Sample and Data Qualifiers Relating to This Work Order

QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-01R	This flag indicates that the sample was initially analyzed within recommended hold time and that a re-run was performed outside of the hold time.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Sample and Data Qualifiers Relating to This Work Order

QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
M-CCV1	The recovery for this element in the Continuing Calibration Verification (CCV) was outside the 90-110% recovery criteria.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Revision Description: This report has been revised to remove Mercury.

Sample and Data Qualifiers Relating to This Work Order

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PRES	Sample was received with no preservative and was preserved upon receipt at the laboratory. If for metals, the sample was allowed to sit for 18-24 hours before analysis.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
/\	Analyte is not certified but the state of sample origination offer certification for the Analyte

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Trip Blank received not noted on COC.

Overall Evaluation of Data and Potential Usability Issues

All results are usable as reported or usable with minor qualification due to sample matrix or laboratory quality control outliers with the exception listed below.

The SVOC nondetect result for n-nitrosodimethylamine in sample FB-1 was rejected (R) due to severely low LCS percent recovery. The result is not usable for project objectives, which may have a major impact on the data usability.

Sample Quantitation and Target Analyte Identification

Calculations were spot-checked; no discrepancies were noted.

DATA VALIDATION QUALIFIERS

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

JN - The analysis indicates the presence of an analyte that has been "tentatively identified" (N) and the associated numerical value represents its approximate (J) concentration.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

DATA VALIDATION QUALIFIERS

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

Overall Evaluation of Data and Potential Usability Issues

All results are usable as reported or usable with minor qualification due to sample matrix or laboratory quality control outliers with the exception listed below.

The SVOC nondetect results for hexachlorocyclopentadiene in samples MW-3, MW-DUP-1, and MW-7 were rejected (R) due to severely low LCS percent recovery. The result is not usable for project objectives, which may have a major impact on the data usability.

The PFAS nondetect results for PFTrDA, PFTeDA, N-EtFOSE, and N-MeFOSE in sample MW-2 were rejected (R) due to severely low EIS percent recovery. The result is not usable for project objectives, which may have a major impact on the data usability.

Sample Quantitation and Target Analyte Identification

Calculations were spot-checked; no discrepancies were noted.

DATA VALIDATION QUALIFIERS

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

JN - The analysis indicates the presence of an analyte that has been "tentatively identified" (N) and the associated numerical value represents its approximate (J) concentration.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
RRF = (Ax)(Cis)/(Ais)(Cx)

Where:
ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
Ax = Area of compound
Cx = Concentration of compound,
Ais = Area of associated internal standard
Cis = Concentration of internal standard

METHOD: LC/MS PFAS (EPA Method 1633)

$$\text{Concentration} = \frac{(Ax)(Vf)(Df)}{(CF)(Vi)(\%S)}$$

Quadratic $Y = a (X^2) + b X + c$

Where:

Ax = Area or height of the peak for the compound to be measured
DF = Dilution factor
CF = Calibration factor from continuing calibration curve
Vi = Initial volume or weight of sample extracted in milliters (mL) or grams (g)
Vf = Final volume or weight of extract (mL)

No samples were qualified since the associated sample results were greater than the action level.

A field blank was not associated with this sample set. Validation action was not required on this basis.

Wet Chemistry

Contamination was not detected in the method blanks.

A field blank was not associated with this sample set. Validation action was not required on this basis.

DATA VALIDATION QUALIFIERS

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

Percent recoveries (%R) for the laboratory control sample (LCS), matrix spike (MS), and post digestion spike (PDS) were recalculated using
%R = (Found/True) x 100
Found = concentration of each analyte measured in the analysis. For the MS calculation, Found = SSR (Spiked Sample Result) - SR (Sample Result)
True = concentration of each analyte in the source
The sample and duplicate relative percent difference (RPD) was recalculated using the following formula:
RPD = (Absolute value(S-D)x 200) / (S+D)
S = Original sample concentration
D = Duplicate sample concentration
The serial dilution percent difference (%D) was recalculated using the following formula.
%D = (Absolute value (I - SDR)) x 100 / (I)
I = Initial sample result
SDR = Serial dilution result (with a 5x dilution applied)

Overall Evaluation of Data and Potential Usability Issues

All results are usable as reported or usable with minor qualification due to sample matrix or laboratory quality control outliers with the exception listed below.

The SVOC nondetect results for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, hexachlorocyclopentadiene, and pyridine in samples MW-1D, MW-2, and MW-4 were rejected (R) due to severely low LCS/LCSD percent recoveries. The results are not usable for project objectives, which may have a major impact on the data usability.

The SVOC-SIM nondetect results for N-nitrosodimethylamine in samples MW-1D, MW-2, and MW-4 were rejected (R) due to severely low LCS percent recovery. The results are not usable for project objectives, which may have a major impact on the data usability.

The PFAS nondetect results for PFBA, PFPeA, PFMPA, PFMBA, and 3:3FTCA in sample FB-4 were rejected (R) due to severely low EIS percent recoveries. The results are not usable for project objectives, which may have a major impact on the data usability.

Quantitation Limits and Data Assessment

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the PFAS analysis. These results were qualified as estimated (J) by the laboratory.

No results were reported below the RL and above the MDL in the VOC, SVOC, SVOC-SIM, 1,4-dioxane, pesticide, and PCB analyses.

Due to high target analyte levels or difficult sample matrix, select samples were analyzed at dilutions. The following table lists the sample dilutions which were performed and the results reported. RLs were elevated accordingly.

DATA VALIDATION QUALIFIERS

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

JN - The analysis indicates the presence of an analyte that has been "tentatively identified" (N) and the associated numerical value represents its approximate (J) concentration.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

The above-listed water samples were collected on June 4, 2025 and were analyzed for metals and dissolved metals by SW-846 methods 6010D, 6020B, and 7470A, hexavalent chromium by SW-846 method 7196A, and trivalent chromium by calculation. The data validation was performed in accordance with the USEPA Region 2 *Standard Operating Procedure for ICP-AES Data Validation,* SOP No. HW-3a, ISM02.2, Revision 1 (September 2016), USEPA Region 2 *Standard Operating Procedure for ICP-MS Data Validation,* SOP No. HW-3b, ISM02.2, , Revision 1 (September 2016), the USEPA Region 2 *Standard Operating Procedure for Mercury and Cyanide Data Validation,* SOP No. HW-3c, ISM02.2, Revision 1 (September 2016), and the USEPA *National Functional Guidelines for Inorganic Superfund Data Review,* EPA 542-R-20-006 (November 2020), modified as necessary to accommodate the non-CLP methodologies used.

