CERTIFICATION

I, Hilmi U. Aydin, certify that I am currently a Qualified Environmental Professional as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Work Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10) and Green Remediation (DER-31).

Hilmi U. Aydin, P.E., QEP
Principal Engineer

1.0 INTRODUCTION

This Remedial Investigation Work Plan (RIWP) was prepared on behalf of 403739 Holding LLC (the Applicant) for the 39-36 28th Street Site located at 39-36 28th Street in the Long Island City section of Queens County, New York (the Site). The Applicant is enrolled in the New York State Brownfield Cleanup Program (BCP). A Brownfield Cleanup Agreement (BCA) was executed by the Applicant on August 1, 2025 (Site No. C241293), with the Applicant classified as a Volunteer. The BCA is pending final execution by the New York State Department of Environmental Conservation (NYSDEC) as of the date of this RIWP.

The purpose of this RIWP is to investigate the Site to characterize the nature and extent of contamination associated with historic operations at the Site, as well as identify the source area for chlorinated solvent contamination. The overall objectives of this project are to remediate and prepare the Site for its proposed residential use. This RIWP was prepared in accordance with the regulations and guidance applicable to the BCP, DER-10 Technical Guidance for Site Investigation and Remediation dated May 2010, DER-31 Technical Guidance for Green Remediation, and the New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York, with revisions (October 2006).

2.0 SITE BACKGROUND

2.1 Site Location and Description

The Site, addressed as 39-36 28th Street, is located on the western side of 28th Street, between 39th Avenue to the north and 40th Avenue to the south, in Queens County, New York. The Site consists of one tax lot, approximately 5,475 square feet. The legal description of the Subject Property is New York City Department of Finance Tax Block 397 and Lot 31.

A Site location map is provided in Figure 1.

According to the New York City Department of Finance's Automated City Register Information System (ACRIS), the ownership is vested in 403739 Holding LLC since March 12, 2025.

The Site is currently improved with a three-story multifamily residence with a basement (approximately 3,120 square feet) and two 1-story detached garages (approximately 500 and 700 square feet). The residence occupies the northeast portion of the Site, and the garages occupy the southwest and south-central portions of the property. The garages are accessible via a concrete-paved driveway that runs along the south side of the residence, leading from 28th Street. The area between garages is also concrete-paved. The remainder of the Site consists of lawn/landscaped yard areas. No floor drains were observed within the residential building or the two garages. The three structures at the Site will be demolished prior to the implementation of this RIWP. The structures at the Site are currently not occupied.

A site plan is provided in Figure 2.

The Site is located within a mixed residential, commercial, industrial, and manufacturing neighborhood of Queens County. The Site is zoned M1-2/R5B and Special Long Island City Mixed Use. M1-2 is a district with multi-story lofts and one- or two-story warehouses characterized by loading bays and includes light industrial uses. Offices, hotels, and most retail uses are also permitted. Community facilities are allowed by special permit. Residential district R5B is a contextual district that allows detached and semidetached buildings with 3-story rowhouses and reflects the district's height and setback, front yard and curb cut regulations within a variety of housing at a higher density, producing 3- to 4-story attached houses and small apartment houses with a height limit of 40 feet.

2.2 Surrounding Property Land Use

North	One three-story residential building (39-34 28th Street), followed by multi-family and single-family residences
South	One six-story residential apartment building (27-09 40th Avenue), followed by 40th Avenue, with a commercial/retail building beyond
West	One two-story family residence (39-39 27th Street) and a 9-story hotel building (39-35 27th Street), followed by 27th Street, with a church beyond
East	28th Avenue, followed by the Growing up Green Charter School (39-42 40th Street), with St. Patrick's Church to the southeast

The Site is bound to the north by a three-story residential building (39-34 28th Street), followed by multi-family and single family residences; to the south by a six-story residential apartment building (27-09 40th Avenue), followed by 40th Avenue, with a commercial/retail building beyond; to the east by 28th Avenue, followed by the Growing up Green Charter School (39-42 40th Street), with St. Patrick's Church to the southeast; and to the west by a two-story family residence (39-39 27th Street) and a 9-story hotel building (39-35 27th Street), followed by 27th Street, with a church beyond.

The nearest ecological receptor is the Newtown Creek located approximately 0.7 miles southwest of the Site. Other sensitive receptors, as defined in DER-10, within a half mile of the Site include the following:

1. The New York Foundling Hospital at 33-00 Northern Boulevard
2. Citiview Connection at 33-24 Northern Boulevard
3. Living Positive- Queens at 34-18 Northern Boulevard
4. New York Counseling for Change Clinic at 30-46 Northern Boulevard
5. Queens Children Mobile Crisis team at 30-30 Northern Boulevard
6. Fortune Society OP at 29-76 Northern Boulevard
7. GED Restart- Adolescent Skills II School at 29-46 Northern Boulevard
8. Playhouse NYC Inc-Day Care and Pre-K at 29-22 Northern Boulevard
9. Consumer Officer Health Care at 42-09 28th Street
10. Transition Management Services at 42-09 28th Street CN #48
11. Atlas at 28-01 41st Avenue
12. Academy of American Studies at 40-11 28th Street
13. Growing Up Green Charter School at 39-27 28th Street
14. Windmill Community Garden at 39-22 29th Street

15. Our World Neighborhood MS at 38-27 30th Street
16. Evangel Christian School at 39-21 Crescent Street
17. SCO Family of Services at 38-11 27th Street
18. United Wire Metal and Machine Medical Center at 24-09 38th Avenue
19. P.S. 112 Dutch Kills at 25-05 37th Avenue
20. Dutch Kills Playground at 36-11 28th Street
21. I.S. 204 Oliver W. Holmes at 36-41 28th Street
22. All Children's Child Care at 35-01 24th Street
23. P.S. 111 Hacon Blackwell at 37-15 13th Street

Surrounding property use, including residences located within a half mile of the Site, are shown in Figure 3.

2.3 Site Topography, Geology, and Hydrogeology

According to the United States Geological Survey (USGS) Topographic Quadrangle for "*Central Park, New York"* dated 2019, the subject property is located at approximately 39 feet above mean sea level (MSL). The contour lines in the subject property area indicate the area is relatively flat, sloping gently toward the northwest.

Based on a subsurface investigation conducted at the Site by Brussee Environmental, Corp. (BEC) in January 2025, historic fill material consisting of brick and concrete was encountered down to 2 feet below grade surface, underlain by coarse dark brown sand with gravel. Bedrock was not encountered during the investigation. According to the same report, the depth to water is approximately 37-38 feet below grade surface (bgs) with an anticipated groundwater flow to the west.

Groundwater flow direction may be impacted by several factors, including surface topography, hydrology, hydrogeology, characteristics of soil, and nearby wells. According to topographic map interpretation, the inferred groundwater flow direction in the vicinity of the Site is southwest towards Newtown Creek, located approximately 0.7 miles to the southwest of the Site.

2.4 Site History

Based on the available records, the Site appeared to be developed with at least one structure by 1897. The earliest available Sanborn map dated 1898 depicts the Site as two adjacent tax lots (Lots 31 and 32). The northern lot (Lot 31) was developed with a 3-story dwelling occupying the eastern half of the tax parcel. The southern lot (Lot 32) was undeveloped. Sometime between 1915 and 1936, the two tax lots were merged into one lot, and appears to have been developed as the current layout including the two 1-story garages in the southwest and south-central portions of the Site. The Site remains unchanged until Present.

Available city directory listings included private residents from 1934 through 2020. A possible source of contamination is not identified during the review of past uses of the Site.

2.5 Summary of Previous Investigations

The previous investigations performed at the Site include the following:

Phase I Environmental Site Assessment, by Brussee Environmental Corp., September 2024

- BEC conducted a Phase I Environmental Site Assessment (ESA) on behalf of 403739 Holding LLC in accordance with ASTM E1527-13.
- At the time of the site reconnaissance on September 12, 2024, the Site consisted of one tax parcel that is approximately 5,475-square feet in area and was developed with a three-story multi-family residence, with a basement, and two 1-story detached garages. The residence occupies the northeastern portion of the property that fronts 28th Street. The garages, consisting of a 3-car storage capacity and a 4-car storage capacity, occupy the southwestern portions of the property and are accessible via a concrete-paved driveway from 28th Street, which runs along the south side of the residence. The first and second floor apartments were occupied by residential tenants, while the third-floor unit was vacant.
- The following Recognized Environmental Conditions (RECs) were identified during the Phase I:
    - Information obtained from the regulatory agency database and the New York State Department of Environmental Conservation (NYSDEC) revealed that the southern adjacent property (29-07 40th Avenue) was listed on the Inactive Hazardous Waste Site (SHWS) and Brownfield Cleanup Program (BCP), as well as several other State and local databases. Investigations conducted at this property since 2008 revealed the presence of chlorinated volatile organic compounds (CVOCs) and metals impacted soil. Groundwater and soil vapor were also significantly impacted with CVOCs. A groundwater monitoring well, and a soil vapor sampling point associated with this site were observed in the sidewalk adjacent to the east of the subject property. A review of sampling data from these wells obtained from the NYSDEC (2020) revealed elevated CVOC concentrations in both soil vapor and groundwater samples. The documented presence of soil vapor and groundwater impacts adjacent to the subject property and the potential soil vapor intrusion risk is considered a REC.
- The following environmental concerns/Business Environmental Risks (BERs) were identified during the Phase I ESA:
    - The subject property was listed on the E-Designation database as having an E-HazMat restriction (E-218), which was determined during the Dutch Kills

Rezoning and Related Actions completed by the City in October 2008 (CEQR 08DCP021Q). The HazMat E-designation requires the issuance of a Notice to Proceed by the New York City Office of Environmental Remediation (NYCOER) before the property can be redeveloped. The presence of the E-Designation is considered a BER.

- Fluorescent light ballasts were observed within some of the inspected portions of the residence, which based on the age of the building, may contain polychlorinated biphenyls (PCBs). BEC recommended that a PCB survey be performed prior to demolition and/or renovation activities.
- Interior paint was generally in good to fair condition, with some areas of chipping or peeling within the basement of the residence. The garage interiors, where painted, fair to poor condition with areas of chipping, peeling and well-worn paint. The building exteriors (residence and garages) were finished with unpainted vinyl siding. The lead content of the paints is unknown; however, given the ages of the buildings, the presence of lead-based paint (LBP) is possible. Since the site improvements are used for residential purposes, lead-based paint is considered an environmental concern. Therefore, BEC recommended that a lead paint survey be conducted prior to any renovation/demolition activities.
- Suspect asbestos-containing acoustic ceiling tile, pipe insulation, and sheetrock/plaster were observed within the residence. The suspect asbestos-containing materials (ACMs) were in good condition at the time of the site inspection. In addition, due to the age of the buildings, it is possible that roofing, roof flashing, and other (inaccessible) building materials may contain asbestos.

