DEC Memo:	Will visit today.. 03/18/08-Vought-Site visit performed by Vought and site next to Exxon Mobil has DOB permits with address listed as 40-34 Crescent and as per Property Shark, address is 40-30 Crescent. As per NYC Property Tax address is listed as 40-34 Crescent Street. Vought upon site visit noticed one 550-gallon UST in excavation for building foundation and another UST with open hole and gasoline present inside on North side of site (away from exxon mobil). No visible contamination on Exxon Mobil Side of site and excavation depth in center to depth of approximately 25' below grade. No contractors onsite however fence was open suggesting that second UST was uncovered in excavation, contractors realized there was product inside and halted work. Contact information on site plywood fence is: AMG Pacific Enterprise (917)299-7163 Best Squad-212-669-7043 As per ACRIS property owner is: Krishna Hospitality, LLC. C/O KAUSHIK PATEL 87-23 144th Street Jamaica, NY 11435 Ph:(718)729-8775 Ph: (917)627-5286 Fax:(718)729-8021 email:lq6014gm@gmail.com DEC requires: 1)PBS registration 2)delineation of soil and groundwater contamination 3)site plan with location of fill ports and dispenser island 4)collection of endpoint samples 5)vapor barrier and possibly SSDS 5)cc to Berninger Vought called AMG Pacific (Eric) and left message to immediately return call. Vought called Best Squad to obtain contact information and spoke to Mark Malik who provided phone number for Krishna. Vought called contact number at Krishna and spoke to Kaushik Patel. Site is not E designated and Phase I was conducted. Patel did not hear as of yet of tank. Patel will perform site visit today and Vought also informed him of requirements and will send CSL with above requirements. 03/20/08-Vought-Received message from Walter Berninger (ph:631-589-6521

EXCAVATION SITE (Continued) **S109060298**

fax:631-589-6528) and Windmill Oil Tank services will remove oil from tank and will be consultant
for site. Vought discussed above requirements and sent out CSL with one month due date and cc to
Berninger. 04/04/08-Vought-Performed site visit with DEC Ahmed and DEC Zhune and contractor onsite
pouring concrete for foundation and rebar in place despite DEC letter not to develop until RAP is
accepted by DEC. Rear half of site already covered in rebar and front quarter of site also rebared
and concreted. Kuashik Patel onsite and Vought stated that no more develop on soiled portions of
site is to take place until RAP is accepted. Vought also indicated that if development on remaining
portions of site did take place then letter to DOB would be sent requesting revocation of permits
and violations would be issued. Patel agreed to only work on currently developed portions of site
and Vought had no objection since rebar and concrete already in place. Vought spoke to Berninger
and he was unaware of development on-site and would submit RAP as soon as possible.
04/05/08-Vought-Reviewed fax received from Walter Berninger dated 4/3/08. Removal of two 550 gallon
underground storage tanks . Windmill Oil Tank Services removed tank. Water was present in tanks
with a small amount of oily film. No visual holes were observed other than what was caused by
excavating and removal . Sidewall and bottom endpoint samples were obtained from excavation. Tanks
were encased in concrete. Laboratory analyticals not received to date from laboratory. BEI is in
the process of filling out and the submission of a Petroleum Bulk Storage Application . Delineation
will be determined upon receiving sample analyticals. Vapor barrier is already installed under the
entire building. No remote fill ports or pump islands were observed at time of tank removal. After
our telephone conversation this afternoon I have spoken to Mr. Patel and all work in this former
tank location area has stopped and awaiting laboratory results to determine what if any additional
work may be required. Analytical results will be submitted to DEC. Site building planned will be a
9 story hotel. 04/07/08-Vought-Received email copy of letter from Berninger dated 4/4/08. Berninger
received analyticals from American Analyticals with detections of minor SVOCS below TAGM 4046
Required Soil Cleanup Objectives. Analyticals showed no detections of VOCs above TAGM 4046 Required
Soil Cleanup Objectives. Berninger is generating for submission, disposal manifests, test results,
site map and PBS registration. Additionally, a vapor barrier is still being installed... . Vought
called Berninger with no objections to proceed as soil analyticals show no TAGM exceedences. Vought
called Berninger and he will send in documentation of vapor barrier.

