Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"03/14/06-Hiralkumar Patel. Spoke with Jim at Metro Fuel. property has 2000 gal AST. when driver read gauge he found that he could deliver more than 1000 gal. but after delivering 899 gal, tank overfilled and spilled on concrete floor. driver is doing initial cleanup. cleanup crew is already left for site. Jim is also goint to site and will call back once he reach on site regarding concrete condition and cleaning process. the measuring gauge is not working properly. Received call from Jim and as per him, oil spilled on solid concrete without affecting soil or drain/sewer. all cleaned up. as i couldn't find PBS registration, i got owner's information from Jim. Organization Name: US Tow INc. Contact Person: Joe Lopez / Randy Number: (718) 246-5566 FAX: (718) 802-1988 called at US Tow and Ms. Randy told me that they rent this property at 364 Maspeth Ave. she doesn't have any idea about PBS. Left message for Mr. Mike who is owner. Received call from Ms. Randy and as they don't have their tank registered, she was asking for registration forms. Letter sent out requesting tank registration and replacement/repairment of faulty guage. faxed to US Tow Inc. 04/21/06-Hiralkumar Patel. Called at US Tow, but Ms. Randy will be back on Monday Apr. 24. 04/24/06-Hiralkumar Patel. Spoke with Ms. Randy at US Tow and she will mail the registration form soon. as the spill was cleaned on day of incident and no soil/groundwater/sewer/drain affected, case is closed."

DEC Memo:	"02-21-12 - LZ The Fourth Quarter 2011 Status Report prepared by CEUS Engineering, P.C. is in eDocs. 11/30/11 - LZ The Third Quarter 2011 Status Report prepared by CEUS Engineering, P.C. is in eDocs. 9/23/11 - Austin - Spoke with Jim Quinn of DEC/DER in Albany. He indicated that the former BCF waste oil facility located at 360 Maspeth Ave. (next store to this Ditmas/Gaseteria site) had been cleaned suffciently of haz. waste contamination that it was being d-listed as

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

a Superfund site. The remaining issue on the site was petroleum contamination (floating product). Gaseteria/Ditmas/Newtown Development LLC have taken title to the BCF property adjoining theirs, and have been exonerated of liability for the SSF cleanup, but were still liable for the oil spill cleanup as the new owners. The BCF project (originally under spill 3 9406807, assigned to Hale in Albany) will be coming back to the Region, and will be assigned along with this spill (9006603) to a Remediation Section (either Brevdo or Hussein) for remediation of both adjoining sites. Quinn will send down information on the discussions with Gaseteria, et. al. regarding their responsibilities in this matter. - end 09/06/11 - LZ Reviewed the Second Quarter 2011 Status Report (eDocs)describing the activities at the site. bioremediation, now temporarily suspended, is scheduled to be retested in the spring 2012. MW-21 that has been destroyed and MW-9R, located nearby, takes over function of MW-21. 07/20/11 - LZ The April 28, 2011 First Quarter Status report (eDocs) quartely report shows that free product appeared in 6 wells; the highest thickness of it was 0.21 foot. The next report is due August 15, 2011. 03/03/11 - LZ The February 14, 2011 RAWP (eDocs) has been approved by DEC letter dated 03/03/11 (eDocs), including quarterly well monitoring and quarterly submission of reports. 11/02/10 - LZ Has reviewed and approves a CEUS Engineering request for a 90-day extension to collect additional data, design a petroleum recovery system, and submit a revised remedial action work plan. The work plan to be submitted by January 31, 2011. In eDocs is the October 29, 2010 Third Quarter 2010 report. 10/12/10 - LZ The July 30, 2010, quarterly report (eDocs) by CEUS Engineering, P.C., proposes installation of recovery wells south of MW-2 where free product still exists. After five wells are installed, vacuum truck extraction will be performed and its results analyze to determine whether to continue weekly vacuuming or to install a recovery system. 04/22/10 - LZ Staff reviewed the March 31, 2010 report(eDocs)prepared by CEUS Engineering, P.C. To improve the effectiveness of bioremediation, CEUS Engineering proposes the complete extraction of free product. Vacuum-enhanced product recovery will be conducted using temporary extraction points in the vicinity of MW-2 until free product is removed, while the bioremediation process is suspended. Bioremediation will resume in the fall of 2010, utilizing monthly bio-applications, and the process will be monitored by sampling performed quarterly. Staff approved the proposed modifications to product recovery and bioremediation operations as well as the proposed schedule of the future activities requiring that vacuum-enhanced product recovery must be conducted at least weekly. 02/12/10 - LZ John Rhodes (phone 646-465-2494), since his comany CEUS took over the project, requested an extension to submit the report by March 31, 2010. Request granted. 10/27/09 - LZ Reviewed the AST quarterly report (eDocs) that covers April - June 2009 activities. Monthly gauging were conducted in 17 onsite and offsite wells. Well MW-2 exhibited free product during every gauging (0.006 -0.07 foot). 09/16/09 - LZ E-mailed Chris Tomasello of AST, LLC requesting a 2nd quarter 2009 report be submitted by September 22th. In addition to previous reports, this report should include the amount of recovered product and all, listed in TAGM 4046, VOCs, SVOCs, and MTBE being analyzed (we spoke about this in April). 05/04/09 - LZ The May 1, 2009, Advanced Site Restoration Quarterly Status Report (eDocs) covers remedial activities from January to April 2009. The monitoring well network was gauged on January 6, February 6, and March 4, 2009,

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

and sampled on April 13, 2009. Gauging was performed at MW-2 through MW-6, MW-8, MW-10, MW-16, MW-17, MW-19, and MW-21.The groundwater samples were analyzed for VOCs, including BTEX and MTBE. Total BTEX concentrations ranged from non-detected to 350 ug/l (MW-10). MTBE concentrations ranged from non-detected to 11 ug/l (MW-21). Concentration of BTEX in excess of applicable NYSDEC GWQS were detected in 3 groundwater samples collected during this groundwater sampling event. The next sampling event is scheduled for July, 2009. LNAPL was last detected on March 6, 2009 in MW-2 and was bailed out from this well. 05/04/09 - LZ The October-December 2008 quarterly report (eDocs) prepared by Advanced Site Restoration, indicates that 500 gallons of Bio Rem LLC H-10 were pumped monthly into the sit s bio-irrigation system. Since October 2006, total 53.5 gallons of LNAPL have been removed from the ground. Free product still exists in MW-2 and MW-17. Twelve wells (MW-2 through MW-6, MW-8, MW-10, MW-16, MW-17, and MW-19 through MW-21) were gauged on 10/01/08, 11/03/08, and 12/17/08. On October 1, 2008, monitoring wells MW-3 through MW-6, MW-8, MW-10, MW-16, and MW-19 were sampled: total BTEX concentration range was found from non-detected to 68 ug/l (MW-19); MTBE concentration range was found from non-detected to 9 ug/l(MW-5). 06/16/08 - LZ A report, dated April 2008, prepared by the ASR, provides data concerning remediation efforts and the level of current contamination at the site. From October 2006 to February 2008, 53.5 gallons of LNAPL has been extracted from groundwater. The ASR has applied 30,000 gallons of bio solution-BioREm H-10. Total BTEX has decreased in all monitoring wells, except MW-2. Free product is still in MW-2 and MW-17. 08/08/06 -Zielinski A site visit and a meeting with Mr. Tomasello of ASR. Sent a letter to Mr. Tomasello((see eDocs) requesting installation of three additional wells, reinstallation of MW1, MW11, and W9. 07/18/06 - Zielinski A review of the July 2006 monthly montoring report received from Advanced Site Restoration, LLC,(ASR) indicates that at wells MW-2 and MW-6 concentraction of benzene and total BTEX concentration is relatively high. Results from other seven wells indicate low contamination of groundwater. In August, staff will visit the site. In August, ASR will submit a quarterly report regarding the status of remedation process at the site. 08/18/04 - Zielinski In its letter of August 18, 2004, the department requested that the delineation of petrolum contamination had to be performed by Ditmas Oil Association. In addition, a remedial action plan must be submitted by the facility. These documents have not been received by the department, a review of files on July 5, 2006, shows. 4/21/04 - This project is re-assigned to Zhao from Sigona. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO This site spill cleanup has been consolidated under Spill No. 9006603. 09/15/90: SPILLER WILL DISPOSE OF SOIL PROPERLY & ASSURE WARNING SYSTEM IS IN PROPER WORKING ORDER, SPILL TO BE REFERRED TO MOSF COORDINATOR. DEC Sigona performed follow-up investigation and discovered groundwater contamination. Site is under a consent order to performed remediation of groundwater and tidal wetlands. 06/29/12 - THIS SPILL CASE HAS BEEN TRANSFERRED TO SECTION B ON 06/29/12 AS DISCUSSED WITH RANDY AUSTIN 07/31/2012 - V. Brevdo Received Second Quarter 2012 Status Report, dated July 20, 2012. Reviewed Report. The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was located in an industrial area of Greenpoint, Brooklyn, adjacent to the English Kill, a part of Newtown Creek. The Site received various petroleum products from barges in the adjacent

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

waterway and the Buckeye pipeline that ran through the Site. Fuel was stored in above and below ground storage tanks and then pumped into trucks through an underground piping system. Petroleum products stored included gasoline, kerosene, diesel, No. 2 Fuel Oil and Bunker C oil. A major spill in excess of 40,000 gallons of gasoline occurred on January 15, 1975 during the Gulf operation according to DEC and Coast Guard records. Tank Number 7, a 475,000 gallon storage tank, was overfilled causing gasoline to fill the surrounding (permeable) retaining dyke to a depth of eight feet. Gasoline was observed emerging from the sea wall at the English Kill. An estimated 1,000 gallons reached the English Kill where the fire department prevented the deployment of berms due to a fire hazard. Additional dissolved contaminants reached the English Kill as the result of water being added to the retaining dyke in an attempt to reduce the gasoline s flow into the ground. The Site was decommissioned between February 2004 and June 2005. Approximately twenty petroleum storage tanks were removed from service. (A 2000 gallon fuel oil Underground Storage Tank (UST) remained for heating the onsite office building.) Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. Remediation of the Site has progressed since 2004 under the NYSDEC approved Facility Closure and Oil Spill Remedial Action Plan under the Order on Consent. In 2011 and to date in 2012, approximately 25 gallons of relatively well separated product was recovered using skimmers and peristaltic pumps, and 62 gallons of emulsified product and oily water by bailing. Additional amounts were recovered during vacuum truck visits. Planned activities for the fourth quarter of 2012 include the following: Commencement of the bioremediation and induced oil recovery pilot test; Placement of the scavenger with groundwater pump in recovery well R-9; Continued Gauging and Quarterly testing in accordance with the approved Monitoring Plan; Commencement of Performance Monitoring of the bioremediation and oil recovery pilot test. V. Brevdo 11/09/2012 - Brevdo CEUS Engineering, P.C. (CEUS) submitted status Report for the former Ditmas Terminal. The following provides a Status Report in accordance with Consent Order R2?0272?97?12; the NYSDEC approved Facility Closure and Oil Spill Remedial Action Plan 1 October 2004 (RAP); the Remedial Action Work Plan Addendum and Fourth Quarter 2010 Status Report 8 February 2011 (RAWP Addendum); and the NYSDEC approval letters 18 August 2004, 5 November 2004, 22 April 2010, 5 January 2011 and 3 March 2011 for the former Ditmas Oil Terminal at 364 Maspeth Avenue, Brooklyn, NY (the Site). This Status Report has been prepared by CEUS Engineering, P.C. (CEUS) with field and data management assistance from Advanced Site Restoration, LLC (ASR). Product removal will continue using the skimmer with groundwater depression, a standalone skimmer, a peristaltic pump and bailing.V. Brevdo 07/29/2013 - V. Brevdo E-mail from consultant wiht attached 2nd Quarter 2013 monitoring report. Vadim, Attached is the 2nd Quarter Status Report for the former Ditmas Oil Terminal. I will also follow-up with a hard copy and compact disk. Many thanks, John A. Rhodes, P.E., F.NSPE CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, 07960 NY: 62 William Street, 3rd Floor, New York, 10005 646 465 2494 10/31/2013 - V. Brevdo E-mails from CEUS Engineering: Vadim, Attached is the 3rd Quarter Status Report for the former Ditmas Terminal, minus the laboratory analytical reports that I will send you in a separate email. I will also send you a hard copy and CD

by mail. Please confirm receipt. Thanks, John A. Rhodes, P.E. CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, NJ 07960 NY: 62 William Street, New York, NY 10005 646 465 2494 JRhodes@CEUSEngineeringPC.com JARhodes1@Verizon.net Vadim, Attached are the laboratory analytical reports to accompany the 3rd Quarter Status Report sent in an earlier email. Thanks, John A. Rhodes, P.E. E-Mail from Brevdo of DEC to John Rhodes of CEUS: Dear Mr. Rhodes: This is to acknowledge receipt of two e-mails with attached status report and lab analytical reports. I will review in the upcoming few days and will get back to you if need be. Contact me if you have questions. Thank you. Vadim Brevdo 11/06/2013 - V. Brevdo Summary of the project status as of 11/06/13. Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (Spill No. 9006603) The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. Remediation of the Site has progressed since 2004. The Site was decommissioned between February 2004 and June 2005. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,000 gallons of product and water were removed from test pits. A bioremediation system was designed and installed in 2005. The system consisted of a series of trenches to allow seepage of a solution to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery of product using mechanical oil skimmer. The upgraded system began operation in September 2012. On November 5, 2013, CEUS Engineering, P.C. (CEUS) submitted remediation Status Report for the 3rd quarter of 2013. Planned activities for the 4th quarter of 2013 associated with further implementation of a RAWP Addendum remain similar to those undertaken in 3rd quarter of 2013, and include the following: Continuation of the bioremediation system operation, including the water depression pumping, oil skimming, treatment plant operation; continued evaluation of the effectiveness of the remedial system and its improvements, cleaning of discharge trenches; gauging and quarterly testing; periodic removal of oily water with a vacuum truck. Recoverable product will continue to be removed by peristaltic pump, skimmer or baling, followed by absorbent socks. CEUS advised the Department of their opinion that the Site is affected by migration of contaminants from the upgradient Key Span / National Grid Greenpoint facility (a.k.a. former Equity Manufactured Gas Plant site) which is undergoing remedial investigation via State Superfund program. The Department s oversight of said State Superfund project is conducted by DER s Remedial Bureau C in Central Office, Albany. Region 2 Project Manager for the Former Ditmas Oil Terminal petroleum spill remediation project and Central Office project manager for the Key Span / National Grid Greenpoint State Superfund project discussed future coordination of investigative and remedial work on these adjacent properties. VB 02/10/2014 V. Brevdo - CEUS submitted 4th Quarter 2013 Status Report, dated February 3, 2014. Estimated time frame for completion of the remediation and submission of the Final Engineering Report is early 2015, which is in the Section 5 Estimated Schedule , page 11 of the report. VB 05/02/2014 - V. Brevdo CEUS submitted 1st Quarter 2014 Status Report, dated April 28, 2014. VB 08/06/2014 - V. Brevdo CEUS submitted 2nd quarter 2014

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

Status Report, dated August 6, 2014. VB. 11/07/2014 - V. Brevdo CEUS/Advanced Site Restoration submitted 3rd quarter 2014 Status Report, dated November 7, 2014. Request Department's approval of several cleanup technology changes. Department is reviewing the report. VB. 11/10/2014 - V. Brevdo Current Project Status Synopsis: Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (Spill No. 9006603) The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was decommissioned between February 2004 and June 2005. Remediation of the Site has progressed since 2004 and is implemented under the Order on Consent. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,715 gallons of product and water were removed from test pits. A bioremediation system was designed and installed in 2005. The system consists of a series of trenches to allow seepage of a solution to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery of product using mechanical oil skimmer. The upgraded system began operation in September 2012. On November 7, 2014, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the 3rd quarter of 2014. As of the end of the third quarter, 2014, the active oil recovery portion of the bioremediation system (skimmer and water depression pump) has eliminated the presence of product in MW-2 area. However, product continues to be detected in R-10 and MW-22 areas. Therefore, CEUS/ASR petitioned the Department for cessation of the active (by pumping) oil recovery operation in the MW-2 area and moving the pumping equipment to other areas. Absorbent socks will continue to be applied at MW-2 and maintained to capture product should it re-appear. CEUS/ASR also proposed several other modifications to the RAWP: elimination of three destroyed wells from monitoring program; pumping water from MW-22 and evaluating the reason MW-22 is slower than the other wells to improve; and adding biodegradable dye or sodium chloride as means of evaluating concentration changes and flows during pumping. CEUS / ASR plans to accomplish remedial objectives and petition the Department for closure of spill case tentatively in early to mid 2015. RP (Malu Properties) continues cooperation with USEPA Remedial Investigation for the Newtown Creek CERCLA Site. Malu Properties has allowed the USEPA to set up a water sampling station on the property s recently repaired bulkhead. Malu Properties also assisted the USEPA in establishing automated sampling station for storm water in the region. The next groundwater sampling is scheduled for December 2014. On November 10, 2014, the Department issued letter of approval of the 3rd quarter 2014 remediation status report and recommendations contained in the report. VB 05-01-2015 - V. Brevdo Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (Spill No. 9006603) On April 30, 2015, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the 1st quarter of 2015. As reported in earlier status reports, the active oil recovery portion of the bioremediation system (skimmer and water depression pump) has eliminated the presence of product in MW-2 area. Absorbent socks continue to be applied and maintained to capture product when

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

it re-appear. To date, no product has reappeared in the MW-2 area. However, product continues to be detected in R-10 area. After conducting tidal and product recovery tests, CEUS/ASR decided to implement automatic product recovery in R-10 area to increase recovery rate. Implementation of automated product recovery in R-10 was included in the approved RAWP should absorbent socks be inefficient in removing the product. CEUS/ASR intends to install a belt skimmer in R-10. The next groundwater sampling is scheduled for May 2015. VB 08-25-2015 - V. Brevdo On August 25, 2015, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the second quarter of 2015. As reported in earlier status reports, the active oil recovery portion of the bioremediation system (skimmer and water depression pump) has eliminated the presence of product in MW-2 area. Absorbent socks continue to be applied and maintained to capture product when it re-appear. To date, no product has reappeared in the MW-2 area. However, product continues to be detected in R-10 area. After conducting tidal and product recovery tests, CEUS/ASR decided to implement automatic product recovery in R-10 area to increase recovery rate. Implementation of automated product recovery in R-10 was included in the approved RAWP should absorbent socks be inefficient in removing the product. CEUS/ASR intended to install a belt skimmer in R-10. However, over the second quarter, insufficient product has collected in R-10 area to meet the minimal requirements for removal by a belt skimmer. Therefore, CEUS delayed implementation of product removal by a belt skimmer, and continue using absorbent sock instead. Groundwater was tested on June 8, 2015. The next groundwater sampling is scheduled for September 2015. VB 11-02-2015 - V. Brevdo Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (Spill No. 9006603) The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was decommissioned between February 2004 and June 2005. Remediation of the Site has progressed since 2004 and is implemented under the Order on Consent. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,715 gallons of product and water were removed from test pits. A bioremediation system was designed and installed in 2005. The system consists of a series of trenches to allow seepage of a solution to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery of product using mechanical oil skimmer. The upgraded system began operation in September 2012. On November 2, 2015, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the third quarter of 2015. The Department is reviewed the report which has good news. CEUS / ASR intensified effort at product removal from recovery well R-10, coordinating recovery with the tides, and have not detected product since early August 2015. CEUS / ASR feel that they may be able to declare the Site product free in the upcoming few months. The focused recovery efforts on well MW-22 have also been successful. As extended pumping indicated improving conditions, CEUS / ASR took an unscheduled sample on September 29, 2015 in which benzene was

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

detected at low concentrations of 29 microgram per liter (ppb). CEUS / ASR intend to continue focused efforts and sampling and testing to check for rebound. However, if aforementioned improvements continue, then all contaminants in all wells are expected to be below standards / cleanup criteria or trending downward criteria. Therefore, CEUS anticipate being in a position for closure in the spring of 2016. VB 02-02-2016 - V. Brevdo Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (NYSDEC Spill No. 9006603) The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was decommissioned between February 2004 and June 2005. Remediation of the Site has progressed since 2004 and is implemented under the Order on Consent. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,715 gallons of product and water were removed from test pits. A bioremediation system was designed and installed in 2005. The system consists of a series of trenches to allow seepage of a solution and oxygenated water to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery of product using mechanical oil skimmer. The upgraded system began operation in September 2012. On February 1, 2016, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the fourth quarter of 2015. No free product has been encountered in any well other than R-10 since June 2014. CEUS / ASR therefore proposed the cessation of product gauging and recovery in all wells other than R-10. CEUS / ASR will continue to monitor for product in R-10 well and recover product using absorbent socks. CEUS/ ASR concluded that the bioremediation is no longer necessary except to enable the surging of MW-22, an inland well, and the discharge of contaminated water pumped from MW-22. CEUS /ASR proposed to maintain the bioremediation system while they continue to address the conditions at MW-22, and operate the system in conjunction with activities related to MW-22. Planned activities for the next quarter as related to the RAWP Addendum include the following: The bioremediation system will be maintained and operated on an as-needed basis to accommodate continued sampling and/or remedial activities at MW-22; If benzene concentrations remain elevated at MW-22 during upcoming March 2016 sampling event, CEUS /ASR will recommence remedial activities, including pumping and pulsing of the well; Sampling and testing will continue for wells MW-8 and MW-23 for at least two more quarters to confirm a downward trend in benzene concentrations; Frequent monitoring for product in well R-10 will continue and product, if encountered, will be removed using absorbent socks. A scope of reduction in the sampling/monitoring and remedial activities in the next quarter is presented in detail on Page 10 of the January 31, 2016 Status Report. On February 2, 2016, the Department approved Fourth Quarter 2015 Status Report including the course of action and reduction of the scope of sampling/monitoring and remediation activities proposed by CEUS /ASR. CEUS /ASR anticipate to accomplish closure of this spill case in late 2016 or early 2017. VB May 2, 2016 - V. Brevdo Received and e-mail from John A. Rhodes of CEUS Engineering, P.C. and first quarter of 2016

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

monitoring report: Vadim, Attached is the 1st Quarter 2016 Status Report for the former Ditmas Terminal. There is not much to report as we were unable to do much over the winter. However, we have put the treatment system back on line and have begun working on MW-22, so we should have more news in the next status report. Benzene in MW-22 and product in R-10 are about the same. Thanks, John John A. Rhodes, P.E., F.NSPE CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, NJ 07960 NY: 62 William Street, New York, NY 10005 646 465 2494 JRhodes@CEUSEngineering.com JARhodes1@Verizon.net 08/03/2016 - V. Brevdo On August 1, 2016, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the second quarter of 2016. CEUS / ASR continued gauging and product recovery activities for well R-10. Product recovery was done using the absorbent socks. Planned activities for the next quarter as related to the RAWP Addendum include the following: The bioremediation system will be maintained and operated on an as-needed basis to accommodate continued sampling and/or remedial activities at MW-22; CEUS / ASR will continue the recent successful activities in the MW-22 area to improve rate of contaminant degradation, including sustained and monitored pumping, and surging of the well; CEUS / ASR will continue frequent monitoring for product in R-10, and remove it using absorbent socks should it be encountered. CEUS /ASR anticipate to accomplish closure of this spill case in late 2016 or early 2017. VB 10/28/2016 - V. Brevdo On October 31, 2016, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the third quarter of 2016. CEUS / ASR concluded that the recalcitrant oil observed in well R-10 was the result of seepage from the blocked sewer. Upon removal of the blocked portion of the sewer pipe, the oily sediment and soil in the vicinity of the blocked portion of the pipe, no oil has been detected in R?10. No oil has been detected anywhere on the former Ditmas property and the oil recovery program has been completed. The March, June and September 2016 sampling and testing show benzene concentrations in remaining wells to be below or near 100 ?g/l with the exception of MW?22. Focused activities on MW?22 will continue. CEUS /ASR anticipate to accomplish closure of this spill case in 2017. VB 02/01/2017 - V. Brevdo On February 1, 2017, CEUS Engineering / ASR submitted 4Q 2016 Site Status Report and Spill Case Closure Petition. Upon review of both report and petition, DEC project manager requested ASR to revise report and petition to make a better and more compelling case to support merits of spill case closure petition. VB 02/15/2017 - V. Brevdo Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (NYSDEC Spill No. 9006603). Project Summary and Spill Case Closure Decision. The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was decommissioned between February 2004 and June 2005. Remediation of the Site has progressed since 2004 and is implemented under the Order on Consent. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a short term parking area for film production trailers, and other commercial fleet vehicles. Previously, it was a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,715 gallons of product and water were removed from test pits. A bioremediation system was

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

designed and installed in 2005. The system consists of a series of trenches to allow seepage of a solution to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery of product using mechanical oil skimmer in Recovery Well R-9 near Monitoring Well MW-2. The upgraded system began operation in September 2012 and completed oil recovery by June 2014. CEUS / ASR therefore proposed the cessation of product gauging and recovery in all wells other than R-10, where oil recovery continued. Additionally, CEUS/ ASR concluded that the bioremediation is no longer necessary except to enable the surging of MW-22 and the discharge of contaminated water pumped from MW-22. CEUS /ASR maintained the bioremediation system while they continue to address the conditions at MW-22, and operate the system in conjunction with activities related to MW-22. On October 31, 2016, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the third quarter of 2016. CEUS / ASR concluded that the recalcitrant oil observed in well R-10 was the result of seepage from the blocked sewer. Upon removal of the blocked portion of the sewer pipe, the oily sediment and soil in the vicinity of the blocked portion of the pipe, no oil has been detected in R?10. As of February, 2017, no oil has been detected anywhere on the former Ditmas property and the oil recovery program has been completed. The March, June and September 2016 sampling and testing show benzene concentrations in remaining wells to be below or near 100 ?g/l with the exception of MW?22. Focused activities on MW?22 continued through December 2016. In the 4th Quarter 2014 Status Report (dated January 31, 2015), a proposal was submitted to undertake tests on MW-22 and a pilot study involving surging to try to increase the rate of contaminant reduction. This proposal was approved by the NYSDEC, and the tests conducted in the spring of 2015 and pilot study begun in September of 2015. Initially, a dye study demonstrated that MW-22 was not being adequately affected by the bioremediation system - oxygenated water was not reaching the area of the well. Aquifer testing evaluated the hydraulic conductivity to be 0.85 gallons per day per foot squared, a substantially lower value than that measured in surrounding areas. With the low hydraulic conductivity and lack of flow to the south toward the bio-remediation trenches and the English Kills, the only sensitive receptor for contaminated groundwater, CEUS/ASR concluded that remaining contaminants were isolated and contained, and not affecting the English Kills. Further, CEUS/ASR concluded that continued surging of the well would have limited effectiveness as the spreading of oxygenated water via the bio-remediation trenches or the recovery of contaminated water would be limited by the low hydraulic conductivity. In turn, CEUS/ASR submitted that the dissolved groundwater concentrations at MW-22 posed no further threat to human health and the environment and have been addressed to the extent feasible. CEUS /ASR proposed closure of this spill case in February, 2017, based on the following criteria: " The Primary Spill Source has been addressed, " Free product has been removed, " Grossly contaminated soil has been addressed to the extent feasible, " The remaining areas of contaminated soil have been addressed to the extent feasible as per CP-51 Soil Cleanup Guidance, " Residual groundwater contaminants either meet standards/cleanup guidance values or are within the range acceptable to the Department, " The nature and extent of groundwater contamination has been delineated, " Dissolved groundwater concentrations have been addressed to the extent feasible, " No migration of contaminants off

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

site is occurring and no threats to sensitive receptors exist, " Remaining contamination is contained, " No threat of exposure to vapors from remaining contamination exists, and, " The Site poses no further threat to human health and the environment for the contemplated use. The Department closed this spill case on February 15, 2017. "

Remarks: "GASOLINE Spill into secondary containment - NYCDEP,USCG,NYCFD ON SCENE, ALARM FAILURE CAUSED PRODUCT TO EXIT THROUGH VENT IN FIRE EXTINGUISHING SYSTEM,APPROX 200 CU YDS OF CONTAMINATED SOIL."

Site Description:	"The Maspeth Railroad Place site is located in an industrialized area of Queens County, New York. The site is approximately 3-acres in size, and can be found at 57-15 49th Street. The main site features include a fenced lot which constitutes the majority of the site. There are no perminent structures on the lot. The headwaters of

MASPETH PROJECT (Continued) **S105589986**

Maspeth Creek are located approximately 100 hundred feet from the site. The site is currently vacant. The site is surrounded by industrial/commercial properties on all sides. The site has had several industrial/commercial uses over the years, with the most recent having been as a bus maintenance facility. A former chemicals blending operation was located immediately adjacent to the site, and there was some concern that wastes from that operation could have contaminated the site. A Remedial Investigation was completed, and an alternatives analysis was submitted in draft form, though it was never finalized. In the spring and summer of 2008, the City of New York performed an Interim Remedial Measure by removing a 20,000 gallon storage tank which was found during the site investigation. Over 100 yards of contaminated soil was removed at this time as well. In December of 2010, the NYSDEC and NYC mutually terminated the State Assistance Contract for the site and this project was closed. Future work at the property is to be conducted under the Spills program."

Env Problem: "The primary contaminants of concern at the site are petroleum related compounds. Preliminary data indicated the possible presence of a common plasticizer (bis-2-ethylhexyl pthalate) at elevated levels in groundwater and soils, however, more recent data indicated much lower levels than previously reported. Localized soil and groundwater contamination has been identified. Groundwater was found above standards for petroleum compounds."

Health Problem: Not reported

DEC Memo:	"Location is English Kills section of Newtown Creek . Sangesland spoke to Tracy at spill center for owner. She said the canal overflowed into the basement, knocked over drums of oil, oil floated on top of canal water and spilled back into the canal. Facility has no power. No cleanup happening yet. 10/30/12- Zhune responded to this site and spoke to Tim 347-351-1166. He brougt me to the truck mechanic shop but I could not get inside becouse he had no keys to open the door. I saw oil (black oil) outside the shop and a heavy rainbow sheen in the water (Gowanus canal). Tim said tomorrow the Environmental Company is going to do the clean up. 10/31/12-Zhune spoke to tracy. She said Environmental Products and Service are going to clean tha spill. She said call J. Bradshw 518-470-0010 and find out if they are going to do the the clean up. Zhune called J. Bradshw at 2:00 PM. he said we are going to the site now. 12/27/12-Trace Murphy from Spill Canter Inc. emailed the spill cloure letter

1213 GRAND STREET (Continued) **S103479685**

provided by Environmental Products & Services of Vermont Inc. dated December 21, 2012. On October 31, 2012, Environmental Products and Servises of Vermont Inc. was contacted to respond to a motor oil release of aproximately 400 gallons located at Transervice Logistics. The motor oil was located in drums within the building. The canal adjacent to the property fooded and caused the drums to spill. The motor oil then covered the duck floor and parking lot outside of the building. The area impacted by the oil was absorbed with speedi-dry, sweep it up, and placed into drums for disposal. the parking lot and interior floor was pressure washed. a total of 4 drums of oil soaked debris were generated snd 2 drums of liquid for disposal. The drums were removed from site and trasnported to Environmental Products & Service of Vermont Inc. in the Port of Albany, New York recycling Disposal. Spill Closed. "

Remarks: "Storm related: water came into basement of facility tipping over 55 gal drums with motor oil & used oil. Cleanup is pending."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 04/25/95: SEE SPILL #9403829. DEC (Sigona) issued a hazardous waste cleanup contractor on 3/27/2000 under H0413. DEC referred this site cleanup to USEPA for RCRA Cleanup action. This spill site cleanup has been consolidated under Spill No. 9406807. 4/21/04 - Spill manager's name switched to Tipple from Sigona. 8/23/04 - Raphael Ketani. Case transferred to Jeff Vought. 7/3/12 - Austin - A synopsis to date of the basic activities on this site: Region 2 Spills staff did a PIN project on this site in the 1990s when it was abandoned by the owner, who found PCBS in his stored waste oil tanks. We re-diverted the storm drainage away from the storage tanks to prevent an overflow condition, and secured the site. The EPA then came in, and did a Superfund emergency removal of the hot oil from

BCF OIL REFINING, INC (Continued) **1001754932**

the tanks. They gave it back to DEC for a NYS Superfund investigation. After Jim Quinn's section did their Superfund investigation of the site, they found there were no hazardous wastes (PCBs) in the ground/groundwater. The original oil spill report, #9406807 (the one of this record), was closed in the interim by Kevin Hale, since it was in the State Superfund program. There is still petroleum g.w. contamination from the waste oil operations, so we need to re-open this spill report (#9406807), and assign it to one of our Remediation staff in Region 2 to continue the investigation, presumably under a PIN project. I have done so, by transferring this spill to Vadim Brevedo's section (Remediation Section B , as per the Regional Remediation Engineer. DEC Brevdo will assign this site to a project manager in his section for review and determination of further action. - end 02/12/2013: This spill case was transferred to A. Doronova. - AD Looked for property information on PropertyShark and NYC ACRIS database. According to the results: this property was sold by City of NY in 2006 to Newtown Development LLC. The property was bought at foreclosure. The Newtown Development company was represented by an attorney - Seth Friedland of Friedland Laifer & Robbins, LLP. Address of attorney: 62 William Street, 3rd Floor New York, NY 10005 Phone: 212-344-1400 Called and left a message to Mr. Friedland on his voicemail. Did not find on the Internet any other contact info for Newtown Development LLC. There is no listing for Newtown Development LLC on Department of State's Division of Corporations database. There is a company with a similar name - Newtown Development Group LLC. The company address is: Newtown Development Group LLC 2208 Astoria Blvd. Astoria, NY Phone: (718)545-1850 Called on the listed phone and left a message. Later in the day called and left a message with a secretary of Mr. Friedland. She told me that Newtown Development LLC is still their client. 1:12 PM - Received a call from Mr. Friedland. He told me that the site was cleaned by DEC and they had some kind of agreement with the state that the site will be remediated before purchasing it in 2006. Asked him to submit this agreement and also asked him for RP contact information. He said that he will speak with his client and get back to us in a day. AD 02/13/2013: Received a message from Mr. Friedland. Called and spoke with him. Mr. Friedland was authorized by the property owner to represent him in this case. CEUS Env. will probably be a consultant for the site. Mr. Friedland will confirm it later. He gave the address and contact info of the owner of the site: Marcello Porcelli - president Newtown Development, LLC c/o Fabrizio Realty 364 Maspeth Ave, Brooklyn, NY phone: (718) 782-4200 Mr. Friedland asked for next course of actions required by DEC. Told him that after I review the case file I will issue a letter to his client with a request for further actions depending on soil and groundwater data. Told him to file FOIL request in a meantime to get site-related data. Mr. Friedland will e-mail me a copy of the comfort letter his client received from DEC. Put site priority as P0. AD 02/25/2013: Reviewed the 2009 Investigation Report. The highest concentration of TVOCs is in shoreline sample point PW-1 at 1200 ppb detected in October 2007. Called and left a message to Mr. Friedland. AD 02/26/2013: Called and spoke with Mr. Friedland regarding the site reconnaissance. Requested to inspect all site-related wells and to collect groundwater samples, then based on the result to propose next course of actions. Later in the day received the following e-mail from Mr. Fridland: Dear Ms. Doronova: As just discussed, you advised me that you reviewed the latest available sampling data in NYSDEC's records for this site

BCF OIL REFINING, INC (Continued) **1001754932**

which are from 2009. Because of the age of those results, you have requested that more current sampling results from the above site be obtained and submitted. You also indicated that the readings in the files were relatively modest with one of the highest reading in the range of 1,300 parts. In this regard, you have requested that our client's consultant do the following: " Inspect the wells for sampling ability and determine the status of the wells (you said you thought there were 17 wells on the site); " Sample groundwater from the wells for VOC's and SVOC's which would relate to fuel oil and PCB's; " Upon the consultant's review and analysis of the sampling results, you would like the consultant to submit a Site Sampling Status Report documenting the sampling results. " In the Site Sampling Status Report, depending on the sampling results, you would also like the consultant to recommend a course of action ranging from a request for spill closure, to continued monitoring and natural attenuation, or another method of remediation that will lead to closure, as recommended by our consultant. Please review my summary above and kindly either confirm my understanding above, or add any other language modifications to this email that you feel are appropriate. Once I receive your response hereto, I will arrange for authority for the consultant to perform the required tasks. Thanks again for your cooperation and assistance. Regards. Sent from my BlackBerry Seth D. Friedland Friedland Laifer & Robbins, LLP 62 William Street New York, New York 10005 T 212.344.1400 x. 202 F 212.344.8735 C 917.902.6386 Efax 646.304.1916 email: sfriedland@friedlandlaifer Sent an e-mail to Mr. Friedland confirming the course of actions. AD 03/06/2013: Received the following e-mail from Mr. Friedland: Dear Ms. Doronova, Our client's consultants went to the site to inspect the wells as you requested. They were able to locate and identify approximately 7 or 8 wells so far. Also, the BCF site has been used as an impound lot by New York City for the parking of cars for the last year or so, so it may have been difficult for the consultants to locate some of the wells because of the presence of parked cars. Can you send me a copy of the well map you had reviewed so the consultants can try to reconcile the current site conditions with the site plan in your files. Thanks very much. Sent from my BlackBerry Seth D. Friedland Friedland Laifer & Robbins, LLP Sent the requested site plans. AD 06/03/2013: Sent an e-mail to Mr. Frieland with a request for site status update info. Requested to submit a summary report by end of June. Later in the day received the following e-mail from Mr. Frieland: Ms. Doronova, I know they are working on trying to finalize the report, but the consultants have a couple of questions. Would it be possible to discuss the report questions before they finalize and submit it in order to expedite the process? I can arrange a telephone call with them at a mutually convenient time if ok with you. Thanks for your patience. Seth D. Friedland Gave him time when I am avalable to take conference call. AD 06/04/2013: Finalized time for the conference call for 1:30 PM for June 6, 2013. AD 06/06/2013: received an e-mail from Mr. Friedland with some site maps from the new report. Had a conference call with Mr. Friedland and his consultant. Discussed the new groundwater data and issues with report presentation. The complete report will be submitted to DEC as scheduled by June 30, 2013. AD 06/28/2013: Received the following e-mail from John Rhodes of CEUS Engineering: Ms. Doronova, Attached is the Site Sampling Report and Petition for Closure of NYSDEC Spill Number 9406807 for the former BCF Site. I am also sending this report to you next week in hard copy with a CD

BCF OIL REFINING, INC (Continued) **1001754932**

containing the report. Please confirm receipt. Thank you for your assistance on this project, John A. Rhodes, P.E., F.NSPE CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, 07960 NY: 62 William Street, 3rd Floor, New York, 10005 646 465 2494 DL the report to eDocs. Will review. AD 08/09/2013: Reviewed the report. It states that the Site was an Inactive Hazardous Waste Site investigated and cleaned-up through a cooperative arrangement between the NYSDEC, New York City (NYC), the United States Environmental Protection Agency (EPA) and a purchaser of the property, Newtown Development, LLC (NDL) to convert an abandoned hazardous waste site back to a beneficial use. According to the report, as part of the cooperative arrangement, the following have been accomplished: - The NYSDEC responded to discharges of petroleum from the former BCF facility, closed an oil water separator, cleaned up surface debris, supervised and funded a Demonstration of Method Applicability Study (DMA) and a Remedial Investigation (RI), led the Traid team during the RI, partnered with NDL to allow the innocent landowner purchase of the Site, and provided the successful regulatory framework and oversight for the project that led to the current status. - The EPA transferred their CERCLA oversight role to the NYSDEC, subordinated a lien against the property so that NDL could move forward to purchase the property and the remediation move forward, provided the expertise for the Triad approach including participation on the Triad team, provided the regulatory framework and oversight for the decontamination of the steel that otherwise would have been TOSCA waste, and performed an emergency removal action that included cleaning and closure of numerous tanks containing PCB laden oils. - The NYSDEC along with EPA, NYC and NDL led the development of the cooperative arrangement as part of the City s and State s interest in economic development and repatriation of contaminated and abandoned property, coordinated local regulatory and other support for the project, participated on the Triad team and promoted the successful approach to cleaning-up the Site to others addressing contaminated properties in NYC. - NDL (along with NYSDEC and NYC) led the conceptual development of the cooperative arrangement, purchased and funded the property allowing the entire enterprise to move forward, demolished the above ground structures, decontaminated and recycled the steel from tanks and piping; identified, leased to and interfaced with an industrial operation on the property (the impound lot operations for NYC s Marshal s operations), covered and leveled the ground with inch quarry stone, and managed the property to allow all other parties (EPA, NYSDEC, Triad team) to do what they needed to do. NDL is now addressing the residual petroleum (fuel oil) contamination issue brought to NDL s attention by NYSDEC as a continuing obligation to which they agreed as part of the cooperative arrangement and in continued cooperation with the NYSDEC, now through the Region 2 office. 2013 GW sampling: The report states that in February and March of 2013 contractors for NDL conducted groundwater sampling and testing and related activities in accordance with the plan approved by the Region 2 office. The 2013 follow?up groundwater elevation measurements and testing confirmed the southerly flow direction of groundwater from the southern portion of the Site. Additionally, through an examination of the construction of the retaining wall and elevations of the underlying clay layer we confirmed that the retaining wall was keyed into the clay and thereby inhibiting direct impacts on the English Kill from the petroleum release on the Site. The monitoring wells in the southern portion of the Site are

BCF OIL REFINING, INC (Continued) **1001754932**

representative of downgradient groundwater conditions to the north of the Site. GW data - SVOCs in GW: Naphthalene was not above this groundwater standard in the 2013 follow up testing.The consultant recommends no further action regarding the SVOC contaminants detected at the Site. BTEX: The NYSDEC noted BTEX compounds (benzene, toluene, ethylbenzene and xylene) in most of the wells on the properly exceeding their respective Class GA Groundwater standard. The concentrations of BTEX compounds in the 2013 testing were consistent with the concentrations in the RI testing (2009), with improvement but also localized increases in concentrations. The average values of toluene, ethylbenzene and xylene all dropped between the 2009 RI testing and the 2013 testing. In 2009 the average or the total of these three compounds was 7.7 ug/l. By 2013, this average had dropped to 1.9 ug/l. However, the average benzene value increased slightly, from 34.6 ug/l at the time of the RI to 67.5 ug/l in 2013. This is likely due to the small amount of LNAPL that was encountered in MW-12 (0.04 inches) thereby biasing high the average value; and our decision to sample groundwater in MW-12 after removal of this LNAPL even though wells with LNAPL were not sampled during the RI. A longer period of record for MW-7, a downgradient well for contaminants from the northern portion of the BCF Site. Total BTEX and benzene concentrations have dropped over the past five years until they are now nearly within Class GA Groundwater standards. A similar record is indicated for the other wells monitoring the BCF Site. however, the BTEX compounds are not migrating. The furthest downgradient well to the south towards the English Kills, MW-16, contained no BTEX compounds (or any other compounds) exceeding Class GA Groundwater Standards. Further, the retaining wall extends around the entire southern portion of the Site, thereby inhibiting flow into the English Kills. Similarly, the furthest downgradient well to the northeast along the Maspeth Avenue utility beddings, MW-7, contained only benzene at 1.1 ug/l, only slightly above its Class GA Groundwater Standard of 1.0 ug/l. (Isopropylbenzene was also detected at 20 ug/l, above its Class GA Groundwater Standard of 5 ug/l.) Therefore, according to the consultant, the VOC constituents of fuel oil are not migrating beyond the property in significant concentrations. GW data comparison (TVOCs in ppb): well 2009 2013 MW-6 193 23 MW-7 17 24 MW-8 349 99 MW-9 47 89 MW-10 19 6.7 MW-12 366 654 MW-13 25 175 MW-14 88 64 MW-15 101 121 MW-16 55 6 MW-17 277 187 Six wells: MW-6, MW-8, MW-10, MW-14, MW-16 and MW-17 showed decrease in TVOCs levels. Five wells: MW-7, MW-9, MW-12, MW-13 and MW-15 indicated increase in TVOCs. The most contaminated well is MW-12 with 654ppb of TVOCs. Free product in 2013: The 2013 testing confirmed LNAPL at two locations (wells MW-12 and MW-15), in lower amounts than identified during the RI. The area where LNAPL had been suspected but not confirmed by the RI contained no LNAPL in 2013. The RI mobility/recoverability testing was repeated. The LNAPL observed in 2013 was confirmed to be essentially immobile and practicably non-recoverable. The consultant recommends no further action regarding the remaining LNAPL at the site. Exposure assesment: The area of the BCF Site has a long industrial history, much of it as an oil terminal stemming back to 1933. The surrounding area has been industrial including land uses such as the National Grid Greenpoint Energy Facility (Keyspan), major pipelines, scrap metal recycling and oil terminals. Today the Site is an impound lot for the City of New York. The New York City Planning Department s objectives are to keep the area industrial. Groundwater at and in the vicinity of the Site

BCF OIL REFINING, INC (Continued) **1001754932**

is not potable and not used for any purpose including industrial. Groundwater is sufficiently deep that exposure to users of the industrial property is unlikely, although basic controls during construction would be appropriate. Furthermore, the remaining groundwater contamination is not migrating off the property in significant amounts. Therefore, there is no potential for exposure to contaminated groundwater other than when deep excavation is done during redevelopment construction or for utility repairs in the immediate vicinity of the Site. The only environmental receptor is the English Kills adjoining the southern portion of the Site. The English Kills is an industrial waterway with barge and other industrial and commercial traffic. A major outfall of the NYC sewer system is located just upstream of the BCF Site. The RIR indicates that contaminants in the sediment in the English Kills come from upgradient sources and not the BCF Site. The Site groundwater evaluation shows minimal if any impact to the English Kills from the Site. Therefore, there is no significant threat to any environmental receptors from the Site. There are no residential or other sensitive use properties in the vicinity and the entire stretch of Maspeth avenue where the Site is located is exclusively heavy industrial and commercial. Soil vapor intrusion is not a current concern due to the lack of structures. Should future structures be desired on this industrial property, soil vapor intrusion can be better addressed at that time, if necessary. The remaining contamination poses no threat to the current and likely future users of the property. None of the targeted contaminants are present in the upper two feet of soil. Currently, any contaminated soil is well separated from current users by the three-quarter inch gravel placed on the ground surface after the demolition of the aboveground facilities as required by the NYSDEC. A Sensitive Receptor Survey was done in conjunction with the 2013 testing. The Sensitive Receptor survey concluded that there was no threat to human health or the environment. The 2013 testing reported here shows the groundwater plume to be stable and consistent with what was found during the RI. Conditions are improving with time. Contaminants associated with fuel oil are not migrating off-site. Furthermore, the BCF Site is capped with gravel and mine millings and currently supporting an industrial operation; it will continue to support an industrial operation based on NYC plans and the Site s location. There is no impact to the English Kills indicated by the 2009 or 2013 testing. With the stable plume, low and improving concentrations of contaminants, lack of significant off-site migration, and a cap protecting an industrial operation; the Site conditions are fully protective of public health and the environment at this industrial property. Therefore, the consultant petitions for closure of NYSDEC Spill Number 9406807. GW data is limited to only two sampling rounds. The lates data indicated increase in Benzene levels. Free product on two wells. Will discuss the closure request with J. Kolleeny. 08/29/2013: Discussed the closure request with J. Kolleeny of DEC. It was decided that although VOC concentrations in some site wells have decreased since the last groundwater sampling event, performed at the site in 2009, the submitted data indicate that free product is present in two site wells, total VOC concentrations increased in five site wells, and benzene levels increased in seven wells. In light of these conditions, further actions are warranted at the site. AD 09/04/2013: Issued and sent a DEC Response letter to Mr. Porcelli stating that spill case closure cannot be approved at this time and that free

BCF OIL REFINING, INC (Continued) **1001754932**

product recovery and groundwater monitoring and sampling of site wells should continue in order to eliminate free product to the extent feasible and establish a clear decreasing trend of groundwater contaminant levels. DL pdf copy of the leter to eDocs. AD 09/18/2013: Received a phone call from John A. Rhodes of CEUS Engineering. He wanted to discuss free product recovery and GW sampling for the site. Told him to measure LNAPL thickness before bailing it out and suggested to install oil absorbent socks into the wells with free product, if it recharges at very slow rate. Permitted the omission of wells MW-7, MW-05, MW-10 and MW-16 from the sampling program. Also required to sample the rest of the site wells only for VOCs. AD 10/03/2013: Received the following e-mail from J. Rhodes: Ainura, We are going to sample the wells at BCF on Monday, October 7. To re-iterate the plan: We ll be sampling wells MW-8, 9, 12, 13, 14, 15 and 17. We ll test for VOCs (no SVOCS or PCBs), and for petroleum compounds (STARS list compounds). We ll gage the wells for product and evaluate increases or decreases, bale the wells as appropriate, and use absorbent socks after baling the wells. We ll report the results to you shortly after receiving the laboratory analytical reports. I also want to tell you that we collected a few samples from the BCF wells last month to get a preliminary idea of what trends were like. We will include the results from these samples in our next report. Let me know if there are any problems with the above. Thanks, John Rhodes, P.E. AD 12/26/2013: Received the following e-mail from J. Rhodes: Ainura, Attached is the BCF Groundwater Sampling Report. I am also sending you the report in hard copy with a CD. Please confirm receipt. Thanks, Ainura, John John A. Rhodes, P.E. CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, NJ 07960 NY: 62 William Street, New York, NY 10005 646 465 2494 JRhodes@CEUSEngineeringPC.com JARhodes1@Verizon.net DL the report to eDocs. Will review. AD 01/10/2014: Reviewed the report. It states that additional groundwater sampling and testing requested by the NYSDEC in September 2013 was conducted in September and up to November 4, 2013. The additional work included sampling and testing of seven wells for specific constituents of petroleum, a trend analysis of groundwater concentrations, and limited remediation comprised of the application of absorbent socks in wells that contained or recently contained LNAPL. Additionally, NDL added a round of groundwater sampling and testing in an effort to better understand contaminant trends. Performed site activities include: - Sample wells MW-8, 9, 12, 13, 14, 15, and 17, - Analyze samples for petroleum VOCs (EPA Method 8260 STARS, no SVOCS or PCBs), - Gauge wells for product to evaluate increases or decreases, and, - Conduct a limited remediation by applying petroleum absorbent socks. Monitoring wells were gauged on September 16, October 8, and November 1, 2013. This gauging confirmed the prior gauging on 2/28/2013, 3/28/2013 and 4/22/2013, as well as the prior readings made during the RI and by Rust in 1998. The groundwater flow in the northern portion of the Site to the north was confirmed. Groundwater from the southern portion of the Site flows south toward the English Kills; this was also confirmed by recent measurements. The presence of the retaining wall at the south end of the Site affects local groundwater flow. This retaining wall is tied into the native clay unit thereby minimizing direct impacts of contaminated groundwater, if any, to the English Kills. MW-16 is a key downgradient well to the south of the BCF source areas. Absorbent socks were employed in wells MW-12, and prophylactically in MW-14 where product was observed during one gauging event, and in MW-15

BCF OIL REFINING, INC (Continued) **1001754932**

where a suspended organic sediment was suspected. Due to the one inch diameter of piezometer PZ K-11, a peristaltic pump was used to remove product if encountered in the well. Upon the discovery of product in what is believed to be well MW-2, absorbent socks were applied at that location as well. GW data comparison (TVOCs in ppb): well 2009 03/2013 10/2013 MW-6 193 23 NS MW-7 17 24 NS MW-8 349 99 ND MW-9 47 89 88 MW-10 19 6.7 NS MW-12 366 654 448 MW-13 25 175 191 MW-14 88 64 65 MW-15 101 121 129 MW-16 55 6 NS MW-17 277 187 ND Three wells: MW-8, MW-12 and MW-17 showed decrease in TVOCs levels. Three wells: MW-9, MW-15 and MW-14 indicated same levels of TVOC for both sampling events. Well MW-13 showed a slight increase in TVOCs. The most contaminated well is MW-12 with 448ppb of TVOCs. Conclusions: According to the consultant, the Exposure Assessment and Sensitive Receptor survey concluded that there was no threat to human health or the environment from the BCF Site. The current and likely future use of the Site and surrounding area is industrial. No threat to the industrial use of the property and surrounding area is presented by the current Site conditions. LNAPL, if any remains, is not a threat to the public or the environment, and practicably unrecoverable. During 2013, LNAPL was intermittently encountered only in small pockets. Through the use of absorbent socks, we have recovered approximately 1 gallon of oil in the latter half of 2013. Although CEUS will continue the application of absorbent socks for prophylactic reasons, further remedial activity will not be significantly effective and would yield diminished returns. Maintaining an open Spill Case will not affect this condition. The 2013 groundwater testing shows remaining contaminant concentrations in all wells to be following an exponential decay pattern similar to that observed in MW-7. The key downgradient well MW-17 decreased in contaminant concentrations over 2013 to the point where the most recent sampling and testing results (October 8) were below Class GA Groundwater Standards. Two other key downgradient wells, MW-16 and MW-7, have also reached the Class GA Groundwater Standards. MW-13, 14 and MW-15 are at lower concentrations and as a result their degradation patterns are not as pronounced. However, concentrations are not significantly increasing, if at all. After repeated groundwater samples and tests from these wells that show no significant contaminant concentrations, further sampling and testing would be of no value. There are currently no receptors for the contaminated groundwater remaining and unlikely to be any receptors in the future for this industrial Site. To the south, the discharge of groundwater to the English Kills is limited by a low permeability retaining wall keyed into the natural clay deposits as described in the RIR. Similarly, a significant contamination is not migrating to the north into the area of high industrial traffic along Maspeth Avenue. Based on the data. the consultant petitioning the NYSDEC for closure of the Spill Number 9406807 stating that there is no threat to the public or the environment from the BCF Site today, and none likely in the future. No remediation is necessary or practicable; further remedial activity will not be significantly effective and would yield diminished returns. No further value is served by additional sampling and testing of groundwater. While TVOCs are low in the site wells and the most contaminated well shows 448 ppb of TVOCs, there still is a free product in some of the site wells. Will diccuss the site with J. Kolleeny of DEC. AD 01/15/2014: Discussed the spill closure request with J. Kolleeny of DEC. The decision was that DEC cannot close the spill case at this time, due to reapearing

BCF OIL REFINING, INC (Continued) **1001754932**

free product in few site wells. GW sampling frequency could be reduced to a semi-annual basis and some wells could be removed from the sampling program (wells with ND levels of TVOCs). Wells with free product should be monitored on a continious basis to establish decreasing trends. AD 02/2014: Left a message to Mr. Rhodes. AD 07/08/2014: Received a call from Mr. Friedland. Explained him that DEC requires to monitor free product at the site wells on a continious basis to establish decreasing trend. AD 10/22/2014: Received the following e-mail from Mr. Rhodes: Ainura, Attached is a report on the former BCF Facility, Spill No. 9406807. As you will see in the report, no oil remains at the site in the any of the locations where it was previously detected. As this was the DEC s last concern for this site, we are now renewing our request that this spill case be closed. You will note in the report that in June of this year we found MW-11, a well in which the DEC had observed oil during the RI. We were able to recover a small amount of oil from the well until July when no oil returned. Although we continue to employ absorbent socks to the well, no oil has returned to the well as of today. Throughout our monitoring in 2014, no oil was detected in any of the other areas of the site where it had been previously detected. Therefore, with the absence of oil in the MW-11 area, we conclude that the site is now practicably oil free. Please let me know if you have any questions. We look forward to your earliest response. John A. Rhodes, P.E., F.NSPE CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, NJ 07960 NY: 62 William Street, New York, NY 10005 646 465 2494 JRhodes@CEUSEngineering.com JARhodes1@Verizon.net Will review. AD 10/28/2014: Reviewed the report. It states that free product monitoring was conducted at the site. LNAPL OBSERVATIONS AND REMEDIATION: After the departure of the impound lot operation in late September, SEUS located MW-11, the 2 well adjacent to the 1 diameter piezometer PZK?11. Since its discovery on June 2, 2014, MW-11 replaced PZK-11 for monitoring and product recovery actions. given its larger size, which makes it more representative of conditions in the area of concern. Product was recovered from MW-11 on the first day of discovery by peristaltic pump, and then by the use of absorption socks. No measurable amount of product has been detected in MW-11 since July 9, 2014. The product observations in calendar year 2014 for MW-11 and MW-2, indicated that these two wells accumulated sufficient oil to stain absorbent socks. No product was indicated in any other well during calendar year 2014. SEUS had applied absorbent socks to all wells in which product had been reported in the past, observed during the investigations or suspected of being present. For a time, small amounts of product absorbed onto the socks and the socks were periodically replaced. As of October 2014, no product is indicated to be absorbing onto any of the absorbent socks that continue to be deployed in all wells in which product had once been indicated or suspected. Conclusions and recommendations: No recoverable LNAPL has been encountered at the former BCF facility since June 2014. The consultant intend to continue the application of absorbent socks for prophylactic and ongoing monitoring reasons, but requests that this activity not hold up the closure of the Spill Case. The Exposure Assessment and Sensitive Receptor Survey presented in prior reports concluded that there is no threat to human health or the environment from the BCF Site. The current and likely future use of the Site and surrounding area is industrial or heavy commercial. No threat to the industrial or heavy commercial use of the property and surrounding area is

BCF OIL REFINING, INC (Continued) **1001754932**

presented by the current Site conditions. Will discuss the spill closure request with J. kolleeny of DEC. AD 10/29/2014: Discussed the spill closure recommendation with J. Kolleeny of DEC. Given the latest GW monitoring results it was decided to approve spill closure request. Issued and sent a letter to Marcello Porcelli of Newtown Development, LLC. Case closed. AD"

Updated By: JAQUINN
Site Description: "The BCF Oil site is located within an urban, industrialized area of East Williamsburg, Brooklyn. Previously existing buildings and above ground storage tanks have been removed, and the property is being used as a Marshall's impound lot. A National Grid facility borders the site on the north, Newtown Creek on the south, a city automobile impound lot on the east and a scrap metal processing facility on the west. The total area is 1.9 acres, of which 0.3 acres is land under water. The property was used as a petroleum distribution facility for many years, starting in the early 1900?s. In 1980, the terminal was modified for use as a waste oil processing facility, and was used for waste oil recycling from 1980 to 1994. Routine sampling detected PCBs in the waste oil, and operations ceased in 1994. The property is zoned M3 (manufacturing/industrial), and it is currently used to store impounded automobiles. The site consists primarily of historic fill placed upon wetlands. Groundwater exists approximately 5 to 10 feet below grade and flows both to the north and south from the site. A remedial investigation of the site has been completed. The site was managed as a single operable unit. See also NYSDEC spill #9406807"
Env Problem: "Based upon investigations conducted to date, the primary contaminant of concern at the site are those associated with petroleum. Separate phase petroleum contamination has been detected in numerous locations, although mobile product may be more limited. The site was extensively assessed for PCB contamination, but no significant levels of PCBs were detected on site. PCBs were detected in the Newtown Creek sediment, but the sediment contamination appears to be part of a larger problem and not related to releases from the site. A significant threat created by the potential for release of PCB-contaminated oil stored in dilapidated storage tank areas was eliminated by a removal action performed by the USEPA in 2000/2001."
Health Problem: Not reported

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D008
Waste Description:	LEAD
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

BCF OIL REFINING, INC. (Continued) **1000272490**

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: K049
Waste Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K051
Waste Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K052
Waste Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: X001
Waste Description: Not Defined

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 12/29/05 Transferred to E. Hampston via Spill Initiative. Contaced DLE caller who reported spill seeking update on referal to other Department representatives or issuance of tickets. 1/5/05 Lt. Fitzpatrick (DLE) indicated that the site was visited in conjunction with NYPD Auto Crimes group. He returned to site with ECO and tickets were issued. Consent Order R2-20030820-221 signed on 8/21/03. Close based on implementation of Order and regulation by DSHM. "
Remarks:	"Location is a junk yard. Various unpermitted discharges of automotive waste fluids found on ground surface at above location."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE Franklin had problems testing this tank. There were several small visible problems, i.e. stage one dry break gasket leak, petrometer leak, guage line leak, reducing bushing on petrometer and reducing bushing for stick line. All of these leaks were within the piping sump. All repairs were done and the piping was reattached to the tank. A complete system test passed. It does not appear that there was impact to the environment because product was not discovered in the sump and the sump tested tight below the lowest penetration."
Remarks:	"CALLER REPORTING A TANK TEST FAILURE TANK AND PIPES ARE DOUBLE WALLED NO RELEASE. NO CALLBACK NECESSARY"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill was reassigned from DEC Sigona to Rommel on January 7, On Thursday January 25, 1996, Dave Pulvermiller of MTS Environserve called A.Sigona and informed that the 550 gallon UST which failed a tank test would be removed along with two other 550 gallon gasoline USTs. They would be taking samples and doing a site assessment during the tank removal. The tanks will be registered and will submit a substantial modification application. The tanks will be removed the week of January 29, 1996, and DEC Sigona is planning to view the excavations on Tuesday January 30, 1996 at 3:30 PM. The consultant plans to sample and test using EPA method 8020. 3/10/05 - Received Phase II Investigation Report from Laurel Environmental. Re-assigned to Zhitomirsky for followup. - KST 4/25/2005 I left a message for Carla Sullivan.AZ 4/27/2005 Conversation with Carla Sullivan (Laurel Environmental). They plan to excavate contaminated soil and take post excavation samples. I requested to take groundwater samples if gorundwater is encountered. GWT is 10' below the grade. The tank was located at 1181 Grand Street.This is a

CONSOLIDATED CARPET (Continued) **S102619094**

warehouse. They will submit a report in June 2005. AZ 7-27-2005 Laurel Environmental informed DEC that they will remove contaminated soils and apply ORC into the exposed groundwater during the week of August 1, 2005. AZ 10/14/2005 I reviewed Soil Removal Report for this spill. A letter was sent to Laurel Env. with my comments. The letter stated that the following deficiencies were noticed in the report: 1. Post excavation soil samples were not taken 2. The site plan was not drawn to scale 3. Groundwater flow direction was not indicated on the plan 4. Well design diagrams were not submitted 5. Soil samples were not collected and screened during well installation. The report stated that analytical results of groundwater samples collected during this investigation indicate minor exceedances of State water quality standards in samples collected from wells MW-1and MW-2. Laurel Environmental recommended no further action with respect to the removed USTs. The Department could not approve no further action at this time. In consultation with J. Kolleeny it was decided that an additional monitoring well should be installed near the excavated area. Soil samples should be collected during well installation and analyzed in a laboratory. Groundwater at the site should be monitored and sampled again three months after the recent samples were taken. Laboratory data should be provided for all compounds analyzed by EPA Method 8021 plus MTBE, and the results compared to State guidelines. These recommendations were mailed to Laurel Env. AZ 1/17/2006 Additional investigation/delineation is pending. Field work has been done. AZ 2/7/2006 I have reviewed a report by Laurel Environmental Assosiates (LEA). The report states that LEA installed 3 one-inch groundwater monitoring wells. On December 16, 2005, LEA purged and sampled the wells. Laboratory analysis inicates that with the exception of a slight exceedance of m and p xylenes and total xylenes at 7 ppb in MW-2, the concentrations of VOCs are below NYSDEC ambient groundwater criteria. According to the report, the tank and contaminated soil have been removed and groundwater treated in-situ. Based on this information the spill is closed. This spill case was discussed with Koon Tang on 1/23/2006 and he concurred with this decision. AZ"