The inorganic data were evaluated based on the following parameters:

- Overall Evaluation of Data and Potential Usability Issues
- Data Completeness
- Holding Times and Sample Preservation
- Instrument Calibration
- Blank Analysis Results
- Inductively Coupled Plasma (ICP) Interference Check Sample (ICS) Result
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
- Laboratory Duplicate Results
- Laboratory Control Sample (LCS) Results
- Serial Dilution Results
- Field Duplicate Results
- Internal Standards
- Detection Limits Results
- Sample Quantitation Results

Overall Evaluation of Data and Potential Usability Issues

All results are usable as reported or usable with minor qualification due to laboratory quality control outliers.

The wet chemistry nondetect result for hexavalent chromium in sample MW-2 was rejected (R) due to exceedance in the technical holding time. The results are not usable for project objectives, which may have a major impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP category B laboratory deliverables.

Holding Times and Sample Preservation

Metals

All criteria were met.

Wet Chemistry

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Hours From Sample Collection Until Analysis	Required Holding Time (in Hours) From Sample Collection Until Analysis	Validation Action
MW-2	Hexavalent chromium	151	24	R (all non-detects)

Initial and Continuing Calibration

Metals

Initial and continuing calibrations were performed as required by the methods.

The initial calibration verification (ICV) and continuing calibration verification (CCV) standards were within QC limits with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (90-110)	Associated Samples	Validation Action
06/09/25	S5F1004-CCV6	Dissolved cadmium Dissolved thallium	112 116	MW-1D MW-2 MW-4	None
06/09/25	S5F1028-CCV4	Antimony Cadmium	123 128	MW-1D MW-2 MW-4	None
06/09/25	S5F1028-CCV5	Thallium	112	MW-1D MW-2 MW-4	None

No data were qualified due to high %R when the associated results were non-detected.

Wet Chemistry

All criteria were met.

ICP Interference Check Sample Analysis

Metals

All criteria were met.

Blanks

Contamination was not detected in the method blanks.

A field blank was not associated with this sample set. Validation action was not required on this basis.

MS/MSD Results

Metals

All criteria were met.

Wet Chemistry

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS %R	MSD %R	Limits	Validation Action
MW-2MS/MSD (MW-2)	Hexavalent chromium	421	419	85-115	None

No data were qualified due to high %R when the associated results were non-detected.

Relative percent differences (RPD) were within QC limits.

Laboratory Duplicate Results

All criteria were met.

Serial Dilution

Metals

Serial dilution was not performed for this SDG.

LCS Results

Metals

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Analyte	%R	Limits	Validation Action
BF50377-BS1	Dissolved calcium	123	80-120	J (all detects)
(MW-1D	Calcium	152	80-120	J (all detects)
MW-2				
MW-4)				

No data were qualified due to high %R when the associated results were non-detected.

Wet Chemistry

All criteria were met.

Field Duplicate Results

No field duplicates were identified in this SDG.

Internal Standards

Metals

All criteria were met.

Detection Limits Results

No results were reported below the reporting limit (RL) and above the method detection limit (MDL) in the metals and wet chemistry analyses.

Due to high target analyte levels or difficult sample matrix, select samples were analyzed at dilutions. The following table lists the sample dilutions which were performed and the results reported. RLs were elevated accordingly.

Sample	Wet Chemistry Analyses Reported
MW-2	5-fold dilution due to sample matrix for hexavalent chromium

Dilutions were not required for metals analyses.

Sample Quantitation Results

Calculations were spot-checked; no discrepancies were noted.

Metals

The results for the dissolved metals sample analyses were greater than the total metals sample analyses as follows:

Sample	Analyte	Concentration (mg/L)	
		Total	Dissolved
MW-1D	Chromium	0.00556U	0.0107
	Sodium	104	108
MW-2	Calcium	107	123
	Magnesium	14.3	15.8
	Potassium	2.71	2.88
MW-4	Potassium	10.6	10.7
	Sodium	29.3	33.9

DATA VALIDATION QUALIFIERS

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

Quality Control Sample Recalculations

LDC #: 61834E

METHOD: Trace Metals (EPA SW 846 Methods 6010/6020/7000)

Percent recoveries (%R) for the laboratory control sample (LCS), matrix spike (MS), and post digestion spike (PDS) were recalculated using

%R = (Found/True) x 100

Found = concentration of each analyte measured in the analysis. For the MS calculation, Found = SSR (Spiked Sample Result) - SR (Sample Result)

True = concentration of each analyte in the source

The sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

RPD = (Absolute value(S-D)x 200) / (S+D)

S = Original sample concentration

D = Duplicate sample concentration

The serial dilution percent difference (%D) was recalculated using the following formula.

%D = (Absolute value (I - SDR)) x 100 / (I)

I = Initial sample result

SDR = Serial dilution result (with a 5x dilution applied)

Sample ID	Type of Analysis	Element	Found/S/I	True/D/SDR	Recalculated %R/RPD/%D	Reported %R/RPD/%D	Acceptable (Y/N)

LDC #: 61834E

METHOD: Inorganics

Percent recoveries (%R) for the laboratory control sample (LCS) and matrix spike (MS) were recalcuated using the following formula:

%R = (Found/True) x 100

Found = concentration of each analyte measured in the analysis. For the MS calculation, Found = SSR (Spiked Sample Result) - SR (Sample Result)

True = concentration of each analyte in the source

The sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

RPD = (Absolute value(S-D)x 200) / (S+D)

S = Original sample concentration

D = Duplicate sample concentration

Sample ID	Type of Analysis	Element	Found/S	True/D	Recalculated %R/RPD	Reported %R/RPD	Acceptable (Y/N)

Overall Evaluation of Data and Potential Usability Issues

All results are usable as reported or usable with minor qualification due to sample matrix or laboratory quality control outliers with the exception listed below.

The SVOC-SIM nondetect results for N-nitrosodimethylamine in samples MW-1I, MW-6, and MW-5 were rejected (R) due to severely low LCS percent recovery. The results are not usable for project objectives, which may have a major impact on the data usability.

The PFAS nondetect result for PFBA in sample FB-5 was rejected (R) due to severely low EIS percent recovery. The results are not usable for project objectives, which may have a major impact on the data usability.

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

JN - The analysis indicates the presence of an analyte that has been "tentatively identified" (N) and the associated numerical value represents its approximate (J) concentration.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

No data were qualified due to high %R when the associated results were non-detected.

