JULY 2026

CERTIFICATIONS

I, Rebecca A. Kinal, certify that I am currently a NYS registered professional engineer and that this Remedial Action Work Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and Green Remediation (DER-31).

TABLE OF CONTENTS

EXECUTIVE SUMMARY 1
REMEDIAL ACTION WORK PLAN 9
1.0 INTRODUCTION 9
1.1 Site Location and Description 9
1.2 Contemplated Redevelopment Plan 9
1.3 Description of Surrounding Property 10
2.0 DESCRIPTION OF REMEDIAL INVESTIGATION FINDINGS 11
2.1 Summary of the Work Performed under the Remedial Investigation (RI) 11
2.2 Findings from Previous Investigations 12
2.2.1 Summary of Hydrogeological Findings 12
2.2.2 Summary of Environmental Findings 12
2.3 Significant Threat 15
2.4 Site History 15
2.4.1 Past Uses and Ownership 15
2.4.2 Previous Environmental Reports 16
2.4.3 Sanborn Maps 17
2.5 Geologic and Hydrogeologic Conditions 17
2.6 Contamination Conditions 17
2.6.1 Conceptual Model of Site Contamination 18
2.6.2 Description of Areas of Concern 18
2.6.3 Identification of Standards, Criteria and Guidance 18
2.6.4 Soil/Fill Contamination 20
2.6.5 On-Site Soil Vapor Contamination 28
2.7 Environmental and Public Health Assessments 29
2.7.1 Qualitative Human Health Exposure Assessment 29
2.7.2 Fish and Wildlife Remedial Impact Analysis 30
2.8 Remedial Action Objectives 30
2.8.1 Groundwater 30
2.8.2 Soil 30
2.8.3 Soil Vapor 31
3.0 WASTE CHARACTERIZATION 32
3.1 Soil Waste Characterization Sampling 32
3.2 Soil Waste Characterization Report 32
4.0 DESCRIPTION OF REMEDIAL ACTION PLAN 33
4.1 Evaluation of Remedial Alternatives 33
4.2 Selection of the Preferred Remedy 39
4.2.1 Zoning 39
4.2.2 Applicable Comprehensive Community Master Plans or Land Use Plans 39
4.2.3 Surrounding Property Uses 40
4.2.4 Citizen Participation 40
4.2.5 Environmental Justice 40
4.2.6 Land Use Designations 40
4.2.7 Population Growth Patterns 40
4.2.8 Accessibility to Existing Infrastructure 40
4.2.9 Proximity to Cultural Resources 40
4.2.10 Proximity to Natural Resources 41
4.2.11 Off-Site Groundwater Impacts 41
4.2.12 Proximity to Floodplains 41

4.2.13 Geography and Geology of the Site 41
4.2.14 Current Institutional Controls (ICs) and Engineering Controls (ECs) 41
4.3 Summary of Selected Remedial Actions 41
5.0 REMEDIAL ACTION PROGRAM 45
5.1 Governing Documents 45
5.1.1 Standards, Criteria, and Guidance (SCGs) 45
5.1.2 Site Specific Health and Safety Plan (HASP) 45
5.1.3 Quality Assurance Project Plan (QAPP) 46
5.1.4 Construction Quality Assurance Plan (CQAP) 46
5.1.5 Soil/Materials Management Plan (SoMP) 46
5.1.6 Storm-Water Pollution Prevention Plan (SWPPP) 46
5.1.7 Community Air Monitoring Plan (CAMP) 47
5.1.8 Contractors Site Operations Plan (SOP); 47
5.1.9 Citizen Participation Plan 47
5.2 General Remedial Construction Information 48
5.2.1 Project Organization 48
5.2.2 Remedial Engineer 49
5.2.3 Remedial Action Construction Schedule 49
5.2.4 Work Hours 49
5.2.5 Site Security and Traffic Control 49
5.2.6 Contingency Plan 49
5.2.7 Worker Training and Monitoring 50
5.2.8 Agency Approvals 50
5.2.9 NYSDEC BCP Signage 51
5.2.10 Pre-Construction Meeting with NYSDEC 51
5.2.11 Emergency Contact Information 51
5.2.12 Remedial Action Costs 51
5.3 Site Preparation 51
5.3.1 Mobilization 51
5.3.2 Monitoring Well / Vapor Probe Decommissioning 51
5.3.3 Erosion and Sedimentation Controls 52
5.3.4 Stabilized Construction Entrance(s) 52
5.3.5 Utility Marker and Easements Layout 52
5.3.6 Sheeting and Shoring 52
5.3.7 Equipment and Material Staging 53
5.3.8 Decontamination Area 53

5.4 Reporting 53
5.4.1 Daily Reports 53
5.4.2 Monthly Reports 54
5.4.3 Other Reporting 54
5.4.4 Complaint Management Plan 55
5.4.5 Deviations from the Remedial Action Work Plan 55
6.0 PRE-DESIGN INVESTIGATION 56
6.1 Soil Sampling 56
6.2 Soil Vapor Sampling 56
6.3 Groundwater Treatment Bench-Scale Treatability Study 57
7.0 REMEDIAL ACTION: MATERIAL REMOVAL FROM SITE 58
7.1 Soil Cleanup Objectives 58

7.2 Remedial Performance Evaluation (Post Excavation End-Point Sampling) 58
7.2.1 End-Point Sampling Frequency 58
7.2.2 Methodology 58
7.2.3 Reporting of Results 59
7.2.4 QA/QC 59
7.2.5 DUSR and EDDs 59
7.2.6 Reporting of End-Point Data in FER 59
7.3 Estimated Material Removal Quantities 60
7.4 Soil/Materials Management Plan 60
7.4.1 Soil Screening Methods 60
7.4.2 Stockpile Methods 60
7.4.3 Materials Excavation and Load Out 61
7.4.4 Materials Transport Off-Site 62
7.4.5 Materials Disposal Off-Site 62
7.4.6 Materials Reuse On-Site 64
7.4.7 Fluids Management 64
7.4.8 Demarcation 64
7.4.9 Backfill from Off-Site Sources 64
7.4.10 Stormwater Pollution Prevention 65
7.4.11 Contingency Plan 65
7.4.12 Community Air Monitoring Plan 67
7.4.13 Odor, Dust and Nuisance Control Plan 68
8.0 RESIDUAL CONTAMINATION TO REMAIN ON-SITE 70
9.0 ENGINEERING CONTROL: SITE COVER SYSTEM 71
10.0 ENGINEERING CONTROL: SUB-SLAB DEPRESSURIZATION SYSTEM 72
10.1 Sub-Slab Depressurization System (SSDS) 72
10.1.1 SSDS Components 72
10.1.2 SSDS Confirmatory Testing 73
11.0 ENGINEERING CONTROL: GROUNDWATER TREATMENT PROGRAM 74
11.1 Bench-Scale Treatability Study 74
11.2 In-Situ Injection Events 74
12.0 ENGINEERING CONTROL: CONTINGENT SOIL VAPOR EXTRACTION SYSTEM 76
12.1 Contingent Soil Vapor Extraction System (SVES) 76
12.1.1 SVES Treatment Area 76
12.1.2 SVES Pilot Test 76
12.1.3 SVES Components 78
12.1.4 SVES Confirmatory Testing 78
12.1.5 SVES Operations and Maintenance (O&M) 78
13.0 CRITERIA FOR COMPLETION OF REMEDIATION/ TERMINATION OF REMEDIAL SYSTEMS 80
13.1 Site Cover System 80
13.2 SSDS 80
13.3 In-Situ Groundwater Treatment 80
13.4 Contingent SVES 80
14.0 INSTITUTIONAL CONTROLS 81
14.1 Environmental Easement 81
14.2 Site Management Plan 83
15.0 FINAL ENGINEERING REPORT 84
15.1 Certifications 84

LIST OF ACRONYMS

Acronym	Definition
1,1,1-TCA	1,1,1-trichloroethane
1,1-DCE	1,1-dichloroethylene
ACM	Asbestos Containing Material
AOCs	Areas of Concern
ASTM	American Society for Testing and Materials
AWQSGVs	Ambient Water Quality Standards and Guidance Values
BCA	Brownfield Cleanup Agreement
BCP	Brownfield Cleanup Program
bsg	Below Surface Grade
BTEX	A group of VOCs comprising benzene, toluene, ethylbenzene, and xylenes
CAMP	Community Air Monitoring Plan
Cis-1,2-DCE	Cis-1,2-dichloroethylene
CoC	Chain of Custody
COC	Contaminants of Concern
DER-10	Division of Environmental Remediation Technical Guide 10
DPP	Direct-push Probe
DUSR	Data Usability Summary Report
ECs	Engineering Controls
ELAP	New York State Environmental Laboratory Approval Program
EM	Electromagnetic
EPA	United States Environmental Protection Agency
ESA	Environmental Site Assessment
ESC	Environmental Studies Corporation, Incorporated
eV	Electron Volt
GPR	Ground Penetrating Radar
HASP	Health and Safety Plan
HAZWOPER	Hazardous Waste Operations and Emergency Response
HDPE	High-density Polyethylene
ICs	Institutional Control
IDW	Investigation Derived Waste
LBP	Lead-based Paint
MCL	Maximum Contaminant Level
MEK	Methyl Ethyl Ketone
mg/kg	Milligrams per Kilogram
MS/MSD	Matrix Spike/Matrix Spike Duplicate
NAPL	Non-Aqueous Phase Liquid
NAVD88	North American Vertical Datum of 1988
ND	Non-Detectable
NTUs	Nephelometric Turbidity Units
NYCRR	New York Codes, Rules and Regulations
NYS	New York State
NYSDEC	New York State Department of Environmental Conservation
NYSDOH	New York State Department of Health
NYSDOT	New York State Department of Transportation
ORP	Oxidation-Reduction Potential

Acronym	Definition
OSHA	United States Occupational Safety and Health Administration
P.S.	Public School
PAHs	Polycyclic Aromatic Hydrocarbons
PCBs	Polychlorinated Biphenyls
PCE	Tetrachloroethylene
PFAS	Per- and Polyfluoroalkyl Substances
PFOA	Perfluorooctanoic Acid
PFOS	Perfluorooctanesulfonic Acid
PID	Photoionization detector
ppb	Parts per billion
ppm	Parts per million
ppt	Parts per trillion
PVC	Polyvinyl Chloride
QA	Quality Assurance
QAPP	Quality Assurance Project Plan
QC	Quality Control
QEP	Qualified Environmental Professional
QHHEA	Qualitative Human Health Exposure Assessment
RA	Remedial Action
RAOs	Remedial Action Objectives
RAWP	Remedial Action Work Plan
RCRA	Resource Conservation and Recovery Act
REC	Recognized Environmental Condition
RI	Remedial Investigation
RIR	Remedial Investigation Report
RIWP	Remedial Investigation Work Plan
RRSCO	Restricted Residential Soil Cleanup Objective
SCOs	Soil Cleanup Objectives
SIM	Selective Ion Monitoring
SVOC	Semivolatile Organic Compound
TAL	Target Analyte List
TCE	Trichloroethylene
UST	Underground Storage Tank
UUSCO	Unrestricted Use Soil Cleanup Objective
VEC	Vapor Encroachment Condition
VOC	Volatile Organic Compound
µg/kg	Micrograms per Kilogram
µg/L	Micrograms per Liter
$\mu g/m^3$	Micrograms per Meter Cubed

EXECUTIVE SUMMARY

Site Description/Physical Setting/Site History

The Site is an approximately 0.48-acre parcel located at 32-11 31st Street in the Astoria section of Queens, New York, also identified as Borough of Queens Tax Block 611, Lot 25 on the New York City Tax Map. On October 6, 2025, Ikos Senior Living LLC (the "Applicant") entered into a Brownfield Cleanup Agreement (BCA) (Index No. C241290) for the Site with the New York State Department of Environmental Conservation (NYSDEC) as a Volunteer.

The Site currently consists of a municipal, asphalt-paved parking lot and is not developed with any permanent structures. The Site location is shown on Figure 1, and the Site Plan is shown on Figure 2.

The Site is abutted to the north by commercial uses (restaurants, a bar, retail, and offices), followed by Broadway; to the south by residential units and the Cretans Association Omonia, Inc. Cultural Facility, followed by office space; to the east by residential units and 32nd Street; and to the west by 31st Street and an elevated NYC subway station, followed by commercial/retail and residential units. The greater surrounding area includes primarily commercial, retail, residential, and transit uses. Surrounding land use is shown on Figure 3.

A review of available records indicates that the Site was developed with a residential dwelling from at least 1898 to 1979 and included several vacant lots. The Site was depicted in its current configuration as one contiguous lot and identified as a parking facility by 1988. The City of New York has owned and operated the Site since December 18, 1997, through a court order in which the City of New York acquired the title to the Site via eminent domain for use as a municipal parking field.

Summary of the Work Performed under the Remedial Investigation (RI)

The RI was conducted between April 27 and May 13, 2026 under a NYSDEC-approved Remedial Investigation Work Plan (RIWP) and included the following scope of work:

1. The performance of a geophysical survey across accessible portions of the Site and utility mark-outs.
2. The advancement of 15 soil borings with collection and laboratory analysis of 80 soil samples.
3. The installation of 10 permanent, 2-inch-diameter groundwater monitoring wells with the collection and laboratory analysis of 10 groundwater samples.
4. The installation of 5 temporary soil vapor probes and the collection and laboratory analysis of 5 soil vapor samples.
5. The performance of a groundwater monitoring well elevation and location survey of the permanent monitoring wells.

The RI was based upon the results from Phase II investigations conducted by AKRF in 2022 and 2024; the results of those investigations were incorporated into the RI Report.

AKRF conducted a Phase II investigation at the Site between October 3 and 5, 2022 under a New York City Department of Environmental Protection (NYCDEP)-approved Phase II Work Plan and included the following scope of work:

1. The performance of a geophysical survey across accessible portions of the Site and utility mark-outs.
2. The advancement of 7 soil borings with the collection and laboratory analysis of 14 soil samples.
3. The installation of 4 temporary, 1-inch-diameter groundwater monitoring wells with the collection and laboratory analysis of 4 groundwater samples.

4. The installation of 5 temporary soil vapor probes and the collection and laboratory analysis of 5 soil vapor samples.

AKRF conducted a RI at the Site between December 11 and 13, 2024 under a New York City Mayor's Office of Environmental Remediation (NYCOER)-approved Phase II work plan and included the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.)
2. The performance of a geophysical survey across accessible portions of the Site and utility mark-outs.
3. The advancement of 9 soil borings with the collection and laboratory analysis of 23 soil samples.
4. The installation of 3 temporary, 1-inch-diameter groundwater monitoring wells with the collection and laboratory analysis of 3 groundwater samples.
5. The installation of 3 temporary soil vapor probes and the collection and laboratory analysis of 3 soil vapor samples.

Summary of Hydrogeological Findings

The following geologic and hydrogeologic conditions were noted during the RI:

1. Based on the May 2026 survey of the newly installed monitoring wells by Fehringer Surveying, PC, the Site lies at an elevation of 50.16 to 55.6 feet above the North American Vertical Datum of 1988 (NAVD88).
2. The stratigraphy of the Site, from the surface down, generally consisted of a surficial layer of asphalt, underlain by fill material comprised of sand, silt, brick, and gravel extending from grade to approximately 2 to 10 feet below grade during the 2026 RI. During previous investigations, fill material was encountered at depths ranging from just below surface grade down to approximately 5 to 14 feet below grade. The fill was underlain by native material comprised of sand, silt, and gravel to the boring terminus. Bedrock was encountered between 47 and 51 feet below grade in borings RI-SB-01, RI-SB-05, and RI-SB-08.
3. Groundwater beneath the Site ranges from elevation 18.82 to elevation 20.08 (NAVD88), or 29.91 to 36.12 feet below grade across the Site. Regional groundwater flows in a westerly direction toward the East River. Based on the site-specific well elevation survey, groundwater flows in a generally southwesterly direction beneath the Site.

Summary of Environmental Findings

Soil

2026 RI

- Volatile organic compounds (VOC) detections included acetone, ethylbenzene, m/p-xylene, o-xylene, tetrachloroethylene (PCE), and total xylenes at concentrations up to 3.8 milligrams per kilogram (mg/kg). PCE was detected at low levels in many samples but was detected above the NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) in one soil sample (RI-SB-11_4-6_20260428 at a concentration of 3.8 mg/kg). There were no VOC exceedances above the RRSCOs.
- Nine SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene, and phenanthrene were detected above the UUSCOs and/or RRSCOs in up to four soil samples at concentrations up to 6.9 mg/kg [benzo(a)pyrene in sample RI-SB-10_0-

0.17_20260427]. SVOCs were detected at individual concentrations ranging from 0.0047 (acenaphthylene in RI-SB-05_2-4_20260501) to 12 mg/kg in (fluoranthene in RI-SB-10_0-0.17_20260427). Total SVOC concentrations ranged from non-detect to 39.34 mg/kg in sample RI-SB-11_4-6_20260428.

- Polychlorinated biphenyls (PCBs) were detected above laboratory reporting limits in sample SB-02_0-2_20221003 at a concentration of 0.63 mg/kg in PCB-1260 (Aroclor 1260) and PCB-1268 (Aroclor 1268) but below UUSCOs and RRSCOs. Pesticides were detected at individual concentrations ranging from 0.0029 (4.4'-DDE in RI-SB-08_0-2_20260501) to 0.013 mg/kg in (fluoranthene in RI-SB-10_0-0.17_20260427). The pesticide P,P'-DDT was detected above the UUSCO, but below the RRSCO in 10 soil samples.

- Copper, lead, mercury, and zinc were detected in soil samples across the Site above UUSCOs in shallow fill material down to 6 feet below grade. Lead was additionally detected above the RRSCO of 400 mg/kg in sample RI-SB-10_4-6_20260427 at a concentration of 4,660 mg/kg. Mercury was detected above the RRSCO of 0.3 mg/kg in sample RI-SB-02_0-0.17_20260429 at a concentration of 0.32 mg/kg. Metals were detected at individual concentrations ranging from 0.0067 (mercury in RI-SB-13_0-0.17_20260428) to 72,000 mg/kg in (calcium in RI-SB-08_0-0.17_20260501).

- Perfluorooctanesulfonic acid (PFOS) was detected above the NYSDEC unrestricted use guidance value of 0.88 parts per billion (ppb) in four samples with concentrations ranging from 1.02 ppb to 2.34 ppb. PFOS were detected at individual concentrations ranging from 0.098 ppb (RI-SB-08_0-2_20260501) to 2.34 ppb (fluoranthene in RI-SB-10_0-0.17_20260427). Perfluorooctanoic acid (PFOA) was detected above the NYSDEC unrestricted use guidance value of 0.66 ppb in two samples, with concentrations up to 1.54 ppb. PFOA were detected at individual concentrations ranging from 0.06 ppb in RI-SB-10_0-0.17_20260427 to 1.54 ppb in RI-SB-10_6-8_20260427. 1,4-Dioxane was not detected above laboratory reporting limits in any of the soil samples.

<u>2022 and 2024 Phase II Investigations</u>

- VOCs detections included 1,2,4-trimethylbenzene, acetone, PCE, toluene, and trichloroethylene (TCE) at concentrations up to 0.16 mg/kg. Acetone was detected above the UUSCO of 0.03 mg/kg in three samples. There were no exceedances of the RRSCOs or PGWSCOs.

- SVOCs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene, and phenanthrene were detected at concentrations up to 29 mg/kg, above the UUSCOs and/or RRSCOs [benzo(b)fluoranthene in sample SB-05_0-2_20221004].

- PCBs were not detected above the UUSCOs or RRSCOs. The pesticides cis-chlordane, P,P'-DDE, and P,P'-DDT were detected above the UUSCOs, but below the RRSCOs.

- Copper, lead, mercury, and zinc were detected in soil samples across the Site above their respective UUSCOs in shallow fill material down to 4 feet below grade. Mercury was detected above the RRSCO of 0.3 mg/kg in one sample (SB-04_0-2_20221003) at a concentration of 0.59 mg/kg.

- During the 2024 Phase II investigation, one soil sample was analyzed for PFAS (SB-08_0-2_20241213). PFOS was detected above the NYSDEC unrestricted use guidance value of 0.88 ppb at a concentration of 2.17 ppb. PFOA and 1,4-dioxane were not detected above laboratory reporting limits in the soil sample.

Groundwater

2026 RI

- The VOCs acetone, chloroform, cis-1,2-dichloroethene, dichlorobromomethane, PCE, and/or TCE were detected in all 10 groundwater samples at concentrations ranging from 0.27 micrograms per liter (µg/L) to 860 µg/L (PCE in sample RI-MW-03_20260513). Chloroform, cis-1,2-dichloroethene, PCE, and/or TCE were detected above the NYSDEC Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs) in all groundwater samples.
- SVOCs were not detected above laboratory reporting limits.
- PCBs and pesticides were not detected above laboratory reporting limits.
- In the filtered (dissolved) groundwater samples, there were exceedances of the AWQSGVs for manganese and sodium. In the unfiltered (total) groundwater samples, there were exceedances of the AWQSGVs for iron, manganese, and sodium, up to 169,000 µg/L.
- PCBs or pesticides were not detected above laboratory reporting limits in any of the groundwater samples.
- PFOS was detected above its NYSDEC guidance value of 2.7 parts per trillion (ppt) in all eight groundwater samples, and the blind duplicate. PFOA was detected above its NYSDEC guidance value of 6.7 ppt in in all eight groundwater samples, and the blind duplicate. 1,4-Dioxane was not detected above laboratory reporting limits in any of the soil samples.

2022 and 2024 Phase II Investigations

- The VOCs acetone, benzene, bromodichloromethane, chloroform, cis-1,2-dichloroethene, dibromochloromethane, m,p-xylenes, methyl ethyl ketone, methylene chloride, PCE and/or TCE were detected in all seven groundwater samples at concentrations ranging from 0.3 µg/L to 330 µg/L (PCE in sample TW-04_20221004).
- Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, bis(2-ethylhexyl) phthalate, chrysene, and indeno(1,2,3-c,d)pyrene were detected in sample TW-01_20221005 at concentrations above the AWQSGVs, up to 6.2 µg/L.
- PCBs and pesticides were not detected above laboratory reporting limits.
- In the filtered (dissolved) groundwater samples, there were exceedances of the AWQSGVs for iron, magnesium, manganese, and sodium. In the unfiltered (total) groundwater samples, there were exceedances of the AWQSGVs for arsenic, barium, beryllium, chromium, copper, iron, lead, magnesium, manganese, mercury, nickel, sodium, thallium, and zinc up to 971,000 µg/L.
- PCBs or pesticides were not detected above laboratory reporting limits in any of the groundwater samples.
- The groundwater samples were not analyzed for PFAS. 1,4-Dioxane was not detected above laboratory reporting limits in any of the soil samples.

Soil Vapor

2026 RI

- Solvent-related VOCs (including bromodichloromethane, chloroform, chloromethane, cis-1,2-dichloroethene, methylene chloride, PCE, TCE, trans-1,2-dichloroethene, and trichlorofluoromethane) were detected in the soil vapor samples at individual concentrations

up to 12,000 micrograms per cubic meter (µg/m^3) from a diluted analysis (PCE in sample SV-02_20210825).

- Petroleum-related VOCs [such as 1,2,4-trimethylbenzene, 1,3-butadiene, 2,2,4-trimethylpentane, 1,3-dichlorobenzene, 4-methyl-2-pentanone, carbon disulfide, cyclohexane, methyl butyl ketone, methyl ethyl ketone, n-butane, n-heptane, n-hexane, tert-butyl alcohol, benzene, toluene, ethylbenzene, and m,p- and-o-xylenes (collectively referred to as BTEX)], were detected in the soil vapor samples at individual concentrations up to 150 µg/m^3 from a diluted analysis (m,p-xylene in sample RI-SV-03_20260429).
- When compared to the New York State Department of Health (NYSDOH) Decision Matrices, cis-1,2-dichloroethene, PCE, and TCE were detected above the lowest level requiring mitigation, regardless of indoor air concentration in samples RI-SV-02_20260429, RI-SV-03_20260429, and RI-SV-04_20260429.

2022 and 2024 Phase II Investigations

- Solvent-related VOCs, including carbon disulfide, chloroform, cis-1,2-dichloroethylene, PCE, and TCE were detected at concentrations up to 1,900 µg/m^3 (PCE in sample SV-04_20221003).
- Petroleum-related VOCs, including 1,3-butadiene, 2,2,4-trimethylpentane, benzene, butane, cyclohexane, methyl ethyl ketone, n-heptane, n-hexane, styrene, and toluene were detected at concentrations up to 66 µg/m^3 (butane in sample SV-07_20241213).
- When compared to the NYSDOH Decision Matrices, cis-1,2-dichloroethene was detected above the lowest level requiring mitigation, regardless of indoor air concentration in samples SV-01_20221004, SV-02_20221003, and SV-03_20221004. PCE was detected above the lowest level requiring mitigation, regardless of indoor air concentration in sample SV-04_20221003.

Areas of Concern (AOCs)

The following environmental issues identified during previous assessments were considered areas of concern (AOCs) for the RI. The AOCs included:

- Historic commercial, industrial, and automotive uses in the surrounding area, including a filling station, a garage and auto repair shop with gasoline tanks, a dry cleaner, and a machine shop and warehouse;
- Polyaromatic hydrocarbons (PAHs) in soil; and
- Elevated concentrations of solvent-related compounds in soil vapor and groundwater.

Qualitative Human Health Exposure Assessment

The Site currently consists of a commuter parking lot. The Site is capped by asphalt pavement and is accessible from 31st and 32nd Street. Currently, there is no potential exposure pathway from soil, groundwater, or soil vapor intrusion since the Site is capped and there are no buildings constructed on-site. Once redevelopment activities begin, there will be a potential exposure pathway from contaminated surface soil/fill to construction workers as these workers could potentially ingest, inhale, or have dermal contact with any exposed contaminated fill/soil. If future redevelopment plans require dewatering, there will be an additional potential exposure pathway as workers could potentially ingest or have dermal contact with the contaminated groundwater. Without remediation, once redevelopment of the Site has been completed, there will be a potential exposure pathway from ingestion, dermal contact, and/or inhalation of particulates from on-site soils that remain uncapped (i.e., landscaped areas) or inhalation of VOC vapors to adult and child residents, building support and maintenance staff, and visitors through cracks or openings in the foundation of the new building. In addition, there will be a potential exposure pathway from direct contact to soil that

remains uncapped (i.e., landscaped areas) at the Site to off-site pedestrians, visitors, cyclists, and adult and child residents. All potential exposure pathways in the future will be prevented through implementation of this RAWP.

Fish and Wildlife Assessment (FWIA)

The Site was assessed against the Fish and Wildlife Resources Impact Analysis (FWRIA) Decision Key located within DER-10, Appendix 3C to determine if an FWRIA was required. It was determined that an FWRIA was not required because no water sources or habitats are being impacted by the Site.

Summary of the Remedy

Remedial activities will be performed at the Site in accordance with this RAWP and the Department-issued Decision Document (DD). All deviations from this RAWP and/or the DD will be promptly reported to NYSDEC for approval and will be fully explained in the Final Engineering Report (FER). The selected remedial actions include:

1. A remedial program will be implemented to provide the details necessary for the construction, operation, optimization, maintenance, and monitoring of the remedial program. Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and site management of the remedy as per DER-31. The major green remediation components are as follows:

    - Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
    - Reducing direct and indirect greenhouse gases and other emissions;
    - Increasing energy efficiency and minimizing use of non-renewable energy;
    - Conserving and efficiently managing resources and materials;
    - Reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste;
    - Maximizing habitat value and creating habitat when possible;
    - Fostering green and healthy communities and working landscapes which balance ecological, economic and social goals;
    - Integrating the remedy with the end use where possible and encouraging green and sustainable re-development; and
    - Additionally, to incorporate green remediation principles and techniques to the extent feasible in the future development at this site, any future on-site buildings shall be constructed, at a minimum, to meet the 2020 Energy Conservation Construction Code of New York (or most recent edition) to improve energy efficiency as an element of construction.

    As part of the remedial program, to evaluate the remedy with respect to green and sustainable remediation principles, an environmental footprint analysis will be completed. The environmental footprint analysis will be completed using an accepted environmental footprint analysis calculator such as SEFA (Spreadsheets for Environmental Footprint Analysis, USEPA), SiteWiseTM (available in the Sustainable Remediation Forum [SURF] library) or similar Department accepted tool. Water consumption, greenhouse gas emissions, renewable and non-renewable energy use, waste reduction and material use will be estimated, and goals for the project related to these green and sustainable remediation metrics, as well as for minimizing community impacts, protecting habitats and natural and cultural resources, and promoting environmental justice, will be incorporated into the remedial

program, as appropriate. The project will include detailed requirements to achieve the green and sustainable remediation goals. Further, progress with respect to green and sustainable remediation metrics will be tracked during implementation of the remedial action and reported in the Final Engineering Report (FER), including a comparison to the goals established during the remedial program.

Additionally, the remedial program will include a climate change vulnerability assessment, to evaluate the impact of climate change on the project site and the proposed remedy. Potential vulnerabilities associated with extreme weather events (e.g., hurricanes, lightning, heat stress and drought), flooding, and sea level rise will be identified, and the remedial program will incorporate measures to minimize the impact of climate change on potential identified vulnerabilities.

2. The proposed remedy is a dual Track 2/Track 4 Restricted Residential cleanup.
3. Removal of asphalt followed by excavation and off-site disposal of 1) all contaminated soil/fill in the upper 15 feet below ground surface (bgs) within the proposed new building cellar footprint to attain a Track 2 cleanup within this area, and 2) a minimum 2 feet bgs cut and all source material removal (soil/fill above PGWSCOs for CVOCs), including a tetrachloroethylene (PCE) hotspot around RI-SB-11, to attain a Track 4 cleanup in other areas of the Site.
4. Any unknown/unregistered tanks and associated piping, other structures associated with a source of contamination, and/or grossly contaminated soil/fill, if encountered, will be removed in accordance with applicable regulations.
5. Installation of support of excavation (SOE) necessary to enable excavation of contaminated soil/fill. SOE installation will comply with applicable local and state-controlled inspections.
6. Decommissioning of existing groundwater monitoring wells in accordance with NYSDEC CP-43 if monitoring well locations conflict with proposed building foundation elements and/or if monitoring wells cannot be safely preserved during construction.
7. A Site-specific Health and Safety Plan (HASP) and Community Air Monitoring Plan (CAMP) will be implemented during all ground-intrusive Site activities, which includes soil disturbance and loading activities, to monitor levels of VOCs and airborne particulates within the active work zones and around the perimeter of the Site.
8. A Special Requirements Community Air Monitoring Program (SRCAMP) will be implemented during all ground-intrusive Site activities within 20 feet of occupied structures and/or potentially exposed populations to monitor levels of VOCs and airborne particulates.
9. Screening for indications of contamination (by visual means, odor, and monitoring with a PID) of soil during all ground-intrusive Site work, including soil disturbance and loading activities.
10. Characterization and off-site disposal of all materials removed from the Site in accordance with all federal, state, and local rules and regulations for handling, transport, and disposal. Waste disposal facilities will be selected based on the data collected to date and the results of the planned waste classification sampling.
11. Performance of a Pre-Design Investigation (PDI) to support the remedy.
12. Importation of clean fill meeting the requirements of 6 NYCRR Part 375-6.7(d) to raise the Site grade after remedial excavation, construct the Site cover, and/or as needed for use as backfill. Fill material that does not exceed RRSCOs for any compound may be used on-site to backfill the Site. Soil exceeding the UUSCO for 1,4-dioxane will not be imported, per DER-10: Appendix 5 - Allowable Constituent Levels for Imported Fill or Soil, Subdivision 5.4(e). If PFOA or PFOS are detected in any sample at or above the RRGV, it will also be tested by the Synthetic Precipitation Leaching Procedure (SPLP). If

the SPLP concentrations of PFOA and PFOS are at or above 10 ppt, the soil will not be reused or imported. Analytical results will be compared to Table 375-6.8(b) of 6 NYCRR Part 375 and submitted to NYSDEC via a *Request to Import/Reuse Soil or Fill* form for review and approval prior to importation and placement on-site. All imported soil or soil proposed for reuse requires NYSDEC review prior to on-site placement.

13. Implementation of a groundwater treatment program to address elevated concentrations of chlorinated volatile organic compounds (CVOCs) in groundwater. Prior to the full implementation of the treatment program, a bench-scale treatability study will be conducted to more clearly define the design parameters; however, it is anticipated that the treatment will require approximately 32 injection points to distribute sodium permanganate (or other chemical) in the treatment area. The groundwater treatment program will be performed to treat groundwater between approximately 30 to 50 feet bgs.
14. Collection and laboratory analysis of post-excavation endpoint samples across the Site to document achievement of the remedy and/or remaining concentrations of contaminants in soil/fill after excavation is complete. Endpoint sampling will occur around any hotspots and/or additional AOCs identified during the remedial action based on the sampling frequency outlined in Section 5.4 of DER-10.
15. Construction and maintenance of a Site cover within the Track 4 portion of the Site to prevent human exposure to residual contaminants in soil/fill remaining under the Site, which will consist of: (1) a minimum of 2 feet of clean fill material placed in landscaped and permeable areas underlain by a demarcation barrier; (2) concrete building slabs (5-inch thick concrete slab in the cellar, 3-inch thick concrete rat slab in the crawl space, and 10-inch thick concrete slab in the first floor) underlain by a minimum 20-mil vapor barrier membrane, which doubles as a demarcation barrier, in the slab-on-grade portion of the proposed building; and (3) paved surfaces in roadway and sidewalk areas.
16. Installation and operation of an active sub-slab depressurization system (SSDS) below the proposed new building foundation to prevent vapor intrusion into the proposed building.
17. Installation of below grade elements of a contingency soil vapor extraction system (SVES) around the Site perimeter. Aboveground elements of the system will be installed and the SVES will be operated depending on post-remedial soil vapor concentrations of CVOCs.
18. Recording of an Environmental Easement (EE) with the New York City Register to prevent future exposure to any residual contamination remaining at the Site. The EE will: require the remedial parties/Site owners to complete and submit a periodic certification of ECs and ICs to the Department in accordance with Part 375-1.8 (h)(3); allow the use and development of the Site for restricted residential use as defined by Part 375-1.8(g), although land use is subject to local zoning laws; restrict the use of groundwater as a source of potable or process water without necessary water quality treatment, as determined by NYSDOH; and require compliance with a Site-specific NYSDEC-approved SMP.
19. Preparation of an SMP for long term management of residual contamination as required by the EE (in the Track 4 portion of the Site) including plans for: (1) ECs and ICs, (2) monitoring, (3) operation and maintenance, and (4) reporting. Inclusion of soil management provisions in the SMP, including an Excavation Work Plan.

REMEDIAL ACTION WORK PLAN

1.0 INTRODUCTION

Ikos Senior Living LLC (the "Applicant") entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in October 2025, to investigate and remediate a 0.48-acre property located at 32-11 31st Street in the Astoria section of Queens, New York, also identified as Borough of Queens Tax Block 611, Lot 25 on the New York City Tax Map. The Applicant is a Volunteer in the Brownfield Cleanup Program. Restricted Residential is proposed for the property. When completed, the Site will contain two new buildings: a 13-story residential building with approximately 167 affordable senior residential units and a partial cellar level along 31st Street, and a three-story community facility building (slab-on-grade) along 32nd Street. Refer to the Brownfield Cleanup Program (BCP) application for additional details.

This Remedial Action Work Plan (RAWP) summarizes the nature and extent of contamination as determined from data gathered during the Remedial Investigation (RI), performed between April 27 and May 13, 2026. It provides an evaluation of a Track 1 cleanup and other applicable Remedial Action alternatives, their associated costs, and the recommended and preferred remedy. The remedy described in this document is consistent with the procedures defined in DER-10, DER-31, and complies with all applicable standards, criteria and guidance, including the requirements of 6 NYCRR Part 375. The remedy described in this document also complies with all applicable Federal, State and local laws, regulations and requirements. All remedial actions and engineered installations described herein are necessary to implement the Site's remediation and to qualify the Site for issuance of a Certificate of Completion. The NYSDEC and New York State Department of Health (NYSDOH) have not yet determined that the Site poses a significant threat to human health and the environment or not. The RI for this Site did not identify fish and wildlife resources.

A draft Remedial Design Report will be submitted detailing the groundwater treatment, SSDS, and the contingent SVES Design.

1.1 Site Location and Description

The Site is located in the neighborhood of Astoria in the County of Queens, New York and is identified as Block 611, Lot 25 on the New York City Tax Map. The Site location is shown on Figure 1, and the Site Plan is shown on Figure 2. The approximately 0.48-acre Site is currently a commuter parking lot. The Site is abutted to the north by commercial uses (restaurants, a bar, retail, and offices), followed by Broadway; to the south by residential units and the Cretans Association Omonia, Inc. Cultural Facility, followed by office space; to the east by residential units and 32nd Street; and to the west by 31st Street and an elevated NYC subway station, followed by commercial/retail and residential units. A boundary map is attached to the BCA as required by Environmental Conservation Law (ECL) Title 14 Section 27-1419. The 0.48-acre property is fully described in Appendix A – Metes and Bounds. A global positioning system coordinate for the starting point is included.

1.2 Contemplated Redevelopment Plan

The Remedial Action to be performed under the RAWP is intended to make the Site protective of human health and the environment consistent with the contemplated end use. The proposed redevelopment plan and end use is described here to provide the basis for this assessment. However, the Remedial Action contemplated under this RAWP may be implemented independent of the proposed redevelopment plan.

The Site is currently zoned as R5/C4-5 along 31st Street and R5/C4-2A along 32nd Street. The Site was rezoned in March 2026 under the Ikos Senior Housing Rezoning & Urban Development Action Area Project (UDAAP), subject to City Environmental Quality Review (CEQR), and allows for the development of community facility space and increased residential space.

Currently, proposed plans include construction of two new buildings: a 13-story residential building with approximately 167 affordable senior residential units and a partial cellar level along 31st Street, and a three-story community facility building (slab-on-grade) along 32nd Street. The two buildings will be connected through a one-story community room. The proposed development plan is included in Appendix B.

The Site was also assigned an E-Designation (E-771) in October 2025 for hazardous materials as part of the Ikos Senior Housing Rezoning.

1.3 Description of Surrounding Property

The Site is bounded to the north by commercial uses (restaurants, a bar, retail, and offices), followed by Broadway; to the south by residential units and the Cretans Association Omonia, Inc. Cultural Facility, followed by office space; to the east by residential units and 32nd Street; and to the west by 31st Street and an elevated NYC subway station, followed by commercial/retail and residential units. The greater surrounding area includes primarily commercial, retail, residential, and transit uses.

The following sensitive receptors are located within 1,000 feet of the Site:

- The Learning Experience daycare, located at 31-57 31st Street, approximately 330 feet north-northeast of the Site.
- Elva's Daycare, located at 31-57 34th Street, Apartment 4B, approximately 845 feet east of the Site.
- Adventureland Child Care Center, located at 32-04 31st Avenue, approximately 1,000 feet northeast of the Site.

Figure 3 shows the surrounding land usage.

2.0 DESCRIPTION OF REMEDIAL INVESTIGATION FINDINGS

The Site was investigated in accordance with the scope of work presented in the NYSDEC-approved Remedial Investigation (RI) Work Plan dated March 2026. The investigation was conducted between April 27 and May 13, 2026. The RI was submitted to NYSDEC on July 24, 2026 and approved by NYSDEC on [insert date].

2.1 Summary of the Work Performed under the Remedial Investigation (RI)

The RI was conducted between April 27 and May 13, 2026 under a NYSDEC-approved Remedial Investigation Work Plan (RIWP) and included the following scope of work:

1. The performance of a geophysical survey across accessible portions of the Site and utility mark-outs.
2. The advancement of 15 soil borings with collection and laboratory analysis of 80 soil samples.
3. The installation of 10 permanent, 2-inch-diameter groundwater monitoring wells with the collection and laboratory analysis of 10 groundwater samples.
4. The installation of 5 temporary soil vapor probes and the collection and laboratory analysis of 5 soil vapor samples.
5. The performance of a groundwater monitoring well elevation and location survey of the permanent monitoring wells.

The RI was based upon the results from Phase II investigations conducted by AKRF in 2022 and 2024; the results of those investigations were incorporated into the RI Report.