Remarks: "TEST METHOD NDE MODEL 1000, UNKNOWN LEAK RATE."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 1996- SUBSURFACE INVESTIGATION OF THIS SITE AND NEIGHBORING SITE(58-74 54TH STREET) DISCOVERED VOCs SVOCs AND LEAD IN SOILS AND VOCs SVOCs, LEAD AND PCE IN GROUNDWATER. THERE WILL BE ADDITIONAL INVESTIGATIONS MADE. TRANSFERRED FROM Y.KRIMGOLD TO KOLLEENY TO I. ISLAM. 4/19/05- The site is under remediation by LiRo Engineers.Reviewed January/05 monthly monitoring report. SVE system is in operation in West 5 area and ORC injected twice in both West 5&5A area.Semiannual soil monitoring, quarterly groundwater monitoring and monthly SVE system performance monitoring to continue. - II. 6/3/05- Reviewed quarterly monitoring report (Dec/04-Feb/05) and approved proposal for advancing three soil borings in West 5 area. GW samplings data from this area still show high level of contamination. If this round of soil sampling results persist in high level contamination in vadose zone soil, it has been strongly recommended to make another application of ORC in that area to treat both soil and GW as the last application was done long time ago, in Jan-Feb/2003. Installed the monitoring report in the eDoc Folder.- II 6/10/05- Reviewed Mar./05 monthly monitoring report for SVE system operation in West 5 area.Vacuum data for two wells (EW-2 & 3) were not available due to inaccessibility to the building. LiRo is informed that it is not an acceptable excuse. Henceforth, LiRo is advised to report to NYSDEC on quarterly basis.- II 7/7/05- Reviewed the Mar.-Apr./05 monitoring report. Approval is given to LiRo's proposal for advancing 3 soil borings LBR-12,13 & 14) in West 5 portion of the site. LiRo's recommendations for installing ORC sock at well MW-8 (West 5A portion of the site)to address persisting contaminant concentrations and continued operation of the SVE system (West 5 area)are also approved. LiRo is advised to include sampling MW-10, 13 and 14R which have the history of high contaminant concentrations.Installed the monitoring report in eDoc Folder.- II 10/31/05- Reviewed the June-August/05 monitoring report, dt. Sept 29/05. The VOC concentration that have been collected by the SVE system shows a steady decreasing trend. The approved three soil borings and samplings (LBR-12 through LBR-14) are scheduled for October/05.In West 5A area, GW sampling results reveal persistent contamination (around 1000ppb) in well MW-8. Wells MW-7,10,11 and 19 were non-detect.MW-13 has not been sampled due to unknown reason even though it was advised earlier to sample this well. In West 5 area, contaminant levels in GW still are in exceedances, but at low level. However, LiRo is now scheduling the installation of ORC sock at MW-8 in West 5A area to address persisteting contaminant concentrations at that location. SVE system operation and monitoring will continue on a monthly basis. Filed this report in the eDoc folder.- II 02/08/06: Reviewed the Quarterly Monitoring Report for the period September to November 2005 and E-mail to DDC. This report was submitted on January 3, 2006 by LiRo Engineers, Inc. Based on recent system performance data, LiRo recommends shutting down the on-site soil vapor extraction (SVE) system. The request to shut down the SVE system is approved on a temporary basis. When management of the site is transferred to Greyhawk, they should collect a new round of groundwater samples. Based on the results, they should submit a remedial proposal to address any remaining contamination. Filed this report in the eDoc folder.- QA 08/18/06: This spill transferred to SK. 10/27/06 Spill

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

case transferred from S. Kraszewski to J. Maisonave. - JAM 1/19/07 Reviewed quarterly monitoring report for period July through September 2006, dated November 10, 2006, and submitted by Roux. On July 17 and 18, 2006, 9 out of 17 monitoring wells were sampled. Results ranged from non-detect to 8,100ppb total VOCs and 1,800 total SVOCs in well MW-02R. The SVE system continues to run but appears to have reached asymptotic conditions. - JAM 6/29/07 Roux submitted a request to reduce groundwater monitoring from quarterly to semi-annually at five sites including this one. I sent an email approval today. - JAM 9/26/07 Reviewed quarterly monitoring report for period October through December 2006, dated March 15, 2007 and submitted by Roux. On October 12, 2006, 11 out of 17 wells were sampled. Results ranged from non-detect to 4,242 total VOCs and 910 total SVOCs in MW-02R. The SVE system is still active and has reached asymptotic conditions. Included in the appendix of this report is a Confirmatory Soil Sampling Work Plan. In the quarterly report, Greyhawk/Roux recommend the following: 1) Conduct confirmatory soil sampling as per the Work Plan included in Appendix C; 2) Reduce the frequency of groundwater monitoring (gauging and sampling) from quarterly to semi-annually; 3) Remove monitoring wells MW-01, MW-07, MW-11, MW-15 and MW-19 from the sampling program since neither VOCs nor SVOCs were detected in these wells for at least 2 consecutive sampling rounds; 4) Remove SVOCs from the sampling program; 5) Install ORC socks in MW-02R, MW-05 and MW-10; I sent an email stating, The Department approves the recommendations 1, 3, 4, and 5. Recommendation 2 was already approved on June 29, 2007. The proposed soil borings should be advanced as close as possible to previous soil borings. For example, proposed boring RXSB-01 should be advanced near boring SB-30. - JAM 9/28/07 Reviewed Semi-annual O&M and Monitoring Report submitted by Roux and dated Sept. 28, 2007. SVE system continues to run but has reached asymptotic conditions. Influent and effluent sample results both returned below detection. Groundwater sampling in May 2007 showed the highest contamination in wells MW-2R, MW-8 and MW-10. Confirmatory soil sampling has not yet occurred. Report uploaded to eDocs. - JAM 3/28/08 Received a call from Chris Wenczel at ERM. His client (Steal Industries?) is the current owner of the site. He informed me that DEC PBS staff are visiting the site next week to inspect two tanks that are inactive but not closed. He said they would like to close the tanks but contamination from this spill may be detected and not from these tanks. That would have to be proven. He will get back to me after the inspection next week. - JAM 6/5/08 Received a call from Chris Wenczel at ERM notifying me that spill # 0800657 was opened when the 1080-gal UST failed a tightness test. The new spill case was assigned to me. Mr Wenczel said the tanks will be closed in the near future and he will notift me. - JAM 6/10/08 Conference call with Chris Wenczel at ERM and Manford Bohms at Berry Bridge Co. They want to close the two USTs located on their site. A consent order requires closure within 90 days. The tanks are beneath a structural slab at least 16inches thick with 3/4inch rebar. They suggested closing the tanks in place. I requested that soil borings be advanced around the tank and groundwater samples be collected as well. They will submit a letter work plan for my approval. (Ref spill #0800657) - JAM 6/20/08 **Duplicate entry to spill No. 0800657** Spoke to Chris Wenczel about the Investigation Work Plan, which was submitted as a letter on 6/19/08. They will do pre-closure sampling to characterize soil conditions beneathe the tank. The work plan proposes advancing 4 soil borings around the tank

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

to a depth of approx 10' (above the water table) and collecting one soil sample from each. A fifth boring will be advanced downgradient to collect a groundwater grab sample (no soil sample). Work Plan uploaded to eDocs. I called Mr. Wenczel and requested that all borings be advanced below the water table. Two soil samples be collected from each boring (one from the interval with the highest PID reading and another from directly above the water table) and two groundwater grab samples be collected (one from the downgradient boring and another from the tank boring with the highest PID reading in the soil). I also requested that an additional boring be advanced near the fill port and soil and grab samples collected from there as well. - JAM 7/11/08 I sent an email approval to ERM for the Revised Investigation Work Plan. Please see spill No. 0800657 DEC Remarks. The Work Plan and the email approval are uploaded in eDocs under that spill number. - JAM 10/23/08 **Duplicate entry to spill No. 0800657** Reviewed the Underground Storage Tank Pre-Closure Investigation submitted by ERM and dated Oct. 7, 2008. The Investigation was performed on August 5-6, 2008 and consisted of installing a total of six soil borings. Two soil samples were collected from each boring and four groundwater samples were collected, one from existing monitoring well MW-5 and one from soil borings SB-01, SB-02 and SB-03. All soil sample results were returned non-detect for VOCs. Some SVOCs were observed with some exceedences in SB-01. The groundwater samples were returned with detections of total VOCs at 121ppb and 7755ppb in MW-05 and SB-03, respectively. Samples from SB-01 and SB-02 were ND and 12ppb, respectively. ERM and Berry Bridge Co. would like to close the two USTs in place because of a structural floor slab that is approx. 16in thick with reinforced concrete. Conclusion: Based on this data and groundwater data from Roux, there are two separate groundwater plumes at the site at the Queens W5 portion and at the Queens W5A portion of the site. No soil contamination was detected around the tanks however, soil beneath the tanks may be contaminated and may act as a source of contamination. At a minimum a remedial plan that addresses contaminated groundwater at both portions of the site should be proposed. I spoke with Chris Wenczel at ERM and Brian Morrissey at Roux today. I recommended that the tanks be removed if possible to see if underlying soil is contaminated. If so it can be removed. Mr. Wenczel believes Berry Bridge will close the tanks in-place due to the structural slab. I recommended to Mr. Morrissey that Greyhawk/Roux secure access to the site, conduct the confirmatory soil investigation approved by DEC in Sept. 2007 (see spill no. 9006042), and propose a groundwater remedy. - JAM 11/06/08 **Duplicate entry to spill No. 0800657** Had a conference call with Jon Kolleeny, Chris Wenscel from ERM, and two representatives from Berry Bridge. Corp, Kevin Lumpe and Manford Bohms. They will submit to the PBS Unit a request for extension to the compliance schedule so we can evaluate if removing the tanks is feasible. - JAM 11/7/08 Issued email to DDC and Roux/Greyhawk. I requested that the DDC and Greyhawk/Roux evaluate removing the two USTs as soon as possible. If removal is not feasible, then the tanks will be closed in place by ERM. The DDC must then propose an alternative remedial plan to address groundwater contamination adjacent to and down-gradient of the USTs. I also reminded DDC and its consultants that semi-annual groundwater sampling has not been conducted for the last 3 monitoring events and that the confirmatory soil sampling was not conducted. It is the DDC's and its consultants' responsibility to meet all of Berry Bridge's insurance requirements

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

to gain access to the site. The site access issue should be worked out with Berry Bridge as soon as possible. Email uploaded to eDocs. - JAM 3/20/09 **Duplicate entry to spill No. 0800657** Berry Bridge began in-place closure activities for the 2 USTs on 3/19/09. I visited the site today to witness the tank closure. The tops of both tanks were exposed and the contractor will shore the excavation prior to opening the tanks. The bottom of the tanks will also be opened and if possible, a soil sample will be collected (tank bottoms might be below the water table which is around 11feet). Fieldwork will continue next week. - JAM 3/23/09 **Duplicate entry to spill No. 0800657** Visited site today to observe closure activities on the two USTs. The tops were cut open so that the crew could enter and clean the tanks. Each tank was a double-walled steel tank with a third wall of fiberglass on the outer steel wall. The diesel tank was found to be smaller than what ERM stated in the Pre-closure Investigation Summary Report . The diesel tank is about 1,000-gallons and while it was being cleaned, water was entering from a seam on the bottom of the tank. It is not known if the water was coming from in between the two steel walls or if the groundwater was coming through both walls. I called Chris Wenczel at ERM to discuss further. Since the tank invert is at the water table, they may not be able to collect a soil sample from directly beneath the tank. - JAM 3/24/09 **Duplicate entry to spill No. 0800657** Visited the site today. Water that was found entering the bottom of the diesel tank, was just water trapped beneath a steal reinforcement sheet. Once the steel sheet was removed, the remaining water was vacuumed out and did not reenter from the bottom of the tank. The bottom of both tanks did not have any holes or corrosion. Each tank was backfilled today with clean sand and the the concrete floor will be patched up tomorrow. A tank closure report will be submitted by ERM. - JAM 8/24/09 **Duplicate entry to spill No. 0800657** Reviewed the Underground Storage Tank Closure Report submitted by ERM dated May 22, 2009. On March 19-25, 2009, two USTs; one 1,080-gallon gasoline UST and one 2,000-gallon diesel UST, were closed in place. The tanks were emptied, cleaned and inspected prior to being backfilled, and were found to be in good condition. Both tanks were double-walled steel with a fiberglass outer shell. Prior to in-place closure, ERM performed an investigation around the tanks to determine if there was a release. Six soil borings were advanced to a depth of 15 feet. Groundwater was encountered at 11.5-13 feet. Eleven soil samples were collected and no VOCs were detected in any of the samples. SVOCs were detected in all the soil samples with only minor exceedences of SCOs. Petroleum related VOCs were deteced in all groundwater samples with one or more coupounds present at concentrations exceeding their respective GWQS&GV in samples MW-05, SB-2 and SV-3. No VOCs were detected at concentrations exceeding GWQS in sample SB-01. No SVOCs were detected at concentrations above their GWQSs in samples MW-05, SB-01 and SB-02. Only Napthalene was detected in sample SB-03 which exceeded its respective GWQS. ERM concludes that a release never occured from these tanks. A tightness test perfromed before the pre-closure investigation and the closure activities and the 1,080-gallon gasoline UST failed. ERM concludes that the integrity of the tank system was compromised after the tanks were removed from use and while the tanks were inactive for the past 13 years. The groundwater contamination observed is related to the historic UST release being addressed by the DDC and these tanks did not contribute to the groundwater plume. The Underground Storage Tank Closure Report is

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

uploaded to eDocs. Since contamination was not observed in the soil column and the tanks were observed in good condtion, this spill case will be closed. A Spill Case Closure letter for spill No. 0800657 (associated with this site), was issued today to Manfred Bohms at Steel Equities. Spill Closure letter uploaded to eDocs. - JAM 11/05/2010: This spill case was transferred to A. Doronova. - AD There is no recent reports in the file. AD 03/03/2011: Had a meeting with DDC and LiRo. Requested to submit site status update info. AD 03/28/2011: Received a Site Turn-Over Status report and Semi-Annual Monitoring Report. DL to eDocs. Will review. AD 05/19/2011: Reviewed the report. It states that in February 2010, NYCDDC replaced Greyhawk/Roux with LiRo Engineers, Inc. (LiRo) to serve as CM for the site. On March 25, 2010, LiRo conducted a site reconnaissance, well inspection and a round of water level gauging of site monitoring wells. Groundwater monitoring wells were gauged and the condition of each well was noted. No free-phase product was noted in any of the wells. The SVE system and ORC injections have been effective in reducing VOC concentrations in soil and groundwater, respectively. The site is currently on a semi-annual groundwater monitoring and sampling program. In October 2010, LiRo implemented the previously approved additional investigation work plan to determine current soil conditions. Additionally, routine semi-annual groundwater sampling was conducted on September 2 and 3, 2010. Groundwater beneath the site occurs under water-table conditions at nine to fifteen feet below ground surface within the unconsolidated glacial till soils. Groundwater flow beneath the site is generally in a northwesterly direction. LiRo implemented the approved ASIWP (with modifications) on October 6 through October 15, 2010. A total of 6 soil borings were installed. A total of 9 soil samples were submitted for STARS list VOC and SVOC analysis and compared to TAGM #4046 RSCOs and CP-51 SCLs. VOCs were detected at concentrations above TAGM #4046 RSCOs and CP-51 SCLs in two samples, RXSB-03 (24 to 25 ft bgs) and RXSB-01 (5 to 7 ft bgs). The 24-25 ftbgs sample collected from RXSB-03 was collected approximately 15 feet below the water table. Total VOC concentrations ranged from 109 ug/kg at RXSB-03 (6 to 7 ft bgs) to 198,030 ug/kg at RXSB-03 (24 to 25 feet bgs). Sample RXSB-01 (5 to 7 ft bgs) slightly exceeded the CP-51 SCL for xylene. Naphthalene was the only SVOC detected in any soil sample and was observed at concentrations below both soil criteria. A sample from the 24 to 25 ft depth at boring location RXSB-03 reported naphthalene at a concentration of 2,000 ug/kg. Wells MW-05, MW-08, MW-09, MW-10, MW-14R, and MW-16 were sampled during the September 2010 event. Groundwater was observed between 8.78 and 11.62 ft bgs. None of the wells gauged contained free-phase product. A groundwater contour map indicated general groundwater flow direction to the north. Total VOC concentrations ranged from 3.2 micrograms per liter in well MW-09 to 1,751ug/L in well MW-08. Three of the six wells sampled reported one or more VOCs at concentrations above standards. AD 04/05/2012: Received semi-annual report for monitoring period January 2011 - December 2011. DL the report to eDocs. Will review. AD 05/01/2012: Reviewed the report. It states that LiRo visited the site in September 2011 and December 2011/January 2012 for groundwater sampling and well gauging. Wells MW-01, MW-02R, and MW-13, which have not been sampled since May 2007, were sampled during both monitoring events in 2011. The wells were not sampled since May 2007 because attempts to access the property through the facility owner and sub-tenant were unsuccessful. September 2011: 10 wells: MW-01,

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

MW-02R, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, and MW-16 were sampled during the September 2011 event. Groundwater was observed between 10.16 and 13.02 ft bgs. None of the wells gauged contained freephase product. A general groundwater flow direction is to the north. ORC socks were installed in 3 monitoring wells: MW-02R, MW-08, MW-10 during the September 2011 monitoring event. Detected TVOCs ranged from 3ug/L in well MW-09 to 21,010ug/L in well MW-02R. Six of the 10 wells sampled, LMW-01, MW-02R, MW-03, MW-08, MW-10, and MW-16, reported one or more VOCs at concentrations above 1.1.1 Ambient Water Quality Standards and Guidance Values. The highest TVOCs during the September 2011 sampling event was in well MW-02R (21,010ug/L) located in the southern portion of the site. This number represents an order of magnitude increase compared to historical groundwater analytical data. Well MW-08, located on the northern portion of the site, reported the second highest total VOC concentration (1960 ug/L) during the September 2011 sampling event. December2011 / January 2012: 10 wells: MW-01, MW-02R, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, and MW-16 were sampled during the December 2011/January 2012 event. Groundwater was observed between 10.93 and 14.70 ft bgs. None of the wells gauged contained free-phase product. A general groundwater flow direction is to the north. TVOCs ranged from 1 ug/L in wells MW-13 and MW-14R to 16,797ug/L in well MW-02R. Five of the 10 wells sampled reported one or more VOCs at concentrations above standards. Similar to the September 2011 results, the highest TVOC was reported during the December 2011/January 2012 sampling event in well MW-02R (16,797ug/L). This is a decrease from September 2011 event (21,010ug/L). The second highest total VOC concentration (2,117 ug/L) was reported at well location MW-08, which is an increase from last sampling in September 2012 (1960 ug/L). LiRo states that the results of the groundwater sampling completed on September 2011 and December 2011/January 2012, show that there is groundwater contamination in the northern area of the Site. The 2011/2012 sampling results at well MW-02R show increased VOC concentrations compared to historical results. LiRo will: - Conduct EFR at well locations MW-02R and MW-08 using a vacuum truck in an attempt to extract the recalcitrant on-going source of groundwater contamination. - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for VOCs, MTBE, and naphthalene. - Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08, and MW-10. - Continue monitored natural attenuation for residua soil and groundwater contamination. There are no proposals at this time requiring NYSDEC approval. AD 11/19/2012: Received semi-annual report for monitoring period January 2012 - June 2012. DL the report to eDocs. Will review. AD 12/07/2012: Reviewed the report. It states that LiRo visited the site on May 14-15, 2012. Wells were sampled for STARS list VOCs, MTBE, and napthalene. 10 wells: MW-01, MW-02R, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, and MW-16 were sampled during the May 2012 event. None of the wells gauged contained free-phase product. A general groundwater flow direction is to the north. The ORC socks were replaced in wells MW-02R, MW-08, and MW-10 during the May 2012 sampling event. Six of the ten wells sampled, MW-01, MW-02R, MW-03, MW-05, MW-08, and MW-10 reported one or more VOCs at concentrations above AWQSGV s. Detected total VOCs ranged from 2 ug/L in wells MW-09 and MW-13 to 15,201 ug/L in well MW-02R. The highest total VOCs (15,201 ug/L) was detected in well MW-02R located in the southern portion of the site. The VOCs in MW-02R have decreased over the last

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

two sampling events. Well MW-08, located in the northern portion of the site, reported the second highest total VOC concentration (2,464 ug/L). Based on the data LiRo concludes the following: - The results of the groundwater sampling completed in May 2012 indicate that there is VOC impacted groundwater contamination present beneath the building; - Significant groundwater contamination is limited to two wells, MW-02R located by a former 4,000-gallon diesel fuel tank in the southern portion of the Site, and well MW-08 near a two former 550-gallon tanks located in the northern portion of the site; - Peripheral well data indicate that there is no significant off-site migration. The site is privately owned and actively leased. Based on the property status and depth to residual soil contamination excavation and SVE are feasible. Any action will require owner cooperation and therefore LiRo is proposing a minimally intrusive approach to address the residual contamination. " Conduct EFR at well locations MW-02R and MW-08 monthly for a period of three months using a vacuum truck in an attempt to extract the recalcitrant on-going source of groundwater contamination. Implementation is contingent upon building owner cooperation. " Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for VOCs, MTBE, and naphthalene. " Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08, and MW-10. " Continue monitored natural attenuation for residual soil and groundwater contamination. There are no proposals at this time requiring NYSDEC approval. AD 04/05/2013: Received a Semi-Annual Monitoring Report for period of July 2012 - January 2013. Dl to eDocs. Will review. AD 05/23/2013: Reviewed the report. It states that the site is currently on a semi-annual gauging and sampling program. This report summarizes the results of the semi-annual routine groundwater sampling and gauging which occurred on January 21 & 28, 2013. Wells MW-2R, MW-05, MW-08, MW-09, MW-10, MW-14R, and MW-16 were sampled during the January 2013 event. Wells that could not be sampled because they were inaccessible were MW-01, MW-03, and MW-13. None of the wells gauged contained free-phase product. General groundwater flow direction is to the north. Five of the seven wells sampled, MW-02R, MW-05, MW-08, MW-09 and MW-10 reported one or more VOCs at concentrations above AWQSGV s. Detected total VOCs ranged from 5 ug/L in wells MW-05 to 20,789 ug/L in well MW-02R. The groundwater monitoring location reporting the highest total VOCs (20,789 ug/L) during the January 2013 sampling event was well MW-02R located in the southern portion of the Site. The VOC concentrations at MW-02R increased compared to the previous sampling event in May 2012. Well MW-10, located in the northern portion of the Site, reported the second highest total VOC concentration (2,464 ug/L) during the May 2012 sampling event. GW data(ppb)- January 28, 2013 - May 2012: 1. MW-02R - 20,789 15,201 ; 2. MW-05 - ND 21; 3. MW-08 - 258 2,464; 4. MW-09 - 64 ND; 5. MW-10 - 274 144; 6. MW-14R - ND ND; 7. MW-16 - ND ND. The EFR events during this monitoring period were completed on September 20, 2012, October 23, 2012, December 14, 2012, and January 16, 2013. The EFR logs for the four events are provided in Attachment 3. A combined total of approximately 326 gallons of total fluids were removed from the two wells during the four EFR events. VOCs at wells MW-02R and MW-08 after the EFR events are essentially stable compared to pre-EFR concentrations. Continued routine EFR with increased monitoring to better evaluate it s effectiveness is warranted. LiRo concludes that: - The results of the groundwater sampling completed in January 2013 indicate that there is

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

VOC impacted groundwater contamination present beneath the building. - Significant groundwater contamination is limited to two wells, MW-02R located by a former 4,000-gallon diesel fuel tank in the southern portion of the Site, and well MW-08 near two former 550-gallon tanks located in the northern portion of the Site. - Peripheral well data indicate that there is no significant off-site migration. - Past soil data shows that petroleum contaminated soils remain on the site at depths below the water table. This deep soil contamination is the likely source of residual groundwater contamination. - EFR at well locations MW-02R and MW-08 should continue in an attempt to stabilize and in time mitigate groundwater contamination at these former tank locations. To better evaluate the effectiveness of EFR, increased monitoring at these well locations should be completed. LiRo will proceed with implementing the following actions at the site: - Conduct EFR at well locations MW-02R and MW-08 using a vacuum truck in an attempt to extract recalcitrant groundwater contamination. - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for VOCs, MTBE, and naphthalene. - Sample EFR wells MW-02R and MW-08 quarterly while EFR is ongoing. - Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08, and MW-10. - Continue monitored natural attenuation for residual soil and groundwater contamination. There are no proposals at this time requiring NYSDEC approval. AD 11/18/2013: Received a Semi-Annual Monitoring Report for period of February to August 2013. Dl to eDocs. Will review. AD 12/05/2013: Reviewed the report. It states that the site is currently on a semi-annual gauging and sampling program. This report summarizes the results of the semi-annual routine groundwater sampling and gauging which occurred on July 23, 2013. ORC sock replacement was completed on May 16, 2013. Routine semi-annual groundwater gauging was completed on July 23, 2013. Groundwater was gauged between 10.25 and 13.28 feet below top of casing [10.50 to 12.64 ft above mean sea level (AMSL)]. No free phase product was detected in any of the accessible monitoring wells. Groundwater elevation contours indicate an interpreted general groundwater flow direction to the northwest. LiRo currently maintains ORC socks in wells MW-02R, MW-08, and MW-10. The ORC socks were replaced during the May 16, 2013 gauging event. Routine groundwater sampling was completed by LiRo on July 23, 2013. Wells were sampled for NYSDEC CP-51 list VOCs, MTBE, and napthalene. Wells MW-05, MW-08, MW-09, MW-10, MW-14R, and MW-16 were sampled during the July 2013 event. Wells that could not be sampled because they were inaccessible were MW-01, MW-02R, MW-03, and MW-13. None of the wells gauged contained free-phase product. Two of the six wells sampled, MW-08 and MW-10, reported one or more VOCs at concentrations above AWQSGV s. Detected total VOCS ranged from 4 ug/L in well MW-09 to 1,125 ug/L in well MW-10. This is the highest TVOCs reported at this location since monitoring began. Well MW-02R, which has historically reported the highest TVOCs, was inaccessible during the July 2013 sampling event. TVOC concentrations decreased for the second consecutive sampling event at well MW-08 declining from 2,464 ug/L in May 2012 to 54 ug/L in July 2013. EFR: EFR at wells MW-02R and MW-08 began in September 2012. The EFR events during this monitoring period were completed on February 19, 2013, April 15, 2013, and May 6, 2013. A combined total of approximately 321 gallons of total fluids were removed from the two wells during the four EFR events. VOCs at well MW-02R after the EFR events is essentially stable compared to pre-EFR concentrations

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

while decreasing TVOC concentrations are decreasing at well MW-08. Continued routine EFR with increased monitoring to better evaluate it s effectiveness is warranted. LiRo concludes that: " The results of the groundwater sampling completed in July 2013 indicate that there is VOC impacted groundwater contamination present beneath the building. " Significant groundwater contamination is limited to two wells, MW-02R located by a former 4,000-gallon diesel fuel tank in the southern portion of the Site, and well MW-08 near two former 550-gallon tanks located in the northern portion of the Site. Well MW-02R was not accessible during the July 2013 sampling event but has historically reported high TVOC concentrations. " Peripheral well data indicate that there has not been significant off-site migration though the July 2013 TVOC results at well MW-10 should be evaluated. " Past soil data shows that petroleum contaminated soils remain on the site at depths below the water table. This deep soil contamination is the likely source of residual groundwater contamination. " EFR at well locations MW-02R and MW-08 should continue in an attempt to stabilize and in time mitigate groundwater contamination at these former tank locations. To better evaluate the effectiveness of EFR, increased monitoring at these well locations should be completed. LiRo states that the site is privately owned and actively leased to commercial occupants. Based on the property status and depth to residual soil contamination excavation and SVE are not feasible. Any action will require owner cooperation and therefore LiRo is recommending a minimally intrusive approach to address the residual contamination. LiRo will: " Continue to conduct EFR at well locations MW-02R and MW-08 using a vacuum truck in an attempt to extract recalcitrant groundwater contamination. Add well MW-10 to the list of wells where EFR is conducted. " Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for VOCs, MTBE, and naphthalene. " Sample wells MW-02R, MW-08, MW-10, and MW-19 quarterly while EFR is ongoing. " Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08, and MW-10. " Continue monitored natural attenuation for residual soil and groundwater contamination. There are no proposals at this time requiring NYSDEC approval. AD 06/23/2014: Received a Semi-Annual Monitoring Report for period of September 2013 to February 2014. Will review. AD 07/15/2014: Reviewed the report. It states that the Site is currently on a semi-annual groundwater monitoring and sampling program. On January 29 and 30, 2014 LiRo completed groundwater sampling and well gauging. Routine semi-annual groundwater gauging was completed on January 29, 2014. Groundwater was gauged between 6.21 and 14.40 feet below top of casing [7.68 to 14.03 ft above mean sea level (AMSL)]. No free phase product was detected in any of the accessible monitoring wells. ORC sock replacement was completed during the January 2014 monitoring event. Groundwater elevation contours indicate an interpreted general groundwater flow direction to the north. GW sampling: Wells: Wells MW-01, MW-02R, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, MW-16, and MW-19 were sampled during the January 2014 event. None of the wells gauged contained free-phase product. The groundwater analytical results were compared to NYSDEC AWQSGV s. Six of the eleven wells sampled, MW-1, MW-2R, MW-03, MW-08, MW-10, and MW-14R, reported one or more VOCs at concentrations above AWQSGV s. Detected total VOC concentrations ranged from ND above laboratory limits in samples from wells MW-16 and MW-19 to 21,207 ug/L in well MW-2R. The TVOC concentrations reported from the current sampling event were compared to the

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

previous reported TVOC concentrations by well. Six wells (MW-02R, MW-03, MW-05, MW-09, MW-10, and MW-14R) reported an increase in TVOC concentrations when compared to the previous sampling data. Three wells (MW-01, MW-08, and MW-13) reported decreases in concentration when compared to previous sampling data and two wells (MW-16 and MW-19) reported no TVOCs detected. Persistent elevated TVOC concentrations have been evident in southwest area well MW-02R since 2011. In the northern portion of the site, the last two rounds of sampling have shown increased TVOC levels at MW-10. A similar increase in TVOC levels is evident in well MW-08 (which is the closest upgradient well to MW-10) from 2010 to 2012. EFR: EFR at wells MW-02R and MW-08 began in September 2012. In December 2013, well MW-10 was added to the list of wells where EFR is completed. The EFR events during this monitoring period were completed on November 13, 2013, December 11, 2013, January 8, 2014, and January 28, 2014. A combined total of approximately 128 gallons of total fluids were removed from the three wells during the four EFR events. VOC concentrations at well MW-02R after the EFR events has increased compared to pre-EFR concentrations while TVOC concentrations are decreasing at well MW-08. Continued routine EFR with increased monitoring to better evaluate it s effectiveness is warranted. Conclusions: According to LiRo: - The results of the groundwater sampling completed in January 2014 indicate that there is VOC impacted groundwater contamination present beneath the Site. - Elevated groundwater contamination (greater than 100 ?g/L) is limited to three wells: MW- 02R which located in the southern portion of the Site, and wells MW-08 in the northern portion of the Site. - Peripheral well data indicate that there has not been off-site migration though the January 2014 TVOC results at well MW-19. - Past soil data shows that petroleum contaminated soils remain on the site at depths below the water table. This deep soil contamination is the likely source of residual groundwater contamination. - EFR at well locations MW-02R, MW-08, MW-10 should continue in an attempt to stabilize and in time mitigate groundwater contamination at these locations. To better evaluate the effectiveness of EFR, increased monitoring at these well locations should be completed. The site is privately owned and actively leased to commercial occupants. LiRo states that based on the property status and depth to residual soil contamination excavation and SVE are not feasible. Any action will require owner cooperation and therefore LiRo is recommending a minimally intrusive approach to address the residual contamination. - Continue to conduct EFR at well locations MW-02 and MW-10 using a vacuum truck in an attempt to extract recalcitrant groundwater contamination and add well MW-03 to the list of wells where EFR is conducted. - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for VOCs, MTBE, and naphthalene. - Sample wells MW-02R, MW-03, MW-08, MW-10, and MW-19 quarterly while EFR is ongoing. - Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08, and MW-10. - Continue monitored natural attenuation for residual soil and groundwater contamination. There are no proposals at this time requiring NYSDEC approval. AD 10/10/2014: Received the following e-mail from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on October 10, 2014. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

573 The report includes a proposal that requires your review and approval. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Project Geologist LiRo Engineers, Inc. Will review. AD 12/06/2014: Reviewed the report. It states that the site is currently on a semi-annual groundwater monitoring and sampling program. On July 1, 2014 LiRo completed groundwater sampling and well gauging. Wells were sampled for NYSDEC CP-51 (formerly STARS) list VOCs, methyl tertiary butyl ether (MTBE), and napthalene. Prior to sampling, wells were purged of at least three well volumes. Wells MW-01, MW-02R, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, MW-16, and MW-19 were sampled during the July 2014 event. None of the wells gauged contained free-phase product. A groundwater contour map indicated general groundwater flow direction to the north. DW data: The groundwater analytical results were compared to NYSDEC AWQSGV s. Four of the eleven wells sampled, MW-1, MW-2R, MW-03, and MW-10, reported one or more VOCs at concentrations above AWQSGV s. Detected total VOC concentrations ranged from ND in samples from monitoring wells MW-09, MW-13, MW-14R, MW-16, and MW-19 to 21,161 ug/L in well MW-02R. The TVOC concentrations reported from the current sampling event were compared to the previous analytical data. Decreasing TVOC concentrations were reported at all wells locations when compared to the previous sampling data. Persistent elevated TVOCs have been evident in southwest area well MW-02R since 2011. EFR: EFR is conducted monthly at well locations MW-02R, MW-08, and MW-10. The September 2013 to February 2014 SAMR recommended adding well MW-03 to the list of wells where EFR is conducted. EFR was not completed at this well location during the monitoring period because the well was inaccessible due construction by the tenant of the property. The EFR events during this monitoring period were completed on March 24, 2014, April 14, 2014, and August 7, 2014. Due to restricted access to wells EFR was not completed in during the months of May, June, and July. A combined total of 118 gallons was removed from the three wells during the three events. LiRo CONCLUSIONS: - The results of the groundwater sampling completed in July 2014 indicate that there is VOC impacted groundwater contamination present beneath the Site. - Elevated groundwater contamination (greater than 100 ug/L) is limited to three wells: MW-02R and MW-03 located in the southern portion of the Site, and well MW-10 in the northern portion of the site. - Peripheral well data indicate that there has not been off-site migration though the July 2014 TVOC results at well MW-19. - Past soil data shows that petroleum contaminated soils remain on the site at depths below the water table. This deep soil contamination is the likely source of residual groundwater contamination. - There was no significant contaminant level rebound or increase in down-gradient contaminant levels during the period when monthly EFR could not be conducted (May-July). RECOMMENDATIONS The site is privately owned and actively leased to commercial occupants. Based on the property status and depth to residual soil contamination excavation and SVE are not feasible. Any action will require owner cooperation and therefore LiRo is recommending a minimally intrusive approach to address the residual contamination. ACTIONS - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for VOCs, MTBE, and naphthalene. - Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08,

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

and MW-10. - Continue monitored natural attenuation for residual soil and groundwater contamination. PROPOSALS - Reduce EFR frequency to quarterly at monitoring wells MW-02R, MW-03, MW-08, and MW-10. ORC sock replacement was completed during the July 2014 monitoring event. AD 01/29/2015: Sent an e-mail to A. Samani approving the recommendation. AD 09/01/2015: Received the following e-mail from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on September 1, 2015. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C= 573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 11/02/2015: Reviewed the report. It states that the Site is currently on a semi-annual groundwater monitoring and sampling program. On April 1, 2015, LiRo completed groundwater sampling and well gauging. Additional gauging events were completed on December 1, 2014, January 13, 2015, February 18, 2015, March 5, 2015, and March 18, 2015. EFR was also conducted during this monitoring period. LiRo currently maintains ORC socks in wells MW-02R, MW-08, and MW-10. The ORC socks were replaced during the February 18, 2015 gauging event. Groundwater beneath the Site occurs at 9 to 15 ft. bgs. Groundwater flow beneath the Site is generally in a northwesterly direction. Groundwater was gauged between 6.25 and 15.64 ft. below top of casing [7.51 to 15.06 ft. above mean sea level (AMSL)] during this monitoring period. Routine semi-annual groundwater sampling/gauging was completed on April 1, 2015. Additional groundwater gauging was completed on December 1, 2014, January 13, 2015, February 18, 2015, March 5, 2015, and March 18, 2015. No free phase product was detected in any of the accessible monitoring wells during this monitoring period. Wells MW-01, MW-02R, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, MW-16, and MW-19 were sampled during the April 2015 event. GW data: Three of the eleven wells sampled, MW-01, MW-02R, and MW-10, reported one or more VOCs at concentrations above AWQSGV s. Detected TVOCs ranged from not detected above laboratory limits in samples from wells MW-03, MW-05, MW-08, MW-09, MW-13, MW-14R, MW-16, and MW-19 to 24,364 ug/L in well MW-02R. The TVOCs reported from the current sampling event were compared to the previous reported TVOCs by well. A total of two wells reported increases in TVOCs, four wells reported decreases in TVOCs, and five wells reported no change (non-detect). Persistent elevated TVOCs have been evident in southwest area well MW-02R since 2011. EFR: Enhanced Fluid Recovery (EFR) is conducted quarterly at well locations MW-02R, MW-03, MW-08, and MW-10. The EFR events during this monitoring period were completed on September 8, 2014, October 7, 2014, and April 9, 2015. The EFR logs for the three events are provided in Attachment 3. A combined total of 90 gallons was removed from the three wells during the three events. Conclusions: According to LiRo: - The results of the groundwater sampling completed in April 2015 indicate that VOC impacted groundwater contamination persists beneath the Site mainly concentrated in the area of well MW-02R and to a lesser extent well MW-01 and MW-10. - Elevated groundwater contamination (above AWQSGVs) is limited three wells: MW-01 and

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

MW-02R located in the southern portion of the Site, and well MW-10 in the northern portion of the Site. - Peripheral well data indicate that there has not been off-site migration though the April 2015 TVOC results at well MW-19. - Past soil data shows that petroleum contaminated soils remain on the site at depths below the water table. This deep soil contamination is the likely source of residual groundwater contamination. - A combination of EFR and natural attenuation appears to have reduced dissolved-phase concentrations in wells MW-03 and MW-08. - TVOC concentrations in wells MW-02R and MW-10 have shown variability. Minimal impacts to TVOC concentrations relating to EFR have been exhibited in well MW-02R. Recommendations: The Site is privately owned and actively leased to commercial occupants. Based on the property status and depth to residual soil contamination excavation and SVE are not feasible. Any action will require owner cooperation and therefore LiRo has recommended a minimally intrusive approach to address the residual contamination. Due to the groundwater condition at MW-02R, LiRo will contact the property owner and discuss the possibility of implementing an ISCO program in a limited area near well MW-02R. ACTIONS - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 VOCs. - Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08, and MW-10. - Continue monitored natural attenuation for residual soil and groundwater contamination. - Continue quarterly EFR on monitoring wells MW-02R, MW-03, MW-08, and MW-10. There are currently no proposals requiring NYSDEC approvals. AD 01/18/2016: Received the following e-mail from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on January 18, 2016. Will review. AD 02/11/2016: Reviewed the SA may - October 2015 report. It states that the site is currently on a semi-annual groundwater monitoring and sampling program. On October 29-30, 2015, LiRo completed groundwater sampling and well gauging. An additional gauging event was completed on August 24, 2015. Groundwater beneath the Site occurs under unconfined conditions at 9 to 15 ft. bgs) within the unconsolidated glacial till sediments. Groundwater flow beneath the Site is generally in a northwesterly direction. GW sampling: Routine semi-annual groundwater sampling/gauging was completed on October 29-30, 2015. An additional groundwater gauging event was completed on August 24, 2015. No free phase product was detected in any of the accessible monitoring wells during this monitoring period. Wells were sampled for NYSDEC CP-51 list VOCs. Prior to sampling. Wells MW-01, MW-02R, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, MW-16, and MW-19 were sampled during the October 2015 event. None of the wells gauged contained free-phase product. Four of the eleven wells sampled, MW-01, MW-02R, and MW-10, reported one or more VOCs at concentrations above AWQSGV s. Detected total VOC concentrations ranged from ND in wells MW-09, MW-13, and MW-16, to 30,917 ppb in well MW-02R. A total of six monitoring wells reported increases in TVOCs, two monitoring wells reported decreases in TVOCs, and three wells reported no change (non-detect). Persistent elevated TVOC concentrations have been evident in southwest area well MW-02R since 2011. EFR: Enhanced Fluid Recovery (EFR) is conducted quarterly at well locations MW-02R, MW-03, MW-08, and MW-10. The EFR events during this monitoring period were completed on July 13, 2015 and October 14, 2015. A combined total of 172 gallons of groundwater was removed

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

from the four wells during the two events. CONCLUSIONS: - The results of the groundwater sampling completed in October 2015 indicate that VOC impacted groundwater contamination persists beneath the Site mainly concentrated in the area of well MW-02R and to a lesser extent well MW-01 and MW-10. - Elevated groundwater contamination (above AWQSGVs) is limited three wells: MW-01 and MW-02R located in the southern portion of the Site, and well MW-10 in the northern portion of the Site. - Peripheral well data indicate that there has not been off-site migration though the October 2015 TVOC results at well MW-19. - Past soil data shows that petroleum contaminated soils remain on the site at depths below the water table. This deep soil contamination is the likely source of residual groundwater contamination. - A combination of EFR and natural attenuation appears to have reduced dissolved-phase concentrations at well location MW-08. - TVOC concentrations in wells MW-02R, MW-03, and MW-10 have shown variability. Elevated TVOC concentrations persist at well MW-02R. RECOMMENDATIONS: The Site is privately owned and actively leased to commercial occupants. Based on the property status and depth to residual soil contamination excavation and SVE are not feasible. Due to the groundwater condition at MW-02R, LiRo has contacted the property owner and discussed the possibility of implementing an ISCO program in a limited area near well MW-02R. An ISCO Work Plan will be prepared and included in the next SAMR. ACTIONS - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 VOCs. - Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08, and MW-10. - Continue monitored natural attenuation for residual soil and groundwater contamination. - Continue quarterly EFR on monitoring wells MW-02R, MW-03, MW-08, and MW-10. There are currently no proposals requiring NYSDEC approvals. 09/09/2016: Received the following e-mail from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on September 9, 2016. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C= 573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 10/19/2016: Reviewed the report for monitoring Period: November 2015 to April 2016. The Site is currently on a semi-annual groundwater monitoring and sampling program. On March 30-31, 2016 groundwater sampling was completed at well locations MW-01, MW-02R, MW-03, MW-05, MW- 08, MW-09, MW-10, MW-13, MW-14, MW-16, and MW-19. Groundwater beneath the Site occurs under unconfined conditions at 9 to 15 ft. bgs) within the unconsolidated glacial till sediments. Groundwater flow beneath the Site is generally in a northwesterly direction. GW data: Routine GW sampling was completed by LiRo on March 30-31, 2016. Wells MW-01, MW-02R, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, MW-16, and MW-19 were sampled during the March 2016 event. None of the wells gauged contained free-phase product. Three of the eleven wells sampled, MW-02R, MW-03, and MW-10, reported one or more VOCs at concentrations above AWQSGV s. Detected total VOCs ranged from ND

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

from MW-08, MW-09, MW-13, and MW-14R, to 25,487 ug/L in well MW-02R. One (MW-16) of the eleven wells reported increases in TVOCs and two monitoring wells (MW-09 and MW-13) reported no change (non-detect). The remaining eight wells reported a decrease in TVOCs. Persistent elevated TVOCs (greater than 20,000 ug/L) have been evident in southwest area well MW-02R since 2011. TVOCs for all other well locations for the March 2016 sampling event were less than 100 ug/L. EFR: EFR is conducted quarterly at well locations MW-02R, MW-03, MW-08, and MW-10. The EFR events during this monitoring period were completed on January 15, 2016 and April 7, 2016. A combined total of 275 gallons of groundwater was removed from the four wells during the two events. CONCLUSIONS The results of the groundwater sampling completed in March 2016 indicate that VOC impacted groundwater contamination persists beneath the Site mainly concentrated in the area of well MW-02R. Elevated groundwater contamination (above AWQSGVs) is limited to three wells: MW-02R and MW-03 located in the southern portion of the Site, and well MW-10 in the northern portion of the Site. Peripheral well data indicate that there has not been off-site migration though the March 2016 TVOC results at well MW-19. Past soil data shows that petroleum contaminated soils remain on the Site at depths below the water table. This deep soil contamination is the likely source of residual groundwater contamination. A combination of EFR and natural attenuation appears to have reduced dissolved-phase concentrations at well location MW-08. The March 2016 TVOC results indicate a similar downward trend at well locations MW-03 and MW-10. Elevated TVOC concentrations persist at well MW-02R. The contamination is localized and the elevated TVOC concentrations at this location could potentially be attributed to contamination within the well filter pack. The Site is privately owned and actively leased to commercial occupants. Based on the property status and depth to residual soil contamination excavation and SVE are not feasible. Due to the reported elevated TVOC concentrations at MW-02R, LiRo will replace well MW-02R to determine if the elevated TVOC results are representative of groundwater conditions or biased high due to contamination of the well screen and filter pack. ACTIONS Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 VOCs. Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08, and MW-10. Continue monitored natural attenuation for residual soil and groundwater contamination. Continue quarterly EFR on monitoring wells MW-02R, MW-03, MW-08, and MW-10. Replace groundwater monitoring well MW-02R. Sample the MW-02R replacement well monthly for CP-51 VOCs for a 3-month period. There are currently no proposals requiring NYSDEC approvals. AD 01/18/2017: Received the following e-mail from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on January 18, 2017. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C= 573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 02/28/2017: Reviewed the report. The Site is currently on a semi-annual groundwater

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

monitoring and sampling program. On October 18-19, 2016, groundwater sampling was completed at well locations MW-01, MW-02R, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14, MW-16, and MW-19. None of the wells gauged contained free-phase product. Three of the eleven wells sampled, MW-02R, MW-03, and MW-10, reported one or more VOCs at concentrations above AWQSGV s. Detected total VOC concentrations ranged from not detected above laboratory limits in samples from monitoring wells MW-05, MW-08, MW-09, MW-13, and MW-16, to 25,911 micrograms per liter (ug/L) in well MW-02R. Persistent elevated TVOCs (greater than 20,000 ug/L) have been evident in southwest area well MW-02R since 2011. TVOCs for all other well locations for the October 2016 sampling event were below 100 ug/L. EFR events: EFR is conducted quarterly at well locations MW-02R, MW-03, MW-08, and MW-10. The EFR events during this monitoring period were completed on July 28, 2016 and October 21, 2016. A combined total of 191 gallons of groundwater was removed from the four wells during the two events. EFR was initiated in October 2012 as an effort to reduce dissolved-phase VOCs in groundwater. A total of eight groundwater sampling events have been conducted since EFR began. TVOCs at well locations MW-03, MW-08, and MW-10 have decreased. The decreases may be a result of EFR activities, natural attenuation or possibly a combination of the two. The TVOCs in well MW-02R have not decreased. CONCLUSIONS: - The results of the groundwater sampling completed in October 2016 indicate that VOC impacted groundwater contamination persists beneath the Site mainly concentrated in the area of well MW-02R. - Elevated groundwater contamination (above AWQSGVs) is limited to three wells: MW-02R and MW-03 located in the southern portion of the Site, and MW-10 in the northern portion of the Site. - Peripheral well data indicate that there has not been off-site migration based on the October 2016 and historic TVOC results at well MW-19. - Past soil data shows that petroleum contaminated soils which remain on the Site are limited in area and are at depths below the water table. This deep soil contamination is likely the source of residual groundwater contamination. - A combination of EFR and natural attenuation appears to have reduced dissolved-phase concentrations at well location MW-08 to non-detectable levels for the last two sampling events. The October 2016 TVOC results indicate a similar downward trend at well locations MW-03 and MW-10. - Elevated TVOCs persist at well MW-02R. The contamination is localized and the elevated TVOCs at this location could be potentially attributed to contamination within the well filter pack. RECOMMENDATIONS (Actions and Proposals) The Site is privately owned and actively leased to commercial occupants. Based on the property status and depth to residual soil contamination excavation and SVE are not feasible. Due to the reported elevated TVOCs at MW-02R, LiRo will replace well MW-02R to determine if the elevated TVOC results are representative of groundwater conditions or biased high due to contamination of the well screen and filter pack. Well replacement is scheduled for completion in the first quarter of 2017. ACTIONS - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 VOCs. - Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW-02R, MW-08, and MW-10. - Continue monitored natural attenuation for residual soil and groundwater contamination. - Continue quarterly EFR on monitoring wells MW-02R, MW-03, and MW-10. EFR will be suspended at well location MW-08 based on recent TVOC concentrations. - Replace groundwater monitoring well MW-02R. - Sample the MW-02R replacement well monthly for CP-51 VOCs for a

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

3-month period There are currently no proposals requiring NYSDEC approvals. AD 11/13/2017: Received the following e-mail from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report & Soil Vapor/Air Sampling Plan for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on November 13, 2017. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a proposal that requires your review and approval. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 12/28/2017: Reviewed the report. It states that: - Elevated groundwater contamination (above AWQSGVs) is limited to three wells: MW-02R2 and MW-03 located in the southern portion of the Site, and MW-10 in the northern portion of the Site. - Peripheral well data indicate that there has not been off-site migration based on the April 2017 and historic TVOC results at well MW-19. - Past and recent (January 2017) soil data from well MW-02R2 and nearby soil borings shows that petroleum contaminated soils which remain on the Site are limited in area and are at depths below the water table. This deep soil contamination is likely the source of residual groundwater contamination. Well MW-02R2 is located in the portion of the Site currently used by Pepperidge Farms for storage and distribution. - A combination of EFR and natural attenuation appears to have reduced dissolved-phase concentrations at well location MW-08 to non-dectable levels for the last two sampling events. The April 2017 TVOC results indicate a similar downward trend at well locations MW-03 and MW-10. - Groundwater TVOC concentrations at replacement well MW-02R2 suggest that the elevated TVOC concentration reported at well MW-02R was localized and is attributed to contamination within the well filter pack of well MW-02R. Additional sampling will determine if this is the case. The Site is privately owned and actively leased to commercial occupants. Based on the property status and depth to residual soil contamination excavation and SVE are not feasible. Proposed actions: - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 VOCs. - Changing (per manufacturer s recommendations) and maintaining ORC socks in wells MW- 02R2, MW-08, and MW-10. - Continue monitored natural attenuation for residual soil and groundwater contamination. - Continue quarterly EFR on monitoring well MW-02R2. EFR will be suspended at well locations MW-03, MW-08, MW-10 based on recent declining TVOC concentrations. LiRo proposes the following: Due to the VOC impacts to soil and groundwater identified at well location MW-02R/MW-02R2, located within the Pepperidge Farms warehouse, LiRo is recommending performing sub-slab vapor, soil vapor, and ambient air sampling to evaluate potential soil vapor intrusion. The evaluation will be used to determine if VOCs are impacting the warehouse. A work plan for the vapor intrusion is presented in the report. Implementation of this proposal is contingent upon property owner/tenant granting permission to conduct the sampling. AD 02/12/2018: Received Semi-Annual Monitoring Report may - October 2017. Will review. AD 02/20/2018: Reviewed the report. It states that

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

the site is currently on a semi-annual groundwater monitoring and sampling program. On July 26-27, 2017 groundwater sampling was completed at all eleven well locations. Routine groundwater sampling was completed by LiRo on July 26-27, 2017. Wells were sampled for NYSDEC CP-51 (formerly STARS) list VOCs. Wells MW-01, MW-02R2, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-16, MW-14R, and MW-19 were sampled during the July 2017 event. Well MW-16 was not accessible for sampling. None of the wells gauged contained free-phase product. Five of the eleven wells sampled, MW-01, MW-02R2, MW-03, MW-08, and MW-10, reported one or more VOCs at concentrations above AWQSGV s. Benzene reported at 1.4 ug/L and MTBE at 99 ug/L account for the AWQSGV exceedances at wells MW-08 and MW-10, respectively. Detected TVOCs ranged from ND in wells MW-09, MW-13, and MW-16 to 9,335 ug/L)in well MW-02R2 during the July sampling event. Replacement monitoring well MW-02R2 was sampled on four occasions during the monitoring period, June 27, July 27, August 25, and September 25, 2017, to assess TVOCs trends. Well MW-02R2 and other all wells gauged on these dates did not contain free-phase product. The reported TVOCs at well MW-02R2 were significantly lower than well MW-02R and the March 2017 sampling of MW-02R2. The TVOCs in MW-02R2 were 9,553 ug/L for the July 2017 sampling event, however, by September the concentration decreased to 2,501 ug/L. The September 2017 TVOC results for MW-02R2 were reported at 2,501 ?g/L. Continued monthly sampling at well MW-02R2 will better determine TVOCs trends. - Groundwater contamination above AWQSGVs is limited to five wells: MW-01, MW-02R2, MW-03, MW-08, and MW-10. Wells MW-01, MW-02R2, and MW-03 are located in the southern portion of the Site, and MW-08 and MW-10 in the northern portion of the Site. The significance of the July 2017 TVOC concentration increase at well location MW-01 will be evaluated through continued monitoring. - Down gradient well MW-19 indicate that there has not been off-site migration of the dissolved phase contaminate plume based on the July 2017 and historic TVOC results. - Past and recent (January 2017) soil data from well MW-02R2 and nearby soil borings shows that petroleum contaminated soils which remain on the Site are limited in area and are at depths below the water table. This deep soil contamination is likely the source of residual groundwater contamination. Well MW-02R2 is located in the portion of the Site currently used by Pepperidge Farms for storage and distribution. The Site is privately owned and actively leased to commercial occupants. Based on the property status and depth to residual soil contamination excavation and SVE are not feasible. ACTIONS - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 VOCs. - Changing (per manufacturer s recommendations) and maintaining ORC socks in well MW-02R2. Based on significant groundwater TVOC concentration reductions, ORC socks will no longer be employed in wells MW-08 and MW-10. - Continue monitored natural attenuation for residual soil and groundwater contamination. - Continue quarterly EFR at monitoring well location MW-02R2. - Implement the Vapor/Air Sampling Plan proposed in the November 13, 2017 SAMR in 2Q2018 pending NYSDEC approval. AD 02/22/2018: Issued and sent a WP approval letter to DDC. AD 12/06/2018: Received the following e-mail from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on December 6, 2018. A copy of the report is also attached in this email due to current DEC issues with access to the filesanywhere site. A link to the website is included:

https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v=
8a6c6b8b9593b0b0a0a5 The report will remain on the website for a
period of one year. A hard copy has been mailed to your office.
Please feel free to contact Steve Frank at franks@liro.com or myself
if you need additional information. Sincerely Martha DeLozier, PG
Geologist/Project Coordinator The LiRo Group Program/Construction
Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New
York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will
review. AD 01/09/2019: Reviewed the report for monitoring period:
November 2017 to April 2018. It states that the Site is currently on
a semi-annual groundwater monitoring and sampling program. - On
November 2-3, 2017 groundwater sampling was completed at all eleven
well locations. Routine semi-annual groundwater sampling/gauging was
completed on November 2-3, 2017. No free phase product was detected
in any of the accessible monitoring wells during this monitoring
event. On November 2, 2017, groundwater was measured between 6.64 and
15.91 ft. below top of casing and between 7.25 to 13.67 feet above
mean sea level (AMSL). The interpreted groundwater flow indicates
general groundwater flow direction to the north. November 2017 GW
data: 6 wells (MW-01, MW-02R2, MW-03, MW-08, MW-10, and MW-14R) of
the 11 wells sampled, reported one or more VOCs at concentrations
above AWQSGV s. Detected TVOCs ranged from ND in wells MW-09, MW-13,
and MW-16 to 2,501 ug/L in well MW-02R2. Groundwater samples from
wells MW-01, MW-02R2, and MW-03 reported four or more VOCs at
concentrations greater than AWQSGVs, samples from monitoring wells
MW-08, MW-10, and MW-14R reported only one elevated VOC. - On April
25-26, 2018 LiRo completed well gauging and groundwater sampling.
Sampling was completed at all eleven well locations required by the
Site Monitoring Plan. No free phase product was detected in any of
the wells during this monitoring event. On April 25, 2018,
groundwater was measured between 6.28 and 14.95 ft. below top of
casing and between 7.75 to 14.86 feet above mean sea level (AMSL).
April 2018 GW data: Five (MW-01, MW-02R2, MW-03, MW-08, and MW-10) of
the eleven wells sampled, reported one or more VOCs above AWQSGV s.
Detected TVOCs ranged from ND in wells MW-13 and MW-16 to 556 ug/L in
well MW-02R2. Well MW-13 has not reported detectable TVOCs since
January 2014 and well MW-16 last reported a detectable TVOC in March
2016. LiRo currently maintains ORC socks in wells MW-02R2, MW-08, and
MW-10. The ORC socks in wells MW-08 and MW-10 were replaced during
the October 18, 2016 gauging event. EFR: During this monitoring
period EFR was completed on November 13, 2017 at well location MW-10.
Street re-construction prevented access to the other wells where EFR
is conducted. On April 27, 2018 EFR was conducted at well location
MW-02R2. A total of 62 gallons of groundwater was removed during the
monitoring period. As of April 2018, EFR was limited to the one well,
MW-02R2. EFR has been discontinued in April 2018 at wells MW-03,
MW-08, and MW-10 due to a significant decrease in TVOCs. CONCLUSIONS
- Groundwater contamination above AWQSGVs is limited to six wells:
MW-01, MW-02R2, MW-03, MW-08, MW-10, and MW-14R. Wells MW-01,
MW-02R2, and MW-03 are located in the southern portion of the Site,
and MW-08 and MW-10 in the northern portion of the Site. Well MW-13
have reported no detectable TVOCs for several monitoring periods. -
Downgradient well MW-19 results indicate that there has not been
off-site migration of the dissolved phase contaminate plume. - Past
and recent (January 2017) soil data from well MW-02R2 and nearby soil
borings shows that petroleum contaminated soils which remain on the
Site are limited in area and are at depths below the water table.