Wet Chemistry

All criteria were met.

ICP Interference Check Sample Analysis

Metals

All criteria were met.

Blanks

Contamination was not detected in the method blanks.

A field blank was not associated with this sample set. Validation action was not required on this basis.

MS/MSD Results

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

Laboratory Duplicate Results

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

Serial Dilution

Metals

Serial dilution was not performed for this SDG.

LCS Results

Metals

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Analyte	%R	Limits	Validation Action
BF50578-BS1 (MW-1I MW-5)	Dissolved calcium Dissolved sodium	145 121	80-120 80-120	J (all detects) J (all detects)
BF50579-BS1 (MW-1I MW-5)	Dissolved antimony Dissolved cadmium	156 171	80-120 80-120	None

No data were qualified due to high %R when the associated results were non-detected.

Wet Chemistry

All criteria were met.

Field Duplicate Results

No field duplicates were identified in this SDG.

Internal Standards

Metals

All criteria were met.

Detection Limits Results

No results were reported below the reporting limit (RL) and above the method detection limit (MDL) in the metals and wet chemistry analyses.

Dilutions were not required for metals and wet chemistry analyses.

Sample Quantitation Results

Calculations were spot-checked; no discrepancies were noted.

Metals

The results for the dissolved metals sample analyses were greater than the total metals sample analyses as follows:

Sample	Analyte	Concentration (mg/L)	
		Total	Dissolved
MW-1I	Calcium	89.2	93.9
	Magnesium	34.8	35.1
	Manganese	0.207	0.219
	Potassium	7.36	7.58
	Zinc	0.0278U	0.047
MW-5	Calcium	150	153
	Potassium	8.06	8.4
	Sodium	111	115
	Zinc	0.0278U	0.0279

DATA VALIDATION QUALIFIERS

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

Percent recoveries (%R) for the laboratory control sample (LCS), matrix spike (MS), and post digestion spike (PDS) were recalculated using

%R = (Found/True) x 100

Found = concentration of each analyte measured in the analysis. For the MS calculation, Found = SSR (Spiked Sample Result) - SR (Sample Result)

True = concentration of each analyte in the source

The sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

RPD = (Absolute value(S-D)x 200) / (S+D)

S = Original sample concentration

D = Duplicate sample concentration

The serial dilution percent difference (%D) was recalculated using the following formula.

The above-listed water samples were collected on June 4 and June 6, 2025 and were analyzed for volatile organic compounds (VOC) by SW-846 method 8260D and perfluoroalkyl and polyfluoroalkyl substances (PFAS) by method 1633. The data validation was performed in accordance with the USEPA Region 2 *Standard Operating Procedure for Validating Volatile Organic Compounds By Gas Chromatography/Mass Spectrometry,* SOP HW-24, Revision 4 (October 2014) and the Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) under NYSDEC's Part 375 Remedial Programs (April 2023), and the USEPA *National Functional Guidelines for Organic Superfund Methods Data Review,* EPA 540-R-20-005 (November 2020), modified as necessary to accommodate the non-CLP methodologies used.

The organic data were evaluated based on the following parameters:

- Overall Evaluation of Data and Potential Usability Issues
- Data Completeness
- Holding Times and Sample Preservation
- Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tunes
- Initial and Continuing Calibrations
- Blank Analysis Results

Overall Evaluation of Data and Potential Usability Issues

All results are usable as reported or usable with minor qualification due to sample matrix or laboratory quality control outliers with the exception listed below.

The PFAS nondetect results for perfluoro-4-oxapentanoic acid (PFMPA) in samples MW-6 and FB were rejected (R) due to severely low LCS/LLLCS percent recoveries. The results are not usable for project objectives, which may have a major impact on the data usability.

The PFAS nondetect results for PFBA in samples MW-6 and FB were rejected (R) due to severely low EIS percent recoveries. The results are not usable for project objectives, which may have a major impact on the data usability.

The validation findings were based on the following information.

Blanks

VOC

Contamination was detected in the associated VOC method blank samples. The presence of blank contamination indicates that false positives may exist for these analytes in the associated samples. Action Levels (ALs) were established at <2x RL (for common contaminants) and <RL (for other contaminants) of the concentrations detected. The following table summarizes the contamination detected.

Blank ID	Analyte	Level Detected	Action Level	Associated Samples
BF50966-BLK1	Acetone	2.14 ug/L	2x RL	Trip Blank

Sample results were qualified as follows:

- If sample concentration was < the reporting limit (RL) and ≤ the Action Level, qualify the result as a nondetect (U) at the RL.
- If sample concentration was > the RL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the RL and > the Action Level, qualification of the data was not required.

No samples were qualified since the associated sample results were nondetect or greater than the action level.

No positive results were found in the trip blank sample TRIP BLANK for VOC analysis.

PFAS

Contamination was not detected in the method blanks.

Contamination was detected in the field blank sample FB for PFAS analysis. The presence of blank contamination indicates that false positives may exist for these analytes in the associated samples. Action Levels (ALs) were established at the reporting limit (RL) for contaminants. The following table summarizes the contamination detected.

Field Blank ID	Analyte	Level Detected	Action Level	Associated Samples
FB	4,4,5,5,6,6,6-Heptafluorohexanoic acid (3:3FTCA)	4.74 ng/L	RL	MW-6

Sample results were qualified as follows:

- If sample concentration was < the reporting limit (RL) and ≤ the Action Level, qualify the result as a nondetect (U) at the RL.
- If sample concentration was > the RL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
-

Qualified sample results are listed in the table below.

Sample ID	Analyte	Level Detected	Validation Action
MW-6	4,4,5,5,6,6,6-Heptafluorohexanoic acid (3:3FTCA)	4.88 ng/L	5.28U ng/L

These results can be used for project objectives as nondetects (U) which may have a minor impact on the data usability.

Internal Standards

VOC

All internal standard areas and retention times were within QC limits.

PFAS

All extracted internal standard percent recoveries (%R) were within QC limits with the following exceptions:

Sample	Internal Standard	%R (Limits)	Affected Analyte	Validation Action
MW-6	MPFBA	0.993 (5-130)	PFBA	R (all non-detects)
MW-6	M5PFPeA	22.8 (40-130)	PFPeA PFMPA PFMBA 3:3FTCA	J (all detects) UJ (all non-detects)

No data were qualified due to high %R when the associated result was non-detected.

All non-extracted internal standard areas and retention times were within QC limits.

