense. Greg sent email with attached letter (in eDocs) to document phone conversation. On 8/15/08, I sent email (in eDocs) to Kenneth Kaiser of Con Ed, cc to Greg DelMastro, formally approving this proposal: I have reviewed letter from Gregory DelMastro of Jacques Whitford, documenting phone conversation I had with him on July 24, '08 concerning project schedule for remediation and monitoring of this spill site. As letter indicates, I agree with Mr. DelMastro's proposal to modify project schedule by postponing installation of monitoring wells in sidewalk on east side of 33rd Street until after subsurface utilities associated with planned Con Edison substation have been installed in that sidewalk, and to delay submission of Final Engineering Report for project until after well installation is complete. These modifications to project schedule are clearly sensible and in best interests of successful completion of project. Please feel free to contact me if you have any questions or comments.

- J. Kolleeny 08/15/08: Reviewed Jacques Whitford's Monthly Progress Report #8, for July '08 (in eDocs). Rpt states that caisson removal & installation of treatment cassette, with associated carbon, manhole, Bilco doors, etc., was completed, and Waterloo sheeting interlocks were grouted. Sampling of GW from mon wells associated with treatment cassette scheduled for Aug.'08. -JK 08/26/08: Received email from Greg DelMastro of Jacques Whitford: Please find attached tabulated groundwater analytical data and sampling location map from baseline August 2008 GW sampling event at Newtown SS Site. Attached data (in eDocs) present results of GW samples collected in Aug. '08 from wells inside treatment cassette in sidewalk, up- and down-gradient of carbon unit. Rslts show several VOCs present in sample from up-gradient well (i.e., prior to flowing through carbon treatment unit), including benzene at 294 ug/L, ethylbenzene at 28.4 ug/L, m,p-xylene at 29 ug/L, and 1,2,4-trimethylbenzene at 12 ug/L. Sample from down-gradient, post-carbon-treatment well was non-detect for all VOCs. - J. Kolleeny 09/05/08: Had conference call on 9/4/08 with Greg DelMastro of Jacques Whitford and Ken Kaiser & Sa'ed Abuasi of Con Ed regarding scheduling of sidewalk monitoring well install'n and submission of Final Engineering Rpt. On 9/5/08, received email from Greg documenting call: Thank you for taking time out of your schedule to attend conference call between yourself, Mr. Ken Kaiser and Mr. Sa'ed Abuasi of Con Edison and myself yesterday (Sept. 4, 2008). Summary of call and acceptance of path forward by all parties is listed below: 1. Due to construction-related activities on 33rd St associated with Con Ed substation, install'n of 2 monitoring wells (one 20 ft north of MW-15 and one 40 ft south of MW-15) is postponed till Nov.'08. We do not want to jeopardize wells' integrity by installing them at this time. If schedule for install'n of these wells slips further, NYSDEC will be notified. 2. Following install'n of 2 wells in sidewalk along 33rd St & sampling & analyzing initial GW sample from wells, this info will be sent to DEC as Addendum to FER. Future GW sampling and chemical analysis efforts on quarterly basis will be documented in quarterly rpt to NYSDEC. 3. Prep of Final Engineering Report (FER) is on-going, Rpt is approx 60% complete. We expect transmittal of draft FER to Con Ed for their review and

comment in Sept. '08. - JK 09/11/08: Reviewed Jacques Whitford's Monthly Progress Rpt #9, for Aug. '08 (in eDocs). Rpt notes that remedial action is 99% complete, mentions postponement of sidewalk well install'n until Nov.'08 followed by submittal of Addendum to Final Engrng Rpt (FER), and projects transmittal of FER to DEC in Sept. '08. Rpt also presents Aug. '08 baseline GW data for treatment cassette wells, received in earlier submission on 8/26/08. - J. Kolleeny 10/20/08: Reviewed Jacques Whitford's Monthly Progress Rpt #10 for Sept.'08 (in eDocs). Rpt notes that remed action is 99% complete, mentions that draft Final Engrng Rpt (FER) has been completed & is under in-house review. Lists remaining actions as completion/submission of FER (in Oct. '08), install'n of two mon wells in sidewalk, and prep/sub of Addendum to FER. - JK 11/26/08: On 11/12/08 received Jacques Whitford's Monthly Prog Rpt #11 for Oct.'08 pdf (in eDocs) by email from Greg DelMastro; got hard copy 11/17/08. Rpt lists actions scheduled for Nov.'08 as Transmittal of FER and SMP to DEC. Sent email to DelMastro on 11/18/08: Thanks for progress rpt. Was my understanding you requested (and I approved) postponing install'n of 2 sidewalk mon wells til Nov.'08, to let constr contractors finish utility work in sidewalk. However, current rpt makes no mention of plans to install wells in Nov. Can you update on well install'n sched? Have contractors completed work in sidewalk? On 11/19/08, got phone message from Ken Kaiser of Con Ed saying well install'n will begin on 11/24/08. On 11/24/08, got email from Greg DelMastro: We will start 0-5 ft bgs utility clearance excav of boreholes today via Vactron along 33rd St. We anticipate tomorrow, Nov. 25 to begin to drill wells. We will also collect quarterly GW samples from wells MW-15 & MW-16 tomorrow. On 11/26/08, I sent email to Greg: Can you update me on install'n of sidewalk mon wells? Were wells successfully installed, was significant contam encountered during install'n? - J. Kolleeny 12/01/08: Received email from Greg DelMastro of Jacques Whitford: As follow-up to your e-mail from last Wed. re status & observations noted during drilling of 2 new wells in sidewalk along 33rd St., I have add'l info to share with you. One well (MW-17) was installed north of treatment gate. Light to moderate staining of soil was observed from 30-40 ft bgs along with petroleum odors and PID readings. Second well (MW-18) was installed south of treatment gate. No staining, odors or PID readings of/from soil was observed/measured. - J. Kolleeny 12/16/08: Reviewed Monthly Progress Rpt #12, for Nov. '08 by Jacques Whitford (in eDocs). Rpt states that draft Final Engrng Rpt and draft Site Mgmt Plan have been completed and are being finalized; that sidewalk monitoring wells MW-17 and MW-18 have been installed and developed, and that GW samples were collected from wells MW-15 and MW-16 in treatment cassette and submitted for VOC analysis. I sent email to Greg DelMastro of JW, cc to Ken Kaiser of Con Ed: Thanks for sending Monthly Progress Rpt #12; I received hard copy of rpt today. Rpt makes no mention of soil sampling during install'n of sidewalk monitoring wells. Were no soil samples collected? I'm not sure if I specifically asked that soil sampling be performed during well installation, but I assumed that it would be (especially since petroleum impacts were noticed in soil in one well). Determination of presence of vadose zone soil contam in sidewalk area is important, since it could act as source of GW contam outside of sheeting which forms funnel & gate system. Please let me know if soil sampling was performed during well install'n. Received email reply from Greg: Advancement of split-spoons was not performed during drilling, so soil sampling was not performed at MW-17 or

MW-18. - JK 12/22/08: Reviewed Monthly Prog Rpt for Nov.'08, dated 12/10/08, by Jacques Whitford (in eDocs). Sent email to Greg DelMastro of JW: Thanks for sending Monthly Prog Rpt #12. I'm puzzled by something - rpt doesn't mention soil sampling during install'n of sidewalk mon wells. Were no soil samples collected? I'm not sure I specifically asked that soil be sampled during install'n, but assumed it would be (esp. since petrol impacts were noticed in soil in one well). Determining presence of vadose zone soil contam in sidewalk area is important, since it could act as source of GW contam outside sheeting of funnel & gate system. Please let me know if soil sampling was done. Greg replied: Advancement of split-spoon samplers was not done during drilling of 2 wells, so soil sampling was not done at either MW-17 or MW-18. Also got email from Ken Kaiser of Con Ed: I do not recall any discussions about taking soil samples off property. On 12/22/08, I wrote back to Ken, cc to Greg DelMastro: It's true we never explicitly discussed collecting soil samples during install'n of wells in sidewalk along 33rd St, but that was because I consider that standard operating procedure during install'n of wells assoc with open spills. In fact, consultants usually contact me for my concurrence when they think it's appropriate to forego collecting soil samples during well install'n, such as if well is being replaced at same loc of well that was damaged/destroyed, or if well is being installed at soil boring loc where soil samples were recently collected. I'm also puzzled that you consider these wells in sidewalk adjoining site to be off property, considering that Con Ed installed caisson with treatment gate and 2 mon wells in same sidewalk, and will monitor & maintain that structure as part of approved remedial plan. I wish to point out it is standard DEC policy to require contam plumes to be zeroed-out before considering investig to be complete and before development of remedial plan. High levels of contam (including high benzene levels) were detected in well formerly in that sidewalk, and I'd have been within my rights to ask for install'n of well across 33rd St (i.e., down-gradient) from site, to evaluate potential off-site migration. I didn't ask for off-site well because Con Ed appeared to be moving relatively aggressively to address contam; however, if new sidewalk wells show high levels of contam that may be migrating off site, I may ask for well (or wells) across street. - J. Kolleeny 01/13/09: Reviewed Mnthly Prog Rpt for Dec.'08, dated 1/8/09, by Jacques Whitford (in eDocs). Rpt says baseline GW samples were collected from new sidewalk wells MW-17 & MW-18 on 12/31/08 (results not available), and presents results of GW samples collected from MW-15 & MW-16 (in treatment cassette in sidewalk) on Aug. 8 & Nov. 25, '08. Results show VOC exceedances in MW-16 (pre-treatment well upgrade of permeable reactive barrier) in Aug.'08 sample, but only benzene exceedance in Nov.'08 sample; both MW-15 samples were clean (post-treatment well, downgrade of barrier. Rpt says qtrly GW mon rpt will be submitted in Jan.'09. - J. Kolleeny 01/16/09: Reviewed Quarterly Groundwater Sampling Report (November 25, 2008) by Jacques Whitford, dated Jan. 12, 2009, received 1/14/09 (in eDocs). Rpt presents same GW data for wells MW-15 and MW-16 (wells within treatment cassette) that were in Dec. '08 Monthly Progress Report. Rpt notes that levels of compounds detected in pre-treatment well MW-16 in Aug. '08 baseline sampling event decreased in Nov. '08 event, except toluene, which was non-detect in Aug.'08 but went to 1 ug/L in Nov.'08. In Aug.'08 event, 5 compounds exceeded standards; in Nov.'08 event, only benzene exceeded std, with 106 ug/L. Again, sample from post-treatment well MW-15 had no

**1009218117**

exceedances or detections of VOCs. - J. Kolleeny 01/29/09: Reviewed Addendum to Nov. 2008 Quarterly GW Sampling Rpt by Jacques Whitford, dated Jan. 16, 2009 (in eDocs). Rpt presents results of GW samples taken on 12/31/08 from two wells installed in sidewalk along 33rd St. in Nov.'08, which show high levels of VOCs in well MW-17, to north of treatment cassette, which had 17,754 ug/L total VOCs including 1,800 ug/L benzene, and moderate levels of VOCs in well MW-18, to south of treatment cassette, which had 307 ug/L total VOCs including 261 ug/L benzene. Sent letter (in eDocs) to Ken Kaiser of Con Ed, cc to Greg DelMastro of JW, requesting two additional wells to delineate plume and evaluate potential off-site migration - one well to north of MW-17 in sidewalk on east side of 33rd St., and one well across 33rd St. to southwest of MW-17. Letter asked for soil screening and sampling during installation, and noted that if contam is found in either or both new wells, add'l wells may be needed to delineate contam. Then sent email to Greg DelMastro of JW, cc to Ken Kaiser: I had a couple of additional comments on Jacques Whitford's Addendum to November 2008 Quarterly Groundwater Sampling Report that I didn't want to include in letter I sent a few minutes ago to Ken Kaiser of Con Ed requesting two add'l monitoring wells for delineation purposes. These comments are: Can compounds listed in groundwater data tables in future reports be reduced to include only gasoline-related VOCs of concern shown on attached table, and can line for Total VOCs be added to table? - J. Kolleeny 02/12/09: On 2/9/09, received Response to NYSDEC Correspondence dated Jan. 29, 2009 by email from Greg DelMastro of JW (in eDocs). Notes that my suggestion of installing well north of MW-18 is not practical, as that would put well in treatment cassette location, and instead proposes 3 new wells: 1 north of MW-17, 1 south of MW-18, and one across 33rd St. to SW of MW-17. I sent email (in eDocs) to Ken Kaiser of Con Ed, cc to Greg DelMastro of JW: Upon review of Response to NYSDEC Correspondence Dated Jan. 29, '09 by Greg DelMastro of JW, dated Feb. 9, '09, I realize I was confused about numbering of sidewalk wells. When I asked for well to north of MW-18 and another to southwest of MW-18, I actually meant to ask for wells to north and southwest of MW-17, which had higher levels of dissolved-phase contam. In any case, Jacques Whitford's proposal to install monitoring wells on east side of 33rd Street north of well MW-17 and south of well MW-18 is approved, but location shown for well proposed across 33rd street, to southwest of MW-18 (which I requested thinking that MW-18 was MW-17) should be relocated further north in sidewalk on west side of 33rd Street, to southwest of well MW-17 and west-southwest of treatment cassette (see attached photocopy of site plan). Please let me know if this is unclear. - J. Kolleeny 04/17/09: Reviewed Quarterly GW Sampling Rpt for March '09 by Jacques Whitford, dated 4/13/09 (in eDocs). March '09 sampling results show total VOCs in influent to treatment cassette decreased from 112 ug/L in Nov. '08 to 20 ug/L in March '09 (i.e., well MW-16); treatment cassette effluent (MW-15) remained Below Reporting Limits; total VOCs in MW-17 decreased from 17,754 ug/L in Dec.'08 to 13,371 ug/L in March'08; TVOCs in MW-18 decreased from 307 ug/L in Dec.'08 to 24 ug/L in March'08, with only benzene exceeding std, at 8.8 ug/L. On 4/15/09, I sent email to Greg DelMastro of JW: Do you know if 3 add'l delineation wells proposed by Jacques Whitford in February '09 have been installed yet? Please let me know. - J. Kolleeny 04/22/09: Received email from Ken Kaiser of Con Ed: Sorry for not getting back to you sooner on this issue. Currently, construction activities at

**CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued)**

**1009218117**

site have increased and now include lanes on 3 surrounding streets (33rd St., 34th St. & 47th Ave.). Due to these activities, we have been unable to install wells we discussed. I have been pressing our construction mgmt people to give date on when we can have access to 33rd St. to install wells. After discussion, due to construction activities, this area will not be available until week of July 13th. We expect that we will install wells at that time. I have attached recent pictures of area so that you can see construction effort [in eDocs image folder]. - J. Kolleeny 06/15/09: On 6/10/09, received email from Greg DelMastro of Jacques Whitford, with attached letter (in eDocs) explaining that construction equipment covers sidewalk monitoring wells and asking that June '09 GW sampling event be postponed, stating that Con Ed will notify DEC when wells become accessible. Received hard copy of letter on 6/12/09. I sent email to Ken Kaiser of Con Ed on 6/12/09: I've looked at letter re June '09 Quarterly GW Sampling Event, and have question. Letter requests that June sampling be postponed due to equipment covering wells. This suggests relatively short delay, but since no time estimate is provided, I'm wondering if what is really being requested is suspension of quarterly GW monitoring rather than postponement of one event? Letter states Con Ed will update NYSDEC when wells become accessible for sampling; if I approve this request as worded, it's conceivable that you could put off GW mon for 6 months, a year, or longer! Can you give estimate of when equipment will be re-located and wells will be accessible? Can Con Ed expedite constr. activities related to placement of equipment covering wells, so equipment can be moved in near future? On 6/15/09, received email reply from Ken Kaiser: I understand your issues. I spoke to Con Ed Constr. Mgmt folks and asked them about moving crane so we can do sampling. However, moving crane is a big deal - significant cost and it takes day or 2 to take it down, another day or 2 to set up again (not even considering NYC permit issues). This would adversely impact tight constr. sched. My intent was not to skip sampling but to get in as soon as crane was moved. CM folks tell me area should be clear by mid to late July, at which point we can install new wells and sample existing wells. I know busy constr. area makes it hard to monitor GW at this time, but once area is cleared things should be much easier. I sent letter (in eDocs) approving request to postpone June '09 sampling, noting that it's DEC's understanding that wells will become accessible in mid/late July, and that if this won't happen, Con Ed should inform DEC and provide new estimate of when equipment will be moved and wells can be sampled. - JK 07/06/09: Received email from Ken Kaiser, Con Ed: Construction has cleared a bit at Site and we have started GW sampling today. We may start drilling/installing new wells on July 16th, we are just waiting for permits. - J. Kolleeny 07/17/09: On 7/16/09, received email from Greg DelMastro: On behalf of Con Ed, I wanted to update you on sched for install'n of mon wells. We plan to mobilize on 7/20/09 to begin utility clearance (0-5 ft bgs), followed by drilling on 7/21/09. On 7/14/09, reps of Con Ed and Stantec Consulting (formerly Jacques Whitford) met on site to review Code 753 utility markouts & newly installed electrical duct runs & manholes, relative to proposed sampling locs on 33rd & 34th Streets. Proposed well MW-25 on 33rd St (see attached Fig. 2 [in eDocs]) needs to be moved from orig proposed location. There is EMF shielding (steel plating) beneath sidewalk and road surface over area from 10 to 70 ft north of northern curbline of 47th Ave. Moving well north from orig proposed loc would put it 10 ft south of existing

**CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued)**

**1009218117**

well MW-18, i.e., too close to MW-18. We propose to move well south from orig proposed loc as shown on Fig. 2. We seek DEC approval for revised well loc. I sent email response to Ken Kaiser of Con Ed, cc's to Saed Abuasi of Con Ed and Greg DelMastro of Stantec: I have reviewed 7/16/09 email by Gregory DelMastro, as well as site plan showing proposed well locs, with revised loc for proposed well MW-25. Based on most recent available GW data for existing well MW-18, I am not insisting on install'n of well to south of MW-18 at this time. I was more concerned with contam in existing well MW-17, which should be delineated by proposed wells MW-23 and MW-24. If Jacques Whitford wishes to install proposed well MW-25 as precautionary measure, I have no objection to revised loc, considering difficulties with orig proposed loc. Got email reply from Ken Kaiser: Thank you for timely response. In light of your response & due to extensive network of subsurface utilities and related obstructions, we will not install MW-25 at this time. Install'n of proposed wells has been difficult due to these obstructions and we do not want to risk hitting obstructions unless absolutely necessary. If ongoing GW data indicates need for an addt'l well in this loc, we will install well at that time. - J. Kolleeny 07/21/09: Received email from Greg DelMastro of Stantec: On behalf of Consolidated Edison Co. of New York, Inc., I wanted to update you on schedule for monitoring well installation in sidewalks surrounding Site. We plan to begin Vactron work on Wednesday, July 22, 2009, followed by drilling activities on Thursday, July 23, 2009. - J. Kolleeny 07/23/09: Visited site to observe well install'n. Met Stantec field tech Lawrence Moller; ADT is driller. They've put in well on west side of site along 33rd St. (east side of street), north of existing well MW-17, started seeing impacts at 22-23 ft bgs, with 96 ppm on PID, then 826 ppm at 23-25 ft, 174 ppm at 25-26 ft, and 3,074 ppm at 26-27 ft (water table). They can't put in down-grade well across 33rd St. since driving lane has been shifted onto that sidewalk by construction, will have to wait. They are also installing wells on up-gradient, east side of site, but have seen no impacts in those wells. - J. Kolleeny 07/29/09: Received email from Ken Kaiser of Con Ed: I wanted to update you on install'n of addt'l wells. We have scheduling difficulty. Due to construction delays, fencing along 33rd St. is still in place. Due to loc of fence, install'n of MW-24 would require closing 33rd St. We submitted permit app to DOT and expected stipulations that would require weekend or night work to install well. Instead of providing stips, DOT rejected permit, so we cannot install MW-24 until fence is moved. I am working with Con Ed Constr. Mgmt grp to determine when fence will be moved and we can install well. Permit for fence has been extended for 6 weeks. We will continue with install'n, development, surveying & sampling of wells, and will report that info to DEC. I will let you know as soon as I have date for install'n of MW-24. - JK 08/10/09: Received email on 8/7/09 from Greg DelMastro of Stantec: We have completed well install'n at site with exception of MW-24 as per Ken Kaiser's e-mail to you on 7/29/09. Following well install'n, MW-19 located in western sidewalk of 34th St., up-gradient of Site, was observed to contain fine sand within screened interval. We would like to flush out well with water from local fire hydrant before we begin development of this well. Flushed water & sand will be properly containerized in drum and transported off-site for disposal. Prior to implementing this, we wanted to get your approval of this method. After removal of sand, well will be properly developed. Other wells recently installed

have already been developed. After speaking with Greg on 8/10/09, sent email: As discussed today on phone, I agree it would be worthwhile to attempt to rehabilitate this well by flushing it out with water in manner you described, and I approve going ahead with procedure. I also understand this will likely result in some delay to scheduled sampling of this & other recently installed wells at site, and agree that delay is acceptable. Please keep me updated on your progress. - JK 09/11/09: Reviewed Quarterly GW Sampling Rpt for 7/6/09, dated 8/21/09 (in eDocs), by Stantec Consulting Svcs (formerly Jacques Whitford). Results of 7/6/09 sampling event showed very high levels of dissolved contam in well MW-17 (north of treatment cassette in sidewalk along 33rd St.), with 3,260 ug/L benzene, 21,950 ug/L mixed xylenes, and 43,029 ug/L total VOCs (up from 13,371 ug/L in March '09). Significant contam also in MW-16, located within treatment cassette on up-gradient side of reactive treatment barrier, with 564 ug/L benzene and total VOCs of 1,036 ug/L (up from 19.6 ug/L total VOCs in March '09). Well MW-15 on down-gradient side of barrier was non-detect for VOCs; MW-18 to south of treatment cassette had minor amts of contam - 3.6 ug/L benzene, 9 ug/L ethylbenzene were only exceedances, and total VOCs were 22.9 ug/L, down slightly from 24 ug/L in March '09. Stantec speculates that increases in contam in wells MW-16 and MW-17 may be attributed to residual soil contam that may have been released into GW by on-going invasive construction activities and/or high amount of rainfall that fell between March and early July 2009. Rpt does not mention that add'l wells were installed in late July nor include any soil or GW data from those wells. I sent email to Ken Kaiser of Con Ed, cc to Greg DelMastro of Stantec: I just completed quick review of 8/21/09 Quarterly GW Sampling Rpt for 7/6/09 sampling event at site, and have several questions and comments related to rpt and to site activities in general: 1. Report makes no mention of add'l monitoring wells installed in late July 09, nor present any data from those wells. Is any soil and/or GW data available for new wells? 2. I'd like to ask for few changes/additions to rpt format. In table presenting VOC results for GW sampling event, I'd like to add line at bottom for Total VOCs in future rpts, and I'd like to have data from earlier quarterly mon events either added to that table, or presented in separate table (including most recent results), so I can quickly see trends in data. 3. Do you have any update on when down-gradient well across 33rd Street can be installed? Please let me know if you have any questions about my comments. - J. Kolleeny 11/05/09: Received email from Greg DelMastro of Stantec: I wanted to update you on status of install'n of remaining monitoring well (MW-24) as requested by NYSDEC, located in western sidewalk of 33rd Street and down gradient of treatment cassette (see attached Fig. 2 [in eDocs]). After several scheduling setbacks and coordination with numerous parties (Con Edison construction personnel, Stantec, Aquifer Drilling & Testing (driller) and NYCDOT (permits)), we have scheduled drilling, soil sampling, well install'n and development for Saturday, Nov. 7th. After we install MW-24, we intend to perform next round of GW sampling from 10 monitoring wells during week of Nov. 16th. Upon receipt and validation of analytical data, we will prepare rpt documenting our findings for your review. - J. Kolleeny 11/12/09: Completed review of Dec.'08 Final Engineering Rpt (FER) by Jacques Whitford, which includes Site Management Plan (SMP) as Appendix L. Rpt summarizes remedial actions to address soil & GW contam at site, including chem oxidant injections, excavation of contaminated soil,