Subsurface Investigation Report, by Brussee Environmental Corp., March 14, 2025

- A subsurface investigation was conducted by BEC in January 2025 to address the E-Designation requirements for hazardous materials, and the findings of their assessment were provided to the Office of Environmental Remediation (OER). The 2025 investigation consisted of installation of six soil borings, and collection of twelve (12) soil samples, installation of three temporary monitoring wells and collection of two groundwater samples, and installation of five soil vapor points and collection of five soil vapor samples.
- Soil samples were analyzed for Part 375 Total Compound List (TCL) volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, and Total Analyte List (TAL) metals. One deep soil sample was analyzed for PFAS and 1,4-dioxane. Groundwater samples were analyzed for Part 375 TCL VOCs and SVOCs. Soil vapor samples were analyzed for VOCs via

United States Environmental Protection Agency (USEPA) Method TO-15. The following provides a summary of the findings:

- No visual or olfactory evidence of contamination was encountered within the soil borings performed across the Site.
- Soil sample results were compared to the NYSDEC Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Restricted Use Restricted Residential Soil Cleanup Objectives (RRSCOs) by Vektor due to the Site's anticipated residential use. Additionally, because tetrachloroethene was identified both in soil and groundwater samples, its respective Protection of Groundwater SCO (PGWSCO), which is the same as its UUSCO, was also considered. One heavy metal, arsenic, was detected in one soil sample at a concentration above its respective Part 375 Restricted Residential Use SCO.
    - No VOCs were detected above the RRSCOs in the soil samples collected from the Site.
    - SVOCs, consisting of polycyclic hydrocarbons (PAHs), were detected in all six soil samples. Of these, benzo(a)anthracene (max. of 8.2 parts per million [ppm]) marginally exceeded its respective RRSCO of 1 ppm in two soil samples, benzo(a)pyrene (max. of 6.9 ppm) marginally exceeded its respective RRSCO of 1 ppm in three soil samples, benzo(b)fluoranthene (max. of 6.4 ppm) marginally exceeded its respective RRSCO of 1 ppm in two soil samples, benzo(k)fluoranthene (max. of 5.7 ppm) slightly exceeded its respective RRSCO of 3.9 ppm in one soil sample, chrysene (max. of 7.4 ppm) slightly exceeded its respective RRSCO of 3.9 ppm in one soil sample, dibenzo(a,h)anthracene (max. of 2.1 ppm) marginally exceeded its respective RRSCO of 0.33 ppm in one soil sample, and indeno(1,2,3-cd)pyrene (max. of 3.9 ppm) slightly exceeded its respective RRSCO of 0.5 ppm in three soil samples.
    - Heavy metals, lead and mercury, were detected in several shallow soil samples collected from the Site. Lead (max. of 624 ppm) exceeded its respective RRSCO of 400 ppm in three shallow soil samples. Mercury (max. of 4.74) exceeded its respective RRSCO of 0.81 ppm in three shallow soil samples.
    - No pesticides were detected above the RRSCOs in the soil samples collected from the Site.
    - No PCBs were detected above the RRSCOs in the soil samples collected from the Site.
    - No PFAS compounds were detected above the RRSCOs in the soil samples collected from the Site.

- Groundwater sample results were compared to the NYSDEC 6NYCRR Part 703.5 Class GA Ambient Water Quality Standard (AWQS).
    - VOCs, acetone (max. of 82 parts per billion [ppb]), chloroform (max. of 9.9 ppb), chloromethane (max. of 8.1 ppb), and tetrachloroethene (PCE) (max. of 18 ppb) exceeded their respective AWQS.
    - SVOCs, benzo(a)anthracene (max. of 0.07 ppb), benzo(b)fluoranthene (max. of 0.05 ppb), benzo(k)fluoranthene (max. of 0.04 ppb), chrysene (max. of 0.09 ppb), nitrobenzene (max. of 0.41 ppb), and phenol (max. of 7.6 ppb) exceeded their respective AWQs.
- Soil vapor results showed presence of petroleum-related and chlorinated VOCs.
    - BTEX concentrations ranging from 0.0 in SV1, SV2 and SV3 to 6.29 micrograms per cubic meter (µg/m^3) in SV4.
    - The chlorinated VOCs trichloroethene (max. of 53.7 µg/m^3 in SV2) and tetrachloroethene (max. of 4,110 µg/m^3 in SV2), were detected within the soil vapor samples.
    - The petroleum related VOCs xylene (m&p) (max of 6.12 µg/m^3 in SV5), and toluene (max of 6.29 µg/m^3 in SV4) were detected in soil vapor samples.
- Based on the results of the Phase II Environmental Site Assessment, impacts to groundwater and soil vapor beneath the Subject Property are identified. Vektor recommended reporting the results to the NYSDEC and remediating the Subject Property under one of their available programs.

Copies of the previous reports are provided as Appendix A. Spider maps showing soil and groundwater exceedances, and soil vapor chemistry concentrations are provided in Figures 4, 5, and 6, respectively. Previous investigation results will be validated and included in the RIR.

2.5.1 Areas of Concern

Based on the prior investigation results, the areas of concern (AOC) for the Site are identified as the following:

- <u>AOC 1: Chlorinated VOCs Impacts in Soil, Groundwater, and Soil Vapor</u>

Trace concentrations of chlorinated VOC (CVOC), PCE, were identified in shallow soil in the central south portion of the Site and beneath the existing cellar located in the eastern portion of the Site.

CVOCs, chloroform, chloromethane, and PCE, were identified in the groundwater above their respective AWQS. Although only two monitoring wells were viable at the time of sampling,

there appears to be groundwater contamination across the Site since MW-1 was located in the southern portion and MW-2 was located in the central north portion.

Elevated concentrations of PCE and low concentrations of its breakdown product, TCE, were also identified in all soil vapor across the Site. Furthermore, chloroform and chloromethane identified in the groundwater were also identified in soil vapor beneath the Site.

Based on the aforementioned findings, it appears that a source for CVOCs is likely present at the Site.

- AOC-2: Historic Fill

SVOCs (benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene) was identified in the western half of the Site; and heavy metal contamination of lead and mercury, appears to be widespread throughout the Site in the shallow soil.

The same SVOCs (benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, nitrobenzene, and phenol) were identified above their respective AWQS in the groundwater.

The presence of PAHs and metals appear to be associated with presence of historic fill at the Site.

3.0 REMEDIAL INVESTIGATION

A Remedial Investigation (RI) proposed herein will supplement the prior assessments to characterize the nature and extent of contamination at the Site. The supplemental data will be analyzed to characterize the nature and extent of contamination at the Site and to evaluate remedial action alternatives.

The remedial investigation will consist of the following scope of work:

- Geophysical survey to locate unidentified underground storage tanks (USTs) and identify utilities in the vicinity of the proposed boring locations,
- Installation of seven soil borings to 15 feet below sidewalk grade, or refusal across the Site, and collection of 14 soil samples and additional quality assurance /quality control (QA/QC) samples,
- Installation of five monitoring wells and collection of five groundwater samples and additional QA/QC samples,
- Installation of three soil vapor points and collection of three soil vapor samples, one duplicate soil vapor sample, and one ambient air sample as the QA/QC samples.

Table 1 provides a summary of the sampling protocol and rationale. Figure 7 shows the proposed locations for soil samples.

If modifications to the scope of work are required due to site conditions, the NYSDEC and NYSDOH project managers will be notified. The RI is planned to be performed after the completion of demolition activities, providing complete access sitewide. All deviations will be reported in the Remedial Investigation Report (RIR).

3.1 Geophysical Survey

A Ground Penetrating Radar (GPR) Survey will be conducted by a licensed geophysical surveyor to determine the locations of any potential USTs at the Site and to clear out the boring locations prior to drilling. A grid of north-south traverses will be established across the Site at five-foot intervals. The data will be processed on-site and used to create a contour map.

3.2 Soil Investigation

Seven soil borings (25SB-1 through 25SB-7) will be advanced to delineate the impacts to shallow soils across the Site. A direct push drill-rig (Geoprobe®) operated by a licensed driller subcontractor will be utilized for the installation of soil borings at the Site. 25SB-1 through 25SB-5 will be advanced continuously to 38 feet below sidewalk grade to screen soil until the groundwater interface, and 25B-6 and 25SB-7 will be installed to 15 feet bgs for

vertical delineation of shallow soils. However, if evidence of contamination is observed at 38 feet below the sidewalk grade or the water table interface, the boring shall be completed until no evidence of contamination is observed.

Soil samples will be retrieved using a 1.5-inch diameter, 5-foot-long core sampler with disposable acetate liners. A Geologist will be on Site to log the soils, visually characterize them, and field screen them with a photoionization detector (PID) for the presence of petroleum contamination.

From each of the seven boring locations, a minimum of two soil samples (a total of 14 samples) will be collected for laboratory analysis. At these borings, one soil sample will be collected from the fill layer at 0 to 2 feet bgs and one sample below the historic fill layer at 3 to 5 feet bgs, since the prior deeper soil samples collected from 13 to 15 feet interval did not show evidence of contamination. Samples from 8 to 10 feet and 10 to 12 feet will be kept on hold to be activated if needed to determine the vertical extent of potential contamination below 5 feet.

If evidence of contamination is observed at 38 feet below the sidewalk grade or the water table interface, the boring shall be completed until no evidence of contamination is observed. Additional samples will be collected, as needed, from any interval within the advanced borings that are observed to exhibit evidence of contamination (i.e., staining, odors, elevated PID readings).

Representative soil samples will immediately be containerized in pre-cleaned laboratory-supplied glassware, stored in a chilled cooler (4 °C), and submitted to a New York State Department of Health-certified laboratory.

The soil samples will be analyzed for:

- Target Compound List (TCL) volatile organic compounds (VOCs) via Environmental Protection Agency (EPA) Method 8260C/5035
- TCL semi-volatile organic compounds (SVOCs) via EPA Method 8270D
- Total analyte list (TAL) metals via EPA Method 6010D
- Polychlorinated biphenyls (PCBs) via EPA Method 8082A
- TLC pesticides via EPA Method 8081B
- NYSDEC list per and polyfluoroalkyl substances (PFAS) (40 compounds) via EPA Method 1633
- 1,4-dioxane via EPA Method 8270 SIM.

Minimum laboratory reporting limits for the proposed analysis above, compared to guidance levels, are provided in Table 2.

3.3 Groundwater Investigation

Five 2-inch permanent groundwater monitoring wells, 25MW-1 through 25MW-5, will be installed to delineate the groundwater contamination beneath the Site utilizing a direct push drill rig. Based on the prior investigation, the groundwater beneath the Site is approximately 37-38 feet below grade.