Quantitation Limits and Data Assessment

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the PFAS analysis. These results were qualified as estimated (J) by the laboratory.

No results were reported below the RL and above the MDL in the VOC analysis.

Dilutions were not required for VOC and PFAS analyses.

Sample Quantitation and Target Analyte Identification

Calculations were spot-checked; no discrepancies were noted.

DATA VALIDATION QUALIFIERS

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

JN - The analysis indicates the presence of an analyte that has been "tentatively identified" (N) and the associated numerical value represents its approximate (J) concentration.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

Where:
ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
Ax = Area of compound
Cx = Concentration of compound,
Ais = Area of associated internal standard
Cis = Concentration of internal standard

Ax = Area or height of the peak for the compound to be measured

DF = Dilution factor

The above-listed water samples were collected on June 4, 2025 and were analyzed for metals and dissolved metals by SW-846 methods 6010D, 6020B, and 7470A, hexavalent chromium by SW-846 method 7196A, and trivalent chromium by calculation. The data validation was performed in accordance with the USEPA Region 2 *Standard Operating Procedure for ICP-AES Data Validation,* SOP No. HW-3a, ISM02.2, Revision 1 (September 2016), USEPA Region 2 *Standard Operating Procedure for ICP-MS Data Validation,* SOP No. HW-3b, ISM02.2, , Revision 1 (September 2016), the USEPA Region 2 *Standard Operating Procedure for Mercury and Cyanide Data Validation,* SOP No. HW-3c, ISM02.2, Revision 1 (September 2016), and the USEPA *National Functional Guidelines for Inorganic Superfund Data Review,* EPA 542-R-20-006 (November 2020), modified as necessary to accommodate the non-CLP methodologies used.

The inorganic data were evaluated based on the following parameters:

- Overall Evaluation of Data and Potential Usability Issues
- Data Completeness
- Holding Times and Sample Preservation
- Instrument Calibration
- Blank Analysis Results
- Inductively Coupled Plasma (ICP) Interference Check Sample (ICS) Result
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
- Laboratory Duplicate Results
- Laboratory Control Sample (LCS) Results
- Serial Dilution Results
- Field Duplicate Results
- Internal Standards
- Detection Limits Results
- Sample Quantitation Results

Overall Evaluation of Data and Potential Usability Issues

All results are usable as reported or usable with minor qualification due to laboratory quality control outliers.

The wet chemistry nondetect result for hexavalent chromium in sample MW-6 was rejected (R) due to exceedance in the technical holding time. The results are not usable for project objectives, which may have a major impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP category B laboratory deliverables.

Holding Times and Sample Preservation

Metals

All criteria were met.

Wet Chemistry

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Hours From Sample Collection Until Analysis	Required Holding Time (in Hours) From Sample Collection Until Analysis	Validation Action
MW-6	Hexavalent chromium	129	24	R (all non-detects)

Initial and Continuing Calibration

Metals

Initial and continuing calibrations were performed as required by the methods.

The initial calibration verification (ICV) and continuing calibration verification (CCV) standards were within QC limits with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (90-110)	Associated Samples	Validation Action
06/11/25	S5F1202-CCV6	Antimony Cadmium	135 139	MW-6	None
06/12/25	S5F1229-CCV5	Dissolved antimony Dissolved cadmium	123 125	MW-6	None
06/12/25	S5F1229-CCV5	Dissolved selenium	113	MW-6	J (all detects)

No data were qualified due to high %R when the associated results were non-detected.

Wet Chemistry

All criteria were met.

ICP Interference Check Sample Analysis

Metals

All criteria were met.

Blanks

Contamination was not detected in the method blanks.

A field blank was not associated with this sample set. Validation action was not required on this basis.

MS/MSD Results

Metals

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

Wet Chemistry

All criteria were met.

Laboratory Duplicate Results

Metals

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

Wet Chemistry

All criteria were met.

Serial Dilution

Metals

Serial dilution was not performed for this SDG.

LCS Results

Metals

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID (Associated Samples)	Analyte	%R	Limits	Validation Action
BF50788-BS1 (MW-6)	Dissolved calcium	123	80-120	J (all detects)
BF50709-BS1 (MW-6)	Antimony Cadmium	123 124	80-120 80-120	None

No data were qualified due to high %R when the associated results were non-detected.

Wet Chemistry

All criteria were met.

Field Duplicate Results

No field duplicates were identified in this SDG.

Internal Standards

Metals

All criteria were met.

Detection Limits Results

No results were reported below the reporting limit (RL) and above the method detection limit (MDL) in the metals and wet chemistry analyses.

Dilutions were not required for metals and wet chemistry analyses.

Sample Quantitation Results

Calculations were spot-checked; no discrepancies were noted.

DATA VALIDATION QUALIFIERS

U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.

J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.

UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.

R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

Percent recoveries (%R) for the laboratory control sample (LCS), matrix spike (MS), and post digestion spike (PDS) were recalculated using
%R = (Found/True) x 100
Found = concentration of each analyte measured in the analysis. For the MS calculation, Found = SSR (Spiked Sample Result) - SR (Sample Result)

The sample and duplicate relative percent difference (RPD) was recalculated using the following formula:
RPD = (Absolute value(S-D)x 200) / (S+D)

Data Usability Summary Report for
ALS Environmental, SDG: 26B0519

1 Ground Water Sample, 1 Field Blank,
and 1 Trip Blank
Collected February 11, 2026

Prepared by: Donald Anné
April 6, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 1 ground water sample, 1 field blank, and 1 trip blank analyzed for volatiles, and the results of 1 ground water sample and 1 field blank sample analyzed for semi-volatiles, SIM semi-volatiles, and TAL metals.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the analytical methods except for the 8270E analyses.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The "not detected" semi-volatile results for 4-nitrophenol, benzaldehyde, phenol, and pyridine were qualified as "rejected, unusable" (R) for samples 26MW-1 and FB because 1 or 2 percent recoveries for these compounds were below QC limits and below 30% in the associated aqueous LCS/LCSD.

- The "not detected" semi-volatile results for caprolactam were qualified as "rejected, unusable" (R) for samples 26MW-1 and FB because the RRF for caprolactam was below the allowable minimum in the associated continuing calibration verification sample.

- The "not detected" semi-volatile results for 29 base/neutral compounds were qualified as "estimated" (UJ) for samples 26MW-1 and FB because 2 of 3 base/neutral surrogate recoveries were below control limits, but not below 10% for the samples.