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

This deep soil contamination is likely the source of residual groundwater contamination. Well MW-02R2 is located in the portion of the Site currently used by Pepperidge Farms for warehousing (storage and distribution). - In April 2018, sub-slab air samples in the Pepperidge Farms warehouse were collected from LAS-01, LAS-02, and LSVP-01 along with corresponding indoor and outdoor ambient air samples. The air sampling results were compared to the NYSDOH, Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006, Table 3.1 AGVs Matrices A, B, and C and Appendix C databases. - No petroleum-related VOCs or non-petroleum related VOCs were reported above NYSDOH Table 3.1 AGVs. The NYSDOH Decision Matrix results support no further action. Additionally, no petroleum-related compounds in the indoor air samples were reported at concentrations above NYSDOH Fuel Oil 2003 Upper Fence Limit. - During the November 8, 2018 meeting with NYSDEC, LiRo proposed closure of Spill No. 9006042 based on decreasing groundwater TVOCs and the April 2018 air and soil vapor sampling results that supported no further action. However, based on the groundwater TVOCs reported for well MW-02R2 in February 2018, NYSDEC was not prepared to approve closure the spill and requested that LiRo evaluate a bioremedial approach to address the impacted groundwater that is limited to well MW-02R2. LiRo will evaluate bioremedial measures that include collection of groundwater samples that will be submitted to a laboratory for bench scale testing. Initial results of the evaluation will be provided in the November 2018 to April 2019 SAMR. ACTIONS - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 VOCs. - Changing and maintaining ORC socks in well MW-02R2. - Continue monitored natural attenuation for residual soil and groundwater contamination. - Continue quarterly EFR at monitoring well location MW-02R2. There are currently no proposals requiring NYSDEC approvals. AD 03/15/2019: Received the following e-mail from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on March 15, 2019. A link to the website is included: https://protect2.fireeye.com/url?k= 3c5f9b8b-607b6dea-3c5d62be-0cc47a6d17e0-3c7d75d881b16a1c&u=https:// private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely Martha DeLozier, PG Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] Will review. AD 03/21/2019: Reviewed the report. it states that the Site is currently on a semi-annual groundwater monitoring and sampling program. - On September 4-5, 2018 LiRo completed well gauging and groundwater sampling. Sampling was completed at all eleven well locations required by the Site Monitoring Plan. On September 4, 2018, groundwater was measured between 5.59 and 14.60 ft. below top of casing and between 8.73 to 14.65 feet above mean sea level (AMSL). Groundwater elevation contours for the gauging event are presented in Figure 3. The interpreted groundwater flow indicates general groundwater flow direction to the northwest. This is similar to historical groundwater flow direction. The calculated hydraulic

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

gradient between monitoring well MW-13 and MW-19 is 0.016 feet per foot (ft/ft). GW data: Three (MW-01, MW-02R2 and MW-10) of the eleven wells sampled, reported one or more VOCs at concentrations above AWQSGV s. Detected total VOCs ranged from ND in samples from wells MW-13, MW-14R, and MW-16 to 6,811 ppb in well MW-02R2 during the September 2018 sampling event. Groundwater samples from wells MW-02R2 and MW-10 reported six or more VOCs at concentrations greater than AWQSGVs. The sample from monitoring well MW-10 reported only one VOC (Naphthalene) at concentrations greater than AWQSGs. The TVOCs reported for the September 2018 sampling event were compared to the most recent sampling event reported TVOCs by location. Two wells (MW-02R2 and MW-10) of the 11 wells reported increases in TVOCs. The reported TVOC, 6,811 ug/L and 141 ug/L for MW-02R2 and MW-10, respectively, were within historic levels for the well locations. Three monitoring wells (MW-09, MW-13, and MW-16) reported no change. The remaining six well locations (MW-01, MW-03, MW-05, MW-08, MW-14R, and MW-19) reported a decrease in TVOCs. During this monitoring period, EFR was completed on September 11, 2018 at well location MW-02R2. Street re-construction prevented access to well MW-02R2 for completion of both quarterly EFR events. A total of 38 gallons of groundwater was removed from well MW-02R2 during the monitoring period. CONCLUSIONS: - Groundwater contamination above AWQSGVs is limited to three wells: MW-01, MW-02R2, and MW-10. Wells MW-01 and MW-02R2 are located in the southern portion of the site, and MW-10 in the northern portion. - Down gradient well MW-19 results indicate that there has not been off-site migration of contaminate plume. - Past and recent (January 2017) soil data from well MW-02R2 and nearby soil borings shows that petroleum contaminated soils which remain on the Site are limited in area and are at depths below the water table. This deep soil contamination is likely the source of residual groundwater contamination. Well MW-02R2 is located in the portion of the Site currently used by Pepperidge Farms for warehousing (storage and distribution). - In April 2018, sub-slab air samples in the Pepperidge Farms warehouse were collected from LAS-01, LAS-02, and LSVP-01 along with corresponding indoor and outdoor ambient air samples. The air sampling results were compared to the NYSDOH, Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006, Table 3.1 AGVs Matrices A, B, and C and Appendix C databases. - Semi-annual sampling and gauging will continue. Groundwater samples will continue to be analyzed for CP-51 VOCs. - Changing (per manufacturer s recommendations) and maintaining ORC socks in well MW-02R2. - Continue monitored natural attenuation for residual soil and groundwater contamination including the resumption of increased groundwater sampling at well MW-02R2. Monthly sampling for a period of six (6) months was initiated at well MW-02R2 in January 2019. - Continue quarterly EFR at monitoring well location MW-02R2. There are currently no proposals requiring NYSDEC approvals. AD 08/29/2019: Received the following e-mail from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on August 29, 2019. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely Martha DeLozier, PG

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

Professional Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 09/19/2019: Reviewed the report. The Site is currently on a semi-annual gauging and sampling program. This report summarizes the results of the semiannual routine groundwater sampling and gauging which occurred on January 8-9, 2019. Also included in this report is the monthly sampling results from well MW-02R2. Per the recommendation of the May 2018 to October 2018 SAMR, monthly sampling of well MW-02R2 resumed in January 2019 to monitor natural attenuation groundwater contamination which is confined to this portion of the Site. Monthly samples were collected on February 7, 2019, March 13, 2019, and April 26, 2019. Groundwater beneath the Site occurs under unconfined conditions at 9 to 15 ft. bgs within the unconsolidated glacial till sediments. Groundwater flow beneath the Site is generally in a northwesterly direction. No free phase product was detected in any of the accessible monitoring wells during this monitoring event. On January 8, 2019, groundwater was measured between 4.83 and 14.82 ft. below top of casing and between 9.49 to 15.22 feet above mean sea level (AMSL). The interpreted groundwater flow indicates general groundwater flow direction to the northwest. This is similar to historical groundwater flow direction. EFR: During this monitoring period, EFR was completed on January 7, 2019 at well location MW-02R2. Street re-construction prevented access to well MW-02R2 for completion of the second quarterly EFR event. A total of 32 gallons of groundwater was removed from well MW-02R2 during the monitoring period. GW sampling: Routine semi-annual groundwater sampling was completed by LiRo on January 8-9, 2019. Wells were sampled for NYSDEC CP-51 list VOCs. In addition to the semi-annual sampling, monthly sampling at well MW-02R2 was completed on February 7, 2019, March 13, 2019, and April 26, 2019. Prior to sampling, wells were purged of at least three well volumes at wells with sufficient recharge. Wells MW-01, MW-02R2, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, MW-16, and MW-19 were sampled during the January 2019 event. Six (MW-01, MW-02R2, MW-03, MW-08, MW-10, and MW-14R) of the eleven wells sampled, reported one or more VOCs at concentrations above AWQSGV s. Detected total VOCs ranged from ND in well MW-13 to 3,394 ug/L in well MW-02R2 during the January 2019 sampling event. Groundwater samples from wells MW-02R2 and MW-10 reported ten or more VOCs at concentrations greater than AWQSGVs. The samples from monitoring wells MW-08 and MW-14R reported only one VOC at concentrations greater than AWQSGs. Wells MW-01 and MW-03 reported seven VOCs at concentrations greater than AWQSGVs. These two wells are located in the same portion of the site where MW-02R2 is located. The TVOC concentrations reported for the January 2019 sampling event were compared to the most recent sampling event reported TVOC concentrations by location. Eight of the eleven monitoring wells reported increases in TVOCs. The reported TVOC concentrations at the eight well locations were within historic levels for the well locations. One monitoring well (MW-13) reported no change. The remaining two well locations (MW-02R2 and MW-19) reported a decrease in TVOCs. Monthly Sampling Events MW-02R2: Monthly sampling at well location MW-02R2 was completed on February 7, 2019, March 13, 2019, and April 26, 2019. The monthly groundwater analytical results were compared to NYSDEC s AWQSGVs. Similar to the January 2019 sample results, the monthly sampling results reported ten or more VOCs at concentrations greater than AWQSGVs. Detected

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

total VOCs ranged from 504 ug/L for the April 2019 event to 3,445 ug/L for the March 2019 sampling event. CONCLUSIONS: - Groundwater contamination above AWQSGVs were reported at six wells during the monitoring period: MW-01, MW-02R2, MW-03, MW-08, MW-10, and MW-14R. Wells MW-01, MW-02R2, MW-03, and MW-14R are located in the southern portion of the Site, and wells MW-08 and MW-10 in the northern portion of the Site. The January 2019 well MW-10 TVOC results was significantly greater than the previous sampling event but less than the highest historic concentration. Additional sampling will determine the significance of the January 2019 results. - Well MW-02R2 has shown a steady decreasing trend. - Down gradient well MW-19 results indicate that there has not been off-site migration of the dissolved phase contaminate plume. - Past and recent soil data from well MW-02R2 and nearby soil borings shows that petroleum contaminated soils which remain on the Site are limited in area and are at depths below the water table. This deep soil contamination is likely the source of residual groundwater contamination. Well MW-02R2 is located in the portion of the Site currently used by Pepperidge Farms for warehousing (storage and distribution). - A combination of EFR and natural attenuation resulted in reduced dissolved-phase concentrations at well locations MW-03, MW-08, and MW-10 to the point where EFR was discontinued at these wells in April 2018. The January 2019 MW-10 sample results were significantly greater than the previous sampling results. Should TVOC concentrations remain elevated at MW-10, EFR at the well may resume. Quarterly EFR continues at well MW-02R2 to address dissolved-phase concentrations at this location. ACTIONS: - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 List VOCs. - Continue monitored natural attenuation for residual soil and groundwater contamination including monthly groundwater sampling at well MW-02R2 through June 2019. - Changing (per manufacturer s recommendations) and maintaining ORC socks in well MW-02R2. - Continue quarterly EFR at monitoring well location MW-02R2. There are currently no proposals requiring NYSDEC approvals. AD 04/03/2020: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on April 3, 2020. A link to the website is included:
https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v=8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note, that in light of the current circumstances, until further notice, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 04/28/2020: Reviewed the report for the monitoring period: May 2019 to October 2019. It states that the Site is currently on a semi-annual gauging and sampling program. This report summarizes the results of the semiannual routine groundwater sampling and gauging which occurred on June 10-11, 2019. Wells MW-01, MW-02R2, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, MW-16, and MW-19 were sampled during the June 2019 event. Four (MW-01, MW-02R2, MW-03, and MW-10) of the eleven wells sampled, reported one or more VOCs at

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

concentrations above AWQSGV s. Total VOCs in all 11 samples ranged from ND in well MW-16 to 10,286 ug/L in well MW-02R2 during the June 2019 sampling event. Groundwater samples from wells MW-02R2 and MW-10 reported ten or more VOCs at concentrations greater than AWQSGVs. Wells MW-01 and MW-03 reported nine or less VOCs at concentrations greater than AWQSGVs. The following wells reported TVOCs less than 10 ug/L: MW-05, MW- 09, MW-13, MW-14R, and MW-19. Also included in this report are sampling results from supplemental sampling of well MW-02R2 conducted on October 14, 2019. The October 2019 sampling was conducted to better assess TVOC trends at MW-02R2. The reported TVOCs in this well was 927 ug/L. Similar to the June 2019 sample results, the October 2019 sampling results reported 12 VOCs at concentrations greater than AWQSGVs though significantly lower TVOCs. The ORC sock in well MW-02R2 was replaced during the October 2019 sampling event. No free phase product was detected in any of the accessible monitoring wells during June 2019 monitoring event. On June 10, 2019, groundwater was measured between 4.42 and 14.55 ft. below top of casing and between 9.47 to 14.40 feet above mean sea level (AMSL). The groundwater flow indicates general flow direction to the northwest. This is similar to historical groundwater flow direction. The calculated hydraulic gradient between monitoring well MW-13 and MW-19 is 0.01 feet per foot (ft/ft). EFR: During this monitoring period, EFR was completed on July 26, 2019 and September 23, 2019 at well location MW-02R2. A total of 67 gallons of groundwater was removed from well MW-02R2 during the monitoring period. Conclusions: - Groundwater contamination above AWQSGVs were reported at four wells during the monitoring period: MW-01, MW-02R2, MW-03, and MW-10. Wells MW-01, MW-02R2, MW-03 are located in the southern portion of the Site, and well MW-10 in the northern portion of the Site. - Although VOCs in well MW-02R2 have shown high variability, the overall trend is decreasing. - Down gradient wells MW-09 and MW-19 results indicate that there has not been off-site migration of the dissolved phase contaminate plume. - Past and recent soil data from well MW-02R2 and nearby soil borings shows that petroleum contaminated soils which remain on the Site are limited in area and are at depths below the water table. This deep soil contamination is likely the source of residual groundwater contamination. Well MW-02R2 is located in the portion of the Site currently used by Pepperidge Farms for warehousing (storage and distribution). - A combination of EFR and natural attenuation resulted in reduced dissolved-phase concentrations at well locations MW-03, MW-08, and MW-10 to the point where EFR was discontinued at these wells in April 2018. Quarterly EFR continues at well MW-02R2 to address dissolved-phase concentrations at this location and can be attributed to the overall decreasing TVOCs trend. The consultant will implement the following actions: - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 List VOCs. - Continue monitored natural attenuation for residual soil and groundwater contamination. - Changing (per manufacturer s recommendations) and maintaining ORC socks in well MW-02R2. - Continue quarterly EFR at monitoring well location MW-02R2. There are currently no proposals requiring NYSDEC approvals 08/06/2020: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 9006042, Former DSNY Queens West 5/5A Garage, 58-70 and 58-74 54th Street, Queens, New York, has been uploaded for your review to LiRo s website on August 6, 2020. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v=

QUEENS WEST 05/05A DOS -DDC (Continued) **S101658482**

8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note, that in light of the current circumstances, until further notice, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Integrated Construction, Design, and Technology Solutions 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 09/21/2020: Reviewed the report. It states that the Site is currently on a semi-annual gauging and sampling program. Groundwater beneath the Site occurs under unconfined conditions at 9 to 15 ft. bgs within the unconsolidated glacial till sediments. Groundwater flow beneath the Site is generally in a northwesterly direction. No free phase product was detected in any of the accessible monitoring wells during this monitoring event. Routine semi-annual groundwater sampling/gauging was completed on November 11-12, 2019. Wells MW-01, MW-02R2, MW-03, MW-05, MW-08, MW-09, MW-10, MW-13, MW-14R, MW-16, and MW-19 were sampled during the November 2019 event. Four (MW-01, MW-02R2, MW-03, and MW-10) of the eleven wells sampled, reported one or more VOCs at concentrations above AWQSGV s. Total VOCs in all eleven samples ranged from ND in wells MW-13, MW-14R, and MW-19 to 1,085 ug/L in well MW-02R2. Groundwater samples from wells MW-02R2 and MW-10 reported ten or more VOCs at concentrations greater than AWQSGVs. Wells MW-01 and MW-03 reported ten or less VOCs at concentrations greater than AWQSGVs. The following 3 wells reported TVOCs less than 10 ug/L: MW-05, MW-08 and MW-19. Conclusions: - Groundwater contamination above AWQSGVs were reported at four wells during the monitoring period: MW-01, MW-02R2, MW-03, and MW-10. Wells MW-01, MW-02R2, MW-03 are located in the southern portion of the Site, and well MW-10 in the northern portion of the Site. - Although VOC concentrations in well MW-02R2 have shown high variability, the overall trend is decreasing. - Down gradient wells MW-09 and MW-19 results indicate that there has not been off-site migration of the dissolved phase contaminate plume. - Soil data from well MW-02R2 shows that petroleum contaminated soils which remain on the Site are limited in area and are below the water table. This deep soil contamination is likely the source of residual, localized groundwater contamination. Well MW-02R2 is located in the portion of the Site currently used by Pepperidge Farms for warehousing (storage and distribution). - Quarterly EFR continues at well MW-02R2 to address dissolved-phase concentrations and there appears to be an overall decreasing TVOC concentration trend at this location. URS will be doing the following actions: - Continue semi-annual sampling and gauging. Groundwater samples will continue to be analyzed for CP-51 List VOCs. - Continue monitored natural attenuation for residual soil and groundwater contamination. - Changing (per manufacturer s recommendations) and maintaining ORC socks in well MW-02R2. - Continue quarterly EFR at monitoring well location MW-02R2. There are currently no proposals requiring NYSDEC approvals. AD"

DER Facility ID:	345933
DEC Memo:	"Cross Ref Spill # 9006042 Sangesland spoke to Chris Wenzel of ERM. He said the spill is associated with a 1080 gal #2 oil tank at a former DOS garage. Cleanup is being managed by NYC DDC. Current owner got a PBS Violation (hearing in May 08?) because the tanks were inspected by PBS and found to be registered as active but not in service. Mr. Wenzel would like to pull the 1080 tank out, but he does not want to cause a problem with the existing contamination work

ERM COMPANY (Continued) **S109064252**

being done on the site. 6/5/08 Spill case was reassigned from Sangesland to J.A. Maisonave Received a call from Chris Wenczel at ERM today asking about this open spill number. He told me that two tanks (including the 1080gal UST) will be closed and he will file registration forms with PBS to do so. I asked for notice when the tanks will be removed and proper sampling procedures must be conducted. A closure report will be sent to me. - JAM 6/10/08 Conference call with Chris Wenczel at ERM and Manford Bohms at Berry Bridge Co. They want to close the two USTs located on their site. A consent order requires closure within 90 days. The tanks are beneath a structural slab at least 16inches thick with 3/4inch rebar. They suggested closing the tanks in place. I requested that soil borings be advanced around the tank and groundwater samples be collected as well. They will submit a letter work plan for my approval. (Ref spill #9006042) - JAM 6/20/08 Spoke to Chris Wenczel about the Investigation Work Plan, which was submitted as a letter on 6/19/08. They will do pre-closure sampling to characterize soil conditions beneathe the tank. The work plan proposes advancing 4 soil borings around the tank to a depth of approx 10' (above the water table) and collecting one soil sample from each. A fifth boring will be advanced downgradient to collect a groundwater grab sample (no soil sample). Work Plan uploaded to edocs. I called Mr. Wenczel and requested that all borings be advanced below the water table. Two soil samples be collected from each boring (one from the interval with the highest PID reading and another from directly above the water table) and two groundwater grab samples be collected (one from the downgradient boring and another from the tank boring with the highest PID reading in the soil). I also requested that an additional boring be advanced near the fill port and soil and grab samples collected from there as well. - JAM 7/11/08 Reviewed the Revised Investigation Work Plan submitted by ERM on June 26, 2008. ERM proposes the following 1) Advancing 6 soil borings (four in the UST area, one in the fill port area, and one 15 feet downgradient of the UST area). 2) Collecting two soil samples from each boring (one from the interval with the highest PID reading and another from the interval directly above the water table). 3) Collecting 3 water samples (one from an existing up-gradient well, one from the boring near the USTs with the highest PID reading, and one from the boring 15 feet directly downgradient from the UST area). I sent email approval today with one modification. A fourth groundwater grab sample should be collected from the boring near the fill ports. The Revised IWP and the email approval are uploaded to eDocs. - JAM 10/23/08 Reviewed the Underground Storage Tank Pre-Closure Investigation submitted by ERM and dated Oct. 7, 2008. The Investigation was performed on August 5-6, 2008 and consisted of installing a total of six soil borings. Two soil samples were collected from each boring and four groundwater samples were collected, one from existing monitoring well MW-5 and one from soil borings SB-01, SB-02 and SB-03. All soil sample results were returned non-detect for VOCs. Some SVOCs were observed with some exceedences in SB-01. The groundwater samples were returned with detections of total VOCs at 121ppb and 7755ppb in MW-05 and SB-03, respectively. Samples from SB-01 and SB-02 were ND and 12ppb, respectively. ERM and Berry Bridge Co. would like to close the two USTs in place because of a structural floor slab that is approx. 16in thick with reinforced concrete. Conclusion: Based on this data and groundwater data from Roux, there are two separate groundwater plumes at the site at the Queens W5 portion and at the Queens W5A portion of

ERM COMPANY (Continued) **S109064252**

the site. No soil contamination was detected around the tanks however, soil beneath the tanks may be contaminated and may act as a source of contamination. At a minimum a remedial plan that addresses contaminated groundwater at both portions of the site should be proposed. I spoke with Chris Wenczel at ERM and Brian Morrissey at Roux today. I recommended that the tanks be removed if possible to see if underlying soil is contaminated. If so it can be removed. Mr. Wenczel believes Berry Bridge will close the tanks in-place due to the structural slab. I recommended to Mr. Morrissey that Greyhawk/Roux secure access to the site, conduct the confirmatory soil investigation approved by DEC in Sept. 2007 (see spill no. 9006042), and propose a groundwater remedy. - JAM 11/06/08 Had a conference call with Jon Kolleeny, Chris Wenscel from ERM, and two representatives from Berry Bridge. Corp, Kevin Lumpe and Manford Bohms. They will submit to the PBS Unit a request for extension to the compliance schedule so we can evaluate if removing the tanks is feasible. - JAM 3/20/09 Berry Bridge began in-place closure activities for the 2 USTs on 3/19/09. I visited the site today to witness the tank closure. The tops of both tanks were exposed and the contractor will shore the excavation prior to opening the tanks. The bottom of the tanks will also be opened and if possible, a soil sample will be collected (tank bottoms might be below the water table which is around 11feet). Fieldwork will continue next week. - JAM 3/23/09 Visited site today to observe closure activities on the two USTs. The tops were cut open so that the crew could enter and clean the tanks. Each tank was a double-walled steel tank with a third wall of fiberglass on the outer steel wall. The diesel tank was found to be smaller than what ERM stated in the Pre-closure Investigation Summary Report . The diesel tank is about 1,000-gallons and while it was being cleaned, water was entering from a seam on the bottom of the tank. It is not known if the water was coming from in between the two steel walls or if the groundwater was coming through both walls. I called Chris Wenczel at ERM to discuss further. Since the tank invert is at the water table, they may not be able to collect a soil sample from directly beneath the tank. - JAM 3/24/09 Visited the site today. Water that was found entering the bottom of the diesel tank, was just water trapped beneath a steal reinforcement sheet. Once the steel sheet was removed, the remaining water was vacuumed out and did not reenter from the bottom of the tank. The bottom of both tanks did not have any holes or corrosion. Each tank was backfilled today with clean sand and the the concrete floor will be patched up tomorrow. A tank closure report will be submitted by ERM. - JAM 8/24/09 Reviewed the Underground Storage Tank Closure Report submitted by ERM dated May 22, 2009. On March 19-25, 2009, two USTs; one 1,080-gallon gasoline UST and one 2,000-gallon diesel UST, were closed in place. The tanks were emptied, cleaned and inspected prior to being backfilled, and were found to be in good condition. Both tanks were double-walled steel with a fiberglass outer shell. Prior to in-place closure, ERM performed an investigation around the tanks to determine if there was a release. Six soil borings were advanced to a depth of 15 feet. Groundwater was encountered at 11.5-13 feet. Eleven soil samples were collected and no VOCs were detected in any of the samples. SVOCs were detected in all the soil samples with only minor exceedences of SCOs. Petroleum related VOCs were deteced in all groundwater samples with one or more coupounds present at concentrations exceeding their respective GWQS&GV in samples MW-05, SB-2 and SV-3. No VOCs were detected at concentrations exceeding GWQS

ERM COMPANY (Continued) **S109064252**

in sample SB-01. No SVOCs were detected at concentrations above their GWQSs in samples MW-05, SB-01 and SB-02. Only Napthalene was detected in sample SB-03 which exceeded its respective GWQS. ERM concludes that a release never occured from these tanks. A tightness test perfromed before the pre-closure investigation and the closure activities and the 1,080-gallon gasoline UST failed. ERM concludes that the integrity of the tank system was compromised after the tanks were removed from use and while the tanks were inactive for the past 13 years. The groundwater contamination observed is related to the historic UST release being addressed by the DDC and these tanks did not contribute to the groundwater plume. The Underground Storage Tank Closure Report is uploaded to eDocs. Since contamination was not observed in the soil column and the tanks were observed in good condtion, this spill case will be closed. A Spill Case Closure letter was issued today to Manfred Bohms at Steel Equities. Spill Closure letter uploaded to eDocs. - JAM"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 11/28/01 REASSIGNED FROM BATISTA TO MILLER. WORKPLAN, DATED 8/8/01, CONDITIONALLY APPROVED 11/28/01. [[[CROSS-REFERENCE SPILL NUMBER 9404494 - PROPOSED SEMIANNUAL GROUND WATER MONITORING PLAN

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

APPROVED FOR FORMER 5K UST. 2/17/04, THE LATTER, SPILL REPORT #9404494, WAS UPDATED: FEW VERY LOW LEVEL DISSOLVED VOCS - NO FURTHER ACTION NOTED.]]] 3/8/04, MILLER: SENT LETTER TO FPM/STARCORP CONCERNING 9/12/03 REPORT ON REMEDIATION BY EXCAVATION; LETTER INCLUDES CONCERN ABOUT MAY '03 REPORT ON GROUND WATER SAMPLING FOR MNA AND DISCOVERY OF LNAPL IN MW-18. 3/8/04 Reassigned from Miller to Sun. 12/16/2005 - Feng - Reassigned from Sun to Feng as per Sun. (RJF) 2/23/2006 - Feng - Reassigned to Sun due to this site might involved in SuperFund issue. (RJF) 2/18/06-File Update by Sun: On July 7, 2004, Sun sent a letter to FPM Group, requiring to perform the following tasks: 1)In the USTs 1, 2, and 3 area: Perform another round of groundwater sampling for petroleum and natural attenuation (NA) after six months and evaluate the levels observed to confirm that the observed decrease in petroleum concentrations continues at MW-15 and MW-16. 2)In UST 4 area: Install a product recovery system in well MW-18, and immediately conduct free product monitoring and recovery visit on a weekly basis, using a product recovery bailer (PRB) to capture any accumulated petroleum. Once the petroleum apparent thickness has been reduced to negligible levels, then absorbent materials can be used to remove the remaining deminimus petroleum. Groundwater monitoring shall continue at nearby well MW-17 to confirm that this well remain unimpacted and to obtain nearby NA data for future use. Further groundwater monitoring is not needed for well MW-02 as this well is more distant from the UST 4 area. (Sun) 3/1/06-File Update by Sun: Review of November 2005 Groundwater Monitoring Report indicated the following: 1) Around UST1, 2, and 3 area, the total VOC and SVOC concentrations at the two wells MW-15 and MW-16 since December 2001 (start of sampling) show a dramatic decrease over four years for MW-15 and slight increase of MW-16 (Total BTEX concentrations for MW-15 and MW-16 showed 123 ug/l and 3,999 ug/l, respectively based on 11/14/05 data) 2) Around UST 4 area, MW-17 showed slight increase in VOCs, relative to previous and first time sampling events (127 ug/l for total VOCs based on 11/14/05 data). At well MW-18, adjacent to UST 4, a ayer of free-phase petreoleum product observed. THe product thickness of 0.13 feer was detected in MW-4 based on 11/14/05 data and a product recovery bailer (PRB) was installed in the well on 11/14/05. THe consultant performed additional monitoring in MW-18 on 12/6/05 and 1/24/06. Small amounts of product were removed from the well on both events (i.e., 01.1 liter on 12/6/06 and 0.6 liters on 1/24/06), suggesting that significan product recovery rates are unlikely. THe next round of product monitoring at MW-18 will be scheduled in approximately one to two months. The report indicated trends in natural attenuation (NA) parameters suggest that NA processes are occuring. These trends include: 1) Increases in alkalinity and decreases in dissolved oxygen over time, indicating that microbial activity is occurring; 2) Decreases in sulfate in the most impacted wells, suggesting sulfate use as an electron acceptor by microorganism; and 3) Decreases in oxcidation-reduction potential, further indicating that microbial activity is occuring. (Sun) 03/24/06-Sun approved the CVOC sampling plan submitted by Kevin Loyst of FPM group, dated 03/10/06 with additional requirement to sample three off-site wells, MW-101, IW-101 and MW-103. (Sun) 11/14/06-Sun: On 8/8/06 Sun sent a letter to Kevin Loyst 631-737-6200, ext. 208) of FPM requiring the following:1).In the USTs 1, 2, and 3 area: Perform another round of groundwater sampling for MW-15 and MW-16 to confirm if natural attenuation processes are actually occurring in the vicinities of MW-15 and

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

MW-16. If natural attenuation are not occurring, a remedial action plan must be prepared and submitted to the Department for review and approval. 2)Continue servicing the PRB in MW-18 periodically (which has been ongoing) and monitoring MW-17 during the semi-annual groundwater monitoring. (Sun) 12/27/06-Sun: Joe spoke to Ritu Mody of FPM Group, Ltd., about the status of site monitoring and RAP submittal. Ritu Mody stated that FPM already submitted the monitoring report of last round sampling results and a Remedial Action Plan (RAP) two weeks ago to the property owner for review and approval. She expectes that DEC will receive the above report in a week once the report is approved by the owner. (Sun) 2/8/07-Sun: Sun approves the following remedial action plan submitted by FPR Group, dated 1/3/07: 1)In the USTs 1, 2, and 3 area: Inject oxygen-releasing compound (ORC) at several injection points, as shown in Figure 1of the report, within the path of the dissolved contamination (i.e., between the tanks and MW-16) with the objective of accelerating the reduction of dissolved petroleum in the groundwater. 2)In UST 4 area: The PRB in well MW-18 will continue to be serviced approximately every one to two months to remove any accumulated petroleum. Once the petroleum apparent thickness has been reduced to negligible levels, then absorbent materials can be used to remove the remaining deminimus petroleum and groundwater monitoring will be recommenced. Groundwater monitoring will continue at nearby well MW-17 to confirm that this well remains essentially unimpacted and to obtain nearby NA data for future use. The Department requires the above remedial work plan be implemented by March 23, 2007. (Sun) 03/01/07-Sun: On 2/28/07, Kevin Loyst of FPM Group sent the following email to Joe Sun: We will be implementing the RAP (ORC injection work for USTs 1,2,3) on Wednesday March 7 at 8AM at the above-referenced site. We expect to be out there 2 days (Wed and Thurs) to complete the work. (Sun) 06/21/07-Sun: Review of March 2007 Groundwater Monitoring Report based the sampling data taken on March 6, 2007 just prior to the injection of ORC material indicated the following: 1) Around UST1, 2, and 3 area, at wells MW-15 and MW-16, several VOCs were detected and several exceedances of the NYSDEC Class GA Ambient Water Quality Standards (Standards) were noted. At MW-15, the VOC concentrations have increased somewhat relative to previous sampling result while at MW-16, the concentrations have decreased somewhat compared to the last sampling event. The total SVOC concentration at MW-15 since DEcember 2001 (start of sampling) shows a decrease over five years and is now non-detected. However, total SVOCs at MW-16 heve remained fairly consistent some exceedances of the Standards. THe historic data shows a significant improvement in groundwater quality in the area where petroleum-impacted soil was removed in 2003 (vicinity of MW-15). However, no significant improvement in the VOC and SVOC concentrations has occurred at MW-16. 2) at UST 4 area, the chemical analytical results at MW-17 indicate no detections of either VOCs or SVOCs. At WEll-18, adjacent to UST 4, a product recovery bailer (PRB) has been installed since November 14, 2005 and is being emptied periodically by Miller Environmental. A small amount of product has been removed from the well approximately every 2 months. The ORC injections were performed on March 7th and March 8th, 2007 by Zebra Environmental Srevices Inc. with FPM providing oversight.ORC injection was performed at 12 points and approximately 35 lbs of ORC slurry were injected under pressure in the water column at each point. FPM recommended that MW-15 and MW-16 be continually monitored semi-annually to monitor the progress of remediation, and PRB should

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

be serviced continually for MW-18 approximately every one to two months to remove any accumulated petroleum. Once the petroleum apparent thickness has been reduced to negligible levels, then absorbent materials will be used to remove the remaining deminimus petroleum and groundwater monitoring will be recommended. Groundwater monitoring will continue at nearby well MW-17 to confirm that this well remains essentially unimpacted and to obtain nearby NA data for future use. (Sun) 06/22/07-Sun: On 6/21/07 Sun of DEC sent a letter to Kevin Loyst of FPM Group Inc, consultant for Norampac, approving the March 2007 Groundwater Monitoring & Remedial Action Report, prepared by FPM Group, Ltd., dated April 16, 2007. DEC approved FPM's recommendation to perform the following: 1)In the USTs 1, 2, and 3 area: FPM will monitor the progress of remediation by continuing semi-annual monitoring of wells MW-15 and MW-16. Groundwater monitoring will include both petroleum constituents (NYSDEC STARS Table 1) and NA parameters. 2)In UST 4 area: The PRB in well MW-18 will continue to be serviced approximately every one to two months to remove any accumulated petroleum. Once the petroleum apparent thickness has been reduced to negligible levels, then absorbent materials can be used to remove the remaining deminimus petroleum and groundwater monitoring will be recommenced. Groundwater monitoring will continue at nearby well MW-17 to confirm that this well remains essentially unimpacted and to obtain nearby NA data for future use. The Department requires five days advanced notice of any work at the site. (Sun) 07/09/08-Sun: Sun sent the following email to the consultant, Kevin Loyst of FPM Group, Ltd, Hi, Kevin, Can you give me an update on the current site status? Your semi-annual monitoring report is overdue. Your immediate reponse is urgently requested. (Sun) 07/09/08-Sun: Sun received the following email from Kevin Loyst of FPM Group, Ltd., Report is being submitted to you this week. (Sun) 07/09/08-Sun: Sun sent the following email to Kevin Loyst of FPM Group, Ltd., Kevin, Thanks for your quick response. DEC requires both hard copy and electronic copy of all the reports. Can you email me the report in pdf format or mail me a CD. (Sun) 7/14/08-Sun: Sun received March 2008 Groundwater Monitoring Report. The report indicated that the VOC levels at MW-16 have remained fairly consistent. FPM recommended to continue semi-annual monitoring . At MW-18, FPM recommended to install absorbent socks to address any residual free-phase petroleum that may recur and to continue semi-annual monitoring for petroleum constituents and NA parameters. (Sun) 8/7/08 - Obligado - Spill transferred from Sun to Obligado as per DEC Brevdo. 1/15/09 - Carlson: Case reassigned to Carlson. Issued letter requiring a delineation workplan and quarterly monitoring and reporting. Workplan due 2/15/09. (Kevin Loyst : k.loyst@fpm-group.com, Stephanie Davis: s.davis@fpm-group.com) 2/27/09 - Carlson: Received letter report dated 2/6/09. They propose inclusion of MW13 and MW14 in the groundwater sampling plan. Significant soil delineation has been conducted previously. Sent letter approving inclusion of MW-13 or MW-14 in the sampling plan and requiring quarterly sampling. 7/1/09 - Carlson: Received March 2009 Update Report, dated June 16, 2009. Issued letter requiring a RAP by 8/1/09. Quarterly sampling required. 8/10/09 - Carlson: Received letter from FPM Group with case timeline/summary. 10/6/09 - Carlson: Issued letter requiring a RAP by 11/6/09. 10/23/09 - Carlson: Meeting scheduled for 11/6 at 10 am. 11/11/09 - Carlson: Email from Kevin Loyst summarizing meeting. They will FOIL adjacent properties and then submit a delineation workplan. 2/19/2010 - Carlson: Sent email

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

to Kevin Loyst - delineation work plan and quarterly report overdue. 2/22/2010 - Carlson: Received email from Kevin Loyst, work plan will be submitted this week. 3/24/2010 - Carlson: Reviewed IP. Issued letter requiring revised IP in 30 days. Additional locations, permanent wells, and correct soil sampling procedures required. 4/7/2010 - Carlson: Spoke to Kevin Loyst and Stephanie Davis from FPM Group. Existing MW12 will be sampled. Revised work plan will be submitted. 5/11/2010 - Carlson: Approved revised delineation work plan. 6/10/2010 - Carlson: Received email. Borings installed. Approved collecting one sample in four borings that were clean. Two soil samples to be collected in one boring that did have evidence of contamination. 8/18/2010 - Carlson: Reviewed Investigation Report. Five wells installed. Soil and low level gw impact in MW-22. Issued letter requiring signed Stip by 9/20/2010. RAWP required 30 days after effective date of Stipulation. 9/14/2010 - Carlson: Spoke to Craig Slater, attorney for Norampac. He requested STIP request be rescinded. Received email summarizing conversation. Received remedial action letter summarizing proposed remedial action plan. Spoke to Kevin Loyst regarding letter/report. MNA (UST 1,2,3) and product recovery (UST4) proposed. 10/14/2010 - Carlson: Issued letter requiring revised Remedial Action Plan by 11/15/2010. MNA rejected, product recovery details required, quarterly sampling required. 11/9/2010 - Breen: Revised RAWP received from FPM Group. FPM's plan differs significantly from the requirements of the Department's 10/14/10 letter. In the UST-1,2,3 area FPM upgraded their orignal MNA to RegenOx injected into up to four injection points near MW-16. This is acceptable. For the UST-4 area FPM proposes multiple sessions of vacuum-enhanced total fluids recovery at MW-18 during mobilization on a single day and then installation of a passive bailer and subsequently an absorbent sox as conditions improve. As to monitoring and sampling all existing G/W monitoring wells on a quarterly basis as DEC required in the 10/14 letter, FRM proposes to reduce the monitoring and sampling frequency of all seven wells in the UST-1,2,3 area. None of the wells in this area have free product. Five are also free of dissolved. FRM further proposes to reduce the monitoring frequency of three of the five wells in the UST-4 Area. MW-18 does have free product, MW-22 has dissolved VOCs; the other three monitoring wells are clean. DEC rejects FRM's proposed cutbacks in monitoring and/or sampling on the grounds that experience has shown such cutbacks to be unwise and may delay and/or jeopardize the closure they seek. DEC deems it necessary monitor and sample quarterly wells that have no floating product but fail to meet standards for dissolved contaminents (typically constituents of gasoline). DEC deems it acceptable to monitor and sample semi-annually wells that are free of dissolved contaminents and have an active recovery system operating for floating product (typically fuel oil or diesel). The Department deems it acceptable to monitor regularly (quarterly or semi-annually) but sample less frequently only if the source is known and removed and no receptors are threatened. This site never stored gasoline, only diesel in four sw, steel USTs without leak monitoring or tightness testing between 1957 and at least 1988. The Department never did a PBS inspection. Since 1994 this facilty has stored only No. 2 FO in a single AST. Kevin Loyst 631-737-6200, ext. 208 of FPM also cell 631-626-5479. 11-16-10 - Breen: I met with Kevin Loyst (He is from Buffalo originally) today for an hour. He wanted to brief me on this long-running and complex project. He wants to eliminate some wells from quarterly monitoring

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

and sampling. He thinks it is unnecessary for some wells. He thinks he has redundant wells. He thinks he has wells that are static. I told him that I can not ignore the specific direction in Sarah s letter of October, which told him to monitor and sample ALL wells quarterly. I told him he can accept Sarah s direction for now and move forward, or wait to see what relief Vadim will give him, if any. I told him wells facilitate closure. He is nearing closure after 22 years. I told him DEC is cutting staff. I told him in a year, this might all look differently and it would be easier then to get what he wants. I told him about the inconsistencies between his UST descriptions and the features given in the PBS registration. He will try and reconcile. I gave him the Info Correction package. Today is UST day. 11-23-10 - Breen: Kevin Loyst sent in the results of his investigation of registration discrepancies. He said there were two separate PBS registrations, 2-117730 and 2-602430. It looks to me like 6/1/94 is the day the error occurred. On that day owner sent in an info correction to add a 10K AST, and close two ASTs one at 15K, the other 16K. In the processes it looks like UST #1 got switched from 550 gallons to 10K. Kevin will verify this from the Norampac files and correct. 11-29-10 - Breen: Kevin sent me an e-mail that contradicted the two items we discussed and settled. He must be writing for his superiors and/or his client. As to the matter of PBS registration. There seems to be an error. It is not clear to me that DEC entered the data wrong. Kevin wants to believe this and have DEC accept it. Even if DEC did make a data entry error, the owner had several renewals and many deliveries to catch the huge discrepancy in tank capacity (10,000 gallons versus 550). As to the matter of closing wells, and/or reducing the frequency of monitoring/analysis, Kevin should hold off for a year or so, when the data substantiates such a change. See e-docs for e-mail exchange. 1-3-11 - Breen: Kevin sent me an e-mail in which he said they will drop their request to deviate from Sarah's demand for quarterly sampling and monitoring for one year and, then, they say they will re-institute their request. See e-docs for this e-mail. 1/11/12 - Carlson: Spoke to Kevin Loyst. 11/8/10 revised RAWP was verbally approved by NYSDEC Breen. Revised RAWP was implemented. Three quarterly reports have been submitted but are not in file. Reports will be resubmitted by email. A fourth quarterly report will be submitted in the next 30 days. 2/29/2012 - Carlson: Reviewed update report dated 2/17/2012. In UST 4 area: LNAPL 0.017 ft in MW18. In UST 1,2,3 area: Regenox was injected in four points around MW-16 in January 2011. VOCs still 3,191 ppb in MW16 on 12/13/11. spoke to Kevin Loyst - recommended another round of injections. He wants to schedule a meeting. He will talk to client and contact me with proposed meeting dates. 3/21/2012 - Carlson: DEC Urda requested a stipulation agreement be signed prior to meeting. Emailed Stipulation Agreement to Kevin Loyst from FPM group. Must be signed and returned within 15 days. 3/28/2012 - Carlson: Received email from Craig Slater, attorney for Norampac NYC. They do not want to sign the Stipulation Agreement. 4/2/2012 - Carlson: Meeting held with FPM group and Richard Etra from Norampac. They stated that additional injections would not be effective, requested closure. Closure denied, the Department requested an additional injection be performed. 1/6/2015 - Raphael Ketani. The spill was called in on 5/18/88. The cause was the failure of four 550 gal. diesel USTs to pass their intergrity tests. Two other spills are associated with this site. They are #0012802 - release of a white caustic substance into secondary containment, and #0107298 - oil entering a sewer

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

during a transfer. Both spills were small and were cleaned up and closed. According to ACRIS, the property 55-01 to 55-15 Grand Avenue if block and lot 2610 and 336. The property 56-05 Grand Avenue isn't listed in the database. A deed dated 1/7/94 shows a transfer of ownership from NYC IDA (Industrial Development Agency) to Star Corrugated Box, Inc., 55-15 Grand Avenue. There are two PBS cases. Case #2-117730 lists NORAMPAC NYC at 55-15 Grand Avenue, Maspeth, NY, 11378 as the owner. John Doyle (718) 386-3200 is the contact. The registration is valid until 7/20/17. Seven tanks are listed: #1 - 550 gals., closed in place; #2 to #4 - 550 gals., closed and removed; #5 and #6 - 16,000 gal. and 15,000 gal., respectively, closed and removed; #7 - 10,000 gal. AST in service with #2 oil. Case #2-602430 lists Star Corrugated Box at 56-05 Grand Avenue, Maspeth as the owner. The contact is Dennis Wood (718) 386-3200. The registration expired on 4/21/04. There was a 1500 gal. UST with #2 oil and a 5000 gal. UST with #2 oil. Both were closed and removed. All mail goes to Star at 55-15 Grand Avenue. Contaminated soil was excavated during June 2003. Groundwater samples recovered from the former area of UST 1 to UST 3 on 10/23/02 and 3/17/09 were either non-detect or up to 102 ppb for total VOCs. However, the 3/17/09 sample from MW-16 to the northeast had 3173 ppb of total VOCs (Figure 1 dated 2/16/10). In Figure 2 (dated 2/16/10), the results from the 3/17/09 sampling for MW-17 for total VOCs were non-detect. However, the 3/17/09 results for MW-18 (which is at the former south end of UST 4) for total VOCs were 55,800 ppb. The 12/13/11 groundwater sample from MW-22 was entirely non-detect for total VOCs. Solution injections and VEFRing took place during 2007. RegenOx injections took place during 2010 and 2011. Most of the wells do not have product. Reports dated 2011 and 2012 indicate that product collection was continuing. The oil spill case concerns only spilled diesel fuel. Chlorinated solvents were never used at the site. Additionally, a superfund site remediation case was opened during 2000. The case number is 241097. The responsible party is Former W.L.K. Corp., 58-30 57th Street, Maspeth, Queens. This site is to the northeast and upgradient to the NORAMPAC/Star Corrugated Box site. A report was produced during 2001 (investigative work undertaken during 2000 to 2001) by FPM Group (631) 737-6200 (Stephanie Davis, Kevin Loyst) that dealt with the occurrence of chlorinated solvents in the groundwater below the site. The plume was depicted in two figures, one for the shallow groundwater at 14' to 20' (Figure 4A) and one for the intermediate groundwater at 30' to 35' (Figure 5A). The earlier work was followed by more borings and well installations during 2002. Total chlorinated solvent concentrations over 100,000 ppb were discovered in the shallow groundwater and concentrations over 200,000 ppb were discovered in the intermediate groundwater. The investigation of the spill at the Former W.L.K. site is ongoing. The case manager is Javier Perez-Maldonado in the Albany office of the Division of Remediation (518) 402-9768. A draft letter to Dennis Wood of Star Corrugated Box, Inc. requesting the status of the remediation and the latest groundwater results was submitted to Hassan Hussein, EE III and head of Unit C in Region 2 Remediation. 1/29/15 - Raphael Ketani. I spoke to Mr. Perez-Maldonado regarding the Former W.L.K. Corp. site. He said that they are finishing the site investigation right now and will then go on to the remediation design phase of the project. I reviewed the FPM Group December 2011 Groundwater Monitoring Report dated 2/17/12. In the report, I found data for a groundwater sample which had been taken from MW-16 during 2011 and

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

for a groundwater sample which had been taken from MW-18 during 2009. Both samples had high analyte concentrations that exceeded the TOGS 1.1.1 standards - the one from MW-18 near UST 4 was extremely high with no followup data. Next, I tried to contact Kevin Loyst, PE, of FPM Group (909 Marconi Avenue, Ronkonkoma, NY, 11779/(631) 737-6200 x 208/k.loyst@fpm-group.com) regarding the present site status. However, I could only leave a voice message. I tried to c-c Craig A. Slater (Norampac attorney) at Harter Secrest & Emery LLP, Twelve Fountain Plaza, Ste 400, Buffalo, NY, 14202 (716) 844-3723/cslater@hselaw.com. However, the emails to him bounced back as undeliverable. 2/4/15 - Raphael Ketani. A conference call took place today between Mr. Loyst (631) 737-6200 x 208 and Ritu Mody of FPM Group and myself regarding what should happen at the site at this point in time. Mr. Loyst did the talking for FPM. He stated that chem ox, excavation and other remedial measures had been performed at the site in order to remove the contamination. I told him that the DEC didn't understand what the present groundwater conditions were at the site because the last sampling took place back during 2011. I added that there were high results at MW-16 and MW-18, but the data was old. Mr. Loyst stated that many of the wells had completely non-detect results back during 2012. He added that no additional reports or documents had been submitted to the DEC since 2/17/12. I told him that the DEC needed to see a trend in the analyte concentrations. So we required that all of the wells be developed and then sampled in order to give us a clear picture regarding the groundwater contamination. Then we would want two additional rounds of sampling to show us a trend. Mr. Loyst stated that he wanted to do one round first and then evaluate the data. I told him that we could start with this and then proceed from there. He asked how the DEC wanted the wells developed. I told him that he could use surge blocking. I added that once the wells are developed then he should wait at least 1 month, preferably 2, and then sample the wells using a low flow method. Mr. Loyst asked whether he needed to send the DEC a work plan. I told him that we can keep things simple and that he should just send me an email stating when he will do the development and the following round of sampling. I asked him for a map showing where all of the wells are. After this, the conversation ended. 2/18/15 - Raphael Ketani. I tried to contact Mr. Loyst (631) 737-6200 x 208/k.loyst@fpm-group.com regarding conducting a site visit tomorrow, but I could only leave a message. 2/25/15 - Raphael Ketani. Leon Marineau (leon_marineau@cascades.com; hydraulic engineer; V.P. Environmental Division; (819) 363-5702/cell (819) 357-0626) called me from Canada today. He said that he is the project manager for the NORAMPAC project. He said that Cascades is the parent company and he was just given authority by management to deal with the site and get the spill closed. He stated that money had been put in escrow for the previous owner to conduct the remediation (Star?). However, progress was slow and the work was never finished. So, some of the money was withdrawn. Now, though, Mr. Marineau stated that he wanted to expedite the closure of the spill. I told him that the DEC needed a new set of groundwater results from sampling all of the wells. However, first we wanted all of the wells to be developed in order that good samples would be collected. Mr. Marineau said that this would take took long and that he just wanted the wells to be purged in the usual manner and then sampled. I told him that he could do this, but the DEC would hold Cascades responsible for any high results due to the possible presence of contamnated clay around the

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

well screen. He said that this wouldn't be a problem. He added that there was still free product at MW-18. I told Mr. Marineau that there is another hot spot on site at MW-16, but the DEC would not hold NORAMPAC as the source of the chlorinated solvents as they are coming from upgradient. We set up a site meeting on March 25, 2015 and the conversation ended. Later, Mr. Marineau sent an email cancelling the meeting as Mr. Loyst could not make it. Mr. Marineau will let me know when would be a good date to meet. 3/13/15 - Raphael Ketani. Mr. Marineau sent an email stating that groundwater sampling will take place at the site. However, he would like to have a meeting with the DEC after the sample results are received by FPM Group and Cascades. In light of this, I tried to contact Mr. Loyst (631) 737-6200 x 208/k.loyst@fpm-group.com to arrange a site visit, but I could only leave a message. 4/2/15 - Raphael Ketani. A quick site visit took place today as planned for viewing the locations of the closed USTs. Joining me were Richard Etra, Manager of Special Projects and Technology ((718) 340-2136/richard_etra@norampac.com), and Mr. Loyst. Mr. Loyst took us to see the location where USTs 1 to 3 were buried. This was a location that was infront of the active loading docks on the southwest side of the main building (past the parking area). Trucks were actively entering and leaving the locations. There was nothing much to see. Mr. Loyst pointed out he locations of the tanks, pointed out the filled pipes which were just barely sticking up, walked with me to the well locations and showed me the pad where the soil excavation had taken place. MW-16, which had elevated contaminants, was at the back of the loading dock. Next, we walked to the third loading dock which fronted on Grand Avenue. The security gates were raised and Mr. Loyst pointed to UST #4. He also showed me the area where the contaminated soil had been dug out and the location of MW-18 (the well with elevated contaminants). This loading dock was not used for much except to place waste material roll off containers. Judging by the debris and dust in the loading dock, I determined that it wasn't used much. After this, I left the site. 4/22/15 - Raphael Ketani. Mr. Loyst (631) 737-6200 x 208 sent me an email stating that the wells will be sampled for VOCs on 4/24/15. 6/3/15 - Raphael Ketani. I reviewed the FPM Group April 2015 Groundwater Monitoring Report dated 6/3/15. MW-15, 16 and 19 to 21 in the vicinity of USTs 1,2 and 3 were redeveloped. MW-12, 17, 22 and 23 in the vicinity of UST 4 were also redeveloped. MW-13 could not be located. MW-18 had product. MW-18 had 1.07 feet of product on 3/17/15 and 0.25 feet of product on 3/20/15. A total of 1.5 gals. of product were collected during March. Before groundwater sampling, each well was gauged and purged. MW-12, 15, 16, 17, and 19 to 23 were sampled on 4/24/15. This date was one month after the wells were developed. The analytical results for the samples from MW-16 show a steady decline over the many years. However, the benzene concentrations continue to be orders of magnitude above the other analytes. FPM states in the report that the sources of the contamination have been treated, further remediation of the spill is unlikely to provide a benefit and that further work is not cost effective. Therefore, they request that the spill case be closed. The analytical results for the 4/24/15 round for MW-12,17 and 19 to 23 are either entirely non-detect or almost entirely non-detect. MW-15 had 6 non-detects and 8 very low to low VOC hits. MW-16 had 8 hits that were from non-detect to low VOCs, 3 moderate hits, 2 150 ppb hits and 1300 ppb of benzene. I approved the report, but sent an email to the consultant requesting an explanation regarding why the benzene

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

concentrations in the samples from MW-16 were so high despite the treatment events. 6/4/15 - Raphael Ketani. I received an email today. Craig Slater s email has changed to cslater@cslaterlaw.com. 6/5/15 - Raphael Ketani. A meeting took place today regarding how the spill case can be closed. In attendance were Mr. Marineau (leon_marineau@cascades.com; hydraulic engineer; V.P. Environmental Division; (819) 363-5702/cell (819) 357-0626), Mr. Loyst (631) 737-6200 x 208/k.loyst@fpm-group.com and Mr. Etra, Manager of Special Projects and Technology ((718) 340-2136/richard_etra@norampac.com). The discussion revolved around the continued presence of product in MW-18 and the continued, though decreasing, high concentrations of benzene in the groundwater samples from MW-16. Mr. Etra started off the conversation by stating that he didn't know why there were very high benzene concentrations at MW-16. I told everyone that I had checked old air photos and had seen that NORAMPAC sits on filled tidal wetlands. I asked everyone whether the site had ever been a disposal site for MGP waste or ever had an MGP plant or gas holder tanks. Everyone stated that MGP facilities never were at the site. Mr. Etra stated that this location had always been a corrugated box manufacturing facility. He added that the inks were oil based. I asked whether containers had ever been unloaded at NORAMPAC which had contained benzene bearing mixtures and whether any of these containers had ever been droppped and had leaked. Mr. Etra said that such containers were never received at the site. I then asked whether any metal cleaning had taken place at the loading dock and so benzene compounds had spilled onto the asphalt. Mr. Etra again stated that this had never taken place. Mr. Marineau stated taht 40 or 50 years ago, oil based inks were used. However, now water based inks are used. The waste ink had been discharged to the sewers many years ago. Mr. Loyst stated that ORC was first injected during March 2007 at the MW-16 location and there was a reduction in the benzene concentrations. After this, RegenOx was injected during 2011 and there were further reductions. Next, the conversation turned to MW-18. Mr. Marineau stated that 1.05 feet of oil was discovered when the well was recently opened. He added that this thickness of product was the results of slow accumulation under quiet conditions and was not typical of the product thickness. The well had not been opened since 2011. Mr. Marineau also stated that he believed there wasn't much oil underground and that the pool was very local. He added that they could possibly set up a skimmer system. Mr. Marineau then asked Mr. Etra whether this loading dock would remain inactive for the foreseeable future. Mr. Etra said that it is quiet now, but it could become active. In the end, it was agreed upon that NORAMPAC will continue to work to recover the product at MW-18, MW-16 will be sampled twice a year in order to monitor the declining benzene concentrations and the rest of the wells will not be monitored, but will remain usable. 6/22/15 - Raphael Ketani. I sent an email to Mr. Mr. Loyst (631) 737-6200 x 208/k.loyst@fpm-group.com asking him when would be a good day and time to meet at the site for walk through and CVOC discussion. 6/25/15 - Raphael Ketani. I sent an email containing a list of 5 items to Mr. Marineau, Mr. Loyst and Mr. Etra which the Department wanted addressed. These items were: 1) The Department has searched for the documents (i.e. reports, letters, work plans) that were generated by Star Corrugated Box from 1988 to early 2001 and has not found them. Please submit these documents on CDs in order that the Department may complete its records and acquire a better understanding of the site conditions. 2) TS (tank system) borings

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

were performed in the vicinity of MW-16. The Department does not have a report describing these soil borings, nor the soil analytical results for the samples which were taken. Please submit this report on CD. 3) The boring for MW-16 is not described n the records contained in the case file. We must receive the boring log for this location and the soil analytical results. 4) There are no statements in the case record regarding the source of the benzene in the groundwater at MW-16. Please send us the document which concerns the investigation which took place to find the source of this contaminant and explain the rationale for addressing it. 5) The soil in the vicinity of MW-16 was treated for contaminants with ORC and RegenOx. The report must be submitted which describes the treatment program. Specifically, what were the contaminants of concern, what was the target horizon, at what depth were the treatment solutions injected, and what did the confirmatory boring sample results show. Later, Mr. Marineau responded to the above request by email and stated the following: Richard Etra will prepare the requested information for you. In the coming weeks, based on your concerns shared at the face to face meeting at the facility, we will: At MW-16 area: 1-Perform a georadar survey to recognize buried structure that could lead to find out a benzene source 2-Characterize soil with boreholes to characterize for benzene 3-Inject oxygen-release-agent for promoting direct oxidation and biodegradation of hydrocarbon residuals and by targeting benzene 4-Perform a post-injection groundwater monitoring to confirm the effectiveness of the injection. At MW-18: 5-Extract on a monthly basis, the existing free phase 6-Record extracted hydrocarbons and keep you informed of the recovered products. 6/29/15 - Raphael Ketani. A site walk through and meeting has been arranged through Mr. Etra (917) 647-9520. The date is presently set as 7/28/15 from 10 AM to noon time. I commented to Mr. Etra that the source of the benzene may be a leaking tank under the loading dock next to MW-16 which contains some benzene. I added that an alternative explanation is that parts were washed years ago with benzene, then the floor was washed where the benzene had spilled, the tainted water went down the drain, the drain leaked and the tainted water went into the soil under the building. Mr. Etra stated that the docks were built during 1957, but he didn't start working for the facility until 1974. With that, the conversation ended. 7/28/15 - Raphael Ketani. A scheduled site meeting and site visit took place today. In attendance were Mr. Etra ((718) 340-2136/richard_etra@norampac.com), Mr. Hussein and myself. The focus of the meeting was the benzene contamination at the location of MW-16. The meeting started with a discussion regarding how the benzene could have entered the subsurface. I proposed various scenarios from my professional experience monitoring the remediation of spills. Mr. Hussein stated during the discussion that he had visited the site many years back and that the discovery of chlorinated solvents in the groundwater lead to the opening of the spill case. Mr. Etra stated that he had no idea regarding how the benzene came to contaminate the soil in the subsurface. Next, we visited the loading dock where MW-16 was located. There was nothing much to see. The specific area was covered by shredded waste paper which had fallen off of the truck during loading. After this, we visited the basement. We saw the location of the large fuel tank which was still in service. We also saw an area that contained drums of hydraulic fluid and lubricating oil. This area had the odor of oil and some Speedi Dri and absorbent pigs were laid on the floor in order to catch any spilled oil. The area was not very messy, but

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

showed signs of minor spillage. Lastly, we visited the basement sump. The water was low in the sump and did not have product. Mr. Hussein asked Mr. Etra to have water sampled from the sump and tested for benzene and other analytes. Mr. Etra agreed to do this. After this, the meeting ended. 8/18/15 - Raphael Ketani. Today, I received a letter from Mr. Etra in response to my comments in a 6/25/15 email that I had sent. A CD containing a tank closure letter, 1 work plan and 4 reports produced during the years 2001 to 2011 was attached to the letter. Mr. Etra responded that they had looked for all of the archived reports, but only found these 6 documents. He referenced in his letter where I could find the information I was looking for. 8/19/15 - Raphael Ketani. Mr. Etra sent me 7 documents on a disc. First, I reviewed the FPM Group 7/18/01 work plan which also contained soil analytical data for the 6/21/01 to 6/29/01 TS series of borings. Some soil samples had no or almost no hits. However, they were away from the areas of contamination/spillage. The other VOC results were as follows: USTs-1,2,3 area: TS-3 (14'-16') = 21 ppm benzene and many low to high exceedences (to 110 ppm) TS-10 (10'-13.5') = 7.6 ppm benzene and many low to high exceedences (to 370 ppm) UST-4 area: TS-5 (9'-12') = 20 ppm benzene and many low to high exceedences (to 210 ppm) TS-8 (8'-12') = 22 ppm benzene and 6 exceedences to 75 ppm TS-8 (16'-20') = 18 ppm benzene and 8 low to high exceedences (to 200 ppm) TS-15 (10'-11') = 110 ppm benzene and 12 low to very high exceedences (to 340 ppm) with many high exceedences TS-16 (10'-12') = 15 ppm benzene and 11 low to high exceedences (to 140 ppm) TS-19 (6'-8') = 35 ppm benzene and 12 low to very high exceedences (to 370 ppm) with many high exceedences NOTE! the highly contaminated locations TS-3 and TS-10 are in the UST 1 to 3 area, NOT THE LOADING DOCK AREA Next, I reviewed the FPM Group 2/15/02 December 2001 additional soil sampling and groundwater sampling results report. They recommended no additional investigating and just groundwater monitoring. Additional borings TS-33 to TS-37 were performed during 12/10/01 and 12/11/01. TS-33 to TS-37 were performed in the UST-1 to UST-3 area. The depths of the soil samples were: TS-33 (4'-8'); TS-34 (5'-7') at the location of MW-16; TS-35 (12'-16'); TS-36 (12'-16'); TS-37 (8'-12'). With the exception of a 0.18 ppb benzene result in the sample from S-35, the rest of the soil sample results were mostly non-detect with some very low hits. On 12/19/01, wells MW-12 to MW-18 were installed. MW-17 and MW-18 were installed in the UST-4 area. Wells MW-12, 13, 14, 16 and 17 had samples which were mostly non-detect for VOCs or with some very low hits. Wells MW-15 and MW-18 were installed in the UST-1 to UST-3 area and in the UST-4 area, respectively. The results for MW-15 were 13 exceedences from 20 ppb to 1700 ppb with 320 ppb benzene and 9 high to very high exceedences from 320 ppb to 1700 ppb. The results for MW-18 were 12 exceedences from 70 ppb to 22000 ppb with 22000 ppb benzene and 8 very high to extremely high exceedences from 480 ppb to 22000 ppb. Following this, I reviewed the Norampac FPM 4/16/07 March 2007 Groundwater Monitoring and Remedial Action Report. Groundwater sampling took place on 3/6/07 at wells MW-15 to MW-16 (UST-1 to UST-3 area) and at well MW-17 (UST-4 area) prior to the ORC injections. MW-15 had 8 low to moderate exceedences to 90 ppb. MW-17 was entirely non-detect. MW-16 had 2100 ppb benzene, 1100 ppb ethylbenzene, 500 ppb naphthalene and 5 non-detects. Table 2 shows the sample results for MW-16 for the 10/23/02 to 3/6/07 rounds. Benzene was always present as a high to very high exceedence, except for the 3/31/04 sample where it was non-detect. This sample was mostly non-detect

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

with no naphthalene, but with 1500 ppb MTBE. From the data, it appears that the trend of naphthalene concentrations is very roughly associated with the trend in the benzene and ethylbenzene concentrations. ORC injections took place on 3/7/07 and 3/8/07 at 12 locations down to 20 feet bgs (10 feet into the water table). One location was just north of the UST-1 to UST-3 tanks, one was just south of these tanks and the other 10 were in an area extending diagonally from just inside the loading dock to the vicinity of MW-16. A total of 420 lbs. of ORC slurry (35 lbs./location) were injected. The FPM Group 7/19/10 Delineation Investigation Results Report was reviewed. Wells MW-19 to MW-21 were installed. in the UST-1 to UST-3 area during 6/7/10 and 6/8/10. Wells MW-13, MW-15, MW-16 and MW-19 to MW-21 were sampled on 6/17/10 and 6/18/10 in the UST-1 to UST-3 area. (MW-19 was at the south end of the loading dock area. MW-20 was north of the loading dock. MW-21 was inside the building and east of the loading dock.) One volume of groundwater was purged at MW-15 and MW-21 as the wells went dry. Wells MW-22 (southwest of the UST in the sidewalk) and MW-23 (far east of the UST) were installed in the UST-4 area on 6/8/10. The soil VOC results for the samples from MW-19 to MW-21 and MW-23 were all entirely non-detect. MW-22 (8'-10') had 6 low exceedences and the rest of the results were from non-detect to low hits. MW-22 (12'-13') had 2 low exceedences and the rest of the results were from non-detect to low hits. The groundwater VOC results for samples collected on 6/17/10 and 6/18/10 from MW-12, 13, 17, 19 to 21 and 23 were entirely non-detect, except for 1 very low hit. MW-15 and MW-22 had mostly low to moderate hits up to 58.7 ppb. MW-16 had 11 low to extremely high (1900 ppb benzene) exceedences. Lastly, I reviewed the FPM Group 4/29/11 March 2011 Groundwater Monitoring and Remedial Action Report. On 1/19/11, 0.4 feet of oil was discovered in MW-18. A total of 21 gals. of mixed liquids was recovered. FPM went back on 1/20/11 and discovered 0.04 feet of oil in the well. A recovery device was installed in the well. Also on 1/20/11, RegenOx was injected at 4 locations in the vicinity of MW-16. The injections took place at 20 feet bgs (10 feet into the water table) and 90 lbs. of chemicals (total 360 lbs.) were injected at each location. Groundwater was sampled on 3/1/11 and 3/2/11 at wells MW-13, 15, 16, and 19 to 21 (UST-1 to UST-3 area) and at wells 12, 17, 22 and 23 (UST-4 area). MW-12 and MW-15 were purged only once as they went dry. From Table 1, the results for MW-12, 13, 19 to 21 and 23 were entirely non-detect. MW-15 had 9 non-detects and 6 very low hits. MW-17 had 13 non-detects and 2 very low hits. MW-16 had 12 low to very high (370 ppb) exceedences with 96 ppb of benzene. The comparatively low benzene concentration is attributed to the dilution of the groundwater by the injected chemical solution. 8/26/15 - Raphael Ketani. I was informed today by Mr. Hussein that he had received a phone call from a person who claimed to be a potential buyer and developer of the site. This person stated that he would tear down the building and build another facility. He wanted to know the environmental conditions of the site and below the site. Mr. Hussein told me that he had explained the environmental conditions and RCRA issues to this person. I sent an email to Mr. Marineau (leon_marineau@cascades.com; hydraulic engineer; V.P. Environmental Division; (819) 363-5702/cell (819) 357-0626), and Mr. Etra ((718) 340-2136/richard_etra@norampac.com), requesting information regarding this person, the company he represents and the potential sale. 8/27/15 - Raphael Ketani. Mr. Etra called me today. He stated that a work plan will be sent to the DEC