**1009218117**

install'n of sheeting to contain & direct flow of GW with residual dissolved contaminants, and install'n of permeable reactive barrier treatment gate on down-gradient side of site to treat residual GW contam. SMP involves maintenance of permeable reactive barrier treatment cassette, quarterly GW monitoring & sampling of up-gradient and down-gradient monitoring wells to evaluate on- and off-site GW quality, and quarterly reporting. SMP anticipates management of residual GW contam until GW meets State standards for 8 consecutive quarters. Implementation of SMP is to be triggered by DEC approval of FER. I sent letter (in eDocs) approving FER & SMP to Ken Kaiser of Con Ed, cc to Greg DelMastro of Stantec (formerly JW), but requested inclusion of add'l wells installed after submission of FER, including MW-23 and MW-24 on down-gradient side of site, and at least one of 4 wells installed on up-gradient side of site (MW-19 through MW-22), in quarterly GW monitoring & sampling program, and stated that data from monitoring wells on down-gradient side of site (i.e., MW-17, MW-18, MW-23 and MW-24) be considered to determine when to submit request for spill closure, as well as data from MW-16 (on pre-treatment side of treatment cassette) as proposed in SMP. - J. Kolleeny 12/18/09: Reviewed Annual GW Sampling Rpt (Aug. 2008 - July 2009) by Stantec, dated 9/29/09 (in eDocs). Rpt summarizes quarterly sampling events over past yr, thru July '09 event. Rpt acknowledges that dissolved-phase contam levels have increased in several wells, esp. MW-16 and MW-17 between March & July '09; Stantec speculates that increase could be attributed to residual impacts in soil column that may have been released into GW by on-going invasive construction activities at site and/or from high rainfall in Spring of '09. Rpt states that GW results show treatment cassette is operating properly, since samples from well on down-gradient side of reactive barrier show no contam leaving cassette. Stantec concludes that based on data, change-out of carbon in treatment cassette is not warranted at this time. - JK 04/06/10: Reviewed Mon Well Install'n and Quarterly GW Sampling Rpt (December 2009), dated 2/3/10 by Stantec (in eDocs). Rpt summarizes install'n of 6 new wells: 4 on east, up-grade side of site (MW-19 thru MW-22) and 2 on west side of site: MW-23 to north of existing well MW-17 (east side of 33rd St.) and MW-24 across 33rd St. from existing well MW-18. Rpt also presents Dec.'09 GW sampling data for new and existing wells. Soil samples taken during install'n of new wells showed significant impacts (PID readings, TAGM 4046 RSCO exceedances in lab analysis) in MW-23; soil sample from MW-20 had TAGM exceedances for xylenes in lab analysis, but well install'n log doesn't show significant PID readings from sample interval. GW samples from all up-gradient wells (i.e., on east side of site) showed no impacts. For down-gradient wells, MW-16 (on up-grade side of treatment cassette) had 635 ug/L total VOCs (down from 1,036 ug/L in July '09); MW-17 had 28,907 ug/L tVOCs (down from 43,029 ug/L in July '09); MW-23 had 4,831 ug/L tVOCs, and MW-24 had 1,475 ug/L tVOCs. Rpt does not provide water table contour map (although top of PVC Riser elevations for all wells are listed), but site plan fig. shows inferred GW flow direction, to southeast. I sent letter (in eDocs) to Ken Kaiser of Con Ed (cc to Greg DelMastro of Stantec), asking that water table elevations be calculated for each quarterly sampling event and a water table contour map be included in each quarterly rpt, in addition to data table with depth to water (& product if applicable) msmts. and water table elevations for each well, and asking that two add'l mon wells be installed to delin contam on west side of site: one well north of MW-23 and one well

**1009218117**

north of MW-24. Asked for brief work plan for well install'n by April 30, 2010. - J. Kolleeny 04/15/10: Spoke with Ken Kaiser of Con Ed, who asked if it would be acceptable to only install one addt'l well, rather than the 2 I requested in my 4/6/10 letter, suggesting putting in a well north of existing well MW-23 in sidewalk on east side of 33rd St. I said if there were to be only one well, I would prefer well across street, to north of existing well MW-24 (i.e., down-gradient of most impacted well MW-17) to delineate leading edge of off-site plume. I added that if contamination in well MW-23 were to increase dramatically, I would still want a well installed to north of it. Ken agreed to this, said they will submit a work plan for well on west side of 33rd St., north of MW-24. I asked for a water table contour map based on latest water levels msmts in work plan. - J. Kolleeny 05/04/10: Reviewed Work Plan by Stantec, dated April 2010, cover letter dated 4/26/10 (both in eDocs). Plan proposes install'n of one new down-gradient well (MW-25) across 33rd St. from existing well MW-17 at west edge of site, as agreed between me and Ken Kaiser of Con Ed, to better delineate off-site impacts. Plan also says upgradient well MW-19 has been damaged, will be decommissioned and not replaced, and wells MW-18 and MW-23 have been damaged and will be repaired. After install'n of new well and repair of damaged wells, all 3 will be surveyed; all wells associated with site will then be sampled during next quarterly event in July 2010. I sent approval letter (in eDocs) to Ken Kaiser, cc to Greg DeIMastro of Stantec. - JK 05/14/10: Received email from Greg DeIMastro of Stantec: Stantec on behalf of Con Edison is providing NYSDEC with notice as per your request that we are going to begin implementation of NYSDEC-approved Work Plan starting on Monday May 17. We will begin with decommissioning well on 34th Street and repairing other damaged wells. - J. Kolleeny 05/21/10: On 5/20/10 received email from Ken Kaiser of Con Ed: As follow-up to our Stantec's e-mail to you last Friday, May 14th notifying NYSDEC of start of field work at site, field work has begun. On Monday, MW-19 was decommissioned and MW-18 & MW-23 were repaired as per NYSDEC-approved Work Plan. During May 18th drilling, well install'n & development were completed at monitoring well MW-25 (see attached figure [in eDocs image folder]). MW-25 is located immediately west of MW-17, within western sidewalk of 33rd Street as per NYSDEC s request. During borehole advancement moderate impacts were noted in soil. Stained soil was observed at capillary fringe (25 ft bgs) and continued to approx 40 ft bgs (bottom of borehole) where it was less evident. Soil samples were collected from intervals 13-15 ft bgs and 23-25 ft bgs for off-site chemical analyses as per Work Plan. Because of heavy rain and moisture yesterday, use of PID was limited. Monitoring well was installed and developed. A minor odor was detected from purge water associated with well development. MW-25 is scheduled for collection of GW sampling at next quarterly GW sampling event in July 2010. - J. Kolleeny 07/20/10: Reviewed Stantec's Quarterly GW Sampling Rpt for April 2010, dated 5/10/10 (in eDocs). Results of April 2010 GW sampling showed decreases in total VOCs in down-gradient mon wells, though significant levels of contam remain in wells MW-17, with 7,989 ug/L TVOCs (down from 28,907 ug/L TVOCs in Dec.'09), and MW-23, with 3,026 ug/L TVOCs (down from 4,831 ug/L TVOCs in Dec.'09). Well MW-15 on down-grade side of treatment gate was ND. - J. Kolleeny 10/12/10: Reviewed Stantec's Mon Well Install'n & Quarterly GW Sampling Rpt for July 2010, dated 8/30/10 (in eDocs). Rpt summarizes install'n of 1 addt'l off-site well (MW-25, across 33rd St. from site), closure of 1

damaged well, repair of 2 damaged wells, & collection of GW samples from all wells in July 2010. Results show high levels of GW contam in several wells on west (down-gradient) side of site: MW-17 had 15,647 ug/L total VOCs (up from 7,989 ug/L in April 2010); MW-23 had 10,676 ug/L tVOCs (up from 3,026 ug/L in April 2010); new well MW-25 had 11,888 ug/L tVOCs. I sent letter (in eDocs) to Ken Kaiser of Con Ed, cc to Greg DelMastro of Stantec, requesting two more wells to delin north edge of plume: 1 well north of MW-25 on west side of 33rd St., and 1 well north of MW-23 on east side of 33rd St., with soil sampling during install'n and full round of GW sampling; based on results, more delin wells may be needed and DEC may require addtl remediation. Asked that summary rpt describe usage of adjacent property to west and make recommendations for addtl actions as appropriate. - JK 11/29/10: Reviewed Stantec's 11/18/10 Off-Site Work Plan (in eDocs). Plan proposes drilling 7 borings, collecting soil samples, installing temporary well points in each boring, and collecting GW samples from temporary wells. Based on results of soil and GW samples, and in consultation with DEC, permanent wells will be installed at 4 locations to better delineate GW plume and evaluate any impacts from potential off-site sources. I sent approval letter (in eDocs) to Ken Kaiser of Con Ed, cc to Gregory DelMastro of Stantec. - J. Kolleeny 12/10/10: Received email from Greg DelMastro of Stantec: In accordance with your Work Plan approval letter to Mr. Ken Kaiser of Con Edison dated Nov. 29, 2010 and on behalf of Con Edison, Stantec and its drilling subcontractor are preparing to mobilize to site on Thursday, Dec. 16, 2010 to begin utility clearance activities. These activities will be followed by Geoprobe work. We currently are awaiting receipt of NYCDOT permits to implement work. If there are any questions, please contact Mr. Kaiser at (718) 267-3881. - J. Kolleeny 12/29/10: Reviewed Quarterly GW Sampling Rpt (October 2010), dated 11/22/10, received 11/29/10 (in eDocs). Results of Oct. 2010 GW sampling event show total VOCs in three worst wells decreased, though they remain elevated. In MW-17, total VOCs were 9,580 ug/L, down from 15,647 ug/L in July 2010; in MW-23, tVOCs were 8,976 ug/L, down from 10,676 ug/L in July 2010; in MW-25, tVOCs were 9,483 ug/L, down from 11,888 ug/L in July 2010. - J. Kolleeny 01/13/11: On 1/10/11, received email from Greg DelMastro of Stantec with attached pdf file of Transmittal of Off-Site Preliminary Data rpt dated 1/10/11 (in eDocs); on 1/13/11, received hard copy of rpt. Will review. - J. Kolleeny 02/04/11: Reviewed Transmittal of Off-Site Prelim Data rpt, which shows significant impacts at 2 boring/temporary well locations. Con Ed argues that they're seeing impacts from an off-site source; proposed to install permanent wells at 5 of 7 boring locations. I contacted Ken Kaiser of Con Ed, requested boring logs, asked what compounds GW samples were analyzed for (since data table shows only BTEX detections, seems unusual), asked depth of refusal at boring GP-6, and asked what remediation Penske was allegedly planning for property to north (as stated in rpt). Ken said he would research my questions and get back to me. - J. Kolleeny 02/14/11: Received email from Greg DelMastro of Stantec with attached pdf file Transmittal of Addtl Data - Off-Site Source Delineation rpt dated 2/14/11 (in eDocs). Rpt provided boring logs; rpt stated that GW samples were analyzed for VOCs, SVOCs & MTBE, but that lab did not initially rpt MTBE results, which are now included in revised data table; rpt stated that boring GP-6 met refusal at 6 ft bg in each of 3 attempts, and no impacts were observed to that depth so no soil sample was collected; and rpt

stated that in their opinion, based on 10/9/03 letter from DEC to GES, petrol contam along northeast portion of site originated from off-site source, and that Penske was required to install add'l wells to delin these impacts. I sent email to Greg DelMastro: Thanks for add'l info. I still have question re: NYSDEC Comment 2, about parameters for which GW samples were analyzed. You state that samples were analyzed for VOCs, SVOCs & MTBE, and your revised data table includes positive results for MTBE; however, data continue to show no detections of compounds other than BTEX in samples, which seems unusual. Can you please provide laboratory data sheets for GW samples? - JK 02/15/11: Received email from Ken Kaiser of Con Ed with attached pdf files of lab data, stating: Please find enclosed portions of analytical data packages. There are another 3,000 pages to these rpt that we figure are not needed - if you do want them, please let me know and we will mail you CDs. On another note, I believe we are seeing different analytical results to north of Newtown SS property because we are seeing impacts of another spill/source area not associated with Con Edison property. I believe we discussed this possibility prior to start of our work. As such, I think this does demonstrate that we have defined northern extent of contamination associated with Newtown SS property. - J. Kolleeny 02/18/11: Spoke with Ken Kaiser of Con Ed. I pointed out that GW samples were not analyzed for full list of gasoline-related compounds usually analyzed (e.g., n-butylbenzene, sec-butylbenzene, tert-butylbenzene, isopropylbenzene, isopropyltoluene, n-propylbenzene, and trimethylbenzene isomers), but that lab sheets he'd sent showed significant detections of trimethylbenzenes and naphthalene as Tentatively Identified Compounds (see report with TICs data in eDocs), and that when these are considered, sample results look more similar to contam they're seeing in other wells installed to delineate their plume. I said I'm not convinced that there's any off-site source, esp. since there's no evidence for gasoline storage/usage on property to north of Con Ed/Penske site. Ken said he does feel there's another source, but stated that Con Ed is committed to addressing contam and wants to move forward to install permanent wells at temp well pt locations as proposed. I sent letter (in eDocs) to Ken Kaiser, cc to Greg DelMastro, stating that DEC does not find that presence of off-site source has been conclusively demonstrated; but that proposals to install permanent wells at locations GP-1, GP-2, GP-3, GP-5 & GP-7, to include new wells in monitoring program, and to properly decomish well pt GP-4 are approved; also stated that based on monitoring results, DEC may request add'l delin wells, such as at failed boring GP-6. - J. Kolleeny 07/13/11: On 6/9/11, received Monitoring Well Install'n and Quarterly GW Sampling Rpt (March 2011) by Stantec, dated 6/7/11. After preliminary review, I contacted Ken Kaiser of Con Ed on 6/13/11 and requested revisions to rpt, to remove unnecessary sections (such as DUSR), improve readability, move data tables closer to text and figs, and re-organize GW data table. On 7/1/11, received email from Gregory DelMastro of Stantec: Dear Mr. Kolleeny: Earlier today as per your request, revised Rpt as referenced above has been sent to you in PDF format on CD via regular mail. On 7/8/11, received CD with revised version of rpt. On 7/13/11, received email from Greg DelMastro: Dear Mr. Kolleeny: I am following up with you on behalf of Con Edison regarding revised CD (see e-mail below) that NYSDEC requested site. Could you please provide confirmation that CD was received and that it is acceptable to you? I sent email reply: Hi Greg, I did receive CD with revised pdf file, on