The proposed monitoring wells will be constructed of 2-inch diameter PVC casing and 0.010-inch slotted PVC well screen or 2-inch pre-packed wells due to the silt identified in soils during the prior sampling. 25MW-1, and 25MW-3 through 25MW-5 will be installed at 43 feet below grade, and the 10-foot screen will be set 5 feet above and 5 feet below the groundwater between 33 and 43 feet (depending on the actual groundwater table). 25MW-2 will be installed at 55 feet and screened between 45 and 55 feet for vertical delineation. Morrie No. 1 or equivalent clean sand will be used to fill the annular gap around the screen and above the top of the screened interval. A bentonite seal will be installed above the sand, and the remainder of the borehole will be backfilled to grade with clean sand. The monitoring wells will have stick-up risers above grade for visibility.

Monitoring wells will then be developed by surging a pump, bailer, or surge block inside the wells. The method will be repeated until sediment-free water is produced, or water turbidity is 50 nephelometric turbidity units (NTU) or less.

All monitoring wells will be surveyed by a New York State licensed surveyor in order to determine the actual direction of groundwater beneath the Site.

Approximately one week after well development, one groundwater sample will be collected from each of the monitoring wells (a total of five groundwater samples). Prior to sampling, each monitoring well will be gauged and purged until groundwater quality parameters such as temperature, dissolved oxygen, oxidation-reduction potential, pH, and turbidity stabilize. Samples will then be collected using a submersible pump and dedicated tubing in accordance with low-flow sampling procedures. The pump will be decontaminated with Alconox® and water between each monitoring well. Groundwater samples will be containerized in pre-cleaned laboratory-supplied glassware, stored in a chilled cooler (4 °C), and submitted to a New York State Department of Health-certified laboratory.

The groundwater samples will be analyzed for:

- Target Compound List (TCL) volatile organic compounds (VOCs) via Environmental Protection Agency (EPA) Method 8260C
- TCL semi-volatile organic compounds (SVOCs) via EPA Method 8270D

- Total analyte list (TAL) metals (filtered and unfiltered) via EPA Method 6010D/7471
- Polychlorinated biphenyls (PCBs) via EPA Method 8082A
- TLC pesticides via EPA Method 8081B
- NYSDEC list per and polyfluoroalkyl substances (PFAS) (40 compounds) via EPA Method 1633
- 1,4-dioxane via EPA Method 8270D SIM.

3.4 Soil Vapor Investigation

Three soil vapor points (25SV-1 through 25SV-3) will be installed using the same direct-push drill rig mentioned above. Soil vapor points will be installed and sampled in accordance with the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006). Soil vapor points will be installed at approximately 20 feet below grade surface. If groundwater is encountered during the RI, soil vapor points will be installed 2 feet above the water table. Sample points will be constructed of a dedicated stainless-steel screen fitted with ¼-inch outer diameter inert polyethylene, Teflon-lined tubing, which will be extended above the ground surface to allow for purging and sampling. The points will be backfilled using glass beads, followed by environmental grade silica sand, and topped with a bentonite layer to seal the tubing in the hole.

Prior to testing, a tracer gas will be used in accordance with NYSDOH protocols to serve as a quality assurance/quality control (QA/QC) technique to verify the integrity of the soil vapor point seal. The integrity of vapor points will be tested by placing a plastic shroud over the vapor points to isolate them from ambient air. Then, a helium tracer gas will be applied to the shroud and will be screened utilizing a helium detector for the presence of helium. If no helium is detected in any of the vapor points, then sampling will occur. If helium is detected, then the points will be resealed properly prior to sampling.

After purging approximately three volumes of air from each vapor point at a flow rate less than 200 milliliters per minute, representative samples will be collected for laboratory analysis utilizing 6-liter SUMMA canisters fitted with 8-hour flow controllers set not to exceed 0.2 liters per minute, as established by the NYSDOH Guidance document. Upon completion of the vapor sampling, all canisters will be labeled properly with the sample ID numbers, and vacuum pressure readings in the canisters before and after the sample collection. The vapor samples will then be submitted to a NYSDOH ELAP-certified laboratory under proper chain of custody procedures to be analyzed for VOCs by EPA Method TO-15.

The QA/QC sample for soil vapor will include one blind duplicate sample from one of the five installed soil vapor points. The sample will be determined by Site logistics. One ambient air sample will be collected at a breathing height as a background sample. The outdoor air

sample will be collected over an 8-hour sampling period concurrently with the soil vapor samples and analyzed for VOCs via EPA Method TO-15.

All soil vapor and ambient air sample analytical results will be reported in micrograms per cubic meter (ug/m^3).

3.4 Management of Investigation Derived Waste

As per the DER-10, soil cuttings from a depth below the fill layer and other soil generated on-site during remedial investigation will be returned to the borehole, unless:

- Free product, NAPL, or grossly contaminated soil, are present in the cuttings,
- The boreholes will be used for installation of a monitoring well,
- The borehole has an aquitard, or other confining layer,
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminant
- Soil cannot fit into the borehole

Those soil cuttings needing to be managed on-site will be containerized in properly labeled Department of Transportation (DOT) approved 55-gallon drums for future off-site disposal at a permitted facility. All boreholes which require soil cuttings disposal would ultimately be filled with hydrated bentonite chips and asphalt/concrete capping.

Groundwater purged from the monitoring wells during development and sampling will be placed into DOT approved 55-gallon drums for future off-site disposal.

4.0 STANDARDS, CRITERIA, AND GUIDANCE (SCGS)

The results of the soil samples will be compared to 6 NYCRR Part 375 Unrestricted Use SCOs and Restricted Residential Use SCOs based on the reasonably anticipated residential use of the Site.

The results of the groundwater samples will be compared to the NYSDEC Class GA Ambient Water Quality Standards (AWQS), or Guidance Values (GVs) as specified in the Technical Operation and Guidance Series (TOGS 1.1.1) Ambient Water Quality Standards and Guidance Values, and Guidance Values published in "Sampling, Analysis and Assessment of PFAS under NYSDEC's Part 375 Remedial Programs".

Soil vapor results will be evaluated to determine the type and concentration of VOCs present and whether engineering controls are required to prevent future exposure of these chemicals to the new building's occupants.

5.0 QUALITY CONTROL/QUALITY ASSURANCE (QA/QC)

The accuracy, precision, and completeness of the samples will be addressed by the certified laboratory for all data generated. The QA/QC samples for soil and groundwater will include one matrix spike/matrix spike duplicate (MS/MSD), and one blind duplicate sample at a frequency of at least one sample per 20 field samples per media. One trip blank per cooler and one field blank per day per matrix collected will also be included. The field blank, blind duplicate, and MS/MSD samples will be analyzed for:

- TCL VOCs EPA Method 8260C/5035
- TCL SVOCs via EPA Method 8270D
- TAL metals via EPA Method 6010D
- PCBs via EPA Method 8082A
- TLC pesticides via EPA Method 8081B
- NYSDEC list PFAS via EPA Method 1633
- 1,4-dioxane via EPA Method 8270 SIM.

Laboratory-prepared trip blanks will be submitted for analysis of VOCs via EPA Method 8260.

The QA/QC sample for soil vapor will include one blind duplicate sample from one of the five installed soil vapor points. The sample will be determined by Site logistics. For soil vapor sampling, a tracer gas will be used prior to testing of each location in accordance with NYSDOH protocols to serve as a QA/QC technique to verify the integrity of each soil vapor point seal. The integrity of the soil vapor points will be tested by placing a plastic shroud over the vapor points to isolate them from ambient air. Then, a helium tracer gas will be applied into the shroud and will be screened utilizing a helium detector for presence of helium. If no helium is detected at any of the vapor points, then sampling will occur. If helium is detected, then the points will be resealed properly prior to sampling. One ambient air sample will be collected at a breathing height as a background QA/QC sample. The outdoor air sample will be collected over an 8-hour period concurrently with the soil vapor samples and will be analyzed for VOCs via EPA Method TO-15.

Table 1 provides a sampling matrix with estimated QA/QC samples. A Quality Assurance Project Plan that describes how QA/QC procedures will be implemented during the RI is provided as Appendix B.

5.1 Data Submittal

Analytical results will be provided by a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory. Data will be

supplied in Analytical Services Protocol (ASP) Category B Data Packages, and all results will be provided in accordance with the NYSDEC Environmental Information Management System (EIMS) electronic data deliverable (EDD) format (EQuIS).

5.2 Data Validation

Data validation will be performed in accordance with the EPA validation guidelines for organic and inorganic data review. A Data Usability Summary Report (DUSR) will be prepared by a third-party contractor upon receipt of the analytical laboratory reports. The DUSR will present the results of the data validation, including a summary assessment of laboratory data packages, sample preservation and chain of custody procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness of each analytical method.

6.0 HEALTH AND SAFETY PLAN (HASP)

A site-specific Health and Safety Plan (HASP) is prepared for this project. All field personnel involved in investigation activities will participate in training required under 29 CFR 1910.120, such as 40-hour hazardous waste operator training and annual 8-hour refresher training. Site Safety Officer will be responsible for maintaining workers training records. The Site Safety Coordinator will be Dominick Basilone. An emergency contact sheet is included in the site-specific HASP.

All investigative work performed under this RIWP will comply with all applicable health and safety laws and regulations, including OSHA worker safety requirements and HAZWOPER requirements. Site-specific training will be provided to field personnel. Additional safety training may be added depending on the tasks performed. Sub-contractors may choose to utilize their own site-specific HASP or adopt this HASP.

A copy of the site-specific Health and Safety Plan is provided as Appendix C.

7.0 COMMUNITY AIR MONITORING PLAN (CAMP)

Community air monitoring will be performed during this RI as required by the DER-10 (Appendix 1A, NYSDOH, Generic CAMP). Real-time air monitoring for volatile organic compounds (VOCs) and particulate levels will be performed during intrusive activities such as soil boring, monitoring well, and soil vapor point installation at an upwind and downwind locations. Background data will be collected prior to any intrusive activities. Continuous monitoring will be performed for all ground intrusive activities and during the handling of contaminated or potentially contaminated media.

Periodic monitoring for VOCs will be performed during non-intrusive activities such as the collection of soil samples or the collection of groundwater samples from existing monitoring wells. Periodic monitoring during sample collection, for instance, will consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or overturning soil, monitoring during well bailing/purging, and taking a reading prior to leaving a sample location. Depending upon the proximity of potentially exposed individuals, continuous monitoring may be performed during sampling activities.

Based on the information that public schools and a public playground are located east of the site, a robust CAMP will be implemented when intrusive remedial investigation activities are conducted along the eastern boundary area of the Site. Furthermore, an adjacent occupied building is located to the south of the subject property.