AKRF conducted a Phase II investigation at the Site between October 3 and 5, 2022 under a New York City Department of Environmental Protection (NYCDEP)-approved Phase II Work Plan and included the following scope of work:

1. The performance of a geophysical survey across accessible portions of the Site and utility mark-outs.
2. The advancement of 7 soil borings with the collection and laboratory analysis of 14 soil samples.
3. The installation of 4 temporary, 1-inch-diameter groundwater monitoring wells with the collection and laboratory analysis of 4 groundwater samples.
4. The installation of 5 temporary soil vapor probes and the collection and laboratory analysis of 5 soil vapor samples.

AKRF conducted a RI at the Site between December 11 and 13, 2024 under a New York City Mayor's Office of Environmental Remediation (NYCOER)-approved Phase II work plan and included the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.)
2. The performance of a geophysical survey across accessible portions of the Site and utility mark-outs.
3. The advancement of 9 soil borings with the collection and laboratory analysis of 23 soil samples.

4. The installation of 3 temporary, 1-inch-diameter groundwater monitoring wells with the collection and laboratory analysis of 3 groundwater samples.
5. The installation of 3 temporary soil vapor probes and the collection and laboratory analysis of 3 soil vapor samples.

2.2 Findings from Previous Investigations

2.2.1 Summary of Hydrogeological Findings

The following geologic and hydrogeologic conditions were noted during the RI:

1. Based on the May 2026 survey of the newly installed monitoring wells by Fehringer Surveying, PC, the Site lies at an elevation of 50.16 to 55.6 feet above the North American Vertical Datum of 1988 (NAVD88).
2. The stratigraphy of the Site, from the surface down, generally consisted of a surficial layer of asphalt, underlain by fill material comprised of sand, silt, brick, and gravel extending from grade to approximately 2 to 10 feet below grade during the 2026 RI. During previous investigations, fill material was encountered at depths ranging from just below surface grade down to approximately 5 to 14 feet below grade. The fill was underlain by native material comprised of sand, silt, and gravel to the boring terminus. Bedrock was encountered between 47 and 51 feet below grade in borings RI-SB-01, RI-SB-05, and RI-SB-08.
3. Groundwater beneath the Site ranges from elevation 18.82 to elevation 20.08 (NAVD88), or 29.91 to 36.12 feet below grade across the Site. Regional groundwater flows in a westerly direction toward the East River. Based on the site-specific well elevation survey, groundwater flows in a generally southwesterly direction beneath the Site.

2.2.2 Summary of Environmental Findings

Soil

2026 RI

- Volatile organic compounds (VOC) detections included acetone, ethylbenzene, m/p-xylene, o-xylene, tetrachloroethylene (PCE), and total xylenes at concentrations up to 3.8 milligrams per kilogram (mg/kg). PCE was detected at low levels in many samples but was detected above the NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCO) and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) in one soil sample (RI-SB-11_4-6_20260428 at a concentration of 3.8 mg/kg). There were no VOC exceedances above the RRSCOs.
- Nine SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene, and phenanthrene were detected above the UUSCOs and/or RRSCOs in up to four soil samples at concentrations up to 6.9 mg/kg [benzo(a)pyrene in sample RI-SB-10_0-0.17_20260427]. SVOCs were detected at individual concentrations ranging from 0.0047 (acenaphthylene in RI-SB-05_2-4_20260501) to 12 mg/kg in (fluoranthene in RI-SB-10_0-0.17_20260427). Total SVOC concentrations ranged from non-detect to 39.34 mg/kg in sample RI-SB-11_4-6_20260428.

- Polychlorinated biphenyls (PCBs) were detected above laboratory reporting limits in sample SB-02_0-2_20221003 at a concentration of 0.63 mg/kg in PCB-1260 (Aroclor 1260) and PCB-1268 (Aroclor 1268) but below UUSCOs and RRSCOs. Pesticides were detected at individual concentrations ranging from 0.0029 (4.4'-DDE in RI-SB-08_0-2_20260501) to 0.013 mg/kg in (fluoranthene in RI-SB-10_0-0.17_20260427). The pesticide P,P'-DDT was detected above the UUSCO, but below the RRSCO in 10 soil samples.
- Copper, lead, mercury, and zinc were detected in soil samples across the Site above UUSCOs in shallow fill material down to 6 feet below grade. Lead was additionally detected above the RRSCO of 400 mg/kg in sample RI-SB-10_4-6_20260427 at a concentration of 4,660 mg/kg. Mercury was detected above the RRSCO of 0.3 mg/kg in sample RI-SB-02_0-0.17_20260429 at a concentration of 0.32 mg/kg. Metals were detected at individual concentrations ranging from 0.0067 (mercury in RI-SB-13_0-0.17_20260428) to 72,000 mg/kg in (calcium in RI-SB-08_0-0.17_20260501).
- Perfluorooctanesulfonic acid (PFOS) was detected above the NYSDEC unrestricted use guidance value of 0.88 parts per billion (ppb) in four samples with concentrations ranging from 1.02 ppb to 2.34 ppb. PFOS were detected at individual concentrations ranging from 0.098 ppb (RI-SB-08_0-2_20260501) to 2.34 ppb in (fluoranthene in RI-SB-10_0-0.17_20260427). Perfluorooctanoic acid (PFOA) was detected above the NYSDEC unrestricted use guidance value of 0.66 ppb in two samples, with concentrations up to 1.54 ppb. PFOA were detected at individual concentrations ranging from 0.06 ppb in RI-SB-10_0-0.17_20260427 to 1.54 ppb in RI-SB-10_6-8_20260427. 1,4-Dioxane was not detected above laboratory reporting limits in any of the soil samples.

<u>2022 and 2024 Phase II Investigations</u>

- VOC detections included 1,2,4-trimethylbenzene, acetone, PCE, toluene, and trichloroethylene (TCE) at concentrations up to 0.16 mg/kg. Acetone was detected above the UUSCO of 0.03 mg/kg in three samples. There were no exceedances of the RRSCOs or PGWSCOs.
- SVOCs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene, and phenanthrene were detected at concentrations up to 29 mg/kg, above the UUSCOs and/or RRSCOs [benzo(b)fluoranthene in sample SB-05_0-2_20221004].
- PCBs were not detected above the UUSCOs or RRSCOs. The pesticides cis-chlordane, P,P'-DDE, and P,P'-DDT were detected above the UUSCOs, but below the RRSCOs.
- Copper, lead, mercury, and zinc were detected in soil samples across the Site above their respective UUSCOs in shallow fill material down to 4 feet below grade. Mercury was detected above the RRSCO of 0.3 mg/kg in one sample (SB-04_0-2_20221003) at a concentration of 0.59 mg/kg.
- During the 2024 Phase II investigation, one soil sample was analyzed for PFAS (SB-08_0-2_20241213). PFOS was detected above the NYSDEC unrestricted use guidance value of 0.88 ppb at a concentration of 2.17 ppb. PFOA and 1,4-dioxane were not detected above laboratory reporting limits in the soil sample.

Groundwater

2026 RI

- VOCs acetone, chloroform, cis-1,2-dichloroethene, dichlorobromomethane, PCE, and/or TCE were detected in all 10 groundwater samples at concentrations ranging from 0.27 micrograms per liter (µg/L) to 860 µg/L (PCE in sample RI-MW-03_20260513). Chloroform, cis-1,2-dichloroethene, PCE, and/or TCE were detected above the NYSDEC Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs) in all groundwater samples.
- SVOCs were not detected above laboratory reporting limits.
- PCBs and pesticides were not detected above laboratory reporting limits.
- In the filtered (dissolved) groundwater samples, there were exceedances of the AWQSGVs for manganese and sodium. In the unfiltered (total) groundwater samples, there were exceedances of the AWQSGVs for iron, manganese, and sodium, up to 169,000 µg/L.
- PCBs or pesticides were not detected above laboratory reporting limits in any of the groundwater samples.
- PFOS was detected above its NYSDEC guidance value of 2.7 parts per trillion (ppt) in all eight groundwater samples, and the blind duplicate. PFOA was detected above its NYSDEC guidance value of 6.7 ppt in in all eight groundwater samples, and the blind duplicate. 1,4-Dioxane was not detected above laboratory reporting limits in any of the soil samples.

2022 and 2024 Phase II Investigations

- VOCs acetone, benzene, bromodichloromethane, chloroform, cis-1,2-dichloroethene, dibromochloromethane, m,p-xylenes, methyl ethyl ketone, methylene chloride, PCE and/or TCE were detected in all seven groundwater samples at concentrations ranging from 0.3 µg/L to 330 µg/L (PCE in sample TW-04_20221004).
- Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, bis(2-ethylhexyl) phthalate, chrysene, and indeno(1,2,3-c,d)pyrene were detected in sample TW-01_20221005 at concentrations above the AWQSGVs, up to 6.2 µg/L.
- PCBs and pesticides were not detected above laboratory reporting limits.
- In the filtered (dissolved) groundwater samples, there were exceedances of the AWQSGVs for iron, magnesium, manganese, and sodium. In the unfiltered (total) groundwater samples, there were exceedances of the AWQSGVs for arsenic, barium, beryllium, chromium, copper, iron, lead, magnesium, manganese, mercury, nickel, sodium, thallium, and zinc up to 971,000 µg/L.
- PCBs or pesticides were not detected above laboratory reporting limits in any of the groundwater samples.
- The groundwater samples were not analyzed for PFAS. 1,4-Dioxane was not detected above laboratory reporting limits in any of the soil samples.

Soil Vapor

2026 RI

- Solvent-related VOCs (including bromodichloromethane, chloroform, chloromethane, cis-1,2-dichloroethene, methylene chloride, PCE, TCE, trans-1,2-dichloroethene, and trichlorofluoromethane) were detected in the soil vapor samples at individual concentrations up to 12,000 micrograms per cubic meter ($\mu g/m^3$) from a diluted analysis (PCE in sample SV-02_20210825).
- Petroleum-related VOCs [such as 1,2,4-trimethylbenzene, 1,3-butadiene, 2,2,4-trimethylpentane, 1,3-dichlorobenzene, 4-methyl-2-pentanone, carbon disulfide, cyclohexane, methyl butyl ketone, methyl ethyl ketone, n-butane, n-heptane, n-hexane, tert-butyl alcohol, benzene, toluene, ethylbenzene, and m,p- and-o-xylenes (collectively referred to as BTEX)], were detected in the soil vapor samples at individual concentrations up to 150 $\mu g/m^3$ from a diluted analysis (m,p-xylene in sample RI-SV-03_20260429).
- When compared to the New York State Department of Health (NYSDOH) Decision Matrices, cis-1,2-dichloroethene, PCE, and TCE were detected above the lowest level requiring mitigation, regardless of indoor air concentration in samples RI-SV-02_20260429, RI-SV-03_20260429, and RI-SV-04_20260429.

2022 and 2024 Phase II Investigations

- Solvent-related VOCs, including carbon disulfide, chloroform, cis-1,2-dichloroethylene, PCE, and TCE were detected at concentrations up to 1,900 $\mu g/m^3$ (PCE in sample SV-04_20221003).
- Petroleum-related VOCs, including 1,3-butadiene, 2,2,4-trimethylpentane, benzene, butane, cyclohexane, methyl ethyl ketone, n-heptane, n-hexane, styrene, and toluene were detected at concentrations up to 66 $\mu g/m^3$ (butane in sample SV-07_20241213).
- When compared to the NYSDOH Decision Matrices, cis-1,2-dichloroethene was detected above the lowest level requiring mitigation, regardless of indoor air concentration in samples SV-01_20221004, SV-02_20221003, and SV-03_20221004. PCE was detected above the lowest level requiring mitigation, regardless of indoor air concentration in sample SV-04_20221003.

2.3 Significant Threat

A significant threat determination to human health and the environment has not yet been made. Upon determination, notice will be provided for public review.

2.4 Site History

2.4.1 Past Uses and Ownership

Historical maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Site, specifically Sanborn Fire Insurance Maps in multiple years between 1898 and 2006. In 1898 and 1915, the Site was depicted as multiple vacant lots with one dwelling and associated shed located on the northern portion of the Site. In 1936, the Site remained mostly unchanged except for the addition of a one-car garage to the east of the previously identified dwelling. The Site remained unchanged until 1979-1896, when the identified dwelling was no longer depicted on the Site, while the one-car garage remained. The western portion of the Site was

identified as parking. In 1988-1989 the Site was developed in its current configuration, as the one-car garage was no longer identified on the Site, and the entirety of the Site was labeled as parking.

Sanborn maps identified primarily residential and commercial historical uses, adjacent to the Site and surrounding area. Some of the pertinent commercial listings between circa 1936 and 2006 included a filling station, located approximately 315 feet north-northeast of the Site; a garage and auto repair shop with gasoline tanks, located approximately 370 feet northwest of the Site; a dry cleaner located approximately 200 feet northeast of the Site; and a machine shop and warehouse located approximately 445 feet southwest of the Site. A list of known previous property owners and operators is provided in Table A.

Table A
Previous Property Owners

Property Owners	Years of Ownership	Status of Entity (Alive, Deceased, Active, Inactive)	Current/Last Known Address/ Phone Number (if available)	Relationship to Requestor(s)
City of New York*	December 18, 1997– Present	Active	55 Water Street, 9th Floor New York, NY 10041 Phone: 212-839-2510	None
Frederick and James Tedeschi/ Yuma Corp.	1982 through 1997	Unknown Yuma Corp.- Inactive	30-98 Crescent Street Long Island City, NY 11102 Phone number: Unknown	None
Louise Tedeschi	Prior to 1982	Unknown	Unknown	None

**Based on a review of available online records, the City of New York acquired the Site through a Court Order/Eminent Domain.*

2.4.2 Previous Environmental Reports

Phase I Environmental Site Assessment – 31-07 31st Street, Astoria, NY, AKRF, Inc., June 2021

AKRF prepared a Phase I Environmental Site Assessment (ESA) for the Site in June 2021 in accordance with the requirements of American Society for Testing and Materials (ASTM) Standard E1527-13 (the applicable standard at that time). At the time of AKRF's assessment, the Site was occupied by a municipal parking lot with no structures. The Phase I ESA included a review of current and historical Sanborn Fire Insurance maps; state and federal environmental regulatory databases; local records; and reconnaissance of the Site and its surroundings. Based on the findings of the Phase I ESA, the following Recognized Environmental Conditions (RECs) and De Minimus conditions were identified:

- One groundwater monitoring well was observed on the 31st Street sidewalk west-adjacent of the Site.
- Sanborn maps, city directories, and the environmental databases reviewed identified automotive and dry-cleaning uses in the surrounding area.

AKRF identified the following Business Environmental Risks (BERs) outside the scope of ASTM E1527-13:

- Buried demolition debris from former on-site structures could contain asbestos-containing materials (ACM), lead-based paint (LBP), polychlorinated biphenyls (PCBs), and/or underground storage tanks.
- Three five-gallon containers of orphan waste were located on the southeastern-most corner of the Site. Two of the three containers were labeled as kerosene and lacquer; the third container was unmarked.

The 2022 and 2024 Phase II Investigation and 2026 RI are summarized in Section 2.1.

2.4.3 Sanborn Maps

Historical maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Site, specifically Sanborn Fire Insurance Maps in multiple years between 1898 and 2006. In 1898 and 1915, the Site was depicted as multiple vacant lots with one dwelling and associated shed located on the northern portion of the Site. In 1936, the Site remained mostly unchanged except for the addition of a one-car garage to the east of the previously identified dwelling. The Site remained unchanged until 1979-1896, when the identified dwelling was no longer depicted on the Site, while the one-car garage remained. The western portion of the Site was identified as parking. In 1988-1989 the Site was developed in its current configuration, as the one-car garage was no longer identified on the Site, and the entirety of the Site was labeled as parking.

Sanborn maps identified primarily residential and commercial historical uses, adjacent to the Site and surrounding area. Some of the pertinent commercial listings between circa 1936 and 2006 included a filling station located north-northeast of the Site; a garage and auto repair shop with gasoline tanks located northwest of the Site; a dry cleaner located northeast of the Site; and a machine shop and warehouse located southwest of the Site. The Sanborn Maps are included in Appendix C.

2.5 Geologic and Hydrogeologic Conditions

The stratigraphy of the Site during the RI, from the surface down, generally consisted of a surficial layer of asphalt underlain by fill material comprised of sand, silt, and gravel with varying amounts of brick, concrete, and asphalt extending from grade to approximately 2 to 10 feet below grade. Fill materials observed in the November 2024 Phase II Investigation were observed extending to 3 to 11 feet below grade. The fill material was underlain by varying amounts of apparent native sand, silt, and gravel to boring termination depths (up to 51 feet below grade). Bedrock was encountered at depths ranging from approximately 47 to 51 feet below grade in borings RI-SB-01, RI-SB-05, and RI-SB-08.

During the RI, groundwater elevation ranged from 18.82 to elevation 20.3 (NAVD88), or approximately 29.91 to 36.12 feet below grade surface across the Site. Based on site-specific survey data, groundwater beneath the Site flows in a southwesterly direction. Regional groundwater flow is generally in a westerly direction, toward the East River, located approximately 1 mile west of the Site. Groundwater elevation data is presented in Table 1. Geologic sections are shown on Figures 4A and 4B. A groundwater flow map is shown on Figure 5.

2.6 Contamination Conditions

The data compiled during the RI and previous investigations was compared to the following Standards, Criteria, and Guidance (SCGs) to determine the nature and extent of the contamination area associated with the Site:

- **Soil** – NYSDEC Part 375 UUSCOs, RRSCOs, CVOCs above the PGWSCOs and the NYSDEC April 2023 guidance values for PFAS Compounds;
- **Groundwater** – NYSDEC Class GA AWQSGVs – TOGS 1.1.1, NYSDEC guidance values for human health for PFOS, PFOA, and 1,4-dioxane; and
- **Soil Vapor** – There are currently no regulatory or published guidance values for soil vapor; soil vapor data was used to assess the potential for exposure to receptors and to help define the nature and extent of contamination at the Site.

2.6.1 Conceptual Model of Site Contamination

Based on an evaluation of the data and information in this RIR, the Site is contaminated with: VOCs, SVOCs, pesticides, metals, PFOA, and PFOS in soil; VOCs, metals, PFOA, and PFOS in groundwater; and solvent- and petroleum-related VOCs in soil vapor. The elevated concentrations of SVOCs, pesticides, metals, PFOA, and PFOS in soil are likely related to the presence of shallow fill material. Chlorinated solvents (PCE, cis-1,2-dichloroethene, and chloroform) in soil, groundwater and soil vapor indicate the possible presence of an on-site release. Solvent-related and petroleum-related VOCs were detected at varying concentrations in the soil vapor samples collected from the Site.

Exceedances in soil were generally found in the shallow fill layer, with elevated concentrations of benzo(g,h,i)perylene extending to the groundwater table in one boring, SB-05 from 29 to 31 feet bgs, in the eastern portion of the Site. PCE was detected in soil above regulatory limits in one sample from 4 to 6 feet bgs (RI-SB-11) in the eastern portion of the Site. PCE was detected in soil samples at trace concentrations throughout the remainder of the Site. PCE was detected above its AQWSGV in all groundwater samples collected during the 2022 and 2024 Phase II investigations and the 2026 RI with the highest concentration (860 µg/L) in groundwater monitoring well RI-MW-03, located in the northeastern portion of the Site, approximately 50 feet from RI-SB-11. The PFOA/PFOS exceedances in groundwater were generally detected site-wide. PCE was detected in soil vapor site-wide with the greatest concentration (12,000 $\mu g/m^3$) in temporary soil vapor point RI-SV-03, located in the northern portion of the Site approximately 50 feet from RI-SB-11 and approximately 65 feet from RI-MW-03. Elevated concentrations of other chlorinated solvent-related and petroleum VOCs in soil vapor were detected site-wide. Based on the proximity of the elevated soil vapor concentrations to the boundaries of adjacent properties, the potential for off-site migration of soil vapor exists.

2.6.2 Description of Areas of Concern

The following environmental issues, discussed in Section 2.4, were considered areas of concern (AOCs) for the RI:

- Historic commercial, industrial, and automotive uses in the surrounding area, including a filling station, a garage and auto repair shop with gasoline tanks, a dry cleaner, and a machine shop and warehouse;
- Polyaromatic hydrocarbons (PAHs) in soil; and
- Elevated concentrations of solvent-related compounds in soil vapor and groundwater.

2.6.3 Identification of Standards, Criteria and Guidance

The following remedial SCGs apply to the project and are the performance criteria used to determine whether the Remedial Action Objectives (RAOs) have been met:

- Soil – 6 New York Codes, Rules and Regulations (NYCRR) Part 375 – UUSCOs and RRSCOs (December 2025); 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes; 6 NYCRR Part 376 - Land Disposal Restrictions; 6 NYCRR Part 360 - Solid Waste Management Facilities; and Analysis and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs (issued in April 2023).
- Groundwater – 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998); TOGS 1.1.1 AWQSGV; Groundwater Effluent Limitations; and NYSDEC April 2023 PFAS Guidance Values.

In addition, the following SCGs are applicable to the remedial program at the Site:

- NYSDEC DER-10 – Technical Guidance for Site Investigation and Remediation (May 2010);
- NYSDEC Draft Brownfield Cleanup Program Guide (May 2004);
- NYSDOH Generic Community Air Monitoring Plan;
- NYSDEC DER-23 – Citizens Participation Handbook for Remedial Programs (January 2010);
- 6 NYCRR Part 372 – Hazardous Waste Manifest System and Related Standards for Generators, Transporters and Facilities (November 1998);
- 6 NYCRR Subpart 374-1 – Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities (November 1998);
- 6 NYCRR Subpart 374-3 – Standards for Universal Waste (November 1998);
- 6 NYCRR Part 375 – Environmental Remediation Programs (December 2025);
- 6 NYCRR Part 612 – Registration of Petroleum Storage Facilities (February 1992);
- 6 NYCRR Part 613 – Handling and Storage of Petroleum (February 1992);
- 6 NYCRR Part 614 – Standards for New and Substantially Modified Petroleum Storage Tanks (February 1992);
- 40 Code of Federal Regulations (CFR) Part 280 – Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks;
- 29 CFR Part 1910.120 – Hazardous Waste Operations and Emergency Response;
- 40 CFR Part 144 – Underground Injection Control Program;
- NYSDEC Sampling, Analysis, and Assessment of PFAS (April 2023);
- NYSDEC DER-31 – Green Remediation (January 2011);
- NYSDOH – Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006, including the updates).

Additional regulations and guidance may be applicable, relevant, and appropriate to the remedial alternatives and will be complied with during implementation of the remedial program. However, the list above is intended to represent the principal SCGs that should be considered in evaluating the remedial alternatives for the Site. SCGs for the Site are provided in Appendix D.

2.6.4 Soil/Fill Contamination

2.6.4.1 Summary of Soil/Fill Data

Based on previous investigations, fill/soil beneath the Site contains elevated concentrations of VOCs, SVOCs, pesticides, metals, PFOA, and PFOS. PCE was detected in shallow soil above the PGWSCO, but below the RRSCO in one soil sample (RI-SB-11_4-6_20260428). SVOCs were detected at elevated levels in shallow soil down to 6 feet below grade, except for benzo(g,h,i)perylene in one sample collected at 29-31 feet below grade. Metals were detected primarily in shallow samples throughout the Site at elevated concentrations, but were detected in deeper samples at lower concentrations. PFAS was detected across the Site at variable concentrations down to approximately 32 feet below grade, the deepest sample interval collected for laboratory analysis.

2.6.4.2 Comparison of Soil/Fill with SCGs

Soil/fill sample concentrations above UUSCOs, PGWSCOs (CVOCs only), RRSCOs, and PFAS Guidance Values are summarized below in Tables B and C. All soil laboratory results are presented in Tables 2 through 7. Exceedances of the applicable standards are shown on Figures 6A through 6K.

Table B

2.6.4.3 Summary of Groundwater Data

Groundwater beneath the Site contains elevated levels of VOCs, metals, PFOA, and PFOS. Solvent-related VOCs, including cis-1,2-dichloroethene, PCE, and TCE were detected at elevated concentrations in groundwater samples collected across the Site. with the highest concentration (860 µg/L) in groundwater monitoring well RI-MW-03, located in the northeastern portion of the Sit.e Metals detections are likely naturally occurring and related to regional groundwater conditions. The presence of PFAS in groundwater is likely the result of regional groundwater conditions.

2.6.4.4 Comparison of Groundwater with SCGs

Groundwater sample concentrations above the AWQSGVs are summarized below in Table D. All groundwater results are presented in Tables 8 through 14. Groundwater sample exceedances above the applicable standards are presented on Figures 7A through 7F.

2.6.5 On-Site Soil Vapor Contamination

Solvent-related VOCs (including bromodichloromethane, carbon disulfide, chloroform, chloromethane, cis-1,2-dichloroethene, methylene chloride, PCE, TCE, trans-1,2-dichloroethene, and trichlorofluoromethane) were detected in the soil vapor samples at individual concentrations up to 12,000 µg/m3 from a diluted analysis (PCE in sample SV-02_20210825).

Other VOCs, including compounds typically associated with petroleum [such as 1,2,4-trimethylbenzene, 1,3-butadiene, 2,2,4-trimethylpentane, 1,3-dichlorobenzene, 4-methyl-2-pentanone, carbon disulfide, cyclohexane, methyl butyl ketone, methyl ethyl ketone, n-butane, n-heptane, n-hexane, tert-butyl alcohol, benzene, toluene, ethylbenzene, and m,p- and-o-xylenes (collectively referred to as BTEX)], were detected in the soil vapor samples at individual concentrations up to 150 µg/m3 from a diluted analysis (m,p-xylene in sample RI-SV-03_20260429).

When compared to the NYSDOH Decision Matrices, cis-1,2-dichloroethene, PCE, and/or TCE were detected above the lowest level requiring mitigation, regardless of indoor air concentration in samples SV-01_20221004, SV-02_20221003, SV-03_20221004, SV-04_20221003, RI-SV-02_20260429, RI-SV-03_20260429, and RI-SV-04_20260429. Soil vapor sample concentrations above the soil vapor Matrix Values are summarized below in Table E.

Table E
Comparison of Soil Vapor Samples with NYSDOH Matrices

Compound	Sample ID	NYSDOH SV Matrix Value (µg/m³)	Result (µg/m³)
Cis-1,2-Dichloroethylene	RI-SV-02_20260429	60	970
	RI-SV-03_20260429		2,500
	RI-SV-04_20260429		270

	RI-SV-03_20260429		12,000
	RI-SV-04_20260429		7,200 D
	SV-04_20221003		1,900 D
Trichloroethylene (TCE)	RI-SV-02_20260429	60	160
	RI-SV-03_20260429		590
	RI-SV-04_20260429		240

Notes:
D = Indicates an identified compound in an analysis that has been diluted.
µg/m³ = micrograms per cubic meter

Soil vapor sample detections are shown on Figures 8A and 8B. Soil vapor analytical results are summarized in Table 15.

2.7 Environmental and Public Health Assessments

2.7.1 Qualitative Human Health Exposure Assessment

The objective of the Qualitative Human Health Exposure Assessment (QHHEA) is to identify potential receptors and pathways for human exposure to the COCs that are present at, or migrating from, the Site. The identification of exposure pathways describes the route that the COC takes to travel from the source within different environmental media to the receptor. An identified pathway indicates that the potential for exposure exists; it does not imply that exposures actually occur.

The findings of the RI, as described in the RIR, are sufficient to complete a QHHEA. The QHHEA was performed to determine whether the Site poses an existing or future health hazard to the Site's exposed or potentially exposed population. The sampling data were evaluated to determine whether there is any health risk by characterizing the exposure setting, identifying exposure pathways, and evaluating contaminant fate and transport. This QHHEA was prepared in accordance with Appendix 3B and Section 3.3 (b) 8 of the NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation. The full QHHEA, which describes the environmental media, contaminants of concern, potential routes of exposure, potential receptors, and existence of human health exposure pathways, is included in Section 6.0 of the RIR, which is provided in Appendix E.

In summary, the Site currently consists of an asphalt-paved parking lot and is not developed with any permanent structures. The entirety of the Site is capped with asphalt pavement, which is in good to fair condition. Groundwater is not used for drinking or other potable purposes in Queens. The Site is served by a public water supply that is not affected by Site

contamination. Additionally, with no site occupants, inhalation of contaminants via soil vapor intrusion is not currently a concern. Once redevelopment activities begin, there will be a potential exposure pathway from contaminated surface soil/fill to construction workers, as these workers could potentially ingest, inhale, or have dermal contact with any exposed contaminated fill or soil; however, this will be mitigated with proper implementation of a CAMP that will prevent migration of particulates and VOCs, and a HASP that will dictate safe practices including the wearing of personal protective equipment. If future redevelopment plans require dewatering, there will be an additional potential exposure pathway as workers could potentially ingest or have dermal contact with the contaminated groundwater. However, extensive dewatering is not anticipated based on the proposed remedial actions. Without remediation, once redevelopment of the Site has been completed, there could be a potential exposure pathway from the potential off-gassing of residual organic vapors in the soil and/or groundwater through cracks or openings in the foundations. All potential exposure pathways in the future condition will be prevented through implementation of this RAWP.

2.7.2 Fish and Wildlife Remedial Impact Analysis

The Site was assessed against the FWRIA Decision Key located within DER-10, Appendix 3C to determine if an FWRIA was required. It was determined that a FWRIA was not required because no water sources or habitats are being impacted by the Site.

2.8 Remedial Action Objectives

Based on the results of the Remedial Investigation, the following Remedial Action Objectives (RAOs) have been identified for this Site.

2.8.1 Groundwater

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Restore groundwater aquifer, to the extent practicable, to pre-disposal/pre-release conditions.
- Remove the source of ground water contamination.

2.8.2 Soil

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.

2.8.3 Soil Vapor

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at the Site.

3.0 WASTE CHARACTERIZATION

All work in this section will include implementation of the QAPP, provided in Appendix F, and the site-specific HASP and CAMP, provided in Appendix G and Appendix H, respectively, which include on-site and community air monitoring procedures.

3.1 Soil Waste Characterization Sampling

It is estimated that approximately 6,317 cubic yards or 9,475 tons of soil/fill will be excavated for remedial purposes. All soil/fill will be disposed of at a facility(ies) licensed to accept such material. Soil pre-characterization sampling will be conducted to characterize the soil for acceptance at properly permitted disposal facilities. The proposed testing will include sampling and laboratory analyses intended to satisfy the analytical requirements of numerous soil disposal/receiving facilities in New Jersey, New York, and Pennsylvania. Typical facilities require one sample per 600-800 cubic yards of material, consisting of a grab and five-point composite, collected from test pits or borings advanced to varying depths across the Site to characterize the material in place prior to the start of excavation.

In accordance with the typical requirements of disposal facilities permitted to receive fill/soil, the grab soil samples will be analyzed for VOCs plus 10 tentatively identified compounds (TICs) by EPA Method 8260 and total petroleum hydrocarbons (TPH) gasoline range organics (GRO) by EPA method 8015D. The five-point composite samples will be analyzed, at a minimum, for SVOCs plus 20 TICs by EPA Method 8270D, diesel range organics (DRO) by EPA Method 8015D, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, herbicides by EPA 8151A, TAL metals by EPA Methods 6010D and 7471B, trivalent chromium by EPA Method 7196A, hexavalent chromium by EPA Method 7196A, RCRA list of TCLP metals plus copper, nickel, and zinc by EPA Methods 6010D and 7470, New Jersey Extractable Petroleum Hydrocarbons (EPH) non-fractionated by Method NJDEP EPH, total cyanide by EPA Method 9012B, ignitability, corrosivity, and reactivity, and paint filter by EPA Method 9095B (one sample only).

Depending on the acceptance criteria of potential disposal facilities at the time of the excavation, these tests may be modified. Additionally, it is possible that once a specific facility is selected, additional testing and/or laboratory analysis may become necessary.

3.2 Soil Waste Characterization Report

A report will be prepared following completion of the waste characterization sampling event and receipt of the laboratory data. The report will be presented to potential disposal facilities and will include a summary of the Site's environmental history and the sampling methodologies, a sample location map, and copies of the analytical results. Disposal facility acceptance letters will be provided to NYSDEC prior to the start of excavation. A copy of the Soil Pre-characterization Report will be included in the Final Engineering Report (FER).

4.0 DESCRIPTION OF REMEDIAL ACTION PLAN

4.1 Evaluation of Remedial Alternatives

This section includes a review of remediation alternatives that were considered for the remedy phase of the BCP. The purpose of completing the alternatives analysis is to identify, evaluate, and select a remedy to address the contamination identified, in accordance with the remedy selection criteria set forth in 6 NYCRR § 375-1.8(f) and the alternatives analysis requirements of 6 NYCRR § 375-3.8(f). The RAOs for soil and groundwater include source removal and treatment necessary to prevent the potential for exposure and contaminant migration. The RAOs for soil vapor include preventing soil vapor from entering the proposed new Site building and preventing off-site migration, as required by 6 NYCRR § 375-6.7(a)(3). The following performance measures, consistent with the nine remedy selection factors set forth in 6 NYCRR § 375-1.8(f), were used to complete the evaluation of remedial alternatives:

- Protection of human health and the environment;
- Compliance with standards, criteria, and guidelines (SCGs);
- Short-term effectiveness and impacts;
- Long-term effectiveness and permanence;
- Reduction of toxicity, mobility, or volume of contaminated material;
- Implementability;
- Cost effectiveness;
- Community Acceptance; and
- Land use.

The following remedial SCGs apply to the project and are the performance criteria used to determine if the RAOs have been met.

- Soil – 6 New York Codes, Rules and Regulations (NYCRR) Part 375 – UUSCOs and RRSCOs (December 2025); 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes; 6 NYCRR Part 376 - Land Disposal Restrictions; 6 NYCRR Part 360 - Solid Waste Management Facilities; and Analysis and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs (issued in April 2023).
- Groundwater – 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998); TOGS 1.1.1 AWQSGV; Groundwater Effluent Limitations; and NYSDEC April 2023 PFAS Guidance Values.

In addition, the following SCGs are applicable to the remedial program at the Site:

- NYSDEC DER-10 – Technical Guidance for Site Investigation and Remediation (May 2010);
- NYSDEC Draft Brownfield Cleanup Program Guide (May 2004);
- NYSDOH Generic Community Air Monitoring Plan;
- NYSDEC DER-23 – Citizens Participation Handbook for Remedial Programs (January 2010);
- 6 NYCRR Part 372 – Hazardous Waste Manifest System and Related Standards for Generators, Transporters and Facilities (November 1998);

- 6 NYCRR Subpart 374-1 – Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities (November 1998);
- 6 NYCRR Subpart 374-3 – Standards for Universal Waste (November 1998);
- 6 NYCRR Part 375 – Environmental Remediation Programs (December 2025);
- 6 NYCRR Part 612 – Registration of Petroleum Storage Facilities (February 1992);
- 6 NYCRR Part 613 – Handling and Storage of Petroleum (February 1992);
- 6 NYCRR Part 614 – Standards for New and Substantially Modified Petroleum Storage Tanks (February 1992);
- 40 Code of Federal Regulations (CFR) Part 280 – Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks;
- 29 CFR Part 1910.120 – Hazardous Waste Operations and Emergency Response;
- 40 CFR Part 144 – Underground Injection Control Program;
- NYSDEC Sampling, Analysis, and Assessment of PFAS (April 2023);
- NYSDEC DER-31 – Green Remediation (January 2011);
- NYSDOH – Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006, including the updates).

Additional regulations and guidance may be applicable, relevant, and appropriate to the remedial alternatives and will be complied in connection with implementation of the remedial program. However, the list above is intended to represent the principal SCGs, which should be considered in evaluating the remedial alternatives for the Site.

Remedial Alternative 1 – No Further Action

This alternative consists of allowing the Site to remain in its current condition. No remedial activities would occur under this remedy.

1. Protection of Human Health and the Environment – Not satisfied; as the on-site soil, groundwater and soil vapor vapor contamination would not be remediated, and the potential on-site exposure pathways would not be addressed.
2. Compliance with SCGs – Not satisfied; as CVOC contaminants would remain in soil (at concentrations that exceed NYSDEC Part 375 UUSCOs and PGWSCOs) potentially impacting groundwater.
3. Short-term Effectiveness and Impacts – Not satisfied; as there would be no measures in place to protect workers or the surrounding community from potential exposure during construction as part of Site redevelopment.
4. Long-term Effectiveness and Permanence – Not satisfied; as potential exposure pathways identified in the QHHEA would remain after Site redevelopment are completed.
5. Reduction of Toxicity, Mobility, or Volume of Contaminated Material – Not satisfied; as the contaminated material would remain in place.
6. Implementability – Very feasible, as no personnel or regulatory approvals would be needed.

7. Cost Effectiveness – Very cost effective to proceed with no further action; however, this criterion is not satisfied, as it requires a comparison of cost to long- and short-term effectiveness and toxicity reduction, which would not be achieved.
8. Community Acceptance – Not satisfied, as this alternative will allow the contamination to remain in place.
9. Land Use – Not satisfied. The Site is currently utilized as a commuter parking lot. In its current state, the Site does not contribute to expanding affordable housing in Queens, which is a land use goal for the community.
10. Environmental Footprint Analysis – Satisfied; this alternative would be the most green and sustainable option, as it does not require any remediation, therefore, no heavy machinery or trucks would be used.
11. Climate Change Vulnerability Assessment – Satisfied, as this alternative would not require any remediation, therefore, the impact of climate change on the Site and the proposed remedy under this alternative would not change.

Remedial Alternative 2 – Track 1 Unrestricted Use Soil Cleanup Objectives (UUSCOs)

Remedial Alternative 2 would include removal and/or treatment of all contaminated soil to comply with UUSCOs and source removal/treatment of groundwater to comply with the AWQSGVs. In addition, removal of all soil above UUSCOs and treatment of groundwater would reduce/eliminate elevated CVOCs in soil vapor. To achieve this, the remedy would include the following: excavation and off-site disposal of all soil across the Site exceeding UUSCOs and CVOCs above PGWSCOs; groundwater treatment to comply with AWQSGVs; and removal of any USTs or other sources of contamination, if encountered.

1. Protection of Human Health and the Environment – Satisfied; all soil above UUSCOs and PGWSCOs (CVOCs only) would be removed, and groundwater concentrations would be reduced to comply with AWQSGVs, thus removing the source of CVOCs in soil vapor.
2. Compliance with SCGs – Satisfied; all soil above UUSCOs and PGWSCOs (CVOCs only) would be removed, and groundwater concentrations would be reduced to comply with AWQSGVs, thus reducing concentrations of CVOCs in soil vapor.
3. Short-term Effectiveness and Impacts – Satisfied; this alternative would be effective in reducing contamination in the short-term since all contaminated soil will be removed from the Site, groundwater concentrations would be reduced through treatment, and soil vapor concentrations would be reduced through reducing soil and groundwater contamination. There is, however, a risk of short-term impacts to Site workers and the community, as the process of excavating contaminated soil to comply with UUSCOs may cause the release of particulates and organic vapors. This risk can be controlled by employing health and safety procedures during remediation and construction.
4. Long-term Effectiveness and Permanence – Satisfied; as removal of all soil above UUSCOs, which would include material with CVOCs above the PGWSCOs, remediation of VOCs in groundwater to comply with AWQSGVs, and remediation of VOCs in soil vapor would allow for unrestricted use of the Site.
5. Reduction of Toxicity, Mobility, or Volume of Contaminated Material – Satisfied; all the soil exceeding UUSCOs and PGWSCOs (CVOCs only) and soil with elevated CVOCs in soil vapor at the Site would be removed and all contaminated groundwater would be treated, the toxicity, mobility, and volume of on-site residual contaminants would be greatly reduced. Additionally,

removing the soil and groundwater contamination would significantly reduce soil vapor contamination or remove it entirely.