- The "not detected" SIM semi-volatile results for n-nitrosodimethylamine were qualified as "rejected, unusable" (R) for samples 26MW-1 and FB because the percent recovery for n-nitrosodimethylamine was below QC limits and below 30% in the associated aqueous LCS.

www.alphageoscience.com

- The positive volatile result for bromodichloromethane was qualified as "not detected" (U) for sample 26MW-1 because the level reported in the sample was not significantly greater than (more than 5 times) the highest associated blank level.

- The positive volatile result for acetone was qualified as "not detected" (U) for sample 26MW-1 because the level reported in the sample was not significantly greater than (more than 10 times) the highest associated blank level.

- The positive volatile results for acetone were qualified as "estimated, biased high" (J+) for the trip and field blanks because 2 of 2 percent recoveries for acetone were above QC limits in the associated aqueous LCS/LCSD sample.

- The positive volatile results for 2-butanone, 2-hexanone, and 4-methyl-2-pentanone were qualified as "estimated, biased high" (J+) for sample 26MW-1 because 2 of 2 percent recoveries for 2-butanone, 2-hexanone, and 4-methyl-2-pentanone were above QC limits in the associated aqueous LCS/LCSD sample.

- The "not detected" volatile result for bromoform were qualified as "estimated" (UJ) for sample 26MW-1, trip blank, and field blank because 1 of 2 percent recoveries for bromoform was below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

All data that are not qualified rejected (R) are considered usable with estimated (J+ or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for applicable compounds were above the method minimums, as required. The %Ds for 8 compounds (marked with a red X on attached FORM VII) were above the method maximum on 02-13-26 (V7-55353.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds for 9 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 02-13-26 (V7-55353.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The trip blank contained a trace of acetone (7.10 ug/L). Field blank FB contained traces of acetone (3.03 ug/L), bromodichloromethane (0.460 ug/L), and chloroform (30.3 ug/L). Positive results for bromodichloromethane and chloroform that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples. Positive results for acetone that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the surface water samples, field blank, and trip blank.

Laboratory Control Sample: The relative percent difference for 2-hexanone was above the allowable maximum and 2 of 2 percent recoveries (%Rs) for 2-butanone, 2-hexanone, 4-methyl-2-pentanone, acetone, and chloroethane were above QC limits for aqueous samples BB60750-BS1/BSD1. Positive results for these compounds should be considered estimated, biased high (J+) in associated aqueous samples.

One of two percent recoveries (%Rs) for bromoform was below QC limits, but not below 30% for aqueous samples BC60274-BS1/BSD1. Positive results for bromoform should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270E Semi-Volatiles Data
for ALS Environmental, SDG: 26B0519

1 Ground Water Sample and 1 Field Blank
Collected February 11, 2026

Prepared by: Donald Anné
April 6, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The %RSD for 2,4-dinitrophenol was above the allowable maximum (30%) for BNA7 on 01-28-26. Positive results for 2,4-dinitrophenol should be considered estimated (J) in associated samples.

Continuing Calibration: The %Ds for 13 compounds (marked with a red X on attached FORM VII) were above the method maximum on 02-16-26 (E70362481.D).

The RRF for caprolactam was below the method minimum and below the allowable minimum (0.010) on 02-16-26 (E70362481.D). This calibration was not method compliant and samples should have been re-analyzed with a compliant calibration. Positive results for caprolactam should be considered estimated (J) and "not detected" results rejected, unusable (R) in associated samples.

The %Ds for 15 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 02-16-26 (E70362481.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method and field blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: One of three acid extractable surrogate recoveries for sample FB was below control limits, but not below 10%. No action is taken on one surrogate recovery per fraction outside control limits, provided no recovery is less than 10%.

www.alphageoscience.com

Two of three base/neutral surrogate recoveries for samples 26MW-1 and FB were below control limits, but not below 10%. Positive results for base/neutral compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) for these samples.

Laboratory Control Sample: The relative percent difference for pyridine was above the allowable maximum and 2 of 2 percent recoveries (%Rs) for 4-nitrophenol, benzaldehyde, and phenol, and 1 of 2 %Rs for pyridine were below QC limits and below 30% for aqueous samples BB60793-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in associated aqueous samples.

One of two %Rs for 2,6-dinitrotoluene was below QC limits, but not below 30% for aqueous samples BB60793-BS1/BSD1. Positive results for 2,6-dinitrotoluene should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Compound ID: Checked surrogate results were within quantitation limits. The analysis of the ground water sample reported target compounds as not detected.

QA/QC Review of Method 8270E SIM Semi-Volatiles Data
for ALS Environmental, SDG: 26B0519

1 Gound Water Samples and 1 Field Blank
Collected February 11, 2026

Prepared by: Donald Anné
April 6, 2026

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 5 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 02-16-26 (E800089198.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method and field blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Laboratory Control Sample: The percent recoveries (%R) for chrysene and hexachloroethane were above QC limits for aqueous sample BB60794-BS2. Positive results for chrysene and hexachloroethane should be considered estimated, biased high (J+) in the associated aqueous samples.

The %R for n-nitrosodimethylamine was below QC limits and below 30% for aqueous sample BB60794-BS2. Positive results for n-nitrosodimethylamine should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in in the associated aqueous samples.

Compound ID: The analysis of the ground water sample reported target compounds as not detected.

QA/QC Review of TAL Metals Data for
ALS Environmental, SDG: 26B0519

1 Ground Water Samples and 1 Field Blank
Collected February 11, 2026

Prepared by: Donald Anné
April 6, 2026

Holding Times: Samples were analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% all metals except Hg, 80-120% for Hg), as required.

CRDL Standard: The percent recoveries for applicable metals were within laboratory QC limits for the CRDL samples.

Blanks: The analyses of the method blanks reported target metals as below the MRLs, as required. Field blank FB contained aluminum (0.807 mg/L), calcium (1.55 mg/L), iron (0.403 mg/L), magnesium (0.872 mg/L), and manganese (0.00856 mg/L) above the MRLs. Positive results for these metals that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%) for the interference check samples.

Spike Sample Recovery: This data was not provided.

Laboratory Duplicate: This data was not provided.

Laboratory Control Sample: The percent recoveries for target metals were within control limits (80-120%) for total aqueous samples BB60882-BS1, BB60904-BS1, and BB60961-BS1, and dissolved aqueous samples BB60885-BS1, BB60988-BS1, and BB60989-BS1.

Serial Dilution: This data was not provided.