7/8/11. I did quick review, and while I appreciate removal of some of unnecessary portions of rpt (e.g., Data Usability Summary Rpt), which has made rpt shorter and pdf file smaller, some of problems I mentioned to Ken remain. For instance, image quality of rpt still looks like pdf was made by scanning a photocopy of printed-out rpt, rather than a direct conversion to pdf from computer files of rpt. This makes it difficult to read well numbers on water table contour map, and to read some of smaller data tables. In particular, I still have problem with Table 4, with current and historical data for VOCs in GW. This table looks like it did in earlier version of rpt -difficult to read, and with results for well MW-17 spread out over 2 pages. There must be a way to organize these data in such a way that results for each well can be presented on one page (not spread over 2), and for print to be larger and clearer. Also, I don't recall if I asked that tables that were interspersed with text be removed; since Table 4 is so difficult to read, now I miss those earlier tables! (Tables A and B.) Finally, I still don't see any discussion of what all data means, other than that total VOCs in such and such well went up or down since last sampling event. I would like to see some evaluation of remedial progress, some analysis of whether or not remedial approach implemented is effectively moving this spill toward closure, or whether some addtl remedial action(s) may be warranted to expedite spill closure. Perhaps these changes could be made for next quarterly rpt, and I will upload current revised rpt to our database as is. - J. Kolleeny 07/14/11: Received email from Ken Kaiser of Con Ed: Jonathan, Thank you for your input. Since your are giving us option, I would prefer that we make addtl changes you request in next rpt. I sent reply, OK, that's fine. I will upload revised rpt to our database. Reviewed Revised Monitoring Well Install'n and Quarterly GW Sampling Rpt (March 2011) by Stantec, dated 6/30/11 (in eDocs). Rpt presents GW data for March 2011 showing significant impacts remaining in wells MW-17, MW-23 and MW-25 on down-gradient side of site; MW-17 had 10,603 ug/L total VOCs, up from 9,580 ug/L in Oct. 2010; MW-23 had 8,921 ug/L tVOCs, down slightly from 8,976 in Oct. 2010; MW-25 had 5,970 ug/L tVOCs, down from 9,483 ug/L (or 10,741 ug/L in dup sample) in Oct. 2010. Well MW-16, on upgradient side of treatment gate, had 1,010 ug/L tVOCs, up from 236 ug/L in Oct. 2010; MW-15, on downgradient side of treatment gate, had 2.4 ug/L J (estimated) tVOCs, up from 1.1 ug/L J in Oct. 2010. Rpt states that minor to moderate GW impacts in new wells MW-26, MW-27, MW-28 and MW-29 (worst of new wells, with 561 ug/L tVOCs), located to NW of plume (north of impacted wells along 33rd St), appear to have migrated from a source area located north of site. (I disagree.) Rpt states that next quarterly GW sampling event is scheduled for June 2011. - J. Kolleeny 07/15/11: Received email from Greg DelMastro of Stantec: In response to your e-mailed comments dated 7/13/11, I have revised Table 4 on behalf of Con Edison. If you could please provide your feedback so we can incorporate this modification if it is acceptable to you in next quarterly GW sampling rpt. Next quarterly GW sampling event is scheduled for next week, July 20-22, 2011. Thank you. I uploaded revised Table 4 to eDocs, sent email reply: Layout of table is fine (except that many pages have blank columns off on right side that could be eliminated). Image-wise, it still looks like scanned photocopy. If image clarity could also be improved, that would make table easier to read and would be greatly appreciated. - JK 12/02/11: Reviewed Quarterly GW Sampling Rpt (July 2011) by Stantec Consulting Svcs Inc., dated 9/6/11 (in eDocs). Rpt presents

**1009218117**

results of July 2011 GW sampling event. Data show well MW-16 (on up-gradient, influent side of treatment gate) had 123 ug/L total VOCs, down from 1,010 ug/L tVOCs in March 2011; well MW-15 (on down-gradient, post-treatment side of gate) remained ND; MW-17 had 4,612 ug/L tVOCs (down from 10,603 ug/L in March 2011); MW-23 had 12,824 ug/L tVOCs (up from 8,921 ug/L in March 2011); MW-25 had 7,022 ug/L tVOCs (up from 5,970 ug/L in March 2011). Next quarterly GW sampling event scheduled for Oct. 2011. - JK 02/24/12: Reviewed Quarterly GW Sampling Rpt (Oct. 2011) by Stantec Consulting Svcs Inc. dated 1/27/12 (in eDocs). GW results for Oct. 2011 show significant decreases in contam levels in some wells: MW-17 had 609 ug/L total VOCs (down from 4,612 ug/L in July 2011); MW-23 had 1,464 ug/L tVOCs (down from 12,824 ug/L in July 2011). However, two wells showed significant increases: MW-25 had 7,808 ug/L tVOCs, up from 7,022 ug/L in July 2011 (but below first baseline sampling result of 11,888 ug/L in July 2010); and MW-27 had 4,656 ug/L tVOCs (up from 23 ug/L in July 2011 and 13 ug/L when first sampled in March 2011). Rpt states that results show good remedial progress; also states that next sampling event in Jan. 2012 has been performed and results will be in next qtrly rpt. - J. Kolleeny 06/20/12: Reviewed Quarterly GW Sampling Rpt (Jan. 2012) by Stantec Consulting Svcs Inc., dated 4/18/12 (in eDocs). GW results for Jan. 2012 show minor rebound in VOCs in two wells of concern, and decreases in VOCs in two other wells of concern: MW-17 had 1,252 ug/L total VOCs, up from 609 ug/L in Oct. 2011; MW-23 had 2,008 ug/L tVOCs, up from 1,464 ug/L in Oct. 2011; MW-25 had 6,417 ug/L tVOCs, down from 7,808 ug/L in Oct. 2011; MW-27 had 1,406 ug/L tVOCs, down from 4,656 ug/L in Oct. 2011. Most wells have decreased from baseline high levels, with exception of MW-27 (and MW-26, which has minor contam - 186 ug/L tVOCs, up from 23 ug/L in Oct. 2011 and baseline level of 39.5 ug/L when first sampled in March 2011 after install'n. Rpt states that next qtrly GW sampling event is scheduled for April 2012. - JK 08/16/12: Reviewed Quarterly GW Sampling Rpt (April 2012) by Stantec Consulting Svcs, dated 7/17/12 (in eDocs). GW results for April 2012 show MW-16, on up-gradient (pre-treatment) side of treatment gate, had 1,043 ug/L total VOCs, significant increase from 95 ug/L in Jan. 2012, almost all of increase due to benzene, which was 942 ug/L (up from 67 ug/L in Jan. 2012). However, MW-15 on down-gradient (post-treatment) side of reactive gate, was virtually ND, with only trace (J value) of xylenes (1.8 ug/L J). Well MW-17 had 4,838 ug/L tVOCs, up from 1,252 ug/L in Jan. 2012 and its 2nd increase in a row (it had 609 ug/L in Oct. 2011 and 4,612 ug/L in July 2011); MW-23 had 4,567 ug/L tVOCs, up from 2,008 ug/L in Jan. 2012 (and 2nd increase in a row, up from 1,464 ug/L in Oct. 2011), with significant increase in benzene, from 40 ug/L in Jan. 2012 to 308 ug/L in April 2012; MW-25 had 5,335 ug/L tVOCs, down from 6,417 ug/L in Jan. 2012 and its 2nd decrease in a row (had 7,808 ug/L or DUP 8,062 ug/L in Oct. 2011), however, benzene increased to 827 ug/L in April 2012, up from 551 ug/L in Jan. 2012; MW-26 had 460 ug/L tVOCs, up from 186 ug/L in Jan. 2012 and from 23 ug/L in Oct. 2011, but MW-26 has no BTEX in contrast to most problem wells (Stantec argues that this shows impacts in MW-26 are from unidentified up-gradient off-site source); MW-27 had significant decrease, with 142 ug/L tVOCs, down from 1,406 ug/L in Jan. 2012 and from 4,656 ug/L in Oct. 2011 (Stantec also argues that impacts in MW-27 are from off-site source, however, benzene and xylenes were present, and all BTEX were present in Jan. 2012 and Oct. 2011). Rpt states that next qtrly sampling event had been scheduled for July

2012 but due to ongoing Con Ed work stoppage, will be in August 2012. I sent email response (in eDocs) to 8/1/12 email from Greg DelMastro of Stantec ( Dear Mr. Kolleeny: Just inquiring if you received rpt and accompanying CD as per your request that was sent to you on July 17. We look forward to your review and comment. ), with cc's to Mariela Gonzalez and Ken Kaiser of Con Ed, replying: Hi Mr. DelMastro: I have reviewed 2nd Quarter 2012 GW Sampling Rpt for this site, prepared by Stantec Consulting Svcs Inc. on behalf of Con Edison and dated 7/17/12. I am a little concerned about increases in total VOCs in wells MW-17 and MW-23, which have occurred in last two quarters. However, I noticed that April 2012 results showed big increase in benzene in well MW-16 on up-gradient side of treatment cassette, and it may be that all these increases are due to temporary fluctuation, perhaps related to changes in water table elevations or precipitation patterns. I also noted that VOC levels in MW-25 decreased from last quarter (altho benzene increased), and that contaminant levels in MW-27 decreased significantly. At this point, I'd like to wait to see results of August 2012 GW sampling event. However, if contaminant levels in MW-17 and MW-23 continue to increase, I may request addtl actions to help enhance attenuation of GW contamination and expedite movement of this spill case toward closure. Please feel free to contact me if you have any questions. - J. Kolleeny 01/28/13: Reviewed Quarterly GW Sampling Rpt (Sept. 2012) dated 1/8/13 by Stantec (in eDocs). Results of Sept. 2012 GW sampling event show MW-16, on up-gradient (pre-treatment) side of treatment gate, had 2,132 ug/L total VOCs (up significantly from 1,043 ug/L in April 2012, and 2nd major increase since 95 ug/L in Jan. 2012), total was mostly benzene with 1,910 ug/L (up from 942 ug/L benzene in April 2012); MW-17 had 1,670 ug/L tVOCs (down from 4,838 ug/L in April 2012); MW-23 had 7,319 ug/L tVOCs (up from 4,567 ug/L in April and 3rd increase in a row, starting at 1,464 ug/L in Oct. 2011); MW-25 had 4,326 ug/L tVOCs (down from 5,335 ug/L in April 2012). Based on results of 13 quarterly GW sampling events, Stantec concludes that treatment cassette is working as designed to address contam and prevent off-site migration. Next quarterly sampling event scheduled for December 2012. - J. Kolleeny 05/23/13: Reviewed Quarterly GW Sampling Rpt (Dec. 2012) by Stantec, dated 5/6/13 (in eDocs). Results of Dec. 2012 GW sampling event show well MW-23 had 7,367 ug/L total VOCs (up slightly from 7,319 ug/L in Sept. 2012 and well above Dec. 2009 baseline result of 4,830.5 ug/L); well MW-25 had 2,539 ug/L tVOCs (down from 4,326 ug/L in Sept. 2012); well MW-17 had 1,380 ug/L tVOCs (down from 1,670 ug/L in Sept. 2012); well MW-16 on up-gradient side of treatment cassette had 3,810 ug/L tVOCs (up from 3,075 ug/L in Sept. 2012 and way above Aug. 2008 baseline of 373 ug/L); well MW-15 on down-gradient (post-treatment) side of cassette was ND except for 0.74(J) ug/L of naphthalene (J value = below reporting limit). Rpt states that next quarterly event was conducted in March 2013 (results presumably in next rpt). - JK 07/19/13: Reviewed Quarterly GW Sampling Rpt (March 2013) by Stantec, dated 6/12/13 (in eDocs). Results of March 2013 GW sampling event show well MW-16 (on up-gradient side of treatment cassette) had 2,677.5 ug/L total VOCs (down from 3,810 ug/L in Dec. 2012); well MW-15 on down-gradient side of treatment cassette was ND; well MW-17 had 1,392 ug/L tVOCs (up slightly from 1,380 ug/L in Dec. 2012); well MW-23 had 2,257 ug/L tVOCs (down from 7,367 ug/L in Dec. 2012); well MW-25 had 3,237 ug/L tVOCs (up from 2,539 ug/L in Dec. 2012); well MW-26 had 1,081 ug/L tVOCs (up from 811 ug/L in Dec. 2012). Stantec states that contam in

