Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D004
Waste Description:	Arsenic
Waste Code:	D005
Waste Description:	Barium
Waste Code:	D006
Waste Description:	Cadmium
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D010
Waste Description:	Selenium
Waste Code:	D011
Waste Description:	Silver
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

MTA- EAST SIDE ACCESS QUEENS TUNNELS EXCAVATION (Continued) **1006810483**

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F032
Waste Description: Wastewaters, Process Residuals, Preservative Drippage, And Spent Formulations From Wood Preserving Processes Generated At Plants That Currently Use, Or Have Previously Used, Chlorophenolic Formulations [Except Potentially Cross-Contaminated Wastes That Have Had The F032 Waste Code Deleted In Accordance With Section 261.35 (I.E., The Newly Promulgated Equipment Cleaning Or Replacement Standards), And Where The Generator Does Not Resume Or Initiate Use Of Chlorophenolic Formulations]. (This Listing Does Not Include K001 Bottom Sediment Sludge From The Treatment Of Wastewater From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.)

Waste Code: F034
Waste Description: Wastewaters, Process Residuals, Preservative Drippage, And Spent Formulations From Wood Preserving Processes Generated At Plants That Use Creosote Formulations. This Listing Does Not Include K001 Bottom Sediment Sludge From The Treatment Of Wastewater From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.

Waste Code: F035
Waste Description: Wastewaters, Process Residuals, Preservative Drippage, And Spent Formulations From Wood Preserving Processes Generated At Plants That Use Inorganic Preservatives Containing Arsenic Or Chromium. This Listing Does Not Include K001 Bottom Sediment Sludge From The Treatment Of Wastewater From Wood Preserving Processes That Use Creosote And/Or Pentachlorophenol.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	001
Tank Id:	11929
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
B00 - Tank External Protection - None

27-01 BRIDGE PLAZA NORTH (Continued) **A100520742**

C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
H00 - Tank Leak Detection - None

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	15000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	12/01/2000
Register:	True

Evaluation Action Summary:
Evaluation Date: 20150826
Evaluation Responsible Agency: EPA
Found Violation: No
Evaluation Type Description: COMPLIANCE EVALUATION INSPECTION
Evaluation Responsible Person Identifier: R2STP
Evaluation Responsible Sub-Organization: RCB
Actual Return to Compliance Date: Not reported
Scheduled Compliance Date: Not reported
Date of Request: Not reported
Date Response Received: Not reported
Request Agency: Not reported
Former Citation: Not reported

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	245410
Material Code:	0008
Common Name of Substance:	Diesel

Equipment Records:

I02 - Overfill - High Level Alarm
C01 - Pipe Location - Aboveground
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
K00 - Spill Prevention - None
E12 - Piping Secondary Containment - Double-Walled (AG only)
J02 - Dispenser - Suction Dispenser
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/2009
Capacity Gallons:	4000

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.

SUPERIOR REED (Continued) **1004762971**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	228715
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

	D01 - Pipe Type - Steel/Carbon Steel/Iron
	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	K01 - Spill Prevention - Catch Basin
	H00 - Tank Leak Detection - None
	I02 - Overfill - High Level Alarm
	J00 - Dispenser - None
	C03 - Pipe Location - Aboveground/Underground Combination
	L00 - Piping Leak Detection - None
	G01 - Tank Secondary Containment - Diking (Aboveground)
	E01 - Piping Secondary Containment - Diking (AG only)
	F00 - Pipe External Protection - None
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	04/17/2009
Capacity Gallons:	5000
Tightness Test Method:	34
Date Test:	07/23/2020
Next Test Date:	Not reported
Date Tank Closed:	Not reported

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
Registry ID: 110066947521

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	01/26/06. Feroze, TTF is sent to property owner. 01/27/06. Feroze visited the site. Its NYCDOT office. Talked with Joseph Donini. Executive director Adm. They will change the tank and remove all contaminated soil if any and will submit those documents to DEC. His Ph. 718-433-3128.Fax 718-433-3389/3121 02/13/06. Ms. Haither 212 442-7721 called me and infirmed that they have removed the old tank & will set a new one soon. They will submit DEC the document soon. 03/15/06. Spill is transferred from Feroze to Kumer Patel. 04/21/06-Hiralkumar Patel. Left message for Ms. Haither. 04/24/06-Hiralkumar Patel. Spoke with Ms. Heather and she will fax me copy of the letter that she sent to Feroze earlier. they are still working to get contractor to do work. tank is empty and they haven't

PS 153 M SCHOOL (Continued) **1000990424**

removed it yet. 04/28/06-Hiralkumar Patel. REceived fax from Ms. Heather. she suggest to contact Joe Donini (718-433-3128) as Joe sent letter to Feroze at DEC. abstract of letter: - tank is currently empty and is not operational. - NYC DOT is in the process of obtaining quotes and recommendations from vendors to perform soil analysis, remediation if necessary, removal and replacement of the tank with letter, she also faxed copy of PBS registration form they filed to registered subject tank. 07/06/06-Hiralkumar Patel. Left message for Joe Donini. 08/29/06-Hiralkumar Patel. Left message for Joe Donini. 09/11/06-Hiralkumar Patel. received message from Mr. Donini (718-433-3128). as per Mr. Donini, NYS DOT will hire someone for work. he will call once he gets more information. 02/16/07-Hiralkumar Patel. received message from Jerry Hickson (Ph. 212-465-5512, Fax: 212-631-3770) from Parson Birnckerhoss. left message for Mr. Hickson. 03/01/07-Hiralkumar Patel. received call from Mr. Hickson. they will investigate soil around tank and associated pipings for any contamination and will send report (in six months). 10/11/07-Hiralkumar Patel. left message for Ms. Alexandra, as Jerry left company. 05/22/08-Hiralkumar Patel. received email from Ms. Wong. Roux associated was working on this case but now somebody else is working. Renee L. Wong Roux Associates, Inc. PH. (631) 232-2600 (O) (631) 774-7346 (C) Fax (631) 232-9898 Email: rwong@rouxinc.com 06/04/08-Hiralkumar Patel. left message for Ms. Wong to know history of work performed. 06/05/08-Hiralkumar Patel. received email from Ms. Wong. she asked to contact Mr. Singh at NYC DOT, who handles the project. spoke with Mr. Singh at NYC DOT. he mentioned that building ownes by NYC Board of Education and occupies by NYC BOE, NYC DOT and NYS DOT. Mr. Singh mentioned that NYS DOT did work regarding tank. Raymond Singh NYC DOT Ph. (718) 793-7316 email: rsingh@dot.nyc.gov George Hanna NYS DOT PH. (718) 482-4793 (718) 499-7075 spoke with Mr. Hanna. he mentioned that tank owned by NYC. they pumped out failed UST and installed temporary AST. Mr. Hanna doesn't know whether city agency will remove or repair the tank. failed tank is currently empty. Mr. Hanna asked to contact John Reis (917-335-7381) at NYS DOT to get contact at city agency who handles the tank. left message for Mr. Reis. received call from Mr. Reis. he asked to contact Mr. Talas. Mohammad Talas NYC DOT Ph. (347) 245-0059 email: mtalas@dot.nyc.gov left message for Mr. Talas. 06/06/08-Hiralkumar Patel. received message from Mr. Talas. left message for Mr. Talas. 06/19/08-Hiralkumar Patel. spoke with Mr. Talas. he mentioned that NYS DOT is working to replace tank. Mr. Talas asked to talk to Mr. Merenes at NYS DOT. spoke with Mr. Merenes. he will contact their consultant and will submit updates. Joseph Merenes NYS DOT PH. (718) 482-4735 email: jmerenes@dot.state.ny.us 06/23/08-Hiralkumar Patel. spoke with Mr. Merenes regarding tank updates. he will ask his consultant to contact. received email from Raymundo Martinez, JHK Engineering: JHK is a prime consultant to the NYSDOT and part of its scope of services under Supplemental Agreement #40 (SA #40) to agreement D008599 is to provide design services for the replacement fuel tank at 28-11. The design services will be performed by PB Americas, a sub-consultant engineering firm on JHK's team on agreement D008599. The JHK team has not proceeded on the design services since we are awaiting approval of SA #40, which should be soon. The SA #40 is currently being processed by NYSDOT Contracts in Albany. Raymundo Martinez President JHK Engineering, P.C. email: raymundo.martinez@transcore.com contractor is waiting for approval from NYSDOT. 04/02/10-Hiralkumar

PS 153 M SCHOOL (Continued) **1000990424**

Patel. 11:33 AM:- left message for Mr. Merenes for updates. 09/10/10-Hiralkumar Patel. 2:43 PM:- left message for Mr. Merenes for updates. 09/14/10-Hiralkumar Patel. 8:45 AM:- received message from Mr. Merenes. he mentioned that their consultant PB will prepare a work plan and then work plan will be forwarded to NY City DOT for implementation. he will call back once gets update from PB. 10/14/10-Hiralkumar Patel. 11:15 AM:- received message from Mr. Merenes. he mentioned that due to scaffolding for some repair work around the building, they could not start bid process for tank removal for about a year. ACRIS record shows that the subject site is owned by City of New York. as per spill report, site has 2,500 gal tank. no PBS record found. 09/16/11-Hiralkumar Patel. 1:00 PM:- spoke with Mr. Merenes. he mentioned that scaffolding is still there and no work has done regarding tank removal. 11/30/11-Hiralkumar Patel. after discussing with DEC Austin, case transferred to DEC Vadim for supervision of the investigatory and remedial work under the NYC Heating Oil Consent Order. DEC requires: 1) PBS registration, 2) isolation test, 3) cleanup of any contamination 12-27-2011 This spill is reassigned from V. Brevdo to Alex Zhitomirsky, as per V. Brevdo instructions. Emailed LiRo and received the following response by S. Frank: We will pull together whatever information we have and forward it to you. AZ 01-15-2020 I inquired S. Frank about this site. He will get back to me. AZ 01-15-2020 E-mail from S. Frank: Alex, We discussed this site briefly in November. This site was previously bid to another consultant. In May 2019, DOT/DDC requested LiRo take over tank closure/spill investigation activities. The tank is located within the sidewalk and is currently out of service. In August 2019, the tank manway was vacuumed out of debris and water. Due to structural issues with the current site building, the tank will be closed in place with an inert foam. A SOW was submitted to LiRo's subcontractor in September 2019. The subcontractor prepared required H&S documents, which LiRo reviewed and returned to subcontractor for edits. The subcontractor's HASP will require DDC QA review. We will get samples around the tank during the closure work. Steve 7-5-2023 Reviewed Tank Closure Report & Spill Closure Request DOT- Queens Plaza North, dated April 10, 2023. NYSDEC Spill No. 0512409 was reported in 2006 as the result of a tank test failure relating to Tank #001, a 2,000-gallon #2 fuel oil emergency generator UST. The tank was reportedly removed from service. A 2018 assessment of the tank system by AECOM, concluded the tank was not registered with NYSDEC, and structural issues/damage are present within the adjacent utility vault. Overhead scaffolding was and remains present around the building due to structural issues. In 2019, management of the spill was assigned to LiRo. Work on the tank and spill was delayed due to multiple factors including budget reductions and DOT s monetary reconciliation of PBS registration late fees associated with Tank #001. Due to the ongoing structural issues at the Site, it was determined that the UST could not be safely removed, and therefore would be closed-in-place. In December 2022, the UST was closed-in-place by removing residual wastewater/debris, flushing and cleaning fill/vent lines, cleaning the interior of UST, cutting fill/vent lines to grade level, and filling the vent lines, fill lines and UST with concrete slurry. Soil samples were collected through the tank walls from sidewalls and bottom. None of the six samples reported any VOC or SVOC concentrations above CP-51 SCLs. No groundwater was encountered during the tank closure activities. In order to assess potential impacts to groundwater and determine if

PS 153 M SCHOOL (Continued) **1000990424**

groundwater was at or below 20 ft. bgs (per DER-10), one soil boring (LSB-10) was advanced across 28th Street, assumed relative downgradient location. The soil boring was advance to 20 ft. bgs, and did not encounter groundwater. No visual or olfactory evidence of petroleum impacts were reported throughout soil boring LSB-01. No PID readings were reported throughout the soil boring. Three soil samples were collected from LSB-01 and submitted for laboratory analysis of CP-51 list VOCs and SVOCs. No VOCs or SVOCs were detected in any of the three soil samples. Based upon the tank closure activities and subsequent soil sampling from material surrounding the tank and the supplemental soil boring location LSB-01, LiRo recommended closure of Spill Number 0512409. LiRo recommends closure of the spill. DEC concurred. 7-7-2023 Spill closure was sent to S. Frank, V. Brevdo. AZ

Remarks: isolate and retest

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

SWIS:	4101
Town:	New York City
Record Added Date:	05/24/2021
Record Updated Date:	12/21/2023
Update By:	DKMACNEA
Site Description:	"Site Location: The site is located at 25-01 Queens Plaza North, Queens, NY 11101 and is identified as Tax Block 415, Lot 4. The site is located in a mixed-use urban area. The site is bordered to the north by multi-story mixed-use residential and commercial buildings, to the south by Queens Plaza North and Queensboro Bridge Greenway, to the east by 27th Street and to the west by Crescent Street. Site Features: The 0.699-acre site consisted of two adjacent lots (Lots 4 and 10) in Queens, New York, which were merged in 2022. The combined lot faces Queens Plaza North and Crescent Street. The former two-story commercial building was recently demolished. The building was heated by an oil-fired boiler, fueled by a 5,000-gallon underground storage tank, that remains on site after demolition. The remainder of the site is used as a parking lot. Current Zoning and Land Use: The site is currently located in an M1-5/R9 (manufacturing/residential) district within the Special Long Island

QUEENSBORO LANES SITE (Continued) **S127750706**

City Mixed Use (LIC) Zoning District, which allows for light industrial uses and residences developed under height factor regulations. The former commercial building was divided into multiple uses, including restaurants, and stores. The surrounding properties are multi-story residential and commercial buildings. Queens Plaza Subway Station is located to the south 100 feet from the site. Past Use of the Site: Former Lot 4 (25-01 Queens Plaza North): According to a 1936 map, three gasoline tanks were located at the southeast corner of the site. The pedestrian bridge to the Queens Plaza subway station platform was added in 1941. The building has been used for commercial and manufacturing purposes since 1947. In the 1950's the basement of the building was occupied by a bowling alley and a restaurant. The three gas tanks at the south east corner of the site were removed prior to 1950. Manufacturing occurred from the 1970s-1980s. Products included garments, magnetic cassette tapes, and plastic processing. The building was heated by an oil-fired boiler, fueled by a 5000 gallon underground storage tank (UST). Three petroleum spills have been reported at the site. In 1989, a tank test failure occurred at the site, and was associated with the fill line for the UST. The incident was assigned Spill No. 8905133 by NYSDEC and closed in November 1992. In 1994, the fuel oil UST on the site was changed from No. 4 to No. 2 fuel oil. In 1997, a traffic accident occurred at the intersection of Crescent Street and Queens Plaza, causing a 50-gallon spill of diesel fuel. The spill was assigned Spill No. 9612175 and was closed on the same day. In 2003, a spill was of No. 2 fuel oil occurred at the site due to a tank test failure. It was assigned Spill No. 0305348 by the NYSDEC, and closed in May of 2007. Former Lot 10 - 25th Street: Between 1898 and 1936, historical maps indicate residential usage. A private garage and small store were present on a 1936 map. Lot 10 is depicted as a single paved lot in 1970. It is likely that contaminated historic fill may have been used to level the site. Site Geology and Hydrogeology: The elevation of the site is approximately 26 feet above mean sea level. The site is generally flat, and the area slopes slightly to the west towards the East River. The East River is approximately 0.67 miles northwest of the site. Newtown Creek is approximately 0.62 miles to the south of the site. Based on the remedial investigation, groundwater appears to flow to the south/southeast. Groundwater depth at the Site range from approximately 15 to 18 ft below surface grade (bsg). Subsurface stratigraphy observed during the remedial investigation generally consisted of historic fill composed of varying amounts of sand, gravel, silt, and varying amounts of anthropogenic materials (brick, slag, and glass) extending to depths ranging from 0 to 7 feet bsg in former Lot 10; historic fill was not observed in former Lot 4. The historic fill layer is underlain by native soil consisting of varying amounts of sand, silt, clay and grave. Bedrock is approximately 54.5 ft bgs at the site."

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Based on the investigations conducted to date, the primary contaminants of concern are SVOCs in soil, and stained and odorous soil related to past petroleum releases in soil, and petroleum VOCs in groundwater. Soil: During RI sampling, SVOCs exceeding the

QUEENSBORO LANES SITE (Continued) **S127750706**

restricted residential soil clean-up objectives (RRSCOs) were identified in one location. The maximum concentration was benzo(b)fluoranthene at 9.1 parts per million (ppm), compared to the RRSCO of 1 ppm. Five other SVOCs (benzo(a)anthracene (8.2 ppm), benzo(a)pyrene (6.8 ppm), chrysene (7.7 ppm), dibenz[a,h]anthracene (1 ppm) and indeno (1,2,3-cd) pyrene (4.6 ppm)) exceeded the RRSCO at this location. No exceedances of restricted residential soil clean-up objectives (RRSCOs) for VOCs, metals, pesticides, PCBs or emerging contaminants were noted. Field notes indicate petroleum staining and odors were noted in 3 locations during sampling. The maximum PID (photoionization detector) reading for these locations was 297 ppm. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Petroleum-related VOCs were detected at concentrations exceeding the Ambient Water Quality Standards (AWQS). The highest exceedance was 1,2,4-trimethylbenzene at 82 parts per billion (ppb) above the NYSDEC AWQS of 5 ppb. Other petroleum related compounds include 1,3,5-trimethylbenzene (6.1 ppb), benzene (8 ppb), naphthalene (64 ppb) and xylene (16 ppb). The maximum concentration of any of these compounds was 64 ppb, and the highest total VOC concentration was 250 ppb. Dissolved metals exceeded the AWQS for barium, iron, magnesium, manganese and sodium. These are naturally occurring in groundwater, are not site related and will not be addressed by the remedy. For PFAs, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations up to 52.2 and 82.8 parts per trillion (ppt) respectively exceeding the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater. 1,4 dioxane was reported at concentrations up to 0.383 parts per billion (ppb), which is below the Maximum Contaminant Level (drinking water standard) of 1 ppb in groundwater. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Vapor: Tetrachloroethene (PCE) was detected in soil vapor samples up to 9.7 micrograms per cubic meter (ug/m3). Petroleum-related compounds were identified in soil vapor at the site. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "The site is covered by a vacant building and pavement so people are not expected to come in contact with site contaminants in soil. However, persons who enter the site could contact contaminants in the soil by digging or otherwise disturbing the soil. Contaminated groundwater is not used for drinking and the site and surrounding areas are served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition, however the potential exists for indoor air impacts in future on-site buildings. Environmental sampling indicates soil vapor intrusion from site contamination is not a concern for off-site buildings."

DEC Memo:	On 7/14/05, J Peck called RIR Com. Cynthia Roby doesn't work there now. Left mesasage to return call concerning spill. Could not determine owner of property from Property Shark or Acris. Called George Falidas on 7/14/05, left message to call back. On 1/19/05, reattempted to determine owner of property. No success. 3/30/07 - Austin - Trasferred to Ketani for further review - end 5/21/07 - Raphael Ketani. I reactiviated the case today. There was very little in the case file. Some printed pages for spill #0305345 (which doesn't pertain to the case, except the memo from Mr. Sigona to Mr. Hassan), an 11/7/05 letter from Joseph Peck of DEC to George Faildas regarding the spill, printouts from Google Earth and Property Shark, and a printout of the spill report for this case. I did a search of ACRIS, the NYC Property Tax database, and Property Shark and determined that 25-15 Queens Plaza North is just one part of the range of properties (25-01 to 25-27 Queens Plaza North) owned by Falidas Associates. It is also known by Bridge Plaza North. The block and lot are: 00415 and 0004. I called up George Falidas (718) 392-0514 of Falidas Associates and was connected to his brother, John Falidas. I made a field visit and met John Falidas. He showed me the basement of one of the properties owned by Falidas Associates and which is near to where the tank failed 2 buildings away. We entered a work room rented by a garment making company. The floor and walls and

FALIDAS ASSCOCIATES (Continued) **1007264881**

bathroom were clean. There were no signs of oil and no oil odors. Mr. Falidas said that he had paid lots of money to get the oil cleaned up years ago and the responsible party never paid anything to him. Mr. Falidas had a package of documents from the EPA and the DEC and showed them to me. These were the RCRA Subtitle C Site Identification Form, letters from South Mall Analytical Labs to PTC, and a DEC Spill Report. He gave me copies of these documents. I was particularly interested in the old DEC spill report form as this document wasn't in the case file. Next, I visited the 2 story building between Mr. Falidas' building and the site of origin of the spill. I met Sandro Cestaro of Atlantic Precious Metal Casting, Inc. (718) 937-7100. He showed me his basement. There were some signs of a thin film of mud in one corner of the basement, but no signs or odors of oil, even though this was the building where the oil first entered. Lastly, I went to the site of the oil spill. The auto parts service place had burned completely, according to the old spill report case notes. This site was 41-22 to 41-30 27 Street. The site was sold to developers who later built an apartment building that was finished in early 2007. This building is listed as 41-28 27 Street. I met the super., Leonardo Colon. He took me to the lowest point in the building. This was a parking garage. There were no signs of oil nor any odors. He said he was new here and didn't know much about the building. The building management company is Golden Management and the contact person is Brandon Wechsler (718) 230-2600, ext 111. I took 3 pictures of the apartment building and the neighboring properties. I remember seeing the dig out for the foundation for the building when I passed by the site many months back. They went down below the bottom of the foundation for the neighboring building which contains Atlantic Precious. This is a depth of about 15 feet or so. Based upon my site visits and the fact that the old auto parts area has been dug out, and the lack of evidence of a spill, I am closing the spill case.