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

soon for conducting geophysical and soil boring work in the vicinity of MW-16. He assured me that despite the possibility of the sale of the property, NORAMPAC will still conduct the work and remediate the benzene - if possible. There exists a non-binding letter to sell right now. There will not be any demolition. The building will be used as is by the prospective buyer. If the sale takes place, it will happen 4 to 8 months in the future. The potential buyer is Steel Equities. They own many properties in the area. They don't make steel - it's just their name. 9/10/15 - Raphael Ketani. I reviewed the FPM Group 8/27/15 work plan for conducting a geophysical survey and for conducting a series of soil borings in the northern part of the loading dock where MW-16 is situated. The work plan also stated that monthly inspections will take place at MW-18 in order to see how much product is in the well and in order to remove any accumulated product. I found the work plan to be acceptable and sent an email to Mr. Etra, Mr. Loyst and Mr. Marineau approving the work. 10/28/15 - Raphael Ketani. I received a call from Chris Wenslee (?) of ERM (631) 756-8920 today. He said that he represented a potential buyer of the property. He wanted to know what were the implications of the unsigned Stipulation Agreement from 2012. I told him that once an R.P. gets a Stipulation Agreement, they are still legally responsible for cleaning up the spill whether they sign the stip or not. Mr. Wenslee asked whether the August 2015 work plan had been approved by the DEC. I told him that I had approved it on 9/10/15. With that, the conversation ended. 11/2/15 - Raphael Ketani. I received the following email today from Mr. Mody of the FPM Group: We are scheduled to perform the boring program phase work for UST 1, 2, 3 at the above-referenced site on Thursday (Nov 5th) and Friday (Nov 6th). 12/7/15 - Raphael Ketani. I reviewed the FPM 12/4/15 Spill Investigation Report (Boring Program Results Report). The geophysical survey was performed on 9/22/15 in order to locate the utilities and any anomalies in the planned boring area. The survey was performed at the outside utility area, in the truck loading bays area and at the elevated loading platform area. The utilities were identified, but not any anomalies due to the presence of a one foot plus concrete slab. Thirteen (13) borings were conducted (B-1 to B-13) on 11/5/15 and 11/6/15. The borings were installed in the northern half of the truck loading bay area and the elevated platform area. No borings were conducted in the outside utility area as this was deemed too risky. Most of the borings were continued to 15 feet below grade. Two samples from each boring were collected. One from the dirtiest sample and one from the soil-groundwater interface. After this, temporary wells were constructed. A groundwater grab sample was collected from each boring location. After this, the borings were plugged. There were no exceedences of the CP-51 industrial soil standards. Eight (8) of the water samples had exceedences of the TOGS 1.1.1 standards. The highest groundwater exceedences were in the samples from B-10 and B-12 in the vicinity of the abandoned truck maintenance pit (abandoned 2006) and the northernmost abandoned fueling station (removed 1990). The majority of the high groundwater analyte concentrations were in the north area of the loading bays in proximity to the abandoned truck maintenance pit and the northernmost abandoned fueling station (B-8, 10, 12 and 13). The results suggest groundwater contamination in the north area of the loading docks. FPM proposes to conduct an oxygen release material injection program. They will focus on the groundwater contamination in the northern area of the loading docks (this area was never treated). They will mix

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

RegenOx and ORC and inject the solution in several general areas. The injections will take place on the north side of the USTs, west of the utility area and in the northernmost loading dock area. The focus will be the former maintenance pit and the former fueling area. They will inject at 17 locations over the course of 3 days. The drilling will take place to 20 feet bgs (10 feet into the groundwater). Both the soil and the groundwater will be treated. Then they will monitor the progress of the injections by collecting groundwater from MW-16. At MW-18, well monitoring took place on 9/22/15 and 11/6/15. During both occasions, the PRB was emptied and product was collected. FPM recommends quarterly visits to the site in order to monitor the product thickness. The VOC soil contamination was highest at B-10 (in the former maintenance pit; 14'-15' interval). There was 180 ppm of total xylenes, 130 ppm of 1,2,4-trimethylbenzene, 38 ppm of 1,3,5-trimethylbenzene, 24 ppm of naphthalene, 21 ppm of toluene and 19 ppm on n-propylbenzene. At B-12 (west of the former maintenance pit and north of the former fueling area; 13'-14' interval), there was 9.4 ppm of ethylbenzene, 9.4 ppm of n-propylbenzene and 3.6 ppm of total xylenes. The soil samples for B-7, 8 and 13 (south of the former maintenance pit and south of the former fueling area, respectively) were taken from the 12' to 14' interval and were mostly non-detects and hits below the CP-51 unrestricted residential standards. B-9 (in the former maintenance pit area; 12'-13' interval) had mostly non-detects with some low hits. B-6 (south of the maintenance pit area) had mostly non-detects with some very low hits. The groundwater contamination was highest at B-10 with 15,000 ppb of total xylenes, 6600 ppb of toluene, 4700 ppb of 1,2,4-trimethylbenzene, 3800 ppb of 1,3,5-trimethylbenzene, 3900 ppb of benzene, 2900 ppb of ethylbenzene, 1000 ppb of naphthalene and 460 ppb of n-propylbenzene. B-12: 5 extremely high exceedences (1000 ppb or higher; 6900 ppb total xylenes), 3 very high exceedences (200 ppb to 999 ppb), and 2 moderate exceedences (26 ppb to 99 ppb). B-8: 2 extremely high exceedences to 1600 ppb, 5 very high exceedences to 910 ppb, 1 high exceedence (100 ppb to 200 ppb), 5 low to moderate exceedences (6 ppb to 99 ppb). B-7: 3 extremely high exceedences to 2500 ppb, 2 very high exceedences, 1 high exceedence, 5 low to moderate exceedences. B-13: 2 extremely high exceedences to 1200 ppb, 4 very high exceedences, 1 high exceedences, 5 low to moderate exceedences. B-6: 2300 ppb benzene and 11 low hits. I reviewed the boring logs. The descriptions were mostly of grayish brown silty clay. Sometimes brownish or grayish silty sand was indicated on the logs. The soil descriptions were short. The grayish soil began at about 5 feet below grade at each location and continued deeper into the subsurface. The descriptions suggest the presence of the original marsh sediments. I approved the report and the plan to do the treatment solutions and the quarterly groundwater monitoring at MW-18. 2/4/16 - Raphael Ketani. I received a call today from Brett McGovern. He said that he wasn't with an environmental advocacy group or a consulting company. He did say that he was doing a search and the spill number for this site came up. He wanted to know what was currently taking place at the site. I told him that in November 2015 some soil borings were done to delineate a contamination hot spot in the loading dock area of the main building. I added that the contamination was not migrating and so the impact to people and the environment was very limited. Also, I told him that the present plan was to treat the hot spot. He asked whether the site sat on fill. I told him that the whole area was built up on fill and that the area

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

used to be marsh land. I added that it wasn't clear whether the solution injections will remove the contamination. I mentioned that due to the location's proximity to the loading dock, excavating the fill and soil was not possible. Mr. McGovern asked whether the site was being contaminated by the spill at the WLK site which is upgradient. I told him that the upgradient wells for the NORAMPAC site did not show the presence of the chlorinated solvents which are contaminated the WLK site. I added that, from the few documents I had read regarding the WLK, it didn't seem like the contamination was migrating. I told him that the WLK site was a superfund site. He asked to speak to Jane O'Connell and so I gave him her number. After this, the conversation ended. 3/14/16 - Raphael Ketani. I received and email today from Mr. Mody (631) 737-6200, ext 220/ r.mody@fpm-group.com. In his email, Mr. Mody stated that FPM had further evaluated the solution injection plan and had decided to inject a combination of RegenOx and ORC Advanced over the course of multiple rounds. The northernmost area inside the loading dock where the highest groundwater contamination was found will receive 3 rounds of injections while the southern area will receive 2 rounds of injections. The first round of injections will take place from March 21st to March 24th. I found this change in the treatment plan to be acceptable. 5/27/16 - Raphael Ketani. I contacted Mr. Marineau (leon_marineau@cascades.com; (819) 363-5702/cell (819) 357-0626), Mr. Etra ((718) 340-2136/richard_etra@norampac.com) and Mr. Mody ((631) 737-6200, ext 220/r.mody@fpm-group.com) regarding remedial progress at the site. 5/31/16 - Raphael Ketani. Mr. Mody sent me the following update today by email: Two rounds of injection have been completed at the site. Round 1 was performed in March and included RegenOx injection at 24 points in the loading bay area. Round 2 was performed in April and included RegenOx injection at 12 points in the northern-most area inside the loading bay and injection of RegenOx and ORC Advanced material at 12 points in the southern area of the loading bay. Groundwater sample from well MW-16 was collected prior to each round. Round 3 which will include injection of RegenOx and ORC Advanced material at 12 points in the northern-most area inside the loading bay is scheduled to start tomorrow. A final report summarizing the work performed as part of this injection program will be prepared and submitted to DEC upon completion of Round 3. 7/6/16 - Raphael Ketani. I reviewed the FPM Group 7/6/16 Remedial Action Report. ORM injections were performed in the vicinity of USTs 1, 2 and 3. The soil and groundwater in the area of MW-16 have only a little contamination. Free phase product is not present. A solution comprised of a combination of RegenOx and Oxygen Releasing Compound Advanced (ORC) was injected in the loading dock area as 3 separate rounds. Round 1 was performed from March 21 to March 23, 2016 and on March 28, 2016. A mixture of 60 lbs. of Part A and 30 lbs. of Part B was injected at each location. A total of 1440 lbs. of Part A and 720 lbs. of Part B was mixed with 3360 gallons of water. The injections could only take place initially for 3 days as the treatment solution started to come out of the ground through cracks in the pavement. Each injection point had been drilled to 20 feet bgs (10 feet into the water table). The locations were 8 to 10 feet apart. Round 2 was performed from April 18 to April 22. A total of 24 injection points were installed. A similar mixture of treatment solution was used during this round. However, it included 50 lbs. of ORC Advanced at each location. The total amount of material injected included 1440 lbs. of Part A, 720 lbs. of Part B and 600 lbs. of ORC. This was

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

mixed into 3720 gallons of water. Round 3 was performed from June 1 to June 2. A total of 12 injection points were used. The treatment solution mixture was similar to the one used during the first round. A mix of 60 lbs. of Part A, 30 lbs. of Part B and 50 lbs. of ORC were injected at each location. A total of 720 lbs. of Part A, 360 lbs. of Part B and 600 lbs. of ORC were mixed in 1860 gallons of water. At the UST 4 area, monitoring was performed from 3/21/16 to 6/1/16. Free phase product was bailed by hand. Groundwater monitoring took place before each round of injections. Sampling was performed for VOCs on 3/21/16, 4/18/16 and on 6/1/16. As shown in Table 1 of the report, there still were many high exceedences of the TOGS 1.1.1 standards. Overall, the results for the 6/1/16 round were about the same as the 4/24/15 round, which took place before the treatments. The only real improvement was a drop in the benzene concentration from 1300 ppb (4/24/15 round) to 550 ppb in the 6/1/16 round. When comparing the results of the two rounds, it appears that some of the VOC concentrations increased in the 6/1/16 round. FPM recommends conducting 3 more quarterly rounds of groundwater monitoring at MW-16. They also recommend making quarterly visits to the site to remove product from MW-18. I sent a response email stating that the Department was approving the report and the recommendations. 2/24/17 - Raphael Ketani. As the third quarter and fourth quarter 2016 monitoring reports were never received, I sent an email to Mr. Marineau (leon_marineau@cascades.com; (819) 363-5702/cell (819) 357-0626), Mr. Etra ((718) 340-2136/richard_etra@norampac.com) and Mr. Mody ((631) 737-6200, ext 220/r.mody@fpm-group.com) requiring the submission of the documentation. Later, Mr. Etra responded by email and stated that groundwater sampling had taken place during September and December 2016. The next round will take place during March 2017. He will followup with FPM. 4/6/17 - Raphael Ketani. I reviewed the FPM Group 4/5/17 Remedial Action Report. ORM injections were performed in the vicinity of USTs 1, 2 and 3. The soil and groundwater in the area of MW-16 have only a little contamination. Free phase product is not present. A solution comprised of a combination of RegenOx and Oxygen Releasing Compound Advanced (ORC) was injected in the loading dock area as 3 separate rounds. Round 1 was performed from March 21 to March 23, 2016 and on March 28, 2016. Round 2 was performed from April 18 to April 22. Round 3 was performed from June 1 to June 2. Groundwater monitoring for VOCs only took place at MW-16 on 9/1/16, 12/7/16 and on 3/6/17. As shown in Table 1 of the report, there is a generally decreasing concentration trend for the analyte concentrations. Benzene was 150 ppb in the 3/6/17 sample, which was a threefold increase from the previous round, but the analytical results for the other analytes in the sample were similar to those of the previous two rounds. At well MW-18 in the UST 4 area, monitoring was performed on 9/1/16, 12/7/16 and 3/6/17. Free phase product was bailed by hand during the December and March visits. Product thickness was 0.30 feet on 12/7/16 and 700 ml of oil was recovered. Product thickess was 0.35 feet on 3/6/17 and 600 ml of oil was recovered. FPM requested that the DEC close the spill case based upon the decreasing analyte concentrations in the water samples from MW-16. However, there was still about 4 inches of product at MW-18. In light of this, I called Mr. Mody [(631) 737-6200, ext 220/r.mody@fpm-group.com] and asked her how she knew that there was 0.30 feet of product in MW-18. She explained that they measure the thickness of the product using a probe. They also look at the bailer which hangs in the well during the quarter and see how

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

much oil is in the tube. I remarked that #6 oil has a tendency to smear and so it often looks as if there is more oil than is present. Ms. Mody stated that she will talk to her supervisor and others in the hydrogeology group and see what they think. I told her that sounded like a good idea and to send me an email discussing what they think about the actual thickness of the oil. She said she will. Later, I sent Mr. Mody an email restating the above and also indicating that an alternative to this problem may be the conducting of a sensitive receptor survey combined with a feasibility study for removing additional product. This would be presented to the DEC as one report. 4/7/17 - Raphael Ketani. Mr. Mody sent me an email today stating that UST-4 once had gasoline, but was later converted to diesel fuel in the 1970s. She added that the bailer will be removed from the well and the product will be bailed by hand. They will revisit the site in 2 weeks to observe the product thickness. After this, they will report their findings to the DEC and discuss with staff at the Department what the next step should be. I responded by email and stated that this plan was acceptable to the Department. 6/22/17 - Raphael Ketani. Mr. Mody sent me an email with 3 attachments. One was the York Analytical Labs 6/8/17 product fingerprinting report. The second was the May 2017 Product Recovery Log Sheet dated 5/24/17. The final document was the June 2017 Product Recovery Log Sheet dated 6/8/17. Mr. Mody stated in his email that FPM was on site on 5/24/17 and measured 0.25 feet of product in well MW-18. FPM returned on 6/8/17 and measured 0.21 feet of product. The fingerprinting report indicated that the product was a mixture of either #2 oil or diesel fuel and weathered gasoline. The May 2017 Product Recovery Log Sheet listed the recovery of 450 ml of oil. The June 2017 Product Recovery Log Sheet listed the recovery of 400 ml of oil. 10/26/17 - Raphael Ketani. As no product recovery reports had been received since June 2017, I sent an email to Mr. Marineau (leon_marineau@cascades.com; (819) 363-5702/cell (819) 357-0626), Mr. Etra ((718) 340-2136/richard_etra@norampac.com), Mr. Mody ((631) 737-6200, ext 220/r.mody@fpm-group.com) and Mr. Loyst (631) 737-6200 x 208/k.loyst@fpm-group.com requesting the missing reports for July to September 2017. 10/31/17 - Raphael Ketani. Mr. Etra called this afternoon. He stated that Norampac had forgotten about the need to continue the monitoring and to submit the associated reports. He added that the environmental contractors will go out to the site tomorrow to check on the presence of product. A contract will be signed with them for performing the monitoring and product collection to the end of 2018. Mr. Etra said that he wasn't sure where the oil was coming from as they had dug out the area even to below the footings. I told him that the oil may have collected in the utility conduit nearby. I added that it was very hard to collect #6 oil or degraded diesel or degraded #2 oil as these are thick liquids. Mr. Etra responded that the product was weathered diesel. With that, the conversation ended. 11/1/17 - Raphael Ketani. Today I received the FPM 11/1/17 groundwater monitoring report for well MW-18 at UST-4. The depth to water was 8.38'. The product thickness was 0.23' and the amount of product collected was 350 ml or 0.09 gallons (1ml = 0.000264172 gallons) or 11.8 oz (1ml = 0.033814 oz). 11/6/17 - Raphael Ketani. Mr. Etra sent me the FPM Monthly Monitoring Agreement for gauging well MW-18 and collecting product. In the letter, it is mentioned that the contract term will extend to the end of 2018, or until the pending sale of the property takes place. Mr. Etra had signed the agreement page on 11/6/17. I had no comments. 12/6/17 -

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

Raphael Ketani. Today I received the FPM 12/5/17 groundwater monitoring report for well MW-18 at UST-4. The depth to water was 8.35'. The product thickness was 0.15' and the amount of product collected was 200 ml or 0.05 gallons (1ml = 0.000264172 gallons) or 6.8 oz (1ml = 0.033814 oz). 2/12/18 - Raphael Ketani. Today Lindsey Thomas of EPM (Environmental Program Management) [founding partner/(909) 557-0102/lthomas@epm-llc.com] called me. She stated that she represented the new owners of the site, LBA Realty, and wanted to set up a conference call this week. I asked her for the owner contact information, but she said that she didn't have it. I asked her for the date of the purchase and she didn't have that, either. I explained to her that the only thing holding up closing the spill case was the persistent presence of oil in MW-18. I added that if someone could figure a way of more efficiently collecting the product, then maybe the DEC could close the spill case. Ms. Thomas said she agreed and that was one reason for the conference call. I gave her the times when I would be at my desk this week. She said that she will send me an email indicating the preferred time for the call based upon the time slots I had just given her. With that, the call ended. Later, Ms. Thomas sent me an email asking whether a conference call at 2PM on 2/13/18 would be alright. She indicated that the following people would participate in the conference call: Michael Coppola with LBA Realty - representing the new owner Rob Crespi with Chiesa Shahinian & Giantomasi - legal counsel Eric Weinstock with Amec Foster Wheeler - Environmental Consultant I responded that the date and time were fine. 2/13/18 - Raphael Ketani. The conference call took place as planned. In attendance were Ms. Thomas, Michael Coppola and Eric Weinstock. Mr. Weinstock did the majority of the talking and explained what the tentative plan of action would be. His thoughts were that Amec Foster Wheeler would use BioSolve Pinkwater to mobilize and flush out the remaining product. Injections and solution/product recovery would take place once per month. Mr. Weinstock asked whether I was familiar with this surfactant. I told him that I was, but that I had seen mixed recovery results with its use. I added that the efficiency of recovery depended on the permeability of the soil or fill material and the thickness of the product. Mr. Weinstock asked where I had seen it work well. I told him that it worked well with fresh #2 oil spills in the outwash sands of southern Brooklyn. However, where groundwater was isolated or the product was weathered, recovery was minimal. I told everyone that they should put together a letter work plan with a schedule stating what exactly they want to do and the DEC would look at it and decide whether it makes sense. I told everyone that this project is near the end and there has been a decreasing trend with the amount of oil recovered. Mr. Weinstock stated that this is why they want to use the BioSolve. Ms. Thomas stated that FPM was at the site on 1/3/18 and they found 0.11' of product on the water table. They recovered 250 ml of oil (8.45 oz; 1ml = 0.033814 oz). I stated that this indicated that the oil thickness had stabilized and that the spill case would not close so quickly. I added that the increase in the amount of recovered oil may be due to the water table dropping. I also stated that the DEC would like to see monthly product recovery. Mr. Coppola said that I will receive the letter plan with the new owner contact information and the date of sale. I stated that we didn't need a hard copy, just a pdf attached to an email. We will take a look at it and give a quick turnaround. With that, the phone call ended. Later, Ms. Thomas sent me an official

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

letter from EPM listing the new owner's name and contact information. The property was sold on 1/30/18. The new owner is: 55-15 Grand Avenue Property, LLC c/o EPM-LLC 115 E. Sunset Drive South Redlands, CA 92373 (909) 557-0102 LTHOMAS@EPM-LLC.COM Attn: Lindsey Thomas 2/21/18 - Raphael Ketani. Eric Weinstock of Wood PLC [(347) 836-4343/eric.weinstock@woodplc.com] sent me the Amec Foster Wheeler Environment & Infrastructure, Inc. Remedial Action Plan dated 2/20/18. The plan was specifically designed to address the continuing presence of product at MW-18. A 5 gallon aqueous solution of 5% BioSolve will be poured down MW-18. Once pouring has been completed, the solution will be agitated with a surge block. The process will be repeated until the well will no longer accept additional liquid or a total of 50 gallons of solution has been introduced to the well. Then the well will be left unattended for 7 days. After this period of time, a vacuum truck will be utilized to withdraw as much liquid as possible. The vacuum collection will be repeated for 3 months. If there is no free product in MW-18 during this time, then a progress report will be written and submitted to the DEC. I approved the RAP without comment and asked for a task schedule. 2/22/18 - Raphael Ketani. Today I received the task schedule for the remedial work plan. I reviewed the schedule. Biosolve injections will take place on 2/28/18, 3/14/18 and 3/28/18. Pump outs will take place on 3/7/18, 3/21/18 and 4/4/18. The remedial report will be submitted to the Department on 4/18/18. I found the schedule to be acceptable without comments. 4/16/18 - Raphael Ketani. On 4/12/18, I received the Amec Foster Wheeler (AFW) 4/12/18 Quarterly Report and Request for Spill Closure for well MW-18 at UST-4. On 3/8/18, a product layer 0.01 feet thick (sheen) was noted (the product thickness on 2/28/18 was 0.13 feet). Due to the presence of the product, a VEFR event took place. More than 20 gallons of water was removed. Surfactant injection followed by VEFRing was conducted 2 more times after this date. As listed in the well gauging table on page 8 of the report, product was not detected on 3/14/18, 3/20/18, 4/2/18 and 4/9/18. In consideration of the absence of product during the last 4 gauging events, I determined that the spill had been remediated to the extent feasible. Therefore, I determined that any residual contamination would not be a threat to the public or the environment. I closed the spill case effective today. A spill closure letter was sent to: "

Remarks: "(4) 550 GALLON TANKS FAILED HYDROSTATIC TEST. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was MILLER 2-8-94 @1115hrs, Responder Miller was dispatched to spill at 55-15 Grand Avenue, Maspeth, Queens. Spill No. 9313195 (1,000-gal. No. 2 oil) was called in yesterday at 1531hrs but occurred @1400hrs. Reportedly, contractor Milro was on site with vac. truck. @1200hrs, Miller arrived on site and met DEP, as they departed after issuing failure to notify. Milro had been vacking up spill but they were waiting for additional personnel to begin mop & squeegee of 2-ASTs (16 K & 14K gal.) on cradles in vault with concrete walls and floors; Star operations man, R. Etra, claimed to have just called in another company to evaluate the ASTs and possibly reline. Milro (Gordon) called me later in day at office to update: both AST vaults were impacted; Milro vacked out 7,000-gallons of No. 2 oil w/10% water - disposed at BCF; apparent high water in vaults; Milro had also cleaned up an earlier No 6(?) spill 5 to 6 (?) weeks earlier in same tank vaults. 8/8/01, FPM Report provided additional information on spill incident noting concrete tank room floor is approximately 12 to 15 ft. below water table. "
Remarks:	"CONTAINED IN TANK ROOM - MILRO IS ON SCENE (516)379-6100"

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

STAR CORRUGATED BOX CO INC (Continued) **1000351051**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
OSHA ESTABLISHMENT
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FEDEX (Continued) **S106004598**

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 10/15/04-Vought-File review by Vought: Access Agreement-7/10/02. Access agreement for FedEx to remove USTs and portion of tankfield on adjacent property. Letter from Testwell Labs(Pearce) to FedEx(Swart)-7/10/02. Work proposal for installation of nine soil borings, field screening of soil samples, conversion of three of the borings into monitoring wells, quarterly sampling of the wells and further excavation of the soil and piping. Letter from Testwell Labs(Pearce) to DEC Vought-7/22/02. Soil samples were taken from the walls and groundwater after the underground fuel storage tanks and surrounding had been removed... Testwell recommends: 1)backfilling of UST excavation 2)SVOC's are due to fill material 3)if wells are deemed necessary they are to be installed at a later date after site work (piles and foundations) is complete 4)remaining vent lines terminate at surface level and remaining contaminated soil on adjacent property should be removed. Letter from Gannett Fleming (Ernst) to DEC Vought-8/13/02. This letter is intended to inform the NYSDEC of the projected site remediation activities. Based on the endpoint soil data (samples WSW and SSW no further action is recommended for the soil beneath facility footprint which is currently under construcion . No groundwater monitoring wells are proposed inside the facility. Gannett Fleming will provide a comprehensive site investigation report on both the UST removal and for the black tar like substance found in the southwestern portion of the site . Report from Gannett Fleming to DEC Vought-8/28/04. This letter provides a summary of the additional investigation activities and sample analysis that have taken place..... Removal of twenty (550-gallon) gasoline USTs and 900 tons of impacted soil. See above 7/22/02 entry for endpoint analyticals. Soil analyticals show 7750ppb 1,3,5-trimethylbenzene(WSW Wall) and 6470ppb xylene(WSW Wall), 110ppb benzene(vent x bottom), 110ppb benzene(Vent x sw), 120ppb benzene(n wall composite), 5900ppb 1,3,5-trimethylbenzene(n wall composite), 11000ppb 1,2,4-trimethylbenzene(n wall composite). Groundwater analytical from one well shows 40ppb benzene and 26ppb xylene. Black stained soil exhibiting a strong petroleum odor was observed adjacent to the southwestern portion of the existing warehouse . Seven test pits were dug to delineate the stained soil but no groundwater samples were collected. Report recommends: 1)no further actions for soils south and west of the former UST area 2)additional delineation north and east of the former UST area via Geoprobe 3)installation of six montoring wells (two upgradient and four downgradient). Investigation activities will be provided to DEC in a supplemental site investigation report. Soil analyticals shos PAH exceedences throughout site due to fill material. Report from Gannett Fleming to DEC Vought-6/8/04. This letter report documents the results of investigative activities conducted.... A review of historic Sanborn maps indicate a Brooklyn Union Gas bulk petroleum storage and distribution terminal was present in the southwestern portion of the site in 1951. Installation of six monitoring wells. An additional well was installed to replace a well destroyed in the tankfield excavation. Groundwater at a depth of 8' below grade. ..groundwater flows to the north in the northern portion of the site. Groundwater flows converge to the east in the southern portion of the site . Groundwater analyticals show 21ppb ethylbenzene(MW1), 13ppb 1,3,5-trimethylbenzene(MW1), 97ppb napthalene(MW1), 10ppb benzene(MW2), 7ppb ethylbenzene(MW2), 93ppb napthalene(MW2), 20ppb benzene(MW7), 7ppb ethylbenzene(MW7), 35ppb xylene(MW7), 52ppb

FEDEX (Continued) **S106004598**

napthalene(MW7). Soil analyticals showed no VOC exceedences and SVOC exceedences attributable to fill material. Report recommends: 1)no further action with respect to soil 2)no further action for onsite groundwater due to poor regional groundwater quality . Report requests no further action. DEC requires: 1)one full year of groundwater monitoring prior to closure. 10/18/04-Vought-Sent letter with above requirement. 9/27/05 - Obligado - SITE TRANSFERRED FROM VOUGHT TO OBLIGADO 9/30/05 - Obligado - Called Manfred Bohms, left message. 10/03/05 - Obligado - Spoke with Manfred Bohms (516) 671-8440. Said that a final quarterly monitoring report should be received by Department in a few weeks. 11/7/05 - Obligado - Review final quarterly monitoring report. Ground water results show 28 ppb benzene (MW1), 28 ppb ethylbenzene (mw1), 10 ppb xylenes (mw1), 3 ppb benzene (mw3), 34 ppb benzene (mw7), 6 ppb toluene (mw7), 32 ppb xylenes (mw7), 150 ppb napthalene (mw7). Conclusions: GW data indicate ground water contmaination is stagnant. GW flow and quality have remained consistent throughout monitoring program. Stagnant gw plume indicate groundwater impacts representative of regional groundwater quality . Requests no further action. Will discuss with Joe Sun. 12/22/05 - Obligado - Spoke with Koon. Approves NFA. Minor residual contamination possibly coming from offsite - former Brooklyn Union is across the street. Spill closed. Letter sent. "

Remarks: "they were excavating a previously closed tank & came across it by the piping - they will excavate & stock pile the soil"

DEC Memo: "9/30/2020 - Feng - Desk Duty in office. Spoke to Nancy Wagner of Miller Environmental. The correct address is 287 Maspeth Ave, Brooklyn. It is a National Grid property. They were doing a fire test today. The fire retardant form, a baking soda like chemical was spilled on the pavement of the basement. The facility is equipped with a gas pump. The chemical material was using in the fire test and spilled on the ground. No known the quantity it spilled. No impact to the soil and drain. The company who spilled the material will vac it up and remove it. She will call them for updates and will respond to my email. Nancy Wagner Miller Environmental 631-506-9144 NWagner@millerenv.com Received photos from Nancy Wagner. It is the dry chemical or fire retardant material, fell from the overhead fire suppression system at the gas pumps. As per R. Austin, it is not something DEC would respond. Spill is closed. "

Remarks: "unk amount of product freed. clean up pending."

Contact Name:	CHRIS MORRIS
DEC Memo:	"10/2/20 - Kim - Desk Duty - I called Chris with GEI who stated that this spill is at a State Superfund site; DEC-Albany PM: Greta White. The spill that was called in is not directly related to the Former MGP site. In the southwest corner of the site there are 7 USTs (4 in one bank and 3 in another) that were associated with a former varnish company that closed in 1933. The tank systems have been out of service for approximately 80-90 years. As part of the GEI Work Plan, they investigated the USTs and dug some borings and test pits. In the soil from the borings, GEI found some staining and high PID readings and in a test pit, the water had a sheen. The tanks are supposed to have stored turpentine. After GEI pulled that tanks and inspected them, they found a few inches of water and a small amount of product. The product smelled almost like fuel oil with a hint of a solvent smell. These tanks are located beneath the building foundation so their removal would be complicated. 12/2/20 - Kim - I received a call from DEC-Albany PM Greta White. This spill case is being consolidated and will be managed by DEC White under Remedial MGP Site no. 224052, K - Greenpoint MGP - Energy Center. This spill case is closed."
Remarks:	"superfund site - cleanup pending - under investigation"

Site Description:	"Location: The site is a large parcel located along Newtown Creek at 287 Maspeth Avenue in Brooklyn,NY in Kings County.It is bounded ny Newtown Creek to the east, Maspeth Ave. to the south, Vandevoort Ave. to the west, and Lombardy St. to the north. Site Features: The site is currently known as the Greenpoint Energy Center, and houses a

K - GREENPOINT MGP - ENERGY CENTER (Continued) **S104787368**

major liquefied natural gas storage facility and compressor station, an operations center for KeySpan's distribution and service units, and a warehouse facility. Current zoning and land uses: Surrounding land uses are mixed industrial, residential, and commercial.The nearest residential land use is located adjacent to the northwest corner of the site. Past use of the site: A large MGP and byproduct coking operation operated on the site from 1928 until 1952. Coal tar has been found in subsurface soils, but the full extent of contamination has not yet been established. The surrounding neighborhood also conatins a large petroleum spill, apparently unrelated to the MGP. A VCA to address the northeast corner of the property was listed under V00631. This work was undertaken to allow expansion of the existing liquefied gas facility, and included a relatively small portion of the site. A site-wide RI began in the summer of 2012. The RI will be conducted in 3 phases and is scheduled to conclude in late 2014. Site Geology/hydrogeology: The site is underlain by fill and heterogeneous glacial deposits that include outwash sands with lenticulas silt and till deposits. Bedrock is approximately 200 feet below the ground surface. Groundwater flows northeasterly, toward the Newtown Creek."

Env Problem: "According to the USEPA a preliminary assessment (PA) was prepared for the site dated September 24, 1986. The PA was not submitted or reviewed. A draft preliminary site investigaiton report was submitted to the Department in June 2004 for the northeast corner of the site. This report noted MGP DNAPL found across the site in the shallow depths (0-5 feet bgs) This material caused most of the soil samples to fail standards for several SVOCs including naphthalene, benzo(a)pyrene, and benzo(a)anthracene. The area noted was addressed in an IRM, but should be representative of a best-case for the site as a whole as it was in an area which was not actually part of the MGP operations. These exceedances represent a significant threat to the environment, This material is also known to contribute to groundwater contamination and sediment contamination. The site's location, adjacent to Newtown creek, means there is a potential for DNAPL to be leaking into the creek, contaminating sediments and surface water. A RI is currently ongoing. The first phase, begun in July 2012 is focused on the eastern portion of the site, adjacent to Newtown Creek."

Health Problem: "Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. Per Bart Polozzitti of Keyspan(516-545-5511), major renovations have occurred at the site. The tank may have been removed, he will forward relevant information when gathered. 01/02/07-Zhune got an e-mail from Bart Polozzitti requesting additional time to get the information. He said hopefully he will get it by 02/17/07. Bart Polozzitti cell # 646-2350403 01/09/07 Bart sent the information a tightness test report from Tanknology Corp. and a letter is included. The letter state the following: The subject underground storage tank (361A)located at 287 Maspeth Ave. Brooklyn, New York was tightness tested unsuccessfully on january 7, 1993. The other three fuel thanks on the same facility (Nos. 363, 364 &365) were tested tight on the same day. After repairing the vent connections causing the ullage leak above the level of product, the tank was retested on January 25, 1993 and passed. There was no release at any time to the surrounding environment. Spill Closed "

DEC Memo:	"05/23/17-Hiralkumar Patel. 1:17 PM:- spoke with Brittany. they are removing two USTs: one 4,000 gal gasoline and one 1,000 gal diesel UST. during removal of diesel tank, crew noted some odors and upto 100 ppm on PID in soil. the tanks were located on concrete pad at 9 ft bg. crew has removed concrete pad and noted groundwater at bottom of excavation at approx. 10 ft bg. no sheen or product noted on groundwater. D&B will remove tank piping and dispenser islands and will collect endpoint soil and groundwater samples. two new tanks will be installed at the same location. Brittany Gaddy D&B Engineering and Architects, P.C. Ph. (516) 364-9890 Ext. 3439 email: bgaddy@db-eng.com National Grid **site operator** 175 East Old Country Road Hicksville, NY 11801 Attn.: Michael Lauro Environmental Engineering Ph. (516) 545-2562 email: michael.lauro@nationalgrid.com 1:39 PM:- sent letter to Mr. Lauro requiring submission of spill cleanup report by the end of 06/30/17. letter emailed to Mr. Lauro and Brittany. case assigned to DEC Zhune. 8/1/17- Brittany email-As discussed, attached to this email is analytical data, tables and an end point sample location map for NYSDEC review for Spill No. 1701762. Below is a detailed summary of the work that is taking place during the removal and installation of two USTs at the National Grid Greenpoint Energy Center, located at 287 Maspeth Avenue in Brooklyn. National Grid is in the process of removing a 4,000-gallon gasoline UST and a 1,000-gallon diesel UST. Upon removal of the USTs, the Contractor will install 27 concrete filled piles, pour a bottom slab and install two new 10,000-gallon USTs in the same location. Existing piping will be removed after the new tanks are in place and the excavation backfilled. End point samples will also be collected for piping excavation as requested by DEC. On May 23, 2017 during excavation related to existing tank removal, some soils were identified that appeared to be impacted due to elevated PID readings and a diesel odor. D&B notified the NYSDEC of a historical petroleum release at the site and a spill case initiated. Soil with elevated PID readings was segregated. Upon removal of the USTs, 14 end point samples were collected and analyzed for the tank excavation. Please see attached for a site plan of the existing fueling station that has been marked with approximate end point sample locations. Table 1, which provides a summary of the removed tanks is attached for reference. Table 2, which provides a summary of PID Readings is also attached for reference. Analytical data related to the endpoint sampling indicates that all VOCs were non detect with the exception of sample GBN which has one exceedance. For sample GBN, benzene was detected at a concentration of 250 ug/kg which exceeds for unrestricted use. This concentration of benzene does not exceed for restricted industrial use. There were several SVOC exceedances for unrestricted and restricted use; however, the Site is known to contain historic fill. Soil borings taken from the area near the USTs show historic fill present up to 12-17 feet below grade. Additionally, the National Grid Greenpoint Energy Center is a former MGP site and is adjoined by Newtown Creek, a designated Superfund site to the east. As the DEC has requested that the tank closure

K - GREENPOINT MGP - ENERGY CENTER (Continued) **S104787368**

report include piping excavation endpoint samples, the report cannot be finalized until the new tank installation is complete. However, due to the results of the endpoint sampling below the old USTs, we are requesting NYSDEC review/approval of analytical data provided to close Spill No. 1701762 at this time. A groundwater sample was collected from the base of the former UST excavation. The groundwater sample indicate one VOC (1500 ug/lt Naphathalene)and multiple SVOCs exceedance their repective NYSDEC GWGS. Following the product piping, vent piping and dispensers island removal, five (5) soil sample were collected from those respective areas. All VOC conccentrations were determined to be below their respective SCO's limits. However, the two (2) samples analyzed via EPA Methos 8270, sample 2 and sample 4, exhibited concentrations of several SVOCs above their respective SCOs. On July 30, 2018 I received an email from John Miller and I spoke with him. The email stated that My name is John Miller and I am the NYSDEC project manager for Greenpoint MGP Site (224052). I was informed recently that National Grid is hoping to close out a spill at the site. My understanding is that any contamination that remains related to the spill would be address under the MPG program. I only just to heard of this issue last week, but after speaking with Grid it sounds like reasonable approach. I wanted to confirm with you whether you agree or not. Do you have any issues or concern?. Based on John Miller's email that any contamination that remains related to the spill would be addressed under the MPG program # 224052 this spill is closed. Spill closed. "

DEC Memo:	"3/27/13 AFrischeisen intern TTF letter sent. 8/25/14 TJD File review. 15,000 gallon UST failed a tightness test associated in preperation of a planned tank abandonment as the facilty has

PEPSI - TTF (Continued) **S112810221**

converted from #2 fuel oil to natural gas and the UST is no longer necessary. Following the tigtness test failure the facility retained the services of a qualified environmental contractor who collected a total of (5) soil samples via interior of tank shell through holes cut solely for this purpose. All laboratory data from sample analysis is within acceptable concentrations. Corroded piping was identified in the tank top sump which is suspected to be the cause of the tightness test failure - all piping was removed as part of the tank abandonment process which was completed following the required site assessment. Closure report has been uploaded to DECDOCS. Based upon the laboratory data provided in support of spill closure - no further action is required. Spill closed. "

Remarks: "repair/retest pending -"

Spiller Company: Universal Used Oil
Spiller Address: 1931 Flushing Ave
Spiller Company: 999
Contact Name: UNKNOWN
DEC Memo: "11/13/14 TJD Inspection scheduled with DLE for 11/14/14 @1300. 11/14/14 TJD Site inspection. Minor housekeeping conditions identified during inspection. Operator had appropriate absorbents and personnel onsite and immediately addresssed conditions identified during site walk through. No tank storage at location - waste oil and antifreeze are stored onsite in 55 gallon drums and picked up by a waste oil contractor at regular frequencies - manifests were available onsite at time of inspection. Reported heavy staining and migration of contaminant to public roadways and municipal sewers was not present at time of inspection -heavy rains the previous evening. Business owner/operator was provided detailed information regarding Best Management Practices and operating an automotive recycling business in compliance with applicable regulations - owner was receptive to guidance provided. No further action required at this time. Spill closed. Notifying agency (NYCDEP) was provided an update regarding inspection findings."
Remarks: "AS per NYCDEP e-mail request for DEC inspection. FW: City of New York - Correspondence #1-1-1033412417 Message to Agency Head, DEP - Hazardous Materials Good morning Tim I just received this correspondence to perform in inspection at this location. It seems to be a complaint regarding ground contamination from oil, gasoline, and other auto chemicals. Can you please scheduled an inspection as well. See attachment. If you need additional information, I can be reached at 347 672-6075. This is to report the company Universal Used Auto for saturating the sidewalk and grounds of their property with oil, grease, gas and car chemicals. They are located at 1931 Flushing Ave, Ridgewood, NY,11385. This business has 2 entrances with the most contamination on Metropolitan ave. That entrance is across street from 48-05 Metropolitan ave. Sidewalk is black from contaminants. The sidewalk behind this company, which is the back entrance to this business and is across the street from 48-05 Metropolitan Ave is completely saturated from oil and grease that runs into the sewers from partially dismantled cars that this company leaves and stores on sidewalk during the day. The sidewalk is total black from years of doing this. When it rains you can see the oil and grease pouring into street from the sidewalk."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 04/12/04 TRANSFERRED FROM SULLIVAN TO SUN. 12/16/2005 - Feng - Reassigned from Sun to Feng as per Sun. (RJF) 10/30/06 Reassigned from Tang to Sun. (MS) 1/25/07: Sun sent letter (TCR and TTF) certified mail to Mehar Singh (Steve's Service Station), 50-02 Metropolitan Ave, Ridgewood, on 1/25/07 requiring that the following be submitted to the NYSDEC by 3/16/07: 1. Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. North arrow and scale must also be included on the site plan. If no tank closure report was prepared or no subsurface investigation was conducted before, the Department requires the following be performed and submitted: 1. Submission of a Tank Closure & Site Assessment Including Soil and Groundwater Investigation Results. (JS/MS) 3/5/07: Received report from Mehar Singh (tel# 718.456.6189), however documents are only for a Stage II Vapor Recovery test (pass) performed in 2005. No additional documentation regarding tank closures in 1999. MS left message on above voicemail. Return call from Jagdeep (718.343.0098), she will send TCR documents asap. (JS/MS) 5/31/07: RP recently suffered heart attack and is in hospital. DEC grants extension for submittal of documents to end of 8/2007. (JS/MS) 8/1/07: MS spoke to Jagdeep who stated that TCR was performed by company that is no longer in operation. She cannot obtain Report and has hired consultant to perform a site investigation. (JS/MS) 9/20/07: MS spoke to Kalgill. He will be visiting site today to locate area of former tank field. If exact location cannot be determined, sanborn maps will be obtained. Once location is marked out, borings will be installed and soil and groundwater samples will be collected to ensure proper closure of former tanks. (MS/JS) 1/15/08: MS left message for Kalgill. 4/15/08: Kal Gill is at site taking soil samples. Geoprobe hit refusal at 24 feet. Will try to get groundwater for VOC (40mL) though unsure if SVOC sampling is possible (requires 1L). (JS/MM) 08/07/08: Spill transferred to Kolleeny/Mandac. - JK 10/03/08: Received SIR from EG&R after being late several months. Only soil borings taken, hit drilling refuse. SIWP from EG&R recommends installing 3 monitoring wells using hollow stem auger. Approved SIWP (JK/MM) 11/26/08: Received pdf of Remedial Investigation Work Plan by EG&R Envt'l Svcs. on 11/21/08 by email from Kal Gill of EG&R (in eDocs); received hard copy on 11/26/08. - JK 12/03/08: RIWP by EG&R approved. Letter sent to Mr. Singh. Revised Figure 2 - Proposed Monitoring Well Locations in eDocs. Figure had MW-3 two times and no MW-2. Remedial Investigation Report due 3/25/09.(JK/KG) 03/23/09: Spoke to Kal Gil and he said he would need an extension to submit the report. The wells were not installed because they hit refusal a couple of times. Tomorrow, when he returns to the office he will submit a request for an extension via email. (JK/KG) 04/21/09: Rec'd call from Kal Gil. He

METRO GAS INC. (Continued) **U001837773**

stated that the wells still have not been installed and the owner plans to remove one of the USTs soon. He will keep me updated me with UST removal and well installation. (JK/KG) 06/01/09: Rec'd call from Kal Gil inquiring about how many samples should be collected if pulling a 550-gallon waste oil tank. I told him he would need to collect a soil sample from each sidewall of excavation and one from bottom of excavation. If water is encountered then a groundwater sample should be collected as well. Samples should be analyzed for TAGM 4046 list of fuel oil parameters. He said there may also be a heating oil tank on-site. He will send me a work plan for removal of tanks. I asked if a PBS registration form was submitted and he said that contractor pulling tanks would be taking care of forms. (JK/KG) 06/04/09: Spoke to Kal Gil, he said the site owner has not yet confirmed that they want the tank(s) pulled. (JK/KG) 06/17/09: Rec'd call from Kal Gil, he said he has not recieved the approval from the site owner to proceed with installing the wells or for the removal of one of the USTs. He said he is meeting with the owner on 6/20 and will call me on 6/22 with an update. Tried to call Jagdeep at 718-343-0098, but mailbox would not accept messages. Called Mehar Singh at 718-456-6189 and left a message. (JK/KG) 06/25/09: Kolleeny spoke to Donna of ABC Tank Cleaning (abctankinc@aol.com). Donna called to inform DEC that fuel oil and/or waste oil tanks would be closed and removed. Kolleeny sent email to Donna regarding their conversation. Hi Donna, Nice speaking with you this morning. As we discussed, once you have removed tanks, excavated as much contaminated soil (if present) as possible, reported new spill (if applicable), taken end-point sidewall and bottom samples from excavation, received lab results, written tank closure report, and received your client's approval to send report to DEC, please email report to me as a pdf file. (JK/KG) 07/02/09: Kal Gil called and said he had not been given approval for tank removal, but had approval for well install'ns. He said he was waiting for tanks to be removed prior to installing wells. Need to call RP, as approved work plan needs to be implemented. (JK/KG) 07/09/09: Kal Gil called on 7/8 and stated that the wells will be installed and he is scheduling the site work. (JK/KG) 07/13/09: Kal Gil called and said the tank removal is scheduled for 7/23/09. (JK/KG) 08/06/09: Kal Gil called; the tank was not removed due to rain and is scheduled for 8/7. (JK/KG) 08/10/09: Rec'd phone message from Kal Gil stating that two tanks were removed on 8/7/09. (JK/KG) 09/03/09: Spoke to Kal Gil, he said EGR will be submitting the tank closure report. I asked him about the wells that need to be installed and he said he needs to contact the drilling company. I asked him if he was waiting for the RP to approve the work and he said he was not waiting for anything from the RP, but had been waiting for the tanks to be removed prior to implementing the approved work plan. Need to follow up with RP if site investigation is not scheduled/conducted.(JK/KG) 10/09/09: Spoke to Kal Gil on 10/8/09 about sites with overdue investigations reports; asked him to send emails explaining delays at these sites. Received email from him: Mr. Kolleeny: As I explained, we recently removed one regulated UST and one non-regulated UST at 50-02 Metropolitan Ave. to accomplish closure of these tanks. We are currently in process of preparing tank closure rpt. Soil sampling indicated that there were no impacts to soil beneath these tanks. Previously, as we informed you, we attempted to install a monitoring well at this facility to determine impacts of former USTs (closed in 1999) to groundwater from former USTs. During drilling, we penetrated as far as 25 feet and

METRO GAS INC. (Continued) **U001837773**

encountered refusal. As you suggested, we tried at 3 separate locations, but did not encounter groundwater. In view of this, we terminated drilling. However, we conducted soil sampling in all 3 borings to determine horizontal & vertical extent of soil contamination. Based on available geological & hydrogeological information, groundwater in area occurs at depth of 50 ft or more. We intend to install deep monitoring well in downgradient direction of former tank excavation. If you have any questions, please contact me. Thank you for your cooperation. - J. Kolleeny 10/13/09: Sent email to Kal Gill of E G & R Environmental: Please provide estimate of when tank closure rpt will be submitted and when deep, down-gradient monitoring well will be installed. Also, please provide email address for your client Mr. Mehar Singh, RP for this spill, so that I can copy him on correspondence regarding this spill case. - J. Kolleeny 11/03/2009: This spill case was transferred to A. Doronova. - AD 12/22/2009: Received an e-mail from Kal Gill saying: Please find attached the report for the Removal/ Closure for 50-02 Metropolitan Ave. A hard copy of the report will be mailed to your office. If you have any questions please contact our office at (732)690-0659. Sincerely, Kal Gill Environmental Engineer/ Project Manager E G & R Environmental (A Division of Universe Resources LLC) 45 Julie Court Somerset, NJ 0887 AD 12/28/2009: Received a hard copy of the UST Removal/Closure report. Will review. AD 02/18/2010: Reviewed the report. It states that on August 7, 2009, one 550 gallon waste oil UST and one 550 gallon heating oil UST were removed from the site. End-point soil samples were collected only from waste oil UST excavation. PID readings were non detect. Analytical results for these samples did not indicated elevated concentrations of VOCs or SVOCs. GW was not encountered in the excavations. based on the soil sampling results, EG&R recommends no further actions for the area of former waste oil UST. AD 06/01/2010: Called and left a message to Mr. Gill of EGR Env. AD 09/12/2011: Called and spoke with Mr. Gill regarding the site. He said that they were not able to install monitoring wells using an auger and hit refusal at 24 feet bgs. He said that depth to regional groundwater is about 50 feet bgs. According to the DEC spill report, this case was opened in reference to a gasoline spill. Initial investigation confirmed soil contamination at 14-15’ bgs at soil boring SB-04 near former and new USTs field. Mr. Gill will look through his files and will call back. AD 02/2012: Sent an e-mail to Mr. Gill requesting site status update info. AD 11/2015: Tried to contact Mr. Gill. Left a message. AD 12/09/2016: Looked for the info for the site in PBS database. There are new phone numbers for the site owner: Sige Realty, Inc. 1475 Franklin Ave Garden City, NY 10121 (516)742-3900 Will contact them. AD 02/07/2017: Called and spoke with Mr. Goldstein of Sige Realty Inc. (516)742-3900. He told me that they have a new site operator. His name is Joseph Macchia (516)933-0700. Had a conference call with both parties. Explained that the spill case for the site is still open, since investigation was not completed at the site, and no wells were installed. Gave my contact information. AD 07/05/2017: Received the following e-mail from Mr. Halpin: Ms. Doronova I just wanted to touch base with you and confirm receipt of this email. I m the PM for the subject site and recently drafted a UST Closure Report for old UST s and one (1) abandonment in place. Please confirm receipt of this email and I will reply with an electronic PDF copy of the UST closure Report. Thank You Justin Halpin Project Manager/Environmental Scientist Berninger Environmental A WRS Environmental Services

METRO GAS INC. (Continued) **U001837773**

Company Sent him the confirmation e-mail. Later received the next e-mail: Great thank you! Please see the attached UST closure Report for subject site. Justin Halpin Project Manager/Environmental Scientist Berninger Environmental A WRS Environmental Services Company Will review the submitted documents. AD 08/04/2017: Reviewed the report. It summarizes the activities associated with the excavation, uncovering, and removal of six (6) newly discovered 550 gallon underground storage tanks (UST s), along with all the equipment and piping associated with the USTs. This project was originally for the purpose of installing a new 10,000 gallon UST, before the six tanks within two concrete vaults were discovered. On May 18, 2017 BEI provided technical direction and oversight during the removal of the newly discovered USTs, which was conducted by Gemstar Construction, Inc. Soil excavation was also conducted by Gemstar and soil was properly disposed of at Soil Safe Inc. Upon removal of the UST s, endpoint sampling was conducted at each tank pit and submitted for lab analysis. The Report also provides a brief discussion on the abandoned 4,000 gallon diesel UST (PBS-001), which was closed in place. Upon preparing for the installation of the new UST, six (6) additional steel 550 gallon tanks were discovered and removed on May 17, 2017. These tanks do not appear to be listed on the NYS-DEC Bulk Storage Database for this property. The tank removal, oversight, and sampling took place during May 16th, 2017 through May 18th, 2017. The six (6) newly discovered USTs were located on the east side of the subject property and to the west of Troutman Avenue. The six (6) steel UST s were installed side by side north to south and were installed within concrete vaults. All of the tanks contained either gasoline or diesel fuel. The USTs contained water that had leaked in from the top of the vault, which was removed and properly disposed of. The USTs were 6 feet in length and 4 feet in diameter and all six (6) USTs appeared to be in excellent condition upon removal. All tanks appeared to be in excellent condition and no signs of fuel leakage were observed, nor did the bottom of the concrete encasement show any signs of leakage. Soil samples were collected upon tanks removal. A total of four (4) samples were obtained from under the tanks. Three samples were collected from locations within the concrete vaults from between and underneath each set of USTs. One sample was taken outside of the concrete vault area. All samples obtained from UST areas are labeled as follows; S-1, S-2, S-3/4, S-5/6. S-1 had a PID reading of 891 ppm, S-2 had a PID of 755 ppm, S-3/4 had a reading of 590 ppm, and S-5/6 had a reading of 1057 ppm. Approximately 408.58 tons of contaminated soil was transported to special facility on May 30, 2017. The analytical data revealed that samples collected at locations surrounding/underneath the USTs (S-1, S-2, S-3/4, S-5/6) detected some minor concentrations of both VOCs and SVOCs, but none of the concentration levels exceeded any of their respective NYSDEC Part 375 SCOs. Conclusions and Recommendations: Six 550 gallon USTs, all equipment and piping associated with the tanks were removed from the the above referenced subject property. Excavation and removal activities began on May 16th, 2017 and concluded on May 18th, 2017. Laboratory analysis of all endpoint soil samples collected from areas surrounding the USTs confirmed the presence of petroleum related impacts, but nothing exceeded the New York State Part-375 SCO s. Given the elevated PID readings on the soil and the nuisance odors, approximately 408.58 tons of soil was excavated from the site and properly disposed of at the Soil Safe facility. Based upon the

METRO GAS INC. (Continued) **U001837773**

laboratory results from the endpoint samples (all below SCO s) and the remedial action (soil excavation) performed, BEI would like to request closure of the NYS spill case # 88-01980. The 6 USTs removed from this site were newly found tanks and were not known at the time when this spill case was reported. The spill was reported when 12 550-gallon tank system failed the tightness test. The case remains open due to an absence of the groundwater data. I also checked this property on our PBS database and it looks like it is not up to date. Called and spoke with Mr. Halpin. Informed him about the PBS records and told him that the recently removed tanks are not associated with the case. Sent him an e-mail. Will discuss the site with J. Kolleeny. AD 09/28/2017: Sent the following e-mail to Mr. Halpin: Hi Justin, I have reviewed the report. The tanks removed in 2017 do not relate to this spill case. The case remains open due to an absence of the groundwater data. I will discuss this site with my supervisor and will inform you on our decision. I also checked this property on our PBS database and it looks like it is not up to date. Please inform your client that he should update all changes to it in a timely manner to avoid fees. Regards, Ainura Doronova - Environmental Engineer AD 11/03/2017: I was forwarded the following e-mail from Mr. Aversa of Albany office: Joe Follow up to our phone discussion regarding six 550 gallon USTs recently discovered and removed under spill # 8801980 for this location. Attached is a pre-printed PBS application. Please add/close the tanks on Section B, 1 tank per line, fill In columns 1-8, and return the completed PBS application (Sections A, B and C)to DEC Region 2 (address pre-printed on top of Section A). No fee is required, unless property ownership has changed since the last registration. Mark any needed corrections. Include a cover letter noting the tank closure/site assessment report has already been provided to the spills case manager. Jack A. Aversa Chief, Registration and Permits Section NYS DEC Division of Environmental Remediation 625 Broadway, 11th Floor Albany, NY 12233-7020 Email: jack.aversa@dec.ny.gov Ph: 518 402-9553 Fax: 518 402-9577 AD 11/08/2017: Called and spoke with Mr. Halpin. Requested to submit a spill closure request with the summary of the all performed actions at the site which should include a site map with depiction of all site-related USTs, current and former. AD 11/15/2017: Received the following e-mail from Mr. Halpin: Ms. Doronova Please see the attached NFA request letter based upon our recent phone conversation outlining all of your requirements. Thank You Justin Halpin Project Manager/Environmental Scientist Berninger Environmental A WRS Environmental Services Company Will review. AD 11/22/2017: Looked at the letter report. It states that while excavating for the new tank installation, six (6) 550 gallon steel UST s were discovered, excavated and removed. The six (6) newly discovered steel UST s were contained in concrete vaults that were also removed during the excavation. Endpoint sampling was conducted at four (4) locations across the span of the excavation. Lab data for each of the endpoint samples collected did not indicate any detections of VOC s (8260) or SVOC s (8270) above unrestricted use Part-375 soil cleanup objectives (SCOs). Approximately 408.58 tons of soil was excavated from tank pit and properly disposed of. The depth to water in this area is expected to be in the 40'+ range with previous attempts by other consultants to collect groundwater samples ending in failure due to multiple refusals, possibly bedrock encounters. Due to the deep nature of the groundwater table, groundwater impacts at this depth are unlikely and the large volume

METRO GAS INC. (Continued) **U001837773**

of source removal (excavation of 408 tons of soil) would prevent any potential future leaching of soil contamination to the underlying aquifer. Based upon the fact that all endpoint sampling data was documented below the unrestricted Part-375 SCOs, the large volume of source material removed/disposed and depth to water at 40'+ below grade, the site in it s current condition is believed to no longer possess any adverse effects to human health or the environment, therefore, closure of the active spill case (88-01980) is requested by the consultant. The submitted site map indicated current and former locations of all site-related USTs. AD 11/27/2017: Discussed the site with J. Kolleeny of DEC. This spill case was reported back in 1988, when 12 550-gallon USTs system failed the tightness test. All these tanks were removed in 1999, but no UST closure report was provided to DEC at that time, and 2 new 4,000-gallon USTs were installed in the same place. Subsurface investigation around the former UST area in 2008, revealed some SVOCs contamination above standards. No groundwater was encountered during the investigation. Refusals were met around 15-20' intervals. Regional groundwater is around 50' deep. 2 550-gallon UST were removed from the site in 2009. No soil contamination was detected in the end-point soil samples. 6 550-gallon UST were discovered and removed in 2017. Approximately 400 tons of soil was excavated and removed off-site. No elevated levels of VOCs were detected in post-excavation end-point soil samples. Based on the lab result and significant depth to regional groundwater, the consultant recommended closure of the spill case. Taking into consideration the submitted data, it was decided to approve closure request. AD 11/29/2017: Issued and sent a closure approval letter to Mr. Goldstein of Sige Realty Inc.: Lon Goldstein Sige Realty, Inc 1475 Franklin Avenue Garden City, NY 10121 GROLTD@MSN.COM This contact info was provided by Mr. Halpin. Case closed. AD "

Remarks: "(12) 550 GALLON TANKS WERE TESTED, INITIAL SYSTEM AIR TEST, NO LEAK RATE, WILL EXCAVATE, ISOLATE AND RETEST."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 4/2/03 TTF LETTER SENT BY TIPPLE. PHONE REQUEST OUT TO OWNER TO CLARIFY IF TANK IS 1100 GAL AS ON REGISTRATION OR 2500 GAL AS PER SPILL REPORT. 6/24/2003-Vought- Spoke with Carol Hinderstein (516-829-5794) who is principle owner. Tenant in process of vacating building. Carol contacted Fenley & Nicol (Courtney). Tank was last in use approximately 20 years ago and is currently not in use. Electric heat in building. Fenly & Nicol will get back to her with proposal. 7/7/2003-Vought-Spoke with Carol who has hired Petroleum Tank Cleaners (718-624-4842). PTC will remove tank and take endpoint samples. For closure NYSDEC requires: 1)site plan 2)work description 3)sample analyticals 4)work invoice. 7/16/2003-Vought-Spoke with Carol who stated that tenant refused access to PTC. Vought contacted tenant's (Sherry Lee-718-417-9880) lawyer (Xian Feng Zhou-718-661-9562) who will call back NYSDEC with information. 7/18/2003-Vought-Site visit by Vought to deliver failure to cooperate letter to tenant. Tenant faxed copy to Xian who will call back NYSDEC with response. Vought inspected basement and no odors or staining were found. 8/1/2003-Vought-Spoke to Mr. Zhou who stated that PTC did not schedule and appointment but did show up yesterday to begin work. Feng requested copy of tank tightness requirement letter. Vought faxed letter on 8/1. 8/4/2003-Vought-Spoke with Carol Hinderstein and PTC gained access twice however performed another site visit on 8/4/2003 and were denied access. Hinderstein will fax copy of letter from tenants lawyers stating that work is not immediate which is contrary to Navigation Law. Vought will call lawyer and PTC to state that NYSDEC will send out ECO's if access is denied after an adequate notification is made by the NYSDEC. 1/7/04-Vought-Spill transferred from Vought to Austin. 01/27/04 - Sawyer - Spill transferred from Austin to Sawyer. 11/28/05- DEc Piper Spoke w/ property owner Dana Antal 570-620- 1313. He stated that work was completed. He will provide the Dept w/ proof. 2/10/06- DEC Piper left message for Dana requesting info. 2/17/06- DEC Piper left message for Dana requesting info,m callback. Staee he has 1 month to provide documentation or and ECO will be sent out to the site. 2/21/06- DEC Piper spoke w/ Mr. Machacyk, representing Dana Atal. He will look into it and get back to the DEPT. 3/15/06- DEC Piper left message for Dana requesting callback. 5/8/06- DEC Piper left message for Dana requesting callback. 5/24/06- DEC Piper recieved call from rep of property. He is looking into it and will provide documentation. 6/1/06- DEC Piper spoke w/ rep for property. He could not determine if soil was examined. DEC sent old ttf letter stating rewirements. If cannot be met, a subsurface investigation must be performed. PBS info needs to be updated. 6/23/06- DEC Piper spoke w/ Mr. Machacyk. Work has begun today and will submit report in 1 month. 8/21/06- DEC Piper reviewed report dated 7/7/06 and received 7/15/06. As per reprot a subsurface

SUPER TRUCK RENTAL CORP (Continued) **U000396204**

investigation was conducted along with the abandonment of the 1,000 gal USt. AS per analytical no VOC's detected and SVOC's below TAGM. Tank was abandoned in place w/ foam. As per report and dociumetation provided to date, this spill is closed. See e-docs if warranted."

