Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) **Property receiving service: BOROUGH: QUEENS** **BLOCK: 2601** **LOT: 6**

(2) **Property Address: 57-00 47TH STREET, QUEENS, NY 11378**

(3) **Owner's Name:** **RL FAMILY PROPERTY OWNER LLC**

Additional Name: **EL FAMILY PROPERTY OWNER LLC**

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

Bargain and Sale Deed, without Covenant against Grantor's Acts--Ind. or Corp.

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT--THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made as of this 13th day of November, 2020,

BETWEEN

FUMO, LLC, a New York limited liability company, having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422,

party of the first part, and

RL FAMILY PROPERTY OWNER LLC, a New York limited liability company, as to a one-third (1/3rd) undivided interest, **EL FAMILY PROPERTY OWNER LLC,** a New York limited liability company, as to a one-third (1/3rd) undivided interest, and **SLMJL FAMILY PROPERTY OWNER LLC,** a New York limited liability company, as to a one-third (1/3rd) undivided interest, each having an address at 248-22 Brookville Boulevard, Rosedale, New York 11422, with the three (3) grantees hold title as tenants-in-common,

party of the second part.

Tax Map Designation:

Block: 2602
Lot(s): 72
Queens County
Section: 14

Address:
57-05 47th St.,
Flushing, NY

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL, that certain plot, piece or parcel of land and all buildings and improvements thereon erected situated, lying and being more particularly described in Schedule "A" annexed hereto and forming a part hereof.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and highways abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

The Premises herein described are the same and are intended to be the same as those conveyed to the party of the first part by deed dated May 31, 2006 and recorded September 26, 2006 in the Office of the City Register of the City of New York at CRFN 2006000542059.

[End of Text; Signature Page to Follow]

SCHEDULE A

All that certain plot, piece or parcel of land, situate, lying and being in the Borough of Queens, County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at the corner formed by the intersection of the southerly side of Maspeth Avenue, 66 feet wide, with the easterly side of 47th Street, 70 feet wide;

RUNNING THENCE easterly along the southerly side of Maspeth Avenue and along the prolongation easterly thereof, 222.76 feet;

THENCE southwesterly along a line forming an interior angle of 54 degrees, 46 minutes, 39 seconds with the preceding course, 242.99 feet;

THENCE westerly at right angles to the easterly side of 47th Street, 78.91 feet to the easterly side of 47th Street;

THENCE northerly along the easterly side of 47th Street, 200 feet to the point or place of BEGINNING.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) **Property receiving service: BOROUGH: QUEENS** **BLOCK: 2602** **LOT: 72**

(2) **Property Address: 57-05 47TH STREET, QUEENS, NY 11378**

(3) **Owner's Name:** **RL FAMILY PROPERTY OWNER LLC**

Additional Name: **EL FAMILY PROPERTY OWNER LLC**

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL, that certain plot, piece or parcel of land and all buildings and improvements thereon erected situated, lying and being more particularly described in Schedule "A" annexed hereto and forming a part hereof.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and highways abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

The Premises herein described are the same and are intended to be the same as those conveyed to the party of the first part by deed dated November 28, 2012 and recorded December 12, 2012 in the Office of the City Register of the City of New York at CRFN 2012000427681.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) **Property receiving service: BOROUGH: QUEENS** **BLOCK: 2602** **LOT: 68**

(2) **Property Address: 57-57 47TH STREET, QUEENS, NY 11378**

(3) **Owner's Name:** **RL FAMILY PROPERTY OWNER LLC**

Additional Name: **EL FAMILY PROPERTY OWNER LLC**

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

AGREEMENT FOR THE ASSIGNMENT OF LEASES

THIS AGREEMENT, made as of the 17th day of May, 1995, between ISLAND TRANSPORTATION CORPORATION, a New York corporation, having an office at 299 Edison Avenue, West Babylon, New York 11704 ("Mortgagor") and APPLE BANK FOR SAVINGS, a New York stock-form savings Bank, having an address at 277 Park Avenue, New York, New York 10172 ("Mortgagee").

W I T N E S S E T H:

WHEREAS, Mortgagor is the fee owner of that certain plot and parcel of land with the buildings and improvements erected thereon situate, lying and being at 57-00 47th Street, Maspeth, New York, bounded and described on **Schedule A** attached hereto and made a part hereof (the "Mortgaged Premises"); and

Block 2601 Lot 6

WHEREAS, Mortgagor has applied to Mortgagee for a mortgage loan in the principal amount of $3,240,500.00 to be evidenced by those certain notes referred to and collectively defined as the "Note" in that certain Modification and Extension Agreement (the "Agreement"), to be made between Mortgagor and Mortgagee and dated of even date herewith, which Agreement is intended to be recorded in the Office of the City Register of the County of New York simultaneously herewith and which Agreement will modify said notes (said notes as so consolidated, modified and extended being hereafter collectively referred to as the "Note"); and

WHEREAS, the payment of the Note is to be secured by those certain mortgages referred to and collectively defined as the "Mortgage" in said Agreement which Agreement will modify, restate and extend said mortgages (said mortgages as so modified, restated and extended being hereinafter referred to as the "Mortgage"); said mortgage loan as evidenced by the Note and secured by the Mortgage and other collateral being hereinafter referred to as the "Mortgage Loan" and the Agreement, Note, Mortgage and any and all other documents or instruments delivered in connection with the Mortgage Loan being hereinafter collectively referred to as the "Loan Documents" or "Loan Document" where reference is to only one; and

WHEREAS, Mortgagee is unwilling to make the Mortgage Loan unless, among other things, this Assignment is entered into between Mortgagor and Mortgagee,

Premises: 57-00 47th St. Maspeth, NY

NOW, THEREFORE, in order to induce Mortgagee to make the Mortgage Loan, and any and all extensions and renewals thereof, Mortgagor and Mortgagee do hereby agree as follows:

1. Mortgagor hereby assigns, transfers and sets over unto Mortgagee, as collateral security as hereinafter provided:

All of the right, title and interest of Mortgagor in and to all leases covering or affecting all or any part of the Mortgaged Premises;

Together with all other leases now or hereafter made covering the Mortgaged Premises or any portion thereof, the assignment of other present and future leases being effective without further or supplemental assignments.

The leases described above and all other present and future leases are hereinafter collectively referred to as the "Lease".

Together with all rent, income and profits arising from the Lease and renewals thereof and together with all rents, income and profits for the use and occupation of the Mortgaged Premises, the right to demand, collect and receive all rentals, additional rents and all moneys due and which may become due or payable to Mortgagor under the Lease or for or by reason of the Mortgaged Premises, whether as rentals or additional rents or the proceeds of insurance, condemnation awards, claims in bankruptcy or otherwise howsoever;

TO HAVE AND TO HOLD the same unto Mortgagee, as collateral security, as herein provided;

HEREBY GIVING AND GRANTING unto Mortgagee, on demand, full power and authority to enter upon and take possession of the Mortgaged Premises and to demand, collect and receive the rents, issues and profits from the Mortgaged Premises and all other moneys as above provided, due or which may become due and payable. Mortgagee hereby waives the right to enter upon the Mortgaged Premises for the purpose of collecting said rents, issues and profits and to collect and receive the rents, issues and profits from the Mortgaged Premises until such time as Mortgagor shall be in default under the Agreement and the same has not been cured within the applicable period provided in the Agreement, if any (an "Event of Default").

This Assignment is given to secure the payment of the principal of and interest on the Mortgage Loan and all other sums which may become due and payable to Mortgagee under any provision of the Loan Documents, and to secure the performance and

discharge of each and every obligation, covenant and agreement of Mortgagor herein and in any of the Loan Documents contained.

Mortgagee shall apply, or cause to be applied, the rentals, additional rents and other moneys received by it hereunder to the payment of any sums then due and payable to Mortgagee under any of the Loan Documents or this Assignment.

Upon payment in full of the Mortgage Loan, and all other sums which may become due and payable to Mortgagee under any provision of the Loan Documents, this Assignment and all rights and powers herein conveyed or granted to Mortgagee shall cease, except that Mortgagor shall remain liable to Mortgagee upon all undertakings and indemnity and other agreements herein or in any of the Loan Documents contained for all losses, liabilities and expenses, including attorneys' fees and disbursements, which Mortgagee may have incurred or sustained prior to such reversion under or pursuant to this Assignment or any of the Loan Documents or the exercise of any right, power or remedy hereunder or thereunder and for which Mortgagor was liable under the Loan Documents. Upon such payments Mortgagee will deliver to Mortgagor on request therefor a cancellation of this Assignment in recordable form.

2. Mortgagor represents, warrants and covenants that:

(i) Mortgagor is the sole owner of the entire lessor's interest in the Lease; that the Lease is valid and legally binding upon the Mortgagor, is in full force and effect and is enforceable in accordance with its terms; that no rent reserved in the Lease has been assigned or anticipated and no rent for any period in excess of one month subsequent to the date of this Assignment has been collected in advance of the time when the same became due under the terms of the Lease;

(ii) except for this Assignment, Mortgagor has not sold, assigned, transferred, mortgaged, pledged or otherwise encumbered any of the rents, issues and profits payable or receivable under the Lease or otherwise in respect of the Mortgaged Premises. Mortgagor has good right and lawful authority to assign the rents, issues and profits of the Mortgaged Premises and the property, estate, rights and interests hereby assigned and conveyed to Mortgagee and the rights, powers and remedies herein granted to Mortgagee and that Mortgagor will maintain and preserve this Assignment as a first and prior charge and lien upon the rents, issues and profits of the Mortgaged Premises and the property, estate, rights and interests hereby

assigned, conveyed and granted to Mortgagee, and will further not sell, assign, mortgage, pledge, or otherwise encumber any of such rents, issues or profits; and

(iii) this Assignment is and will continue to be valid and legally binding as a present assignment enforceable in accordance with its terms.

3. Mortgagor shall duly perform and comply with all covenants, conditions and provisions of the Lease on the part of the landlord to be performed and complied with. Mortgagor covenants, without the prior consent of Mortgagee, not to terminate, modify or accept a surrender of any Lease, except in the event of a default by a tenant.

4. Mortgagor shall furnish to Mortgagee promptly, on Mortgagee's written request, such information, reports, financial statements, certificates and other papers relating to the operation of the Mortgaged Premises as Mortgagee may, in the exercise of Mortgagee's discretion, deem proper in the protection of its interests.

5. The execution and delivery of this Assignment, having been made only as collateral security, shall not in any way impair or diminish or affect the duties and obligations and liabilities of Mortgagor, as landlord under the Lease, and Mortgagee shall have no duty or liability or responsibility for the control, care, management or operation of the Mortgaged Premises and Mortgagee has not assumed and shall not be liable for the performance of any of the covenants, conditions and provisions of the Lease.

6. Mortgagee may take or release other security or may release any party primarily or secondarily liable for any indebtedness secured hereby, may grant extensions, renewals or indulgences with respect to such indebtedness, or may increase or otherwise deal in or with such indebtedness in such manner as Mortgagee may deem fit and no action taken or omitted by Mortgagee shall be deemed to prejudice the estate, right, title or interest in the Lease or any rights, powers or remedies in respect thereof granted or conveyed to Mortgagee hereunder. Nothing herein contained and no act done or omitted by Mortgagee hereunder or pursuant hereto or under or pursuant to any of the Loan Documents shall be deemed to be a waiver or discharge of Mortgagee's rights, powers and remedies, together with all other rights and remedies possessed at any time by Mortgagee by law or in equity, which shall be possessed and may be exercised by Mortgagee at any time or from time to time as separate and concurrent and continuing rights, powers and remedies until the

payment in full of all indebtedness and liabilities secured hereby.

7. Mortgagor will appear in and defend any action or proceeding arising under, growing out of or in any manner connected with the Lease or the obligations, duties and liabilities of Mortgagor thereunder or the control, care, management or operation of the Mortgaged Premises and will pay all costs, losses, liabilities and expenses of Mortgagee, including attorneys' fees and disbursements, incurred or sustained in any action or proceeding or in preparation therefor in which Mortgagee may be involved.

8. This Assignment applies to, shall inure to the benefit of and shall bind all parties hereto and their successors in interest and permitted assigns.

9. Mortgagee is hereby irrevocably and exclusively (with, however, full power of delegation) empowered and authorized, as attorney-in-fact for Mortgagor and/or as such Mortgagee, in the name of Mortgagor or Mortgagee or otherwise as Mortgagee may determine in each case, to execute, make, serve and file notices, demands, requests and other instruments and to exercise such powers, rights and remedies as Mortgagor may have the right or obligation to execute, make, serve, file and exercise under the Lease or under applicable law in respect of the Mortgaged Premises or of proceeds of insurance or of proceedings or awards in condemnation, or in respect of the default or the enforcement of the rights, powers or remedies of Mortgagor based upon or following default by the tenant under the Lease. It is agreed that the agency hereby established is one coupled with an interest. Mortgagee hereby waives the authority to act as attorney-in-fact under this paragraph 9 until such time as an Event of Default shall have occurred.

10. After the occurrence of an Event of Default and after demand by Mortgagee, Mortgagor will expressly and irrevocably order and direct each tenant under the Lease to remit directly to Mortgagee at the address above written, or to such other address as the Mortgagee may designate in such notice and demand or such other address as Mortgagee may from time to time thereafter in writing designate, all rentals, additional rents and other moneys due or which may become due or payable thereafter under the Lease or otherwise with respect to the Mortgaged Premises.

11. It is agreed that Mortgagee is not a trustee or fiduciary for Mortgagor and owes no duty or obligation of any nature to Mortgagor and shall not be liable to Mortgagor in any manner except for the misapplication of moneys actually received

by Mortgagee. Mortgagee has no duty or obligation to Mortgagor to collect any moneys assigned hereunder or to exercise any right, power or remedy provided hereunder or in any of the Loan Documents or provided by applicable law. Mortgagee shall be fully protected in any action taken or done or omitted to be taken or done by it in good faith in the exercise of its judgment or in reliance upon the advice of its attorneys. Mortgagor hereby agrees to indemnify, defend and hold Mortgagee harmless of and from any and all liability, loss, damage or expense, including attorneys' fees and disbursements, which it may incur or sustain under or by reason of the Lease or under or by reason of this Assignment or the exercise of any right, power or remedy of any nature or anything done or omitted to be done by Mortgagee under or pursuant to or based upon or in anywise arising upon, from or out of the transactions related in any way to the Lease, this Assignment, any of the Loan Documents and of and from all claims, demands, actions and proceedings whatsoever which may be asserted or brought against Mortgagee by reason of any alleged obligations or undertakings on its part to perform or discharge any of the terms, covenants or agreements contained in the Lease or to perform or discharge any duty imposed by applicable law in respect of the Mortgaged Premises or by reason of any alleged breach of any such obligations or undertakings or duty and any such liability, loss, damage or expense, including attorneys' fees and disbursements, so paid, incurred or sustained shall be secured hereby.

12. Nothing contained in this Assignment and no act done or omitted by Mortgagee pursuant to the powers and rights granted it hereunder shall be deemed to be a waiver by Mortgagee of its rights and remedies under the Mortgage or the Agreement, and this Assignment is made and accepted without prejudice to any of the rights and remedies possessed by Mortgagee under the terms thereof. The right of Mortgagee to collect said principal sum, interest and indebtedness and to enforce any other security therefor held by it may be exercised by Mortgagee either prior to, simultaneously with, or subsequent to any action taken by it hereunder.

13. The rights and remedies of Mortgagee hereunder may be exercised at the election of Mortgagee with or without action brought to foreclose the Mortgage or application for a receiver of rents. In case of foreclosure and the appointment of a receiver of rents, the rights and remedies contained herein shall inure to the benefit of such receiver.

14. Mortgagor, in compliance with Section 13 of the Lien Law, covenants that it will receive the advances secured by the Mortgage and will hold the right to receive such advances as a trust fund to be applied first for the purpose of paying the

cost of improvement before using any part of the total of the same for any other purpose.

15. Mortgagor agrees that Mortgagor shall not accept without the prior written consent of Mortgagee any payment of rent or additional rent more than one month before the same is due.

16. Neither this Assignment nor any provision hereof may be changed, waived, discharged or terminated orally, but only by a statement in writing signed by each party against which enforcement of the change, waiver, discharge or termination is sought.

THIS ASSIGNMENT, together with the covenants and warranties therein contained, shall inure to the benefit of Mortgagee and any subsequent holder of the Mortgage and shall be binding upon the assignor, his heirs, executors, administrators, successors and assigns and any subsequent owner of the Mortgaged Premises.

IN WITNESS WHEREOF, Mortgagor has duly signed, sealed and delivered, and Mortgagee has accepted, this Assignment in the State of New York on the day and year first above written.

(CORRECTION DEED)

THIS INDENTURE, made the 27th day of March, in the year 2001

BETWEEN

PETER GALASSO, residing at 79 Wheatley Road, Old Westbury, New York

TO THE ORIGINAL

party of the first part, and

NANCY GALASSO, residing at 79 Wheatley Road, Old Westbury, New York

party of the second part.

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

all of his right, title and interest in

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough and County of Queens, City and State of New York, bounded and described as follows:

Tax Map Designation

BEGINNING at a point on the easterly side of 47th Street, 70 feet wide, distant 200 feet southerly from the corner formed by the intersection of the easterly side of 47th Street with the southerly side of 58th Road, formerly known as Maspeth Avenue, 66 feet wide;

RUNNING THENCE easterly at right angles to the easterly side of 47th Street, 78.91 feet to a point;

RUNNING THENCE southwesterly along a line forming an angle on the southwest with the last mentioned course of 76 degrees, 45 minutes, 31 seconds 39.24 feet to a point;

RUNNING THENCE again southwesterly along a line forming an angle on the northwest with the last mentioned course of 157 degrees, 27 minutes, 25 seconds 86.06 feet to a point;

RUNNING THENCE westerly at right angles to the easterly side of 47th Street 19.60 feet to the easterly side of 47th Street;

RUNNING THENCE northerly along the easterly side of 47th Street 108.01 feet to the point or place of BEGINNING.

This deed is a correction deed from Grantor to Grantee dated October 23, 1992 and recorded on February 23, 1993 in Reel 3509, Page 982, and is being recorded solely to correct an erroneous description.

TOGETHER with all right, title and interest, if any, of the party of the first part of, in and to any streets and roads abutting the above-described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been incumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

BETWEEN

LAURENT ASSOCIATES, INC., ANDREW LIBASCI, HERE REALTY, INC. and EDWARD N. SLADE, as tenants-in-common, c/o Joel Paul Berger, 42-08 Bell Blvd., Bayside, N.Y. 11361

party of the first part, and ALFREDO LAMANNA

REEL 1607 PAGE 848

residing at 3 Divine Street, Lynbrook, New York.

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough and County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at the corner formed by the intersection of the southerly side of Maspeth Avenue, 66 feet wide, with the easterly side of 47th Street, 70 feet wide;
RUNNING THENCE easterly along the southerly side of Maspeth Avenue and along the prolongation easterly thereof, 222.70 feet;
THENCE southwesterly along a line forming an interior angle of 54 degrees, 46 minutes, 39 seconds with the preceding course, 241.99 feet;
THENCE westerly at right angles to the easterly side of 47th Street, 78.91 feet to the easterly side of 47th Street;
THENCE northerly along the easterly side of 47th Street, 200 feet to the point or place of BEGINNING.

SAID PREMISES being known as and by the street number 57-05 47th Street, Maspeth, New York.

This conveyance is made in the ordinary course of business with the unanimous consent of all of the stockholders of LAURENT ASSOCIATES, INC.

This conveyance is made in the ordinary course of business with the unanimous consent of all of the stockholders of HERE REALTY INC.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises, TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.
AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.
The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) was retained by Bay Crane Service of New York (the User) to prepare a Phase I Environmental Site Assessment (ESA) for the properties located at 57-00, 57-05, 57-57, and 58-20 47th Street in the Maspeth neighborhood of Queens, New York (collectively the Subject Property). The Subject Property is identified on the Queens Borough Tax Map as Block 2601, Lots 1 and 6, and Block 2602, Lots 68 and 72. The approximately 168,000-square-foot Subject Property is situated on the northern part of Block 2601 and northeastern part of Block 2602, and is transected by 47th Street. The Subject Property is situated on the city blocks bound by 58th Road to the north, 49th Place to the east, Grand Avenue to the south, and Newtown Creek to the west. The Subject Property is vacant with the exception of the southern area of the Lot 72 which is used by a scaffolding company for staging and storage of equipment. The Subject Property was most recently occupied by a trucking company and US Concrete Inc., a concrete processing/recycling facility (Lots 1 and 6), a delicatessen (Lot 68), and a food services/food truck storage company (Lot 72). A Subject Property Location Map is included as Figure 1 and a Subject Property Plan is provided as Figure 2.

Block 2601 Lots 1 and 6 are subject to an Order on Consent ("Order"), dated April 2021 between the Subject Property owner and New York State Department of Environmental Conservation (NYSDEC). The Order relates to the unauthorized operation of a solid waste and aggregate processing facility, installation of a concrete wall within a wetlands buffer area without a NYSDEC permit and failure to restore the wetlands buffer area along the western boundary of the Subject Property. The active remedial Work associated with bringing the Subject Property into compliance with the Order is anticipated to be completed prior to the transfer of ownership to the User.

This Phase I ESA was completed in general accordance with ASTM International (ASTM) Standard E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process) and the United States Environmental Protection Agency (USEPA) All Appropriate Inquires (AAI) Rule, for the purpose of identifying recognized environmental conditions (REC), and historical RECs (HREC), controlled RECs (CREC). CRECs were not identified at the Subject Property. Two RECs, one HREC and one de minimis condition were identified and are discussed below.

REC

A REC is defined by ASTM E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to any release to the environment,

under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The following RECs were identified and are shown of Figure 3:

REC 1 – Historical Use of Subject Property

Historical operations at the Subject Property included a 'fertilizer works' facility (1902 to 1914), an oil depot with petroleum bulk storage (1914 to 1936), truck parking (1974 to 1991), truck repair (1982 to 2006), a waste transfer facility with petroleum bulk storage (2004 to 2021), and auto repair (2013, 2014) on Lots 1 and 6; and a motor freight station with petroleum bulk storage (1963, 1982 to 2006) on Lot 72. The Subject Property is listed as an active facility on the Solid Waste Facilities/Landfill Sites (SWF/LF) database for the processing of construction and demolition (C&D) waste; however, based on the site reconnaissance this operation ceased in early 2021. Historical operations at the Subject Property may have resulted in inadvertent releases of hazardous substances or petroleum products.

REC 2 – Western-Adjoining Superfund Site

Newtown Creek, which is listed in the National Priority List (NPL) and Superfund Enterprise Management System (SEMS) databases. Contamination in the creek is attributed to combined sewer overflow (CSO) and historical industrial facilities on the creek banks. Facilities included over 50 oil refineries, petrochemical plants, fertilizer and glue factories, sawmills, and lumber and coal yards. A remedial investigation is presently underway for the entire Creek and a focused feasibility study (FFS) is currently being prepared by responsible parties regarding a combined sewer outfall (CSO) long term control plan, pursuant to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Given that the remedial investigation and a focused feasibility study are underway by the responsible parties, it is unknown as to whether there is any impact to the Subject Property.

HREC

A HREC is defined by ASTM E1527-13 as the past release of any hazardous substances or petroleum products that has occurred in connection with the Subject Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Subject Property to any required controls.

HREC 1 – Closed Spills on the Subject Property

The Subject Property is listed on the Leaking Tanks (LTANKS) and NY SPILLS databases for six spills summarized below:

- NYSDEC Spill No. 94-11004 was reported on November 17, 1994 was after the release of an unknown volume of gasoline. The spill was administratively closed on November 17, 1994.

- NYSDEC Spill No. 97-09690 was reported on November 20, 1997 after the release of an unknown volume of diesel oil on soil. No further information regarding the spill was provided. The spill was administratively closed on January 8, 1998

- NYSDEC Spill No. 98-12248 was reported on January 4, 1999 after petroleum-impacted soil was identified during removal of an underground storage tank (UST). Petroleum-impacted soil was removed and documentation endpoints samples were collected. The spill was remediated to the satisfactory of NYSDEC and the spill was administratively closed on July 12, 2006.

- NYSDEC Spill No. 07-09978 was reported after a UST failed a tank tightness test on December 18, 2007. The tank lines were re-tested and it was determined that the vent line failed due to a loose fitting. Evidence of petroleum contamination to the subsurface was not observed and the spill was administratively closed December 28, 2007.

- NYSDEC Spill No. 08-08170 was reported on October 21, 2008 after a call was made to the NYSDEC citing active release of petroleum substances, and illegal storage and refueling of vehicles at the Subject Property. A limited subsurface investigation completed in 2009 consisting of advancing six soil borings and collection of soil samples identified petroleum impacts to soil ranging from surface grade to about 8 feet below grade surface. About 381.04 tons of petroleum-impacted soil was excavated and disposed of in 2010. Documentation soil samples and groundwater samples collected post-remediation confirmed that the spill was remediated to the satisfaction of the NYSDEC. The spill was administratively closed on October 27, 2012.

- NYSDEC Spill No. 13-06438 was reported on September 19, 2013 after diesel contaminated soil and pea gravel was identified in tank vault during removal of a 4,000-gallon UST. Further information regarding the remediation was unavailable; however, a closure report summarizing the remedial work and analytical data was prepared for NYSDEC. The spill was remediated to the satisfaction of the NYSDEC, and the spill was administratively closed on February 12, 2014.

De Minimis Condition

A de minimis condition is defined by ASTM E1527-13 as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

De minimis oil-like staining was observed throughout Lot 6 including the interior warehouse space, near the mechanics pits, in the vicinity of a former ASTs, throughout the concrete-paved parking areas to the south, east, and west of the building, and underneath a parked excavator; and on Lot 72 throughout the interior warehouse space, truck access bays and exterior concrete-paved parking areas. Surficial concrete cracks, joints or exposed soil were not observed in stained areas; however, staining was observed near the wall/floor seams near the former above ground storage tank (AST) area. The staining is considered a de minimis condition.

1.0 INTRODUCTION

Langan was retained by Bay Crane Service of New York (the User) to prepare a Phase I Environmental Site Assessment (ESA) for the properties at 57-00, 57-05, 57-57, and 58-20 47th Street in the Maspeth neighborhood of Queens, New York (collectively the Subject Property). This Phase I ESA was performed for the User in general accordance with ASTM International's (ASTM) Standard E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process) and the United States Environmental Protection Agency's (USEPA) All Appropriate Inquires (AAI) Rule. The purpose of this Phase I ESA is to accomplish the following:

1. Identify Recognized Environmental Conditions (RECs) in connection with the Subject Property, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

2. Provide services consistent with the USEPA 40 Code of Federal Regulations (CFR) Part 312 Subpart C Standards and Practices §312.20 AAI Rule.

1.1. Scope of the ESA

This Phase I ESA was conducted using a standard of good commercial and customary practice that is consistent with ASTM E1527-13. No significant scope-of-work additions, deletions, or deviations to ASTM E1527-13 were made in connection with this report, as described in Section 8.0. In general, the scope of this assessment consisted of obtaining information from the User; reviewing reasonably ascertainable information and environmental data relating to the Subject Property; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing persons knowledgeable about the Subject Property; and conducting a site reconnaissance. The specific scope of this assessment included the following:

1. A site reconnaissance to characterize conditions and assess the Subject Property's location with respect to adjoining and surrounding property uses and natural surface features. The reconnaissance included the surrounding roads and observations of

surrounding properties from public rights-of-way to identify obvious potential environmental conditions on neighboring properties. The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and then progressing to adjoining and surrounding properties. Photographs taken as part of the site reconnaissance are included in Appendix A.

2. A review of the response to the User questionnaire. The completed questionnaire is included in Appendix B.
3. A review of available previous environmental reports completed for the Subject Property. Copies of the reports are included in Appendix C.
4. A review of environmental databases maintained by the USEPA, state, and local agencies within the approximate minimum search area. The environmental database report was provided by Environmental Data Resources, Inc. (EDR), and is included in Appendix D.
5. Filing of Freedom of Information Act (FOIA) requests with federal, state, and local agencies. Copies of the FOIA requests are included in Appendix E.
6. A review of New York City Department of Buildings (NYCDOB) records, Federal Emergency Management Agency (FEMA) Flood Maps and a Planning Commission Zoning Map. Available NYCDOB records, the FEMA Map and the Zoning Map are included in Appendices F, G and H respectively.
7. A review of physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils, and hydrologic data.
8. A review and interpretation of aerial photographs, Sanborn® Fire Insurance Maps (Sanborn® Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Subject Property. Copies are included in Appendices I, J, K, and L respectively.
9. A review of an environmental lien search for the Subject Property. A copy of the environmental lien search report is included in Appendix M.
10. A review of published radon occurrence maps to evaluate whether the Subject Property is located in an area with a propensity for elevated radon levels.

1.2. Assumptions, Limitations, and Exceptions

This Phase I ESA report was prepared for Bay Crane Service of New York for the Subject Property located at 57-00, 57-05, 57-57, and 58-20 47th Street in the Maspeth neighborhood of Queens, New York. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility

for use of this report for any property other than the Subject Property addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 1.1, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comports to those prescribed in the ASTM Standard E1527-13. Intrusive sampling (i.e., soil borings and groundwater sampling) was not performed as part of this Phase I ESA.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Subject Property. The purpose of this investigation was limited to determining if there are any RECs affecting the Subject Property. It should be understood that even the most comprehensive Phase I ESA might fail to detect environmental liabilities at a particular Subject Property. Therefore, Langan cannot "insure" or "certify" that the Subject Property is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions, opinions, and recommendations provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-13 and are intended exclusively for the purpose stated herein, at the specified Subject Property, as it existed at the time of our site visits.

2.0 SITE DESCRIPTION

2.1. Location and Description

The Subject Property is located at 57-00, 57-05, 57-57, and 58-20 47th Street and is identified on the Queens Borough Tax Map as Block 2601, Lots 1 and 6 and Block 2602, Lots 68 and 72. The approximately 168,000-square-foot Subject Property is situated on the northern part of Block 2601 and northeastern part of Block 2602, and is transected by 47th Street. The Subject Property is situated on the city blocks bound by 58th Road to the north, 49th Place to the east, Grand Avenue to the south, and Newtown Creek to the west. The Subject Property is improved upon with a vacant slab-on-grade one-story building with a mezzanine level (Lot 6), and two slab-on-grade one-story buildings (Lots 68 and 72). The remainder of the Subject Property is improved with concrete/asphalt parking space. The Subject Property is currently vacant, however, it was most recently operated by a trucking company and by US Concrete Inc., a concrete processing/recycling facility (Lots 1 and 6), a delicatessen (Lot 68), and a food services/food truck storage company (Lot 72). A Subject Property Location Map is included as Figure 1 and a Subject Property Plan is included as Figure 2.

According to the United States Geological Survey (USGS) Central Park Quadrangle 7.5-minute Series Topographic Map, the Subject Property sits at an elevation of about 9 feet above mean sea level (msl) and the surrounding area slopes gradually to the southwest towards Newtown Creek. Based on visual observations of the surrounding area during the site reconnaissance, the Subject Property is located within an industrial area characterized by one- to two-story commercial and manufacturing/industrial buildings. Site reconnaissance photographs are included in Appendix A. Surrounding property use is summarized in the following table:

Direction	Block	Lot	Adjoining Properties	Surrounding Properties
North	58th Road			Industrial-use buildings and Maspeth Creek
	2600	1	One- to two-story building and asphalt-paved parking occupied by NYC Department of Sanitation (DSNY) (47-01 48th Street)	
South	2601	25	NYC Department of Environmental Protection (DEP)Newtown Creek aeriation facility, parking and vegetated land	Industrial-use buildings, Grand Avenue
East	2602	90	One-story warehouse and asphalt-paved parking operated by Raja Foods and Vegetables Inc.	Commercial- and industrial-use buildings, parking, vacant land
		58	One-story warehouse and asphalt-paved parking lot operated by LaserShip shipping service	
		52	One-story industrial/manufacturing building occupied by Safeway Carting	
West	Newtown Creek			Industrial-use buildings

2.2. Description of Site Improvements

Improvements at the Subject Property are summarized in the following table:

SITE IMPROVEMENTS	
Size of the Subject Property	About 168,000 square feet
Buildings/Spaces/Structures	Lot 6: 20,000-square foot single-story slab-on-grade warehouse/office building occupying the central-eastern part of the lot Lot 72: 4,000-square foot single-story slab-on-grade warehouse/office building occupying the western part of the lot Lot 68: 2,000-square foot slab-on-grade commercial building occupying the southwestern part of the lot
Surface Water	None
Potable Water Source	Municipal
Sanitary and Storm Sewer Utilities	Lot 6: Four, large metal/concrete hatches in a row were observed at the southern part of the Lot. According to the site representative, these drain directly to the subsurface. All lots: Sewer drains were observed in exterior areas of the Subject Property and reportedly connected to the New York City municipal or sanitary systems.
Electrical Utilities	Con Edison
Construction Completion Date	1964 (Lot 72); 1966 (Lot 68); 1974 (Lot 6)
General Construction Type	Masonry and steel construction.
Cooling and Ventilation System Type	Heating, ventilation, and air conditioning (HVAC) units, including air conditioners, were observed on the roofs and/or on exterior walls.
Heating System Type	The buildings have natural gas- and/or electric-powered heating systems, which mainly consist of ceiling-mounted hot air blower units.
Emergency Power	None

2.3. Title Records

Langan researched ownership records for the Subject Property on the Automated City Register Information System (ACRIS) website (https://a836-acris.nyc.gov/DS/DocumentSearch/Index). According to ACRIS, the Subject Property is owned by SLMJL Family Property Owner LLC (Block 2601, Lot 1) and RL Family Property Owner LLC (Block 2601, Lot 6 and Block 2602, Lots 68 and 72). Title information available via ACRIS is summarized below:

Date	Document Type	First Party	Second Party
Block 2601, Lot 1			
11/13/2020	Deed	Lamanna, Sabatino	SLMJL Family Property Owner LLC
12/31/2008	Deed	Lamanna, Emilio	Lamanna, Emilio

Date	Document Type	First Party	Second Party
12/16/1986	Deed	Alfredo Lamanna Trucking	Lamanna, Emilio
9/7/1985	Deed	Galasso, Peter	Island Transportation CP
4/23/1985	Deed	Galasso, Peter	Alfredo Lamanna Trucking
1/18/1972	Deed	EJG Construction Corp.	Peter Galasso
1/18/1972	Deed	Galasso Peter	EJG Construction Corp.
Block 2601, Lot 6			
11/13/2020	Deed	57-00 Maspeth Avenue, LLC	RL Family Property Owner LLC
4/30/1998	Deed	Island Transportation Corporation	57-00 Maspeth Avenue, LLC
Block 2602, Lot 68			
11/13/2020	Deed	57-57 47th Street Mack, LLC	RL Family Property Owner LLC
11/28/2012	Deed	57-57 47th Street Realty Corp.	57-57 47th Street Mack, LLC
3/27/2001	Deed	Galasso, Nancy	57-57 47 St Realty Corp
3/27/2001	Deed	Galasso, Peter	Galasso, Nancy
10/23/1992	Deed	Galasso, Peter	Galasso, Nancy
5/1/1986	Deed	Johnson Ave Realty Co	Galasso, Peter
6/22/1970	Deed	Galaron Realty Corp	Peter Galasso
Block 2602, Lot 72			
11/13/2020	Deed	Fumo, LLC	RL Family Property Owner LLC
5/31/2006	Deed	Estate of Alfredo Lamanna	Fumo, LLC
11/9/1983	Deed	Here Realty Inc.	Lamanna, Alfredo
1/14/1983	Deed	Greenspan, Willim R. (Ref)	Here Realty Inc.
1/4/1973	Deed	Cestaro Joseph A	Leco Distributors Inc.

Trucking/transportation companies were identified on Block 2601, Lots 1 and 6 during the review of ACRIS documents. Unreported releases or spills of petroleum and/or hazardous substances associated with these historical trucking operations may have adversely impact soil, groundwater and/or soil vapor at the Subject Property and is considered a REC.

3.0 USER PROVIDED INFORMATION

3.1. User Questionnaire

Per ASTM E1527-13, a User questionnaire was provided to the User to inquire about specialized information related to the Subject Property. Philip Bernardo, representative of the User, completed the questionnaire. Mr. Bernardo stated that he is not aware of any environmental liens or land use limitations at the Subject Property. According to Mr. Bernardo, the purchase price of the Subject Property reasonably reflects fair market value and is not attributable to any contamination known or believed to be present at the Subject Property. The completed User questionnaire is included in Appendix B.

3.2. Previous Environmental Reports

An Order on Consent ("Order") dated April 2021 between the current owner of the Subject Property and New York State Department of Environmental Conservation (NYSDEC) (DEC File No. R2-20210416-53) was provided to Langan for review. The Order applies to the western half of the Subject Property (Block 2601, Lots 1 and 6), and cites the unauthorized operation of a solid waste registration and aggregate facility without a tidal wetlands permit, installation of a concrete wall within a tidal wetlands buffer area without a NYSDEC permit, and violations associated with a 2009 Order including failure to provide NYSDEC with sales and transfer agreements associated with the Subject Property, and failure to restore the wetlands buffer area along the western boundary of the Subject Property. The Order references violation of articles 15, 17, 25 and 27, and 34 of the NYS Environmental Conservation Law and New York State Title 6 of the Codes, Rules and Regulations (6NYCRR) Parts 360, 608, 661 and 750. Compliance activities outlined in the 2021 Order include the following:

- Closure of the solid waste and aggregate processing facilities, which includes removal of all waste materials;
- Implementation of a wetlands restoration plan, including removal of concrete/structural elements, and replanting of the high marsh area and buffer planting area;
- Monitoring the plantings over a five year period with annual reporting;
- Adhere to best management practices during removal and planting activities, and
- Record in the property records for lots 1 and 6 a restrictive declaration to identify and protect the tidal wetlands and vegetated buffer areas such by incursions by current or future owners, tenants, and occupants.

During the site reconnaissance, activity including removal of concrete surface cover, grading and placement of top soil was underway as part of the wetlands restoration worked required to bring

the Subject Property into compliance with the Order. Additionally, operation of the solid waste facility ceased in early 2021, with a majority of the stockpile concrete/aggregate materials removed from the site. Most of the Work associated with the Order will be complete prior to the transfer of ownership to the User. A copy of the Order is provided in Attachment C.

4.0 ENVIRONMENTAL RECORDS

A regulatory database search was provided by EDR and is included in Appendix D. The EDR report provides a listing of sites identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM E1527-13. Langan reviewed each environmental database on a record-by-record basis to evaluate whether the identified sites represent a potential for environmental impact to the Subject Property. Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are those sites that could not be mapped due to inadequate address information. Any Orphan Sites that were identified by Langan within the ASTM search radii, either during the site reconnaissance or by cross-referencing to mapped listings, are addressed in the discussion below.

The following table lists the number of sites identified in standard and additional environmental record databases, within the prescribed search area and appearing in the EDR Report.

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	**Minimum Search Area**	**Subject Property listed**	**Number of Sites Within Minimum Search Area**
USEPA DATABASES			
National Priorities List (NPL) (04/27/2021)	1 Mile Radius	No	1
Delisted NPL (04/27/2021)	1 Mile Radius	No	0
Superfund Enterprise Management System (SEMS, formerly CERCLIS) and SEMS-Archive (formerly known as CERCLIS-NFRAP) (04/27/2021)	1/2 Mile Radius	No	6
Resource Conservation and Recovery Act (RCRA) Corrective Reports (CORRACTS) (03/22/2021)	1 Mile Radius	No	0
RCRA Treatment, Storage, and Disposal Facilities (TSDF) (03/22/2021)	1/2 Mile Radius	No	0
RCRA Generators (Large Quantity Generator [LQG], Small Quantity Generator [SQG], Very Small Quantity Generator [VSQG], Conditionally Exempt Small Quantity Generator [CESQG], Non-Generators [Non-Gen]) (03/22/2021)	Subject Property and Adjoining Properties	Yes	3
Facility Index System (FINDS) (02/03/2021)	Subject Property	Yes	2

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	**Minimum Search Area**	**Subject Property listed**	**Number of Sites Within Minimum Search Area**
Environmental Response Notification System (ERNS) (12/14/2020)	Subject Property	No	0
Federal Engineering Controls (US ENG CONTROLS) Sites Lists (02/22/2021)	Subject Property	No	0
Federal Institutional Controls (US INST CONTROLS) Sites Lists (02/22/2021)	Subject Property	No	0
NYSDEC DATABASES			
Inactive Hazardous Waste Disposal Sites (SHWS) (02/09/2021)	1 Mile Radius	No	19*
Solid Waste or Landfill Facilities (SWF/LF) (12/31/2020)	1/2 Mile Radius	Yes	25
Leaking Storage Tanks (LTANKS) (02/09/2021)	1/2 Mile Radius	Yes	39
SPILLS Information Database (NY SPILLS) (02/09/2021)	1/8 Mile Radius	Yes	22
New York Engineering Controls (NY ENG CONTROLS) Sites Lists (02/09/2021)	Subject Property	No	0
New York Institutional Controls (NY INST CONTROLS) Sites Lists (02/09/2021)	Subject Property	No	0
NY Voluntary Cleanup Program (VCP) (02/09/2021)	1/2 Mile Radius	No	2
NY Brownfields (02/09/2021)	1/2 Mile Radius	No	1
Solid Waste Disposal Sites Registered Recycling Facility List (SWRCY) (12/31/2020)	1/2 Mile Radius	No	12
Chemical Bulk Storage (CBS) Underground Storage Tank (UST) and Aboveground Storage Tank (AST) Databases (12/17/2020)	Subject Property and Adjoining Properties	No	0
Major Oil Storage Facilities (MOSF) UST and AST Databases (12/17/2020)	Subject Property and Adjoining Properties	No	0

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	**Minimum Search Area**	**Subject Property listed**	**Number of Sites Within Minimum Search Area**
Registered and Historical Drycleaners (NY DRYCLEANERS) and Cleaners (03/09/2021)	1/4 Mile Radius	No	0
Petroleum Bulk Storage (PBS) Facilities UST and AST Databases (12/17/2020)	Subject Property and Adjoining Properties	Yes	8
EDR (PROPRIETARY) DATABASES			
EDR Former Manufactured Gas Plant (MGP) Sites (N/A)	1 Mile Radius	No	3
EDR US Historical Auto Stations (N/A)	1/8 Mile Radius	No	0
EDR US Historical Cleaners (N/A)	1/8 Mile Radius	No	0

N/A – Not Applicable; databases were reviewed as part of this Phase I ESA but not required as per ASTM E1527-13.
* - includes Orphan listings

A description of the reviewed databases is included in the EDR Report (Appendix D). A summary of sites identified within the prescribed search area is presented below.

4.1. Federal Agency Database Findings

The Subject Property and/or sites within the respective minimum search distances as specified by ASTM E1527-13 were not listed in the following federal agency databases: Delisted NPL, RCRA CORRACTS, RCRA TSDF, ERNS, US ENG CONTROLS, and US INST CONTROLS.

National Priorities List

The National Priority List database is a subset of the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) and identifies over 1,200 sites for priority cleanup under the Superfund program. The Subject Property was not listed in the NPL database. One site, Newtown Creek, was listed within the minimum search distance in the NPL database and is discussed below:

Site Name: Newtown Creek
Location: Western-adjoining property (hydraulically down-gradient)
Description: The site (USEPA ID: NYN000206282) was identified in the NPL database beginning in 2010. Formerly a natural tributary of the East River, Newtown Creek was channelized in the 1800s by backfilling surrounding wet areas to support heavy industrial development. Contamination in the creek is attributed to combined sewer overflow (CSO) and historical industrial facilities on the creek banks. Facilities included over 50 oil refineries, petrochemical plants, fertilizer and glue factories, sawmills, and lumber and coal yards. According to the listing, the Newton Creek Superfund Site, a remedial investigation is presently underway for the entire site and a focused feasibility study (FFS) is currently being prepared regarding a combined sewer outfall (CSO) long term control plan. Proximity to Newtown Creek may result in impacts to groundwater and/or soil vapor at the Subject Property and is considered a REC.

SEMS (formerly CERCLIS) and SEMS-Archive (formerly CERCLIS-NFRAP)

The SEMS database tracks hazardous waste sites, potentially hazardous waste sites and remedial activities under the USEPA Superfund Program. The database compiles data on potentially hazardous waste sites reported to the USEPA and sites that are either proposed for listing or listed on the NPL. The database, formerly known as CERCLIS, was renamed SEMS by the USEPA in 2015. The USEPA stopped updating the CERCLIS database in 2013; new updates are captured in the SEMS database. Former CERCLIS sites that have been granted the status of no further remedial action planned (NFRAP) are now included in the SEMS-ARCHIVE database. The USEPA's AAI Rule and ASTM E1527-13 will eventually be updated to reflect the change to SEMS. The minimum search radius for the databases is within 1 mile from the Subject Property.

The Subject Property was not listed in the SEMS or SEMS-archive databases; however, two sites were listed in the SEMS database and four sites were listed in the SEMS-archive database within the minimum search area. One facility listed in the SEMS database and the four facilities listed in the SEMS-archive database are located over 1,600 feet west of the Subject Property, across Newtown Creek, and are not considered RECs. The remaining SEMS site, Newtown Creek, is considered a REC as discussed in the NPL section.

RCRA Generators Database

The RCRA generators/transporters database is USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. RCRA

databases include LQG, SQG, CESQG, and Non-Gen. ASTM E527-13 identifies the minimum search distance to 'Subject Property and adjoining properties'.

The Subject Property is listed on the database; however, the listing is addressed incorrectly and is not associated with the Subject Property. Two adjoining hazardous waste generators were identified in the NonGen and VSQG databases as described below:

Site Name: NYC Dept Sanitation Garage
Site Address: 52-35 58th Street
Site Location: North-adjoining property (hydraulically cross-gradient)
Description: The site is listed in the RCRA NonGen database (EPA ID NYR000076083) for the generation of D001 (ignitable) waste in 1999. NY Manifests were also identified for the disposal of 447 pounds of D001 and F003 (spent non-halogenated solvent) waste in May 2018. Based on the absence of violations and volume of waste generated, this listing is not considered a REC.

Site Name: At Lite
Site Address: 57-47 47th Street
Site Location: East-adjoining property (hydraulically up-gradient)
Description: The site is listed in the RCRA VSQG database (EPA ID NYR000049809) for the generation of D001 waste between 2000 and 2007. NY Manifests were also identified for the disposal of five gallons of D002 (corrosive waste) in February 2004. Based on the absence of violations and volume of waste generated, this listing is not considered a REC.

FINDS Database

The FINDS database contains facility information and "pointers" to other sources and databases that contain additional details. ASTM E527-13 defines the minimum search distance as the 'Subject Property'. Two listings were identified under the Subject Property address in the FINDS database. One listing was incorrectly addressed and is not associated with the Subject Property. The Subject Property is listed under the 57-00 47th Street address (Lot 6) for the unauthorized discharge to a waterbody without a National Pollutant Discharge Elimination System (NPDES) permit in August 2009. No further violations were identified; therefore, this listing is not considered a REC.