MAP FINDINGS

**CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued)**

**1009218117**

MW-26 has different chemical signature from contam in other wells, and based on near absence of contam in wells MW-27, MW-28 & MW-29 (in between on-site source area and well MW-26), they postulate that contam in MW-26 is from a different off-site source, located somewhere to north. Rpt states that next quarterly GW sampling event was scheduled for late June 2013. - J. Kolleeny 08/19/13: Reviewed Quarterly GW Sampling Rpt (July 2013) by Stantec, dated 7/29/13 (in eDocs). Results of July 2013 GW sampling event show well MW-16 (up-gradient side of treatment cassette) had 2,563 ug/L total VOCs (down a little from 2,678 ug/L in March 2013; well MW-15 on down-gradient side of treatment gate was ND; well MW-17 had 1,740 ug/L tVOCs (up from 1,392 ug/L in March 2013); well MW-23 had 4,479 ug/L tVOCs (up from 2,257 ug/L in March 2013); well MW-25 had 3,306 ug/L tVOCs (up a little from 3,237 ug/L in March 2013); well MW-26 had 496 ug/L tVOCs (down from 1,081 ug/L in March 2013). Stantec again states (as in March 2013 rpt) that contam in MW-26 differs in chemical signature from contam in other wells, and based on near absence of contam in wells MW-27, MW-28 & MW-29 (in between on-site source area and well MW-26), they postulate that contam in MW-26 is from an off-site source. Rpt states that next quarterly GW sampling event is scheduled for early October 2013. - J. Kolleeny 03/12/14: Reviewed Quarterly GW Sampling Rpt (October 2013) by Stantec, dated 2/10/14 (in eDocs). Results of Oct. 2013 GW sampling event show well MW-16 (up-gradient side of treatment cassette) had 6,208 ug/L total VOCs (up from 2,563 ug/L in July 2013), with 5,540 ug/L of benzene! Well MW-15 (down-gradient side of treatment cassette) was ND. Well MW-17 had 1,924 ug/L tVOCs (up from 1,740 ug/L in July 2013), well MW-23 had 2,749 ug/L tVOCs (down from 4,479 ug/L in July 2013), wells MW-25 and MW-26 were not sampled due to obstructions in wells. Rpt states that data indicate treatment cassette is working as designed. Next quarterly GW sampling event is scheduled for January 2014. - J. Kolleeny 03/17/14: Reviewed Quarterly GW Sampling Rpt (January 2014) by Stantec, dated 3/7/14, received pdf by email on 3/7/14, received hard copy on 3/14/14 (rpt in eDocs). Results of Jan. 2014 GW sampling show well MW-16 (up-gradient side of treatment cassette) had 3,982.5 ug/L total VOCs (down from 6,208 ug/L in Oct. 2013), of which 3,710 ug/L was benzene (had 5,540 ug/L benzene in Oct. 2013). Well MW-15, on down-gradient side of treatment gate, had 75.1 ug/L tVOCs, all of which was benzene; this was first exceedance ever detected in this well. Well MW-17 had 1,195 ug/L tVOCs (down from 1,924 ug/L in Oct. 2013), well MW-23 had 623 ug/L tVOCs (down from 2,749 ug/L in Oct. 2013), well MW-24 had ~18 ug/L tVOCs (down from 138 ug/L in Oct. 2013), well MW-25 had 630 ug/L tVOCs (not sampled in Oct. 2013; had 3,306 ug/L tVOCs in July 2013), well MW-26 had 148 ug/L tVOCs (not sampled in Oct. 2013; had 496 ug/L tVOCs in July 2013). Rpt states that detection of benzene above stds in well MW-15 for first time may indicate breakthrough of treatment cassette, and that VOCs in MW-15 should be reevaluated next quarter to confirm it benzene detection is reproducible. I called Kimm Perlin of Stantec (PM) to discuss this; he agreed that breakthrough of treatment gate may have occurred, but said they will be sampling wells again in March 2014 and would like to see if breakthru is confirmed before taking corrective actions. We agreed that slug of hi-level contam with lots of benzene seems to have moved thru treatment gate over past few quarters (actually, since April 2012 when total VOCs jumped to 1,043 ug/L from 95 ug/L in Jan. 2012 and benzene jumped to 942 ug/L from 67 ug/L in Jan. 2012), and that this may have overwhelmed treatment gate. Mr. Perlman stated

that if March 2014 sampling data confirm breakthrough, Con Ed will remove spent carbon from treatment gate and replace with fresh carbon. - J. Kolleeny 06/12/14: Reviewed Quarterly GW Sampling Rpt (March 2014) by Stantec, dated 5/19/14 (in DecDocs). Rpt presents results of GW sampling on 3/20-21/2014, showing well MW-15 (on down-gradient side of treatment cassette) was ND (down from 75.1 ug/L total VOCs in Jan. 2014); well MW-16 had 5,115.5 ug/L tVOCs with 3,780 ug/L of benzene (had 3,982.5 ug/L tVOCs in Jan. 2014, with 3,710 ug/L benzene); well MW-17 had 936.4 ug/L tVOCs (down from 1,195.2 ug/L in Jan. 2014); well MW-23 had 4,231 ug/L tVOCs (up from 623 ug/L in Jan. 2014); well MW-25 had 1,396 ug/L tVOCs (up from 630 ug/L in Jan. 2014); well MW-26 was not sampled due to blockages in well. Rpt states that past 18 quarters of GW data indicate treatment cassette is working as designed to address GW impacts; notes that in Jan. 2014, benzene was detected in well MW-15 on down-gradient side of cassette, but benzene was ND in MW-15 in March 2014. Rpt states that monitoring should continue to confirm that Jan. 2014 benzene detection did not indicate a trend and carbon breakthrough. Next quarterly GW sampling event will take place in June 2014. Rpt states that any questions re: rpt should be directed to Ms. Mariela Gonzalez of Con Ed at 718-204-4226 (i.e., Con Ed rep is no longer Ken Kaiser), or to Kimm Perlin of Stantec (i.e., Stantec rep is no longer Gregory DelMastro). - J. Kolleeny 12/05/14: Reviewed 2nd Quarterly 2014 GW Sampling Rpt (June 2014) by AECOM (new consultant), dated 10/30/14 (in DecDocs). Results of GW gauging/sampling on 6/24-25/2014 showed no LNAPL detected in any wells; for dissolved VOCs, well MW-15 (on down-gradient side of treatment cassette) was ND (same as in March 2014; altho rpt does not provide GW data for Jan. & March 2014 sampling events); well MW-16 (on up-gradient side of treatment cassette) had 4,537 ug/L total VOCs (down from 5,115.5 ug/L in March 2014); well MW-17 had 844 ug/L tVOCs (down from 936 ug/L in March 2014); well MW-18 had 54 ug/L tVOCs (up from ND in March 2014); well MW-23 had 2,234 ug/L tVOCs (down from 4,231 ug/L in March 2014); well MW-24 had 5 ug/L tVOCs (down from 49 ug/L in March 2014); well MW-25 had 1,434 ug/L tVOCs (up from 1,396 ug/L in March 2014); well MW-26 could not be sampled due to a blockage still present in well. Rpt states that based on last 20 quarterly sampling events, treatment cassette is working as designed to prevent migration of contam plume off site. Rpt notes that since April 2012, tVOCs have been on generally increasing trend, driven mainly by increases in benzene concentrations. Rpt states that 3rd quarter 2014 GW sampling event was performed in Sept. 2014 and results will be presented in 3rd Quarter 2014 GW Sampling Rpt. - J. Kolleeny 12/05/14: Reviewed 3rd Quarterly 2014 GW Sampling Rpt (Sept. 2014) by AECOM, dated 11/6/14 (in DecDocs). Results of well gauging/sampling on 9/10-12/2014 showed no LNAPL detected in any wells; for dissolved VOCs, well MW-15 (on down-gradient side of treatment cassette) was ND; data table does not present Sept. 2014 results for well MW-16 (on up-grade side of cassette), but lab sheets show it had 5,069 ug/L total VOCs (up from 4,537 ug/L in June 2014), of which 4,700 ug/L were benzene (had 4,400 ug/L benzene in June 2014); well MW-17 had 1,232 ug/L tVOCs (up from 844 ug/L in June 2014); well MW-18 had 2.4 ug/L tVOCs (down from 53.4 ug/L in June 2014); well MW-23 had 2,168 ug/L tVOCs (down from 2,234 ug/L in June 2014); well MW-25 had 1,016 ug/L tVOCs (down from 1,434 ug/L in June 2014); well MW-26 was not sampled due to a blockage in well. I noticed that GW data table has no data for several gasoline-related VOCs which are typically analyzed for: naphthalene,

1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene, all of which have NA written in data table. I checked lab data sheets, and seems these compounds were not included in their 8260 analyses for some reason. I went back and checked 2nd quarter 2014 rpt by AECOM, and found same problem with these 3 compounds not being analyzed for by lab. 3rd Qtr Rpt states that since April 2012, tVOCs have been on generally increasing trend, driven mainly by increases in benzene concentrations. Also states that consistently elevated VOCs in wells MW-17 & MW-23 may be result of off-site migration from adjacent site to north. Rpt states that 4th Quarter 2014 GW sampling event will take place in Dec. 2014. I called Sara Meissner of AECOM to discuss 2nd & 3rd quarter 2014 rpts. I pointed out problem with lab not analyzing for 3 VOCs; she will look into it with lab. I also noted that rpts have picked up language from Stantec rpts about general trends and asked that rpts provide more up-to-date analysis of data and trends. I also stated that I do not believe contam in wells MW-17 and MW-23 is from off-site, pointing out that adjacent site to north never had gasoline USTs and I am unaware of any gasoline spills at locations to north of site. She agreed to re-examine statements in rpt conclusions. - JK 04/28/15: Reviewed 4th Quarter 2014 GW Sampling Rpt (Dec. 2014) by AECOM, dated 1/12/15 (in DecDocs). Results of well gauging & sampling on Dec. 9 & 10, 2014 showed no LNAPL detected in any well, and showed well MW-15 (on down-gradient side of treatment cassette) was ND for VOCs (same as in Sept. 2014), well MW-16 (on up-gradient side of treatment cassette) had 330 ug/L total VOCs (down from 5,141 ug/L in Sept. 2014), well MW-17 had 21 ug/L tVOCs (down from 1,232 ug/L in Sept. 2014), well MW-23 had 463 ug/L tVOCs (down from 2,168 ug/L in Sept. 2014), well MW-24 had 294 ug/L tVOCs (up from 1 ug/L in Sept. 2014), well MW-25 had 2,452 ug/L tVOCs (up from 1,016 ug/L in Sept. 2014), well MW-26 (to NW of site) was not sampled, but wells MW-27, MW-28 & MW-29 showed very low VOC levels, providing adequate delineation in that area. Based on data, AECOM concludes that treatment cassette is working as designed to prevent off-site migration of GW contamination, and that Dec. 2014 data show significant VOC decreases in several wells, while VOCs in some wells (e.g., MW-25) fluctuated. Rpt states that 1st quarter 2015 GW sampling event will take place in March 2015. - J. Kolleeny 05/04/15: Reviewed 1st Quarter 2015 GW Sampling Rpt (March 2015) by AECOM, dated 4/28/15 (in DecDocs). Results of well gauging & sampling on March 17, 18, & 19 2015 showed no LNAPL detected in any well, and showed well MW-15 (on down-gradient side of treatment cassette) had a 0.21 ug/L J detection of benzene but was otherwise ND for VOCs (same as Dec. 2014), well MW-16 (on up-gradient side of treatment cassette) had 2,147 ug/L total VOCs (up from 330 ug/L in Dec. 2014) with 1,900 ug/L of benzene (up from 210 ug/L benzene in Dec. 2014), well MW-17 had 482 ug/L tVOCs (up from 21 ug/L in Dec. 2014), well MW-23 had 408 ug/L tVOCs (down from 463 ug/L in Dec. 2014), well MW-24 had 146 ug/L tVOCs (down from 294 ug/L in Dec. 2014), well MW-25 had 5,703 ug/L tVOCs (up from 2,452 ug/L in Dec. 2014), with big increases in total xylenes (2,170 ug/L, up from 910 ug/L in Dec. 2014) and 1,2,4-trimethylbenzene (1,400 ug/L, up from 210 ug/L in Dec. 2014). Well MW-26 (to NW of site) was not sampled, but wells MW-27, MW-28 & MW-29 showed very low to ND VOC levels, providing delineation in that area. AECOM concludes that treatment cassette is working as designed to prevent off-site migration of GW contam. Rpt states that 2nd quarter 2015 GW sampling event will take place in June 2015. - JK 10/20/15: Reviewed 2nd Quarter 2015 GW Sampling Rpt (June 2015) by