Updated By:	JCGRATHW
Site Description:	"Location: The Former W.L.K. Corp. Site (58-30 57th St.) is located near the intersection of Grand Avenue and 57th Street in Maspeth, Queens County, New York. Site Features: The site is identified on the Queens Business Borough Tax Map as Block 2610, Lots 412 and 440 and is approximately 2.01 acres in size. The site is bordered on the north by MTA/LIRR rail lines, on the south by Grand Avenue, on the east by 57th Street, and on the west by a commercial/industrial property. The site is mostly paved, with a small area overgrown with vegetation (former railroad spur) present adjacent to the western portion of the building. Current Zoning and Land Use: Lots 412 and 440 are currently zoned M3-l. The site is currently used as a lumber yard with some offices. The surrounding parcels are currently used for a combination of commercial, light industrial, and transportation. The closest residential area is directly across 57th Street. Past Use of the Site: The northern portion of the site has historically been used by a radiator distribution facility (1930's-1940's), a steel pipe distributor (1950's- early 1970's), corrugated box company (early 1980's), a beer distributing company (mid/late 1980's), and a recycling facility (early 1990's - early 2000's). The southern portion of the site is currently occupied by offices and has been used for several businesses. A lubricating oils company occupied this portion of the site at least from 1936 into the 1970's. Over the years other occupants included an oil company sales office, a milk products company, and an engineering firm. Also, a filling station was located on the site at the corner of Grand Avenue and 57th Street from early 1930's to early 1970's. Site Geology and Hydrogeology: Based on soil collected by continuous sampling activities, stratigraphy along the northwestern portion of the site consists of between 8 and 10 feet of fine to medium sand with trace silt and gravel. Along the northern portion of the property the subsurface material is made up of fill consisting of fine sand and rock fragments. The fine to medium sand/silty-sand in the area of the former rail spur next to the loading dock is underlain by a gray to brown clay that is at least several feet thick. The water table is generally encountered at a depth of approximately eight feet below ground surface (bgs) in either the clay or the overlying sand. The shallow groundwater flow is generally southwest."
Env Problem:	"Nature and Extent of Contamination: The primary contaminants of concern at the site include chlorinated volatile organic compounds

FORMER W.L.K. CORP. (Continued) **S109209067**

(CVOCs), specifically, Tetrachloroethylene (PCE) and 1,1,1-Trichloroethane (TCA) and their respective breakdown products. Soil: Exceedances of standards, criteria, and guidance in the on-site soils include TCE (max. 31 ppm), 1,1,1-TCA (1.1 ppm), PCE (max. 2.6 ppm), and total 1,2-DCE (max. 46.2 ppm). Groundwater: Exceedances of standards, criteria, and guidance in the groundwater include 1,1,1-TCA (max. 16 ppb), TCE (max. 710 ppb), PCE (max. 47 ppb), and total 1,2-DCE (max. 548 ppb). Samples taken off-site, adjacent to the former railroad spur area, revealed exceedances in the groundwater of 1,1,1-TCA (max. 71,000 ppb), TCE (360,000 ppb) and 1,2-DCE (max. 42,000 ppb). Soil Vapor: Elevated levels of VOCs were detected in sub-slab soil vapor and indoor air. The maximum concentrations of PCE and TCE in sub-slab soil vapor were detected in the western portion of the existing warehouse at the respective concentrations of 22 micrograms per cubic meter (ug/m3) and 2,310 ug/m3. The maximum concentrations of PCE and TCE in indoor air were detected in the same portion of the warehouse at the concentrations of 1.8 ug/m3 and 2.5 ug/m3. Sampling indicates that contaminated soil vapor extends off-site with TCE in sub-slab soil vapor and indoor air up to 7,260 ug/m3 and 0.38 ug/m3, respectively. Significant Threat: The site presents a significant threat to the environment due to significant groundwater and soil contamination. PCE and TCA are chlorinated volatile organics that are mobile in groundwater, persistent in soil vapor, and considered carcinogenic. Groundwater was observed approximately 8 feet below ground surface and determined flowing in a southwesterly direction. Contamination has been detected migrating downgradient from the site. "

Health Problem: "Further investigation is needed to assess the nature and extent of site-related contamination and the potential for exposure to site contaminants. The site currently has several buildings and a paved parking lot, therefore, contact with subsurface contamination is unlikely. Exposure to site-related contaminants in drinking water is not expected because the area is served by public water. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion to occur. "

Site Description:	"This property is located in Brooklyn (Block #2962 - lots 1, 5, & 37), and is owned by Rhino Trust (Albert Realty Co.). The site is a vacant lot, except for two, one-story shed buildings in a state of disrepair. The site has a develop- ment history dating back to the early 1900's; site uses have included an asphalt paving company and a lumber company. As a result of an environmental survey of this site conducted in 1988 and 1989, traces of 4-chloroaniline, pentachlorophenol, butyl-ben zylpthalate; di-N-butylphthalate and flouranthene were found. Metals and total petroleum hydrocarbons were also found in the soils, surface and groundwater. Contamination of soils by metals was found to include: silver, barium, cadmium, chromium , iron, lead and copper. Concentrations of metals in the groundwater exceeded groundwater quality standards for lead and iron. Rhino Trust has carried out a supplemental site assessment under a consent order in the summer of 1992. An interpretation of the analytical results from the previous investigation has been inconclusive due to data gaps in the reports. Rhino Trust performed a Supplemental Site Assessment, and the fieldwork was completed in 1994. The PRP has removed the contaminated soils. Hazardous waste is no longer present and significant threat no longer exists."
Env Problem:	"Contaminated soils have been removed but groundwater contamination evidently due to construction and demolition debris (non-hazardous), still exists."

Site Description: "Location: The approximately 1/2 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the northeast corner of the intersection of Lombardy Street and Varick Avenue. Site Features: The site is completely covered by two (2) masonry block buildings. Current Zoning and Land Use(s): The site is zoned for manufacturing. The site is currently utilized as a warehouse. Numerous commercial and industrial properties are located to the north, east, and west of the site. A National Grid energy facility is located south of the site across Lombardy Street. The Brooklyn-Queens Expressway (I-278) is located 1 block north of the site. A residential area is located 2 blocks southwest of the site. Newtown Creek is located 4 blocks east of the site. Past Use(s) of the Site: The Department began a Site Characterization in this area during the Summer of 2011 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular area was specifically targeted for investigation based on its previous use as a lacquer storage facility in the 1930s, as a soap manufacturer from the early 1950s to 1989, and on data collected by the Department during investigations conducted at an adjacent site between 2007-2009 (ACME Steel - Brass Foundry) which indicated the

CHLORAL GROUP (Continued) **S102637940**

	presence of an additional source area along Varick Avenue between Anthony and Lombardy Streets. Site Geology and Hydrogeology: The site is underlain by a sand unit (~110' thick) with a discontinuous clayey silt/silty sand unit within the sand unit, and the Raritan formation. Groundwater is present at a depth of approximately 45-50' below ground surface in the vicinity of the site. Groundwater flows north towards Newtown Creek, which lies approximately 1,600' northeast of the site."
Env Problem:	"Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 8,400 ppb, and in deep groundwater up to 20,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. - Soil PCE has been found in soil up to 23,000 ppm @ 1-1.5' below grade adjacent to a site-related cesspool, which is well above the soil cleanup objective for unrestricted use (1.3 ppm). Significant Threat: The site poses a significant environmental threat due to the ongoing release of PCE from source areas into soil and groundwater and a significant threat to public health due to the concentrations of PCE detected in groundwater and soil, in conjunction with the proximity of occupied structures."
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur in on-site structures should be evaluated. In addition, off-site sampling indicates soil vapor intrusion is a concern for off-site buildings."

PHELPS DODGE REFINING CORP (Continued) **1000291443**

Record Upd: 07/09/2018
Updated By: JHOCONNE
Site Description: "Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. "
Env Problem: "Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethyhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were

PHELPS DODGE REFINING CORP (Continued) **1000291443**

found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117). "

Health Problem: "The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water."

PHELPS DODGE REFINING CORP (Continued) **1000291443**

Site Description: "Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. "

Env Problem: "Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethyhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected

PHELPS DODGE REFINING CORP (Continued) **1000291443**

	in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117). "
Health Problem:	"The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water."

Updated By:	NNCRAWFO
Site Description:	"Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site

PHELPS DODGE REFINING CORP (Continued) **1000291443**

redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. "

Env Problem: "Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethyhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth

PHELPS DODGE REFINING CORP (Continued) **1000291443**

	Creek adjacent to the Site are being addressed separately (see site no. 241117). "
Health Problem:	"The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water."

Name: PHELPS DODGE REFINING CORPORATION
Address: 42-02 56TH ROAD
City,State,Zip: MASPETH, NY 11378
Site Code: 58835
HW Code: 241002
Control Code: 15
Control Type: ENG
Date Record Added: 03/25/2016
Date Rec Updated: 12/01/2020
Updated By: NNCRAWFO
Site Description: "Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial

PHELPS DODGE REFINING CORP (Continued) **1000291443**

purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. "

Env Problem: "Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a, h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethyhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117). "

Health Problem: "The potential for human exposure is limited to physical contact with

PHELPS DODGE REFINING CORP (Continued) **1000291443**

contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water."

Name: PHELPS DODGE REFINING CORPORATION
Address: 42-02 56TH ROAD
City,State,Zip: MASPETH, NY 11378
Site Code: 58835
Control Name: Environmental Easement
HW Code: 241002
Control Code: J
Control Type: INST
Dt record added: 03/18/2016
Dt rec updated: 12/01/2020
Updated By: NNCRAWFO
Site Code: 58835
Site Description: "Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since

PHELPS DODGE REFINING CORP (Continued) **1000291443**

1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. "

Env Problem: "Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a, h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethyhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117). "

Health Problem: "The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by

PHELPS DODGE REFINING CORP (Continued) **1000291443**

fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water."

Name: PHELPS DODGE REFINING CORPORATION
Address: 42-02 56TH ROAD
City,State,Zip: MASPETH, NY 11378
Site Code: 58835
Control Name: Monitoring Plan
HW Code: 241002
Control Code: 31
Control Type: INST
Dt record added: 04/24/2007
Dt rec updated: 12/01/2020
Updated By: NNCRAWFO
Site Code: 58835
Site Description: "Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of

PHELPS DODGE REFINING CORP (Continued) **1000291443**

tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. "

Env Problem: "Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a, h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethyhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117). "

Health Problem: "The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a

PHELPS DODGE REFINING CORP (Continued) **1000291443**

site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water."

Site Code: 58835
Control Name: O&M Plan
HW Code: 241002
Control Code: 33
Control Type: INST
Dt record added: 04/24/2007
Dt rec updated: 12/01/2020
Updated By: NNCRAWFO
Site Code: 58835
Site Description: "Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the

PHELPS DODGE REFINING CORP (Continued) **1000291443**

processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. "

Env Problem: "Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a, h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethyhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117). "

Health Problem: "The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with

PHELPS DODGE REFINING CORP (Continued) **1000291443**

commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water."

Name: PHELPS DODGE REFINING CORPORATION
Address: 42-02 56TH ROAD
City,State,Zip: MASPETH, NY 11378
Site Code: 58835
Control Name: Site Management Plan
HW Code: 241002
Control Code: 32
Control Type: INST
Dt record added: 03/25/2016
Dt rec updated: 12/01/2020
Updated By: NNCRAWFO
Site Code: 58835
Site Description: "Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this

PHELPS DODGE REFINING CORP (Continued) **1000291443**

facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. "

Env Problem: "Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethyhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117). "

Health Problem: "The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related

PHELPS DODGE REFINING CORP (Continued) **1000291443**

contaminants are not expected. The surrounding area is served by public water."

Name: PHELPS DODGE REFINING CORPORATION
Address: 42-02 56TH ROAD
City,State,Zip: MASPETH, NY 11378
Site Code: 58835
Control Name: Landuse Restriction
HW Code: 241002
Control Code: 25
Control Type: INST
Dt record added: 03/25/2016
Dt rec updated: 12/01/2020
Updated By: NNCRAWFO
Site Code: 58835
Site Description: "Location: This site is located in an urban area at 42-02 56th Road in Maspeth, Queens. It is just east of the Kosciuszko Bridge, i.e., the Brooklyn Queens Expressway (BQE). Newtown Creek flows along the southern boundary of the facility. Site Features: In 2004, Phelps Dodge Refining Corporation (PDRC) sold the property to a developer (Sagres Partners) which has subdivided the site into 10 parcels. Site redevelopment is continuing in phases. Capping of several parcels is completed and various parcels have been developed for industrial uses. Current Zoning/Use(s): This site is zoned for industrial purposes. Historical Uses: This site has been industrialized since 1891. PDRC used the facility from 1920-1983 for the production of tri-basic copper sulfate (pesticides), copper and sulfate pentahydrate, and as a copper refinery. Waste sludges from the processes were stored in an unlined lagoon. Plant operations at this facility are discontinued since 1983. In 1986, the PDRC excavated more than 10,000 cubic yards of contaminated soils from a 3.5 acre

PHELPS DODGE REFINING CORP (Continued) **1000291443**

hotspot area, and transported and disposed this material off-site. Site Geology and Hydrogeology: Examination of site geology indicates that in the following stratigraphic units are present beneath the site in descending order: urban fill; silty sand/silt; peat/meadow mat; silt and clay; sand and gravel; and bedrock. The water table ranges from 2 to 15 feet below the ground surface. Groundwater flow is generally to the south towards Newtown Creek. "

Env Problem: "Nature and Extent of Contamination Prior to Completion of Remediation Surface Soils - The majority of the site was covered with asphalt or concrete pavement or former Building foundations. During the RI, surface soil samples were collected from the various OUs. In locations where concrete or asphalt was present, the surface soil samples were collected from directly beneath the concrete/asphalt. Organic parameters of interest are primarily PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene) and PCBs. Inorganic parameters of interest are antimony, arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium and zinc. Parameters with concentrations above the characteristic hazardous waste limits were cadmium (up to 1.3 ppm vs. TCLP limit of 1 ppm) in two samples, and lead (up to 11.9 ppm vs. TCLP Limit of 5 ppm) in five samples. Subsurface Soils - Parameters with TCLP concentrations above the hazardous waste thresholds are cadmium, lead and mercury. Other metals of interest include antimony, arsenic, copper and chromium were detected in the subsurface soil. SVOCs of interest include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. The SVOCs were generally found at isolated locations and in samples collected from within 4 feet of the ground surface. PCBs were found in shallow soil samples (less than 3.5 to 4 feet bgs). Groundwater - VOCs including benzene, tetrachloroethylene, 1,1,1-trichloroethane and 1,1-dichloroethane were detected at concentrations above the Class GA groundwater standards. SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, bis(2-ethyhexyl)phthalate and indeno(1, 2, 3-cd) pyrene) were detected at concentrations above the Class GA groundwater standards. Inorganics including antimony, lead, arsenic, cadmium, copper, iron, magnesium, manganese, nickel, selenium, thallium, and zinc were detected in the monitoring wells at concentrations above the Class GA groundwater standards. No PCBs were found in groundwater above Class GA groundwater standards. Soil Vapor - Elevated levels of methane and total non-methane VOCs were detected in several locations which corresponded with the locations of former underground storage tanks and petroleum storage and handling facilities. Sediments - The sediments in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed as an individual Operable Unit (OU-6) and were not included in this ROD. Surface Water - The surface waters in the Newtown Creek and Maspeth Creek adjacent to the Site are being addressed separately (see site no. 241117). "

Health Problem: "The potential for human exposure is limited to physical contact with contaminated soils on-site. Access to the site is restricted by fences and security personnel. Remediation of the site includes a site-specific cap, which will minimize the potential for expsoures. Areas adjacent to the site are heavily developed with commercial/industrial facilities. Off-site exposures to site related contaminants are not expected. The surrounding area is served by public water."

Updated By:	HMDUDEK
Site Description:	"Location The 1.08-acre site is located in the Greenpoint/East Williamsburg industrial section of Brooklyn, NY. The site is located on the southwest corner of the intersection of Vandervoort Avenue and Richardson Street. Please refer to Figures 1 2. Site Features The site is completely covered by a one-story brick building. Numerous other commercial and industrial properties are located to the north, south, and west of the site. The Greenpoint Little League fields and a National Grid energy facility are east of the site across Vandervoort Avenue. A small residential area is located 1-2 blocks north of the site. An eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located 4 blocks to the north. Current Zoning and Land Use The site is zoned for (M1) manufacturing. Per NYC Planning, M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently used for sheet metal fabrication and offices. Past Use of the Site The Department began a Site Characterization in this area in2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, Site ID No. 224121). This property was identified as a potential source of contamination based on its past use. Klink Cosmo Cleaners operated as a commercial dry cleaner from the 1950's to the mid 1990's. During that time, hazardous waste (spent halogenated solvents) was generated under EPA ID no. NYD000824334. Site Geology and Hydrogeology The site is underlain by urban fill unit (0.5-8 feet thick), a sand unit (approximately 100 feet thick) with varying textural features, and the Raritan (clay) Formation approximately 110 feet below ground surface (bgs). Groundwater is present approximately 35 feet bgs and flows north to northeast toward Newtown Creek. "
Env Problem:	"Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include VOCs and metals. Nature and Extent of Contamination: Soil The VOC source area was identified in the northeast corner of the current building at depths from 1 - 35 feet below ground surface (bgs). Tetrachloroethylene (PCE) was detected in soils on-site at concentrations up to 273 parts per million or ppm, exceeding the soil cleanup objective (SCO) for commercial use (150 ppm) and for the protection of groundwater (1.3 ppm). Trichloroethene (TCE) was

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

detected in two on-site samples which slightly exceed the protection of groundwater SCO (0.47 ppm). PCE contaminated soil exceeding the protection of groundwater SCO extends off-site approximately ten feet to the north and east below the adjacent sidewalks of Vandervoort Avenue and Richardson Street. Metals contamination associated with urban fill was detected in shallow soil on-site. For example, lead was detected up to 2,680 ppm (exceeding the commercial SCO of 1,000 ppm) and arsenic up to 38.7 ppm (exceeding the commercial SCO of 16 ppm). The data does not indicate any off-site metal impacts in soil related to this site. Groundwater Based on the investigations conducted to date, the primary contaminants of concern detected in groundwater include PCE and trichloroethene (TCE). PCE has been found in shallow groundwater at concentrations up to 46,000 parts per billion or ppb (exceeding the groundwater standard of 5 ppb). PCE has also been found in deep groundwater (atop the Raritan clay) up to 4,500 ppb. TCE, a daughter product of PCE, was detected up to 2,100 ppb (exceeding the groundwater standard of 5 ppb). The groundwater plume extends north and east from the site to at least Lombardy street where it becomes co-mingled with contamination originating from other sites. Soil Vapor PCE has been found in soil vapor beneath the site at concentrations up to 2,090,000 micrograms per cubic meter, or ug/m^3. TCE has been found at concentrations up to 7,380 ug/m^3. Soil vapor intrusion sampling has been completed at twenty off-site structures. Actions described in Section 6.2 were needed to address potential exposure at twelve structures. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered by a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub?slab depressurization systems (SSDSs) have been installed in twelve off?site residential buildings to prevent the indoor air quality from being affected by the contamination in soil vapor in the area. SSDSs remain available to homeowners in the vicinity of the site who previously rejected the State s offer for a system. The on-site building does not have an SSDS; however, the potential for soil vapor intrusion is being addressed by the soil vapor extraction/air sparge system which is being constructed and will be operated on-site. "

Updated By: JHOCONNE
Site Description: "Location: The site is located at 513 Porter Avenue in the Greenpoint section of the Borough of Brooklyn. It is bounded by Cherry Street to the north, Porter Avenue to the east, and Anthony Street to the south. Site Features: The site was once occupied by 5 contiguous, 1-story masonry construction buildings with an area of 39,000 sq. ft. (181.95 ft. x 200 ft.) constructed in 1950 (now demolished). Sergeant William Dougherty Playground was located immediately west of the site (now partially demolished and closed). The eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located immediately north of the site. A small residential area is located two block south of the site. Current Zoning and Land Use: The site is located in a manufacturing area. The site was used as a staging area for equipment and materials as part of the Kosciuszko Bridge replacement project. Past Use of the Site: The site was operated by the ACME Steel Partition Company until 2007 when operations at the property ceased. The property was acquired via eminent domain by the NYSDOT as part of the Kosciuszko Bridge replacement project. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the

FORMER ACME STEEL PARTITION CO. (Continued) **S118950564**

	Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site."
Env Problem:	"Nature and Extent of Contamination: Soil - PCE has been found in on-site soils at concentrations up to 2.2 ppm, which is slightly above the soil cleanup objective for unrestricted use (1.3 ppm). Lead had been found up to 6,400 ppm, which is well above the soil cleanup objective for restricted residential use (400 ppm). Lead-hazardous soils were also identified on-site. Groundwater - The primary contaminants of concern at the site are tetrachloroethene (PCE), trichloroethene (TCE), and lead. PCE (up to 70 parts per billion, or ppb), TCE (up to 80 ppb), and lead (up to 254 ppb) have been found at concentrations slightly above their Part 703.5 class GA standards of 5, 5, and 25 ppb respectively. Soil Vapor - PCE has been found in soil vapor at concentrations up to 11,000 micrograms per cubic meter (ug/m3). TCE has been found at concentrations up to 106 ug/m3. "
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

The site is located on the east side of Porter Avenue between Anthony and Lombardy Streets. Site Features: The site consists of one 1-story brick building, three 1-story metal sheds, two truck parking areas and a bus parking lot. The site is surrounded by other commercial and industrial properties. A large National Grid energy facility is located one block south of the site across Lombardy Street. Sergeant William Dougherty Playground is located one block northwest of the site across Anthony Street, and the elevated Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block southwest of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a marble and granite distribution warehouse and and a City-Wide truck maintenance shop at 498 Porter Avenue. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a brass foundry from the 1960's to 1993, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). This investigation was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~110' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~130-135' below ground surface). Groundwater is approximately 45-55' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,000' northeast of the site."
Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been detected up to 1,800 parts per billion or ppb (compared to a groundwater standard of 5 ppb). - Soil PCE has been found in on-site soils at concentrations up to 220 parts per million or ppm (compared to a commercial use soil cleanup objective of 150 ppm). - Soil Vapor

ACME STEEL/BRASS FOUNDRY (Continued) **S118950559**

	Concentrations of PCE have been found up to 19,000 ug/m^3. Concentrations of TCE have been found up to 1,300 ug/m^3. "
Health Problem:	"Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available. Site Description:	"Location: The 1.01 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Vandervoort Avenue between Anthony and Lombardy Streets. Site Features: The site is completely covered by one (1) two-story and three (3) one-story brick buildings. The site is surrounded by other

95 LOMBARDY ST./ACME ARCH. PRODS., INC. (Continued) **U003652054**

commercial and industrial properties. Sergeant William Dougherty Playground is located immediately north of the site across Anthony Street, and the eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block south of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a granite warehouse and showroom at 95 Lombardy Street, and a paper distribution office and a kitchen cabinet warehouse/showroom at 46 Anthony Street. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a metal fabricator and painting facility from the 1930's to the late 2000's, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site."

Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is trichloroethene (TCE). TCE has been found on-site in shallow groundwater at concentrations up to 66,000 ppb, and in deep groundwater at concentrations up to 70,000 parts per billion or ppb, exceeding Part 703.5 class GA standards (5 ppb). Concentrations of tetrachloroethene (up to 8,000 ppb) and 1,2-dichloroethene (3,200 ppb) have also been found above their respective Part 703.5 class GA standards (5 ppb each). - Soil TCE was detected in soil at 2.3 parts per million or ppm in one sample (exceeding the unrestricted Soil Cleanup Objective). - Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 3,100 ug/m^3. Concentrations of TCE in soil vapor have been found up to 4,500 ug/m^3, and in indoor air up to 13 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing releases of TCE from source areas into soil and groundwater."

Health Problem: "Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available. "

Site Description: "Empire State Varnish Company, Inc. is located at 38 Varick Street,

EMPIRE VARNISH COMPANY, INC. (Continued) **S121933822**

Brooklyn, NY. The Property is situated along the east side of Varick Street approximately 200 feet from the corner of Bridgewater Street in the Greenpoint section of Brooklyn. The irregular shaped Property also fronts on Bridgewater Street. The Property is zoned M3-1 and consists of an approx. 30,000 sq. ft. lot improved with several small buildings utilized for the production of varnish and paint. Empire has been producing paint and varnish on-site since the 1930's. The production process involves heating and mixing natural or synthetic resins with a vegetable oil. This mixture is then cooled and blended with a volatile solvent in large kettles. The oils primarily used by Empire are soybean and linseed oils. The volatile solvent commonly used by Empire is mineral spirits. The mineral spirits were stored on-site in underground storage tanks until the early 1980's. The facility currently uses only aboveground tanks or 55-gallon drums to store raw materials or finished product on-site. A consent order was completed to close the site under RCRA. Since this site is located across from Exxon site (Greenpoint), Exxon showed interest in acquiring this property to extract the free product in groundwater migrating from their site. RCRA agreed to transfer the Empire site to DER to close the site under the remediation program. Consent order has been amended to transfer the responsibility to DER. Empire has submitted a closure plan and ROUX Associates has submitted a report with the details of their investigation. Closure activities begun in August 2007. All the undergound and above ground tanks were removed along with the drums, containers, cehmical equipments and other misc. items and disposed off-site. The soils excavated during the removal of USTs were sampled and properly disposed. The closure activites were completed in December 2007. The final closure report was submitted in February and was approved. The No Further Action letter was sent to the owner on February 29, 2008."

Env Problem: "Other than physical hazards at the site there are no significant environemntal hazards from this site. The groundwater at the site is contaminated but the contamination was contributed from the Exxon Mobil (Greenpoint) spill. Recent investigation results indicate the presence of free product in groundwater at the site. Closure activities begun in August 2007. All the undergound and above ground tanks were removed along with the drums, containers, chemical equipments and other misc. items and disposed off-site. The soils excavated during the removal of USTs were sampled and properly disposed. The closure activites were completed in December 2007. The final closure report was submitted in February and was approved. The No Further Action letter was sent to the owner on February 29, 2008. Now the ownership of the property is transferred to Exxon. The consultant for Exxon is installing extraction wells to remove the free product in the groundwater. "

SHWS:
Name: FORMER GOODMAN BROTHERS STEEL DRUM CO.
Address: 18 DIVISION PLACE
City,State,Zip: BROOKLYN, NY 11222
Program: HW
Site Code: 505634
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 0.670
HW Code: 224211
Record Add: 03/18/2015
Record Upd: 08/10/2020
Updated By: HMDUDEK
Site Description: "Location: The 0.67 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is mostly covered with one-story buildings, with a storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used for storage and light manufacturing. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of $28,000 for numerous violations. Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away)."
Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminants in groundwater are Volatile Organic Compounds or VOCs and Per/ polyfluoroalkyl substances (PFAS). For example, the chlorinated VOC, cis-1,2 dichloroethene (DCE) was detected up to 61,000 parts per billion or ppb, compared to groundwater standard of 5 ppb. The PFAS compound Perfluorooctanoic acid (PFOA) was detected up to 5,100 parts per trillion or ppt, compared to a groundwater standard of 10 ppt. - Soil The primary contaminants in soil are VOCs and Polychlorinated Biphenyls (PCBs). For example, the chlorinated VOC, tetrachloroethene (PCE) was detected up to 1,200 parts per million or ppm. This exceeds the commercial Soil Cleanup Objective (SCO) of 150 ppm. Total PCBs were detected up on 130 ppm, which

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued) **1000190383**

	exceeds the commercial SCO of 1 ppm. Soil Vapor: Numerous VOCs were detected in soil vapor. For example, DCE was detected up to 5,600,000 micrograms per cubic meter (ug/m3). Numerous Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil groundwater and soil vapor."
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures. "

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued) **1000190383**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Site Description: "The Technical Metal Finishers Company was a plating company located in a light industrial/residential area. The company is out of business and the site is abandoned. The site was discovered in June 1982 when a fire occurred at the abandoned plant. The facility contained waste acids, caustics and cyanides stored in tanks and drums. The wastes contained in the tanks and drums were removed by a

TECHNICAL METAL FINISHERS (Continued) **1003864057**

	contractor hired by NYC Dept. of Environmental Protection. Clean up has been initiated by NYC Dept. of Environmental Protection through contract with Radiac Research Corporation. All tanks and debris have been removed from site and soil has been excavated. The building was demolished, and all work has been completed."
Env Problem:	"The site was delisted from the Registry as removal action conducted at the site has removed all hazardous waste."
Health Problem:	"NYSDOH has insufficient information to fully evaluate the potential for human exposures."

Site Description: "Site being handled under BCP - C224036 Location: The Former Jayer Plating site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. "
Env Problem: "This site is now in the BCP as 2 Ingraham Street site (C224036). Project was reclassed to N. "

Updated By:	IXMUNTEA
Site Description:	"2 Ingraham Street, site represents the Block 3084, Lot 1, in the Williamsburg Area of Brooklyn, NY 11206. The site is a 0.5 acre warehouse. The property is bordered by Ingraham Street to the north, by Marrisson Place to the south, by Bogart Street to the west and by Morgan Avenue to the east. The current use of the site is commercial. Before 1998, the building was used for cloth manufacturing and one of its section was used as a plating factory (Former Jayer Plating Co.). In spring 1998, the warehouse was vacant. The neighbourhood was mixed industrial, residential, and commercial. In the western section of the warehouse, where the plating factory has operated a deep corroded dry drain was noticed. In this area the concrete floor was also broken and corroded, perhaps due to waste bath residues of the metal plating processes on the floor. The VCP investigation was not compleated and the Volunteer Cleanup Agreement negotiations have been closed . See project C224036 "

Update By:	GWBURKE
Site Description:	"This project (2 Ingraham Street Off-Site, C224036A) was created to investigate for potential off-site impacts from the 2 Ingraham Street BCP Site (C224036). Location: This site is the off-site component to the 2 Ingraham Street Site located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The BCP site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The BCP site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the BCP site is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the BCP site was used as an orphanage. In 1948, the BCP site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the BCP site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The BCP site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. "
Env Problem:	"Nature and Extent of Contamination: The primary contaminants of concern off-site include metals, and volatile organic compounds (VOCs). Previous environmental investigation in the area revealed concentrations of metals and VOCs exceeding Standards, Criteria, and Guidance values in the soil and/or groundwater. Based upon investigations to date, shallow soils (up to 5 feet below ground surface) are contaminated with metals. Data results from soils sampling reported metals (lead, mercury and nickel). Maximum detections vs. applicable unrestricted use or protection of groundwater cleanup objectives are as follows: lead at 106 parts per million (ppm) vs. 63 ppm, mercury at 18.2 ppm vs. 0.73 ppm, and nickel at 433 ppm vs. 130 ppm. Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are

2 INGRAHAM STREET (Continued) **S110487597**

	likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: tetrachloroethene at 17 parts per billion (ppb) vs. 5 ppb, trichloroethene at 140 ppb vs. 5 ppb, chromium at 10,800 ppb vs. 50 ppb, and nickel at 8,690 ppb vs. 100 ppb. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Site Description:	"Location: The 2 Ingraham Street site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. "
Env Problem:	"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. The primary contaminants of concern at the site include metals, SVOCs, and VOCs. Environmental investigation in the area revealed concentrations of metals, SVOCs, and VOCs exceeding Standards, Criteria, and Guidance values (SCGs) in the soil and/or groundwater. Soil: Based upon investigations to date, sub-surface soils are contaminated with metals, SVOCS, and VOCs. Results from soils sampling reported metals (chromium, lead, mercury, and nickel), SVOCs (polyaromatic hydrocarbons or PAHs), and VOCs(tetrachloroethene or PCE). The PAHs contamination in soils is likely related to the presence of historic fill. Maximum detections vs. applicable

2 INGRAHAM STREET (Continued) **S110487597**

unrestricted use or protection of groundwater soil cleanup objectives (UUSCO/PGWSCO) are as follows: chromium at 8,400 ppm vs. 19 ppm, lead at 607 ppm vs. 63 ppm, mercury at 1,790 ppm vs. 0.73 ppm, nickel at 3,720 ppm vs. 130 ppm, several PAHs including benzo(a)pyrene at 16 ppm vs. 1 ppm, and PCE at 1.9 ppm vs. 0.47 ppm. Mercury and nickel (up to 18.2 ppm, and 433 ppm, respectively) were detected off-site at soil boring SSB7N. Lead (up to 106 ppm) was detected off-site at soil boring SB8. Groundwater: Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: chromium at 110,000 parts per billion (ppb) vs. 50 ppb, lead at 461 ppb vs. 25 ppb, and nickel at 90,900 ppb vs. 100 ppb. PCE (up to 17 ppb) and mercury (up to 3.3 ppb) were detected in off-site downgradient groundwater at MW-7. Chromium, lead, and nickel (up to 10,800 ppb, 802 ppb, and 8,690 ppb, respectively) were detected off-site in down-gradient groundwater at MW-8. Trichloroethene up to 140 ppb was detected off-site in groundwater at MW-6. Soil Vapor: Elevated levels of VOCs were detected in sub-slab soil vapor. The maximum concentrations of PCE and 1,1,1-Trichloroethane in sub-slab soil vapor were detected in the northwestern/northeastern portion of the site at the respective concentrations of 827 micrograms per cubic meter (ug/m3) and 1,220 ug/m3. In addition, soil vapor intrusion (SVI) levels for methylene chloride (e.g., 42 ug/m3 [below the slab] and 20.5 ug/m3 [indoor air]) require additional assessment, investigation or mitigation in accordance with NYSDOH SVI matrices. Therefore, additional sampling is needed to determine whether actions are needed to address soil vapor intrusion on- and off-site. Significant Threat: Recent public events held at the site and past unapproved activities are likely to increase the risk of direct contact with the contamination visually observed on the surface of the slab and/or slab areas with broken concrete in which the upper soils likely contain hazardous waste levels of contamination. Contravention of SCOs for metals pose a significant threat to human health due to accessibility. Also, metals contamination in soil at the source area exceeds respective industrial and/or protection of groundwater SCOs. This has resulted in contamination of shallow groundwater at levels several orders of magnitude above standards, creating a significant threat to the environment."

Health Problem: "Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. People may come into contact with contaminants in soils if they dig below the surface or contact exposed soil. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in the event the site is re-occupied and for any future buildings developed on the site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 02/22/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

UTM Y (Meters):	4508026.0
Elevation:	9 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

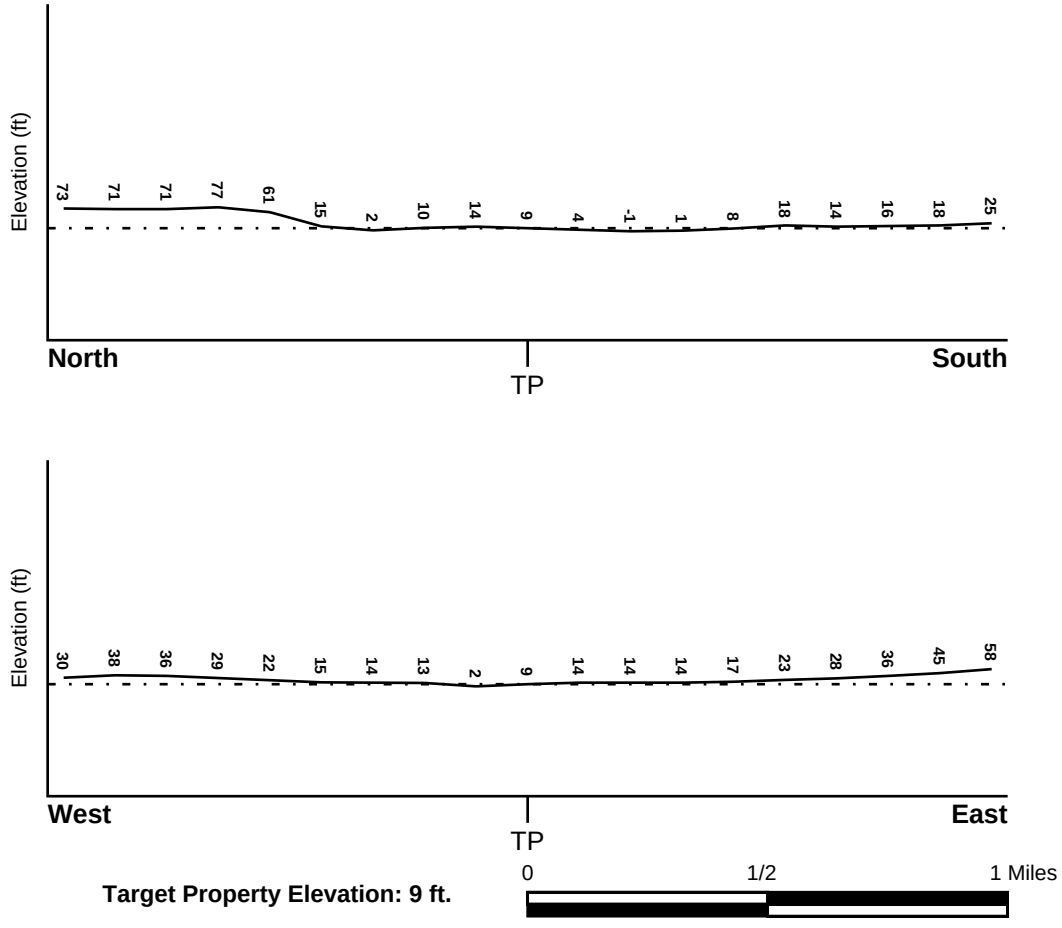
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 9 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970206F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970202F	FEMA FIRM Flood data
3604970049B	FEMA Q3 Flood data
3604970204F	FEMA FIRM Flood data

3604970057B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile NNE
Site Name:	Phelps Dodge Refining Corp
Site EPA ID Number:	NYD039138789
Groundwater Flow Direction:	DEPENDENT ON WELL PUMPING RATES.
Measured Depth to Water:	not available.
Hydraulic Connection:	Salt water intrusion may be present at the site. Information about the hydraulic connection between aquifers underlying the site is not available. The depth to bedrock is approximately 60 feet.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

New York City Fire Department Fuel Tank Special Report

The New York City Fire Department issues New York City Fire Code Fuel Tank Inspection Reports and issues violations for bulk fuel storage tanks within New York City. The FDNY does not maintain copies of Fuel Tank Inspection Report records for bulk fuel storage tanks located outside of New York City.

Where do I obtain a copy of my FDNY Fuel Tank Special Report?

- You can perform an on-line search for a summons, see a copy of the summons, find your NYC Office of Administrative Trials and Hearings (OATH) Environmental Control Board (ECB) hearing date, hearing results, and make payments. You can search for this information by name, address or the summons number. You can search for this information by name, address or the summons number by going to the Summons Finder.
- You may obtain copies from the FDNY Public Records Unit through the following methods,
    - In Person
    - By Mail
    - Online

If you are picking your Report up in person or want to request the records by mail, please either visit or mail requests to:

FDNY Public Records Unit
9 MetroTech Center- First Floor
Brooklyn, N.Y. 11201
Use the FLATBUSH AVENUE ENTRANCE
Hours of Operation: Monday - Friday 9:00am to 4:00pm (except Holidays)
(718) 999-1998 or 1999

Who is eligible to obtain a copy of a FDNY Fuel Tank Special Report?

- Anyone may obtain a copy of a FDNY Fuel Tank Special Report.

What is the fee for a copy of an FDNY Fuel Special Tank Report?

- The fee is $10.00 per Report.
- Payments for Mail or Online requests may be made by check or money order payable to the New York City Fire Department - **Do not send cash**.
    - *NOTE: Payments submitted from foreign countries must be made by a check drawn on a United States bank or by international money order.*

RE: 170686701

Dear Kimberly Semon:

This will acknowledge receipt of your request for records under the Freedom of Information Law (FOIL), received by this office on June 11, 2021.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig, Esq.

New York City Fire Department Fuel Tank Special Report

The New York City Fire Department issues New York City Fire Code Fuel Tank Inspection Reports and issues violations for bulk fuel storage tanks within New York City. The FDNY does not maintain copies of Fuel Tank Inspection Report records for bulk fuel storage tanks located outside of New York City.

Where do I obtain a copy of my FDNY Fuel Tank Special Report?

- You can perform an on-line search for a summons, see a copy of the summons, find your NYC Office of Administrative Trials and Hearings (OATH) Environmental Control Board (ECB) hearing date, hearing results, and make payments. You can search for this information by name, address or the summons number. You can search for this information by name, address or the summons number by going to the Summons Finder.
- You may obtain copies from the FDNY Public Records Unit through the following methods,
    - In Person
    - By Mail
    - Online

If you are picking your Report up in person or want to request the records by mail, please either visit or mail requests to:

FDNY Public Records Unit
9 MetroTech Center- First Floor
Brooklyn, N.Y. 11201
Use the FLATBUSH AVENUE ENTRANCE
Hours of Operation: Monday - Friday 9:00am to 4:00pm (except Holidays)
(718) 999-1998 or 1999

Who is eligible to obtain a copy of a FDNY Fuel Tank Special Report?

- Anyone may obtain a copy of a FDNY Fuel Tank Special Report.

What is the fee for a copy of an FDNY Fuel Special Tank Report?

- The fee is $10.00 per Report.
- Payments for Mail or Online requests may be made by check or money order payable to the New York City Fire Department - **Do not send cash**.
    - *NOTE: Payments submitted from foreign countries must be made by a check drawn on a United States bank or by international money order.*

Dear Kimberly Semon:

This will acknowledge receipt of your request for records under the Freedom of Information Law (FOIL), received by this office on June 11, 2021.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

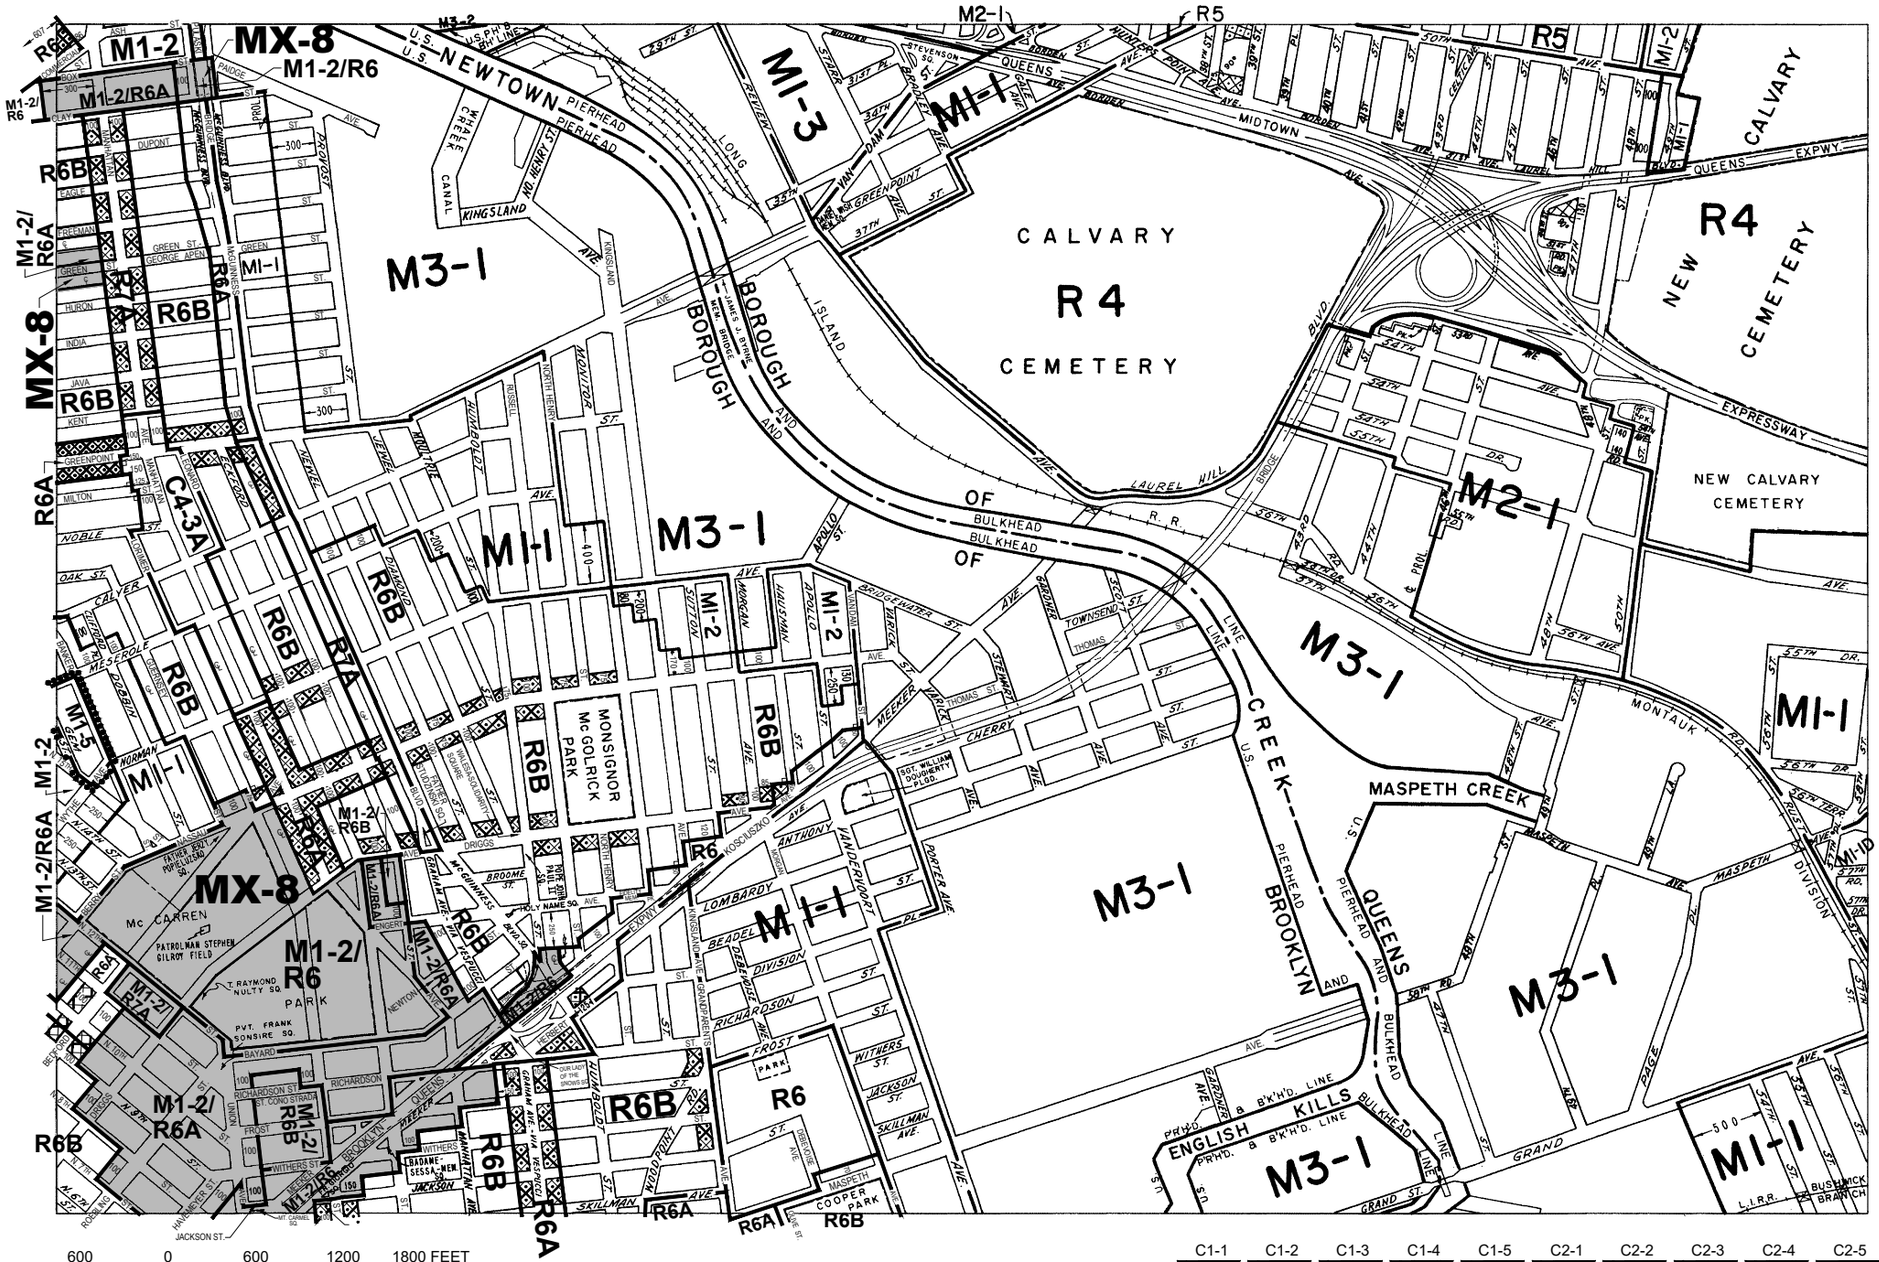
New York City Planning Commission Zoning Map



C1-1 C1-2 C1-3 C1-4 C1-5 C2-1 C2-2 C2-3 C2-4 C2-5

NOTE: Where no dimensions for zoning district boundaries appear on the zoning maps, such dimensions are determined in Article VII, Chapter 6 (Location of District Boundaries) of the Zoning Resolution.

ZONING MAP

THE NEW YORK CITY PLANNING COMMISSION

Major Zoning Classifications:

The number(s) and/or letter(s) that follows an R, C or M District designation indicates use, bulk and other controls as described in the text of the Zoning Resolution.

R – RESIDENTIAL DISTRICT

C – COMMERCIAL DISTRICT

M – MANUFACTURING DISTRICT

SPECIAL PURPOSE DISTRICT
The letter(s) within the shaded area designates the special purpose district as described in the text of the Zoning Resolution.

AREA(S) REZONED

Effective Date(s) of Rezoning:

05-27-2021 C 210138 ZMK

Special Requirements:

For a list of lots subject to CEQR environmental requirements, see APPENDIX C.

For a list of lots subject to "D" restrictive declarations, see APPENDIX D.

For Inclusionary Housing designated areas and Mandatory Inclusionary Housing areas on this map, see APPENDIX F.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

New York, NY 10001
Contact: Lucy Bevan

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Limited Permission To Make Copies

Langan Engineering, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT--THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made as of this 13th day of November, 2020,

BETWEEN

SABATINO LAMANNA and **EMILIO LAMANNA**, each having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422,

party of the first part, and

EL FAMILY PROPERTY OWNER LLC, a New York limited liability company, as to a fifty percent (50%) undivided interest, and **SLMJL FAMILY PROPERTY OWNER LLC,** a New York limited liability company, as to a fifty percent (50%) undivided interest, each having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422, with the two (2) grantees hold title as tenants-in-common,

party of the second part.

Tax Map Designation:

Block: 2601
Lot(s): 1
Queens County
Section: 14

Address:
58-20 47th St.,
Flushing, NY

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL, that certain plot, piece or parcel of land and all buildings and improvements thereon erected situated, lying and being more particularly described in Schedule "A" annexed hereto and forming a part hereof.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and highways abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

The Premises herein described are the same and are intended to be the same as those conveyed to the party of the first part by deed dated December 31, 2008 and recorded February 5, 2009 in the Office of the City Register of the City of New York at CRFN 2009000034446.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) Property receiving service: BOROUGH: QUEENS BLOCK: 2601 LOT: 1

(2) Property Address: 58-20 47TH STREET, QUEENS, NY 11378

(3) Owner's Name: SLMJL FAMILY PROPERTY OWNER LLC

Additional Name: EL FAMILY PROPERTY OWNER LLC

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

Bargain and Sale Deed, without Covenant against Grantor's Acts--Ind. or Corp.

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT--THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made as of this 13th day of November, 2020,

BETWEEN

57-57 47TH STREET MACK, LLC, a New York limited liability company, having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422,

party of the first part, and

RL FAMILY PROPERTY OWNER LLC, a New York limited liability company, as to a one-third (1/3rd) undivided interest, **EL FAMILY PROPERTY OWNER LLC,** a New York limited liability company, as to a one-third (1/3rd) undivided interest, and **SLMJL FAMILY PROPERTY OWNER LLC,** a New York limited liability company, as to a one-third (1/3rd) undivided interest, each having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422, with the three (3) grantees hold title as tenants-in-common,

party of the second part.

Tax Map Designation:

Block: 2602
Lot(s): 68
Queens County
Section: 14

Address:
57-57 47th St.,
Flushing, NY

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL, that certain plot, piece or parcel of land and all buildings and improvements thereon erected situated, lying and being more particularly described in Schedule "A" annexed hereto and forming a part hereof.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and highways abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

The Premises herein described are the same and are intended to be the same as those conveyed to the party of the first part by deed dated November 28, 2012 and recorded December 12, 2012 in the Office of the City Register of the City of New York at CRFN 2012000427681.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) **Property receiving service: BOROUGH: QUEENS** **BLOCK: 2602** **LOT: 68**

(2) **Property Address: 57-57 47TH STREET, QUEENS, NY 11378**

(3) **Owner's Name:** **RL FAMILY PROPERTY OWNER LLC**

Additional Name: **EL FAMILY PROPERTY OWNER LLC**

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

Bargain and Sale Deed, without Covenant against Grantor's Acts--Ind. or Corp.

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT--THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made as of this 13th day of November, 2020,

BETWEEN

FUMO, LLC, a New York limited liability company, having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422,

party of the first part, and

RL FAMILY PROPERTY OWNER LLC, a New York limited liability company, as to a one-third (1/3rd) undivided interest, **EL FAMILY PROPERTY OWNER LLC,** a New York limited liability company, as to a one-third (1/3rd) undivided interest, and **SLMJL FAMILY PROPERTY OWNER LLC,** a New York limited liability company, as to a one-third (1/3rd) undivided interest, each having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422, with the three (3) grantees hold title as tenants-in-common,

party of the second part.

Tax Map Designation:

Block: 2602
Lot(s): 72
Queens County
Section: 14

Address:
57-05 47th St.,
Flushing, NY

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL, that certain plot, piece or parcel of land and all buildings and improvements thereon erected situated, lying and being more particularly described in Schedule "A" annexed hereto and forming a part hereof.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and highways abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

The Premises herein described are the same and are intended to be the same as those conveyed to the party of the first part by deed dated May 31, 2006 and recorded September 26, 2006 in the Office of the City Register of the City of New York at CRFN 2006000542059.

[End of Text; Signature Page to Follow]

SCHEDULE A

All that certain plot, piece or parcel of land, situate, lying and being in the Borough of Queens, County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at the corner formed by the intersection of the southerly side of Maspeth Avenue, 66 feet wide, with the easterly side of 47th Street, 70 feet wide;

RUNNING THENCE easterly along the southerly side of Maspeth Avenue and along the prolongation easterly thereof, 222.76 feet;

THENCE southwesterly along a line forming an interior angle of 54 degrees, 46 minutes, 39 seconds with the preceding course, 242.99 feet;

THENCE westerly at right angles to the easterly side of 47th Street, 78.91 feet to the easterly side of 47th Street;

THENCE northerly along the easterly side of 47th Street, 200 feet to the point or place of BEGINNING.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) **Property receiving service: BOROUGH: QUEENS** **BLOCK: 2602** **LOT: 72**

(2) **Property Address: 57-05 47TH STREET, QUEENS, NY 11378**

(3) **Owner's Name:** **RL FAMILY PROPERTY OWNER LLC**

Additional Name: **EL FAMILY PROPERTY OWNER LLC**

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

Queens County
Section: 14

Address:
57-00 47th St.,
Flushing, NY

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL, that certain plot, piece or parcel of land and all buildings and improvements thereon erected situated, lying and being more particularly described in Schedule "A" annexed hereto and forming a part hereof.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and highways abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

The Premises herein described are the same and are intended to be the same as those conveyed to the party of the first part by deed dated April 30, 1998 and recorded July 16, 1998 in the Office of the City Register of the City of New York at Reel 4197, Page 1526.

[End of Text; Signature Page to Follow]

SCHEDULE A

All that certain plot, piece or parcel of land, situate, lying and being in the Borough of Queens, County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at a point on the westerly side of 47th Street as laid out, 70 feet wide, distant 705.85 feet north of the corner formed by the intersection of the said westerly side of 47th Street with the present northerly side of Grand Avenue as laid out, 80 feet wide;

RUNNING THENCE northerly from the point of beginning and along the said westerly side of 47th Street, a distance of 440 feet;

THENCE westerly along a line forming an interior angle of 91 degrees 04 minutes 06 seconds with the preceding course, a distance of 195.27 feet to the U.S. Pier and Bulkhead line extending along the easterly side of New Town Creek and approved by the Secretary of War January 21, 1920, as shown on Alteration Map No. 890 to the Final Maps of the City of New York for the Borough of Queens;

THENCE southerly along said Pier and Bulkhead Line forming interior angle of 109 degrees 29 minutes 19 seconds with the preceding course, a distance of 269.10 feet to an angle point in the said Pier and Bulkhead line;

THENCE southerly along the said Pierhead and Bulkhead line along a line forming an interior angle of 160 degrees 42 minutes 52 seconds with the preceding course, a distance of 191.72 feet;

THENCE easterly on a line forming an interior angle of 88 degrees 43 minutes 43 seconds with the preceding course and being also at right angles to the aforementioned westerly side of 47th Street, a distance of 293.98 feet to the point or place of BEGINNING.

[Signature Page to Deed – 57-00 Maspeth Avenue]

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

11. Date of Sale / Transfer: 11 / 13 / 2020 (Month Day Year)

12. Full Sale Price: $ 0

(Full Sale Price is the total amount paid for the property including personal property. This payment may be in the form of cash, other property or goods, or the assumption of mortgages or other obligations.) *Please round to the nearest whole dollar amount.*

13. Indicate the value of personal property included in the sale:

14. Check one or more of these conditions as applicable to transfer:

A ☑ Sale Between Relatives or Former Relatives
B ☑ Sale Between Related Companies or Partners in Business
C ☐ One of the Buyers is also a Seller
D ☐ Buyer or Seller is Government Agency or Lending Institution
E ☐ Deed Type **not** Warranty or Bargain and Sale (Specify Below)
F ☐ Sale of Fractional or Less than Fee Interest (Specify Below)
G ☐ Significant Change in Property Between Taxable Status and Sale Dates
H ☐ Sale of Business is Included in Sale Price
I ☐ Other Unusual Factors Affecting Sale Price (Specify Below)
J ☐ None

ASSESSMENT INFORMATION - Data should reflect the latest Final Assessment Roll and Tax Bill

15. Building Class: E 1

16. Total Assessed Value (of all parcels in transfer): 4,836,150

17. Borough, Block and Lot / Roll Identifier(s) (If more than three, attach sheet with additional identifier(s))

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) **Property receiving service: BOROUGH: QUEENS** **BLOCK: 2601** **LOT: 6**

(2) **Property Address: 57-00 47TH STREET, QUEENS, NY 11378**

(3) **Owner's Name:** **RL FAMILY PROPERTY OWNER LLC**

Additional Name: **EL FAMILY PROPERTY OWNER LLC**

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

Print Name of Owner: RL FAMILY PROPERTY OWNER, LLC

Resumes

JEFFREY STOICESCU, PE

SENIOR ASSOCIATE/VICE PRESIDENT

ENVIRONMENTAL, GEOTECHNICAL, & CIVIL ENGINEERING

Mr. Stoicescu has 26 years of engineering, permitting, and construction experience in a wide range of sectors including aviation, oil & gas, major and minor commercial developments, industrial improvements, and federal Superfund cleanup for sites across the United States and around the world. His experience focuses on the geotechnical, environmental, and site/civil engineering aspects of projects, from due diligence through detailed design, construction, commissioning and post construction compliance.

For the aviation sector, Mr. Stoicescu' s experience has included the design and permitting of new buildings, warehouses, terminals, taxiways, plane aprons, and many other airside facilities. For the oil & gas sector, he has worked on projects for many of the world's largest oil producers, including Shell, Chevron, Hess, Exxon, and Saudi Aramco, involving due diligence property transfers, environmental remediation and compliance monitoring, dredge management, modifications to waste water treatment systems, and plant expansions. Mr. Stoicescu also has been involved in several major environmental remediation projects including US Superfund sites. He served as the Engineer-of-Record for one of the nation's largest Superfund sites in Camden, NJ, which saw the remediation of radiological contamination of hundreds of residential and commercial sites. The project involved full restoration of facilities including the design of playgrounds, ball fields, homes, and more.

Mr. Stoicescu's specific project experience includes early site work activities involving geotechnical and environmental investigations; schematic design; geotechnical design (foundations, retaining walls, and pavements); site/civil design, including site layout; environmental consulting, including preparation and implementation of Environmental Management Plans as well as federal, state and local permitting; Engineer-of-Record responsibilities, including preparation of drawings and specifications; construction management; and post-construction operations and compliance monitoring.

SELECTED PROJECTS

- Port Authority New York and New Jersey Contract Manager for several on-call contracts including Environmental and Ecological
- Accurate Box Warehouse Design and Construction, Paterson, NJ (2018 NJ ACEC Honor Award, National ACEC Distinguished Award)
- Newark International Airport, Terminal A Redevelopment, Newark, NJ
- Dallas/Fort Worth International Airport, Redevelopment of Airport for New Tenant Operations (Airside), Dallas, TX
- JFK International Airport, Terminal 7 Multiple Environmental and Infrastructure Improvements, New York, NY
- LaGuardia Airport, Multiple Tenant Environmental Remediation and Improvement Projects, New York, NY

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) prepared this Phase II Environmental Site Investigation (ESI) report on behalf of Bay Crane Service of New York for the properties located at 57-00, 57-05, 57-57, and 58-20 47th Street in the Maspeth neighborhood of Queens, New York (the site). The Phase II ESI was conducted to investigate the recognized environmental conditions (RECs) identified during the Phase I Environmental Site Assessment (ESA) dated July 21, 2021.

The Phase II ESI included completion of a geophysical survey, advancement of soil borings, installation of temporary groundwater monitoring wells, and collection and laboratory analysis of soil and groundwater samples. The Phase II ESI field work was completed on July 7 through July 9, 2021.