EXCAVATION SITE (Continued) **S109060298**

04/16/08-Vought-Received email from Berninger that he is preparing letter for submission with site info, maps, pictures and lab data. Berninger inquired that since two tanks total 1100-gallons in capacity that they do not need to be registered. After conferral with DEC Krimgold, PBS registration is not required due to capacity being under 1101 gallons. Vought sent email to Berninger that PBS registration was not required. 04/18/06-Vought-Received and reviewed Report submitted by Berninger dated 4/7/08. Report has pictures of vapor barrier placed under concrete observed by DEC during site visit on 4/4/08. ...area where the tanks were will be uncovered with a 6 mil plastic that goes from property lines under all areas where the building will occupy. Copy of disposal manifest also included. Request of No Further Action. No remote fill ports or dispenser islands observed. Soil analyticals (same as those from 4/7/08 show no TAGM 4046 Required Soil Cleanup Objective exceedences). Spill closed by Vought. Vought sent NFA to: Krishna Hospitality, LLC. Here is the summary of the report from Island Environmental Tank, Inc. * According to owner, the tank has previously been used for the purpose of storing #2 heating oil and owner doesn't know when this tank was installed. * UST was installed horizontally in the backfill material, with the top of the tank located approximately 4' below the surface. * A 1080 gal. capacity tank was removed in the presence of Mr. Vinny Lovari of Island Tank Enviromental. After removal from cavity, tank has been cut and washed and removed oil and water mixture with vac/truck. * No groundwater or static surface water was encountered in the tank cavity. * Tank had pits and holes. * Tank cavity was excavated approximately 30 cubic yard of soil in 55 gal. drums and disposed at Jamaica Recycling Inc. Jamaica, NY. * Tank cavity was backfilled and compacted in place. * 6 samples were taken out from cavity and tested at Severn Trent Laboratory, Edison, NJ. * The metal tank and all metal tank system components were removed from teh owner's property and disposed of as scrap metal at John Iron & Metal Co.,Inc. 33 Arthur Kill Road, Staten Island, NY. 1/5/06-Hiralkumar Patel. Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Emissions & Generation Resource Integrated Database (EGRID) contains data on emissions and resources mix for virtually every power plant and company that generates electricity in the United States.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
THE ENERGY INFORMATION ADMINISTRATION (EIA) IS AN INDEPENDENT AGENCY WITHIN THE U.S. DEPARTMENT OF ENERGY THAT DEVELOPS SURVEYS, COLLECTS ENERGY DATA, AND DOES ANALYTICAL AND MODELING ANALYSES OF ENERGY ISSUES. THE EIA-860 DATABASE SUPPORTS THE ANNUAL ELECTRIC GENERATOR REPORT AND CONTAINS ELECTRIC UTILITY AND NON-UTILITY (INCLUDING INDEPENDENT POWER PRODUCERS, COMBINED HEAT AND POWER PRODUCERS, AND OTHER INDUSTRIALS) GENERATOR-SPECIFIC PLANT DATA, INCLUDING COUNTY AND STATE LOCATION AND OWNERSHIP INFORMATION

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 02/28/05: Transfered from Rommel to Tibbe. Site being investigated by NYCT. Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. 12/15/05: Transfered back to Tibbe from Bureau B. 08-30-06: NYCT attempted to perform a subsurface investigation but continually encountered refusal. A new subway tunnel, ventilation bulding and utilities were constructed in the area of the former tanks and associated contamination. It would appear that the contamination was removed during construction becuase of the large excavation that was required to construct these facilities, but NYCT has no reports or mainfests to indicate how much was removed. Further investigation does not appear to be possible due to the ubderground structures and utilities.

On 10/30/03, Crompco conducted precision test on tanks. One 4000gal diesel UST failed the test. Energy Storage Systems reviewed the test data and suggested the test technician failed to plug the air eliminator on the pumps and therefore the tanks failed. On 12/9/03, Crompco retested the tanks and plugged the air eliminator and the tank passed. 12/19/03 Spoke to Andy at Energy Storage systems. As per Sigona's recommendation, he will submit a report summarizing the first and second testing episodes. Rommel 12/23/03 Received letter from Mort Turoff at Energy Storage systems summarizing first and second tests. Diesel tank passed on 12/9/03 retest. Results on file. (KMF) 1/9/04 Sent NFA. (KMF)

Site Description: "Location: The 29-05 38th Avenue Site is located in an urban area of Queens County and consists of a single 0.24-acre parcel. The site is bounded by a vacant lot that formerly contained an industrial building to the north, 30th Street to the east, 38th Avenue to the south, and Old Ridge Road to the west. Site Features: Site is currently an active construction site and there are no site occupants. Prior to demolition, the parcel contained a 1.5-story warehouse building with a partial basement that was formerly occupied by a biofuel generator rental company, a single-story vacant commercial building, a 2-story residential building with a basement, a single-single story residential building with a basement, and two, non-contiguous paved parking areas. Current Zoning and Land Use: The current zoning designation for the site is M1-2/R6A5D, allowing for mixed residential, commercial, and light industrial uses. Past Use of the Site: The site historically was developed with four buildings. From southeast to northwest, these buildings included a 1-story commercial building, 1.5-story warehouse, 1-story residential building, and a 2-story residential building. Historic Sanborn maps identify the commercial building in the southeastern portion of the site as an automotive service facility and gasoline station from 1947 until at least 1950. The 1.5-story warehouse is identified as a carpet cleaning facility from 1936 until 2006. These buildings were demolished in early 2021. The 1-story and 2-story residential buildings in the northwestern portion of the site were constructed