Remarks: SPILL AT A COMMERCIAL BLD CALLER IS A TENANT AND REQ A CALL FROM DEC SPILL HAS NOT BEEN CLEANED UP BEEN SMELLING THIS FOR ABOUT 3 WEEKS

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Waste Code:	D006
Waste Description:	Cadmium
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D010
Waste Description:	Selenium
Waste Code:	D011
Waste Description:	Silver
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F006
Waste Description:	Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.
Waste Code:	F007
Waste Description:	Spent Cyanide Plating Bath Solutions From Electroplating Operations.
Waste Code:	F008
Waste Description:	Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.
Waste Code:	P029
Waste Description:	Copper Cyanide (Or) Copper Cyanide Cu(Cn)
Waste Code:	P121
Waste Description:	Zinc Cyanide (Or) Zinc Cyanide Zn(Cn)2
Waste Code:	U080
Waste Description:	Methane, Dichloro- (Or) Methylene Chloride

Site Description:	"Location: The site is located in the Long Island City section of Queens (Borough of Queens, New York City). The site is located along the north side of 41st Avenue between 22nd and 23rd Streets. Site Features: The site is approximately 2,500 square feet (0.058 acres) in size and is currently improved with a four-story building and basement that covers the entire property. The building was recently renovated to convert the former factory to an occupied professional office space. To the west of the site is a multi-story hotel, and a parking area and a multi-story commercial building are located east of the site. Metropolitan Transportation Authority property (the F train) runs directly underneath 41st Avenue along the southern side of the property. Current Zoning and Land Use: The site is zoned M1-3 (manufacturing) which also allows for commercial uses. The current land use is commercial. The upper four floors of the building were recently renovated for use as professional office space. The surrounding area is mixed-use commercial and residential. Past Use of the Site: The property was occupied by an electroplating facility from 1962 to 2012. During an August 2012 inspection, NYSDEC discovered over a hundred 55-gallon drums in various states of decay containing numerous chemicals, several plating baths and rinsate tanks, and heavily stained walls and floors. Pursuant to a NYC Department of Environmental Protection Commissioners order, the new property owner undertook a limited clean up in 2013. Site Geology and Hydrogeology: The soil below the basement consists of a permeable sand and gravel fill to a depth of approximately 5 feet below the basement slab. The soils underlying the fill are Pleistocene age and consist of gray clays and silts to a depth of approximately 12 to 16 ft below grade (bg), followed by brown clayey sand. The depth to bedrock is believed to be approximately 32 to 35 ft bg. Groundwater was found approximately 6 to 7 ft bg. The property is situated approximately one-half mile east of the East River. Groundwater flows west direction towards the East River. "

DOUBLE E PLATING CO DBA HYGRADE POLISHING & PLATING (Continued) **1009218042**

Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in groundwater and soil vapors consist of chlorinated related VOCs and Perfluorooctane sulfonic acid (PFOS) in groundwater. Prior to the site entering into the BCP, 581 tons of soil was removed and VOCs, SVOCs, pesticides, PCBs, or metals at concentrations exceeding the protection of groundwater or commercial soil cleanup objectives (SCOs) were not identified. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to address the potential for exposure to residual site related contaminants. "

Groundwater flows west direction towards the East River. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in groundwater and soil vapors consist of chlorinated related VOCs and Perfluorooctane sulfonic acid (PFOS) in groundwater. Prior to the site entering into the BCP, 581 tons of soil was removed and VOCs, SVOCs, pesticides, PCBs, or metals at concentrations exceeding the protection of groundwater or commercial soil cleanup objectives (SCOs) were not identified. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to address the potential for exposure to residual site related contaminants. "

Site Code:	499923
Site Description:	"Location: The site is located in the Long Island City section of Queens (Borough of Queens, New York City). The site is located along the north side of 41st Avenue between 22nd and 23rd Streets. Site Features: The site is approximately 2,500 square feet (0.058 acres) in size and is currently improved with a four-story building and basement that covers the entire property. The building was recently renovated to convert the former factory to an occupied professional office space. To the west of the site is a multi-story hotel, and a parking area and a multi-story commercial building are located east of the site. Metropolitan Transportation Authority property (the F train) runs directly underneath 41st Avenue along the southern side of the property. Current Zoning and Land Use: The site is zoned M1-3 (manufacturing) which also allows for commercial uses. The current land use is commercial. The upper four floors of the building were recently renovated for use as professional office space. The surrounding area is mixed-use commercial and residential. Past Use of the Site: The property was occupied by an electroplating facility from 1962 to 2012. During an August 2012 inspection, NYSDEC discovered over a hundred 55-gallon drums in various states of decay containing numerous chemicals, several plating baths and rinsate tanks, and heavily stained walls and floors. Pursuant to a NYC Department of Environmental Protection Commissioners order, the new property owner undertook a limited clean up in 2013. Site Geology and Hydrogeology: The soil below the basement consists of a permeable sand and gravel fill to a depth of approximately 5 feet below the basement slab. The soils underlying the fill are Pleistocene age and consist of gray clays and silts to a depth of approximately 12 to 16 ft below grade (bg), followed by brown clayey sand. The depth to bedrock is believed to be approximately 32 to 35 ft bg. Groundwater was found approximately 6 to 7 ft bg. The property is situated approximately one-half mile east of the East River. Groundwater flows west direction towards the East River. "
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in groundwater and soil vapors consist of chlorinated related VOCs and Perfluorooctane sulfonic acid (PFOS) in groundwater. Prior to the site entering into the BCP, 581 tons of soil was removed and VOCs, SVOCs, pesticides, PCBs, or metals at concentrations exceeding the protection of groundwater or commercial soil cleanup objectives (SCOs) were not identified. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to address the potential for exposure to residual site related contaminants. "

Site Code: 499923
Site Description: "Location: The site is located in the Long Island City section of Queens (Borough of Queens, New York City). The site is located along the north side of 41st Avenue between 22nd and 23rd Streets. Site Features: The site is approximately 2,500 square feet (0.058 acres) in size and is currently improved with a four-story building and basement that covers the entire property. The building was recently renovated to convert the former factory to an occupied professional office space. To the west of the site is a multi-story hotel, and a parking area and a multi-story commercial building are located east of the site. Metropolitan Transportation Authority property (the F train) runs directly underneath 41st Avenue along the southern side of the property. Current Zoning and Land Use: The site is zoned M1-3 (manufacturing) which also allows for commercial uses. The current land use is commercial. The upper four floors of the building were recently renovated for use as professional office space. The surrounding area is mixed-use commercial and residential. Past Use of the Site: The property was occupied by an electroplating facility from 1962 to 2012. During an August 2012 inspection, NYSDEC discovered over a hundred 55-gallon drums in various states of decay containing numerous chemicals, several plating baths and rinsate tanks, and heavily stained walls and floors. Pursuant to a NYC Department of Environmental Protection Commissioners order, the new property owner undertook a limited clean up in 2013. Site Geology and Hydrogeology: The soil below the basement consists of a permeable sand and gravel fill to a depth of approximately 5 feet below the basement slab. The soils underlying the fill are Pleistocene age and consist of gray clays and silts to a depth of approximately 12 to 16

DOUBLE E PLATING CO DBA HYGRADE POLISHING & PLATING (Continued) **1009218042**

ft below grade (bg), followed by brown clayey sand. The depth to bedrock is believed to be approximately 32 to 35 ft bg. Groundwater was found approximately 6 to 7 ft bg. The property is situated approximately one-half mile east of the East River. Groundwater flows west direction towards the East River. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in groundwater and soil vapors consist of chlorinated related VOCs and Perfluorooctane sulfonic acid (PFOS) in groundwater. Prior to the site entering into the BCP, 581 tons of soil was removed and VOCs, SVOCs, pesticides, PCBs, or metals at concentrations exceeding the protection of groundwater or commercial soil cleanup objectives (SCOs) were not identified. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to address the potential for exposure to residual site related contaminants. "

Updated By:	AMSERVIS
Site Description:	"Location: The site is located in the Long Island City section of Queens (Borough of Queens, New York City). The site is located along the north side of 41st Avenue between 22nd and 23rd Streets. Site Features: The site is approximately 2,500 square feet (0.058 acres) in size and is currently improved with a four-story building and basement that covers the entire property. The building was recently renovated to convert the former factory to an occupied professional office space. To the west of the site is a multi-story hotel, and a parking area and a multi-story commercial building are located east of the site. Metropolitan Transportation Authority property (the F train) runs directly underneath 41st Avenue along the southern side of the property. Current Zoning and Land Use: The site is zoned M1-3 (manufacturing) which also allows for commercial uses. The current land use is commercial. The upper four floors of the building were recently renovated for use as professional office space. The surrounding area is mixed-use commercial and residential. Past Use of the Site: The property was occupied by an electroplating facility from 1962 to 2012. During an August 2012 inspection, NYSDEC discovered over a hundred 55-gallon drums in various states of decay containing numerous chemicals, several plating baths and rinsate tanks, and heavily stained walls and floors. Pursuant to a NYC Department of Environmental Protection Commissioners order, the new property owner undertook a limited clean up in 2013. Site Geology and Hydrogeology: The soil below the basement consists of a permeable sand and gravel fill to a depth of approximately 5 feet below the basement slab. The soils underlying the fill are Pleistocene age and consist of gray clays and silts to a depth of approximately 12 to 16 ft below grade (bg), followed by brown clayey sand. The depth to bedrock is believed to be approximately 32 to 35 ft bg. Groundwater was found approximately 6 to 7 ft bg. The property is situated approximately one-half mile east of the East River. Groundwater flows west direction towards the East River. "
Summary:	"Remedial actions are complete and measures are in place to address the potential for exposure to residual site related contaminants. "
Summary:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in groundwater and soil vapors consist of chlorinated related VOCs and Perfluorooctane sulfonic acid (PFOS) in groundwater. Prior to the site entering into the BCP, 581 tons of soil was removed and VOCs, SVOCs, pesticides, PCBs, or metals at concentrations exceeding the protection of groundwater or commercial soil cleanup objectives (SCOs) were not identified. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual

City,State,Zip: LONG ISLAND CITY, NY 11101
Program: BCP
Site Code: 520289
Acres: Not reported
HW Code: C241148A
SWIS: 4101
Town: New York City
Record Added Date: 12/23/2015
Record Updated Date: 03/04/2020
Update By: JHOCONNE
Site Description: "The area of concern subject to this work is considered off-site from Brownfield Cleanup Program (BCP) Site No. C241148 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C241148 for further information regarding the status of the site in the BCP. Location: The area is located in the Long Island City section of Queens County (Borough of Queens, NY). Site Features: The site does not have definite boundaries since it is an off-site project associated with an on-site BCP. The area of concern includes the properties surrounding the BCP site. Current Zoning and Land Use: The area is zoned M1-3 (manufacturing). The surrounding area is generally used for commercial purposes. Since the site is a collection of properties surrounding the BCP project, it includes both public and private land (public sidewalk and private residences). Past Use of the Site: The on-site BCP property was formerly occupied by a metal shop, metal polishing, and electroplating facility. The on-site property owner undertook a limited cleanup pursuant to a NYCDEP Commissioners order prior to entry into the BCP. This work began in April 2013 and included: (a) emptying and removal of all the plating baths and tanks; (b) removal of all the 55-gallon drums; and (c) removal of all grossly-contaminated concrete flooring and walls. This work was completed in June 2013. In May 2015, the site entered into the BCP. Additional remediation of the on-site property is being completed under a BCP agreement. Site Geology and Hydrogeology: The on-site BCP property soils consist of medium to fine-grained sand to about 10' below grade, followed by a layer of silty clay of an undetermined thickness. Groundwater was found ~13' below grade. Groundwater flow direction was determined to be a westerly direction towards the East

FORMER HYGRADE POLISHING AND PLATING CO - OFF-SITE (Continued) **S118372395**

	River. "
Env Problem:	"Chlorinated solvents, primarily tetrachloroethylene (PCE) and trichloroethene (TCE) were detected in soil, groundwater, and soil vapor samples from the on-site BCP project. All contamination is being addressed within the property boundaries under the BCP. The off-site properties were suspected to be contaminated based on soil vapor data collected during the on-site investigation. The Responsible Party conducted an off-site investigation and included collection of off-site soil vapor, sub-slab soil vapor, and indoor air samples. The results of this sampling event showed the maximum concentration of PCE at 6.4 ug/m3 and TCE at 37 ug/m3 in sidewalk soil vapor samples in front of the BCP site. Sapling conducted at the multi-story hotel adjacent to the west of the BCP site detected PCE at a concentration 3.9 ug/m3 in sub-slab soil vapor and 3 ug/m3 in indoor air, and TCE at a concentration of 18 ug/m3 in sub-slab soil vapor and 0.28 ug/m3 in indoor air. The results of the off-site investigation did not identify concentrations of contaminants that require mitigation; therefore, no off-site remedial program was implemented."
Health Problem:	"Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A subslab depressurization system (system that ventilates/removes the air beneath the building) was installed in the onsite building to address the identified indoor air quality impacts from the contaminated soil vapor. Sampling indicates soil vapor intrusion is not a concern for one adjacent offsite building."

DEC Memo: 12/28/11- Zhune visited the site. RR Plumbing Sevice Corp. was going to replace the sewer line at this site. While digging they noiced oil smell. They stopped digging with the machine and started doing hand digging when they found soil contamination coming from a leaking return line. The line was shut down. AB Environmental is going to do the clean up. Violeta Leano 718-784-3530 -- Owner tleano@yahoo.com 02/24/12- On 02/15/12 AB Environmental emailed the report dated 02/9/12. The soil contaminated in the impacted area was removed. The excavation was completed as best that could be accomplished with out compromising the foundation. One endpoint sample was collected at the bottom of the excavation(7feet). The endpoint sample analytical result indicated that all detected constituents are within acceptable limit. Spill Closed. Report eDocs.

UNDERGROUND LINE (Continued) **S104514679**

Remarks: Found line broken. Been leaking for years

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Town:	New York City
Record Added Date:	03/07/2018
Record Updated Date:	08/14/2023
Update By:	CXMAYCOC
Site Description:	"Location: The site is located in an urban area at 37-11 30th Street and 30-14 37th Avenue in the Long Island City neighborhood of Queens and is identified on the Queens Borough Tax Map as Block 372, Lot 107 and Lot 121. The 26,853 square-foot (0.616-acre) site is situated on the northwest corner of the block bound by 37th Avenue to the north, 31st Street to the east, 38th Avenue to the south, and 30th Street to the west. The elevated N and Q subway tracks run north-south above 31st Street, which are about 100 feet east of the site. Site Features: The site had been developed with a two-story residential building on Lot 21 (30-14 37th Avenue) and a one-story and partial three-story warehouse building with multiple partial cellar levels and a stockyard/storage area in the northern portion of Lot 8 (37-11 30th Street). All on-site buildings were demolished. Following completion of remediation, a new seven-story, mixed-use residential, commercial, and light manufacturing building was constructed; the new building includes one full cellar level with parking, tenant amenity space and utility rooms. Current Zoning and Land Use: The site is located within the Long Island City Special Mixed Use Paired District (M1-2/R6A). This paired district promotes development and expansion of the longstanding mix of residential, commercial, industrial, and cultural use throughout the area. M1 districts typically include retail and light industrial uses such as woodworking shops, repair shops, and wholesale service and storage facilities, and R6A districts promote residential development. Zoning is consistent with the proposed mixed-use development. The surrounding area is primarily commercial and industrial, but also includes residential buildings, public facilities, day care centers, and schools. As a result of the CEQR process, Block 372, Lot 21 was assigned an E-Designation (E-218) on October 7, 2008 by the NYCDCP as part of the Dutch Kills Rezoning (CEQR No. 08DCP021Q). The E-Designation requires coordination with NYC OER to obtain a building permit. Past Use of the Site: The site was an undeveloped vacant lot until at least 1915. The existing warehouse building at Lot 8 was constructed around 1920 and historically operated as a plastics manufacturer (The Marblette Corp. Mfg. of Plastic Materials) from at least 1930 to about 1980. Following 1980, the site operated as a warehouse for audio and lighting equipment. Lot 21 was developed with a two-story residential dwelling as early as 1898. From the 1930s through the 1980s, Marblette Corp. manufactured plastics, which primarily included production of synthetic resins. During this time, plastic was

37-11 30TH STREET (Continued) **S121933807**

typically made using a mixture of synthetic chemicals, solvents, and petroleum products. An abandoned water supply well was observed in the northwest portion of the site during the June/July 2014 Limited Subsurface Investigation by Merritt Environmental Consulting Corp. The water supply well was reportedly abandoned prior to 1980 when the site transitioned from plastics manufacturing to warehousing. Site Geology and Hydrogeology: The site consists of a historic fill layer beneath concrete-paved surfaces that is predominately brown, medium-grained sand with varying amounts of gravel, silt, brick, coal, metal, clay, slag, glass, ceramics and concrete to depths ranging from 2 to 8.5 feet below ground surface (bgs). Fill material is underlain by a native brown fine- to coarse-grained sand layer observed to depths of about 32 to 69 feet bgs, with occasional layers of silt. In one deep boring advanced to 70 feet bgs, the sand layer is underlain by an olive clay layer, which was observed to depths of about 59 to 70 feet bgs. In a second deep boring advanced in the northern portion of the site, weathered rock fragments, potentially indicative of weathered bedrock or glacial till, were observed between 69 and 72 feet bgs. Bedrock was not encountered in any of the soil borings. Depth to groundwater was measured between about 22.76 to 27.77 feet bgs. The groundwater elevation is highest in the northern region of the site and flows south toward Sunnyside Yards and Newtown Creek. "

Env Problem:

"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, chromium, lead, tetrachloroethene (PCE) and trichloroethene (TCE). Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Residual contamination in the groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), Target Analyte List (TAL) metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for Per- and Polyfluoroalkyl Substances (PFAS) and 1,4-dioxane. Based upon investigations conducted to date, the primary contaminants of concern include benzo(a)anthracene, benzo(a)ayrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, chromium, lead, tetrachloroethene (PCE) and trichloroethene (TCE). Soil - SVOCs present at the site include benzo(a)anthracene, which is found at a concentration up to 6.1 parts per million, or ppm (as compared to the unrestricted use soil cleanup objective, or UUSCO of 1 ppm), benzo(a)pyrene at a concentration up to 4.5 ppm (UUSCO is 1 ppm), benzo(a)fluoranthene at a concentration up to 6.2 ppm (UUSCO is 1 ppm), and chrysene at a concentration up to 5.2 ppm (UUSCO is 1 ppm). Metals including chromium were detected in the central eastern portion of the site above their hazardous waste threshold in an 18-foot by 15-foot area of shallow fill up to 8 feet. Hexavalent chromium is present at a concentration up to 1,080 ppm, which exceeds the UUSCO of 1 ppm. Lead is found at a concentration up to 8,750 ppm (UUSCO is 63 ppm). Data does not indicate any off-site impacts in soil related to this site. Groundwater - Total chromium is found at a concentration up to 1,146 parts per billion (ppb) which exceeds the Ambient Water Quality Standard (AWQS) of 50 ppb; hexavalent chromium is found at a concentration up to 654 ppb (groundwater standard is 50 ppb); perfluorooctanoic acid (PFOA) is found at a concentration up to 34.8

37-11 30TH STREET (Continued) **S121933807**

	parts per trillion (ppt) and perfluorooctanesulfonic acid (PFOS) is found at a concentration up to 11.3 ppt. Data does not indicate any off-site impacts in groundwater related to this site. Sub-slab, Soil Vapor and Indoor Air - In sub-slab soil vapor, TCE is found at a concentration up to 22.3 micrograms per cubic meter (g/m3), PCE is found at a concentration up to 12,000 g/m3. In indoor air, TCE is found at a concentration up to 0.296 g/m3 and PCE is found at a concentration up to 6.66 g/m3. In soil vapor, TCE was not detected, PCE is found at a concentration up to 26.9 g/m3. Data does not indicate any off-site impacts in soil vapor related to this site. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with any residual contamination at the site."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 8/18/2004 Sangesland spoke to Manny Caruana, Building Supervisor at See Factor Industry Inc. to discuss the specifics of what the DEC needs to close out this spill 9/13/2004 Sangesland spoke again with Manny Caruana and asked him to send in the soil borings he has along with the tank closure documents. 9/15/2004 Mr. Caruana hand delivered a package of documents to the DEC office. Included was a summary letter outlining the testing and closure of the tank. After the tank failed the tank test in 1998, it was not retested, however Mr. Caruana says he inspected the interior of the tank and said it was still secure. He states that the initial test was faulty because of a dry leak on the vent line. In 2000 the tank was abandoned by USA tanks and an abandonment certification was forwarded to the NYC Fire Dept. The building now operates on natural gas. In Feb 2000 several soil borings were taken on the site (3 in the tank area) as part of a structural investigation for a possible building expansion. Three of

SEE FACTOR INDUSTRY (Continued) **S103238355**

these borings were approx. 10 ft from the abandoned tank and went down to 20 ft depth. There was no evidence of any soil contamination. Based on this information, the DEC believes that there was no actual petroleum spill at this site and this case has been closed out effective 9/15/2004.

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

KOCH & LOW (Continued) **1000237438**

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	31/32 LIC LLC - OFF-SITE
Address:	37-29 31ST STREET
City,State,Zip:	QUEENS, NY 11101
Program:	BCP
Site Code:	534977
Acres:	Not reported
HW Code:	C241182A
SWIS:	4101
Town:	New York City
Record Added Date:	10/26/2016
Record Updated Date:	04/16/2024
Update By:	HMDUDEK
Site Description:	"The area of concern subject to this work is considered off-site from BCP site C241182 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C241182 for further information regarding the status of the site in the Brownfield Cleanup program. Location- The 31/32 LIC LLC site is a 0.40-acre parcel located in a well-developed urban area with a mix of commercial and residential buildings. The site address is 37-29 31st Street, Long Island City, NY, 11101 (formerly 37-26 32nd Street and 37-27 31st Street). The site fronts both 31st Street and 32nd Street and is located between 37th and 38th Avenue. Elevated New York City Subway tracks are located along the 31st Street frontage of the property. Site Features- Previously the site was developed with two one-story structures. Prior to demolition, there was no open space on the property as the buildings fully covered the tax lot. The structures were both slab on grade with small partial cellars. The slab was left in place during demolition activities. Current Zoning and Land Use The current zoning designation is M1-2/R6A which includes light manufacturing and residential use. The site is currently vacant. The proposed use is consistent with existing zoning for the property. Past Uses of the Site The site and its surrounding properties were undeveloped until about 1915 when 3rd Avenue traversed the site from northeast to southwest until 1936. Since 1936, the property has hosted multiple tenants which included: tool manufacturing and plating works (1947-1950); lighting factory (1953);

31/32 LIC LLC - OFF-SITE (Continued) **S121933768**

welding equipment warehouse (1970-1979); food cart manufacturer, refrigeration facility, and metal shop (1977- 2015); and an auto body facility (1980 present). Past uses most likely contaminated the property through on-site disposal of materials through historic drains, sumps, and pits. Site Geology and Hydrogeology - Medium grain sand and fill extend to three feet below grade and medium grain sand from three to 23 feet below grade. The site is relatively level and has no natural or artificial surface water bodies or impoundments. The depth of the shallow groundwater ranges from 22 to 23 feet below grade. Shallow groundwater beneath the site flows to the southwest towards the East River and Dutch Kills. Underlying groundwater in this area of Queens is not used for potable supply purposes. Potable water is provided to the residents by the NYC Department of Environmental Protection."

Env Problem: "Nature and Extent of Contamination: Based upon the remedial investigation at the BCP site #C241182, the primary contaminants of concern are expected to be trichloroethene (TCE) which was found in the BCP site soil vapor. The BCP site soils also contained semi-volatile organic compounds (SVOCs) and metals, such as benzo(a)pyrene, benzo(a) anthracene and benzo(b)fluoranthene, indenp(1,2,3-CD)pyrene, dibenz[a,h]anthracene, lead, copper, chromium, and zinc. The site was fully remediated under the Brownfield cleanup Program and received a Track 1 certificate of completion. A full sitewide excavation was conducted in preparation for new construction. The off-site investigation has not begun, therefore this section will be updated to reflect the investigation results as data become available. Significant Threat: It is not yet known whether there is a significant off-site environmental threat due to contamination at the BCP site. This section will be updated as data become available. "

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion at off-site structures."