A Special Requirements CAMP (SR-CAMP) will need to be implemented when remedial investigation activities are occurring within 20 feet of the occupied northern, eastern, and western adjacent buildings as follows:

<u>Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures</u>

When work areas are within 20 feet of potentially exposed populations or occupied structures, the continuous monitoring locations for VOCs and particulates will reflect the nearest potentially exposed individuals and the location of ventilation system intakes for nearby structures. The use of engineering controls such as vapor/dust barriers, temporary negative-pressure enclosures, or special ventilation devices will be considered to prevent exposures related to the work activities and to control dust and odors. Consideration will also be given to implementing the planned activities when potentially exposed populations are at a minimum, such as during weekends or evening hours in non-residential settings.

- If total VOC concentrations opposite the walls of occupied structures or next to intake vents exceed 1 ppm, monitoring will occur within the occupied structure(s).

Depending upon the nature of contamination, chemical-specific colorimetric tubes of sufficient sensitivity may be necessary for comparing the exposure point concentrations with appropriate pre-determined response levels (response actions will be pre-determined). Background readings in the occupied spaces will be taken prior to commencement of the planned work. Any unusual background readings will be discussed with NYSDOH prior to commencement of the work.

- If total particulate concentrations opposite the walls of occupied structures or next to intake vents exceed 150 mcg/m^3, work activities will be suspended until controls are implemented and are successful in reducing the total particulate concentration to150 mcg/m3 or less at the monitoring point.
- Depending upon the nature of contamination and remedial activities, other parameters (e.g., explosivity, oxygen, hydrogen sulfide, carbon monoxide) may also need to be monitored. Response levels and actions will be pre-determined, as necessary.

A detailed Community Air Monitoring Plan is provided as Appendix D.

8.0 BEST MANAGEMENT PRACTICES

To improve the sustainability of the remedy, best management practices (BMPs) will be implemented regarding all equipment used on-site. All vehicles, including equipment, will be turned off when not in use, reducing idling emissions. The driller will choose the most effective tooling to minimize tooling switch outs. The ability to change out tooling for the proper application ultimately reduces waste. The drill rig used for the remedy will be appropriately maintained to ensure there are no fluid leaks.

Soil cuttings and other soil generated on-site during the RI are anticipated to be returned to the borehole, with the exception of conditions noted in Section 3.4, to reduce need of additional containerization and off-site disposal for waste. In the event that soil needs to be drummed, soil should be contained within the minimum number of drums as possible to reduce future waste. Other waste generated from the investigation, including drummed groundwater, will be removed from the site during a single pick-up event, along with any other waste (i.e. soil), to reduce mobilizations. The proposed disposal facilities' information for investigation derived waste, including their location, will be reported to the NYSDEC project manager upon the disposal activities. These practices are sustainable as less waste is produced.

Soil disturbance activities may release dust particles, affecting air quality. Dust particles will be monitored as part of a Community Air Monitoring Plan, and dust mitigation practices, including the use of fresh water to suppress dust and prevent fugitive dust, will be employed when necessary.

Emissions evaluation criteria, specific to this scope, includes sustainability metrics such as total energy consumption, greenhouse gases, and other air emissions, as well as water consumption, waste generation and disposal. The footprint analysis was conducted by utilizing the EPA's Spreadsheets for Environmental Footprint Evaluation (SEFA). The emissions associated with the equipment and the overall remedy will be analyzed through SEFA to track metrics throughout RI implementation. To complete the analysis, the metrics will be tracked by coordinating with the contractor, utilizing surveys, and using meters as necessary.

8.1 Green and Sustainable Remediation and Climate Resiliency

The evaluations of the RI activities consisted of human and environmental health considerations, which will be the basis of this Green and Sustainable Remediation and Climate Resiliency.

To reduce the environmental impact of the RI, the following Best Management Practices, in addition to the practices noted in the previous section, can be implemented:

1. To protect the local ecosystem and ecosystem services, minimally invasive technologies will be employed. Real-time data collecting technologies are minimally invasive, protecting the local ecosystem and ecosystem services. The BMPs implemented under this principle include:
    i. The Site's Community Air Monitoring Plan (CAMP). The Site will have portable Photo Ionization Detectors (PIDs) and portable dust monitors that protect the workers on-site and the surrounding community, while remaining minimally invasive on-site.
2. Reducing the amount of time and distance for transporting materials to and from the Site will reduce the fuel consumed and associated air emissions. The BMPs implemented under this principle include:
    i. Ensuring any heavy diesel trucks transporting materials have a Clean Idle Certification Label;
    ii. Requiring trucks and the drill rig(s) to turn off their engines when leaving the engine on is not necessary;
    iii. When applicable, the reuse of clean, recyclable materials reduces consumption of non-renewable virgin resources and can provide energy savings and greenhouse gas reduction since these materials can be locally-derived, thus reducing transportation and processing emissions;
    iv. Participating in a low-energy project management program. Under this program, whenever possible, meetings were held using remote communication technologies, such as videoconferencing and teleconferencing to reduce energy consumption and traffic congestion associated with personal transportation.
3. Reducing the amount of unnecessary material used both on-site or off-site will reduce both material consumption and waste generation, and will reduce the emissions associated with extraction, processing/production, use, and disposal. The BMPs implemented under this principle include:
    i. Reducing paper usage by using electronic copies of plans and drawings;
    ii. When applicable, the reuse of clean, recyclable materials reduces consumption of non-renewable virgin resources.
4. Requesting the Contractor tracks material use, material disposal, equipment use and associated emissions, water use, and transportation emissions of both material and personnel. The tracking data will be used in collaboration with the EPA's Spreadsheets for Environmental Footprint Analysis ("SEFA") to determine the footprint of activities on Site. Summaries of the activities are included in Appendix E.

Based on DER-31, the RI is necessary to assess the extent of contamination beneath the Site, and preparing a site conceptual model for the Remedial Action Work Plan will result in a green cleanup, benefiting the people and ecosystems around the Site.

The footprint of the anticipated RI was calculated. Overall, approximately 3,163 pounds of greenhouse gas emissions (GHG) emissions (carbon dioxide equivalents of global warming potential), 14 pounds of NOx emissions, 1 pounds of SOx emissions, 1 pound of particulate matter (PM) emissions, and 1 pound of hazardous air pollutants (HAPs) are anticipated to be produced during the entirety of the RI based on the current scope. The tracking during the RI work will be used in collaboration with the EPA's SEFA spreadsheets to determine the approximate footprint of activities on Site after completion of work. GSR Summary for the RIWP is provided in Appendix E.

9.0 REMEDIAL INVESTIGATION REPORT (RIR)

Upon receipt of the analytical results, Vektor will prepare a Remedial Investigation Report (RIR) in accordance with DER-10. The RIR will include the following sections:

- Introduction,
- Summary of site history,
- Summary of previous environmental investigation,
- Field methods and observations,
- Laboratory results section,
- Conclusions, and recommendations, where necessary.

The report will also include scaled sampling plans showing all sample locations and exceedances, field logs, soil borings logs, monitoring well construction logs, summary tables with comparison to respective standards, laboratory results, and a Qualitative Human Health Exposure Assessment in accordance with DER-10 (Appendix 3B) as appendices. The Qualitative Human Health Exposure Assessment will discuss both on and off-site pathways. All results will be provided in accordance with the NYSDEC EIMS EDD format (EQuIS).

10.0 SCHEDULE

The RI will be implemented after approval of this RIWP by the NYSDEC and completion of the 30-day public comment period and the demolition of on-site structures. A 7-day notification will be provided to the NYSDEC and NYSDOH prior to RI. The table below shows the anticipated schedule for completing the RI:

Anticipated RI Schedule	
Submittal of BCP Application	April 2025
Revised BCP Application Submittal and 30-Day Public Comment Period	June 2025
Submittal of RIWP and 30-Day Public Comment Period	August 2025
Brownfield Cleanup Agreement Execution	August 2025
NYSDEC and NYSDOH Comments on RIWP	September-October 2025
NYSDEC Approval of RIWP	October 2025
Demolition	October 2025
RI Implementation	November 2025
RIR Submittal	January 2026
RAWP Submittal and 45-Day Public Comment Period	March-April 2026
NYSDEC Approval of RIR/RAWP	June-July 2026

TABLES

Table 1
Sampling Rationale and Summary
39-36 28th Street, Queens, NY
39-36 28th Street Site (C241293)

Sample Matrix	Sample ID	Sample Interval (feet below surface grade)	Rationale	Estimated Number of Samples	Analysis
SOIL	25SB-1 (0-2')	0'-2' (historic fill)	To assess the extent of historic fill and overall soil quality beneath the Site	1	Target Compound List (TCL) volatile organic compounds (VOCs), TCL semivolatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), Pesticides, Total Analyte List (TAL) Metals, hexavalent chromium, trivalent chromium, per- and poly-fluoroalkyl substances (PFAS), and 1,4-dioxane
	25SB-2 (0-2')			1	
	25SB-3 (0-2')			1

EXECUTIVE SUMMARY

Brussee Environmental Corporation (BEC) prepared this Phase I Environmental Site Assessment (ESA) for the residential property located on the western side of 28th Street, between 39th Avenue to the north, and 40th Avenue to the north, in the Long Island City section of the Borough of Queens, New York City, Queens County, New York (hereinafter the "subject property"). The subject property is identified by the street address of 39-36 28th Street, and as Borough 4 – Block 397 – Lot No. 31 on the New York City (NYC) tax maps.

The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions. Recognized environmental conditions are defied as (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and BEC's proposal for services.

BEC was able to establish a history for the property dating back to 1897. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property appears developed with at least one structure by 1897. The 1898 Sanborn map (earliest available) depicts the property was two small tax lots. The northern lot is developed with a 3-story residence occupying the eastern half of the parcel. The southern lot is undeveloped. Between 1915 and 1936, the southern portions of the property were developed with two 1-story garages. One at the southwestern corner and the other at the south-central portion. By 1950, the residence is identified as apartments. City directory listings include the names of individuals for the property address from 1934 through 2020, consistent with residential occupancy.

The property is currently developed with a 3-story multi-family residence, with a basement, and two 1-story detached garages. The residence occupies the northeastern portion of the property and fronts east along 28th Street. The garages (one 3-car and one-4-car) occupy the southwestern portions of the property and are accessible via a concrete-paved driveway which runs along the south side of the residence, leading from 28th

Street. The area between garages is also concrete-paved. The remainder of the property consists of lawn/landscaped yard areas. Sidewalks are east of the property along 28th Streets. The residence is divided into three apartments (one per floor). The first and second floor apartments are occupied by residential tenants, while the third floor unit is currently vacant.