6. Implementability – Not satisfied, as the cost, time, and structural engineering requirements to complete an excavation to bedrock is not feasible. The site-wide excavation would present wide-ranging difficulties for access, use of machinery, fluids management, dewatering, and methods for supporting the excavation based on the overall depth of excavation and the west-adjacent infrastructure for the elevated NYC MTA train tracks. Due to the proximity and condition of the residential and commercial structures located on the eastern, southern and northern Site boundaries, significant support of excavation (SOE) and underpinning of the adjacent structures would be required to complete the full excavation of the Site. In addition, this alternative would require excavation in portions of the Site to approximately 50 feet bgs and into the groundwater table (groundwater table previously measured between 31 and 35 feet bgs) across portions of the Site, which would require significant dewatering and treatment of dewatering effluent. Excavation would be completed through the groundwater table to clean soil where endpoint samples would be collected to confirm attainment of PGWSCOs (CVOCs only) and UUSCOs. The significant volume of dewatering could induce settlement on the adjacent structures (including the roadway), which would require significant support and/or shoring.
7. Cost Effectiveness – Not cost-effective; this alternative would require extensive structural support to excavate approximately 20 feet below the water table (groundwater is approximately 30 feet bgs) and to protect the adjacent property structures and roadway. To achieve UUSCOs and PGWSCOs (CVOCs only) and remove the sources of soil vapor, it is assumed that all soil Site-wide (approximately 36,500 cubic yards or 54,750 tons of soil) would need to be excavated from the Site for off-site disposal. Using a conversion factor of 1.5 per ton, $50-100 per ton for disposal of non-hazardous soil, the disposal cost for this amount of contaminated soil would range from $2,737,500 to $5,475,000. Approximately 32,750 cubic yards of clean fill would then need to be imported, placed, and backfilled to establish pre-existing Site grades. Using a market rate of $50 per cubic yard, this equals approximately $1,637,500. The costs for dewatering the deeper localized excavation area to facilitate the excavation of soil/fill below the water table and treatment of the groundwater to comply with AWQSGVs would be approximately $500,000. To perform an excavation of this magnitude, extensive shoring, sheeting, and underpinning would have to be installed for the existing roadway and neighboring properties, with SOE costs estimated at $10,000,000. In addition to soil removal/remediation, groundwater treatment would be implemented to achieve the groundwater SCGs. The estimated groundwater treatment costs are $2,000,000. Engineering, inspection, oversight, and reporting associated with this alternative are estimated at a rate of 10% of the total costs or approximately $987,500. The cost for this alternative was estimated by combining these figures for an approximate total of $16,875,000. This assumes that the remedial work would be performed concurrent with the planned Site development and is not inclusive of demolition or abatement costs.
8. Community Acceptance – Partially satisfied; this alternative would be protective of human health and the environment in the long term; however the extended construction schedule would increase the time for potential construction-related disruptions to the surrounding community during remedial activities.
9. Land Use – Satisfied; this alternative would result in the cleanup of the Site for unrestricted use, which would allow for redevelopment of the Site.

Remedial Alternative 3 – Dual Track 4/Track 2 Restricted Residential Use Soil Cleanup Objectives

Remedial Alternative 3 would include: removal of asphalt followed by excavation and off-site disposal of removal of asphalt followed by excavation and off-site disposal of all source material (soil/fill above PGWSCOs for CVOCs), including a tetrachloroethylene (PCE) hotspot around RI-SB-11; all contaminated soil/fill in the upper 15 feet below ground surface (bgs) within the proposed new building cellar footprint to attain a Track 2 cleanup within this area; a minimum 2-foot cut outside the building footprint and within the slab-on-grade portion of the proposed building and all source material removal (soil/fill above PGWSCOs for CVOCs), including a tetrachloroethylene (PCE) hotspot around RI-SB-11, to attain a Track 4 cleanup in other areas of the Site. to attain a Track 4 cleanup; removal of any tanks or other sources of contamination discovered during remedial activities; implementation of a groundwater treatment program; installation of an active sub-slab depressurization (SSDS) system; installation of a contingency soil vapor extraction system (SVES); and, construction of a site cover system within the Track 4 portion of the Site. The site cover system would include a minimum of 2 feet of clean fill material placed in landscaped and permeable areas underlain by a demarcation barrier; (2) concrete building slabs (5-inch thick concrete slab in the cellar, 3-inch thick concrete rat slab in the crawl space, and 10-inch thick concrete slab in the first floor) underlain by a minimum 20-mil vapor barrier membrane, which doubles as a demarcation barrier, in areas within the new building footprint; and (3) paved surfaces in roadway and sidewalk areas.

The dual Track 4/Track 2 remedy would require Engineering Controls (ECs) and Institutional Controls (ICs) to be implemented for long-term management of the Site and to prevent future exposure to residual contamination. Each engineering control-the site cover system, SSDS, SVES, and groundwater treatment program-is a necessary component of the remedy required to achieve the RAOs and obtain a Certificate of Completion. As such, an Environmental Easement (EE) would be recorded for the Site to implement appropriate ECs and ICs, and a Site-specific Site Management Plan (SMP) would be prepared to specify future soil handling requirements, include provisions for evaluation of potential soil vapor intrusion for any buildings developed on the Site, management and inspection of the ECs that may be necessary, maintenance of Site access controls, Department notification, and land use restrictions would be prepared. Periodic inspection and reporting would be required to verify that the restrictions and requirements included in the EE remain in place and continue to be effective, in accordance with the certification requirements of 6 NYCRR § 375-1.8(h)(3).

1. Protection of Human Health and the Environment – Satisfied; as any residual contamination would be covered by a site cover system and SSDS/SVE will prevent vapor intrusion. Additionally, ECs and ICs would be implemented to prevent future exposure to any residual contamination.
2. Compliance with SCGs – Satisfied; as RAOs would be achieved by removing or preventing the potential for human and environmental exposures to chemical constituents above Track 4/2 RRSCOs and/or PGWSCOs (CVOCs only) and the groundwater treatment program would reduce CVOC concentrations in groundwater.
3. Short-term Effectiveness and Impacts – Satisfied; as this alternative would be effective in reducing soil/fill contamination in the short-term since the PCE source material in soil and additional contaminated material site-wide will be removed from the Site to comply with the Track 2/4 RRSCOs. Mitigation measures included in this RAWP, including the HASP and CAMP, would protect and limit exposure of workers and the surrounding community to contaminated soil, dust, and/or soil vapor during the remedial action.

4. Long-term Effectiveness and Permanence – Satisfied; as contaminated material would be removed from the Site to comply with the Track 2/4 RRSCOs, and the implementation of ECs (including an active SSDS, groundwater treatment program, Site cover system and contingent SVES and ICs would address residual contamination and limit the exposure of future occupants to contaminated soil in the long term, thus achieving the RAOs.
5. Reduction of Toxicity, Mobility, or Volume of Contaminated Material – Satisfied; as the volume of contaminants at the Site would be greatly reduced. Removal of source material from the Site would also reduce residual contaminant mobility into groundwater and soil vapor. Operation and maintenance of an SSDS and SVES (if required) would reduce mobility of soil vapor contaminants with respect to migrating into on-site and off-site structures.
6. Implementability – Satisfied, contaminated soil removal could be completed in a relatively short timeframe and the equipment and personnel needed to perform the proposed remedial actions are readily available. The equipment and materials necessary to install the SSDS and SVES (if required) and to implement the groundwater treatment program are readily available, and each could be installed concurrent with development.
7. Cost Effectiveness – Satisfied; this alternative is the most cost-effective while being implementable. Under this alternative, approximately 6,317 cubic yards, or 9,475 tons, of contaminated soil would be excavated and disposed of off-site. The average market rate for the transportation and disposal of contaminated non-hazardous soil is estimated at $50-$100 per ton. Using these unit rates, the disposal cost for this amount of contaminated non-hazardous soil would be on the order of $473,750 to $947,500. Approximately 1,100 cubic yards of clean fill would then need to be imported, placed, and backfilled to establish pre-existing Site grades. Using a market rate of $50 per cubic yard, this equals approximately $55,000. The estimated cost for the shoring/sheeting to complete the remedial excavation is estimated at $1,500,000. The cost to install the SSDS and vapor barrier would be approximately $290,000. If required, the cost to install the SVES is approximately $600,000. In addition to soil removal/remediation, groundwater treatment would be implemented to achieve the groundwater SCGs. The estimated groundwater treatments costs are $960,000. Costs associated with consulting services including engineering/environmental oversight, design, coordination, and reporting are approximately $450,000. Analytical laboratory fees for laboratory analyses for endpoint samples, import/reuse, groundwater sampling and data validation are estimated at $200,000. The cost for this alternative was estimated by combining these figures for an approximate total of $4,270,000. If the contingent SVES is required, the total costs are estimated at approximately $4,870,000. This assumes the remedial work would be performed concurrent with the planned Site development.
8. Community Acceptance – Satisfied; this alternative would be protective of human health and the environment.
9. Land use – Satisfied; this alternative would result in the cleanup of the Site for restricted-residential use, which would allow for redevelopment of the Site.
10. Environmental Footprint Analysis – Satisfied; as this alternative would incorporate more green and sustainable remediation principles compared to a Track 1 cleanup, by requiring fewer truck trips for soil disposal and import, and a shorter period during which heavy equipment is used to complete the work. An environmental footprint analysis for this alternative will be performed in accordance with the NYSDEC guidelines, the methodologies used in the EPA SEFA tool, and the requirements of the CLCPA. The environmental footprint analysis will be provided in the forthcoming Remedial Design Document. Water consumption, greenhouse gas emissions, renewable and non-renewable energy use, waste reduction, and material use were estimated,

and goals for the project related to these green and sustainable remediation metrics, as well as for minimizing community impacts, protecting habitats and natural and cultural resources, and promoting environmental justice, were incorporated. A dual Track 2/4 cleanup would result in less fuel usage and waste, in comparison to the Track 1 alternative. Additionally, the shorter construction duration for dual Track 2/4 indicates that there would be less energy consumption and fewer co-pollutant emissions.

11. Climate Change Vulnerability Assessment – Satisfied, the impact of climate change on the Site and the proposed remedy under this alternative was evaluated. Potential vulnerabilities associated with extreme weather events (e.g., hurricanes, lightning, heat stress and drought), flooding, and sea level rise were identified, and this alternative would incorporate measures to minimize the impact of climate change on potential identified vulnerabilities. The remedy is not expected to be affected by the projected increase in temperature, precipitation levels, or sea level rise. Additionally, erosion and sediment controls that will be implemented during construction will be resilient to the current rainfall levels. The Climate Change Vulnerability Assessment will be provided in the forthcoming Remedial Design Document.

4.2 Selection of the Preferred Remedy

Remedial Alternative 1 (no action) allows the Site to remain in its current condition. This remedial alternative was reviewed and found to be unacceptable, since it would not achieve the RAOs. Therefore, this remedial alternative is not considered a feasible solution.

Remedial Alternative 2 (Track 1) was reviewed and found to be unacceptable, since it is not cost-effective and extremely difficult to implement or may not be implementable. Therefore, this remedial alternative is not considered a feasible solution.

Remedial Alternative 3 (Dual Track 2/Track 4) achieves the RAOs while being cost-effective and satisfies all nine remedy selection factors set forth in 6 NYCRR § 375-1.8(f). After careful consideration with respect to the evaluation criteria listed, Remedial Alternative 3 is determined to be the preferred remedy, since it is necessary to adequately address the subsurface contamination, protect public health and the environment, achieve compliance with applicable SCGs, and provide for the long-term effectiveness and permanence of the remedy using the most cost-effective and implementable approach. Each component of the selected remedy, including source removal, engineering controls (SSDS, SVES, groundwater treatment, and site cover system), and institutional controls, will achieve the remedial action objectives and to obtain a Certificate of Completion pursuant to 6 NYCRR § 375-3.9 and ECL § 27-1419.

4.2.1 Zoning

The Site is currently zoned as R5/C4-5 along 31st Street and R5/C4-2A along 32nd Street. The Site was rezoned in March 2026 under the Ikos Senior Housing Rezoning UDAAP, subject to CEQR, and allows for the development of community facility space and increased residential space. The proposed use of the Site is consistent with the objectives of the zoning district.

4.2.2 Applicable Comprehensive Community Master Plans or Land Use Plans

The proposed redevelopment plan is consistent with existing zoning and land use patterns in the surrounding area, and there are no existing neighborhood plans or policies in effect that would preclude the proposed redevelopment.

4.2.3 Surrounding Property Uses

The Site is bounded to the north by commercial uses (restaurants, a bar, retail, and offices), followed by Broadway; to the south by residential units and the Cretans Association Omonia, Inc. Cultural Facility, followed by office space; to the east by residential units and 32nd Street; and to the west by 31st Street and an elevated NYC subway station, followed by commercial/retail and residential units. The greater surrounding area includes primarily commercial, retail, residential, and transit uses.

4.2.4 Citizen Participation

A Citizen Participation Plan (CPP) was prepared by AKRF in October 2025 as part of the BCP process, and the CPP was approved by NYSDEC in November 2025. The CPP provides for ongoing updates to the public regarding the investigation and remediation and allows for involvement regarding the environmental investigation and cleanup of the Site; the contemplated remedy complies with the CPP. The NYSDEC-approved CPP is included as Appendix I.

4.2.5 Environmental Justice

The Site is not located in an Environmental Justice Area. Environmental justice is defined as the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.

Environmental justice efforts focus on improving the environment in communities, specifically minority and low-income communities, and addressing disproportionate adverse environmental impacts that may exist in those communities. The selected remedy would address any environmental justice concerns although the Site is not located in an Environmental Justice Area.

4.2.6 Land Use Designations

There are no federal or state land use designations.

4.2.7 Population Growth Patterns

The population in this neighborhood is expected to increase in the future. This project will provide necessary affordable housing units to help meet that need.

4.2.8 Accessibility to Existing Infrastructure

The Site is located within walking distance of the N and W subway line, and the Q104, Q69 and Q100 public bus stops. The Bruckner Expressway (I-278) is located four avenues (approximately 0.7 miles) north of the Site. The surrounding area is supplied with municipal sewers and water, electricity, telephone, natural gas, and fiber-optic lines.

4.2.9 Proximity to Cultural Resources

There are no cultural resources located adjacent to the Site. The nearest cultural resources include Museum of the Moving Image, Marlene Yu Museum, MoMA PS1, the Queens Culture & Arts Network, and Greek Cultural Center located approximately 1.1 miles from the Site.

4.2.10 Proximity to Natural Resources

Nearby parks and natural resources include Athens Square, Rainey Park, and Socrates Sculpture Park, located within approximately 0.7 miles of the Site.

4.2.11 Off-Site Groundwater Impacts

Based on Site-specific groundwater measurements, groundwater beneath the Site ranges from elevation 18.82 to elevation 20.3 (NAVD88), or 29.91 to 36.12 feet below grade across the Site, and flows in a generally westerly direction as shown on Figure 5. VOCs (chloroform, cis-1,2-dichloroethene, PCE, and TCE) and metals were detected in groundwater samples at concentrations above the AWQSGVs. PFOA and PFOS were detected above their respective NYSDEC guidance value of 6.7 and 2.7 parts per trillion (ppt) in all eight groundwater samples.

The metals detected in groundwater are consistent with regional background conditions typical of groundwater quality in Queens and are not considered COCs. Based on the RI data, there is the potential for chlorinated solvents to migrate off-site.

PFAS concentrations in groundwater appear to be relatively consistent across the Site, indicating that the concentrations observed may be indicative of the surrounding area and not of an on-site source. The proposed remedy is intended to remove the source of groundwater contamination for chlorinated solvents, thereby preventing any (further) off-site migration of contaminated groundwater.

4.2.12 Proximity to Floodplains

The Site is not located within the 100- or 500-year floodplain.

4.2.13 Geography and Geology of the Site

The stratigraphy of the Site, from the surface down, generally consisted of a surficial layer of asphalt underlain by fill material comprised of sand, silt, and gravel with varying amounts of brick, concrete, and asphalt extending from grade to approximately 2 to 10 feet below grade. The fill material was underlain by varying amounts of apparent native sand, silt, and gravel to boring termination depths (up to 51 feet below grade). Bedrock was encountered at depths ranging from approximately 47 to 51 feet below grade in borings RI-SB-01, RI-SB-05, and RI-SB-08.

4.2.14 Current Institutional Controls (ICs) and Engineering Controls (ECs)

Currently, there are no ICs or ECs at the Site.

4.3 Summary of Selected Remedial Actions

Remedial activities will be performed at the Site in accordance with this RAWP and the Department-issued Decision Document (DD). All deviations from this RAWP and/or the DD will be promptly reported to NYSDEC for approval and will be fully explained in the Final Engineering Report (FER). Each of the selected remedial actions described below is necessary to implement the Site's remediation, achieve the RAOs, obtain a Certificate of Completion, and comply with the requirements of 6 NYCRR Part 375 and the BCA. The selected remedial actions include:

1. A remedial program will be implemented to provide the details necessary for the construction, operation, optimization, maintenance, and monitoring of the remedial program. Green remediation principles and techniques will be implemented to the extent feasible in the design,

implementation, and site management of the remedy as per DER-31. The major green remediation components are as follows:

- Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
- Reducing direct and indirect greenhouse gases and other emissions;
- Increasing energy efficiency and minimizing use of non-renewable energy;
- Conserving and efficiently managing resources and materials;
- Reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste;
- Maximizing habitat value and creating habitat when possible;
- Fostering green and healthy communities and working landscapes which balance ecological, economic and social goals;
- Integrating the remedy with the end use where possible and encouraging green and sustainable re-development; and
- Additionally, to incorporate green remediation principles and techniques to the extent feasible in the future development at this site, any future on-site buildings shall be constructed, at a minimum, to meet the 2020 Energy Conservation Construction Code of New York (or most recent edition) to improve energy efficiency as an element of construction.

As part of the remedial program, to evaluate the remedy with respect to green and sustainable remediation principles, an environmental footprint analysis will be completed. The environmental footprint analysis will be completed using an accepted environmental footprint analysis calculator such as SEFA (Spreadsheets for Environmental Footprint Analysis, USEPA), SiteWiseTM (available in the Sustainable Remediation Forum [SURF] library) or similar Department accepted tool. Water consumption, greenhouse gas emissions, renewable and non-renewable energy use, waste reduction and material use will be estimated, and goals for the project related to these green and sustainable remediation metrics, as well as for minimizing community impacts, protecting habitats and natural and cultural resources, and promoting environmental justice, will be incorporated into the remedial program, as appropriate. The project will include detailed requirements to achieve the green and sustainable remediation goals. Further, progress with respect to green and sustainable remediation metrics will be tracked during implementation of the remedial action and reported in the Final Engineering Report (FER), including a comparison to the goals established during the remedial program.

Additionally, the remedial program will include a climate change vulnerability assessment, to evaluate the impact of climate change on the project site and the proposed remedy. Potential vulnerabilities associated with extreme weather events (e.g., hurricanes, lightning, heat stress and drought), flooding, and sea level rise will be identified, and the remedial program will incorporate measures to minimize the impact of climate change on potential identified vulnerabilities.

2. The proposed remedy is a dual Track 2/Track 4 Restricted Residential cleanup.
3. Removal of asphalt followed by excavation and off-site disposal of 1) all contaminated soil/fill in the upper 15 feet bgs within the proposed new building cellar footprint to attain a Track 2 cleanup within this area, and 2) a minimum 2-foot cut and all source material removal (soil/fill

above PGWSCOs for CVOCs), including a PCE hotspot around RI-SB-11, to attain a Track 4 cleanup in other areas of the Site.

4. Any unknown/unregistered tanks and associated piping, other structures associated with a source of contamination, and/or grossly contaminated soil/fill, if encountered, will be removed in accordance with applicable regulations.
5. Installation of support of excavation (SOE) necessary to enable and physically support the excavation of contaminated soil/fill and to prevent off-site migration of contamination, in accordance with 6 NYCRR § 375-1.8(c). SOE installation will comply with applicable local and state-controlled inspections.
6. Decommissioning of existing groundwater monitoring wells in accordance with NYSDEC CP-43 if monitoring well locations conflict with proposed building foundation elements and/or if monitoring wells cannot be safely preserved during construction.
7. A Site-specific Health and Safety Plan (HASP) and Community Air Monitoring Plan (CAMP) will be implemented during all ground-intrusive Site activities, which includes soil disturbance and loading activities, to monitor levels of VOCs and airborne particulates within the active work zones and around the perimeter of the Site.
8. A Special Requirements Community Air Monitoring Program (SRCAMP) will be implemented during all ground-intrusive Site activities within 20 feet of occupied structures and/or potentially exposed populations to monitor levels of VOCs and airborne particulates.
9. Screening for indications of contamination (by visual means, odor, and monitoring with a PID) of soil during all ground-intrusive Site work, including soil disturbance and loading activities.
10. Characterization and off-site disposal of all materials removed from the Site in accordance with all federal, state, and local rules and regulations for handling, transport, and disposal. Waste disposal facilities will be selected based on the data collected to date and the results of the planned waste classification sampling.
11. Performance of a Pre-Design Investigation (PDI) to support the remedy.
12. Importation of clean fill meeting the requirements of 6 NYCRR Part 375-6.7(d) to raise the Site grade after remedial excavation, construct the Site cover, and/or as needed for use as backfill. Fill material that does not exceed RRSCOs for any compound may be used on-site to backfill the Site. Soil exceeding the UUSCO for 1,4-dioxane will not be imported, per DER-10: Appendix 5 - Allowable Constituent Levels for Imported Fill or Soil, Subdivision 5.4(e). If PFOA or PFOS are detected in any sample at or above the RRGV, it will also be tested by the Synthetic Precipitation Leaching Procedure (SPLP). If the SPLP concentrations of PFOA and PFOS are at or above 10 ppt, the soil will not be reused or imported. Analytical results will be compared to Table 375-6.8(b) of 6 NYCRR Part 375 and submitted to NYSDEC via a *Request to Import/Reuse Soil or Fill* form for review and approval prior to importation and placement on-site. All imported soil or soil proposed for reuse requires NYSDEC review prior to on-site placement.
13. Implementation of a groundwater treatment program necessary to address elevated concentrations of chlorinated volatile organic compounds (CVOCs) in groundwater, restore groundwater quality to the extent practicable in accordance with 6 NYCRR § 375-1.8(d), and prevent the off-site migration of the groundwater plume. Prior to the full implementation of the treatment program, a bench-scale treatability study will be conducted to more clearly define the design parameters; however, it is anticipated that the treatment will require approximately 32 injection points to distribute sodium permanganate (or other chemical) in the treatment area.

The groundwater treatment program will be performed to treat groundwater between approximately 30 to 50 feet bgs.

14. Collection and laboratory analysis of post-excavation endpoint samples across the Site to document achievement of the remedy and/or remaining concentrations of contaminants in soil/fill after excavation is complete. Endpoint sampling will occur around any hotspots and/or additional AOCs identified during the remedial action based on the sampling frequency outlined in Section 5.4 of DER-10.
15. Construction and maintenance of a Site cover system within the Track 4 portion of the Site which is necessary to prevent human exposure to residual contaminants in soil/fill remaining under the Site and to satisfy the Cover System Requirements of 6 NYCRR § 375-3.2(e). The cover system, consistent with applicable regulations, which will consist of: (1) a minimum of 2 feet of clean fill material placed in landscaped and permeable areas underlain by a demarcation barrier; (2) concrete building slabs (5-inch thick concrete slab in the cellar, 3-inch thick concrete rat slab in the crawl space, and 10-inch thick concrete slab in the first floor) underlain by a minimum 20-mil vapor barrier membrane, which doubles as a demarcation barrier, in the slab-on-grade portion of the proposed building; and (3) paved surfaces in roadway and sidewalk areas.
16. Installation and operation of an active sub-slab depressurization system (SSDS) below the proposed new building foundation to prevent vapor intrusion into the proposed building and to eliminate the exposure pathway from contaminated soil vapor to future building occupants, as required by regulations and the NYSDOH Soil Vapor Intrusion Guidance.
17. Installation of below grade elements of a contingency soil vapor extraction system (SVES) around the Site perimeter, which is necessary to prevent off-site migration of contaminated soil vapor and to protect adjacent receptors from vapor intrusion in accordance with Part 375. Aboveground elements of the system will be installed and the SVES will be operated depending on post-remedial soil vapor concentrations of CVOCs.
18. Recording of an Environmental Easement (EE) with the New York City Register to prevent future exposure to any residual contamination remaining at the Site and required pursuant to 6 NYCRR § 375-1.8(h)(2) and ECL Article 71, Title 36. The EE will: require the remedial parties/Site owners to complete and submit a periodic certification of ECs and ICs to the Department in accordance with Part 375-1.8 (h)(3); allow the use and development of the Site for restricted residential use as defined by Part 375-1.8(g), although land use is subject to local zoning laws; restrict the use of groundwater as a source of potable or process water without necessary water quality treatment, as determined by NYSDOH; and require compliance with a Site-specific NYSDEC-approved SMP.
19. Preparation of an SMP necessary for long-term management of residual contamination as required by the EE and 6 NYCRR § 375-1.8(a)(5) (in the Track 4 portion of the Site) including plans for: (1) ECs and ICs, (2) monitoring, (3) operation and maintenance, and (4) reporting. Inclusion of soil management provisions in the SMP, including an Excavation Work Plan.

5.0 REMEDIAL ACTION PROGRAM

5.1 Governing Documents

5.1.1 Standards, Criteria, and Guidance (SCGs)

The SCGs, summarized in Section 2.6.3 and provided in Appendix D, that apply to the project and will be used to determine whether the RAOs have been met.

5.1.1.1 Green and Sustainable Remediation and Climate Resiliency

As part of the remedial design program, the remedy was evaluated with respect to green and sustainable remediation principles via an environmental footprint analysis. After the remedial program is completed, the environmental footprint analysis will be updated using a NYSDEC-accepted environmental footprint analysis calculator EPA Spreadsheets for Environmental Footprint Analysis (SEFA), SiteWise™ or similar NYSDEC-accepted tool. Water consumption, greenhouse gas emissions, renewable and non-renewable energy use, waste reduction and material use were estimated, and goals for the project related to these green and sustainable remediation metrics, as well as for minimizing community impacts, protecting habitats and natural and cultural resources, and promoting environmental justice, were incorporated into the remedial design program, as appropriate. The project design specifications include detailed requirements to achieve the green and sustainable remediation goals. The environmental footprint analysis will be provided in the forthcoming Remedial Design Document.

Further, progress with respect to green and sustainable remediation metrics will be tracked during implementation of the remedial action and reported in the FER, including a comparison to the goals established during the remedial design program. Additionally, the remedial design program included a climate change vulnerability assessment to evaluate the impact of climate change on the project site and the proposed remedy. Any potential vulnerabilities associated with extreme weather events (e.g., hurricanes, lightning, heat stress and drought), flooding, and sea level rise were identified, and the remedial design program will incorporate measures to minimize the impact of climate change on potential identified vulnerabilities.

5.1.2 Site Specific Health and Safety Plan (HASP)

A Site-specific HASP has been prepared for the Site and is included as Appendix G. All remedial work performed under this RAWP will be in compliance with governmental requirements, including Site and worker safety requirements mandated by the federal Occupational Health and Safety Administration (OSHA). Community air monitoring will be conducted during all intrusive Site activities in compliance with the NYSDOH Generic CAMP and the Site-Specific CAMP (included in Appendix H). Work zone monitoring will be performed for the health and safety of workers in accordance with action levels and guidance outlined in the HASP.

The Volunteer and associated parties preparing the remedial documents submitted to the State and those performing the construction work, are completely responsible for the preparation of an appropriate HASP and for the appropriate performance of work according to that plan and applicable laws.

The HASP and requirements defined in this RAWP pertain to all remedial and invasive work performed at the Site until the issuance of a Certificate of Completion (CoC).

Resumes of key AKRF personnel involved in the RA are included in Appendix A of the QAPP, provided as Appendix F.

Confined space entry will comply with all OSHA requirements to address the potential risk posed by combustible and toxic gasses.

5.1.3 Quality Assurance Project Plan (QAPP)

Any sampling associated with this project will be conducted in accordance with the QAPP included in Appendix F, which details field screening and sampling methodologies, and sample submittal and reporting requirements. The QAPP includes the project team responsible for implementing the remediation requirements and provisions set forth in this RAWP.

5.1.4 Construction Quality Assurance Plan (CQAP)

The CQAP, provided as Appendix J, provides a detailed description of the observation and testing activities that will be used to monitor construction quality and confirm that remedial construction is in conformance with the remediation objectives and specifications.

5.1.5 Soil/Materials Management Plan (SoMP)

An SMMP is included in Section 6.4 of this document. The SMMP includes detailed plans for managing all soils/materials that are disturbed at the Site, including excavation, handling, storage, transport, and disposal. It also includes all procedures that will be applied to assure effective, nuisance-free performance in compliance with all applicable federal, state, and local laws and regulations.

5.1.6 Storm-Water Pollution Prevention Plan (SWPPP)

Based on the size of disturbance required for redevelopment, a SWPPP is required and will be submitted to the New York City Department of Environmental Protection (NYCDEP) in accordance with New York City Stormwater regulations. Erosion and sediment controls implemented at the Site will conform to requirements presented in the New York State Guidelines for Urban Erosion and Sediment Control Erosion. Sediment control measures will be installed at the Site prior to conducting any ground-intrusive work. These measures will be installed according to all applicable or relevant and appropriate federal, state, and local laws. The measures will provide for abatement and control of environmental pollution arising from proposed remediation and construction activities. The control measures will include procedures for perimeter Site controls, stabilized construction pads at each construction entrance, equipment decontamination, drainage inlet protection, and dust suppression. The Remedial Engineer (RE), or her representative, will conduct routine inspections, any repairs and/or maintenance of control measures will be completed in a timely fashion to maintain the controls in proper working order. All vehicles will be inspected to ensure that no soil adheres to their wheels or undercarriage prior to leaving the Site. Any situations involving material spilled in transit or mud and dust tracked offsite will be remedied. The access routes will be inspected for road conditions, overhead clearance, and weight restrictions.

Upon approval of the SWPPP by NYCDEP, it will be reviewed by the RE, and a copy will be submitted to NYSDEC prior to start of remedial excavation.

5.1.7 Community Air Monitoring Plan (CAMP)

Community air monitoring will be conducted during all intrusive Site activities in compliance with the NYSDOH Generic CAMP and the Site-Specific CAMP, provided in Appendix H. A minimum of two CAMP stations (upwind and downwind) will be utilized during all remedial activities. The proposed CAMP station locations are shown on Figure 9.

Additionally, a Special Requirements CAMP will be implemented during all ground-intrusive Site activities within 20 feet of occupied structures and/or potentially exposed populations. The Special Requirements CAMP will be performed via fixed stations placed at the location of the nearest potentially exposed individuals (e.g., public walkway, building wall, etc.) and/or ventilation system intakes of the occupied structures. Further information is provided in Appendix H. A total of three CAMP stations will be utilized during intrusive activities performed at the Site. The approximate CAMP station locations are shown on Figure 9.

CAMP data summarized will be provided to NYSDEC and NYSDOH in the daily reports, and CAMP action level exceedances will be reported to NYSDEC and NYSDOH within 24 hours.

5.1.8 Contractors Site Operations Plan (SOP);

The Remedial Engineer (RE), or her designated representative, has or will review all plans and submittals for this remedial project (including those listed above and contractor and sub-contractor document submittals) to confirm that they are in compliance with this RAWP. The RE is responsible to ensure that all later document submittals for this remedial project, including contractor and sub-contractor document submittals, are in compliance with this RAWP. All remedial documents will be submitted to NYSDEC and NYSDOH in a timely manner and prior to the start of work.

5.1.9 Citizen Participation Plan

A certification of mailing will be sent by the Volunteer to the NYSDEC project manager following the distribution of all Fact Sheets and notices that includes: (1) certification that the Fact Sheets were mailed; (2) the date they were mailed; (3) a copy of the Fact Sheet; (4) a list of recipients (contact list); and (5) a statement that the repository was inspected on (specific date) and that it contained all of applicable project documents.

No changes will be made to approved Fact Sheets authorized for release by NYSDEC without written consent of the NYSDEC. No other information, such as brochures and flyers, will be included with the Fact Sheet mailing.

The approved CPP for this project is attached in Appendix I. Document repositories have been established at the following locations listed in Table F and contain all applicable project documents:

Table F
Document Repositories

Document Repository	Hours of Operation
Broadway Public Library 40-20 Broadway Astoria, NY 11103 **Attn:** Abigail Goldberg, Asst. Manager **Phone:** (718) 721-2462	Monday : 10 AM–6 PM Tuesday: 1 PM–6 PM Wednesday: 10 AM–6 PM Thursday: 12 PM–6 PM Friday: 10 AM–6 PM Saturday: 10 AM–5 PM Sunday: Closed
Queens Community Board 1 45-02 Ditmars Boulevard LL Suite 1025 Queens, NY 11105 **Attn:** Florence Koulouris, District Manager **Phone:** (718) 626-1021	Monday-Friday: 9AM–5PM (call for appointment)
NYSDEC 625 Broadway Albany, NY 12233-7016 **Attn:** Meghan Medwid, EIT **Phone:** (518) 402-9767	Monday-Friday: 9 AM–5 PM (call for appointment)

5.2 General Remedial Construction Information

5.2.1 Project Organization

A list of the personnel responsible for implementation of the RAWP is presented in Table G.

Table G
Project Organization

Organization	Responsibility	Name
NYSDEC	Project Manager	Elliot Jackson
NYSDOH	Project Manager	Mya Burns
Ikos Senior Living LLC	Volunteer's Representative	Alexa Mendel
AKRF	Remedial Engineer	Rebecca A. Kinal, P.E.
	Project Director	Deborah Shapiro, QEP
	Project Manager	Adrianna Bosco
	Project Manager Alternate	Benjamin Hess, PE
	Site Safety Officer	Brian Quinn
	Anticipated Field Monitors	Carey Parker Sean Curley

Resumes of key AKRF personnel involved in the RA are included in Attachment A of the QAPP, provided as Appendix F.

5.2.2 Remedial Engineer

The RE for this project will be Rebecca Kinal. The RE is a registered professional engineer licensed by the State of New York. The RE will have primary direct responsibility for implementation of the remedial program for the Ikos Senior Living Site (NYSDEC BCA Index No. C241290). The RE will certify in the FER that the remedial activities were observed by qualified environmental professionals under her supervision and that the remediation requirements set forth in the RAWP and any other relevant provisions of ECL 27-1419 have been achieved in full conformance with that Plan. Other RE certification requirements are listed later in this RAWP.

The RE, or designated personnel under her supervision, will coordinate the work of other contractors and subcontractors involved in all aspects of remedial construction, including soil excavation, stockpiling, characterization, removal and disposal, air monitoring, emergency spill response services, import of back fill material, and management of waste transport and disposal. The RE will be responsible for all appropriate communication with NYSDEC and NYSDOH.

The RE, or designated personnel under her supervision, will review all pre-remedial plans submitted by contractors for compliance with this RAWP and will certify compliance in the FER. The RE will provide the certifications listed in Section 10.1 in the FER.

5.2.3 Remedial Action Construction Schedule

A schedule for performance of the remedial work is included in Section 13.0.

5.2.4 Work Hours

The hours for operation of remedial construction will conform to the New York City Department of Buildings (NYCDOB) construction code requirements, construction permits, or according to specific variances issued by the NYCDOB. NYSDEC will be notified by the Volunteer of any variances issued by the NYCDOB. NYSDEC reserves the right to deny alternate remedial construction hours.

5.2.5 Site Security and Traffic Control

The Site will be completely closed from public access by using secured construction fencing. No unauthorized personnel will be able to access the Site. During off hours, the Site will be completely enclosed within a locked gate.

It is not anticipated that traffic will be disrupted beyond normal contractor vehicle traffic going to and from the Site during construction. Any sidewalk closures that are required during the course of construction/remediation activities will be conducted in accordance with NYCDOT permits.

5.2.6 Contingency Plan

A contingency plan has been developed to describe the procedures to be followed upon discovery of an unknown source of contamination or AOC that may require remediation (USTs, stained soil, drums, etc.). The identification of an unknown source structure or unexpected contaminated media discovered by waste characterization sampling and/or screening during invasive Site work will be promptly communicated by phone to NYSDEC's Project Manager. These findings will also be included in daily and periodic reports. Any unknown/unregistered USTs discovered during the course of remedial activities will be managed in accordance with requirements of NYCRR 375-1.12(e). The

NYSDEC project manager will be notified immediately before any action is taken. Any sampling will be performed on product, sediment and surrounding soil, etc. Chemical analytical work will be for TCL VOCs, SVOCs, TCL pesticides, PCBs, and TAL metals. These analyses will not be limited to the Commissioner's Policy (CP)-51 parameters where tanks are identified without prior approval by NYSDEC.

5.2.7 Worker Training and Monitoring

All those who enter the work area while intrusive activities are being performed must recognize and understand the potential hazards to health and safety. All construction personnel upon entering the Site must attend a brief training meeting, its purpose being to:

- Make workers aware of the potential hazards they may encounter;
- Instruct workers on how to identify potential hazards;
- Provide the knowledge and skills necessary for them to perform the work with minimal risk to health and safety;
- Make workers aware of the purpose and limitations of safety equipment; and
- Ensure that they can safely avoid or escape from emergencies.

Construction personnel will be responsible for identifying potential hazards in the work zone. The project manager will be responsible for ensuring that the training is conducted. Others who enter the Site must be accompanied by a suitably-trained construction worker. In addition, any site workers within the remediation "work zone" will have received the OSHA 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) training and will be under a medical monitoring program. Current certifications for key personnel are included in Attachment A of the QAPP, provided as Appendix F.

5.2.8 Agency Approvals

The Volunteer will comply with all City Environmental Quality Review (CEQR) and State Environmental Quality Review Act (SEQRA) requirements for this Site. All permits or government approvals required for remedial construction have been, or will be, obtained prior to the start of remedial construction.

The planned end use for the Site is in conformance with the current zoning for the Site as determined by New York City Department of Planning, the New York City Department of Housing Preservation and Development, and the New York City Department of Buildings. A Certificate of Completion will not be issued for the project unless conformance with zoning designation is demonstrated.

A complete list of all local, regional and federal governmental permits, certificates or other approvals or authorizations required to perform the remedial and development work will be provided in the FER.

Although not anticipated, all planned remedial or construction work in regulated wetlands and adjacent areas will be specifically approved by the NYSDEC Division of Natural Resources to ensure that it meets the requirements for substantive compliance with those regulations prior to the start of construction. Nothing in the approved RAWP or its approval by NYSDEC should be construed as an approval for this purpose.

5.2.9 NYSDEC BCP Signage

Signs are optional for BCP sites and will be discussed with the NYSDEC Project Manager. If a sign is displayed, it will follow NYSDEC specifications for design and content, provided by the NYSDEC Project Manager.

5.2.10 Pre-Construction Meeting with NYSDEC

A pre-construction meeting with NYSDEC will be scheduled prior to the start of major construction activities. Representative members of the Volunteer, the general contraction, foundation contractor, soil broker (if applicable), AKRF, NYSDEC, and NYSDOH, will be invited to attend.

5.2.11 Emergency Contact Information

An emergency contact sheet with names and phone numbers is included in the Site-specific HASP, provided in Appendix G. That document will define the specific project contacts for use by NYSDEC and NYSDOH in the case of a day or night emergency.

5.2.12 Remedial Action Costs

The total estimated cost of the Remedial Action is $4,270,000 to $4,870,000. An itemized and detailed summary of estimated costs for all remedial activity is included in Table 16. All costs identified therein are necessary to implement the Site's remediation, achieve the RAOs, and qualify for issuance of a Certificate of Completion pursuant to ECL § 27-1419 and 6 NYCRR § 375-3.9. This will be revised based on actual costs and submitted as an appendix to the FER.

5.3 Site Preparation

Prior to conducting any intrusive activities for Site remediation activities, the work zone(s), designated entry points, soil stockpile staging areas, decontamination zones, and truck routes will be established, as applicable. All site preparation activities described in this section are necessary to facilitate and enable the remediation activities required under this RAWP. A truck route map is included as Figure 10. The Site Plan will be updated as necessary to reflect any changes in operations during the course of the intrusive work. Particulate control measures, if necessary, will be implemented. Additional details of Site preparation activities are provided in the following sections.

5.3.1 Mobilization

Site mobilization involving Site security setup, fencing, equipment mobilization, utility mark outs and marking and staking excavation areas will be performed prior to undertaking any Site remediation activities.

5.3.2 Monitoring Well / Vapor Probe Decommissioning

Existing groundwater monitoring wells will either be protected during remediation, if required, or will be properly decommissioned in accordance with NYSDEC Commissioners Policy CP-43. The only exception to this is if the full length of the well is to be excavated during remediation.

As there are currently no permanent soil vapor probes on-site, soil vapor probe decommissioning is not required.