Town:	New York City
Record Added Date:	12/28/2015
Record Updated Date:	12/30/2021
Update By:	RKCORCOR
Site Description:	"Location - The 31/32 LIC LLC site is a 0.40-acre parcel located in a well-developed urban area with a mix of commercial and residential buildings. The site address is 37-29 31st Street, Long Island City, NY (formerly 37-26 32nd Street and 37-27 31st Street). The site fronts both 31st Street and 32nd Street and is located between 37th and 38th Avenue. Elevated New York City Subway tracks are located along the 31st Street frontage of the property. Site Features - Previously the site was developed with two one-story structures. Prior to demolition, there was no open space on the property as the buildings fully covered the lot. The structures were both slab on grade with small partial cellars. The slab was left in place during demolition activities until it could be tested and disposed of properly. Current Zoning and Land Use The current zoning designation is M1-2/R6A which includes light manufacturing and residential use. The site has been dug out completely, a vapor barrier placed and a parking garage & business building has been erected. The proposed use is consistent with existing zoning for the property. Past Uses of the Site The site and its surrounding properties were undeveloped until about 1915 when 3rd Avenue traversed the site from northeast to southwest until 1936. Since 1936, the property has hosted multiple tenants which included: tool manufacturing and plating works (1947-1950); lighting factory (1953); welding equipment warehouse (1970-1979); food cart manufacturer, refrigeration facility, and metal shop (1977- 2015); and an auto body facility (1980 present). Past uses most likely contaminated the property through on-site disposal of materials through historic drains, sumps, and pits. Site Geology and Hydrogeology - The property is underlain by glacial and alluvial deposits with Harrison Gneiss underlying. Medium grain sand and fill extend to three feet below grade and medium grain sand from three to 23 feet below grade. The site is relatively level and has no natural or artificial surface water bodies or impoundments. The depth of the shallow groundwater ranges from 22 to 23 feet below grade. Shallow groundwater beneath the site flows to the southwest towards the East River and Dutch Kills. Underlying groundwater in this area of Queens is not used for potable supply purposes. Potable water is provided to the residents by the NYC Department of Environmental Protection. "
Env Problem:	"Remediation at the site is complete and a Track 1 (unrestricted) cleanup was achieved. A full sitewide excavation was conducted in preparation for new construction. Prior to remediation, the primary

31/32 LIC LLC (Continued) **S118457875**

	contaminants of concern were trichloroethene (TCE) in soil vapor, SVOCs, and various metals consistent with historic fill identified in the top 5 feet of soil. Remedial actions have successfully achieved soil cleanup objectives for residential & commercial use. "
Health Problem:	"Remedial actions are complete and have addressed the potential for contact with site-related contaminants. "

Record Upd: 03/19/2024
Updated By: WBBENNET
Site Description: "Location: The Site is located in a mixed residential/commercial/light industrial area of Long Island City (Borough of Queens), NY. The location of the Site is the west corner of the intersection of 24th Street and 37th Avenue. Site Features: The site consists of four lots. Current owner owns three lots and the other lot foreclosed by NYC as tax lien property. Recently the other lot (lot 26) was bought by a different owner who demolished the single-story old building that was existed on this lot. The main current site features include a newly built eleven story building on one lot which is being developed, and in other two lots began excavation under an IRM. Excavation initiated in absence of consultant's oversight. During excavation an water main break happened in Dec of 2018, since then no work has been going on until early May of 2022 when newly hired consultant initiated Site Characterization sampling. The whole site is currently secured with a fence and a lockable gate. Current Zoning and Land Use: The site s property is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial and utility rights-of-way. The nearest residential area is located north (up gradient) of the site, on the other side of 37th Avenue. There is also a residential area approximately 500 feet south (downgradient) of the Site, on the south side of 38th Avenue. Past Use of the Site: From the 1930 s to the late 1980 s, the Site was used as a commercial laundry. The Site was utilized as a commercial dry cleaner from the late 1980 s to the mid 1990 s. It appears that site contamination resulted from poor housekeeping and spills associated with the dry-cleaning operation. Site Geology and Hydrogeology: Subsurface material consists of sand and some silt and urban fill. The depth to the groundwater varies from approximately 13 to 15 feet below the ground surface. On-site groundwater flow direction is relatively flat; the general flow direction appears to be towards the south-southeast. "
Env Problem: "Nature and Extent of Contamination: The primary contaminants of concern at the site are tetrachloroethene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride (VC). Soil - During the remedial investigation, PCE, TCE and cis-1,2-DCE were found in on-site soils at concentrations up to 83 parts per million (ppm), 0.22 ppm and 0.17 ppm respectively. The concentration of PCE on-site significantly exceeded the Soil Cleanup Objective (SCO) for unrestricted use as well as for protection of groundwater (1.3 ppm). Groundwater - PCE, TCE, cis-1,2-DCE, trans-1,2-DCE and VC were detected in on-site shallow groundwater at concentrations up to 4,000 parts per billion (ppb), 1200 ppb, 12000 ppb, 130 ppb and 240 ppb respectively. Groundwater standards have been exceeded for PCE, TCE, cis-1,2-dichloroethene, trans-1,2-Dichloroethene, vinyl chloride and chloroform. As per April and June 2012 and March 2014 groundwater data, the PCE plume in groundwater has migrated approximately 400 feet down gradient from the site (off-site) towards southeast. Soil Vapor - PCE and TCE were detected in on-site soil vapor at levels up to 2,800,000 microgram per cubic meter (g/m3) and 130,000 g/m3 respectively and off-site at levels up to 13,000 g/m3 and 420 g/m3, respectively. Soil Vapor Intrusion (SVI) evaluation As part of SVI evaluation, vapor samples were collected from under the basement slab

JUNG SUN LAUNDRY SITE (Continued) **S110246984**

	and basement indoor air from 5 surrounding structures. Two structures need mitigation and one structure needs monitoring or mitigation. To mitigate one of the structures located adjacent to the site an SSDS system has installed which currently in operation. "
Health Problem:	"Contact with contaminated soil is not expected since it is located at depth and covered by buildings, asphalt and concrete. Ingestion of contaminated groundwater is not likely since the area is served with public water. Site-related contaminants are present in soil vapor. Therefore, there is a potential for soil vapor intrusion to occur in on-site and off-site structures. Investigation of this potential pathway is recommended. "

On 9/2 - Bob C - spoke with Al Cardino, who said to call the school custodian (Tom Logan) at 718-937-8214, who would have the records and could fax them. Called Tom on 9/7 & left message. 11/15/2005: Lead transfered to Joe White as part of the Spill Initiaative Project. 12/08/2005: Mr. James Merlo contacted Joe

PS #112 (Continued) **S103824906**

White and is checking to see if a new tank test has been performed on this tank. He will provide documentation so spill can be closed.
1/5/2006: Tha associated PBS# 2-478741 indicates that the tanks 001 and 002 have ben closed in place as of 6/1/2001. The remaining tank 003 is an above ground tank that does not require a tank test. Given that the spill was a tank failure and the underground tanks are no longer in service I am closing out this spill -------- joe white

Site Description:	"Location: Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York. Site Features: The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. The Site is bordered by commercial/residential properties, with Northern Boulevard located to the north, 42nd Place located to the east, Thompson Avenue to the west, and Skillman Avenue located to the south. Newtown Creek, which defines the border between Queens and Kings Counties, is located less than 0.5 mile south of the western portion of the Site. Current Zoning/Use: The Site is located in Manufacturing Zone (M1-1) and used

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

as a railroad maintenance and storage facility Historic Use: The Yard was originally constructed in the early 1900s by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later known as the Penn Central Transportation Company). On April 1, 1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. LIRR is constructing tunnels through the Yard as part of its East Side Access (ESA) project. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S & I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S & I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology: Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits or native deposits. The saturated native deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the former Dutch Kills Creek. In the deeper deposits, groundwater predominantly flows west across the Site. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOCs) were identified. Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern, lead and

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

total PAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD) for OU2. Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the contaminants of concern. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs, lead and PAHs. The maximum PCB concentration was 25,000 ppm; PAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs for PCBs, lead and PAHs. The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and PAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in sediment from the sewers at concentrations ranging from 0.053 ppm to 120 ppm, which exceeds the SSSCL of 25 ppm. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to 83 ppb. Five of the unfiltered samples also exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the contaminants of concern. Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010. "

Health Problem: "Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 7/9/07: Reassigned to Kartik Chanda (Chanda) 9/10/07: Kartik Chanda of DEC has reviewed this spill case and sent a letter to National Railroad Passenger, 400 West 31st St., 4th Floor, NY, NY 10001, Attn: Emma Cattafi requiring that the following information be submitted to DEC for review by 10/25/07: 1. An explanation of the cause of the tank/equipment failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/17/07: Chanda received a letter from Emma Cattafi, Senior Environmental Coordinator, Amtrak with enclosed: 1. Invoices from Eadtmond describing work performed. 2.Invoices and scope of work from CHES. 3. Soil sample analysis report. 4.Tightness test tesults. 5.Shipping paper for soil disposal. 11/19/07: Chanda reviewed soil sample analytical results and UST tightness test results for this spill and has the following comments: 1. On May 14, 2004, the oil was found during the soil excavation phase of a project to upgrade/ retrofit an existing 20,000-gallon UST. 2. Amtrak estimated a release of approximately 10 gallon of #2 fuel oil. 3. Clean Harbors Environmental Services(CHES) excavated the contaminated soil surrounding the tank. VOCs and SVOCs were not

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

detected in soil analytical results. Kartik Chanda discussed with Joe Sun (NYSDEC) regarding the
findings of the soil analytical results and based on the information presented to the Department,
DEC closed this spill, dated 11/20/07. 11/21/07: Chanda sent an NFA letter to Ms.Emma Cattafi,
Senior Environmental Coordinator, AMTRAK, by regular mail.

DEC Memo:	10/12/2011 - Sangesland reviewed a Request for Closure submittal from Riteway Tank dated Oct 12, 2011. Problem was a Tank Test Failure that was traced to a hole in the sidewalk fill line. The sidewalk was opened and 58 drums of contaminated soil was removed. The line was replaced and 4 end point samples were taken. Clean fill was put back and the sidewalk was repoured. Based on the end point lab results, this spill case has been closed out. Lab results, manifests, photos etc are all in eDocs attachments.
Remarks:	tank test failure. retest pending, believed to be line failure

Record Add: 09/27/2016
Record Upd: 03/30/2021
Updated By: SMQUANDT
Site Description: "Location: The 20,500 square-foot lot is surrounded by commercial, industrial, and mixed use residential and commercial buildings. Commercial and industrial buildings are located to the south, 33rd street followed by a commercial building to the east, and 32nd street followed by mixed-use residential and commercial buildings to the west. The site was a vacant lot prior to redevelopment. Site Features: The site has recently been developed with a 7-story residential apartment building with retail stores on the first floor Current Zoning and Land Use: The property is zoned as M1-2/R6A, which allows for mixed residential and commercial buildings. Past Use of the Site: As of 1898, the subject property contained a two-story bottling and laboratory facility occupied by Hiscox & Company Patent Medicines. By 1915, the building was occupied by Mercury Motor Works and two two-story dwellings were constructed in the western portion. By 1936, the main building expanded, occupying more of the property and was occupied by Renner-Maras Inc. Ornamental Iron Works. In addition, one of the dwellings was identified as an office. By 1947, the building was identified as a loft and electro-plating facility. By 1970, the western building was built-out to the property and was identified as Bliss Display Corp, a manufacturer. The eastern portion was used for painting and the southern was used for woodworking. By 1995, the property was occupied by one manufacturer. By 1996, a small portion was used for parking. The property remained substantially unchanged through 2006. Site Geology and Hydrogeology: The topography of the site is generally level and is approximately 36 feet above mean sea level. The site is located approximately 0.87 miles northeast of Dutch Kills and 1.1 miles east of the East River. Depth to groundwater is approximately 30 feet below ground surface (bgs). Groundwater flows to the west towards Dutch Kills. The major aquifer systems beneath the subject property are the Upper Glacial and Lloyd aquifers. The subsurface beneath the site consists of unconsolidated sand and gravel layers from the ground surface to approximately 50 ft bgs where the Raritan confining unit is encountered. Bedrock beneath the subject property is located approximately 200 ft bgs. The lithology generally consisted of up to five feet of fill material underlain by a silt or clay lens extending to a maximum observed depth of seven feet followed by poorly graded sand to the terminal depth of the investigation at 23 ft bgs. The historic fill encountered was evidenced by brick and concrete, which predominantly was embedded in a silty sand matrix."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related volatile organic compounds in soil and groundwater, and trichloroethene and tetrachloroethene in soil vapor. Post excavation samples collected at 14 feet below grade demonstrated achievement of soil cleanup objectives for residential use, and a sub-slab depressurization system was installed to mitigate building occupant exposures related to soil vapor intrusion. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."

DEC Memo:	6/27/2016: Rashad 37-21 32 Street has an alternate address of 37-13 - 37-23 32 Street and 37-12 - 37-18 33 Street. No additional spills or PBS registrations found for this site. Called Mark, this site is an OER site and they found contamination during RIR field work. Shaminder contacted us this morning with regards to this site: I am reviewing an RIR which indicated VOCs in soils at 20 feet depths. Groundwater was not sampled due to refusal at 27 feet depths. Soil/fill samples results were compared to New York State Department of Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples collected during the RI showed that no PCBs were detected in any of the soil samples. VOCs including 1,2,4-Trimethylbenzene (42,000 ug/kg), 1,3,5-Trimethylbenzene (13,000 ug/kg), Ethyl Benzene (3,800 ug/kg), n-Propylbenzene (6,700 ug/kg) and total Xylenes (19,000 ug/kg) were detected above Unrestricted Use SCO in one deep soil sample SB-9 (21-23). The email had two documents attached. First document has site maps with soil concentrations as well as soil vapor results. Soil vapor results are as follows: SV-1: Tetrachloroethene-150ug/m3, SV-2: tetrachloroethene-230ug/m3, SV-3: Tetrachloroethene-170ug/m3, SV-4 Tetrachloroethene-160ug/m3, trichloroethene-400ug/m3, SV-5: tetrachloroethene-260ug/m3, trichloroethene-170ug/m3, SV-6 tetrachloroethene-220ug/m3, trichloroethene-200ug/m3, SV-7 tetrachloroethene-96ug/m3, trichloroethene-420ug/m3. Soil analyticals found contamination at SB-9 21-23 feet: 1,2,4 Trimethylbenzene-42,000ppb, 1,3,5 Trimethylbenzene-13,000ppb, Ethyl Benzene-3,800ppb, n-propylbenzene-6,700ppb, and total xylene-19,000ppb. 7/7/2016: Rashad Sent contaminated soil letter to NYCOER for site, it has been uploaded to D2 and mailed to owner. 9/6/2016: Rashad Received call from Paul Stewart of Advanced Cleanup Technologies. He said that he is working with OER on site and that the RAWP is in the final stages of approval. Received email from Shaminder: Above spill was recently called in during Site investigations. Since then, RIR and RAWP have been prepared. A copy of RAWP is attached for your review. Development includes excavations of full footprint of property to more than 22 feet deep for cellar and sub-cellar (to

MOTOR AND IRON WORKS (Continued) **S118705940**

be used as parking garage) and a seven story residential building. Remedy includes: 1. Excavation and removal of soil/fill exceeding Track 4 Site Specific SCOs. 2. Performance of a remedial action for the petroleum spill #16-03003 under New York State Department of Environmental Conservation (NYSDEC) Spill program. 3. Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs. End point samples for spill closure will be performed per DER-10 requirements. 4. Construction of an engineered composite cover 5. Installation of a vapor barrier system 6. Installation of a passive sub-slab depressurization system (SSDS) 7. parking garage with high volume air exchange in conformance with NYC Building Code. Attached to email was RIR and summary. It has been uploaded to D2. Review or RAWP is as follows: Site is in VCP. The proposed future use of site will be a seven story mixed use building with retail stores on first floor, and residential apartments on the upper six floors. The cellar will be built to a max depth of 10 feet bgs, the subcellar will be built to a depth of 20 feet bgs. The majority of the property will be excavated to a depth of 22 ftbgs. Elevator pits will be excavated to depth of 26 ft bgs, the excavation is not expected to reach the groundwater table. The sub-cellar will contain 45 parking spots. The cellar will contain 25 parking sports. Groundwater was not encountered, refusal was reached at 27 ft bgs. The proposed remedial action will consist of: community air monitoring, excavation and removal of soil for the majority of the site to a depth of 22 feet below grade except for two recessed area to the northwest and northeast, which will be excavated to 2 feet bgs. A small portion will be excavated to 27 ft bgs. Removal of all USTs that are encountered during soil removal actions and registrations of all found tanks. Performance of remedial actions for the open spill case on property which include installation and monitoring of off site groundwater wells as required and approved by NYSDEC, and may include the removal of LNAPL present beneath the site, treatment of groundwater plume via injections of biorem and chem ox if required by NYSDEC, excavation and removal of petroleum impacted soil, where feasible to 2 feet below groundwater and the implementation of a groundwater monitoring program. A separate RAWP Addendum may be required by NYSDEC. Construction of an engineered composite cover of a min of 6 inch thick reinforced concrete building slab. Installation of a vapor barrier system consisting of vapor barrier beneath the building slab and outside of sub-grade foundation sidewalls. Vapor barrier will be 20 mill in thickness. Installation of

MOTOR AND IRON WORKS (Continued) **S118705940**

passive SSDS. Property is
also E-designated. 9/7/2016: Rashad Spoke to DEC Vought and sent
report review letter approving
RAWP to NYCOER pending proposed monitoring well locations. 10/5/2016:
Rashad Shaminder submitted
addendum to myself and John Durnin, John is DEC project manager for
hazardous waste remediation
project on this site. Sent email to John seeking if I should
administratively close this spill and
refer it to his hazardous waste project. 10/6/2016: Rashad Review of
the addendum is as follows;
they are proposing installation of two down gradient groundwater
monitoring wells along the western
boundary of the site. Also five additional soil vapor samples have
been proposed along the northern
and southern boundaries of the site. Discussions with John continue on
possible case transfer
(Remediation ID number 241191). 10/13/2016: Rashad On 10/12 DEC Durnin
sent comments to Shaminder
for the RAWP Addendum which include: Revised RAWP Addendum (see figure
below) Site investigation
decisions for this P site are based on the entire property being
excavated to the depth of at least
22 feet. The north corner of the site along 32nd Street (recessed
area) and the east corner of the
site along 33rd Street (recessed area) both are only going to be
excavated to a depth of 2 feet.
Should the developer not implement this excavation plan, the soil
investigation would require
additional sampling from 2 feet to 22 feet across to entire property.
Soil Vapor According to the
June 22, 2016 draft RIR (page 20), nine soil vapor samples (SV-1
through SV-9) were collected but
only 7 are documented (SV-1 to SV-7). This should be corrected in the
final RIR. Relocate proposed
SV-11 away from the former basement area to ensure the soil vapor
sample (6 -7 probe depth) is
representative of the soil conditions without any influence of the
former basement. Add soil vapor
sample points SV-13 and SV-14 at each end of the site near 32nd Street
and 33rd Street to evaluate
the potential for off-site migration. Soil There is only one soil
sample, SB-9 (21 -23) below the
two foot depth. All the other soil samples are from the 0 to 2 depth.
The off-site soil borings for
MW-1 and MW-2 must be logged continuously and screened with a PID. Any
visual evidence of
contamination or elevated PID readings will require soil sample
collection and laboratory analysis
for VOCs, SVOCs and Metals. Groundwater Based on groundwater data from
other OER Brownfield Sites
in the area, the groundwater flow direction is most likely in the
westerly direction and
approximately 20 feet deep. Indicate the diameter of the proposed
wells and the type of well
drilling rig to be used. Since refusal was encountered at 27 feet
during a previous attempt, a

MOTOR AND IRON WORKS (Continued) **S118705940**

larger drill rig is needed to install the four proposed monitoring wells. Provide well construction details for all new wells. MW-1 and MW-2 must be greater than 20 feet apart to be representative of a broader area of groundwater, to not influence one another and to enhance the verification of the groundwater flow direction. MW-2 needs to be far enough along 32nd Street to reasonably be downgradient of the site. MW-3 should be located near SB-9 where elevated levels of Trimethylbenzenes, Ethyl Benzene, n-Propylbenzene and total Xylenes were encountered in the soil at 21 to 23 feet. MW-4 will show if there is off-site groundwater impacting the site (assuming a westerly groundwater flow). As per DEC Vought, no further comments are needed for petroleum remediation as DEC Durnin has taken the lead and addressed the Departments comments/concerns.
10/31/2016: Rashad On 10/28 DEC Durnin asked for update to revised addendum. Alysha from OER sent revised addendum report. It has been uploaded to D2. 11/9/2016: Rashad John Durnin sent email:
There has been a question raised regarding the revision of the RAWP Addendum for 37-21 32nd Street, Spill #16-03003. The consultant, Advanced Cleanup Technologies, Inc. (ACT) prepared the revised addendum to the Remedial Action Work Plan (RAWP) and RAWPs required a P.E. to do the work. However, the work I ve been reviewing and commented on involves investigative work necessary to evaluate if this project (NYSDEC P Site) will be in the NYCOER BF program or the NYSDEC BF program, typically investigative work not requiring a P.E. Is it possible that this is actually an addendum to an existing RIWP prepared by ACT in early 2016? Alysha replied: The addendum is for the existing RIWP and will be also included as an appendix in the Stipulation List.
1/5/2017: Rashad Emailed DEC Durnin about possible case transfer due to my resignation at DEC, received no response. 1/6/2017:
Rashad After meeting with RSE Austin spill will be assigned to DEC Durnin. There is a DEC approved RI Work Plan addendum for additional wells and SVI sampling. Waiting for this to be done. DEC sent a sidewalk opening permit request letter on February 23, 2017. (3/31/2017) The additional well samples and SVI sampling were completed in May 2017. Site remediation/construction began in January 2018. Daily reports are available on the NYCOER EPIC website (16TMP0372M). Once the site remediation is completed, DEC will evaluate the open spill and determine if it can be closed. The DEC Project Manager, John Durnin, will retire in April 2018. The new Project Manager will be Kyle Forster. (3/29/2018), Remedial Action Report acceptable to DEC. A memo has been filed documenting the remedial actions taken and summarizes remaining contamination.

Town:	New York City
Record Added Date:	06/26/2020
Record Updated Date:	10/27/2023
Update By:	HMDUDEK
Site Description:	"Location The site is located at 22-09 Queens Plaza North (Lot 1) and 22-09 41st Avenue (Lot 25), in the Long Island City section of Queens, New York. The site is bound to the north by 41st Avenue and underground train tracks for the Metropolitan Transit Authority (MTA) F line, followed by a commercial building occupied by a printing and graphics facility and an electrical supply company, an office building, and a hotel; to the east by 23rd Street, followed by mixed residential and commercial buildings; to the south by Queens Plaza North, the Queensboro Bridge roadway, and aboveground railroad tracks for the MTA N line, followed by parking areas; and to the west by 22nd Street, followed by a commercial building, vacant land, and a warehouse for a lighting facility. Site Features The site consists of two tax lots on an approximately 2.56-acre parcel. Lot 1 contains an approximately 67,600-square foot, one- to two-story building, currently occupied by commercial office space and storage. The northern portion of Lot 1 contains a concrete- and asphalt-paved yard occupied by vehicles and storage of construction equipment. The yard and storage area extend further north into Lot 25. Current Zoning and Land Use The current zoning designation of the site is M1-5 (manufacturing). The proposed rezoning plan would change the site zoning to M1-6/R9/R10; however, this is currently under review by the New York City Department of City Planning (NYCDCP) as part of the Uniform Land Use Review Procedure (ULURP). The surrounding area is largely developed with industrial and commercial uses with residential uses located further west and east. Past Use of the Site Available records indicate the site was used for residential purposes from the late 1800s through the early 1900s. Broadway Maintenance Corporation and Water House occupied the site from the 1950s through approximately 1985. A 1971 Certificate of Occupancy identified electrical and machine repair, and engine rebuilding in the southern portion of the site. Electric motor repair rooms, automotive garage and service station operations, and related activities have remained ongoing at the site for over the last 30 years. Other industrial uses included a lumber yard between approximately 1936 and 1947. A pump station first associated with the Broadway Maintenance Corp. and Water House was located in the central portion of the site from approximately 1950 through 1986 (this location is generally consistent with five 4,000-gallon USTs closed-removed in 2013). Tenants following operations by Broadway Maintenance Corp. included Mahrco Printer and Stationers (approximately 1985 to 1991) and a taxi

22-09 QUEENS PLAZA NORTH (Continued) **S127012993**

storage and maintenance yard (approximately 1991 to 2000). More recent site occupants between approximately 2000 and 2015 have included Petrocelli Electric Company, Welsbach Electric Corp., Ronart Leasing Corp., and Grace Industries Corp. Site Geology and Hydrology Based on reports compiled by the U.S. Geological Survey Central Park Quadrangle map, the site lies at an elevation of approximately 20 to 25 feet above the National Geodetic Vertical Datum of 1988 (an approximation of mean sea level) and slopes slightly down toward the west to southwest. Groundwater elevation ranges from approximately 41.4 to 42.0 feet above NAVD 88 (approximately 8.5 to 10.2 feet bgs). Groundwater is expected to flow in a southwesterly direction toward the East River, located approximately 0.5 mile west of the site. During MECC s February 2019 FSSI, subsurface materials beneath the site consisted of approximately 5 feet to 10 feet of fill material (predominantly sand with varying amounts of clay, brick, ash, wood, and cinder), underlain by sand and clay down to the maximum boring terminus of 15 feet below grade. The fill thickness was thinner beneath the site building."