AECOM, dated 7/2/15 (in DecDocs). Results of gauging & sampling of 11 wells on June 3, 4 & 5, 2015 showed no LNAPL detected in any well, and showed well MW-15 (on down-gradient side of treatment cassette) was ND (had 0.21 ug/L J detection of benzene in March 2015), well MW-16 (on up-gradient side of treatment cassette) had 4,034 ug/L total VOCs (up from 2,147 ug/L in March 2015), well MW-17 had 93 ug/L tVOCs (down from 482 ug/L in March 2015), well MW-23 had 800 ug/L tVOCs (up from 408 ug/L in March 2015), well MW-24 had 13 ug/L tVOCs (down from 146 ug/L in March 2015), well MW-25 had 2,933 ug/L tVOCs (down from 5,703 ug/L in March 2015). Rpt concludes that data show treatment cassette is working as designed to prevent off-site migration of on-site GW impacts, and notes that June 2015 data for well MW-16 showed significant increase in VOCs. Rpt states that 3rd quarter 2015 GW sampling event will be conducted in Sept. 2015. - JK 12/21/15: Reviewed 3rd Quarter 2015 GW Sampling Rpt (Sept. 2015) by Tetra Tech (Con Ed's new consultant), dated 11/6/15 (in DecDocs). Results of gauging & sampling of 12 wells on Sept. 14, 15 & 16, 2015 showed no LNAPL detected in any well, and showed well MW-15 (on down-gradient side of treatment cassette) was ND for VOCs (same as in June 2015), well MW-16 (on up-gradient side of treatment cassette) had 5,654 ug/L total VOCs (up from 4,034 ug/L tVOCs in June 2015, with 5,100 ug/L of benzene, up from 3,400 ug/L benzene in June 2015), well MW-17 had 1,844 ug/L tVOCs (up from 93 ug/L in June 2015), well MW-23 had 1,927 ug/L tVOCs (up from 800 ug/L in June 2015), well MW-24 had 24 ug/L tVOCs (up from 13 ug/L in June 2015), well MW-25 had 1,158 ug/L tVOCs (down from 2,933 ug/L in June 2015), well MW-26 had 563 ug/L tVOCs (up from 148 ug/L in Jan. 2014; well was not sampled from June 2014 thru June 2015 due to obstruction in well, which has been cleared by Tetra Tech). Rpt concludes that based on data from 25 quarters of GW sampling, treatment cassette is working as designed to prevent off-site migration of on-site GW impacts; rpt notes that Sept. 2015 data for well MW-16 showed significant increase in VOCs over June 2015 data (but does not specifically mention Sept. 2015 increase in well MW-17 in Conclusions Section of rpt). Rpt states that 4th quarter 2015 GW sampling event will be conducted in December 2015. - J. Kolleeny 03/18/16: Reviewed 4th Quarter 2015 GW Sampling Rpt (Dec. 2015) by Tetra Tech, dated 1/20/16 (in DecDocs). Results of gauging & sampling of 12 wells on Dec. 15 & 16, 2015 showed no LNAPL detected in any well, and well MW-15 (down-gradient side of treatment cassette) was ND (same as in Sept. 2015), well MW-16 (up-gradient side of treatment cassette) had 10,127 ug/L total VOCs (up from 5,654 ug/L in Sept. 2015), well MW-17 had 1,373 ug/L tVOCs and duplicate sample had 1,699 ug/L tVOCs (down from 1,773 ug/L in Sept. 2015), well MW-23 had 1,569 ug/L tVOCs (down from 1,927 ug/L in Sept. 2015), well MW-25 had 949 ug/L tVOCs (down from 1,158 ug/L in Sept. 2015), well MW-26 had 534 ug/L tVOCs (down from 563 ug/L in Sept. 2015). Rpt concludes that based on data from 26 quarters of GW sampling, treatment cassette is working as designed to prevent off-site migration of on-site GW impacts; rpt notes that Dec. 2015 data for well MW-16 showed significant increase in VOCs. Rpt states that 1st quarter 2016 GW sampling event will be conducted in March 2016. - J. Kolleeny 05/06/16: Reviewed 1st Quarter 2016 GW Sampling Rpt (March 2016) by Tetra Tech, dated 4/18/16 (in DecDocs). Results of gauging & sampling of 12 wells on March 14 & 15, 2016 showed no LNAPL detected in any wells; well MW-15 (down-gradient side of treatment cassette) was ND (same as in Dec. 2015), well MW-16 (up-gradient side of treatment cassette) had 7,006 ug/L total VOCs

**1009218117**

(down from 10,127 ug/L in Dec. 2015), well MW-17 had 1,942 or 1,998 ug/L tVOCs (2nd result is duplicate sample)(up from 1,373 or 1,699 ug/L in Dec. 2015, also dup samples), well MW-23 had 3,058 ug/L tVOCs (up from 1,569 ug/L in Dec. 2015), well MW-24 had 94 ug/L tVOCs (up from 9 ug/L in Dec. 2015), well MW-25 had 1,767 ug/L tVOCs (up from 949 ug/L in Dec. 2015), well MW-26 had 119 ug/L tVOCs (down from 534 ug/L in Dec. 2015). Rpt concludes that based on data from 27 quarters of GW sampling, treatment cassette is working as designed to prevent off-site migration of on-site GW impacts; rpt acknowledges that VOCs in several wells increased from Dec. 2015 to March 2016 (MW-17, MW-23, MW-25), however, they remain significantly below baseline levels for those wells. Rpt states that 2nd quarter 2016 GW sampling event will be conducted in June 2016. I contacted Robert Cantagallo of Tetra Tech (project manager), asked that future rpts include well gauging data table and water table contour map. I also noted that impacts in wells MW-17, MW-23 and MW-25 are persisting at levels too high for spill closure, and suggested that Tetra Tech and Con Ed consider add'l remedial actions to reduce VOC levels and move this case toward closure. Mr. Cantagallo agree to speak with Ms. Mariela Gonzalez of Con Ed and get back to me. - J. Kolleeny 06/14/16: Met with Con Ed & consultant Tetra Tech to discuss appearance of LNAPL in wells MW-23 & MW-25, resulting in new spill #1602542 (meeting sign-in sheet in DecDocs). I suggested they perform vacuum-enhanced fluid recovery (VEFR); they agreed to try this and will update me on progress. - J. Kolleeny 12/14/16: Reviewed 2nd & 3rd Quarter Sampling Rpt by Tetra Tech dated 11/14/16, submitted with Con Ed cover letter dated 11/17/16 (in DecDocs). Rpt presents results of June & Oct. 2016 well gauging & GW sampling, plus Aug. 2016 LNAPL recovery/recharge study. Well gauging in June 2016 showed well MW-23 had 0.46 ft of LNAPL, well MW-25 had 1.37 ft of LNAPL; well gauging in Oct. 2016 showed well MW-23 was dry, wells MW-24 and MW-28 had product on interface probe (not measurable in well), well MW-25 had 0.43 ft of LNAPL, and well MW-27 had 0.03 ft of LNAPL. GW sampling showed well MW-15 was ND for VOCs in June & Oct. 2016 (same as in March 2016), well MW-16 had 7,711 ug/L total VOCs in June 2016 (up from 7,006 ug/L in March 2016) and had 6,050 ug/L tVOCs in Oct. 2016, well MW-17 had 333 ug/L tVOCs in June 2016 (down from 1,942 ug/L in March 2016) and had 479 ug/L tVOCs in Oct. 2016, well MW-18 had 277 ug/L tVOCs in June 2016 (up from ND in March 2016) and had 25 ug/L tVOCs (??) in Oct. 2016 (detected compounds only seem to add up to 6 ug/L tVOCs!?), well MW-24 had 206 ug/L tVOCs in June 2016) up from 94 ug/L in March 2016) and wasn't sampled in Oct. 2016, well MW-26 had 49 ug/L tVOCs in June 2016 (down from 119 ug/L in March 2016) and had 32 ug/L tVOCs in Oct. 2016, well MW-27 had 45 ug/L tVOCs in June 2016 (up from ND in March 2016) and wasn't sampled in Oct. 2016, well MW-29 had 52 ug/L tVOCs in June 2016 (up from 15 ug/L in March 2016) and had 39 ug/L tVOCs in Oct. 2016. Table 6 in rpt shows that in late Aug. 2016, wells MW-23 were gauged for LNAPL, bailed and re-checked, showing recharge to previous thickness in ~24 hrs; over 3-day period ~10 gals of NAPL were recovered. Rpt states that MW-26 has historically had a different chemical signature than other wells at site, suggesting a possible different source, and Tetra Tech speculates that appearance of LNAPL in several wells may be related to this hypothetical off-site source. Tetra Tech recommends review of surrounding property info to locate potential off-site sources for impacts in MW-26 and possibly for LNAPL, and to determine if any local businesses are pumping GW and depressing local water table. Tetra Tech also

**CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued)**

**1009218117**

recommends evaluating different NAPL recovery methods & preparing a NAPL recovery plan for DEC. I sent letter (in DecDocs) to Neil O'Halloran of Con Ed, cc's to Qinling Zheng of Con Ed, Robert Cantagallo of Tetra Tech, stating that (1) available data do not support notion of off-site source for LNAPL, and DEC considers Newtown site (formerly a Penske Truck leasing facility) to be source of LNAPL and regards Con Ed as RP to address LNAPL; (2) recommendation to review surrounding property info to identify potential candidates for off-site contam source and determine if any local businesses are extracting GW does not require DEC approval, Con Ed & Tetra Tech may undertake this review at their own discretion; and (3) recommendations to evaluate methods of LNAPL recovery and prepare LNAPL recovery plan for DEC are approved, NAPL plan should be submitted by 01/30/17. - J. Kolleeny 01/13/17: Had conference call with Neil O'Halloran and Qinling Zheng of Con Edison to discuss LNAPL recovery plan, to address product recently detected in wells along 33rd street down-gradient of site. They proposed gauging wells, doing VEFR on wells with significant product thickness and installing absorbent socks in wells with trace of product, then a week later gauging wells again and bailing any product (replacing socks as needed), and after another two weeks performing VEFR again and replacing socks as needed. I agreed to this approach and requested submission of written work plan for review and approval. - J. Kolleeny 02/08/17: Reviewed LNAPL Recovery Plan dated 2/8/17 by Con Edison (in DecDocs). Plan proposes following tasks: (1) gauge wells MW-23 & MW-25 with oil-water interface probe, perform VEFR if a well has more than 0.1 ft of LNAPL, & install absorbent sock in a well with up to 0.1 ft of LNAPL; (2) one week after completion of 1st task, gauge wells again, perform manual bailing if necessary, and replace absorbent socks; this will be done for two weeks; (3) three weeks after VEFR event in Task 1, gauge wells MW-23 & MW-25 again, replace socks as needed, and perform VEFR again on MW-25. At conclusion of these tasks, product recovery/accumulation will be evaluated and a schedule for add'l gauging & bailing events will be proposed. I sent letter (in DecDocs) to Neil O'Halloran of Con Ed, cc's to Qinling Zheng of Con Ed and Bob Cantagallo of Tetra Tech, approving this plan but adding that during gauging events, other wells along 33rd St should also be gauged, and if any indications of LNAPL are detected, impacted well(s) should be included in LNAPL recovery tasks, and stating that if well MW-23 is consistently found to be dry, as it has been during recent gauging events, it may be necessary to install a deeper replacement well to better evaluate area for presence of LNAPL and enhance effectiveness of LNAPL recovery efforts. - J. Kolleeny 09/05/17: Reviewed 1st Quarter 2017 GW Sampling Rpt (March 2017) by Tetra Tech dated 6/28/17 (in DecDocs). Rpt summarizes well gauging & GW sampling event in March 2017. Well gauging showed 0.20 ft of LNAPL in well MW-25 and a sheen in well MW-27. GW sampling showed well MW-15 was ND (same as in Dec. 2016), well MW-16 had 3,465 ug/L total VOCs (down from 5,487 ug/L in Dec. 2016), well MW-17 had 25 ug/L tVOCs (down from 70n ug/L in Dec. 2016); wells MW-25 & MW-27 were not sampled due to LNAPL; wells MW-23, MW-29 & MW-30 were not sampled because wells were dry, or went dry during purging. Rpt states that based on past 31 quarters of GW sampling, treatment cassette is working as designed to prevent on-site GW impacts from traveling off-site. Rpt states that next GW sampling event will be in July 2017. - J. Kolleeny 11/09/17: Reviewed 2nd Quarter 2017 GW Sampling Rpt by Tetra Tech dated 9/26/17 (in