5.3.3 Erosion and Sedimentation Controls

Erosion and sedimentation control measures will be installed at the Site prior to conducting any ground-intrusive work. These measures will be installed according to all applicable or relevant and appropriate federal, state, and local laws and the NYCDEP-approved SWPPP. The measures will provide for abatement and control of environmental pollution arising from proposed remediation and construction activities. The control measures will include procedures for perimeter Site controls, stabilized construction pads at each construction entrance, equipment decontamination, drainage inlet protection, and particulate suppression. The RE, or her representative, will conduct routine inspections, and any repairs and/or maintenance of control measures required will be completed in a timely fashion to maintain the controls in proper working order. All vehicles leaving the project Site will be inspected to ensure that no soil adheres to the wheels or undercarriage of the vehicle leaving the Site. Any situations involving material spilled in transit or mud and particulate tracked off-site will be remedied. The access routes will be inspected for road conditions, overhead clearance, and weight restrictions.

Upon approval of the SWPPP by NYCDEP, it will be reviewed by the RE, and a copy will be submitted to NYSDEC prior to start of remedial excavation.

5.3.4 Stabilized Construction Entrance(s)

A crushed stone path will be constructed by the general contractor at all truck entrances for the Site. All trucks will drive over this path prior to leaving so that they do not get re-contaminated prior to departure from the Site. A laborer with a broom and a hose connected to a NYC fire hydrant will check the trucks as they leave. The broom and/or hose will be used to remove soil/fill from the truck tires and body as it leaves the Site, as necessary.

5.3.5 Utility Marker and Easements Layout

The Volunteer and its contractors are solely responsible for the identification of utilities that might be affected by work under the RAWP and implementation of all required, appropriate, or necessary health and safety measures during performance of work under this RAWP. The Volunteer and its contractors are solely responsible for safe execution of all invasive and other work performed under this RAWP. The Volunteer and its contractors must obtain any local, State or Federal permits or approvals pertinent to such work that may be required to perform work under this RAWP. Approval of this RAWP by NYSDEC does not constitute satisfaction of these requirements.

The presence of utilities and easements on the Site has been investigated by the Remedial Engineer. It has been determined that no risk or impediment to the planned work under this Remedial Action Work Plan is posed by utilities or easements on the Site.

5.3.6 Sheeting and Shoring

Sheeting and shoring are engineering controls required to prevent off-site migration of contamination from the Site and to physically support the remedial excavation, in accordance with the source removal and control requirements of 6 NYCRR § 375-1.8(c). Appropriate management of structural stability of on-Site or off-Site structures during on-Site activities including excavation is the sole responsibility of the Volunteer and its contractors. The Volunteer and its contractors are solely responsible for safe execution of all invasive and other work performed under this RAWP. The Volunteer and its contractors must obtain any local, State or Federal permits or approvals that may be required to perform work under this RAWP. Further, the Volunteer and its contractors are solely responsible

for the implementation of all required, appropriate, or necessary health and safety measures during performance of work under the approved RAWP.

5.3.7 Equipment and Material Staging

Staging and storage of equipment and materials will be contained within the secured Site or within a secured area on the street/sidewalk in accordance with a NYCDOT permit. By the nature of the work involved in the project, equipment and materials will be moved to different areas within the secured Site as work progresses. Materials will be stored in accordance with applicable federal, state, and local regulations.

5.3.8 Decontamination Area

A decontamination area will be established adjacent to the work areas. Decontamination fluids will be managed to prevent discharge to the ground surface.

All equipment in direct contact with known or potentially contaminated material will be either dedicated or decontaminated prior to handling less contaminated material or removal from the Site. All liquids used in the decontamination procedure will be collected, stored and disposed of in accordance with federal, state, and local regulations. Personnel performing this task will wear the proper personal protective equipment (PPE) as prescribed in the HASP, which is provided in Appendix G.

5.3.9 Site Fencing

The Site will be secured with a locking, wooden construction fence meeting all applicable NYCDOB requirements, that will be placed around the entire perimeter. Entrance gates will be chain link with silt fencing. Both types of fencing will help contain dust and debris generated during demolition and ground intrusive activities from migrating off-site. During all remedial activities, access to the Site will be limited and all persons entering the Site will be required to sign a log book and meet all applicable health and safety requirements. The Site will be secured during non-working hours.

5.3.10 Demobilization

Restoration of the excavation work will include general earthwork and/or backfilling to prepare for construction of the proposed foundation elements, and roadways/pathways/sidewalks. Upon completion of the remedial excavation work, any waste materials (i.e., plastic sheet, absorbent pads, etc.) and the decontamination pad will be removed from the Site for proper disposal.

5.4 Reporting

All daily and monthly Reports will be included in the Final Engineering Report.

5.4.1 Daily Reports

Daily reports will be submitted to NYSDEC and NYSDOH Project Managers by noon of each day following the reporting period and will include:

- An update of progress made during the reporting day;
- Locations of work and quantities of material imported and exported from the Site;
- References to alpha-numeric map for Site activities;
- A summary of any and all complaints with relevant details (names, phone numbers);

- A summary of CAMP finding, including excursions;
- Photographs of Site activities; and
- An explanation of notable Site conditions.

Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (accident, spill), requests for changes to the RAWP or other sensitive or time critical information. However, such conditions must also be included in the daily reports. Emergency conditions and changes to the RAWP will be addressed directly to NYSDEC Project Manager via personal communication.

Daily Reports will include a description of daily activities keyed to an alpha-numeric map for the Site that identifies work areas. These reports will include a summary of CAMP results, odor and dust excursions and corrective actions, and all complaints received from the public.

A Site map that shows a predefined alpha-numeric grid for use in identifying locations described in reports submitted to NYSDEC will be prepared during the waste characterization sampling event and provided to NYSDEC prior to the start of construction.

The NYSDEC assigned project number will appear on all reports.

5.4.2 Monthly Reports

Monthly reports will be submitted to NYSDEC and NYSDOH Project Managers by the 10th day of each month following the reporting period and will include:

- Activities relative to the Site during the previous reporting period and those anticipated for the next reporting period, including a quantitative presentation of work performed (e.g., tons/cubic yards of material exported and imported, etc.);
- Description of approved activity modifications, including changes of work scope and/or schedule;
- Sampling results received following internal data review and validation, as applicable; and,
- An update of the remedial schedule including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays.
- Tracking of GSR metrics determined during the design process should be included in monthly reports.

5.4.3 Other Reporting

Photographs will be taken of all remedial activities and submitted to NYSDEC in digital (JPEG) format. Photos will illustrate all remedial program elements and will be of acceptable quality. Representative photos of the Site prior to any Remedial Actions will be provided. Representative photos will be provided of each contaminant source, source area and Site structures before, during and after remediation. Photos will be included in the daily reports as needed, and a comprehensive collection of photos will be included in the FER.

Progress with respect to green and sustainable remediation metrics will be tracked during implementation of the remedial action and reported in the FER, including a comparison to the goals established during the remedial program. Regular updates to the metrics used (SEFA, SiteWise™ or otherwise approved method) should be included.

The Climate Screening process and results will be documented in the form of a completed checklist and brief letter report. If the Climate Screening results indicate that a CVA is necessary, a complete CVA Report will be developed. The CVA Report will be included as an appendix or attachment in relevant documents and/or submitted as a standalone report.

Job-site record keeping for all remedial work will be appropriately documented. These records will be maintained on-Site at all times during the project and be available for inspection by NYSDEC and NYSDOH staff.

5.4.4 Complaint Management Plan

A log of any complaints from the public regarding nuisance or other Site conditions will be compiled by a member of the AKRF project team, as applicable. All complaints will be documented in the daily reports.

5.4.5 Deviations from the Remedial Action Work Plan

Any deviations from this RAWP will require prior approval from NYSDEC. The deviations will be recorded in both the monthly progress reports and in the FER. At a minimum, the report of the deviations will include the following:

- Reasons for deviating from the approved RAWP;
- Approval process to be followed for changes/editions to the RAWP; and
- Effect of the deviations on overall remedy.

6.0 PRE-DESIGN INVESTIGATION

6.1 Soil Sampling

A Pre-Design Investigation (PDI) will be conducted to further refine the extent of remedial excavation of the PCE concentrations in soil above the PGWSCOs detected at sample location RI-SB-11_4-6_20260428 and to collect soil vapor samples to aid in designing the contingent SVES. Five soil borings (PDI-SB-01 through PDI-SB-05) will be advanced around RI-SB-11 and one soil boring (RI-SB-11A) will be advanced immediately adjacent to RI-SB-11 using a Geoprobe® direct-push probe (DPP), as shown on Figure 11. Soil samples will be collected from PDI-SB-01 through PDI-SB-05 every 2 feet between grade and immediately above the water table. Soil samples will be collected from RI-SB-11A every 2 feet between 6 feet (deepest sample depth collected during the RI) and the water table. Samples collected from PDI-SB-01 through PDI-SB-05 from 0 to 6 feet will be analyzed immediately by the laboratory and the remaining samples will be placed on hold, pending the results of the 0 to 6 feet samples. Samples collected from RI-SB-11A at 6 to 8 feet will be analyzed immediately by the laboratory and the remaining samples will be placed on hold, pending the results of the initial sample. Soil samples will be submitted to an NYSDOH ELAP-certified laboratory for analysis of CVOCs by EPA Method 8260 with Category B deliverables. In addition, one trip blank, field blank, blind duplicate, and MS/MSD samples will be submitted to the laboratory for every 20 parent samples submitted in accordance with the QAPP. Samples will be shipped to the laboratory with appropriate COC documentation.

At all boring locations, continuous soil cores will be collected in 5-foot long, 2-inch diameter, stainless steel macrocore piston rod samplers fitted within internal, dedicated acetate liners. Soil samples will be inspected by AKRF field personnel for evidence of contamination (e.g., odors, staining, etc.), screened for the presence of VOCs with a calibrated PID, and logged using the modified Burmister soil classification system. After each boring is completed, the boreholes will be filled with on-site materials (if not noticeably contaminated) in accordance with Section 3.3(e) of DER-10. Soil cuttings displaying field evidence of contamination will be containerized in properly labeled Department of Transportation (DOT)-approved 55-gallon drums for off-site disposal at a permitted facility. Boreholes that require drill cutting disposal will be filled with bentonite chips (hydrated). Disposable sampling equipment that comes in contact with environmental media will be double bagged and disposed of as municipal trash as non-hazardous refuse.

6.2 Soil Vapor Sampling

To aid in the design of the SVE system, soil vapor samples will be collected at two depth intervals from 12 sample locations, as shown on Figure 11. The soil vapor point clusters will be constructed using two individual dedicated 6-inch stainless steel mesh sample points connected to polyethylene tubing installed at 15 feet and 28 feet below grade (approximately 2 feet above the water table), for a total of 28 individual points. Each sample point will be backfilled with No. 2 filter sand to 1-foot above the screened interval, followed by hydrated bentonite until the start of the next sampling point interval. Sample locations were selected to obtain representative vertical coverage across the Site and support the forthcoming remedial design.

The soil vapor samples will be collected using 1-Liter Tedlar® bags. The soil vapor samples will be analyzed for VOCs by EPA Method TO-15 by a NYSDOH ELAP-certified laboratory with Category B deliverables. Samples will be shipped to the laboratory with appropriate COC documentation.

6.3 Groundwater Treatment Bench-Scale Treatability Study

As further discussed in Section 11.1, a bench-scale treatability study will be performed during the PDI to evaluate the effectiveness of various proposed oxidant and reductant mixes to oxidize or reduce CVOCs, primarily PCE and TCE, present in shallow groundwater. The bench scale study will test the effectiveness of four separate oxidants including modified Fenton's reagent (MFR), carbohydrate activated sodium persulfate (CHASP), surfactant enhanced CHASP (S+CHASP), and sodium permanganate. The bench scale study will also test the effectiveness of two separate reducing agents including zero valent iron (ZVI), and ZVI and emulsified vegetable oil (ZVI+EVO). Two different experiment environments will be utilized in the study: ambient air environments will be used for the chemical oxidation experiments and oxygen-free environments will be used for the reduction experiments.

The findings from the PDI, including a full description of the in-situ groundwater treatment program, SVE, and SSDS designs will be provided as part of a separate Remedial Design Document and submitted to NYSDEC and NYSDOH for review and approval prior to implementation.

7.0 REMEDIAL ACTION: MATERIAL REMOVAL FROM SITE

Removal of materials from the Site will include: (1) paved asphalt and/or concrete surfaces and/or debris; (2) decommissioning of existing groundwater monitoring wells in accordance with NYSDEC CP-43; (3) all contaminated soil/fill in the upper 15 feet below ground surface (bgs) within the proposed new building cellar footprint to attain a Track 2 cleanup in this area of the Site; (4) a minimum of 2 feet bgs cut and all source material (soil/fill above PGWSCOs for CVOCs), including a PCE hotspot around RI-SB-11, to attain a Track 4 cleanup in all other areas of the Site; and, (5) removal of any unknown petroleum storage tanks, fill ports, vent pipes, and other associated structures, if encountered during excavation.

Based on the information obtained from the RI and previous investigations, approximately 9,475 tons of soil is estimated to be removed as part of the remedy and bedrock is not anticipated to be encountered. The proposed areas of remedial excavation are shown on Figure 12.

Any excavated contaminated soil will be removed from the Site and disposed of at a facility(ies) licensed to accept the material. Proposed disposal facilities will be selected after completing the waste characterization sampling. The proposed disposal facilities will be submitted to NYSDEC for review and approval prior to off-site disposal.

7.1 Soil Cleanup Objectives

The applicable SCOs for this Site are the PGWSCOs for CVOCs only, and Track 2/Track 4 RRSCOs for all other VOCs, SVOCs, PCBs, pesticides, and metals. Soil and materials management on-site and off-site will be conducted in accordance with the SMMP as described below. Any petroleum storage tank closures will, at a minimum, conform to the criteria defined in DER-10.

All soil samples that exceed the UUSCOs and RRSCOs are presented in Tables 2 through 7. Exceedances of the applicable standards are shown on Figures 6A through 6K.

7.2 Remedial Performance Evaluation (Post Excavation End-Point Sampling)

7.2.1 End-Point Sampling Frequency

Based on the sampling frequency outlined in Section 5.4 of DER-10, documentation sampling for the remedial excavation will include one bottom soil sample for every 900 square feet across the Site and one sidewall sample for every 30 linear feet around the perimeter of the Site, except where SOE is located. Based on the size of the proposed remedial excavation area at the Site, approximately 55 post-excavation endpoint samples will be collected for laboratory analysis at the approximate locations shown on Figure 13.

Endpoint sampling will occur around any additional AOCs identified during the RA based on the sampling frequency outlined in Section 5.4 of DER-10.

7.2.2 Methodology

Documentation samples will be collected using a decontaminated stainless steel sampling trowel or hand auger, or a dedicated wooden tongue depressor and placed directly into pre-sterilized, laboratory-issued containers.

The sample containers will be properly labeled and immediately placed on ice within a cooler. Sample time, date, and location will be recorded on a chain of custody. The samples will be submitted to an ELAP-certified laboratory for analysis of TCL VOCs by EPA Method 8260, TCL SVOCs by EPA Method 8270, pesticides by EPA Method 8081, PCBs by EPA Method 8082, TAL metals by EPA Method 6000/7000 series, 1,4-dioxane by EPA

Method 8270, and PFAS compounds by EPA Method 1633A. The laboratory will follow the NYSDEC Analytical Services Protocol (ASP) dated 1995 using NYSDEC ASP Category B deliverables. Further details regarding the specific sampling methodology and analytical procedures are presented in the QAPP, included as Appendix F.

7.2.3 Reporting of Results

The analytical results of documentation samples will be tabulated and compared to the UUSCOs and RRSCOs. The tabulated data and the laboratory reports will be included in the FER. All analytical data will be submitted to NYSDEC in electronic data deliverable (EDD) format via the Environmental Quality Information System (EQuIS™).

7.2.4 QA/QC

The QA objective with respect to accuracy, precision, and sensitivity of analysis for laboratory analytical data is to achieve the QC acceptance of the analytical protocol. The accuracy, precision, and completeness requirements will be addressed by the laboratory for all data generated. Collected samples will be appropriately packaged, placed in coolers, and shipped or delivered directly to the analytical laboratory by the laboratory's courier service. Samples will be containerized in appropriate laboratory provided glassware and shipped in plastic coolers. Samples will be preserved to maintain a temperature of 4° C. Decontamination of non-dedicated sampling equipment will consist of the following: gently tap or scrape to remove adhered soil; rinse with tap water; wash with Alconox® detergent solution and scrub; rinse with tap water; rinse with distilled or deionized water; prepare field blanks by pouring distilled or deionized water in laboratory provided containers.

One trip blank, one field blank, one blind duplicate sample, and one matrix spike/matrix spike duplicate (MS/MSD) will be collected per every 20 samples per media and submitted for analysis during the documentation sampling event. The field blank(s), blind duplicate(s), and MS/MSD(s) will include all parameters included in the sample analysis while the trip blank will be analyzed for VOCs only. Additional QA/QC information is provided in the QAPP, included as Appendix F.

7.2.5 DUSR and EDDs

Lori A. Beyer of L.A.B. Validation Corp., a qualified third-party data validator, will review the documentation sample laboratory reports and prepare a DUSR, for all samples collected under this RAWP. The DUSR will be discussed and included as an appendix to the FER. The validator's resume is included in the QAPP provided as Appendix F.

Validated EDDs will be submitted to NYSDEC via EQuIS™.

7.2.6 Reporting of End-Point Data in FER

Chemical labs used for all end-point sample results and contingency sampling will be NYSDOH ELAP certified.

End point sampling, including bottom and side-wall sampling, will be performed in accordance with DER-10 sample frequency requirements. Side-wall samples will be collected a minimum of every 30 linear feet. Bottom samples will be collected at a rate of one for every 900 square feet from the base of the remedial excavation. The FER will provide a tabular and map summary of all end-point sample results and exceedances of SCOs.

7.3 Estimated Material Removal Quantities

The estimated quantity of soil/fill to be removed from the Site based on the proposed dual Track 2/Track 4 remedial excavation is 9,475 tons. The estimated quantity of soil to be imported into the Site for backfill and cover soil is 1,100 cubic yards. Soil/fill reuse is not anticipated, but may be considered, as part of the remedial action. The proposed remedial excavation is shown on Figure 12 and summarized below in Table H.

Table H
Remedial Excavation Location Summary

Location On-Site	Approximate Excavation Depth (feet bgs)	Approximate Excavation Volume (cubic yards)	Approximate Excavation Volume (tons)
Track 2 Area	15	5,420	8,125
Track 4 Area	2	815	1,225
CVOC Hotspot	10	85	125
			Total = 9,475 tons

7.4 Soil/Materials Management Plan

The SMMP describes the procedures to be performed during the handling of soil/fill materials on-site during all intrusive work.

7.4.1 Soil Screening Methods

Visual, olfactory and PID soil screening and assessment will be performed by a qualified environmental professional or experienced field geologist or other scientist under the direction of the RE during all remedial and development excavations into known or potentially contaminated material. Soil screening will be performed regardless of when the invasive work is done and will include all excavation and invasive work performed during the remedy and during development phase, such as excavations for foundations and utility work, prior to issuance of the COC.

All primary contaminant sources (including but not limited to tanks and hotspots) identified during waste characterization, previous subsurface investigations, and Remedial Action will be surveyed by a surveyor licensed to practice in the State of New York or located with a GPS survey to obtain exact coordinates on the Site. This information will be provided on maps in the FER.

Screening will be performed by qualified environmental professionals, an experienced field geologist, or other scientist. Resumes for all anticipated personnel responsible for field screening (i.e., those representing the Remedial Engineer) of invasive work for unknown contaminant sources during remediation and development work are provided in the QAPP included as Appendix F.

7.4.2 Stockpile Methods

Stockpiles will be inspected at a minimum once each week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by NYSDEC. At a minimum, a storm event should be considered a rainfall of three inches or greater in 12 hours. Judgement should be used to evaluate water infiltration, nearby waterbodies where runoff is likely, and engineering controls that may be affected.

Stockpiles will be kept covered at all times with appropriately anchored tarps. Stockpiles will be routinely inspected and damaged tarp covers will be promptly replaced.

Soil stockpiles will be continuously encircled with silt fences. Hay bales will be used as needed near catch basins, surface waters and other discharge points.

Water will be available on-site at suitable supply and pressure for use in dust control.

7.4.3 Materials Excavation and Load Out

The RE or designated personnel under her supervision, will oversee all invasive work and the excavation and load-out of all excavated material. The Applicant and its contractors are solely responsible for safe execution of all invasive and other work performed under this RAWP.

The presence of utilities and easements on the Site will be investigated by the RE to ensure that no risk or impediment to the planned work under this RAWP is posed by utilities or easements on the Site.

Loaded vehicles leaving the Site will be appropriately lined, tarped, securely covered, manifested, and placarded in accordance with appropriate federal, state, local, and NYSDOT requirements (and all other applicable transportation requirements). A truck wash will be operated on-site. The RE or designated personnel under her supervision will be responsible for ensuring that all outbound trucks will be washed at the truck wash before leaving the Site until the remedial construction is complete. Locations where vehicles enter or exit the Site shall be inspected daily for evidence of off-site sediment tracking.

The RE, or her designated personnel, will be responsible for ensuring that all egress points for truck and equipment transport from the Site will be clean of dirt and other materials derived from the Site during Site remediation and development. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to Site-derived materials.

The Applicant and associated parties preparing the remedial documents submitted to NYSDEC and NYSDOH, and parties performing this work, are completely responsible for the safe performance of all invasive work, the structural integrity of excavations, and for structures that may be affected by excavations (such as building foundations and bridge footings).

The RE will ensure that Site development activities will not interfere with, or otherwise impair or compromise, remedial activities proposed in this RAWP.

All contaminated materials and structures that may be remediated (i.e., USTs, vaults and associated piping, transformers, etc.) will be removed and endpoint sampling completed before excavations related to Site development commence proximal to the hotspot or structure.

Development-related grading cuts and fills will not be performed without NYSDEC approval and will not interfere with, or otherwise impair or compromise, the performance of remediation required by this plan. Mechanical processing of historical fill and contaminated soil on-Site is prohibited.

All primary contaminant sources (including but not limited to tanks and hotspots) identified during Site characterization, subsurface investigations, and Remedial Action will be surveyed by a surveyor licensed to practice in the State of New York or located with a GPS

survey to obtain exact coordinates on the Site. The survey information will be shown on maps to be reported in the FER.

7.4.4 Materials Transport Off-Site

All transport of materials will be performed by licensed haulers in accordance with appropriate local, state, and federal regulations, including 6 NYCRR Part 364. Haulers will be appropriately licensed and trucks properly placarded.

Proposed truck transport routes are as follows:

- Trucks entering the Site will take I-278E; take Exit 5 toward Astoria Boulevard South/Truck I-278; turn right onto 31st Street and continue to the Site.
- Trucks exiting the Site will head north on 31st Street and turn left to merge onto I-278 W/RFK Bridge.

All trucks loaded with Site materials will exit the vicinity of the Site using only these approved truck routes. Proposed in-bound and out-bound truck routes to the Site are shown on Figure 10. This is the most appropriate route and takes into account: (a) limiting transport through residential areas and past sensitive sites; (b) use of city mapped truck routes; (c) prohibiting off-site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; and (f) overall safety in transport.

Trucks will be prohibited from stopping and idling in the neighborhood outside the Site. Egress points for truck and equipment transport from the Site will be kept clean of dirt and other materials during Site remediation and development. Queuing of trucks will be performed on-site in order to minimize off-site disturbance. Off-site queuing will be prohibited.

Material transported by trucks exiting the Site will be secured with tight-fitting covers. Loose-fitting canvas-type truck covers will be prohibited. If loads contain wet material capable of producing free liquid, truck liners will be used.

All trucks will be washed prior to leaving the Site. Truck wash waters will be collected and disposed of off-site in an appropriate manner.

7.4.5 Materials Disposal Off-Site

For any materials to be disposed of off-site, based on the waste characterization results, a properly permitted waste disposal facility will be selected for off-site disposal. The disposal information will be reported to the NYSDEC Project Manager prior to commencing the disposal activities. The total quantity of material expected to be disposed off-Site is 9,475 tons, and specific waste streams will be determined based on the waste characterization results.

Any soil/fill/solid waste excavated and removed from the Site will be treated as contaminated and regulated material and will be disposed in accordance with all local, State (including 6 NYCRR Part 360) and federal regulations. If disposal of soil/fill from this Site is proposed for unregulated disposal (i.e., clean soil removed for development purposes), a formal request with an associated plan will be made to NYSDEC's Project Manager. Unregulated off-site management of materials from this Site is prohibited without formal NYSDEC approval. Material that does not meet Track 1 UUSCOs is prohibited from being taken to a New York State recycling facility (6 NYCRR Part 360-15 Registration Facility).

The following documentation will be obtained and reported by the RE for each disposal location used in this project to fully demonstrate and document that the disposal of material derived from the Site conforms with all applicable laws: (1) a letter from the RE or BCP Volunteer to the receiving facility describing the material to be disposed and requesting formal written acceptance of the material. This letter will state that material to be disposed is contaminated material generated at an environmental remediation Site in New York State. The letter will provide the project identity and the name and phone number of the RE. The letter will include as an attachment a summary of all chemical data for the material being transported (including waste characterization data); and (2) a letter from all receiving facilities stating it is in receipt of the correspondence (above) and is approved to accept the material. These documents will be included in the FER.

Non-hazardous fill material and contaminated soils taken off-site will be handled, at minimum, as a Municipal Solid Waste per 6 NYCRR Part 360-1.2. Fill and contaminated soils from the Site are prohibited from being disposed at Part 360-16 Registration Facilities (also known as Soil Recycling Facilities).

Soils that are contaminated but non-hazardous and are being removed from the Site are considered by the Division of Materials Management (DMM) in NYSDEC to be Construction and Demolition (C&D) materials with contamination not typical of virgin soils. These soils may be sent to a permitted Part 360 landfill. They may be sent to a permitted C&D processing facility without permit modifications only upon prior notification of NYSDEC Region 2 DMM. This material is prohibited from being sent or redirected to a Part 360-16 Registration Facility. In this case, as dictated by DMM, special procedures will include, at a minimum, a letter to the C&D facility that provides a detailed explanation that the material is derived from a DER remediation Site, that the soil material is contaminated and that it must not be redirected to on-site or off-site Soil Recycling Facilities. The letter will provide the project identity and the name and phone number of the RE. The letter will include as an attachment a summary of all chemical data for the material being transported.

The FER will include an accounting of the destination of all material removed from the Site during this Remedial Action, including excavated soil, contaminated soil, historic fill, solid waste, and hazardous waste, non-regulated material, and fluids. Documentation associated with disposal of all material must also include records and approvals for receipt of the material. This information will also be presented in a tabular form in the FER. Bill of Lading system or equivalent will be used for off-site movement of non-hazardous wastes and contaminated soils. This information will be reported in the FER.

Hazardous wastes derived from on-site will be stored, transported, and disposed of in full compliance with applicable local, state, and federal regulations.

Appropriately licensed haulers will be used for material removed from this Site and will be in full compliance with all applicable local, state, and federal regulations.

Waste characterization will be performed for off-site disposal in a manner suitable to the receiving facility and in conformance with applicable permits. Sampling and analytical methods, sampling frequency, analytical results and QA/QC will be reported in the FER. All data available for soil/material to be disposed at a given facility must be submitted to the disposal facility with suitable explanation prior to shipment and receipt.

7.4.6 Materials Reuse On-Site

Material reuse is not anticipated as part of the remedial action. However, if material reuse is planned, chemical criteria for on-site reuse of material must be approved by NYSDEC prior to reuse. Materials planned for reuse (if any) will be segregated and stockpiled from materials slated for off-site disposal. Stockpiles will be placed on and covered with polyethylene sheeting. The stockpiled soil will be sampled and analyzed in accordance with Table 5.4(e)10 on page 161 of DER-10 Technical Guidance for Investigation and Remediation. All materials to be reused on the Site will comply with the RRSCOs. The RE will ensure that procedures defined for materials reuse in this RAWP are followed and that unacceptable material will not remain on-site.

A "Request to Import/Reuse Fill Material" form will be filed with the NYSDEC project manager for review and approval prior to material reuse on the Site. A copy of the form is presented in Appendix K.

Demolition material (C&D) will not be reused on-site. Concrete crushing or processing on-site is prohibited. Organic matter (wood, roots, stumps, etc.) or other solid waste derived from clearing and grubbing of the Site is prohibited for reuse on-site. Contaminated on-site material, including historic fill and contaminated soil, removed for grading or other purposes will not be reused within a cover soil layer, within landscaping berms, or as backfill for subsurface utility lines. This will be expressed in the final Site Management Plan (SMP).

7.4.7 Fluids Management

All liquids to be removed from the Site, including dewatering fluids, will be handled, transported and disposed in accordance with applicable local, state, and federal regulations. Liquids discharged into the New York City sewer system will be addressed through approval by NYCDEP.

Dewatered fluids will not be recharged back to the land surface or subsurface of the Site. Dewatering fluids will be managed off-site. Discharge of water generated during remedial construction to surface waters (i.e., a local pond, stream or river) is prohibited without a SPDES permit.

7.4.8 Demarcation

After the completion of soil removal and any other invasive remedial activities and prior to backfilling, a land survey will be performed by a New York State licensed surveyor. The survey will define the top elevation of residual contaminated soils. A physical demarcation layer, consisting of orange snow fencing material or equivalent material will be placed on this surface to provide a visual reference. This demarcation layer will constitute the top of the 'Residuals Management Zone', the zone that requires adherence to special conditions for disturbance of contaminated residual soils defined in the SMP. The survey will measure the grade covered by the demarcation layer before the placement of cover soils, pavement and sub-soils, structures, or other materials. This survey and the demarcation layer placed on this grade surface will constitute the physical and written record of the upper surface of the 'Residuals Management Zone' in the SMP. A map showing the survey results will be included in the FER and the SMP.

7.4.9 Backfill from Off-Site Sources

All materials proposed for import onto the Site will be approved by the Remedial Engineer and will be in compliance with provisions in this RAWP prior to receipt at the Site.

Material from industrial sites, spill sites, other environmental remediation sites or other potentially contaminated sites will not be imported to the Site. Solid waste will not be imported onto the Site.

The FER will include the following certification by the Remedial Engineer: "I certify that all import of soils from off-Site, including source evaluation, approval and sampling, has been performed in a manner that is consistent with the methodology defined in the Remedial Action Work Plan".

All imported soils will meet NYSDEC approved backfill or cover soil quality objectives for this Site. These NYSDEC approved backfill or cover soil quality objectives are the lower of the protection of groundwater or the protection of public health soil cleanup objectives for RRSCOs as set forth in Table 375-6.8(b) of 6 NYCRR Part 375 and listed in Table 17. Non-compliant soils will not be imported onto the Site without prior approval by NYSDEC. Nothing in the approved RAWP or its approval by NYSDEC should be construed as an approval for this purpose.

Soils that meet 'general fill' requirements under 6 NYCRR Part 360.13, but do not meet backfill or cover soil objectives for this Site, will not be imported onto the Site without prior approval by NYSDEC. Nothing in this RAWP should be construed as an approval for this purpose.

A "Request to Import/Reuse Fill Material" form will be filed with the NYSDEC project manager for review and approval prior to import to the site. A copy of the form is presented in Appendix K.

7.4.10 Stormwater Pollution Prevention

A SWPPP will be prepared and approved by NYCDEP. Soil and erosion sediment controls including barriers and hay bale checks will be installed and inspected once a week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by NYSDEC. All necessary repairs shall be made immediately.

Accumulated sediments will be removed as required to keep the barrier and hay bale check functional.

All undercutting or erosion of the silt fence toe anchor shall be repaired immediately with appropriate backfill materials.

Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

Erosion and sediment control measures identified in the RAWP shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving waters.

Silt fencing or hay bales will be installed around the entire perimeter of the remedial construction area.

7.4.11 Contingency Plan

If USTs or other previously unidentified contaminant sources are found during on-Site remedial excavation or development related construction, sampling will be performed on product, sediment and surrounding soils, etc. in accordance with DER-10. Chemical

analytical work will be for full scan parameters (TAL metals, TCL VOCs, TCL SVOCs, TCL pesticides, PCBs, and PFAS). Analyses will not be otherwise limited without NYSDEC approval.

Identification of unknown or unexpected contaminated media identified by screening during invasive Site work will be promptly communicated by phone to NYSDEC's Project Manager. These findings will be also included in daily and periodic electronic media reports.

7.4.11.1 Extreme Storm Preparedness and Response Contingency Plan

Damage from flooding or storm surge can include dislocation of soil and stockpiled materials, dislocation of site structures and construction materials and equipment, and dislocation of support of excavation structures. Damage from wind during an extreme storm event can create unsafe or unstable structures, damage safety structures and cause downed power lines creating dangerous site conditions and loss of power. In the event of emergency conditions caused by an extreme storm event, the Volunteer will undertake the following steps for site preparedness prior to the event and response after the event.

Storm Preparedness

Preparations in advance of an extreme storm event will include the following: containerized hazardous materials and fuels will be removed from the property; loose materials will be secured to prevent dislocation and blowing by wind or water; heavy equipment such as excavators and generators will be removed from excavated areas, trenches and depressions on the property to high ground or removed from the property; an inventory of the property with photographs will be performed to establish conditions for the site and equipment prior to the event; stockpile covers for soil and fill will be secured by adding weights such as sandbags for added security and worn or ripped stockpile covers will be replaced with competent covers; stockpiled hazardous wastes will be removed from the property; stormwater management systems will be inspected and fortified, including, as necessary: clean and reposition silt fences, hay bales; clean storm sewer filters and traps; and secure and protect pumps and hosing.

Storm Response

At the conclusion of an extreme storm event, as soon as it is safe to access the property, a complete inspection of the property will be performed. A site inspection report will be submitted to NYSDEC at the completion of site inspection and after the site security is assessed. Site conditions will be compared to the inventory of site conditions and material performed prior to the storm event and significant differences will be noted. Damage from storm conditions that result in acute public safety threats, such as downed power lines or imminent collapse of buildings, structures or equipment will be reported to public safety authorities via appropriate means such as calling 911.

Petroleum spills will be reported to NYSDEC within 2 hours of identification and consistent with State regulations. Public safety structures, such as construction security fences will be repaired promptly to eliminate public safety threats. Debris will be collected and removed.

Dewatering will be performed in compliance with existing laws and regulations and consistent with emergency notifications, if any, from proper authorities. Eroded areas of soil including unsafe slopes will be stabilized and fortified. Dislocated materials will be collected and appropriately managed. Support of excavation structure will be inspected and

fortified as necessary. Impacted stockpiles will be contained and damaged stockpile covers will be replaced. Stormwater control systems and structures will be inspected and maintained as necessary.

If soil or fill materials are discharged off site to adjacent properties, property owners and NYSDEC will be notified, and corrective measure plan designed to remove and clean dislocated material will be submitted to NYSDEC and implemented following approval by NYSDEC and granting of site access by the property owner. Impacted offsite areas may require characterization based on site conditions, at the discretion of NYSDEC.

If onsite petroleum spills are identified, a qualified environmental professional will determine the nature and extent of the spill and report to NYSDEC's spill hotline at (800) 457-7362 within statutory defined timelines. If the source of the spill is ongoing and can be identified, it should be stopped if this can be done safely. Potential hazards will be addressed immediately, consistent with guidance issued by NYSDEC.

Storm Response Reporting

A site inspection report will be submitted to NYSDEC at the completion of site inspection. An inspection report will be used for this purpose. Site conditions will be compared to the inventory of site conditions and material performed prior to the storm event and significant differences will be noted. The site inspection report will be sent to the NYSDEC project manager and will include the site name, address, tax block and lot, site primary and alternate contact name and phone number.

Damage and soil release assessment will include: whether the project had stockpiles; whether stockpiles were damaged; photographs of damage and notice of plan for repair; report of whether soil from the site was dislocated and whether any of the soil left the site; estimates of the volume of soil that left the site, nature of impact, and photographs; description of erosion damage; description of equipment damage; description of damage to the remedial program or the construction program, such as damage to the support of excavation; presence of onsite or offsite exposure pathways caused by the storm; presence of petroleum or other spills and status of spill reporting to NYSDEC; description of corrective actions; schedule for corrective actions.

This report should be completed and submitted to NYSDEC project manager with photographs within 24 hours of the time of safe entry to the property after the storm event.

7.4.12 Community Air Monitoring Plan

A Site-specific HASP and a CAMP have been prepared for this Site and are enclosed as Appendix G and Appendix H, respectively. Community air monitoring and real-time air monitoring at the perimeter of the exclusion zone will be conducted during all intrusive Site activities in accordance with the NYSDOH Generic CAMP and as described in Appendix H. The CAMP requirements may be modified in consultation with NYSDEC and NYSDOH for activities involving minimal soil disturbance (e.g., site preparation, pile installation, etc.). All readings will be recorded and available for NYSDEC and NYSDOH personnel to review. The CAMP station locations may vary depending on wind direction and location of work activities. A map showing the proposed locations of CAMP stations is shown on Figure 9. Mobile air monitoring using handheld equipment will be conducted around workers and locations will vary based on the work zone(s).

As the Site is located within 20 feet of potentially occupied structures, a Special Requirements CAMP will be implemented. The fixed CAMP stations will be located near

potentially exposed individuals. Commercial-use buildings are located west-adjacent to the Site.

The additional CAMP provisions included in the Special Requirements CAMP are as follows:

- Use of engineering controls such as vapor/dust barriers or special ventilation devices will be considered; and
- Special consideration will be given to implementing planned activities when potentially exposed populations are at a minimum.

Exceedances observed in the CAMP will be reported to NYSDEC and NYSDOH Project Managers and included in the Daily Report.

7.4.13 Odor, Dust and Nuisance Control Plan

The FER will include the following certification by the Remedial Engineer: "I certify that all invasive work during the remediation and all invasive development work were conducted in accordance with dust and odor suppression methodology defined in the Remedial Action Work Plan."

Odor Control Plan

This odor control plan is capable of controlling emissions of nuisance odors off-site. Specific odor control methods to be used on a routine basis will include the use of a PID to screen for VOCs and olfactory observations by a field technician. If nuisance odors are identified, work will be halted and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have been abated. NYSDEC and NYSDOH will be notified within 24 hours of all odor events and of all other complaints about the project. Implementation of all odor controls, including the halt of work, will be the responsibility of the Volunteer's RE, who is responsible for certifying the FER.

All necessary means will be employed to prevent on- and off-site nuisances. At a minimum, procedures will include: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; and (c) using foams to cover exposed odorous soils (such as BioSolve® Pinkwater or RusFoam®). If odors develop and cannot be otherwise controlled, additional means to eliminate odor nuisances will include: (d) direct load-out of soils to trucks for off-site disposal; (e) use of chemical odorants in spray or misting systems; and, (f) use of staff to monitor odors in surrounding neighborhoods.

Where odor nuisances have developed during remedial work and cannot be corrected, or where the release of nuisance odors cannot otherwise be avoided due to on-site conditions or close proximity to sensitive receptors, odor control will be achieved by sheltering excavation and handling areas under tented containment structures equipped with appropriate air venting/filtering systems.

Dust Control Plan

A dust suppression plan that addresses dust management during invasive on-Site work will include, at a minimum, the items listed below:

- Water will be available on-site at suitable supply and pressure for use in dust control.
- Clearing and grubbing of larger sites will be done in stages to limit the area of exposed, unvegetated soils vulnerable to dust production.

- Gravel will be used on roadways to provide a clean and dust-free road surface.
- On-Site roads will be limited in total area to minimize the area required for water spraying.

Other Nuisances

A plan for rodent control will be developed and utilized by the contractor prior to and during Site clearing and Site grubbing, and during all remedial work.

A plan will be developed and utilized by the contractor for all remedial work and will conform, at a minimum, to NYCDEP noise control standards.

8.0 RESIDUAL CONTAMINATION TO REMAIN ON-SITE

Since residual contaminated soil, groundwater, and/or soil vapor may exist beneath the Site after the remedy is complete, ECs and ICs are necessary and required pursuant to 6 NYCRR § 375-1.8(h) to protect human health and the environment and to achieve the RAOs. These ECs and ICs are described hereafter. Long-term management of EC/ICs and of residual contamination will be executed under a Site-specific SMP that will be developed and included as an appendix of the FER.