Env Problem:	"Site conditions present a variety of environmental concerns. There have been spills and underground storage tanks reported on the site previously. There was an onsite petroleum spill that was treated with soil vapor extraction. Site conditions need further evaluation to determine if there are further petroleum impacts. A variety of industrial facilities existed on the site (including a lumberyard, machine and engine repair, car repair, service station, and a pump station). In the soil, the contaminants of concern are semi-volatile organic compounds (SVOCs) and metals. The metals include arsenic, barium, lead, and mercury. These contaminants are located on the eastern side of the site. The contaminants of concern in the groundwater are volatile organic compounds (VOCs) including chlorinated solvents and SVOCs, including polycyclic aromatic hydrocarbons. Soil vapor data was not provided or available for the application. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 4/29/2002 - Sangesland spoke to property owner (Mr. Ron Levy). Mr. Levy did not feel comfortable with ProTest and requested information on how to close out this spill. Isolate and retest just the tank and just the piping. Once the spill is closed out, owner will abandon the tank and switch to gas. 6/10/2002 Man hole on top of tank was left open. Gasket was replaced and the tank passed the retest. 7/3/2002 Mr. Levy called. He will send a copy of the tank test which shows that the tank passed the second test. He also said that he will be pulling the tank out and wanted to know the proper procedures. Sangesland provided Mr. Levy with a contact at PBS. 6/16/05 Heitzman: See PBS 2-607788. Tank was removed July 2002. Closed.

BROWNFIELDS:

Name:	QUEENS PLAZA RESIDENTIAL DEVELOPMENT - SITE C
Address:	28-30 JACKSON AVENUE
City,State,Zip:	LONG ISLAND CITY, NY 11101
Program:	BCP
Site Code:	503091
Acres:	0.309
HW Code:	C241169
SWIS:	4101
Town:	New York City
Record Added Date:	12/18/2014
Record Updated Date:	03/26/2024
Update By:	HMDUDEK
Site Description:	"Location: The site is a narrow plot of land perpendicular to Jackson Avenue in Long Island City (Queens County) approximately 150 feet west of Queens Boulevard. The site is bordered by Jackson Avenue to the north and surrounded by Queens Plaza Residential Development - Site B (Site No. C241151) on the east, west and south. Site Features: High-rise residential apartment buildings with ground floor commercial space are present on-site. Current Zoning and Land Use: The Site is located in the Special Long Island City Mixed Use District and is zoned M1-6/R-10 (manufacturing and residential). According to the NYC Planning website, the Special Long Island City Mixed Use District promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Past Use of the Site: Prior to November 18 2014, the property was a dedicated NYC street operated by the NYCDOT. Previously known as Barn Street from 1898 to 1936 and West Street from 1947 to 2014. Site Geology and Hydrogeology: The subsurface soils consist of a fill layer approximately 6 to 8 feet in thickness. The fill is a mixture of fine

QUEENS PLAZA RESIDENTIAL DEVELOPMENT - SITE C (Continued) **S118950490**

	to medium sand, with some silt and gravel and traces of brick, concrete and cobbles. The fill is underlain by silty sand and glacial deposits followed by a layer of fine sand with intermittent seams of silt and clay. Bedrock is present at approximately 33 to 50 ft. bg. Depth to the groundwater table is approximately 8 ft. bg. at the site. Regional groundwater flow to the southwest. "
Env Problem:	"As of April 2016, all soil within the top 15 feet below grade which exceeded restricted-residential Soil Cleanup Objectives (SCOs) was removed and properly disposed of off-site. A Site Management Plan (SMP) will be implemented to managed remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. Prior to remediation, soil and groundwater samples were collected for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), pesticides and metals. Contamination encountered on-site appeared related to historic urban fill: Soil: No VOCs exceeded restricted-residential soil cleanup objectives (RRSCOs) Several SVOCs exceeded RRSCOs in soil. For example, benzo(a)anthracene was detected up to 3 parts per million (ppm) and the benzo(b)fluoranthene was detected up to 3 ppm (the RRSCO for both compounds is 1 ppm). Two metals exceeded RRSCOs. One sample for mercury at 0.84 ppm (the RRSCO is 0.81ppm). One sample for lead at 1,900 ppm (the RRSCO is 400 ppm). PCBs and pesticides were not detected above RRSCOs. Groundwater: One groundwater sample was collected on-site. VOC, SVOC, PCB and pesticide concentrations were below groundwater standards. The metals iron, manganese and sodium exceeded groundwater standards. No soil vapor data was submitted."
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination."

Control Code:	13
Control Type:	ENG
Date Record Added:	08/28/2019
Date Rec Updated:	06/20/2024
Updated By:	MDSOLLEC
Site Description:	"Location: The site is on the city block bordered by Queens Plaza South to the north, 24th Street to the east, 42nd Road to the south, and 23rd Street to the west. The site is 0.626 acres in size. Site Features: The site is completely occupied by a vacant four-story concrete building with a basement. Current Zoning and Land Use: The site is improved with a four-story vacant building with a full cellar and is located in a M1-5/R9 mixed-used district characterized by mixed commercial and industrial use with some residential use. Past Use of the Site: The site has been used for industrial manufacturing and a garage since as early as 1936. The industrial activities included metal stamping and fabrication of metals parts, and lacquer spraying. Oil staining from the former on-site metal fabrication machines was observed on the cellar floor. Based on a 2012 Phase II Environmental Site Investigation Report, a spill was reported to the NYSDEC (Spill No. 13-02812). Geology and Hydrogeology: The surface soil immediately beneath the concrete slab of the existing building (at el. 11) is a historic fill layer, generally consisting of brown and gray coarse to fine sand with varying amounts of silt, gravel and concrete fragments. This layer extends to about 8 feet below slab grade (bsg). A glacial till layer of gray and brown silt with varying amounts of gravel, sand and clay is present below the historic fill. Bedrock consists of hard to very hard, slightly weathered to fresh, coarse- to fine- grained, quartz-mica-garnet gneiss of the Ravenwood Granodiorite and is present at depths ranging from approximately 14 to 21 feet bsg. The groundwater depth ranges from approximately 4 to 7 feet bsg and flows to the west towards the East River which is located approximately 1/2 mile from the site."
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethylene (PCE) in groundwater and soil vapor; trichloroethylene (TCE) in soil vapor; chrysene, benzo(a)anthracene and petroleum products in groundwater; and copper and lead in soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination

Date Record Added:	08/28/2019
Date Rec Updated:	06/20/2024
Updated By:	MDSOLLEC
Site Description:	"Location: The site is on the city block bordered by Queens Plaza South to the north, 24th Street to the east, 42nd Road to the south, and 23rd Street to the west. The site is 0.626 acres in size. Site Features: The site is completely occupied by a vacant four-story concrete building with a basement. Current Zoning and Land Use: The site is improved with a four-story vacant building with a full cellar and is located in a M1-5/R9 mixed-used district characterized by mixed commercial and industrial use with some residential use. Past Use of the Site: The site has been used for industrial manufacturing and a garage since as early as 1936. The industrial activities included metal stamping and fabrication of metals parts, and lacquer spraying. Oil staining from the former on-site metal fabrication machines was observed on the cellar floor. Based on a 2012 Phase II Environmental Site Investigation Report, a spill was reported to the NYSDEC (Spill No. 13-02812). Geology and Hydrogeology: The surface soil immediately beneath the concrete slab of the existing building (at el. 11) is a historic fill layer, generally consisting of brown and gray coarse to fine sand with varying amounts of silt, gravel and concrete fragments. This layer extends to about 8 feet below slab grade (bsg). A glacial till layer of gray and brown silt with varying amounts of gravel, sand and clay is present below the historic fill. Bedrock consists of hard to very hard, slightly weathered to fresh, coarse- to fine- grained, quartz-mica-garnet gneiss of the Ravenwood Granodiorite and is present at depths ranging from approximately 14 to 21 feet bsg. The groundwater depth ranges from approximately 4 to 7 feet bsg and flows to the west towards the East River which is located approximately 1/2 mile from the site."
Env Problem:	"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethylene (PCE) in groundwater and soil vapor; trichloroethylene (TCE) in soil vapor; chrysene, benzo(a)anthracene and petroleum products in groundwater; and copper and lead in soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Control Type: INST
Dt record added: 08/28/2019
Dt rec updated: 06/20/2024
Updated By: MDSOLLEC
Site Code: 491518
Site Description: "Location: The site is on the city block bordered by Queens Plaza South to the north, 24th Street to the east, 42nd Road to the south, and 23rd Street to the west. The site is 0.626 acres in size. Site Features: The site is completely occupied by a vacant four-story concrete building with a basement. Current Zoning and Land Use: The site is improved with a four-story vacant building with a full cellar and is located in a M1-5/R9 mixed-used district characterized by mixed commercial and industrial use with some residential use. Past Use of the Site: The site has been used for industrial manufacturing and a garage since as early as 1936. The industrial activities included metal stamping and fabrication of metals parts, and lacquer spraying. Oil staining from the former on-site metal fabrication machines was observed on the cellar floor. Based on a 2012 Phase II Environmental Site Investigation Report, a spill was reported to the NYSDEC (Spill No. 13-02812). Geology and Hydrogeology: The surface soil immediately beneath the concrete slab of the existing building (at el. 11) is a historic fill layer, generally consisting of brown and gray coarse to fine sand with varying amounts of silt, gravel and concrete fragments. This layer extends to about 8 feet below slab grade (bsg). A glacial till layer of gray and brown silt with varying amounts of gravel, sand and clay is present below the historic fill. Bedrock consists of hard to very hard, slightly weathered to fresh, coarse- to fine- grained, quartz-mica-garnet gneiss of the Ravenwood Granodiorite and is present at depths ranging from approximately 14 to 21 feet bsg. The groundwater depth ranges from approximately 4 to 7 feet bsg and flows to the west towards the East River which is located approximately 1/2 mile from the site."
Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethylene (PCE) in groundwater and soil vapor; trichloroethylene (TCE) in soil vapor; chrysene, benzo(a)anthracene and petroleum products in groundwater; and copper and lead in soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 491518
Site Description: "Location: The site is on the city block bordered by Queens Plaza South to the north, 24th Street to the east, 42nd Road to the south, and 23rd Street to the west. The site is 0.626 acres in size. Site Features: The site is completely occupied by a vacant four-story concrete building with a basement. Current Zoning and Land Use: The site is improved with a four-story vacant building with a full cellar and is located in a M1-5/R9 mixed-used district characterized by mixed commercial and industrial use with some residential use. Past Use of the Site: The site has been used for industrial manufacturing and a garage since as early as 1936. The industrial activities included metal stamping and fabrication of metals parts, and lacquer spraying. Oil staining from the former on-site metal fabrication machines was observed on the cellar floor. Based on a 2012 Phase II Environmental Site Investigation Report, a spill was reported to the NYSDEC (Spill No. 13-02812). Geology and Hydrogeology: The surface soil immediately beneath the concrete slab of the existing building (at el. 11) is a historic fill layer, generally consisting of brown and gray coarse to fine sand with varying amounts of silt, gravel and concrete fragments. This layer extends to about 8 feet below slab grade (bsg). A glacial till layer of gray and brown silt with varying amounts of gravel, sand and clay is present below the historic fill. Bedrock consists of hard to very hard, slightly weathered to fresh, coarse- to fine- grained, quartz-mica-garnet gneiss of the Ravenwood Granodiorite and is present at depths ranging from approximately 14 to 21 feet bsg. The groundwater depth ranges from approximately 4 to 7 feet bsg and flows to the west towards the East River which is located approximately 1/2 mile from the site."
Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern

23-10 QUEENS PLAZA SOUTH (Continued) **U003393329**

	were tetrachloroethylene (PCE) in groundwater and soil vapor; trichloroethylene (TCE) in soil vapor; chrysene, benzo(a)anthracene and petroleum products in groundwater; and copper and lead in soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Remaining contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 3/11/2003 Sangesland responded to the site of an ECO/Police action at a junk yard. Site has been an active Auto Parts facility for approx 2 years. Site is an irregular T shaped lot (approx 120' x 200') Cement/asphalt appears to cover majority of the lot, unknown if this ground cover is complete and impervious to surface spills. No obvious floor drains could be seen. Unknown if rainwater, auto fluids run into

CITY USED AUTO CENTER INC (Continued) **S108145769**

the ground or directly off site. Central area of the yard appears to be the car dismantling area and contains the majority of the spilled auto fluids (oil, transmission fluid, etc.) There is no controled spill containment area (no curbing, collection tank etc). Perimeter of yard was lined primarily with automobile racks (3 cars high). Ground staining appeared weathered and less severe than in the central area. Along with automotive liquids, the yard contained a large number of engines, transmissions, various engine parts and multiple automobile batteries (several appeared damaged and overturned). DEC Requirements: 1) Surface of the yard must be cleaned down to the cement/asphalt level. An integrity inspection will be made to determine if there are any floor drains or open cracks directly to the ground below. 2) A Site Delineation will be required at the property. A series of soil borings will be taken in a grid pattern over the area of the yard and soil/water samples tested to EPA Method 8260, 8770 & heavy metals. 3) Based on the results of the Site Delineation , a Site Remediation Plan will need to be prepared which will identify the procedure to clean up the contamination identified in the delineation. 4/11/2003 - The owner of the property is believed to be Virginia 516-383-9358. She is somehow associated with Yardley Associates . A call was made to this number in an attempt to get a mailing address, but no response was recieved. Lease holder to the site is: Jussain Zulfiqar and/or Anwar Javed. 5/7/2003 Sangesland spoke with Virginia Lupoli (owner) She inherited the property from her father. Yardley Associates LLC is the corporate name for the owner. Sangesland outlined the work which will be required on this site. 1) Power wash the lot to determine the condition of the black top or cement pavement 2) Geo Probe of site to determine the subsurface condition of the site. 3) A 60 day limit will be put in the letter. 4) A list of state contractors will be forwarded with the letter Contact info: Yardley Associates LLC Attn: Virginia Lupoli P.O. Box 237 Cold Spring Harbor, NY 11724 Fax # 631-385-4477 11/4/2003 Sangesland reviewed an Environmental Site Assessment for this site prepared by Dr. Norman Munroe (917-497-0190) of Astem Labs Inc. Report states that the entire site is capped with a cement pad between 8 and 24 thick. There did not appear to be any open preferential pathways directly to the soil. The report did not outline the path for rain water runoff or recharge. Report outlines soil boring work done on the site along with some ground water sampling. Some minor soil VOC hits (BTEX) in BH-2, BH-4 and BH-9 One minor groundwater hit for Benzene & MTBE in BH-4 SVOC’s for soil and water were below regulatory limits Heavy metal

CITY USED AUTO CENTER INC (Continued) **S108145769**

concentrations in soil samples exceeded
regulatory limits for several metals including: lead arsenic, cadmium, chromium and copper. Based
on this information, the case is closed with no further action
required.

Remarks: DEC SPILLS GROUP CALLED TO SITE OF POLICE ACTION AT A JUNK YARD. SITE HAD SPILLS OF AUTO RELATED LIQUIDS OVER ENTIRE YARD AREA.

DEC Memo:	4/6/04 TTF letter sent out to Cary Wolf. 9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(Consultant, National Env.) with J. Rommel and L. Oliva. BP is doing cleanup under spill #8402855. Provided copy ot TTF letter dated 4/6/04. B. Beck to provide response by 10/8/04. 10/20/04 Received repair record for the premium tank line performed by Alvin Petroleum. Alvin excavated over the premium tank on 4/9/04. They found plastic in the check valve over the tank and removed the plastic and insert on valve.

AMOCO SERVICE STATION (Continued) **S102142222**

DIsconnected suction line from tank, tested the line at 50lbs. and found the line tight. Reconnected and installed drop in check valve. Received passing tightness test of previously failing premium line gas tank performed by Crompco. There was no release to the environment. 10/21/04 NFA letter mailed.

Remarks: TANK WILL BE PUMPED OUT AND INVESTIGATE FURTHER

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Update By:	HMDUDEK
Site Description:	"Location: The Queens Plaza Residential Development - Site B Off-site is located in an urban area surrounding 28-10 Jackson Avenue in Long Island City. This site is the off-site project for Site No. C241151: Queens Plaza Residential Development - Site B and includes the surrounding land in all directions excluding three properties (Site No. C241105: Queens Plaza Residential Development, Site No. C241105A Queens Plaza Residential Development - Offsite and C241169: Queens Plaza Residential Development - Site C). The precise boundaries of this site will be identified after the remedial investigation has been conducted. This site was divided into two operable units (OUs) for administrative reasons. The operable units will be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU-01 represents off-site areas to the east, west and north. OU-02 represents the LIRR property to the south. Current Zoning and Land Use: This area of Long Island City is zoned M1-6/R10 (Manufacturing and Residential) under the special Long Island City Mixed Use District. According to the NYC Department of City Planning website, The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Site Geology/Hydrogeology: Based on the information collected on Site No. C241151, depth to bedrock varies from approximately 5 - 50 feet below grade (fbg) and consists predominantly of gray gneiss with varying degrees of weathering. Surface soils consist of a fill layer approximately 4 12 feet in thickness. This fill is a mixture of fine to medium sand, with some silt and gravel and traces of brick, cinders, concrete, cobbles, and wood. The fill is underlain by silty sand and glacial deposits followed by a layer of fine sand with intermittent seams of silt and clay. The groundwater table ranges from approximately 3 to 12 fbg over the site. Based on groundwater elevation data collected in 2014, groundwater appears to flow west, south and north. "
Env Problem:	"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals, pesticides, and total petroleum hydrocarbons. Groundwater samples were analyzed for per- and polyfluoroalkyl substances (PFAS). Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include petroleum VOCs and SVOCs in soil and groundwater, metals in soil, and VOCs in soil vapor. Soil - VOCs, metals and SVOCs were detected above Protection of Groundwater Soil Cleanup Objectives (PGSCO) and/or Restricted Residential Soil Cleanup Objectives (RRSCO). VOCs exceeding applicable SCOs include 1,2,4-trimethylbenzene at 67 parts per million (ppm) (RRSCO is 52 and PGSCO is 3.6 ppm), 1,3,5-trimethylbenzene at 24 ppm (RRSCO is 52 and PGSCO is 8.4 ppm), ethylbenzene at 21 ppm (PGSCO is 1 ppm), toluene at 7.6 ppm (PGSCO is

QUEENS PLAZA RESIDENTIAL DEVELOPMENT-SITEB-OFFSITE (Continued) **S113493750**

0.7 ppm) and total xylenes at 82 ppm (PGSCO is 1.6 ppm). Metals exceeding applicable SCOs include lead at 130 ppm (PGSCO is 30 ppm) and mercury at 5 ppm (RRSCO is 0.81 ppm). SVOCs exceeding applicable SCOs in soil include acenaphthene at 66 ppm (PGSCO: 98 ppm and RRSCO: 100 ppm), benzo(a)anthracene at 1.5 ppm (PGSCO and RRSCO: 1 ppm), chrysene at 1.2 ppm (PGSCO: 1 ppm), fluorene at 48 ppm (PGSCO: 30 ppm), indeno(1,2,3-cd)pyrene at 0.66 ppm (RRSCO: 0.5 ppm), and naphthalene at 510 ppm (PGSCO: 12 and RRSCO: 100 ppm). Groundwater: Groundwater samples collected exceeded the Ambient Water Quality Standards (AWQSs) for VOCs, SVOCs, and metals. The highest concentrations of VOCs detected above AWQS include 1,2-Dichloroethane at 25 ppb (AWQS: 0.6 ppb), Cis-1,2-Dichloroethene at 48 ppb (AWQS: 5 ppb), 1,2,4-trimethylbenzene at 380 parts per billion (ppb) (AWQS: 5 ppb), benzene at 450 ppb (AWQS: 1 ppb), toluene at 840 ppb (AWQS: 5 ppb), isopropyl benzene 45 ppb (AWQS: 5 ppb), trichloroethene at 64 ppb (AWQS: 5 ppb), vinyl chloride at 12 ppb (AWQS: 2 ppb), and total xylenes at 1,000 ppb (AWQS: 5 ppb). The highest concentrations of SVOCs detected above AWQS include 2,4-Dimethylphenol at 5,000 ppb (AWQS: 50 ppb), acenaphthene at 440 ppb (AWQS: 20 ppb), benzo(a)anthracene at 2.3 ppb (AWQS: 0.002 ppb), benzo(b)fluoranthene at 0.95 ppb (AWQS: 0.002 ppb), benzo(k)fluoranthene at 0.05 ppb (AWQS: 0.002 ppb), chrysene at 0.12 ppb (AWQS: 0.002 ppb), indeno(1,2,3-cd)pyrene at 0.06 ppb (AWQS: 0.002 ppb), and naphthalene at 7,900 ppb (AWQS: 10 ppb). The highest concentrations of metals detected above AWQS include arsenic at 50.18 ppb (AWQS: 25 ppb) and lead at 30.42 ppb (AWQS: 25 ppb). Soil Vapor: Soil vapor containing primarily petroleum related VOC s and chlorinated VOCs was detected including acetone at 63.7 micrograms per cubic meter (ug/m3), ethylbenzene at 23 ug/m3, m+p-Xylene at 79.1 ug/m3, o-Xylene at 46 ug/m3, 1,1,1-Trichloroethane at 31.4 ug/m3, Tetrachloroethene at 380 ug/m3, and Trichloroethene at 122 ug/m3. "

DEC Memo:	Spill occurred from/onto Outlet City, Inc. (V00081). The Voluntary site consists of several large abandoned buildings. Prior to 1978, the site was known as West Chemical Company. The site is predominately contaminated with creosote. Spill occurred water being discharged from a pipe inside one of the abandoned buildings on-site. The leak could be due to disrepair or vandalism. Water eventually flooded the southernmost part of the site adjacent to the Sunnyside Yard (specifically LIRR property). The flood extended onto the LIRR by approximately 60ft. Spoke with: Gloria G. Russo, LEED Green Associate Manager Environmental Planning &

Compliance Corporate Safety & Training
Department Long Island Rail Road 144-41 94th Avenue JCC Building, MC 1944 Jamiaca, NY 11435 Tel
347-494-6034 Cell 516-369-4889 Refer to C241151A: Queens Plaza Residential Development Site B
off-site 5/21/13 - required work plan to investigate Spill within 30 days July 12, 2013 - approved
work plan to investigate the flooded area (both on-site and off-site) LIRR and Outlet City need an
access agreement to implement Department's plan to investigate the Spill area (350ft by 70ft)
through surface soil sampling October 2013 - Outlet City currently has no environmental consultant
to implement the approved work plan and no plan to May 2013 - Haggerty: The BCA to remediate the
on-site contamination at Outlet City (formerly West Chemical) was executed 5/20/14. The remediation
of off-site contamination at this time is under negotiation between the Volunteer and Outlet City

Remarks: Watre pipe broke on a prior contaminated site and it feared that water is spreading contamination. Mike Haggarty of DEC Spills is aware of situation.