Based on the results of the site inspection, records review and interviews, it was determined that there was one REC identified for the subject property. RECs are those conditions, which could adversely affect the environmental integrity of the property. No historic recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs) were identified. The identified REC is summarized below:

- Information obtained from the regulatory agency database and the New York State Department of Environmental Conservation (NYSDEC) revealed that the southern adjacent property (29-07 40th Avenue) was listed on the Inactive Hazardous Waste Site (SHWS) and Brownfield Cleanup Program (BCP), as well as several other State and local databases. Investigations conducted at this property since 2008 revealed the presence of chlorinated volatile organic compounds (CVOCs) and metals-impacted soil. Groundwater and soil vapor were also significantly impacted with CVOCs. A groundwater monitoring well, and a soil vapor sampling point associated with this site were observed in the sidewalk adjacent to the east of the subject property. A review of sampling data from these wells obtained from the NYSDEC (2020) revealed elevated CVOC concentrations in both soil vapor and groundwater samples. The documented presence of soil vapor and groundwater impacts adjacent to the subject property and the potential soil vapor intrusion risk is considered a REC.

Based upon the above findings and conclusions, BEC recommends following:

- Potential impacts to groundwater, soil vapor, and/or indoor air quality related to documented chlorinated solvent impacts attributed to the southern adjacent SHWS and BCP site, should be evaluated by conducting a subsurface investigation. At a minimum, the investigation should include the installation of soil borings with the collection of representative samples for laboratory analysis to document subsurface conditions and determine the nature and extent of contamination (if present). Since the subject property also has an E-Designation for hazardous materials there is an option to conduct a due diligence Phase II or a more extensive investigation to satisfy the E-Designation requirements in conjunction with the re-development of the site.

In addition to the aforementioned REC, BEC identified several environmental concerns (ASTM Non-Scope issues/Business Environmental Risks [BERs]) for the subject property. The environmental concerns/BERs and BEC's recommendations are summarized as follows:

- The subject property was listed on the E-Designation database as having an E-HazMat restriction (E-218), which was determined during the Dutch Kills Rezoning and Related Actions completed by the City in October 2008 (CEQR 08DCP021Q). The HazMat E-designation requires the issuance of a Notice to Proceed by the New York City Office of Environmental Remediation (NYCOER) before the property can be redeveloped. The presence of the E-Designation is considered a BER.

- Fluorescent light ballasts were observed within some of the inspected portions of the residence, which based on the age of the building, may contain polychlorinated biphenyls (PCBs). BEC recommends that a PCB survey be performed prior to demolition and/or renovation activities. Any PCB-containing equipment affected by the development of the site must be properly managed during demolition and/or renovation activities. In addition, while the disposal of non-leaking PCB ballasts is not currently regulated by the United States Environmental Protection Agency (USEPA), BEC recommends that the PCB ballasts be packaged in a lined, steel drum containing an absorbent material and disposed of as PCB-waste to reduce the potential for environmental contamination and potential liability for cleanup of any environmental release of PCBs from the ballasts.

- Interior paint was in generally good to fair condition, with some areas of chipping or peeling within the basement of the residence. The garage interiors, where painted, fair to poor condition with areas of chipping, peeling and well-worn paint. The building exteriors (residence and garages) were finished with unpainted vinyl siding. The lead content of the paints is unknown; however, given the ages of the buildings, the presence of lead-based paint (LBP) is possible. Since the site improvements are used for residential purposes, lead-based paint is considered an environmental concern. Therefore, BEC recommends that a lead paint survey be conducted prior to any renovation/demolition activities. The disposal of lead paint waste resulting from renovation or demolition activities may be subject to federal and New York State (NYS) regulations. Additionally, the building may be subject to LBP testing and other requirements specified in NYC Local Law No. 1 for 2004.

- Suspect asbestos-containing acoustic ceiling tile, pipe insulation, and sheetrock/plaster were observed within the residence. The suspect asbestos-containing materials (ACMs) were in good condition at the time of the site inspection. In addition, due to the age of the buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

  If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then BEC recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a NYS-licensed contractor must be retained to remove the asbestos in accordance with federal and NYS regulations.

1.0 INTRODUCTION

1.1 Purpose

This document is a Phase I Environmental Site Assessment (ESA) prepared to determine recognized environmental conditions (RECs) and/or potential environmental concerns (PECs) in connection with the residential property located on the western side of 28th Street, between 39th Avenue to the north, and 40th Avenue to the north, in the Long Island City section of the Borough of Queens, New York City, Queens County, New York (hereinafter the "subject property"). The subject property is identified by the street address of 39-36 28th Street, and as Borough 4 – Block 397 – Lot No. 31 on the New York City (NYC) tax maps (Figures 1 through 4). Representative site photographs are included in Appendix A.

1.2 Detailed Scope of Services

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions and American Society of Testing and Materials (ASTM) Practice E1527-21, inclusive of the United States Environmental Protection Agency (USEPA) "all appropriate inquiry" requirement published in the Federal Register on November 1, 2005. The USEPA "all appropriate inquiry" requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

The purpose of ASTM Practice E1527-21 is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of CERCLA and petroleum products. As such, the practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability; that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 U.S.C. §9601 (35)(B).

As stated in ASTM Practice E1527-21, the purpose of the Phase I ESA is to identify, to the extent feasible pursuant to the process established by ASTM Practice E1527-21, *"recognized environmental conditions in connection with the subject commercial parcel."*

The term *recognized environmental conditions*, as defined by ASTM Practice E1527-21 means*"...the (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

"The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions. A material threat is a physically observable or obvious threat which is reasonably likely to lead to a release that is threatening and might result in impact to human health and the environment."

This Phase I Environmental Site Assessment, as required by ASTM Practice E1527-21, specifically consists of the following four components:

1. Records Review;
    a. Physical settings document review;
    b. Regulatory database records search;
    c. Local municipal agency records search; and
    d. Historic use records search.
2. Site Reconnaissance;
3. Interviews with Past and Present Owners and Occupants; and
4. Evaluation and Reporting.

As stated in Practice E1527-21, there may be environmental issues or conditions at the property, which may be requested by the user to be addressed as part of the Phase I ESA, which are not covered within the scope of ASTM Practice E1527-21. The issues are referred to as non-scope considerations. The following

is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-Based Paint;
- Asbestos-Containing Materials;
- Wetlands; and
- Mold and Water Damage.

1.3 Significant Assumptions

In preparation of the Phase I Environmental Site Assessment, it is assumed that information provided within the Environmental Database, regulatory agency records, municipal agency records, as well as information obtained from the user is accurate.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the subject property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the subject property, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report;

2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work and defined in ASTM Practice E1527-21. Any deviations from this scope are defined below. Furthermore, the scope of work was defined and developed pursuant to the request of the Client;

3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in

existence at the time of the investigation, and other information obtained and reviewed by Brussee Environmental Corporation (BEC);

4. BEC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report will not be construed to offer legal opinion or representations as to the requirements of, or compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. BEC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document;

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the subject property and should not be interpreted as such. An evaluation of subsurface soil and groundwater conditions was not performed as part of this investigation. As at any site, the actual condition of the groundwater and sub-surface soil cannot be determined without further investigation;

6. This report is based, in part, on information supplied to BEC by third-party sources. While efforts have been made to substantiate this third-party information, BEC cannot attest to the completeness or accuracy of information provided by others; and

7. The Phase I ESA practice does not include any testing or sampling of materials (e.g., soil, water, air, building materials).

1.5 User Reliance

This report was prepared in September 2024 by BEC at the request of Mr. Mike Ma representing 403739 LLC, for use by 403739 LLC, their legal and consulting representatives and other agents authorized to act on their behalf, in conjunction with the sale, lease, or financing of the subject property. KBEA assumes no liability for the use of this report by any person or entity other than those for which it was prepared.

2.0 SITE DESCRIPTION

2.1 Property and Address Location

The subject property consists of a single tax parcel located on the western side of 28th Street, between 39th Avenue to the north, and 40th Avenue to the north, in the Long Island City section of the Borough of Queens, New York City, Queens County, New York (hereinafter the "subject property"). The subject property is identified by the street address of 39-36 28th Street (Figures 1 through 4).

2.1.1 Tax Map Number

The subject property is designated as Borough 4 – Block 397 – Lot No. 31 on the NYC tax maps.

2.1.2 Acreage and Building Size

According to New York City Tax Maps, the subject property consists of a single, 0.126 acre (5,475 square foot) tax parcel. The property is currently developed with a 3-story multi-family residence, with a basement, and two 1-story detached garages. The residence occupies the northeastern portion of the property, fronts east along 28th Street and has a reported area of 3,120 square feet (SF). The garages (one 3-car and one-4-car) occupy the southwestern portions of the property, with estimated areas of 500 and 700 SF. The garages are accessible via a concrete-paved driveway which runs along the south side of the residence, leading from 28th Street. The area between garages is also concrete-paved. The remainder of the property consists of lawn/landscaped yard areas. Sidewalks are east of the property along 28th Streets.

2.1.3 Ownership

According to information maintained by the New York City Department of Finance, the current property owner is identified as 7 CC LLC.

2.1.4 Zoning

According to the City of New York Zoning Maps, the subject property is zoned for mixed manufacturing/residential (M1-2/R5B) use (Figures 5A and 5B).

2.2 Current Occupancy and Property Use

The property is developed with the aforementioned 3-story building family with a basement, two detached garages, and associated paved driveway/parking areas. The residence is divided into three apartments (one per floor). The first and second floor apartments are occupied by residential tenants, while the third floor unit

is currently vacant. The basement contains storage space, utilized by the property owner, and mechanical space. The garages are also utilized by the residential tenants.

3.0 USER PROVIDED INFORMATION

3.1 Title Records

As of the date of this report the Client did not engage BEC to perform a Chain of Title review nor was a Chain of Title provided for review.

3.2 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. The user has not made BEC aware of any environmental liens against the subject property and has not requested that BEC perform an environmental lien search for the subject property.

3.3 Specialized Knowledge

The user has not made BEC aware of any specialized knowledge regarding the chemicals or processes formerly in use at the subject or surrounding properties.

3.4 Commonly Known or Reasonably Ascertainable Information

The user has not made BEC aware of any commonly known or reasonably ascertainable information regarding the past uses of the Subject property, specific chemicals in use at the Subject property or any spills, chemical releases, or environmental cleanups at the Subject property.

3.5 Valuation Reduction for Environmental Issues

The user has not made BEC aware of any valuation reduction regarding the sale price of the property.

3.6 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the subject property as part of the due diligence to support the acquisition/financing of the property by 403739 LLC.