The Controlled Property (the Site) will have four ECs, consisting of a site cover system, an active SSDS, in-situ groundwater treatment, and a contingency SVES. Each of these engineering controls is necessary to eliminate or prevent exposure pathways from residual contamination to human health and the environment, as required by the source removal and control hierarchy of 6 NYCRR § 375-1.8(c). A conceptual SSDS layout, conceptual SVES layout and proposed temporary groundwater injection point layout are provided on Figures 14, 15, and 16, respectively. Full design details regarding the SSDS, contingency SVES, and groundwater injections will be provided in a separate Remedial Design Document.

The FER will report residual contamination on the Site in tabular and map form. This will include presentation of exceedances of both Track 1 and Track 4 sites.

9.0 ENGINEERING CONTROL: SITE COVER SYSTEM

A site cover system is necessary and will be installed and maintained in the Track 4 portion of the Site to prevent direct contact with any residual contaminated soil and to eliminate exposure pathways, as required by 6 NYCRR § 375-3.8(e)(4)(iii) and the Cover System Requirements of 6 NYCRR § 375-3.2(e). The proposed site cover system will be composed of: (1) a minimum of 2 feet of clean fill material placed in landscaped and permeable areas underlain by a demarcation barrier; (2) concrete building slabs (5-inch thick concrete slab in the cellar, 3-inch thick concrete rat slab in the crawl space, and 10-inch thick concrete slab in the first floor) underlain by a minimum 20-mil vapor barrier membrane, which doubles as a demarcation barrier, in the slab-on-grade portion of the proposed building; and (3) paved surfaces in roadway and sidewalk areas. The site cover system is a permanent engineering control necessary to achieve the RAOs and qualify for a Certificate of Completion, and the quality and integrity of the system will be inspected at defined, regular intervals. Inspections of the site cover system will be detailed in the SMP. The proposed site cover system plan is provided as Figure 17.

The vapor barrier will be installed in accordance with the manufacturer's installation procedures. Prior to pouring the concrete slab, the installed vapor barrier will be inspected and photographed. A set of the installation photos in addition to the "as built" drawings will be included in the FER. A Soil Management Plan will be included in the SMP and will outline the procedures to be followed in the event that the site cover system and any underlying residual contamination are disturbed after the RA is complete. Maintenance of the site cover system will be described in the SMP in the FER.

10.0 ENGINEERING CONTROL: SUB-SLAB DEPRESSURIZATION SYSTEM

10.1 Sub-Slab Depressurization System (SSDS)

An active SSDS will be installed to mitigate the potential for sub-slab vapor intrusion into the proposed new buildings. The SSDS will induce a negative pressure (i.e., vacuum) beneath the proposed building slab. Slotted piping will extend horizontally throughout the building footprint and will be connected, via solid aboveground piping, to a roof-mounted blower(s) and ultimately the effluent vapors will be exhausted to the atmosphere via a discharge stack(s). The design also includes the installation of a sufficient number of vacuum monitoring points to verify that there is negative pressure underneath the entire building slab.

The SSDS layout is subject to change depending on any changes to the building plans. The proposed SSDS layout and standard design details are further discussed below. A full description of the proposed SSDS will be provided as part of a separate Remedial Design Document and submitted to NYSDEC and NYSDOH for review and approval prior to implementation. Figure 14 shows the conceptual layout of the SSDS. A conceptual process and instrumentation flow diagram is included as Figure 18.

10.1.1 SSDS Components

The proposed SSDS to be installed as part of the Site remedy consists of, but is not limited to:

1. 0.02-inch slotted and solid, 4-inch diameter Schedule 40 PVC pipe lengths beneath the building slab;
2. A pipe manifold, which combines the PVC pipe sections into a 6-inch metal riser pipe;
3. A riser pipe, which extends from the manifold to the roof of the building;
4. A roof-mounted blower with a shut-off alarm connected to a local alarm panel installed in the building;
5. One rooftop exhaust stack fitted with a rain cap, terminating at least 7 feet above the finished roof;
6. Communication and pipe sleeves through concrete foundation elements;
7. A minimum 6-inch thick gas-permeable aggregate stratum underlain by a non-woven geotextile fabric beneath the entire SSDS treatment area;
8. Condensate drains, as necessary;
9. Five vacuum monitoring points (VMPs) installed beneath the building slab;
10. Accessories, including: cleanouts, sample ports, vacuum indicators/pressure gauges, flow meters, butterfly valves, and differential pressure switches; and
11. A control panel equipped with a telemetry system to notify select personnel of alarm conditions.

During construction, non-woven geotextile fabric overlain by a minimum 6-inch layer of ¾-inch gas permeable aggregate (GPA) stone bedding meeting the gradation requirements of #5 aggregate in ASTM C33 will be installed below the entire building slab, and under, around, and above all SSDS piping to promote favorable conditions for ventilation of vapors. Five VMPs will be installed to monitor and confirm the presence of induced

vacuum across the building slab. A minimum 20-mil vapor barrier, a construction component, will be installed above the GPA layer under the building slab to enhance vacuum capabilities beneath the building and further assist in the prevention of sub-slab vapor infiltration into indoor air.

An appropriately-sized blower will be installed in the northeastern corner of the building roof or at another location that complies with NYSDOH guidance and NYC Mechanical Code. The SSDS effluent vapors will exit the blower via a discharge stack terminating at least 7 feet above the finished roof and at least 25 feet away from any air intakes or windows, in accordance with local and state building codes.

10.1.2 SSDS Confirmatory Testing

SSDS startup, including balancing the system and the collection of vacuum readings at the five VMPs, will be conducted to assess induced vacuum conditions under the building slab and determine the efficacy of the SSDS. Adequate sub-slab vacuum will be determined via VMP vacuum readings of 0.004 inH_2O. If sub-slab vacuum readings indicate minimum vacuum readings less than the target operating conditions, the SSDS will be rebalanced by adjusting the applied vacuum and air flow rate conditions at the individual SSDS lines until acceptable induced vacuum conditions are observed at each of the VMPs. Additionally, indoor air sampling and sub-slab soil vapor sampling will be conducted approximately 30 days after SSDS startup is complete. This sampling will be performed under the SMP, after building superstructure is complete and aboveground components of the SSDS are fully installed. Locations of proposed indoor air samples will be included in the Remedial Design Report.

SSDS operations and maintenance requirements will be outlined in the SMP. As-built drawings, diagrams, calculations, manufacturer documentation for the SSDS will be presented in the FER.

11.0 ENGINEERING CONTROL: GROUNDWATER TREATMENT PROGRAM

Based on the analytical results of the RI, groundwater and soil beneath the Site is contaminated with chlorinated solvent-related VOCs. PCE was detected in groundwater at concentrations ranging from 15 to 860 µg/L, above the NYSDEC AWQSGV of 5 µg/L, with elevated concentrations detected in the eastern, northeastern, and southwestern portions of the Site. To enhance attenuation of the chlorinated solvent-related contamination, and address the potential for contaminated groundwater to migrate off-site, an in-situ groundwater treatment program will be implemented at the Site.

11.1 Bench-Scale Treatability Study

A bench-scale treatability study will be performed by In-Situ Oxidative Technologies, Inc. (ISOTEC) of Lawrenceville, New Jersey to evaluate the effectiveness of various proposed oxidant and reductant mixes to oxidize or reduce CVOCs, primarily PCE and TCE, present in shallow groundwater. The bench scale study will test the effectiveness of four separate oxidants including modified Fenton's reagent (MFR), carbohydrate activated sodium persulfate (CHASP), surfactant enhanced CHASP (S+CHASP), and sodium permanganate. The bench scale study will also test the effectiveness of two separate reducing agents including zero valent iron (ZVI), and ZVI and emulsified vegetable oil (ZVI+EVO). Two different experiment environments will be utilized in the study: Ambient air environments will be used for the chemical oxidation experiments and oxygen-free environments will be used for the reduction experiments. To facilitate the treatability study, four groundwater samples and four soil samples will be collected from the proposed treatment area and submitted to ISOTEC for use during the treatability study. Following the treatability study, a full description of the in-situ groundwater treatment program, including treatment areas, injection locations, treatment technology, and monitoring protocols, will be provided as part of a separate Remedial Design Document and submitted to NYSDEC and NYSDOH for review and approval prior to implementation.

11.2 In-Situ Injection Events

General Details

The groundwater treatment program will target four areas throughout the Site with an approximately 9,000-square foot total treatment area including three (3) groundwater treatment zones, each consisting of nine injection wells, and one (1) groundwater treatment transect consisting of five additional injection wells positioned in a line that is perpendicular to the presumed groundwater flow direction, and located in a portion of the Site that is not covered by or immediately adjacent to any of the hotspot groundwater treatment zones, to treat any downgradient groundwater.

The proposed treatment program will consist of a construction-phase injection event, followed by the installation of a permanent injection system for potential future (contingency) injection events. The need for post-construction injection events will be assessed as part of the FER. The proposed treatment areas and groundwater monitoring well locations are shown on Figure 16. The construction-phase ISCO event will be conducted after excavation of source removal in shallow soil during construction. The construction-phase event will occur within the proposed treatment zones in phases using temporary injection well points installed with a direct push drill rig. The construction-phase injection event will be conducted using temporary 1-inch diameter PVC injection wells, and will occur after contaminant mass removal in soil through excavation and off-site disposal. The permanent contingency ISCO injection system will consist of permanent 1-inch diameter PVC injection wells connected to dedicated lengths of subsurface ½-inch diameter HDPE tubing, which will connect to an injection tube manifold, located within the future Site building or

access vault. The radius of influence (ROI) around each injection point is anticipated to be approximately 10 feet. The treatment interval will extend from the top of the groundwater surface (approximately 30 to 35 feet below sidewalk grade) to approximately 50 feet below sidewalk grade. The proposed amendments will be mobilized to the Site in totes or 55-gallon drums, and potable water from the Site will be used to further dilute the reagents to the target concentration and injection volume. A permit from the FDNY will be obtained to allow for the transportation and temporary storage of the chemicals on-site.

During both the construction-phase, and potential post-construction groundwater treatment events, downgradient Site boundary groundwater conditions will be monitored through monitoring wells installed on the west and southwestern Site boundaries, along 31st Street. The locations of the proposed groundwater treatment injection wells are shown on Figure 16.

All groundwater treatment will occur in accordance with all federal, state, and local laws and guidelines, including proper notification of relevant governmental and regulatory agencies. These proposed details notwithstanding, additional details or potential changes to the groundwater treatment program will be provided in the Remedial Design Document, or other future communication to NYSDEC.

12.0 ENGINEERING CONTROL: CONTINGENT SOIL VAPOR EXTRACTION SYSTEM

12.1 Contingent Soil Vapor Extraction System (SVES)

A SVES may be installed along the Site perimeter if the post-remedial soil vapor sampling indicates the need for mitigation measures to prevent the off-site migration of soil vapor. Post-remedial soil vapor samples will be collected from the RI soil vapor point locations, as shown on Figure 15, following completion of site-wide soil excavation. The target area for the SVES is the vadose zone (unsaturated soil above the groundwater table) around the Site perimeter. The SVE wells will be connected through a network of underground piping to a SVE blower, which will apply a vacuum to draw contaminated vapors from the treatment area through a granular activated carbon (GAC) vapor treatment system prior to discharge to the atmosphere. The proposed number and locations of the SVE wells, screen intervals, and piping layout will be included in a separate Remedial Design Document submitted to NYSDEC and NYSDOH for review and approval prior to installation. The conceptual SVES layout is shown on Figure 15.

12.1.1 SVES Treatment Area

The target area for the SVES is the vadose zone where subsurface soil sampling and soil vapor sampling identified elevated concentrations of PCE and TCE. The SVE wells will be installed at the approximate locations shown on Figure 15. The SVE wells will be installed to provide overlapping Radii of Influence (ROIs). Each SVE well is projected to have an ROI of approximately 30 feet; however, the final quantity and placement of SVE wells will be subject to the SVES pilot test.

The SVE wells will be connected through a network of underground piping to a SVE blower located in an aboveground equipment shed, which will apply a vacuum to draw contaminated vapors from the treatment area through a GAC vapor treatment system prior to discharging the treated vapor to the atmosphere.

12.1.2 SVES Pilot Test

12.1.2.1 Pilot Test SVE Well Installation

To conduct the pilot test, two SVE wells (biased towards areas with elevated RI soil vapor detections) will be installed at two of the proposed SVE well locations shown on Figure 15. The SVE wells will be installed with 4-inch diameter Schedule 40 PVC pipe, with a 15-foot length of 0.020-inch slotted screen and solid riser. A No. 2 sand filter pack will be installed around, and 2 feet above, the top of the well screen. Approximately 2 feet of hydrated bentonite will be installed above the sand filter pack and a non-shrinking bentonite-cement grout will be used to fill the annular space to approximately 1 foot below surface grade.

12.1.2.2 Temporary Vapor Monitoring Point Installation

Approximately eight temporary vapor monitoring points will be installed using a Geoprobe® DPP drill rig at locations surrounding the two SVE well locations selected for the pilot test. Each vapor monitoring point will be installed with a probe set at the approximate depth of the screened interval of the corresponding pilot test well. The vapor monitoring points will be generally installed 20 and 40 feet north, east, and west of each SVE well to the extent practicable, based on Site constraints and the proposed SVE wells' proximity to the Site boundaries.

At each monitoring point, a 6-inch stainless steel screen implant will be connected to Teflon™-lined tubing and installed to the target depth within the screened intervals of the SVE wells. The sampling tubing will extend from the end of the screen to above surface grade. The annular space around the point and tubing will be backfilled with clean silica sand to between approximately 3 and 6 inches above the screen. Hydrated bentonite will be used to fill the remaining void around the sampling tubing to approximately 1 foot below surface grade and a non-shrinking cement-grout mixture will fill the void to surface grade. Dependent on the final building design, the temporary vapor monitoring points may be utilized as permanent vapor monitoring points completed with flush-mounted 6-inch diameter watertight locking well covers.

12.1.2.3 Pilot Test Baseline Monitoring

Baseline monitoring will be conducted to provide data for static conditions prior to initiating the SVE pilot test. The measurements from each SVE well and vapor monitoring point will include the following:

- Vacuum/pressure of well headspace using a magnehelic gauge;
- Organic vapors at the well headspace using a PID; and
- Oxygen (O_2) at the well headspace using an O_2 meter.

Each temporary vapor monitoring point will be fitted with an expandable well cap that will be pre-drilled with a hose fitting and connected to a section of sampling hose to allow for headspace readings (vacuum/pressure, organic vapors, O_2) within the well. Magnehelic gauges measuring a range of 0 to 5 inches of water will be utilized during the baseline monitoring to measure vacuum and/or pressure at the observations wells.

12.1.2.4 Blower Calibration

A skid-mounted regenerative blower with a capacity of at least 100 cubic feet per minute (cfm) at a vacuum of 40 inches of water (in H_2O), will be utilized for the pilot test. The system will be equipped with a variable frequency drive (VFD), flow meter, and vacuum gauge. The blower specifications and blower curve for the blower that will be used during the pilot test will depend on availability at the time of the pilot test.

Following installation of the SVE pilot test blower assembly, the blowers, gauges, and monitoring equipment will be checked for functionality. The SVE pilot test blower will be operated initially to determine the maximum flow rate and applied vacuum. The system will then be shut off.

12.1.2.5 Pilot Test Implementation

To specify design details for the proposed SVE system, a pilot test will be performed to confirm the ROI around each SVE well and to evaluate the appropriate blower sizing. Effluent vapor sampling will also be conducted during the testing to help determine the change out schedule and sizing of the proposed GAC vapor treatment prior to discharge into the atmosphere.

The pilot test will be performed at both SVE pilot test wells in step tests utilizing three increasing air flow rates as a percentage (25%, 50%, and 100%) of the maximum blower capacity without inducing significant upwelling and/or water entrainment. During each step test, vacuum/pressure measurements will be collected at each monitoring point to assess the ROI for the SVE pilot test wells.

12.1.3 SVES Components

The sizing and configuration of final SVES components are subject to the results of the pilot test; however, they are likely to include the following:

1. 4-inch diameter SVE wells constructed with 15 feet of screen approximately 2-5 feet above the observed groundwater interface, pending results of the pilot test.
2. 4-inch and 6-inch diameter solid PVC piping connecting the SVE wells from the subsurface to an exterior equipment enclosure.
3. Accessories on the individual SVE lines, including throttling valves, sample ports, vacuum/pressure gauges, air flow rate gauges, temperature sensors, reducers, unions, etc., to be confirmed during final design and installation.
4. SVE blower(s), equipped with a variable-frequency drive (VFD) to throttle blower operation to appropriate conditions (vacuum and air flow rate) and a dilution valve with fresh air intake.
5. A control panel equipped with a telemetry system to notify select personnel of alarm conditions.
6. A GAC vapor treatment unit (size based on pilot testing) consisting of carbon units piped in series.
7. A 6-inch diameter galvanized steel exhaust stack fitted with a rain cap.
8. Pipe sleeves through concrete foundation elements.
9. Condensate sump(s), if necessary.
10. An exterior equipment enclosure with a grounding rod to house all mechanical equipment, including a knockout (i.e., moisture) drum and pump.

12.1.4 SVES Confirmatory Testing

SVES startup testing, including balancing the system, will be conducted to assess induced vacuum conditions throughout the Site. If subsurface vacuum and air flow rate conditions are not adequately induced in the treatment area (as determined by individual line vacuum and air flow rate readings, induced vacuum readings at adjacent SVE wells, and vacuum field extension readings at monitoring points), the SVES will be rebalanced by adjusting the applied vacuum and air flow rate conditions at the individual SVE wells until acceptable conditions are observed. Effluent GAC sampling will be conducted periodically to determine the carbon change out schedule.

12.1.5 SVES Operations and Maintenance (O&M)

After successful SVES startup, daily checks will be performed during the first week of operation and weekly checks will be performed during the first month of operation. After the initial month of operation, the SVES will be inspected at a minimum of once a month to ensure proper operation. Monthly checks will consist of individual SVES riser pipe gauge readings, suction fan inspections, and alarm checks. More detailed system maintenance instructions will be included in the SMP.

A proposal to discontinue the SVES may be submitted by the property owner based on confirmatory SVES operations and effluent vapor sample data that justifies such a request. The SVES will continue to be maintained and operational until permission to discontinue operation is granted in writing by NYSDEC and NYSDOH.

All as-built drawings, diagrams, design calculations, and manufacturer documentation for treatment systems will be included in the FER.

13.0 CRITERIA FOR COMPLETION OF REMEDIATION/ TERMINATION OF REMEDIAL SYSTEMS

13.1 Site Cover System

The site cover system is a permanent control, and the quality and integrity of this system will be inspected at defined, regular intervals in perpetuity.

13.2 SSDS

The active SSDS will not be discontinued without written approval by NYSDEC and NYSDOH. A proposal to discontinue the SSDS may be submitted by the property owner based on confirmatory data that justifies such request. The system will remain in place and operational until permission to discontinue use is granted in writing by NYSDEC and NYSDOH. Prior to discontinuing the SSDS, sub-slab soil vapor samples will be collected from the five SSDS vacuum monitoring points.

13.3 In-Situ Groundwater Treatment

The Remedial Design Report will include a contingency for subsequent injection events. The need for subsequent events will be determined based on the post-remedial groundwater monitoring results. Post-remedial sampling will be conducted from up to 15 groundwater monitoring wells in accordance with the QAPP (Appendix F).

13.4 Contingent SVES

If an SVES is required, it will not be discontinued without written approval by NYSDEC and NYSDOH. A proposal to discontinue the SVES may be submitted by the property owner based on confirmatory data that justifies such request. The system will remain in place and operational until permission to discontinue use is granted in writing by NYSDEC and NYSDOH.

14.0 INSTITUTIONAL CONTROLS

After the remedy is complete, the Site will have residual contamination remaining in place. Engineering Controls (ECs) for the residual contamination are necessary and have been incorporated into the remedy to render the overall Site remedy protective of public health and the environment, as required by 6 NYCRR § 375-3.8(a) and § 375-1.8(h). Two elements have been designed to ensure continual and proper management of residual contamination in perpetuity, as mandated by the Environmental Easement requirements of 6 NYCRR § 375-1.8(h)(2): an Environmental Easement and a Site Management Plan (SMP).

All as-built drawings, diagrams, calculation and manufacturer documentation for treatment systems will be presented in the FER. A Site-specific Environmental Easement will be recorded with New York City Department of Finance Office of the City Register to provide an enforceable means of ensuring the continual and proper management of residual contamination and protection of public health and the environment in perpetuity or until released in writing by NYSDEC. It requires that the grantor of the Environmental Easement and the grantor's successors and assigns adhere to all Engineering and Institutional Controls (ECs/ICs) placed on this Site by this NYSDEC-approved remedy. ICs provide restrictions on Site usage and mandate operation, maintenance, monitoring and reporting measures for all ECs and ICs. The SMP describes appropriate methods and procedures to ensure compliance with all ECs and ICs that are required by the Environmental Easement. Once the SMP has been approved by the NYSDEC, compliance with the SMP is required by the grantor of the Environmental Easement and grantor's successors and assigns.

14.1 Environmental Easement

An Environmental Easement, as defined in Article 71 Title 36 of the Environmental Conservation Law, is required when residual contamination is left on-Site after the Remedial Action is complete. As part of this remedy, an Environmental Easement approved by NYSDEC will be filed and recorded with the New York City Department of Finance Office of the City Register. The EE will be submitted as part of the Final Engineering Report.

The Environmental Easement renders the Site a Controlled Property. The Environmental Easement must be recorded with the New York City Department of Finance Office of the City Register before the Certificate of Completion can be issued by NYSDEC, in accordance with 6 NYCRR § 375-3.8(h)(3). A series of Institutional Controls are necessary under this remedy to implement, maintain and monitor these Engineering Control systems, prevent future exposure to residual contamination by controlling disturbances of the subsurface soil and restricting the use of the Site to restricted residential, commercial, or industrial use(s) only. These Institutional Controls are requirements or restrictions placed on the Site that are listed in, and required by, the Environmental Easement, and must include the elements specified in 6 NYCRR § 375-1.8(h)(1). Institutional Controls can, generally, be subdivided between controls that support Engineering Controls, and those that place general restrictions on Site usage or other requirements. Institutional Controls in both of these groups are closely integrated with the SMP, which provides all of the methods and procedures to be followed to comply with this remedy.

The ICs that support Engineering Controls are:

- Compliance with the Environmental Easement by the Grantee and the Grantee's successors and adherence of all elements of the SMP is required;
- All Engineering Controls must be operated and maintained as specified in this SMP;
- A site cover system consisting of a minimum of 2 feet of clean fill material in landscaped and pervious areas, concrete or impervious paved walkways, and concrete building slabs (5-inch thick concrete slab in the cellar, 3-inch thick concrete rat slab in the crawl space, and 10-inch

thick concrete slab in the first floor) must be inspected, certified and maintained as required in the SMP;

- A soil vapor mitigation system consisting of a SSDS under all building structures must be inspected, certified, operated and maintained as required by the SMP;
- A contingency SVES on the Site perimeter must be inspected, certified, operated and maintained as required by the SMP;
- The permanent groundwater treatment system must be maintained and inspected as required by the SMP;
- All ECs on the Controlled Property must be inspected and certified at a frequency and in a manner defined in the SMP;
- Groundwater, soil vapor and other environmental or public health monitoring must be performed as defined in the SMP;
- Data and information pertinent to Site Management for the Controlled Property must be reported at the frequency and in a manner defined in the SMP;
- On-Site environmental monitoring devices, including but not limited to, groundwater monitor wells, soil vapor probes and SSDS vacuum monitoring points, must be protected and replaced as necessary to ensure proper functioning in the manner specified in the SMP; and
- ECs may not be discontinued without an amendment or extinguishment of the Environmental Easement.

Adherence to these Institutional Controls for the Site is mandated by the Environmental Easement and will be implemented under the SMP (discussed in Section 12.2). The Controlled Property (Site) will also have a series of Institutional Controls in the form of Site restrictions and requirements. The Site restrictions that apply to the Controlled Property are:

- In-ground vegetable gardens and farming on the Site are prohibited;
- Use of groundwater underlying the Controlled Property is prohibited without treatment rendering it safe for intended purpose;
- All future activities on the Controlled Property that will disturb residual contaminated material are prohibited unless they are conducted in accordance with the soil management provisions in the SMP;
- The Controlled Property may be used for restricted residential, commercial or industrial use only, provided the long-term Engineering and Institutional Controls included in the SMP are employed;
- The Controlled Property may not be used for a higher level of use, such as unrestricted or single-family residential use without an amendment or extinguishment of this Environmental Easement;
- Grantor agrees to submit to NYSDEC a written statement that certifies, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP. NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an

alternate period of time that NYSDEC may allow. This annual statement must be certified by an expert that the NYSDEC finds acceptable.

14.2 Site Management Plan

Site Management is the last phase of remediation and begins with the approval of the FER and issuance of the Certificate of Completion (COC) for the Remedial Action. The SMP is submitted as part of the FER but will be written in a manner that allows its removal and use as a complete and independent document. Site Management continues in perpetuity or until released in writing by NYSDEC. The property owner is responsible to ensure that all Site Management responsibilities defined in the Environmental Easement and the SMP are performed.

The SMP should include methods to incorporate and track GSR. Measures should be taken to maintain a cost-effective, protective remedy that remains conscientious of the Site's environmental footprint. At a minimum, the following should be assessed: waste generation, energy usage, emissions, and water usage.

The SMP is intended to provide a detailed description of the procedures required to manage residual contamination left in place at the Site following completion of the Remedial Action in accordance with the BCA with the NYSDEC. This includes: (1) development, implementation, and management of all Engineering and Institutional Controls; (2) development and implementation of monitoring systems and a Monitoring Plan; (3) development of a plan to operate and maintain any treatment, collection, containment, or recovery systems (including, where appropriate, preparation of an Operation and Maintenance Manual); (4) submittal of Site Management Reports, performance of inspections and certification of results, and demonstration of proper communication of Site information to NYSDEC; and (5) defining criteria for termination of treatment system operation.

To address these needs, this SMP will include four plans: (1) an Engineering and Institutional Control Plan for implementation and management of EC/ICs; (2) a Monitoring Plan for implementation of Site Monitoring; (3) an Operation and Maintenance Plan for implementation of remedial collection, containment, treatment, and recovery systems; and (4) a Site Management Reporting Plan for submittal of data, information, recommendations, and certifications to NYSDEC. The SMP will be prepared in accordance with the requirements in NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation and the guidelines provided by NYSDEC.

Site management activities, reporting, and EC/IC certification will be scheduled on a certification period basis. The certification period will be annually. The SMP will be based on the certifying period relative to the date of issuance of the COC. The first submission will be due16 months after the issuance of the COC, and annually (or at another frequency as approved by NYSDEC) thereafter.

The SMP in the FER will include a monitoring plan for groundwater at the down-gradient Site perimeter to evaluate Site-wide performance of the remedy. Appropriately placed groundwater monitor wells will also be installed immediately down-gradient, within the Site boundary. of all source remediation areas for the purpose of evaluation of the effectiveness of the remedy that is implemented.

No exclusions for handling of residual contaminated soils will be provided in the SMP. All handling of residual contaminated material will be subject to provisions contained in the SMP.

15.0 FINAL ENGINEERING REPORT

A FER will be submitted to NYSDEC following implementation of the Remedial Action defined in this RAWP. The FER provides the documentation that the remedial work required under this RAWP has been completed and has been performed in compliance with this plan. The FER will provide a comprehensive account of the locations and characteristics of all material removed from the Site including the surveyed map(s) of all sources. The Final Engineering Report will include as-built drawings for all constructed elements, calculation and manufacturer documentation for treatment systems, certifications, manifests, bills of lading as well as the complete SMP. The FER will provide a description of the changes in the Remedial Action from the elements provided in the RAWP and associated design documents. The FER will provide a tabular summary of all performance evaluation sampling results and all material characterization results and other sampling, and chemical analysis performed as part of the Remedial Action. The FER will provide test results demonstrating that all mitigation and remedial systems are functioning properly. The FER will be prepared in conformance with DER-10.

Where determined to be necessary by NYSDEC, a Financial Assurance Plan will be required to ensure the sufficiency of revenue to perform long-term operations, maintenance and monitoring tasks defined in the Site Management Plan and Environmental Easement. This determination will be made by NYSDEC in the context of the FER review.

The FER will include written and photographic documentation of all remedial work performed under this remedy and an itemized tabular description of actual costs incurred during all aspects of the Remedial Action.

The FER will provide a thorough summary of all residual contamination left on the Site after the remedy is complete. Residual contamination includes all contamination that exceeds the Track 1 Unrestricted Use SCO in 6NYCRR Part 375-6. A table that shows exceedances from Track 1 Unrestricted SCOs for all soil/fill remaining at the Site after the Remedial Action and a map that shows the location and summarizes exceedances from Track 1 Unrestricted SCOs for all soil/fill remaining at the Site after the Remedial Action will be included in the FER.

The FER will provide a thorough summary of all residual contamination that exceeds the SCOs defined for the Site in the RAWP and must provide an explanation for why the material was not removed as part of the Remedial Action. A table that shows residual contamination in excess of Site SCOs and a map that shows residual contamination in excess of Site SCOs will be included in the FER.

The FER will include an accounting of the destination of all material removed from the Site, including excavated contaminated soil, historic fill, solid waste, hazardous waste, non-regulated material, and fluids. Documentation associated with disposal of all material must also include records and approvals for receipt of the material. It will provide an accounting of the origin and chemical quality of all material imported onto the Site.

The FER must include a discussion of the green remediation practices/technologies employed throughout the remedial program. A final footprint analysis using a DER accepted model, and any tracking methods used through the construction including restoration activities. Before approval of a FER and issuance of a COC, all project reports must be submitted in digital form on electronic media (PDF).

15.1 Certifications

The following certification will appear in front of the Executive Summary of the Final Engineering Report. The FER will be prepared, stamped and the following certification signed by an individual licensed or otherwise authorized in accordance with article 145 of the education law to practice the profession of engineering. The certification will include the following statements:

I, Rebecca Kinal, P.E., am currently a registered professional engineer licensed by the State of New York. I had primary direct responsibility for implementation of the remedial program for the 32-11 31st Street Site (BCA Index No. C241290).

I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Remedial Action Work Plan and Remedial Design was implemented and that all construction activities were completed in substantial conformance with the Department-approved Remedial Action Work Plan and Remedial Design.

I certify that the data submitted to the Department with this Final Engineering Report demonstrates that the remediation requirements set forth in the [Remedial Action Work Plan or Remedial Design] and in all applicable statutes and regulations have been or will be achieved in accordance with the time frames, if any, established for the remedy.

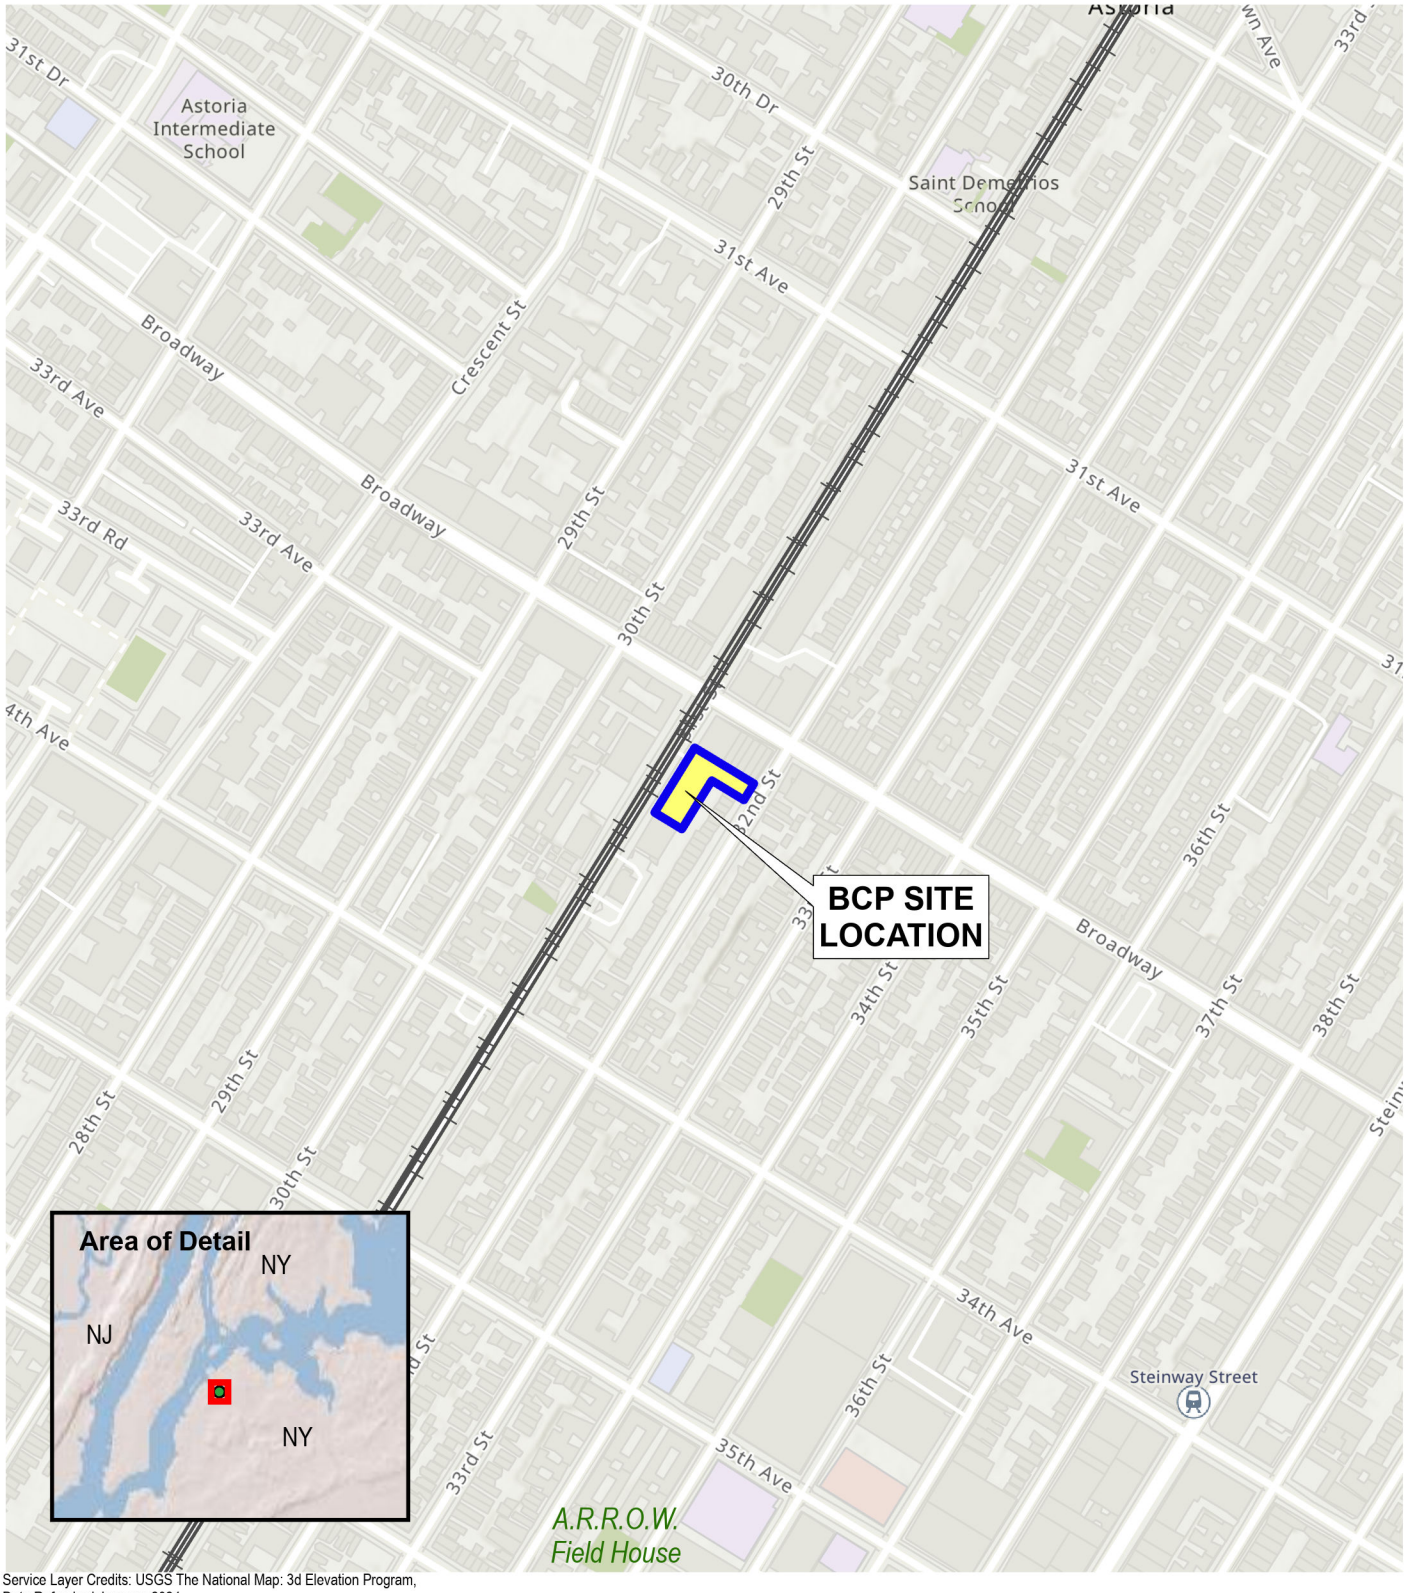
I certify that all use restrictions, Institutional Controls, Engineering Controls, and/or any operation and maintenance requirements applicable to the Site are contained in an environmental easement created and recorded pursuant ECL 71-3605 and that all affected local governments, as defined in ECL 71-3603, have been notified that such easement has been recorded.

I certify that a SMP has been submitted for the continual and proper operation, maintenance, and monitoring of all Engineering Controls employed at the Site, including the proper maintenance of all remaining monitoring wells, and that such plan has been approved by the Department.

I certify that any financial assurance mechanisms required by the Department pursuant to Environmental Conservation Law have been executed.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department.

I certify that all information and statements in this certification are true. I understand that a false statement made herein is punishable as Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Rebecca Kinal, of AKRF, Inc. at 440 Park Avenue South, New York, NY York 10016, am certifying as Owner's Designated Site Representative or the Site.



It is a violation of Article 145 of New York State Education Law for any person to alter this document in any way without the express written verification of adoption by any New York State licensed engineer in accordance with Section 7209(2), Article 145, New York State Education Law.

16.0 SCHEDULE

Table I
Proposed Project Schedule

Activity	Time To Complete
RIR Submitted to NYSDEC	July 2026
Draft RAWP Submitted to NYSDEC	July 2026
NYSDEC Issues Comments on Draft RIR and RAWP	End of August 2026
Revised RIR and RAWP Submitted to NYSDEC	September 2026
45-day Public Comment Period for RAWP is Initiated	September 2026
NYSDEC Approves RIR	October 2026
Public Comment Period for RAWP Ends	October 2026
Final RAWP Submitted/NYSDEC Approves RAWP and Issues Decision Document	November 2026
Issue Remedial/Construction Notice Fact Sheet and Conduct Pre-Construction Meeting	December 2026
Begin Redevelopment (Construction) with Implementation of RAWP	January 2027
Execution of Environmental Easement (if required)	July 2027
Draft Site Management Plan (SMP) Submitted to NYSDEC	August 2027
Draft Final Engineering Report and Fact Sheet	September 2027
Certificate of Completion and Fact Sheet	December 2027
Completion of Building (first occupancy)	December 2029

Part 375 Soil Cleanup Objectives (SCOs): SCOs listed in the New York State Department of Environmental Conservation (NYSDEC) "Part 375" Regulations (6 NYCRR Part 375).

Exceedances of NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) are presented in bold font.

Exceedances of NYSDEC Restricted Residential Soil Cleanup Objectives (RRSCOs) are shaded

mg/kg: milligrams per kilogram = parts per million (ppm)
J: The concentration given is an estimated value.
T: Indicates that a quality control parameter has exceeded laboratory limits
D: Indicates an identified compound in an analysis that has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analyses

Subsurface (Phase II) and Remedial Investigations
Notes

DEFINITIONS

D : Indicates an identified compound in an analysis that has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analyses.