4.2. State Agency Database Findings

The Subject Property and/or sites within the respective minimum search distances as specified by ASTM E1527-13 were not listed in the following state agency databases: NY ENG CONTROLS, NY INST CONTROLS, CBS, MOSF, and NY DRYCLEANERS.

SHWS

The State Hazardous Waste Sites (SHWS) records SHWS records are the states' equivalent to SEMS and may or may not already be listed on the federal SEMS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified, along with sites where cleanup will be paid for by potentially responsible parties. The Subject Property was not listed in the SHWS database; however, 19 listings (including five Orphan sites) were identified within the minimum search area of one mile. Based on their distance and/or hydraulic relationship to the Subject Property, the listings are not considered RECs.

SWF/LF

The Solid Waste Facilities/Landfill Sites (SWF/LF) records are an inventory of solid waste disposal facilities or landfills in a particular state. The Subject Property was listed in the SWF/LF database as summarized below:

Site Name: Pebble Lane Associates LLC
Site Address: 57-00 47th Street (Lot 6)
Location: Subject Property
Description: The Subject Property is listed as an active construction and demolition (C&D) processing facility beginning in April 2009. Waste types accepted at the facility include asphalt, brick, concrete, rock, soil, glass, metals (ferrous), metals (non-ferrous), and C&D debris. The former tenant, US Concrete Inc., operated Lots 1 and 6 for processing and distribution of recycled concrete materials. Undocumented releases of petroleum products, solvents and/or hazardous substances associated with this historical operation may have impacted soil, groundwater and/or soil vapor at the Subject Property and is considered a REC.

Twenty-four listings were identified in the SWF/LF database within the minimum search area of 1/2 mile. Twenty-two of the listings are related to sites located over 1,000 feet from the Subject Property and are not considered RECs. The remaining two listings are discussed below:

Site Name: M & C Transfer Station
Site Address: 58-26 47th Street
Location: South-adjoining (hydraulically cross-gradient)
Description: This facility is listed as an inactive transfer station site. Further information regarding the time of operation and material accepted at the facility was not provided. No violations or spills are listed in association with this facility. Based on the absence of reported violations or spills associated with this facility, it is not considered a REC.

Site Name: Maspeth Recycling Inc.
Site Address: 58-08 48th Street
Location: 555 feet north (hydraulically cross-gradient)
Description: This facility is listed as an active C&D processing facility for waste types include concrete, asphalt, soil, and sand. No spills or violations are listed for this facility. Based on the absence of violations and/or releases, distance and hydraulic relationship to the Subject Property, this listing is not considered a REC.

LTANKS Database

The LTANKS database contains an inventory of reported leaking storage tank incidents, including leaking USTs and ASTs. The minimum search area for the LTANKS database includes the Subject Property and any sites within a 1/2-mile radius. Two listings were identified in association with the Subject Property. One listing for the Subject Property was incorrectly addressed and is associated with the site located 680 feet to the north; this listing is not considered a REC. The remaining listing is discussed below:

Site Name: Island Trans Corp
Site Address: 57-00 47th Street
Location: Subject Property (Lot 6)
Description: NYSDEC Spill No. 07-09978 was reported at the Subject Property after a UST failed a tank tightness test on December 18, 2007. The tank lines were re-tested and it was determined that the vent line failed due to a loose fitting. Evidence of petroleum contamination was not observed and the spill was closed December 28, 2007. Based on the regulatory status, this closed spill on the Subject Property is considered a HREC.

Thirty-nine listings were identified in the minimum search area. Two listings were identified in association with the northern adjoining property; however, these listings were incorrectly addressed and are associated with a site over one mile from the Subject Property. The listed incidents were primarily caused by tank test failures, tank failures, and tank overfills. All 39 incidents have been granted closed status by the NYSDEC, indicating that the NYSDEC is satisfied with spill remediation; therefore, these listings are not considered RECs.

NY SPILLS

The Spills database, maintained and updated by NYSDEC, is an inventory of sites where spills have been identified and reported to the NYSDEC. Eight spills were listed at the Subject Property. Three spills were incorrectly addressed and are not associated with the Subject Property. The remaining five spills are summarized below:

Site Name: 57-00 Maspeth Avenue LLC
Site Address: 57-00 47th Street (Lot 6)
Location: Subject Property
Description: Spill No. 94-11004 was reported on November 17, 1994 after the release of an unknown volume of gasoline. No further information regarding the spill was provided. The spill was administratively closed by the NYSDEC on November 17, 1994.

Site Name: Island Transportation
Site Address: 47th Street (Lot 6)
Location: Subject Property
Description: Spill No. 97-09690 was reported on November 20, 1997 after the release of an unknown volume of diesel oil on soil. No further information regarding the spill was provided. The spill administratively closed by the NYSDEC on January 8, 1998.

Site Name: 5700 Maspeth Avenue LLC
Site Address: 57-00 47th Street (Lot 6)
Location: Subject Property
Description: Spill No. 08-08170 was reported on October 21, 2008 after a call was made to the NYSDEC citing active release of petroleum substances, and illegal storage and refueling of vehicles at the Subject Property. A limited subsurface investigation completed in 2009 consisting of advancing six soil borings and collection of soil samples identified petroleum impacts to soil ranging from surface grade to about 8 feet below grade surface. About 381.04 tons of petroleum-impacted soil was excavated and disposed of in 2010. Documentation soil samples and groundwater samples collected post-remediation confirmed that the spill was remediated to the satisfaction of the NYSDEC. The spill was administratively closed on October 27, 2012.

Site Name: Commercial Property
Site Address: 57-00 47th Street (Lot 6)
Location: Subject Property
Description: Spill No. 13-06438 was reported on September 19, 2013 after diesel contaminated soil and pea gravel was identified in tank vault during removal of a 4,000-gallon UST. Further information regarding the remediation was unavailable; however, a closure report summarizing the remedial work and analytical data was prepared for NYSDEC. The spill was remediated to the satisfaction of the NYSDEC, and the spill was administratively closed on February 12, 2014.

Site Name: Boro Lumber Company
Site Address: 57-57 47th Street (Lot 68)
Location: Subject Property

Description: Spill No. 98-12248 was reported on January 4, 1999 when petroleum-impacted soil was identified during a UST removal. Petroleum-impacted soil was removed and documentation endpoints samples were collected. The spill was remediated to the satisfactory of NYSDEC and the spill was administratively closed on July 12, 2006.

Based on the closed regulatory status, the spills at the Subject Property are considered HRECs.

Fourteen spills were listed within the minimum search radius. Thirteen spills have been granted closed status by the NYSDEC, indicating that NYSDEC is satisfied with spill remediation. The remaining open spill is located 450 feet down-gradient from the Subject Property and across Newtown Creek. Based on their distance, hydraulic relationship and/or current regulatory status, these listings are not considered RECs.

VCP

The VCP uses private funds to remediate contaminated sites to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination. The Subject Property was not listed in the VCP database; however, two sites were identified within the minimum ½-mile search radius. The sites are located over 1,500 feet hydraulically down-gradient from the Subject Property and across Newtown Creek, and are not considered RECs.

NY Brownfields

Brownfield sites are any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria, or guidance adopted by the NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations. The Subject Property was not listed in the BCP database. One listing was identified within a ½-mile radius of the Subject Property in relation to a National Grid property at K – Greenpoint MGP – Energy Center at 287 Maspeth Avenue. Ongoing investigations have identified volatile organic compound (VOC) and semivolatile organic compound (SVOC) contamination of soils and groundwater and the presence of a Dense Non-Aqueous Phase Liquid (DNAPL) at shallow depths with the potential to affect the east-adjoining Newtown Creek. The site is located 225 feet west and hydraulically down-gradient of the Subject Property, across from Newport Creek, and is not considered a REC.

SWRCY

The Solid Waste Disposal Sites Registered Recycling Facility List (SWRCY) provides a list of registered recycling facilities. The Subject Property was not listed on the SWRCY database;

however, 12 listings were identified within the minimum search radius of ½ mile. Ten of the listings are located over 1,000 feet from the Subject Property and/or hydraulically down-gradient from the Subject Property and are not considered RECs. The two remaining listings are located at the same addressed and are summarized below:

Site Name: GPB Waste NY DBA NY/NJ Recycling/NMS Waste Paper
Site Address: 58-35 47th Street
Location: 220 feet southeast of the Subject Property (hydraulically cross-gradient)
Description: The facility is listed under two site names as a cardboard and paper recycling facility. No violations are listed in association with either facilities. One spill is listed in associated with the NMS Waste Paper facility (NYSDEC Spill No. 04-04192); however, the spill was administratively closed in February 2005. Given the absence of violations, type of material handled by the facility and hydraulic location with respect to the Subject Property, these listings are not considered RECs.

PBS UST and AST Databases

The PBS UST and AST databases contain records of registered USTs and ASTs. A registered PBS UST or AST does not constitute a REC in and of itself; however, properties listed on the UST or AST databases with a reported leak, spill, or release could constitute a REC with respect to the Subject Property. The minimum search distance required for USTs and ASTs is the Subject Property and adjoining properties. Three PBS facilities were listed in associated with the Subject Property. One listing is associated with a property over 700 feet north of the Subject Property and is not considered a REC. The remaining two PBS listings are discussed below:

Site Name: 57-00 Maspeth Ave LLC
Site Address: 57-00 47th Street (Lot 6)
Location: Subject Property
Description: The Subject Property is listed in the PBS AST and UST databases under this facility name (PBS Facility No. 2-318744) as housing two in-service ASTs, one closed/removed AST and four closed/removed USTs as summarized below:

Tank No.	Location	Capacity (gallons)	Contents	Date of closure
Status – In service				
2	AST	180	Used Motor Oil	Not Available
3	AST	180	Used Motor Oil	
Status – Closed/Removed				
001	UST	4,000	Diesel	September 19, 2013

Tank No.	Location	Capacity (gallons)	Contents	Date of closure
002	UST	4,000	Other	December 1, 1998
003	UST	4,000	Other	December 1, 1998
004	UST	1,080	Other	December 1, 1998
005	AST	6,000	No.2 Fuel Oil	March 8, 2006

The in-service ASTs, installed January 3, 2000, are reported to have suction dispensers and be in contact with an impervious barrier in a secondary containment vault with no leak detection or overfill protection. During the site reconnaissance (see Section 5.0), only one AST was identified. Two petroleum spills (Spill Nos. 94-11004 and 08-08170) are associated with this facility as discussed in the SPILLS section. The spills were administratively closed by NYSDEC on November 17, 1994 and October 27, 2012, respectively.

Site Name: A Lamanna Trucking Co
Site Address: 57-05 47th Street (Lot 72)
Location: Subject Property
Description: The Subject Property is listed under this facility name in the PBS UST database (PBS Facility No. 2-350001) as formerly housing a 4,500-gallon diesel UST. The UST was reportedly closed and removed December 1, 1998. Spills or releases were not reported in association with this UST.

Based on the timeline of historical industrial operations and petroleum bulk storage at the Subject Property, unreported spills/releases of petroleum products associated with historical petroleum bulk storage may have adversely impacted soil, groundwater and/or soil vapor at the Subject Property is considered a REC.

Three adjoining properties were listed in the PBS UST and AST databases and are described below:

Site Name: DSNY Queens District 5A Garage
Site Address: 58-02 48th Street
Location: North-adjoining property (hydraulically cross-gradient)
Description: The site is listed in the PBS UST database (PBS Facility No. 2-605735) for housing 10 in-service USTs and 11 closed/removed USTs, summarized below:

Tank No.	Tank ID	Capacity (gallons)	Contents	Date of closure
Status – In service				
001A	245123	2,500	Gasoline/Ethanol	Not Available

Tank No.	Tank ID	Capacity (gallons)	Contents	Date of closure
002A	245124	4,000	Biodiesel	
003A	245125	4,000	Biodiesel	
004A	245126	1,000	Motor Oil	
005A	245127	1,000	Hydraulic Oil	
006A	245128	1,000	Hydraulic Oil	
007A	247237	1,000	Waste Oil/Used Oil	
008A	247238	1,000	Waste Oil/Used Oil	
009A	247239	1,000	Waste Oil/Used Oil	
010A	235604	2,500	No. 2 Fuel Oil	
Status – Closed/Removed				
001	60354	2,500	Gasoline	May 31, 2012
002	60355	4,000	Biodiesel	May 31, 2012
003	60356	4,000	Biodiesel	May 31, 2012
004	60368	1,000	Motor Oil	May 3, 2012
005	60369	550	Hydraulic Oil	May 3, 2012
006	60370	1,000	Hydraulic Oil	May 3, 2012
007	60371	1,000	Waste Oil/Used Oil	July 18, 2012
008	60372	1,000	Waste Oil/Used Oil	July 31, 2012
009	60373	550	Waste Oil/Used Oil	July 18. 2012
010	60377	2,500	No. 2 Fuel Oil	April 15, 2010
011	233246	1,000	Waste Oil/Used Oil	October 11, 2012

The in-service USTs are reported to be have leak protection, overfill alarms and shut off valves and double walled secondary containment.

Site Name: DSNY Queens District 5 Garage
Site Address: 48-01 58th Street
Location: North-adjoining property (hydraulically cross-gradient)
Description: The site is listed in the PBS UST database (PBS Facility No. 2-605736) for housing eight in-service USTs and 11 closed/removed USTs, summarized below:

Tank No.	Tank ID	Capacity (gallons)	Contents	Date of closure
Status – In service				
010A	235603	2,500	No. 2 Fuel Oil	NA

Tank No.	Tank ID	Capacity (gallons)	Contents	Date of closure
012	245684	4,000	Diesel	
013	245685	4,000	Diesel	
014	245686	1,000	Motor Oil	
015	245687	1,000	Hydraulic Oil	
016	247816	1,000	Unspecified	
017	247817	1,000	Unspecified	
018	247818	1,000	Unspecified	
Status – Closed (removed)				
001	60374	2,500	Gasoline	July 24, 2012
002	60375	4,000	Biodiesel	July 24, 2012
003	60376	1,000	Hydraulic Oil	July 24, 2012
004	60378	1,000	Motor Oil	July 24, 2012
005	60379	550	Hydraulic Oil	October 2, 2012
006	60380	550	Waste Oil/Used Oil	November 27, 2012
007	60381	1,000	Waste Oil/Used Oil	November 27, 2012
008	60382	1,000	Waste Oil/Used Oil	October 4, 2012
009	60383	1,000	Waste Oil/Used Oil	October 4, 2012
010	60384	2,500	No. 2 Fuel Oil	April 30, 2010
011	227047	4,000	Biodiesel	July 24, 2012

In-service USTs are reported to be have leak protection, overfill alarms and shut off valves and doubled walled secondary containment.

The DSNY 5/5A Garage site is associated with five closed SPILLS listings and two closed LTANKS listings; however, these spills have been administratively closed by NYSDEC. Based on the closed status of the spills and reported secondary containment and overflow protection measures, this listing is not considered a REC.

Site Name: Advanced/Molloy
Site Address: 57-47 47th Street
Location: East-adjoining property (hydraulically up-gradient)
Description: The site is listed in the PBS AST database (PBS Facility No. 2-320943) as housing an in-service, 3,000-gallon No. 2 fuel oil AST. The tank is reportedly on saddles, elevated above grade allowing visual inspection. The AST is also reported to have secondary containment, a product level gauge and vent whistle for overfill

protection. Two closed spills are associated with this facility; documentation available for the spills indicates that subsurface media was not impacted and both spills were administratively closed by the NYSDEC. No violations are listed for this facility. Based on the absence of violations, administrative closure on on-site spills and information provided regarding secondary containment and overfill protective measures, this listing is not considered a REC.

Site Name: Boro Timber Co
Site Address: 57-45 47th Street
Location: East-adjoining property (hydraulically up-gradient)
Description: The site is listed in the PBS UST database (PBS Facility No. 2-296007) for housing two closed/removed 4,000-gallon diesel USTs and one closed/removed 4,000-gallon gasoline UST, removed on December 1, 1998. Based on the facility listing, the USTs did not have secondary containment or product level gauge for overfill prevention. One spill (NYSDEC Spill No. 97-14130) was reported at this facility when petroleum-impacted soil was identified during UST removal. The spill was administratively closed by the NYSDEC on July 12, 2006. Based on the closed status of the facility and documented spills, this listing is not considered a REC.

4.3. Other Database Findings

Former Manufactured Gas Plant

The MGP sites database is a proprietary database that includes records of historical manufactured coal gas plants compiled by EDR. The Subject Property was not listed in the database; however, three listings were identified within the minimum search area of 1 mile. Two of the sites are over 2,000 feet down-gradient from the Subject Property and are not considered RECs. The remaining site, National Grid property at K – Greenpoint MGP – Energy Center, is located west and hydraulically down-gradient and across Newtown Creek from the Subject Property. Based on the distance and hydraulic relationship with respect to the Subject Property, this listing is not considered a REC.

4.4. Local Regulatory Agency Findings

FOIA Requests

FOIA requests were submitted during the week of June 7, 2021 to the following federal, state, and local agencies via written correspondence:

- NYCDEP
- NYC Department of Health (DOH)
- New York City Fire Department (FDNY)
- NYSDOH
- NYSDEC

Complete responses have not yet been received from NYCDEP, NYCDOH, FDNY, NYSDOH, and NYSDEC. Should future responses alter the conclusions of this Phase I ESA, an addendum will be issued. Copies of the FOIA requests and any responses received are included in Appendix E.

USEPA

A review of the USEPA MyProperty, MyEnvironment and Envirofacts databases was performed on Jun 18, 2021. The Subject Property (57-00 47th Street) was identified on the Envirofacts database in relation the NPDES outlined in the FINDS section. No violations were identified.

NYCDOB

Langan conducted a records search through the NYCDOB online query system on June 21, 2021. The Subject Property is identified as Block 2601, Lots 1 and 6 and Block 2602, Lots 68 and 72. Department of Finance (DOF) Classification and NYCDOB query information are outlined below:

Block	Lot	BIN	DOF Classification	NYCDOB Violations	Available COs	CO Details
2601	1	484949	Z9-Miscellaneous	No	2005	Waste transfer station in conjunction with the adjacent tax Lot 6.
2601	6	4311638	E1-Warehouse	4 active: failure to file 2017 annual boiler inspection report	2004 to 2014	2004-2014: Waste transfer station and accessory uses including storage, parking and loading berths. COs from 2013 and 2014 also list an automobile repair shop.
2602	68	4058960	O1-Office Buildings	No	None	Not Available
2602	72	4058961	E9-Warehouse	No	1963	Trucking terminal

BIN – Building Identification Number, DOF – Department of Finance, CO – Certificate of Occupancy

Four active low- pressure boilers were listed on the most recent boiler inspection reports available, dated June 2013. Defects were reported for all boilers. The historical uses of the Subject Property as a waste transfer facility and auto repair are considered RECs. Copies of available NYCDOB records are included in Appendix F.

Zoning Department

According to the New York Department of City Planning Commission (NYCDCP) Zoning Map 13a, the Subject Property is zoned in a Manufacturing District (M3-1). M3 districts are designated for areas with heavy industries that generate noise, traffic or pollutants. Typical uses include power plants, solid waste transfer facilities and recycling plants, and fuel supply depots. According to a review of City Environmental Quality Review (CEQR) documents, the Subject Property is not assigned an E-designation or Restrictive Declaration. A copy of the zoning map is included in Appendix H.

"E" Designation

The NYCDCP coordinates a program, through rezoning efforts, to identify properties requiring an assessment of environmental site conditions because of documented historical use, requiring attenuation of neighborhood noise conditions, and/or special measures to mitigate against exacerbation of neighborhood air quality issues. These properties are identified as part of the environmental review process associated with discretionary actions, and are then noted as "E" Designated. For properties that have been so designated, the NYCDOB is restricted from issuing building permits until the New York City Office of Environmental Remediation (NYC OER) reviews information prepared by an environmental professional and makes a determination to issue a Notice of No Objection (NNO) or a Notice to Proceed (NTP) to the NYCDOB.

According to the list of City Environmental Quality Review (CEQR) Environmental Designations, dated June 30, 2009, the Subject Property is not listed with an "E" designation.

4.5. Physical Setting Sources

4.5.1. Topography

According to the USGS Brooklyn Quadrangle 7.5-minute Series Topographic Maps, the Subject Property sits at an elevation of about 9 feet above msl. The general topographic gradient of the Subject Property and surrounding properties slopes southwest towards Newtown Creek.

4.5.2. Geology

Geological surface features (e.g., rock outcroppings) were not observed at the Subject Property. Baskerville's "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey", dated 1994, indicates the bedrock underlying the Subject Property is part of the Hartland Formation. The Hartland Formation is comprised of mica schist and quartz-feldspar granulite, with localized intrusions of granite and pegmatite. Given the development history and infilling in the south, historic fill will likely be present beneath the Subject Property. Geological surface features (e.g., rock outcroppings) were not observed at the Subject Property.

4.5.3. Hydrology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeological network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeological and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks. Groundwater is inferred to flow to the southwest towards Newtown Creek. Based on information provided in the EDR report, groundwater is anticipated to about 7 feet bgs. According to the National Wetlands Inventory (NWI), the west-adjoining Newtown Creek is classified as an estuarine and marine deep-water wetland associated with English Kills.

The current Federal Emergency Management Agency (FEMA) Advisory Base Flood Elevation Maps include new advisory flood zone boundaries and advisory base flood elevations. According to the current FEMA Effective Flood Insurance Rate Maps (FIRM) dated September 5, 2007 (Map Numbers 3604970206F and 3604970208F), the northern and western parts of the Subject Property fall within Zone AE, a special flood hazard area with base flood elevation of 10 feet inundated by 1% annual chance of flooding. The remainder of the Subject Property falls within Zone X and lies within the area of 0.2% annual chance of flood. A copy of the FEMA flood map is provided in Appendix G.

4.6. Historical Use Information

Langan reviewed available historical resources (including aerial photographs, Sanborn® and topographic maps, and city directories) dated 1897 to 2017. Findings of the review are presented below.

4.6.1. Aerial Photographs

Langan reviewed aerial photographs of the Subject Property and surrounding areas for the years 1924, 1941, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 2006, 2009, 2013, and 2017. The photographs indicate that the Subject Property was historically surrounded by undeveloped land, with dense urban development occurring in the 1940s and 1950s. In the 1924 photograph, the northern part of the Subject Property appears to be improved with several buildings while the southwest section of the Subject Property is occupied by Newtown Creek. The remainder of the Subject Property comprises undeveloped land. By 1941, the buildings in the northern part of the Subject Property are no longer present with the exception of a small structure along the northwestern boundary (Lot 6). In 1951, 47th Street had been constructed, transecting the Subject Property. A second roadway is also present in the northeast of the Subject Property (Lot 68). Stockpiled soil is visible on the northern and western parts of the Subject Property in the 1954 photograph. By 1966, the southwestern part of the Subject Property formerly occupied by Newtown Creek appears to have been infilled and the present-day buildings on Lots 68 and 72 are visible. By 1974, the present-day building on Lot 6 is constructed and the remainder of Lots 1 and 6 appear to be used for truck parking between 1974 and 1991. In 1991, multiple stockpiles of material, likely associated with the former C&D processing facility, occupy Lot 1. The stockpiles appear to expand into the northern part of Lot 6 beginning in 2006. The Subject Property remains relatively unchanged between 2006 through 2017. The historical operation of the Subject Property including C&D processing/recycling facility and truck parking is considered a REC.

Land adjoining the Subject Property to the north, east and south remained undeveloped until about 1951. From 1954 to 2006, the area surrounding the Subject Property was developed for various commercial and industrial uses. Unreported spills or violations were not listed in association with these operations; therefore, they are not considered RECs. Copies of aerial photographs are included in Appendix I.

4.6.2. Sanborn® Fire Insurance Maps

A search for historical fire insurance maps for the Subject Property and surrounding properties was conducted by EDR and reviewed by Langan. Sanborn® Maps constitute a database of prior

site uses of real property for many cities and towns in the United States. Langan reviewed Sanborn® Maps for the Subject Property for the years 1902, 1907, 1914, 1933, 1936, 1950, 1951, 1965, 1968, 1977, 1979, 1980, 1981, 1982, 1985, 1986, 1988, 1990 through 1996, 1999, and 2001 through 2007. Maps from 1965 through 1982 only partially cover the Subject Property and appear blank. Copies of Sanborn® Fire Insurance Maps are included in Appendix J.

The Sanborn® Map review revealed that the Subject Property was situated in a low -density industrial area as early as 1902. In 1902, the Subject Property was occupied by several one- to two-story buildings associated with C. Meyer Fertilizer Works and an 'old well' present on the southern part of the Subject Property (Lot 6). By 1914, the former buildings are no longer present and Valvoline Oil Company Oil Depot occupies the Subject Property, including multiple areas labelled 'oil tanks', an auto repair building, storage shed and office building occupy the northern part of the Subject Property (Lots 1 and 72). By 1936, the Subject Property is no longer labelled as the Valvoline Oil Company; several unspecified buildings remain on site included on building labelled "dilapidated". In 1982, 47th Street is observed transecting the Subject Property from north to south and the present-day one-story buildings are visible on the Subject Property; the building on Lot 72 is labelled "motor freight station", the Lot 68 building is labelled "construction office" and the building on Lot 6 is labelled "truck body repair". The Subject Property remains unchanged through 2006. Historical operations on the Subject Property including fertilizer works facility, oil depot, truck repair facility and motor freight station are considered RECs.

Adjoining and surrounding properties to the north, east and south generally consisted of residential buildings, and commercial and industrial operations, and Newtown Creek is observed to the west of the Subject Property. While responsible parties are currently conducting a remedial investigation pursuant to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), Newtown Creek has potential conditions that pose a material threat of a future release to the environment and is considered a REC.

4.6.3. Historical USGS Topographic Quadrangles

Langan reviewed historical USGS Topographic Quadrangle maps obtained from EDR for information regarding past uses of the Subject Property. Quadrangle maps were available for the Subject Property for the years 1897, 1898, 1900, 1947, 1956, 1967, 1979, 1995, and 2013. Based on a review of the historical topographic maps, the Subject Property has been located in a low density developed area and was improved with several buildings since at least 1897. In maps from 1967 and 1979, present-day buildings on the northeastern and western parts of the Subject Property, respectively, are visible.

The surrounding sites were also developed from as early as 1897 and comprised low density development within a wider network of waterways and marsh land. By 1947, land to the north, east and south of the Subject Property are infilled to create the present-day configuration of the west-adjoining Newtown Creek and Maspeth Creek, north of the Subject Property. The Subject Property and surrounding properties appeared relatively unchanged through 2013. Review of the USGS maps did not reveal any RECs. Copies of the topographic maps are included in Appendix K.

4.6.4. City Directories

The City Directory Abstract, obtained from EDR, is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1922 through 2017. The directory was obtained for the Subject Property and surrounding area. A copy of the City Directory Abstract report is included in Appendix L.

The Subject Property was not listed in the City Directory. Adjoining properties included residential and commercial entities. A review of the city directory did not reveal any RECs.

4.6.5. Environmental Lien Search

Langan contracted EDR to conduct an environmental lien search for the Subject Property. The results of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, revealed that there are no environmental liens or other Activity and Use Limitations (AUL) associated with the Subject Property. A copy of the Environmental Lien Search is included in Appendix M.

5.0 SITE RECONNAISSANCE

The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and progressing to the adjoining and surrounding properties. The assessment of the adjoining and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining and surrounding structures.

The site reconnaissance was performed at 10:00 AM on June 22, 2021 by Tyler Goodnough of Langan, accompanied by Emilio Lamanna, the Subject Property owner, and Phil Bernardo, representative of the User. The weather at the time of the inspection was cloudy with intermittent light rain and approximately 80°F.

5.1. General Site Setting and Reconnaissance Observations

The Subject Property consists of four tax lots totaling approximately 168,000 square feet, and includes contiguous Lots 1 and 6 on the western side of 47th Street, and contiguous Lots 68 and 72 on the eastern side of 47th Street. The Subject Property is improved with three buildings, including a 20,000-square foot warehouse/office building on Lot 6, a 4,000-square foot warehouse/office building on Lot 72, and a 2,000-square foot commercial building on Lot 68. The buildings are all slab-on-grade masonry and steel construction.

Lot 1

Lot 1 is a vacant lot, accessible via a secured gate along 47th Street. During the site reconnaissance, an approximate 1,000-cubic yard stockpile of recycled concrete aggregate (RCA) was observed on the eastern part of the lot. According to Mr. Lamanna, the stockpiled material is remnant of the former concrete processing/recycling operations at the Subject Property.

Lot 6

Lot 6 is accessible via a secured gate on 47th Street and is improved upon with a vacant, slab-on-grade, one-story office/warehouse building with a mezzanine level. Nine vehicle access bay doors are present along the southern and western parts of the building. A locker room, bathroom, and former AST room are also located in the southwestern area of the building. The northern and eastern areas of the building contain office space on the ground floor and mezzanine levels. The building is surrounded by concrete-paved parking areas to the south, east, and west. Several pits were identified in the south-central part of the building including two mechanics pits, one pit

that appeared to be infilled with concrete flush with the building slab, and one pit covered with a metal cover that could not be moved. De minimis oil-like staining was observed throughout the warehouse space interior, near the mechanics pits, throughout the external parking lot area, and underneath an excavator parked along the southern boundary. According to Mr. Lamanna, the building and exterior parts of Lots 1 and 6 were formerly occupied by U.S. Concrete for truck repairs, office space, a small concrete testing laboratory, and a concrete/fill recycling facility. Mr. Lamanna also stated that the recycling facility has been closed as required under the April 2021 Order on Consent (see Section 3.2)

During the site reconnaissance, grading and placement of topsoil was being completed along the western boundary of Lots 1 and 6 to prepare for planting. This activity is being completed to bring the site into compliance with the April 2021 Order on Consent (see Section 3.2).

Lot 68

The building on Lot 68 is a vacant, one-story commercial building surrounded by asphalt-paved parking areas on all sides. According to Mr. Lamanna, Lot 68 was most recently occupied by a delicatessen. The interior of the building on Lot 68 was not accessible during the reconnaissance. De minimis staining was observed in areas of the parked exterior; however, the surface cover appears to be in good condition.

Lot 72

Lot 72 is accessible via a locked gate along 58th Road and is improved with a vacant, slab-on-grade one-story warehouse. Three vehicle access bay doors and warehouse space span the eastern part of the building. The remainder of the building contains office space, bathrooms, utility space and a kitchen area. Oil-like staining was observed on the ground throughout the warehouse. According to Mr. Lamanna, the staining was likely associated with cooking oil resulting from the most recent tenant's operations, and not petroleum products. The building is surrounded by concrete-paved parking areas on all sides. The southern-most part of the lot is currently used by a scaffolding company to stage equipment. An approximate three-gallon, open plastic tub of waste motor oil with nearby de minimis oil-like staining was observed in the east of the parking lot, and de minimis oil-like staining was observed throughout the parking lot areas to the north and east of the building. According to Mr. Lamanna, Lot 72 was most recently occupied by a food services and food truck storage company.

The Lot 6 and Lot 72 buildings contain natural gas- and/or electric-powered heating systems, which mainly consist of ceiling-mounted hot air blower units. HVAC units, including air conditioners, were observed on the roofs and/or on exterior walls of the buildings.

5.2. Pits, Ponds, Lagoons

Several pits were identified in the south-central part of the Lot 6 building including two mechanics pits, one pit that appeared to be infilled with concrete flush with the building slab, and one pit covered with a metal cover that could not be moved. De minimis oil-like staining was observed in the vicinity of the pits; however, surficial concrete cracks, joints or exposed soil were not observed in these stained areas.

Ponds, or lagoons were not observed.

5.3. Pools of Liquid

Pools of liquid were not observed.

5.4. Storm Drains, Wells, and Cisterns

Stormwater drains were observed in the parking areas on eastern and northern parts of the Subject Property (Lots 6 and 72). Floor drains were also observed in the bathrooms of these buildings. A large collection drain was observed in a concrete testing room at the northern side of the building on Lot 6.

Trench drains were observed inside the Lot 6 and Lot 72 buildings. Black oil-like residue was observed inside a concrete-lined trench drain along the southern side of the Lot 6 building. An oily residue, suspected to be from cooking oil, was also observed in a clogged trench drain on the north-central part of the Lot 72 building as well as inside a stormwater drain located on Lot 72. Odors were not observed at any of the drain locations.

Four, large metal and concrete hatches were observed along the southern boundary of the Subject Property (Lot 6). According to Mr. Lamanna, the covers are associated with four large stormwater collection basins that accept water from the drains inside and around the building on Lot 6. Mr. Lamanna stated that the basins drain directly to the subsurface and the remaining drains at the Subject Property are reportedly connected to the New York City municipal or sanitary systems.

No wells were observed at the Subject Property.

5.5. Polychlorinated Biphenyl (PCB) Transformers and Other Suspect Equipment

Suspect PCB-containing transformers and other equipment were not observed.

5.6. Storage Containers, Drums, and Chemical Storage Areas

The following storage containers were observed at the Subject Property:

Container Type	Size	Contents	Location
Seven metal cans	2.5 to 5 gallons	Gasoline	Parking lot south of Lot 72 building
Three metal cans (empty)	Five gallons	Diesel (empty)	Parking lot south of Lot 72 building
Two plastic buckets	5 gallons	Paint, disinfectant/cleaner	Parking lot south of Lot 72 building
Six plastic bottles	1 gallon	Household cleaners	Northeastern corner of Lot 6 building
Metal drum (empty)	55 gallons	Antifreeze/coolant (empty)	Northern exterior wall of Lot 6 building
Plastic bucket	5 gallons	Hydraulic oil	Northern exterior wall of Lot 6 building

Langan did not observe evidence of spills or releases associated with these containers.

5.7. Sewage Ejector Pits and Sumps

Two sumps were observed at the Subject Property located in the northeastern part of the Lot 6 building and in a small concrete enclosure on the eastern part of Lot 1. Odors, staining and/or sheen were not observed at either sump location. Ejector pits were not observed on the Subject Property.

5.8. Waste Generation, Storage, and Disposal

Two, roll-off containers containing trees/branches and other debris from ongoing grubbing and regrading activities were observed on Lot 6. The waste was generated as a result of the work performed to bring the Subject Property into compliance with the NYSDEC Consent Order, dated April 2021 (see Section 3.2). Other waste generation at the Subject Property was not observed.

5.9. Air Emissions or Wastewater Discharges

Air emissions or wastewater discharges were not observed.

5.10. USTs or ASTs

One empty 275-gallon AST was observed at the Subject Property along the west-central exterior wall of the building on Lot 6. Staining and/or odors were not observed in the vicinity of the AST. Evidence of former ASTs was observed in the west-central part of the Lot 6 building, including remnants of concrete secondary containments, cut vent and fill pipes, oil feed lines on the wall, and de minimis, surficial oil-like staining. The concrete floors in the vicinities of the former ASTs

appeared to be in good condition and free of cracks; however, staining was observed near wall/floor seams were present near the former AST area.

Two vent pipes were observed on the southeastern exterior wall of the building on Lot 6. According to Mr. Lamanna, the pipes were associated with former USTs that were located in the southeastern part of the Subject Property (Lot 6). A small steel cover labeled "test" was also observed in the parking lot that may have been associated with the former USTs. Mr. Lamanna stated that the USTs on the Subject Property had all been closed and removed to the satisfaction of NYSDEC in 2017 (see Section 4.2). Staining or odors were not observed around these features.

5.11. Monitoring Wells or Remedial Activities

Monitoring wells or evidence of remedial activities were not observed. At the time of the reconnaissance, regrading and filling activities were ongoing along the western boundaries of Lots 1 and 6. These activities are ongoing to bring the Subject Property into compliance with the NYSDEC Order on Consent, dated April 2021 (see Section 3.2).

5.12. Stained or Discolored Soil

Stained or discolored soil was not observed.

5.13. Leachate or Seeps

Evidence of leachate or seeps was not observed.

5.14. Adjoining and Surrounding Property Uses

Adjoining and surrounding properties include commercial buildings, and manufacturing/ industrial buildings. The Subject Property is bound by 58th Road followed by the City of New York Department of Sanitation District 5 Garage to the north, distribution warehouses and a waste collection company to the east, a NYCDEP Newtown Creek aeriation facility to the south, and Newtown Creek and associated wetlands to the west. Several vent pipes and an apparent UST were observed at the northern adjoining sanitation garage, about 100 feet north-northeast of the Subject Property. With the exception of the DSNY garage, fill ports or vents were not identified on adjoining and surrounding properties.

6.0 INTERVIEWS

6.1.1 Site Owner/Operator

Langan conducted an interview with Emilio Lamanna, the Subject Property owner, during the site reconnaissance. Mr. Lamanna stated that his family had been associated with the Subject Property since the early 1980s. Additional information provided by Mr. Lamanna is discussed in Section 5.0.

6.1.2 Owners/Tenants of Adjoining Properties

Owners/tenants of adjoining properties were not interviewed as part of this Phase I ESA.

7.0 ADDITIONAL SERVICES

7.1. Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithological conditions.

The USEPA has established a recommended radon action level of 4.0 pico Curies per liter (pCi/L). According to the USEPA Radon Zone Map, the Subject Property is located in Zone 3, which indicates a predicted average indoor radon screening level less than 2 pCi/L. Based on federal data included in the EDR report, 81 homes were tested in Queens County with average concentrations of 0.970 pCi/L and 0.620 pCi/L in basements and living areas, respectively. Ninety-three percent of basements and 97% of living areas had concentrations below 4 pCi/L. Based on this information, it is unlikely that elevated levels of radon gas are present at the Subject Property.

8.0 DEVIATIONS AND DATA GAPS

8.1. Deviations

Langan performed a Phase I ESA of the Subject Property using a standard of good commercial and customary practice that is consistent with the ASTM E1527-13 and the 40 CFR Part 312 Standards and Practices for AAI. Significant deviations were not made to the above referenced standards.

8.2. Data Gaps

In order to address data gaps, additional sources of information may be consulted. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in section 312.10) in the information developed…that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps." According to ASTM E1527-13, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure, and if any of the standard historical sources were excluded, give the reasons for the exclusion."

This Phase I ESA was completed without significant data gaps except that responses to FOIA letters have not been received from all recipients. Sufficient information was provided from other sources to enable conclusions regarding RECs at the Subject Property. As such, this data gap is not expected to alter the results of the Phase I ESA. If information becomes available that alters the conclusions of this report, an addendum will be issued.

9.0 FINDINGS, OPINIONS, AND CONCLUSIONS

This Phase I ESA was conducted in accordance with ASTM E1527-13 and the USEPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-13 as a REC.

Based on information obtained during the visual inspection of the Subject Property; review of environmental databases and historic information; and contact with federal, state, and local agencies. CRECs were not identified. Two RECs, one HREC, three BERs, one de minimis condition and one non-ASTM consideration were identified and are discussed below.

REC

A REC is defined by ASTM E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to any release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The following RECs were identified:

REC 1 – Historical Use of Subject Property

Historical operations at the Subject Property included a 'fertilizer works' facility (1902 to 2014), an oil depot with petroleum bulk storage (1914 to 1936), truck parking (1974 to 1991), truck repair (1982 to 2006), a waste transfer facility with petroleum bulk storage (2004 to 2021), and auto repair (2013, 2014) on Lots 1 and 6; and a motor freight station with petroleum bulk storage (1963, 1982 to 2006) on Lot 72. The Subject Property is listed as an active facility on the SWF/LF database for the processing of C&D waste; however, based on the site reconnaissance this operation ceased in early 2021. Historical operations at the Subject Property may have resulted in inadvertent releases of hazardous substances or petroleum products.

REC 2 – Western-Adjoining Superfund Site

Newtown Creek, which is listed in the National Priority List (NPL) and Superfund Enterprise Management System (SEMS) databases. Contamination in the creek is attributed to combined sewer overflow (CSO) and historical industrial facilities on the creek banks. Facilities included over 50 oil refineries, petrochemical plants, fertilizer and glue factories, sawmills, and lumber and coal yards. A remedial investigation is presently underway for the entire Creek and a focused feasibility study (FFS) is currently being prepared by responsible parties regarding a combined sewer outfall (CSO) long term control plan, pursuant to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Given that the remedial investigation and

a focused feasibility study are underway by the responsible parties, it is unknown as to whether there is any impact to the Subject Property.

HREC

A HREC is defined by ASTM E1527-13 as the past release of any hazardous substances or petroleum products that has occurred in connection with the Subject Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Subject Property to any required controls.

HREC 1 – Closed Spills on the Subject Property

The Subject Property is listed on the LTANKS and NY SPILLS databases for six spills, outlined below:

- NYSDEC Spill No. 94-11004 was reported on November 17, 1994 was after the release of an unknown volume of gasoline. The spill was administratively closed on November 17, 1994.

- NYSDEC Spill No. 97-09690 was reported on November 20, 1997 after the release of an unknown volume of diesel oil on soil. No further information regarding the spill was provided. The spill was administratively closed on January 8, 1998

- NYSDEC Spill No. 98-12248 was reported on January 4, 1999 after petroleum-impacted soil was identified during removal of a UST. Petroleum-impacted soil was removed and documentation endpoints samples were collected. The spill was remediated to the satisfactory of NYSDEC and the spill was administratively closed on July 12, 2006.

- NYSDEC Spill No. 07-09978 was reported after a UST failed a tank tightness test on December 18, 2007. The tank lines were re-tested and it was determined that the vent line failed due to a loose fitting. Evidence of petroleum contamination to the subsurface was not observed and the spill was administratively closed December 28, 2007.

- NYSDEC Spill No. 08-08170 was reported on October 21, 2008 after a call was made to the NYSDEC citing active release of petroleum substances, and illegal storage and refueling of vehicles at the Subject Property. A limited subsurface investigation completed in 2009 consisting of advancing six soil borings and collection of soil samples identified petroleum impacts to soil ranging from surface grade to about 8 feet below grade surface. About 381.04 tons of petroleum-impacted soil was excavated and disposed of in 2010. Documentation soil samples and groundwater samples collected

post-remediation confirmed that the spill was remediated to the satisfaction of the NYSDEC. The spill was administratively closed on October 27, 2012.

- NYSDEC Spill No. 13-06438 was reported on September 19, 2013 after diesel contaminated soil and pea gravel was identified in tank vault during removal of a 4,000-gallon UST. Further information regarding the remediation was unavailable; however, a closure report summarizing the remedial work and analytical data was prepared for NYSDEC. The spill was remediated to the satisfaction of the NYSDEC, and the spill was administratively closed on February 12, 2014.

De Minimis Condition

A de minimis condition is defined by ASTM E1527-13 as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

De minimis oil-like staining was observed throughout Lot 6 including the interior warehouse space, near the mechanics pits, in the vicinity of a former ASTs, throughout the concrete-paved parking areas to the south, east, and west of the building, and underneath a parked excavator; and on Lot 72 throughout the interior warehouse space, truck access bays and exterior concrete-paved parking areas. Surficial concrete cracks, joints or exposed soil were not observed in stained areas; however, staining was observed near the wall/floor seams near the former AST area. The staining is considered a de minimis condition.

11.0 STATEMENT OF QUALIFICATIONS AND SIGNATURES

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA meet the definition of Environmental Professional as defined in Subsection 312-10 of 40 CFR Part 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. They have developed and performed the AAIs in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes outlining the qualifications of the Environmental Professionals who performed this Phase I ESA are included in Appendix N.

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) prepared this Phase II Environmental Site Investigation (ESI) report on behalf of Bay Crane Service of New York for the properties located at 57-00, 57-05, 57-57, and 58-20 47th Street in the Maspeth neighborhood of Queens, New York (the site). The Phase II ESI was conducted to investigate the recognized environmental conditions (RECs) identified during the Phase I Environmental Site Assessment (ESA) dated July 21, 2021.

The Phase II ESI included completion of a geophysical survey, advancement of soil borings, installation of temporary groundwater monitoring wells, and collection and laboratory analysis of soil and groundwater samples. The Phase II ESI field work was completed on July 7 through July 9, 2021.

This report is organized as follows:

- Section 2.0: Describes the site background
- Section 3.0: Presents the Phase II ESI methodology
- Section 4.0: Presents the findings of the Phase II ESI
- Section 5.0: Presents conclusions based on the findings
- Section 6.0: Presents limitations

2.0 BACKGROUND

2.1 Site Location and Description

The site is located at 57-00, 57-05, 57-57, and 58-20 47th Street in the Maspeth neighborhood of Queens, New York, and is identified on the Queens Borough Tax Map as Block 2601, Lots 1 and 6 and Block 2602, Lots 68 and 72. The approximately 168,000-square-foot site is situated on the northern part of Block 2601 and northeastern part of Block 2602, and is transected by 47th Street. The site is situated on the city blocks bound by 58th Road to the north, 49th Place to the east, Grand Avenue to the south, and Newtown Creek to the west. The site is improved with a vacant slab-on-grade one-story building with a mezzanine level (Lot 6), and two vacant slab-on-grade one-story buildings (Lots 68 and 72). The remainder of the site is improved with concrete and asphalt parking space.

According to the United States Geological Survey (USGS) Central Park Quadrangle 7.5-minute Series Topographic Map, the site sits at an elevation of about 9 feet above mean sea level (msl) and the surrounding area slopes gradually to the southwest towards Newtown Creek. The site is located within an industrial area characterized by one- to two-story commercial and manufacturing/industrial buildings. A Site Location Map is included as Figure 1.

2.2 Proposed Development

Redevelopment plans for the site are in early development; however, the site may be used in its present-day configuration for crane storage and repair.

2.3 Recognized Environmental Conditions

Langan's July 20, 2021 Phase I ESA identified the following Recognized Environmental Conditions (RECs) for the site:

REC 1 – Historical Use of Subject Property

Historical operations at the Subject Property included a 'fertilizer works' facility (1902 to 1914), an oil depot with petroleum bulk storage (1914 to 1936), truck parking (1974 to 1991), truck repair (1982 to 2006), a waste transfer facility with petroleum bulk storage (2004 to 2021), and auto repair (2013, 2014) on Lots 1 and 6; and a motor freight station with petroleum bulk storage (1963, 1982 to 2006) on Lot 72. The Subject Property is listed as an active facility on the Solid Waste Facilities/Landfill Sites (SWF/LF) database for the processing of construction and demolition (C&D) waste; however, based on the site reconnaissance this operation ceased in early 2021. Historical operations at the Subject Property may have resulted in inadvertent releases of hazardous substances or petroleum products.

REC 2 – Western-Adjoining Superfund Site

Newtown Creek, which is listed in the National Priority List (NPL) and Superfund Enterprise Management System (SEMS) databases. Contamination in Newtown Creek is attributed to combined sewer overflow (CSO) and historical industrial facilities on the creek banks. Facilities included over 50 oil refineries, petrochemical plants, fertilizer and glue factories, sawmills, and lumber and coal yards. A remedial investigation is presently underway for the entire Newtown Creek Superfund Site and a focused feasibility study (FFS) is currently being prepared by responsible parties regarding a combined sewer outfall (CSO) long term control plan, pursuant to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Given that the remedial investigation and a focused feasibility study are underway by the responsible parties, it is unknown as to whether there is any impact to the Subject Property.