QUEENS PLAZA RESIDENTIAL DEVELOPMENT-SITEA-OFFSITE (Continued) **S120706177**

Site Description: "Location: The Queens Plaza Residential Development Site A - Off-Site is located at 28-18 Jackson Avenue in Long Island City (Queens County). This site is a rectangle-shaped parcel bounded on the north by Jackson Avenue; to the west and south by Queens Plaza Residential Development Site A (C241105); and to the east by New York City Transit subway electrical switching station. Site Features: The property was developed into a 45-story residential building with first floor commercial space. Current Zoning and Land Use: The site is currently unoccupied and under development. The site is zoned M1-6/R10 (Manufacturing and Residential) under the special Long Island City Mixed Use District. According to the NYC Department of City Planning website, The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Past Use of the Site: The site was historically occupied by a blacksmith, wagon and carpenter shops in the 19th century. The now razed 5-story brick building was built circa 1915 and was occupied primarily by commercial occupants including a battery and ignition service, a paint store, a restaurant, a liquor store and an exterminator. The site was also used for residential purposes from the 1960s to the 1990s. Site Geology and Hydrogeology: A surface fill layer approximately 5 - 10 feet thick is present on-site. The fill is a mixture of sand, silt and gravel with traces of brick, cinders, concrete, cobbles, and wood. The fill is underlain by silty sand with lenses of silt and clay. Additionally, a glacial till layer is present over much of the site beginning from approximately 20 feet below grade and extends to the top of bedrock. Bedrock consists un-weathered to moderately-weathered gray gneiss at depths ranging from 10 - 40 feet below grade. Groundwater flow is to the southwest and is approximately 10 - 12 feet below grade. "

Env Problem: "Nature and Extent of Contamination Prior to Remediation: A large creosote release on the adjacent site (Site No. C241105: Queens Plaza Residential Development Site A) caused soil and groundwater contamination. Based on the remedial investigation, the primary contaminants of concern are Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs) related to the creosote release however chlorinated VOCs, metals and pesticides contamination were present. Non-Aqueous Phase Liquid is present on-site. Soil: Total VOCs in soil range from non-detect to 165 parts per million (ppm). Multiple compounds exceeded unrestricted-use soil cleanup objectives (SCOs) but only two compounds exceeded their restricted residential soil cleanup objectives (RRSCOs): benzene at 6.6 parts per million or ppm (RRSCO of 4.8 ppm) and 1,2-dichloroethane at 5.6 ppm (RRSCO of 3.1 ppm). Total SVOCs in soil range from non-detect to over 2,000 ppm. Compounds exceeding their RRSCO's include dibenzofuran up to 146 ppm (RRSCO of 59 ppm) and naphthalene up to 796 ppm (RRSCO of 100 ppm). Several metals exceeded their unrestricted-use SCOs but none exceeded their RRSCOs. Pesticides and PCBs were not detected over unrestricted-use SCOs. Groundwater: Total VOCs, including both chlorinated and petroleum compounds, are present in groundwater from 5,000 - 20,000 parts per billion (ppb). Compounds detected exceeding Ambient Water Quality Standards and Guidance Values include xylene up to 5,160 ppb (compared to a standard of 5 ppb) and 1,2-dichloroethane up to 1,930 ppb (compared to a standard of 5 ppb). Total SVOCs are present in groundwater from 7,000 - 50,000

QUEENS PLAZA RESIDENTIAL DEVELOPMENT-SITEA-OFFSITE (Continued) **S120706177**

	ppb. Compounds detected exceeding Ambient Water Quality Standards and Guidance Values include 2,4-dimethylphenol up to 32,100 ppb (compared to a standard of 1 ppb) and naphthalene up to 6,720 ppb (compared to a guidance value of 10 ppb). The pesticides beta-BHC and 4,4'-DDT were detected in groundwater above the AWQSGVs. Beta-BHC was detected at 0.12 ppb (compared to a standard of 0.04 ppb) and 4,4'-DDT was detected at 0.31 ppb (compared to a standard of 0.2 ppb). Soil Vapor: Petroleum and chlorinated VOCs were detected in soil vapor. For example, the petroleum-VOC benzene was detected up to 4,060 micrograms per cubic meter (ug/m3) and the chlorinated-VOC tetrachloroethene was detected up to 53 ug/m3. Post-Remediation: Remediation at the site is complete. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (hydraulic control/containment, subsurface barriers, soil cover/cap) of the remedy will be operated and maintained under the SMP. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Update By:	HMDUDEK
Site Description:	"Location: The site is located at 28-02/ 28-30 Jackson Avenue in Long Island City, Queens County and is approximately 0.470 acres in size. The site is bounded by Jackson Avenue to the north, Orchard Street to the west, a related off-site property known as Queens Plaza Residential Development Site A Off-site (Site No. C241105A) to the east and by another Brownfield Cleanup Program (BCP) site known as Queens Plaza Residential Development - Site B (Site No. C241151) to the south. Site Features: High-rise residential apartment buildings with ground floor commercial space are present on-site. Current Zoning and Land Use: The site is currently unoccupied and under development. The site is zoned M1-6/R10 (Manufacturing and Residential) under the special Long Island City Mixed Use District. According to the NYC Department of City Planning website, The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Past Use of the site: The West Chemical Company operated at the site from the early 1900 s until their closure in 1977. The company manufactured commercial and household products such as disinfectants, insecticides, soaps, floor wax and paper product dispensing machines. Bulk quantities of pine oil, mineral oil, hydrochloric acid, cresylic acid, tar acid, caustic potash, terpene solvent, Shell E-407 solvent, ortho nitro toluene, kerosene and creosote were stored and used on-site. In 1978, property ownership was transferred to the Modell Company and used for commercial purposes under the company name Outlet City. Multiple previous environmental investigations were conducted on-site since the mid-1980's leading up to the property owner at the time, Outlet City, signing Voluntary Cleanup Agreements with the Department on February 10, 1997 and again on April 18, 2001. The site entered the BCP on August 3, 2007 by TST LIC Development, LLC as a potential purchaser of the property. The former West Chemical/ Outlet City property now consists of two BCP sites: Queens Plaza Residential Development Site A (Site No. C241105) and Queens Plaza Residential Development Site B (Site No. C241151). Site Geology and Hydrogeology: A surface fill layer approximately 5 - 10 feet thick is present on-site. The fill is a mixture of sand, silt and gravel with traces of brick, cinders, concrete, cobbles, and wood. The fill is underlain by silty sand with lenses of silt and clay. Additionally, a glacial till layer is

QUEENS PLAZA RESIDENTIAL DEVELOPMENT-SITE A (Continued) **S118950486**

present over much of the site beginning from approximately 20 feet below grade and extends to the top of bedrock. Bedrock consists un-weathered to moderately-weathered gray gneiss at depths ranging from 10 - 40 feet below grade. Groundwater flow is to the southwest and is approximately 10 - 12 feet below grade. "

Env Problem: "Nature and Extent of Contamination Prior to Remediation: A large on-site creosote release in the 1950's caused extensive soil and groundwater contamination. Based on the previous investigations of the property while in the Voluntary Cleanup Program, the primary contaminants of concern are Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs) related to the creosote release however chlorinated VOCs, metals and pesticides contamination were present. Also, both Light Non-Aqueous Phase Liquid (LNAPL) and Dense Non-Aqueous Phase Liquid (DNAPL) were present on-site. Groundwater: Total VOC s in groundwater range from 55 - 25,000 parts per billion (ppb). Compounds detected exceeding Ambient Water Quality Standards and Guidance Values (AWQSGVs) include benzene up to 4,100 ppb (compared to a groundwater standard of 1 ppb) and 1,2-dichloroethane up to 4,320 ppb (compared to a groundwater standard of 0.6 ppb). Total SVOCs in groundwater range from 10 - 112,000 ppb. Compounds detected exceeding AWQSGVs include naphthalene up to 9,100 ppb (compared to a groundwater guidance value of 10 ppb), and 2-methylphenol up to 8,940 ppb (compared to a groundwater standard of 1 ppb). Several metals were detected over AWQSGVs including arsenic up to 102 ppb (compared to a groundwater standard of 25 ppb) and lead up to 152 ppb (compared to a groundwater standard of 25 ppb). Pesticides and Polychlorinated Biphenyls (PCBs) were not analyzed for in groundwater. During the remedial investigation, contaminated groundwater was confirmed to be migrating off-site. Soil: Total VOCs in soil range from non-detect to 400 parts per million (ppm). Compounds exceeding their restricted-residential soil cleanup objectives (RRSCOs) include xylene up to 190 ppm (RRSCO of 100 ppm) and benzene up to 9.5 ppm (RRSCO of 4.8 ppm). Total SVOCs in soil range from non-detect to 7,000 ppm. Compounds exceeding their RRSCO's include acenaphthene up to 390 ppm (RRSCO of 100 ppm) and naphthalene up to 2,500 ppm (RRSCO of 100 ppm). Several metals exceeded their RRSCO s including copper up to 3,330 ppm (RRSCO of 270 ppm) and lead up to 2,190 ppm (RRSCO of 400 ppm). The only pesticide detected above RRSCOs was alpha-BHC at 0.93 ppm (RRSCO of 0.48 ppm). PCB s were not detected in soil above RRSCOs. Soil Vapor: Sub-slab and indoor air samples were collected in two on-site buildings. Petroleum VOCs were detected however no standards, criteria and guidance values exist for these compounds. No chlorinated VOCs were detected. Significant Threat Determination: The site was determined to represent a significant threat to public health and the environment. Post-Remediation: Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (containment/ capture wells, vapor mitigation, soil cover/ cap) of the remedy will be operated and maintained under the SMP. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or

QUEENS PLAZA RESIDENTIAL DEVELOPMENT-SITE A (Continued) **S118950486**

	other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination."

Site Description:	"Location: The site is a 0.11 acre lot located at 38 68 13th Street, between 38th Avenue and 40th Avenue in the Long Island City section of Queens, NY. Site Features: The site is relatively flat and includes no buildings except brick walls on three sides and a gate at the front which restricts access to the side. The site is covered by

BEST-DDK CLEANERS (Continued) **S109826034**

a concrete floor . Current Zoning and Land Use: The site is zoned M1-3 for industrial and manufacturing use. The surrounding parcels are currently used for a combination of commercial and light industrial. The site has been vacant since a fire in 2016. Past Use of the Site: The site was a residential building with garages beginning in 1898. From 1947 to 1950, the site was vacant, after which it was used for sheet metal work from 1967 1983. The site was converted to a commercial dry -leaning facility in 1997. The one story building dry-cleaning building consisted of slab on grade construction with a small sub-cellar in the front of the building which housed the boiler. The building contained dry cleaning machines, garment storage area, storage, office, customer service area, and a bathroom. The building covered the entire footprint of the site. The facility operated three 4th generation dry cleaning machines on a secondary containment concrete slab, five washers and a dryer, a spotting stand, ten press machines, three sets of shirt machines, four air compressors, two refrigerated dryers and a sump. In April 2016, a fire caused signification structural damage to the building and contents. Site Geology and Hydrogeology: Subsurface soil at the site consists of historic fill characterized by sand comingled with brick and coal ash to a depth of up to 10 feet, followed by native sand and silt. Refusal (possible bedrock) was encountered between 14 and 20 feet below grade. Groundwater was encountered at depths of 8.5 9.5 ft below ground surface. The groundwater flow direction is west-northwest towards the East River, which is located approximately 2000 feet from the site. This site is now being managed under the BCP site #C241126. "

Env Problem: "Nature and Extent of Contamination: Soil, groundwater and soil vapor were analyzed for volatile organic compounds (VOCs) as part of the site characterization. Based upon investigations conducted to date, the primary contaminants of concern include tetrachloroethene (PCE) and its degradation products. Soil PCE was found at a maximum concentration up to 490 parts per million (ppm) as compared to the commercial use soil cleanup objective (SCO) of 150 ppm and the protection of groundwater SCO of 1.3 ppm. Additional investigation is needed to fully delineate the extent of soil contamination. Groundwater PCE is found at a maximum concentration of 72,000 parts per billion (ppb) which exceeds the Ambient Water Quality Standard (AWQS) of 5 ppb; TCE was found at a maximum concentration of 150 ppb (AWQS is 5 ppb), and cis-1,2-dichloroethylene (cis-1,2-DCE) was found at a maximum concentration of 210 ppb (AWQS is 5 ppb). Data indicates the potential for off site impacts in groundwater related to this site. Sub slab Vapor Sub slab soil vapor samples were collected from beneath the existing remnant concrete floor. PCE was found at a maximum concentrations of 2,100,000 micrograms per cubic meter (g/m3), TCE was found at a maximum concentration of 14,000 g/m3 and cis-1,2-DCE is found at concentrations up to 95 g/m3. Data indicates the potential for off site impacts in soil vapor related to this site. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Control Type:	ENG
Date Record Added:	08/05/2015
Date Rec Updated:	06/20/2024
Updated By:	MDSOLLEC
Site Description:	"Location: The BCP site is located in Long Island City at 23-01 42nd Road, Queens County. It is bordered to the north by Queens Plaza South, 24th Street to the east, 42nd Road to the south, and 23rd Street to the west. Site Features: The Site encompassed an area of approximately 0.342 acres which was formerly occupied by a vacant two-story concrete building. The building was demolished in March 2014 for development purposes. Current Zoning and Land Use: A 44-story residential apartment building was constructed on the Site which is located in the Special Long Island City Mixed Use District within Area B of the Queens Plaza Subdistrict. It is part of the M1-5/R9 zone, which allows for light industrial use and moderate to high density residential use. Past Use of the Site: Prior to becoming vacant, the on-site building was used for industrial processes from at least 1947, including metal stamping and fabrication of metal parts for electrical switches and fuses. Discoloration and staining of the basement floors from the on-site metal fabrications machines was noted. A Phase II investigation was conducted in September 2012. Groundwater and soil samples were collected and the results showed groundwater standards were exceeded for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs) and metals. The turbidity of the groundwater samples, which were collected from temporary well points, is unknown. As a consequence, the representativeness of the historical groundwater data is unclear. The results also showed levels above unrestricted Soil Cleanup Objectives for SVOCs, and metals. Based on the Phase II Environmental Site Investigation Report, a petroleum spill was reported to the Department on June 14, 2013 (Spill No. 13-02811). This open spill was closed by the Department on September 1, 2015. Site Geology and Hydrogeology: Historic urban fill is the surficial unit, predominantly consisting of brown and gray, coarse to fine sand with varying amounts of silt, gravel and concrete fragments. The historic fill layer extends to depths of up to approximately 15 feet below sidewalk grade (approximately el. 1.6 relative to the Queens Highway Datum). A layer of gray and brown silt with varying amounts of gravel, sand and clay (i.e., glacial till) exists below the historic

23-01 42ND ROAD (Continued) **S113813706**

fill. Bedrock was encountered at depths ranging from approximately 16 feet to 25 feet below sidewalk grade (approximately el. -3.4 to el. -10.4). The groundwater depth ranged from approximately 7 feet to 13 feet below sidewalk grade (approximately el. 3.5 to el. 5.80) and flows to the west towards the East River which is located approximately 0.5 miles from the Site. "

Env Problem: "Post-Remediation Remediation of the Site is complete. Prior to remediation, the primary contaminants of concern were trichloroethylene in soil vapor; benzene in groundwater; and carcinogenic polyaromatic hydrocarbons and metals in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/remove air beneath the building) is installed on-site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicated soil vapor intrusion is not a concern for off-site buildings."

varying amounts of silt, gravel and concrete fragments. The historic fill layer extends to depths of up to approximately 15 feet below sidewalk grade (approximately el. 1.6 relative to the Queens Highway Datum). A layer of gray and brown silt with varying amounts of gravel, sand and clay (i.e., glacial till) exists below the historic fill. Bedrock was encountered at depths ranging from approximately 16 feet to 25 feet below sidewalk grade (approximately el. -3.4 to el. -10.4). The groundwater depth ranged from approximately 7 feet to 13 feet below sidewalk grade (approximately el. 3.5 to el. 5.80) and flows to the west towards the East River which is located approximately 0.5 miles from the Site. "

Env Problem: "Post-Remediation Remediation of the Site is complete. Prior to remediation, the primary contaminants of concern were trichloroethylene in soil vapor; benzene in groundwater; and carcinogenic polyaromatic hydrocarbons and metals in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/remove air beneath the building) is installed on-site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicated soil vapor intrusion is not a concern for off-site buildings."

Site Code: 484397
Site Description: "Location: The BCP site is located in Long Island City at 23-01 42nd Road, Queens County. It is bordered to the north by Queens Plaza South, 24th Street to the east, 42nd Road to the south, and 23rd Street to the west. Site Features: The Site encompassed an area of approximately 0.342 acres which was formerly occupied by a vacant two-story concrete building. The building was demolished in March 2014 for development purposes. Current Zoning and Land Use: A 44-story residential apartment building was constructed on the Site which is located in the Special Long Island City Mixed Use District within Area B of the Queens Plaza Subdistrict. It is part of the M1-5/R9 zone, which allows for light industrial use and moderate to high density residential use. Past Use of the Site: Prior to becoming vacant, the on-site building was used for industrial processes from at least 1947, including metal stamping and fabrication of metal parts for electrical switches and fuses. Discoloration and staining of the basement floors from the on-site metal fabrications machines was noted. A Phase II investigation was conducted in September 2012. Groundwater and soil samples were collected and the results showed groundwater standards were exceeded for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs) and metals. The turbidity of the groundwater samples, which were collected from temporary well points, is unknown. As a consequence, the

23-01 42ND ROAD (Continued) **S113813706**

representativeness of the historical groundwater data is unclear. The results also showed levels above unrestricted Soil Cleanup Objectives for SVOCs, and metals. Based on the Phase II Environmental Site Investigation Report, a petroleum spill was reported to the Department on June 14, 2013 (Spill No. 13-02811). This open spill was closed by the Department on September 1, 2015. Site Geology and Hydrogeology: Historic urban fill is the surficial unit, predominantly consisting of brown and gray, coarse to fine sand with varying amounts of silt, gravel and concrete fragments. The historic fill layer extends to depths of up to approximately 15 feet below sidewalk grade (approximately el. 1.6 relative to the Queens Highway Datum). A layer of gray and brown silt with varying amounts of gravel, sand and clay (i.e., glacial till) exists below the historic fill. Bedrock was encountered at depths ranging from approximately 16 feet to 25 feet below sidewalk grade (approximately el. -3.4 to el. -10.4). The groundwater depth ranged from approximately 7 feet to 13 feet below sidewalk grade (approximately el. 3.5 to el. 5.80) and flows to the west towards the East River which is located approximately 0.5 miles from the Site. "

Env Problem: "Post-Remediation Remediation of the Site is complete. Prior to remediation, the primary contaminants of concern were trichloroethylene in soil vapor; benzene in groundwater; and carcinogenic polyaromatic hydrocarbons and metals in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. Site Code: 484397
Site Description: "Location: The BCP site is located in Long Island City at 23-01 42nd

23-01 42ND ROAD (Continued) **S113813706**

Road, Queens County. It is bordered to the north by Queens Plaza South, 24th Street to the east, 42nd Road to the south, and 23rd Street to the west. Site Features: The Site encompassed an area of approximately 0.342 acres which was formerly occupied by a vacant two-story concrete building. The building was demolished in March 2014 for development purposes. Current Zoning and Land Use: A 44-story residential apartment building was constructed on the Site which is located in the Special Long Island City Mixed Use District within Area B of the Queens Plaza Subdistrict. It is part of the M1-5/R9 zone, which allows for light industrial use and moderate to high density residential use. Past Use of the Site: Prior to becoming vacant, the on-site building was used for industrial processes from at least 1947, including metal stamping and fabrication of metal parts for electrical switches and fuses. Discoloration and staining of the basement floors from the on-site metal fabrications machines was noted. A Phase II investigation was conducted in September 2012. Groundwater and soil samples were collected and the results showed groundwater standards were exceeded for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs) and metals. The turbidity of the groundwater samples, which were collected from temporary well points, is unknown. As a consequence, the representativeness of the historical groundwater data is unclear. The results also showed levels above unrestricted Soil Cleanup Objectives for SVOCs, and metals. Based on the Phase II Environmental Site Investigation Report, a petroleum spill was reported to the Department on June 14, 2013 (Spill No. 13-02811). This open spill was closed by the Department on September 1, 2015. Site Geology and Hydrogeology: Historic urban fill is the surficial unit, predominantly consisting of brown and gray, coarse to fine sand with varying amounts of silt, gravel and concrete fragments. The historic fill layer extends to depths of up to approximately 15 feet below sidewalk grade (approximately el. 1.6 relative to the Queens Highway Datum). A layer of gray and brown silt with varying amounts of gravel, sand and clay (i.e., glacial till) exists below the historic fill. Bedrock was encountered at depths ranging from approximately 16 feet to 25 feet below sidewalk grade (approximately el. -3.4 to el. -10.4). The groundwater depth ranged from approximately 7 feet to 13 feet below sidewalk grade (approximately el. 3.5 to el. 5.80) and flows to the west towards the East River which is located approximately 0.5 miles from the Site. "

Env Problem: "Post-Remediation Remediation of the Site is complete. Prior to remediation, the primary contaminants of concern were trichloroethylene in soil vapor; benzene in groundwater; and carcinogenic polyaromatic hydrocarbons and metals in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/remove air beneath the building) is installed on-site to

23-01 42ND ROAD (Continued) **S113813706**

prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicated soil vapor intrusion is not a concern for off-site buildings."

Site Description: "Location: The BCP site is located in Long Island City at 23-01 42nd Road, Queens County. It is bordered to the north by Queens Plaza South, 24th Street to the east, 42nd Road to the south, and 23rd Street to the west. Site Features: The Site encompassed an area of approximately 0.342 acres which was formerly occupied by a vacant two-story concrete building. The building was demolished in March 2014 for development purposes. Current Zoning and Land Use: A 44-story residential apartment building was constructed on the Site which is located in the Special Long Island City Mixed Use District within Area B of the Queens Plaza Subdistrict. It is part of the M1-5/R9 zone, which allows for light industrial use and moderate to high density residential use. Past Use of the Site: Prior to becoming vacant, the on-site building was used for industrial processes from at least 1947, including metal stamping and fabrication of metal parts for electrical switches and fuses. Discoloration and staining of the basement floors from the on-site metal fabrications machines was noted. A Phase II investigation was conducted in September 2012. Groundwater and soil samples were collected and the results showed groundwater standards were exceeded for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs) and metals. The turbidity of the groundwater samples, which were collected from temporary well points, is unknown. As a consequence, the representativeness of the historical groundwater data is unclear. The results also showed levels above unrestricted Soil Cleanup Objectives for SVOCs, and metals. Based on the Phase II Environmental Site Investigation Report, a petroleum spill was reported to the Department on June 14, 2013 (Spill No. 13-02811). This open spill was closed by the Department on September 1, 2015. Site Geology and Hydrogeology: Historic urban fill is the surficial unit, predominantly consisting of brown and gray, coarse to fine sand with varying amounts of silt, gravel and concrete fragments. The historic fill layer extends to depths of up to approximately 15 feet below sidewalk grade (approximately el. 1.6 relative to the Queens Highway Datum). A layer of gray and brown silt with varying amounts of gravel, sand and clay (i.e., glacial till) exists below the historic fill. Bedrock was encountered at depths ranging from approximately 16 feet to 25 feet below sidewalk grade (approximately el. -3.4 to el. -10.4). The groundwater depth ranged from approximately 7 feet to 13

23-01 42ND ROAD (Continued) **S113813706**

feet below sidewalk grade (approximately el. 3.5 to el. 5.80) and flows to the west towards the East River which is located approximately 0.5 miles from the Site. "

Env Problem: "Post-Remediation Remediation of the Site is complete. Prior to remediation, the primary contaminants of concern were trichloroethylene in soil vapor; benzene in groundwater; and carcinogenic polyaromatic hydrocarbons and metals in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/remove air beneath the building) is installed on-site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicated soil vapor intrusion is not a concern for off-site buildings."