This report is organized as follows:

- Section 2.0: Describes the site background
- Section 3.0: Presents the Phase II ESI methodology
- Section 4.0: Presents the findings of the Phase II ESI
- Section 5.0: Presents conclusions based on the findings
- Section 6.0: Presents limitations

2.0 BACKGROUND

2.1 Site Location and Description

The site is located at 57-00, 57-05, 57-57, and 58-20 47th Street in the Maspeth neighborhood of Queens, New York, and is identified on the Queens Borough Tax Map as Block 2601, Lots 1 and 6 and Block 2602, Lots 68 and 72. The approximately 168,000-square-foot site is situated on the northern part of Block 2601 and northeastern part of Block 2602, and is transected by 47th Street. The site is situated on the city blocks bound by 58th Road to the north, 49th Place to the east, Grand Avenue to the south, and Newtown Creek to the west. The site is improved with a vacant slab-on-grade one-story building with a mezzanine level (Lot 6), and two vacant slab-on-grade one-story buildings (Lots 68 and 72). The remainder of the site is improved with concrete and asphalt parking space.

According to the United States Geological Survey (USGS) Central Park Quadrangle 7.5-minute Series Topographic Map, the site sits at an elevation of about 9 feet above mean sea level (msl) and the surrounding area slopes gradually to the southwest towards Newtown Creek. The site is located within an industrial area characterized by one- to two-story commercial and manufacturing/industrial buildings. A Site Location Map is included as Figure 1.

2.2 Proposed Development

Redevelopment plans for the site are in early development; however, the site may be used in its present-day configuration for crane storage and repair.

2.3 Recognized Environmental Conditions

Langan's July 20, 2021 Phase I ESA identified the following Recognized Environmental Conditions (RECs) for the site:

REC 1 – Historical Use of Subject Property

Historical operations at the Subject Property included a 'fertilizer works' facility (1902 to 1914), an oil depot with petroleum bulk storage (1914 to 1936), truck parking (1974 to 1991), truck repair (1982 to 2006), a waste transfer facility with petroleum bulk storage (2004 to 2021), and auto repair (2013, 2014) on Lots 1 and 6; and a motor freight station with petroleum bulk storage (1963, 1982 to 2006) on Lot 72. The Subject Property is listed as an active facility on the Solid Waste Facilities/Landfill Sites (SWF/LF) database for the processing of construction and demolition (C&D) waste; however, based on the site reconnaissance this operation ceased in early 2021. Historical operations at the Subject Property may have resulted in inadvertent releases of hazardous substances or petroleum products.

REC 2 – Western-Adjoining Superfund Site

Newtown Creek, which is listed in the National Priority List (NPL) and Superfund Enterprise Management System (SEMS) databases. Contamination in Newtown Creek is attributed to combined sewer overflow (CSO) and historical industrial facilities on the creek banks. Facilities included over 50 oil refineries, petrochemical plants, fertilizer and glue factories, sawmills, and lumber and coal yards. A remedial investigation is presently underway for the entire Newtown Creek Superfund Site and a focused feasibility study (FFS) is currently being prepared by responsible parties regarding a combined sewer outfall (CSO) long term control plan, pursuant to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Given that the remedial investigation and a focused feasibility study are underway by the responsible parties, it is unknown as to whether there is any impact to the Subject Property.

2.4 Soil and Geology

Geological surface features (e.g., rock outcroppings) were not observed at the site. Baskerville's "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey", dated 1994, indicates the bedrock underlying the site is part of the Hartland Formation. The Hartland Formation is comprised of mica schist and quartz-feldspar granulite, with localized intrusions of granite and pegmatite. Review of the United States Geographic Services (USGS) Topographic Maps for the site identified infilling along the western and southern parts of the site between 1947 and 1979. Given the development history, historic fill will likely be present.

2.5 Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeological network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeological and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks. Groundwater is inferred to flow to the southwest towards Newtown Creek. Groundwater was encountered at depths ranging from 8.0 to 11.2 feet below grade surface (bgs) during this Phase II ESI.

Groundwater in New York City is not used as a potable water source. Potable water is provided to the site by New York City and is obtained from surface impoundments in the Croton, Catskill, and Delaware watersheds. According to the current Federal Emergency Management Agency

(FEMA) Effective Flood Insurance Rate Map (FIRM) dated September 5, 2007, the northern and western parts of the site fall within Zone AE, a special flood hazard area with base flood elevation of 10 feet inundated by 1% annual chance of flooding. The remainder of the site falls within Zone X and lies within the area of 0.2% annual chance of flood.

3.0 FIELD INVESTIGATION

The Phase II ESI included completion of a geophysical survey, advancement of eleven environmental soil borings, installation of four temporary groundwater monitoring wells, and collection of eleven soil and four groundwater samples for laboratory analysis. The Phase II ESI field work was completed from July 7 through 9, 2021. A sample summary is included in Table 1 and sample locations are shown on Figure 2. Photographs taken during the field investigation are included in Appendix A.

3.1 Geophysical Survey

Prior to intrusive sampling, NOVA Geophysical & Environmental, Inc. (NOVA), of Douglaston, New York, conducted a geophysical survey on July 7, 2021. NOVA used ground penetrating radar (GPR) and electromagnetic detection equipment to identify potential underground storage tanks (USTs) and locate buried utilities and anomalies across the site. Boring locations were cleared of any subsurface structures or utilities.

A copy of the geophysical survey report is included in Appendix B.

3.2 Soil Investigation

Eleven soil borings, SB01 through SB11, were advanced by Eastern Environmental Solutions, Inc. of Manorville, New York. A Langan field engineer was on-site to document field observations and collect soil samples. Soil borings were advanced using Geoprobe® 7922 DT 2-inch direct push drill rig to depths ranging from 15 to 20 feet below ground surface (bgs). Soil samples were collected continuously into 5-foot Macro-Core® sample barrels lined with dedicated acetate sleeves.

Soil samples retrieved from borings were visually classified for soil type, grain size, texture, and moisture content. Each sample was screened for visual, olfactory, and instrumental evidence of a chemical or petroleum release. Instrumental screening for the presence of organic vapors was performed using a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. Eleven soil samples were collected, one each, from borings SB01 through SB11 for laboratory analysis. Samples were collected from the interval exhibiting the greatest degree of impacts or from representative intervals of historic fill material. Samples submitted for volatile organic compound (VOC) analysis were collected directly from the acetate liner into laboratory-supplied Terra Core® soil samplers. The remaining sample volume was homogenized and placed in laboratory-supplied containers for additional analyses. The sample containers were labeled, placed in a laboratory-supplied cooler, and packed on ice (to attempt to maintain a temperature of about 4°C). The samples were picked up and delivered via courier service to York Analytical

Laboratories Inc. (York) under standard chain-of-custody protocol. York is a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory located in Stratford, Connecticut.

Soil samples were analyzed for Part 375 List and Target Compound List (TCL) VOCs by United States Environmental Protection Agency (USEPA) Method 8260C, semi-volatile organic compounds (SVOCs) by USEPA Method 8270D, pesticides by USEPA Method 8081B, polychlorinated biphenyls (PCBs) by USEPA Method 8082A, and Part 375/Target Analyte List (TAL) metals including hexavalent and trivalent chromium by USEPA Methods 6010C.

Following sample collection, boreholes were backfilled to grade with soil cuttings and the ground surface was restored. Soil boring logs are included in Appendix C, soil boring locations are shown on Figure 2, and a soil sample summary is included in Table 1.

3.3 Groundwater Investigation

Four soil borings, SB01 through SB04, were converted into temporary groundwater monitoring wells. Monitoring wells MW01, MW02 and MW04 were installed by inserting 10 feet of 0.02-inch slotted, one-inch diameter well screen and 10 feet of PVC riser pipe. Monitoring well MW03 was installed by inserting 5 feet of 0.02-inch slotted, one-inch diameter well screen, and 10 feet of PVC riser pipe. Well screens were positioned to straddle the observed water table. The annular space of each monitoring well was backfilled with No. 2 sand to 2 inches bgs and the upper 2 inches of the borehole was sealed to grade surface with bentonite.

Following installation, the monitoring wells were developed and sampled using a peristaltic pump. Prior to sample collection, the wells were purged and attempts were made to stabilize groundwater parameters (pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential), with turbidity measurements below 50 Nephelometric Turbidity Units (NTU). Following groundwater sample collection, each temporary monitoring well was removed, boreholes were filled to grade surface with non-impacted soil cuttings and No. 2 sand, and patched with concrete. Monitoring well construction logs and groundwater sampling logs are included as Appendix D.

The groundwater samples were collected into laboratory-supplied glassware and delivered via courier service to York. Groundwater samples were analyzed for TCL VOCs by EPA Method 8260, TCL SVOCs by EPA Method 8270, PCBs by EPA Method 8082, pesticides by USEPA Method 8081B, and total and dissolved (field filtered) metals including hexavalent and trivalent chromium by EPA Methods 6010B/7471A. The groundwater monitoring well locations are shown on Figure 2 and a groundwater sample summary is included in Table 1.

4.0 OBSERVATIONS AND RESULTS

4.1 Geophysical Survey

NOVA's geophysical survey identified municipal water, sewer, electric, telecom and/or gas lines entering the buildings on Lots 6, 68 and 72 from 47th Street. An electric line was also observed transecting Lots 1 and 6. The geophysical survey identified anomalies indicative of an oil/water separator on the eastern side of the Lot 6 building and drainage structures within the Lot 6 building and southern part of Lot 6. Anomalies indicative of underground storage tanks (UST) graves were also identified on the southern part of Lot 6. Borings were relocated as necessary to avoid subsurface utilities. A copy of the geophysical survey report is included in Appendix B.

4.2 Subsurface Observations

Fill material, generally consisting of fine-grained sand with varying amounts of fine gravel, silt, brick, wood, and concrete was identified from below surface grade to depths ranging from about 4 to 16 feet bgs. Native soil, typically consisting of fine-grained sand and silt with varying amounts of medium sand, peat and fine gravel was identified beneath the fill layer to the boring termination depths ranging from 5 to 20 feet bgs.

Petroleum-like odors, staining, and PID readings above background levels were each identified at the following locations:

Soil Boring	Depth Interval (feet bgs)	Maximum PID (ppm)	Other Observations
SB01	10 to 12	76.1	Petroleum-like odor; staining
SB02	10 to 11	17	Petroleum-like odor; staining
	17 to 18	192.8	Petroleum-like odor; staining
SB04	8 to 11	50.3	Petroleum-like odor; staining

*ppm = parts per million

Groundwater was encountered in soil borings at depths ranging from 8 to 11.2 feet bgs. Petroleum-like odors and PID readings of 8.6 ppm and 49.7 ppm were observed from the headspace of monitoring wells MW02 and MW04, respectively. Purge water from these locations exhibited gray and brown discoloration; however, sheen or free product was not observed.

4.3 Soil Sample Results

Soil sample analytical results were compared to Title 6 of the New York Codes, Rules and Regulations (NYCRR) Part 375 Commercial Use (CU) and Industrial Use (IU) Soil Cleanup Objectives (SCOs). Analytes exceeding the CU and/or IU SCOs are summarized below. SCOs are listed in parentheses. Exceedances of IU SCOs are in bold. Soil sample analytical results are summarized in Table 2, and analytical laboratory reports are included in Appendix E.

SVOCs – SVOCs were detected in SB03, SB07, and SB11 above the CU and/or IU SCOs as summarized below:

- Benzo(a)anthracene – **64.8 milligrams per kilogram (mg/kg)** in SB07_8-9 (CU SCO: 5.6 mg/kg; IU SCO: 11 mg/kg)
- Benzo(a)pyrene – 1.08 mg/kg in SB03_2-3; 3.84 mg/kg in SB-11_13-14; **47.1 mg/kg** in SB07_8-9 (CU SCO: 1 mg/kg; IU SCO: 1.1 mg/kg)
- Benzo(b)fluoranthene – **39.2 mg/kg** in SB07_8-9 (CU SCO: 5.6 mg/kg; IU SCO: 11 mg/kg)
- Chrysene – 65.2 mg/kg in SB07_8-9 (CU SCO: 56 mg/kg)
- Dibenzo(a,h)anthracene – 0.748 mg/kg in SB11_13-14 to **9.53 mg/kg** in SB07_8-9 (CU SCO: 0.56 mg/kg; IU SCO: 1.1 mg/kg)
- Indeno(1,2,3-cd)pyrene – **26.7 mg/kg** in SB07_8-9 (CU SCO: 5.6 mg/kg; IU SCO: 11 mg/kg)

Metals – Metals were detected in SB-07, SB-10, and SB-11 above their respective CU and/or IU SCOs as summarized below:

- Arsenic – **27.6 mg/kg** in SB10_3-4 (CU/IU SCO: 16 mg/kg)
- Lead – 1,840 mg/kg in SB10_3-4 (CU SCO: 1,000 mg/kg)
- Mercury – 2.97 mg/kg in SB10_3-4; 4.22 mg/kg in SB-11_13-14; 5.33 mg/kg in SB07_1-2 (CU SCO: 2.8 mg/kg)

VOCs, Pesticides and PCBs

VOCs, pesticides and PCBs were not detected at concentrations above CU and/or IU SCOs.

4.4 Groundwater Sample Results

Groundwater results were compared to the NYSDEC Division of Water Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA (drinking water). Analytical results from the groundwater sample are summarized in Table 3.

VOCs were detected in samples collected from MW02 and MW04 at concentrations above the NYSDEC TOGS SGVs and are summarized below. SGVs are listed in parentheses:

- 1,2-Dichloropropane – 7 milligrams per liter (µg/L) in MW02 (SGV: 1 µg/L)
- Isopropylbenzene – 5.1 µg/L in MW02 (SGV: 5 µg/L)
- N-Propylbenzene – 6 µg/L in MW02 (SGV: 6 µg/L)
- Methyl tert-butyl ether (MTBE) - 73 µg/L in MW04 (SGV: 10 µg/L)

SVOCs were detected in samples collected from MW03 at concentrations above the NYSDEC TOGS SGVs and are summarized below.

- Benzo(a)anthracene – 0.564 µg/L (SGV: 0.002 µg/L)
- Benzo(a)pyrene – 0.523 µg/L (SGV: 0.002 µg/L)
- Benzo(b)fluoranthene – 0.369 µg/L (SGV: 0.002 µg/L)
- Benzo(k)fluoranthene – 0.41 µg/L (SGV: 0.002 µg/L)
- Chrysene – 0.523 µg/L (SGV: 0.002 µg/L)
- Indeno(1,2,3-cd)pyrene – 0.297 µg/L (SGV: 0.002 µg/L)

Total and dissolved metals that were detected in the samples collected from MW01 through MW04 at concentrations above the SGVs and are summarized below.

- Total Antimony – 4.34 µg/L in MW03 (SGV: 3 µg/L)
- Total Arsenic – 37.6 µg/L in MW03 (SGV: 25 µg/L)
- Total Iron – 7,420 µg/L in MW04 to 11,100 µg/L in MW01 (SGV: 300 µg/L)
- Dissolved Iron – 5,740 µg/L in MW03 to 11,400 µg/L in MW01 (SGV: 300 µg/L)
- Total Lead - 419 µg/L in MW03 (SGV: 25 µg/L)
- Total Magnesium – 38,800 µg/L in MW01 (SGV: 35,000 µg/L)
- Dissolved Magnesium – 39,900 µg/L in MW01 (SGV: 35,000 µg/L)
- Total Manganese – 1,490 µg/L in MW01 to 3,090 µg/L in MW02 (SGV: 300 µg/L)
- Dissolved Manganese – 1,560 µg/L in MW01 to 3,100 in MW02 (SGV: 300 µg/L)
- Total Sodium – 67,100 µg/L in MW02 to 110,000 µg/L in MW04 (SGV: 20,000 µg/L);
- Dissolved Sodium – 71,900 µg/L in MW02 to 126,000 µg/L in MW04 (SGV: 20,000 µg/L)

5.0 CONCLUSIONS

The following is a summary of Phase II findings:

- Anomalies indicative of an oil/water separator and underground storage tanks (UST) graves were identified on the Eastern and southern part of Lot 6, respectively.
- Fill material, generally consisting of fine-grained sand with varying amounts of fine gravel, silt, brick, wood, and concrete was identified from below surface grade to depths ranging

from about 4 to 16 feet bgs. Native soil, typically consisting of fine-grained sand and silt with varying amounts of medium sand, peat and fine gravel was identified beneath the fill layer to the boring termination depths, ranging from 5 to 20 feet bgs.

- Groundwater was encountered at depths ranging from 8 to 11.5 feet bgs.
- Petroleum-like odors, staining, and PID readings were each identified in soil borings SB01, SB02, and SB04 at depths ranging from 8 to 18 feet bgs. Impacts were generally identified at or below the groundwater table; petroleum-related VOCs and SVOCs were not detected above CU SCOs in the soil samples collected from these borings.
- SVOCs and metals were detected in soil samples at a concentrations above CU and/or IU SCOs in one or more boring. Generally, concentrations were consistent with historic fill in New York City and are not indicative of a point source or release. Concentrations of SVOCs above IU SCOs identified in SB07_8-9 may be attributed to historical site operations or historic fill quality.
- VOCs were not identified in soil about CU and/or IU SCOs; however, MTBE was identified in monitoring wells site-wide, with concentrations exceeding the NYSDEC TOGS SGVs in up-gradient monitoring well MW04. Select petroleum-related VOCs were also identified in monitoring well MW02 above the NYSDEC TOGS SGVs. Petroleum-related VOCs in groundwater may be attributed to historical on-site operations.
- SVOCs were identified in one monitoring well, MW03, above the NYSDEC TOGS SGVs. These exceedances are likely the result of entrained sediment in groundwater derived from historic fill.
- Total antimony, arsenic, iron, lead, magnesium, manganese, and sodium and dissolved iron, magnesium, manganese and sodium were detected in groundwater at a concentrations exceeding TOGS SGVs. Detections of iron, magnesium, manganese and sodium are naturally-occurring and the observed concentrations are not indicative of groundwater contamination. Because dissolved antimony, arsenic, and lead were not identified in groundwater at concentrations greater than the SGV, detections of these total metals in groundwater are likely the result of entrained sediment in groundwater derived from historic fill.

6.0 LIMITATIONS

This report was prepared expressly for Bay Crane Service of New York, for the property located at 57-00, 57-05, 57-57 and 58-20 47th Street, in Maspeth, Queens, New York, and for the objectives defined herein. Langan cannot assume responsibility for the use of this report for any property other than the specific site addressed in this report, or by any third party without specific written authorization from Langan.

The conclusions and opinions provided in this report are based on subsurface conditions ascertained from the analysis of a limited number of samples. Actual conditions encountered may differ substantially from those presented herein and should be brought to our attention whereby we may determine how such changes may affect our conclusions and opinions.

Notes provided on Page 2.
Concentrations above Restricted Use Commercial SCOs are bolded.
Concentrations above Restricted Use Industrial SCOs are shaded.

Table 2
Phase II Environmental Site Investigation
Soil Sample Analytical Results Summary

57-00, 57-05, 57-57 and 58-20 47th Street
Maspeth, Queens, New York
Langan Project No.: 17068701

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Restricted Use Commercial and Restricted Use Industrial Soil Cleanup Objectives (SCO).
2. Only detected analytes are shown in the table.
3. Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenc (p-cresol).
4. Detected analytical results above Restricted Use Commercial are bolded.
5. Detected analytical results above Restricted Use Industrial SCOs are shaded.
6. Analytical results with reporting limits (RL) above the lowest applicable criteria are italicized.
7. ~ = Regulatory limit for this analyte does not exist
8. bgs = below grade surface
9. mg/kg = milligrams per kilogram
10. % = percent

Qualifiers:

D = The concentration reported is a result of a diluted sample.
E = The result is estimated and cannot be accurately reported due to levels encountered or interferences.
J = The analyte was detected above the Method Detection Limit (MDL), but below the RL; therefore, the result is an estimated concentration.
U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
B = The analyte was found in the associated analysis batch blank.

Notes:
1. Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water (herein collectively referenced as "NYSDEC SGVs").
2. Only detected analytes are shown in the table.
3. Detected analytical results above NYSDEC SGVs are bolded and shaded.
4. Analytical results with reporting limits (RL) above NYSDEC SGVs are italicized.
5. ~ = Regulatory limit for this analyte does not exist
6. µg/l = micrograms per liter
7. ND = Not detected

Qualifiers:
D = The concentration reported is a result of a diluted sample.
J = The analyte was detected above the Method Detection Limit (MDL), but below the RL; therefore, the result is an estimated concentration.
U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
B = The analyte was found in the associated analysis batch blank.

Re: Geophysical Engineering Survey (GES) Report
Industrial Site
58-20 47th Street,
Maspeth, Queens 11378

Dear Mrs. Semon,

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 58-20 47th Street, Maspeth, Queens 11378 (the "Site").

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks and other substructures on July 7th, 2021.

The equipment selected for this investigation was a Sensors and Software Noggin 250 MHz ground penetrating radar (GPR) with a shielded antenna and a Radio Detection RD7100 Electromagnetic utility locator.

A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transduce via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where

there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS

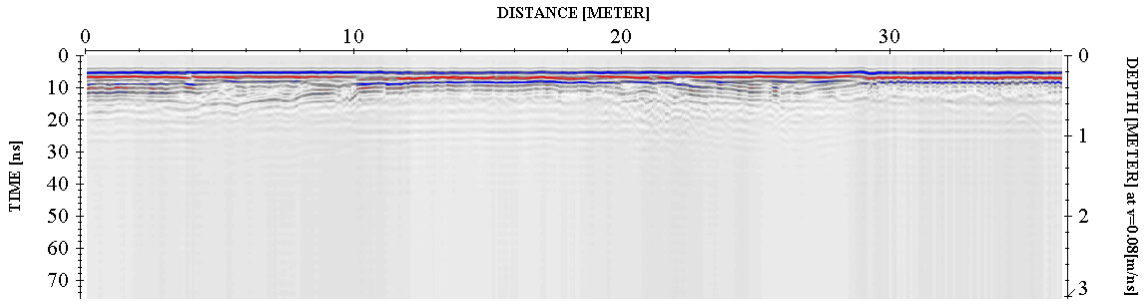
The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

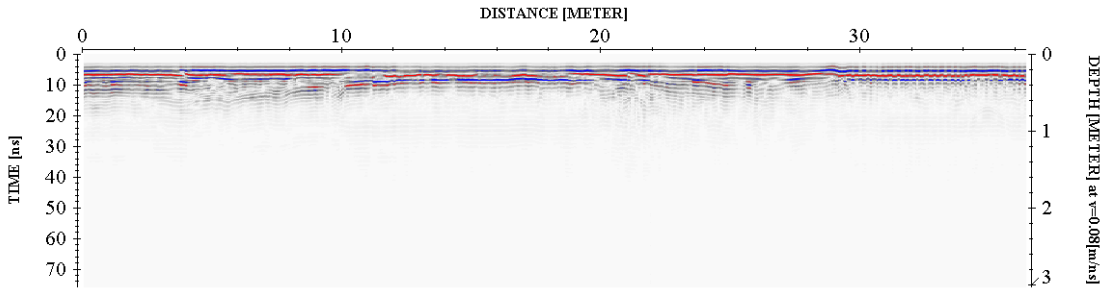
DATA PROCESSING

In order to improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing work flow is briefly described in this section.

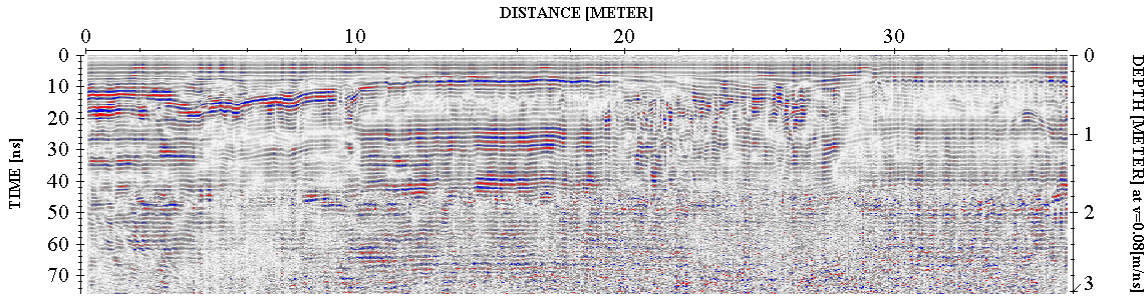
Step 1. Import Raw RAMAC data to standard processing format



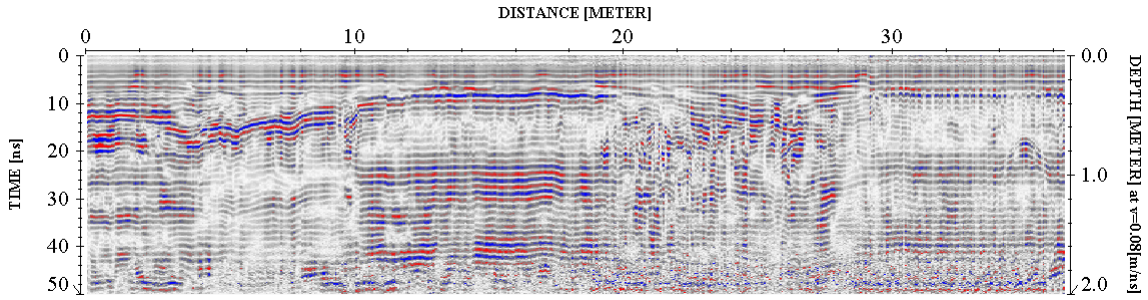
Step 2. Remove instrument noise *(dewow)*



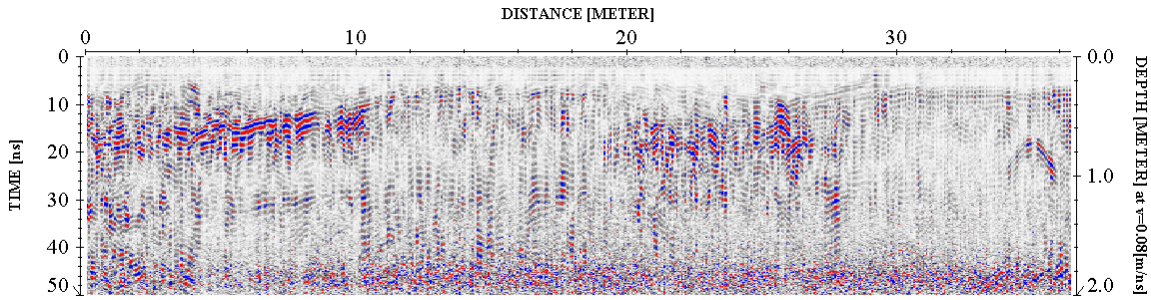
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Clear

Temperature: 95° F

Surface: Concrete, Gravel,

Survey Parameters: A GPR grid scan was conducted within the survey areas as shown on the survey plan. The approximate line spacing of the grid survey was approximately 6'. Additional GPR data was collected over features of interest and in the vicinity of proposed boring locations. An EM utility locator was used in conjunction with the GPR throughout the surveyed areas.

Limitations: The geophysical noise level at the site was high due to being located in an urban environment, reinforced concrete within the surveyed areas and the presence of gravel.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

- Anomalies resembling potential subsurface utilities (such as sewer, water, electric, drainage, telecom, and gas) along with related structures (such as an oil water separator and drains) were identified during the GES. The approximate locations are shown in the survey plan.
- NOVA identified a suspected aboveground storage tank (AST) vault (AST removed prior to GES). A second AST was also identified within the survey area. Two additional sets of vent pipe and fill port were identified and are suspected to be related to two previously removed ASTs. Shown in the survey plan.
- Two large geophysical anomalies resembling potential underground storage tank (UST) graves along with associated lines were identified. Shown in the survey plan.
- All cleared proposed boring locations are shown in the survey plan.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.

Project Engineer

APPENDIX D
WELL CONSTRUCTION AND GROUNDWATER SAMPLING LOGS

WELL CONSTRUCTION AND DEVELOPMENT SUMMARY

Well No. MW01

PROJECT		PROJECT NO.	
57-00 47th Street		170686701	
LOCATION		**ELEVATION AND DATUM**	
Maspeth, NY		N/A	
DRILLING AGENCY		**DATE STARTED**	**DATE FINISHED**
Eastern Environmental Solutions, Inc.		7/7/2021	7/8/2021
DRILLING EQUIPMENT		**DRILLER**	
Geoprobe® 7822 DT		Ernesto Santiago	
SIZE AND TYPE OF BIT		**INSPECTOR**	
2-inch Direct Push		Michael Au	
BOREHOLE DIAMETER		**TYPE OF WELL (OVERBURDEN / BEDROCK)**	
2 inches		Overburden	
RISER MATERIAL	**DIAMETER**	**TYPE OF BACKFILL MATERIAL**	
PVC	1 inch	No. 2 Sand	
TYPE OF SCREEN	**DIAMETER**	**TYPE OF WELL PACK**	**TYPE OF SEAL MATERIAL**
PVC No. 20 Slot	1 inch	No. 2 Sand	Bentonite

METHOD OF INSTALLATION

Geoprobe 7822 DT was used to advance soil boring SB01 to approximately 20 feet below grade surface (bgs). A 1-inch PVC temporary monitoring well was installed, which consisted of 10 feet of 20 slot (0.020-inch) well screen, and 10 feet of PVC riser. Well screen was installed from approximately 10 to 20 feet bgs with riser from 10 feet bgs to grade surface. The annular space of the monitoring well was backfilled with No. 2 sand to 2 inches bgs and the upper 2 inches of the borehole was sealed to grade surface with bentonite. Following groundwater sample collection, the temporary monitoring well was removed, the borehole was filled to grade surface with No. 2 sand and was patched with portland cement.

RISER MATERIAL	**DIAMETER**	**TYPE OF BACKFILL MATERIAL**	
PVC	1 inch	No. 2 Sand	
TYPE OF SCREEN	**DIAMETER**	**TYPE OF WELL PACK**	**TYPE OF SEAL MATERIAL**
PVC No. 20 Slot	1 inch	No. 2 Sand	Bentonite

METHOD OF INSTALLATION

Geoprobe 7822 DT was used to advance soil boring SB03 to approximately 15 feet below grade surface (bgs). A 1-inch PVC temporary monitoring well was installed, which consisted of 5 feet of 20 slot (0.020-inch) well screen, and 10 feet of PVC riser. Well screen was installed from approximately 10 to 15 feet bgs with riser from 10 feet bgs to grade surface. The annular space of the monitoring well was backfilled with No. 2 sand to 2 inches bgs and the upper 2 inches of the borehole was sealed to grade surface with bentonite. Following groundwater sample collection, the temporary monitoring well was removed and the borehole was filled to grade surface with No. 2 sand.

METHOD OF INSTALLATION

Geoprobe 7822 DT was used to advance soil boring SB04 to approximately 15 feet below grade surface (bgs). A 1-inch PVC temporary monitoring well was installed, which consisted of 10 feet of 20 slot (0.020-inch) well screen, and 5 feet of PVC riser. Well screen was installed from approximately 4.4 to 14.4 feet bgs with riser from 4.4 feet bgs to about 0.6 feet above grade surface. The annular space of the monitoring well was backfilled with No. 2 sand to 2 inches bgs and the upper 2 inches of the borehole was sealed to grade surface with bentonite. Following groundwater sample collection, the temporary monitoring well was removed, the borehole was filled to grade surface with No. 2 sand and was patched with portland cement.

Subject: Draft -- Phase I Environmental Site Assessment
57-00, 58-20, 57-05, and 57-57 47th Street
Maspeth, Queens, NY
Langan Project: 100965501

Dear Mr. Richer:

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) is submitting this Phase I Environmental Site Assessment (ESA) for the 47th Street Site (inclusive of 57-00, 58-20, 57-05, and 57-57 47th Street) (Site) in Maspeth, Queens, New York. In performing this Phase I ESA, we have exercised the degree of care and skill generally exercised by other consultants undertaking similar studies at the same time, under similar circumstances and conditions, and in the same geographical area.

We appreciate the opportunity to assist you with this project. If you have questions or need information clarified, please call Mr. Andrew Kerr at 510-333-9051 or Mr. Rory Johnston at (973) 560-4978.

Sincerely yours,

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.

Andrew Kerr, P.G. Calif.

E1.0 EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) has performed this Phase I Environmental Site Assessment (ESA) for the following properties located in Maspeth, New York:

- 57-00 47th Street
- 58-20 47th Street
- 57-05 47th Street
- 57-57 47th Street

The properties are collectively known as "the 47th Street Site" and "the Site".

The approximate location of the Site is shown on **Figure 1 (Appendix A)**. This ESA was performed on behalf of Prologis, L.P. (User) to assist with a potential purchase of the Site.

This Phase I ESA was performed using the guidelines and limitations of the following: 1) ASTM International's (ASTM) E1527-13 (Standard Practice for ESAs: Phase I ESA Process (and subsequent amendments thereto)), and 2) the United States Environmental Protection Agency's (USEPA) 2006 standards for All Appropriate Inquiry (AAI) Rule (40 CFR Part 312).

The objective of this Phase I ESA was to attempt to identify the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products as defined in ASTM E1527 13 as a Recognized Environmental Condition (REC).

E1.1 Facility Description

General information relative to the Site is outlined below. Site features and the immediate area surrounding the Site are depicted on **Figure 2** in **Appendix A.**

The Site is located in northwestern Queens, adjacent to Newtown Creek and south of the intersection of Interstates 278 and 495. This area is characterized by commercial and industrial use. The Site encompasses a total of 3.8544 acres and is comprised of the following street

addresses, tax blocks and lots (on the Queens borough tax map) and City Register File Numbers (CFRN):

Property Address	Block/Lot	CFRN No.	Land Area (Approximate)
57-00 47th Street	2601/6	2020000326467	2.70 acres
58-20 47th Street	2601/1	2020000326471	0.35 acres
57-05 47th Street	2601/72	2020000326469	0.69 acres
57-57 47th Street	2601/68	2020000326473	0.10 acres

Information provided by NYC Zoning & Land Use Map

The entirety of the Site is vacant:

- The 57-00 47th Street parcel consists of vacant vehicle maintenance garage with office space on the eastern end of the building. The 57-00 parcel building is approximately 20,000 square feet (SF) in size and was constructed in 1966.
- The 58-20 47th Street parcel functions contiguously with the 57-00 parcel and currently is vacant with a recycled concrete aggregate (RCA) and no permanent structures.
- The 57-05 47th Street parcel consists of a vacant building with a vehicle maintenance shop on the eastern end and an office space on the western end. The 57-05 parcel building is approximately 5,000 SF in size and was constructed in 1964.
- The 57-57 47th Street parcel consists of a vacant commercial building which previously functioned as office space followed by a delicatessen. The 57-57 parcel building is approximately 1,500 SF in size and was constructed in 1966.

The different portions of the Site will be referred to as the 57-00, 58-20, 57-05, and 57-57 parcels, consecutively. Please see Figures 1 and 2 for parcel locations on the Site.

The current Site owners are SLMJL Family Property Owner, LLC (58-20) and RL Family Property Owner, LLC (57-00, 57-57, and 57-05). Below are the most recent former Parcel tenants, as per information from the property owner representative during Phase I ESA site reconnaissance.

Parcel	Tenant	Property Use
57-00 Parcel	NYC Concrete Materials AKA Pebble Lane Associates, LLC	Concrete testing, vehicle maintenance, and office operations

Parcel	Tenant	Property Use
58-20 Parcel	NYC Concrete Materials AKA Pebble Lane Associates, LLC	Concrete recycling
57-05 Parcel	Marshark Craft	Portable catering parking and vehicle maintenance
57-57 Parcel	Delicatessen	Small scale delicatessen

E1.2 Property History

The Site is located in Maspeth, which is the northwestern area of the Queens Borough. The Site was first developed sometime prior to 1897, initially on the 57-00 and 57-05 parcels and was utilized as a 'fertilizer works' facility (circa 1897 to 1914) and an oil depot with petroleum bulk storage (circa 1914 to 1936). Seven separate buildings of unknown use were located on the 57-00 parcel in 1902 associated with the fertilizer works. The buildings were predominantly 1-floor, while two of the buildings contained 2-floor building sections.

When the Site operated as an oil depot circa 1914 to 1936, the following buildings were located on parcel 58-20 and the northern end of parcel 57-00:

- Oil tanks were located on the northeastern end of the parcel along 47th Street.
- Wagon sheds were located on the northern end of the Site along 58th Road with miscellaneous 1-floor buildings.
- A vehicle garage was centrally located on the 58-20 parcel.
- An office, 2-floor wagon house, and office with petroleum products were located on the southern end of the 58-20/northern end of the 57-00 parcel.
- Oil in barrels was located along Newtown Creek on the northwestern end of the 57-00 parcel/southwestern end of the 58-20 parcel.

Following fertilizer works and oil depot operations, buildings associated with these purposes were demolished. Following building demolition, fill appears to have been placed on the Site in the early 1950s. The current buildings were constructed on the Site in the mid-1960s. Once the building were constructed, the Site operated as truck parking (circa 1974 to 1991), truck repair (1982 to 2006), a concrete recycling facility with petroleum bulk storage (circa 2004 to 2021), and auto repair (circa 2013, 2014) on Parcels 58-00 and 57-00; a motor freight station with petroleum

bulk storage (circa1963, 1982 to 2006) on Parcel 57-05; and office space and delicatessen on the 57-57 parcel.

E1.3 Environmental Database and File Review

The review of an environmental database report prepared by Environmental Data Resources, Inc. (EDR) indicates the Site was identified in 8 of the approximately 115 databases searched by EDR for this geography. Databases that the Site is listed in include the Facility Index System (FINDS), Solid Waste of Landfill Facilities (SWF/LF), NY underground storage tank (NY UST), NY aboveground storage tank (AST), Leaking Storage Tanks (LTANKS), Spills Information Database (NY SPILLS) databases. The Site was listed three times in the NY SPILLS database. The Site was also listed as a Resource Conservation and Recovery Act (RCRA) Generator, however additional information was not available for the Site in this database.

The majority of databases are associated with former operations at the 57-00 parcel. A concrete recycling facility formerly operated on this Parcel (circa 2004 and 2021) and several above and below ground petroleum storage tanks were listed for the facility, refer to Section 5.5 for a listing of storage tanks registered at the Site. Leaks associated with underground storage tanks (USTs) were reported on the 57-00 and 57-57 parcels. Additional petroleum spills were reported on the 57-00 parcel in association with historical commercial operations predominantly associated with the concrete recycling facility.

Inquiries related to past or current petroleum bulk storage and hazardous substances handling and/or documented releases at the Site were submitted to the NYC Department of Environmental Protection (NYCDEP), NYC Department of Buildings, Public Works, NYC Fire Department (FDNY), NYC Department of City Planning, New York State Department of Environmental Conservation (NYSDEC), NYS Department of Health (DOH), and EPA.

E1.4 Findings

This Phase I ESA identified four Recognized Environmental Conditions (RECs), one Historical REC (HREC), five Business Environmental Risks (BERs), and one de minimis condition associated with the Site:

REC 1 – Historical Site Use

Industrial/commercial operations at the Site date back to the 1800s and include an oil depot with petroleum bulk storage (circa 1914 to 1936), fertilizer/glue manufacturing (circa 1897 to 1914), and vehicle maintenance (circa 1982 to 2006). Various petroleum underground storage tanks (USTs have historically been located on three of the four parcels (UST records were not

available for review for 58-20). UST-related leaks have been reported on two of the four parcels (on Parcels 57-00 and 57-57). Although these leaks are closed with the NYSDEC, closure reports were not available from NYSDEC for all of the reported incidents.

More recently, the 57-00 and 58-20 parcels formerly operated as a concrete recycling facility; the facility also accepted other demolition debris (circa 2004 and 2021). Additionally, a concrete laboratory historically operated on the 57-00 parcel (circa 2004 and 2021). Concrete testing laboratories historically have included chlorinated solvents in the operations..

REC 2 – Newtown Creek Superfund

The Newtown Creek is adjacent to the 57-00 and 58-20 parcel western property lines. The creek was added to the USEPA National Priority List in 2010 and remains as such. Former heavy industrial operations in the vicinity of Newtown Creek dating back to the 1800s have impacted the sediments and groundwater in the Creek.. A remedial investigation is currently underway for the Creek. Additionally, a focused feasibility study is currently being prepared regarding a combined sewer outfall long term control plan.

Newtown Creek has the potential to impact on-site soil and groundwater through tidal fluctuations and sediment deposition along the bank of the Creek.

REC 3 – On-Site Storm Water Vault & Oil/Water Separator

The geophysical survey associated with a Phase II Environmental Site Investigation prepared by Langan and dated July 2021 (the Langan July 2021 Phase II ESI) identified a potential oil/water separator and piping suggesting that the trench drains discharged to an on-site storm water vault on the southwestern end of the 57-00 parcel. Concrete slabs cover the storm water vault and piping, therefore the presence of both the discharge piping and the vault could not a be field verified during the site reconnaissance.

REC 4 – Methyl Tert-Butyl Ether (MTBE) in Groundwater

During the Langan July 2021 Phase II ESI, methyl tert-butyl ether (MTBE) was detected in a groundwater sample collected from the northeastern corner of Parcel 57-05. MTBE is a gasoline additive (used since the 1980s) to aid in increasing octane and oxygen levels in gasoline to lower pollution emissions.

HREC 1- Closed Petroleum Spills

The Site has six NYSDEC reported spills which were all administratively closed. A summary of information provided in the Spills section of the EDR report is included below:

- NYSDEC Spill No. 94-11004 was reported November 17, 1994 due to the release of an unknown volume of gasoline. The spill was administratively closed on November 17, 1994. This incident occurred at the 57-00 parcel.

- NYSDEC Spill No. 97-09690 was reported November 20, 1997 after the release of an unknown volume of diesel fuel on soil. No further information regarding the spill was provided. The spill was administratively closed on January 8, 1998. This incident occurred at the 57-00 parcel.

- NYSDEC Spill No. 98-12248 was reported on January 4, 1999 after petroleum impacted soil was identified during the removal of a UST. Petroleum impacted soil was removed and endpoint samples were collected. The spill was remediated to NYSDEC satisfaction and was administratively closed on July 12, 2006. The incident occurred at the 57-57 parcel while under the Boro Lumber Company occupancy.

- NYSDEC Spill No. 07-09978 was reported after a UST failed a tank tightness test on December 18, 2007. The tank lines were re-tested and it was determined that the vent line failed due to a loose fitting. According to a NYSDEC obtained report, evidence of petroleum impacts to the subsurface were not identified by Larry E. Tyree Co., Inc. (the contracted environmental services provider of the Site occupant). The spill was administratively closed on December 28, 2007 following report submission by Larry E. Tyree Co. This incident occurred at the 57-00 parcel.

- NYSDEC Spill No. 08-08170 was reported October 21, 2008 after the report of an active release of petroleum substances and illegal storage and refueling of vehicles. A limited subsurface investigation was reportedly completed in 2009 that identified petroleum impacts in soils from surface grade to about eight feet below grade surface. About 381.04 tons of petroleum impacted soil was reportedly excavated and disposed of in 2010. Documentation of soil and groundwater samples collected post remediation reportedly confirmed that the spill was remediated to the satisfaction of the NYSDEC. The spill was administratively closed on October 27, 2012. This incident occurred at the 57-00 parcel.

- NYSDEC Spill No. 13-06438 was reported on September 19, 2013 after diesel impacted soil and pea gravel was identified in a tank vault during the removal of a 4,000-gallon UST. A closure report summarizing the remedial work and analytical data was reportedly prepared for NYSDEC. The spill was remediated to the satisfaction of the NYSDEC and the spill was administratively closed February 12, 2014. This incident occurred at the 57-00 parcel.

BER 1- Historic Fill

Previous report submittals contain reported field conditions identifying the presence of fill material on the Site. Field conditions identified historic fill material (i.e. brick, gravel, concrete, and wood) in soil borings completed as part of the Langan July 2021 Phase II ESI. Historic fill was also identified during other previous environmental investigations reviewed for this Phase I ESA. Laboratory results from soil and groundwater samples collected on the Site indicate the presence of typical historic fill constituents (i.e. polycyclic aromatic hydrocarbons [PAHs] and Metals).

Historical topographic maps indicate historic fill was deposited within the region sometime prior to the 1900s. Historical aerials depict a dark fill material spread onto lighter underlying soils on the 57-00 and 58-20 parcels in the early 1950s. Elevated PAHs and Metals pose a potential BER if future grading is planned, likely requiring a Soil Management Plan (SMP).

BER 2- Trench Drains & Oil/Water Separator

Trench drains were identified within the 57-00 and 57-05 parcel maintenance garage bays.

- Within the 57-00 parcel garage, trench drains were identified running along the northern and southern ends of the building. Metal plate-covered boxes were also identified near the trench drains on the northern and southern ends of the building. The representative for the property owner stated these boxes were associated with receiving liquids from the trench drains, however piping was not identified within these boxes during site reconnaissance. An oil/water separator was also observed near the trench drain along the southern side of the building. According to a geophysical report prepared as part of the Langan July 2021 Phase II ESI, the northern and southern trench drains appear to connect to a nearby storm drain in the southern parking area. This storm drain discharges to the on-site storm water vault.

- A trench drain connected to a slop sink was identified within a garage bay in the northern part of the building on the 57-05 parcel. The discharge location of this trench drain is unknown.

BER 3 - RCA Pile

During Langan's site reconnaissance on November 2, 2021, an approximate 1,000 cubic yard stockpile of recycled concrete aggregate (RCA) was observed on the northeastern portion of the 58-20 parcel. The stockpiled material appears related to the former concrete processing/recycling operations at the Site. The RCA pile is considered a BER since the

source and environmental conditions of this material is unknown and it will need to be characterized and removed prior to Site redevelopment.

BER 4 - Administrative Consent Order

In April 2021, the NYSDEC imposed an administrative consent order (ACO) on the property. The ACO was imposed due to a tidal wetlands buffer requirement along Newtown Creek, which is western and adjacent to the 57-00 parcel. The ACO was filed with the property deed, and included provisions that structures cannot be erected on this area of Parcels 57-00 and 58-20. Additionally, a tidal wetland buffer vegetated area must be maintained by current and future occupants.

BER 5 – Asbestos Containing Materials (ACM), Lead-in-Paint and Mold

Asbestos and lead-in paint surveys were completed by Langan at the Site in November 2021, which identified confirmed and/or presumed ACM associated with the on-site buildings. Lead-in-paint was also identified red paint on the metal columns by the shutter doors on Parcel 57-00. A description of the asbestos and lead-in-paint survey results are presented in the *Hazardous Materials Survey Report* dated December 2021.

Langan observed indicators of mold during the Phase I ESA site reconnaissance on November 2, 2021. Potential mold was identified within buildings with damaged roofs on Parcels 57-00 and 57-05.

One de minimis condition was identified during site reconnaissance in the form of petroleum-like staining which was identified throughout parcel 57-00 within the interior warehouse space, near mechanic pits, trench drains, and within the former AST room. This condition was also identified on the 57-05 parcel interior space, truck bays, and exterior paved parking areas. Surficial cracks, joints, or exposed soils were not identified within the staining areas. Staining identified within the former AST room was within a secondary containment concrete block treated with specialized concrete purposed to not allow leaking.

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) has completed this Phase I Environmental Site Assessment (ESA) for the properties located at: 57-00, 58-20, 57-05, and 57-57 47th Street, Maspeth, Queens, New York, herein after referred to as "the 47th Street Site" and "the Site" (see **Figure 1** included in **Appendix A**). This ESA was performed on behalf of Prologis, L.P. (User) to assist with a possible purchase of the Site.

1.1 Purpose

The purpose of this Phase I ESA is to:

(1) Identify Recognized Environmental Conditions (RECs) in connection with the Site, as outlined in the ASTM International's (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: the presence or likely presence of any hazardous substances or petroleum products in, on, or at a Site: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. The identification of RECs includes listing of historical and controlled RECs (HRECs and CRECs) as defined by ASTM E1527-13.

(2) Utilize the guidelines of United States Environmental Protection Agency (USEPA) 40 Code of Federal Regulations (CFR) Part 312 Subpart C Standards and Practices §312.20 All Appropriate Inquiry (AAI) Rule for the development and implementation of the scope of services.

As per ASTM E-1527-13, Phase I ESAs can also categorize identified items as a Business Environmental Risk (BER) or de minimis condition. A BER is defined by ASTM E1527-13 as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of *commercial real estate*, not necessarily limited to those environmental issues required to be investigated in this practice." A de minimis condition is defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies".

1.2 Scope of Services

This Phase I ESA was conducted utilizing a standard of good commercial and customary practice that is consistent with ASTM E1527-13. Significant scope additions, deletions, or deviations to ASTM E1527-13 are noted in Section 1.4 of this report. In general, the scope of this assessment consisted of obtaining information from the User; reviewing reasonably ascertainable information and environmental data relating to the Site; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing persons knowledgeable about the Site; and conducting a site reconnaissance. The specific scope of this assessment included the following:

1. A site reconnaissance to observe the Site's condition and assess its location with respect to adjoining and surrounding property uses and natural surface features. The reconnaissance included making observations of adjacent and surrounding properties from public rights-of-way to identify obvious potential environmental conditions. The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Site, and then progressing to adjacent and surrounding properties. Photographs taken as part of the site reconnaissance are provided in **Appendix B**.

2. An interview of Mr. Sabatino Lamanna, the property manager for the Site. Mr. Lamanna is employed by SLMJL Family Property Owner, LLC and RL Family Property Owner, LLC.

3. A review of environmental databases maintained by the USEPA, federal, state, and local agencies within the approximate minimum search distance. Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut prepared the environmental database report, which is included in **Appendix C**.

4. Identification of physical characteristics of the Site through previous site information and/or referenced sources.

5. A review and interpretation of historical information, including aerial photographs, topographic maps, Sanborn Fire Insurance Maps (Sanborn maps), and listings of past occupants, to identify previous activities on and in the vicinity of the Site. Copies of historical documentation items and reports, most generated by EDR, are included in **Appendix D**.

6. A review and interpretation of additional historical reports or records from local city or county agencies. Pertinent portions of selected reports have been included in **Appendix E**.

7. Limited desktop or visual evaluations of the potential for radon, lead in drinking water, wetlands, mold, and polychlorinated biphenyls (PCBs) conditions or equipment were conducted as part of this Phase I ESA as applicable.

8. A limited regulated materials survey was completed at the Site to identify the presence/absence of asbestos containing material (ACM) and lead-in-paint separate and

simultaneously with this Phase I ESA. The findings from this survey are summarized in Sections 7.2 and 7.3.

1.3 User Reliance

Langan has prepared this report specifically for the use of the User, with reliance to include Prologis, L.P., and its subsidiaries, affiliates, related parties (specifically including any 1031 exchange entities), successors and assigns, subject to and in accordance with the terms of the Master Services Agreement between Prologis, L.P. and Langan, dated November 8, 2017, under which the report was prepared. Other parties cannot rely on this Phase I ESA and the conclusions thereof, without written authorization from Langan.

1.4 Deletions and Deviations

This Phase I ESA has been performed using the guidelines of ASTM E1527-13 (Standard Practice for ESA: Phase I ESA Process). Two elements of the above referenced standard were not completed:

- A questionnaire was not provided to current Site tenants; however, short interviews/discussions with current Site tenants were conducted, when possible, during the site reconnaissance. Relevant information from the interviews is included throughout the report.

- Questionnaires were sent to the User and the Site owner; completed versions have not been returned.

1.5 Limitations, Assumptions, and Data Gaps

This Phase I ESA was prepared for the Site on behalf of the User. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Site addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, as described above, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comport to those prescribed in the ASTM E1527-13. Sampling (e.g. soil samples from cores or borings, groundwater sampling from wells, or construction material surveys or sampling) was not performed as part of this Phase I ESA.

This Phase I ESA was not intended to be a definitive investigation of all possible environmental impacts at the Site. The purpose of the site investigation was limited to determining if there is reason to suspect the possibility of RECs at the Site. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular property. Therefore, Langan cannot "insure" or "certify" that the Site is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by the User, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The findings and opinions provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-13 and are intended exclusively for the purpose stated herein, at the specified Site, as it existed at the time of our site reconnaissance.

The scope of services performed for this study did not include the following: cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and biological agents. Limited desktop or visual evaluations of the potential for radon, lead in drinking water, wetlands, mold, and PCB conditions and equipment were conducted as part of this Phase I ESA.

The AAI Rule and ASTM E1527-13 discuss data gaps and the need to identify them if they have occurred and are deemed significant to the identification of RECs. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in Section 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases…such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps." According to ASTM E 1527-13, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met…If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

This Phase I ESA was completed with the following data gaps:

- Complete responses to FOIA requests have not been received from the following government agencies: NYCDEP, NYC Department of Buildings, Public Works, FDNY, NYC Department of City Planning,, NYSDOH, and EPA.

- Langan was not granted access to the interior of the 57-57 building due to a misplaced key.

- Langan was not granted access to two garage bays located on the northwestern end of the 57-00 parcel building. This was due to lack of electricity to open the garage bay doors.

- A questionnaire was not provided to current Site tenants.

- Questionnaires were sent to the User and the Site owner; completed versions have not been returned.

The above listed data gaps are not expected to impact the overall conclusions of this Phase I ESA. Data from other data sources provided information that would be expected were these data gaps to be satisfied. For these reasons, these data gaps are not considered significant. If information becomes available which alters the conclusions of this Phase I ESA, an addendum will be issued.

1.6 Consultant Qualifications

The signatures of the environmental professional(s) responsible for this Phase I ESA are provided on the submittal letter and/or cover page of this report.

The qualifications of the environmental professionals that conducted this Phase I ESA are presented in the resumes provided in **Appendix F**. Langan declares that, to the best of our professional knowledge and belief, the individuals responsible for this Phase I ESA meet the definition of Environmental Professional as defined in #312.10 of 40 CFR 312. Langan has specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The Site is located at 57-00, 58-20, 57-05, and 57-57 47th Street, Maspeth, Queens, New York, approximately 0.75 miles south form the intersection of Interstates 278 and 495. The Site

consists of parcels encompassing the majority of the northern end of 47th Street (see **Figure 1**). The Site also adjoins Newtown Creek. This location is in a commercial and industrial area of northwestern Queens.

As per a Site survey completed December 22, 2020, the collective Site is 3.8544 acres in size and consists of four New York City Register File Number (CFRN) parcels. See table below for additional property information.

Property Address	Block/Lot	CFRN IDs	Land Area (Approximate)
57-00 47th Street	2601/6	2020000326467	2.70 acres
58-20 47th Street	2601/1	2020000326471	0.35 acres
57-05 47th Street	2601/72	2020000326469	0.69 acres
57-57 47th Street	2601/68	2020000326473	0.10 acres

The approximate area corresponding to each address and parcel boundaries are depicted in **Figure 2**. The different portions of the Site will be referred to as the 57-00, 58-20, 57-05, and 57-57 parcels, respectively.

2.2 Improvements

The Site configuration is shown on the Site Plan in **Figure 2**. The primary Site improvements consist of three buildings. The building on parcel 57-00 is 19,760 square feet in area. Parcel 57-05 contains a 5,100-square foot building. And parcel 57-57 has a 1,890-square foot building.

Ground coverings on the northern and southern ends of parcel 57-00 consists of concrete. The southern end and parcel 58-20 consists of gravel and crushed concrete along with a planted wetland buffer. The buildings on parcels 57-05 and 57-57 are surrounded by asphalt.

2.2.1 Main Structures

There are three main structures on the Site as summarized below:

<u>57-00 Parcel</u>

The 57-00 parcel includes a centrally located building of approximately 19,760 square feet which was constructed in 1966. The building is currently vacant, however it was last occupied by NYC

Concrete Materials AKA Pebble Lane Associates, LLC. The building was utilized for vehicle maintenance, concrete testing, and administrative purposes. The building is constructed of brick and cinderblock with sheetrock and drop ceilings within the office space and panel ceilings within the garage area. The garage area is on the western end of the building and the administrative area is on the eastern end of the building. Concrete testing occurred within the northeastern end of the administrative area.

58-20 Parcel

A concrete block shed with a sewer ejector pit is located on the southeastern end of this parcel.

57-05 Parcel

The 57-05 parcel contains a vacant 5,100-square foot commercial building located on the western end of the property. The building was constructed in 1964 and consists of vehicle maintenance garage bays on the eastern end of the building and office space on the western end. A floor drain is located on the western end of the northern garage bay. The floor drain has a slop sink draining into this floor drain. An unknown dark material was observed lining the slop sink basin. A discharge location for this floor drain was not identified.

57-57 Parcel

The 57-57 parcel contains a vacant 1,890-square foot commercial building located on the western side of the property. The building was constructed in 1966 and consists of a one story brick structure which was formerly utilized as office space, followed by a former delicatessen space. The interior of the building was not accessible during site reconnaissance due to a misplaced key.

2.3 Owner, Site Manager, and Occupant Information

SLMJL Family Property Owner, LLC (58-20) and RL Family Property Owner, LLC (57-00, 57-57, and 57-05) own the Site. The Site is currently vacant. The table below lists the most recent tenants on the Site; information was provided by the Site contact.

Parcel	Most Recent Tenant	Most Recent Parcel Use
57-00 Parcel	NYC Concrete Materials AKA Pebble Lane Associates, LLC	Concrete testing, vehicle maintenance, and office operations.
58-20 Parcel	NYC Concrete Materials AKA Pebble Lane Associates, LLC	Concrete recycling

Parcel	Most Recent Tenant	Most Recent Parcel Use
57-05 Parcel	Marshark Craft	Portable catering parking and vehicle maintenance
57-57 Parcel	Delicatessen	Small scale delicatessen

2.4 Zoning

The Site is zoned Manufacturing District (M3-1) according to the New York City Zoning and Land Use Map, accessed from the New York City ZoLa GIS map. Snapshots of the Zoning Map is included in **Attachment E1, Appendix E**.

2.5 Utilities

The Site is serviced by the New York City Sewer and NYC Department of Environmental Protection (DEP) for water. Electricity and natural gas are provided by Con Edison. Currently, utilities are not active on the Site except for a minor amount of electric within the 57-00 building.

2.6 Current Use

The Site is currently vacant.

3.0 REGIONAL DESCRIPTION AND PHYSICAL SETTING

3.1 Topography

The topography of the Site is relatively flat and elevation is near sea level. According to the EDR Radius Check, the Site has an elevation of approximately seven feet above mean sea level (msl). The EDR Radius Check references the United States Geological Service (USGS) Brooklyn, NY map, dated 2013.

3.2 Surface Water

Surface water is not present within Site boundaries. The nearest surface water body is Newtown Creek which adjoins the Site to the west.

3.3 Floodplains

According to the Federal Emergency Management Agency (FEMA) Map Service Center, the Site is plotted on FEMA panel 3604970208F. The entire Site is mapped within a shaded portion of a Zone X area designated with a 0.2% annual chance flood hazard (i.e. – within the 500 year flood zone area). The FEMA National Flood Hazard Layer FIRMette is included in **Attachment E2, Appendix E**.

3.4 Geology

The United States Department of Agriculture indicates the surficial geology of the Site consists of predominantly Urban Land, with a till substratum and also Urban land, tidal marsh. According to Bakersville's Bedrock and Engineering Maps of New York County and Parts of Kings and Queen Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey", dated 1994, indicates the bedrock underlying the Site is part of the Hartland Formation. The Hartland Formation is comprised of micaschist and quartz-feldspar granulite, with localized intrustions of granite and pegmatite. Given the development history and infilling in the south, historic fill will likely be present beneath the Site. Geological surface features (i.e. outcroppings were not identified.

Soil borings completed as part of the Langan July 2021 Phase II ESI indicated subsurface soils contained fill material. Fill material constituents were gravel, non-native gray sand, brick, and concrete pieces. Native soil consisted of brown/olive medium sand with trace fine gravel. Peat was detected in some boring locations at a depth of approximately twelve and a half feet below grade.

3.5 Hydrology and Hydrogeology

Groundwater is typically influenced topographically, shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeological network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeological and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks.

Groundwater from temporary well points installed on the Site as part of the Langan July 2021 Phase II ESI indicate groundwater is present at a depth of approximately 10 to 10.5 feet below grade. Groundwater flow is suspected to be westerly towards Newtown Creek.

3.6 Surrounding Properties

The Site is located south of the intersection of 47th Street and 58th Road. Adjacent properties are:

North	
58th Road	
47-01 8th Street	NYC Department of Sanitation Queens West District 5 Garage
South	
58-26 47th Street	NYC Department of Environmental Protection Newtown Creek aeration facility
58-38 47th Street	Currently vacant, formerly B&H Scaffold
Grand Avenue	
East	
57-47 47th Street	Molloy Brothers Moving and Storage/LaserShip Delivery
57-45 47th Street	Commercial building with vehicle repair/maintenance
48-05 47th Street	New York City Transit Authority parking facility
West	
Newtown Creek	
1313 Grand Street	Empire Transit Mix Inc. (concrete mixing facility)

Additional selected information regarding occupants for nearby buildings is included in the City Directory report included in **Appendix D.**

4.0 SITE AND REGIONAL HISTORY

This Site is located in a portion of northwestern Queens which was developed sometime prior to 1897. The area has a rich industrial/commercial history. The first documented use on the Site was for operations associated with a fertilizer and rendering works which began on parcel 57-00 sometime prior to 1901 and ended circa 1901. Valvoline Oil Company operated on parcels 58-20

and 57-05 from approximately 1914 until sometime prior to 1941. Following Valvoline cessation of operations, the current Site configuration took shape in the mid-1960s.

Site and regional land use is documented by the following items:

Historical Items	Dates
Aerial Photographs	1924, 1941, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 2006, 2009, 2013, 2017
Historical Sanborn Maps	1933, 1936, 1950, 1951, 1965, 1968, 1971, 1977, 1979, 1980, 1981, 1982, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005, 2006, 2007
Historical USGS Topographic Maps	1897, 1898, 1900, 1947, 1956, 1967, 1979, 1995, 2013
City Directory Abstract (available business directories, including city, cross-reference, and telephone directories)	1922, 1934, 1939, 1945, 1950, 1962, 1967, 1970, 1976, 1983, 1991, 1994, 1996, 1999, 2000, 2004, 2005, 2009, 2014, 2017

4.1 Aerial Photographs

Langan reviewed 16 aerial photographs provided by EDR to help evaluate past uses and relevant characteristics of the Site and surrounding properties. The EDR Aerial Photo Decade Package report, which contains a copy of each photograph, is provided in **Appendix D**. Features noted in the photographs are discussed below.

1924 Photograph. Structures are present on parcel 58-20 and extending to the northern end of parcel 57-00. Approximately five buildings are located on the parcels. Additional structures are present on the northeastern end of parcel 57-05 with ancillary pieces of equipment on the southwestern end of the parcel. An off-site, unimproved road leads to the northern end of the Site.

1941 Photograph. Imagery is not of high quality, therefore specific details are not clearly identifiable. An unimproved roadway bifurcates the Site in a similar location as current 47th Street, however the terminus of the road is on parcel 58-20. Possible structures are present along Newtown Creek on parcels 57-00 and 58-20. It is unclear if buildings remain on parcel 57-05.