2.4 Soil and Geology

Geological surface features (e.g., rock outcroppings) were not observed at the site. Baskerville's "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey", dated 1994, indicates the bedrock underlying the site is part of the Hartland Formation. The Hartland Formation is comprised of mica schist and quartz-feldspar granulite, with localized intrusions of granite and pegmatite. Review of the United States Geographic Services (USGS) Topographic Maps for the site identified infilling along the western and southern parts of the site between 1947 and 1979. Given the development history, historic fill will likely be present.

2.5 Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeological network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeological and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks. Groundwater is inferred to flow to the southwest towards Newtown Creek. Groundwater was encountered at depths ranging from 8.0 to 11.2 feet below grade surface (bgs) during this Phase II ESI.

Groundwater in New York City is not used as a potable water source. Potable water is provided to the site by New York City and is obtained from surface impoundments in the Croton, Catskill, and Delaware watersheds. According to the current Federal Emergency Management Agency

(FEMA) Effective Flood Insurance Rate Map (FIRM) dated September 5, 2007, the northern and western parts of the site fall within Zone AE, a special flood hazard area with base flood elevation of 10 feet inundated by 1% annual chance of flooding. The remainder of the site falls within Zone X and lies within the area of 0.2% annual chance of flood.

3.0 FIELD INVESTIGATION

The Phase II ESI included completion of a geophysical survey, advancement of eleven environmental soil borings, installation of four temporary groundwater monitoring wells, and collection of eleven soil and four groundwater samples for laboratory analysis. The Phase II ESI field work was completed from July 7 through 9, 2021. A sample summary is included in Table 1 and sample locations are shown on Figure 2. Photographs taken during the field investigation are included in Appendix A.

3.1 Geophysical Survey

Prior to intrusive sampling, NOVA Geophysical & Environmental, Inc. (NOVA), of Douglaston, New York, conducted a geophysical survey on July 7, 2021. NOVA used ground penetrating radar (GPR) and electromagnetic detection equipment to identify potential underground storage tanks (USTs) and locate buried utilities and anomalies across the site. Boring locations were cleared of any subsurface structures or utilities.

A copy of the geophysical survey report is included in Appendix B.

3.2 Soil Investigation

Eleven soil borings, SB01 through SB11, were advanced by Eastern Environmental Solutions, Inc. of Manorville, New York. A Langan field engineer was on-site to document field observations and collect soil samples. Soil borings were advanced using Geoprobe® 7922 DT 2-inch direct push drill rig to depths ranging from 15 to 20 feet below ground surface (bgs). Soil samples were collected continuously into 5-foot Macro-Core® sample barrels lined with dedicated acetate sleeves.

Soil samples retrieved from borings were visually classified for soil type, grain size, texture, and moisture content. Each sample was screened for visual, olfactory, and instrumental evidence of a chemical or petroleum release. Instrumental screening for the presence of organic vapors was performed using a photoionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. Eleven soil samples were collected, one each, from borings SB01 through SB11 for laboratory analysis. Samples were collected from the interval exhibiting the greatest degree of impacts or from representative intervals of historic fill material. Samples submitted for volatile organic compound (VOC) analysis were collected directly from the acetate liner into laboratory-supplied Terra Core® soil samplers. The remaining sample volume was homogenized and placed in laboratory-supplied containers for additional analyses. The sample containers were labeled, placed in a laboratory-supplied cooler, and packed on ice (to attempt to maintain a temperature of about 4°C). The samples were picked up and delivered via courier service to York Analytical

Laboratories Inc. (York) under standard chain-of-custody protocol. York is a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory located in Stratford, Connecticut.

Soil samples were analyzed for Part 375 List and Target Compound List (TCL) VOCs by United States Environmental Protection Agency (USEPA) Method 8260C, semi-volatile organic compounds (SVOCs) by USEPA Method 8270D, pesticides by USEPA Method 8081B, polychlorinated biphenyls (PCBs) by USEPA Method 8082A, and Part 375/Target Analyte List (TAL) metals including hexavalent and trivalent chromium by USEPA Methods 6010C.

Following sample collection, boreholes were backfilled to grade with soil cuttings and the ground surface was restored. Soil boring logs are included in Appendix C, soil boring locations are shown on Figure 2, and a soil sample summary is included in Table 1.

3.3 Groundwater Investigation

Four soil borings, SB01 through SB04, were converted into temporary groundwater monitoring wells. Monitoring wells MW01, MW02 and MW04 were installed by inserting 10 feet of 0.02-inch slotted, one-inch diameter well screen and 10 feet of PVC riser pipe. Monitoring well MW03 was installed by inserting 5 feet of 0.02-inch slotted, one-inch diameter well screen, and 10 feet of PVC riser pipe. Well screens were positioned to straddle the observed water table. The annular space of each monitoring well was backfilled with No. 2 sand to 2 inches bgs and the upper 2 inches of the borehole was sealed to grade surface with bentonite.

Following installation, the monitoring wells were developed and sampled using a peristaltic pump. Prior to sample collection, the wells were purged and attempts were made to stabilize groundwater parameters (pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential), with turbidity measurements below 50 Nephelometric Turbidity Units (NTU). Following groundwater sample collection, each temporary monitoring well was removed, boreholes were filled to grade surface with non-impacted soil cuttings and No. 2 sand, and patched with concrete. Monitoring well construction logs and groundwater sampling logs are included as Appendix D.

The groundwater samples were collected into laboratory-supplied glassware and delivered via courier service to York. Groundwater samples were analyzed for TCL VOCs by EPA Method 8260, TCL SVOCs by EPA Method 8270, PCBs by EPA Method 8082, pesticides by USEPA Method 8081B, and total and dissolved (field filtered) metals including hexavalent and trivalent chromium by EPA Methods 6010B/7471A. The groundwater monitoring well locations are shown on Figure 2 and a groundwater sample summary is included in Table 1.

4.0 OBSERVATIONS AND RESULTS

4.1 Geophysical Survey

NOVA's geophysical survey identified municipal water, sewer, electric, telecom and/or gas lines entering the buildings on Lots 6, 68 and 72 from 47th Street. An electric line was also observed transecting Lots 1 and 6. The geophysical survey identified anomalies indicative of an oil/water separator on the eastern side of the Lot 6 building and drainage structures within the Lot 6 building and southern part of Lot 6. Anomalies indicative of underground storage tanks (UST) graves were also identified on the southern part of Lot 6. Borings were relocated as necessary to avoid subsurface utilities. A copy of the geophysical survey report is included in Appendix B.

4.2 Subsurface Observations

Fill material, generally consisting of fine-grained sand with varying amounts of fine gravel, silt, brick, wood, and concrete was identified from below surface grade to depths ranging from about 4 to 16 feet bgs. Native soil, typically consisting of fine-grained sand and silt with varying amounts of medium sand, peat and fine gravel was identified beneath the fill layer to the boring termination depths ranging from 5 to 20 feet bgs.

Petroleum-like odors, staining, and PID readings above background levels were each identified at the following locations:

Soil Boring	Depth Interval (feet bgs)	Maximum PID (ppm)	Other Observations
SB01	10 to 12	76.1	Petroleum-like odor; staining
SB02	10 to 11	17	Petroleum-like odor; staining
	17 to 18	192.8	Petroleum-like odor; staining
SB04	8 to 11	50.3	Petroleum-like odor; staining

*ppm = parts per million

Groundwater was encountered in soil borings at depths ranging from 8 to 11.2 feet bgs. Petroleum-like odors and PID readings of 8.6 ppm and 49.7 ppm were observed from the headspace of monitoring wells MW02 and MW04, respectively. Purge water from these locations exhibited gray and brown discoloration; however, sheen or free product was not observed.

4.3 Soil Sample Results

Soil sample analytical results were compared to Title 6 of the New York Codes, Rules and Regulations (NYCRR) Part 375 Commercial Use (CU) and Industrial Use (IU) Soil Cleanup Objectives (SCOs). Analytes exceeding the CU and/or IU SCOs are summarized below. SCOs are listed in parentheses. Exceedances of IU SCOs are in bold. Soil sample analytical results are summarized in Table 2, and analytical laboratory reports are included in Appendix E.

SVOCs – SVOCs were detected in SB03, SB07, and SB11 above the CU and/or IU SCOs as summarized below:

- Benzo(a)anthracene – **64.8 milligrams per kilogram (mg/kg)** in SB07_8-9 (CU SCO: 5.6 mg/kg; IU SCO: 11 mg/kg)
- Benzo(a)pyrene – 1.08 mg/kg in SB03_2-3; 3.84 mg/kg in SB-11_13-14; **47.1 mg/kg** in SB07_8-9 (CU SCO: 1 mg/kg; IU SCO: 1.1 mg/kg)
- Benzo(b)fluoranthene – **39.2 mg/kg** in SB07_8-9 (CU SCO: 5.6 mg/kg; IU SCO: 11 mg/kg)
- Chrysene – 65.2 mg/kg in SB07_8-9 (CU SCO: 56 mg/kg)
- Dibenzo(a,h)anthracene – 0.748 mg/kg in SB11_13-14 to **9.53 mg/kg** in SB07_8-9 (CU SCO: 0.56 mg/kg; IU SCO: 1.1 mg/kg)
- Indeno(1,2,3-cd)pyrene – **26.7 mg/kg** in SB07_8-9 (CU SCO: 5.6 mg/kg; IU SCO: 11 mg/kg)

Metals – Metals were detected in SB-07, SB-10, and SB-11 above their respective CU and/or IU SCOs as summarized below:

- Arsenic – **27.6 mg/kg** in SB10_3-4 (CU/IU SCO: 16 mg/kg)
- Lead – 1,840 mg/kg in SB10_3-4 (CU SCO: 1,000 mg/kg)
- Mercury – 2.97 mg/kg in SB10_3-4; 4.22 mg/kg in SB-11_13-14; 5.33 mg/kg in SB07_1-2 (CU SCO: 2.8 mg/kg)

VOCs, Pesticides and PCBs

VOCs, pesticides and PCBs were not detected at concentrations above CU and/or IU SCOs.

4.4 Groundwater Sample Results

Groundwater results were compared to the NYSDEC Division of Water Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA (drinking water). Analytical results from the groundwater sample are summarized in Table 3.

VOCs were detected in samples collected from MW02 and MW04 at concentrations above the NYSDEC TOGS SGVs and are summarized below. SGVs are listed in parentheses:

- 1,2-Dichloropropane – 7 milligrams per liter (µg/L) in MW02 (SGV: 1 µg/L)
- Isopropylbenzene – 5.1 µg/L in MW02 (SGV: 5 µg/L)
- N-Propylbenzene – 6 µg/L in MW02 (SGV: 6 µg/L)
- Methyl tert-butyl ether (MTBE) - 73 µg/L in MW04 (SGV: 10 µg/L)

SVOCs were detected in samples collected from MW03 at concentrations above the NYSDEC TOGS SGVs and are summarized below.

- Benzo(a)anthracene – 0.564 µg/L (SGV: 0.002 µg/L)
- Benzo(a)pyrene – 0.523 µg/L (SGV: 0.002 µg/L)
- Benzo(b)fluoranthene – 0.369 µg/L (SGV: 0.002 µg/L)
- Benzo(k)fluoranthene – 0.41 µg/L (SGV: 0.002 µg/L)
- Chrysene – 0.523 µg/L (SGV: 0.002 µg/L)
- Indeno(1,2,3-cd)pyrene – 0.297 µg/L (SGV: 0.002 µg/L)

Total and dissolved metals that were detected in the samples collected from MW01 through MW04 at concentrations above the SGVs and are summarized below.

- Total Antimony – 4.34 µg/L in MW03 (SGV: 3 µg/L)
- Total Arsenic – 37.6 µg/L in MW03 (SGV: 25 µg/L)
- Total Iron – 7,420 µg/L in MW04 to 11,100 µg/L in MW01 (SGV: 300 µg/L)
- Dissolved Iron – 5,740 µg/L in MW03 to 11,400 µg/L in MW01 (SGV: 300 µg/L)
- Total Lead - 419 µg/L in MW03 (SGV: 25 µg/L)
- Total Magnesium – 38,800 µg/L in MW01 (SGV: 35,000 µg/L)
- Dissolved Magnesium – 39,900 µg/L in MW01 (SGV: 35,000 µg/L)
- Total Manganese – 1,490 µg/L in MW01 to 3,090 µg/L in MW02 (SGV: 300 µg/L)
- Dissolved Manganese – 1,560 µg/L in MW01 to 3,100 in MW02 (SGV: 300 µg/L)
- Total Sodium – 67,100 µg/L in MW02 to 110,000 µg/L in MW04 (SGV: 20,000 µg/L);
- Dissolved Sodium – 71,900 µg/L in MW02 to 126,000 µg/L in MW04 (SGV: 20,000 µg/L)

5.0 CONCLUSIONS

The following is a summary of Phase II findings:

- Anomalies indicative of an oil/water separator and underground storage tanks (UST) graves were identified on the Eastern and southern part of Lot 6, respectively.
- Fill material, generally consisting of fine-grained sand with varying amounts of fine gravel, silt, brick, wood, and concrete was identified from below surface grade to depths ranging

from about 4 to 16 feet bgs. Native soil, typically consisting of fine-grained sand and silt with varying amounts of medium sand, peat and fine gravel was identified beneath the fill layer to the boring termination depths, ranging from 5 to 20 feet bgs.

- Groundwater was encountered at depths ranging from 8 to 11.5 feet bgs.
- Petroleum-like odors, staining, and PID readings were each identified in soil borings SB01, SB02, and SB04 at depths ranging from 8 to 18 feet bgs. Impacts were generally identified at or below the groundwater table; petroleum-related VOCs and SVOCs were not detected above CU SCOs in the soil samples collected from these borings.
- SVOCs and metals were detected in soil samples at a concentrations above CU and/or IU SCOs in one or more boring. Generally, concentrations were consistent with historic fill in New York City and are not indicative of a point source or release. Concentrations of SVOCs above IU SCOs identified in SB07_8-9 may be attributed to historical site operations or historic fill quality.
- VOCs were not identified in soil about CU and/or IU SCOs; however, MTBE was identified in monitoring wells site-wide, with concentrations exceeding the NYSDEC TOGS SGVs in up-gradient monitoring well MW04. Select petroleum-related VOCs were also identified in monitoring well MW02 above the NYSDEC TOGS SGVs. Petroleum-related VOCs in groundwater may be attributed to historical on-site operations.
- SVOCs were identified in one monitoring well, MW03, above the NYSDEC TOGS SGVs. These exceedances are likely the result of entrained sediment in groundwater derived from historic fill.
- Total antimony, arsenic, iron, lead, magnesium, manganese, and sodium and dissolved iron, magnesium, manganese and sodium were detected in groundwater at a concentrations exceeding TOGS SGVs. Detections of iron, magnesium, manganese and sodium are naturally-occurring and the observed concentrations are not indicative of groundwater contamination. Because dissolved antimony, arsenic, and lead were not identified in groundwater at concentrations greater than the SGV, detections of these total metals in groundwater are likely the result of entrained sediment in groundwater derived from historic fill.

6.0 LIMITATIONS

This report was prepared expressly for Bay Crane Service of New York, for the property located at 57-00, 57-05, 57-57 and 58-20 47th Street, in Maspeth, Queens, New York, and for the objectives defined herein. Langan cannot assume responsibility for the use of this report for any property other than the specific site addressed in this report, or by any third party without specific written authorization from Langan.

The conclusions and opinions provided in this report are based on subsurface conditions ascertained from the analysis of a limited number of samples. Actual conditions encountered may differ substantially from those presented herein and should be brought to our attention whereby we may determine how such changes may affect our conclusions and opinions.

Notes provided on Page 2.
Concentrations above Restricted Use Commercial SCOs are bolded.
Concentrations above Restricted Use Industrial SCOs are shaded.

Table 2
Phase II Environmental Site Investigation
Soil Sample Analytical Results Summary

57-00, 57-05, 57-57 and 58-20 47th Street
Maspeth, Queens, New York
Langan Project No.: 17068701

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Restricted Use Commercial and Restricted Use Industrial Soil Cleanup Objectives (SCO).
2. Only detected analytes are shown in the table.
3. Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenc (p-cresol).
4. Detected analytical results above Restricted Use Commercial are bolded.
5. Detected analytical results above Restricted Use Industrial SCOs are shaded.
6. Analytical results with reporting limits (RL) above the lowest applicable criteria are italicized.
7. ~ = Regulatory limit for this analyte does not exist
8. bgs = below grade surface
9. mg/kg = milligrams per kilogram
10. % = percent

Qualifiers:

D = The concentration reported is a result of a diluted sample.
E = The result is estimated and cannot be accurately reported due to levels encountered or interferences.
J = The analyte was detected above the Method Detection Limit (MDL), but below the RL; therefore, the result is an estimated concentration.
U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
B = The analyte was found in the associated analysis batch blank.

Notes:
1. Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water (herein collectively referenced as "NYSDEC SGVs").
2. Only detected analytes are shown in the table.
3. Detected analytical results above NYSDEC SGVs are bolded and shaded.
4. Analytical results with reporting limits (RL) above NYSDEC SGVs are italicized.
5. ~ = Regulatory limit for this analyte does not exist
6. µg/l = micrograms per liter
7. ND = Not detected

Qualifiers:
D = The concentration reported is a result of a diluted sample.
J = The analyte was detected above the Method Detection Limit (MDL), but below the RL; therefore, the result is an estimated concentration.
U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.
B = The analyte was found in the associated analysis batch blank.

ORDER ON CONSENT

DEC FILE NO. R2-20210416-53

Jurisdiction

1. The Department of Environmental Conservation ("the Department" or "NYSDEC") is a department of the state of New York ("the State") with authority under section 3-0301 of the Environmental Conservation Law ("ECL") to enforce the environmental laws of the State and the rules, regulations and orders issued pursuant to that authority.

2. Pursuant to Article 15 of the ECL and Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York ("NYCRR") Part 608, the Department has administrative jurisdiction over and is responsible for regulating the building of structures in, on, or above waters of the State and the placement of fill in the navigable waters of the State or wetlands adjacent thereto.

3. The Department is also responsible for the management of tidal wetlands and adjacent areas of the State and thus regulates, among other activities, the placement of fill and other materials or structures therein by requiring permits for these of activities pursuant to ECL Article 25 and 6 NYCRR Part 661.

4. Furthermore, the Department is responsible for the administration and enforcement of laws and regulations pertaining to the abatement and prevention of pollution of state waters pursuant to Article 17 of the ECL and 6 NYCRR Part 750.

5. The Department has jurisdiction over the abatement and prevention of pollution to the waters of the State pursuant to Article 17 of the ECL and 6 NYCRR Part 750, *et seq.* This jurisdiction also authorizes NYSDEC, as a State agency with an approved program per Sections 318, 402 and 405 of the federal Clean Water Act ("CWA"), 33 U.S.C. Section 1251, *et seq.*, and its implementing regulations under 40 C.F.R. Part 123 to regulate the discharge of pollutants from point sources into the waters of the State in conformity with the CWA.

6. Pursuant to this authority to protect the waters of the State, the Department administers the State Pollutant Discharge Elimination System ("SPDES") permit program, ECL §17-0801, *et seq.* In general, the SPDES program prohibits any discharge of pollutants to the waters of the State without a permit establishing pollutant limitations and treatment requirements. SPDES permits set certain effluent limitation parameters ("parameters"), determined according to ECL §17-0809 and 6 NYCRR §750-1.11, in keeping with water pollution control mandates and consistent with meeting water quality standards ("WQS"). Those conditions address not only the allowable range of parameters for discharge of pollutants to the waters of the State, but also the

manner in which the permittee is to operate, maintain, monitor, and report on its regulated facilities and activities.

7. The Department further has jurisdiction over the transportation, storage, treatment, and disposal of solid waste under Articles 27 and 71 of the ECL and Part 360 of 6 NYCRR. NYS ECL §27-0703 authorizes NYSDEC to adopt and promulgate, amend and repeal rules and regulations governing the operation of SWMFs. Pursuant to §27-0703, NYSDEC promulgated 6 NYCRR Parts 360, 361, 362, 363, and 365 governing the operation of SWMFs, effective November 4, 2017. NYCRR 360.4(f), as the transition rule applicable to a facility registered under the previously promulgated Part 360 in effect prior to November 4, 2017 (generally, as "Prior 360") that now requires a permit under 6 NYCRR Part 360, requires that such facilities must continue to operate in compliance with the conditions of the previously issued registration until a SWMF permit is issued by the Department. Any facility operating under Prior 360 Registration must comply with all applicable regulations under Prior 360. Therefore, all references in this order to 6 NYCRR Part 360 are to Prior 360.

Respondents

8. Respondent Pebble Lane Associates, Inc. (hereinafter "Pebble Lane") is a foreign limited liability company with a mailing address at 1218 Central Avenue, Suite 100, Albany, NY 12205 and was a lessee of Queens County, Tax Block 2601, Lots 1 and 6.

9. Respondent Emilio Lamanna is a corporate officer of Respondent Pebble Lane, who at all pertinent times has been involved in the day-to-day business activities of Pebble Lane, including those that gave rise to the violations. Respondent Emilio is also the co-owner of Queens County, Tax Block 2601, Lot 1.

10. Respondent Rossana Bortone (hereinafter "Bortone") is a corporate officer of Respondent Pebble Lane, who at all pertinent times has been involved in the day-to-day business activities of Pebble Lane, including those that gave rise to the violations.

11. Respondent Mary Jean Lamanna (hereinafter "Mary Jean") is a corporate officer of Respondent Pebble Lane, who at all pertinent times has been involved in the day-to-day business activities of Pebble Lane, including those that gave rise to the violations.

12. Respondent 57-00 Maspeth Avenue, LLC (hereinafter "57-00 Maspeth Ave LLC") is a domestic limited liability company with a mailing address at 57-05 47th Street, Maspeth, NY 11378. 57-00 Maspeth Ave is the owner of Queens County, Tax Block

2601, Lot 6.

13. Respondent Sabatino Lamanna is an individual who until November 2020 was the owner of Queens County, Tax Block 2601, Lot 1, together with Respondent Emilio Lamanna.

14. Respondent RL Family Property Owner LLC is a domestic limited liability company with an address at 248-22 Brookville Boulevard, Rosedale, NY 11422.

15. Respondent EL Family Property Owner LLC is a domestic limited liability company with an address at 248-22 Brookville Boulevard, Rosedale, NY 11422.

16. Respondent SLMJL Family Property Owner LLC is domestic limited liability company with an address at 248-22 Brookville Boulevard, Rosedale, NY 11422.

Site

17. The "Site," as the term is used in this Order, extends over two commercial waterfront parcels identified as Queens County Tax Block 2601, Lots 1 and the northern portion of Lot 6, as well as the area immediately adjacent thereto. Specifically, the Site encompasses the portion of the parcels that has been used for an aggregate facility as depicted in Figure 1, below:

Figure 1: The Site (Lot 1 and p/o Lot 6), facing east

18. The mailing address for Queens County Tax Block 2601 Lot 1 is 58-20 47th Street,

Maspeth, NY 11378.

19. The mailing address for Queens County Tax Block 2601 Lot 6 is 57-00 47th Street, Maspeth, NY 11378.

20. Respondent 57-00 Maspeth Ave LLC acquired Lot 6 on April 30, 1998.

21. By deed dated November 13, 2020, Respondent 57-00 Maspeth Avenue, LLC conveyed titled to Lot 6 to Respondents RL Family Property Owner LLC, EL Family Property Owner LLC, and SLMJL Family Property Owner LLC, each holding 1/3 of the undivided interested in Lot 6 as tenants in common.

22. Respondents Emilio Lamanna and Sabatino Lamanna acquired Lot 1 on December 31, 2008, and conveyed the lot by deed dated November 13, 2020, to EL Family Property Owner LLC and SLMJL Family Property Owner LLC.

23. The Site abuts, and a portion of the Site extends into, Newtown Creek, a navigable water of the State, which at the Site is mapped as a regulated tidal wetland on official tidal wetlands maps #590-506 and #590-508.

24. Portions of the Site are mapped as high marsh area and littoral zone, both areas that are protected and regulated under articles 15 and 25 of the ECL.

The 2009 Consent Order

25. On April 30, 2009, under file numbers R2-20061227-560 and R2-20090331-188, DEC entered into an order on consent ("the 2009 Order") with respondents Pebble Lane Associates, Inc.; Emilio Lamanna; Mary Jean Lamanna; Rossana Bortone; Sabatino Lamanna; and 57-00 Maspeth Avenue, LLC to address multiple violations at the Site involving ECL Art. 15, 17, 25, and 27 and the corresponding regulations.

26. Paragraph I of the 2009 Order required Pebble Lane Associates, Inc.; Emilio Lamanna; Mary Jean Lamanna; Rossana Bortone; Sabatino Lamanna; and 57-00 Maspeth Avenue, LLC to impose the obligation to comply with the 2009 Order onto any tenant, lessee or transferee and to provide DEC with any contract of sale or lease.

27. The 2009 Order required, among numerous other compliance activities, the development and implementation of a Best Management Practices Plan, the restoration of the wetland on the Site, the installation of a vegetated buffer area, and the relocation of the commercial operation on the Site pursuant to a tidal wetlands permit application the respondents to the 2009 Order were supposed to submit and complete.

28. On May 1, 2009, Respondents Emilio Lamanna and Sabatino Lamanna leased lot 6 to Pebble Lane Associates, LLC, a foreign limited liability company registered with the New York State Department of State on May 7, 2009, and a subsidiary of U.S. Concrete Inc., a corporation headquartered in Texas.

29. Also on May 2, 2009, 57-00 Maspeth Avenue LLC leased a portion of lot 1 to Pebble Lane Associates, LLC.

30. In violation of the 2009 Order, Respondents did not provide DEC with either lease.

31. Based on the lease agreement, Pebble Lane Associates, LLC and New York Sand & Stone LLC owned and operated a solid waste registration facility and aggregate facility on the Site but never obtained a tidal wetlands permit for their facility.

32. On or before September 17, 2012, a new concrete wall was installed at the northwest portion of the Site in the regulated tidal wetlands area without a DEC permit.

33. In violation of the 2009 Order, Respondents did not provide DEC with the sales or transfer agreements on which the November 13, 2020 deeds referenced in paragraphs 21 and 22, above, are based.

Applicable Law

34. ECL §15-0503(1)(b) and 6 NYCRR Part 608 prohibit the construction, placement, or expansion of any dock, wharf, platform, or other structure in, on, or above waters without a NYSDEC permit.

35. ECL §15-0107(4) defines “waters” to include, among other water bodies, “estuaries, marshes, inlets, canals, the Atlantic Ocean within the territorial limits of the state of New York, and all other bodies of surface or underground water, natural or artificial, inland or coastal, fresh or salt, public or private, which are wholly or partially within or bordering the state or within its jurisdiction.”

36. ECL §15-0505 and 6 NYCRR Part 608 prohibit the excavation and placement of fill in the navigable waters of the State or in marshes, estuaries, tidal marshes, and wetlands that are adjacent to and contiguous at any point to any of the navigable waters of the State and that are inundated at mean high water level or tide, without a permit from the NYSDEC.

37. ECL §71-1107 provides for a civil penalty of up to five thousand dollars ($5,000) for

each violation of section 15-0505 as well as criminal sanctions and injunctive relief.

38. ECL §71-§1127 provides that any person who violates or fails to comply with any rule, regulation, determination or order of the department under ECL Art. 15 shall be liable for a civil penalty of not more than $2,500 for each such violation and an additional civil penalty of not more than $500 for each day during which such violation continues.

39. ECL §17-0501 and 6 NYCRR §703.1 *et seq.* prohibit any discharge into the waters of the state that shall cause or contribute to a condition in contravention of the State's Surface Water and Groundwater Quality Standards and Groundwater Effluent Limitations.

40. Newtown Creek at the Site is categorized as Class SD saline surface water pursuant to 6 NYCRR §890.6 item 54.

41. Pursuant to 6 NYCRR §703.2 a discharge into a Class SD surface water must not increase turbidity in a manner that causes a substantial visible contrast to natural conditions.

42. ECL §17-0803 and 6 NYCRR §750-1.4 prohibit any discharge into the waters of the state not permitted by the provisions of Article 17 of the ECL, the rules and regulations adopted or applicable pursuant thereto, the Federal Water Pollution Control Act, or provisions of a permit issued pursuant to ECL Article 17, including General Permit GP-0-15-002.

43. Pursuant to 40 C.F.R. 122.26(b)(15)(i) the term "construction activities" requiring coverage under General Permit GP-0-15-002 includes clearing, grading, and excavating that result in land disturbance of equal to or greater than one acre.

44. ECL §17-0503(2) provides that "[g]arbage, cinders, ashes, oils, sludge or refuse of any kind shall not be thrown, dumped or permitted to run into the waters of the marine district."

45. Pursuant to ECL § 13-0103, the marine district encompasses the waters of the Atlantic Ocean within three nautical miles from the coast line and all other tidal waters within the state.

46. ECL 71-1929 provides for a civil penalty of up to thirty-seven thousand five hundred dollars ($37,500) per day for each violation of titles 1 through 11 inclusive and title 19 of

Article 17, or the rules, regulations, orders, or determinations of the Commissioner promulgated thereto.

47. ECL §25-0401 and 6 NYCRR § 661.8 prohibit regulated activities in a tidal wetland or regulated tidal wetland adjacent area without a permit from NYSDEC.

48. 6 NYCRR § 661.4(ee)(1) defines "regulated activity" to encompass, among other activities,

a. "any form of [...] excavation or removal, either directly or indirectly, of soil, mud, sand, shells, gravel or other aggregate;"

b. "any form of dumping, filling or depositing, either directly or indirectly, of any soil, stones, sand, gravel, mud, rubbish or fill of any kind;"

c. "the erection of any structures or construction of any facilities or roads, the driving of any pilings or placing of any other obstructions, whether or not changing the ebb and flow of the tide;"

d. "any form of pollution;"

e. "any portion of a subdivision of land located in any tidal wetland or adjacent area;" and

f. "any other new activity within a tidal wetland or on an adjacent area which directly or indirectly may substantially alter or impair the natural condition or function of any tidal wetland."

49. 6 NYCRR § 661.4(gg) defines the term "subdivision" to include "any grading, road construction, installation of utilities or other improvements or any other land use and development preparatory or incidental to any such division."

50. ECL § 71-2503 authorizes the imposition of a civil penalty of up to ten thousand dollars ($10,000) per day for each violation of Article 25 as well as injunctive relief.

51. ECL § 27-0707 and 6 NYCRR § 360-1.5(a) prohibit the disposal of solid waste except at a properly authorized disposal facility or one that is exempt from the requirements of Part 360.

52. Section 360-1.7(a) of 6 NYCRR states that no person shall construct, operate,

modify, or expand a solid waste management facility except in accordance with a valid permit issued by the Department.

53. Section 360-1.7(a)(2)(iv) of 6 NYCRR provides that new solid waste management facilities must not be constructed or operated within the boundary of a regulated wetland.

54. Section 360-1.14(b)(1) of 6 NYCRR provides that solid waste shall be prevented from entering surface and/or groundwater.

55. Section 360-16.1(c) of 6 NYCRR states that no person shall construct or operate a facility used to receive, treat or process construction and demolition debris ("C&D debris") without first having obtained a permit to do so from the department.

56. Section 360-16.4(f)(3) of 6 NYCRR states that processed or unprocessed C&D debris storage piles shall not exceed 20 feet in height, and the area of the storage pile at the base shall not exceed 5,000 square feet.

57. Pursuant to ECL §71-2703(1), any violation of 6 NYCRR Part 360 or any order issued thereunder subjects the violator(s) to a civil penalty of up to $7,500 for each violation and an additional penalty of $1,500 for each day the violation continues, as well as to criminal penalties and injunctive relief. Violations related to the laws and regulations involving waste transporter permits or solid waste management and resource recovery facilities may be sanctioned by a civil penalty of up to $22,500 if they involve the release of ten cubic yards or more of solid waste in the environment. If construction and demolition debris is involved, an additional civil penalty of up to $15,000 per day for each violation may be imposed pursuant to ECL § 71-2703(3).

58. By failing to comply with the 2009 Order, by operating or causing the operation of the registration facility in the tidal wetland and adjacent area without permit, by installing an additional wall structure, Respondents violated ECL §15-0503(1)(b), 71-1929, 25-0401, and 71-2703(1) as well as the corresponding regulations of Part 608, 703, 661, and 360.

59. In settlement of the Respondents' civil liability for the aforesaid violations Respondents affirmatively waive their rights to notice and hearing in the manner provided by law and consent to the payment of the sums specified below, and the issuance and entry of this Order. Respondents agree to be bound by the terms, provisions and conditions contained herein.

NOW, having considered this matter and being duly advised, it is ORDERED:

I. Respondents shall carry out their respective obligations set forth in the attached Schedule of Compliance ("Schedule A") which is hereby made part of this Order. Unless otherwise specified in this Order, Respondents shall certify in writing completion of the respective activities for which they are responsible within fifteen (15) days of the completion of each activity. Should Respondents sell, transfer, or otherwise convey the subject property or any ownership or controlling interest therein, they shall impose the obligation to comply with said Schedule and all other terms and conditions of this Order on the purchaser, successor, or assign by contract. Respondents shall submit to NYSDEC a copy of any contract of sale of the premises or of a controlling interest therein within five days of the execution thereof or at least thirty days prior to any such conveyance or sale, whichever shall be earlier.

II. This Order on Consent, once it is signed by the Respondents and their signatures have been notarized, shall be returned to

NYSDEC Region 2
Attention: Udo Drescher
Office of General Counsel
47-40 21st Street, Fl. 4
Long Island City NY 11101-5401

along with any pertinent submissions.

III. Civil Penalty: With respect to the aforesaid violations, Respondents shall be jointly and severally liable to pay a civil penalty in the amount of eight hundred twenty-four thousand dollars ($824,000) to be paid as follows:

A. Half of the assessed civil penalty, that is, four hundred twelve thousand dollars ($412,000), shall be paid in four equal monthly installments as follows:

1. One hundred three thousand dollars ($103,000) shall be due and payable within thirty (30) days after the Department's execution of this Order.

2. One hundred three thousand dollars ($103,000) shall be due and payable within sixty (60) days after the Department's execution of this Order.

3. One hundred three thousand dollars ($103,000) shall be due and payable within ninety (90) days after the Department's execution of this Order.

4. One hundred three thousand dollars ($103,000) shall be due and payable within one hundred twenty (120) days after the Department's execution of this Order.

All payments shall be made by electronic payment at http://www.dec.ny.gov/about/61016.html#On-Line or by check made payable to the order of the "New York State Department of Environmental Conservation," with the enclosed invoice and the Case Number of this Order on Consent "R2-20210416-53" written in the memo section of the check, which shall be sent to the Department of Environmental Conservation, Division of Management and Budget Services, 625 Broadway, 10th Floor, Albany, NY 12233-4900.

B. The remainder of the penalty in the amount of four hundred twelve thousand dollars ($412,000) shall be suspended, provided Respondents strictly and timely comply with the requirements of this Order and the attached Schedule of Compliance.

C. The suspended portion of the civil penalty shall become payable by all Respondents, jointly and severally, immediately upon service of a Notice of Non-Compliance to any Respondent.

D. Default of Payment. The penalty assessed in the Order constitutes a debt owed to the State of New York. Failure to pay the assessed penalty, or any part thereof, in accordance with the schedule contained in the Order, may result in referral to the New York State Attorney General for collection of the entire amount owed (including the assessment of interest, and a charge to cover the cost of collecting the debt), or referral to the New York State Department of Taxation and Finance, which may offset any tax refund or other monies that may be owed to you by the State of New York by the penalty amount. Any suspended or stipulated penalty provided for in this Order will constitute a debt owed to the State of New York when and if such penalty become due.

IV. Permit Requirement/Schedule of Compliance: Respondents as well as their successors and assigns shall apply for any required NYSDEC permits for future work on the site to be conducted by or on behalf of Respondents and obtain them before doing any such work, except that a NYSDEC permit shall not be required for the performance of the work described in the annexed Schedule of Compliance.

V. Access: For the purpose of monitoring compliance with this Order and with applicable provisions of the ECL and regulations promulgated thereunder, duly authorized representatives of NYSDEC shall be permitted access to the Site and to relevant records without prior notice during reasonable hours at such times as may be desirable or necessary in order to inspect and perform tests the Department deems appropriate to determine the status of the property and Respondent's compliance. Such permitted access to ensure compliance shall include overhead flights by Department owned and operated remotely piloted aircraft systems upon reasonable notice to Respondent.

VI. Violation of this Order: In the event that NYSDEC determines that there is a violation of this Order on Consent, the NYSDEC reserves the right to initiate actions based upon the violation(s) of this Order on Consent and also to seek penalties for such additional violations (including continued violations) that occur after the date of this order.

VII. Binding Effect: The provisions of this Order shall be deemed to bind the Respondents and the Respondents' successors and assigns, including but not limited to any successor in title to the Site or any interest therein, receivers, trustees in bankruptcy, and all persons, officers, directors, employees, or agents acting under or for Respondents.

VIII. Indemnification: Respondents shall indemnify and hold harmless New York State, NYSDEC, and any of their employees, agents, or contractors for all claims, actions, damages, and costs resulting from Respondents' acts in fulfillment or attempted fulfillment of the provisions of this Order.

IX. Settlement and Reservation of Rights.

A. Upon completion of all obligations created in this Order, this Order settles only all claims for civil and administrative penalties concerning the violations described in this Order against Respondents and their successors (including successors in title) and assigns.

B. Except as provided in Subparagraph IX(A) of this Order, nothing contained in this Order shall be construed as barring, diminishing, adjudicating or in any way affecting any of the civil, administrative, or criminal rights of the Department or of the Commissioner or his designee (including, but not limited to, nor exemplified by, the rights to recover natural resources damages and to exercise any summary abatement powers) or authorities with respect to any party, including Respondent.

C. NYSDEC reserves the right to require the Respondents to undertake any additional measures required by law to protect human health and the environment, subject to Respondents' procedural rights under the State Administrative Procedures Act and NYSDEC Uniform Procedures Regulations at 6 NYCRR Parts 620 to 622.

X. Communication: All reports, submissions, and certifications herein required shall be made to the New York State Department of Environmental Conservation, Region 2, 47-40 21st Street, Long Island City, NY 11101, Attn: Justin Falls, Marine Resources Program. A copy of each shall also be sent to Udo M. Drescher, Asst. Regional Attorney, at the same address or by email at udo.drescher@dec.ny.gov. The NYSDEC file number appearing on the first page of this Order shall be endorsed on the face of each such submission.

XI. Miscellaneous:

A. No changes in this Order shall be binding upon NYSDEC unless such changes are authorized in writing by the NYSDEC Region 2 Director.

B. The provisions of this Order constitute the complete and entire Order issued to Respondents concerning resolution of the violations identified in this Order. No term, condition, understanding or agreement purporting to modify or vary any term hereof shall be binding unless made in writing and subscribed by the party to be bound. No informal oral or written advice, guidance, suggestion, or comment by the Department regarding any report, proposal, plan, specification, schedule, comment, or statement made or submitted by the Respondent shall be construed as relieving the Respondents of their obligations to obtain such formal approvals as may be required by this Order.

C. This Order resolves only those violations specifically described herein and does not relieve Respondent of liability for any acts, omissions, or

violations not articulated herein, nor does it relieve Respondent of any liability pursuant to the jurisdiction of any other local, state, or federal agency.

XII. Force Majeure: If a Respondent cannot comply with a deadline or requirement of this Order on Consent, because of natural disaster, epidemic or pandemic, war, terrorist attack, strike, riot, judicial injunction, or other, similar unforeseeable event which was not caused by the negligence or willful misconduct of Respondent and which could not have been avoided by the Respondent through the exercise of due care, Respondent shall apply in writing to the Department within a reasonable time after obtaining knowledge of such fact and request an extension or modification of the deadline or requirement. Respondent shall include in such application the measures taken by Respondent to prevent and/or minimize any delays. Failure to give such notice constitutes a waiver of any claim that a delay is not subject to penalties. Respondent shall have the burden of proving that an event is a defense to a claim of non-compliance with this Order on Consent pursuant to this subparagraph.

XIII. Effective Date and Termination: The effective date of this Order shall be the date upon which it is signed on behalf of NYSDEC. This Order shall terminate when all requirements imposed by this Order will have been completed to the Department's satisfaction.

DATED: Long Island City, New York

SCHEDULE OF COMPLIANCE (SCHEDULE A)

RESPONDENTS: PEBBLE LANE ASSOCIATES, INC.; EMILIO LAMANNA; MARY JEAN LAMANNA; ROSSANA BORTONE; 57-00 MASPETH AVENUE, LLC; SABATINO LAMANNA; RL FAMILY PROPERTY OWNER, LLC; EL FAMILY PROPERTY OWNER, LLC; AND SLMJL FAMILY PROPERTY OWNER, LLC

NYSDEC FILE NO. R2-20210416-53

1. **Within sixty (60) days after the effective date of this Order** Respondents must:

   1.1. Close the solid waste operation on the Site by removing all waste material and submitting to the Department's Division of Materials Management, 47-40 21st Street, 4th Floor, Long Island City, NY 11101-5407, a completed and signed Inactive Solid Waste Management Facility or Activity Notification Form together with a closure report which must include

   1.1.1. a narrative that explains that the facility is closed - the attached form (Attachment 1) should be completed and included, which provides for termination of the facility registration;

   1.1.2. the date when the facility ceased acceptance of solid waste;

   1.1.3. a statement that all solid wastes and solid waste processing/handling equipment specific to the facility have been removed from the facility;

   1.1.4. an explanation that the closure will "minimize the need for further maintenance or corrective actions and to prevent or remedy adverse environmental or health impacts such as, but not limited to, contravention of surface water and groundwater quality standards, gas migration, odors and vectors."

   1.1.5. a final survey documenting that materials have been removed; and

   1.1.6. photographs that document the conditions at the time of closure, depicting the entire area that was utilized for the operation of the facility and taken in such sequence, frequency, and clarity that a compliance determination can be made using he photographs. The photos must be accompanied by a photo map, showing the location and direction of each photo.

The form and report must be signed by a properly authorized, competent representative of the facility.

1.2. Complete a solid waste management facility annual report for activities conducted during calendar year 2021, using Attachment 2, and submit it via email to swmfannualreport@dec.ny.gov and SWMFannualreportR2@dec.ny.gov.

1.3. Schedule an inspection by Department Division of Materials Management staff to occur after all solid waste and facility equipment have been removed from the facility. Respondents shall schedule such inspection by contacting Udo Drescher at udo.drescher@dec.ny.gov.

2. **Within sixty (60) days after the effective date of this Order** Respondents must implement the wetlands restoration plan, identified as "Consent Order Site Plan" Drawing A-001.00 – A-003.00, prepared by Sheldon L. Reich, P.C., Consulting Engineers & Architects, dated 06.08.18 and last revised 04.19.21, a reduced copy of which is attached hereto as Attachment 3.A – 3.C, removing all aggregate material, structures and structural elements (including, but not limited to, concrete blocks, the concrete wall[s], and any concrete blocks that have tumbled down on the shoreline) from the tidal wetland and buffer area and creating a functioning high marsh area. .

3. **The high marsh area must be planted with a mixture of the following** grasses and shrubs:

3.1. The shrubs must consist at least six hundred (600) shrubs, consisting of *Iva frutescens* and *Baccharis halimifolia,* which must be at least 2.5 feet (thirty inches) tall at the time of planting and must be planted three feet (3 ft) on center.

3.2. Grasses must include one thousand (1,000) grass culms of either Distichlis spicata or Spartina patens but may also include Panicum virgatum, Scirpus punges and Juncus gerardii. The grasses must be planted three feet (3') on center and must be 2.3 feet (twenty-eight inches) tall at the time of planting.

4. **In the buffer planting area**, landward of the high marsh area, one thousand one hundred (1,100) plants comprised of a mixture of at least two (2) but possibly more of the following plant species must be planted and should be shown on the plan(s)): *Ammophila breviligulata, Andopogon virginicus, Cares Pensylvanica , Panica virgatum , Schizachyrium scoparium or Sorghastrum nultans.* These must be planted three feet (3') on center and must be 2.3 feet (twenty-eight inches) tall at the time of planting.

5. All plantings must be arranged in a random and naturalistic arrangement.

6. The plantings must be monitored for five (5) years following planting.

   6.1. If during the monitoring period the survival rate or areal coverage within the respective planting area drops below 85%, dead plants must be replaced and the planting area must be monitored again until an 85% survival rate is accomplished over at least two (2) consecutive growing seasons.

   6.2. An annual inspection report must be submitted to the Department no later than December 31 of each year during the monitoring period(s). The reports must be signed by a party taking responsibility for the reports' accuracy on behalf of Respondents and must include:

      6.2.1. Written observations of the condition of the plants as well as a description of percent survival, and

      6.2.2. Color photographs of such size, detail and sharpness and taken in such sequence that the photos clearly and completely depict the monitored area in a manner that a compliance determination can be made exclusively by using those photographs.

7. **During** the removal and planting activities, best management practices (BMPs) in the form of silt fencing and hay bales or similarly effective methods must be deployed and maintained in good working condition to prevent soil and other material from eroding into the tidal wetland and from the planting area into Newtown Creek. These BMPs must be maintained until a vegetative cover has formed that prevents erosion.

8. **Within two (2) weeks after the effective date of this Order** Respondents must record in the property records for lots 1 and 6 a restrictive declaration, consistent with the draft attached as Attachment 4, having inserted and missing information and having the document signed by the appropriate, authorized representatives of the lot owners and having those signatures properly notarized prior to recording. The purpose of the restrictive declaration is to identify and protect the tidal wetland and vegetated buffer area as such against incursions by current or future owners, tenants, and occupants. Prior to recording, Respondents must submit both declarations with the respective attachments to the Department (udo.drescher@dec.ny.gov) for review and approval. The documents must be prepared in such a manner that the content of the declarations and the attachments, including the fine print, will be legible to an average viewer of New York City's ACRIS system.

Attachment 4. A (Declaration for Lot 1) Page 1 of 5

D E C L A R A T I O N

THIS DECLARATION is made by EL Family Property Owner LLC and SLMJL Family Property Owner LLC, whose address is 248-22 Brookville Boulevard, Rosedale, NY 11422, hereinafter jointly called the "Declarant."

W I T N E S S E T H :

WHEREAS the Declarant is the owner of certain real property located in Queens County, City and State of New York, Queens County Tax Map Block 1, Lot 1, which real property is described in the metes and bounds description annexed hereto as "Attachment A" and which real property is hereinafter referred to as the "Subject Property;" and

WHEREAS the Subject Property is within the jurisdiction of the New York State Department of Environmental Conservation ("NYSDEC" or "Department")) under the article 25 of the New York State Environmental Conservation Law (the Tidal Wetlands Act") because it contains regulated tidal wetland and/or regulated wetland adjacent area; and

WHEREAS, Declarant has entered into an order on consent with NYSDEC under NYSDEC File number R2-20210416-53 (the Consent attached hereto as "Attachment B"), which requires among other things the creation and protection of the regulated tidal wetland on the Subject Property, which includes an area mapped as high marsh on the official tidal wetland inventory as shown on maps #590-506 and #590-508, and a thirty foot (30') wide vegetated buffer around that high marsh area partially on the Subject Property; and

WHEREAS, Declarant represents and warrants that no restriction of record on the use of the Subject Property, nor any present or presently existing future estate or interest in the Subject Property nor any right, obligation, covenant, limitation, or encumbrance of any kind precludes, prohibits or potentially, the imposition of the restrictions, covenants, obligations, easements and agreements of this Declaration or the development of the Subject Property in accordance therewith.