4.0 SITE GEOLOGY AND HYDROGEOLOGY

4.1 Topography and Site Characteristics

4.1.1 Elevation

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Central Park, NY-NJ Quadrangle (Figure 4). The elevation of the subject property is approximately 39 feet above mean sea level (amsl). The subject property is relatively flat with the general topographic gradient sloping downward to the northwest.

4.1.2 Surface Water Bodies

There are no surface water bodies on or adjacent to the subject property. The nearest surface water body is the Dutch Kills, located approximately 0.7 mile to the south at its closest point. In addition, the East River is located approximately 0.75 mile to the west-northwest.

4.1.3 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the subject property is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinate soil types may be present in the general vicinity of the subject property. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (Appendix D).

4.2 Groundwater Characteristics

4.2.1 Depth to the Water and Groundwater Flow Direction

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2013 (Figure 6), the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 39 feet amsl, the depth to groundwater in the vicinity of the subject property is approximately 28 feet below grade surface (bgs). Groundwater is expected to flow west-northwest, consistent with the regional trend.

A review of well data available from the USGS indicates that the nearest USGS monitoring well with groundwater measurement data (Q3122.2) is located approximately one-eighth mile east of the subject property. The well has an unspecified grade elevation and is screened in the Upper Glacial at a depth of 55 feet. A total of 54 groundwater measurements were collected from this well between July 2000 and February 2005. This data indicates the depth to groundwater fluctuated between 12.56 and 15.36 feet amsl.

4.3 Geology

According to the USGS Ground Water Atlas of the United States, New York region (1995) and the USGS Hydrogeologic Framework of Long Island, New York, the site is situated within the Coastal Plain physiographic province. The Coastal Plain physiographic province is characterized by layers of Cretaceous age sediments (primarily clay, sand, and gravel) overlying igneous and metamorphic rocks that crop out in Connecticut. The surface of these rocks slopes to the southeast, and the overlying Coastal Plain sediments slope and thicken in the same direction. Quaternary glacial deposits (primarily outwash sand and gravel) cover the Coastal Plain sediments on Long Island to depths of as much as 600 feet. In the area of the site, bedrock is present at a depth of approximately 50 feet below grade and is overlain by the Upper Glacial Aquifer, with the Lloyd Aquifer, Raritan Confining Unit, and the Magothy Aquifer absent from the geologic sequence.

5.0 SITE HISTORY

5.1 Municipal Records Review

As the subject property is located in the Borough of Queens, New York City, Queens County, on-line records searches were conducted or Freedom of Information Act (FOIA) requests were sent to the following agencies: New York City Department of Finance, New York City Registrar, New York City Department of Buildings, the New York City Fire Department, the New York City Department of Environmental Protection (NYCDEP), the New York City Department of Health (NYCDOH), and the New York State Department of Environmental Conservation (NYSDEC) requesting available regulatory information regarding the subject property. Regulatory agencies usually take six to eight weeks to process FOIA requests. Responses/information received to date are included in Appendix B. Any additional responses will be reviewed and forwarded upon receipt. As of the date of this report, the following information has been received:

New York City Department of Finance

The following is a summary of pertinent information obtained:

Tax Lot:	Borough 4 – Block 397 – Lot No. 31
Address:	39-36 28th Street
Owner:	7CCr LLC
Lot Size:	54.75 by 100 feet – rectangular
Building Class:	C0 – Three families
Zoning:	Manufacturing/Residential (M1-2/R5D)

New York City Department Buildings

Computerized Property Profile Overviews (PPOs) available from the New York City Department of Buildings (NYCDOB) Building Information System (BIS) website were reviewed for information regarding the subject property. Pertinent information regarding the subject property is summarized below:

BIN No. 4004819 – 39-36 28th Street

According to the PPO, ten Actions are listed for this BIN: four alteration permits, dated in 1908, 1928, 1931, and 1937; two Certificates of Occupancy (C/Os), both dated in 1927; and four new building notices, dated in

1926 (2) and 1927 (2). Review of the C/Os revealed that the property was developed with a 1-car garage and a 4-car garage.

One DOB violation and no Environmental Control Board (ECB) violations are listed for this BIN. However, DOB violation is identified as closed/resolved.

Two Complaints are listed for this BIN. The Complaints, dated in August 2014 and December 2022, are related to excavation damage to a building and work without a permit. However, both are listed as closed/resolved.

Two Jobs/Filings and no ARA/LAA jobs are listed for this BIN. A summary of the Jobs/Filings is provided with the DOB records in Appendix B.

BIN No. 4541830 – 39-36 28th Street Garage
No NYCDOB records are available for this BIN.

BIN No. 4541831 – 39-36 28th Street Rear
No NYCDOB records are available for this BIN.

New York City Fire Department
Freedom of Information Law (FOIL) application FOIL applications were forwarded to the New York City Fire Department (FDNY) on September 10, 2024. Responses from the FDNY are pending.

New York City Department of Health
A FOIL application was forwarded to the New York City Department of Health (NYCDOH) on September 10, 2024. A response from this agency is pending.

New York City Department of Environmental Protection
A FOIL application was forwarded to the New York City Department of Environmental Protection (NYCDEP) on September 10, 2024. A response from this agency is pending.

5.2 Historical Resources Review

5.2.1 Sanborn Fire Insurance Map Review

EDR conducted a search of available Sanborn Fire Insurance Maps for the subject property and immediate surrounding area. Fire Insurance Maps were provided for the years 1898, 1915, 1936, 1947, 1950, 1970, 1977, 1979, 1980, 1985, 1986, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005, and 2006 (Appendix C). BEC's review of the Sanborn Maps is provided on the following table:

Date	Comments
1898-1915	**Subject Property:** Shown as two separate tax lots, both fronting along 28th Street (east). The northern parcel is developed with a 3-story residence. The residence occupies the eastern half of the lot, with an undeveloped rear yard. The southern lot is undeveloped. **Surrounding Properties:** A 3-story residence is adjacent to the north, followed by dense, low-rise residential development, with undeveloped lots, residences and retail stores beyond. Two residences are to the west, followed by Prospect Street (currently 27th Street). A retail store and several undeveloped lots are to the south, followed by Payntar Avenue (currently 40th Avenue). Radoe Street (currently 28th Street) is to the east, followed by undeveloped land. A church is further to the southeast and a stable is to the northeast. The retail store to the south and the stable to the northeast are not depicted on the 1915 map. A rectory building has also been constructed adjacent to the north of the church along Academy Street (29th Street).
1936-1950	**Subject Property:** Developed consistent with the 1915 map depiction, except that two detached garages have been constructed on the southwestern and south-central portions of the property. In addition, the subject property is now identified as a single parcel. **Surrounding Properties:** A residence is to the north, followed by dense, low-rise residential development. Two residences are to the west, followed by 27th Street, with a retail store and garage beyond. A school is further to the northwest, with retail stores further to the southwest. Undeveloped land is to the south, followed by 40th Avenue, with residences and an undeveloped lot beyond. 28th Street is to the east, followed by a parochial school, with a convent and church to the southeast. A photo engraving facility and electric motor repair shop is shown adjacent to the south on the 1947 map. A scientific glass works was constructed to the southwest (north side of 40th Avenue) by 1950.
1970-1980	**Subject Property:** Developed consistent with the 1950 map depiction. The residence is identified as apartments beginning on the 1977 map. **Surrounding Properties:** Also developed generally consistent with their 1950 map depictions, except that the electric motor repair shop to the south is now identified as an office. The parochial school across 28th Street to the east has been expanded to the north. A mattress supplies shop is further to the southwest, along 40th Avenue. In addition, the eastern portions of the school building beyond 27th Street to the northwest have been demolished. The 1977 map shows the mattress supplies shop to the southwest as now occupied by an auto body repair shop. In addition, the northern adjacent residence is now identified as apartments.
1985-2006	**Subject Property:** Developed consistent with the 1980 map depiction. **Surrounding Properties:** Also developed generally consistent with their 1980 map depictions, except that the school building beyond 27th Street to the northwest is now identified as a warehouse and office. This building is identified as a private school beginning on the 1990 map. The 1992 map shows the scientific glass works to the south-southwest is now occupied by an auto sales and service facility. The 2001 map shows a storage building across 40th Avenue further to the south.

5.2.2 Historic Aerial Photograph Review

EDR conducted a search and provided copies of available historical aerial photographs showing the subject and surrounding properties. Aerial photographs were provided for the years 1924, 1941, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 1995, 2002, 2006, 2011, 2015, and 2019 (Appendix C). However, given that the historical use of the site was established through a review of a Sanborn Maps, city directories and topographic maps, BEC determined that the historical use of the site has been properly assessed, and, therefore, the historic aerials were only briefly reviewed for evidence of significant differecnces and to fill in time gaps (if any).

The photographs do not show any evidence of historic water bodies, significant re-grading, mining or historic dumping activities, which would indicate a potential environmental risk to the property. In addition, due to the long term, dense urban use of the subject property and surrounding areas, the aerial photographs did not provide significant details regarding potential environmental concerns at the site or surrounding properties.

5.2.3 Historic Topographic Map Review

BEC reviewed the 2023 Brooklyn, NY and Central Park, NY-NJ USGS topographic quadrangle maps, as well as available historic topographic quadrangle maps provided by EDR. BEC's review of the topographic maps is provided on the following table:

Date	Comments
1897-1900	**Subject Property:** Shown as undeveloped land, which contradicts the 1888 Sanborn map that depicts a residence on the northern portion of the property. **Surrounding Properties:** Undeveloped land is to the north, with dense development further to the north along 39th Avenue. Dense development is to the west, followed by 27th Street, with moderate to dense development beyond. Undeveloped land is to the south, followed by dense development, with 40th Avenue beyond. 28th Street is to the east, followed by sparse development. Northern Boulevard is further to the southeast, with railroad tracks beyond.
1947	**Subject Property:** Shaded black, which indicates that the property is developed with one or more structures, consistent with the residential building and garages depicted on the 1947 Sanborn map. **Surrounding Properties:** Dense development is to the north, with 39th Avenue beyond. Dense development is to the west, although the western adjacent areas are partially obscured by map text. 27th Street is further to the west, with a school to the northwest. Dense development is to the south, with 40th Avenue beyond. A school is visible further to the south-southeast, beyond 40th Avenue. 28th Street is to the east, followed by dense development.

1956-1995	**Subject Property:** Shaded pink to indicate dense, urban development with no improvements depicted. **Surrounding Properties:** Shaded pink to indicate dense, urban development with no improvements depicted, except for St. Patrick's church and school across 28th Street to the east and southeast, and PS 4 located further to the northwest, beyond 27th Street. 28th Street is adjacent to the east. 27th Street is further to the west, 39th Avenue is further to the north, and 40th Avenue is further to the south. LI City High School is further to the south-southeast beyond 40th Avenue.
2013-2023	**Subject and Surrounding Properties:** The 2013 through 2023 maps do not depict any buildings or other structures. Surrounding roads are visible, consistent with their current configuration. A post school is further to the northwest, beyond 27th Street. Northern Boulevard is further to the southeast and thew Queensboro Bridge approaches are further to the south-southwest.