J : The concentration given is an estimated value.

K : Reported concentration value is proportional to dilution factor and may be exaggerated

L : Sample result is estimated and biased low.

ND : The standard is a non-detectable concentration by the approved analytical method.

NR : Not reported.

NS : No standard.

R : Indicates the reported result is unusable. (note: the analyte may or may not be present.)

T : Indicates that a quality control parameter has exceeded laboratory limits.

U : The analyte was not detected at the indicated concentration.

UJ : The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg : milligrams per kilogram

ppb : parts per billion

ppt : parts per trillion

µg/L : micrograms per liter

µg/m^3 : micrograms per cubic meter of air

Tables 2-15

Queens, NY
Subsurface (Phase II) and Remedial Investigations
Notes

STANDARDS

Part 375 SCOs : Soil Cleanup Objectives (SCOs) listed in New York State Department of Environmental Conservation (NYSDEC) "Part 375" Regulations [6 New York Codes, Rules and Regulations (NYCRR) Part 375].

Note: Endosulfans ABS represents the detected sum of Endosulfan I, Endosulfan II, and Endosulfan Sulfate.

Exceedances of Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) are highlighted in bold font.
Exceedances of Part 375 Restricted Residential Soil Cleanup Objectives (RRSCOs) are highlighted in gray shading.
Exceedances of Part 375 Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) are underlined.

NYSDEC Part 375 PFAS Guidance Values : New York State Department of Environmental Conservation (NYSDEC) Sampling, Analysis and Assessment Of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs Issued April 2023.

Exceedances of NYSDEC PFAS Unrestricted Use Guidance Values (UUGVs) are highlighted in bold font.
Exceedances of NYSDEC PFAS Restricted Residential Guidance Values (RRGVs) are highlighted in gray shading.

NYSDEC Class GA AWQSGVs : New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs).

Exceedances of NYSDEC Class GA AWQSGVs are highlighted in bold font.

Estimated Remedial Costs

	Quantity	Units	Unit Rate	Cost
Support of Excavation (SOE)				
- SOE for Track 2/4 areas	1	Estimated Total	$1,500,000	$1,500,000
Soil Excavation and Disposal Subtotal				**$1,500,000**
Soil Excavation and Backfill[1]				
- Soil disposal (estimated non-haz waste)	9,475	Tons	$75	$710,625
- Backfill	1,100	CY	$50	$55,000
Soil Excavation and Disposal Subtotal				**$770,000**
Groundwater Treatment				
- ISCO Treatment (one event)	1	Estimated Total	$600,000	$600,000
- Temporary Well Installation	32	EA	$2,500	$80,000
- Contingency Permanent Injection Well Installation	32	EA	$4,500	$144,000
- Contingency Permanent Injection System Installation	1	EA	$100,000	$100,000
- Post-Remedial Monitoring Well Installation	6	EA	$4,500	$27,000
ISCO Subtotal				**$960,000**
Sub-Slab Depressurization System (SSDS) and Vapor Barrier				
- Filter fabric, gravel layer, underground piping	13,730	SF	$6	$82,380
- Vapor Barrier	13,730	SF	$12	$164,760
- Aboveground piping, blowers, accessories & electrical	1	Lump Sum	$40,000	$40,000
SSDS Subtotal				**$290,000**
Contingent Soil Vapor Extraction System (SVES)				
- Pilot Test	1	Lump Sum	$100,000	$100,000
- Design	1	Lump Sum	$50,000	$50,000
- Soil Vapor Extraction Well Installation	10	EA	$5,000	$50,000
- Aboveground piping, blowers, accessories & electrical	1	Lump Sum	$400,000	$400,000
SVE Subtotal				**$600,000**
Analytical Laboratory Fees				
- Laboratory analysis for endpoint samples, import/reuse, groundwater sampling, and data validation	1	Estimated Total	$200,000	$200,000
Analytical Laboratory Subtotal				**$200,000**
Consulting Services				
- Engineering/Environmental Oversight, Design, and Coordination	1	Estimated Total	$450,000	$450,000
Site Preparation Subtotal				**$450,000**
Site Management Plan and Final Engineering Report	1	Lump Sum	$50,000	$50,000
Remedial Design Report	1	Lump Sum	$50,000	$50,000
Reporting Subtotal				**$100,000**
Estimated Total				**$4,270,000**
Estimated Total w/ SVE Contingency				**$4,870,000**

Notes/Assumptions:

[1] ***Soil Excavation***

Track 2/Cellar	5,417	Cubic Yards		
Track 4/Outside Cellar	817	Cubic Yards		
Incremental volume for hotspots	83	Cubic Yards		
Total	**6,317**	**Cubic Yards**	**9,475**	**Tons**

Assumes 1.5 Tons per cubic yard

GENERAL NOTES

1. ELEVATIONS AND ESTABLISHED GRADES SHOWN HEREON REFER TO NAVD 1988 WHICH IS 1.625 FEET BELOW THE QUEENS TOPOGRAPHICAL BUREAU DATUM.
2. ESTABLISHED GRADES SHOWN HEREON REFER TO TOP OF CURB. IF ESTABLISHED GRADES VARY SUBSTANTIALLY WITH EXISTING ELEVATIONS CONSULT WITH THE HIGHWAY DEPARTMENT BEFORE DESIGNING IMPROVEMENTS.
3. SIZES AND LOCATIONS OF WATER MAINS SHOWN HEREON AS SUPPLIED BY THE DEPARTMENT OF WATER SUPPLY, BOROUGH OF QUEENS. LOCATIONS OF WATER SUPPLY MANHOLES, HYDRANTS AND WATER VALVES AS OBTAINED FROM FIELD MEASUREMENT.
4. SIZES AND TYPES OF SEWERS SHOWN HEREON AS OBTAINED FROM THE BOROUGH OF QUEENS SEWER DEPARTMENT RECORDS. SEWER MANHOLE RIM AND INVERT ELEVATIONS SHOWN HEREON OBTAINED BY FIELD MEASUREMENTS UNLESS INDICATED (*) WHICH DENOTES INVERT INACCESSIBLE OR MANHOLE NOT FOUND IN FIELD. INFORMATION SHOWN IN THIS MANNER IS AS OBTAINED FROM THE BOROUGH OF QUEENS SEWER DEPARTMENT RECORDS.
5. ELECTRIC AND GAS INFORMATION SHOWN HEREON AS SUPPLIED BY THE CONSOLIDATED EDISON COMPANY OF NEW YORK. (CONSOLIDATED EDISON COMPANY DOES NOT PROVIDE UNDERGROUND ELECTRIC & GAS INFORMATION).
6. TELEPHONE INFORMATION SHOWN HEREON AS SUPPLIED BY THE NEW YORK TELEPHONE COMPANY.
7. FIRE ALARM INFORMATION SHOWN HEREON AS SUPPLIED BY THE NEW YORK CITY FIRE DEPARTMENT. AERIAL FIRE ALARM SERVICES.
8. CABLE TELEVISION INFORMATION SHOWN HEREON AS SUPPLIED BY THE CABLE VISION COMPANY OF NEW YORK. AERIAL CABLE TV SERVICES.
9. LOCATIONS OF ALL UTILITIES AND SUBSTRUCTURES ARE APPROXIMATE ONLY. THE INFORMATION GIVEN ON THE SURVEY PERTAINING TO UTILITIES AND SUBSTRUCTURES IS NOT CERTIFIED AS TO ACCURACY OR COMPLETENESS. CONSULT WITH THE APPROPRIATE COMPANY OR AGENCY BEFORE DESIGNING IMPROVEMENTS.
10. THE OWNER, CONTRACTOR AND/OR HIS AGENTS MUST NOTIFY THE APPROPRIATE UTILITY COMPANIES AND/OR AGENCIES AT LEAST 72 HOURS PRIOR TO ANY CONSTRUCTION IN ACCORDANCE WITH INDUSTRIAL CODE RULE 753.
11. NO EVIDENCE OF EXISTING STREAMS, CREEKS, DITCHES OR WATER COURSES ON/OR CROSSING PROPERTY SURVEYED, OTHER THAN THOSE SHOWN.
12. NOT ALL SUBSURFACE INFORMATION PLOTTED.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: 2821-4B87-B580

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

AKRF, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

APPENDIX D
STANDARDS, CRITERIA, AND GUIDANCE

1.0 SCGS FOR SITE CHARACTERIZATION AND REMEDIAL INVESTIGATION

The following standards and criteria typically will apply to Site Characterizations and Remedial Investigations conducted in New York State:

- 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes
- 6 NYCRR Part 375 – Environmental Remediation Programs
- 6 NYCRR Parts 700-706 - Water Quality Standards
- 6 NYCRR Part 182 - Endangered & Threatened Species of Fish & Wildlife
- 6 NYCRR Part 608 - Use and Protection of Waters
- 6 NYCRR Part 661 - Tidal Wetlands - Land Use Regulations
- 6 NYCRR Part 663 - Freshwater Wetlands Maps and Classification
- 6 NYCRR Part 257 - Air Quality Standards
- 10 NYCRR Part 5 of the State Sanitary Code - Drinking Water Supplies (May 1998)
- 29 CFR Part 1910.120 - Hazardous Waste Operations and Emergency Response
- 6 NYCRR Part 175 - Special Licenses and Permits--Definitions and Uniform Procedures
- Sampling, Analysis, And Assessment of Per- And Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (April 2023)

The following guidance typically applies to Site Characterizations and Remedial Investigations conducted in New York State:

- TOGS 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations
- Fish and Wildlife Impact Analysis for Inactive Hazardous Waste Sites (October 1994)
- Technical Guidance for Screening Contaminated Sediments (January 1999)
- Niagara River Biota Contamination Project: Fish Flesh Criteria for Piscivorous Wildlife (July 1987)
- Wildlife Toxicity Assessment for Cadmium in Soils (May 1999)
- Air Guide 1 - Guidelines for the Control of Toxic Ambient Air Contaminants
- NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006)

2.0 SCGS FOR REMEDY SELECTION

The following standards and criteria typically apply to the remedy selection process conducted in New York State:

- 6 NYCRR Part 375 - Environmental Remediation Programs
- 6 NYCRR Part 376 - Land Disposal Restrictions
- 6 NYCRR Part 608 - Use and Protection of Waters
- 6 NYCRR Part 661 - Tidal Wetlands - Land Use Regulations
- 6 NYCRR Part 663 - Freshwater Wetlands - Permit Requirements
- 6 NYCRR Parts 700-706 - Water Quality Standards
- 19 NYCRR Part 600 - Waterfront Revitalization and Coastal Resources

The following guidance typically applies to the remedy selection process conducted in New York State:

- TAGM 4044 - Accelerated Remedial Actions at Class 2, Non-RCRA Regulated Landfills (March 1992)
- TAGM 4051 - Early Design Strategy (August 1993)
- Citizen Participation in New York's Hazardous Waste Site Remediation Program: A Guidebook (June 1998)
- TAGM 3028 - "Contained In" Criteria for Environmental Media: Soil Action Levels (August 1997)
- Freshwater Wetlands Regulations - Guidelines on Compensatory Mitigation (October 1993)
- Air Guide 1 - Guidelines for the Control of Toxic Ambient Air Contaminants
- Technical Guidance for Screening Contaminated Sediments (January 1999)

3.0 SCGS FOR UNDERGROUND STORAGE TANK CLOSURE

The following standards and criteria typically apply to UST closures conducted in New York State:

- 6 NYCRR Part 612 - Registration of Petroleum Storage Facilities (February 1992)
- 6 NYCRR Part 613 - Handling and Storage of Petroleum (February 1992)
- 6 NYCRR Part 614 - Standards for New and Substantially Modified Petroleum Storage Tanks (February 1992)
- 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes (November 1998)
- 6 NYCRR Subpart 374-2 - Standards for the Management of Used Oil
- 6 NYCRR Parts 700-706 - Water Quality Standards
- 40 CFR Part 280 - Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks

The following guidance typically applies to UST closures conducted in New York State:

- Spill Response Guidance Manual
- Permanent Closure of Petroleum Storage Tanks
- TAGM 3028 - "Contained In" Criteria for Environmental Media: Soil Action Levels (August 1997)
- TOGS 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations
- Air Guide 1 - Guidelines for the Control of Toxic Ambient Air Contaminants
- NYSDOH Environmental Health Manual CSFP-530 - “Individual Water Supplies - Activated Carbon Treatment Systems”

4.0 SCGS FOR REMEDIAL ACTION

The following standards and criteria typically apply to Remedial Actions conducted in New York State:

- 29 CFR Part 1910.120 - Hazardous Waste Operations and Emergency Response
- 40 CFR Part 144 - Underground Injection Control Program
- 10 NYCRR Part 67 – Lead
- 12 NYCRR Part 56 - Industrial Code Rule 56 (Asbestos)
- 6 NYCRR Part 175 - Special Licenses and Permits-Definitions and Uniform Procedures
- 6 NYCRR Part 361 - Siting of Industrial Hazardous Waste Facilities
- 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes (November 1998)
- 6 NYCRR Part 372 - Hazardous Waste Manifest System and Related Standards for Generators, Transporters and Facilities (November 1998)
- 6 NYCRR Subpart 373-4 - Facility Standards for the Collection of Household Hazardous Waste and Hazardous Waste from Conditionally Exempt Small Quantity Generators (November 1998)
- 6 NYCRR Subpart 374-1 - Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities (November 1998)
- 6 NYCRR Subpart 374-3 - Standards for Universal Waste (November 1998)
- 6 NYCRR Part 375 - Inactive Hazardous Waste Disposal Sites (as amended January 1998)
- 6 NYCRR Part 376 - Land Disposal Restrictions
- 19 NYCRR Part 600 - Waterfront Revitalization and Coastal Resources
- 6 NYCRR Part 608 - Use and Protection of Waters
- 6 NYCRR Part 661 - Tidal Wetlands - Land Use Regulations
- 6 NYCRR Part 663 - Freshwater Wetlands - Permit Requirements
- 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998)
- 6 NYCRR Part 750 through 758 - Implementation of NPDES Program in NYS (“SPDES Regulations”)
- Technical Guidance for Screening Contaminated Sediments (January 1999)
- DER-31 Green Remediation (January 2011)

The following guidance typically applies to Remedial Actions conducted in New York State:

- TAGM 4013 - Emergency Hazardous Waste Drum Removal/ Surficial Cleanup Procedures (March 1996)
- TAGM 4046 - Determination of Soil Cleanup Objectives and Cleanup Levels (January 1994)
- TAGM 4059 - Making Changes To Selected Remedies (May 1998)
- TAGM 3028 - "Contained In" Criteria for Environmental Media: Soil Action Levels (August 1997)

- Citizen Participation in New York's Hazardous Waste Site Remediation Program: A Guidebook (June 1998)
- TOGS 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations
- TOGS 1.3.8 - New Discharges to Publicly Owned Treatment Works
- TOGS 2.1.2 - Underground Injection/Recirculation (UIR) at Groundwater Remediation Sites
- Air Guide 1 - Guidelines for the Control of Toxic Ambient Air Contaminants
- State Coastal Management Policies
- OSWER Directive 9200.4-17 - Use of Monitored Natural Attenuation at Superfund, RCRA Corrective Action, and Underground Storage Tank Sites (November 1997)
- NYSDOH Environmental Health Manual CSFP-530 - "Individual Water Supplies - Activated Carbon Treatment Systems"

5.0 SCGS FOR SITE MANAGEMENT

The following standards and criteria typically apply to Site Management activities conducted in New York State:

- 6 NYCRR Part 175 - Special Licenses and Permits--Definitions and Uniform Procedures

The following guidance typically applies to Site Management activities conducted in New York State:

- Groundwater Monitoring Well Decommissioning Procedures (May 1995)
- The activity is a component of a program selected by a process complying with the public participation requirements of section 1.10, to the extent applicable.
- NYSDOH Environmental Health Manual CSFP-530 - "Individual Water Supplies - Activated Carbon Treatment Systems"

Re: **Phase I Environmental Site Assessment**
31-07 31st Street
Astoria, New York
AKRF Project Number 210124

Dear Mr. Kokinakis:

AKRF, Inc. (AKRF) is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 unless noted otherwise in Section 9.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact Deborah at 646-388-9544.

Sincerely,
AKRF, Inc.

Deborah Shapiro, QEP
Sr. Vice President

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Mega Development LLC to prepare a Phase I Environmental Site Assessment (ESA) of 31-07 31st Street, located in Astoria, Queens (the "Property"). The Property was identified as Queens Tax Block 611, Lot 25. The Property was generally bounded by commercial units to the north, residential/institutional units to the south, commercial/residential units and 32nd Street to the east, and 31st Street and an elevated subway station to the west (as shown on Figure 1). The Property consisted of an existing 20,880 square-foot municipal parking facility.

The greater surrounding area was primarily commercial/retail with some residential and transit uses. The objective of this assessment was to identify any potential environmental concerns associated with the Property resulting from past or current usage of the Property or neighboring properties.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard and/or data gaps are described in Section 9.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

A Tier 1 Vapor Encroachment Screen was also conducted in accordance with ASTM Standard E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. The term "Vapor Encroachment Condition" (VEC) means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a property caused by the release of vapors on or near the property.

A summary of the assessment findings is presented below:

Recognized Environmental Conditions (RECs)/Vapor Encroachment Conditions (VECs)

- One groundwater monitoring well was observed on 31st Street sidewalk west-adjacent of the Property.
- Sanborn maps, city directories, and the environmental databases reviewed identified automotive and dry cleaning uses in the surrounding area.

Business Environmental Risks (including items outside the scope of ASTM E1527-13 such as asbestos containing material [ACM], lead-based paint [LBP] and/or polychlorinated biphenyls [PCBs] in building materials or fill/debris)

- Buried demolition debris from former on-site structures could contain ACM, LBP, PCBs and/or underground storage tanks.

De minimus

- Three five-gallon containers of orphan waste were located on the southeaster-most corner of the Property. Two of the three containers were labeled as kerosene and lacquer; the third container was unmarked. These containers should be removed from the Property and properly disposed of in accordance with federal, state, and local requirements.

Recommendations

- A subsurface (Phase II) investigation should be conducted at the Property to investigate the identified RECs/VECs.

- During any future subsurface disturbance, excavated soil should be handled and disposed of in accordance with all applicable regulatory requirements, with testing as required. Any evidence of a petroleum spill must be reported to the NYSDEC and addressed in accordance with applicable requirements. If any tanks are encountered, they should be properly assessed, closed, and removed in accordance with federal, state, and local regulations. Transportation of material leaving the Property for off-site disposal should be in accordance with federal, state, and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- If dewatering is required during future construction activities, water must be discharged in accordance with the New York City Department of Environmental Protection (NYCDEP) requirements.
- Any activities with the potential to disturb LBP must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - Lead Exposure in Construction) and NYC Local Laws regarding tenant notification, contractor licensing, abatement procedures, etc. Additional requirements, even if no disturbance is planned (e.g., tenant notification, inspections, contractor licensing, and abatement) apply to occupied residential buildings.
- Unless there is labeling or test data that indicates that fluorescent lights and other electrical equipment are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- Any suspect ACM- containing material and/or LBP encountered during excavation should be properly characterized, managed and disposed of in accordance with applicable regulations.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Mega Development LLC (User or Client) to prepare a Phase I Environmental Site Assessment (ESA) of 31-07 31st Street, located in Astoria, Queens (the "Property"). The Property was identified as Queens Tax Block 611, Lot 25. The Property was generally bounded by commercial units to the north, residential/commercial units to the south, commercial/residential units and 32nd Street to the east, and 31st Street and an elevated subway station to the west (as shown on Figure 1). The Property consisted of an existing approximately 0.5-acre municipal parking facility (as shown on Figure 2).

The objective of this assessment was to identify any potential environmental concerns associated with the Property resulting from past or current usage of the Property or surrounding properties.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice)* and ASTM Standard E2600-15 (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*). Any exceptions to, or deletions from, this practice are described in Section 9.0. The scope included the following:

- Observations of accessible portions of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; leaks; odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor and/or groundwater) within, from and onto the Property.
- The reconnaissance of accessible portions of the Property included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint (LBP). However, no samples were collected or analyzed as part of reconnaissance and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use maps for the Property and nearby sites were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and other properties within the ASTM-defined radii: the National Priority List (NPL); Superfund Enterprise Management System (SEMS), including Superfund Enterprise Management System Archive (SEMS-ARCHIVE); Comprehensive Environmental Response, Compensation, and Liability Information System-No Further Remedial Action Planned (CERCLIS-NFRAP); Corrective Actions Report (CORRACTS); Resource Conservation and Recovery Information System (RCRIS); and Emergency Response Notification System (ERNS). Federal ASTM supplemental records reviewed included: Toxic Chemical Release Inventory System (TRIS); Superfund Consent Decrees (CONSENT); Records of Decision (ROD); National Priority List Deletions (Delisted NPL); and United States Brownfields.
- The following state regulatory databases were reviewed to determine the regulatory status of the Property and other properties within predetermined radii: petroleum and hazardous material spills

(SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); and New York Brownfield Cleanup Program (BCP).

- Local agency reviews including online Buildings and Finance Departments records and Environmental Quality Review (CEQR) E Designation-sites were conducted for the Property only.
- Review of historic reports including non-ASTM scope items.

2.0 PHYSICAL SITE DESCRIPTION

Visual inspection of the Property was performed on May 4, 2021 by Ms. Elizabeth Baird of AKRF. Ms. Baird was not accompanied by a Client representative during the inspection. At the time of the inspection, the weather was partly cloudy and approximately 65ºF with generally good visibility. The majority of the parking spaces were occupied and surface conditions of the Property were not fully visible during inspection.

The Property was inspected for the presence of stained surfaces and soil, evidence of storage tanks, drums, leaking pipes, transformers, and any other evidence of hazardous material usage and storage on-site. Neighboring properties were also viewed, but only from public rights-of-way. Photographs documenting the inspection are included in Appendix A.

2.1 General Site Conditions

The Property consisted of an approximately 20,880 square foot municipal parking facility for short-term parking. The Property was generally bounded by commercial/retail units to the north, residential/commercial units to the south, residential units and 32nd Street to the east, and 31st Street/an elevated subway station to the west.

The parking facility was comprised of an at-grade asphalt paved parking lot with 60 parking spaces and two pay stations. The asphalt pavement was in poor condition with cracking, patches, and petroleum-like staining observed. Several pole lights, steel traffic bollards, and guard rails were observed on the Property. No other above-grade structures were observed on the Property.

Three apparent storm drains were observed and were presumably connected to the municipal sewer system. Utility manholes were observed along 31st Street and 32nd Street.

Three five-gallon containers of orphan waste were observed in the southeastern-most corner of the Property. Two of the containers were labeled as kerosene and lacquer; the remaining container was unmarked. One trash can, containing household waste, was located on the Property.

No pits, ponds, or lagoons exhibiting evidence (e.g., discolored water, distressed vegetation, obvious wastewater discharge) of holding liquids or sludge containing hazardous substances or petroleum products were observed on the Property. One groundwater monitoring well was observed in the eastern sidewalk along 31st Street, along the western Property boundary. A second monitoring well was observed in the sidewalk of the west-adjacent Property block.

2.2 Topography and Hydrogeology

Based on the U.S. Geological Survey, Central Park, New York 2013 Quadrangle map, the Property lies at approximately 49 feet above mean sea level, with the general surrounding area topography gently sloping down in a westerly direction towards the East River. The East River is located approximately one mile west of the Property.

Based upon a review of topographical data, groundwater is assumed to flow in a westerly direction toward the East River; however, actual groundwater flow at the Property can be affected by many factors, including past filling activities, underground utilities, and other subsurface openings or obstructions such as basements, nearby subway lines, and other factors beyond the scope of this study. There are no surface water bodies or streams on or immediately adjacent to the Property. Groundwater in Queens is not used as a source of potable water.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

During the Property inspection, no evidence, such as manways, vent pipes, or dispenser equipment, was observed that would indicate past or present USTs at the Property. NYC Department of Buildings (NYCDOB) records did not indicate any USTs on the Property.

Off-site USTs are discussed in Section 5.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

No evidence, such as tanks or vaults likely to contain tanks, vent pipes or fill caps, was observed during the reconnaissance to indicate that ASTs are or were present. NYCDOB records did not indicate any records of ASTs at the Property.

Off-site ASTs are discussed in Section 5.2.2.

2.4 Polychlorinated Biphenyls (PCBs)

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

No suspect PCB-containing equipment was identified, and no obvious leaks or odors were noted at the Property.

2.5 Lead-Based Paint (LBP)

Although use of lead-based paint (LBP) has diminished since the 1960s, LBP may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children, especially when it is in poor condition.

Painted surfaces on the Property were observed to be in generally good to fair condition, with some damaged paint noted on the steel traffic bollards. Any renovation activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—Lead Exposure in Construction).

2.6 Utilities

Consolidated Edison provided electricity to the Property and electricity and natural gas to the surrounding area. The Property was connected to the New York City municipal water and sewer systems.

2.7 Waste Management and Chemical Handling

General refuse generated at the Property was presumably removed by the NYC Department of Sanitation. No evidence of current on-site hazardous waste operations was observed during the site reconnaissance.

2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. According to a New York State Department of Health database, 563 radon tests were conducted in Queens in December 2020. The average basement radon level was found to be 1.22 picoCuries per liter (pCi/L), below the USEPA recommended action level of 4.0 pCi/.

3.0 ASBESTOS-CONTAINING MATERIAL (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, drywall, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Suspect ACM was not observed during the reconnaissance. However, this reconnaissance did not constitute and cannot substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintaining the materials in good condition and, prior to any renovation or demolition, inspection/sampling by a NYC-certified asbestos investigator to determine whether the project will disturb ACM. Any ACM that would be disturbed by the renovation or demolition must be properly removed prior to such activity.

4.0 ADJACENT LAND USE

The Property was abutted to the north by commercial/retail units, followed by Broadway; to the west by 31st Street and an elevated subway station, followed by commercial/retail and residential units; to the south by residential units and the Cretans Association Omonia, Inc. Cultural Facility, followed by retail and commercial units; and to the east by residential units and 32nd Street. The greater surrounding area was primarily commercial/retail, residential and transit uses.

5.0 PROPERTY HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use Maps

Historical maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1898, 1915, 1936, 1948, 1950, 1967, 1977, 1979, 1981, 1985, 1986, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005, and 2006. Copies of the maps are provided in Appendix B.

1898

Property:

The Property was depicted as multiple vacant lots with one dwelling and associated shed located on the northern portion of the Property.

Surrounding Properties:

The surrounding properties were primarily vacant lots and some residential dwellings. The William H. Siebrecht Florist Greenhouses were identified north of Broadway between 30th and 31st Streets.

1915

Property:

The Property remained primarily vacant. The previously identified dwelling and shed were replaced with a new dwelling and shed located in the northwestern portion of the Property.

Surrounding Properties:

The surrounding areas were further developed as mostly residential with some commercial uses. A beer bottling and wagon shed was identified on the north-adjacent Property block. Retail stores and wagon sheds were identified on the northwest-adjacent Property block.

1936

Property:

The Property remained mostly unchanged from the 1915 map except for the addition of a one-car garage to the east of the previously identified dwelling.

Surrounding Properties:

The surrounding areas were further developed with residential apartment buildings and rowhouse dwellings as well as commercial uses. A two-story building with shops, a bowling alley, and offices was noted north-adjacent to the Property. The elevated Broadway Subway Station was identified running north-south along 31st Street. The previously identified beer bottling and wagon shed was noted as retail stores. The Broadway Theater Moving Picture Studio was identified north of Property at the intersection of Broadway and 32nd Street. A garage with a gasoline tank and auto repair shop with three adjacent gasoline tanks were noted northwest of the Property at the intersection of Broadway and 29th Street.

1948

Property:

The Property remained mostly unchanged from the 1936 map.

Surrounding Properties:

The surrounding areas continued to develop with more residential (i.e., apartment buildings and rowhouses) and commercial/retail uses. The previously identified William H. Siebrecht Florist Greenhouses were now noted as residential dwellings. The previously identified Broadway Theater Moving Picture Studio and the auto garage and repair shop with gasoline tanks remained unchanged from the 1936 map.

1950

Property:

The Property remained mostly unchanged from the 1948 map except for the configuration and number of the property lot lines, which was reduced to five.

Surrounding Properties:

The surrounding area remained mostly unchanged from the 1948 map. The previously identified auto repair shop and nearby gasoline tanks were no longer depicted northwest of the Property.

1967-1977

Property:

The Property remained unchanged from the 1950 map.

Surrounding Properties:

The surrounding area remained mostly unchanged from the 1950 map. A filling station was identified north-northeast of the Property on 31st Street. A commercial building was identified south-adjacent to the Property. A mechanic's shop and warehouse was identified southwest of the Property along 31st Street between Broadway and 34th Avenue. A dry cleaners was identified along Broadway between 32nd and 33rd Streets, northeast of the Property. The building previously identified as Broadway Theater Moving Picture Studio was no longer identified as such. The eastern-most portions of the 1967 and 1977 maps were indiscernible due to poor image quality.

1979-1986

Property:

The previously identified dwelling was no longer depicted on the Property. The previously identified one-car garage remained on the Property. The western portion of the Property was identified as parking.

Surrounding Properties:

The Property block and surrounding areas remained mostly unchanged, with minimal changes in commercial and residential uses.

1988-1989

Property:

The previously identified one-car garage was no longer identified on the map and the entirety of the Property was labeled as parking.

Surrounding Properties:

The Property block and surrounding areas remained mostly unchanged, with minimal changes in commercial and residential uses.

1990

Property:

The Property remained unchanged from the 1988-1989 maps.

Surrounding Properties:

The previously identified mechanic's shop was noted as a fitness center; the neighboring mechanic's warehouse remained unchanged. The surrounding areas remained mostly unchanged, with minimal changes in commercial and residential uses.

1991-2006

Property:

The Property remained unchanged from the 1990 map.

Surrounding Properties:

The Property block and surrounding areas remained mostly unchanged, with minimal changes in commercial and residential uses.

In summary, historical Sanborn maps indicated that the Property was developed as a residential dwelling from at least 1898 to 1979. The Property was developed in its current configuration as a parking facility by 1988.

Sanborn maps identified primarily residential and commercial uses adjacent to the Property and in the surrounding area. Some of the pertinent commercial listings between circa 1936 and 2006 included: a filling station located north-northeast of the Property; a garage and auto repair shop with gasoline tanks located northwest of the Property; a dry cleaners located northeast of the Property; and a machine shop and warehouse located southwest of the Property.

5.1.2 Property Tax Files and Zoning Records

Based on NYC Department of City Planning's Zoning Map information, the Property was zoned C1-2 (Commercial District Overlay) and R5 (Residential).

5.1.3 Recorded Land Title Records

Copies of title records were not provided to AKRF for review. A review of computerized New York City Automated City Register Information System (ACRIS) records, which included records of financial transactions involving the Property, identified no environmental liens for the Property.

5.1.4 Local Street Directories

A City Directory prepared by Environmental Data Resources, Inc. (EDR) was reviewed as part of this Phase I ESA. The City Directory consisted of the names of businesses located on-site and in adjacent properties, compiled from city and reverse telephone directories at approximately five-year intervals starting in 1920. A summary of the directory findings is below:

The Property was listed in the City Directory in 1934, 1945, 1967, 2000, and 2005; all occupants identified were residential occupants. No occupants indicating non-residential use were listed.

In the surrounding areas, the directories identified mainly residential uses, with some proximal commercial uses, including:

- TR Service Station at 31-70 31st Street (located north-northeast of the Property) in 1962, 1967, 1970, and 1983.
- Riteway/Bartley's Service Station at 32-02 30th Street (located southwest of the Property) in 1939 and 1962.
- Brighton Cleaners/City Cleaners at 31-84 33rd Road/31-85 33rd Street/33-14 Broadway (located northeast of the Property) in 1934, 1939, 1945, 1962, 1994, 2004, 2005, 2014, and 2017.
- Minerva Cleaners at 31-89 29th Street/29-09 Broadway (located northwest of the Property) in 1970, 1994, 2004, 2005, 2009, 2014, and 2017.
- Jeon's Cleaners/Renee French Cleaners at 30-08 Broadway (located north-northwest of the Property) in 1962, 1994, 2004, 2005, 2009, and 2017.
- United Cleaners at 30-02 and 30-06 Broadway (located north-northwest of the Property) in 1934.
- D&F Cleaners at 33-12 Broadway (located east of the Property) in 1934.
- World Cleaners at 32-08 Broadway (located east of the Property) in 2005 and 2009.
- Roosevelt Cleaners at 30-17 Broadway (located north of the Property) in 1962.
- M&M Auto Service at 31-73 31st Street (located northwest of the Property) in 1939.

Given their locations, the above-listed facilities have some potential to have affected the Property subsurface.

The City Directory search results are included in Appendix C.

5.2 Regulatory Review

EDR of Shelton, Connecticut, was contracted to obtain information regarding the regulatory status of the Property and the surrounding area. This information included records from databases maintained by the USEPA and New York State Department of Environmental Conservation (NYSDEC). AKRF reviewed these records to identify the use, generation, storage, treatment and/or disposal of hazardous material and chemicals, or releases of such materials which may impact the project site. All applicable regulatory databases meet ASTM guidelines requesting utilization of information within 90 days' receipt from the appropriate agency. Copies of the pertinent sections of the EDR report are included in Appendix D.

5.2.1 Federal

Federal ASTM standard records reviewed included: the National Priority List (NPL); Superfund Enterprise Management System (SEMS), including Superfund Enterprise Management System Archive (SEMS-ARCHIVE); Comprehensive Environmental Response, Compensation, and Liability Information System-No Further Remedial Action Planned (CERCLIS-NFRAP); Corrective Actions Report (CORRACTS); Resource Conservation and Recovery Information System (RCRIS); and Emergency Response Notification System (ERNS).

Federal ASTM supplemental records reviewed included: Toxic Chemical Release Inventory System (TRIS); Superfund Consent Decrees (CONSENT); Records of Decision (ROD); National Priority List Deletions (Delisted NPL); and United States Brownfields.

National Priority List (NPL)

The NPL is the USEPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially impacting property values.

The Property was not listed on the NPL database. No NPL sites were identified within a one-mile radius of the Property.

Superfund Enterprise Management System (SEMS), including Superfund Enterprise Management System Archive (SEMS-ARCHIVE)

The SEMS (formerly known as CERCLIS) list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by USEPA but have not been elevated to the status of a Superfund (NPL) site. Former CERCLIS sites that have been granted the status of No Further Remedial Action Planned (NFRAP), currently known as Superfund Enterprise Management System Archive (SEMS-ARCHIVE) sites, are also included in this database.

The Property was not listed on the SEMS or SEMS-ARCHIVE databases. No SEMS or SEMS-ARCHIVE were identified within a ½-mile radius of the Property.

Corrective Actions Report (CORRACTS)

The CORRACTS database identifies hazardous waste handlers with RCRA corrective action activity.

The Property was not listed on the CORRACTS database. No CORRACTS sites were identified within a one-mile radius of the Property.

Resource Conservation and Recovery Information System (RCRIS)

This database lists sites that have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); very small quantity generators (VSQG), small quantity generators (SQG), and large quantity generators (LQG); and transporters regulated under RCRA.

The Property was not listed on RCRIS databases. No TSD or LQG facilities were identified within a ½-mile radius of the Property.

One SQG and two VSQG facilities were identified within a ⅛-mile radius of the Property. Of these, the following facilities has some limited potential to have affected environmental conditions at the Property:

- Rite Aid Store No. 10569, located at 32-14 31st Street, approximately 100 feet west of the Property, was listed as a conditionally exempt small quantity generator of wastes associated with photograph development activities and pharmaceutical handling activities.
- The New York City Transit (NYCT) Elevated Subway Station, located at 31st Street and Broadway, approximately 140 feet north-northeast of the Property, was listed as a small quantity generator of lead in 2015.
- Brighton Cleaners, located at 33-14 Broadway, approximately 453 feet northeast of the Property, was listed as a conditionally exempt small quantity generator of spent halogenated solvents in 2006 and 2007 and as a small quantity generator in 1987.

Details of the listings are included in Appendix F.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

No ERNS listings were identified at the Property.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

The Property was not identified on the TRIS database. No TRIS sites were identified within a ⅛-mile radius of the Property.

Superfund Consent Decrees (CONSENT)

Superfund consent decrees are major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. These decrees are periodically released by the United States District Courts after settlement by parties to litigation matters.

The Property was not listed on the CONSENT database. No CONSENT sites were identified within a one-mile radius of the Property.

Records of Decision (ROD)

ROD documents mandate permanent remedies at NPL sites, and contain technical and health information to aid in the cleanup.

The Property was not listed on the ROD database. No ROD sites were identified within a one-mile radius of the Property.

National Priority List Deletions (Delisted NPL)

This database described former NPL sites that are removed from the NPL list by the US EPA. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establish the criteria used by the EPA to delist sites where no further federal response is needed.

The Property was not listed on the delisted NPL database. No delisted NPL sites were identified within a one-mile radius of the Property.

US Brownfields

The US Brownfields program is for properties that report cleanups to the EPA and are served by Brownfields grant programs.

The Property was not listed on the US Brownfields database. No US Brownfields sites were identified within a ½-mile radius of the Property.

5.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); and New York Brownfield Cleanup Program (BCP).

New York State Spills Information Database (NY Spills)/Leaking Underground Storage Tanks (LTANKs)

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

The Property was not listed within the NY Spills and LTANKS listings. A total of 282 spills, which included 52 leaking tanks, were reporting on surrounding properties within a ½-mile radius. Based on their proximity (within approximately 400 feet), assumed hydraulic relationships, and/or listing details, the following listings have some limited potential to affect subsurface conditions at the Property:

- NYSDEC Spill No. 0512053 was reported at 32-16 33rd Street, approximately 214 feet east-northeast of the Property, and involved a leaking fuel oil AST (presumably with a capacity of 275 gallons) in a residential basement. According to the spill report, following a 230-gallon oil delivery, the entire contents of the tank were released to concrete and soil within the basement. Approximately 17 cubic yards of soil were excavated; however, residual contamination was documented via endpoint sampling. A passive venting system was installed at the property and the spill was closed in 2006.
- NYSDEC Spill Nos. 8903296, 9003215, and 0613804 were reported at 31-70 31st Street, approximately 446 feet north-northeast of the Property and were related to an auto service station with several USTs. According to the information provided in the spill listings, petroleum product was identified in an on-site groundwater monitoring well in 1990; no additional details regarding remediation was provided.

  The listing also reported that several USTs (quantity unknown) were removed and replaced at the site circa 1999, following a tank test failure. Information regarding the tank removals was not provided to NYSDEC and therefore, NYSDEC required further assessment of the site. A Phase II ESA was performed at the site in 2006; the assessment did not encounter petroleum-impacted soils or groundwater and NYSDEC subsequently issued a "No Further Action". In 2007, two 4,000-gallon USTs, six previously unidentified 550-gallon USTs, two pump islands, and associated piping were removed from the site. During tank removal activities,

impacted soil was encountered and approximately 270 tons of petroleum-contaminated soil were excavated from the site. No further investigation or remediation was required and NYSDEC closed the spill in 2007. According to the Petroleum Bulk Storage (PBS) listing, it was reported that the two 4,000-gallon tanks had been converted to non-regulated use. See the PBS Database summary below for additional details.

Based on their locations, assumed hydraulic relationships, and/or listing details, the remaining listings are not likely to have significantly affected subsurface conditions at the Property. Details for all listed NY Spills and LTANKS sites are included in Appendix D.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

The Property was not listed on the CBS database. No CBS facilities were identified within a ⅛-mile radius of the Property.