NOW, THEREFORE, Declarant does hereby declare that the Subject Property shall only be held, sold, conveyed and occupied subject to the following restrictions, covenants, obligations, and agreements, which are for the purpose of maintaining and protecting the tidal wetland and area adjacent thereto for the benefit of the citizens of the State of New York generally and for the benefit specifically of the owners and/or occupants of property

DRAFT

Attachment 4. A (Declaration for Lot 1) Page 2 of 5

identified as Queens County Tax Block 2601, Lot 1, which maintenance and protection is in mitigation of the impacts to such regulated wetland and adjacent area from unauthorized filling and the extended duration of unauthorized commercial activities on the Subject Property, which restrictions, covenants, obligations, and agreements shall run with such real property, binding every party having any right, title, or interest in the Subject Property or any part thereof and binding all heirs, executors, administrators, successors, and assigns.

1. Declarant hereby covenants and agrees to develop and maintain in perpetuity as high marsh and vegetated buffer area the portion of the Subject Property depicted as such on, and in accordance with, the site plan identified as "Order Site Plan" Drawing A-001.00 – A-003.00, prepared by [illegible] Consulting Engineers & Architects, dated 06.08.18, and last revised 0[illegible]21, a copy of which is appended hereto as Attachment [illegible].

2. Declarant hereby covenants and agrees to further restrict and prohibit any person or party from performing, ordering, agreeing, any activity, change in grade, or change in vegetation [illegible] said high marsh and vegetated buffer area other than required pursuant to [illegible] Order. Declarant further covenants and agrees to restrict and prohibit any person or party from performing, any regulated activity, as defined in Part 661 of Chapter Six of the Official Compilation of Rules and Regulations of the State of New York (and any successor regulation) on or within such high marsh and vegetated buffer area.

3. Declarant, its successors and assigns and future grantees of all or a portion of any interest in the Subject Property shall set forth these covenants, restrictions and declarations in any and all transfer documents and leases of the property and shall by the terms of such lease subject the transferee or lessee to the covenants and restrictions contained herein. Failure by Declarant, its successors or assigns to so comply with such transfers or leases shall not invalidate the automatic subjugation of the transferee or lessee to these covenants, restrictions and declarations.

4. Declarant shall include a copy of this Declaration, executed and affixed with the file stamp and seal of the Clerk of the City of New York, County of Queens, as part of any application pertinent to the Subject Property submitted to the Department of Buildings of the City of New York, or to any agency succeeding to said department's jurisdiction.

5. If any section, subsection, paragraph, clause, phrase, or provision of these covenants, restrictions, and agreements shall, by a court of competent jurisdiction, be adjudged illegal, unlawful, or invalid, or held to be unconstitutional, the same judgment shall not affect the validity of this Declaration as a whole or any other part or provision hereof other than the parts so adjudged.

Attachment 4. A (Declaration for Lot 1) Page 3 of 5

6. The provisions herein contained shall be enforceable by the Attorney General of the State of New York, by the Commissioner of the Department, or by such agencies or regulatory authorities having jurisdiction over the Subject Property, and/or over the Declarant, its successors, and/or occupants of the Subject Property currently identified as Queens County Tax Block 2601, Lot 1. The failure of any such party individually or collectively to enforce any of the covenants, restrictions, and/or agreements contained herein shall in no event be deemed a waiver of the right to do so thereafter.

7. Any violation of these restrictions, covenants and agreements shall cause the violator, in addition to any fines, penalties, and/or forfeitures prescribed by law, to pay for any and all reasonable legal fees and expenses incurred by any party in enforcing the covenants, restrictions, and agreements herein.

8. If the Declarant, its successors, and/or assigns at the time of any interest in the Subject Property shall fail to comply with the obligations hereunder within five (5) days after receipt of a notice from any party entitled to enforce this Declaration, stating the obligation not complied with, and stating that the obligation cannot be complied with within such five-day period but compliance has been commenced and is being diligently pursued, said five-day period shall be extended for such time as may be reasonably necessary to effectuate compliance], the party or parties entitled to enforce this Declaration may cure such non-compliance and may come upon the Subject Property with such workers and materials as may be reasonably required for effectuating such compliance any time after five (5) days following the giving of such notice by Declarant, its successors, and/or assigns, or future owners-in-interest. The owner, owners, lessees, occupants, or other parties-in-interest of the Subject Property shall pay to the party enforcing and effectuating such compliance with this Declaration all reasonable costs incurred in effectuating compliance, including court costs, legal fees, disbursements, and paralegal charges. The remedy set forth above shall not be exclusive and parties seeking to enforce such Declaration shall have all rights and remedies at law or in equity to do so. In the event any party or parties having the right to enforce such Declaration shall bring any action at law or in equity for enforcement, and such enforcement is granted, the party against whom such enforcement is sought shall pay all legal fees, court costs, and other expenses of the party or parties seeking to enforce such Declaration, and if not paid the same shall become a lien against the Subject Property.

9. Each of the covenants, restrictions, and agreements contained in this Declaration shall run with the land in perpetuity, binding the Declarant and its successors and/or assigns, and each shall be so construed.

10. Declarant recognizes that the Department is an interested party to this Declaration

Attachment 4. A (Declaration for Lot 1) Page 4 of 5

and consents to the enforcement by the DEC of the covenants, restrictions, and agreements contained in such Declaration by whatever means are appropriate.

11. This Declaration may be amended, modified, or canceled only with the express written approval and consent of the Commissioner of the Department, or the head of the agency succeeding to its jurisdiction. No other approval or consent shall be required or accepted from any public body, private person, or legal entity of any kind.

12. Declarant hereby covenants and agrees that it shall immedia[illegible] record this Declaration after execution by Declarant in the [illegible] Cler[illegible] of New York, Queens County, and Declarant shall ensu[illegible] at s[illegible] Decla[illegible] dexed against the Subject Property. Declarant further cov[illegible] nts [illegible] gree[illegible] e a copy of this Declaration as stamped, recorde[illegible] ed, [illegible] s a [illegible] f such Declaration by the Cit[illegible] ounty, to the Regional Permit Administrator for Region 2 ([illegible] Yo[illegible] tment. The Department shall also have the r[illegible] and record th[illegible] with the Clerk of the City of New York, Que[illegible]

THIS DECLARATION is made by RL Family Property Owner LLC, EL Family Property Owner LLC, and SLMJL Family Property Owner LLC (hereinafter collectively referred to as the "Declarant"), whose address is 248-22 Brookville Boulevard, Rosedale, NY 11422,

W I T N E S S E T H

WHEREAS the Declarant is the owner of certain real property located in the County, City and State of New York, Queens County, Tax Block 16, Lot 6, which real property is described in the metes and bounds description annexed hereto as "Attachment A" and which real property is hereinafter referred to as the "Subject Property;" and

WHEREAS the Subject Property is within the jurisdiction of the New York State Department of Environmental Conservation ("NYSDEC" or "Department")) under the article 25 of the New York State Environmental Conservation Law ("the Tidal Wetlands Act") because it contains regulated tidal wetland and regulated wetland adjacent area; and

WHEREAS, Declarant has entered into an agreement on consent with NYSDEC under NYSDEC File number R2-20210416-53 (the "Consent" attached hereto as "Attachment B"), which requires among other things the creation and protection of the regulated tidal wetland on the Subject Property, which includes an area mapped as high marsh on the official tidal wetlands inventory as shown on maps #590-506 and #590-508, and a thirty foot (30') wide vegetated buffer around that high marsh area partially on the Subject Property; and

WHEREAS, Declarant represents and warrants that no restriction of record on the use of the Subject Property, nor any present or presently existing future estate or interest in the Subject Property nor any right, obligation, covenant, limitation, or encumbrance of any kind precludes, prohibits or potentially, the imposition of the restrictions, covenants, obligations, easements and agreements of this Declaration or the development of the Subject Property in accordance therewith.

NOW, THEREFORE, Declarant does hereby declare that the Subject Property shall only be held, sold, conveyed and occupied subject to the following restrictions, covenants, obligations, and agreements, which are for the purpose of maintaining and protecting the tidal wetland and area adjacent thereto for the benefit of the citizens of the State of New York generally and for the benefit specifically of the owners and/or occupants of property

DRAFT

Attachment 4. B (Declaration for Lot 6) Page 2 of 6

identified as Queens County Tax Block 2601, Lot 6, which maintenance and protection is in mitigation of the impacts to such regulated wetland and adjacent area from unauthorized filling and the extended duration of unauthorized commercial activities on the Subject Property, which restrictions, covenants, obligations, and agreements shall run with such real property, binding every party having any right, title, or interest in the Subject Property or any part thereof and binding all heirs, executors, administrators, successors, and assigns.

1. Declarant hereby covenants and agrees to develop and m[illegible]in in perpetuity as high marsh and vegetated buffer area the portion of the Sub[illegible]roperty depicted as such on, and in accordance with, th[illegible] site[illegible]ider[illegible]Consent Order Site Plan" Drawing A-001.00 – A-003.00, [illegible]pare[illegible]She[illegible]ch, P.C., Consulting Engineers & Architects, dated 06[illegible]18, [illegible]st re[illegible] 04.19.21, a reduced copy of which is appen[illegible]ere[illegible]ment

2. Declarant hereby covenants and a[illegible]rees to [illegible]er re[illegible]prohibit any person or party from performi[illegible]rderi[illegible]g, agri[illegible]y, change in grade, or change in vegetati[illegible]said h[illegible]m[illegible]tated buffer area other than required pursua[illegible]mplia[illegible]er. Declarant further covenants and agrees to rei[illegible]d to [illegible] person or party from performing, any [illegible]d a[illegible]ity, as [illegible]Par[illegible]661 of Chapter Six of the Official Compilatio[illegible]Rule[illegible]d Reg[illegible]of the State of New York (and any successor regu[illegible]or [illegible]hin such hi[illegible]marsh and vegetated buffer area.

3. Declarant, its su[illegible]s ar[illegible]s al[illegible]ure grantees of all or a portion of any i[illegible]the [illegible]ct P[illegible]l set fo[illegible]n these covenants, restrictions and de[illegible]y and all transfe[illegible]eases of the property and shall by the terms of such leas[illegible]ject t[illegible]nsferee or lessee to the covenants and restrictions co[illegible]here[illegible]e fa[illegible]e Declarant, its successors or assigns to so c[illegible]sfers[illegible]ases[illegible]ot invalidate the automatic subjugation of the tran[illegible]sse[illegible]ese covenants, restrictions and declarations.

4. D[illegible]rant[illegible]inc[illegible]t copy of this Declaration, executed and affixed with the file [illegible]p a[illegible]of th[illegible]Clerk of the City of New York, County of Queens, as part of any [illegible]plicati[illegible]pertinent to the Subject Property submitted to the Department of Buildings[illegible]he City of New York, or to any agency succeeding to said department's jurisdiction.

5. If any section, subsection, paragraph, clause, phrase, or provision of these covenants, restrictions, and agreements shall, by a court of competent jurisdiction, be adjudged illegal, unlawful, or invalid, or held to be unconstitutional, the same judgment shall not affect the validity of this Declaration as a whole or any other part or provision hereof other than the parts so adjudged.

Attachment 4. B (Declaration for Lot 6) Page 3 of 6

6. The provisions herein contained shall be enforceable by the Attorney General of the State of New York, by the Commissioner of the Department, or by such agencies or regulatory authorities having jurisdiction over the Subject Property, and/or over the Declarant, its successors, and/or occupants of the Subject Property currently identified as Queens County Tax Block 2601, Lot 6. The failure of any such party individually or collectively to enforce any of the covenants, restrictions, and/or agreements contained herein shall in no event be deemed a waiver of the right to do so thereafter.

7. Any violation of these restrictions, covenants and agreements shall cause the violator, in addition to any fines, penalties, and/or forfeitures prescribed by law, to pay for any and all reasonable legal fees and expenses incurred by any party in enforcing the covenants, restrictions, and agreements herein.

8. If the Declarant, its successors, and/or assigns at the time of any interest in the Subject Property shall fail to comply with the obligations hereunder within five (5) days after receipt of a notice from any party entitled to enforce this Declaration, stating the obligation not complied with, and stating that the obligation cannot be complied with within such five-day period but compliance has been commenced and is being diligently pursued, said five-day period shall be extended for such additional time as reasonably necessary to effectuate compliance], the party or parties entitled to enforce this Declaration may cure such non-compliance and may come upon the Subject Property with such workers and materials as may be reasonably required for effectuating such compliance any time after five (5) days following the mailing of such notice by Declarant, its successors, and/or assigns, or future owners-in-interest. The owner, owners, lessees, occupants, or other parties-in-interest of the Subject Property shall pay to the party enforcing and effectuating such compliance with this Declaration all reasonable costs incurred in effectuating compliance, including court costs, legal fees, disbursements, and title search charges. The remedy set forth above shall not be exclusive of any other parties seeking to enforce such Declaration shall have all rights at law or equity to do so. In the event any party or parties having the right to enforce such Declaration shall bring any action at law or in equity for enforcement, and such enforcement is granted, the party against whom such enforcement is sought shall pay all legal fees, court costs, and other expenses of the party or parties seeking to enforce such Declaration, and if not paid the same shall become a lien against the Subject Property.

9. Each of the covenants, restrictions, and agreements contained in this Declaration shall run with the land in perpetuity, binding the Declarant and its successors and/or assigns, and each shall be so construed.

10. Declarant recognizes that the Department is an interested party to this Declaration

Attachment 4. B (Declaration for Lot 6) Page 4 of 6

and consents to the enforcement by the DEC of the covenants, restrictions, and agreements contained in such Declaration by whatever means are appropriate.

11. This Declaration may be amended, modified, or canceled only with the express written approval and consent of the Commissioner of the Department, or the head of the agency succeeding to its jurisdiction. No other approval or consent shall be required or accepted from any public body, private person, or legal entity of any kind.

12. Declarant hereby covenants and agrees that it shall immedia[illegible] record this Declaration after execution by Declarant in the [illegible] Cler[illegible]y of New York, Queens County, and Declarant shall ensu[illegible]at s[illegible]ecla[illegible]dexed against the Subject Property. Declarant further co[illegible]ants [illegible]gre[illegible]e a copy of this Declaration as stamped, recorde[illegible]d, [illegible]s a [illegible]f such Declaration by the Clerk of the Cit[illegible]ounty, to the Regional Permit Administrator for Region 2 ([illegible]Yo[illegible]tment. The Department shall also have the [illegible]and record th[illegible]with the Clerk of the City of New York, Que[illegible]

APPENDIX: OFFSET INFORMATION FORM

This form should be signed by any Respondent requesting a penalty payment schedule in an Order

** FORM TO BE DESTROYED AFTER PAYMENT IS MADE **

NYS Department of Environmental Conservation
Tax Information Form and Statewide Offset Program Notice

In reference to the debt to the State of New York
• memorialized in document number R2-20210416-53
• signed by Respondent _____

State agencies may refer past-due accounts to a private collection agency or the New York State Attorney General's Office. Further, Section 171-f of 'the State Tax Law authorizes State agencies to certify a past-due legally enforceable debt to the New York State Department of Taxation and Finance, for collection by offset of tax overpayments or other payments due from the State. In addition, State agencies are authorized to charge a collection fee, up to 22 percent of the outstanding debt; on accounts that are more than 90 days past due.

This form serves to notify you that the above referenced debt may be certified to the Department of Taxation and Finance for offset if not timely paid. The Department of Taxation and Finance is authorized, by law to collect your past-due debt through the offset of certain State and tax Refunds and other State payments.

You have the right to present written evidence, or to appear at a conference with a representative of this agency to present oral or written evidence in support of a defense to this certification. However, you may not challenge the underlying debt at that time, nor reargue any issue which was, or could have been previously heard.

Defenses that would be acceptable include (1) the debt has been paid, (2) you are not the person identified as the debtor in this notice, (3) the total amount owed is incorrect, (4) a deferred payment agreement is in effect and payments have been paid as agreed, (5) the debt has been discharged in bankruptcy, or (6) the debt is currently in bankruptcy.

Re: **Diesel Fuel Spill Remediation - Spill No. 13-06438**
Industrial Property
57-00 47th Street, Maspeth, New York

Dear Mr. Piper:

This letter summarizes recent spill remediation activities performed by Preferred Environmental Services (Preferred), in concert with Almar Supplies Inc. (Almar), to address a release of diesel fuel associated with New York State Department of Environmental Conservation (NYSDEC) Spill No. 13-06438. Spill No. 13-06438 was assigned on September 19, 2013 due to the identification of diesel fuel-contaminated pea-gravel, surrounding fill piping, during the removal of an out-of-service (OOS) 4,000-gallon single wall fiberglass Underground Storage Tank (UST) at the industrial property located at 57-00 47th Street, Maspeth, New York (Subject Property).

UST removal and subsequent remedial work was performed on September 19, 2013 by Almar, in conjunction with their Fire Department of New York-permitted tank removal contractor AARCO Environmental Services (AARCO), with environmental oversight provided by Preferred. All remedial work was performed in accordance with a verbal work scope provided to the NYSDEC representative (Mr. Ryan Piper) at the time of the UST removal/spill assignment. A photographic log is included as an attachment as well as a detailed Figures (**Figures 1-3**) to document the spill remediation.

Project Background

The former 4,000-gallon single wall fiberglass diesel fuel UST (listed as Tank No. 001 on the Petroleum Bulk Storage Permit 2-318744) had been reportedly out-of-service for approximately one year. The UST was reportedly installed in 1985 and was last successfully integrity tested via a five (5) year precision test on February 14, 2011 by Henrich/Dry As-A-Bone.

On July 30, 2013, the property owner received a violation from the City of New York Fire Department (FDNY) for "*the failure to perform a two (2) year functionality test of the leak detecting system protecting the motor fuel storage system*" of the 4,000 gallon diesel fuel UST. In lieu of re-testing, the leak detection system, the property owner voluntarily decided to remove the UST as it was no longer needed.

UST Removal and Diesel Fuel Spill Remediation

On September 19, 2013, Preferred, in conjunction with Almar and AARCO, removed the out-of-service 4,000-gallon UST from the ground. Prior to its removal, a total 350-gallons of residual diesel fuel and sludge was removed from within the UST, utilizing an NYCRR Part 364-permitted vacuum truck for off-site transport and disposal. During the uncovering of the UST for removal purposes, pea-gravel containing diesel fuel odors, staining and elevated PID readings was noted surrounding former fill piping along the top of the UST. The NYSDEC was subsequently notified and Spill No. 13-06438 was assigned to the property. The UST was observed to be contained within a solid concrete vault.

Upon removal of the UST, no holes or cracks were noted along the UST shell other than those that were created during actual UST removal efforts. Staining was noted along a majority of the UST, likely associated with the limited release associated with the former fill piping along the top of the UST.

Pea-gravel contained within the concrete vault was noted to contain diesel fuel odors, staining and exhibited elevated PID readings. The pea-gravel was subsequently removed from within the vault and placed into a 20-yard roll-off container, awaiting off-site disposal. In addition, trapped water containing diesel fuel odors and sheens within the vault was also removed by a pump truck for proper off-site disposal. A total of 31.07 tons of diesel fuel impacted pea-gravel and 930 gallons of trapped water were removed from within the vault that was measured to extend to twelve (12) feet below grade surface (bgs), at which point the concrete floor of the vault was encountered. The vault was then cleaned and inspected and was noted to be in good condition with no visible holes or direct exposure to adjacent and/or underlying soils.

As requested by the NYSDEC, two (2) soil borings were advanced through the concrete base of the vault via a decontaminated stainless steel hand auger in order to assess underlying soil conditions. Soils encountered below the concrete vault consisted of dark brown to black silty sands with various fill material. Field screening of soils within the two soil borings (B-1 and B-2) confirmed the absence of petroleum impacted soils (e.g., odors, staining, elevated PID readings, etc) from the directly below the concrete vault located at 12.5 feet bgs to a depth of 13 feet bgs, at which point groundwater was encountered. Subsequently, two (2) soil samples (B-1 (12.5-13 ft bgs) and B-2 (12.5-13 ft bgs)) were collected for laboratory analysis. As verbally agreed upon with the NYSDEC, during a subsequent telephone conversation, sidewall soil samples were not required due to the presence of the concrete vault that was confirmed to possess integrity.

Waste Disposal

A total of 350-gallons of residual diesel fuel and 930-gallons of trapped oily water was transported by AARCO Environmental Services (NYR000107326) to the Advanced Waste and Water Technology, Inc. Facility located at 208 Rt. 109, Farmingdale, NY. A total of 31.07 tons of diesel fuel contaminated pea-gravel was transported by Rizzo Environmental Services, a Part 364 licensed waste transporter, in a 20-yard roll-off container to Clean Earth of Carteret disposal facility located at 24 Middlesex Avenue, Carteret, NJ. All waste manifests are included as **Appendix B**.

Endpoint Sampling Analytical Data

The two (2) soil samples (B-1 (12.5-13 ft bgs) and B-2 (12.5-13 ft bgs)) collected by Preferred's geologist were submitted for laboratory analysis for NYSDEC CP-51 List Volatile Organic Compounds (VOCs) by EPA Method 8260 and NYSDEC CP-51 List Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270 to an NYSDOH-ELAP certified Laboratory (American Analytical Laboratories, LLC). Laboratory analytical data are included as **Appendix C**. Analytical results were then compared to Soil Clean-up Objectives (SCOs) for Fuel Oil Contaminated Soil NYSDEC CP-51/Soil Cleanup Guidance issued October 21, 2010.

As summarized in **Table 1**, only one (1) VOC compound (sec-Butylbenzene) was detected above its

respective laboratory Method Detection Limits (MDLs) in both soil samples. However, sec-Butylbenzene was reported well below its associated NYSDEC CP-51 Soil Cleanup Objective (SCO) within both samples.

A number of SVOC compounds were reported above their respective MDLs within both endpoint soil samples, consistent with the fill like material observed below the concrete vault. Of the detected SVOC compounds, three (3) compounds (Benzo(a)anthracene at 1,100 µg/kg, Chrysene at 1,100 µg/kg and Indeno(1,2,3-c,d)pyrene at 570 µg/kg) were reported slightly above (well within one order of magnitude) their associated NYSDEC SCOs within endpoint soil sample B-2 at 12.5-13 ft bgs. Of the detected SVOC compounds in endpoint sample B-1(12.5-13 ft bgs), all were reported below or at their respective NYSDEC SCOs.

Summary and Conclusions

Spill remediation was conducted at the industrial property located at 57-00 47th Street, Maspeth, New York on September 19, 2013 in order to address NYSDEC Spill 13-06438. Remedial activities included the removal and disposal of 31.07 tons of diesel fuel impacted pea-gravel and 930 gallons of trapped water from within the former concrete vault. Laboratory analysis of one (1) endpoint soil sample (B-1(12.5-13 ft bgs)) collected directly below the concrete vault documented compliant soil conditions underlying the southern portion of the concrete vault. Although slight SVOC exceedances were reported within endpoint soil sample B-2 at12.5-13 ft bgs), collected below the northern portion of the UST vault, these concentrations are just above their applicable SCOs, and are generally consistent with the fill material observed underlying the vault. Therefore, these marginal concentrations are not considered to be indicative of impacts due to the former UST and storage of diesel fuel.

Based upon the successful removal of diesel fuel impacted pea-gravel and trapped water within a solid concrete vault and the compliant soil conditions documented under the southern portion of the concrete vault and near compliant soil conditions under the northern portion of the concrete vault, as documented by endpoint soil samples, closure of NYSDEC Spill No. 13-06438 is respectfully requested.

Sincerely,

PREFERRED ENVIRONMENTAL SERVICES

Photograph No. 1- Front view of the industrial property located at 57-00 47th Street, Maspeth, New York.

Photograph No. 2 – Prior to the removal of the 4,000-gallon Diesel UST, approximately 350 gallons of residual diesel and sludge was removed from within UST via a pump truck for proper disposal.

Photograph No. 3 – While uncovering the UST, stained pea-gravel exhibiting diesel fuel odors and elevated PID readings were observed surrounding the former fill piping. The NYSDEC was notified and Spill No. 13-06438 was assigned to the property.

Photograph No. 4 – Upon completion of the removal of all liquids from within the UST, the UST subsequently removed from the ground.

Photograph Nos. 5 & 6- Inspection of the 4,000-gallon single-wall fiberglass UST noted the absence of any holes or cracks that did not appear to be sustained during the removal efforts.

Photograph No. 7 – The UST was contained within a solid concrete vault extending to twelve (12) feet below grade surface (bgs). Pea-gravel and trapped water contained within the vault was noted to contain diesel fuel odors, staining and exhibited elevated Photoionization Detector (PID) responses.

Photograph Nos. 8 & 9 - Both the pea-gravel and trapped water were removed from within the vault for off-site disposal.

Photograph Nos. 10 & 11 - As discussed with the NYSDEC, two (2) bottom samples were collected through the concrete floor of the vault in order to determine the environmental condition of underlying soils.

Photograph No. 12- Field screening of soils underlying the concrete vault noted the presence of fill material absent of diesel odors and elevated PID responses.

Figure 2 Site Map

1.0 INTRODUCTION

1.1 *Purpose of Report*

Environmental Management Solutions, Inc. ("EMS") was retained by 5700 Maspeth Ave., LLC, owner of the subject site, to supervise excavation activities, including the removal of contaminated soils, and assist in evaluating the soil conditions with respect to the possible presence of petroleum-related contamination.

On August 21, 2008, during a New York State Department of Environmental Conservation ("NYSDEC") inspection, staining was observed associated with historic truck parking. The NYSDEC Spill Hotline was notified and Spill #0808170 was assigned.

1.2 *Scope of Work*

Various items were identified and implemented during the scope of this investigation including:

- Field screening and sampling of the excavation,
- Analytical testing of the soil samples obtained,
- An evaluation of the information collected and preparation of a detailed report summarizing excavation activities and the resulting conclusions and recommendations.

The characteristics of the site and surrounding area are summarized in Section 2.0. Soil excavation activities are described in Section 3.0. Analytical results are summarized in Section 4.0. Waste transportation and disposal is discussed in Section 5.0, and an overall summary and interpretation of the observations and analytical results is provided as Section 6.0, the concluding section.

2.0 SITE CHARACTERISTICS

The subject property, currently operating as a trucking company, is located at 5700 47th Street, Maspeth, Kings County, New York. The general location of the site is shown on an

Area Map provided as Figure 1, Appendix A. Located centrally on the property is a building utilized as a garage with office space occupying the front portion of the building. Behind the building is a concrete pad utilized for truck parking. A Site Map illustrating pertinent site features is presented as Figure 2, Appendix A.

The site is situated in a mixed commercial/industrial area. No residences were identified in the immediate vicinity. Topography of the immediate area is relatively flat. The Newtown Creek is located approximately 100 feet to the west of the area of investigation. According to groundwater observed in the excavation the depth to groundwater is estimated to be at seven feet below ground surface.

3.0 SOIL EXCAVATION ACTIVITIES

3.1 Soil Removal

On March 17 through 19, 2010, 351.04 tons of contaminated soil was excavated and stockpiled for disposal. M. P. Howlett, Inc., located in Port Newark, NJ, removed the contaminated soil to MNJ Services, located in Long Pond, PA for proper disposal. Disposal documentation is provided in Appendix B.

3.2 Soil Sampling

Prior to sample collection, a hand-held RAE Systems photoionization detector (PID), was utilized for the screening evaluation of the excavation. The PID is calibrated using both fresh air (zero point) and single sensor calibrations (second point). Single sensor calibration was conducted by applying a known amount of isobutylene reference standard to each sensor. The volatile vapor scan technique is a screening method used to assess the presence of certain potentially hazardous compounds and the necessity for further exploration and analytical testing. Soil samples were obtained by EMS from multiple areas horizontally and vertically, placed into plastic zip-lock bags, allowed to sit for ten minutes then subjected to a head space volatile vapor scan. Soil was removed according to PID measurements.

The depth of the excavation was approximately eight feet below ground surface (fbgs). Groundwater was observed in the excavation and is estimated to be at seven fbgs. There was no bedrock encountered.

Subsequent to the excavation of contaminated soil, a total of five samples were collected around the perimeter of the pit, approximately one foot from the floor of the excavation, where PID readings were the highest. Two samples were collected from the bottom of the excavation. Associated PID readings are included in Table 1. A map of the excavation and sample locations is provided in Figure 2, Appendix A.

After sample collection all samples were sealed, logged, maintained at 4 degrees Celsius and transported to a New York State Department of Health certified laboratory, for analysis. The chain of custody form was generated in the field and accompanied the samples to a NYSDEC certified laboratory in accordance with standard Quality Assurance and Quality Control (QA/QC) measures.

4.0 ANALYTICAL RESULTS

Seven endpoint samples, identified as S-1 through S-7, were obtained from the sidewalls and from the bottom of the excavation. All soil samples were analyzed for STARS List volatile organic compounds (VOCs) using EPA Method 8260B and for STARS List semivolatile organic compounds (SVOCs) by EPA Method 8270C. Soil samples were submitted to Accredited Analytical Resources, a New York State Department of Health certified laboratory for analytical testing.

All VOC sample results were within the Recommended TAGM 4046 Soil Cleanup Objectives (RSCOs) established by the New York State Department of Environmental Conservation. Further there were no compounds detected above the respective laboratory minimum detection limits. All samples exceeded RSCOs for SVOCs. A summary of analytical results and associated cleanup objectives can be found in Table 1. Complete laboratory analysis is included in Appendix C.

5.0 WASTE TRANSPORTATION AND DISPOSAL

The petroleum-contaminated soil was transported by M.P. Howlett, Inc., located in Port Newark, NJ to MNJ Services, 108AA Sullivan Trail, Long Pond, PA. Disposal documentation is included in Appendix C.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Soil excavation activities were completed at 5700 47th Street, Maspeth, New York, at the request of, 5700 Maspeth Avenue, LLC, owner of the subject property. The scope of work included removal of a concrete pad, excavation of contaminated soil, soil sample screening and collection, laboratory analysis, and preparation of an Investigation Report summarizing excavation activities, soil sampling and analytical results.

Excavation activities were initiated on March 18, 2010 and completed March 19, 2010. The following observations can be made:

- Approximately 351 tons of petroleum-contaminated soil was removed for disposal associated with historical truck parking activities. Groundwater was observed at approximately seven feet below ground surface in the excavation.
- Seven endpoint soil samples were collected for laboratory analysis. There were no VOC concentrations exceeding RSCOs. All samples exceeded allowable RSCO concentrations for SVOCs.
- There was no collection system encountered or any piping associated with a floor drain in the concrete pad.

Given the above referenced conclusions EMS recommends the installation of a single groundwater monitoring well in the area of the excavation to establish groundwater quality. Should groundwater contamination be confirmed additional monitoring wells should be installed to delineate the extent of groundwatter contamination.

Spill No. 07-09978

Dear Mr. Falvey:

The above referenced spill number was generated on December 18, 2007 due to a tank failure. On December 21, 2007,Tyree found the problem was a cross over line that had not been removed from the tank top. We removed line, installed a plug at the fitting, re-tested the tank and it held air pressure for three hours. The tank was then tested by a third party certified testing company (Metro Environmental) on the 21st, December, 2007. The test results supported our find that the tank was tight.

There were no visible signs of petroleum contamination

I will be forwarding the test results as soon as I receive them. If you need additional information, please contact the undersigned.

Thank you.

Sincerely,

Laurie Jodice
Project Manager

12/21/07 Received call from Sean Healy of Getty. He believes the vent line failed due to fitting at tank was loose. No contamination found. Metro Environmental will be testing line tonight. Will send test report and letter. bf

12/28/07 received fax from Laurie Jodice of Tyree. There was a crossover line that was not removed. Fitting for line was plugged and tank was restested by Metro Environmental and passed. Called Sean Healy and he told me no signs of petroleu contamination was found during repairs. He then transferred me to Laurie Jodice of Tyree who is the project manager. I told I need test results and letter regarding contamination. She said that she will send letter and send test results when she gets them. Letter stating no visdible signs of petroleum contamination received by fax from L. Jodice. Received passing tightness test results. NFA. bf

DEC REMARKS:

10/21/08-Zhune visited the site, spoke to Rossana Bortone (718) 456-8636 owner of Almar Supplies. She said they will hired contractor to do the cleaned up.

08/27/12-Environmental Management Solutions, Inc. sent the Limmited Subsurface Investigation Report dated January 23, 2009.
Six soil borings locations were selected according to visual petroleum related staining. All soil samples were collected at a depth of 1.5 feet(BGS).

There were olfatory inidcations of petroleum related contamination in samples S-1, S-5, S-6. The soil Analytical results identified samples S-1 and S-5, having seven and two VOCs respectively in excess of the limit. S-1 (Total xylenes 2500 ppb, 1,3,5 Trimethyl Benzene 11000 ppb) and S-5(Total Xylene 34000 ppb, n-propylbenzene 3800 ppb, 1,2,5 Trimethyl Benzene 2300 ppb, 1,2,4 Trimethyl Benzene 58000 ppb, n-butylbenzene 11000 ppb, napgthalene 24000 ppb.

08/27/12- Environmental management Solutions, Inc. sent the Investigation Summary Report dated November 2010.
On March 17 through 19 381.04 tons of contaminated soil was excavated. depth of excavation was approximately eight feet (Bgs). Groundwater was observed in the excavation and is estimated to be at 7 feet(bgs). Subsequent to the excavation of contaminate soil a total of five samples were collected arround the perimeter of the pit approximately on foot from the floor of excavation.
The endpoint soil analytical results inidcated that there were no VOCs exceeding the limit.
There was no collection system encountered or any piping associated with the floor drain in the concrete pad.

08/27/12- Taylor Environmental sent the report for the instalation and sampling of a monitoring well date August 20, 2012.
A groundwater sample was collected from the well. The groundwater analitycal result are within the accetable limit. Spill CLosed.

February 09, 2009

Rossane Bortone
57-00 47th Street
Maspeth , NY 11378

Re: 57-00 47th ST. Maspeth, NY
Spill #: 0808170

Dear Ms, Bortone :

The New York State Department of Environmental Conservation (the Department) has received and reviewed the Limited Subsurface Investigation Report dated January 30, 2009, submitted by Environmental Management Solutions, Inc. for the above referenced site. The Department has reviewed the Report and approved the recommendations to excavate soil. The Department requires the following:

1. *Collection of Soil Endpoint Samples from Limit of Excavation:* As per DER-10 (Technical Guidance for Site Investigation and Remediation), available at **http://www.dec.ny.gov/regulations/2393.html** 5.4(a) "In order to document the effectiveness of a soil removal the following sampling activities are to be performed: (2.ii) For excavations 20 to 300 feet in perimeter: (2) For subsurface spills, one sample from the bottom of each sidewall for every 30 linear feet of sidewall and one sample from the excavation bottom for every 900 square feet of bottom area". Samples will be analyzed for EPA Methods 8260 and 8270 and results will be submitted to the Department. Furthermore, a scaled site plan must be submitted with all endpoint sampling locations. Contaminated soil must be removed and disposed of as per 6 NYCRR Part 364 including the submission of soil disposal manifests to the Department. Additional borings/monitoring wells may be necessary based upon review of the investigation report.

2. *Submission of Site Map with Concrete Pad and Drain:* As per DER-10 (Technical Guidance for Site Investigation and Remediation), available **http://www.dec.ny.gov/regulations/2393.html** , 3.3b "A description of each area of concern including approximate dimensions, suspected contaminants, suspected source of discharge and potential receptors" must be submitted to the Department. A scaled site plan including the concrete pad and the drain must be submitted to the Department.

3. *Investigation of Drain in Concrete Pad:* As per DER-10 (Technical Guidance for Site Investigation and Remediation), available at **http://www.dec.ny.gov/regulations/2393.html** , 3.9d "If there is a reason to believe contaminants were or may have been discharged into the floor drain or collection system: I. The point of discharge for any floor drain or collection system should be sampled if the system discharges or ever may have discharged to soil, groundwater or surface water; ii. If the point of discharge is unknown, tracer tests (for example, dye or smoke) should be

conducted to determine the discharge point (s); iii. Collection system integrity should be documented by representative soil sampling at potential leak areas, video inspection, hydrostatic test or pressure test. Documentation of the investigation must be submitted to the Department .

The Department holds any Responsible Party liable for addressing any on- or off-site contamination associated with this spill case. Under Article 12 of the New York State Navigation Law (NL) and Article 17 of Environmental Conservation Law (ECL), any person who discharges petroleum and fails to promptly clean up such prohibited discharge may be subject to a penalty of up to $37,500 per day per violation. The report must be **submitted to this office no later than one month from the date of this letter**, referencing the spill case number (see above) and the site address. It should be sent to the attention of the above named NYSDEC Project Manager.

If you wish to discuss this letter, please contact me at (718) 482-7305.

Sincerely,

Veronica Zhune

Re: 5700 47th Street, Maspeth, NY
Spill #: 0808170

Dear Ms. Bortone:

The New York State Department of Environmental Conservation (the Department) has received and reviewed the Investigation Summary Report, dated November, 2012, submitted by Environmental Management Solutions, Inc. for the above referenced site. The Department requires the following:

1.*Collection of Groundwater Sample From Former Excavation Location:* The Department requires the collection of groundwater sample from former excavation location. If contaminated groundwater is noted then groundwater flow direction must be determined the contamination must be delineated on-site and off-site (if applicable). During installation of the borings/monitoring wells, soil must be sampled continuously with a PID. The two deepest dry soil sample and the sample with the highest PID reading must be sent to a NYSDOH certified laboratory for analysis by EPA Method 8260/8270 and the results must be sent to the Department. If no elevated PID readings are found then the two deepest dry soil samples must be submitted for analysis. Water samples must be analyzed for EPA Method 8260/8270. Prior to installation, all utilities must be located and marked out. A report summarizing the findings of the subsurface investigation including boring logs, well installation logs, sample results, site plan, conclusions and recommendations are to be submitted to the Department. Additional borings/monitoring wells may be necessary based upon review of the investigation report.

If you wish to discuss this letter, please contact me at (718) 482-7305.

Sincerely,

Veronica Zhune

Re: 57-00 47th Street, LLC
57-00 47th Street
Maspeth, New York
NYSDEC Spill Case 0808170

Ms. Zhune,

The purpose of this letter is to present data collected from the subject site, requested in your letter dated April 6, 2012.

Todd Syska, Inc. was subcontracted by Taylord Environment, Inc. ("TE") to complete a soil borings on the project site, in the area of the former soil remediation. A track mounted, two inch, hydraulic press, GeoProbe™, drill rig was utilized by Todd Syska, Inc. to advance the boring on July 19, 2012. Continuous soil samples were collected throughout the exploration. The soil boring was advanced to approximately 16 feet below grade and finished with a one inch, sch 40, PVC, piezometer. The piezometer constructions was as follows: 16 feet to 6 feet below grade is one inch, sch 40, 0.020 slot screen, PVC; 6 feet to grade is one inch, sch 40, solid PVC. The well was finished with a sand pack from 16 feet to 3 feet below grade, one foot of bentonite plug and sand to grade. See "Figure 1" for the location of the sample point.

TE observed the following physical characteristics of soils encountered during the exploration:
0' – 4' Recycled Item 4 ("Blend"), PID Readings ND ppm
4' – 8' Recycled Item 4 to Brown Clay Loam (transition ~ 6'-7'), PID ND ppm
8' – 12' Dark Brown/Black Organic/Clay Loam, PID 19.8 ppm (GW @ ~11')
12' – 16' Brown Clay to Coal Ash to Wood Ash (All Historically Placed), PID ND ppm

As requested, TE collected a representative soil sample from the exploration. The soil sample was collected from the interval that exhibited the highest PID reading, in the area just above the static groundwater table, approximately 11 feet below grade. The soils collected for laboratory analysis were indigenous to the site, NOT backfill material placed following the remedial action. Laboratory analysis of the soil sample showed concentrations of target analytes below the NYSDEC Guidance Values (CP-51). See Table 1 for a summary of the laboratory data.

On July 19, 2012, TE used a peristaltic pump to develop the piezometer installed in the soil boring. TE pumped three well volumes from the piezometer prior to collecting a representative groundwater sample. The groundwater sample was collected with the peristaltic pump at a low flow rate. Laboratory analysis of

Taylord Environment, Inc.
24 Wing Avenue
Dover Plains, New York 12522
Telephone/Fax (845) 877-3840
E-Mail taylord@optonline.net

02-05-'13 12:13 FROM- T-284 P0002/0012 F-210

the groundwater sample showed concentrations of target analytes below the NYSDEC Guidance Values (TAGM #4046). See Table 1 for a summary of the laboratory data.

Soil and groundwater samples described in this document were collected into laboratory clean glassware, maintained at four degrees Celsius, and delivered to York Analytical Laboratories, Inc., located in Stratford, CT, for analysis. The soil sample was analyzed by EPA Method 8260 and EPA Method 8270, modified for CP-51 compounds only. The groundwater sample was analyzed by EPA Method 8260, modified for CP-51 compounds only.

The post-remediation soil and groundwater samples, presented with this document, demonstrate a successful soil remediation. It is the opinion of TE that no further remedial actions are required for the subject site. TE believes that the previous action successfully eliminated impacted soils. Therefore, Taylord Environment, Inc., on behalf of 57-00 47th Street, LLC, requests closure of the active NYSDEC Spill Case 0808170. The request for closure is based on the remediation preformed and the data presented in this report and by data submitted by Environmental Management Solutions, Inc.

This report has been prepared for the use of the NYSDEC, 57-00 47th Street, LLC, and/or pertinent parties associated with the subject site. Reasonable due diligence was exercised by the staff of Taylord Environment Inc. in conducting the research and investigation necessary for the development of this report. The conclusions provided by Taylord Environment Inc. in this report are based solely on the information reported in this document. Results of future subsurface investigations may result in a modification of the conclusions stated above. The conclusions presented herein are based upon the current regulatory climate and may require revision if future regulatory changes occur. This investigation and preparation of this report has been conducted in accordance with generally accepted practices. No other warranty, expressed or implied, is made.

If you have any questions regarding this report, please contact Scott Taylor at (845) 877-3840.

Sincerely,

Scott Taylor

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 20, 2012 and listed below. The project was identified as your project: **5700 47th St. LLC 57-00 47th St. Maspeth, NY.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
12G0633-01	Monitoring Well	Water	07/19/2012	07/20/2012
12G0633-02	Monitoring Well @11'	Soil	07/19/2012	07/20/2012

General Notes for York Project (SDG) No.: 12G0633

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Approved By: Robert Q. Bradley **Date:** 07/31/2012

ANALYTICAL LABORATORIES, INC.

Notes and Definitions

J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL); therefore, the result is an estimated concentration.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

APPENDIX F

RESUMES OF ENVIRONMENTAL PROFESSIONALS

REBEKAH DIEHL

SENIOR STAFF SCIENTIST

SITE REMEDIATION/ENVIRONMENTAL SPECIALIST

Ms. Diehl is a Senior Staff Scientist in the Site Remediation/Hazardous Waste Group with 7 years of experience. She has attained various skills while working predominantly under New Jersey Department of Environmental Protection (NJDEP) and New York State Department of Environmental Conservation (NYSDEC) regulations.

Ms. Diehl has conducted various environmental investigations for various contaminant categories and in in various remedial phases. This has included: chlorinated solvents; petroleum products; metals; pesticides/fumigants; and polychlorinated biphenyls. She specializes in research and field work involving soil, groundwater, sediment, potable water, DNAPL/LNAPL, and vapor intrusion related sampling.

Ms. Diehl has prepared various remedial documents that have included: remedial investigation/action reports; background investigation conceptual site models; health and safety plans; scopes of work; information for bidders, quarterly monitoring reports, preliminary assessment/site investigation reports, ASTM E1527-13 Phase I environmental site assessment reports, and quality assurance project plans. She has also created geographic information system (GIS) shapefiles for deed notices, remedial investigations, and classification exemption areas in accordance with the NJDEP. Ms. Diehl has a strong understanding of NJDEP technical requirements and guidance documents

SELECTED PROJECTS

Mahwah Public Housing, Mahwah, NJ - Completed Phase I ESA to ASTM E1527-13 standards including site walk, OPRA request submittal and review, along with writing report.

Ramsey Public Housing, Ramsey, NJ - Completed Phase I ESA to ASTM E1527-13 standards including site walk, OPRA request submittal and review, along with writing report.

1755 Amwell Road, Franklin Township, NJ - Completed Phase I ESA to ASTM E1527-05 standard including site walk, OPRA request submittal and review, along with writing report.

2301 Route 27, Franklin Township, NJ - Completed Phase I ESA to ASTM E1527-05 standard including site walk, OPRA request submittal and review, along with writing report.

Victory Boulevard, Staten Island, NY - Site was former industrial site which was slated for sale or development. Completed Phase I ESA to ASTM E1527-13 standards including OPRA request submittal and review and report writing.

EDUCATION

BS, Environmental Studies, East Stroudsburg University of Pennsylvania

PROFESSIONAL REGISTRATION

OSHA 40-Hour Hazardous Waste Operations & Emergency Resp. (HAZWOPER)

NJ, NY, PA Lead Inspector and Risk Assessor

NJ, PA, NYS/ EPA/AHERA Asbestos Inspector

OSHA 10-Hour Construction Safety

Practical Applications in Hydrogeology (4-day), Rutgers University

Introduction to Wetland Identification (1-day), Rutgers University

Underground Storage Tank (UST) Training (1-day), Rutgers University

AFFILIATIONS

Association of Environmental & Engineering Geologists (AEG)

Amboy Road Property, Long Island, NY - Coordinated with geophysical and drilling contractors to perform a site investigation to determine if Phase I ESA findings were significant. Managed drillers and made onsite determinations pertaining to soil, groundwater, and sub-slab sampling locations. Prepared summary letter of site investigation findings.

NC-15/NC-16, Staten Island, NY - Completed Phase I ESA to ASTM E1527-05 Standard including site walk, foil request submittal and review, obtaining deeds, along with writing report.

NC-18, Staten Island, NY - Completed Phase I ESA to ASTM E1527-05 standard including site walk, FOIL request submittal and review, obtaining deeds, along with writing report.

SBE-1A/SBE-1B, Staten Island, NY - Completed Phase I ESA to ASTM E1527-05 standard including site walk, FOIL request submittal and review, obtaining deeds, along with writing report.

851 and 879 Father Capodanno Boulevard, Staten Island, NY - Worked with OER regarding E-Designation on properties and request for redevelopment. Completed Phase I ESAs to ASTM E1527-05 standard including site walk, FOIL request submittal and review, obtaining deeds, along with writing report.