BROWNFIELDS:

Name:	23-01 42ND ROAD
Address:	23-01 42ND ROAD
City,State,Zip:	LONG ISLAND CITY, NY 11101
Program:	BCP
Site Code:	484397
Acres:	0.342
HW Code:	C241152
SWIS:	4101
Town:	New York City
Record Added Date:	07/11/2013
Record Updated Date:	05/15/2024
Update By:	SMQUANDT
Site Description:	"Location: The BCP site is located in Long Island City at 23-01 42nd Road, Queens County. It is bordered to the north by Queens Plaza South, 24th Street to the east, 42nd Road to the south, and 23rd Street to the west. Site Features: The Site encompassed an area of approximately 0.342 acres which was formerly occupied by a vacant two-story concrete building. The building was demolished in March 2014 for development purposes. Current Zoning and Land Use: A 44-story residential apartment building was constructed on the Site which is located in the Special Long Island City Mixed Use District within Area B of the Queens Plaza Subdistrict. It is part of the M1-5/R9 zone, which allows for light industrial use and moderate to high density residential use. Past Use of the Site: Prior to becoming vacant, the on-site building was used for industrial processes from at least 1947, including metal stamping and fabrication of metal parts for electrical switches and fuses. Discoloration and staining of the basement floors from the on-site metal fabrications machines was noted. A Phase II investigation was conducted in September 2012. Groundwater and soil samples were collected and the results showed groundwater standards were exceeded for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs) and metals. The turbidity of the groundwater samples, which were collected from temporary well points, is unknown. As a consequence, the representativeness of the historical groundwater data is unclear. The results also showed levels above unrestricted Soil Cleanup Objectives for SVOCs, and metals. Based on the Phase II Environmental Site Investigation Report, a petroleum spill was reported to the Department on June 14, 2013 (Spill No. 13-02811). This open spill was closed by the Department on September 1, 2015. Site Geology and Hydrogeology: Historic urban fill is the surficial unit, predominantly consisting of brown and gray, coarse to fine sand with

23-01 42ND ROAD (Continued) **S113813706**

	varying amounts of silt, gravel and concrete fragments. The historic fill layer extends to depths of up to approximately 15 feet below sidewalk grade (approximately el. 1.6 relative to the Queens Highway Datum). A layer of gray and brown silt with varying amounts of gravel, sand and clay (i.e., glacial till) exists below the historic fill. Bedrock was encountered at depths ranging from approximately 16 feet to 25 feet below sidewalk grade (approximately el. -3.4 to el. -10.4). The groundwater depth ranged from approximately 7 feet to 13 feet below sidewalk grade (approximately el. 3.5 to el. 5.80) and flows to the west towards the East River which is located approximately 0.5 miles from the Site. "
Env Problem:	"Post-Remediation Remediation of the Site is complete. Prior to remediation, the primary contaminants of concern were trichloroethylene in soil vapor; benzene in groundwater; and carcinogenic polyaromatic hydrocarbons and metals in soil. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilates/remove air beneath the building) is installed on-site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the building. Sampling indicated soil vapor intrusion is not a concern for off-site buildings."

BROWNFIELDS:

Name:	DOT RELOCATION SITE
Address:	38-21 12TH STREET
City,State,Zip:	LONG ISLAND CITY, NY 11101
Program:	BCP
Site Code:	569681
Acres:	1.610
HW Code:	C241213
SWIS:	4101
Town:	New York City
Record Added Date:	05/02/2018
Record Updated Date:	12/29/2023
Update By:	HMDUDEK
Site Description:	"LOCATION The site is located at 38-21 12th Street and includes the addresses 38-01 12th Street through 38-33 12th Street, 38-02 13th Street through 38-36 13th Street, and 12-02 38th Avenue through 12-20 38th Avenue. The site is located in the Long Island City section of Queens, NY. The site consists of one tax lot on an approximately 70,200-sf (1.6 acre) parcel. The site is bounded to the northwest by 38th Avenue, followed by a taxi garage; to the northeast by 38th Avenue, followed by a scaffolding manufacturer; to the east by a 13th Street, followed by an auto body and paint shop, car wash and parking lot; to the south by an auto repair shop and church; and to the west by 12th Street, followed by a commercial building, scaffolding company, and a construction site. SITE FEATURES The site contains three one-story buildings, constructed around 1936, and two partially covered parking lots. The site is currently vacant but was recently occupied by commercial and industrial businesses including: a pipe fitting shop, two leased commercial parking lots, a marble and granite fabricator, a carpentry shop, and a commercial kitchen. CURRENT ZONING AND LAND USE The current zoning designation of the site is M1-3 (manufacturing district). The surrounding area is largely developed with industrial and commercial uses with residential and commercial uses located to the south and east. The site has an open spill number (0413143) related to petroleum contamination. PAST USE OF THE SITE The site has had numerous historical commercial, industrial, and automotive uses. The site was a rag shop in 1915 and was developed in 1936 with three one-story buildings that were operated by Chesebro-Whitman Co. Inc. as a wood working facility. In 1970, Chesebro-Whitman Co. Inc. became a scaffolding manufacturing and repair facility, and on-site uses changed to include a metal workshop, with a garage and gasoline tank. An office and a storage area were also constructed in the former vacant parcel on the southern portion of the site in 1970. SITE GEOLOGY AND HYDROLOGY The site is approximately 15 feet above mean sea level. Groundwater is present at the site between approximately 8 and 10 feet below sidewalk grade and flows in a southwesterly direction towards the East River, approximately 0.3 miles away. Soil borings, which were advanced between 10 and 15 feet below sidewalk grade across the site, encountered historic fill material (coal ash, concrete, brick, plastic, and/or glass) underlain by native brown sand or silty-sand and gravel. "
Env Problem:	"Nature and Extent of Contamination: Soil and groundwater were

DOT RELOCATION SITE (Continued) **S122449236**

analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include petroleum VOCs, SVOCs and metals in soil, petroleum VOCs in groundwater, and chlorinated VOCs in soil vapor. Soil: Soil data were compared to Commercial Use Soil Cleanup Objectives (CSCOs) and Protection of Groundwater Soil Clean up Objectives (PoGWSCOs). Contaminants of concern are VOCs, SVOCs and metals to a depth of approximately 9 feet below grade. VOCs identified include benzene, at a maximum concentration of 190 parts per million (ppm) which exceeds its 44 ppm CSCO and PoGWSCO of 0.06 ppm, and toluene at a maximum concentration of 1,100 ppm (CSCO: 500 ppm and PoGWSCO: 0.7 ppm). SVOCs identified include benzo(a)anthracene at a maximum concentration of 200 ppm (CSCO: 1 ppm),benzo(a)pyrene at a maximum concentration of 120 ppm (CSCO: 1 ppm), benzo(b)fluoranthene at a maximum concentration of 130 ppm (CSCO: 5.6 ppm), and naphthalene at a maximum concentration of 1,500 ppm (CSCO: 500 ppm). Metals detected include barium at a maximum concentration of 1,330 ppm (CSCO: 400 ppm), lead at a maximum concentration of 2,330 ppm (CSCO: 1,000 ppm) and mercury at a maximum concentration of 1.8 ppm (CSCO: 2.8 ppm). Waste classification samples analyzed for lead exhibited levels exceeding the hazardous waste threshold on-site in one location. Soils containing gGrossly cContaminated material as defined in 6-NYCRR Part 375 and non-aqueous phase liquids were identified on-site. No PCBs or pesticides were detected at concentrations exceeding the CUSCOs. Data does not indicate any off-site impacts in soil related to this site. PFAS compounds were not sampled as part of the remedial investigation. The presence of PFAS in soil will be determined during the remedial action. Groundwater: Groundwater data was compared to the Department s TOGS Ambient Water Quality Standards (NY-AWQS). The VOC benzene was detected at a maximum concentration of 1.5 parts per billion (ppb) compared to the ambient water quality standard of 1ppb. Elevated levels of the naturally occurring metals iron, manganese and sodium were also detected in the groundwater on-site; however, these are not considered to be site-specific contaminants of concern. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 85.1 and 37.8 parts per trillion (ppt), respectively, exceeding the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater. Concentrations of PFOA and PFOS were relatively consistent across the e site. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: Six soil vapor samples were collected throughout the site during the RI. Tetrachloroethene (PCE) was detected at a maximum concentration of 36 micrograms per cubic meter (ug/m3). Trichloroethene (TCE) was detected a maximum concentration of 2.6 ug/m3). Toluene was detected at a maximum concentration of 29 ug/m3. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem: "Since the site is fenced and covered by asphalt or concrete, people will not come into direct contact with site-related contamination is unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) may move into buildings and

DOT RELOCATION SITE (Continued) **S122449236**

affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant; however, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future onsite building development and occupancy. Environmental sampling indicates soil vapor intrusion is not a concern for offsite buildings."

Date Record Added: 11/30/2000
Date Record Updated: 06/28/2016
Updated By: KALEWAND
Site Description: "Location: The site is located in Queens County, on Jackson Ave between Orchard Street to the east, Queens Blvd. to the west and Long Island Railroad rail yard to the south. A subway (E,G,R,V) runs underneath Jackson Avenue bordering the site to the north. Site Features: Prior to demolition, the 2.5 acre site consisted of 9 buildings and associated parking areas. The property is currently being redeveloped. Current Zoning and Land Use: The site is zoned M1-6/R10 (Manufacturing and Residential) under the special Long Island City Mixed Use District. According to the NYC Department of City Planning website, The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Historical Uses: The site had formerly been used for chemical manufacturing. From 1901-1978, West Chemical Co. owned the property and manufactured commercial and disinfectant products such as disinfectants, insecticides, soaps, floor wax, and paper products dispensing machines. Manufacturing operations employed various chemical substances including creosote, coal and acids, cresylic acids, degreasing solvents, iodine, and assorted oils and pesticides. Metal plating and gasoline filling operations were also conducted at the property. In November 1978 Outlet City acquired title to the property from West Chemical. During Outlet City's ownership, a flea market and various vendor operations were operated at the property. Previous investigations in the late 1980's and early 1990's led to the property entering the Voluntary Cleanup Program. The Voluntary Agreement was terminated in August 2015. Site Geology and Hydrogeology: Site geology consists of sand and silt at varying depths. Bedrock (gneiss) encountered at depths from elevation 10 North American Vertical Datum (NAVD) to -30 NAVD. Groundwater is approximately 8-10ft below grade. Remediation Status: Remediation of Outlet City will be addressed under the Brownfield Cleanup Program (BCP). Refer to Queens Plaza Residential Development - Site A (C241105) and Queens Plaza Residential Development - Site B (C241151). For offsite contamination, refer to Queens Plaza Residential Development - Site A Offsite (C241105A) and Queens Plaza Residential Development - Site B Offsite (C241151A). "
Env Problem: "Nature and Extent of Contamination: The site is contaminated with creosote, petroleum, and solvents. Both soil and groundwater are affected. The majority of the contamination is located in Areas D and E where a large scale creosote spill took place. Total on-site VOC s (Volatile Organic Compounds) including both chlorinated hydrocarbons and petroleum constituents are present in groundwater from non-detect - 30,000ppb. Total on-site SVOC s (Semi-Volatile Organic Compounds) are present in groundwater from non-detect to over 100,000ppb. An initial off-site investigation was completed in 2013. Contamination, both VOCs and SVOCs has migrated off-site to the west and north. Due to flooding event caused by a homeless person removing piping in Building 10 to sell for scrap, the monitoring well in the narrow strip of land between the on-site buildings and the Sunnyside Yard could not be sampled. "
Health Problem: "Exposures to contaminated groundwater is not expected because the area is served by public water. Soils contaminated with

OUTLET CITY, QUEENS BLVD. & JACKSON AVE. (Continued) **S105684691**

etrachloroethene are beneath the site, however, exposure to this soil is not expected because the site is capped with asphalt. Indoor air samples collected in a portion of the on-site building contained levels of tetrachloroethene that exceeded the New York State Department of Health Guideline for tetrachloroethene in Indoor Air. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion into structures near the site."

Update By:	HMDUDEK
Site Description:	"Location: Queens Plaza Residential Development - Site B is located at 28-02/ 28-30 Jackson Avenue and 30-02 Queens Boulevard in Long Island City, Queens County. The site is 1.883 acres in size and is bounded to the north by Queens Plaza Residential Development - Site A (Site No. C241105), Queens Plaza Residential Development - Site C (Site No. C241169) and Jackson Avenue; to the west by Orchard Street;

QUEENS PLAZA RESIDENTIAL DEVELOPMENT - SITEB (Continued) **S118950488**

to the south by the Long Island Railroad (LIRR) Sunnyside Yard property and to the east by Queens Boulevard. Site Features: High-rise residential apartment buildings with ground floor commercial space are present on-site. Current Zoning and Land Use: The site is currently unoccupied and under development. The site is zoned M1-6/R10 (Manufacturing and Residential) under the special Long Island City Mixed Use District. According to the NYC Department of City Planning website, The Special Long Island City Mixed Use District (LIC) promotes the development and expansion, at varying densities, of the longstanding mix of residential, commercial, industrial and cultural uses found in its four subdistricts Court Square, Queens Plaza, Hunters Point and Dutch Kills. Past Use of the site: The West Chemical Company operated at the site from the early 1900 s until their closure in 1977. The company manufactured commercial and household products such as disinfectants, insecticides, soaps, floor wax and paper product dispensing machines. Bulk quantities of pine oil, mineral oil, hydrochloric acid, cresylic acid, tar acid, caustic potash, terpene solvent, Shell E-407 solvent, ortho nitro toluene, kerosene and creosote were stored and used on-site. In 1978, property ownership was transferred to the Modell Company and used for commercial purposes under the company name Outlet City. Multiple previous environmental investigations were conducted on-site since the mid-1980's leading up to the property owner at the time, Outlet City, signing Voluntary Cleanup Agreements with the Department on February 10, 1997 and again on April 18, 2001. The site entered the BCP on May 20, 2014 by TST LIC Development, LLC as a potential purchaser of the property. The former West Chemical/ Outlet City property now consists of two BCP sites: Queens Plaza Residential Development Site A (Site No. C241105) and Queens Plaza Residential Development Site B (Site No. C241151). Site Geology and Hydrogeology: A surface fill layer approximately 5 - 10 feet thick is present on-site. The fill is a mixture of sand, silt and gravel with traces of brick, cinders, concrete, cobbles, and wood. The fill is underlain by silty sand with lenses of silt and clay. Additionally, a glacial till layer is present over much of the site beginning from approximately 20 feet below grade and extends to the top of bedrock. Bedrock consists un-weathered to highly-weathered gneiss at depths ranging from 5 - 50 feet below grade. Groundwater flow is to the southwest and is approximately 5 - 12 feet below grade."

Env Problem:

"Nature and Extent of Contamination Prior to Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) related to historic creosote and petroleum releases however chlorinated VOCs, pesticides and metals contamination are also present. The greatest impact was encountered in the central processing and storage areas on the west half of site where various chemicals were stored during and after West Chemical s operation at the property. Groundwater: Total VOC s in groundwater ranged from non-detect to over 15,000 parts per billion (ppb). Compounds detected exceeding Ambient Water Quality Standards and Guidance Values (AWQSGVs) include xylene up to 1,460 ppb (compared to a groundwater standard of 5 ppb) and 1,2-dichloroethane up to 4,280 ppb (compared to a groundwater standard of 0.6 ppb). Total SVOCs in groundwater ranged from non-detect to over 30,000 ppb. Compounds detected exceeding AWQSGVs include naphthalene up to 11,400 ppb (compared to a groundwater guidance value of 10 ppb) and phenol up to 3,630 ppb (compared to a

QUEENS PLAZA RESIDENTIAL DEVELOPMENT - SITEB (Continued) **S118950488**

groundwater standard of 1 ppb). Several pesticides were detected over AWQSGVs including dieldrin detected up to 2 ppb (compared to a groundwater standard of 0.004 ppb) and 4,4 -DDD up to 4.5 ppb (compared to a groundwater standard of 0.3 ppb). Several metals were detected over AWQSGVs including arsenic up to 162 ppb (compared to a groundwater standard of 25 ppb) and lead up to 303 ppb (compared to a groundwater standard of 25 ppb). The 2014 remedial investigation was limited to the overburden. Subsequent to the remedial investigation, a bedrock evaluation was conducted and Non-Aqueous Phase Liquid (NAPL) was encountered in weathered bedrock in the southwestern portion of the site. Information on NAPL in bedrock was presented in the Remedial Design Report. During the remedial investigation, contaminated groundwater was confirmed to be migrating off-site. Soil: Total VOCs in soil ranged from non-detect over 250 parts per million (ppm). Compounds exceeding their restricted-residential soil cleanup objectives (RRSCOs) include xylene up to 147 ppm (RRSCO of 100 ppm) and 1,4-dichlorobenzene up to 29.2 ppm (RRSCO of 13 ppm). Total SVOCs in soil ranged from non-detect over 5,000 ppm. Compounds exceeding their RRSCO's include acenaphthene up to 267 ppm (RRSCO of 100 ppm) and naphthalene up to 2,150 ppm (RRSCO of 100 ppm). Several metals exceeded their RRSCO s including arsenic up to 104 ppm (RRSCO of 16 ppm) and lead up to 3,890 ppm (RRSCO of 400 ppm). The highest metals concentrations were encountered in surface soil samples collected adjacent to on-site railroad tracks. The only pesticide detected above RRSCOs was dieldrin up to 0.77 ppm (RRSCO of 0.2 ppm). PCB s were detected in soil at concentrations below the restricted-residential SCO. Soil Vapor: Elevated petroleum and chlorinated VOCs were detected in soil vapor. For example, the petroleum-VOC benzene was detected up to 3,480 micrograms per cubic meter (ug/m3) and the chlorinated-VOC 1,1,1-trichloroethane was detected up to 25,000 ug/m3. Significant Threat Determination: The site was determined to represent a significant threat to public health and the environment. Post-Remediation: Remediation at the site is complete. Remedial actions have successfully achieved the soil cleanup objectives for restricted-residential use. A Site Management Plan (SMP) will be implemented to manage remaining contamination in the future. An environmental easement will limit the future use of property, restrict the use of groundwater and require compliance with the SMP. All engineering controls (soil cover/cap, NAPL recovery and contingent hydraulic control) of the remedy will be operated and maintained under the SMP."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination."

HARRINGTON This spill site has been transferred from DEC Sigona to Remedial Bureau B, on August 4, 2003. This spill site has been consolidated under Spill No. 9007853. DEC Sigona conducted a site visit on 8/29/2000 with ExxonMobil (Meola) and Handex (Tonn). On or about August 9, 2000, 12 x 550's gallon, 5 x 4,000 gallon gasoline USTs were removed , 1 x 1,000 gallon fuel oil were removed by Tyree Bros Environmental Services. DEC (ECO) Michael Mat issued violations to Tyree for failure to obtain a Substantial facility modification for the site. This violation was issued on Aug 9, 2000. Handex collected 10 soil samples in Early August 2000-and reported soil contamintion under Spill No. 0004702. Tyree discovered an additional 17 x 550's gasoline tanks previously abandoned, and 1 x 1,000 and 2 x 2,000 USTs, which were removed on September 9 - 15, 2000. Handex submitted proposal on September 11, 2000 for installation of vapor control system for new building. Also see spill nos. 8900605, 9009272, 0004702 and 0006097 for further site information. Additional investigation will be performed according to Handex after the USTs are removed and site construction is completd.

Remarks: Reported as Ullage Test Failure

DEC Memo:	1/21/2010 Sangesland spoke to Shawn at Crompco. He said the tank failed a test yesterday and a spill report was called in. Today they isolated the tank and retested. He said the tank passed, but the suction line inside the tank failed. Sangesland asked Shawn to call back and talk directly to Jake Krimgold to determine if this can be closed out. 1/21/10. J.Krimgold spoke to Shawn from Crompco. Agreed that the failure of the suction line inside the tank could not lead to a release. Case closed.

Town:	New York City
Record Added Date:	09/20/2016
Record Updated Date:	07/02/2018
Update By:	BXANDERS
Site Description:	"Location: The site is located at 42-50 24th Street in Long Island City, New York (Queens County) and is denoted on the New York City Tax Map as Block 428, Lot 1. Alternative addresses for the site include 42-63 23rd Street and 23-17 43rd Avenue. The site is located on the city block bound by 43rd Avenue to the south, 23rd Street to the west, 42nd Road to the north, and 24th street to the east. An access ramp to the Queensboro Bridge borders the site to the north. Site Features: The site occupies an area of about 34,000 square feet and consists of two interconnected, one-story buildings and an asphalt-paved storage, fueling, and parking area. The site is currently operated by Midtown Operating Corporation as a taxi dispatch and repair facility. An NYCTA subway easement for the R train transects the site from north to south. Current Zoning and Land Use: The site, which is currently operated as a taxi dispatch and repair facility, is located in the Special Long Island City Mixed Use District and designated as a M1-5/R9 (manufacturing/residential) district, which permits a maximum development FAR of 8.0. The site is also located in an area that will be zoned for Mandatory Inclusionary Housing; therefore, a percentage of the proposed residential development must include affordable housing units. The project is consistent with the goals of the City Council as embodied in the NYC zoning districts. The New York City Department of Buildings classifies the site buildings as G-1, which includes buildings with garage and gasoline station usage. The current site owner, QPT 24th Street Development LLC, will undertake the proposed development. The New York City Department of City Planning has assigned the site a restrictive E designation for hazardous materials contamination and noise concerns (E-104, City Environmental Quality Review [CEQR] No. 00DCP055Q). As such, the project will receive approval from the New York City Mayor s Office of Environmental Remediation prior to

QUEENS PLAZA TAXI (Continued) **S118950511**

construction. Past Use of the Site: The site was vacant until at least 1915 and was partially developed with a lumber yard containing a shed, office and garage by 1936. A store was located on the southwestern portion of the site in 1947. A gasoline tank was located on the southern portion of the property adjacent to the office and garage in the 1936, 1947, and 1950 Sanborn Maps. By 1970, the lumber yard was replaced with a taxi cab garage and service center, which contained a garage building in the northeastern portion of the site. The garage building was extended to encompass the northern third of the site in 1977, and the site, which is currently operated as a taxi dispatch and repair facility, has remained unchanged since. Site Geology and Hydrogeology: Based on borings advanced by Langan during the May 2016 subsurface investigations (environmental and geotechnical), the subsurface strata consists of a layer of historic fill material that extends to depths of up to 20 feet below grade surface (bgs) in the exterior portions of the site and extends about 5 feet below the basement slab of the building. The historic fill consists of brown, fine- to coarse-grained sand with varying amounts of clay, gravel, brick, glass, and organic material. Native soil consisting of brown, fine sand with varying amounts of silt and gravel was encountered beneath the historic fill layer. Native soil in this area of Queens consists of glacial (ground moraine) sediments that typically encompass an unsorted mixture of clay, sand and boulders. The glacial strata are underlain by the Middle Ordovician to Lower Cambrian-Ordovician Hartland Formation, which generally consists of muscovite-biotite-quartz schist. The top of bedrock was observed at about 20 feet bgs in borings advanced along the bordering 24th Street and 43rd Avenue sidewalks during a 2016 geotechnical investigation. Groundwater was observed at about 10 to 11 feet bgs. Groundwater beneath the site is inferred to flow southeast towards the Dutch Kills. Groundwater in this area of New York City is not used for consumption, and the New York City water supply is derived from watersheds in the Catskills. Contaminated groundwater is therefore not expected to impact the drinking water supply."