Solid Waste Facilities/Landfill Sites (SWF/LF)

The SWF/LF database is a comprehensive listing of state permitted/recorded solid waste management facilities including certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

The Property was not listed in the SWF/LF database. No SWF/LF facilities were identified with a ½-mile radius of the Property.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

Thirty PBS facilities were identified within a ⅛-mile radius of the Property. Of these, the following facilities have some limited potential to have affected environmental conditions at the Property:

Table 1
Area Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Status	Distance/Direction from the Property
34-04/08 Broadway	1 x 1,500 AST	No. 2 Fuel Oil	Closed - removed in 2012	140 feet east
30-18 Broadway	1 x 3,000 AST	No. 2 Fuel Oil	Active	147 feet north
31-01 Broadway	1 x 1,500 UST	No. 2 Fuel Oil	Closed - removed in 1990	184 feet north-northeast
30-02 Broadway	1 x 3,000 AST	No. 2 Fuel Oil	Active	197 feet north-northwest
32-12 Broadway	1 x 1,500 UST	No. 2 Fuel Oil	Closed - in place in 1991	197 feet east
31-11 Broadway	1 x 2,000 UST	No. 2 Fuel Oil	Active	200 feet northeast
32-15 30th Street	1 x 3,000 AST	No. 2 Fuel Oil	Active	238 feet northwest
31-77 32nd Street	1 x 5,000 AST	No. 2 Fuel Oil	Active	340 feet east-northeast
32-42 33rd Street	1 x 5,000 UST	No. 6 Fuel Oil	Active	352 feet south-southeast
31-70 31st Street	2 x 4,000 UST	Gasoline	Converted to Non-regulated Use (According to the LTANLKS/SPILLS listings, these tanks, along with six 550-gallon USTs were removed in 2007)	446 feet north-northeast

Based on listing details, distance from the Property and/or inferred groundwater flow direction, the remaining listings would not be expected to have significantly affected the Property.

Details of all PBS listings are included in Appendix D.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program, also known as State Superfund, lists information regarding a variety of sites likely requiring cleanup.

The Property was not listed on the SHWS database. Eleven SHWS sites were identified within a one-mile radius of the Property. Of these, the following listing has some limited potential to have affected environmental conditions at the Property:

- An auto repair facility, located at 34-14 31st Street, approximately 808 feet southwest of the Property, was listed in the database as a 4,000-square foot facility which had operated as an auto repair shop since at least 1936. Elevated concentrations of the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and metals (lead, mercury, and nickel) were detected in site soils. PCE and trichloroethene (TCE) were detected at elevated concentrations in sub-slab vapor samples. Groundwater was not encountered during the remedial investigation. Remediation at this site has been completed; no information regarding the nature and extent of the remediation was provided in the database listing.

Based on the distance from the Property and/or presumed hydraulic relationship, the other facilities are not anticipated to have affected subsurface conditions at the Property.

Details of the SHWS listing are included in Appendix D.

Hazardous Substance Waste Disposal Site Inventory (HSWDS)

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites.

The Property was not listed on the HSWDS database. No HSWDS sites were identified within a ½-mile radius of the Property.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

The Property was not listed on the MOSF database. No MOSF facilities were reported within a ⅛-mile radius of the Property.

Environmental Restoration Program (ERP)

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

The Property was not listed on the ERP database. No ERP sites were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program (VCP)

The VCP is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

The Property was not listed on the VCP database. One VCP site, the Levco Metals Finishers site, was identified within a ½-mile radius of the Property. The Levco Metals Finishers site was located at 34-11 36th Street, approximately 2,000 feet south of the Property. Based on the distance from the Property and the presumed hydraulic relationship, this facility is not anticipated to have affected subsurface conditions at the Property.

Details of the VCP listing are included in Appendix D.

Brownfield Cleanup Program (BCP)

The BCP is a NYSDEC program and is the successor to the VCP. Some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

The Property was not listed on the BCP database. One BCP site, Teitelbaum Dry Cleaning, Inc., was identified within a ½ -mile radius of the Property. The Teitelbaum Dry Cleaning site is located at 35-45 35th Street, approximately 2,000 feet south of the Property. Based on the distance from the Property and the presumed hydraulic relationship, this BCP site is not anticipated to have affected subsurface conditions at the Property.

Details of the BCP listing are included in Appendix D.

New York City E-Designation Site Listing

A New York City "E" designation for a property requires that the fee owner of the site conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYC Office of Environmental Remediation (OER) before the issuance of a building permit by the NYC Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements).

The Property was not listed with an E-designation in the database information.

EDR US Historic Auto Station Listings

The EDR US Historic Auto Station database was researched to identify listings for the Property and within a ⅛-mile radius of the Property. This database lists properties that might include gas/filling station establishments based on EDR's search of select national business directories.

The Property was not listed on the historic auto stations database. One EDR historic auto station was identified within a ⅛-mile radius:

- TR Service Station/Sunoco Service Station, located at 31-70 31st Street, approximately 446 feet north-northeast of the Property.

Please refer to the SPILLS/LTANKS listings for further details on this site.

Manufactured Gas Plant (MGP) Sites (Coal Gas)

The EDR manufactured gas plant (MGP) database was researched to identify listings for the Property and facilities within a one-mile radius of the Property.

The Property was not listed on the MGP database. No MGP sites were identified within a one-mile radius of the Property.

Registered Dry Cleaners/EDR US Hist Cleaners

The registered dry cleaners database was researched to identify listings within ¼-mile of the Site. As a supplement to the registered dry cleaners database, EDR's proprietary listing of potential drycleaner sites (listings based on the opinion of EDR) was also reviewed.

The Property was not listed on the database. Six registered dry cleaners and four US EDR Historic Cleaners sites were listed within a ¼-mile radius of the Property. Of these, the following facilities have very limited potential to have affected environmental conditions at the Property:

- City/Brighton Cleaners, Inc., located at 33-14 Broadway, approximately 453 feet east-southeast of the Property, was listed as a dry cleaner and a dry cleaning plant, except rugs in the EDR historical cleaners records between the years of 1991 and 2012.
- Minerva Tailors and Cleaners, located at 29-09 Broadway, approximately 490 feet north-northwest of the Property, was listed as a dry cleaning drop shop. This facility was also listed as a garment pressing and cleaners' agent between the years of 1987 and 1991 and a dry cleaning plant, except rugs between the years of 1992 and 2014 in the EDR historical cleaners records.
- Jeon's Cleaners, located at 30-08 Broadway, approximately 182 feet north-northwest of the Property, was listed as a registered dry cleaning drop shop. This facility, also identified as 3008 Incorporated ERS/Renee French Cleaners, was

listed as a garment pressing and cleaners' agent between the years of 1987 and 2003 and as a cleaning service between the years of 2004 and 2014 in the EDR historical cleaners records.

- Market Supervisory Services, located at 29-10 Broadway, approximately 437 feet northwest of the Property, was listed as a garment pressing and cleaners' agent in 1997 in the EDR historical cleaners records.

Based on their distance from the Property and/or presumed groundwater flow, the remaining facilities are not anticipated to have affected subsurface conditions at the Property.

Details of the registered dry cleaners/EDR US historic cleaners listing are included in Appendix D.

5.2.3 Local Agency File Review

Records available online from the New York City Buildings and Finance Departments were viewed for the Property. Since the local records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses. Copies of pertinent information are included in Appendix E (Buildings and Finance Department Records).

NYC Buildings Department (DOB)

Electronic NYCDOB records for the Property were reviewed to determine whether there were any references to buildings, tanks or other structures, property usage or inspection reports that may have indicated the presence, past use, or release of hazardous substances, wastes or petroleum products within the Property. A Certificate of Occupancy dated 1957 identified the Property usage as a parking lot. No additional pertinent environmental records were identified in the NYCDOB electronic files.

Land Title Records and Tax Records

Copies of title records were not provided to AKRF for review. A review of computerized New York City ACRIS records, which included records of financial transactions involving the Property, identified no environmental liens or use restrictions for the Property. No deed information was provided in the ACRIS files. Pertinent Property information obtained from the ACRIS files is summarized below:

Year	Land Title Records Information for the Property
1983	Deed for Block 611, Lot 25 Grantor is: Louise Tedeschi (Executor); Grantee is: Frederick Tedeschi and James Tedeschi
1997	Court Order for Block 611, Lots 25, 29, 31, and 32 Grantor is: James Tedeschi and Frederick Tedeschi; Grantee is the City of New York

New York City Department of Health and Mental Hygiene (NYCDOHMH)

AKRF sent a freedom of information law (FOIL) request to the NYCDOHMH for pertinent environmental records on April 29, 2021. On April 29, 2021, NYCDOHMH issued a response e-mail acknowledging the request.

To date, no response has been provided. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

New York City Department of Environmental Protection (NYCDEP)

AKRF sent a FOIL request to the NYCDEP on April 29, 2021. On April 29, 2021, NYCDEP issued a response e-mail acknowledging the request.

To date, no response has been provided. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; useful, accurate and complete in light of the objective of the records review. These records may include:

- Local Brownfields Lists
- Local Lists of Landfill/solid waste disposal sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Department of Health/Environmental Division
- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

On April 29, 2021, AKRF sent FOIL requests to the following agencies requesting information pertaining to environmental records for the Property;

- Fire Department of the City of New York (FDNY)
- NYSDEC Region 2
- New York State Department of Health (NYSDOH)

To date, no responses have been provided. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

In addition, AKRF submitted a FOIL request to NYSDEC Region 2 regarding the former auto service station located at 31-70 31st Street, on the northwest-adjacent Property block. To date, no response has been provided. Additional information regarding this site is provided in Section 5.2.2.

In AKRF's judgment, no other local records meeting the ASTM criteria are pertinent for the Property.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the client provide any pertinent information regarding the Property, specifically:

- Whether any environmental liens or activity and land use limitations (AULs) are in place or filed or recorded against the Property?
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of any chemicals used on-site)?
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated?
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property?
- Whether they were aware of any obvious indicators of contamination at the Property?
- Whether they were aware of any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products?

Mr. Emanuel Kokinakis of Mega Development LLC completed a user questionnaire for the Property. Mr. Kokinakis was not aware/had no information on the status of any: environmental liens or activity use limitations on the Property; property value reduction due to environmental issues; any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products; or any obvious indicators of contamination on the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

7.0 PREVIOUS STUDIES

No previous studies were provided for review.

8.0 VAPOR ENCROACHMENT SCREENING

A Tier 1 Vapor Encroachment Screening was conducted in accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The term "Vapor Encroachment Condition" means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a Property caused by the release of vapors on or near the Property. The object of the Tier 1 screening is to conduct a screen for vapor encroachment based on findings from the Phase I ESA to determine if a possible VEC exists at the Property.

Based on AKRF's review of historical and regulatory database records, the following potential VECs were identified based on the Tier 1 Vapor Encroachment Screening:

- One groundwater monitoring well was observed on 31st Street sidewalk west-adjacent of the Property.
- Sanborn maps, city directories, and the environmental databases reviewed identified automotive and dry cleaning uses in the surrounding area.

9.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- During the site reconnaissance, the majority of the parking spaces were occupied and surface conditions of the asphalt parking lot were not fully visible during inspection.
- Interviews and user-provided information were limited to those discussed in Section 6.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the site and surrounding area could be obtained from the available historical Sanborn maps, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2), as well as FOIL requests submitted to NYSDEC, NYCDEP, NYSDOH, and NYCDOH. AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

10.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF, Inc. was retained by Mega Development LLC to prepare a Phase I ESA of 31-07 31st Street, located in Astoria, Queens (the "Property"). The Property was identified as Queens Tax Block 611, Lot 25. The Property was generally bounded by commercial units to the north, residential/institutional units to the south, commercial/residential units and 32nd Street to the east, and 31st Street and an elevated subway station to the west (as shown on Figure 1). The Property consisted of an existing 20,880 square-foot municipal parking facility.

The greater surrounding area was primarily residential and commercial/retail with some transit uses. The objective of this assessment was to identify any potential environmental concerns associated with the Property resulting from past or current usage of the Property or neighboring properties.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard and/or data gaps are described in Section 9.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

A Tier 1 Vapor Encroachment Screen was also conducted in accordance with ASTM Standard E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. The term "Vapor Encroachment Condition" (VEC) means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a property caused by the release of vapors on or near the property.

A summary of the assessment findings is presented below:

Recognized Environmental Conditions (RECs)/Vapor Encroachment Conditions (VECs)

- One groundwater monitoring well was observed on 31st Street sidewalk west-adjacent of the Property.
- Sanborn maps, city directories, and the environmental databases reviewed identified automotive and dry cleaning uses in the surrounding area.

Business Environmental Risks (including items outside the scope of ASTM E1527-13 such as asbestos containing material [ACM], lead-based paint [LBP] and/or polychlorinated biphenyls [PCBs] in building materials or fill/debris)

- Buried demolition debris from former on-site structures could contain ACM, LBP, PCBs and/or underground storage tanks.

De Minimus

- Three five-gallon containers of orphan waste were located on the southeastern-most corner of the Property. Two of the three containers were labeled as kerosene and lacquer; the third container was unmarked. These containers should be removed from the Property and properly disposed of in accordance with federal, state, and local requirements.

Recommendations

- A subsurface (Phase II) investigation should be conducted at the Property to investigate the identified RECs/VECs.
- During any future subsurface disturbance, excavated soil should be handled and disposed of in accordance with all applicable regulatory requirements, with testing as required. Any evidence of a petroleum spill must be reported to the NYSDEC and addressed in accordance with applicable requirements. If any tanks are encountered, they should be properly assessed, closed, and removed in accordance with federal, state, and local regulations. Transportation of material leaving the Property for off-site disposal should be in accordance with federal, state, and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- If dewatering is required during future construction activities, water must be discharged in accordance with the New York City Department of Environmental Protection (NYCDEP) requirements.
- Any activities with the potential to disturb LBP must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - Lead Exposure in Construction) and NYC Local Laws regarding tenant notification, contractor licensing, abatement procedures, etc. Additional requirements, even if no disturbance is planned (e.g., tenant notification, inspections, contractor licensing, and abatement) apply to occupied residential buildings.
- Unless there is labeling or test data that indicates that fluorescent lights and other electrical equipment are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- Any suspect ACM-containing material and/or LBP encountered during excavation should be properly characterized, managed and disposed of in accordance with applicable regulations.

11.0 SIGNATURE PAGE

I declare that, to the best of our professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. I have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Deborah Shapiro, QEP
Senior Vice President

12.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the Property, and to identify existing and/or potential environmental issues associated with the Property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice.*

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the Property and to the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the Property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than the Mega Development LLC and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) performed a Subsurface (Phase II) Investigation at the property located at 31-07 31st Street, located in Astoria, Queens (the "Site"). The Site is identified as Block 611, Lot 25 on the New York City Tax map. The Site consists of an approximately 20,880 square-foot municipal parking lot and is generally bounded by commercial units to the north, residential and institutional uses to the south, commercial and residential uses and 32nd Street to the east, and 31st Street and an elevated subway station to the west (as shown on Figure 1). A Site location map is provided as Figure 1, and a Site plan with sample locations is provided as Figure 2.

The Phase II investigation described below is intended to ascertain whether past uses on or near the Site have adversely affected the Site subsurface prior to redevelopment. The scope of work is based on the findings of a Phase I Environmental Site Assessment (ESA) of the Site, prepared by AKRF in June 2021, which is described in Section 3.0 below, as well as proposed redevelopment plans for the Site.

This investigation was conducted in accordance with a Subsurface (Phase II) Investigation Work Plan and Health and Safety Plan (AKRF, June 2022) approved by the New York City Department of Environmental Protection (NYCDEP) in a letter dated June 16, 2022. Any deviations from the Work Plan are detailed in Section 4.0.

Field activities were performed on October 3 through 5, 2022, and consisted of a geophysical survey, and the installation of seven soil borings, four temporary wells, and five soil vapor probes, with the collection of 14 soil samples, four groundwater samples, and five soil vapor samples for laboratory analysis. This report describes the methods and results of the investigation conducted by AKRF. The locations of the soil borings, temporary groundwater monitoring wells, and temporary soil vapor points are shown on Figure 2.

2.0 SITE DESCRIPTION

At the time of the Phase II Investigation, the Site consisted of a parking lot with no structures. The Site is generally bounded by commercial uses to the north, residential and institutional uses to the south, commercial and residential uses and 32nd Street to the east, and 31st Street and an elevated subway station to the west (as shown on Figure 1).

Based on the U.S. Geological Survey, Central Park, New York 2013 Quadrangle map, the Site is approximately 49 feet above mean sea level, with the general surrounding area topography gently sloping down in a westerly direction towards the East River. The East River is located approximately one mile west of the Site.

Based upon a review of topographical data, groundwater is assumed to flow in a westerly direction toward the East River; however, actual groundwater flow at the Site can be affected by many factors, including past filling activities, underground utilities, and other subsurface openings or obstructions such as basements, nearby subway lines, and other factors beyond the scope of this study. There are no surface water bodies or streams on or immediately adjacent to the Site. Groundwater in Queens is not used as a source of potable water.

During this Phase II Investigation, fill material (consisting of sand and gravel, with varying amounts of asphalt and brick) was encountered at depths ranging from approximately just below surface grade down to 5 to 14 feet below grade. The fill material was underlain by sand with trace amounts of gravel. Groundwater was encountered between 31 and 34 feet below grade in all seven soil borings.

3.0 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

Phase I Environmental Site Assessment (ESA) – 31-07 31st Street, Astoria, NY, AKRF Inc., June 2021

AKRF conducted a Phase I ESA of the Site in June 2021 in accordance with ASTM E1527-13. At the time of the ESA, the Site consisted of the existing municipal parking facility. The Phase I ESA identified the following Recognized Environmental Conditions (RECs) in connection with the Site:

- One groundwater monitoring well was observed on the 31st Street sidewalk, west-adjacent of the Site.
- Sanborn maps, city directories, and the environmental databases reviewed identified automotive and dry-cleaning uses in the surrounding area.

AKRF identified the following Business Environmental Risks (BERs) outside the scope of ASTM E1527-13:

- Potential fill materials and/or demolition debris beneath the Site could contain asbestos-containing materials (ACM), lead-based paint (LBP), and/or polychlorinated biphenyls (PCBs) related to former structures.

Based on the RECs identified, AKRF recommended a Subsurface (Phase II) Investigation be conducted at the Site.

4.0 FIELD ACTIVITIES

4.1 Geophysical Investigation

On October 3, 2022, a geophysical survey was conducted by Enviroprobe Service, Inc. (Enviroprobe) of Mt. Laurel, New Jersey across accessible areas of the Site, to clear the proposed soil boring locations for subsurface utilities and/or structures, and to search for potential USTs. Portions of the Site covered by parked vehicles were inaccessible and not surveyed by Enviroprobe. The geophysical survey included electromagnetic (EM), radio-detection (RD), and ground penetrating radar (GPR) methods. During the geophysical survey, underground electric and storm drainage infrastructure was located to the north and along the eastern and western boundaries. An unknown utility was encountered immediately south of the existing storm drainage infrastructure along the northern portion of the Site. The geophysical investigation report is attached as Appendix A. Photographs of the Phase II activities are provided in Appendix B.

In addition to the geophysical survey, AARCO Environmental Services (AARCO), the drilling contractor, notified Dig Safely New York at least 3 days prior to the start of the intrusive investigation work.

4.2 Soil Sampling and Analysis

Seven soil borings (SB-01 through SB-07) were advanced at the Site on October 3 through 5, 2022 by AARCO. Soil borings were advanced using a track-mounted Geoprobe® direct push probe (DPP). Several borings were relocated within approximately 5 feet of the proposed locations proposed in the Work Plan due to access considerations, utility markouts, and/or geophysical survey findings.

All soil borings were advanced approximately 5 feet into the water table to approximately 40 feet below grade, except for SB-04, which was advanced to 45 feet below grade. Soil cores were collected using 5-foot long, 2-inch diameter macrocore piston rod samplers fitted with dedicated acetate liners. Each macrocore sample was split lengthwise and all samples were logged by AKRF field personnel. Logging consisted of: describing the soil according to the modified Burmister Classification System; describing any evidence of contamination (e.g., staining, sheens, odors); and field-screening the soil for organic vapors using a photoionization detector (PID). The PID was calibrated at the start of the work day, prior to on-site use, using 100 parts per million (ppm) isobutylene gas in accordance with the manufacturer's instructions. Soil boring locations are shown on Figure 2 and soil boring logs are provided in Appendix C.

In accordance with the Work Plan, discrete soil samples were collected from the 0-2 foot interval of each boring, and the interval with the greatest contamination. In the absence of contamination, the sample was collected from the 2-foot interval immediately above the groundwater interface. No staining or sheen was detected in any of the soil borings. Elevated PID readings above background levels were not detected in any of the borings.

Soil samples were placed in laboratory-supplied containers within a chilled cooler in accordance with U.S. Environmental Protection Agency (EPA) protocols and transported via courier with appropriate chain of custody documentation to Eurofins TestAmerica, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory, in Edison, New Jersey. The samples were analyzed for:

- VOCs by EPA Method 8260;
- Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270;
- Polychlorinated Biphenyls (PCBs) by EPA Method 8082;

- Pesticides by EPA Method 8081; and
- Target Analyte List (TAL) Metals plus Hexavalent Chromium by EPA 6000/7000 series.

4.3 Groundwater Sampling and Analysis

Between October 3 and 5, 2022, four 1-inch diameter temporary groundwater monitoring wells, designated as TW-01 through TW-04, were installed in borings SB-01 through SB-04, respectively, to facilitate the collection of groundwater samples for laboratory analysis. Groundwater monitoring wells TW-01, TW-02, and TW-03 were installed to approximately 40 feet below grade and monitoring well TW-04 was installed to 45 feet below grade.

The wells were constructed of 1-inch diameter Schedule 40, threaded, flush-jointed polyvinyl chloride (PVC) materials with a 10-foot screen installed across the water table. The wells were developed following installation by purging approximately three well volumes. Prior to sampling, the depth to groundwater and the total well depth were measured using a multi-parameter interface probe attached to a measuring tape accurate to 0.01 feet. Depth to groundwater ranged from 30.31 to 36.61 feet below grade across the Site. No evidence of floating petroleum (separate phase product), sheen, or odors was detected in the purge water at either location, and purge water was discarded back into the boring following sampling activities. Temporary well locations are shown on Figure 2.

Groundwater samples slated for analysis were placed in laboratory-supplied containers and a chilled cooler in accordance with EPA protocols and were analyzed by Eurofins TestAmerica. The groundwater samples were analyzed for:

- VOCs by EPA Method 8260;
- SVOCs by EPA Method 8270;
- PCBs by EPA Method 8082;
- Pesticides by EPA Method 8081; and
- TAL Metals (total and dissolved) by EPA 6000/7000 series. Groundwater samples were filtered in the field for the dissolved metals analysis.

4.4 Soil Vapor Sampling and Analysis

Five soil vapor probes (SV-01 through SV-05) were installed using a Geoprobe® DPP drill rig by advancing an expendable drive point to approximately 14 feet below grade, approximately 2 feet below the proposed building foundation footprint. A 6-inch long, 0.5-inch diameter stainless steel soil vapor screen implant with connected Teflon tubing extending above grade was threaded into the drive point. The probe was then retracted approximately six inches to create a void. No. 2 Morie sand was used to fill the annular space around the vapor point and then, hydrated bentonite was used to fill the void around the tubing to grade. The soil vapor sample locations are shown on Figure 2.

The soil vapor probes were sampled in accordance with the NYSDOH October 2006 *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*. Prior to sampling, each probe was purged of approximately three sampler volumes using a Gilian® GilAir™ Plus personal air pump. During purging, an inverted bucket was placed over the probe and helium was introduced through a small hole in the bucket to saturate the atmosphere around the sample port. The purged vapors were collected into a Tedlar® bag and a Dielectric Technologies Model MGD-2002 portable helium detector was used to check for short-circuiting by ambient air, i.e. to verify the adequacy of the bentonite seal. Helium concentrations of less than the NYSDOH guideline of 10 percent were

considered sufficient. Purged vapors were also field-screened for VOCs using a PID calibrated with 100 ppm isobutylene gas. Soil vapor sampling logs are provided in Appendix C.

PID readings were not detected in the purged vapor at all five vapor points. After purging, the probes were connected via tubing to laboratory-supplied, batch-certified clean six-liter SUMMA canisters equipped with two-hour flow regulators. Vacuum readings were collected at the start, middle, and end of sampling. The soil vapor samples were transported via courier with chain of custody documentation to Eurofins TestAmerica for analysis of VOCs by EPA Method TO-15. Upon completion, the soil vapor probes were removed, the holes backfilled, and the ground surface restored to its original condition.

5.0 INVESTIGATION RESULTS

5.1 Field Observations

Soil Sampling

Soil borings were advanced to a maximum depth of approximately 45 feet below grade during this investigation. Fill material (consisting of sand and gravel, with varying amounts of asphalt and brick) was encountered at depths ranging from approximately just below surface grade down to 5 to 14 feet below grade. The fill material was underlain by sand with trace amounts of gravel. Groundwater was encountered between 31 and 34 feet below grade in all seven soil borings.

No evidence of contamination, i.e., PID readings, staining, or odors were observed in any of the seven soil borings. Soil descriptions, observations, and PID readings are detailed in the soil boring logs provided in Appendix C.

Groundwater Sampling

Groundwater, as measured from temporary well points, was encountered between 30.31 and 36.61 feet below grade. No evidence of contamination (i.e., sheen or floating product) was noted in the groundwater samples.

Soil Vapor Sampling

No helium was detected during purging, verifying an adequate bentonite seal for each soil vapor point. PID readings were not detected in the purged vapor prior to sampling. The field logs detailing the soil vapor purging and sampling are included in Appendix C.

5.2 Soil Analytical Results

A total of 14 soil samples were submitted to Eurofins TestAmerica for analysis of VOCs, SVOCs, PCBs, pesticides, TAL metals and hexavalent chromium. Laboratory analytical results were compared to the New York State Department of Environmental Conservation (NYSDEC) Soil Cleanup Objectives for Unrestricted Use and Restricted-Residential Use (UUSCOs and RRSCOs, respectively) presented in Sections 6.8(b) of 6 NYCRR Part 375. Soil analytical results are summarized in Tables 1 through 5. The complete laboratory analytical report is provided as Appendix D. The analytical results from the soil sampling are discussed below.

Volatile Organic Compounds (VOCs)

Up to three VOCs [1,2,4-Trimethylbenzene, acetone, and tetrachloroethene (PCE)] were detected in up to 10 of the 14 soil samples with sample concentrations ranging from 0.00024 milligrams per kilogram (mg/kg) to 0.16 mg/kg. Several of the reported concentrations were marked with a "J" qualifier, indicating estimated concentrations. Acetone was detected slightly above the UUSCO of 0.05 mg/kg in two samples with a maximum concentration of 0.16 mg/kg. No VOCs were detected above the RRSCOs.

Analytical results for VOCs in soil are summarized in Table 1.

Semi-volatile Organic Compounds (SVOCs)

Twenty-three SVOCs were detected in the soil samples. Seven SVOCs were detected at concentrations above the UUSCOs and/or RRSCOs, as presented below:

SVOCs in Soil above UUSCOs and RRSCOs

Boring ID Depth (feet bg) Units = mg/kg	UUSCO	RRSCO	SB-01 0-2	SB-05 0-2	SB-05 29-31
Benzo(a)Anthracene	**1**	**1**	**6.5**	**25**	NE
Benzo(a)Pyrene	**1**	**1**	**5.3**	**23**	NE
Benzo(b)Fluoranthene	**1**	**1**	**7.1**	**29**	NE
Benzo(k)Fluoranthene	**0.8**	**3.9**	**2.3**	**7.6**	NE
Chrysene	**1**	**3.9**	**6**	**23**	NE
Dibenz(a,h)Anthracene	**0.33**	**0.33**	**0.95**	**2.7**	NE
Indeno(1,2,3-c,d)Pyrene	**0.5**	**0.5**	**4.2**	**17**	**1.2**

Bold = Detection above UUSCO
Bold and highlighted = Detection above RRSCO
mg/kg = milligrams per kilogram
bg = below grade
NE = No detection above UUSCO or RRSCO

The SVOCs detected above the SCOs consisted of polycyclic aromatic hydrocarbons (PAHs), a class of compounds commonly found in ash, asphalt, and petroleum products. Based on the field observations, the PAHs are most likely attributable to the fill material encountered in the soil borings at the corresponding depths, as noted on the boring log (Appendix C). Analytical results for SVOCs in soil are summarized in Table 2.

Metals

Twenty-three of the 24 metals analyzed for were detected in the soil samples. Hexavalent chromium was not detected above laboratory reporting limits. Four metals (copper, lead, mercury, and zinc) were detected at concentrations exceeding their UUSCOs, but not their RRSCOs, in four out of the 14 samples, as presented below.

Metals in Soil above UUSCOs

Boring ID Depth (feet bg) Units = mg/kg	UUSCO	RRSCO	SB-03 0-2	SB-04 0-2	SB-05 0-2	SB-07 0-2
Copper	**50**	**270**	NE	NE	**63.1**	NE
Lead	**63**	**400**	**81.7**	**80**	**283**	**131**
Mercury	**0.18**	**0.81**	NE	**0.59**	NE	NE
Zinc	**109**	**10,000**	NE	NE	**149**	NE

Bold = Detection above UUSCO
mg/kg = milligrams per kilogram
bg = below grade
NE = No detection above UUSCO or RRSCO

Based on the field observations and the Site history, these findings are most likely attributable to the fill material observed in the borings at corresponding depths, and not to a release or other source area. Analytical results for metals in soil are summarized in Table 3.

Polychlorinated Biphenyls (PCBs) and Pesticides

The PCB Aroclor 1262 was detected at a concentration of 0.063 mg/kg, below its UUSCO of 0.1 mg/kg and RRSCO of 1 mg/kg, in sample SB-02_0-2_20221003. PCBs were not detected above the UUSCO or RRSCO in any of the 14 soil samples.

Four pesticides (cis-chlordane, dieldrin, and P,P'-DDT) were detected in up to three of the 14 soil samples collected. P,P'-DDT was detected at a maximum concentration of 0.0063 mg/kg in sample SB-05_0-2_20221004, above its UUSCO of 0.0033 mg/kg. No other pesticides were detected at concentrations above the UUSCOs. Several of the reported concentrations were marked with a "J" qualifier, indicating estimated concentrations.

Analytical results for PCBs and pesticides in soil are summarized in Tables 4 and 5, respectively.

The detections of SVOCs, metals, PCBs, and pesticides are likely attributable to fill material observed in the soil borings or historical Site uses, and do not appear to indicate a significant release or source area. PCE was detected at low levels in shallow soil samples, indicating potential source material, which has migrated to the groundwater table as evidenced by the groundwater results for VOCs.

5.3 Groundwater Analytical Results

Groundwater analytical results were compared to the NYSDEC Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs) as presented in the NYSDEC Division of Water TOGS 1.1.1. The groundwater analytical results are summarized in Tables 6 through 11. The complete laboratory analytical report is provided as Appendix D. The analytical results from the groundwater sampling are discussed below:

VOCs

Chlorinated solvent-related VOCs were detected above AWQSGVs in four groundwater samples, as presented below:

VOCs in Groundwater above Class GA AWQSGVs

Well ID Units = µg/L	Class GA AWQSGV	TW-01	TW-02	TW-03	TW-04
Chloroform	**7**	NE	NE	NE	**9.2**
Cis-1,2-Dichloroethylene	**5**	**14**	**6.7**	NE	NE
Tetrachloroethylene (PCE)	**5**	**100**	**19**	**100**	**330**

Notes:
Bold = Detection above the Class GA AWQSGV
µg/L = micrograms per liter
NE = No detection above the Class GA AWQSGV

The elevated concentrations of chlorinated solvents in groundwater indicate the possible presence of a release. As the current and prior usage of the Site include parking and residential, the source of the chlorinated solvent detections is unknown at this time. The complete analytical results for VOCs in groundwater are summarized in Table 6.

SVOCs

SVOCs were detected above the AWQSGVs in the sample collected from TW-01, as presented below:

SVOCs in Groundwater above Class GA AWQSGVs

Well ID Units = µg/L	Class GA AWQSGV	TW-01
Benzo(a)Anthracene	**0.002**	**2.1**
Benzo(a)Pyrene	**ND**	**1.6**
Benzo(b)Fluoranthene	**0.002**	**2.2**
Bis(2-Ethylhexyl) Phthalate	**5**	**6.2**
Chrysene	**0.002**	**2**
Indeno(1,2,3-c,d)Pyrene	**0.002**	**1.6 J**

Notes:
Bold = Detection above the Class GA AWQSGV
µg/L = micrograms per liter
J = estimated concentration
ND = Non-detect

No other SVOCs were detected above the AWQSGVs in the groundwater samples. The SVOC detected are likely attributable to fill material entrained in the water sample. Analytical results for SVOCs in groundwater are summarized in Table 7.

The complete analytical results for SVOCs in groundwater are summarized in Table 7.

Metals (total and dissolved)

In the unfiltered (total) groundwater samples, there were exceedances of the AWQSGVs for 14 metals, whereas in the filtered (dissolved) samples exceedances were limited to iron, magnesium, manganese, and sodium, as presented below:

Total Metals in Groundwater Above AWQSGVs

Well ID Units = µg/L	Class GA AWQSGV	TW-01	TW-02	TW-03	TW-04
Arsenic	**25**	**63.9**	NE	NE	NE
Barium	**1,000**	**3,540**	NE	NE	NE
Beryllium	**3**	**14.2**	NE	NE	NE
Chromium, Total	**50**	**3,390**	NE	NE	NE
Copper	**200**	**1,340**	NE	NE	NE
Iron	**300**	**971,000**	NE	**1,660**	**4,430**
Lead	**25**	**857**	NE	NE	NE
Magnesium	**35,000**	**355,000**	NE	**47,500**	NE
Manganese	**300**	**24,600**	**439**	NE	**1,090**
Mercury	**0.7**	**1.7**	NE	NE	NE
Nickel	**100**	**922**	NE	NE	NE
Sodium	**20,000**	**74,600**	**140,000**	**128,000**	**109,000**
Thallium	**0.5**	**5.1**	NE	NE	NE
Zinc	**2,000**	**2,640**	NE	NE	NE

Notes:
Bold = Detection above the Class GA AWQSGV
µg/L = micrograms per liter
NE = No detection above the Class GA AWQSGV

Dissolved Metals in Groundwater Above AWQSGVs

Well ID Units = µg/L	Class GA AWQSGV	TW-01	TW-02	TW-03	TW-04
Iron	**300**	NE	NE	**492**	**1,630**
Magnesium	**35,000**	NE	NE	**45,900**	NE
Manganese	**300**	NE	**450**	NE	**1,020**
Sodium	**20,000**	**35,300**	**141,000**	**127,000**	**107,000**

Notes:
Bold = Detection above the Class GA AWQSGV
µg/L = micrograms per liter
NE = No detection above the Class GA AWQSGV

The discrepancy between total and dissolved analysis indicates, as is typical, that the unfiltered samples included entrained particulate material. The exceedances in the filtered samples were likely indicative of natural conditions (e.g., sodium and manganese) and urban background conditions (e.g., heavy metals). Analytical results for metals in groundwater are summarized in Tables 8 and 9.

PCBs and Pesticides

No PCBs or pesticides were detected above laboratory reporting limits in the groundwater samples. The complete analytical results for PCBs and pesticides in groundwater are summarized in Tables 10 and 11, respectively.

The detected metal concentrations in the groundwater samples were likely attributable to regional groundwater contamination and particulate material entrained in the samples. The concentrations of chlorinated solvents above the AWQSGVs indicate the possible presence of a release. As the current and prior usage of the Site include parking and residential, the source of the chlorinated solvent detections is unknown at this time. PAH detections in groundwater are likely attributable to particulates entrained in the water samples, as opposed to an on-site source of SVOC contamination.

5.4 Soil Vapor Analytical Results

The soil vapor sample results indicated 38 of the 71 VOCs analyzed utilizing EPA Method TO-15 were detected in one or more samples. Although there are currently no regulatory or published guidance values for VOCs in soil vapor, soil vapor data was used to assess the potential for exposure to receptors and to help define the nature and extent of contamination at the Site. The analytical results for VOCs in soil vapor are summarized in Table 9. The complete laboratory analytical report is provided in Appendix D.

Solvent-related VOCs [including carbon 1,1,1-trichloroethane, carbon tetrachloride, cis-1,2-dichloroethylene, methylene, PCE, and trichloroethylene (TCE)] were detected at individual concentrations up to 1,900 micrograms per cubic meter (µg/m^3) from a diluted sample (PCE in sample SV-04_20221003). Petroleum-related VOCs benzene, toluene, ethylbenzene, and xylenes (collectively referred to as BTEX) were detected in up to all five soil vapor samples at concentrations up to 29 µg/m^3 (toluene in SV-04_20221003).

The elevated concentrations of chlorinated solvents are likely attributable to off-gassing from the elevated solvent concentrations in groundwater or the detections in soil.

6.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF, Inc. (AKRF) performed a Subsurface (Phase II) Investigation at the property located at 31-07 31st Street, located in Astoria, Queens (the "Site"). The Site is identified as Block 611, Lot 25 on the New York City Tax map. The Site consists of an approximately 20,880 square-foot municipal parking lot and is generally bounded by commercial units to the north, residential and institutional uses to the south, commercial and residential uses and 32nd Street to the east, and 31st Street and an elevated subway station to the west (as shown on Figure 1).

The Phase II investigation is intended to ascertain whether past uses on or near the Site have adversely affected the Site subsurface prior to redevelopment. The scope of work is based on the findings of a Phase I Environmental Site Assessment (ESA) of the Site, prepared by AKRF in June 2021, which is described in Section 3.0 below, as well as proposed redevelopment plans for the Site.

This investigation was conducted in accordance with a Subsurface (Phase II) Investigation Work Plan and Health and Safety Plan (AKRF, June 2022) approved by the New York City Department of Environmental Protection (NYCDEP) in a letter dated June 16, 2022. Any deviations from the Work Plan are detailed in Section 4.0.

This investigation was conducted in accordance with a Subsurface (Phase II) Investigation Work Plan and Health and Safety Plan (AKRF, June 2022). Field activities were conducted on October 3 through 5, 2022 and consisted of the installation of seven soil borings, four temporary wells and five soil vapor probes, with the collection of 14 soil samples, four groundwater samples and five soil vapor samples for laboratory analysis. This report describes the methods and results of the investigation conducted by AKRF. The locations of the soil borings, temporary groundwater monitoring wells, and temporary soil vapor points are shown on Figure 2.

During this Phase II Investigation, fill material (consisting of sand and gravel, with varying amounts of asphalt and brick) was encountered at depths ranging from approximately just below surface grade down to 5 to 14 feet below grade. The fill material was underlain by sand with trace amounts of gravel. Groundwater was encountered between 31 and 34 feet below grade in all seven soil borings.

Based upon a review of topographical data, groundwater is assumed to flow in a westerly direction toward the East River; however, actual groundwater flow at the Site can be affected by many factors, including past filling activities, underground utilities, and other subsurface openings or obstructions such as basements, nearby subway lines, and other factors beyond the scope of this study. There are no surface water bodies or streams on or immediately adjacent to the Site. Groundwater in this portion of Queens is not used as a source of potable water.

Soil sample analytical results were compared to the New York State Department of Environmental Conservation (NYSDEC) 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs). Groundwater sample analytical results were compared to NYSDEC TOGS (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs). It should be noted that the Class GA AWQSGVs were developed assuming use of groundwater as a drinking source, a scenario that does not and will not occur at the Site. There are currently no regulatory or published guidance values for volatile organic compounds (VOCs) in soil vapor.

A summary of the analytical results is as follows:

- Fourteen discrete soil samples were collected from the seven soil borings (two samples collected per boring) advanced across the Site and analyzed for VOCs, semivolatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, and metals. Analytical results for the soil samples identified one VOC (acetone) in two samples above UUSCOs. No VOCs exceeded the RRSCOs. Up

to seven SVOCs were detected above the UUSCOs and/or RRSCOs. Four metals (copper, lead, mercury, and zinc) were detected in up to four samples above their UUSCOs, but below the RRSCOs. The pesticide P,P'-DDT was detected in one sample above its UUSCO.

- Four groundwater samples were collected from temporary wells TW-01 through TW-04 (installed in borings SB-01 through SB-04) and analyzed for VOCs, SVOCs, PCBs, pesticides, and metals (total and dissolved). Three VOCs [tetrachloroethylene (PCE), cis-1,2-dichloroethene, and chloroform] were detected in at least one of the four samples above their AWQSGVs. Six SVOCs were detected in sample TW-01_20221005 at concentrations above the AWQSGVs. In the unfiltered (total) metals analysis, up to 14 metals were detected at concentrations above the AWQSGVs. In the filtered (dissolved) metals analysis, four metals were detected at concentrations above the AWQSGVs.
- Several VOCs [including PCE, trichloroethylene (TCE), and cis-1,2-dichloroethene] were detected at elevated concentrations in the five soil vapor samples. Concentrations were detected up to 1,900 micrograms per cubic meter ($\mu g/m^3$) of PCE.