Former Lever Brothers Baltimore Manufacturing Plant, Baltimore, MD Site was former soap manufacturing plant with more than eighty years of industrial development and former manufactured gas plant. Completed Phase I ESA ASTM E1527-13 standard including PIA and FOIA request submittal and review, historical document review, and report writing.

Bordentown Maintenance Facility, Bordentown, NJ - Aided in site characterization and preparation of EO-215 Environmental Assessment Report.

Maintenance Facility, Freehold, NJ - Aided in site characterization and preparation of EO-215 Environmental Assessment Report. Completed emergency asbestos sampling.

Hanover Maintenance Facility, Whippany, NJ - Aided in site characterization and preparation of EO-215 environmental assessment report.

Extra Yard, Wantage, NJ - Aided in site characterization and preparation of EO-215 Environmental Assessment Report.

Former Gasoline Service Station, Maspeth, NY - Site was former gasoline service station prior to redevelopment as an office building. Completed Phase II ESA which included soil sampling.

Various Residential Clients, NJ - Oversaw various residential unregulated heating oil tanks (UHOT) removals. Prepared for removals by applying for local permits, scheduling mark-outs, coordinated with laboratories, and also equipment rental companies. Onsite for various remedial excavations associated with fuel oil releases, completed field screening and associated soil and groundwater sampling with these releases. Completed remedial action and remedial investigation reports for various residential clients which

included scaled maps, appendix preparation, and interpreting laboratory deliverables. Also coordinated with insurance companies pending property owners coverage.

Various Residential Clients, Plymouth Rock Insurance, Harleysville Insurance, and Metlife Insurance, NJ - Performed various residential UHOT related insurance investigations to determine if third party coverage was available for homeowners and also delineated soil contamination. Performed soil boring, temporary well point, monitoring well, and age dating sampling for these investigations.

Murch's Auto Body Newton, NJ - Environmental Scientist for site involving NJDEP site closure of case involving former not properly documented leaded gasoline underground storage tank (UST). Completed state Open Public Record Act (OPRA) review and added summary into report, created site plan and assisted with soil and groundwater sampling on the property.

Fairchild Gas & Auto Service, Morristown, NJ - Field operations for site involving a historical waste oil tank. Site had previously removed but did not properly document the removal of a waste oil UST. Soil boring sampling was implemented on the site to determine if the tank had leaked into the surrounding soil. Created a scaled map of all soil boring locations and assisted with soil screening. Co-authored report with Licensed Site Remediation Professional (LSRP) assistance.

Residential Client, Sandyston, NJ - Environmental scientist/field technician for remedial action involving a No. 2 fuel oil release into basement of residential property. Lead field investigation utilizing soil boring equipment to delineate petroleum impacts. Field screened and oversaw work crew while hand digging petroleum impacted soil. Created scaled maps depicting site excavation and completed remedial action report.

Residential Client, Branchville, NJ - Environmental scientist/field technician for site involving a fuel oil release in garage of property with possible immediate environmental concern (IEC) due to lake in close proximity. Determined no IEC existed onsite or adjacent to property. Oversaw remedial excavation and collected post excavation soil samples. Completed remedial action report along with all associated appendices.

Confidential Client, Washington Township, NJ - Staff scientist for site requiring removal of two (2) regulated USTs. Applied for municipal and NJDEP permits, updated the NJDEP UST facility questionnaire. Completed tank closure report with required appendices and submitted to the NJDEP.

Home Improvement Authority of Bergen County – Dumont Senior Citizen Housing, Dumont, NJ - Created and submitted deed notice GIS shapefile for pesticide soil contamination on property.

Pro Staff Real Estate, Nutley, NJ - Site was former gasoline station which was to be transformed into medical space. Ground penetrating radar (GPR) concluded four (4) tanks onsite, discovered a total of seven (7) tanks during the removal process. Applied for municipal and NJDEP permits, updated the NJDEP UST facility questionnaire. Coordinated for equipment rental and purchase for the removal of the gasoline tanks. Oversaw tank removal, also conducted field screening and sampling (Terracores) following tank removals. Completed scaled map of property, along with tank closure report including appendices with LSRP forms.

Patrician Creative Floors, Garwood, NJ - Environmental Scientist for site involving the removal of petroleum impacted soil associated with UHOT. Remedial activities included the installation of helical piers below the building footing. Oversaw pier installation and verified piers were installed as per engineering plan specifications. Oversaw remedial soil excavation and site restoration; also completed remedial action report with all associated appendix documents.

Hanover Supply Company, East Hanover, NJ - Environmental Scientist/field technician for site involving a former leaded gasoline tank which had been previously improperly remediated. Oversaw soil delineation, determined that the former soil remediation had not removed all impacted soil. Onsite for impacted soil removal and performed soil sampling utilizing Terracore sampling technique. Also onsite during monitoring well installation and site restoration (area of concern was in drainage area and was required to maintain consistent grade).

County Concrete Company, Morristown, NJ - Environmental Scientist for site involving emergency response which entailed an accidental release of diesel fuel following overfilling. Immediately assessed the site, determined where sorbent pans should be placed, field screened soil, and collected soil samples.

FW Speer, Passaic, NJ - Environmental Scientist for site involving former leaded gasoline tank which required deed notice for area in right of way. Obtained and met with client, discussed the establishing of the deed notice with the NJDEP. Created geographic information system (GIS) shapefile for deed notice, notified appropriate agencies (special consideration to affected area being in right of way).

Former Southend Pyramid Gasoline Station, Montclair, NJ - Site was former gasoline and service station, former underground storage tanks had been removed prior to involvement. Sampled onsite monitoring wells via low flow technique and sampled buried drum sludge. Completed receptor evaluation and assisted with completing remedial action report.

Former Britton Transportation, Wayne, NJ - Site was former bulk storage facility for various petroleum products above and below ground, site sold to be repurposed as supply warehouse. Low flow sampled numerous wells on property, pumped out light non-aqueous phase liquid (LNAPL) from three (3) wells on various occasions. Assisted with writing remedial investigation report for site and submitted various OPRA requests for site.

NAES/Pace Analytical, Linden, NJ - Site operating cogeneration plant, collected several samples for bi-annual effluent sampling events for Pace Laboratory whom was contracted as a third party sampler by NAES. Coordinated with laboratory, security, and client to sample for various parameters including hexavalent chromium.

New Jersey Turnpike Authority, Interchange 3, Runnemede, NJ - Site historically contained a leaking heating oil UST, residual LNAPL remained in two (2) monitoring wells. Gauged all monitoring wells on property prior and following supervised vapor enhanced fluid recovery (VEFR) events.

New Jersey Turnpike Authority, Woodbridge, NJ - Site historically ontained a leaking gasoline tank, gauged and sampled various monitoring wells on property.

New Jersey Turnpike Authority, Ocean View Service Area, Ocean View, NJ - Site historically contained various leaking underground gasoline tanks. Sampled monitoring wells onsite on various occasions, oversight for monitoring well repairs, abandonment, and replacement. Prepared and submitted NJDEP GIS shapefile for classification exemption area (CEA) associated with the property.

Martin Shopping Plaza, Fairfield, NJ - Strip mall containing dry cleaner which historically utilized tetrachloroethylene in daily operations and leading to vapor intrusion issues for neighboring tenants. Assisted with indoor air and subslab sampling along with indoor air surveys in various tenant spaces within the strip mall.

Essex County Municipal Airport, Fairfield, NJ - Site currently functioning as airport but was historically an airplane parts manufacturing facility. Sampled various soil borings via Encore sampling method and logged soil, also performed sediment sampling at various locations. Oversight and post excavation sampling and site restoration for removal of an oil water separator UST and historical demolition debris.

Harris Corporation, Route 3 Facility, Clifton, NJ - Site historically was manufacturing military parts involving metal fabrication, over time spills occurred which caused high groundwater chlorinated volatile organic compound (CVOC) contamination. Assisted with passive diffusion bag monitoring well sampling and provided assistance with onsite Tri-Pack filled tower air stripper.

Harris Corporation, River Road Facility, Nutley, NJ - Site historically was manufacturing military parts involving metal fabrication, this site included electroplating with the use of chromium. Completed low flow hexavalent chromium groundwater sampling at various wells following injection treatments.

Haller Testing Laboratories, Plainfield, NJ - Completed due diligence for site which was potentially contributing to public water supply wellfield contamination. Conducted OPRA and Freedom of Information Act (FOIA) requests and reviewed material in order to assist with writing a background investigation conceptual site model report for the site.

Former Ronson Metals, Newark, NJ - Staff scientist for facility which formerly produced metal encased cigarette lighters, site was given deed

notice, however after several years residential properties were built on the deed noticed land. Assisted with soil gas sampling located in temporary points drilled in sidewalk and also assisted with sampling temporary well points. Verified well search for site and also assisted with formatting various tables for report.

Atlantic Hard Chromium, Piscataway, NJ - Staff scientist for former electroplating facility left vacant requiring remedial investigation. Assisted with data tabulation, electronic data disk (EDD) creation and EQuIS data input. Completed well search, site walk, natural heritage database search, sensitive receptor determination, and wetlands mapping associated with the NJDEP ecological evaluation and receptor evaluation.

Fairclough & Sons, Inc., Towaco, NJ - Staff scientist for former site investigation of former petroleum bulk storage facility. Collected and logged soil samples along with sampling various monitoring wells on the property including a positive pressure monitoring well; also collected sediment and surface water samples from nearby stream.

Monroe Township Wells 4 and 5, Monroe Township, NJ - Field lead for an unknown source investigation centered around private potable wells contaminated with tetrachloroethylene and trichloroethylene. Aided in writing background investigation conceptual site model report for site along with additional OPRA reviews on the county and municipal levels and gained local knowledge of former businesses. Created health and safety plan and information for bidder documents, scopes of work, and quality assurance project plan. Coordinated and submitted laboratory bottleware orders, pickups and drop-offs to be within NJDEP hold times. Obtained signed access agreements from various property owners for drilling on private property and sampling potable wells. Coordinated project with various field personnel such as drillers, geophysical personnel, field staff, and state field representative. Sampled groundwater via hydropunch technique, logged soil via Munsel color chart and collected samples via Terracore method. Operated a portable gas chromatographer mass spectrophotometer (GC/MS) in the field which produced live time chlorinated volatile organic compound (CVOC) concentrations. Completed various sections of report when field work was completed.

Municipal Building Groundwater Contamination, Elk Township, NJ - Unknown source investigation centered around the detection of the crop fumigant 1,2,3-trichloropropane (TCP) contaminating potable wells. Aided in the background investigation prior to field work and field preparation. Performed independent field work which included overseeing drilling operations associated with hydropunching at several intervals for an extended period of time in southern New Jersey. Sample collection consisted of a minimum of four (4) intervals down to approximately eighty (80) feet below grade surface (bgs.). Community outreach and investigation discussion with municipality and residents regarding potable well testing and obtaining site access. Sampled various potable wells within contamination known extent (CKE) and just beyond border.

South Black Horse Pike, Monroe Township, NJ - Unknown source investigation centered around private potable wells contaminated with mercury and trichloroethylene. Started background investigation conceptual site model report by submitting and reviewing OPRA requests to municipal, county, and state government. As part of the report, a well search was completed to NJDEP standards. Also requested and reviewed additional reports from private entities such as ERS Record Search and EDR.

TCE Groundwater Contamination, North Haledon, NJ - Unknown source investigation centered around private potable wells contaminated with trichloroethylene. Aided in writing background investigation conceptual site model report for site. Completed additional OPRA reviews on the county and municipal levels and gained local knowledge on suspect sites. As part of the report, a well search was completed to NJDEP standards.

Greenwich Township MUA Well #4 and 6, Greenwich Township, NJ - Unknown source investigation centered around trichloroethylene contamination of two (2) municipal supply wells. Operated a portable field GC/MS which produced live time chlorinated volatile organic compound (CVOC) concentrations. Provided oversight and sampling for Geoprobe hydropunching sampling method. Community outreach and investigation discussion with various residents regarding potable well sampling and site access. Performed various potable well sampling episodes following granted site access.

Wayne Court and Passaic Avenue Groundwater Contamination, North Haledon, NJ - Unknown source investigation centered around private potable wells contaminated with Carbon tetrachloride. Aided in writing background investigation conceptual site model report for site. Completed additional OPRA reviews on the county and municipal levels and gained local knowledge on suspect sites. As part of the report, a well search was completed to NJDEP standards.

MAC Products, Inc., Kearny, NJ - Managed drilling team inside and outside industrial facility during manufacturing off-hours. Sampling and handling DNAPL discovery and determining NJDEP reporting requirements.

Atlantic Cleaners, Manasquan, NJ - Conducted indoor air sampling at site and monitoring well abandonment oversight. Completed soil remedial investigation/action report along with receptor evaluation and all required forms.

Fuel One, Milltown, NJ - Responsible party investigation researched into spills which occurred on the property and determining whom was potentially responsible for the incidents. Completed a potentially responsible party report which included title search, EDR/ERS database review; municipal, county, and state OPRA requests. Following report submittal, followed up with NJDEP comments and resubmitted.

East Elmer Road Groundwater Contamination, Vineland, NJ - Unknown source investigation centered around private potable wells contaminated with mercury (believed to be of agricultural origin) and

trichloroethylene. Started this project from ground up by submitting and reviewing OPRA requests to state, county, and municipality for potable well testing data and information related to potentially responsible parties. Completed a background investigation conceptual site model report which named potentially responsible parties and recommendations for field work. As part of the report, a well search was completed to NJDEP standards. Performed field work which entailed a hydropunch investigation with groundwater sampling.

Bay Avenue BP, Manahawkin, NJ - Responsible party investigation researching into various spills which occurred on the property and determining whom was potentially responsible for incidents. Completed title search, and aided in EDR/ERS database review; municipal, county, and state OPRA requests. Following report submittal, followed up with NJDEP comments and resubmitted.

South East Boulevard Groundwater Contamination, Vineland, NJ - Unknown source investigation centered around private potable wells contaminated with mercury and tetrachloroethylene. Started this project from ground up by submitting and reviewing OPRA requests to state, county, and municipality for potable well testing data and information related to potentially responsible parties. Completed a background investigation conceptual site model report complete with potentially responsible parties and recommendations for field work. As part of the report, a well search was completed to NJDEP standards. Performed field work which entailed a hydropunch investigation with groundwater sampling along with soil sampling and logging via Munsel Color Chart.

Bloomingdale Borough Regional Groundwater Contamination, Bloomingdale, NJ - Unknown source investigation centered around private potable wells contaminated with tetrachloroethylene. Started this project from ground up by submitting and reviewing OPRA requests to state, county, and municipality for potable well testing data and information related to potentially responsible parties. Completed a background investigation conceptual site model report complete with potentially responsible parties and recommendations for field work. As part of the report, a well search was completed to NJDEP standards.

Groundwater Contamination, Villas, NJ - Unknown source investigation centered around private potable wells contaminated with trichloroethylene and tetrachloroethylene. Started this project from ground up by submitting and reviewing OPRA requests to state, county, and municipality for potable well testing data and information related to potentially responsible parties. Completed a background investigation conceptual site model report complete with potentially responsible parties and recommendations for field work.

Groundwater Contamination, Franklin Township, NJ - Unknown source investigation centered around private potable wells contaminated with tetrachloroethylene. Started this project from ground up by submitting and reviewing OPRA requests to state, county, and municipality for potable well testing data and information related to potentially responsible parties. Completed a background investigation conceptual site model report complete with potentially responsible parties and recommendations for field work. As part of the report, a well search was completed to NJDEP standards.

Paramount Express, Paterson, NJ - Conducted low flow and conventional purge groundwater sampling at former industrial site. Completed remedial investigation/action report with all required appendix documents including receptor evaluation complete with ArcGIS generated figures.

Twin Rivers Shopping Plaza, East Windsor, NJ - Coordinated field work with subcontractors, and managed onsite operations during monitoring well installation and GPR utility mark-out. Performed sub-slab soil gas sampling.

Rutgers Newark Alumni Building, Newark, NJ - Assisted in the preparation of waste classification soil analysis analytical parameters. Coordinated with soil disposal facility and contractors for remedial action-soil removal.

LSRP On-Call Contract, Monmouth County, NJ - Worked on three separate LSRP cases for the County. Completed groundwater sampling activities at all three sites. Completed injection oversight and soil sampling activities at one of the properties.

Route 15 & Meadows Road, Lafayette, NJ - Completed initial receptor evaluation report. Oversight and sampling for temporary well point installation into road right-of-way. Coordination and oversight for installation of eight monitoring wells via conventional drill rig and geoprobe rig installation. Two of the monitoring wells were installed within a roadway parking area, coordinated with department of transportation, police, and traffic control. Coordination for sampling 14 onsite monitoring wells.

Camden County Trail, Camden County, NJ - Aided with linear construction project, completed site investigation reports for seven segments of trail. Majority of segments intersect railroad right-of-way. Completed historic research, site reconnaissance, and findings reports for all seven segments.

Jaggers Point Recreational Area, Pittsgrove Township, NJ - Aided in creating information for bidders specification sheet for removal of UST and installation of AST.

Route 287 Dump, Boonton, NJ - Performed PFA/PFOA groundwater and soil sampling. Oversight and sampling of monitoring well and soil boring installations.

Greystone Psychiatric Hospital, Morris Plains, NJ - Prepared preliminary assessment, remedial investigation, and remedial action reports for both campuses. Categorizing and cataloging large quantities of soil, groundwater, sediment, surface water, and toxicological samples into an easily searchable format. Created and submitting several hundred Electronic Data Disks (EDDs). Subcontractor oversight, sampling, and data compilation related to chemical injections.

272 Wagaraw Road, Hawthorne, NJ - Determined third party monitoring well ownership on parcel with no known contamination.

Garden State Parkway Over Passaic River, Clifton/Elmwood Park, NJ
Prepared environmental screening report for 0.8-mile of parkway, bridge, roadway, and right-of-way. Research included researching properties, which had been acquired by the Client prior to roadway construction. Report preparation also included figure creation and thorough site walk. Coordinated and executed sediment sampling beneath Garden State Parkway Bridge. Completed summary report of sediment sample findings.

Route 280 Tire Dump, East Hanover, NJ - Collected low flow purge method groundwater samples from monitoring wells located in uneven forested terrain. Oversight and soil categorizing for test pit installation into landfill. Performed quarterly groundwater sampling. Performed surface water and sediment sample analysis. Additionally, collected samples for benthic macroinvertabrae taxonomy and toxicity study. Completed hazardous waste delineation. Aided in preparing closure reports for former landfill.

Maintenance Yard, Clinton, NJ - Performed environmental site assessment for proposed redevelopment activities. Created workplan from environmental assessment findings. Performed soil investigation and authored findings report.

Auto Spa, Wayne, NJ - Oversight for monitoring well installation, also performed groundwater sampling. Oversaw and directed drilling and in-situ injections. Completed Remedial Action Report and authored Response Action Outcome for property.

Richmond Terrace, Staten Island, NY - Staff scientist for community air monitoring program (CAMP) involving an asbestos test pit investigation. Monitored and recorded readings from photoionization detectors (PID), noise detecting instruments, and dust monitoring equipment.

Ashokan High Point Reservoir, Shokan, NY - Completed initial project EHS profile, risk assessment report, and site reconnaissance for a proposed new building.

East River, New York, NY - Site experienced various historical dielectric fuel spills from transformers (some incidents involving poly chlorinated biphenyls), assisted with closing out various spills with the New York Department of Conservation (DEC). Also assisted with tabulating data from years of enhanced fluid recovery (ERF) events and assisted in preparing quarterly DEC reports detailing LNAPL levels.

Macbeth Plant, Newburgh, NY - Site historically manufactured color densitometers and various paint related products for years prior to EPA regulations. Assisted with annual indoor air and subslab sampling at the property.

Caddell Dry Dock, Long Island, NY - Performed research pertaining to discharge to surface water NYDEC permitting guidelines. Finalized low level mercury sampling plan which was approved by NYDEC. Decontaminated equipment and performed clean hands/dirty hands sampling technique for several sampling episodes. Prepared finding reports for each sampling episode.

829 Father Capodanno Boulevard, Staten Island, NY - Worked with OER regarding E-Designation on properties and request for redevelopment. Completed Remedial Action Workplan (RAWP) which included Community Air Monitoring Program (CAMP). During construction activities implemented camp, ensured RAWP and OER compliance, and completed daily reports for OER review.

W.A.T.E.R. Project, Waterbury, CT - Oversight, sampling, and subcontractor coordination for project involving earthwork in suspected soil contaminated area. Samples collected in order to determine worker protection level for pending road construction.

Pequonnock River Trail, Bridgeport, CT - Oversight, sampling, and subcontractor coordination for project involving earthwork in suspected soil contaminated area. Samples collected in order to determine worker protection level for pending sidewalk installation and revitalization.

Childcare Facility Lead Paint Inspection, Philadelphia, PA - Completed lead inspection at current and proposed childcare facilities. Lead inspection components included XRF analysis and water sample collection.

Adelphia Gateway, Philadelphia, PA - Coordinated, aided in development, and completed regional soil sampling plan along proposed natural gas pipeline installation route through industrial area. Coordinated with PennDOT, utilized ECMS portal, six natural gas pipeline companies, four different municipalities, and three different subcontractors. Completed findings report for the regional soil/groundwater investigation for Federal Energy Regulatory Commission (FERC) review and addressed FERC report comments. Completed additional sediment/soil investigation and wrote detailed report of findings.

Herbology, Grassroots Cannabis, King Of Prussia, PA - Completed Phase II environmental site assessment indoors and outside of former auto mechanic shop.

Robert (Rory) S. Johnston, PE, BCEE

Principal / Vice President
Environmental & Geotechnical Engineering

30 years in the industry

Mr. Johnston's consulting career spans almost 30 years ranging from geotechnical engineering on large industrial projects to environmental investigation and remediation. At Langan a key part of his role is to lead client development in various market sectors, including an emphasis on the oil and gas markets.

Mr. Johnston experience includes all aspects of geotechnical engineering for a wide range of industrial, commercial, private, and government clients. He has been involved in the geotechnical design and construction management of a wide range of infrastructure projects around the nation, major improvements at all NYC airports, baseball stadiums, landfills, refineries, LNG facilities, industrial developments, and more. Mr. Johnson has conducted and directed extensive site investigations, developed geotechnical and environmental solutions, and provided oversight of the implementation of these solutions.

47th Street Site
Maspeth, Queens, New York
Langan Project No. 100965501

Dear Mr. Richer:

Langan Engineering and Environmental Services, Inc. (Langan) is submitting the enclosed *Phase II Environmental Site Investigation (ESI) for the 47th Street Site, Maspeth, Queens, New York*. Our scope of services for this project consisted of a geophysical survey and the collection and analysis of soil and groundwater samples.

We appreciate the opportunity to assist you with this project. If you have questions or need information clarified, please call Mr. Andrew Kerr at 510-333-9051 or Mr. Rory Johnston at (973) 560-4978.

Sincerely,

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.

PHASE II ENVIRONMENTAL SITE INVESTIGATION
47th Street Site
57-00, 57-05, 57-57, and 58-20 47th Street
Maspeth, Queens, New York

1.0 INTRODUCTION

This Phase II Environmental Site Investigation (ESI) was performed for the properties located at 57-00, 57-05, 57-57, and 58-20 47th Street in Maspeth, Queens, New York, herein referred to as 'the 47th Street Site'. This Site is 3.8 acres in area and consists of four parcels of land with distinct uses. A site location map is provided as **Figure 1**.

The Site is currently vacant. The 57-00 47th Street parcel consists of a vacant former vehicle maintenance garage building with office space on the eastern end. The 58-20 47th Street parcel adjoins the 57-00 47th parcel and currently is vacant with a recycled concrete aggregate (RCA) surface and no permanent structures. The 57-05 47th Street parcel is developed with a vacant building that was recently used by a vehicle maintenance shop on the eastern end and as office space on the western end. The 57-57 47th Street parcel is developed with a vacant commercial building which was recently used as a delicatessen. The different portions of the Site will be referred to as the 57-00, 58-20, 57-05, and 57-57 parcels, consecutively.

The implemented scope of services included a geophysical survey and the completion of ten exploratory soil borings, eight of which were converted to temporary monitoring wells. Ten soil samples were collected from the ten borings and nine were analyzed. A groundwater sample was collected from each of the eight temporary monitoring wells and all eight were analyzed. Site configuration and sampling locations are included as **Figures 2 and 3.**

This summary report describes the scope of services conducted and the results of the investigation. Background information is presented below.

2.0 BACKGROUND

2.1 Phase I Environmental Site Assessment

Langan conducted a Phase I Environmental Site Assessment (ESA) for the Site in December 2021 (Langan, December 2021). Relevant information from this report is included as **Appendix D.** The

Phase I ESA identified the following Recognized Environmental Conditions (RECs), Historical REC (HREC), and Business Environmental Risks (BERs) in association with the Site:

REC 1 – Historical Site Use

Industrial/commercial operations at the Site date back to the 1800s and include an oil depot with petroleum bulk storage (circa 1914 to 1936), fertilizer/glue manufacturing (circa 1897 to 1914), and vehicle maintenance (circa 1982 to 2006). Various petroleum underground storage tanks (USTs have historically been located on three of the four parcels (UST records were not available for review for 58-20). UST-related leaks have been reported on two of the four parcels (on Parcels 57-00 and 57-57). Although these leaks are closed with the NYSDEC, closure reports were not available from NYSDEC for all of the reported incidents.

More recently, the 57-00 and 58-20 parcels formerly operated as a concrete recycling facility; the facility also accepted other demolition debris (circa 2004 and 2021). Additionally, a concrete laboratory historically operated on the 57-00 parcel (circa 2004 and 2021). Concrete testing laboratories historically have included chlorinated solvents in the operations..

REC 2 – Newtown Creek Superfund

The Newtown Creek is adjacent to the 57-00 and 58-20 parcel western property lines. The creek was added to the USEPA National Priority List in 2010 and remains as such. Former heavy industrial operations in the vicinity of Newtown Creek dating back to the 1800s have impacted the sediments and groundwater in the Creek.. A remedial investigation is currently underway for the Creek. Additionally, a focused feasibility study is currently being prepared regarding a combined sewer outfall long term control plan.

Newtown Creek has the potential to impact on-site soil and groundwater through tidal fluctuations and sediment deposition along the bank of the Creek.

REC 3 – On-Site Storm Water Vault & Oil/Water Separator

The geophysical survey associated with a Phase II Environmental Site Investigation prepared by Langan and dated July 2021 (the Langan July 2021 Phase II ESI) identified a potential oil/water separator and piping suggesting that the trench drains discharged to an on-site storm water vault on the southwestern end of the 57-00 parcel. Concrete slabs cover the storm water vault and

piping, therefore the presence of both the discharge piping and the vault could not a be field verified during the site reconnaissance.

REC 4 – Methyl Tert-Butyl Ether (MTBE) in Groundwater

During the Langan July 2021 Phase II ESI, methyl tert-butyl ether (MTBE) was detected in a groundwater sample collected from the northeastern corner of Parcel 57-05. MTBE is a gasoline additive (used since the 1980s) to aid in increasing octane and oxygen levels in gasoline to lower pollution emissions.

HREC 1- Closed Petroleum Spills

The Site has six NYSDEC reported spills which were all administratively closed. A summary of information provided in the Spills section of the EDR report is included below:

- NYSDEC Spill No. 94-11004 was reported November 17, 1994 due to the release of an unknown volume of gasoline. The spill was administratively closed on November 17, 1994. This incident occurred at the 57-00 parcel.
- NYSDEC Spill No. 97-09690 was reported November 20, 1997 after the release of an unknown volume of diesel fuel on soil. No further information regarding the spill was provided. The spill was administratively closed on January 8, 1998. This incident occurred at the 57-00 parcel.
- NYSDEC Spill No. 98-12248 was reported on January 4, 1999 after petroleum impacted soil was identified during the removal of a UST. Petroleum impacted soil was removed and endpoint samples were collected. The spill was remediated to NYSDEC satisfaction and was administratively closed on July 12, 2006. The incident occurred at the 57-57 parcel while under the Boro Lumber Company occupancy.
- NYSDEC Spill No. 07-09978 was reported after a UST failed a tank tightness test on December 18, 2007. The tank lines were re-tested and it was determined that the vent line failed due to a loose fitting. According to a NYSDEC obtained report, evidence of petroleum impacts to the subsurface were not identified by Larry E. Tyree Co., Inc. (the contracted environmental services provider of the Site occupant). The spill was administratively closed on December 28, 2007 following report submission by Larry E. Tyree Co. This incident occurred at the 57-00 parcel.
- NYSDEC Spill No. 08-08170 was reported October 21, 2008 after the report of an active release of petroleum substances and illegal storage and refueling of vehicles. A limited subsurface investigation was reportedly completed in 2009 that identified petroleum impacts in soils from surface grade to about eight feet below grade surface. About 381.04

tons of petroleum impacted soil was reportedly excavated and disposed of in 2010. Documentation of soil and groundwater samples collected post remediation reportedly confirmed that the spill was remediated to the satisfaction of the NYSDEC. The spill was administratively closed on October 27, 2012. This incident occurred at the 57-00 parcel.

- NYSDEC Spill No. 13-06438 was reported on September 19, 2013 after diesel impacted soil and pea gravel was identified in a tank vault during the removal of a 4,000-gallon UST. A closure report summarizing the remedial work and analytical data was reportedly prepared for NYSDEC. The spill was remediated to the satisfaction of the NYSDEC and the spill was administratively closed February 12, 2014. This incident occurred at the 57-00 parcel.

BER 1- Historic Fill

Previous report submittals contain reported field conditions identifying the presence of fill material on the Site. Field conditions identified historic fill material (i.e. brick, gravel, concrete, and wood) in soil borings completed as part of the Langan July 2021 Phase II ESI. Historic fill was also identified during other previous environmental investigations reviewed for this Phase I ESA. Laboratory results from soil and groundwater samples collected on the Site indicate the presence of typical historic fill constituents (i.e. polycyclic aromatic hydrocarbons [PAHs] and Metals).

Historical topographic maps indicate historic fill was deposited within the region sometime prior to the 1900s. Historical aerials depict a dark fill material spread onto lighter underlying soils on the 57-00 and 58-20 parcels in the early 1950s. Elevated PAHs and Metals pose a potential BER if future grading is planned, likely requiring a Soil Management Plan (SMP).

BER 2- Trench Drains & Oil/Water Separator

Trench drains were identified within the 57-00 and 57-05 parcel maintenance garage bays.

- Within the 57-00 parcel garage, trench drains were identified running along the northern and southern ends of the building. Metal plate-covered boxes were also identified near the trench drains on the northern and southern ends of the building. The representative for the property owner stated these boxes were associated with receiving liquids from the trench drains, however piping was not identified within these boxes during site reconnaissance. An oil/water separator was also observed near the trench drain along the southern side of the building. According to a geophysical report prepared as part of the Langan July 2021 Phase II ESI, the northern and southern trench drains appear to connect to a nearby storm drain in the southern parking area. This storm drain discharges to the on-site storm water vault.

- A trench drain connected to a slop sink was identified within a garage bay in the northern part of the building on the 57-05 parcel. The discharge location of this trench drain is unknown.

BER 3 - RCA Pile

During Langan's site reconnaissance on November 2, 2021, an approximate 1,000 cubic yard stockpile of recycled concrete aggregate (RCA) was observed on the northeastern portion of the 58-20 parcel. The stockpiled material appears related to the former concrete processing/recycling operations at the Site. The RCA pile is considered a BER since the source and environmental conditions of this material is unknown and it will need to be characterized and removed prior to Site redevelopment.

BER 4 - Administrative Consent Order

In April 2021, the NYSDEC imposed an administrative consent order (ACO) on the property. The ACO was imposed due to a tidal wetlands buffer requirement along Newtown Creek, which is western and adjacent to the 57-00 parcel. The ACO was filed with the property deed, and included provisions that structures cannot be erected on this area of Parcels 57-00 and 58-20. Additionally, a tidal wetland buffer vegetated area must be maintained by current and future occupants.

BER 5 – Asbestos Containing Materials (ACM), Lead-in-Paint and Mold

Asbestos and lead-in paint surveys were completed by Langan at the Site in November 2021, which identified confirmed and/or presumed ACM associated with the on-site buildings. Lead-in-paint was also identified red paint on the metal columns by the shutter doors on Parcel 57-00. A description of the asbestos and lead-in-paint survey results are presented in the *Hazardous Materials Survey Report* dated December 2021.

Langan observed indicators of mold during the Phase I ESA site reconnaissance on November 2, 2021. Potential mold was identified within buildings with damaged roofs on Parcels 57-00 and 57-05.

2.2 Prior Assessments

Phase I Environmental Site Assessment Report- July 21, 2021

Based on information provided by Prologis, a Phase I ESA was prepared by Langan on behalf of a party previously interested in the Site. Below is a summary of the RECs HRECs and de minimis condition identified during the July 21, 2021 Phase I ESA:

Two (2) Recognized Environmental Conditions (RECs) were identified on the Site.

- REC 1- Historical Use of Subject Property
- REC 2- Western-Adjoining Superfund Site (Newtown Creek)

One (1) Historical Recognized Environmental Conditions (HREC) was identified on the Site.

- HREC 1- Closed Spills on the Subject Property

One de minimis condition was identified during the site reconnaissance. The condition consisted of oil like staining identified throughout Lot 6 (Parcel 57-00). De minimis staining was identified in the interior warehouse space, near mechanic pits, in the vicinity of former ASTs, throughout the concrete paved parking area (south, east, and west of the building), beneath a parked excavator. This de minimis staining was also identified on Parcel 57-05 interior space, truck access bays, and exterior concrete paved parking areas. Surficial concrete cracks, joints, or exposed soil were not identified within stained areas.

Phase II Environmental Site Investigation Report- July 26, 2021

Based on information provided by Prologis, a Phase II ESI was prepared by Langan on behalf of a party previously interested in the Site. Below is a summation of the findings from the above referenced report. Relevant information from this report is included as **Appendix D.**

- A geophysical survey was conducted across the Site to clear soil borings/temporary well points; determine locations of underground utilities; and to attempt to identify subsurface anomalies, including those consistent with USTs.
    - 57-00 and 58-20 Parcels: Two UST graves were identified on the southeastern end of the parcel. Various underground utility lines, and drains were identified throughout the

parcels along with associated underground piping. A potential oil/water separator was identified within the southern end of the maintenance garage. The potential oil/water separator appears to be connected to piping leading to a nearby storm water drain which discharged to the on-site storm water vault.

  - 57-05 Parcel: Underground utility lines and underground storm sewer lines were identified throughout the parcel.

  - 57-57 Parcel: A water and sewer underground utility line was identified on this parcel.

- Eleven soil borings were completed on the Site. Four of these borings were converted to temporary groundwater monitoring wells. Soil and/or groundwater samples were collected from each sample location.

- Subsurface observations: Fill material consisting of fine-grained sand with varying amounts of fine gravel, silt, brick, wood, and concrete were identified at depths of four to sixteen feet below grade surface (bgs) on the Site. Petroleum-like odor and staining was identified within three locations (SB01, SB02, and SB04). Impacts were generally identified at or below the groundwater table; however, petroleum-related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) were not detected above the Title 6 New York Codes, Rules and Regulations (6NYCRR) Part 375 Commercial Use (CU) and Industrial Use (IU) Soil Cleanup Objectives (SCOs) in the soil samples collected from these borings.

- Soil analytical results identified polycyclic aromatic hydrocarbons (PAHs), arsenic, lead, and mercury greater than their respective CU and IU SCOs.

- Groundwater analytical results identified VOCs, PAHs, and dissolved Metals (antimony, arsenic, iron, lead, magnesium, manganese, and sodium) above the NYSDEC Division of Water Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA water (drinking water).

  - PAHs and Metals (i.e. anthracene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, and ideno(1,2,3-cd)pyrene) were identified in groundwater at concentrations greater than their respective SGV.

  - Petroleum-related VOCs (i.e. 1,2-dichloropropane, isopropylbenzene, n-

propylbenzene) and MTBE were detected in groundwater at concentrations above their respective TOGS SGVs. MTBE was identified groundwater throughout the Site..

3.0 PHASE II EVALUATION

3.1 Scope and Timing

Langan completed the following scope of services:

- Further investigated the presence of potential subsurface utilities, USTs and/or subsurface structures and to clear proposed boring locations.
- Collected ten soil samples from ten exploratory soil borings advanced to a maximum depth of 18 feet bgs; and
- Collected eight groundwater samples from eight temporary wells.

The investigations were completed on 11 and 12 of November 2021. A summary of the analysis performed on soil and groundwater samples is presented in **Table 1** and **Table 2** respectively, and the location of the completed investigation points is shown on **Figures 2** and **3.**

3.2 Field Investigation Methods

The field investigation methods used to complete the Phase II ESI are summarized below. The activities are described in the general order of completion.

3.2.1 Pre-Investigative Tasks

The soil and groundwater sampling was completed after the following pre-investigative tasks:

- Lakewood Environmental Services, Corp. (Lakewood) submitted a New York State One Call ticket prior to the initiation of drilling activities. Utility mark outs were limited to public property (i.e. the street and sidewalk).
- Boreholes were marked out prior to drilling, for the purpose of utility clearance.

3.2.2 Geophysical Survey

Nova Geophysical Engineering Services (Nova) of Queens, New York conducted a geophysical survey on 11 November 2021, prior to the initiation of intrusive drilling activities. The survey was observed by Langan field staff and included the use of a Noggin 250 MHz ground penetrating radar (GPR) and

Radio Detection RD7100 electromagnetic (EM) utility locator. These instruments were utilized to attempt to locate potential subsurface utilities, USTs and/or subsurface structures and to clear proposed boring locations. Borings were relocated as necessary to avoid buried structures. The geophysical report prepared by Nova is included in **Appendix A**, with findings described below:

- 57-00 and 58-20 Parcels: Various underground utility lines, and drains with associated piping were identified throughout the parcels. A potential oil/water separator was identified within the southern end of the maintenance garage. The identified feature had piping connected to a nearby storm water drain, which connects to the on-site storm water vault.

- 57-05 Parcel: Two potential USTs were identified within the northeastern and northwestern portions of the parcel. A potential underground injection control (UIC) unit was also identified on the northern portion of the parcel. Underground utility and storm sewer lines were identified throughout the parcel.

- 57-57 Parcel: Water and sewer underground utility lines were identified on this parcel.

3.2.3 Exploratory Borings and Soil Sampling

The ten exploratory borings were drilled on 11 and 12 November 2021. Borings were advanced by Lakewood using a portable track-mounted Geoprobe 6610 DT direct push drill rig. The boreholes were advanced by hydraulically pushing a 2.0-inch diameter stainless steel sampler containing a 4 to 5-foot-long acetate macrocore sleeve into the subsurface. The boreholes were advanced to a depth between 15 and 18 feet bgs.

Soils were logged based on a modified Burmeister and Unified Soil Classification System (USCS) system. Completed logs for each soil boring are included in **Appendix B**. Soils retrieved from the acetate liners were screened for the presence of VOCs using a photo-ionization detector (PID) with a 10.6 eV bulb and calibrated with 100 parts per million (ppm) isobutylene reference gas. Elevated PID readings (ranging from 97 ppm to >500 ppm) in five of the ten soil borings (LB-4, LB-5, LB-6, LB-9, and LB-10), contained with the highest PID readings detected at or below groundwater.

Samples were collected by removing the soil in the acetate liner from the chosen sample depth and placing the soil into laboratory-provided containers. Sample jars were sealed and stored in a cooler with ice for transport to the analytical laboratory. Ten soil samples were collected at the Site, including:

- Four soil samples from borings on Parcel 57-00 (LB-1 to LB-4) that were analyzed for VOCs, SVOCs, Metals, and polychlorinated biphenyls (PCBs).
- Three soil samples from the interior of the structure on Parcel 57-00 (LB-5, LB-6, and LB 10) that were analyzed for VOCs, SVOCs, Metals, and PCBs.
    - The sample from boring LB-5 was placed on hold at the laboratory for all analyses and not analyzed considering soil boring LB-6 was located closer to the oil/water separator.
- Two soil samples from soil borings LB-7 and LB-8, completed on Parcel 57-05 in the estimated downgradient direction from the previously encountered MTBE area on Parcel 57-05; these samples were analyzed for VOC analysis. The soil sample from the soil boring (LB-9) located adjacent to and in an inferred downgradient from the UIC unit on Parcel 57-05, was also analyzed for VOC and SVOCs.
- One soil sample from soil boring LB-9 completed adjacent to a possible UST detected during the geophysical investigation on Parcel 57-05; the sample was analyzed for VOCs, SVOCs, Metals, and PCBs.

3.2.4 Temporary Well Installation & Groundwater Sampling

Eight borings were converted to temporary monitoring wells by installing 1-inch or 2-inch diameter poly-vinyl chloride (PVC) casing into select soil boreholes. The annular space around the temporary well was filled with No. 2 sand. The temporary well points were purged and groundwater samples were collected from each using dedicated, disposable 1.5-inch and 0.75-inch diameter weighted Teflon bailers and were collected into laboratory-supplied sample jars. Sample jars were secured in laboratory-provided, protective pouches, and stored in a cooler with ice for transport to the analytical laboratory.

The groundwater samples were collected at the Site on 12 November 2021, and analyzed for VOCs, SVOCs, and Metals. Since sample turbidity is generally high from groundwater collected from temporary well points; all groundwater samples were laboratory filtered, and analyzed for total and dissolved Metals. Exceptions included the samples from temporary well points LB-7 and LB-8, which were analyzed for VOCs only, and the sample from temporary well point LB-9, which was analyzed for VOCs and SVOCs.

4.0 RESULTS

4.1 Observed Subsurface Conditions

Subsurface soils consisted of sand, soil, and fill material (i.e. brick, concrete, gravel, and sand); bedrock was not encountered during this ESI. Groundwater was encountered between about 8.5 to 11 feet bgs. Odors, staining, and/or elevated PID readings were identified in soil borings LB-5, LB-6, LB-8, LB 9, and LB-10 at depths ranging from 6 to 18 feet bgs. However, petroleum-related VOCs and SVOCs were not detected above CU and/or IU SCOs in soil samples collected from these borings.

4.2 Soil and Groundwater Quality

Laboratory results are summarize by media in **Tables 1 and 2**, with results above the regulatory criteria depicted in Figures 2 and 3. Evaluation and discussions of the collected data are presented below. The laboratory analytical reports are included for reference in **Appendix C.**

4.2.1 Soil Evaluation

Langan evaluated the soil analytical results relative to 6NYCRR Part 375 CU and IU SCOs. Compounds and Metals exceeding the CU and/or IU SCOs are summarized below. SCOs are listed in parentheses. Exceedances of IU SCOs are in **bold**.

VOCs

VOCs were not detected at concentrations above CU or IU SCOs.

SVOCs – SVOCs were detected in LB-1, LB-2 and LB-3 above the CU and/or IU SCOs as summarized below:

- Benzo(a)pyrene – **4.8 mg/kg** in LB-1; **1.3 mg/kg** in LB-2; **3.6 mg/kg** in LB-3 (CU SCO: 1 mg/kg; IU SCO: 1.1 mg/kg)
- Benzo(b)fluoranthene – 5.7 mg/kg in LB-1 (CU SCO: 5.6 mg/kg; IU SCO: 11 mg/kg)
- Dibenzo(a,h)anthracene – 0.92 mg/kg in LB-1; 0.67 mg/kg in LB-3 (CU SCO: 0.56 mg/kg; IU SCO: 1.1 mg/kg)

PCBs - PCBs were not detected at concentrations above CU and/or IU SCOs.

Metals – Metals were detected in LB-1, LB-2, LB-3, and LB-10 above their respective CU and/or IU SCOs as summarized below:

- Arsenic – **83 mg/kg** in LB-3; **1,900 mg/kg** in LB-10 (CU/IU SCO: 16 mg/kg)
- Barium – 1,400 mg/kg in LB-2 (CU SCO: 400 mg/kg; IU SCO:10,000 mg/kg)
- Copper – 580 mg/kg in LB-2 (CU SCO: 270 mg/kg; IU SCO: 10,000 mg/kg)
- Cyanide – 140 mg/kg in LB-10 (CU SCO: 27 mg/kg; 54 SCO: 10,000 mg/kg
- Lead – 1,800 mg/kg in LB-1 and LB-10 (CU SCO: 1,000 mg/kg)
- Mercury – 3.6 mg/kg in LB-2; **6.5 mg/kg** in LB-10 (CU SCO: 2.8 mg/kg)

4.2.2 Groundwater Evaluation

Langan evaluated the groundwater analytical results relative to the NYSDEC's TOGS SGVs for Class GA (drinking water).

VOCs - VOCs were detected in samples TW-1, TW-8, and TW-9 at concentrations above the NYSDEC TOGS SGVs and are summarized below. SGVs are listed in parentheses:

- Ethylbenzene – 8.6 micrograms per liter (µg/L) in TW-1 (SGV: 5 µg/L)
- Isopropylbenzene – 24 µg/L in TW-9 (SGV: 5 µg/L)
- Toluene – 60 µg/L in TW-8 (SGV: 5 µg/L)

SVOCs - SVOCs were detected in samples TW-1 and TW-2 at concentrations above the NYSDEC TOGS SGVs and are summarized below. SGVs are listed in parentheses:

- Acenaphthene– 53 µg/L in TW-1 (SGV: 20 µg/L)
- Anthracene– 73 µg/L in TW-1 (SGV: 50 µg/L)
- Benzo(a)anthracene – 63 µg/L in TW-1; 6.9 µg/L in TW- 2 (SGV: 0.002 µg/L)
- Benzo(a)pyrene – 43 µg/L in TW-1; 6.2 µg/L in TW-2 (SVG: 0 µg/L)
- Benzo(b)fluoranthene – 44 µg/L in TW-1; 7.3 µg/L in TW-2 (SGV: 0.002 µg/L)
- Benzo(k)fluoranthene – 10 µg/L in TW-1; 2.2 µg/L in TW-2 (SGV: 0.002 µg/L)
- Chrysene – 60 µg/L in TW-1; 5.2 µg/L in TW-2 (SGV: 0.002 µg/L)
- Fluoranthene – 110 µg/L in TW-1 (SGV: 50 µg/L)
- Fluorene – 55 µg/L in TW-1 (SGV: 50 µg/L)
- Indeno(1,2,3-cd)pyrene – 15 µg/L in TW-1; 3.2 µg/L in TW-2 (SGV: 0.002 µg/L)
- Naphthalene – 17 µg/L in TW-1 (SGV: 10 µg/L)
- Phenanthrene – 220 µg/L in TW-1 (SGV: 50 µg/L)

- Pyrene – 170 µg/L in TW-1 (SGV: 50 µg/L)

Total Metals – One or more of the following Metals were detected at concentrations above the NYSDEC TOGS SGVs in the unfiltered groundwater samples across the site:

- Antimony
- Arsenic
- Barium
- Beryllium
- Cadmium
- Chromium
- Copper
- Iron
- Lead
- Magnesium
- Manganese
- Mercury
- Nickel
- Selenium
- Sodium
- Zinc

Dissolved Metals - Dissolved Metals were detected in filtered samples TW-1 through TW-4 and TW-6 at concentrations above the SGVs and are summarized below. SGVs are listed in parenthesis:

- Antimony – 3.3 µg/L in TW-4 to 8.3 µg/L in TW-6 (SGV: 3 µg/L)
- Arsenic – 45 µg/L was detected in in TW-3 (SGV: 3 µg/L)
- Iron – 650 µg/L in TW-1 (SGV: 300 µg/L)
- Manganese – 640 µg/L in TW-2 (SGV: 300 µg/L)
- Sodium – 25,000 µg/L in TW-6 to 310,000 µg/L in TW-4 (SGV: 20,000 µg/L);

5.0 FINDINGS

The following is a summary of Phase ESI II findings:

- Anomalies indicative of an UIC point and two USTs were identified during the geophysical survey on the northern, northeastern, and northwestern portions of Parcel 57-05, respectively. In addition, an OWS, storm and sanitary lines, and a storm water vault were detected on Parcel 57-00.
- Odors, staining, and/or elevated PID readings were identified in soil borings LB-5, LB-6, LB-8, LB-9, and LB-10 at depths ranging from 6 to 18 feet bgs. These observations were generally identified in soils at or below the groundwater table. However, petroleum-related VOCs and SVOCs were not detected above CU and/or IU SCOs in soil samples collected from these borings.