1951-1966 Photographs. All parcels are void of buildings. Material which is darker than material on nearby properties and the native ground surface has been deposited on parcels 57-00 and 58-20. A building foundation is apparent near Newtown Creek on parcel 57-00.

Piles of material are apparent on parcels 57-00 and 58-20; the majority of the parcels are covered with these piles (1954). By 1961, the piles were no longer apparent on the parcels. Erosion of imported material is evident on parcels 57-00 and 58-20. Parcels 57-05 and 57-57 remain vacant and void of structures and notable development until 1966.

1974-1980 Photographs. Buildings are apparent on parcel 57-00; the current building configuration depicted. Tractor trailers are located surrounding the 57-00, 58-20, and 57-05 buildings. Debris piles were located on northeastern end of the 57-05 parcel (1974).

1984 Photograph. Trailers remain apparent on the 57-00 and 58-20 parcels. Parcel 57-05 no longer has trailers parked on the property; the building on this parcel appears vacant. The debris pile appears to have been removed from northeastern corner of 57-05.

1991-1994 Photographs. A concrete recycling plant has been constructed on parcel 58-20 and the northern end of 57-00. Piles of RCA material is apparent throughout this area. Trucks are parked throughout the 57-00 parcel. Material, debris, and vehicles are located throughout the 57-05 parcel.

2006-2009 Photographs. The majority of trucks were removed from the 57-00 parcel. Concrete plant operations appear to have been reconfigured; RCA piles have been moved to new areas on the 57-00 and 58-20 parcels. Some debris/vehicles have been removed from the 57-05 parcel. Material is being stored on the 57-57 parcel surrounding the building.

2013-2017 Photographs. Additional trucks are parked on the 57-00 parcel. Parcel 57-05 appears to be operating a material distribution company (material type is unknown), which is evident by staged materials along perimeter of parcel.

4.2 Topographic Maps

Langan reviewed nine historical topographic maps from EDR. The following additional information was obtained from the topographic maps about the Site and/or the immediate areas near the Site:

- Topographic maps from the 19th century depict structures on the Site. Various commercial development is present within the Site vicinity. Surrounding areas have been fully

developed with residential use. A railroad track is located approximately 2,166 feet north and east of the Site.

- Topographic maps from 1947 until 2013 indicate a steady progression of development within the area surrounding the Site. The Site appears void of structures from 1956 until 1967. The U.S. Naval Reservation was constructed east of the Site circa 1956.

- The Site is not depicted as being inundated with water on any map, with the nearest hydrologic features being Newtown Creek, adjoining the Site to the west.

A copy of EDR's Historical Topography Maps report is provided in **Appendix D**.

4.3 Sanborn Maps

Sanborn maps provide information on structures related to building construction and materials that could impact fires (i.e. gasoline tanks, chemical storage, etc.) within these structures. EDR provided two Sanborn map plates covering the Site and adjoining properties dated 1902 through 2007. However, the Site is not depicted in the majority of these maps. A copy of the Sanborn map report is provided in **Appendix D**. Additional information not included in the aerial photographs and/or topographic maps include the following items:

1902 Map: Moller and Cos. Fertilizer and Rendering Works is depicted east and extending onto the southern end of parcel 57-00. Several buildings associated with these operations were depicted on the 1902 Sanborn Map and included the fertilizer works building. An old well is located on the southern property line of parcel 57-57.

1914 Map: Valvoline Oil Company Oil Depot is located on parcels 58-20 and 57-05. Various outbuildings are associated with the Valvoline operations and include: Storage areas, barrels of oil, six areas with oil tanks, and oil engine building. A roadway is located on parcel 57-57.

1950 Map: It appears that the Valvoline Oil Company Oil Depot became abandoned sometime prior to 1950. Some structures remain from Valvoline operations on parcels 58-20 and 57-05.

1980 Map: Current buildings have been constructed on the Site. The building on parcel 57-00 is stated to function as a truck body repair facility. The building on parcel 57-05 was stated to be operated as a motor freight station. The building on parcel 57-57 was stated to be an office.

4.4 Historical Site Occupants

Langan reviewed a city directory search and abstract provided by EDR. For each address, the directory lists the name of the corresponding occupant at approximate five year intervals. Business directories including city, cross reference, and telephone directories were reviewed, if available, for the years spanning 1967 through 2017. Available data for the target property appears to be dated from 1966 to 2014. The City Directory Report is included in **Appendix D**. Below is a summary of the occupant listings for the Site addresses:

Address	Reported Year	Reported By	Occupant
57-00 & 58-20	2021	Site Visit /Interview	Vacant- Formerly NYC Concrete Materials AKA Pebble Lane Associates, LLC
	2003-Spring 2021	Filed Lease	Formerly NYC Concrete Materials AKA Pebble Lane Associates, LLC
	2013-2017	Google Street View	Queen's Truck Auto Center (Repair shop) Sky Materials Rizzo Environmental Services (2013-2015)
	1995-2012	Filed Lease	Island Transportation
57-00 & 58-20	2000-2005	EDR	Alfredo Lamanna Trucking Inc. Brookville Enterprises, Inc. Island Transport Almar Supplies, inc.
	1991	EDR	United Leasing Corp.
	1976	EDR	Fruehauf Trailer Corporation
57-05	2021	Site Visit/Interview	Vacant- Formerly Marshark Craft NYC
	2020-May 2021	Google Street View	Marshark Craft NYC
	2011-2017	Google Street View	Almar Supplies, Inc.
	2005	EDR	Sagana Industries
	2000	EDR	Office Depot Stlt
	1983	EDR	Arflo Trucking Inc. Queens Motor Transpoeration
	1967-1970	EDR	Tayaton HW Co. Inc.
57-57	2021	Site Visit/Interview	Delicatessen
	2020-May 2021	Google Street View	Delicatessen

Address	Reported Year	Reported By	Occupant
57-57 (cont.)	2014-2017	Google Street View	Peterbilt of New York City (Parts dealer)
	2007-2012	Google Street View	Boro Timber (Sales)

4.5 Google Street View

Google Street View imagery was analyzed for the Site for years 2007 through 2021. Below is a summation of notable findings:

Parcel 57-00 and 58-20

All items below were identified on the 57-00 parcel, during this time period, the 58-20 parcel operated as the yard for concrete manufacturing operations. Gasoline and or diesel pumps were located on southeastern end of the parcel in a location of current portable guard shack (2007-2012). The trench drain area northeast on property was utilized to wash trucks entering/exiting facility. Island Transportation identified to be operating on the Site (2007-2012). Queen's Truck Auto Center repair shop was operating within the southern garage bays not associated with the concrete facility operations (2013-2017). Sky Materials is operating out of southern area and material stored throughout the Site (2013-2017). Rizzo Environmental Services (trash contractor) operated from office space adjacent to NYC Concrete from 2013 to 2015. Pebble Lane Associates/US Concrete began operating a concrete truck repair facility from the southern garage bays (2018-2021).

Parcel 57-05

Cargo containers were located along southwestern side of the parcel (2007). Parts of parking area have had asphalt removed and a large gravel patch located in northeastern end of parcel (2007). Almar Supplies, Inc. operated on-site from 2011 to 2017, appears vehicle maintenance and parking occurred with Almar operations. In September 2013, a new garage bay on northern end of building was constructed and entire parking area paved. 275-Gallon AST stored within the northeastern corner of parking area, unknown contents or if in-use or simply staged (2015). Shipping containers within the southwestern portion of the parcel. The parcel contains a traffic control tenant which utilized the Site as a parking area and vehicle maintenance shop in 2017. Marshark Craft NYC (food truck service) operating on the parcel from 2020 through May 2021, building material storage south of the building also during this period.

Parcel 57-57

Boro Timber operating within the on-site building from 2007 to 2012. The parcel operated as a parts dealer for Peterbilt of New York City from 2014 to 2017. The parcel housed a delicatessen operator from 2020 to 2021.

4.6 Historical Site Ownership

Historical ownership of the Site according to information retrieved from Automated City Register Information System (ACRIS) website (http://www.nyc.gov/html/dof/html/jump/acris.shtml), is summarized below by lot.

Date	Party 1	Party 2
57-00 and 58-20 Parcels		
4/30/1988	Island Transportation Corporation	57-00 Maspeth Avenue, LLC
11/13/2020	57-00 Maspeth Avenue, LLC	RL Family Property Owner, LLC
11/17/2020	RL Family Property Owner, LLC	RL Family Property Owner, LLC EL Family Property Owner, LLC SLMJL Family Property Owner, LLC
57-05 Parcel		
1/4/1973	Joseph A. Cestaro and Peter Galasso	LECO Distributors, Inc.
1/14/1983	LECO Distributors, Inc. and Maspeth Federal Savings and Loan Association (William R. Greenspan)	Laurent Associates, Inc. Andrew Libasci Here Realty, Inc. Edward N. Slade
11/9/1983	Laurent Associates, Inc. Andrew Libasci Here Realty, Inc. Edward N. Slade	Alfredo Lamanna
5/31/2006	Estate of Alfredo Lamanna	FUMO, LLC
11/13/2020	FUMO, LLC	RL Family Property Owner, LLC
11/13/2020	RL Family Property Owner, LLC	RL Family Property Owner, LLC EL Family Property Owner, LLC SLMJL Family Property Owner, LLC
57-57 Parcel		
6/22/1970	Galaron Realty Corp.	Peter Galasso
5/1/1968	Peter Galasso	Johnson Avenue Realty Company c/o Peter Galasso
10/23/1982	Peter Galasso	Nancy Galasso
3/27/2001	Nancy Galasso	57-57 47th Street Realty Corp.
11/28/2012	57-57 47th Street Realty Corp.	57-57 47th Street Mack, LLC
11/13/2020	57-57 47th Street Mack, LLC	RL Family Property Owners, LLC
11/13/2021	RL Family Property Owners, LLC	RL Family Property Owner, LLC EL Family Property Owner, LLC SLMJL Family Property Owner, LLC

A printout of the information from the ACRIS website is included as **Attachment E3** in **Appendix E**.

4.6 Environmental Orders, Liens, Use Limitations

Langan did not identify environmental orders, liens, or use limitations associated with the Site. However, a restrictive declaration was required for filing onto the deeds for parcels 57-00 and 58-20 due to an April 2021 Administrative Consent Order (ACO) imposed by the NYSDEC. The restrictive declaration has not yet been filed on the property deeds, however will be sometime in the future. This restrictive declaration will in summation identify and protect the tidal wetlands and vegetative buffer area from disruption by current or future property owners, tenants, and occupants. Additional information on this ACO is included in Section 4.8.

4.7 Valuation Reductions for Environmental Issues

Langan identified the ACO associated with parcel 57-00 and 58-20 as a potential valuation reduction. This poses a potential valuation reduction because the ACO area of the parcel cannot be developed and must be maintained with tidal wetlands and vegetative buffer..

4.8 Prior Assessments

Reports were provided to the Client from the Site owner for review. These reports have been included in **Appendix E**.

Phase I Environmental Site Assessment Report- July 21, 2021

Based on information provided by Prologis, a Phase I ESA prepared by Langan on behalf of a party previously interested in the Site. Below is a summation of this previously prepared report. Key information from this report is included as **Attachment E4, Appendix E**.

Two (2) Recognized Environmental Conditions (RECs) were identified on the Site.

- REC 1- Historical Use of Subject Property
    - Historical operations include a fertilizer works facility (1902 to 1914), an oil depot with bulk petroleum storage (1914 to 1936), truck parking (1974 to 1991), truck repair (1982 to 2006), a waste facility and petroleum bulk storage (2004 to 2021), and an auto repair facility (2013 to 2014). The Site is listed as an active Solid Waste Facilities/Landfill Sites (SWF/LF) for the processing of construction and demolition waste (ceased in early 2021).

- REC 2- Western-Adjoining Superfund Site

    - Newtown Creek is listed on the US Environmental Protection Agency (EPA) National Priority List (NPL). Contamination within the creek is attributed to combined sewer overflow and historical industrial facilities on the creek banks. Facilities include over fifty oil refineries, petrochemical plants, fertilizer, glue factories, lumber, and coal yards. A remedial investigation is presently underway for the entire creek and a focused feasibility study is currently being prepared by responsible parties pursuant to Compensation and Liability Act (CERCLA).

One (1) Historical Recognized Environmental Conditions (HREC) was identified on the Site.

- HREC 1- Closed Spills on the Subject Property

    - NYSDEC Spill No. 94-11004 was reported November 17, 1994 due to the release of an unknown volume of gasoline. The spill was administratively closed on November 17, 1994. This incident occurred at the 57-00 parcel.

    - NYSDEC Spill No. 97-09690 was reported November 20, 1997 after the release of an unknown volume of diesel fuel on soil. No further information regarding the spill was provided. The spill was administratively closed on January 8, 1998. This incident occurred at the 57-00 parcel.

    - NYSDEC Spill No. 98-12248 was reported on January 4, 1999 after petroleum impacted soil was identified during the removal of a UST. Petroleum impacted soil was removed and endpoint samples were collected. The spill was remediated to NYSDEC satisfaction and was administratively closed on July 12, 2006. The incident occurred at the 57-57 parcel while under the Boro Lumber Company occupancy.

    - NYSDEC Spill No. 07-09978 was reported after a UST failed a tank tightness test on December 18, 2007. The tank lines were re-tested and it was determined that the vent line failed due to a loose fitting. According to a NYSDEC obtained report, evidence of petroleum impacts to the subsurface were not identified by Larry E. Tyree Co., Inc. (the contracted environmental services provider of the Site occupant). The spill was administratively closed on December 28, 2007 following report submission by Larry E. Tyree Co. This incident occurred at the 57-00 parcel.

    - NYSDEC Spill No. 08-08170 was reported October 21, 2008 after the report of an active release of petroleum substances and illegal storage and refueling of vehicles. A limited subsurface investigation was reportedly completed in 2009 that identified petroleum impacts in soils from surface grade to about eight feet below grade surface. About 381.04 tons of petroleum impacted soil was reportedly excavated and disposed of in 2010. Documentation of soil and groundwater samples collected post remediation reportedly confirmed that the spill was remediated to the satisfaction of

the NYSDEC. The spill was administratively closed on October 27, 2012. This incident occurred at the 57-00 parcel.

- NYSDEC Spill No. 13-06438 was reported on September 19, 2013 after diesel impacted soil and pea gravel was identified in a tank vault during the removal of a 4,000-gallon UST. A closure report summarizing the remedial work and analytical data was reportedly prepared for NYSDEC. The spill was remediated to the satisfaction of the NYSDEC and the spill was administratively closed February 12, 2014. This incident occurred at the 57-00 parcel.

One de minimis condition was identified during the site reconnaissance in the form of oil-like staining identified throughout Lot 6 (parcel 57-00) within the interior warehouse space, near mechanic pits, in the vicinity of former ASTs, throughout the concrete paved parking area (south, east, and west of the building), beneath a parked excavator. This de minimis staining was also located within the 57-05 parcel interior space, truck access bays, and exterior concrete paved parking areas. Surficial concrete cracks, joints, or exposed soil were not identified within stained areas. Stained areas were also identified near wall/floor seams near the former above ground storage tank (AST) area.

Phase II Environmental Site Investigation Report- July 26, 2021

Based on information provided by Prologis, a Phase II ESI prepared by Langan on behalf of a party previously interested in the Site. Findings of the Phase I ESA were investigated to determine if negative impacts were present. Below is a findings summation. Key information from this report is included as **Attachment E5, Appendix E**.

- A geophysical survey was conducted within the garage space on parcel 57-00, surrounding parking area on this parcel, parcel 58-20, parcel 57-05, and parcel 57-57. The geophysical survey was completed to clear soil borings/temporary well points, determine locations of underground utilities, and identify subsurface anomalies.

    - 57-00 and 58-20 Parcels: Two UST graves were identified on the southeastern end of the parcel. Various underground utility lines were identified throughout the Site. Various drains were identified throughout the Site along with associated underground piping. A potential oil water separator was identified within the southern end of the maintenance garage. The potential oil water separator had piping discharging to a nearby storm water drain which discharged to the on-site storm water vault.

    - 57-05 Parcel: Underground utility lines were identified throughout the parcel along

with underground storm sewer lines.

  - 57-57 Parcel: A water and sewer underground utility line were identified on this property.

- Eleven soil borings were installed on the Site, four of these borings were converted to temporary groundwater monitoring wells. Soil and/or groundwater samples were collected from each sample point.

- Subsurface observations: Fill material consisting of fine-grained sand with varying amounts of fine gravel, silt, brick, wood, and concrete were identified at depths of four to sixteen feet below grade surface (bgs.) on the Site. Petroleum-like odor and staining was identified within three locations (SB01, SB02, and SB04).

- Soil sample analytical results identified polycyclic aromatic hydrocarbons (PAHs), arsenic, lead, and mercury greater than various New York Codes, Rules and Regulations Part 375 Commercial Use and Industrial Use Soil Cleanup Objectives.

- Groundwater analytical results identified volatile organic compounds (VOCs), PAHs, and dissolved metals (antimony, arsenic, iron, lead, magnesium, manganese, and sodium) were greater than the NYSDEC Division of Water Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA (drinking water).

  - Due to typical historic fill components identified within the subsurface, PAHs and metals associated with historic fill (i.e. anthracene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, and ideno(1,2,3-cd)pyrene) were anticipated to be greater than the SGVs.

  - VOCs (i.e. 1,2-dichloropropane, isopropylbenzene, n-propylbenzene, and methyl tert-butyl ether [MTBE]) were not anticipated to exceed the SGVs. These exceedances, most notable MTBE are notable because they are not associated with historic fill material but rather petroleum products.

Administrative Consent Order- April 2021

An administrative consent order (ACO) was issued to the current owner of the Site by NYSDEC. The ACO is included as **Attachment E6, Appendix E**. The ACO applies to the western end of the 57-00 and 58-20 parcels. More specifically, the high marsh area consists of 14,600 square

feet and the buffer zone consists of 10,100 square feet. The ACO was issued due to the operation of a solid waste and aggregate facility without a tidal wetlands permit. Additionally the Site owner was cited for the installation of a concrete wall within a tidal wetlands buffer area without a NYSDEC permit and other violations associated with sales and transfers of the subject property without restoring the wetlands buffer area along the western property boundary.

The ACO references violation of articles 15, 17, 25, 27, and 34 of the NYS Environmental Conservation Law and New York State Title 6 of the Codes, Rules, and Regulations (6NYCRR0 Parts 360, 608, 661, and 750. Compliance activities outlined in the April 2021 ACO include the following:

- Closure of the solid waste and aggregate processing facility, which includes the removal of all waste materials;
- Implementation of a wetland restoration plan, including removal of concrete/structural elements, and replanting a high marsh area and buffer planning area;
- Monitoring newly installed plantings over a five year period with annual reporting;
- Adherence to best management practices during removal of concrete recycling facility features and wetland planting activities;
- Recording in the property records for the 57-00 and 58-20 parcels a restrictive declaration to identify and protect the tidal wetlands and vegetated buffer areas from disturbances by current or future owners, tenants, and occupants.

Diesel Fuel Spill Remediation Report - December 5, 2013

This report summarizes remedial actions taken to remedy NYSDEC Spill No. 13-06438. This spill was reported in association with the removal of a 4,000-gallon diesel UST. Below is a summation of pertinent parts of this report. Key information from this report is included as **Attachment E7, Appendix E**.

- One out-of-service 4,000-gallon diesel UST was removed on September 19, 2013. During the removal, staining and petroleum impacted pea gravel was identified within the underground tank vault.
- Two soil borings were collected from below the concrete base of the UST vault. Fill material was identified and sampled from within these locations.

- Laboratory analytical results from these soil borings indicated three SVOCs were greater than their respective NYSDEC CP-51 Soil Cleanup Objectives (SCOs) Guidance Values by less than one order of magnitude. These compounds were benzo(a)anthracene at 1,100 ppb, chrysene at 1,100 ppb, and indeo(1,2,3-c,d)pyrene at 570 ppb.

- The report states that the presence of these SVOCs is related to historic fill and not petroleum, therefore the report states that these exceedances were not further investigated.

According to NYSDEC data, the 13-06438 case was closed with the NYSDEC on February 11, 2014.

Investigation Summary Report, Spill #08-08170- November 2010

This report summarizes remedial investigation efforts associated with NYSDEC Spill No. 08-08170. This spill was reported by NYSDEC in association with illegally storing and dispensing petroleum. Petroleum spills were also reported. This report prompted various field work which is summarized below. Key information from this report is included as **Attachment E8, Appendix E**.

- A total of 351.04 tons of petroleum impacted soil was excavated, stockpiled, and removed offsite. According to EDR database information, remedial excavation had previous delineation soil samples greater than NYSDEC SCOs. This prompted the removal of impacted soil. The source of the petroleum release was not indicated in the Investigation Summary Report.

- A concrete pad was also removed simultaneously with the petroleum impacted soil. The concrete pad was stated to have a floor drain without piping.

- Seven post excavation soil samples were collected from the sidewalls and center base of the excavation. Samples were analyzed for VOCs and SVOCs.

- Laboratory analytical results indicated select PAHs associated with historic fill material exceeded the NYSDEC SCOs.

- As per an NYSDEC letter dated April 16, 2012, a groundwater monitoring well was required to be installed within the soil excavation to evaluate groundwater quality. Monitoring well installation and sampling documentation were not available with the NYSDEC FOIA response.

According to a NYSDEC Spill Report Form, this spill was closed October 27, 2012.

Tank Tightness Test Reporting- December 28, 2007

A tank tightness test was completed on December 18, 2007. The tank tightness test report is included as **Attachment E9, Appendix E**. The testing results concluded that the UST did not pass. The NYSDEC was contacted to report this incident. Spill No. 07-09978 was assigned to this incident. Subsequent faxes to the NYSDEC state that the failure was due to a cross over line that had not been removed from the tank top. The line was removed and the tank subsequently passed on December 21, 2007. The spill was administratively closed according to the NYSDEC Spill Report Form on December 28, 2007.

5.0 SITE RECONNAISSANCE AND INTERVIEWS

Site reconnaissance was conducted on November 2, 2021 by Ms. Rebekah Diehl and Mr. Preston Lai of Langan. The reconnaissance was conducted in a systematic manner, focusing first on the building exteriors at the Site, progressing to the indoor areas, and finishing with driving the nearby public streets and viewing adjacent and surrounding properties. The weather on the reconnaissance day was 51° and overcast. Photographs of the site reconnaissance are included in **Appendix B**.

Langan was not granted access to two garage spaces on the northwestern end of the 57-00 parcel due to lack of electricity to open the garage bay doors. The building interior on parcel 57-05 was not accessible due to a misplaced key during site reconnaissance.

The assessment of the adjacent and surrounding properties was limited to identifying, as possible, indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products. The assessment was also geared to collect information regarding the general type of current Site use, the general topography of the surrounding area, and the general use of adjoining facilities or adjacent structures.

5.1 Interviews

For the Phase I ESA, Langan interviewed the Site Property Manager Mr. Sabatino Lamanna while on-site. The objective of the interviews was to obtain information indicating the potential for RECs in connection with the Site and to provide further details regarding operations at the Site. The results of the interviews are included throughout the report as appropriate.

5.2 Site Features and General Reconnaissance Observations

The Site is located in a commercial and industrial use area in in Maspeth Queens, New York.

Site Use

The Site is current unoccupied, previous tenants are described in Section 2.3.

Structures

There are three main buildings on the Site, as previously described in Section 2.2.

Overall Condition / Upkeep

The buildings were in overall poor condition for their approximate age of fifty-four years old. The 57-57 building interior was not included in reconnaissance due to a misplaced key. Therefore, interior conditions of this building are not available.

57-00 Building

The roof is in disrepair within the northwestern and southeastern ends of the building. Interior fitted areas are also equally in poor condition and have not been maintained. A potential mold issue is evident within the southeastern office space. Some cracks were identified within the building slab. Paint was peeling throughout the building. Large quantities of paint was peeling and bubbling within the southeastern office area due to a roofing issue. Staining was identified throughout the garage space, however these stains were identified within areas of competent concrete floors.

57-05 Building

The roof was in disrepair within the southeastern garage bay. Some cracks were identified within the building slab and paint was peeling throughout the building. Staining was identified throughout the garage space, however these stains were identified within areas of competent concrete floors.

Odors

Odors were not observed within the 57-00 and 57-05 buildings or within all accessible exterior areas on the Site.

Pools of Liquids

No pools of liquid were observed.

Pits, Ponds, or Lagoons

Ponds or lagoons were not observed. However, three pits were identified.

57-00 and 58-20 Parcels

A pit was identified within a concrete structure within the northeastern end of the Site, this pit may be a sewer ejector or sump pit. An additional pit was identified within a mechanical room on the first floor office area (northeastern corner). The pit had a metal cover and was two feet by two feet and approximately three feet deep. This pit appears to be a sewer ejector pit.

Additionally, two mechanic pits were identified within the northeastern end of the garage area. North of this area a concrete filled and a metal plate were identified two additional mechanic pits.

57-05 Parcel

A pit was identified within a utility closet on the southwestern end of the building. The pit was covered with a metal plate that was unable to be removed. This pit is also believed to be a sewer ejector pit.

Stained Soil and/or Surfaces

Stains were identified on competent asphalt and concrete within and outside the 57-00 building. Additionally, staining was identified within a room formerly containing oil ASTs (57-00 building). The AST room also had staining on competent concrete. Staining was identified within the 57-05 building garage bay area on competent concrete. Staining was not identified within exterior areas of the 57-57 parcel.

Stressed Vegetation

Stressed vegetation was not identified on the Site.

Abandoned Equipment / Waste

Langan did not observe abandoned equipment or waste with the exception of general municipal dumpster bins on the 57-00 parcel.

5.3 Storm Water

Storm Drain Catch Basins

Storm drains were identified on the Site; details are included below. Conventional catch basins were not identified. See the description below for a non-conventional catch basin located on the 57-00 parcel. Drainage features are depicted on **Figure 2**.

57-00 and 58-20 Parcels

A storm water collection system is located on the southwestern end of parcel 57-00. Three storm water drains collecting parking area runoff are located on the southern end of the parking area. Storm water is then collected within a storm water vault which holds the water while it percolates into the ground. This system does not allow storm water runoff to enter Newtown Creek through a point source discharge. The storm water collection system was installed sometime between 2002 and 2010 as indicated by the Site contact. Outdoor trench drains are located along the northeastern end of the building. According to Mr. Lamanna, these drains do not discharge, rather evaporate over time from the drain.

57-05 Parcel

Three storm drains are located on this parcel. Storm water from these drains discharges to the public storm sewer line located in 47th Street. The nearest outfall for this storm sewer is the terminus of 58th Road. During site reconnaissance, an excessive amount of silt was identified surrounding the storm drain located on the northeastern end of the parcel.

57-57 Parcel

Storm drains were not identified on the parcel, however there is one located within the sidewalk south of the building. The discharge point of this sidewalk street drain is assumed to be the storm sewer.

Other Water Drainage Management Features

Additional drainage management features were not identified.

5.4 Material & Waste Storage

The Site is currently vacant with most operational material and waste removed. The only remaining material associated with prior operations is an approximate 1,000- cubic yard stockpile

of recycled concrete aggregate (RCA). Formerly, there was an oil storage room within the southwestern end of the 57-00 building. It appears this room formerly contained waste oil and diesel oil in ASTs and/or various containers. A 1-gallon container of paint was identified within this area. Two dumpsters with construction-like debris were located on the 57-00 parcel on the western and northern sides of the parcel.

Other notable items remaining on the 57-00 parcel include three 55-gallon drums located inside an inaccessible garage bay on the northwestern end of the 57-00 building. The contents and condition of these drums are unknown due to limited access to this garage bay. A 55-gallon unlabeled drum was also located outside the northwestern garage bay, this drum was in good condition without staining/evidence of leaks.

A locked shipping crate was identified on the southern end of the 57-05 parcel. Contents of this container are unknown, however staining was not identified below the container.

5.5 Storage Tanks

On the 57-00 parcel, an approximate 550-gallon outdoor portable AST on a sled containing an unknown amount of unknown liquid is located north of the former oil room, which is located on the western end of the building. It appears there were formerly at least two ASTs (unknown capacities and contents) inside this room. Fill and vent ports were observed exiting the northern room wall.

According to the NYSDEC, four USTs and three ASTs were formerly located on the 57-00 parcel; a summation is below. All of these tanks are registered as having been removed. Currently there are no ASTs or USTs remaining on-site with the exception of a portable AST on a sled described above this table.

Former ASTs and USTs at the 57-00 Parcel				
Tank No.	**Tank Type**	**Capacity (Gallons)**	**Contents**	**Closure Date**
2	AST	180	Used Motor Oil	Unavailable
3	AST	180	Used Motor Oil	Unavailable
005	AST	6,000	No. 2 Heating Oil	March 8, 2006
001	UST	4,000	Diesel	September 19, 2013
002	UST	4,000	Other	December 1, 1998

Former ASTs and USTs at the 57-00 Parcel				
Tank No.	**Tank Type**	**Capacity (Gallons)**	**Contents**	**Closure Date**
003	UST	4,000	Other	December 1, 1998
004	UST	1,080	Other	December 1, 1998

Parcel 57-00 formerly contained a UST on the southeastern area of the Site, this is included in the table above as Tank No. 001. The UST was removed in 2013. The UST may have been associated with former diesel and/or gasoline pumps. Once the UST was removed, contaminated pea gravel was identified within the tank vault. A spill was reported to the NYSDEC in association with this removal (Spill No.13-06438). The spill was remediated and the case was closed with the NYSDEC administratively in 2014. Additional information on this incident are discussed in Section 4.8.

A UST located on parcel 57-00 failed tank tightness test in 2007, prompting reporting to NYSDEC (Incident No. 07-09978). Upon further evaluation, it was determined this failure was due to a vent line. The case was subsequently administratively closed with the NYSDEC in 2007.

At the 57-05 parcel, there is a record of one 4,500-gallon diesel UST was identified in the EDR database. The tank was reportedly installed on June 1, 1982 and removed December 1, 1998. Additional documentation regarding UST condition once removed was not reported.

USTs were removed from the 57-57 parcel in January 1999, the number, size and contents are unknown. Following removal of the tanks, gasoline impacted soil was identified. This prompted the reporting of the incident with the NYSDEC (Incident No. 98-12248). Records indicate the NYSDEC closed this case administratively in 2006. Additional documents were not available for review related to this soil cleanup.

5.6 Wastewater Discharges

Septic Systems

Langan did not observe indicators of septic systems at the Site during the reconnaissance.

Wastewater

Regular wastewaters, including water from sinks and toilets, are discharged to the city sanitary sewer system.

Floor Drains

57-00 and 58-20 Properties

Trench drains extend across the majority of the garage space on the northern and southern ends of the garage building. Additional drains were identified within the garage of this building. On the northern and southern ends of the building near the trench drains, a metal plate was identified. The southern plate was unable to be opened due to denting. The northern plate opened, beneath this plate were dirt and sludge material. According to Mr. Lamanna, excess drainage water from the trench drains flow into these metal covered boxes. However, pipes were not identified within the northern box. According to Mr. Lamanna, liquids within the trench drains do not exit the building . Sludge and oily material was located within and adjacent to the southern trench drain.

A drainage grate with a ventilation hood was also identified within the northeastern end of the office area. The drainage grate was associated with the concrete laboratory operations. A mixture of powder and dried concrete was identified below the grate. A geophysical report from NOVA dated July 19, 2021 indicated that this drain is attached to outdoor trench drains north of this indoor drain.

57-05 Parcel

A trench drain was identified along the western end of the northern garage bay. A former slop sink outlet is discharging to this trench drain.

5.7 Air Emissions

Langan did not observe air emissions at the time of the site reconnaissance. However, exhaust vents for boilers were observed on the 57-00, 57-05, and 57-57 building roofs.

5.8 PCBs

Langan observed one pole mounted transformer within the 47th Street right-of-way adjacent to the 57-57 parcel.

5.9 Groundwater Wells

Langan did not observe irrigation, industrial water supply wells, or monitoring wells at the Site during the reconnaissance.

5.10 Other

A potential oil water separator was identified within the southern end of the 57-00 parcel garage space. This determination was based upon the location of a steel plate near a trench drain along the southern end of the garage bay. A geophysical completed as part of the Langan July 2021 Phase II ESI identified piping leaving this area and connecting to a nearby storm drain. The storm drain discharge location is the storm water discharge vault on the southern end of the parcel.

6.0 ENVIRONMENTAL RECORDS REVIEW

6.1 Federal and State Database Review

Langan reviewed an environmental database search report, prepared by EDR, for the Site and surrounding area. The EDR report is a listing of properties identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM E1527-13. This information is reported to Langan by EDR, and to EDR by government sources; therefore, neither Langan nor EDR can verify the completeness or accuracy of the database information. Langan reviewed reported information on a record-by-record basis to estimate if certain sites identified in the report are suspected to represent a potential impact to the Site. The EDR search covered approximately 115 databases applicable to this area of New York. A copy of regulatory database information provided by EDR is included in **Appendix C**.

The following summary table lists the number of properties by database within the prescribed search radius appearing in the EDR Radius Map Report:

Database	Minimum Search Area	Target Site Listed	Cases Within Search Area
Federal			
National Priorities List (NPL)	1 Mile	No	1
Delisted NPL	1 Mile	No	0
Resource Conservation Act Management System (SEMS, formerly CERCLIS and SEMS- Archive (formerly known as CERCLIS-NFRAP)	½ Mile	No	6
Resource Conservation and Recovery Act (RCRA) Corrective Reports (CORRACTS)	1 Mile	No	0
RCRA Treatment, Storage, and Disposal Facilities (TSDF)	½ Mile	No	0
RCRA Generators (Large Quantity Generator [LQG], Small Quantity Generator [SQG], Very Small Quantity Generator [VSQG], Conditionally Exempt Small Quantity Generator [CESQG], Non-Generators [Non-Gen])	Subject Property and Adjoining	Yes	3

Database	Minimum Search Area	Target Site Listed	Cases Within Search Area
Facility Index System (FINDS)	Subject Property and Adjoining	Yes	2
Environmental Response Notification System (ERNS)	Subject Property	No	0
Federal Engineering Controls (US ENG CONTROLS)	Subject Property	No	0
Federal Institutional Controls (US INST CONTROLS) Sites Lists	Subject Property	No	0
NYSDEC Databases			
Inactive Hazardous Waste Disposal Sites (SHWS)	1 Mile	No	19*
Solid Waste or Landfill Facilities (SWF/LF)	½ Mile	Yes	25
Leaking Storage Tanks (LTANKS)	½ Mile	Yes	39
SPILLS Information Database (NY SPILLS)	1/8 Mile	Yes	22
New York Engineering Controls (NY ENG CONTROLS) Sites List	Subject Property	No	0
New York Institutional Controls (NY INST CONTROLS) Sites List	Subject Property	No	0
NY Voluntary Cleanup Program (VCP)	½ Mile	No	2
NY Brownfields	½ Mile	No	1
Solid Waste Disposal Sites Registered Recycling Facilities List (SWRCY)	½ Mile	No	12
Chemical Bulk Storage (CBS) Underground Storage Tank (UST) and Aboveground Storage Tank (AST) Databases	Subject Property and Adjoining	No	0
Major Oil Storage Facilities (MOSF) UST and AST Databases	Subject Property and Adjoining	No	0
Registered and Historical Drycleaners (NY DRYCLEANERS) and Cleaners	¼ Mile	No	0
Petroleum Bulk Storage (PBS) Facilities UST and AST Databases	Subject Property and Adjoining	Yes	8
EDR Proprietary Databases			
EDR Former Manufactured Gas Plant (MPG) Sites	1 Mile	No	3
EDR US Historical Auto Stations	1/8 Mile	No	0
EDR US Historical Cleaners	1/8 Mile	No	0
Other Ascertainable Databases			
ECHO	1/8 Mile	Yes	1

*Quantities include Orphan listings

A description of the reviewed databases is provided in the EDR Radius Map Report **(Appendix C)**. A summary of Site database listings and other properties identified within the prescribed search area is presented below.

6.1.1 Site Listings

A summary of the Site listings is included below.

57-00 Parcel

NY Spills

This database consists of NYSDEC reported spills, there were four reported spills on the 57-00 parcel. Below is a summation of these spills:

- 13-06438 (Commercial Property): Reported September 19, 2013 when diesel contaminated soil and pea gravel were identified within a UST tank vault during removal of the 4,000-gallon UST. Additional information is included in Section 4.8.

- 08-08170 (5700 Maspeth Avenue LLC): Reported October 21, 2008; caller stated property was illegally operating a fueling station. Additionally it was reported that the property was illegally storing petroleum and had petroleum releases. A limited subsurface investigation was reportedly completed in 2009 consisting of six soil borings. Approximately 381.04-tons of petroleum impacted soil was reportedly excavated and removed from the site in 2010. Post remediation soil and groundwater samples reportedly confirmed the spill was remediated to the satisfaction of the NYSDEC. The spill was administratively closed on October 27, 2012.

- 97-09690 (Island Transportation): Reported November 20, 1997 following the release of an unknown volume of diesel oil onto soil. Additional remedial information was not available. The spill was administratively closed by the NYSDEC on January 8, 1998.

- 94-11004 (Maspeth Avenue LLC): Reported November 17, 1994 following the release of an unknown volume of gasoline. Additional remedial information was not available. The spill was administratively closed by the NYSDEC on November 17, 1994.

SWF/LF

This database is an inventory of solid waste disposal facilities or landfills. The Site was identified within this database and details are below.

- Activity No. 41W64 (Pebble Lane Associates LLC): Solid waste landfill associated with asphalt, brick, rock, clean soil, ferrous and non-ferrous metals, construction, and demolition debris. Registered with these operations beginning April 2009.

- This listing is associated with the former on-site concrete recycling operations.

LTANKS

This database is an inventory of reported UST and AST leaks and incidents. The Site was identified within this database and details are below.

- 07-09978 (Island Trans Corp): Reported December 18, 2007 following the failure of a UST tank tightness test. Further evaluation identified that the vent line failed due to a loose fitting. Evidence of a petroleum contamination was not identified. The spill was closed December 28, 2007.

PBS UST and AST Database

This database is a record of registered USTs and ASTs. Findings from this database are summarized in Section 5.5.

ECHO/FINDS Database

These databases are a record of "pointers" to other sources and databases that contain additional details. These databases directed to the Site listed under the National Pollution Discharge Elimination System (NPDES) permit in August 2009.

57-05 Parcel

UST Database

This database includes USTs registered to properties. Findings from this database are summarized in Section 5.5.

57-57 Parcel

NY Spills

This database consists of NYSDEC reported spills, there was one reported spills on the 57-57 parcel. Below is a summation of this spill:

- 98-12248 (Boro Lumber): Reported January 4, 1999 following a gasoline discharge while removing a UST. In 2006, it was reportedly determined that the cleanup was adequately performed. The spill was administratively closed by the NYSDEC on July 12, 2006.

RCRA Generator

The Site was inaccurately included in the RCRA generator list, additional site-specific records were not available for this database. This listing is believed to be not associated with the Site due to the RCRA generator listed address. The address for the RCRA generator is 55-80 47th Street.

6.1.2 Neighboring Property Listings

Langan reviewed the EDR listings of off-site facilities exhibiting the greatest likelihood to represent potential environmental concerns to the Site. The Langan July 2021 Phase II ESI identified groundwater impacts with MTBE. No other petroleum constituents or hazardous substances of environmental concern were identified in groundwater at the Site. Thus, upgradient, off-site listings that pertain to things other than gasoline or MTBE are not considered of environmental concern to the Site.

The following properties adjacent to the Site, or locations in the near vicinity of the Site may be of environmental concern:

Newtown Creek- West adjoining property

USEPA ID: NYN000206282

The Newtown Creek is list adjacent to the 57-00 parcel property line. The Creek was added to the USEPA National Priority List in 2010 and remains as such. Former nearby heavy industrial operations dating back to the 1800s contaminated the creek. Contributing industrial operations include petrochemical refineries, miscellaneous factories, and coal yards are some of the contributors. A remedial investigation is underway for the entire creek and a focused feasibility study is currently being prepared regarding a combined sewer outfall long term control plan. This adjoining property has a potential to affect soil and/or groundwater on the Site.

NYC Department of Sanitation Garage (52-35 58th Street)- North adjoining property

RCRA Non-Generator USEPA ID: NYR000076083

The sanitation garage is listed for the generation of ignitable waste (D001) and spent non-halogenated solvent between 2000 and 2007.

At Lite/Molloy Brothers (57-47 47th Street)- East adjoining property

RCRA Very Small Quantity Generator USEPA ID: NYR000076083 and UST Database

This site is listed as generating ignitable and corrosive wastes between 2000 and 2007. This property is not listed as currently generating federally regulated wastes. Additionally, a 5,000-gallon UST was abandoned in place. A 3,000-gallon No. 2 heating oil AST remains in use at the property. A petroleum like substance was reported within a sump inside the building. The spill was determined to be minor and cleaned up, the case was later closed. Due to the quantity of waste associated with operations, they are not expected to affect the Site.

Boro Timber Co (57-45 47th Street)- East adjoining property

UST Database ID 13611

The property formerly had three 4,000-gallon USTs which were abandoned in place. Two of the USTs were diesel and the third tank was gasoline. All USTs were removed from the NYSDEC database in 1998. A spill was not reported for this property in association with these USTs.

6.1.3 Orphan Listings

According to EDR, an orphan listing is a property that cannot be mapped due inadequate address information. There were sixteen orphan listing identified by the EDR search. These listings were researched to determine if they were associated with the Site. All the orphan listings were determined to not be associated with current or former Site operations.

6.2 Local Agency Review

Inquiries were sent to the NYCDEP, NYC Department of Buildings, Public Works, FDNY, NYC Department of Planning, NYSDEC, NYS DOH, and EPA. Key findings include:

- Three reports were received for the 57-00 parcel. See Section 4.8 for a NYSDEC FOIA request summation.

To date, incomplete responses or lack of information notifications were received from NYC Department of Buildings, NYC Public Works, NYC Department of City Planning, NYSDOH, and EPA. Copies of FOIA responses which were not previously included are provided in **Attachment E10, Appendix E**.

7.0 SUPPLEMENTAL CONSIDERATIONS

7.1 Wetlands

No evidence of wetland characteristics such as hydrophilic soil or associated vegetation was observed during the site reconnaissance. However, an ACO was issued to the 57-00 and 58-20 parcels to compel the property owner to re-establish and protect a tidal wetland and vegetative buffer on the western ends of these parcels. Newtown Creek is located western adjacent to the Site, this is a tributary to the East River. A wetlands figure is included as **Figure 2, Appendix A**.

7.2 Asbestos

Potential ACM building materials were identified within the subject buildings during the site reconnaissance. An asbestos survey was completed in November 2021 for the on-site buildings. One-hundred and fifty-nine (159) samples were collected from accessible areas during the pre-demolition asbestos survey.

The ACM Surveys identified the following confirmed and/or presumed ACM:

Material	Location	Survey Results	Estimated Quantity of ACM
57-00 47th Street			
Expansion wall joint caulk	Perimeter walls	ACM	15 SF
Roof flashing	Main Roof	ACM	500 SF
Duct membrane/mastic	Main Roof	ACM	150 SF
Roof flashing	Lower Roof	ACM	170 SF
Suspect flooring materials (floor tiles/mastic, floor coverings, etc.), thermal system insulation, miscellaneous and surfacing materials	Shop NW Section (no access for the NW Garage section which encompasses approx 20% of the floor)	Assumed ACM	TBD
57-05 47th Street			
Floor tile/mastic under ceramic flooring	Office Area	ACM	700 SF
Built-up roof and flashing materials	Roof	Assumed ACM	5,100 SF
57-57 47th Street			
9" square floor tile and mastic	Adjacent to Rear Freezer and inside Built-in Freezer	ACM	65 SF
Mastic on exhaust vent	Roof	ACM	5 SF
Roof flashing	Roof	ACM	350 SF

A description of the pre-demolition asbestos survey sampling and results for the on-site buildings are presented in the *Hazardous Materials Survey Report* dated December 2021.

7.3 Lead-In-Paint

The use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm²) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

A lead in paint survey was completed at the Site in November 2021 using a handheld X-ray fluorescent (XFR) analyzer. Results from the XRF screening conducted at the Site revealed that the red paint on the metal columns by the shutter doors at 57-00 47th Street contained lead in excess of 1.0 mg/cm^2: Overall, the painted surfaces in accessible building spaces were observed to be in fair condition. A description of the lead in paint survey results for the on-site buildings are presented in the *Hazardous Materials Survey Report* dated December 2021.

7.4 Lead-In Drinking Water

Lead has historically been used in pipes, solder, and fittings used in water distribution systems and building plumbing. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing fittings. The EPA action level for lead in public drinking water is 0.015 parts per million (ppm) or 15 parts per billion (ppb).

The NYCDEP provides drinking water service for the subject property. System-wide lead screening of the water is performed by the NYCDEP. The water supply is reportedly in compliance with the USEPA's Lead and Copper Regulations.

7.5 Radon

The subject property is located in Zone 3 (Low Radon Potential) per the USEPA's Map of Radon Zones. According to the EDR Report, 563 radon tests were conducted in Queens county basements with results indicating 544 basements contained radon concentrations less than 4 pCi/L, which is the USEPA action level for mitigation. Based on the non-residential use scenario, it is Langan's opinion that radon impacts to the subject buildings are unlikely.

7.6 Mold

Langan observed indicators of mold during the site reconnaissance. Potential mold was identified within buildings with damaged roofs on parcels 57-00 and 57-05.

8.0 FINDINGS AND RECOMMENDATIONS

Langan's findings from the Phase I ESA are summarized below.

8.1 Known or Suspect RECs and BERs

REC 1 – Historical Site Use

Industrial/commercial operations at the Site date back to the 1800s and include an oil depot with petroleum bulk storage (circa 1914 to 1936), fertilizer/glue manufacturing (circa 1897 to 1914), and vehicle maintenance (circa 1982 to 2006). Various petroleum underground storage tanks (USTs have historically been located on three of the four parcels (UST records were not available for review for 58-20). UST-related leaks have been reported on two of the four parcels (on Parcels 57-00 and 57-57). Although these leaks are closed with the NYSDEC, closure reports were not available from NYSDEC for all of the reported incidents.

More recently, the 57-00 and 58-20 parcels formerly operated as a concrete recycling facility; the facility also accepted other demolition debris (circa 2004 and 2021). Additionally, a concrete laboratory historically operated on the 57-00 parcel (circa 2004 and 2021). Concrete testing laboratories historically have included chlorinated solvents in the operations..

REC 2 – Newtown Creek Superfund

The Newtown Creek is adjacent to the 57-00 and 58-20 parcel western property lines. The creek was added to the USEPA National Priority List in 2010 and remains as such. Former heavy industrial operations in the vicinity of Newtown Creek dating back to the 1800s have impacted the sediments and groundwater in the Creek.. A remedial investigation is currently underway for the Creek. Additionally, a focused feasibility study is currently being prepared regarding a combined sewer outfall long term control plan.

Newtown Creek has the potential to impact on-site soil and groundwater through tidal fluctuations and sediment deposition along the bank of the Creek.

REC 3 – On-Site Storm Water Vault & Oil/Water Separator

The geophysical survey associated with a Phase II Environmental Site Investigation prepared by Langan and dated July 2021 (the Langan July 2021 Phase II ESI) identified a potential oil/water separator and piping suggesting that the trench drains discharged to an on-site

storm water vault on the southwestern end of the 57-00 parcel. Concrete slabs cover the storm water vault and piping, therefore the presence of both the discharge piping and the vault could not a be field verified during the site reconnaissance.

REC 4 – Methyl Tert-Butyl Ether (MTBE) in Groundwater

During the Langan July 2021 Phase II ESI, methyl tert-butyl ether (MTBE) was detected in a groundwater sample collected from the northeastern corner of Parcel 57-05. MTBE is a gasoline additive (used since the 1980s) to aid in increasing octane and oxygen levels in gasoline to lower pollution emissions.

HREC 1- Closed Petroleum Spills

The Site has six NYSDEC reported spills which were all administratively closed. A summary of information provided in the Spills section of the EDR report is included below:

- NYSDEC Spill No. 94-11004 was reported November 17, 1994 due to the release of an unknown volume of gasoline. The spill was administratively closed on November 17, 1994. This incident occurred at the 57-00 parcel.
- NYSDEC Spill No. 97-09690 was reported November 20, 1997 after the release of an unknown volume of diesel fuel on soil. No further information regarding the spill was provided. The spill was administratively closed on January 8, 1998. This incident occurred at the 57-00 parcel.
- NYSDEC Spill No. 98-12248 was reported on January 4, 1999 after petroleum impacted soil was identified during the removal of a UST. Petroleum impacted soil was removed and endpoint samples were collected. The spill was remediated to NYSDEC satisfaction and was administratively closed on July 12, 2006. The incident occurred at the 57-57 parcel while under the Boro Lumber Company occupancy.
- NYSDEC Spill No. 07-09978 was reported after a UST failed a tank tightness test on December 18, 2007. The tank lines were re-tested and it was determined that the vent line failed due to a loose fitting. According to a NYSDEC obtained report, evidence of petroleum impacts to the subsurface were not identified by Larry E. Tyree Co., Inc. (the contracted environmental services provider of the Site occupant). The spill was administratively closed on December 28, 2007 following report submission by Larry E. Tyree Co. This incident occurred at the 57-00 parcel.
- NYSDEC Spill No. 08-08170 was reported October 21, 2008 after the report of an active release of petroleum substances and illegal storage and refueling of vehicles. A limited subsurface investigation was reportedly completed in 2009 that identified petroleum impacts in soils from surface grade to about eight feet below grade surface. About 381.04 tons of petroleum impacted soil was reportedly excavated and disposed

of in 2010. Documentation of soil and groundwater samples collected post remediation reportedly confirmed that the spill was remediated to the satisfaction of the NYSDEC. The spill was administratively closed on October 27, 2012. This incident occurred at the 57-00 parcel.

- NYSDEC Spill No. 13-06438 was reported on September 19, 2013 after diesel impacted soil and pea gravel was identified in a tank vault during the removal of a 4,000-gallon UST. A closure report summarizing the remedial work and analytical data was reportedly prepared for NYSDEC. The spill was remediated to the satisfaction of the NYSDEC and the spill was administratively closed February 12, 2014. This incident occurred at the 57-00 parcel.

BER 1- Historic Fill

Previous report submittals contain reported field conditions identifying the presence of fill material on the Site. Field conditions identified historic fill material (i.e. brick, gravel, concrete, and wood) in soil borings completed as part of the Langan July 2021 Phase II ESI. Historic fill was also identified during other previous environmental investigations reviewed for this Phase I ESA. Laboratory results from soil and groundwater samples collected on the Site indicate the presence of typical historic fill constituents (i.e. polycyclic aromatic hydrocarbons [PAHs] and Metals).

Historical topographic maps indicate historic fill was deposited within the region sometime prior to the 1900s. Historical aerials depict a dark fill material spread onto lighter underlying soils on the 57-00 and 58-20 parcels in the early 1950s. Elevated PAHs and Metals pose a potential BER if future grading is planned, likely requiring a Soil Management Plan (SMP).

BER 2- Trench Drains & Oil/Water Separator

Trench drains were identified within the 57-00 and 57-05 parcel maintenance garage bays.

- Within the 57-00 parcel garage, trench drains were identified running along the northern and southern ends of the building. Metal plate-covered boxes were also identified near the trench drains on the northern and southern ends of the building. The representative for the property owner stated these boxes were associated with receiving liquids from the trench drains, however piping was not identified within these boxes during site reconnaissance. An oil/water separator was also observed near the trench drain along the southern side of the building. According to a geophysical report prepared as part of the Langan July 2021 Phase II ESI, the northern and southern trench drains appear to connect to a nearby storm drain in the southern parking area. This storm drain discharges to the

on-site storm water vault.

- A trench drain connected to a slop sink was identified within a garage bay in the northern part of the building on the 57-05 parcel. The discharge location of this trench drain is unknown.

BER 3 - RCA Pile

During Langan's site reconnaissance on November 2, 2021, an approximate 1,000 cubic yard stockpile of recycled concrete aggregate (RCA) was observed on the northeastern portion of the 58-20 parcel. The stockpiled material appears related to the former concrete processing/recycling operations at the Site. The RCA pile is considered a BER since the source and environmental conditions of this material is unknown and it will need to be characterized and removed prior to Site redevelopment.

BER 4 - Administrative Consent Order

In April 2021, the NYSDEC imposed an administrative consent order (ACO) on the property. The ACO was imposed due to a tidal wetlands buffer requirement along Newtown Creek, which is western and adjacent to the 57-00 parcel. The ACO was filed with the property deed, and included provisions that structures cannot be erected on this area of Parcels 57-00 and 58-20. Additionally, a tidal wetland buffer vegetated area must be maintained by current and future occupants.

BER 5 – Asbestos Containing Materials (ACM), Lead-in-Paint and Mold

Asbestos and lead-in paint surveys were completed by Langan at the Site in November 2021, which identified confirmed and/or presumed ACM associated with the on-site buildings. Lead-in-paint was also identified red paint on the metal columns by the shutter doors on Parcel 57-00. A description of the asbestos and lead-in-paint survey results are presented in the *Hazardous Materials Survey Report* dated December 2021.

Langan observed indicators of mold during the Phase I ESA site reconnaissance on November 2, 2021. Potential mold was identified within buildings with damaged roofs on Parcels 57-00 and 57-05.

One de minimis condition was identified during site reconnaissance in the form of petroleum-like staining which was identified throughout parcel 57-00 within the interior warehouse space, near

mechanic pits, trench drains, and within the former AST room. This condition was also identified on the 57-05 parcel interior space, truck bays, and exterior paved parking areas. Surficial cracks, joints, or exposed soils were not identified within the staining areas. Staining identified within the former AST room was within a secondary containment concrete block treated with specialized concrete purposed to not allow leaking.

8.2 Other Items

Other items were not identified during file review and site reconnaissance.

8.3 Conclusion

Langan conducted the Phase I ESA with a standard of care consistent with commercial and customary practices and with ASTM E1527-13. Historical Site use, close proximity of an EPA Superfund site on the NPL adjacent to the Site, the on-site storm water vault potentially receiving trench drain liquids, and the MTBE groundwater exceedance indicate a further evaluation of Site conditions is prudent. Specifically, soil and groundwater investigation work is recommended to be able to understand the magnitude of environmental risk associated with overall Site ownership and future redevelopment.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan Engineering were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA

Project: 100965501 - 47th Street

Coordinates:

Latitude:	40.719661 40° 43' 11" North

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

ASSIGNMENT OF LEASES AND RENTS

THIS ASSIGNMENT OF LEASES AND RENTS, made this 22nd day of January, 2003 from **57-00 Maspeth Avenue, LLC**, a New York limited liability company having an address at c/o Pebble Lane Associates, 1545 Pebble Lane, Hewlett, NY 11557, ("**Assignor**"), to **BROOKLYN FEDERAL SAVINGS BANK**, having an address at 81 Court Street, Brooklyn, New York 11201 ("**Assignee**").

B 2601
L 6

WITNESSETH:

WHEREAS, Assignor is the owner of a commercial building located at 57-00 47th Street, Maspeth, Queens, New York as more particularly described on Exhibit "A" annexed hereto and made a part hereof ("**Property**"); and

WHEREAS, Assignee has made a loan to Assignor in the principal amount of $2,500,000.00 as evidenced by a certain Consolidated Secured Promissory Note executed simultaneously herewith (hereinafter referred to as the "**Note**");

WHEREAS, Assignee would not have made the loan to Assignor unless Assignor assigned to Assignee all of Assignor's rights, title and interest as landlord under any and all leases, subleases and other occupancy agreements now existing for any space at the Property and to any modified, replacement, substitute or new lease, sublease or other occupancy agreement for any space at the Property entered into after the date of this Assignment.

NOW, THEREFORE, the Assignor, for and in consideration of these presents and the mutual agreements contained in this Assignment of Rents ("**Assignment**") and in consideration of the sum of TEN AND NO/100 DOLLARS ($10.00) to the Assignor in hand paid, the receipt of which are hereby acknowledged, does hereby sell, assign and transfer unto the Assignee all rents, issues and profits now due and which may hereafter become due under or by virtue of and any lease or sublease, whether written or verbal, or any letting of, or of any agreement for the use or occupancy of the Property or any part thereof, which may have been heretofore or may be hereafter made or agreed to or which may be made or agreed to by the Assignor under the powers herein granted, it being the intention hereby to establish an absolute transfer and assignment of all rents, issues and profits arising from or related to the Property, to the Assignee, and the Assignor does hereby appoint irrevocably the Assignee its true and lawful attorney in its name and stead (with or without taking possession of the Property), to collect all of said avails, rents, issues and profits arising from or accruing at any time hereafter, and all now due, or that may hereafter become due under any lease, sublease or other occupancy agreement and all future leases and agreements, written or verbal, or other tenancy existing or which may hereafter exist on the Property, with the same rights and powers and subject to the same immunities, exoneration of liability and rights of recourse and indemnity as the Assignor would have upon taking possession of the Property pursuant to the provisions hereinafter set forth.

It is agreed that this is an absolute assignment of rents, income and profits; however, Assignee grants and deems unto Assignor a license to collect all rents, issues and profits for so long as Assignor is not in default under any of the provisions of the Note or any other agreements which secure the Note (hereinafter collectively "**Loan Documents**"), including any renewal, extension or rearrangement of the Note or the Loan Documents and Assignor shall hold same in trust for the benefit of Assignee, and the proceeds from such rents, issues and profits shall be used by Assignor solely in the following order of priority:

(a) To the payment of the Note including any renewal, extension or rearrangement thereof;

(b) To the payment of insurance, taxes and special assessments now due or which may become hereinafter due on the Property;

(c) To the payment of all operating expenses of the Property including, but not limited to, management and leasing expenses, utilities and repairs to the Property.

In the event of a default by Assignor under any of the Loan Documents, then the license granted herein to Assignor to collect the rents, issues and profits from the Property shall terminate without Assignee having to take any affirmative action to bring about such termination. The license granted herein to Assignor is personal, revocable and unassignable.

The Assignor additionally assigns to Assignee a security interest in all leases entered into with any tenant occupying all or any part of the Property; and further Assignor agrees to assign and transfer to the Assignee a security interest in all future leases upon all or any part of the Property in order to secure the repayment of the Note and the performance by Assignor of its covenants under the Loan Documents; provided, however, that notwithstanding any provision herein to the contrary, under no circumstances shall Assignee be liable or responsible for any of the obligations of Assignor as lessor under any of said leases or other occupancy agreements. Assignor agrees to execute and deliver, immediately upon the request of the Assignee, all such further assurances and assignments in the Property as the Assignee shall from time to time require. In the event of a default by Assignor under any of the Loan Documents then Assignee may proceed to enforce its rights under any of the leases and Assignor does hereby appoint irrevocably the Assignee its true and lawful attorney in its name and stead (with or without taking possession of the Property), to rent, lease or let all or any portion of the Property to any party or parties at such rental and upon such terms in its discretion as it may determine.

Although it is the intention of the parties that this assignment of rents, issues and profits shall be a present and absolute assignment, Assignor has additionally granted and assigned unto Assignee a security interest in and to all leases and other occupancy agreements and future leases or future occupancy agreements of the Property and it is expressly understood and agreed, anything herein

contained to the contrary notwithstanding, that the Assignor shall not exercise any of the rights and powers conferred upon it by virtue of its security interest in any of the leases until and unless a default shall occur in the payment of interest or principal due under the Note or in the performance or observance of any of the conditions or agreements of any Loan Documents now or at any time securing the Note or the debt evidenced thereby or by any extension thereof and nothing herein contained shall be deemed to affect or impair any rights which the Assignee may have under the Note, Loan Documents or any other instrument evidencing or securing the indebtedness evidenced by the Note.

Once the Note and any renewals and extensions thereof have been paid, and the obligations on behalf of Assignor contained in the Loan Documents have been completed to the satisfaction of Assignee, the Assignee will assign back to Assignor the rents, issues and profits granted herein and further Assignee shall release its security interest any of the leases upon written request of Assignor.

During the time period intervening between a default by the Assignor and either the taking of possession of the Property as provided hereinafter, or a foreclosure by Assignee or a conveyance by a deed in lieu of foreclosure by Assignor to Assignee, this Assignment shall remain in full force and effect and Assignee will be entitled to all rents, issues and profits arising out of the Property.

The Assignor represents and agrees that no rent has been or will be paid by any person or entity in possession of any portion of the Property for more than one (1) month in advance and that no payment of the rents to accrue for any portion of the Property has been or will be waived, released, reduced or discounted, or otherwise discharged or compromised by the Assignor. The Assignor waives any right of set off against any person in possession of any portion of the Property. The Assignor agrees that it will not further assign any of the rents or profits of the Property and any such further assignment shall be void and of no force or effect.

The Assignor represents and agrees that it shall not cancel, terminate, or consent to any surrender of any lease, sublease or other occupancy agreement or any future leases or other occupancy agreements, permit any cancellation, termination, or surrender, commence an action of ejectment or any summary proceedings for dispossession of the tenant under any of the leases, exercise any right of recapture provided in any or the leases or other occupancy agreements, or modify or in any way alter the terms of any lease or other occupancy agreement or future lease or future occupancy agreement without Assignee's prior written consent which may be granted or withheld in Assignee's sole and absolute discretion provided, however, that for so long as no Event of Default shall exist under any of the Loan Documents, Assignor shall have the right to enter into residential leases and commercial leases in accordance with the terms set forth in paragraph 7 of the Mortgage;

Nothing herein contained shall be construed as constituting the Assignee a "mortgagee in possession" in the absence of the taking of actual possession of the Property by the Assignee pursuant to the provisions hereinafter contained. In the exercise of the powers herein granted the Assignee, no liability shall be asserted or enforced against the Assignee, all such liability being expressly waived and released by the Assignor.

In any case in which the Assignee has a right to declare the indebtedness secured hereby due and payable, either before or after said indebtedness is declared due, forthwith upon demand of the Assignee, the Assignor agrees to surrender to the Assignee and the Assignee shall be entitled to take actual possession of the Property or any part thereof, personally, or by its agents or attorneys, and the Assignee in its discretion may, with or without force, and with or without process of law, enter upon and take and maintain possession of all or any part of the Property, together with all the documents, books, records, papers and accounts of the Assignor or the then owner of the Property relating thereto, and may exclude the Assignor, the agents or servants of the Assignor, wholly therefrom and may as attorney-in-fact or agent of the Assignor or in its own name as holder and under the powers herein granted, hold, operate, manage and control the Property and conduct the business, if any, thereof either personally or by its agents, with full power to use such measures, legal or equitable, as in its discretion or in the discretion of its successors or assigns may be deemed proper or necessary to enforce the payment or security of the avails, rents, issues and profits of the Property, including actions for the recovery of rent, actions in forcible detainer and actions in distress for rent, hereby granting full power and authority to exercise each and every one of the rights, privileges and powers herein granted at any and all times hereafter, without notice to the Assignor, and with full power to cancel or terminate any lease or sublease for any cause or on any ground which would entitle the Assignee to cancel the same, to elect to disaffirm any lease or sublease made subsequent to this Assignment, to make all necessary or proper repairs, decorating, renewals, replacements, alterations, additions, betterments and improvements to the Property that may seem judicious, in its discretion, insure and re-insure the same for all risks incidental to Assignee's possession, operation and management thereof and to receive all such avails, rents, issues and profits.