Dissolved vs Total: The dissolved metal results were less than the total result plus 10%, as required.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 08, 2025 and listed below. The project was identified as your project: **32-20 38th Avenue**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Sample and Data Qualifiers Relating to This Work Order

TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 12, 2026 and listed below. The project was identified as your project: **32-10 38th Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Sample and Data Qualifiers Relating to This Work Order

TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
/\	Analyte is not certified but the state of sample origination offer certification for the Analyte

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Data Usability Summary Report for
York Analytical Laboratories, Inc., SDG: 25E0530

6 Soil Vapor/Air Samples and 1 Field Duplicate
Collected May 7, 2025

Prepared by: Donald Anné
October 31, 2025

The data packages contain the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results for 6 soil vapor/air samples and 1 field duplicate analyzed for TO-15 volatiles.

The overall performances of the analyses are acceptable. York Analytical Laboratories, Inc. did fulfill the requirements of the method for TO-15 volatiles.

The data are mostly acceptable with some issues that are identified in the accompanying data validation review. The following data were qualified:

- The positive volatile results for acrylonitrile and chloromethane were qualified as "estimated" (J) for samples 25SV-1, 25SV-4, and 25SV-5 because %Ds for acrylonitrile and chloromethane were above the allowable maximum in the associated continuing calibration verification sample.

- The positive volatile results for isopropanol were qualified as "estimated" (J) for samples 25SV-1, 25SV-3, 25SV-4, 25SV-5, and 25OA-1 because %RSD for isopropanol was above the allowable maximums in the associated initial calibration.

- The positive volatile result for chloromethane was qualified as "estimated, biased low" (J-) for sample 25OA-1 because percent recovery for chloromethane was below QC limits, but not below 10% in the associated air/vapor LCS.

- The "not detected" volatile results for chloromethane were qualified as "estimated" (UJ) for samples 25SV-2 and 25SV-DUP-1 because percent recovery for chloromethane was below QC limits, but not below 10% in the associated air/vapor LCS.

All data are considered usable, with estimated (J, J-, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method TO-15 Volatiles Data
for York Analytical Laboratories, Inc., SDG: 25E0530

6 Soil Vapor/Air Samples and 1 Field Duplicate
Collected May 7, 2025

Prepared by: Donald Anné
October 31, 2025

Holding Times: Samples were analyzed within recommended USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for 5 compounds (highlighted yellow on attached FORM VI) were above the allowable maximum (30%) for TO15 AIR3 on 02-13-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for acrylonitrile, chloromethane, and hexachlorobutadiene were above the allowable maximum (30%) on 05-14-25 (TV030888.D). The %Ds for acrylonitrile, chloromethane, and hexachlorobutadiene were above the allowable maximum (30%) on 05-15-25 (TV030906.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Duplicate: The relative percent differences for applicable compounds were below the allowable maximum (25%) for sample 25SV-1, as required.

Laboratory Control Sample: The percent recovery (%R) for bromoform and hexachlorobutadiene were above QC limits for air/vapor sample BE51280-BS1. The positive results for these compounds should be considered estimated, biased high (J+) in associated air/soil vapor samples.

The %R for chloromethane was below QC limits, but not below 10% for air/vapor sample BE51280-BS1. The positive results for chloromethane should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated air/soil vapor samples.

Field Duplicates: The relative percent differences for applicable compounds were below the allowable maximum (25%) for soil vapor field duplicate pair 25SV-2/25SV-DUP-1 (attached table), as required.

Compound ID: Checked compounds were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Canister Pressure: The laboratory reported "received" pressure for samples below zero (residual vacuum), as required.

Data Usability Summary Report for
York Analytical Laboratories, Inc., SDG: 25E1667

6 Soil Samples, 1 Field Duplicate,
1 Field Blank, and 1 Trip Blank
Collected May 27, 2025

Prepared by: Donald Anné
October 31, 2025

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 6 soil samples, 1 field duplicate, 1 field blank, and 1 trip blank analyzed for volatiles.

The overall performances of the analyses are acceptable. York Analytical Laboratories, Inc. did fulfill the requirements of the analytical method.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The "not detected" volatile results for 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, p-isopropyltoluene, and styrene were qualified as "estimated" (UJ) for samples 25SB-16(2-4), 25SB-17(0-2), 25SB-17(2-4), and DUP-04(0-2) because 1 or 2 percent recoveries for these compounds were below QC limits, but not below 10% in the associated soil LCS/LCSD.

- The "not detected" volatile result for methylcyclohexane was qualified as "estimated" (UJ) for sample 25SB-17(12-14) because 2 of 2 percent recoveries for methylcyclohexane were below QC limits, but not below 10% in the soil MS/MSD.

- The "not detected" volatile results for 8 compounds (except methylcyclohexane) were qualified as "estimated" (UJ) for sample 25SB-17(12-14) because 1 or 2 percent recoveries for these 8 compounds were below QC limits, but not below 10% in the associated soil LCS/LCSD.

- The "not detected" volatile results for cyclohexane and dichlorodifluoromethane were qualified as "estimated" (UJ) for samples TB-4 and FB-4 because 1 or 2 percent recoveries for these compounds were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

www.alphageoscience.com

- The “not detected” volatile results for 1,4-dioxane were qualified as “rejected, unusable” (R) for samples TB-4 and FB-4 because 2 of 2 percent recoveries for 1,4-dioxane were below QC limits and below 30% in the associated aqueous LCS/LCSD.

All data that are not qualified rejected (R) are considered usable with estimated (UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260C Volatiles Data for
York Analytical Laboratories, Inc., SDG: 25E1667