SOIL:

- VOCs were not measured in soil samples at concentrations greater than their respective CU or IU SCOs.
- SVOCs and Metals were detected in soil samples at a concentrations greater than their respective CU and/or IU SCOs.

GROUNDWATER:

- VOCs and SVOCs were detected in Site groundwater at concentrations greater than their respective NYSDEC TOGS SGVs. VOCs and select SVOCs detected above the NYSDEC TOGS SGVs are petroleum-related.
- Ethylbenzene and naphthalene were identified in temporary well point TW-1, installed along the southwestern portion of Parcel 57-00 at concentrations greater than their respective NYSDEC TOGS SGVs.
- Gasoline VOC related constituents MTBE, toluene, and isopropylbenzene were identified in groundwater on Parcel 57-05.
- Barium, beryllium, cadmium, total chromium, copper, lead, magnesium, mercury, nickel, selenium, and zinc were detected in total concentrations above the NYSDEC TOGS SGVs in the unfiltered samples and can be attributed to the suspended solids in the groundwater samples. These results correlate with high field-reported turbidity levels at each of the sample locations.
- Antimony, iron, manganese and sodium were detected at dissolved concentrations in filtered samples. These Metals are naturally-occurring and the detected concentrations are not indicative of groundwater contamination. Arsenic was identified in filtered temporary well sample TW-3 at concentrations exceeding the NYSDEC TOGS SGVs.

Notes:
CAS - Chemical Abstract Service
NS - No standard
mg/kg - milligram per kilogram
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Restricted Use Commercial, and Restricted Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenol (p-cresol).

Qualifiers:
D - The concentration reported is a result of a diluted sample.
J - The analyte was detected above the method detection limit (MDL), but below the reporting limit (RL); therefore, the result is an estimated concentration.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

Exceedance Summary:
10 - Result exceeds Restricted Use Commercial SCOs
10 - Result exceeds Restricted Use Industrial SCOs

Notes:
CAS - Chemical Abstract Service
NS - No standard
ug/l - microgram per liter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water (herein collectively referenced as "NYSDEC SGVs").

Qualifiers:
D - The concentration reported is a result of a diluted sample.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the

Exceedance Summary:
10 - Result exceeds NYSDEC SGVs

Re: Geophysical Engineering Survey (GES) Report
Industrial Site
58-20 47th Street,
Maspeth, Queens 11378

Dear Mr. Arico.

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 58-20 47th Street, Maspeth, Queens 11378 (the "Site").

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks and other substructures on November 9th, 2021. This report and attachments also include findings from a previous survey that was performed at the site on July 7th, 2021.

The equipment selected for this investigation was a Sensors and Software Noggin 250 MHz ground penetrating radar (GPR) with a shielded antenna and a Radio Detection RD7100 Electromagnetic utility locator.

A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transduce via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency

according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS

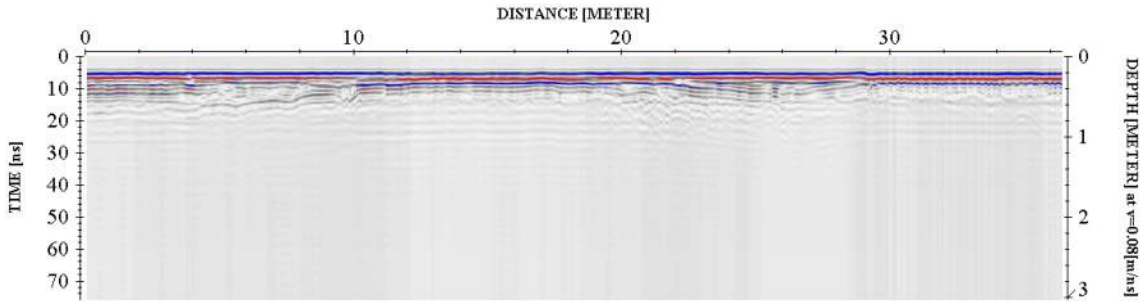
The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

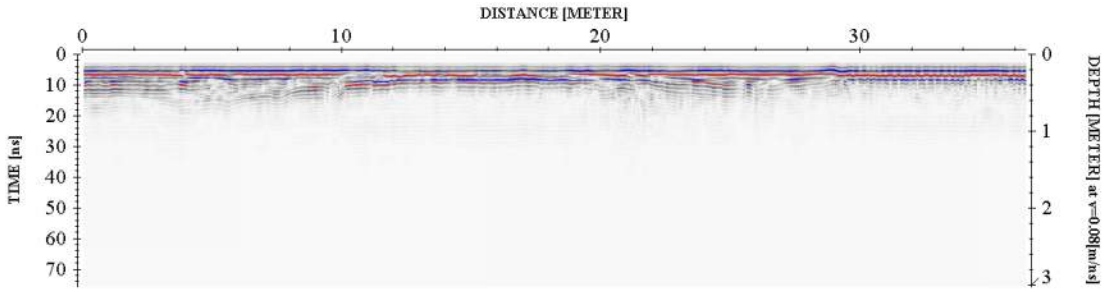
DATA PROCESSING

To improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing workflow is briefly described in this section.

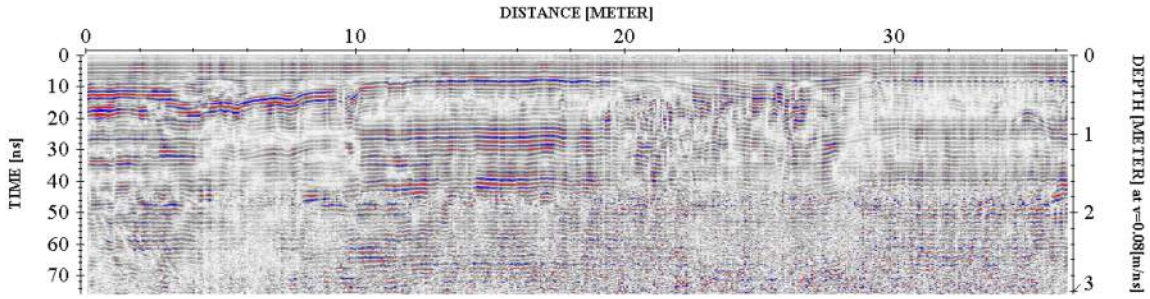
Step 1. Import Raw RAMAC data to standard processing format



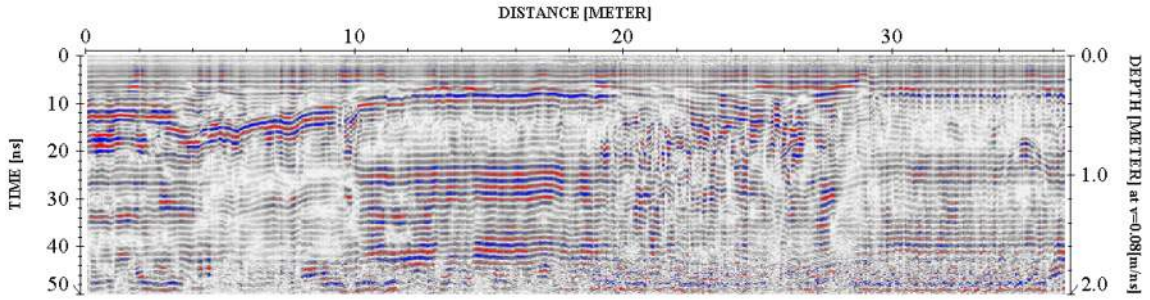
Step 2. Remove instrument noise *(dewow)*



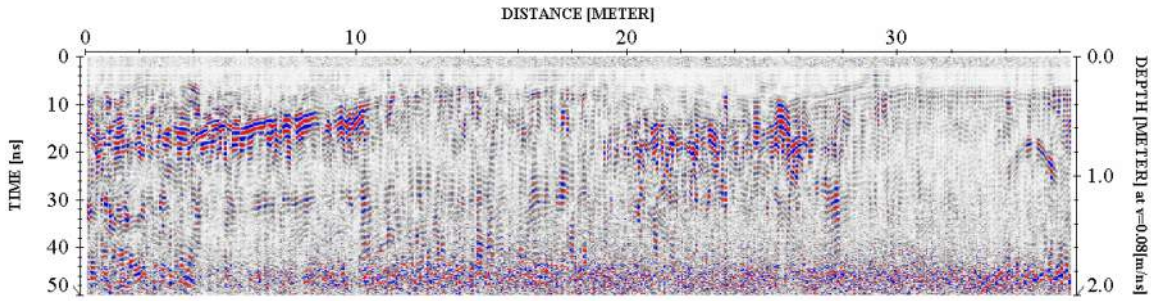
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Clear

Temperature: 55° F

Surface: Concrete, Gravel,

Survey Parameters: A GPR grid scan was conducted within the survey areas as shown on the survey plan. The approximate line spacing of the grid survey was approximately 6'. Additional GPR data was collected over features of interest and in the vicinity of proposed boring locations. An EM utility locator was used in conjunction with the GPR throughout the surveyed areas.

Limitations: The geophysical noise level at the site was high due to being in an urban environment, reinforced concrete within the surveyed areas and the presence of gravel.

RESULTS

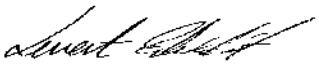
The results of the geophysical engineering survey (GES) identified the following at the project site:

- Anomalies resembling potential subsurface utilities (such as sewer, water, electric, drainage, telecom, and gas) along with related structures (such as an oil water separator and drains) were identified during the GES. The approximate locations are shown in the survey plan.
- NOVA identified a suspected aboveground storage tank (AST) vault (AST removed prior to GES). A second AST was also identified within the survey area. Two additional sets of vent pipe and fill port were identified and are suspected to be related to two previously removed ASTs. Shown in the survey plan.
- Two large geophysical anomalies resembling potential underground storage tank (UST) graves along with associated lines were identified. Two more large geophysical anomalies resembling potential existing USTs were also identified. Shown in the survey plan.
- All cleared boring locations are shown in the survey plan.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services



Levent Eskicakit, P.G., E.P.

Project Engineer

Remarks (Drilling Fluid, Depth of Casing, Fluid Loss, Drilling Resistance, etc.)

Started Drilling at 11/12/2021 8:40 AM

Bottom of boring at 11/12/2021 8:46 AM. Refusal encountered at 7.0ft. Possibly metal

Once completed the boring was backfilled with any remaining drill cuttings, and then finished with fast setting high strength concrete to match the existing concrete pavement.

RE: Underground Storage Tank Removal and Underground Injection Control Unit Sampling
57-05 47th Street
Maspeth, Queens, New York
Langan Project No. 100965501

Dear Mr. Richer,

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) is pleased to provide this letter to summarize underground storage tank (UST) removal and underground injection control (UIC) unit sampling activities. Activities were completed at 57-05 47th Street in Maspeth, Queens, New York (Block 2602, Lot 72); herein referred to as the Site.

One 550-gallon UST and one 3,500-gallon UST were encountered and subsequently removed on February 21, 2022. Excess tank contents, waste generated during decommissioning, and cleaned UST carcasses were disposed of off-site. These USTs were added to the existing petroleum bulk storage (PBS) registration for the facility (PBS Site No. 2-350001); the PBS registration is included as **Attachment A**. New York City Fire Department (FDNY) tank removal affidavits are included in **Appendix B**. Waste disposal manifests are included in **Appendix C**. Sampling locations and a summary of laboratory results for endpoint samples collected after UST removals are shown on **Figure 1.** Sampling location and summary of laboratory results for the UIC structure are shown on **Figure 2**. A more detailed summary of laboratory results are included as **Tables 1** through **5**.

Underground Storage Tank Removal and Sampling Activities

UST 002 (550-gallon Waste Oil)

- On February 21, 2022, AARCO Environmental Services, Inc. (AARCO) mobilized to the Site and removed a 550-gallon waste oil UST (UST 002) from the western side of the Site. During the removal process, it was observed that the tank had previously been abandoned in-place. Some discolored soils were observed above of the tank. Stained soils were

segregated separately from clean soils that were removed from above the tank and a soil sample (PRE-EX) was collected from the stained material for laboratory analysis.

- The sample was analyzed for target compound list volatile organic compounds plus 15 tentatively identified compounds (TCL VOC+15) via EPA Method SW846 8260C, semi-volatile organic compounds plus 20 tentatively identified compounds (SVOC+20) via EPA Method SW846 8270D, target compound list (TCL) metals via EPA Method SW846 16010D and 17471B, and polychlorinated biphenyls (PCBs) via EPA Method SW846 18082A.

    - Analytical results from the PRE-EX soil sample obtained from the discolored soil did not contain concentrations of VOCs, SVOCs, PCBs, and metals greater than the NYSDEC Part 375 Restricted Use Commercial Soil Cleanup Objectives (Commercial SCOs), the Restricted Use Industrial Soil Cleanup Objectives (Industrial SCOs), or Commissioner Policy 51 Soil Cleanup Guidance (CP-51) SCOs. A summary of these results is included as **Table 1**.

- Once the UST was removed, evidence of a discharge from the sides and bottom of the tank was not identified. The UST was identified to be in good condition with no corrosion holes observed. Approximately 550 gallons of water and approximately 5 gallons of sludge were removed from the tank and disposed off-site.

- After the UST carcass was removed from the ground, soil samples were collected from the center base and side walls of the excavation at the tank invert. All samples were analyzed for TCL VOC+15, SVOCs+20, TAL Metals, and PCBs via the EPA methods outlined above.

    - Analytical results indicate that the post UST removal soil samples did not contain concentrations of VOCs, SVOCs, PCBs, and metals greater than the NYSDEC Commercial SCOs, Industrial SCOs, or CP-51 SCOs. All samples contained detectable concentrations of metals and SVOCs. Refer to **Table 1** for a results summation.

- Following soil sample collection, the excavation was backfilled with unimpacted overburden and clean fill brought to the Site. Discolored overburden was segregated and stockpiled for offsite disposal. On March 11, 2022, the excavation area was restored with concrete.

UST 003 (3,500-gallon Diesel)

- On February 21, 2022, AARCO mobilized to the Site and removed a 3,500-gallon diesel UST (UST 003) from the northeastern portion of the Site. During the removal process, a hole cut into the top of the tank was observed, indicating the tank had previously been abandoned in place. Additionally, the UST had been filled with soil, presumably during the prior abandonment activities.

- This tank was located inside concrete encasement. The top portion of the encasement had been removed as part of previous abandonment measures. The encasement walls were either fully or partially demolished to allow for tank removal/soil sampling activities.

- The UST was noted to be in good condition and free of corrosion holes. Approximately 2,550-gallons of water was removed from the tank with a vacuum truck and disposed off-site. Oily sludge and soil utilized to previously abandon the tank was drummed and disposed of off-site.

- Once the UST and encasement was removed, evidence of a discharge was observed on the sides and beneath the tank. Soil staining was identified on all sides and bottom of the tank excavation. Elevated photoionization detector (PID) readings were identified on the northern, eastern, southern, and center portions of the excavation.

- Soil samples were collected from the center base and the four side walls at the invert of the tank. Samples were analyzed for CP-51 parameters which include select VOCs via EPA method SW846 8260C and SVOCs via EPA method SW846 8270D.

    - Analytical results indicated a detectable amount of xylenes in sample USTB-3. Xylene (m/p and total) concentrations were below the Part 375 Commercial and Industrial SCOs but greater than CP-51 Fuel Oil and Gasoline SCOs.

    - Three of the five samples had detectable levels of SVOCs. Sample USTB-4 contained benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and ideno(1,2,3-cd)pyrene at concentrations greater than their respective Commercial and Industrial SCOs. Additionally, this sample contained benzo(k)fluoranthene, chrysene, and phenanthrene at concentrations greater than their respective CP-51 Fuel Oil SCOs. A summary of these results is included as **Table 2**.

- The detections of xylene and SVOC, together with the PID readings within the tank excavation, were indicative of a petroleum release, therefore NYSDEC was contacted. Spill No. 2110517 was assigned to this incident.

Underground Injection Control Unit Sampling Activities

- A sludge sample was collected from within a UIC structure on February 22, 2022. The sample was analyzed for TCL VOCs, TCL SVOCs, and toxicity characteristics leaching procedure (TCLP) Resource Conservation and Recovery Act (RCRA) 8 metals.
    - Analytical results indicated the following compounds were detected in sludge within the UIC: 1,2,4-trimethylbenzene, 2-hexanone, methyl ethyl ketone, acetone, cymene, toluene, bis(2-ethylhexyl) phthalate, and dibutyl phthalate. TCLP results indicate the sludge is not considered a characteristic hazardous waste for metals. Sludge results compared to the Environmental Protection Agency (EPA) RCRA 8 metals is included as **Table 3** and a table with detections only is included as **Table 4**.

- A liquid sample was collected from within the UIC structure on February 21, 2022. The sample was analyzed for TCL VOCs and TCL SVOCs with select ion monitoring (SIM).
    - Analytical results indicated liquids within this structure contained acetone, methyl ethyl ketone, toluene, 2-methylnaphthalene, acenaphthalene, benzo(b)fluoranthene, benzo(g,h,i)perylene, bis(2-ethylhexyl) phthalate, chrysene, fluoranthene, fluorene, ideo(1,2,3-cd)pyrene, pentachlorophenol, phenanthrene, and pyrene. A summary of these results is included as **Table 5.**

Please contact us at 973-524-8124 with any questions.

Sincerely,

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C

Job Description: Removal of One (1) 550 Gallon Waste Oil Underground Storage Tanks

In accordance with Title 3 RCNY at 21-02 and FDNY Code R3404-01:
I have supervised the permanent removal of: (1) 550 Gallon Underground Storage Tank(s) at: 57-05 47th Street, Maspeth, Queens NY 11378

- Contents of tank(s) were removed and legally disposed of.
- Tanks were thorougly cleaned and rendered free of combustible vapors.
- All pipes were removed.
- Fill ports were removed/abandoned with concrete/capped.
- Work was performed on: 21-Feb-22 through 3/11/2022
- Tanks was: Removed
- Environmental site assessment has been performed in accordance with the requirements of federal or state law/regulations.

Roger Terlaga

New York City Underground Tank Installer
Certified of License # 85314227, expiration: 7/ 7/22/2023

Sworn before me this 16 day of Mar-22

Notes:
CAS - Chemical Abstract Service
NS - No standard
mg/kg - milligram per kilogram
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Soil sample analytical results are compared to New York State Department of Environmental Conservation (NYSDEC) Commissioner Policy 51 (CP-51) Soil Cleanup Levels (SCL) for Gasoline and Fuel Oil Contaminated Soils (October 2010), and NYSDEC Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Restricted Use Commercial and Restricted Use Industrial Soil Cleanup Objectives (SCO).
Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenol (p-cresol).
The criteria comparison for total chromium is provided for reference. The promulgated SCO shown is for hexavalent chromium.

Qualifiers:
J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:
10 - Result exceeds NYSDEC CP51 SCLs for Gasoline and Fuel Oil Contaminated Soils
10 - Result exceeds Restricted Use Industrial SCOs
10 - Result exceeds Restricted Use Commercial SCOs

Notes:
CAS - Chemical Abstract Service
mg/kg - milligram per kilogram
Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulg SCOs are for 3-methylphenol (m-cresol) and 4-methylphenol (p-cresol).

Qualifiers:
J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the report RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the lev the RL or the sample concentration for results impacted by blank contamination.

Table 3

Notes:
CAS - Chemical Abstract Service
NS - No standard
ug/l - microgram per liter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 703.5 and the NYSD Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class G Water (herein collectively referenced as "NYSDEC SGVs").

Qualifiers:
J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sampl
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:
10 - Result exceeds NYSDEC SGVs

Re: Soil Vapor Intrusion Summary Letter
57-00 and 57-05 47th Street
Maspeth, Queens, New York
Langan Project No. 100965503

Dear Mr. Richter:

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology D.P.C. (Langan) has prepared this letter to provide a summary of a recent soil vapor intrusion (SVI) investigation completed at the buildings located at 57-00 (Block 2601, Lot 6) and 57-05 (Block 2602, Lot 72) 47th Street, Queens (Maspeth), New York. The SVI investigation was completed to evaluate if a vapor intrusion concern exists in the on-site buildings. The SVI investigation was performed in general accordance with Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH October 2006, revised May 2017) (NYSDOH Guidance). A summary of the SVI investigation procedures and the laboratory analytical results is provided below.

Site Location and Background

The site is located within a high density commercial/industrial neighborhood of Maspeth (Queens), along Newtown Creek. The building located at 57-00 47th Street (Block 2601, Lot 6) was constructed in 1966. The building was formerly utilized as a vehicle parking area and maintenance garage, followed by a concrete materials recycling facility, and is currently vacant. The building located at 57-05 47th Street (Block 2602, Lot 72) was constructed in 1964. The building was formerly utilized as a vehicle parking garage, for building materials storage, and as a vehicle maintenance garage; the building is currently vacant.

A SVI investigation was completed to determine if a potential vapor intrusion condition exists in either building that warrants mitigation per NYSDOH guidance. Indoor air and sub-slab vapor (SSV) sample locations are depicted on **Figure 1**.

Pre-Sampling Site Walk and Survey

Langan personnel completed a pre-sampling survey on May 12, 2022 to document building conditions and assess potential background sources of volatile organic compounds (VOCs) in indoor air. Screening of indoor air and chemical products was performed using a ppbRAE 3000+ photoionization detector (PID) equipped with a 10.6 electron volt (eV) bulb to measure total

organic vapors (TOV). The findings from this surveys are summarized below and provided on the Building Inventory Forms included in **Attachment 1**.

The 57-00 47th Street building contained household cleaners, general maintenance products, and vehicle maintenance fluids. When screened with a PID, two of the chemicals stored within this building yielded PID readings of 23 parts per million (PPM). These products were stored within a maintenance closet inside the office space of the building and away from areas where the indoor air samples were collected.

The 57-05 building contained general building maintenance products. When screened with a PID, two of the products within this building yielded PID readings ranging from 0.6 PPM to 40 PPM. Both of these products were stored within a separate storage area west of the SSV05/IA05.

Sub-Slab Soil Vapor, Indoor Air, and Ambient Air Sampling – May 2022

On May 11, 2022, Langan installed five temporary SSV points labeled SSV01 through SSV05 within the on-site buildings. Three temporary SSV points were installed within the 57-00 47th Street building (SSV01 through SSV03) and two temporary sub-slab vapor points within the 57-05 47th Street building (SSV04 and SSV05). The SSV points are depicted on the Sample Location Plan included in **Figure 1**, SSV installation logs are included as **Attachment 2**.

Sub-slab points were installed via a hammer drill which cored an approximate ¾-inch diameter borehole through the concrete slab floors to reach the soil beneath. Stainless steel soil vapor probes were installed beneath the floor slabs and connected to polyethylene tubing. Following installation of the temporary SSV points, an air-tight seal was created at the surface of each soil vapor point using an inert clay. The adequacy of each seal was tested via water dam and helium tracer test before sampling. All sample locations were determined to have an air tight seal as per the helium tracer and water dam tests.

On May 12, 2022, Langan returned to collected SSV samples (SSV01 through SSV05) and co-located indoor air samples (IA01 through IA05) and one ambient air sample (AA01) from the Site. The ambient air sample was collected approximately 230 feet north and upwind of the 57-00 47th Street building to evaluate potential background sources. The sub-slab vapor, indoor air, and outdoor ambient air samples were collected concurrently. Windows and exterior doors were closed during sample collection. The samples were collected utilizing a 6-liter SUMMA canisters fitted with flow controllers calibrated by the laboratory to allow for the collection of a sample over approximately 8-hours. Air canisters for indoor and ambient air sampling were placed within the breathing zone (3' to 5' above ground surface). Prior to sample collection, three volumes of air were evacuated from the SSV points. The evacuated air was screened with a calibrated PID to determine VOC field concentrations. VOC SSV concentrations below the 57-00 47th Street

building slab ranged from 0.7 PPM to 20 PPM. VOC SSV concentrations below the 57-05 47th Street building slab ranged from 0 PPM to 1.3 PPM.

The sub-slab soil vapor, indoor air and ambient air samples were analyzed by Alpha, an NYSDOH Environmental Laboratory Approval Program-certified laboratory. All samples were analyzed via EPA Method TO-15.

Analytical Results

A total of five sub-slab vapor samples, five indoor air samples, and one ambient air sample were collected and analyzed for VOCs. Results are summarized in the following sections.

The SSV, IA and AA sample analytical results are summarized in **Tables 1** and **2** and on **Figure 1.** The laboratory data package is provided in **Attachment 3.**

NYSDOH Decision Matrices

Sub-slab vapor and indoor sample analytical results were evaluated using the decision matrices contained in the NYSDOH Guidance. The NYSDOH decision matrices address the following eight chlorinate volatile organic compounds (CVOCs): 1,1,1-trichloroethane, 1,1-dichloroethene,cis-1,2-dichloroethylene, carbon tetrachloride, methylene chloride, tetrachloroethene (PCE), trichloroethene (TCE), and vinyl chloride.

57-00 47th Street Building (Block 2601, Lot 6)

The following table presents the sub-slab soil vapor and indoor air concentration ranges of the eight CVOCs addressed by the decision matrices, presented in micrograms per cubic meter ($\mu g/m^3$).

Compound	Sub-Slab Soil Vapor Range ($\mu g/m^3$)	Indoor Air Range ($\mu g/m^3$)
1,1,1-Trichloroethane	ND to 3.2 (SSV01)	ND
1,1-Dichloroethene	ND to <61.9 (SSV03)	ND
cis-1,2-Dichloroethene	ND to <61.9 (SSV03)	ND
Carbon tetrachloride	ND	0.585 (IA01) to 0.61 (IA02)
Methylene chloride	ND	ND
Tetrachloroethene	ND to 485 (SSV02)	0.373 (IA01) to 0.454 (IA03)
Trichloroethene	ND to <83.8 (SSV03)	ND
*Vinyl chloride	ND to 501(SSV03)	ND

ND = Not Detected

*Due to the high concentration of vinyl chloride, sample SSV03 required dilution which resulted in three other CVOC compounds (1,1-dichloroethene, cis-1,2-dichloroethene, and trichloroethene) in the same sample to have reporting limits (RLs) greater than the evaluation criteria presented in NYSDOH Decision Matrices. As a conservative measure, the RLs were applied to the decision matrix in lieu of the diluted and estimated concentrations. The values shown in the able above for these three compounds are the RLs.

Analytical results indicate that sub-slab vapor is impacted by CVOCs, including 1,1,1-trichloroethane, 1,1-dichloroethene, cis-1,2-dichloroethene, PCE, TCE, and vinyl chloride. Analytical results identified carbon tetrachloride and PCE in indoor air. Applying the detected

CVOC concentrations in SSV and indoor air to the NYSDOH Guidance Decision Matrices yields recommendations including:

- "No further action" (1,1,1-trichloroethane, methylene chloride, carbon tetrachloride, and PCE)
- "Mitigate" (vinyl chloride, 1,1-dichloroethene, cis 1,2-dichloroethene, and TCE)

Indoor air analytical results were also compared to the NYSDOH Air Guideline Values (AGVs) and NYSDOH Recommended Immediate Action Levels (RIALs). All indoor air VOC results were less than their respective AGV and RIALs.

57-05 47th Street Building (Block 2602, Lot 72)

The following table presents the sub-slab soil vapor and indoor air concentration ranges of the eight CVOCs addressed by the decision matrices, presented in µg/m^3.

Compound	Sub-Slab Soil Vapor Range (µg/m^3)	Indoor Air Range (µg/m^3)
1,1,1-Trichloroethane	ND	ND
1,1-Dichloroethene	ND	ND
cis-1,2-Dichloroethene	ND	ND
Carbon tetrachloride	ND	0.585 (IA04) to 0.579 (IA05)
Methylene chloride	ND	ND
Tetrachloroethene	30.8 (SSV05) to 49.5 (SSV05)	0.468 (IA05) to 0.475 (IA04)
Trichloroethene	ND	ND
Vinyl chloride	ND to 0.631 (SSV04)	ND

ND = Not Detected

Analytical results indicate that sub-slab vapor is impacted by PCE and vinyl chloride. Analytical results identified carbon tetrachloride and PCE in indoor air. Applying the detected CVOC concentrations in SSV and indoor air to the NYSDOH Guidance Decision Matrices yielded "No further action" for all CVOC compounds.

Indoor air analytical results were also compared to the NYSDOH AGVs and NYSDOH RIALs. All indoor air VOC results were less than their respective AGV and RIALs.

Data Validation

Lagan completed a data validation of the laboratory analytical results and the data validation report is provided in **Attachment 4.** On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of minor deficiencies as discussed in the data validation report.

The data is considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid is 100%.

Conclusions and Recommendations

It is noted that carbon tetrachloride was detected in all five of the indoor air samples and in the ambient air sample collected during the May 2022 VI investigation. Carbon tetrachloride was not

detected in any of the SSV samples. Based on this information, carbon tetrachloride is considered to be a background contaminant and not associated with VI. No further action is required for this compound.

57-00 47th Street Building (Block 2601, Lot 6)

Chlorinated solvent and petroleum related VOCs were identified beneath the building slab. When evaluated using NYSDOH Decision Matrices, SSV and indoor air data from locations SSV01 and SSV02 yielded a recommendation for no further action. However, SSV and indoor air data from sample location SSV03 yielded a recommendation for mitigation for vinyl chloride. Due to the high concentration of vinyl chloride detected in SSV03, the sample required laboratory dilution which resulted in three other chlorinated solvent compounds to have RLs greater than their respective NYSDOH Decision Matrices threshold values (1,1-dichloroethene, cis 1,2-dichloroethene, and TCE). Applying the RLs for SSV to the decision matrices for these three compounds, yields a recommendation to mitigate.

Based on these data, SVI mitigation is recommended for the 57-00 47th Street Building to address the CVOC concentrations in sub-slab gas detecting in sample SSV03. Mitigation measures may include the following: creating a positive pressure environment inside the building, increasing air exchange rates within the building, and installing a sub-slab depressurization system within the building. All three mitigation measures will be further evaluated for site-specific feasibility and effectiveness.

57-05 47th Street Building (Block 2602, Lot 72)

Chlorinated solvent and petroleum related VOCs were identified beneath the building slab. When evaluated using NYSDOH Decision Matrices, SSV and indoor air data from both sampling locations yielded a recommendation for no further action.

Should you have any questions regarding the information contain in this letter, please feel free to contact the undersigned at 973-560-4613.

Sincerely,
Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.

GENERAL NOTES

1. CO-LOCATED INDOOR AIR AND SUB-SLAB SOIL VAPOR ANALYTICAL RESULTS WERE EVALUATED USING TO THE NEW YORK STATE DEPARTMENT OF HEALTH (NYSDOH) DECISION MATRICES CONTAINED IN THE NYSDOH'S FINAL GUIDANCE FOR EVALUATING SOIL VAPOR INTRUSION IN THE STATE OF NEW YORK (OCTOBER 2006) AND IN THE DECISION MATRICES UPDATED IN MAY 2017.
2. INDOOR AIR ANALYTICAL RESULTS ARE COMPARED TO NYSDOH AIR GUIDELINE VALUES (AGVS) FOR INDOOR AIR.
3. ALL SAMPLE CONCENTRATIONS ARE IN MICROGRAMS PER CUBIC METER.
4. ND = NOT DETECTED
5. - = NOT APPLICABLE

Exceedance Summary:

10 - Result exceeds one or more NYSDOH Soil Vapor/Indoor Air Matrix values and does not require further action

10 - Result exceeds one or more NYSDOH Soil Vapor/Indoor Air Matrix and requires mitigation

*Reporting Limit greater than NYSDOH Soil Vapor/Indoor Air Matrix requiring action

Table 1
Remedial Investigation Report
Sub-Slab Vapor and Indoor Air Sample Analytical Results

47th Street Site
57-00 (Block 2601, Lot 6)
Maspeth, Queens, New York
Langan Project No.: 100965501

Notes:
AA - Ambient Air
IA - Indoor Air
SSV - Sub-slab Soil Vapor
CAS - Chemical Abstract Service
NS - No standard
ug/m3 - microgram per cubic meter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Indoor air sample analytical results are compared to the New York State Department of Health (NYSDOH) Air Guideline Values (AGVs) as set forth in the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York and subsequent updates (2013, 2015, 2017).
Ambient air sample analytical results are shown for reference only.

Qualifiers:
J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:
10 - Result exceeds NYSDOH AGVs

Remedial Investigation Report
Sub-Slab Vapor and Indoor Air Sample Analytical Results

47th Street Site
57-05 (Block 2602, Lot 72)
Maspeth, Queens, New York
Langan Project No.: 100965501

Notes:

IA - Indoor Air
SSV - Sub-slab Soil Vapor
CAS - Chemical Abstract Service
NS - No standard
ug/m3 - microgram per cubic meter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Indoor air sample analytical results are compared to the New York State Department of Health (NYSDOH) Air Guideline Values (AGVs) as set forth in the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York and subsequent updates (2013, 2015, 2017).
Ambient air sample analytical results are shown for reference only.

Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds NYSDOH AGVs

ATTACHMENT 1

INDOOR AIR BUILDING SURVEYS

LANGAN

57-00 47th Street, Maspeth (Queens) New York

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Preston Lai Date/Time Prepared 5/12/2022 @ 8:00

Preparer's Affiliation Langan Phone No. 973.560.4785

Purpose of Investigation Determine if VI trigger(s) exist

1. OCCUPANT:

Interviewed: Y / (N)

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / (N)

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	(Commercial) Multi-use
(Industrial)	Church	Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Former concrete recycling/testing facility and maintenance garage

Does it include residences (i.e., multi-use)? Y / (N) If yes, how many? _____

Other characteristics:

Number of floors West- 1, East- 2 Building age Approx. 52 Years

Is the building insulated? Y / (N) How air tight? Tight / Average / (Not Tight)

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Current tubes/tracer smoke evaluation not performed, building is vacant.

Airflow between floors

_____

_____

_____

Airflow near source

_____

_____

_____

Outdoor air infiltration

_____

_____

_____

Infiltration into air ducts

_____

_____

_____

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	concrete	stone	brick
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	covered with _____	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	Utilized as first floor
j. Sump present?	Y / N			
k. Water in sump?	Y / N / not applicable			

Basement/Lowest level depth below grade: 0 (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Trench drains and oil/water separator

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: Natural gas, however not operable

Boiler/furnace located in: Basement Outdoors Main Floor Other_____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? (Y) / N Eastern end of building

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Building currently vacant and in disrepair due to roof failure. Duct joints assumed to be loose.
Building is vacant, therefore HVAC system on eastern end of building not in service.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never (Vacant)

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	N/A- Slab on grade
1st Floor	Eastern end- Concrete lab and office space. Western end- Vehicle maintenance garage.
2nd Floor	Eastern end- Office space. Western end- No second floor.
3rd Floor	
4th Floor	

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? (Y) / N

b. Does the garage have a separate heating unit? (Y) / N / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / (NA)
Please specify Currently vacant

d. Has the building ever had a fire? Y / (N) When?

e. Is a kerosene or unvented gas space heater present? Y / (N) Where?

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type?

g. Is there smoking in the building? Y / (N) How frequently?

h. Have cleaning products been used recently? Y / (N) When & Type?

i. Have cosmetic products been used recently? Y / (N) When & Type?

j. Has painting/staining been done in the last 6 months? Y / (N) Where & When? _____

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented?_____

n. Is there a bathroom exhaust fan? Y / (N) If yes, where vented?_____

o. Is there a clothes dryer? Y / (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / (N) When & Type?_____

Are there odors in the building? Y / (N)
If yes, please describe: _____

Do any of the building occupants use solvents at work? Y / (N)
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / (N)

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) (No)
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / (N) Date of Installation: _____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency) N/A

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

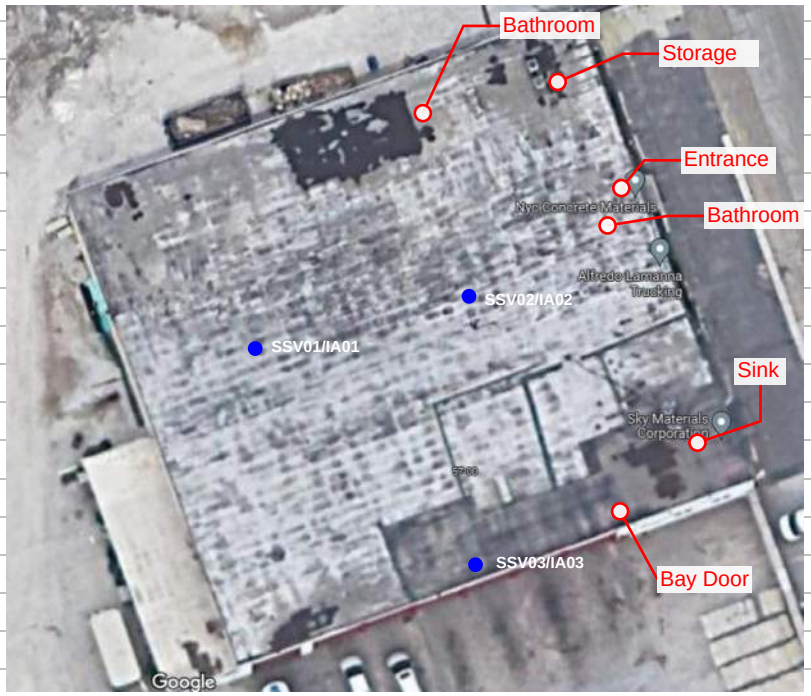
11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

Slab on grade, no basement

First Floor:

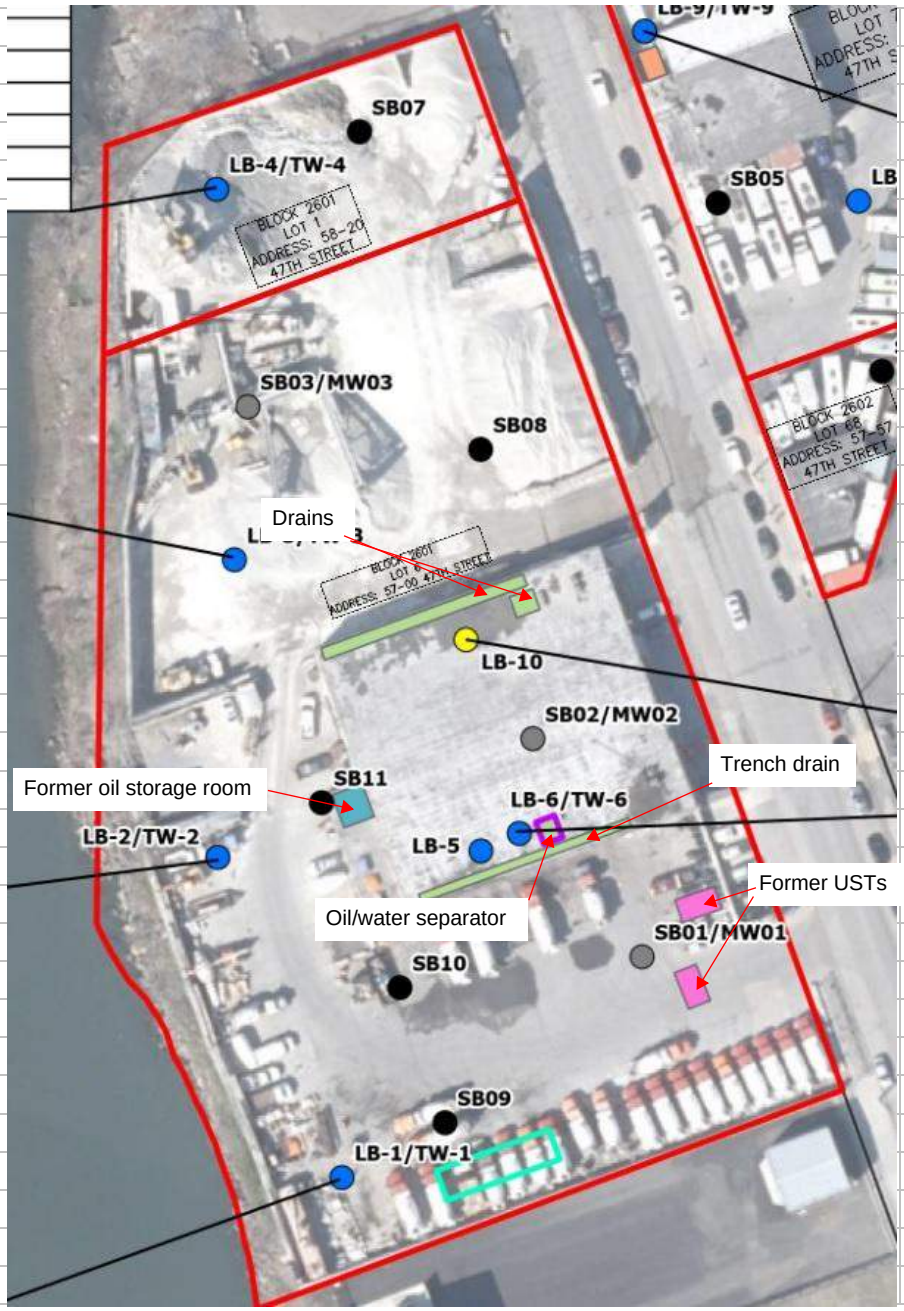


*Sample locations are approximate

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: MiniRAE 3000+

List specific products found in the residence that have the potential to affect indoor air quality.

PID readings collected from open containers. All containers closed had 0 ppm readings.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
Bay Door	Lizzie Mae's Pigeon Feed	Empty	Empty	Grains	0.0 ppm	No
Bay Door	Flexlock Polymeric Sand	50 lb.	Ripped- open	Sand w/ polymers	0.0 ppm	No
Bay Door	Spec mix mortar	50 lb.	Ripped- open	Mortar	0.0 ppm	No
Bathroom	Fire extinguisher	10 lb.	Closed- good	Carbon dioxide	0.0 ppm	No
Sink	Prestone antifreeze	Empty	Closed- good	Ethylene glycol	0.0 ppm	No
Sink	Fram full synthetic motor oil	Empty	Open	Motor oil	0.0 ppm	No
Bathroom	Krystal Kleer washer fluid	Empty	Open	Ethylene glycol	0.0 ppm	No
Bathroom	Lysol Disinfectant spray	7 oz.	Closed- good	Alkyl, Dimethyl Benzyl Ammonium Chlorides	0.0 ppm	No
Bathroom	Febreze Air	8.8 oz.	Closed- good	Cyclodextrin, alcohol, and Hydrogenated Castor Oil	0.0 ppm	No
Bathroom	Pledge Multi-Surface	8.8 oz.	Closed- good	ALKYL DIMETHYL BENZYL AMMONIUM CHLORIDE, N-ALKYL, HEXOXYETHANOL	0.0 ppm	No
Entrance	Dwayne Reed 3% hydrogen peroxide	Empty	Closed- good	Hydrogen peroxide	0.0 ppm	No
Storage	Minote Chem 480 P&R	3 gal.	Closed- good	Butyl APC water soluble degreaser	23 ppm	No
Storage	Remove R&R Chemical	3 gal.	Closed- good	Degreaser and wax stripper	23 ppm	No
Entrance	Lock Ease	3 oz.	Closed- good	Aluminum stearate and petroleum oil lubricant, colloidal graphite, water-repellant and anti corrosion additives	0.0 ppm	No

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

57-05 47th Street, Maspeth (Queens) New York

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Preston Lai Date/Time Prepared 5/12/2022 @ 8:45

Preparer's Affiliation Langan Phone No. 973.560.4785

Purpose of Investigation Determine if VI trigger(s) exist

1. OCCUPANT:

Interviewed: Y / (N)

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / (N)

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	(Commercial) Multi-use
Industrial	Church	Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Former vehicle maintenance garage/masonry material storage facility

Does it include residences (i.e., multi-use)? Y / (N) If yes, how many? _____

Other characteristics:

Number of floors 1 Building age Approx. 52 Years

Is the building insulated? Y / (N) How air tight? Tight / Average / (Not Tight)

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Current tubes/tracer smoke evaluation not performed, building is vacant.