DecDocs). Rpt summarizes well gauging & GW sampling in June 2017. Well gauging found LNAPL in wells MW-25 & MW-29 (no measurement is given, rpt states that absorbent socks in wells showed product staining), and a petroleum odor was noted in well MW-16. GW samples were not collected from these wells, and wells MW-23 & MW-30 were dry and could not be sampled. GW sampling showed well MW-15 had 1 ug/L of VOCs (altho all individual compounds were listed as undetected, with detection limit of 1 ug/L); well MW-17 had 37 ug/L tVOCs (up from 21 ug/L in March 2017); well MW-18 had 960 ug/L tVOCs, including 860 ug/L of benzene (well was ND in March 2017); well MW-26 had 24 ug/L tVOCs (down from 43 ug/L in March 2017, but again, individual compounds do not seem to add up to tVOC number). Rpt states that next sampling event will be in Sept. 2017; also states that wells MW-23, MW-29 & MW-30 are dry & Tetra Tech will inspect these wells & evaluate them for potential redevelopment. - JK 11/10/17: I sent email to Qinling Zheng of Con Ed, cc to Neil O'Halloran of Con Ed: Ling, I've looked over 1st & 2nd Quarter 2017 GW Sampling Rpts for Newtown Substation site, and I have comments. First, while both rpts mention presence of LNAPL in a couple of wells, there is no discussion in either rpt of LNAPL Recovery Plan approved by DEC in Feb. 2017. That plan proposed specific tasks at specific time intervals, e.g., VEFR on wells with more than 0.10 ft of LNAPL (MW-25 had 0.20 ft of LNAPL in March 2017), checking wells in a week, placing absorbent socks in wells, checking wells again in 3 weeks, and possibly doing VEFR again. Plan further stated that after these tasks, data would be evaluated and a schedule for add'l well gauging & bailing events would be proposed. I have not received any proposal for an ongoing well gauging/bailing schedule, & it seems as though actions proposed in LNAPL Recovery Plan were never performed. Also, 2nd quarter 2017 rpt states that a petroleum odor was noted in well MW-16, but does not mention result of gauging well with an interface probe. Table 1 (gauging data) states that MW-16 had a slight odor. Yet rpt states that well MW-16 was not sampled due to free product detected in well. Was there measurable product in MW-16, based on gauging with interface probe? Was there a visible sheen on GW, based on observation of water in bailer? If not, if there was only a slight petroleum odor in well, then a GW sample should have been collected from MW-16. Rpt should be more clear about what was found in MW-16 that resulted in decision to not collect a GW sample. Next, Table 3 in both rpts, which presents GW sampling data, lists wells out of order. This should be corrected in future monitoring rpts. Also, in Table 3; numbers for individual compounds don't seem to add up to tVOC numbers given. Is Tetra Tech adding detection limits for undetected compounds into tVOC numbers? Finally, rpts mention that wells MW-23, MW-29 & MW-30 are consistently dry, & 2nd quarter rpt states that wells will be inspected & evaluated for potential redevelopment. Redevelopment is not enough, at least in case of MW-23 which has historically had high tVOCs as well as LNAPL detections. As I stated in my 2/8/17 letter approving Tetra Tech's LNAPL Recovery Plan, well MW-23 should be replaced with a deeper well if it is consistently found to be dry. At this point, that condition has been met and well should be replaced. Please provide an update on implementation of Feb. 2017 LNAPL Recovery Plan, and please respond to other questions & concerns expressed in this email as soon as possible. Feel free to call to discuss these issues. - J. Kolleeny 11/14/17: On 11/13/17, I was contacted by Neil O'Halloran of Con Ed, set up a conference call for next day (11/14/17) to discuss my

**CON EDISON - OTHER - SPECIFY SUBSURFACE (Continued)**

**1009218117**

11/10/17 email comments on 2nd quarter 2017 rpt. On 11/14/17, participated in conference call with Qinling Zheng & O'Halloran of Con Ed. They explained that LNAPL recovery plan had been implemented & summary rpt had been prepared but never submitted; they agreed to submit it ASAP. They stated well MW-16 was not sampled because it had visible sheen; they agreed to revise 2nd quarter 2017 rpt to state this more clearly. They also explained that Table 3 VOC totals include all compounds detected by lab (not just STARS list VOCs), but stated they will add a line to table for total target VOCs & will re-submit revised 2nd quarter rpt. - JK 11/17/17: Received email from Qinling Zheng of Con Ed: Jon, This is follow-up email to phone call we had this Tuesday [11/14/17]. I have attached rpt for March & April 2017 VEFR work, along with revised 2nd quarter GW monitoring rpt. Following changes were made to 2nd quarter GW mon rpt: 1. On page 1 of rpt, we included MW-16 had a sheen during gauging 2. Table 3 was modified to include a new row called Sum of Target VOCs 3. Last paragraph on p. 7 of rpt called out VEFR work completed during March & April 2017. Please take a moment to review rpts. If you have any comments/questions, please feel free to contact me. Third quarter GW monitoring rpt is going through final internal review. We should have it ready shortly. Revised 2nd Quarter 2017 GW Sampling Rpt (in DecDocs) addressed my comments in 11/10/17 email (see above) - text states that well MW-16 had sheen and so was not sampled; Table 3 includes line for Total Target VOCs (i.e., STARS List VOCs) and puts well numbers in proper order; text mentions that LNAPL gauging & recovery work was performed in March & April 2017 as per approved plan, and that results plus follow-up recommendations will be submitted as separate rpt. - J. Kolleeny 11/20/17: Reviewed LNAPL Gauging and Recovery rpt by Tetra Tech, dated 11/17/17 (in DecDocs). Rpt states that all wells were gauged on 3/22/17, and MW-25 had 0.20 ft of LNAPL. Rpt summarizes actions performed at site as part of approved Feb. 2017 LNAPL Recovery Plan. On 3/23/17, VEFR was performed on MW-25 and at end of day, no LNAPL was detected in well. Absorbent socks were placed in well MW-27, which had a sheen, and well MW-29, which had a strong petroleum odor. One week later (3/31/17), wells were gauged again. No LNAPL was detected in MW-25 (or other wells), but MW-25 had a petroleum odor, and a sock was placed in well. MW-27 again had a sheen and MW-29 again had an odor; socks were checked but were not significantly stained. A 3rd event was performed a week later (4/7/17); all wells were gauged, MW-25, MW-27 & MW-29 had petroleum odor. Sock in MW-25 showed some staining and was replaced; sock in MW-27 had light staining, sock in MW-29 showed no staining. A final event was conducted following week on 4/14/17. Again, MW-25, MW-27 & MW-29 had petroleum odor; sock in MW-25 showed some staining, sock in MW-27 had light staining, sock in MW-29 showed no staining. Socks were replaced in MW-25 and MW-27. Rpt states that in light of data, gauging of wells for LNAPL should continue on quarterly basis, with next event in Dec. 2017, and absorbent socks should be changed as needed. If MW-25 again exhibits measurable LNAPL or heavy staining of sock, another VEFR event will be considered. Rpt states that well MW-23 has been consistently dry since Oct. 2016, and MW-29 has shown decreasing water levels. Tetra Tech plans to redevelop and surge these wells to try to clear sediment and reestablish connection to surrounding aquifer. If wells continue to show low water levels after redevelopment, Tetra Tech will submit a plan to install replacement wells at these locations. - J. Kolleeny 01/23/18: Reviewed 3rd Quarter 2017 GW Sampling Rpt

**1009218117**

(Sept. 2017) by Tetra Tech dated 12/21/17 (in DecDocs). Rpt summarizes Sept. 2017 well gauging & sampling event. Well MW-25 was not sampled due to LNAPL staining on absorbent sock, indicating presence of product in well. Well MW-15 (down-gradient side of treatment gate) was ND (had 1 ug/L total VOCs in June 2017), well MW-16 (up-gradient side of treatment gate) had 960 ug/L tVOCs (down from 3,465 ug/L in March 2017), well MW-17 had 19 ug/L tVOCs (down from 20 ug/L in June 2017), well MW-18 had 310 ug/L tVOCs (down from 960 ug/L in June 2017), well MW-23 was dry again, well MW-24 had 6 ug/L tVOCs (same as June 2017), well MW-26 had 21 ug/L tVOCs (down from 24 ug/L in June 2017), well MW-27 had 147 ug/L tVOCs (up from 62 ug/L in June 2017), well MW-28 had 6 ug/L tVOCs (up from 5 ug/L in June 2017), well MW-29 was not sampled due to staining of absorbent sock, suggesting presence of product. Rpt states that 4th quarter 2017 sampling event will take place in December 2017. - J. Kolleeny 02/02/18: On 1/23/18, I sent email to Qinling Zheng of Con Ed, noting that 3rd quarter 2017 mon rpt reverted back to mistakes I mentioned about 2nd quarter 2017 rpt - well MW-16 listed out of order in GW data table, and row for Total of Target VOCs is gone from GW data table, so Total VOCs listed don't seem to correspond with detections of individual compounds listed in table. I asked that these changes be made permanent for quarterly monitoring rpts moving forward. I also stated that since well MW-23 was again found to be dry, it's time to install a deeper replacement well. On 2/2/18, I received email from Ling with attached revised 3rd quarter 2017 rpt, stating: Jon, We took some time to revise 3rd quarter rpt to include following items " Table 3 all wells are now in order " There is a line for total target VOCs in Table 3 " December 2008 data has been set as our baseline On page 8 of document, we added a paragraph to discuss replacement of MW-23. Proposed MW-23 will be at least 10 ft below its current depth, or until water table is reached. Please take a moment to review this document. If you have any further comments/questions, feel free to contact me. Revised 3rd quarter 2017 rpt uploaded to DecDocs; will review. - J. Kolleeny 02/12/18: Reviewed revised 3rd Quarter 2017 GW Sampling Rpt by Tetra Tech, dated 2/2/18 (in DecDocs). Rpt has corrections to Table 3 VOC GW Data - well MW-16 is now listed in order, and table has an additional row for Total Target VOCs. Total Target VOC numbers are a little lower than Total VOC numbers listed in bottom row (and cited in my review of 3rd quarter 2017 rpt above in entry dated 1/23/18). Also in Table 3, row showing Baseline Total VOCs now lists Dec. 2008 data instead of Aug. 2008, starting with well MW-17 (baseline data for MW-15 & MW-16 are still from Aug. 2008). Rpt's Recommendations section states that well MW-23 will be replaced with a new well, existing well will be over-drilled & boring will be advanced at least 10 ft below well's current depth or until water table is encountered; new well will be screened across water table. - JK 03/22/18: Received email from Qinling Zheng of Con Ed: Jon, I am writing to submit 4th quarter GW sampling rpt for Newtown Substation. 4th quarter GW sampling was completed in January due to severe weather conditions in December. In this rpt, we included proposal to replace MW-23. New MW-23 will be advanced at least 10 ft below current depth or at least 10 ft below water table. We originally proposed to start work in March, unfortunately current weather condition will delay this field work. We would like to start field work in April when weather gets better. Please take a moment to review this rpt. If you have any questions or comments, please feel free to contact me. I sent reply: Ling, Thanks for sending rpt, I ll