BEC's historic topographic map review did not reveal evidence of recognized environmental conditions in connection with the site or adjoining properties.

5.2.4 Historical City Directory Search

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (Appendix D) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property. The listings for the subject property are summarized in the following table:

Date	Comments
1922	**Subject Property:** "Address not Listed in Research Source"
1934	**Subject Property:** The names of individuals
1939	**Subject Property:** "Address not Listed in Research Source"
1945	**Subject Property:** The names of individuals
1950	**Subject Property:** "Address not Listed in Research Source"
1962-1992	**Subject Property:** The names of individuals
1995-1996	**Subject Property:** "Address not Listed in Research Source"
2000-2020	**Subject Property:** The names of individuals

Note: Addresses shown in ( ) are on 28th Street unless noted otherwise.

BEC notes that the subject and nearby properties were identified as a mixture of residential, commercial/retail, and light industrial uses along since the early 1920s, including warehouses, shipping/trucking facilities, auto sales and service facilities, auto/auto body repair shops, contractor offices/yards, manufacturing operations, restaurants, religious and educational uses, taxi and limousine garages, retail stores, and commercial/professional offices. Given the time of operation for these facilities and

their potential prior use, the area cannot be confirmed of having no subsurface impacts; however, no specific operation or activity was noted that warrants additional investigation at this time. BEC notes that several of the adjacent/surrounding properties were listed on various regulatory databases indicating hazardous waste generation, petroleum storage and/or petroleum releases; however, these listings are further discussed in Sections 6.1 and 6.2).

5.2.5 Previous Environmental Site Assessments

No previous ESAs or information regarding previous environmental investigations/reports for the subject property were provided to KBEA for review by the property owner or their representatives.

5.2.6 Environmental Liens or Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject property, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property because of environmental issues identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an "E" designation, as well as maintained within Chain of Title Records. For a site to be designated with an "E" restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a "Potential" or "Projected" re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an "E" designation require additional investigation and/or remediation be performed to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an "E" designated site without approval from the New York City Office of Environmental Remediation (NYCOER).
The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites.

The City of New York Environmental Quality Review (CEQR) Requirement Declarations and City of New York Zoning maps and website, as well as the EDR database report, indicate that the subject property is identified as having an E-HazMat restriction (E-218), which was determined during the Dutch Kills Rezoning

and Related Actions completed by the City in October 2008 (CEQR 08DCP021Q). The Hazardous Materials designation indicates that there is a potential for soil and groundwater beneath the subject property to be impacted by historic operations at the subject or adjacent properties. As such, the property requires an environmental assessment and review by the NYCOER to determine if the current and/or historic use of the property has impacted the subsurface and if additional investigation/remediation is warranted.

The E-designation requires the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designations is considered a Business Environmental Risk (BER).

5.3 Summary of Site History

BEC was able to establish a history for the property dating back to 1897. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property appears developed with at least one structure by 1897. The 1898 Sanborn map (earliest available) depicts the property was two small tax lots. The northern lot is developed with a 3-story residence occupying the eastern half of the parcel. The southern lot is undeveloped. Between 1915 and 1936, the southern portions of the property were developed with two 1-story garages. One at the southwestern corner and the other at the south-central portion. By 1950, the residence is identified as apartments. City directory listings include the names of individuals for the property address from 1934 through 2020, consistent with residential occupancy.

The property is currently developed with a 3-story multi-family residence, with a basement, and two 1-story detached garages. The residence occupies the northeastern portion of the property and fronts east along 28th Street. The garages (one 3-car and one-4-car) occupy the southwestern portions of the property and are accessible via a concrete-paved driveway which runs along the south side of the residence, leading from 28th Street. The area between garages is also concrete-paved. The remainder of the property consists of lawn/landscaped yard areas. Sidewalks are east of the property along 28th Streets. The residence is divided into three apartments (one per floor). The first and second floor apartments are occupied by residential tenants, while the third floor unit is currently vacant.

6.0 REGULATORY AGENCY DATABASE SEARCH

EDR was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched and the search radius is shown on the summary table below. BEC reviewed the database output to determine if the property appears on any of the regulatory agency lists.

6.1 Federal Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
National Priorities List Sites, including Proposed and Delisted Sites	NPL	1.0 mile	No	1 NPL 0 Proposed 0 Delisted
Superfund Enterprise Management System (SEMS) and SEMS Archive Sites	SEMS and SEMS-ARCHIVE	0.5 mile	No	0 SEMS 0 SEMS-ARCHIVE
Corrective Action Reports	CORRACTS	1.0 mile	No	1
Federal Facility Site Information	FFSI	1.0 mile	No	0
Resource Conservation and Recovery Act - Treatment, Storage and Disposal Facilities	RCRA-TSDF	0.5 mile	No	0
Resource Conservation and Recovery Act – Active and Former Hazardous Waste Generators	RCRA LQG/SQG/VSQG/ NonGen	Site & Adjoining	No	0 LQG 0 SQG 1 VSQG 0 NonGen
Land Use Control Information System	LUCIS	0.5 mile	No	0
Engineering Control Sites	USEC	Site	No	NA
Institutional Control Sites	USIC	Site	No	NA
Emergency Response Notification System	ERNS	Site	No	NA
Federal Brownfields Sites	US Brownfields	0.5 mile	No	0

In addition to the federal databases included on the table above, over 30 additional federal databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional federal databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

Federal National Priorities List (NPL): One NPL listing, Newtown Creek Superfund Site, Newtown Creek, was identified within one mile of the subject property. Historic use of the creek and adjacent properties as an industrial shipping waterway and various industrial uses have resulted in surface water and bottom sediments being impacted, primarily by petroleum constituents. The site was added to the NPL in 2010 and investigation activities are on-going. Based on this information, its distance (3,720 feet south-southwest) and the presumed hydraulic gradient it is unlikely that the Newtown Creek represents a significant environmental concern to the subject property. The Newtown Creek site is also listed on the federal SEMS, RCRA-SQG, USEC, ROR, PRP, and MANIFEST databases.

Federal RCRA CORRACTS: CORRACTS identify hazardous waste handlers with RCRA corrective action activity. One CORRACTS facility (Con Edison – Ravenswood Tunnel Headhouse, 3854 Vernon Boulevard) was identified within a one-mile radius of the subject property. Given that the listed CORRACTS facility is located over one-half mile and/or hydraulically crossgradient/downgradient, it is unlikely that this facility represents a significant environmental concern to the subject property.

Federal Resource Conservation and Recovery Act (RCRA): This database includes selective information on facilities which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). One of the listed RCRA sites is located adjacent to the subject property, and it is summarized below:

- Alpians Fancy Cleaners (ID No. NYR000019000), 27-09 40th Avenue, adjacent to the south-southwest and hydraulically crossgradient of the subject property. This facility has reportedly operated as RCRA-VQG since at least January 1996. This facility was cross referenced on the MANIFEST database and is identified as generating halogenated solvent wastes. No RCRA violations were listed for this facility. This property is also listed on the NY BROWNFIELDS database. Historic dry cleaning operations have impacted soil, groundwater and soil vapor, including sidewalk areas east of the subject property. As such this property is considered a REC.

6.2 State Databases

Listing Name or Database Searched	Abbreviat0ion	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
Inactive Hazardous Waste Disposal Sites, including De-listed Sites	SHWS	1.0 mile	No	20 SHWS 0 Delisted SHWS
Vapor Intrusion Legacy Site List	VAPOR	1.0 mile	No	0
Hazardous Substance Waste Disposal Site	HSWDS	0.5 mile	No	0
Solid Waste Facilities/Landfill Sites	SWF/LF	0.5 mile	No	4
Registered Recycling Facility List	SWRCY	0.5 mile	No	0

Spills Information Database	NYSPILLS	0.125 mile	No	9
Registered Drycleaning Facilities	DRYCLEANERS	0.25 mile	No	6

**BEC notes that according to ASTM E 1527-21, Section 8.1.2.1, the search distance may be reduced at the discretion of the environmental professional. The potential to impact the site, including BEC's decision to reduce the search distances, was based on several factors including, but not limited to: regulatory status by applicable agencies, medium impacted, distance from the site, historical use of the site and surrounding properties, estimated direction of groundwater flow, soil/geologic factors, urban setting, and other factors. In this case, the databases with reduced search distances were the VCP and NY Brownfields..*

The subject property is identified on the E-Designation database. This listing is summarized as follows:

NYC E-Designated Sites(E-DES): The subject property was listed on the E-Designation database as having an E-HazMat restriction (E-218), which was determined during the Dutch Kills Rezoning and Related Actions completed by the City in October 2008 (CEQR 08DCP021Q). The HazMat E-designation requires the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designation is considered a BER (see Section 5.2.6).

In addition to the New York State (NYS) databases included on the table above, over, ten additional NYS databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional State databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

State Inactive Hazardous Waste Sites (SHWS): SHWS records are New York State's equivalent to the CERCLIS. These properties may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. These records come from the NYSDEC.

Two SHWS listings were identified within a one-quarter mile radius of the subject property, and they are summarized as follows:

- 27-09 40th Avenue Site (ID No. 241241) 27-09 40th Avenue, adjacent to the south-southwest and hydraulically crossgradient of the subject property. This property was comprised of several parcels that were historically operated as a drycleaner, auto sales/service, a scientific glass factory, a photoengraving shop, and an auto body shop. Investigations conducted at this property since 2008 revealed the presence of chlorinated volatile organic compounds (CVOCs) and metals-impacted soil. Groundwater and soil vapor were also significantly impacted with CVOCs. This property is being remediated and was recently re-developed under the BCP. A groundwater monitoring well, and a soil vapor sampling point associated with this site were observed in the sidewalk adjacent to the east of the subject property. A review of sampling data from these wells obtained from the NYSDEC (2020) revealed elevated CVOC concentrations in both soil vapor and groundwater samples. The

documented presence of soil vapor and groundwater impacts adjacent to the subject property and the potential soil vapor intrusion risk is considered a REC and should be evaluated as part of a Phase II investigation. BEC notes that soil vapor sampling is a required part of the NYCOER E-Designation HazMat investigation program.