Airflow between floors

_____

_____

_____

Airflow near source

_____

_____

_____

Outdoor air infiltration

_____

_____

_____

Infiltration into air ducts

_____

_____

_____

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	concrete	stone	brick
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	covered with _____	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	Utilized as first floor
j. Sump present?	Y / N			
k. Water in sump?	Y / N / not applicable			

Basement/Lowest level depth below grade: 0 (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Trench drains

_____

_____

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: Natural gas, however not operable

Boiler/furnace located in: Basement Outdoors Main Floor Other_____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? (Y) / N Western end of building

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Building currently vacant and in disrepair. Duct joints assumed to be loose.
Building is vacant, therefore HVAC system on western end of building not in service.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never (Vacant)

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	N/A- Slab on grade
1st Floor	Eastern end- Former vehicle maintenance. Western end- Office space.
2nd Floor	
3rd Floor	
4th Floor	

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? (Y) / N

b. Does the garage have a separate heating unit? (Y) / N / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / (NA)
Please specify Currently vacant

d. Has the building ever had a fire? Y / (N) When?_____

e. Is a kerosene or unvented gas space heater present? Y / (N) Where? _____

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type? _____

g. Is there smoking in the building? Y / (N) How frequently? _____

h. Have cleaning products been used recently? Y / (N) When & Type? _____

i. Have cosmetic products been used recently? Y / (N) When & Type? _____

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

Slab on grade, no basement

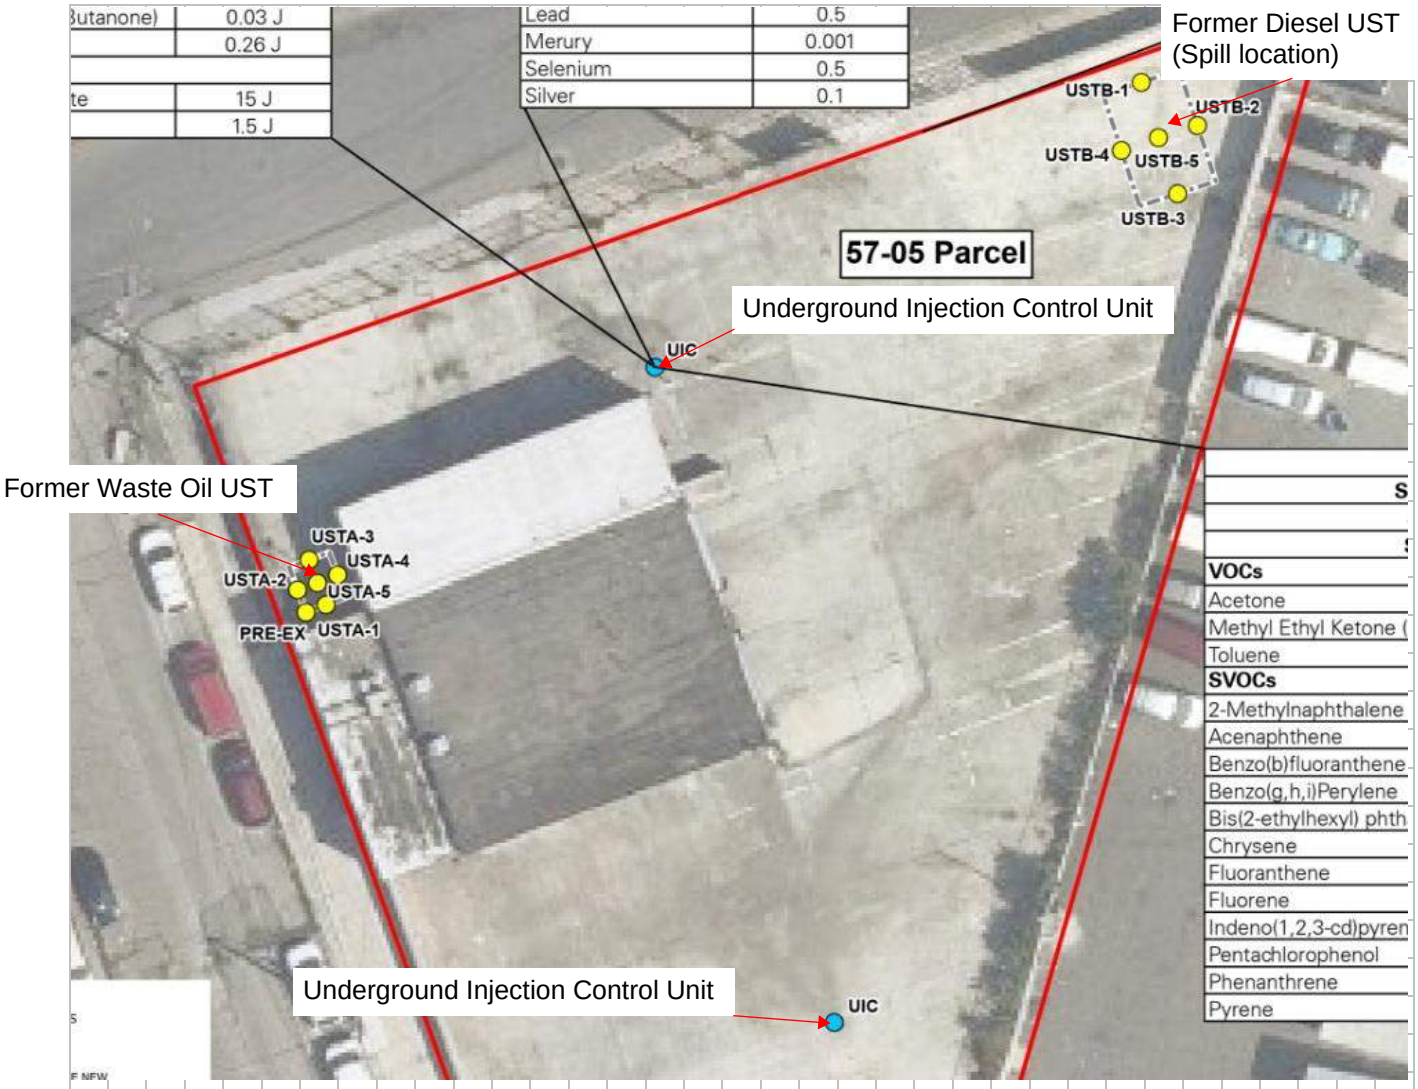
First Floor:

*Sample locations are approximate

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



j. Has painting/staining been done in the last 6 months? Y / (N) Where & When? _____

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented?_____

n. Is there a bathroom exhaust fan? Y / (N) If yes, where vented?_____

o. Is there a clothes dryer? Y / (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / (N) When & Type?_____

Are there odors in the building? Y / (N)
If yes, please describe: _____

Do any of the building occupants use solvents at work? Y / (N)
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / (N)

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) (No)
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / (N) Date of Installation: _____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency) N/A

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: MiniRAE 3000+

List specific products found in the residence that have the potential to affect indoor air quality.

PID readings collected from open containers. All containers closed had 0 ppm readings.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
Interior wall	3M Fire lining seal	Empty	Empty	water-based acrylic	0.6 ppm	No
Interior wall	Chem Safe Clear odorless mastic remover	(3) 5-gal.	Empty	Petroleum distillate, butoxydiglycol, and surfactant mixture	40 ppm	No
Interior wall	Total fire protection extinguisher	10 lb.	Closed- good	Carbon dioxide	0.0 ppm	No

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

SUB-SLAB VAPOR POINT INSTALLATION LOGS

SOIL VAPOR SAMPLING LOG SHEET

Sample Number: SSV01

PROJECT: 57-00, 57-05, and 58-20 47th Street	**PROJECT NO.:** 100965501	
LOCATION: Queens, NY	**SURFACE ELEVATION AND DATUM:** n/a	
DRILLING FIRM OR LANGAN INSTALLER: Kale Novalis/ Preston Lai	**INSTALLATION DATE STARTED:** 5/11/2022	**DATE FINISHED:** 5/11/2022
INSTALLATION FOREMAN: n/a	**SAMPLE DATE STARTED:** 5/12/2022	**DATE FINISHED:** 5/12/2022
INSTALLATION EQUIPMENT: Hammer Drill	**TYPE OF SAMPLING DEVICE:** 6-Liter Summa Canister	
INSPECTOR: Kale Novalis/Preston Lai	**SAMPLER:** Preston Lai	
POTENTIAL SAMPLE INTERFERENCES:	**WEATHER CONDITIONS (PRECIP., TEMP., PRESS., WIND SPEED AND DIR.):** Temp: 70s Wind: 10S Precipitation: n/a Pressure: 30.3	

METHOD OF INSTALLATION AND PURGING:
Sub-slab vapor sampling point was installed by Langan using a hammer drill by drilling a 5/8-inch diameter hole through the concrete slab to a depth about one inch into the underlying soil. The sampling point was then completed with a Vapor Pin™ assembly, consisting of steel barb fitting with a silcone sleeve sealing the 5/8-inch-diameter hole.

TUBING TYPE/DIAMETER: 3/16-inch ID, 1/4-inch OD Teflon-Lined Polyethylene Tubing	**TYPE OF MATERIAL ABOVE SEAL:** None
IMPLANT SCREEN TYPE/LENGTH/DIAMETER: 2-Inch Stainless Steel Probe	**SEAL MATERIAL (Bentonite, Beeswax, Modeling Clay, etc.):** Modeling Clay
BOREHOLE DIAMETER: 5/8 inch	**FILTER PACK MATERIAL (Sand or Glass Beads):** None

	Pressure:	30.3	

METHOD OF INSTALLATION AND SAMPLING:

Langan field screened the sample location with a MultiRAE photoionization detector prior to sampling. Sample consisted of 6L Summa canister fitted with an 8-hour flow control valve. The sample and flow controller were checked each hour during sampling to ensure proper operation.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on May 10, 2022. The canister certification results are provided as an addendum.

The continuing calibration standard, associated with [L2225590], is outside the %D criteria for Isopropanol (31%), however, it is within overall acceptance criteria for the LCS. Target hits of Isopropanol may be biased high.

L2225590-03D and -04D: The samples have elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the samples.

L2225590-04: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

The WG1640147-3 LCS recovery for bromoform (132%) and benzyl chloride (148%) is above the upper 130% acceptance limit. All samples associated with this LCS do not have reportable amounts of this analyte.

The WG1640711-3 LCS recoveries for dibromochloromethane (132%), bromoform (136%), benzyl chloride (150%), 1,2-dibromo-3-chloropropane (132%), naphthalene (133%) and 1,2,3-trichlorobenzene (132%) are above the upper 130% acceptance limit. All samples associated with this LCS do not have reportable amounts of these analytes.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Report Date: 05/20/22

Title: Technical Director/Representative

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Report Format: Data Usability Report

Data Qualifiers

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

ND - Not detected at the reporting limit (RL) for the sample.

Report Format: Data Usability Report

Volatile Organics Instruments

Volatile Organics:

Instrument: Agilent 7890 GC/5975C MSD	Columns (length x ID x df):
Trap: Supelco K Trap (VOACARB 3000)	RTX-VMS 20m x 0.18mm x 1um
Concentrator: EST Encon (or equivalent)	RTX-VMS 30m x 0.25mm x 1.4um
Autosampler: EST Centurion (or equivalent)	RTX-502.2 40m x 0.18mm x 1um
Purge time: 11 min	

Volatile Organics: VPH

Instrument: Agilent 6890 (or equivalent)	Column Type: Restek RTX 502.2
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 105 Meters
Concentrator: EST Encon (or equivalent)	df: 3.00 um
Autosampler: EST Centurion (or equivalent)	ID: 0.53mm

Volatile Organics: PIANO

Instrument: Agilent 7890 GC/5975C MSD	Column Type: DB-VRX
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 60 Meters
Concentrator: Tekmar Velocity / EST Encon	df: 1.40 um
Autosampler: Varian Archon / EST Centurion	ID: 0.25 mm
Purge time: 11 min	Desorb: 1 min

Volatile Organics: Dissolved Gas

Instrument: Agilent 7890 (or equivalent) with FID/TCD	
	Column Type: Haysep S Column
	Column Length: 2 Meters packed (100/200 mesh)
Autosampler: LEAP Headspace	Purge time: 0.6 min

Volatile Organics in Air Instruments

Volatile Organics in Air:

Instruments: Agilent 6890 GC / 5975 MSD Shimadzu QP2010-SE / QP2020

Concentrator: Entech 7100A or 7200	Column Type: Restek RTX-1
Autosampler: Entech 7016CA or 7016D	Column Length: 60 Meters
	df: 1.00 um
	ID: 0.25 mm or 0.32 mm

Trap 1: Glass Bead: manufacturer-Entech: 20 cm packing material
Trap 2: Tenax: manufacturer-Entech: 20 cm packing material

Semivolatile Organics Instruments - Westborough

Semivolatile Organics (Acid/Base/Neutral Extractables):

Instrument: Agilent 5973N MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.32 um
Column Length: 30 Meters	ID: 0.25 mm

Polynuclear Aromatic Hydrocarbons by 8270 SIM:

Instrument: Agilent 5973 MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Pesticides/PCB/Herbicides:

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Petroleum/EPH:

Instrument: Agilent 6890 w/FID / HP 5890 w/ FID	Injection Volume: 1uL
Column: Restek RTX 5	df: 0.25
Column Length: 30 Meters	
ID: 0.32 mm	

Semivolatile Organic Instruments - Mansfield

Semivolatile Organics (ALK-PAH Extractables):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 1 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8270):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 2 ul
Column Type: ZB-Semivolatiles	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (8270 SIM):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (1,4-Dioxane):

Instrument: Agilent 5973N / 5975 / 5977 MSD	Injection volume: 3 ul
Column Type: RTX-5	df: 0.25um, 0.18 um
Column Length: 30 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (209 Congener):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: RTX-5, RTX-PCB	df: 0.25um, 0.18 um
Column Length: 60 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (8081):

Instrument: Agilent 6890 / 7890	Injection volume: 1 ul
Column Type: RTX-5 / RTX-CLP II	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8082):

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Semivolatile Organics (SHC Extractables):

Instrument: Agilent 6890	Injection volume: 1 ul
Column Type: RTX-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Sample Delivery Group Summary

Alpha Job Number : L2225590

Account Name : Langan Engineering & Environmental
Project Number : 100965503
Project Name : 57-00, 57-05 47TH ST

Received : 13-MAY-2022

QLast Update : Tue May 17 15:52:12 2022
Response via : Initial Calibration

#5
dichlorodifluoromethane
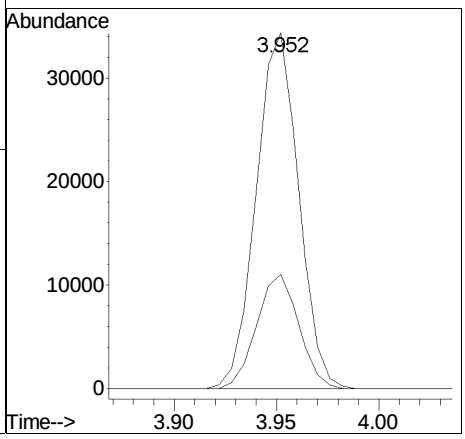
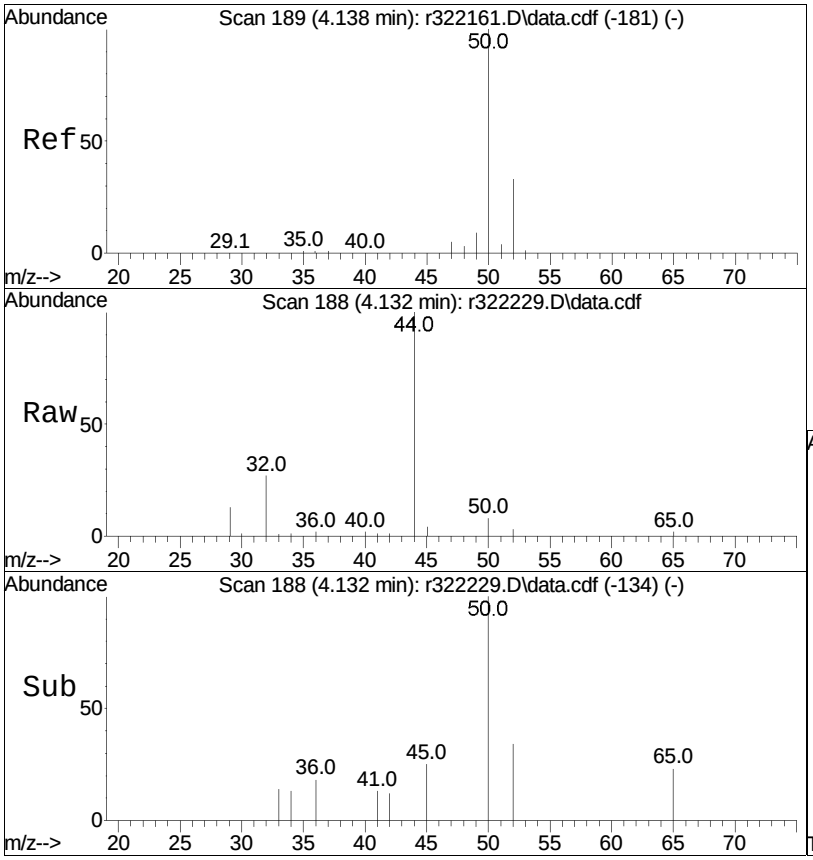
Concen: 1.45 ppbV
RT: 3.952 min Scan# 158
Delta R.T. 0.000 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 85 Resp: 49443

Ion	Ratio	Lower	Upper
85	100		
87	32.1	25.8	38.6

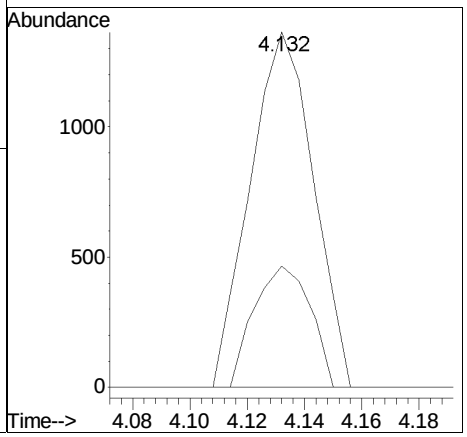


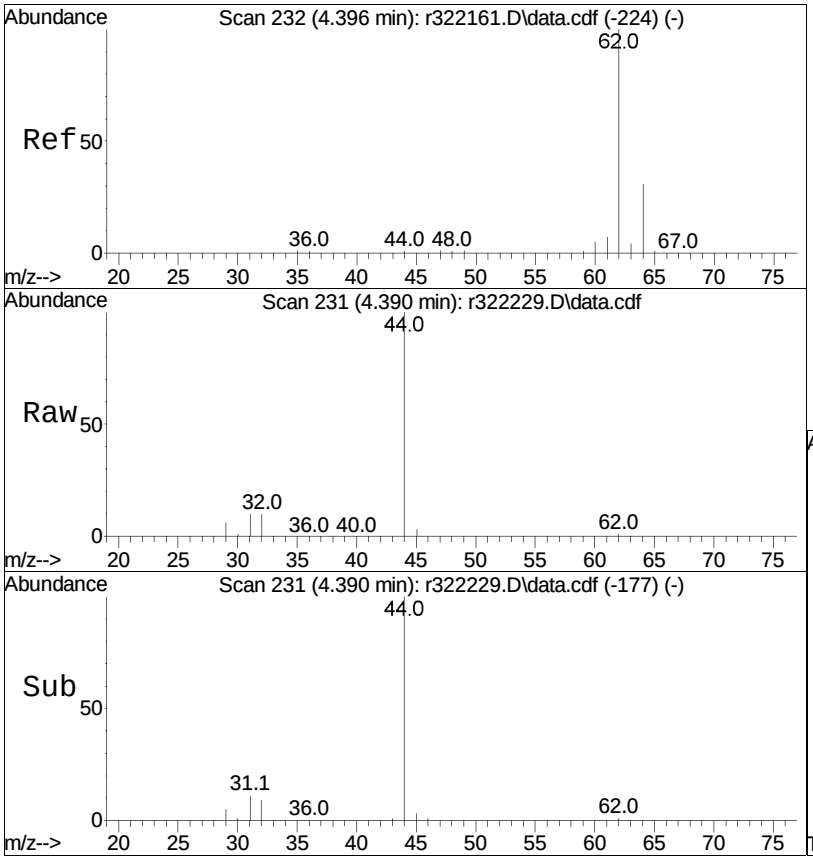


#6
chloromethane
Concen: 0.13 ppbV
RT: 4.132 min Scan# 188
Delta R.T. -0.006 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 50 Resp: 2097

Ion	Ratio	Lower	Upper
50	100		
52	34.2	26.3	39.5

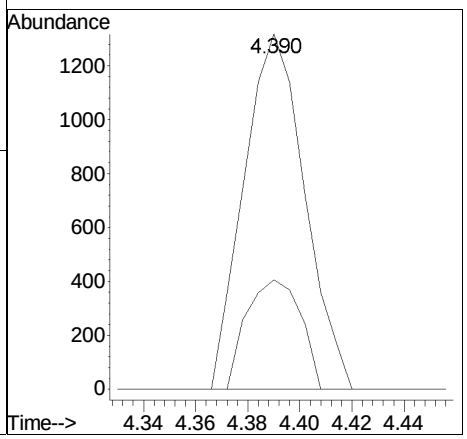


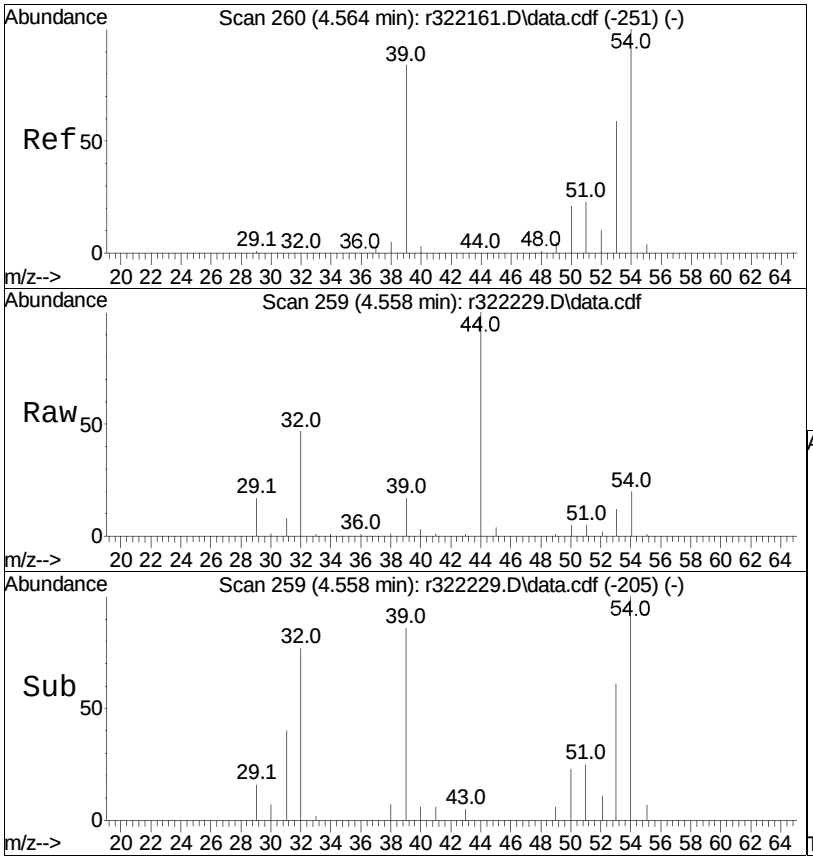


#9
vinyl chloride
Concen: 0.10 ppbV
RT: 4.390 min Scan# 231
Delta R.T. -0.006 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 62 Resp: 2141

Ion	Ratio	Lower	Upper
62	100		
64	30.8	24.4	36.6

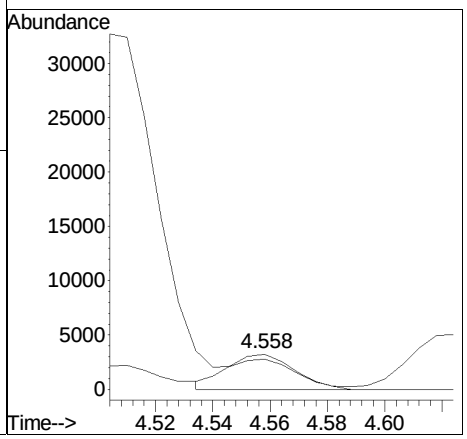


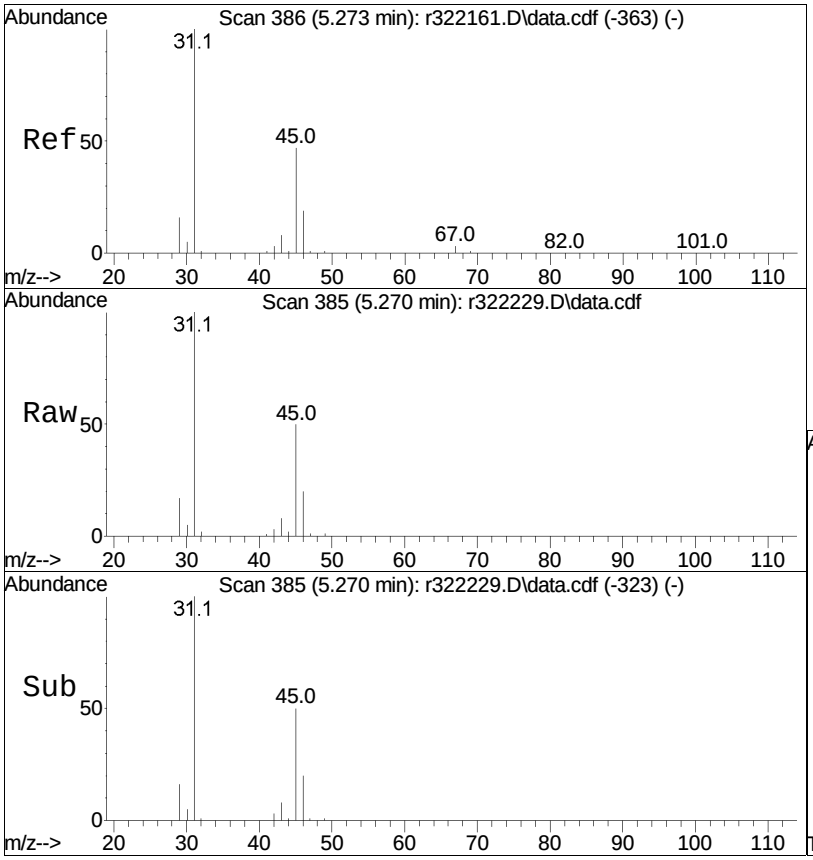


#10
1,3-butadiene
Concen: 0.31 ppbV
RT: 4.558 min Scan# 259
Delta R.T. -0.006 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 54 Resp: 5320

Ion	Ratio	Lower	Upper
54	100		
39	86.3	67.8	101.8

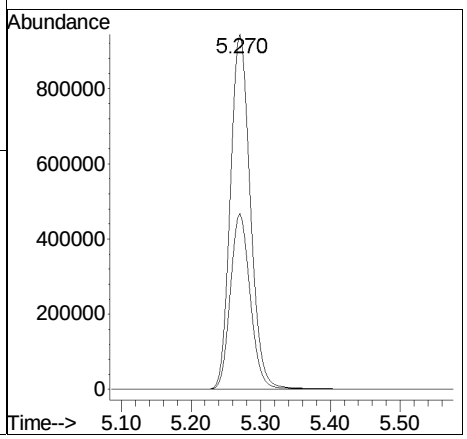


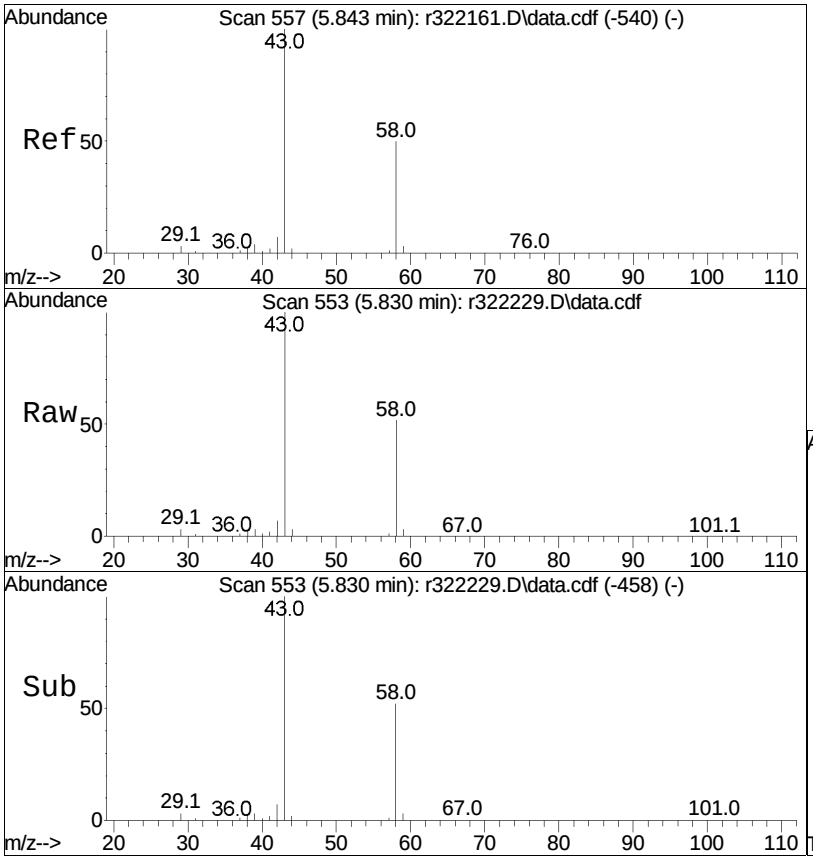


#15
ethanol
Concen: 113.25 ppbV
RT: 5.270 min Scan# 385
Delta R.T. -0.003 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 31 Resp: 1885956

Ion	Ratio	Lower	Upper
31	100		
45	49.6	37.6	56.4

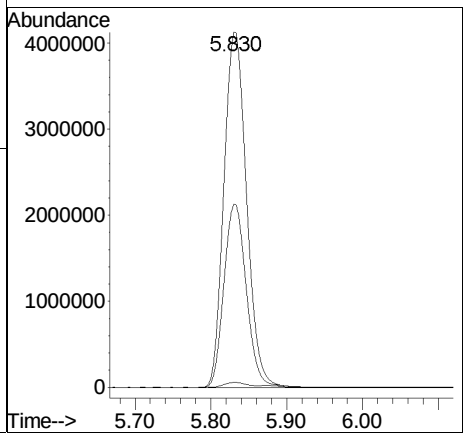


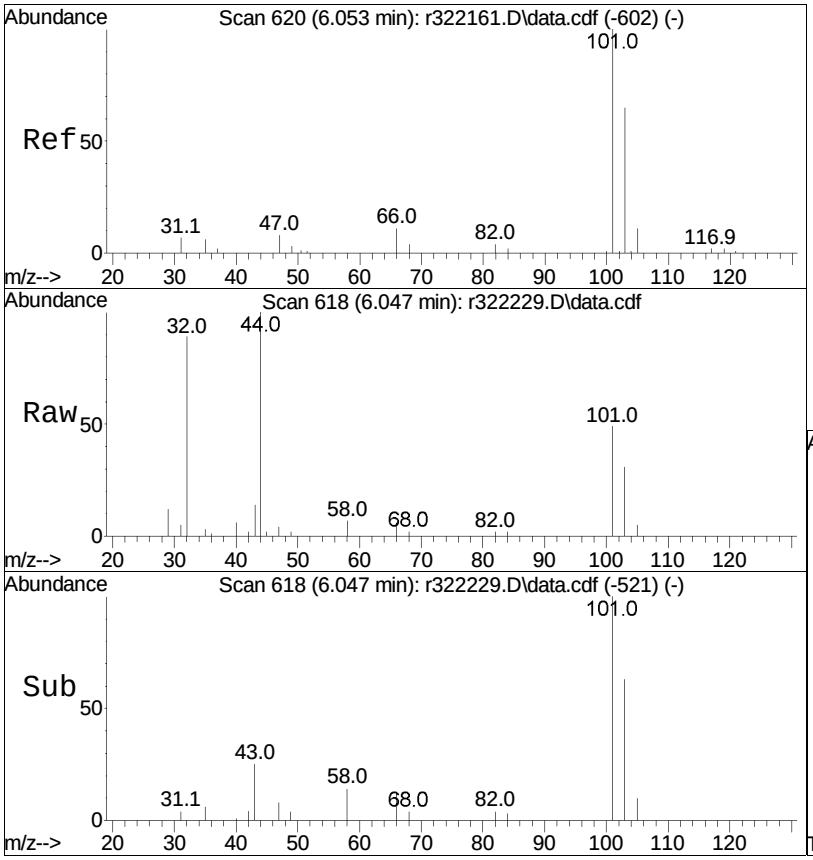


#19
acetone
Concen: 361.17 ppbV
RT: 5.830 min Scan# 553
Delta R.T. -0.013 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 43 Resp: 8576261

Ion	Ratio	Lower	Upper
43	100		
58	51.6	39.8	59.8
57	1.4	1.0	1.6

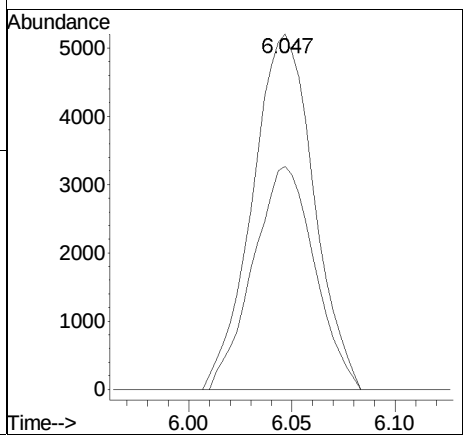


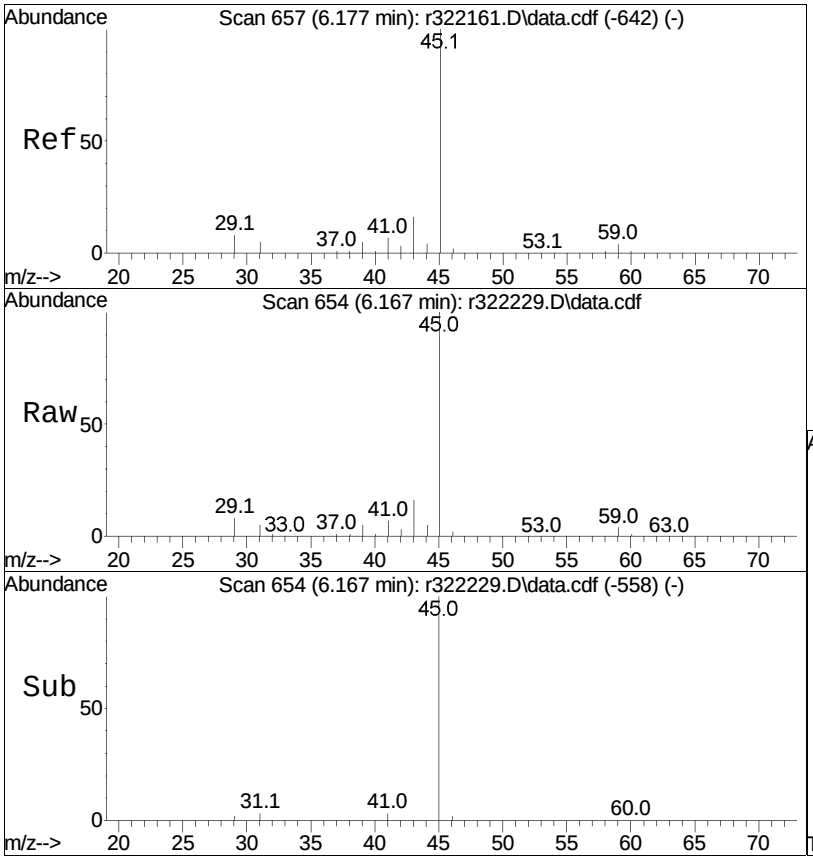


#21
trichlorofluoromethane
Concen: 0.35 ppbV
RT: 6.047 min Scan# 618
Delta R.T. -0.007 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion:101 Resp: 10783

Ion	Ratio	Lower	Upper
101	100		
103	62.8	51.8	77.6

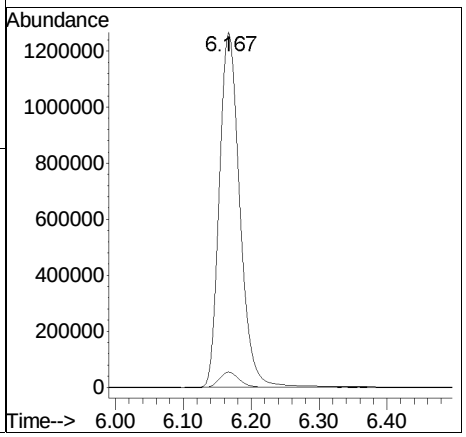


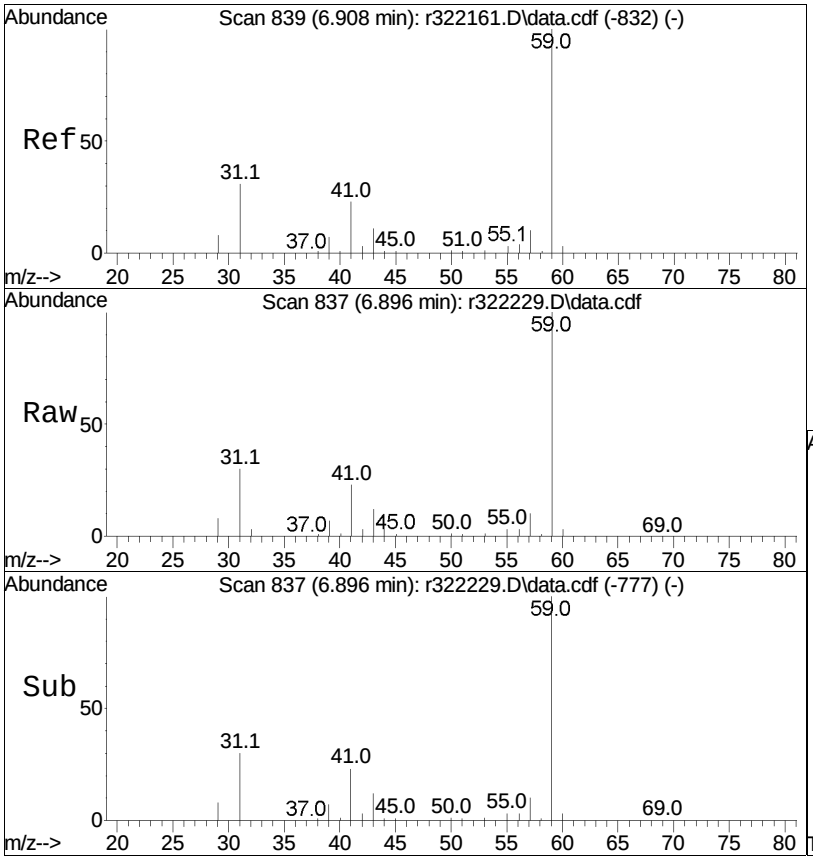


#22
isopropyl alcohol
Concen: 93.42 ppbV
RT: 6.167 min Scan# 654
Delta R.T. -0.010 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 45 Resp: 2669206

Ion	Ratio	Lower	Upper
45	100		
59	4.3	3.5	5.3

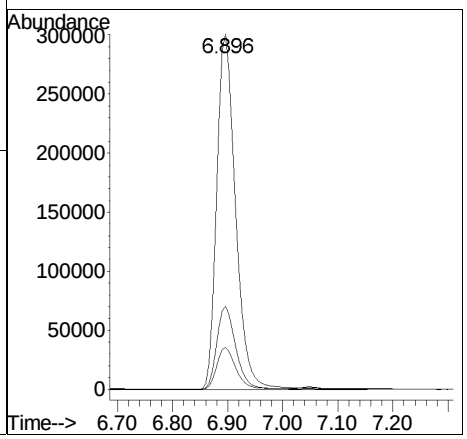


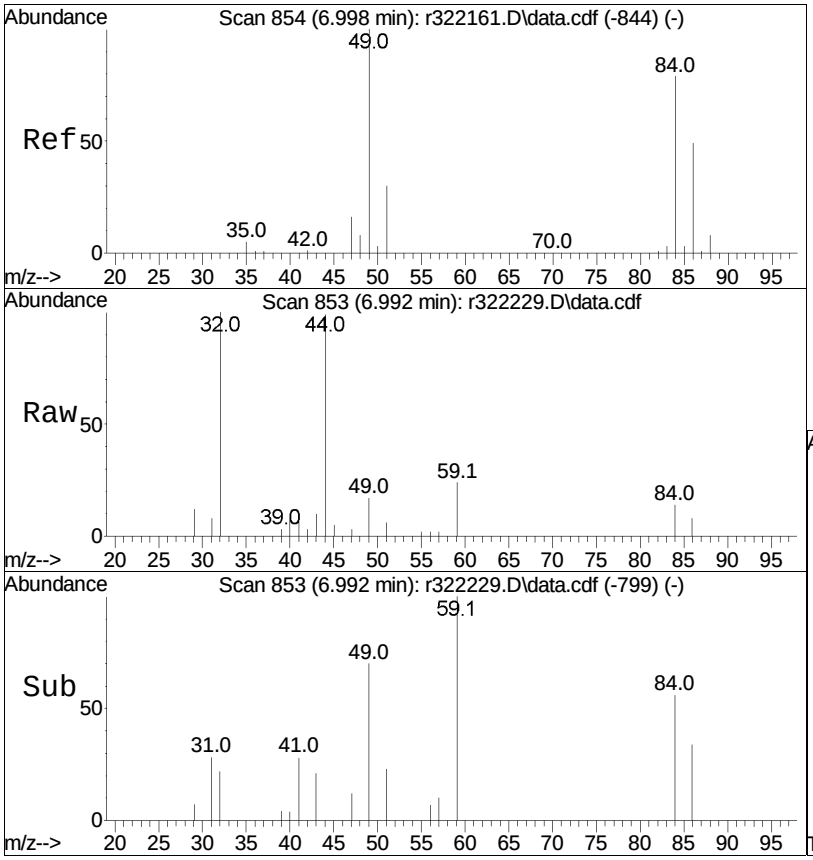


#27
tertiary butyl alcohol
Concen: 20.26 ppbV
RT: 6.896 min Scan# 837
Delta R.T. -0.012 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 59 Resp: 720331

Ion	Ratio	Lower	Upper
59	100		
41	23.4	18.2	27.2
43	11.8	8.9	13.3

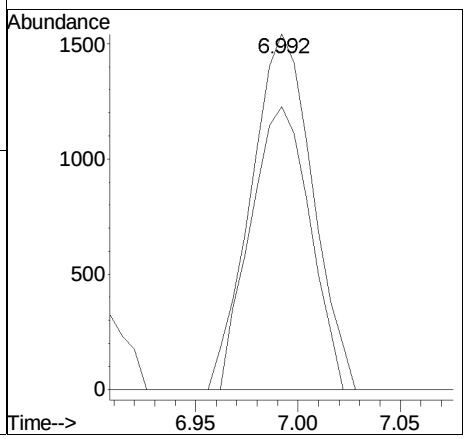


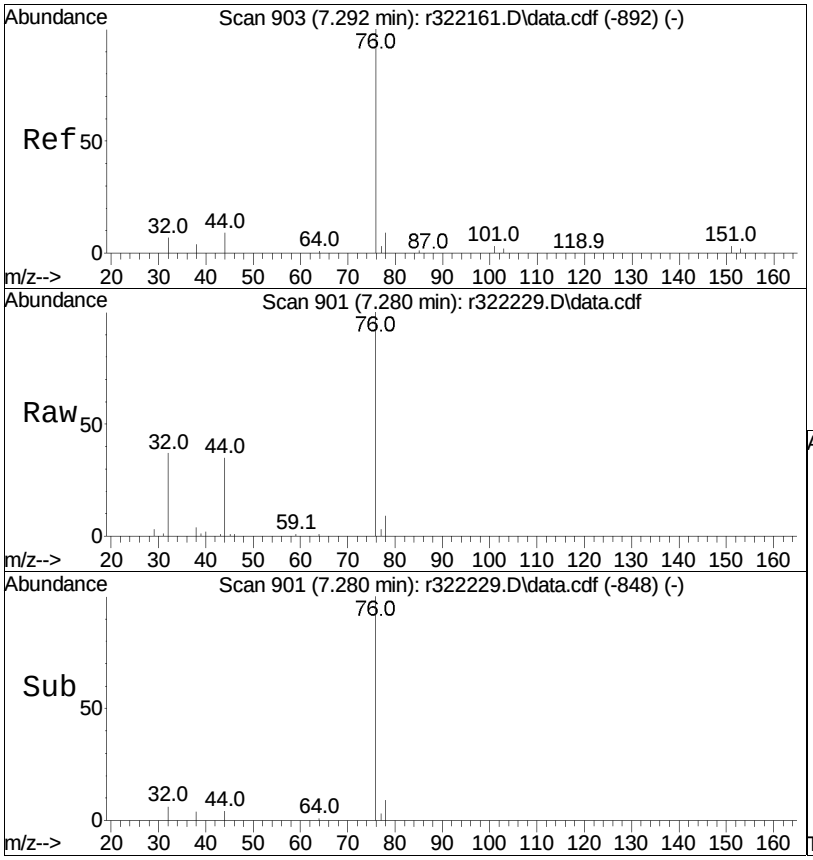


#28
methylene chloride
Concen: 0.12 ppbV
RT: 6.992 min Scan# 853
Delta R.T. -0.006 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 49 Resp: 3234

Ion	Ratio	Lower	Upper
49	100		
84	79.6	63.0	94.6

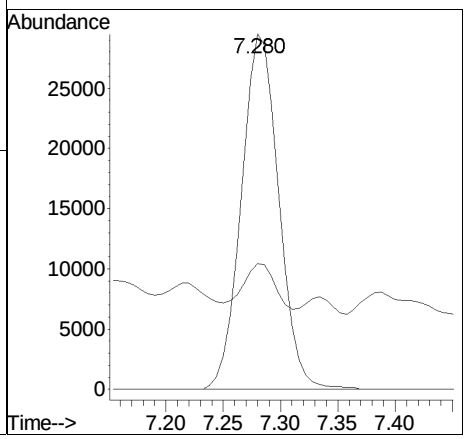


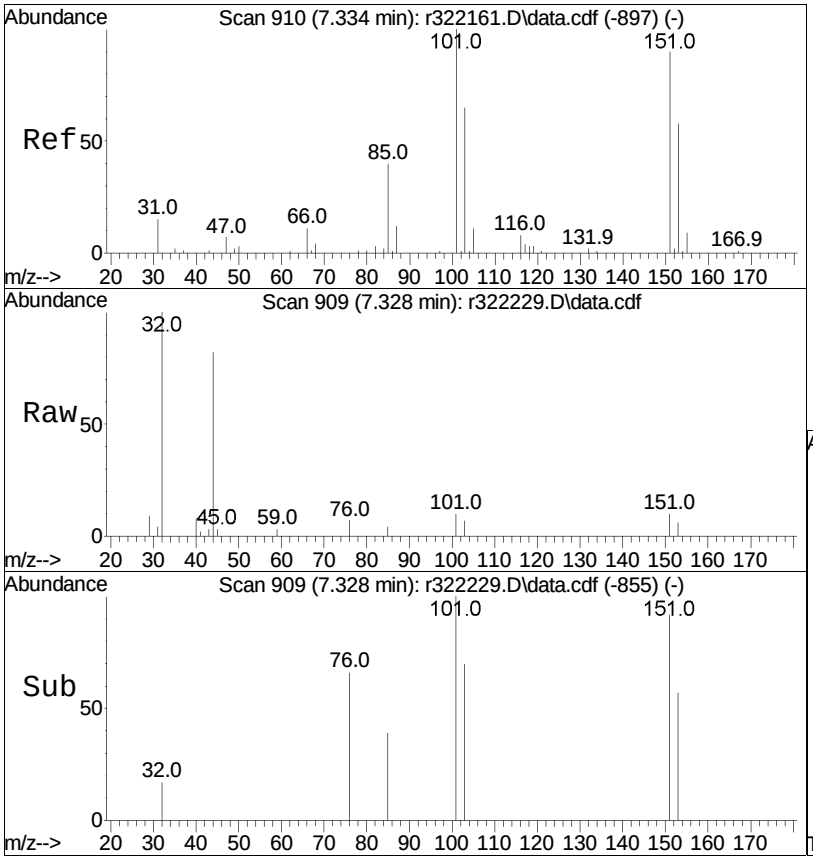


#30
carbon disulfide
Concen: 1.08 ppbV
RT: 7.280 min Scan# 901
Delta R.T. -0.012 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 76 Resp: 66904