Env Problem:

"based upon investigations conducted to date, the primary contaminations of concern include benzene, ethylbenzene, toluene. Soil: Multiple volatile organic compounds (VOCs) including 1,2,4-Trimethylbenzene,1,3,5-Trimethylbenzene, ethylbenzene, toluene and total xylenes were found at the central and eastern portion of the site. Several semi-volatile organic compounds(SVOCs) were found to the northeastern and central portion of the site. Toluene and total xylenes were detected of 370 ppm and 920 ppm, respectively above restricted-residential use SCOs(toluene 100 ppm and xylenes 100 ppm) but below commercial use SCOs(500 ppm). Multiple metals including arsenic, lead, and mercury were found at a depths of 10 to 11 feet-below ground surface(bgs) throughout the site. Highest concentration of lead was found at 1,720 ppm. Groundwater: Petroleum-related VOCs (e.g., benzene 75 ppb, ethylbenzene 410 ppb, toluene 610 ppb, o-Xylenes 94 ppb and p/m-xylenes 690 ppb) were found near the underground storage tanks(USTs)and refueling area at concentrations above their respective ambient water quality standard(AWQS). Several SVOCs(1,2,4-Trimethylbenzene, benzene, ethylbenzene, toluene, xelenes) and metals(Lead, magnesium, sodium) were detected in groundwater throughout the site at concentrations above their respective AWQS. Highest concentrations of toluene(610 ppb) and ethylbenzene(410 ppb) were found at the central portion(MW-09)of the site. Lead was found at highest concentration of

QUEENS PLAZA TAXI (Continued) **S118950511**

1,990 ppb at MW-03(southern side) of the site above RRUSCOs(400ppm) and commercial use SCOs(1,000 ppm). Soil Vapor and Indoor Air: Elevated concentrations of VOCs were found in soil vapor throughout the site. The highest concentrations of toluene and tetrachloroethylene(PCE)were found 8,288 um/m3 and 13 um/m3, respectively at the central portion(SV-08)of the site."

Updated By:	JEBROWN
Site Code:	490213
Site Description:	"Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies, including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to course sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is

SILVER STAR AUTO RESOURCES LLC (Continued) **U000409049**

the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code:	490213
Site Description:	"Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies, including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to course sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Update By:	JEBROWN
Site Description:	"Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies, including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to course sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Update By:	AMSERVIS
Site Description:	"Location: The site is located on the southeastern part of the Borough of Queens at 27-01 Jackson Avenue in the Long Island City neighborhood of Queens, NY. The approximately 9,200 square foot (0.211 acre) site is identified on the Queens Borough Tax Map as Block 432, Lot 21. The site is bounded by a multi-story hotel followed by Hunter Street to the north; a vacant lot and the Ed Koch Queensboro Bridge on-ramp and upper roadway followed by a multi-story commercial use building to the east; Jackson Avenue followed by a one-story industrial use building to the south; and 43rd Avenue followed by multi-story mixed-use buildings to the west. The Metropolitan Transit Authority (MTA) E and M subway lines are located beneath Jackson Avenue directly south of the site, and the R subway line transects the northeastern corner of the site. Site Features: Current site redevelopment includes construction of a 24-story mixed-use commercial and residential building with three sub-cellar levels. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use Paired District (M1-5/R9). M1-5 zoning allows for light manufacturing, commercial and community facility. R9 is a zoning that allows for high residential density through large buildable floor areas. The adjoining parcels and surrounding area in general are used for mixed-use commercial and residential purposes, as well as for industrial purposes. Past Use of the Site: Historical operations at the site included a hand laundry in 1936 and a gasoline station and auto repair shop from 1945 to 2015. Prior to redevelopment the site had been fenced and vacant since 2015. Site Geology and Hydrogeology The site was excavated for remediation to bedrock located at elevations el.3 to el. -23 or 9 to 35 feet blow grade surface (bgs) removing all historic fill and native soil. Prior to remediation, Historic fill predominantly consisting of brown, fine- to medium-grained sand with varying amounts of silt, gravel, clay, coal, brick, wood, glass, and concrete was present at depths ranging from about 6.5 to 22 feet-bgs. Native soil encountered below historic fill predominantly consisted of fine- to medium-grained sand with varying amounts of gravel, silt, and clay. Prior to remedial excavation to bedrock, groundwater was present at depths of about 10.11 to 14.72 feet bgs at the site. Groundwater generally flows west but is likely partially influenced by dewatering activities from the southern adjoining subway tunnel, causing a low point in the groundwater table in the southwestern corner of the site. This low point is causing a secondary flow

27-01 JACKSON AVENUE (Continued) **S121933805**

Env Problem:

direction to the south. Underground utilities and other subsurface structures may locally influence the direction of groundwater flow. " "Post Remediation: Prior to remediation the primary contaminants of concern were petroleum related volatile organic compounds (VOCs)in soil, groundwater and soil vapor. This contamination also extended off-site in groundwater. Remedial action has successfully achieved the soil cleanup objectives for unrestricted use under a track 1 cleanup which included excavation and removal of all fill and native soil to bedrock, installation of a secant wall to facilitate both support of excavation and dewatering followed by treatment prior to disposal to the sewer. The impacted off-site groundwater was treated with injection of activated carbon and will continue to be monitored under an Off-site Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: As part of the Remedial Investigation (RI) soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for emerging contaminants (ECs). Soil vapor was analyzed for VOCs. Based upon the results of investigations conducted to date, the primary contaminants of concern for the site include petroleum related volatile organic compounds (PVOCs), poly aromatic hydrocarbons (PAHs) and metals. Soil Several VOCs were detected in soil at concentrations above the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs). Petroleum-related VOCs were generally detected from 8 to 40 feet below ground surface (bgs) or refusal, whichever was shallower, in the southern and western parts of the site and the adjoining sidewalks. These VOCs include: 1,2,4-trimethylbenzene (TMB) at a maximum concentration of 1,500 parts per million (ppm) compared to the UUSCO of 3.6 ppm; 1,3,5-TMB at 670 ppm (UUSCO is 8.4 ppm); benzene at 36 ppm (UUSCO is 0.06 ppm); toluene at 770 ppm (UUSCO is 0.7 ppm); ethylbenzene at 520 ppm (UUSCO is 1 ppm); total xylenes at 3,100 ppm (UUSCO is 0.26 ppm); and naphthalene at 380 ppm (UUSCO is 12 ppm). Several SVOCs were detected in historic fill material at concentrations above the applicable UUSCOs in the 0 to 9-foot bgs interval in samples collected across the site. The maximum concentrations of SVOCs detected include benzo(a)anthracene at 14 ppm (UUSCO is 1 ppm), benzo(a)pyrene at 12 ppm (UUSCO is 1 ppm), benzo(b)fluoranthene at 15 ppm (UUSCO is 1 ppm), benzo(k)fluoranthene at 4.2 ppm (UUSCO is 0.8 ppm), and chrysene at 13 ppm (UUSCO is 1 ppm). The following pesticides were detected in soil at concentrations above UUSCOs in the 0 to 5-foot interval bgs in samples collected from across the site: 4,4'-DDD at 0.0381ppm (UUSCO is 0.0033 ppm), 4,4'-DDE at 0.0185 ppm (UUSCO is 0.0033 ppm), 4,4'-DDT at 0.031 ppm (UUSCO is 0.0033 ppm), and dieldrin at 0.0131 ppm (UUSCO is 0.005 ppm). Several metals were detected at concentrations above the UUSCOs in the historic fill layer across the site, including arsenic at 19.7 ppm (UUSCO is 13 ppm), barium at 688 ppm (UUSCO is 350 ppm), hexavalent chromium 4.27 ppm (UUSCO is 1 ppm), trivalent chromium at 43 ppm (UUSCO is 30 ppm), lead at 10,600 ppm (UUSCO is 63 ppm), and mercury at 2.22 ppm (UUSCO is 0.18 ppm). Lead concentrations did not exceed the USEPA Resource Conservation and Recovery Act (RCRA) Hazardous Waste Regulatory Level of 5 ppm using the TCLP analysis. Data indicates the presence of off-site impacts in soil related to migration of site-related contaminants from this site. Groundwater - Multiple petroleum VOCs were detected at concentrations above ambient water quality standards (AWQS) in the on-site monitoring wells located in the vicinity of the

27-01 JACKSON AVENUE (Continued) **S121933805**

two former gasoline UST areas in the southern part of the site and in off-site monitoring wells located on the southern and western-adjoining sidewalks. These VOCs included 1,3,5-TMB at a maximum concentration of 620 parts per billion (ppb) compared to the AWQS of 5 ppb, benzene at 3,200 ppb (AWQS is 1 ppb), cymene at 6.9 ppb (AWQS of 5 ppb), toluene at 15,000 ppb (AWQS is 5 ppb), total xylenes at 15,000 ppb (AWQS is 5 ppb), ethylbenzene at 2,900 ppb (AWQS is 5 ppb), and naphthalene at 630 ppb (AWQS is 10 ppb). Several SVOCs were detected above their AWQS including benzo(a)anthracene at 1.2 ppb (AWQS is 0.002 ppb), benzo(b)fluoranthene at 1.4 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 0.47 ppb (AWQS is 0.002 ppb), and chrysene at 1.1 ppb (AWQS is 0.002 ppb). No pesticides or PCBs were detected at concentrations exceeding their AWQS. The only dissolved metals detected in groundwater exceeding their respective AWQS were iron, sodium, manganese and magnesium. These are naturally-occurring metals and are not considered site-related contaminants. PFOA was detected in groundwater samples above the screening level of 10 parts per trillion (ppt) in 12 of the 13 monitoring wells at concentrations ranging from 12.6 ppt to 245 ppt. PFOS was detected in groundwater samples above the screening level of 10 ppt in eight of the 13 monitoring wells at concentrations ranging from 11.8 ppt to 59.4 ppt. Data does not indicate that the site is a likely source of PFOS or PFOA contamination. Data indicates that site-related contaminants have migrated off-site in groundwater. Light, Non-Aqueous Phase Liquid (LNAPL) - During the RI, two feet of LNAPL in the form of separate phase weathered gasoline was observed in one off-site monitoring well. The well was bailed, and subsequent measurements showed reduction to about 3 inches of LNAPL. During the subsequent recovery assessment, about 25% of the initial LNAPL volume (0.72 inches) recharged into the well over a four-hour period. Soil Vapor - Thirteen soil vapor samples and two ambient air samples were collected and analyzed in 2018/2019. Total VOC concentrations ranged from about 279.89 micrograms per cubic meter (ug/m3) to 1,325,600 ug/m3 in soil vapor, and up to 62.21 ug/m3 in ambient air. Petroleum VOCs, specifically benzene, toluene, ethylbenzene and xylene (together known as BTEX), concentrations detected in soil vapor ranged from 20.6 ug/m3 to 83.70 ug/m3. BTEX was also detected in the ambient air sample at a concentration of 0.94 ug/m3. In addition to the petroleum VOCs, tetrachloroethylene (PCE) was detected in on-site soil vapor in the northern part of the site at 390 ug/m3 and trichloroethene (TCE) at 476 ug/m3. In July 2020 four previous soil vapor sample locations and two new sample locations were sampled to assess the potential for off-site vapor intrusion. Total VOC concentrations ranged from 331 ug/m3 to 18,887 ug/m3. Ambient air total VOC concentrations were 207.31 ug/m3, of which 199.89 ug/m3 were petroleum VOCs. BTEX concentrations detected in soil vapor ranged from 24.2 ug/m3 to 873 ug/m3 and BTEX was also detected in the ambient air sample at a concentration of 63 ug/m3. Data does not indicate off-site impacts in soil vapor related to this site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site-related contamination off-site."

Site Description:	"Location: The site is located on the southeastern part of the Borough of Queens at 27-01 Jackson Avenue in the Long Island City neighborhood of Queens, NY. The approximately 9,200 square foot

27-01 JACKSON AVENUE (Continued) **S121933805**

(0.211 acre) site is identified on the Queens Borough Tax Map as Block 432, Lot 21. The site is bounded by a multi-story hotel followed by Hunter Street to the north; a vacant lot and the Ed Koch Queensboro Bridge on-ramp and upper roadway followed by a multi-story commercial use building to the east; Jackson Avenue followed by a one-story industrial use building to the south; and 43rd Avenue followed by multi-story mixed-use buildings to the west. The Metropolitan Transit Authority (MTA) E and M subway lines are located beneath Jackson Avenue directly south of the site, and the R subway line transects the northeastern corner of the site. Site Features: Current site redevelopment includes construction of a 24-story mixed-use commercial and residential building with three sub-cellar levels. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use Paired District (M1-5/R9). M1-5 zoning allows for light manufacturing, commercial and community facility. R9 is a zoning that allows for high residential density through large buildable floor areas. The adjoining parcels and surrounding area in general are used for mixed-use commercial and residential purposes, as well as for industrial purposes. Past Use of the Site: Historical operations at the site included a hand laundry in 1936 and a gasoline station and auto repair shop from 1945 to 2015. Prior to redevelopment the site had been fenced and vacant since 2015. Site Geology and Hydrogeology The site was excavated for remediation to bedrock located at elevations el.3 to el. -23 or 9 to 35 feet blow grade surface (bgs) removing all historic fill and native soil. Prior to remediation, Historic fill predominantly consisting of brown, fine- to medium-grained sand with varying amounts of silt, gravel, clay, coal, brick, wood, glass, and concrete was present at depths ranging from about 6.5 to 22 feet-bgs. Native soil encountered below historic fill predominantly consisted of fine- to medium-grained sand with varying amounts of gravel, silt, and clay. Prior to remedial excavation to bedrock, groundwater was present at depths of about 10.11 to 14.72 feet bgs at the site. Groundwater generally flows west but is likely partially influenced by dewatering activities from the southern adjoining subway tunnel, causing a low point in the groundwater table in the southwestern corner of the site. This low point is causing a secondary flow direction to the south. Underground utilities and other subsurface structures may locally influence the direction of groundwater flow. "

Summary: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site-related contamination off-site."

Summary: "Post Remediation: Prior to remediation the primary contaminants of concern were petroleum related volatile organic compounds (VOCs)in soil, groundwater and soil vapor. This contamination also extended off-site in groundwater. Remedial action has successfully achieved the soil cleanup objectives for unrestricted use under a track 1 cleanup which included excavation and removal of all fill and native soil to bedrock, installation of a secant wall to facilitate both support of excavation and dewatering followed by treatment prior to disposal to the sewer. The impacted off-site groundwater was treated with injection of activated carbon and will continue to be monitored under an Off-site Site Management Plan. Prior to Remediation: Nature and Extent of Contamination: As part of the Remedial Investigation (RI) soil and groundwater were analyzed for volatile organic

27-01 JACKSON AVENUE (Continued) **S121933805**

compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for emerging contaminants (ECs). Soil vapor was analyzed for VOCs. Based upon the results of investigations conducted to date, the primary contaminants of concern for the site include petroleum related volatile organic compounds (PVOCs), poly aromatic hydrocarbons (PAHs) and metals. Soil Several VOCs were detected in soil at concentrations above the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs). Petroleum-related VOCs were generally detected from 8 to 40 feet below ground surface (bgs) or refusal, whichever was shallower, in the southern and western parts of the site and the adjoining sidewalks. These VOCs include: 1,2,4-trimethylbenzene (TMB) at a maximum concentration of 1,500 parts per million (ppm) compared to the UUSCO of 3.6 ppm; 1,3,5-TMB at 670 ppm (UUSCO is 8.4 ppm); benzene at 36 ppm (UUSCO is 0.06 ppm); toluene at 770 ppm (UUSCO is 0.7 ppm); ethylbenzene at 520 ppm (UUSCO is 1 ppm); total xylenes at 3,100 ppm (UUSCO is 0.26 ppm); and naphthalene at 380 ppm (UUSCO is 12 ppm). Several SVOCs were detected in historic fill material at concentrations above the applicable UUSCOs in the 0 to 9-foot bgs interval in samples collected across the site. The maximum concentrations of SVOCs detected include benzo(a)anthracene at 14 ppm (UUSCO is 1 ppm), benzo(a)pyrene at 12 ppm (UUSCO is 1 ppm), benzo(b)fluoranthene at 15 ppm (UUSCO is 1 ppm), benzo(k)fluoranthene at 4.2 ppm (UUSCO is 0.8 ppm), and chrysene at 13 ppm (UUSCO is 1 ppm). The following pesticides were detected in soil at concentrations above UUSCOs in the 0 to 5-foot interval bgs in samples collected from across the site: 4,4'-DDD at 0.0381ppm (UUSCO is 0.0033 ppm), 4,4'-DDE at 0.0185 ppm (UUSCO is 0.0033 ppm), 4,4'-DDT at 0.031 ppm (UUSCO is 0.0033 ppm), and dieldrin at 0.0131 ppm (UUSCO is 0.005 ppm). Several metals were detected at concentrations above the UUSCOs in the historic fill layer across the site, including arsenic at 19.7 ppm (UUSCO is 13 ppm), barium at 688 ppm (UUSCO is 350 ppm), hexavalent chromium 4.27 ppm (UUSCO is 1 ppm), trivalent chromium at 43 ppm (UUSCO is 30 ppm), lead at 10,600 ppm (UUSCO is 63 ppm), and mercury at 2.22 ppm (UUSCO is 0.18 ppm). Lead concentrations did not exceed the USEPA Resource Conservation and Recovery Act (RCRA) Hazardous Waste Regulatory Level of 5 ppm using the TCLP analysis. Data indicates the presence of off-site impacts in soil related to migration of site-related contaminants from this site. Groundwater - Multiple petroleum VOCs were detected at concentrations above ambient water quality standards (AWQS) in the on-site monitoring wells located in the vicinity of the two former gasoline UST areas in the southern part of the site and in off-site monitoring wells located on the southern and western-adjoining sidewalks. These VOCs included 1,3,5-TMB at a maximum concentration of 620 parts per billion (ppb) compared to the AWQS of 5 ppb, benzene at 3,200 ppb (AWQS is 1 ppb), cymene at 6.9 ppb (AWQS of 5 ppb), toluene at 15,000 ppb (AWQS is 5 ppb), total xylenes at 15,000 ppb (AWQS is 5 ppb), ethylbenzene at 2,900 ppb (AWQS is 5 ppb), and naphthalene at 630 ppb (AWQS is 10 ppb). Several SVOCs were detected above their AWQS including benzo(a)anthracene at 1.2 ppb (AWQS is 0.002 ppb), benzo(b)fluoranthene at 1.4 ppb (AWQS is 0.002 ppb), benzo(k)fluoranthene at 0.47 ppb (AWQS is 0.002 ppb), and chrysene at 1.1 ppb (AWQS is 0.002 ppb). No pesticides or PCBs were detected at concentrations exceeding their AWQS. The only dissolved metals detected in groundwater exceeding their respective AWQS were iron, sodium, manganese and magnesium. These are naturally-occurring

27-01 JACKSON AVENUE (Continued) **S121933805**

metals and are not considered site-related contaminants. PFOA was detected in groundwater samples above the screening level of 10 parts per trillion (ppt) in 12 of the 13 monitoring wells at concentrations ranging from 12.6 ppt to 245 ppt. PFOS was detected in groundwater samples above the screening level of 10 ppt in eight of the 13 monitoring wells at concentrations ranging from 11.8 ppt to 59.4 ppt. Data does not indicate that the site is a likely source of PFOS or PFOA contamination. Data indicates that site-related contaminants have migrated off-site in groundwater. Light, Non-Aqueous Phase Liquid (LNAPL) - During the RI, two feet of LNAPL in the form of separate phase weathered gasoline was observed in one off-site monitoring well. The well was bailed, and subsequent measurements showed reduction to about 3 inches of LNAPL. During the subsequent recovery assessment, about 25% of the initial LNAPL volume (0.72 inches) recharged into the well over a four-hour period. Soil Vapor - Thirteen soil vapor samples and two ambient air samples were collected and analyzed in 2018/2019. Total VOC concentrations ranged from about 279.89 micrograms per cubic meter (ug/m3) to 1,325,600 ug/m3 in soil vapor, and up to 62.21 ug/m3 in ambient air. Petroleum VOCs, specifically benzene, toluene, ethylbenzene and xylene (together known as BTEX), concentrations detected in soil vapor ranged from 20.6 ug/m3 to 83.70 ug/m3. BTEX was also detected in the ambient air sample at a concentration of 0.94 ug/m3. In addition to the petroleum VOCs, tetrachloroethylene (PCE) was detected in on-site soil vapor in the northern part of the site at 390 ug/m3 and trichloroethene (TCE) at 476 ug/m3. In July 2020 four previous soil vapor sample locations and two new sample locations were sampled to assess the potential for off-site vapor intrusion. Total VOC concentrations ranged from 331 ug/m3 to 18,887 ug/m3. Ambient air total VOC concentrations were 207.31 ug/m3, of which 199.89 ug/m3 were petroleum VOCs. BTEX concentrations detected in soil vapor ranged from 24.2 ug/m3 to 873 ug/m3 and BTEX was also detected in the ambient air sample at a concentration of 63 ug/m3. Data does not indicate off-site impacts in soil vapor related to this site. "

DER Facility ID:	307531
Latitude:	40.7593690
Longitude:	-73.9398870
DEC Memo:	12/30/05-Hiralkumar Patel. I spoke with Levent Eskicakit at Athenica Enviromental, who is handling environmental investigation of this site. Levent is doing Phase-I and Phase-II investigation of site. During phase II, he found contamination. this is an empty building, previously used as office and in back of building there are 3 tanks of 275 gal capacity above ground, and 1 underground tank capacity of 3000 gal. this building is financed by State Bank of Long Island and owned by Metro B.C. LLC. Levent took samples at points 8 to 9 ft apart and about 15 ft deep. From the samples of whole area, they found contamination in backyard where the tanks are. Levent found contamination in the area of 10ft*10ft*9ft. After investigation, the building will be demolished for further use. At financing bank, the further use of this site is noted as commercial use. Levent: Ph. (718) 784-7490 Fax. (718) 784-4085 Email: leskicakit@athenica.com Contact Person in Metro LLC: Demetrios Demetrios (718) 937-5353 Fax. (718) 937-8743 Cell (347) 203-9923 Address of Metro LLC: 11-20 30th Ave. Long Island City, NY I have sent soil contamination letter today and also faxed it. 1/17/06-Hiralkumar Patel. I got letter back because of wrong address. Letter with corrected address has been sent out. Correct Address: 1120 37th Ave Long Island City, NY 11101 1/20/06-Hiralkumar Patel. Spoke with Levent at Athenica Environmental and as per his knowledge, the Metro LLC is now selling this property. and the new owner will do all the required remediation work. Until now Levent has not heared anything from Metro LLC or the new buyer. as soon as he get some information, he will inform me. I have asked him to send soil investigation report in email. 1/24/06-Hiralkumar Patel. Talked with Levent at Athenica. He will send me report today

COMMERCIAL BUILDING (Continued) **S107523279**

in email. Received site plan, soil results and groundwater results in an emil from Levent. Reviewing report. { c:\\hiralkumar\\1204 37th ave } - 6 soil samples, 1 groundwater sample close to UST. - found contamination at soil sample no. 1 and 3, which are close to UST and contamination in groundwater close to tank. - from the plan, property has 5 AST of capacity 275 gal. Left message for Mr. Demetrios at Metro LLC. Received call from Demetrios, and he will call me back with latest information regarding cleanup on this case once he reach his office. Received email from Levent at Athenica.