circa 1898 and 1936, respectively, and were utilized for residential use until demolition in October 2021. The adjacent property to the north (37-24 & 37-28 30th Street) has been investigated and was remediated under the BCP as Site Number C241214. This site and the adjacent BCP site to the north were historically used as commercial dry cleaning and laundry facilities, and previous investigations identified elevated levels of the dry cleaning solvent tetrachloroethene (PCE) and its daughter product trichloroethene (TCE) in soil vapor. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists of approximately 10 feet of coarse-to-fine grained sand with silt and clay underlain by 10 feet of poorly-graded sand and clay. Historic fill material, as determined predominantly by the presence of brick pieces, was identified at depths of 2 to 7 feet below ground surface (bgs). Groundwater depth beneath the site ranges from 24 feet bgs to 28 feet bgs. Groundwater flow beneath the site is from east to west. "

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, per- and polyfluoroalkyl substances (PFAS), and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include VOCs in groundwater and soil vapor. Soil: Thirteen soil samples were collected during the Remedial Investigation (RI). One VOC exceeded its respective unrestricted use soil cleanup objective (UUSCO): methylene chloride at 0.085 parts per million (ppm) above its UUSCO of 0.05 ppm. Several SVOCs exceeded the UUSCOs in site soils, including, but not limited to benzo(a)anthracene at a maximum concentration of 1.45 ppm, benzo(a)pyrene at a maximum concentration of 1.32 ppm, benzo(k)fluoranthene at a maximum concentration of 1.07 ppm, chrysene at a maximum of 1.53 ppm, all compared to their respective UUSCOs of 1 ppm; and indeno(1,2,3-cd)pyrene at a maximum concentration of 0.716 ppm, compared to its UUSCO of 0.5 ppm. Lead exceeded its respective UUSCO of 63 ppm in three soil samples with a maximum concentration of 92.8 ppm. There were no exceedances of pesticides or PCBs above UUSCOs. PFAS were detected in one soil sample, with perfluorooctanoic acid (PFOA) detected at 1.58 parts per billion (ppb) and perfluorooctane sulfonic acid (PFOS) detected at 9.17 ppb. These concentrations are above respective unrestricted use guidance values of 0.66 ppb for PFOA and 0.88 ppb for PFOS. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Groundwater samples were collected from monitoring wells located throughout the site as part of the RI. VOCs were detected in groundwater samples collected throughout the site including, but not limited to tetrachloroethene (PCE) at a maximum concentration of 120 parts per billion (ppb) compared to its ambient water quality standard (AWQS) of 5 ppb. Several metals were detected in groundwater above AWQS including manganese, magnesium, selenium and sodium, however these concentrations are consistent with regional background concentrations. There were no exceedances of AWQS for PCBs or pesticides in groundwater samples. PFOA and PFOS were reported at concentrations of up to 35.2 and 15.9 parts per trillion (ppt), respectively, exceeding the respective AWQ guidance values of 6.7 ppt and 2.7 ppt for each compound. There were no detections of 1,4-dioxane in groundwater samples. Data indicates groundwater contamination may be migrating off-site. Off-site investigation of

29-05 38TH AVENUE SITE (Continued) **S127282808**

	groundwater impacts will be performed as part of a separate off-site investigation program. Soil Vapor: Five soil vapor points were sampled during the RI at locations throughout the site. Multiple VOCs were detected in each soil vapor sample collected from the site. Petroleum related compounds, such as benzene and toluene were detected in each soil vapor sample at relatively low concentrations. Chlorinated VOCs were detected at maximum concentrations including, but not limited to, PCE at 23,000 micrograms per cubic meter (ug/m3), and trichloroethene (TCE) at 520 ug/m3. Data indicates there is potential for off-site impacts in soil vapor related to this site. "
Health Problem:	"The site buildings have been demolished and the site contains a small fenced off parking area which has a paved surface, therefore it is not expected that people will come into contact with site related contamination unless they disturb the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Since the site is vacant, soil vapor intrusion is not a current concern, however the potential exists for indoor air impacts in any future on-site development and occupancy. Also, the potential exists for indoor air impacts from site contaminants in off-site buildings."

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