Ion	Ratio	Lower	Upper
76	100		
44	35.4	7.6	11.4#

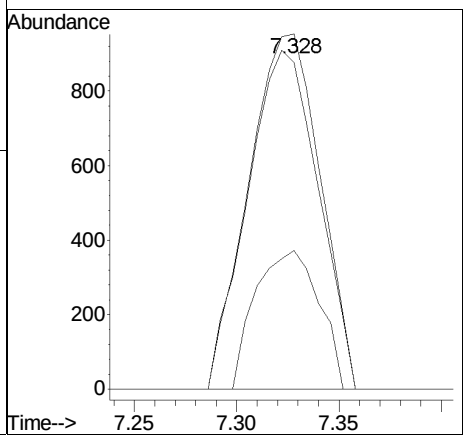


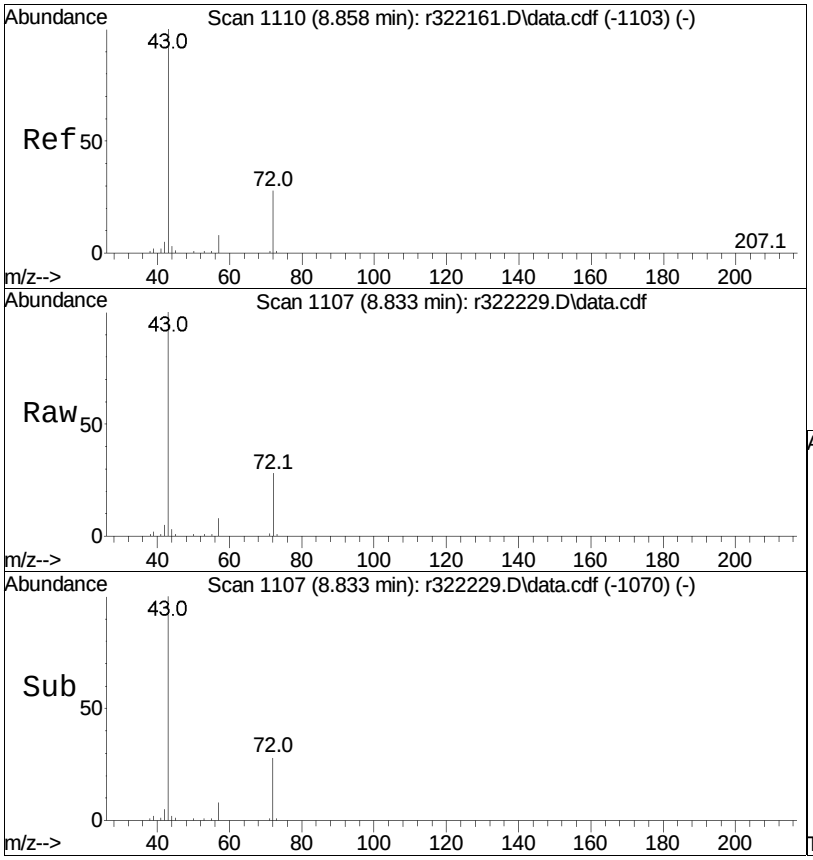


#31
Freon 113
Concen: 0.07 ppbV
RT: 7.328 min Scan# 909
Delta R.T. -0.006 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion:101 Resp: 2317

Ion	Ratio	Lower	Upper
101	100		
85	39.0	31.8	47.8
151	91.9	72.2	108.4

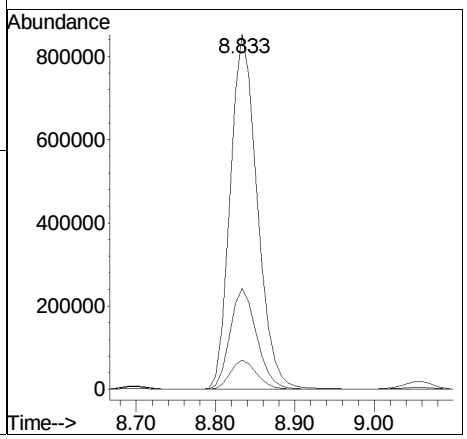


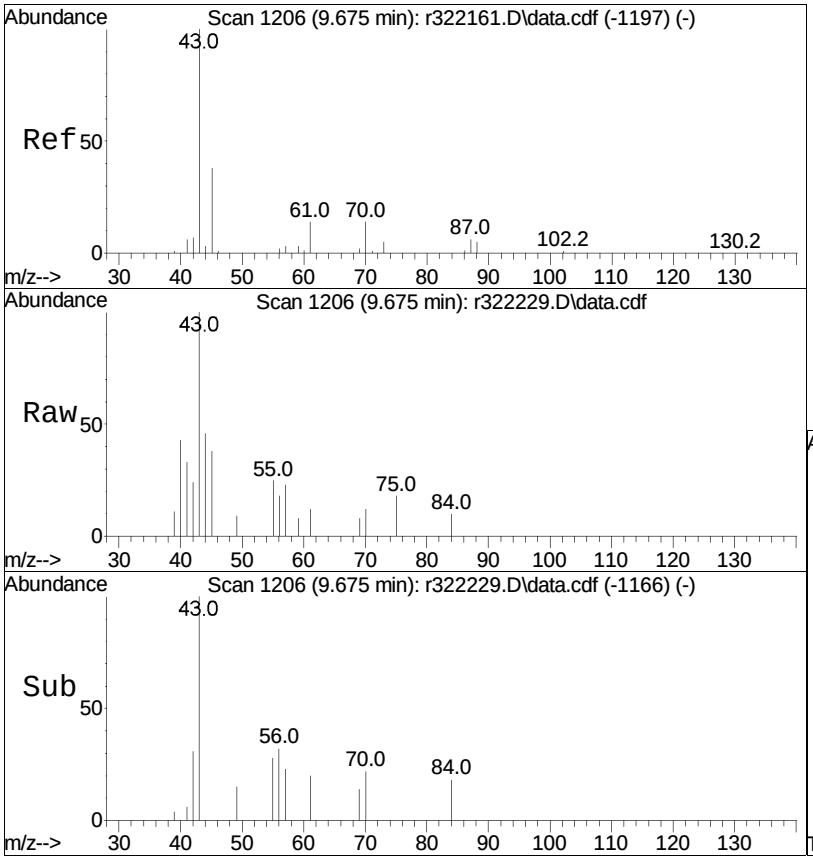


#36
2-butanone
Concen: 46.73 ppbV
RT: 8.833 min Scan# 1107
Delta R.T. -0.025 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 43 Resp: 2017614

Ion	Ratio	Lower	Upper
43	100		
72	28.4	22.6	33.8
57	8.3	6.6	10.0

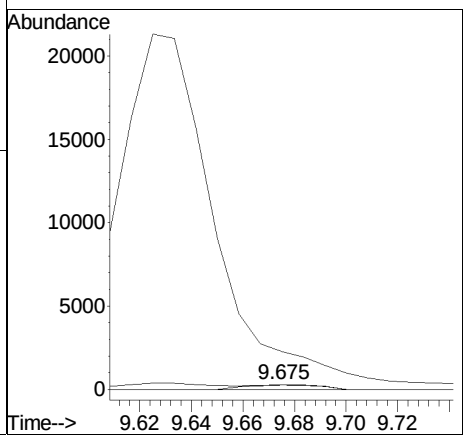


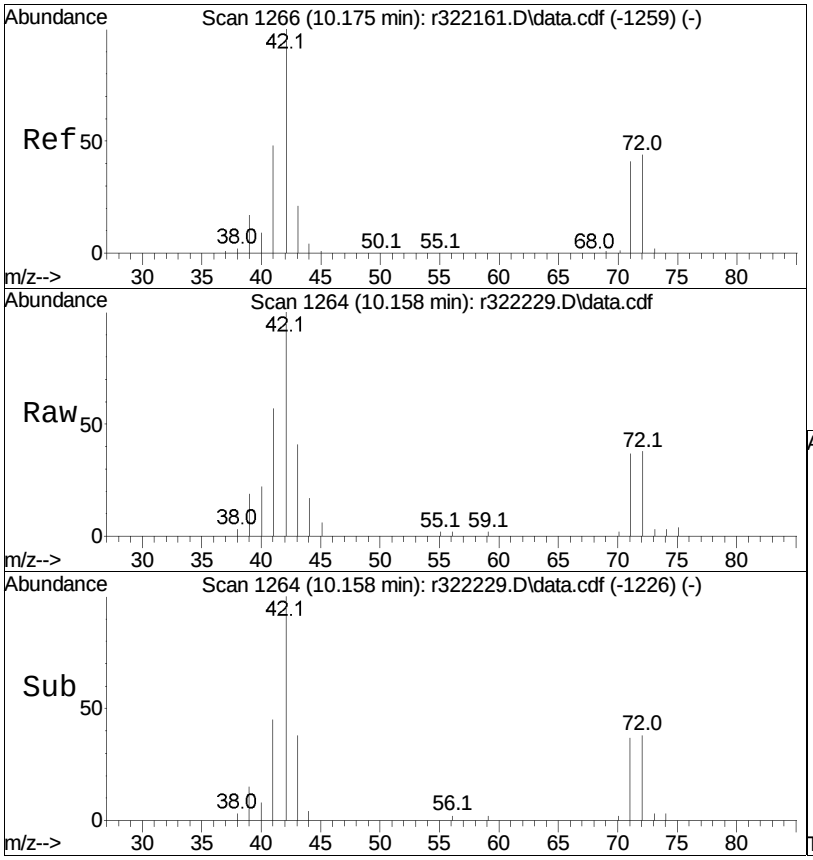


#38
Ethyl Acetate
Concen: 0.07 ppbV
RT: 9.675 min Scan# 1206
Delta R.T. 0.000 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 61 Resp: 525

Ion	Ratio	Lower	Upper
61	100		
70	106.5	78.8	118.2
43	868.3	593.4	890.0

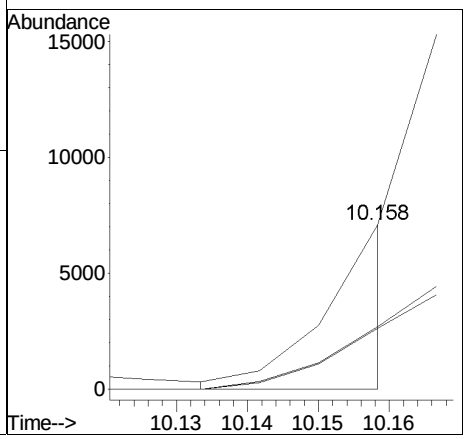


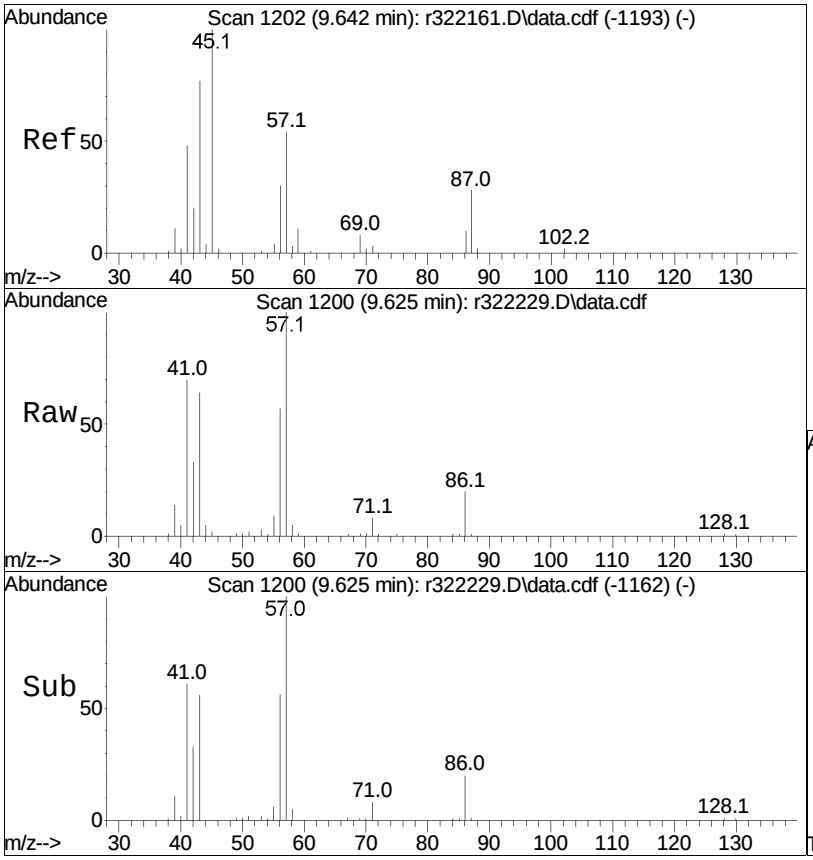


#40
Tetrahydrofuran
Concen: 0.21 ppbV m
RT: 10.158 min Scan# 1264
Delta R.T. -0.017 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 42 Resp: 5331

Ion	Ratio	Lower	Upper
42	100		
71	37.1	32.4	48.6
72	38.1	35.2	52.8

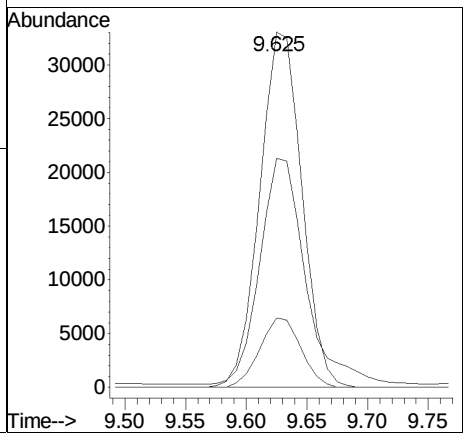


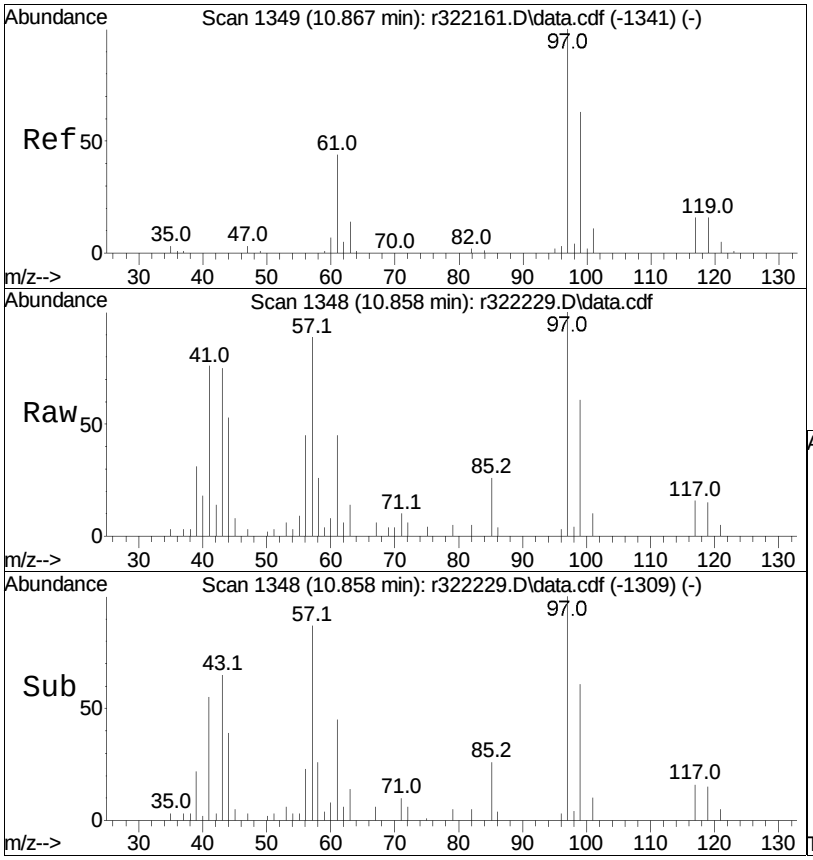


#44
hexane
Concen: 2.13 ppbV
RT: 9.625 min Scan# 1200
Delta R.T. -0.017 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 57 Resp: 79896

Ion	Ratio	Lower	Upper
57	100		
43	64.5	115.0	172.6#
86	19.6	15.5	23.3

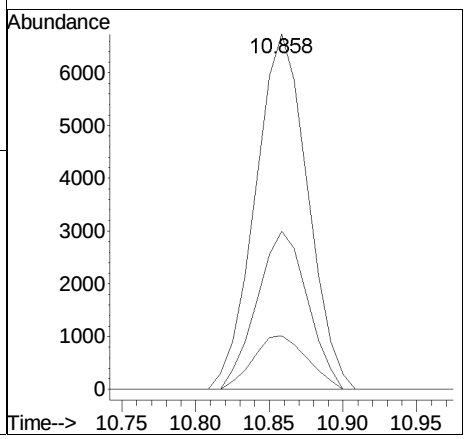


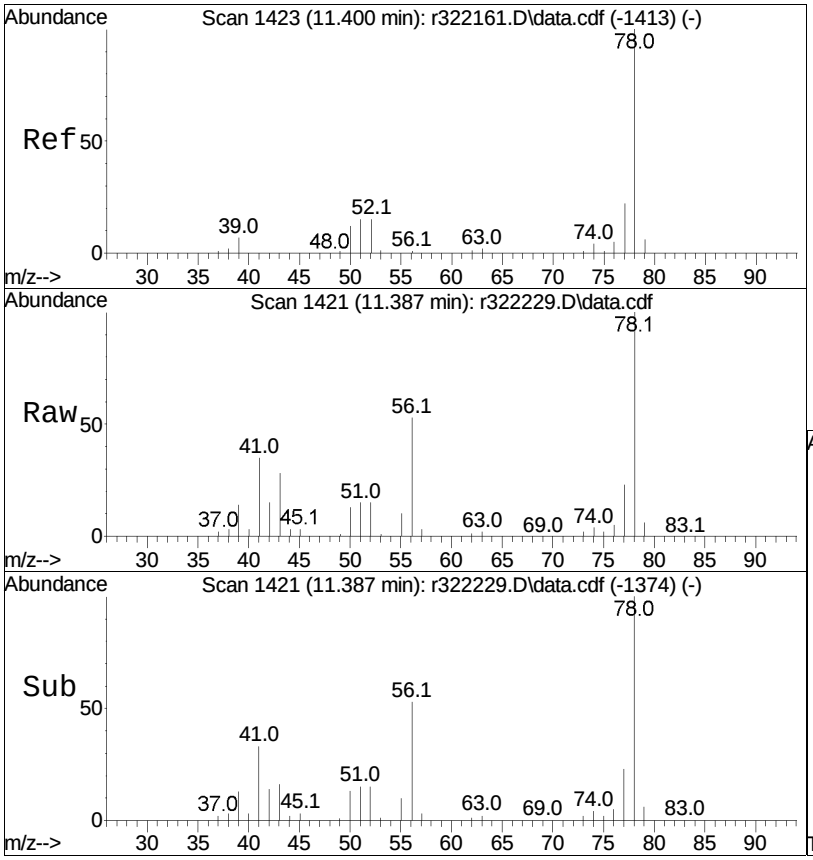


#48
1,1,1-trichloroethane
Concen: 0.59 ppbV
RT: 10.858 min Scan# 1348
Delta R.T. -0.008 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 97 Resp: 16627

Ion	Ratio	Lower	Upper
97	100		
61	44.5	35.1	52.7
119	15.1	12.5	18.7

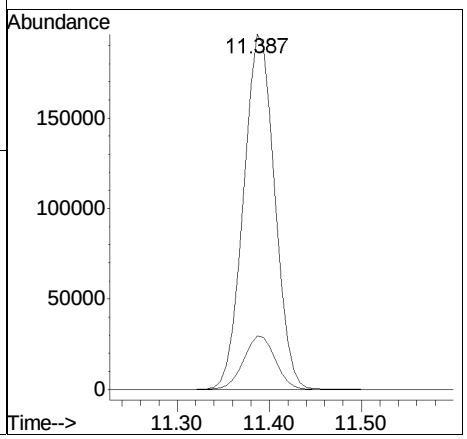


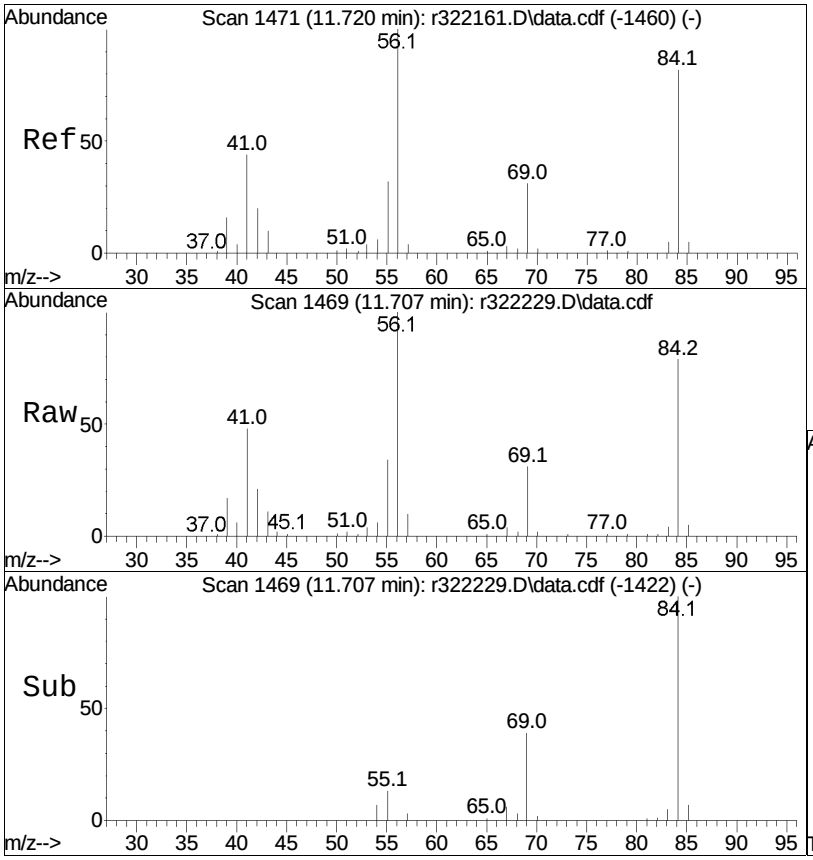


#50
benzene
Concen: 6.00 ppbV
RT: 11.387 min Scan# 1421
Delta R.T. -0.013 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 78 Resp: 460800

Ion	Ratio	Lower	Upper
78	100		
52	15.0	12.2	18.2

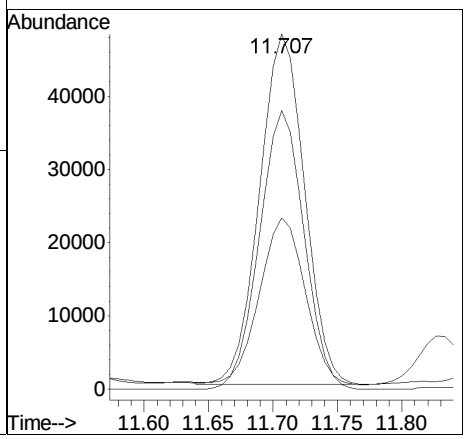


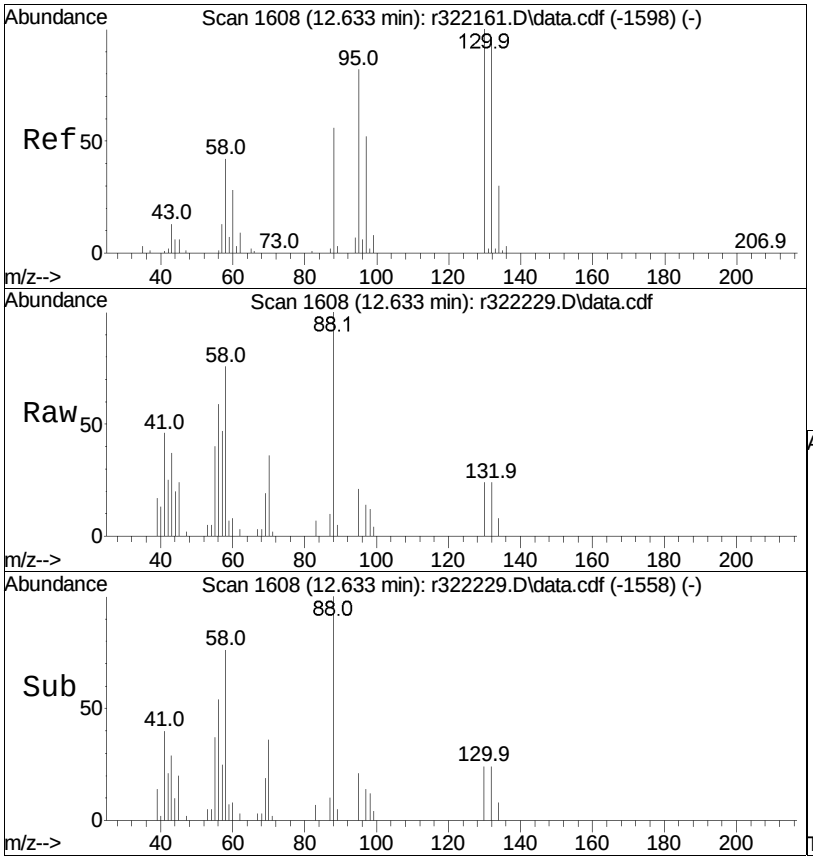


#53
cyclohexane
Concen: 3.00 ppbV
RT: 11.707 min Scan# 1469
Delta R.T. -0.013 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 56 Resp: 116614

Ion	Ratio	Lower	Upper
56	100		
84	78.5	65.4	98.0
41	48.3	35.4	53.2

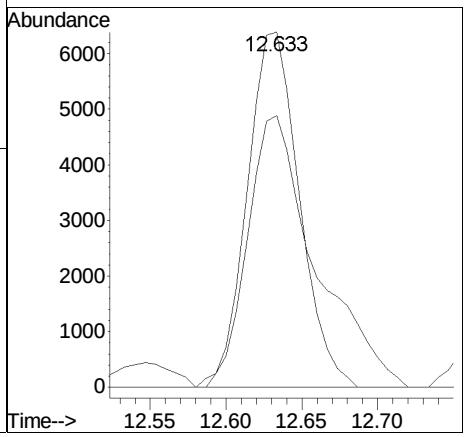


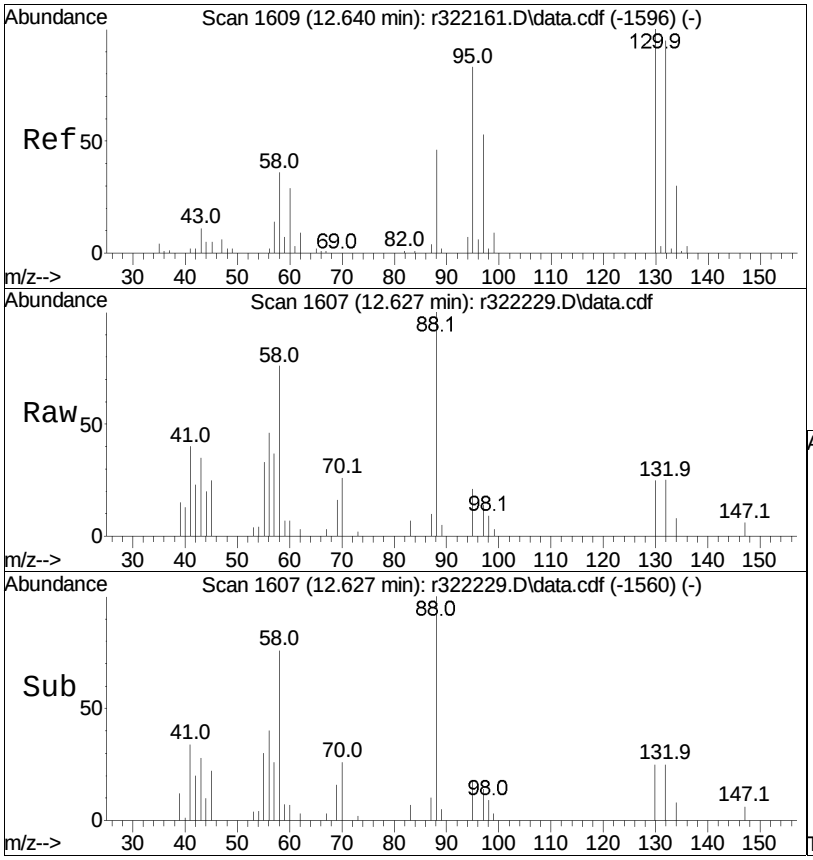


#58
1,4-dioxane
Concen: 0.97 ppbV
RT: 12.633 min Scan# 1608
Delta R.T. 0.000 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion: 88 Resp: 15224

Ion	Ratio	Lower	Upper
88	100		
58	76.5	61.2	91.8





#59
trichloroethene
Concen: 0.12 ppbV
RT: 12.627 min Scan# 1607
Delta R.T. -0.013 min
Lab File: r322229.D
Acq: 19 May 2022 6:57 PM

Tgt Ion:130 Resp: 3627

Ion	Ratio	Lower	Upper
130	100		
132	97.9	76.2	114.2

Compound #96: 4-ethyl toluene

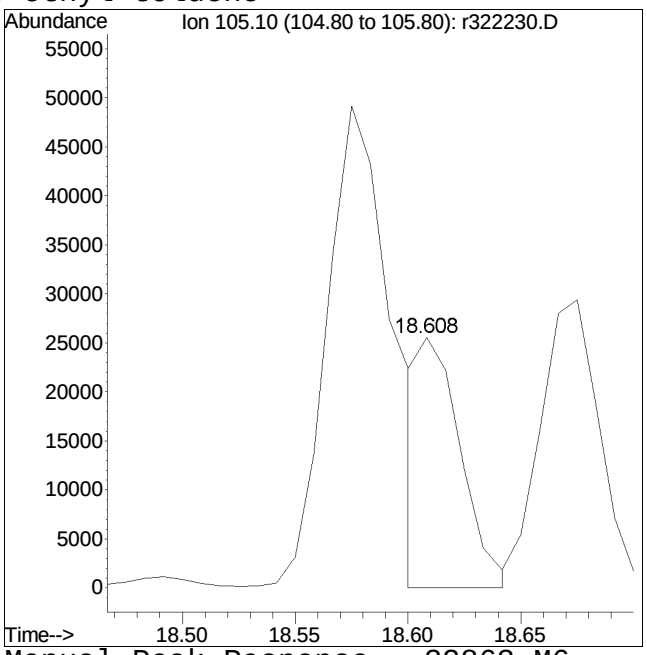
Original Peak Response = 129177



Manual Peak Response = 32863 M6

M6 = Misassignment of peak valley by automated integration (poor split of 2 peaks).

Manual Integration Report

Sample : ITO15-LLSTD020

Method : TFS3_220516.M
Operator : AIRPIANO3:TS
Instrument :
Quant Date : 5/17/2022 8:06 am

Compound #3: propylene

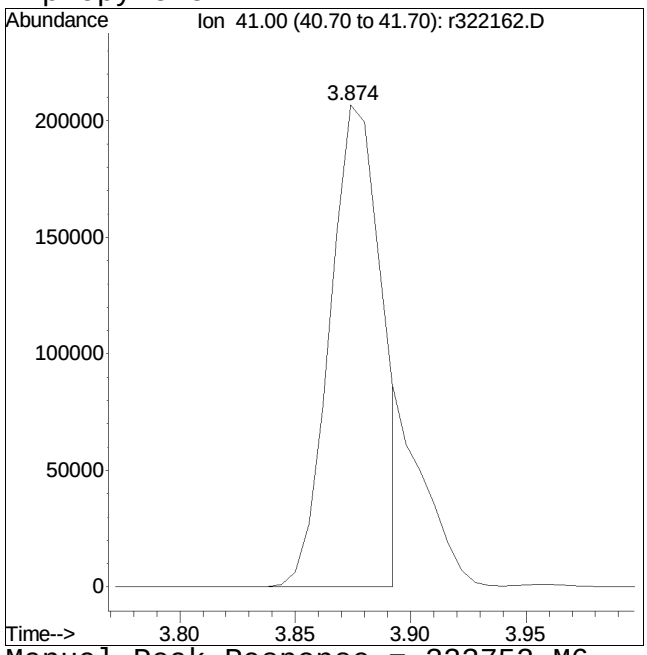
Original Peak Response = 387327



Manual Peak Response = 323752 M6

M6 = Misassignment of peak valley by automated integration (poor split of 2 peaks).

Manual Integration Report

Data Path : O:\Forensics\Data\AirpianoQMethod : TFS3_220516.M

Compound	R.T.	QIon	Response	Conc	Units	Dev(Min)
Internal Standards						
1) bromochloromethane	9.567	49	504144	10.000	ppbV	0.00
Standard Area = 424706			Recovery = 118.70%			
43) 1,4-difluorobenzene	11.840	114	1439448	10.000	ppbV	0.00
Standard Area = 1294364			Recovery = 111.21%			
67) chlorobenzene-D5	16.575	54	217565	10.000	ppbV	0.00
Standard Area = 203329			Recovery = 107.00%			
System Monitoring Compounds						
47) 1,2-dichloroethane-D4	10.450	65	409789	9.073	ppbV	0.00
Spiked Amount 10.000	Range 70 - 130		Recovery = 90.73%			
69) toluene-D8	14.683	98	1482017	10.547	ppbV	0.00
Spiked Amount 10.000	Range 70 - 130		Recovery = 105.47%			
90) bromofluorobenzene	17.950	95	961267	10.780	ppbV	0.00
Spiked Amount 10.000	Range 70 - 130		Recovery = 107.80%			
Target Compounds						Qvalue
2) chlorodifluoromethane	3.838	51	3060087	114.058	ppbV	97
3) propylene	3.874	41	1709048M6	122.341	ppbV	
4) propane	3.898	29	2360530	128.466	ppbV	97
5) dichlorodifluoromethane	3.952	85	3079843	91.945	ppbV	99
6) chloromethane	4.132	50	1668322	109.714	ppbV	98
7) Freon-114	4.258	85	4123050	95.298	ppbV	97
8) methanol	4.336	31	4554070	369.079	ppbV	95
9) vinyl chloride	4.396	62	2378367	118.102	ppbV	98
10) 1,3-butadiene	4.558	54	1865751	117.003	ppbV	97
11) butane	4.624	43	3191007	117.298	ppbV	99
12) acetaldehyde	4.276	29	3302646	396.282	ppbV #	77
13) bromomethane	4.876	94	1837224	115.163	ppbV	99
14) chloroethane	5.098	64	1284155	128.286	ppbV	100
15) ethanol	5.290	31	8093711	485.691	ppbV	87
16) dichlorofluoromethane	5.240	67	4071948	106.919	ppbV	99
17) vinyl bromide	5.530	106	1817989	118.532	ppbV	97
18) acrolein	5.680	56	1176340	120.515	ppbV #	94
19) acetone	5.843	43	9820166	482.063	ppbV #	91
20) acetonitrile	5.527	41	2007053	121.244	ppbV	97
21) trichlorofluoromethane	6.050	101	3303383	108.846	ppbV	100
22) isopropyl alcohol	6.183	45	8693444	313.703	ppbV #	97
23) acrylonitrile	6.430	53	2308780	141.375	ppbV	98
24) pentane	6.500	43	4896756	141.912	ppbV	98

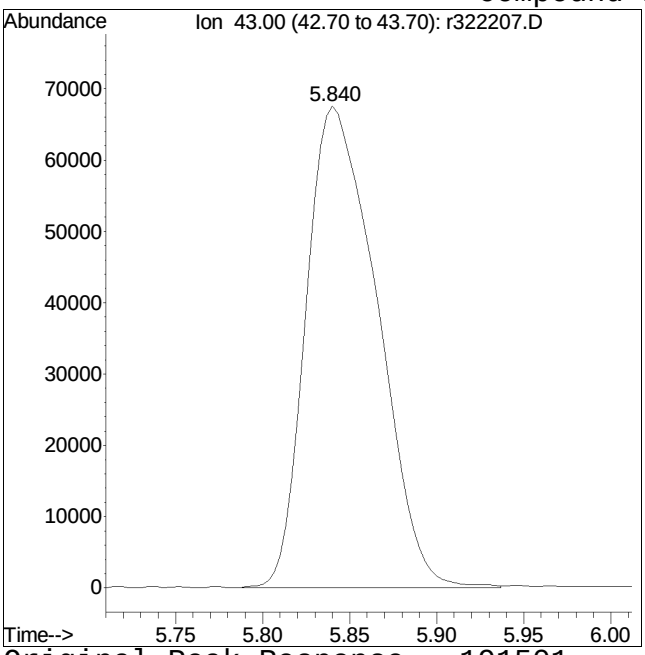
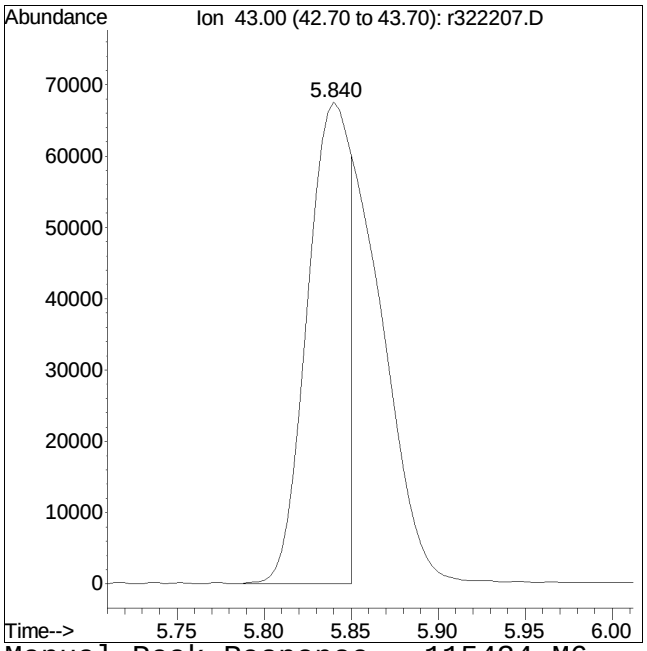
Compound #19: acetone



Original Peak Response = 191501



Manual Peak Response = 115434 M6

M6 = Misassignment of peak valley by automated integration (poor split of 2 peaks).

Manual Integration Report

There are no manual integrations or false positives in this file.

Calculation of Volatile Organic Compounds in Air

The instrument will calculate the concentration (ppbv). If the sample is diluted (DF), the result is multiplied by the DF to generate the final result.

Result, ppbv = C_s x DF
Where:
C_s = Concentration of sample (ppbv)
DF = Dilution Factor

Calculation of Instrument Dilution Factor

For dilutions, smaller sample volumes (< 250mL) are analyzed. The smallest volume that can be analyzed with accuracy is 10 mL.

Samples that arrive at the laboratory with pressures below -15 inches Hg must be pressurized with zero air to greater than -15 inches Hg. This pressurization results in a dilution factor.

Calculation of Dilution Factor
$DF = V_{cf} / V_{ci}$
Where:
V_{ci} = volume of air in canister prior to pressurization, L
P =

Conversion of ppbv to ug/m^3
ug/m^3 = (ppbv) * MW / 24.47
Where:
24.47 = molar gas constant (g/g-mole)
MW = molecular weight of the compound of interest

Dilution Factor for Pressurization of Subatmospheric Samples: Three Steps

Step 1: Calculate the volume in the canister prior to pressurization (Assume a 2.7 liter canister is used).

Dilution Factor for Pressurization of Subatmospheric Samples: Three Steps

Step 1: Calculate the volume in the canister prior to pressurization (Assume a 2.7 liter canister is used).

$V_{ci} = 2.7 * Pl/14.696$

Step 2: Calculate the volume in the canister after pressurization.

$V_{cf} = 2.7 * PF/14.696$

Step 3: Calculate the dilution factor.

$DF = V_{cf} / V_{ci}$

Where:

V_{ci} = volume of air in canister prior to pressurization, L
PI = pressure reading of canister prior to pressurization (psia)
V_{cf} = volume of air in canister after pressurization, L
PF = pressure reading of canister after pressurization (psia)
DF = dilution factor
14.696 = atmospheric pressure (psia)

There are no manual integrations or false positives in this file.

Calculation of Volatile Organic Compounds in Air

The instrument will calculate the concentration (ppbv). If the sample is diluted (DF), the result is multiplied by the DF to generate the final result.

Result, ppbv = C_s x DF
Where:
C_s = Concentration of sample (ppbv)
DF = Dilution Factor

Calculation of Instrument Dilution Factor

For dilutions, smaller sample volumes (< 250mL) are analyzed. The smallest volume that can be analyzed with accuracy is 10 mL.

Samples that arrive at the laboratory with pressures below -15 inches Hg must be pressurized with zero air to greater than -15 inches Hg. This pressurization results in a dilution factor.

Calculation of Dilution Factor
$DF = V_{cf} / V_{ci}$
Where:
V_{ci} = volume of air in canister prior to pressurization, L
P =

Conversion of ppbv to ug/m^3
ug/m^3 = (ppbv) * MW / 24.47
Where:
24.47 = molar gas constant (g/g-mole)
MW = molecular weight of the compound of interest

Dilution Factor for Pressurization of Subatmospheric Samples: Three Steps

Step 1: Calculate the volume in the canister prior to pressurization (Assume a 2.7 liter canister is used).

Dilution Factor for Pressurization of Subatmospheric Samples: Three Steps

Step 1: Calculate the volume in the canister prior to pressurization (Assume a 2.7 liter canister is used).

$V_{ci} = 2.7 * Pl/14.696$

Step 2: Calculate the volume in the canister after pressurization.

$V_{cf} = 2.7 * PF/14.696$

Step 3: Calculate the dilution factor.

$DF = V_{cf} / V_{ci}$

Where:

V_{ci} = volume of air in canister prior to pressurization, L
PI = pressure reading of canister prior to pressurization (psia)
V_{cf} = volume of air in canister after pressurization, L
PF = pressure reading of canister after pressurization (psia)
DF = dilution factor
14.696 = atmospheric pressure (psia)

Date: May 23, 2022

Re: Data Usability Summary Report
For 57-00, 57-05 47th Street
May 2022 Soil Vapor and Ambient Air Samples
Langan Project No.: 100965501

This memorandum presents the findings of an analytical data validation of the data generated from the analysis of air samples collected in May 2022 by Langan Engineering and Environmental Services at the 57-00, 57-05 47th Street site. The samples were analyzed by Alpha Analytical Laboratories, Inc. (NYSDOH NELAP registration # 11148) for volatile organic compounds (VOCs) by the methods specified below.

- VOCs by USEPA Method TO-15 and TO-15 SIM

Table 1, attached, summarizes the laboratory and client sample identification numbers, sample collection dates, and analytical parameters subject to review.

Validation Overview

This data validation was performed in accordance with the following guidelines, where applicable:

- USEPA Region II Standard Operating Procedure (SOP) #HW-31, "Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15" (September 2016, Revision 6),
- USEPA Contract Laboratory Program "National Functional Guidelines for Organic Superfund Methods Data Review" (EPA 540- R-20-005, November 2020), and
- published analytical methodologies.

Validation includes review of the analytical data to verify that data are easily traceable and sufficiently complete to permit logical reconstruction by a qualified individual other than the originator.

Tier 1 data validation is based on completeness and compliance checks of sample-related QC results including: sample receipt documentation; analytical holding times; sample preservation; blank results (method, field, and trip); surrogate recoveries; MS/MSD recoveries and RPDs

values; field duplicate RPDs, laboratory duplicate RPDs, and LCS/LCSD recoveries and RPDs. Analytical reports described in this assessment underwent Tier 1 validation.

As a result of the review process, the following qualifiers may be assigned to the data in accordance with the USEPA's guidelines and best professional judgment:

- **R –** The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.
- **J –** The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
- **UJ –** The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.
- **U –** The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.
- **NJ –** The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

If any validation qualifiers are assigned these qualifiers should supersede any laboratory-applied qualifiers. Data that is not qualified as a result of this data validation is considered acceptable on the basis of the items specified for review. Data that is qualified as "R" are considered invalid and are not technically usable for data interpretation. Data that is otherwise qualified due to minor data quality anomalies are usable, as qualified in Table 2 (attached).

The following acronyms may be used in the discussion of data-quality issues:

%D	Percent Difference	MB	Method Blank
CCV	Continuing Calibration Verification	MDL	Method Detection Limit
FB	Field Blank	MS	Matrix Spike
FD	Field Duplicate	MSD	Matrix Spike Duplicate
ICAL	Initial Calibration	RF	Response Factor
ICV	Initial Calibration Verification	RL	Reporting Limit
ISTD	Internal Standard	RPD	Relative Percent Difference
LCL	Lower Control Limit	RSD	Relative Standard Deviation
LCS	Laboratory Control Sample	TB	Trip Blank
LCSD	Laboratory Control Sample Duplicate	UCL	Upper Control Limit

MAJOR DEFICIENCIES:

Major deficiencies include those that grossly impact data quality and necessitate the rejection of results. No major deficiencies were identified.

MINOR DEFICIENCIES:

Minor deficiencies include anomalies that directly impact data quality and necessitate qualification, but do not result in unusable data. The section below describes the minor deficiencies that were identified.

VOCs by USEPA Method TO-15 and TO-15 SIM:

L2225590

Samples SSV02, SSV03, SSV04, SSV05, and IA02 exhibited a laboratory-measured receipt pressures above -2 in. Hg (-1.9 in Hg, -1.9 in Hg, -1.0 in Hg, 0.0 in Hg, and -1.6 in Hg. The associated results in samples SSV02, SSV03, SSV04, SSV05, and IA02 are qualified as J or UJ because of potential indeterminate bias.

The ethanol result for sample SSV04 exceeded the calibration curve. The associated result is qualified J based on potential indeterminate bias.

OTHER DEFICIENCIES:

Other deficiencies include anomalies that do not directly impact data quality and do not necessitate qualification. The section below describes the other deficiencies that were identified.

VOCs by USEPA Method TO-15 and TO-15 SIM:

L2225590

The LCS for batch WG1640147 exhibited percent recoveries above the UCL for bromoform (132%) and benzyl chloride (148%). The associated results are non-detect. No qualification is necessary.

The LCS for batch WG1640711 exhibited percent recoveries above the UCL for dibromochloromethane (132%), bromoform (136%), and benzyl chloride (150%). The associated results are non-detect. No qualification is necessary.

CONCLUSION:

On the basis of this evaluation, the laboratory appears to have followed the specified analytical methods with the exception of errors discussed above. If a given fraction is not mentioned above, that means that all specified criteria were met for that parameter. All of the data packages met ASP Category B requirements.

All data are considered usable, as qualified. In addition, completeness, defined as the percentage of analytical results that are judged to be valid, is 100%.