6.1 Conclusions

Based on the findings of the Phase II investigation, AKRF concludes the following:

- The SVOCs, PCBs, pesticides, and metals detected above the SCOs in soil are most likely attributable to the fill material encountered in the soil borings at the corresponding depths, and not related to an on-site source. PCE was detected at low levels in shallow soil samples, indicating potential source material, which has migrated to the groundwater table as evidenced by the groundwater results for VOCs.
- The elevated concentrations of chlorinated solvents (PCE, cis-1,2-dichloroethene, and chloroform) in groundwater and soil vapor indicate the possible presence of a release. As the current and prior usage of the Site include parking and residential, the source of the chlorinated solvent detections is unknown at this time.
- The detected metal and PAH concentrations in the groundwater samples were likely attributable to regional groundwater contamination and particulate material entrained in the samples.
- The elevated concentrations of chlorinated solvents in soil vapor are likely attributable to off-gassing from the elevated solvent concentrations in groundwater or the detections in shallow soil.

6.2 Recommendations

AKRF understands that the Client is proposing to redevelop the Site with two buildings: a 13-story mixed-used residential building on the Site's 31st Street frontage with 167 affordable senior units and one superintendent's unit and ground-floor retail space; and a three-story community facility building on the Site's 32nd Street frontage. The 13-story building would have a full cellar level, which would require excavation to approximately 12 feet below grade (with limited deeper excavation for foundation elements). The remainder of the Site would be redeveloped with private open space.

- A Remedial Action Plan (RAP) and associated Construction Health and Safety Plan (CHASP) should be prepared for implementation during proposed construction and submitted for DEP approval. The RAP should address requirements for items such as: soil stockpiling, soil disposal and transportation; dust control; tank removal procedures and contingency measures

if petroleum storage tank(s) or other contamination should be unexpectedly encountered; and installation of a vapor barrier beneath the new building foundations to mitigate potential vapor intrusion from new or existing off-site sources. The CHASP should include measures for worker and community protection, including personal protective equipment, dust control, air monitoring, and emergency response procedures.

- Any soil or fill excavated as part of future Site redevelopment activities should be managed in accordance with applicable regulations. All material intended for off-site disposal (including all dumped debris piles) should be tested in accordance with 6 NYCRR Part 360 regulations and the requirements of the intended receiving facility. Transportation of all material leaving the Site for off-site disposal should be in accordance with 6 NYCRR Part 364 requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc. Excavation may reveal different or more significant soil contamination in areas not tested as part of this investigation. If discovered, such contamination could require further investigation and/or remediation in accordance with applicable regulations.
- If dewatering is required during future construction activities, water must be disposed or discharged in accordance with local, county, state, and federal requirements.
- Based on the elevated concentrations of chlorinated solvents in soil vapor, a vapor mitigation system, including a vapor barrier and sub-slab depressurization system (SSDS), is recommended to be installed during new building construction, to prevent intrusion of contaminated vapors into the proposed building.

7.0 LIMITATIONS

The findings set forth in this report are strictly limited in scope and time to the date of the evaluation described herein. The conclusions and recommendations presented in the report are based solely on the services and any limitations described in this report.

This report may contain conclusions that are based on the analysis of data collected at the time and locations noted in the report through intrusive or non-intrusive sampling. However, further investigation might reveal additional data or variations of the current data, which may differ from our understanding of the conditions presented in this report and require the enclosed recommendations to be reevaluated or modified.

Chemical analyses may have been performed for specific parameters during the course of this investigation, as summarized in the text and tables. It should be noted that additional chemical constituents, not searched for during this investigation, may be present at the site. Due to the nature of the investigation and the limited data available, no warranty, expressed or implied, shall be construed with respect to undiscovered liabilities. The presence of biological hazards, radioactive materials, lead-based paint and asbestos-containing materials was not investigated, unless specified in the report.

Interpretations of the data, including comparison to regulatory standards, guidelines or background values, are not opinions that these comparisons are legally applicable. Furthermore, any conclusions or recommendations should not be construed as legal advice. For such advice, the client is recommended to seek appropriate legal counsel. Disturbance, handling, transportation, storage and disposal of known or potentially contaminated materials is subject to all applicable laws, which may or may not be fully described as part of this report.

The analytical data, conclusions, and/or recommendations provided in this report should not be construed in any way as a classification of waste that may be generated during future disturbance of the project site. Waste(s) generated at the site including excess fill may be considered regulated solid waste and potentially hazardous waste. Requirements for intended disposal facilities should be determined beforehand as the data provided in this report may be insufficient and could vary following additional sampling.

This report may be based solely or partially on data collected, conducted, and provided by, AKRF and/or others. No warranty is expressed or implied by usage of such data. Such data may be included in other investigation reports or documentation. In addition, these reports may have been based upon available previous reports, historical records, documentation from federal, state and local government agencies, personal interviews, and geological mapping. This report is subject, at a minimum, to the limitations of the previous reports, historical documents, availability and accuracy of collected documentation, and personal recollection of those persons interviewed. In certain instances, AKRF has been required to assume that the information provided is accurate with limited or no corroboratory evidence.

This report is intended for the use solely by Mega Development LLC. Reliance by third parties on the information and opinions contained herein is strictly prohibited and requires the written consent of AKRF. AKRF accepts no responsibility for damages incurred by third parties for any decisions or actions taken based on this report. This report must be used, interpreted, and presented in its entirety.

8.0 SOIL DISPOSAL ISSUES

In addition to the discussions in the Conclusions, Recommendations, and Limitations Sections (Sections 6.0 and 7.0), the issue of appropriate management of off-site disposal of soil warrants careful consideration. Any material being disposed of off-site is a regulated waste, and disposal must be in accordance with:

- Requirements of the specific receiving facility;
- Requirements of any agencies overseeing the cleanup/excavation; and
- Federal and state requirements (sometimes in both the state where the soil is generated and where disposal will occur).

For hazardous wastes and petroleum-contaminated soil (and other 'clearly contaminated' materials), the requirements are usually fairly well defined. It is in the situation where contamination is not readily apparent (e.g., so called "historic or urban fill" or "construction and demolition debris" or material that may have been formerly identified as "clean fill") that present the greatest potential for problems and cost overruns. Even on sites where no contamination requiring remediation is identified, it is common that most of the excavated material is considered "contaminated" for purposes of waste disposal. Concentrations of the various contaminants in historic fill can be highly variable, and upon further testing, the material could contain higher contaminant concentrations than outlined in this investigation. Portions of this material could be classified as hazardous waste.

It is important that the intended disposal facility (or facilities) be identified in advance of off-site disposal. Agency approval is sometimes required for disposal, and the facility will frequently require additional testing prior to (and sometimes at the time of) accepting material. Material must conform to a lengthy list of requirements based on both chemical composition and sometimes numerous other parameters (related to size, percentage of liquids, presence of odors, etc.) for acceptance at the facility. Assuming (or allowing a contractor to assume) that all, or even most, of the soil from a site can be disposed of at minimal cost may result in unanticipated and expensive change orders.

For these reasons, we recommend that professional advice be sought prior to preparing bid documents and contracts incorporating soil disposal.

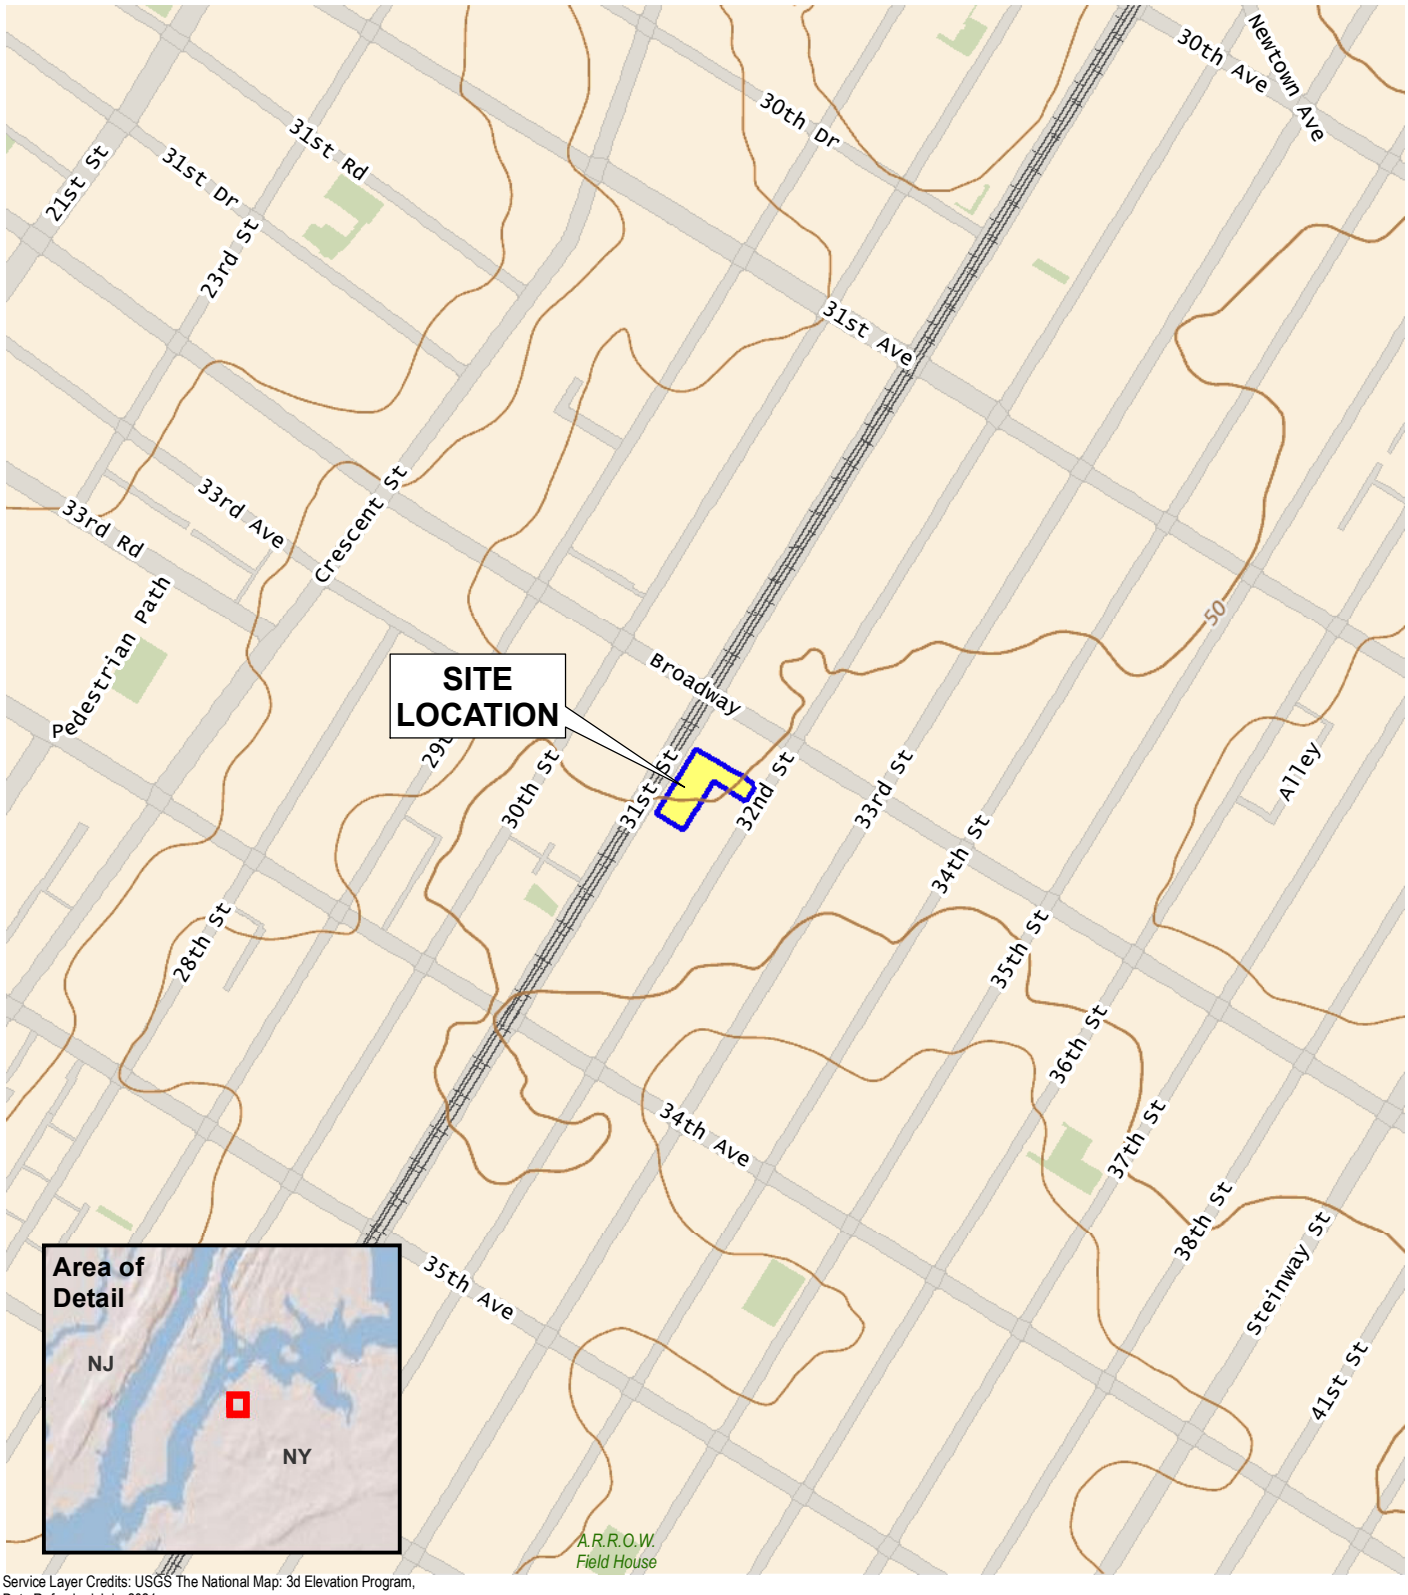
Phase II Investigation Analytical Results
Notes

DEFINITIONS

D	:	Indicates an identified compound in an analysis that has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analyses.
J	:	The concentration given is an estimated value.
ND	:	The standard is a non-detectable concentration by the approved analytical method.
NR	:	Not reported.
NS	:	No standard.
P	:	Indicates a pesticide/aroclor target analyte had a percent difference greater than 25% between the two gc columns. The lower of the two results is reported.
T	:	Indicates that a quality control parameter has exceeded laboratory limits.
U	:	The analyte was not detected at the indicated concentration.
mg/kg	:	milligrams per kilogram
µg/L	:	micrograms per liter
µg/m^3	:	micrograms per cubic meter of air

STANDARDS

Part 375 Soil Cleanup Objectives	:	Soil Cleanup Objectives listed in New York State Department of Environmental Conservation (NYSDEC) "Part 375" Regulations [6 New York Codes, Rules and Regulations (NYCRR) Part 375].



Note: Endosulfans ABS represents the detected sum of Endosulfan I, Endosulfan II, and Endosulfan Sulfate.

Exceedances of Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) are highlighted in bold font.
Exceedances of Part 375 Restricted Residential Soil Cleanup Objectives (RRSCOs) are highlighted in gray shading

NYSDEC Class GA AWQSGVs	:	New York State Department of Environmental Conservation (NYSDEC) Technical and Operational Guidance Series (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values (AWQSGVs).

Exceedances of NYSDEC Class GA AWQSGVs are highlighted in bold font.

1.0 INTRODUCTION

Enviroprobe Service, Inc. (Enviroprobe) is an environmental investigation services firm which provides monitoring well installation (HSA), Geoprobe (DPT) drilling services and Environmental & Engineering Geophysics (EEG) services to the environmental consulting and engineering community.

Enviroprobe conducted a subsurface geophysical investigation at the subject property within client-specified areas of concern. Due to conditions and objectives, the investigation utilized a GSSI UtilityScan HS cart-mounted Ground Penetrating Radar (GPR) unit with a 350 MHz antenna, a Fisher TW-6 metallic locator, a Radiodetection RD7000TX3 multi-frequency transmitter, and a Radiodetection RD7000PXL receiver.

Ground penetrating radar (commonly called GPR) is a geophysical method that has been developed over the past thirty years for shallow, high-resolution, subsurface investigations of the earth. GPR uses high frequency pulsed electromagnetic waves (generally 10 MHz to 2,000 MHz) to acquire subsurface information. An EM wave is propagated downward into the ground by a transmitting antenna. Where abrupt changes in electrical properties occur in the subsurface, a portion of the energy is reflected back to the surface. This reflected wave is detected by a receiver antenna and transmitted to a control unit for real time processing and display. The penetration depth of the GSSI unit varies from several inches to tens of feet according to site-specific conditions. The penetration depth decreases with increased soil conductivity. The penetration depth is the greatest in ice, dry sands, and fine gravels. Clayey, highly saline or saturated soils, areas covered by concrete, foundry slag, or other highly conductive materials greatly reduce GPR penetration. GPR is a method that is commonly used for environmental, engineering, archaeological, and other shallow investigations.

The Fisher TW-6 metallic locator is designed to find pipes, cables and other metallic objects such as underground storage tanks (USTs). The TW-6 transmitter generates an electromagnetic field that induces electrical currents in the subsurface. These currents produce a secondary electromagnetic field that is measured by the TW-6 receiver. One surveyor can carry both the transmitter and receiver together to search for underground metallic objects, although the TW-6 response can also be affected by the electrical properties of non-metallic materials in the subsurface.

The Radiodetection (RD) transmitter and receiver are commonly used for pipe and cable locating. The multi-frequency transmitter can be directly connected, clamped, or used to induce a signal in a target line while the multi-frequency receiver is used to measure the signal from energized lines.

2.0 SCOPE OF WORK

On October 03, 2022, a geophysical technician from Enviroprobe Service Inc. was mobilized to the subject property to perform a geophysical investigation. The purpose of the investigation was to clear boring locations, detect possible anomalies and designate underground conduits/utilities in the client selected exterior portions of the subject property. The ground surface of the survey area consisted of asphalt and concrete.

3.0 SURVEY RESULTS

The survey was conducted using a cart-mounted GPR unit, a Fisher TW-6 metallic locator, and a RD unit. The RD unit was used to trace common utilities from sources in and around the survey area. The RD receiver was also used in the passive mode to search for live underground electrical power cables and other utilities emitting 60Hz electromagnetic signals. When possible, the locations of utilities were confirmed with the GPR. Designated utilities were marked on-site with spray paint using the following colors: green – sanitary sewer & storm drainage, pink – vent lines & unknown utilities (See Figure Below).

The GPR and TW-6 were used in a grid pattern over all client specified areas of the site. Based on the results of the GPR and TW-6 surveys, no metallic anomalies That were consistent with UST's, vent piping, or product piping were detected on site (See Figure above)

4.0 LIMITATIONS

The client-selected areas contained obstructions including materials, Reinforced concrete and vehicles. These objects prevented a thorough investigation of the spaces beneath and immediately adjacent to them.

Due to surface conditions and subsurface content, the GPR signal penetration was estimated at less than 4 ft in the majority of the survey area. This penetration was reduced in areas of concrete cover.

The TW-6 survey was kept up to 6 feet away from above ground objects containing metals depending on the sizes, shapes and positions of the metal objects. The TW-6 survey was not effective in areas with reinforced concrete.

Due to the dielectric properties of the subsurface, clay, plastic polymer, and fiberglass utilities may not have been detected.

All field services were conducted in compliance with the industry standard of care guidelines found in ASCE 38-02 (Level B).

5.0 WARRANTIES

The field observations and measurements reported herein are considered sufficient in detail and scope for this project. Enviroprobe Service, Inc. warrants that the findings and conclusions contained herein have been promulgated in accordance with generally accepted environmental engineering methods. There is a possibility that conditions may exist which could not be identified within the scope of this project and were not apparent during the site activities performed for this project.

Enviroprobe represents that the services were performed in a manner consistent with that level of care and skill ordinarily exercised by environmental consultants under similar circumstances. No other representations to Client, express or implied, and no warranty or guarantee is included or intended in this agreement, or in any report, document, or otherwise.

Enviroprobe Service, Inc. believes that the information provided in this report is reliable. However, Enviroprobe cannot warrant or guarantee that the information provided by others is complete or accurate. No other warranties or guarantees are implied or expressed.

GPR data is subject to signal anomalies and operator interpretation. The GPR data is intended to provide the locations of areas of concern requiring additional investigation or the approximate location of underground structures and utilities. Great care must be utilized when excavating and/or drilling around underground structures and utilities since GPR data can only be used for estimation purposes and GPR data is subject to

misinterpretation. Enviroprobe can not guarantee that utilities, post-tension cables, and/or rebar will not be incurred during drilling, cutting, coring, or excavating activities.

This report was prepared pursuant to the contract Enviroprobe has with the Client. That contractual relationship included an exchange of information about the property that was unique and between Enviroprobe and its client and serves as the basis upon which this report was prepared. Because of the importance of the communication between Enviroprobe and its client, reliance or any use of this report by anyone other than the Client, for whom it was prepared, is prohibited and therefore not foreseeable to Enviroprobe.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to Enviroprobe contract with the Client. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

Soil Vapor Sample Log

AKRF Project No:	210124	**Point Installed By:**	AARCO
Project Location:	31-07 31st Street, Astoria, NY	**Installation Method:**	DPP
Client:	Mega Development LLC	**Sampled By:**	T. Giordano
Date:	10/4/2022	**Weather:**	40 °F, Rain

Sample Setup

Vapor Point Depth:	168	Inches	**Total Time of Purge:**	10min
Purging Pump:	Gilair Plus		**Purge Volume:**	2L
Pump Flow Rate*:	0.2	L/min	**Purged Vapor PID:**	ND ppm
			Helium Concentration:	0 %

Sample Identification

Soil Vapor Point ID:	**SV-01**	**SUMMA® Canister ID:**	**5630**
Flow Controller ID:	**10655**	**Soil Vapor Sample ID:**	**SV-01_20221004**

Sample Collection

Time		Vacuum (in/Hg)	Background PID	Notes
Time Started:	12:30	-30	ND	Open air parking lot / rain
Time Halfway:	13:30	-25	ND	Issue with regulator. AKRF notified laboratory for guidance.
Time Stopped:	15:30	-14	ND	Stopped @ -14 in/Hg as per instruction from lab project manager

Notes:

*Purge flow rate not to exceed 0.2 L/min.

ND = non-detect ppm = parts per million L/min = Liters per minute

Soil vapor sample SV-01 20220713 collected in a 6-L SUMMA® canister using a 2-hour flow controller.

Soil Vapor Sample Log

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Melissa Haas
Senior Project Manager

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 200-65184-1

Laboratory: Eurofins Burlington

Narrative

CASE NARRATIVE

Client: AKRF Inc

Project: Ikos Senior Living

Report Number: 200-65184-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/4/2022 1:30 PM and 10/5/2022 10:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANICS (AMBIENT AIR)

Samples SV-02_20221003 (200-65184-1), SV-01_20221004 (200-65197-1), SV-04_20221003 (200-65184-2), SV-03_20221004 (200-65197-2) and SV-05_20221004 (200-65197-3) were analyzed for Volatile Organics (Ambient Air) in accordance with EPA Method TO15. The samples were analyzed on 10/06/2022 and 10/07/2022.

The continuing calibration verification (CCV) associated with batch 200-184402 recovered above the upper control limit for Benzyl chloride. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SV-01_20221004, SV-03_20221004 and SV-05_20221004.

The laboratory control sample (LCS) for analytical batch 200-184402 recovered outside control limits for the following analytes: Benzyl chloride. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No other difficulties were encountered during the VOCs analysis.

All other quality control parameters were within the acceptance limits.

Accreditation/Certification Summary

Client: AKRF Inc
Job ID: 200-65184-1
Project/Site: Ikos Senior Living

Laboratory: Eurofins Burlington

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New Jersey	NELAP	VT972	06-30-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TO-15		Air	1,4-Dioxane
TO-15		Air	4-Isopropyltoluene
TO-15		Air	Chlorodifluoromethane
TO-15		Air	m,p-Xylene
TO-15		Air	n-Butane
TO-15		Air	n-Butylbenzene
TO-15		Air	n-Propylbenzene
TO-15		Air	sec-Butylbenzene
TO-15		Air	tert-Butylbenzene

Form No. CA-C-WI-003, Rev. 2.28, dated 1/8/2021

After printing this label:
1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.
Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	N/A	Thermal preservation not required.
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	N/A	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Indicates an estimated value.
U	Analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	MS or MSD is outside acceptance limits.
*	Duplicate RPD exceeds control limits
*	LCS or LCSD is outside acceptance limits.
E	Compound concentration exceeds the upper level of the calibration range of the instrument for that specific analysis.
J	Indicates an estimated value.
U	Analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
*	MS or MSD is outside acceptance limits.
J	Indicates an estimated value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
U	Analyzed for but not detected.

Metals

Qualifier	Qualifier Description
*	Duplicate analysis not within control limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Sample result is greater than the MDL but below the CRDL
N	Spiked sample recovery is not within control limits.
U	Indicates analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 460-266752-1

Laboratory: Eurofins Edison

Narrative

CASE NARRATIVE

Client: AKRF Inc

Project: Ikos Senior Living

Report Number: 460-266752-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/3/2022 7:00 PM, 10/4/2022 6:30 PM and 10/5/2022 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.3º C, 2.6º C, 2.6º C and 3.3º C.

Receipt Exceptions

The client requested that the soils and ground waters collected for this project be split into 2 separate COCs.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC/MS)

Samples SB-02_0-2_20221003 (460-266752-1), SB-05_0-2_20221004 (460-266826-1), SB-01_0-2_20221005 (460-266877-1), SB-02_31-33_20221003 (460-266752-2), SB-05_29-31_20221004 (460-266826-2), SB-01_31-33_20221005 (460-266877-2), SB-03_0-2_20221003 (460-266752-3), SB-06_0-2_20221004 (460-266826-3), SB-03_31-33_20221003 (460-266752-4), SB-06_29-31_20221004 (460-266826-4), SB-04_0-2_20221003 (460-266752-5), SB-04_32-34_20221003 (460-266752-6), SB-07_0-2_20221003 (460-266752-7) and SB-07_32-34_20221003 (460-266752-8) were analyzed for Volatile Organic Compounds (GC/MS) in accordance with EPA SW-846 Method 8260D. The samples were prepared on 10/04/2022, 10/05/2022 and 10/06/2022 and analyzed on 10/05/2022, 10/06/2022, 10/07/2022 and 10/08/2022.

The continuing calibration verification (CCV) analyzed in batch 460-870087 was outside the method criteria for the following analyte: Bromoform. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-870199 was outside the method criteria for the following analyte: Bromoform. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Job ID: 460-266752-1 (Continued)

Laboratory: Eurofins Edison (Continued)

The continuing calibration verification (CCV) associated with batch 460-870378 recovered above the upper control limit for Methyl acetate. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-870277 was outside the method criteria for the following analyte: Bromoform. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 460-870277 recovered outside control limits for the following analytes: Carbon tetrachloride, sec-Butylbenzene and tert-Butylbenzene. These analytes were biased low in the LCS/LCSD and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) associated with batch 460-870501 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane and n-Butylbenzene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-870379 was outside the method criteria for the following analytes: Carbon tetrachloride, Chlorobromomethane, Bromoform and Methyl tert-butyl ether. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The laboratory control sample (LCS) for analytical batch 460-870379 recovered outside control limits for the following analyte: Bromoform. This analyte was biased low in the LCS and was not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-870690 was outside the method criteria for the following analytes: 1,3,5-Trimethylbenzene, Isopropylbenzene, N-Propylbenzene, n-Butylbenzene, sec-Butylbenzene and Tetrachloroethene (biased high) and Dichlorodifluoromethane (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-870776 was outside the method criteria for the following analytes: 1,1,2-Trichloro-1,2,2-trifluoroethane and 1,1-Dichloroethene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 460-870776 recovered outside control limits for the following analyte: Carbon disulfide. This analyte was biased low in the LCS/LCSD and was not detected in the associated samples; therefore, the data have been reported.

No other difficulties were encountered during the Volatiles analysis.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC/MS)

Samples SB-02_0-2_20221003 (460-266752-1), SB-05_0-2_20221004 (460-266826-1), SB-01_0-2_20221005 (460-266877-1), SB-02_31-33_20221003 (460-266752-2), SB-05_29-31_20221004 (460-266826-2), SB-01_31-33_20221005 (460-266877-2), SB-03_0-2_20221003 (460-266752-3), SB-06_0-2_20221004 (460-266826-3), SB-03_31-33_20221003 (460-266752-4), SB-06_29-31_20221004 (460-266826-4), SB-04_0-2_20221003 (460-266752-5), SB-04_32-34_20221003 (460-266752-6), SB-07_0-2_20221003 (460-266752-7) and SB-07_32-34_20221003 (460-266752-8) were analyzed for semivolatile organic compounds (GC/MS) in accordance with EPA SW-846 Methods 8270E. The samples were prepared on 10/04/2022, 10/05/2022 and 10/07/2022 and analyzed on 10/05/2022, 10/06/2022, 10/08/2022 and 10/09/2022.

The continuing calibration verification (CCV) analyzed in batch 460-870154 was outside the method criteria for the following analyte(s): Benzaldehyde and Indeno[1,2,3-cd]pyrene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Job ID: 460-266752-1 (Continued)

Laboratory: Eurofins Edison (Continued)

The continuing calibration verification (CCV) associated with batch 460-870313 recovered above the upper control limit for 4,6-Dinitro-2-methylphenol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-870313 was outside the method criteria for the following analyte(s): 2-Nitroaniline and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 460-870226 and analytical batch 460-870313 recovered outside control limits for the following analytes: Atrazine and Caprolactam. These analytes were biased high in the LCS/LCSD and were not detected in the associated samples; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-870349 was outside the method criteria for the following analyte(s): < 2,4-Dinitrophenol, Atrazine and Benzaldehyde>. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-870755 was outside the method criteria for the following analyte(s): 2,4-Dinitrophenol and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The continuing calibration verification (CCV) analyzed in batch 460-870853 was outside the method criteria for the following analyte(s): 2-Nitrophenol, 4,6-Dinitro-2-methylphenol and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The following sample was diluted to bring the concentration of target analytes within the calibration range: SB-01_0-2_20221005 (460-266877-1). Elevated reporting limits (RLs) are provided.

Several analytes failed the recovery criteria low for the MS of sample 460-266324-1 in batch 460-870755.

Several analytes failed the recovery criteria low for the MSD of sample 460-266324-1 in batch 460-870755.

Atrazine and Caprolactam failed the recovery criteria high for the MS of sample 460-266802-4 in batch 460-870313.

Atrazine and Caprolactam failed the recovery criteria high for the MSD of sample 460-266802-4 in batch 460-870313. Benzaldehyde exceeded the RPD limit.

No other difficulties were encountered during the semivolatiles analysis.

All other quality control parameters were within the acceptance limits.

PESTICIDES

Samples SB-02_0-2_20221003 (460-266752-1), SB-05_0-2_20221004 (460-266826-1), SB-01_0-2_20221005 (460-266877-1), SB-02_31-33_20221003 (460-266752-2), SB-05_29-31_20221004 (460-266826-2), SB-01_31-33_20221005 (460-266877-2), SB-03_0-2_20221003 (460-266752-3), SB-06_0-2_20221004 (460-266826-3), SB-03_31-33_20221003 (460-266752-4), SB-06_29-31_20221004 (460-266826-4), SB-04_0-2_20221003 (460-266752-5), SB-04_32-34_20221003 (460-266752-6), SB-07_0-2_20221003 (460-266752-7) and SB-07_32-34_20221003 (460-266752-8) were analyzed for Pesticides in accordance with EPA SW-846 Methods 8081B. The samples were prepared on 10/04/2022, 10/05/2022 and 10/07/2022 and analyzed on 10/05/2022, 10/06/2022 and 10/10/2022.

The continuing calibration verification (CCV) associated with batch 460-870169 recovered above the upper control limit for beta-BHC on

Job ID: 460-266752-1 (Continued)

Laboratory: Eurofins Edison (Continued)

the secondary column. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 460-870169/6).

The %RPD between the primary and confirmation column exceeded 40% for cis-Chlordane for the following sample: SB-02_0-2_20221003 (460-266752-1). The lower value(s) has been reported and qualified in accordance with the laboratory's SOP.

The continuing calibration verification (CCV) associated with batch 460-870367 recovered above the upper control limit for beta-BHC on the secondary column. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 460-870367/3).

The %RPD between the primary and confirmation columns exceeded 40% for cis-Chlordane for the following sample: SB-05_0-2_20221004 (460-266826-1). The lower value has been reported and qualified in accordance with the laboratory's SOP.

4,4'-DDE, beta-BHC and Endrin aldehyde failed the recovery criteria low for the MSD of sample 460-266794-1 in batch 460-870367.

No other difficulties were encountered during the Pesticides analysis.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS

Samples SB-02_0-2_20221003 (460-266752-1), SB-05_0-2_20221004 (460-266826-1), SB-01_0-2_20221005 (460-266877-1), SB-02_31-33_20221003 (460-266752-2), SB-05_29-31_20221004 (460-266826-2), SB-01_31-33_20221005 (460-266877-2), SB-03_0-2_20221003 (460-266752-3), SB-06_0-2_20221004 (460-266826-3), SB-03_31-33_20221003 (460-266752-4), SB-06_29-31_20221004 (460-266826-4), SB-04_0-2_20221003 (460-266752-5), SB-04_32-34_20221003 (460-266752-6), SB-07_0-2_20221003 (460-266752-7) and SB-07_32-34_20221003 (460-266752-8) were analyzed for polychlorinated biphenyls in accordance with EPA SW-846 Method 8082A. The samples were prepared on 10/04/2022, 10/05/2022 and 10/07/2022 and analyzed on 10/05/2022, 10/06/2022 and 10/10/2022.

No difficulties were encountered during the PCBs analysis.

All quality control parameters were within the acceptance limits.

METALS - TOTAL (ICP/MS)

Samples SB-02_0-2_20221003 (460-266752-1), SB-05_0-2_20221004 (460-266826-1), SB-01_0-2_20221005 (460-266877-1), SB-02_31-33_20221003 (460-266752-2), SB-05_29-31_20221004 (460-266826-2), SB-01_31-33_20221005 (460-266877-2), SB-03_0-2_20221003 (460-266752-3), SB-06_0-2_20221004 (460-266826-3), SB-03_31-33_20221003 (460-266752-4), SB-06_29-31_20221004 (460-266826-4), SB-04_0-2_20221003 (460-266752-5), SB-04_32-34_20221003 (460-266752-6), SB-07_0-2_20221003 (460-266752-7) and SB-07_32-34_20221003 (460-266752-8) were analyzed for Metals - Total (ICP/MS) in accordance with EPA SW-846 Method 6020B - Total. The samples were prepared on 10/05/2022, 10/06/2022 and 10/07/2022 and analyzed on 10/05/2022, 10/07/2022 and 10/10/2022.

Antimony and Manganese failed the recovery criteria low for the MS of sample 460-266735-8 in batch 460-870271. Aluminum and Potassium failed the recovery criteria high.

Antimony and Manganese failed the recovery criteria low for the MSD of sample 460-266735-8 in batch 460-870271. Aluminum, Iron and Magnesium failed the recovery criteria high.

Antimony failed the recovery criteria low for the MS of sample 460-266794-1 in batch 460-870468. Several analytes failed the recovery criteria high.

For the MSD of sample 460-266794-1 in batch 460-870468, Antimony and Vanadium failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Calcium, Lead, Nickel and Vanadium exceeded the RPD limit.

Antimony, Calcium and Magnesium failed the recovery criteria low for the MS of sample SB-05_29-31_20221004MS (460-266826-2) in batch 460-870666. Aluminum, Iron and Manganese failed the recovery criteria high.

Job ID: 460-266752-1 (Continued)

Laboratory: Eurofins Edison (Continued)

Several analytes failed the recovery criteria low for the MS of sample 460-266993-2 in batch 460-871052. Calcium, Iron, Lead and Vanadium failed the recovery criteria high.

For the MSD of sample 460-266993-2 in batch 460-871052, Potassium failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Arsenic, Copper, Iron and Manganese exceeded the RPD limit.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

HEXAVALENT CHROMIUM

Samples SB-02_0-2_20221003 (460-266752-1), SB-05_0-2_20221004 (460-266826-1), SB-01_0-2_20221005 (460-266877-1), SB-02_31-33_20221003 (460-266752-2), SB-05_29-31_20221004 (460-266826-2), SB-01_31-33_20221005 (460-266877-2), SB-03_0-2_20221003 (460-266752-3), SB-06_0-2_20221004 (460-266826-3), SB-03_31-33_20221003 (460-266752-4), SB-06_29-31_20221004 (460-266826-4), SB-04_0-2_20221003 (460-266752-5), SB-04_32-34_20221003 (460-266752-6), SB-07_0-2_20221003 (460-266752-7) and SB-07_32-34_20221003 (460-266752-8) were analyzed for hexavalent chromium in accordance with EPA SW-846 Method 7196A. The samples were prepared on 10/10/2022 and analyzed on 10/10/2022 and 10/11/2022.

No difficulties were encountered during the hexchrome Cr6 analysis.

All quality control parameters were within the acceptance limits.

MERCURY - TOTAL

Samples SB-02_0-2_20221003 (460-266752-1), SB-05_0-2_20221004 (460-266826-1), SB-01_0-2_20221005 (460-266877-1), SB-02_31-33_20221003 (460-266752-2), SB-05_29-31_20221004 (460-266826-2), SB-01_31-33_20221005 (460-266877-2), SB-03_0-2_20221003 (460-266752-3), SB-06_0-2_20221004 (460-266826-3), SB-03_31-33_20221003 (460-266752-4), SB-06_29-31_20221004 (460-266826-4), SB-04_0-2_20221003 (460-266752-5), SB-04_32-34_20221003 (460-266752-6), SB-07_0-2_20221003 (460-266752-7) and SB-07_32-34_20221003 (460-266752-8) were analyzed for Mercury - Total in accordance with EPA SW-846 Method 7471B. The samples were prepared and analyzed on 10/05/2022, 10/06/2022 and 10/10/2022.

No difficulties were encountered during the Hg analysis.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS/PERCENT MOISTURE

Samples SB-02_0-2_20221003 (460-266752-1), SB-05_0-2_20221004 (460-266826-1), SB-01_0-2_20221005 (460-266877-1), SB-02_31-33_20221003 (460-266752-2), SB-05_29-31_20221004 (460-266826-2), SB-01_31-33_20221005 (460-266877-2), SB-03_0-2_20221003 (460-266752-3), SB-06_0-2_20221004 (460-266826-3), SB-03_31-33_20221003 (460-266752-4), SB-06_29-31_20221004 (460-266826-4), SB-04_0-2_20221003 (460-266752-5), SB-04_32-34_20221003 (460-266752-6), SB-07_0-2_20221003 (460-266752-7) and SB-07_32-34_20221003 (460-266752-8) were analyzed for percent solids/percent moisture in accordance with EPA Method CLPISM01.2 (Exhibit D) Modified. The samples were analyzed on 10/05/2022 and 10/10/2022.

No difficulties were encountered during the %solids/moisture analysis.

All quality control parameters were within the acceptance limits.

Surrogate Summary

Client: AKRF Inc
Job ID: 460-266752-1
Project/Site: Ikos Senior Living

Method: 8082A - Polychlorinated Biphenyls (PCBs) by Gas Chromatography (Continued)

Matrix: Solid **Prep Type: Total/NA**

		Percent Surrogate Recovery (Acceptance Limits)			
Lab Sample ID	Client Sample ID	DCBP1 (10-150)	DCBP2 (10-150)	TCX1 (42-150)	TCX2 (42-150)

Accreditation/Certification Summary

Client: AKRF Inc
Job ID: 460-266752-1
Project/Site: Ikos Senior Living

Laboratory: Eurofins Edison

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	11452	04-01-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8270E	3546	Solid	3 & 4 Methylphenol
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Method Summary

Client: AKRF Inc