The Assignee shall not be obligated to perform or discharge, nor does it hereby undertake to perform or discharge, any obligation, duty or liability under any of the leases or other occupancy agreements relating to the Property, and the Assignor shall and does hereby agree to indemnify and hold the Assignee harmless of and from any and all liability, loss or damage which it may or might incur under any of the leases or under or by reason of the assignment thereof and of and from any and all claims and demands whatsoever which may be asserted against it by reason of any alleged obligations or undertakings on its part to perform or discharge any of the terms, covenants or agreements contained in any of the leases. Should the Assignee incur any such liability, loss or damage, under any of the leases or under or by reason of the assignment thereof, or in the defense of any claims or demands the Assignor agrees to reimburse the Assignee for the amount thereof, immediately upon demand.

The Assignee in the exercise of the rights and powers conferred upon it by this Assignment shall have full power to use and apply the avails, rents, issues and profits of the Property to the payment of or on account of the following, in such order as the Assignee may determine:

(a) To the payment of any of the above described indebtedness or any renewal, extension or rearrangement thereof;

(b) To the payment of all operating expenses of the Property, including, but not limited to, the cost of management and leasing thereof (which shall include reasonable compensation to the Assignee and its agent or agents, if management be delegated to an agent or agents, and it shall also include lease commissions and other compensation and expenses of seeking and procuring tenants and entering into leases), utilities and repairs to the Property;

(c) To the payment of insurance, taxes and special assessments now due or which may hereafter become due on the Property.

The Assignor does further specifically authorize and instruct each and every present and future lessee or tenant of the whole or any part of the Property to pay all unpaid rentals agreed upon in any tenancy to the Assignee upon receipt of demand from the Assignee to so pay the same.

It is understood and agreed that the provisions set forth in this Assignment shall be deemed as a special remedy given to the Assignee, and shall not be deemed exclusive of any of the remedies which the Assignee would otherwise have, but shall be cumulative with any such remedies.

Whenever the word "Assignor" is mentioned herein, it is hereby understood that the same includes and shall be binding upon the heirs, executors, administrators, successors and assigns (including successors by consolidation) of the Assignor as the case may be, and any party or parties holding title to the Property by, through or under the Assignor. All of the rights, powers, privileges and immunities herein granted assigned to the Assignee shall also inure to its successors and assigns, including all holders, from time to time, of the Note.

It is expressly understood that no judgment or decree which may be entered on any debt secured hereby shall operate to abrogate or lessen the effect of this instrument, but that the same shall continue in full force and effect until the payment and discharge of any and all indebtedness secured hereby, in whatever form the said indebtedness may be shall have been paid in full and all bills incurred by virtue of the authority herein contained have been fully paid out of the rents, issues and profits of the Property, or by the Assignor, or until such time as this instrument may be voluntarily released. The rights granted hereunder shall inure to the benefit of and be binding upon the respective heirs, executors, administrators, successors and assigns of the Assignor and the Assignee.

In the event any lessee under any of the leases should be the subject of any proceeding under the United States Bankruptcy Code or any other federal, state, or local statute which provides for the possible termination or rejection of any of the leases assigned hereby, Assignor covenants and agrees that if any of the leases are so rejected, no settlement for damages shall be made without the prior written consent of the Assignee, and any check in payment of damages for rejection of any of the leases will be made payable both to the Assignor and Assignee. Assignor hereby assigns any such payment to Assignee and further covenants and agrees that upon the request of Assignee it will duly endorse to the order of Assignee any such check, the proceeds of which will be applied to whatever portion of the indebtedness secured by this Agreement Assignee may elect.

AFFIDAVIT IN SUPPORT OF CLAIM FOR EXEMPTION FROM
TAX UNDER SECTION 255 OF THE NEW YORK TAX LAW
IN CONNECTION WITH RECORDING OF ASSIGNMENT OF LEASES AND RENTS

The undersigned hereby states that:

(1) The undersigned is the Mortgagor under a Mortgage encumbering the premises on 57-00 47th Street, Maspeth, Queens, New York which Mortgage has been executed and delivered simultaneously with an Assignment of Leases and Rents. Mortgage Tax has been paid in connection with the recording of the Mortgage without abatement or credit.

(2) The Assignment of Leases and Rents dated the same date as the Mortgage and to be recorded against the Premises further secures the sums secured by the Mortgage and does not evidence any new indebtedness.

(3) The Assignment is herewith tendered for recording.

WHEREFORE, deponent respectfully requests that the Assignment herewith tendered for recording be declared exempt from taxation pursuant to the provisions of Section 255 of Article XI of the Tax Law of the State of New York.

ASSIGNMENT OF LEASES AND RENTS

THIS ASSIGNMENT OF LEASES AND RENTS, made this 8th day of November, 2005 from 57-00 Maspeth Avenue, LLC, a New York limited liability company having an address at c/o Pebble Lane Associates, 1545 Pebble Lane, Hewlett, NY 11557, ("**Assignor**"), to BROOKLYN FEDERAL SAVINGS BANK, having an address at 81 Court Street, Brooklyn, New York 11201 ("**Assignee**").

W I T N E S S E T H:

WHEREAS, Assignor is the owner of a commercial building located at 57-00 47th Street, Maspeth, Queens, New York as more particularly described on Exhibit "A" annexed hereto and made a part hereof ("**Property**"); and

WHEREAS, Assignee has made available to Assignor a revolving crddit facility in the principal amount of $1,500,000.00 as evidenced by a certain Revolving Line of Credit Secured Promissory Note executed simultaneously herewith (hereinafter referred to as the "**Note**");

WHEREAS, Assignee would not have made the loan to Assignor unless Assignor assigned to Assignee all of Assignor's rights, title and interest as landlord under any and all leases, subleases and other occupancy agreements now existing for any space at the Property and to any modified, replacement, substitute or new lease, sublease or other occupancy agreement for any space at the Property entered into after the date of this Assignment.

NOW, THEREFORE, the Assignor, for and in consideration of these presents and the mutual agreements contained in this Assignment of Rents ("**Assignment**") and in consideration of the sum of TEN AND NO/100 DOLLARS ($10.00) to the Assignor in hand paid, the receipt of which are hereby acknowledged, does hereby sell, assign and transfer unto the Assignee all rents, issues and profits now due and which may hereafter become due under or by virtue of and any lease or sublease, whether written or verbal, or any letting of, or of any agreement for the use or occupancy of the Property or any part thereof, which may have been heretofore or may be hereafter made or agreed to or which may be made or agreed to by the Assignor under the powers herein granted, it being the intention hereby to establish an absolute transfer and assignment of all rents, issues and profits arising from or related to the Property, to the Assignee, and the Assignor does hereby appoint irrevocably the Assignee its true and lawful attorney in its name and stead (with or without taking possession of the Property), to collect all of said avails, rents, issues and profits arising from or accruing at any time hereafter, and all now due, or that may hereafter become due under any lease, sublease or other occupancy agreement and all future leases and agreements, written or verbal, or other tenancy existing or which may hereafter exist on the Property, with the same rights and powers and subject to the same immunities,

exoneration of liability and rights of recourse and indemnity as the Assignor would have upon taking possession of the Property pursuant to the provisions hereinafter set forth.

It is agreed that this is an absolute assignment of rents, income and profits; however, Assignee grants and deems unto Assignor a license to collect all rents, issues and profits for so long as Assignor is not in default under any of the provisions of the Note or any other agreements which secure the Note (hereinafter collectively "**Loan Documents**"), including any renewal, extension or rearrangement of the Note or the Loan Documents and Assignor shall hold same in trust for the benefit of Assignee, and the proceeds from such rents, issues and profits shall bc used by Assignor solely in the following order of priority:

(a) To the payment of the Note including any renewal, extension or rearrangement thereof;

(b) To the payment of insurance, taxes and special assessments now due or which may become hereinafter due on the Property;

(c) To the payment of all operating expenses of the Property including, but not limited to, management and leasing expenses, utilities and repairs to the Property.

In the event of a default by Assignor under any of the Loan Documents, then the license granted herein to Assignor to collect the rents, issues and profits from the Property shall terminate without Assignee having to take any affirmative action to bring about such termination. The license granted herein to Assignor is personal, revocable and unassignable.

The Assignor additionally assigns to Assignee a security interest in all leases entered into with any tenant occupying all or any part of the Property; and further Assignor agrees to assign and transfer to the Assignee a security interest in all future leases upon all or any part of the Property in order to secure the repayment of the Note and the performance by Assignor of its covenants under the Loan Documents; provided, however, that notwithstanding any provision herein to the contrary, under no circumstances shall Assignee be liable or responsible for any of the obligations of Assignor as lessor under any of said leases or other occupancy agreements. Assignor agrees to execute and deliver, immediately upon the request of the Assignee, all such further assurances and assignments in the Property as the Assignee shall from time to time require. In the event of a default by Assignor under any of the Loan Documents then Assignee may proceed to enforce its rights under any of the leases and Assignor does hereby appoint irrevocably the Assignee its true and lawful attorney in its name and stead (with or without taking possession of the Property), to rent, lease or let all or any portion of the Property to any party or parties at such rental and upon such terms in its discretion as it may determine.

Although it is the intention of the parties that this assignment of rents, issues and profits shall be a present and absolute assignment, Assignor has additionally granted and assigned unto

Assignee a security interest in and to all leases and other occupancy agreements and future leases or future occupancy agreements of the Property and it is expressly understood and agreed, anything herein contained to the contrary notwithstanding, that the Assignor shall not exercise any of the rights and powers conferred upon it by virtue of its security interest in any of the leases until and unless a default shall occur in the payment of interest or principal due under the Note or in the performance or observance of any of the conditions or agreements of any Loan Documents now or at any time securing the Note or the debt evidenced thereby or by any extension thereof and nothing herein contained shall be deemed to affect or impair any rights which the Assignee may have under the Note, Loan Documents or any other instrument evidencing or securing the indebtedness evidenced by the Note.

Once the Note and any renewals and extensions thereof have been paid, and the obligations on behalf of Assignor contained in the Loan Documents have been completed to the satisfaction of Assignee, the Assignee will assign back to Assignor the rents, issues and profits granted herein and further Assignee shall release its security interest any of the leases upon written request of Assignor.

During the time period intervening between a default by the Assignor and either the taking of possession of the Property as provided hereinafter, or a foreclosure by Assignee or a conveyance by a deed in lieu of foreclosure by Assignor to Assignee, this Assignment shall remain in full force and effect and Assignee will be entitled to all rents, issues and profits arising out of the Property.

The Assignor represents and agrees that no rent has been or will be paid by any person or entity in possession of any portion of the Property for more than one (1) month in advance and that no payment of the rents to accrue for any portion of the Property has been or will be waived, released, reduced or discounted, or otherwise discharged or compromised by the Assignor. The Assignor waives any right of set off against any person in possession of any portion of the Property. The Assignor agrees that it will not further assign any of the rents or profits of the Property and any such further assignment shall be void and of no force or effect.

The Assignor represents and agrees that it shall not cancel, terminate, or consent to any surrender of any lease, sublease or other occupancy agreement or any future leases or other occupancy agreements, permit any cancellation, termination, or surrender, commence an action of ejectment or any summary proceedings for dispossession of the tenant under any of the leases, exercise any right of recapture provided in any or the leases or other occupancy agreements, or modify or in any way alter the terms of any lease or other occupancy agreement or future lease or future occupancy agreement without Assignee's prior written consent which may be granted or withheld in Assignee's sole and absolute discretion provided, however, that for so long as no Event of Default shall exist under any of the Loan Documents, Assignor shall have the right to enter into commercial leases in accordance with the terms set forth in paragraph 7 of the Mortgage;

Nothing herein contained shall be construed as constituting the Assignee a "mortgagee in possession" in the absence of the taking of actual possession of the Property by the Assignee pursuant to the provisions hereinafter contained. In the exercise of the powers herein granted the Assignee, no liability shall be asserted or enforced against the Assignee, all such liability being expressly waived and released by the Assignor.

In any case in which the Assignee has a right to declare the indebtedness secured hereby due and payable, either before or after said indebtedness is declared due, forthwith upon demand of the Assignee, the Assignor agrees to surrender to the Assignee and the Assignee shall be cntitled to take actual possession of the Property or any part thereof, personally, or by its agents or attorneys, and the Assignee in its discretion may, with or without force, and with or without process of law, enter upon and take and maintain possession of all or any part of the Property, together with all the documents, books, records, papers and accounts of the Assignor or the then owner of the Property relating thereto, and may exclude the Assignor, the agents or servants of the Assignor, wholly therefrom and may as attorney-in-fact or agent of the Assignor or in its own name as holder and under the powers herein granted, hold, operate, manage and control the Property and conduct the business, if any, thereof either personally or by its agents, with full power to use such measures, legal or equitable, as in its discretion or in the discretion of its successors or assigns may be deemed proper or necessary to enforce the payment or security of the avails, rents, issues and profits of the Property, including actions for the recovery of rent, actions in forcible detainer and actions in distress for rent, hereby granting full power and authority to exercise each and every one of the rights, privileges and powers herein granted at any and all times hereafter, without notice to the Assignor, and with full power to cancel or terminate any lease or sublease for any cause or on any ground which would entitle the Assignee to cancel the same, to elect to disaffirm any lease or sublease made subsequent to this Assignment, to make all necessary or proper repairs, decorating, renewals, replacements, alterations, additions, betterments and improvements to the Property that may seem judicious, in its discretion, insure and re-insure the same for all risks incidental to Assignee's possession, operation and management thereof and to receive all such avails, rents, issues and profits.

The Assignee shall not be obligated to perform or discharge, nor does it hereby undertake to perform or discharge, any obligation, duty or liability under any of the leases or other occupancy agreements relating to the Property, and the Assignor shall and does hereby agree to indemnify and hold the Assignee harmless of and from any and all liability, loss or damage which it may or might incur under any of the leases or under or by reason of the assignment thereof and of and from any and all claims and demands whatsoever which may be asserted against it by reason of any alleged obligations or undertakings on its part to perform or discharge any of the terms, covenants or agreements contained in any of the leases. Should the Assignee incur any such liability, loss or damage, under any of the leases or under or by reason of the assignment thereof, or in the defense of any claims or demands the Assignor agrees to reimburse the Assignee for the amount thereof, immediately upon demand.

The Assignee in the exercise of the rights and powers conferred upon it by this Assignment shall have full power to use and apply the avails, rents, issues and profits of the

Property to the payment of or on account of the following, in such order as the Assignee may determine:

(a) To the payment of any of the above described indebtedness or any renewal, extension or rearrangement thereof;

(b) To the payment of all operating expenses of the Property, including, but not limited to, the cost of management and leasing thereof (which shall include reasonable compensation to the Assignee and its agent or agents, if management be delegated to an agent or agents, and it shall also include lease commissions and other compensation and expenses of seeking and procuring tenants and entering into leases), utilities and repairs to the Property;

(c) To the payment of insurance, taxes and special assessments now due or which may hereafter become due on the Property.

The Assignor does further specifically authorize and instruct each and every present and future lessee or tenant of the whole or any part of the Property to pay all unpaid rentals agreed upon in any tenancy to the Assignee upon receipt of demand from the Assignee to so pay the same.

It is understood and agreed that the provisions set forth in this Assignment shall be deemed as a special remedy given to the Assignee, and shall not be deemed exclusive of any of the remedies which the Assignee would otherwise have, but shall be cumulative with any such remedies.

Whenever the word "Assignor" is mentioned herein, it is hereby understood that the same includes and shall be binding upon the heirs, executors, administrators, successors and assigns (including successors by consolidation) of the Assignor as the case may be, and any party or parties holding title to the Property by, through or under the Assignor. All of the rights, powers, privileges and immunities herein granted assigned to the Assignee shall also inure to its successors and assigns, including all holders, from time to time, of the Note.

It is expressly understood that no judgment or decree which may be entered on any debt secured hereby shall operate to abrogate or lessen the effect of this instrument, but that the same shall continue in full force and effect until the payment and discharge of any and all indebtedness secured hereby, in whatever form the said indebtedness may be shall have been paid in full and all bills incurred by virtue of the authority herein contained have been fully paid out of the rents, issues and profits of the Property, or by the Assignor, or until such time as this instrument may be voluntarily released. The rights granted hereunder shall inure to the benefit of and be binding upon the respective heirs, executors, administrators, successors and assigns of the Assignor and the Assignee.

In the event any lessee under any of the leases should be the subject of any proceeding under the United States Bankruptcy Code or any other federal, state, or local statute which provides for the possible termination or rejection of any of the leases assigned hereby, Assignor covenants and agrees that if any of the leases are so rejected, no settlement for damages shall be made without the prior written consent of the Assignee, and any check in payment of damages for rejection of any of the leases will be made payable both to the Assignor and Assignee. Assignor hereby assigns any such payment to Assignee and further covenants and agrees that upon the request of Assignee it will duly endorse to the order of Assignee any such check, the proceeds of which will be applied to whatever portion of the indebtedness secured by this Agreement Assignee may elect.

EXECUTED and DELIVERED on this the 8th day of November, 2005

EXECUTOR'S DEED (INDIVIDUAL OR CORPORATION)

FORM 8005 (short version), FORM 8010 (long version)

CAUTION: THIS AGREEMENT SHOULD BE PREPARED BY AN ATTORNEY AND REVIEWED BY ATTORNEYS FOR SELLER AND PURCHASER BEFORE SIGNING.

THIS INDENTURE, made the 31st MAY, 2006,

between Marcella Lamanna

as executor of The Last Will and Testament of Alfredo Lamanna, late of 3 Devine Street, Lynbrook, New York 11563 who died on the Second day of October, Two Thousand Eour, party of the first part, and

Fumo, LLC of 57-00 47th Street, Maspeth, New York 11378,

party of the second part,

WITNESSETH, that the party of the first part, to whom letters testamentary were issued by the Surrogate's Court, Nassau County, New York on January 3, 2005 and by virtue of the power and authority given in and by said last will and testament, and/or by Article 11 of the Estates, Powers and Trusts Law, and in consideration of 10.00 dollars, lawful money of the United States, paid by the party of the second part, does hereby grant and release unto the party of the second part, the distributees or successors and assigns of the party of the second part forever.

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough and County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at the corner formed by the intersection of the southerly side of Maspeth Avenue, 66 feet wide, with the easterly side of 47th Street, 70 feet wide;
RUNNING THENCE easterly along the southerly side of Maspeth Avenue and along the prolongation easterly thereof, 222.76 feet;
THENCE southwesterly along a line forming an interior angle of 54 degrees, 46 minutes, 39 seconds with the preceding course, 242.99 feet;
THENCE westerly at right angles to the easterly side if 47th Street, 78.91 feet to the easterly side of 47th Street;
THENCE northerly along the easterly side of 47th Street, 200 feet to the point or place of BEGINNING.

SAID PREMISES being known as and by the street number 57-05 47th Street, Maspeth, New York.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances, and also all the estate which the said decedent had at the time of decedent's death in said premises, and also the estate therein, which the party of the first part has or has power to convey or dispose of, whether individually, or by virtue of said will or otherwise,

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the costs of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

MEMORANDUM OF LEASE

THIS MEMORANDUM OF LEASE, dated May 1, 2009, between, **57-00 MASPETH AVENUE, LLC**, a New York limited liability company, having an address at c/o Sullivan Gardner PC, 475 Park Avenue South, New York, New York 10016 ("Landlord"), and **PEBBLE LANE ASSOCIATES, LLC**, a Delaware limited liability company, having an address at c/o U.S. Concrete, Inc., 2925 Briarpark, Suite 1050, Houston, Texas 77042 ("Tenant").

WHEREAS, by a certain lease dated May 1, 2009 (hereinafter referred to as the "Lease"), Landlord leased to Tenant the premises (hereinafter referred to as the "Premises") described in the Lease and also set forth in item 4 below, subject to the terms, covenants, and conditions set forth in the Lease; and

WHEREAS, Landlord and Tenant have executed this Memorandum in accordance with Section 291-C of the Real Property Article of the New York Code for the purpose of submitting it to be recorded among the land records of Queens County, New York.

NOW, THEREFORE, WITNESSETH, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto state as follows with respect to the Lease:

1. Names of the parties:

   Landlord: 57-00 Maspeth Avenue, LLC
   Tenant: Pebble Lane Associates, LLC

2. The addresses of the parties set forth in the Lease:

   Landlord's Address: 57-00 Maspeth Avenue, LLC
   c/o Sullivan Gardner PC
   475 Park Avenue South
   New York, New York 10016

   Tenant's Address: Pebble Lane Associates, LLC
   c/o U.S. Concrete, Inc.
   2929 Briarpark, Suite 1050
   Houston, Texas 77042

3. Reference to the Lease:

   The lease was executed by and between Landlord and Tenant and was dated as of May 1, 2009.

4. Description of the Premises as set forth in the Lease: the land outlined on Exhibit A of the Lease.

5. Initial Term of the Lease expires on April 30, 2019.

Commencement Date: May 1, 2009
Termination Date: April 30, 2019

6. The initial term of the Lease may be extended for a maximum of 10 years.

7. Section 26 of the Lease grants Tenant the right of first refusal over the leased premises, upon certain terms and conditions set forth therein.

CREDIT LINE MORTGAGE

NOTICE: THIS MORTGAGE SECURES A NOTE WHICH CONTAINS A PROVISION ALLOWING FOR CHANGES IN THE INTEREST RATE.

THIS MORTGAGE IS A CREDIT LINE MORTGAGE AS DEFINED IN SECTION 2B1 OF THE NEW YORK REAL PROPERTY LAW. IT SECURES AN INDEBTEDNESS UNDER THE DEFINITION OF NOTE, LOCATED IN THE DEFINITIONS SECTION, WHICH REFLECTS THE FACT THAT THE PARTIES REASONABLY CONTEMPLATE ENTERING INTO A SERIES OF ADVANCES OR ADVANCES, PAYMENTS, AND READVANCES. THE NOTE LIMITS THE AGGREGATE AMOUNT AT ANY TIME OUTSTANDING TO THE MAXIMUM AMOUNT SET FORTH BELOW IN THE DEFINITION OF NOTE.

MAXIMUM LIEN. The lien of this Mortgage shall not exceed at any one time $150,000.00.

The Property covered by this Mortgage is or will be secured by other than a 1 or 2 family residence.

THIS MORTGAGE dated September 6, 2012, is made and executed between 57-00 Maspeth Avenue, LLC, whose address is 54-01 43rd Street, 2nd Floor, Maspeth, NY 11378 and New Ditmas Realty, LLC, whose address is 2B Woodmere Boulevard South, Woodmere, NY 1159B (referred to below as "Grantor") and Bank of New Jersey, whose address is 45B West Street, Fort Lee, NJ 07024 (referred to below as "Lender").

GRANT OF MORTGAGE. For veluable consideration, Grentor mortgages, grants, and conveys to Lender all of Grantor's right, title, and interest in end to the following described real property, together with all existing or subsequently erected or affixed buildings, improvements and fixtures; all easements, rights of way, and appurtenences; ell water, weter rights, watercourses and ditch rights (including stock in utilities with ditch or irrigation rights); and all other rights, royalties, and profits releting to the reel property, including without limitation all minerals, oil, gas, geothermal and similar matters, **(the "Real Property") located in Queens & Brooklyn County, State of New York:**

See the exhibit or other description document which is attached to this Mortgage and made a part of this Mortgage as if fully set forth herein.

The Real Property or its address is commonly known as 98-26 Ditmas Avenue, Brooklyn, NY 11236, and 57-00 47th Street, See Attached Schedule "A", Maspeth, NY 11378. The Real Property tax identification number is Borough 3, Block 3650, Lot 119 & 121; And Section 14, Block 2601, Lot 6, See Attached Schedule "B".

REVOLVING LINE OF CREOIT. This Mortgage secures the Indebtedness including, without limitation, a revolving line of credit, which obligates Lender to meke advences to Grantor so long es Grentor complies with all the terms of the Note.

Grantor presently assigns to Lender all of Grantor's right, title, and interest in and to all present and future leases of the Property and all Rents from the Property. In addition, Grantor grants to Lender a Uniform Commercial Code security interest in the Personal Property and Rents.

THIS MORTGAGE, INCLUOING THE ASSIGNMENT OF RENTS ANO THE SECURITY INTEREST IN THE RENTS ANO PERSONAL PROPERTY, IS GIVEN TO SECURE (A) PAYMENT OF THE INOEBTEONESS AND (B) PERFORMANCE OF ANY AND ALL OBLIGATIONS UNOER THE NOTE, THE RELATEO OOCUMENTS, ANO THIS MORTGAGE. THIS MORTGAGE IS GIVEN ANO ACCEPTEO ON THE FOLLOWING TERMS:

PAYMENT ANO PERFORMANCE. Except as otherwise provided in this Mortgage, Grentor shall pay to Lender ell amounts secured by this Mortgage as they become due and shell strictly perform ell of Grantor's obligations under this Mortgage.

POSSESSION ANO MAINTENANCE OF THE PROPERTY. Grantor agrees that Grantor's possession and use of the Property shall be governed by the following provisions:

Outy to Maintein. Grantor shall maintain the Property in tenantable condition end promptly perform ell repairs, replacements, and maintenance necessary to preserve its value.

Compliance With Environmental Laws. Grantor represents and warrants to Lender that: (1) During the period of Grantor's ownership of the Property, there has been no use, generation, manufacture, storage, treatment, disposal, release or threatened releese of any Hazerdous Substance by any person on, under, about or from the Property; (2) Grantor has no knowledge of, or reeson to believe that there has been, except as previously disclosed to and acknowledged by Lender in writing, (e) any breach or violation of any Environmental Laws, (b) any use, generation, manufacture, storage, treatment, disposal, release or threatened release of any Hazardous Substance on, under, about or from the Property by any prior owners or occupants of the Property, or (c) any actual or threetened litigation or claims of any kind by any person relating to such matters; and (3) Except as previously disclosed to and acknowledged by Lender in writing, (a) neither Grantor nor any tenant, contractor, egent or other authorized user of the Property shall use, generate, manufacture, store, treat, dispose of or release any Hazardous Substance on, under, ebout or from the Property; and (b) eny such activity shall be conducted in compliance with all applicable federal, state, and local laws, regulations and ordinances, including without limitation all Environmental Laws. Grantor authorizes Lender and its egents to enter upon the Property to make such inspections and tests, et Grantor's expense, as Lender may deem appropriate to determine compliance of the Property with this section of the Mortgage. Any inspections or tests made by Lender shall be for Lender's purposes only and shall not be construed to create any responsibility or liability on the part of Lender to Grantor or to any other person. The representations and warranties contained herein are based on Grentor's due diligence in investigating the Property for Hazardous Substances. Grantor hereby (1) releases and waives any future claims against Lender for indemnity or contribution in the event Grantor becomes liable for cleenup or other costs under any such laws; and (2) agrees to indemnify, defend, and hold harmless Lender against any and all claims, losses, liabilities, demages, penalties, and expenses which Lender may directly or indirectly sustain or suffer resulting from a breach of this section of the Mortgage or as a consequence of any use, generation, menufacture, storage, disposal, release or threatened release occurring prior to Grantor's ownership or interest in the Property, whether or not the same wes or should have been known to Grantor. The provisions of this section of the Mortgage, including the obligation to indemnify and defend, shall survive the payment of the Indebtedness and the satisfaction and reconveyance of the lien of this Mortgage and shall not be affected by

Lender's ecquisition of any interest in the Property, whether by foreclosure or otherwise.

Nuisance, Weste. Grantor shall not cause, conduct or permit any nuisance nor commit, permit, or suffer any stripping of or wasta on or to the Property or any portion of the Property. Without limiting the generality of the foregoing, Grantor will not remove, or grant to any other perty the right to remove, any timber, minerals (including oil and gas), coel, clay, scoria, soil, gravel or rock products without Lender's prior written consent.

Removal of Improvemants. Grantor shall not demolish or remove any Improvements from the Real Property without Lender's prior written consent. As a condition to the removal of any Improvements, Lender may require Grantor to make arrangements satisfectory to Lender to replace such Improvements with Improvements of at least equal value.

Lendar's Right to Enter. Lender and Lender's agents and representatives may enter upon the Real Property at all reasonable times to attend to Lender's interests and to inspect the Real Property for purposes of Grantor's compliance with the terms and conditions of this Mortgage.

Complience with Governmantal Raquiraments. Grantor shall promptly comply with ell laws, ordinances, and reguletions, now or hereefter in effect, of all governmental authorities eppliceble to the use or occupancy of the Property, including without limitation, the Americans With Disabilities Act. Grantor may contest in good faith any such law, ordinance, or regulation and withhold compliance during any proceeding, including appropriate appeals, so long as Grantor has notified Lender in writing prior to doing so and so long as, in Lender's sole opinion, Lender's interests in the Property are not jeopardized. Lender may require Grantor to post adequate security or a surety bond, reasonably satisfactory to Lender, to protect Lendar's interest.

Duty to Protect. Grantor agrees neither to abandon or leave unattended the Property. Grantor shall do all other acts, in addition to those acts set forth above in this section, which from the character and use of the Property are reasonably necessary to protect and preserve the Property.

AGREEMENTS ABOUT NEW YORK LIEN LAW. Grantor shall receive all amounts lent to Grantor by Lender subject to the trust fund provisions of Section 13 of the New York Lien Law.

DUE ON SALE - CONSENT BY LENDER. Lender may, at Lender's option, declare immediately due end payable all sums secured by this Mortgage upon the sale or transfer, without Lender's prior written consent, of all or any part of the Real Property, or any interest in the Real Property. A "sale or transfer" means the conveyance of Real Property or any right, title or interest in the Real Property; whether legal, beneficial or equitable; whether voluntary or involuntary; whether by outright sale, deed, installment sale contract, land contract, contract for deed, leasehold interest with a term greeter than three (3) years, lease-option contract, or by sale, assignment, or transfer of any beneficial interest in or to any land trust holding title to the Real Property, or by any other method of conveyance of an interest in the Real Property. If any Grantor is a corporation, partnership or limited liability company, transfer also includes any change in ownership of more than twenty-five parcent (25%) of the voting stock, partnership interests or limited liability company interests, es the cese may be, of such Grantor. However, this option shall not be exercised by Lender if such exercise is prohibited by federal law or by New York law.

TAXES AND LIENS. The following provisions releting to the taxes and liens on the Property are part of this Mortgage:

Paymant. Grantor shall pay when due (and in all events prior to delinquency) all taxes, payroll taxes, special taxes, assessments, water charges and sewer service charges levied against or on account of the Property, and shall pay when due all claims for work done on or for services rendered or material furnished to the Property. Grantor shall maintain the Property free of any liens having priority over or equal to the interest of Lender under this Mortgage, except for the Existing Indebtedness referred to in this Mortgage or those liens specificelly agreed to in writing by Lender, and except for the lien of taxes and assessments not due as further specified in the Right to Contest paragraph.

Right to Contast. Grantor may withhold payment of any tax, assessmant, or claim in connection with a good faith dispute over the obligation to pay, so long as Lender's interest in the Property is not jaopardized. If a lien arises or is filed as a result of nonpeyment, Grantor shall within fifteen (15) days after the lien arises or, if a lien is filed, within fifteen (15) days after Grantor has notice of the filing, secure the discharge of the lien, or if requested by Lender, deposit with Lender cash or a sufficient corporate surety bond or other security satisfectory to Lender in an amount sufficient to discharge the lien plus any costs and reasonable attorneys' fees, or other charges thet could accrue as a result of a foreclosure or sele under the lien. In any contest, Grentor shall defend itself and Lender and shall satisfy any adverse judgment before enforcement ageinst the Property. Grantor shall name Lender as an additional obligee under any surety bond furnished in the contest proceedings.

Evidence of Peyment. Grantor shall upon demand furnish to Lender satisfactory evidence of payment of the taxes or assessments and shall authorize the appropriate governmental official to deliver to Lender at any time a written statement of the taxes and assessments against the Property.

Notice of Construction. Grantor shall notify Lender et least fifteen (15) days before any work is commenced, any services are furnished, or any materials are supplied to the Property, if any mechanic's lien, meterialmen's lien, or other lien could be asserted on account of the work, services, or materials. Grantor will upon request of Lender furnish to Lender advance essurances satisfactory to Lender that Grantor can end will pay the cost of such improvements.

PROPERTY DAMAGE INSURANCE. The following provisions relating to insuring the Property are e part of this Mortgage:

Meintenance of Insurence. Grantor shall procure and maintain policies of fire insurance with standard extended coverage endorsements on a replecament basis for the full insurable value covering all Improvements on the Real Property in an amount sufficient to avoid application of any coinsurance clause, and with a standard mortgagee cleuse in favor of Lender. Grantor shall also procure and maintain comprehensive generel liability insurance in such coverage amounts as Lender mey request with Lender being namad as additional insureds in such liability insurance policies. Additionally, Grantor shall maintain such other insurance, including but not limited to hazard, business interruption end boiler insurance as Lender may require. Policies shall ba written by such insurance companies and in such form as may be reasonably acceptable to Lender. Grantor shall deliver to Lender certificates of coverage from each insurer containing a stipulation that coverage will not be cancelled or diminished without a minimum of fifteen (15) days' prior written notice to Lender and not containing any disclaimer of the insurer's liebility for failure to give such notice. Each insurance policy also shall include an endorsement providing that coverage in favor of Lender will not be impaired in any way by any act, omission or default of Grantor or any other person. Should the Real Property be located in an area designated by the Director of the Federal Emergency Managemant Agency as a special flood hazard area, Grantor agrees to obtain and maintain Federal Flood Insurance, if available, within 45 days after notice is given by Lender that the Property is located in a special flood hazard area, for the full unpaid principal balance of the loan and eny prior liens on the property securing the loan, up to the maximum policy limits sat under the National Flood Insurance Program, or as otherwise required by Lender, and to meintain such insurance for the term of the

insurance provisions under this Mortgage, to the extent complianca with the terms of this Mortgage would constitute a duplication of insurance requirement. If any proceads from the insurance become payable on loss, the provisions in this Mortgage for division of proceeds shall apply only to that portion of the proceeds not payable to the holder of the Existing Indebtedness.

Grantor's Raport on Insurance. Upon raquest of Lender, however not more than once a year, Grantor shall furnish to Lander a report on each existing policy of insurance showing: (1) the name of the insurer; (2) the risks insured; (3) the amount of tha policy; (4) the property insured, the then current replacement valua of such property, and the manner of determining that value; and (5) the expiration date of the policy. Grantor shall, upon request of Lender, have an independent appraiser satisfactory to Lender determine the cash value replacement cost of the Property.

LENDER'S EXPENDITURES. If any action or proceeding is commenced that would materially affect Lender's interest in the Property or if Grantor fails to comply with any provision of this Mortgage or any Related Documents, including but not limited to Grantor's failure to comply with any obligation to maintain Existing Indebtedness in good standing as required below, or to discharge or pay when due any amounts Grantor is required to discharge or pay under this Mortgage or any Related Documents, Lender on Grantor's behalf may (but shall not be obligated to) take any action that Lender deems appropriate, including but not limited to discharging or paying all taxes, liens, security interests, encumbrances and other claims, at any time levied or placed on the Property and paying all costs for insuring, maintaining and preserving the Property. All such expenditures incurred or paid by Lender for such purposas will then bear interest at the rate charged under the Note from the date incurred or paid by Lender to the date of repayment by Grantor. All such expenses will become a part of tha Indebtedness and, at Lender's option, will (A) be payable on demand; (B) be added to the balance of the Nota and be apportioned among and be payable with any installment payments to become due during either (1) the term of any applicable insurance policy; or (2) the remaining term of the Note; or (C) be treated as a balloon payment which will be due and payabla at the Note's maturity. The Mortgage also will secure payment of these amounts. Such right shall be in addition to all other rights and remedies to which Lender may be entitled upon Default.

WARRANTY; DEFENSE DF TITLE. The following provisions relating to ownership of the Property are a part of this Mortgage:

Title. Grantor warrants that: (a) Grantor holds good and marketable title of record to the Property in fee simple, free and clear of all liens and encumbrances other than those set forth in the Real Property description or in the Existing Indebtedness section below or in any title insurance policy, title report, or final title opinion issued in favor of, and accepted by, Lender in connection with this Mortgage, and (b) Grantor has the full right, power, and authority to execute and deliver this Mortgage to Lender.

Dafansa of Title. Subject to the exception in the paragraph above, Grantor warrants and will forever defend the title to the Property against the lawful claims of all persons. In tha event any action or proceeding is commenced that questions Grantor's title or the interest of Lender under this Mortgage, Grantor shall defend the action at Grantor's expense. Grantor may be the nominal party in such proceeding, but Lender shall be entitled to participate in the proceeding and to be represented in the proceeding by counsel of Lender's own choice, and Grantor will deliver, or cause to be delivered, to Lender such instruments as Lender may request from time to time to permit such participation.

Complianca With Laws. Grantor warrants that the Property and Grantor's use of the Property complies with all existing applicable laws, ordinances, and regulations of governmental authorities.

Survival of Representations and Warranties. All representations, warranties, and agreements made by Grantor in this Mortgage shall survive the execution and delivary of this Mortgage, shall be continuing in nature, and shall remain in full force and effect until such time as Grantor's Indebtedness shall be paid in full.

EXISTING INDEBTEDNESS. The following provisions concerning Existing Indebtedness are a part of this Mortgage:

Existing Lian. The lien of this Mortgage securing the Indebtedness may be secondary and inferior to an existing lien. Grantor expressly covanants and agraes to pay, or see to the payment of, the Existing Indebtedness and to prevent any default on such indebtedness, any default under the instruments evidencing such indabtadness, or any default under any security documents for such indebtedness.

No Modification. Grantor shall not enter into any agreement with the holder of any mortgage, deed of trust, or other security agreement which has priority ovar this Mortgage by which that agreement is modified, amended, extended, or renewed without the prior written consent of Lender. Grantor shall neither request nor accept any future advances under any such security agreement without the prior written consent of Lender.

CDNDEMNATIDN. Tha following provisions relating to condemnation proceedings are a part of this Mortgage:

Procaadings. If any proceeding in condemnation is filed, Grantor shall promptly notify Lender in writing, and Grantor shall promptly take such steps as may be necessary to defend the action and obtain the award. Grantor may be the nominal party in such proceeding, but Lender shall be entitled to participate in the proceeding and to be represented in the proceeding by counsel of its own choice, and Grantor will deliver or cause to be delivered to Lender such instruments and documentation as may be requested by Lender from time to time to permit such participation.

Application of Nat Proceeds. If all or any part of the Property is condemned by eminent domain proceedings or by any proceeding or purchese in lieu of condemnation, Lender may at its election require that all or any portion of the net proceeds of the award be applied to the Indebtedness or the repair or restoration of tha Property. The net proceeds of the award shall mean the award after payment of all reasonable costs, expenses, and attorneys' fees incurred by Lender in connection with the condemnation.

IMPOSITIDN OF TAXES, FEES AND CHARGES BY GDVERNMENTAL AUTHDRITIES. The following provisions relating to governmental taxes, fees and charges are a part of this Mortgage:

Current Taxas, Faes and Charges. Upon request by Lender, Grantor shall execute such documents in addition to this Mortgage and take whatever other action is requested by Lender to perfect and continue Lender's lien on the Real Property. Grantor shall reimburse Lender for all taxes, as described below, together with all expenses incurred in recording, perfecting or continuing this Mortgage, including without limitation all taxes, fees, documentary stamps, and other charges for recording or registering this Mortgage.

Taxes. The following shall constitute taxes to which this section applies: (1) a specific tax upon this type of Mortgage or upon all or any part of the Indebtedness secured by this Mortgage; (2) e specific tax on Grantor which Grantor is authorized or required to deduct from payments on the Indebtedness secured by this type of Mortgage; (3) a tax on this type of Mortgage chargeable against the Lender or the holder of the Note; and (4) a specific tax on all or any portion of the Indebtedness or on payments of principal and interest made by Grantor.

Subsequent Taxes. If any tax to which this section applies is enacted subsequent to the date of this Mortgage, this event shall have

available to Lender within three (3) days after receipt of written demand from Lander to the extent permitted by applicable law.

Addresses. Tha mailing addresses of Grantor (debtor) and Lendar (secured party) from which informetion concarning the security interest granted by this Mortgage may be obtained (each as raquired by the Uniform Commercial Code) ara as stated on the first page of this Mortgage.

FURTHER ASSURANCES; ATTORNEY-IN-FACT. The following provisions relating to further assurances and attorney-in-fact are a part of this Mortgage:

Further Assurencas. At any time, and from time to time, upon request of Lender, Grantor will make, execute and deliver, or will cause to be mada, executed or delivered, to Lender or to Lender's designee, and when requested by Lander, cause to be filed, recorded, refiled, or rerecorded, as the case may be, at such times and in such offices and places as Lander may deem appropriate, any and all such mortgages, deeds of trust, security deeds, security agreements, financing statements, continuation stetements, instruments of further assurance, certificates, and other documents as may, in the sole opinion of Lender, be necessary or desirable in order to effectuate, complete, perfect, continua, or preserve (1) Grantor's obligations under the Note, this Mortgage, and the Related Documents, and (2) the liens and security interests created by this Mortgage on tha Property, whether now owned or hereafter acquired by Grantor. Unless prohibited by law or Lender agrees to the contrary in writing, Grantor shall reimburse Lender for all costs and expenses incurred in connection with the matters referred to in this paragraph.

Attorney-in-Fact. If Grantor fails to do any of the things referred to in the preceding paragraph, Lender may do so for and in the name of Grantor and at Grantor's expense. For such purposes, Grantor hereby irrevocably appoints Lender es Grantor's attorney-in-fact for the purpose of making, executing, delivering, filing, recording, and doing ell other things as may be necessary or desirable, in Lender's sole opinion, to accomplish the matters referred to in the preceding paragraph.

FULL PERFORMANCE. If Grantor pays all the Indebtedness when due, and otherwise performs all the obligations imposed upon Grantor under this Mortgaga, Lender shall execute end deliver to Grantor e suitable satisfaction of this Mortgage and suitable statements of termination of any financing statement on file evidencing Lender's security interest in the Rents and the Personal Property.

DEFAULT. Default will occur if payment in full is not made immediately when due.

RIGHTS AND REMEOIES ON DEFAULT. Upon Default and at any time thereafter, Lender, at Lender's option, may axercise any one or more of the following rights and remedies, in addition to any other rights or remadies provided by law:

Accelarete Indebtedness. Lender shall have the right at its option without notice to Grantor to declare the entire Indebtedness immadiately due and payable, including any prepayment penalty that Grantor would be required to pay.

UCC Remadies. With respect to all or any part of the Personal Property, Lendar shall have all the rights and remedies of a secured party undar the Uniform Commercial Code.

Collact Rents. Lender shall have the right, without notice to Grantor, to take possession of the Property and collect the Rents, including amounts past due and unpaid, and apply the net proceeds, over and above Lander's costs, against tha Indebtednass. In furtherance of this right, Lender may require any tenent or other user of the Property to maka payments of rent or use fees directly to Lender. If the Rents are collected by Lander, then Grantor irrevocably designates Lender as Grantor's attorney-in-fact to endorse instrumants receivad in payment thereof in the name of Grantor and to negotiate the same and collect the proceeds. Payments by tenants or other users to Lender in response to Lender's demand shall satisfy the obligetions for which the payments are made, whether or not any proper grounds for the demand existed. Lender may exercise its rights under this subparagraph either in person, by agent, or through a receiver.

Appoint Receiver. Lender shall have the right to heve a receiver eppointed to take possession of all or any part of the Property, with the power to protact end praserve the Property, to operate the Property preceding foreclosure or sale, and to collect the Rents from the Property and apply the proceeds, over and above the cost of the receivership, against the Indebtedness. Lander's right to the appointment of a receiver shall exist whether or not the apperent value of the Property exceeds the Indebtedness by a substantial amount. The right to a receiver shall be given to Lender regardless of the solvency of Grantor and without any requirement to give notice to Grantor.

Judicial Foreclosure. Lender may obtain a judicial decree foreclosing Grantor's interest in all or any part of the Property.

Nonjudiciel Sale. Grantor gives Lender a power of sele over Grentor's interest in all or in any part of the Personal Property or the Real Property subject to the Mortgege. This means that Lender will be authorized to sell all property subject to the Mortgage in connection with a non-judicial foreclosure proceeding. Lender is authorized to commence a non-judicial foreclosure proceeding as may be permitted by epplicable law, including Article 14 of the New York Real Property Actions and Proceedings Law and any amendments or succassors to that law.

Deficiency Judgment. If permitted by applicable law, Lender may obtain a judgment for any deficiency remaining in the Indebtedness due to Lendar after application of all amounts received from the exarcise of the rights provided in this section.

Tenancy at Suffarenca. If Grantor remains in possession of the Property after the Property is sold as provided above or Lender otherwise becomes entitled to possession of the Property upon default of Grantor, Grentor shall become e tenant at sufferance of Lender or the purchaser of the Property and shall, at Lender's option, either (1) pay a reesonable rental for the use of the Property, or (2) vacata the Property immediately upon the demand of Lender.

Othar Remadias. Lender shall have all other rights and remedies provided in this Mortgege or the Note or available at law or in equity.

Sela of the Property. To the extent permitted by applicable law, Grantor hereby waivas any and all right to have the Property marshalled. In exercising its rights and remedies, Lender shall be free to sell all or any pert of the Property together or separately, in one sale or by separate sales. Lender shall be entitled to bid at any public sale on all or any portion of tha Property.

Notica of Sale. Landar shall give Grantor reasonable notice of the time and place of any public sale of the Personal Property or of the time after which any private sale or other intended disposition of the Personal Property is to be mada. Reasonable notice shall mean notice given at least ten (10) deys before the time of the sale or disposition. Any sale of the Personal Property may be made in conjunction with any sale of the Reel Property.

Election of Remedias. Election by Lender to pursue any remedy shall not exclude pursuit of any other remedy, and an election to make expenditures or to teke action to perform an obligation of Grantor under this Mortgage, after Grantor's failure to perform, shall not affect Lender's right to declare a default and exercise its remedias. Nothing under this Mortgage or otherwise shall be construed so as to limit or restrict the rights and remedies available to Lender following Default, or in eny way to limit or restrict the rights and ability of Lendar to proceed directly against Grantor and/or against any other co-maker, guarentor, surety or endorsar and/or to proceed against any other collateral directly or indirectly securing the Indebtedness.

Attornays' Fees; Expenses. If Lender institutes any suit or action to anforce any of the terms of this Mortgage, Lender will be entitled to recover such sum as the court may adjudge reasonabla as attornays' faes at trial and upon any appaal. Whether or not any court action is involved, ell reesoneble expenses Lender incurs thet in Lender's opinion are necessary at any time for tha protaction of its interest or the enforcement of its rights shall become a part of the Indebtedness. Expenses covered by this paragraph include, subject to any limits undar applicable law, Lender's reasonable attorneys' fees and Lender's legal expanses whether or not there is e lawsuit, including reasonable ettorneys' fees and expenses for bankruptcy proceedings (including efforts to modify or vacate any automatic stay or injunction), appeals, and any enticipated post-judgment collection services, the cost of saarching records, obtaining title reports (including foreclosure reports), surveyors' reports, and appraisal fees and title insurance, to the extent permitted by applicable law. Grantor also will pay any court costs, in addition to all other sums provided by law.

NOTICES. Any notice required to be given under this Mortgaga shall be givan in writing, and shall be effective when actually delivered, when actually received by telefacsimile (unless otherwise required by law), when deposited with e nationally recognized overnight courier,

or, if mailed, when deposited in the United States mail, as first class, certified or registered mail postage prepaid, directed to the addresses shown near the beginning of this Mortgage. All copies of notices of foreclosure from the holder of any lien which has priority over this Mortgage shall be sent to Lender's address, as shown near the beginning of this Mortgage. Any party may change its address for notices under this Mortgage by giving formal written notice to the other parties, specifying that the purpose of the notice is to change the party's address. For notice purposes, Grantor agrees to keep Lender informed at all times of Grantor's current address. Unless otherwise provided or required by law, if there is more than one Grantor, any notice given by Lender to any Grantor is deemed to be notice given to all Grantors.

MISCELLANEOUS PROVISIONS. The following miscellaneous provisions are a part of this Mortgage:

Amendments. This Mortgage, together with any Related Documents, constitutes the entire understanding and agreement of the parties as to the matters set forth in this Mortgage. No alteration of or amendment to this Mortgage shall be effective unless given in writing and signed by the party or parties sought to be charged or bound by the alteration or amendment.

Annual Reports. If the Property is used for purposes other than Grantor's residence, Grantor shall furnish to Lender, upon request, a certified statement of net operating income received from the Property during Grantor's previous fiscal year in such form and detail as Lender shall require. "Net operating income" shall mean all cash receipts from the Property less all cash expenditures made in connection with the operation of the Property.

Caption Headings. Caption headings in this Mortgage are for convenience purposes only and are not to be used to interpret or define the provisions of this Mortgage.

Governing Law. With respect to procedural matters related to the perfection and enforcement of Lender's rights against the Property, this Mortgage will be governed by federal law applicable to Lender and to the extent not preempted by federal law, the laws of the State of New York. In all other respects, this Mortgage will be governed by federal law applicable to Lender and, to the extent not preempted by federal law, the laws of the State of New Jersey without regard to its conflicts of law provisions. However, if there ever is a question about whether any provision of this Mortgage is valid or enforceable, the provision that is questioned will be governed by whichever state or federal law would find the provision to be valid and enforceable. The loan transaction that is evidenced by the Note and this Mortgage has been applied for, considered, approved and made, and all necessary loan documents have been accepted by Lender in the State of New Jersey.

Choice of Venue. If there is a lawsuit, Grantor agrees upon Lender's request to submit to the jurisdiction of the courts of Stete of New York.

Joint and Several Liability. All obligations of Grantor under this Mortgage shall be joint and several, and all references to Grantor shall mean each and every Grantor. This means that each Grantor signing below is responsible for all obligations in this Mortgage. Where any one or more of the parties is a corporation, partnership, limited liability company or similar entity, it is not necessary for Lender to inquire into the powers of any of the officers, directors, partners, members, or other agents acting or purporting to act on the entity's behalf, and any obligations made or created in reliance upon the professed exercise of such powers shall be guaranteed under this Mortgage.

No Waiver by Lender. Lender shall not be deemed to have waived any rights under this Mortgage unless such waiver is given in writing and signed by Lender. No delay or omission on the part of Lender in exercising any right shall operate as a waiver of such right or any other right. A waiver by Lender of a provision of this Mortgage shall not prejudice or constitute a waiver of Lender's right otherwise to demand strict compliance with that provision or any other provision of this Mortgage. No prior waiver by Lender, nor any course of dealing between Lender and Grantor, shall constitute a waiver of any of Lender's rights or of any of Grantor's obligations as to any future transactions. Whenever the consent of Lender is required under this Mortgage, the granting of such consent by Lender in any instance shall not constitute continuing consent to subsequent instances where such consent is required and in all cases such consent may be granted or withheld in the sole discretion of Lender.

Severability. If a court of competent jurisdiction finds any provision of this Mortgage to be illegal, invalid, or unenforceable as to any person or circumstance, that finding shall not make the offending provision illegal, invalid, or unenforceable as to any other person or circumstance. If feasible, the offending provision shall be considered modified so that it becomes legal, valid and enforceable. If the offending provision cannot be so modified, it shall be considered deleted from this Mortgage. Unless otherwise required by law, the illegality, invalidity, or unenforceability of any provision of this Mortgage shall not affect the legality, validity or enforceability of any other provision of this Mortgage.

Merger. There shall be no merger of the interest or estate created by this Mortgage with any other interest or estate in the Property at any time held by or for the benefit of Lender in any capacity, without the written consent of Lender.

Successors and Assigns. Subject to any limitations stated in this Mortgage on transfer of Grantor's interest, this Mortgage shall be binding upon and inure to the benefit of the parties, their successors and assigns. If ownership of the Property becomes vested in a person other than Grantor, Lender, without notice to Grantor, may deal with Grantor's successors with reference to this Mortgage and the Indebtedness by way of forbearance or extension without releasing Grantor from the obligations of this Mortgage or liability under the Indebtedness.

Time is of the Essence. Time is of the essence in the performance of this Mortgage.

DEFINITIONS. The following capitalized words and terms shall have the following meanings when used in this Mortgage. Unless specifically stated to the contrary, all references to dollar amounts shall mean amounts in lawful money of the United States of America. Words and terms used in the singular shall include the plural, and the plural shall include the singular, as the context may require. Words and terms not otherwise defined in this Mortgage shall have the meanings attributed to such terms in the Uniform Commercial Code:

Borrower. The word "Borrower" means 57-00 Maspeth Avenue, LLC; and New Ditmas Realty, LLC and includes all co-signers and co-makers signing the Note and all their successors and assigns.

Default. The word "Default" means the Default set forth in this Mortgage in the section titled "Default".

Environmental Laws. The words "Environmental Laws" mean any and all state, federal and local statutes, regulations and ordinances relating to the protection of human health or the environment, including without limitation the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended, 42 U.S.C. Section 9601, et seq. ("CERCLA"), the Superfund Amendments and Reauthorization Act of 1986, Pub. L. No. 99-499 ("SARA"), the Hazardous Materials Transportation Act, 49 U.S.C. Section 1801, et seq., the Resource Conservation and Recovery Act, 42 U.S.C. Section 6901, et seq., or other applicable state or federal laws, rules, or regulations adopted pursuant thereto.

Existing Indebtedness. The words "Existing Indebtedness" mean the indebtedness described in the Existing Liens provision of this Mortgage.

Grantor. The word "Grantor" means 57-00 Maspeth Avenue, LLC; and New Ditmas Realty, LLC.

Hazardous Substances. The words "Hazardous Substances" mean materials that, because of their quantity, concentration or physical, chemical or infectious characteristics, may cause or pose a present or potential hazard to human health or the environment when improperly used, treated, stored, disposed of, generated, manufactured, transported or otherwise handled. The words "Hazardous Substances" are used in their very broadest sense and include without limitation any and all hazardous or toxic substances, materials or waste as defined by or listed under the Environmental Laws. The term "Hazardous Substances" also includes, without limitation, petroleum and petroleum by-products or any fraction thereof and asbestos.

Improvements. The word "Improvements" means all existing and future improvements, buildings, structures, mobile homes affixed on the Real Property, facilities, additions, replacements and other construction on the Real Property.

Indebtedness. The word "Indebtedness" means all principal, interest, and other amounts, costs and expenses payable under the Note

or Related Documents, together with all renewals of, extensions of, modifications of, consolidations of and substitutions for the Note or Related Documents and any amounts expended or advanced by Lender to discharge Grantor's obligations or expenses incurred by Lender to enforce Grantor's obligations under this Mortgege, including attorneys' fees, together with interest on such amounts as provided in this Mortgage.

Lender. The word "Lender" means Bank of New Jersey, its successors and assigns.

Mortgage. The word "Mortgage" means this Mortgege between Grantor and Lender.

Note. The word "Note" means the promissory note deted September 6, 2012, **in the original principal amount of $150,000.00** from Grantor to Lender, together with all renewals of, extensions of, modifications of, refinancings of, consolidations of, and substitutions for the promissory note or agreement. **NOTICE TD GRANTDR: THE NDTE CONTAINS A VARIABLE INTEREST RATE.**

Personal Property. The words "Personal Property" mean all equipment, fixtures, and other articles of personal property now or hereafter owned by Grantor, and now or hereafter attached or affixed to the Real Property; together with all accessions, parts, and additions to, all replacements of, and all substitutions for, eny of such property; and together with all proceeds (including without limitation all insurance proceeds and refunds of premiums) from any sale or other disposition of the Property.

Proparty. The word "Property" means collectively the Real Property and the Personal Property.

Reel Property. The words "Real Property" mean the real property, interests and rights, as further described in this Mortgage.

Ralatad Documants. The words "Related Documents" mean all promissory notes, credit agreements, loan agreements, environmental agreements, guaranties, security agreements, mortgages, deeds of trust, security deeds, collateral mortgages, and all other instruments, agreements and documents, whether now or hereafter existing, executed in connection with the Indebtedness.

Rents. The word "Rents" means all present and future rants, revenues, income, issues, royalties, profits, and other benefits derived from the Property.

EACH GRANTOR ACKNOWLEDGES HAVING READ ALL THE PRDVISIDNS DF THIS MDRTGAGE, AND EACH GRANTDR AGREES TD ITS TERMS.

1. This affidavit is made by Edward J. Bruton, Jr. being duly admitted to practice in the State of New York with offices located at 467 Sylvan Avenue, Englewood Cliffs, New Jersey and acting as legal counsel to Bank of New Jersey ("the Mortgagee") in connection with a mortgage loan transaction between said Mortgagee and 57-00 MASPETH AVENUE, LLC, a New York limited liability company whose principal place of business is 57-05 47th Street, Maspeth, New York 11378-2105 and NEW DITMAS REALTY, LLC, a New York limited liability company whose principal place of business is 57-05 47th Street, Maspeth, New York 11378-2105 (hereinafter referred to collectively, jointly and severally as the "Borrower" or "Mortgagor" and each as a "Borrower" or "Mortgagor" as the context may require).

Q

2. The Borrower executed a credit line mortgage dated September 21, 2011 in the original principal amount of $150,000.00 which was recorded on November 2, 2011 in CRFN No.: 2011000386061.

B3601
L
6

3.On even date herewith, the Borrower executed a corrective credit line mortgage, which secures the same $150,000.00. The purpose of the corrective credit line mortgage is to (i) add a Mortgagor who was inadvertently omitted from the original credit line mortgage and (ii) to delete reference to a Block and Lot which was inadvertently included in the original credit line mortgage.

4. The prior mortgage was in the original principal amount of $150,000.00, on which mortgage was paid mortgage recording tax in the amount of $3075.00.

5. That this Affidavit is given solely to request that the corrective credit line mortgage in the amount of $150,000.00 be exempt from payment of a mortgage tax pursuant to Section 255 of the New York State Tax Law as mortgage recording tax was already paid on this amount at the time the original credit line mortgage was recorded. Deponent respectfully requests that the corrective credit line mortgage be declared exempt from taxation pursuant to provisions of Section 255 of the Tax Law.

BARGAIN AND SALE DEED WITH COVENANT AGAINST GRANTOR'S ACTS

TT
$22 00

THIS INDENTURE, made the 28th day of November, 2012, between ***57-57 47th Street Realty Corp.*** *with an address at 57-5747th Street*, Maspeth, New York 11378, party of the first part, and

57-57 47th Street Mack, LLC with an address at 5700 47th Street, Maspeth, New York 11378, party of the second part;

B
2602
C
68

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and No Cents ($10.00), lawful money of the United States, paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the County of Queens, State of New York, more particularly described in Schedule A annexed hereto and made a part hereof.

Said Premises is the same premises as was conveyed to the party of the first part by deed dated March 27, 2001 and recorded in the office of the City Register of the City of New York on May 24, 2001 in liber/reel 5885, page 956;

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part, covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

© 2009 Matthew Bender & Co., a member of the LexisNexis Group.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) **Property receiving service: BOROUGH: QUEENS** **BLOCK: 2602** **LOT: 68**

(2) **Property Address: 5757 47 STREET, QUEENS, NY 11378**

(3) **Owner's Name: 57-57 47TH STREET MACK LLC**

Additional Name:

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

Print Name of Owner:

Signature: _____ Date (mm/dd/yyyy)

Bargain and Sale Deed, without Covenant against Grantor's Acts--Ind. or Corp.

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT--THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made as of this 13th day of November, 2020,

BETWEEN

57-00 MASPETH AVENUE, LLC, a New York limited liability company, having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422,

party of the first part, and

RL FAMILY PROPERTY OWNER LLC, a New York limited liability company, as to a one-third (1/3rd) undivided interest, **EL FAMILY PROPERTY OWNER LLC,** a New York limited liability company, as to a one-third (1/3rd) undivided interest, and **SLMJL FAMILY PROPERTY OWNER LLC,** a New York limited liability company, as to a one-third (1/3rd) undivided interest, each having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422, with the three (3) grantees hold title as tenants-in-common,

party of the second part.

Tax Map Designation:

Block: 2601
Lot(s): 6
Queens County
Section: 14

Address:
57-00 47th St.,
Flushing, NY

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL, that certain plot, piece or parcel of land and all buildings and improvements thereon erected situated, lying and being more particularly described in Schedule "A" annexed hereto and forming a part hereof.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and highways abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

The Premises herein described are the same and are intended to be the same as those conveyed to the party of the first part by deed dated April 30, 1998 and recorded July 16, 1998 in the Office of the City Register of the City of New York at Reel 4197, Page 1526.

[End of Text; Signature Page to Follow]

SCHEDULE A

All that certain plot, piece or parcel of land, situate, lying and being in the Borough of Queens, County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at a point on the westerly side of 47th Street as laid out, 70 feet wide, distant 705.85 feet north of the corner formed by the intersection of the said westerly side of 47th Street with the present northerly side of Grand Avenue as laid out, 80 feet wide;

RUNNING THENCE northerly from the point of beginning and along the said westerly side of 47th Street, a distance of 440 feet;

THENCE westerly along a line forming an interior angle of 91 degrees 04 minutes 06 seconds with the preceding course, a distance of 195.27 feet to the U.S. Pier and Bulkhead line extending along the easterly side of New Town Creek and approved by the Secretary of War January 21, 1920, as shown on Alteration Map No. 890 to the Final Maps of the City of New York for the Borough of Queens;

THENCE southerly along said Pier and Bulkhead Line forming interior angle of 109 degrees 29 minutes 19 seconds with the preceding course, a distance of 269.10 feet to an angle point in the said Pier and Bulkhead line;

THENCE southerly along the said Pierhead and Bulkhead line along a line forming an interior angle of 160 degrees 42 minutes 52 seconds with the preceding course, a distance of 191.72 feet;

THENCE easterly on a line forming an interior angle of 88 degrees 43 minutes 43 seconds with the preceding course and being also at right angles to the aforementioned westerly side of 47th Street, a distance of 293.98 feet to the point or place of BEGINNING.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.