---------- Hiralkumar: As I mentioned to you earlier, at the request of Metro LLC, Athenica Environmental Services (AES) conducted a Phase II Focused Subsurface Site Investigation on December 2005 at the above referenced property. The results of this investigation revealed followings: * Field investigation indicated that Site soils (B-1 & B-3) located along the former abandoned 3,000-gallon UST area (or former cesspool area), contained field evidence of petroleum contamination. The field evidence suggests that petroleum contamination soils occur at depths of approximately four (4) feet bgs to the water table, which was encountered between ten (10) and twelve (12) feet bgs. * There was no evidence of any VOC or SVOC contamination observed within the remaining soil samples (B-2, B-4, B-5 and B-6) collected from the Site. * The laboratory analytical results indicated that, with the exception of soil samples B-1 and B-2 collected within the vicinity of the former abandoned UST, none of the remaining soil samples (B-2, B-4, B-5 and B-6) from the Site had concentrations above the NYSDEC STARS Memo Alternative Soil Guidance Values. Soil Samples collected from B-1 and B-2 contained concentration of VOCs and SVOCs above the NYSDEC STARS Memo Alternative Soil Guidance Values. * Laboratory results of groundwater sample GW-1 collected from the soil boring B-1 indicated that concentration of benzene and MTBE were 1.7 ppb and 24 ppb, respectively. These concentrations exceed the NYSDEC TOGS Memo Groundwater Cleanup Criteria of 1 ppb for benzene and 10 ppb for MTBE. Based upon the field evidence and the laboratory data, AES concluded that the Site has been impacted by old petroleum-related VOCs and SVOCs in the former abandoned UST (or cesspool) area. However, based on the fact that this is a historical spill and is located approximately 4 feet below ground surface (bgs) and the fact that the entire area is covered with 6 inches of concrete floor, there are no immediate thread to the environment and the occupants of the Site. Further, the Site is not a residential and the entire area is used solely for parking and storage. My conversation with Mr. Demetrios of Metro LLC (the Site owner) indicated that the Site will go under construction for the development of a new building approximately sometimes in 2007. AES recommended that when the proposed construction activities should take a place, environmental engineering controls including remedial action work plans, and health & safety plan should be prepared in order to protect the workers and environment and submitted to the NYSDEC for review and approval. Regards, Levent LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Environmental Engineering Consultants 45-09 Greenpoint Avenue Long Island City, New York 11103

---------- 01/25/06-Hiralkumar Patel. Received email

COMMERCIAL BUILDING (Continued) **S107523279**

from Levent. This UST was abandoned in place sometimes 20 years ago. It's supposed to be filled with sand. As i discussed with Vought, if this tank is empty, we can wait till they start construction in 2007. 05/03/06-Hiralkumar Patel. Received email from Levent. ---------- Kumar: How are you doing? Finally, I have a signed proposal to conduct required remediation activities for this Site. Right now, I am putting the contractors together to excavate the impacted areas at the site. Please do not hesitate to contact me with any questions. Levent LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Environmental Engineering Consultants 45-09 Greenpoint Avenue Long Island City, New York 11103 ---------- Tried Levent's number, but it is out of service. replied email and asked to send work plan including contractor's information. Received eamil from Levent and he will send RAP shortly. 05/04/06-Hiralkumar Patel. received eamil from Levent. ---------- Kumar: Attached is the Remedial Action Work Plan (RAWP) along with a Site Specific Health and Safety Plan (HASP) for the above referenced property. We are looking to schedule this project for next week. Eastern Environmental Solutions, Inc., a NYFD certified environmental contractor, will be subcontractor for the excavation of the soils and/or removal of the UST (if discovered). Please confirm. Thanks Levent LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Environmental Engineering Consultants 45-09 Greenpoint Avenue Long Island City, New York 11103 ----------

abstract of RAP: - result of dye test confirmed that all 10 floor drains located at the site building, the onsite drywell (1) and two trench drains are interconnected and the final destination of these drains is the NYC municipal sewer located on 37th Ave. - geophysical survey didn't identiy the presence of any additional USTs or former septic system other than an anomaly that might be the former abandoned UST or former septic sywtem located at the site. - site soils consist of approx. nine ft of fill material containing brick, concrete, fly ahs, slag, fine silty sands, clay and fine gravels. native material, consisting of fine to medium sands with some silt, was observed at depths greateer than nine ft bg. - field evidence suggests that petroleum impacted soils occur at depths of approx. four ft bg to the water table, which was encountered between ten and twelve ft bg. - based on the field evidence and the laboratory data, AES concludes that the site has been impacted by petroleum related VOCs and SVOCs in the area where the anomaly identified during the former abandoned UST area. - petroleum impacted material indentified during the previous investigations will be excavated and removed from the site. based on the results of the Phase-II investigation approx. 30 to 50 cubic yards of material will require excavation and subsequent disposal. - once the required remediation activities completed at the site, AES will collect endpoint samples from the excavation. - three groundwater monitoring wells will be installed at selected locations on the site. - it is anticipated that two of the wells loctaion will be located in downgradient area of the release (along site boundry), one well will be located in a portion of the

COMMERCIAL BUILDING (Continued) **S107523279**

site upgradient of the former suspect UST or former cesspool area. - wells will be completed to an anticipated depth of 15 ft bg. - based on the outcome of the remediation activities at the site, minimum of two sets of groundwater samples will be collected from the monitoring well network. first set will be collected approx. one week following the completion of moniotring well installation efforts. the remaining set will be collected approx. 12 weeks from the date of initial sampling event. COMMUNITY AIR MONITORING PLAN - during the site excavation procedures, AES will perform monitoring of ambient air for VOCs and airborne particulates. - CAMP requires real time monitoring for VOCs and particulates (i.e. dust) at the downwind perimeter of each designated work area when certain activities are in progress at a contaminated site. - action level specified herein require increased monitoring, corrective actions to abate emissions, and/or work shut down. - real time air monitoring for VOCs and particulate levels will occur at the perimeter of the exclusion zone. continuous monitoring will be implemented for all ground intrusive activities. ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pitting or trenching, and the installation of soil borings or monitoring wells. - VOCs will be monitored at the downwind perimeter of the immediate work area. upwind concentrations will be measured at the start of each work day and periodically thereafter to establish background conditions. - if ambient air concentration of total VOCs at the downwind perimeter of the work area or exclusion zone exceeds 5 ppm above background for the 15-minute averate, work activities will be temporarily halted and monitoring continued. - if the VOC level is above 25 ppm at hte perimeter of the work area, activities will be shut down. - if the downwind PM-10 particulate level is 100 mcg/m3 greater than the background (upwind perimeter) for the 15 minute period of if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. - if, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater then 150 mcg/m3 above the upwind level, work will be stopped and a re-evaluation of activities initiated. spoke to Levent (Cell: 347-556-7787). they are planning to remove all contaminated material from site including suspected abandoned UST and any associated area. he will email me figure 2 of RAWP and phase-II investigation report. Received figure 2 in email. 05/08/06-Hiralkumar Patel. Received call from Levent and he was asking about written approval of proposed RAWP. send email with such approval. 06/21/06-Hiralkumar Patel. REceived email from Levent.

Gentlemen: Finally, we have received our groundwater sample results for the above referenced property. As the analytical results indicate, none of the groundwater samples collected from site contained volatile organic compounds above laboratory methods detection limits or NYSDEC TAGM groundwater cleanup criteria. In summary, we have excavated and disposed of a total of approximately 40 tons of petroleum impacted soil from the site. Confirmatory soil samples have already indicated that no compounds were detected above the NYSDEC TAGM Soil Cleanup Criteria. Following up the excavation, we have installed a total of three groundwater monitoring wells, where we the results are presented within attached report. Upon completion of Remedial Action Report (RAR) for the site, we will submitted it to Mr. Patel of NYCDEP requesting closure of the case number and No Further Action Required letter be issued for the Site.

COMMERCIAL BUILDING (Continued) **S107523279**

If you have any questions, please do not hesitate to contact me. LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Environmental Engineering Consultants 45-09 Greenpoint Avenue Long Island City, New York 11103 ---------- no contamination found in groundwater samples. i haven't received soil test results yet. send email to Levent to send soil data with site plan with sampling locations. 06/28/06-Hiralkumar Patel. Received email from Levent. ---------- Kumar: Attached is the Remedial Action Report (RAR) which summarizes soil excavation, remediation, groundwater sampling, laboratory analytical results, field logs and waste manifests for the above referenced property. The hard copy of the report with all attachments will follow via US Mail. In summary, as the RAR indicated, all petroleum impacted soils have been excavated and disposed of the Site and confirmatory soil and groundwater samples with no detected compounds above the NYSDEC TAGM or TOGS Soil and Groundwater quality Criteria. Consequently, AES requests that the NYSDEC Case Number 05-11360 be closed and a No Further Action Required letter be issued for the Site. If you have any questions, please do not hesitate to contact me. Regards LEVENT ESKICAKIT, P.G., E.P. Phone: 718-784-7490 Fax: 718-784-4085 Email: <mailto:leskicakit@athenica.com> leskicakit@athenica.com ATHENICA ENVIRONMENTAL SERVICES INC. Environmental Engineering Consultants 45-09 Greenpoint Avenue Long Island City, New York 11103 ---------- no contamination found in any endpoint sample from excavation pit. no contamination found in groundwater also. based on available information, case is closed. NFA letter sent out to Mr. Demetrois. faxed to Mr. Demetrois and to Levent.

Remarks: SOIL SAMPLES CAME BACK POSITIVE FOR PETROLEUM IMPACT

Record Added Date:	06/05/2018
Record Updated Date:	01/08/2024
Update By:	SMQUANDT
Site Description:	"Location: The site is located at 26-32 Jackson Avenue in the Long Island City neighborhood of Queens, NY. The site is bounded by Jackson Avenue followed by a vacant lot (BCP site no. C241209) to the north; a vacant lot followed by Dutch Kills Street to the east; a multi-story residential building and a vacant lot followed by mixed-use commercial and residential buildings to the south; and a mixed use commercial and residential building followed by Purves Street to the west. Site Features: The site is a square, 10,000 square foot (0.230 acre) lot. The entire site is currently (December 2022) undergoing foundation work for the redevelopment to consist of a site-wide, multi-story apartment building. Current Zoning and Land Use: The site is located in the Special Long Island City Mixed Use Paired District (M1-5/R9) and was most recently used as a construction field office and materials storage space. Adjoining parcels and surrounding area are used for commercial, residential and industrial purposes. Past Use of the Site: Historic operations at the site included a garage with petroleum bulk storage (circa 1922 to 1936), a warehouse (circa 1947 to 1994) and an automotive parts shop (1994 to 2006). Site Geology and Hydrogeology: The site is at an elevation of approximately 15 feet above mean sea level. The surrounding area slopes gradually to the south toward the Dutch Kills, which is located approximately 0.3 miles to the south. Historic fill is present up to approximately 2 to 7 feet below grade. The fill material is underlain by native soil generally consisting of medium-dense fine-grained silty sand with varying amounts of gravel and clay. Bedrock was not encountered during the remedial investigation but is anticipated to be present at a depth of 40 to 50 feet below grade. Groundwater was encountered from approximately 15 to 17 feet below grade and flows toward the north-northwest. Groundwater flow may be influenced by the sites proximity to the

26-32 JACKSON AVENUE (Continued) **S122449243**

	Metropolitan Transit Authority (MTA) subway tunnel beneath Jackson Avenue, which is actively being dewatered."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and lead in on-site soil. Volatile organic compounds were observed in on-site groundwater with no indication of a source in on-site soil and likely due to a documented off-site source. VOCs attributed to their presence in groundwater were present in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for residential use. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Updated By:	JHOCONNE

Site Description: "Location: The Site is located at 34-12 36th Avenue, Long Island City, NY in an urban area. It consists of a four-story public school building with a partial basement and a total floor area of approximately 40,000 square feet. The school occupies the first 3 floors and the owner occupies the top floor. Site Features: The Site is bounded by 36th Avenue to the north followed by two four-story residential buildings, 35th Street to the east followed by two-story commercial buildings, two-story commercial and residential properties to the south, and three- and four-story residential with first floor commercial spaces to the west. Current Zoning/Use(s): The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses. Historic Use(s): The Site was a commercial building occupied by various manufacturing and warehousing entities including a cosmetic manufacturing firm from at least 1934 to approximately 1967. The Site was renovated for use as a public school in 2002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during prior investigations generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater is at 18 to 21 feet bgs. The hydraulic gradient direction is towards the southwest. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites. The source of the contamination noted on-site was determined to be

FORMER LUFT CO. INC. COSMETICS MANUFACTURER (Continued) **U001831683**

from an upgradient property. See site no. C241149 for further updates."

Env Problem: "Nature and Extent of Contamination: The Supplemental Site Investigation (SSI) dated April 2012 indicated that the presence of tetra-chloroethylene (PCE) and its breakdown products at elevated concentrations in the underlying groundwater. The subsequent Addendum to the SSI performed in June 2012 revealed the presence of these chlorinated volatile organic compounds (CVOCs) at even higher concentrations in nearby upgradient locations. Soil - There were no volatile organic compounds detected in soil samples at concentrations at or above the Unrestricted Use Soil Cleanup Objectives (UUSCOs). Twelve of sixty-five semi-volatile organic compounds (SVOCs) were detected in one or more soil samples. However, none were detected above the UUSCOs. Seven of the eight metals analyzed for were detected, but only lead and silver were detected at concentrations exceeding the UUSCOs. These were attributed to the characteristics of the fill material. PCBs were not detected in any of the soil samples. Groundwater - On-site: Three VOCs, namely PCE (450 ppb), tri-chloroethylene (TCE-15 ppb), and cis-1,2-dichloroethylene (DCE-24 ppb)were detected in groundwater samples at levels exceeding groundwater standards. Off-site: PCE and one or more of its breakdown products were detected above Class GA Standards in all of the groundwater samples save one. The highest concentrations of these CVOCs were detected in samples from monitoring wells located directly in front of the dry cleaning concern at 35-45 35th Street (13,600 ppb) and at the intersection of 35th Street and 36th Avenue (5,500 ppb -50 feet southwest of the dry cleaning concern) northeast of and directly upgradient of the Site. Sub-slab soil vapor - Sixteen petroleum and chlorinated solvent related VOCs were detected in one or more of the four sub-slab soil vapor samples. Concentrations of 1,1-Dichloroethane (DCA), 1,2,4-Trimethylbenzene (TMB), 1,3,5-Trimethylbenzene, cis-1,2-Dichloroethene (DCE), PCE and TCE were detected at concentrations greater than the range of published background concentrations. PCE and TCE were detected at concentrations exceeding the NYSDOH Air Guideline Values (AGVs) in all four samples. Indoor Air - Fifteen petroleum and chlorinated solvent related VOCs were detected in at least one of the two indoor air samples. The concentrations of 1,2,4-TMB, 1,3,5-TMB and PCE exceeded the range of corresponding background indoor air concentrations. However, the concentration of PCE was below the corresponding NYSDOH AGV. A subsequent indoor air sampling event confirmed these findings. Outdoor Air - PCE was detected in the outdoor air sample at a concentration well below the concentrations found in indoor air and TCE was not detected in the outdoor air sample, indicating that the presence of these compounds in indoor air did not originate from ambient conditions. Significant Threat: The results of the SSI groundwater analysis revealed that PCE, TCE and cis-1,2-DCE were detected at concentrations above the NYSDEC groundwater standard on-site. The presence of these VOCs in groundwater did not appear to be attributable to an on-site source as there was no corresponding detections at high concentrations in soil samples. However, as the Addendum to the SSI revealed there are greater levels of CVOC contamination in nearby off-site upgradient locations and this is most likely the source of on-site CVOC contamination. CVOCs detected at elevated concentrations in sub-slab soil vapor and indoor air are attributable to the the contamination in groundwater. Comparisons of the sub-slab soil vapor concentrations

FORMER LUFT CO. INC. COSMETICS MANUFACTURER (Continued) **U001831683**

of PCE and TCE to indoor air concentrations indicate that the vapor intrusion pathway is complete and, as per the NYSDOH decision matrices, mitigation is the recommended action. Therefore, a Sub-Slab Depressurization System was installed and is operating to prevent soil vapor migration into the building."

Longitude:	-73.9456420
DEC Memo:	01/10/06: This spill transferred from J.Kolleeny to S.Kraszewski. Two 15K tanks, both failed a tank test in 1993 and both were closed in place in 1996. An ISRP from 1995 shows that 5 soil borings were taken and 2 MWs installed at this site. B-1,2,3 showed evidence of SVOC concentrations above HHGVs and soil guidance values. B-1,2,3,4 detected VOCs, as many as 13 different compounds. MW-1 had a sheen but no volatiles of semi-volatiles were detected. DEC suggested among other options, to close the tanks which was done by NYCHA as a condition for approval of the ISRP. Close monitoring of the GW to detected movement of contaminants was proposed and agreed upon. Lab results from 2 soil samples taken in 1997 were performed to legally abandon these two tanks. These anlysis methods did not meet EPA methods 8270 and 8021 as recommended in SPOTS Memo #14 for Site Assessments. A letter dated May 1, 1997 from Jane Healy noted this discrepancy but she mentioned that in light of the previous site investigation (ISRP) by SBE/H2M additional SOIL samples were not required. However, the ISRP stipulated that the GW would be monitored through the 2 existing MWs and no records of monitoring activity are on file. DEC approved a remedial design plan dated April 1997 to address the seepage of free product in to the boiler room. No technical draft plans of this proposed remediation are on file, so it is not clear what activiy has taken place. Need: GW monitoring results and documentation of any remedial activity. - SK 03/14/06: This spill reassigned to K.Tang. - SK 09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 12/27/11: J.Kann - visited site on June 2, 2011. Report submitted to DEC on 8/30/11. Reviewed report and discussed with Linda Ross on December 19. Minor SVOCs detected in soils below CP-51. Comments sent in an email dated December 23. Additional information needed to clarify the PBS record for the site. 5/29/12: J.Kann - revised report received in april 2011 and briefly

QUEENSBRIDGE PLANT D -NYCHA (Continued) **S101103122**

reviewed. Additional information necessary. site assigned P3, because no major concerns. 8/7/13: J.Kann - visited site on July 31. confirmed that new boilers were installed. No seepage on boiler room walls. Based on the review of all information submitted to the Department, historic and current, the spill has been closed. This is based on the following: -The September 1995 SBE ISRP indicated an area around B-2 which contained saturated soils . This contamination was likely No. 6 fuel oil. Groundwater samples analyzed were not impacted (STARS SVOCs and VOCs). At that time 5 borings were advanced and 3 monitoring wells installed. USTs at this site were subsequently closed in place. (Plant B feeds the boiler at Plant D) - As a part of boiler upgrade work in 2010, soils in the area around B-2 were excavated to allow for the installation of new boilers in the basement of Plant D. - No endpoints were taken as a part of boiler replacement, however, Boring B-7 was advanced by ALC in the vicinity of B-2 in 2011. The B-7 boring log did not show any indications of oil impacts and the soil sample collected did not exceed CP-51 soil guidance values. -The ALC report included the advancement of 6 soil borings and the collection of one groundwater sample. All samples met CP-51 and TOGS 1.1.1 criteria with the exception of methylene chloride which was likely a lab derivative. -Site currently operates on firm gas. -NFA

DEC Memo:	05/22/09 CSL was sent to Getty Petroleum Marketing 1500 Hempstead Turnpike East Meadow, NY 11554 Attn: Scott Hanley 08/31/09- Tyree sent the Subsurface Investigation Report dated June/22/09. The report stated that the piping and the four(4) product dispensers were removed in May 2009. The USTs has been drain of all fuel and are scheduled to be abondoned. On May 22,2009 the subsurface investigation activities were initiated , Based upon recent analytical datas it appears that the source of the soil and groundwater contamination is located in the area of the USTs and pump

GETTY S/S #344 - GETTY PROPERTIES (Continued) **S104278677**

island. A total of seven (7)soil/groundwater borings were installed as part of the investigation.
Soil samples were collested from ground surface to depths ranging from thirty-five(35) feet to
forty (40) feet below grade. Groundwater was encountered at (27) feet below grade. The analytical
results for soil samples indicate No VOCs exceeding the RSCOs. Some SVOC'S were slighly exceding
the RSCOs for the samples ND-W, ND-E, WD-N, WD-S and B-TFE(13-14 ft). The analytical results for
grounswater indicate Methyl-tert Butyl Ether and Benzene slighly exceeding the RSCOs. SVOC s are
not exceding the RSCOs. As per Scott Hanley Getty Marketing (516) 542-5023 and Kevin Shean Getty
Realty Corporation (516) 478-5400 there is no plan for developing the site until 20015. The site is
going to be used for vehicle repair inside and for storage of vehicle outside. Getty Marketing
leased the property. Getty Realty Corporation owns the property. Spill Closed

Remarks: CALLER STATES THAT THEY GOT TEST RESULTS BACK FROM A PHASE 2 SHOWING SOIL CONTAMINATION CLEAN UP IS PENDING.

DEC Memo:	Tyree Closure letter dated 7/8/2008 states: The above noted site utilizes one 4,000 gallon premium grade gasoline underground storage tank (UST), one 4,000 gallon regular grade gasoline UST and one 4,000 gallon diesel fuel UST. On April 10, 2008 WCC Tank Technology, Inc. performed an inspection of the interior tank lining for all three USTs. The results of the inspection revealed that the tanks failed on the visual inspection and the tank lining thickness. The tanks did pass on the tank metal thickness. It should also be noted that the three tanks were tightness tested and all passed, as such there was no release to the environment. A copy of the tank inspection report is included with this report. The NYSDEC was immediately notified and spill No. 08-00383 was assigned to the site. The three tanks were re-lined subsequent to the initial inspection. On June 20, 2008 the three tanks and the associated piping system were tightness tested. The results of the tightness test indicated that all of the tanks and the associated piping passed. A copy of the tightness testing report is included with this report. Based on this information, the DEC is closing this spill case.
Remarks:	LINE TEST FAILED

J00 - Dispenser - None
B00 - Tank External Protection - None
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
C02 - Pipe Location - Underground/On-ground
G00 - Tank Secondary Containment - None
A00 - Tank Internal Protection - None
H00 - Tank Leak Detection - None
I00 - Overfill - None

Tank Number: 022
Tank ID: 59230
Tank Status: Closed - Removed
Material Name: Closed - Removed
Capacity Gallons: 550
Install Date: Not reported
Date Tank Closed: 11/01/2000
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0009
Common Name of Substance: Gasoline

Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Pipe Model: Not reported