6 Soil Samples, 1 Field Duplicate,
1 Field Blank, and 1 Trip Blank
Collected May 27, 2025

Prepared by: Donald Anné
October 31, 2025

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-butanone, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 for VOA No.3 on 05-07-25. The average RRF for bromoform was below the method minimums, but not below 0.010 for VOA No.5 on 05-21-25. The average RRFs for 2-butanone, 2-hexanone, acetone, and bromoform were below the method minimums, but not below 0.010 for QVOA9 on 05-28-25. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %RSD for 1,2,4-trichlorobenzene was above the allowable maximum (30%) for VOA No.3 on 05-07-25. The %RSDs for bromoform, methylene chloride, and trans-1,3-dichloropropylene were above the allowable maximum (30%) for VOA No.3 on 05-21-25. The %RSDs for acetone, bromomethane, chloroethane, chloromethane, and trichlorofluoromethane were above the allowable maximum (30%) for QVOA9 on 05-28-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRF for bromoform was below the method minimums, but not below 0.010 on 05-29-25 (V31905609.D). The RRFs for 2-butanone, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 on 05-30-25 (V31905634.D). The RRF for bromoform was below the method minimums, but not below 0.010 on 06-02-25 (V5447026.D). The RRFs for 2-butanone, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 on 05-30-25 (V31905634.D). The RRFs for 2-butanone, 2-hexanone, acetone, bromoform, and bromomethane were below

the method minimums, but not below 0.010 on 06-03-25 (QV935932.D). The %Ds for 10 compounds (highlighted yellow on attached FORM VII) were above the method maximum on 05-29-25 (V31905609.D). The %Ds for 8 compounds (highlighted yellow on attached FORM VII) were above the method maximum on 05-30-25 (V31905634.D). The %Ds for bromomethane, chloromethane, dichlorodifluoromethane, methyl acetate, and vinyl chloride were above the method maximum on 06-02-25 (V5447026.D). The %Ds for 6 compounds (marked with red X on attached FORM VII) were above the method maximum on 06-03-25 (QV935932.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds for 10 compounds (highlighted yellow on attached FORM VII) and TBA were above the allowable maximum (20%) on 05-29-25 (V31905609.D). The %Ds for 8 compounds (highlighted yellow on attached FORM VII) and TBA were above the allowable maximum (20%) on 05-30-25 (V31905634.D). The %Ds for bromomethane, chloromethane, dichlorodifluoromethane, methyl acetate, TBA, and vinyl chloride were above the allowable maximum (20%) on 06-02-25 (V5447026.D). The %Ds for 9 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 06-03-25 (QV935932.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank BE52232-BLK1 contained a trace of methylene chloride (0.0069 mg/kg). Method blank BE52284-BLK1 contained a trace of methylene chloride (0.0071 mg/kg). Trip blank TB-4 contained a trace of methylene chloride (3.79 ug/L). Positive results for methylene chloride that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples, field blank, and trip blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target compounds were below the allowable maximum, but 2 of 2 percent recoveries for methylcyclohexane were below QC limits, but not below 10% for soil MS/MSD sample 25SB-17(12-14). The “not detected” result for methylcyclohexane should be considered estimated (UJ) in sample 25SB-17(12-14).

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum, but 2 of 2 percent recoveries (%Rs) for 1,3-dichlorobenzene, p-isopropyltoluene, and styrene, and 1 of 2 %Rs for 1,2,4-trimethylbenzene were below QC limits, but not below 10% for soil samples BE52232-BS1/BSD1. The RPDs for target compounds were below the allowable maximum, but 1 or 2 %Rs for 8 compounds (highlighted yellow on attached FORM III) were below QC limits, but not below 10% for soil samples BE52284-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

The %RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for dichlorodifluoromethane were above QC limits for soil samples BF50025-BS1/BSD1. Positive results for dichlorodifluoromethane should be considered estimated, biased high (J+) in associated soil samples.

The RPD for TBA was above the allowable maximum for aqueous samples BF50204-BS1/BSD1. Positive results for TBA should be considered estimated (J) in associated aqueous samples.

Two of two %Rs for cyclohexane and 1 of 2 %Rs for dichlorodifluoromethane were below QC limits, but not below 30% for aqueous samples BF50204-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Two of two %Rs for 1,4-dioxane were below QC limits and below 30% for aqueous samples BF50204-BS1/BSD1. Positive results for 1,4-dioxane should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in associated aqueous samples.

Field Duplicates: The analyses of soil field duplicate pair 25SB-16(0-2)/DUP-4(0-2) reported target compounds as not detected; therefore, valid relative percent differences could not be calculated. The analyses for the field duplicate pair were acceptable.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Data Usability Summary Report for
York Analytical Laboratories, Inc., SDG: 25E1670

8 Soil Samples
Collected May 27, 2025

Prepared by: Donald Anné
October 31, 2025

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 8 soil samples analyzed for volatiles.

The overall performances of the analyses are acceptable. York Analytical Laboratories, Inc. did fulfill the requirements of the analytical method.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile result for methylene chloride was qualified as "not detected" (U) for sample 25 SV-2-N (14-15) because the level reported in the sample was not significantly greater than (more than 10 times) the highest associated blank level.

- The "not detected" volatile results for 1,2,4-trimethylbenzene, 1,3-dichlorobenzene, p-isopropyltoluene, and styrene were qualified as "estimated" (UJ) for the following samples because 1 or 2 percent recoveries for these compounds were below QC limits, but not below 10% in the associated soil LCS/LCSD.

25 SV-2-N (12-14)	25 SV-2-N (14-15)	25 SV-2-S (0-2)
25 SV-2-S (2-4)	25 SV-2-S (10-12)	25 SV-2-S (14-15)

- The "not detected" volatile results for 66 compounds were qualified as "rejected, unusable" (R) for samples 25 SV-2-N (10-12) and 25 SV-2-S (12-14) because the internal standard areas used to quantitate these results were below control limits and below 25%.

- The positive volatile results for acetone were qualified as "estimated, biased high" (J+) for samples 25 SV-2-N (10-12) and 25 SV-2-S (12-14) because the internal standard area used to quantitate these results were below control limits and below 25%.

All data that are not qualified rejected (R) are considered usable with estimated (J- or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

York Analytical Laboratories, Inc., SDG: 25E1670

8 Soil Samples
Collected May 27, 2025

Prepared by: Donald Anné
October 31, 2025

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-butanone, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 for VOA No.3 on 05-07-25. The average RRF for bromoform was below the method minimums, but not below 0.010 for VOA No.5 on 05-21-25. No action is taken when fewer than 20% of the compounds per calibration do not meet either method %RSD or average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %RSD for 1,2,4-trichlorobenzene was above the allowable maximum (30%) for VOA No.3 on 05-07-25. The %RSDs for bromoform, methylene chloride, and trans-1,3-dichloropropylene were above the allowable maximum (30%) for VOA No.3 on 05-21-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRF for bromoform was below the method minimums, but not below 0.010 on 05-29-25 (V31905609.D). The RRF for bromoform was below the method minimums, but not below 0.010 on 06-02-25 (V5447026.D). The %Ds for 10 compounds (highlighted yellow on attached FORM VII) were above the method maximum on 05-29-25 (V31905609.D). The %Ds for bromomethane, chloromethane, dichlorodifluoromethane, methyl acetate, and vinyl chloride were above the method maximum on 06-02-25 (V5447026.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds for 10 compounds (highlighted yellow on attached FORM VII) and TBA were above the allowable maximum (20%) on 05-29-25 (V31905609.D). The %Ds for bromomethane, chloromethane, dichlorodifluoromethane, methyl acetate, TBA, and vinyl chloride were above the allowable maximum (20%) on 06-02-25 (V5447026.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank BE52232-BLK1 contained a trace of methylene chloride (0.0069 mg/kg). Positive results for methylene chloride that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard retention times were within control limits. Three of three internal standard areas for samples 25 SV-2-N (10-12) and 25 SV-2-S (12-14) were below control limits and below 25%. Positive results for target compounds should be considered estimated, biased high (J+) and "not detected" results rejected, unusable (R) in samples 25 SV-2-N (10-12) and 25 SV-2-S (12-14).