**1009218117**

review it and let you know if I have any questions or comments. It s fine to replace well MW-23 in April; I m assuming you don t need a formal response/approval from me for that work? (I think I ve already asked for a replacement well in writing.) Will review rpt soon. - J. Kolleeny 05/01/18: Received email from Qinling Zheng of Con Ed: Jon, We are conducting fieldwork at Newtown substation for replacement of MW-23. Existing well will be over-drilled and replaced with a new well. Fieldwork will start on Monday 5/7/2018 and possibly last for three days. If you have any questions or comments, please feel free to contact me. Thank you very much. - J. Kolleeny 05/08/18: Received email from Qinling Zheng of Con Ed: Jon, Here is some update for Newtown substation well redevelopment. Install'n of new well was completed yesterday. There was about 12 ft of sediment at bottom of well MW-23. Old well was pulled out and we installed a new well with 20 ft of screen. We will return to site tomorrow at to develop well. Thank you very much. - JK 05/10/18: Received email from Qinling Zheng of Con Ed: Jon, We completed redevelopment of MW-23 at Newtown substation yesterday. I am writing to summarized what we did on Monday and Wednesday. On Monday 5/7, Tetra tech gauged well and measured about 3 ft of water in well. Driller over-drilled old MW-23, and pulled out 2-inch well. Entire length of well is about 40 ft deep, bottom 12 ft of well was brown sediment. We drilled to 45 ft below grade, and took some soil sample. After that, we installed a brand-new 2-inch well at same location. New well is about 40 ft below grade with 20 ft of screen at bottom. Contractor filled bottom 23 ft of gap outside of well screen with coarse bag sand, rest was filled with Bentonite and grout to top of casing. We left well on site for GW to recover. On Wednesday, we returned to site to develop well. Well was once again gauged in morning and measured with PID. No product was measured in well. Well was pumped at regular rate to allow GW to recover. GW level stabilized around 25 ft below top of casing. After water level stabilized, Tetra Tech purged well until turbidity reached 50 NTU. No product was observed in purge water or in well. Newtown MW-23 redevelopment is complete. We will gauge this well for next round of sampling. If you have any questions, please feel free to contact me. - JK 06/06/18: Reviewed 4th Quarter 2017 GW Sampling Rpt (Jan. 2018) by Tetra Tech dated 3/22/18 (in DecDocs). Rpt summarizes Jan. 2018 well gauging & sampling event. Rpt states that free product was detected in wells MW-25 & MW-29, and that petroleum odors were detected in wells MW-16, MW-18 & MW-25. For both MW-25 & MW-29, well gauging data table does not provide a measured LNAPL thickness, but states in Comments that NAPL was present on absorbent sock. GW sampling showed well MW-15 (on down-gradient side of treatment cassette) was ND (as usual for this well), well MW-16 (on up-gradient side of treatment cassette) had 423 ug/L total VOCs (down from 927 ug/L in Sept. 2017), well MW-17 had 4 ug/L tVOCs (down from 7 ug/L in Sept. 2017), well MW-18 had 490 ug/L tVOCs (up from 267 ug/L in Sept. 2017), well MW-24 had 53 ug/L tVOCs (dupe sample)(had 1 ug/L in Sept. 2017), well MW-27 had 8 ug/L tVOCs (down from 107 ug/L in Sept. 2017). Well MW-23 had about 0.6 ft of water in it and was not sampled (well was replaced in May 2018; see above entry). Rpt states that 1st quarter 2018 GW sampling event will be in March 2018, & that MW-23 will be replaced. - JK 06/06/18: Reviewed 1st Quarter 2018 GW Sampling Rpt by Tetra Tech dated 5/15/18 (in DecDocs). Rpt summarizes March 2018 well gauging & sampling event. Rpt states that free product was detected in well MW-25; absorbent sock in this well contained a light brown, translucent LNAPL and a

1009218117

sheen. Also, a petroleum odor was detected in well MW-27. GW sampling showed well MW-15 (on down-gradient side of treatment cassette) had a J detection of 0.3 ug/L benzene (well is usually ND, but has had benzene detections in past), well MW-16 (on up-gradient side of treatment cassette) had 692.5 ug/L total VOCs, including 660 ug/L of benzene (up from 423 ug/L tVOCs and 370 ug/L benzene in Jan. 2018), well MW-17 had 2.6 ug/L tVOCs (down from 4.2 ug/L in Jan. 2018), well MW-18 had 0.9 ug/L tVOCs, consisting of two J detections of benzene & isopropylbenzene (down from 490 ug/L tVOCs in Jan. 2018), well MW-24 had 43 ug/L tVOCs (down from 53 ug/L in Jan. 2018), well MW-27 had 416 ug/L tVOCs (up from 8 ug/L in Jan. 2018), well MW-29 had 1.1 ug/L tVOCs, only MTBE (down from 139 ug/L tVOCs when last sampled in Dec. 2016). Well MW-23 had insufficient water for sampling (was replaced in May 2018, after March 2018 sampling event). Rpt states that 2nd quarter 2018 GW sampling event will be in June 2018, and that well MW-23 will be replaced. - J. Kolleeny 06/06/18: Sent email to Qinling Zheng of Con Ed, cc to Neil O'Halloran of Con Ed: Ling, I ve reviewed 4th quarter 2017 & 1st quarter 2018 GW monitoring rpts for this site, and have a few comments. I noticed that Tetra Tech rpts no longer include a water table contour map. Each monitoring rpt should include a water table contour map based on most recent well gauging data. (No need to revise existing rpts, but please include water table contour maps in future rpts.) Also, I d like to request that a new site plan Figure be created for future rpts, focusing on wells on down-gradient side of site along 33rd Street. Diagram should include text boxes linked to each well showing total Target VOCs detected in well. In fact, it would be great if text box could show total Target VOCs for past 4 sampling events. Such a figure would allow me to better evaluate spatial distribution of contaminants in GW at site, as well as any trends in contaminant levels. Please let me know if these two requests can be accommodated. - J. Kolleeny 09/13/18: Reviewed 2nd Quarter 2018 GW Sampling Rpt by Tetra Tech dated 8/28/18 (in DecDocs). Rpt states that gauging of all wells in June 2018 showed no free product detected in any wells; however, a petroleum odor was observed in wells MW-16, MW-18, MW-23, MW-25 & MW-27. Sampling of wells on 6/26-27/18 showed well MW-15 (on down-gradient side of treatment cassette) was ND for target VOCs (had 0.28 J detection of benzene in March 2018); well MW-16 (on up-gradient side of cassette) had 350 ug/L total target VOCs, with 330 ug/L of benzene (had 692.5 ug/L tVOCs in March 2018, with 660 ug/L benzene), well MW-17 was ND (had 2.6 ug/L tVOCs in March 2018, with 2 ug/L benzene), well MW-18 was ND (had ~1 ug/L in March 2018, consisting of J detections of two VOCs), well MW-23 (replaced in May 2018) had 18,978 ug/L tVOCs (up from 2,983 ug/L when last sampled in March 2016); a duplicate sample was taken for MW-23 and had 16,565 ug/L tVOCs; well MW-24 had 1.5 ug/L tVOCs (a 1 ug/L detection and a 0.52 J detection)(down from 43 ug/L in March 2018), well MW-25 had 450 ug/L tVOCs (down from 1,661 ug/L when last sampled in March 2016), well MW-27 had 182 ug/L tVOCs (down from 416 ug/L in March 2018); other wells sampled were either ND or had very low tVOCs. Rpt includes water table contour map showing GW flow mainly to SW, but with strong NW component on west side of site; rpt also includes a site plan fig with data boxes, as requested. Rpt states in Overall Trends section that treatment cassette is working as designed. Rpt states that 3rd quarter sampling event will take place in September 2018. - J. Kolleeny "

Updated By: MXMAGLOI  
Site Description:

Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162).  
Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23.  
Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR).  
Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business.  
Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately

8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Description: Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162). Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR). Past Use of

Env Problem:

the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business. Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem:

Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may

Site Code: 493090

Site Description: Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162).  
Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement benefiting Lot 4 permitting access to Purves Street across Lot 23.  
Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use District within Area B of Queens Plaza Subdistrict. The site's zoning designation is M1-5/R9, which allows residential development at 8.0x floor area ratio (FAR).  
Past Use of the Site: In 1936 a garage with a gasoline filling pump island was operated on Lot 4. Previous uses of Lot 4 include a paper warehouse and photo chemical warehouse. Lot 4 was improved with one-story buildings since approximately 1941. Lot 23 was used for manufacturing, labs, leather goods business, and a plating equipment business.  
Geology and Hydrogeology: Groundwater underlying the site ranges from approximately 3.26 feet to 7.95 feet below grade surface (bgs) and flows to the north-northeast toward Purves Street. Beneath the site surface, material was observed to be urban fill predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.  
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being

managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

predominately comprised of medium-brown to reddish-brown fine to coarse sand with varying amounts of clay, silt, gravel, brick, concrete, ash and coal. The urban fill layer extends to approximately 8 to 11 feet bgs in Lot 23 and 5 to 11 feet bgs in Lot 4. Beneath the fill was a gray-brown to gray-black silt or clay with some silt, trace fine sand, and trace organics. Bedrock is estimated to range from 50 feet to 70 feet bgs. The nearest body of water is the Dutch Kills, located approximately 0.25 miles south-southeast of the site.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern are volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination remaining in soil and groundwater is being managed under a Site Management Plan. Following excavation and disposal of soil, and removal of four underground storage tanks (USTs), documentation samples were collected from the base of excavation, from the eastern excavation sidewall, and from two UST removal excavations that extended the planned remedial excavation depth. Documentation samples were analyzed for Part 375 List and Target Compound List (TCL)/Target List (TAL) VOCs, SVOCs, pesticides, herbicides, polychlorinated biphenyls (PCBs), and metals. Soil - Prior to remediation, SVOCs and metals were detected at concentrations above their restricted residential use soil cleanup objectives (RRUSCOs). Since the completion of the remedial work, the following SVOCs have been detected at concentrations above their RRUSCOs: benzo(a)anthracene detected at a maximum concentration of 10 parts per million (ppm), benzo(a)pyrene at a maximum concentration of 8.1 ppm, benzo(b)fluoranthene at a maximum concentration of 8.3 ppm, chrysene at a maximum concentration of 10 ppm, dibenzo(a,h)anthracene at a maximum concentration of 0.9 ppm and indeno(1,2,3-cd)pyrene at a maximum concentration of 4.1 ppm. The metals that have been identified in soil include: lead detected at a maximum concentration of 1,200 ppm compared to the RRUSCO of 400 ppm; arsenic detected at a maximum concentration of 27 ppm compared to the RRUSCO of 16 ppm; barium detected at a maximum concentration of 430 ppm compared to the RRUSCO of 400 ppm; mercury detected at a maximum concentration of 7.8 ppm compared to the RRUSCO of 0.81 ppm. All remaining contamination is below the existing site cover. Groundwater - Prior to remediation, SVOCs in groundwater exceeded the ambient water quality standards (AWQS). After the remediation, benzo(b)fluoranthene was the only SVOCs that was detected in documentation soil samples at concentrations that exceed the protection of groundwater soil cleanup objective. The presence of benzo(b)fluoranthene in groundwater reflects the quality of regional groundwater.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. Volatile organic compounds in groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional sampling is needed to determine if soil vapor intrusion is a concern for off-site buildings.

Site Code: 493090

Site Description: Location: The site is located at 27-21 44th Drive and 44-18 Purves Street in the Long Island City section of Queens County. It is denoted on New York City tax maps as Block 268, Lots 4 and 23. The site is bordered by Jackson Avenue to the north, Purves Street to the east, Thomson Avenue to the south, and 44th Drive to the west. Lot 22 is immediately north of Lot 23 and is also part of the proposed development, but is not included in the Brownfield Cleanup Program. It should be noted that the property immediately adjacent and upgradient from the site is also in the BCP (see site no. C241162).  
Site Features: The site is approximately 0.27 acres in size and consists of two parcels, both of which are currently vacant. Lot 4 is occupied by a vacant one-story garage/warehouse building with a full basement. Lot 23 is vacant and partially covered with a deteriorating concrete slab overgrown with vegetation. There is an egress easement