Surrogate Recovery: Two of three surrogate recoveries for sample 25 SV-2-N (10-12) were below control limits, but not below 10% and 1 of 3 surrogate recoveries was above control limits. Positive results for target compounds should be considered estimated (J) in sample 25 SV-2-N (10-12).

One of three surrogate recoveries for sample 25 SV-2-S (12-14) was above control limits. Positive results for target compounds should be considered estimated, biased high (J+) in sample 25 SV-2-S (12-14).

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum, but 2 of 2 percent recoveries (%Rs) for 1,3-dichlorobenzene, p-isopropyltoluene, and styrene, and 1 of 2 %Rs for 1,2,4-trimethylbenzene were below QC limits, but not below 10% for soil samples BE52232-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

The %RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for dichlorodifluoromethane were above QC limits for soil samples BF50025-BS1/BSD1. Positive results for dichlorodifluoromethane should be considered estimated, biased high (J+) in associated soil samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Re: Data Validation Report
Former Refron Inc. Gas Reclamation Site
November 2025-February 2026 Ground Water
and Soil Vapor Sampling Events

Dear Mr. Klein,

The Data Usability Summary Reports are attached to this letter for the Former Refron Inc. Gas Reclamation Site, November 2025-February 2026 ground water and soil vapor sampling events. The data for ALS Environmental SDG numbers 25K0961, 26B0519, and 26B0520 are mostly acceptable, with issues that are identified in the DUSR and QA/QC review summaries. There are data that are rejected, unusable (R) in data pack 26B0519. The DUSR and QA/QC reviews outlines the reasons for rejecting the data. The data are rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

A list of data validation acronyms and qualifiers is attached to assist you in interpreting the data validation reviews. If you have any questions concerning the work performed, please contact me at (518) 348-6995. Thank you for providing us an opportunity with vEKtor consultants.

Sincerely,
Alpha Geoscience

Data Usability Summary Report for
ALS Environmental, SDG: 25K0961

3 Soil Vapor/Air Samples
Collected November 13, 2025

Prepared by: Donald Anné
April 6, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 3 soil vapor/air samples analyzed for TO15 volatiles.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the analytical method.

The data are acceptable with some minor issues that are identified in the accompanying data validation review. There no data qualified as either rejected (R) or estimated; therefore, all data are considered usable. Detailed information on data quality is included in the data validation review.

3 Soil Vapor/Air Samples
Collected November 13, 2025

Prepared by: Donald Anné
April 6, 2026

Holding Times: Samples were analyzed within recommended USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for benzyl chloride and bromoform were above the allowable maximum (30%) for AIR4 on 11-06-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %D for methyl methacrylate was above the allowable maximum (30%) on 11-20-25 (TQQ000903.D). Positive results for methyl methacrylate should be considered estimated (J) in associated samples.

Blanks: The analysis of the method blank reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for air/vapor samples BK51315-BS1 and BK51323-BS1.

The %R for methyl methacrylate was above QC limits for air/vapor sample BK51389-BS1. Positive results for methyl methacrylate should be considered estimated, biased high (J+) in associated air/vapor samples.

Compound ID: Checked compounds were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Canister Pressure: The laboratory reported "received" pressure for samples below zero (residual vacuum), as required.

Data Usability Summary Report for
ALS Environmental, SDG: 26B0520

4 Soil Vapor/Air Samples and 1 Field Duplicate
Collected February 11, 2026

Prepared by: Donald Anné
April 6, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 4 soil vapor/air samples and 1 field duplicate analyzed for TO15 volatiles.

The overall performances of the analyses are acceptable. ALS Environmental did fulfill the requirements of the analytical method.

The data are mostly acceptable with some issues that are identified in the accompanying data validation review. The following data were qualified:

- The "not detected" volatile results for carbon tetrachloride and vinyl acetate were qualified as "estimated" (UJ) for all 4 soil vapor/air samples and 1 field duplicate because percent recoveries for carbon tetrachloride and vinyl acetate were below QC limits, but not below 25% in the associated soil vapor/air LCS.

- The positive volatile results for o-xylene were qualified as estimated (J) for samples 26SV-3 and DUP because the relative percent difference for o-xylene was above the allowable maximum for the vapor/air field duplicate pair 26SV-3/DUP.

All data are considered usable with estimated (UJ or J) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method TO-15 Volatiles Data
for ALS Environmental, SDG: 26B0520

4 Soil Vapor/Air Samples and 1 Field Duplicate
Collected February 11, 2026

Prepared by: Donald Anné
April 6, 2026

Holding Times: Samples were analyzed within recommended USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for 1,2,4-trichlorobenzene and benzyl chloride were above the allowable maximum (30%) for TO15_AIR3 on 12-05-25. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 1,2,4-trichlorobenzene, carbon tetrachloride, naphthalene, and vinyl acetate were above the allowable maximum (30%) on 02-18-26 (TV035314.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analysis of the method blank reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The percent recoveries (%Rs) for 1,2,4-trichlorobenzene and naphthalene were above QC limits for air/vapor sample BB61000-BS1. Positive results for these compounds should be considered estimated, biased high (J+) in associated air/vapor samples.

www.alphageoscience.com

The %Rs for carbon tetrachloride and vinyl acetate were below QC limits, but not below 25% for air/vapor sample BB61000-BS1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated air/vapor samples.

Field Duplicates: The relative percent difference for o-xylene was above the allowable maximum (25%) for vapor/air field duplicate pair 26SV-3/DUP (attached table). The positive results for o-xylene should be considered estimated (J) in samples 26SV-3 and DUP.

Compound ID: Checked compounds were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Canister Pressure: The laboratory reported "received" pressure for samples below zero (residual vacuum), as required.

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.