- Fresh Cleaners & Laundry Site/Bridge Cleaners (ID No. 241127) 36-26 30th Street, approximately 500 feet east-southeast and hydraulically crossgradient of the subject property. This facility is a former commercial dry cleaner that operated for approximately 10 years through 2011. Soil, groundwater, and soil vapor were impacted with chlorinated volatile organic compounds (CVOCs). On-site impacts are being addressed under a Site Management Plan, with an air sparging/soil vapor extraction (AS/SVE) system installed in 2018 as part of an Interim Remedial Measure (IRM). Off-site impacts have also been remediated, most of which were addressed during remediation of the Union Wire BCP site. Groundwater is documented as flowing to the south-southwest Based on this information, its distance in a dense urban area, the presumed hydraulic gradient, and/or that the subject property and surrounding area are supplied potable water from a municipal source; this facility is unlikely to represent a significant environmental risk to the subject property.

Eighteen additional SWHS listings were identified between one-quarter mile and one-mile from the subject property; however, based upon their distances in a dense urban area, the presumed hydraulic gradient, and/or that the site and surrounding area is supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental risk to the subject property.

Solid Waste Facilities/ Landfill Sites (SWF/LF): This database is an inventory of solid waste disposal facilities or landfills in New York State. Four SWF/LF listings were identified within a one-quarter mile radius of the subject property. These listings are summarized as follows:

- City Used Auto Center, 37-25 21st Street, approximately 1,740 feet north-northwest and hydraulically cross- to downgradient of the subject property. This facility is identified as an inactive vehicle dismantling facility, with no violations.

- GE Tselel Automotive, 36-28 14th Street, approximately 2,280 feet north-northwest and hydraulically cross- to downgradient of the subject property. This facility is identified as an inactive vehicle dismantling facility, with no violations.

- Astoria Used Auto Parts, 36-28 14th Street, approximately 2,280 feet north-northwest and hydraulically cross- to downgradient of the subject property. This facility is identified as an inactive vehicle dismantling facility, with no violations.

- Patano Brothers, 38-36 10th Street, approximately 2,590 feet northwest and hydraulically crossgradient of the subject property. This facility is identified as an inactive waste transfer station, with no violations.

Based on the information provided in the database report, their distances, the presumed hydraulic gradient, and the absence of additional database listings for these facilities, there is no information to indicate that these facilities represent a significant environmental concern to the subject property.

Leaking Underground Storage Tanks (LTANKS): Fifty-eight LTANKS listings were identified within a one-half mile radius of the subject property. Each of the 58 LTANKS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. In addition, none of the listed closed LTANKS sites is located adjacent to the subject property.

State Chemical Bulk Storage Sites (CBS): The inclusion of a facility on the CBS list means that a site has one or more registered storage tanks, regulated under 6NYCRR Part 595 - 599 (NYSDEC Chemical Bulk Storage) and has a total storage capacity equal to or greater than 185 gallons. This database does not indicate leaks, spills, or other violations. Two CBS facilities (Alert Garage Corp., 30-17 40th Avenue and Koch & Low, 21-24 39th Avenue) were identified within a one-quarter mile radius of the subject property. Both of these facilities are identified as "Unregulated/Closed". Based on this information, their distances (over one-eighth mile) and/or the presumed hydraulic gradient, it is unlikely that the listed CBS facilities represent a significant environmental concern to the subject property.

Voluntary Cleanup Program (VCP) Sites: VCP sites are those facilities where the property owner has to investigate and remediate the site. New York's VCP is a cooperative program for lenders, developers and prospective purchasers to investigate and/or remediate contaminated sites and return them to productive use. Under the VCP, a volunteer performs remedial activities pursuant to one or more NYSDEC approved work plans and agrees to remediate the site to a level that is protective of public health and the environment for the present or intended use of the property. Investigation and remediation is carried out under oversight of the

NYSDEC, and the New York State Department of Health (NYSDOH) and the volunteer pays the State's oversight costs. When the volunteer completes work, a release from liability from the Department is provided with standard reservations.

Eight VCP listings were identified within a one-eighth mile of the subject property. A review of information available in the database report and obtained from the NYCOER website reveled that seven of these eight properties were investigated, subsequently remediated and re-developed, and were issued Notices of Satisfaction/Completion by NYCOER. As such, these listings are unlikely to represent a significant environmental risk to the subject property. The remaining active listing is summarized as follows:

- 39-25 27th Street Site (ID No. 20CVCP006Q), 39-25 27th Street, approximately 520 feet northeast and hydraulically cross- to upgradient of the subject property. Information obtained from the NYCOER website indicates this site was historically developed with 2-story residence and detached garage and is proposed to be redeveloped with a 6-story mixed-use building with a basement. Soil/fill material is impacted with semi-volatile organic compounds (SVOCs) and metals. Groundwater is impacted with VOCs and metals, and soil vapor is impacted by moderate levels of petroleum and chlorinated VOCs. Remediation is on-going and includes soil removal and the installation of a composite cover system and vapor barrier, with addition sampling to determine the need for a vapor mitigation system. Based on the information in the database report, its distance, and the presumed hydraulic gradient, it is unlikely that this facility represents a significant environmental concern to the subject property.

Twenty-four additional VCP listings were identified between one-eighth and one-quarter mile from the subject property; however, based on their distances in a dense urban area, the presumed hydraulic gradient, and/or that the subject property and surrounding area are supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental risk to the subject property.

New York State Brownfields Sites (BROWNFIELDS): In New York State, a Brownfields site is any real property in the State, whose redevelopment or reuse may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant, except those properties which are listed as Class 1 or 2 in the Registry of Inactive Hazardous Waste Disposal Sites (Class 2 sites owned by a Volunteer are eligible until July, 1, 2005); sites on the USEPA NPL; hazardous waste treatment, storage, or disposal facilities (TSDFs) permitted under ECL §27-0901 ("interim status" facilities are eligible); sites subject to a cleanup order or Stipulation under Article 12 of the Navigation Law (oil spill prevention, control, and

compensation) or under Title 10 of ECL Article 17 (control of the bulk storage of petroleum); or sites subject to any on-going state or federal enforcement actions regarding solid/hazardous waste or petroleum.

Five BROWNFIELDS sites were identified within a one-eighth mile radius of the subject property. These sites are summarized as follows:

- 29-07 40th Avenue Site (ID No. C241241), 2907 40th Avenue, adjacent to the south-southwest and hydraulically crossgradient the subject property. The site was summarized above in the SHWS sites section, where it was determined to represent a REC based upon the documented presence of CVOC-impacted groundwater and soil vapor and potential soil vapor intrusion concerns.

- Former Union Wire Die Corp. – Off-Site, 39-40 30th Street, approximately 480 feet southeast and hydraulically crossgradient of the subject property. This listing is associated with the sidewalk areas along 29th Street between 39th Avenue and 40th Road, along 30th Street between 39th and 40th Avenues, and 40th Avenue to 31st Street. This area formerly included a printing operation, commercial laundry/dry cleaner, a wire die manufacturer and a gas station. Groundwater flows south-southeast from this facility and is impacted with chlorinated solvents. Soil vapor is also impacted. Off-site investigations identified impacts in two of four buildings sampled and remedial recommendations have been made by NYSDEC. Based on the information in the database report, its distance, and the documented groundwater flow direction, this site is unlikely to represent a significant environmental concern to the subject property.

- Former Union Wire Die Corp., 39-40 30th Street, approximately 480 feet southeast and hydraulically crossgradient of the subject property. This listing represents the onsite portion of the former Union Wire Die facility at the corner of 30th Street and 40th Avenue. This facility was also formerly developed with a gas station and a warehouse. Groundwater flows south-southeast from this facility and is impacted with chlorinated solvents. Soil vapor is also impacted. This site was remediated under NYSDEC oversight and issued a Certificate of Completion in December 2017. Residual impacts are being addressed under a SMP. Based on the information in the database report, its regulatory status, distance, and the documented groundwater flow direction, this site is unlikely to represent a significant environmental concern to the subject property.

- Fresh Cleaners and Laundry, Inc./Bridge Cleaners, 39-26 30th Street – Site and Off-site, approximately 500 feet east-southeast and hydraulically crossgradient of the subject property. This facility (both on-site and off-site impacts(was detailed above in the SHWS sites section, where it was determined unlikely to represent a significant environmental concern to the subject property.

Nineteen additional BROWNFIELDS listings were identified between one-eighth and one-half mile from the subject property; however, based on their distances in a dense urban area, the presumed hydraulic gradient, and/or that the subject property and surrounding area are supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental risk to the subject property.

NYCDCP Environmental Designation Sites (E-DES): Environmental "E" designation sites are those sites identified by the NYC Department of City Planning (DCP), which need to be evaluated to address potential issues related to hazardous materials, air quality and/or noise. This designation is typically associated with areas NYC has designated for re-development and/or re-zoning, and ensure that sampling and remediation (if warranted) or other measures implemented at the property if demolition, excavation and construction are proposed to be conducted.

Three types of E-DES listings (HazMat, Air and Noise) exist, although a property can be assigned multiple designations based on known or potential risks to redevelopment. However, only those with a HazMat designation are considered to present a concern based on their historic use/development (i.e., service station, dry cleaner, manufacturing facility, etc.). The HazMat designation indicates that projected and potential development of these sites requires an environmental assessment and review by the NYCOER to determine if the current and/or historic use of a property has impacted the subsurface and if additional investigation/remediation is warranted.

One-hundred and nineteen E-DES listings were identified within one-eighth mile of the subject property, five of which (39-39 27th Street, 329-35 27th Street, 39-34 28th Street, 27-09 40th Avenue and 39-42 40th Avenue) are adjacent to the subject property. These designations do not indicate the presence of contamination, nor do they indicate the presence/potential presence of offsite impacts. Therefore, there is no information in the database to indicate that these sites represent a significant environmental concern to the subject property.

NYC Office of Environmental Remediation Sites (NYCOER): This database is a listing of those properties remediated under the oversight of the NYC Office of Environmental Remediation (OER) as part of either the

E-Designation program or NYC VCP. The database includes sites that have been completed or are in-progress. Eleven NYCOER sites were identified within a one-eighth mile radius of the subject property. Remediation has been completed at ten of the 11 listed properties and is on-going at the 39-25 27th Street site, which is located to the north and hydraulically crossgradient of the subject property. Based upon a review of the information included in the database report and available from the NYCOER website, as well as their distances and the presumed hydraulic gradient, it is unlikely that these sites represent a significant environmental concern to the subject property.

Seventy-four additional NYCOER listings were identified between one-quarter mile and one-mile from the subject property; however, based upon their distances in a dense urban area, the presumed hydraulic gradient, and/or that the subject property and surrounding area is supplied potable water from a municipal source, these facilities are unlikely to represent a significant environmental concern to the subject property.

Registered Drycleaning Facilities (DRYCLEANERS): Six DRYCLEANERS sites (Enterprise Cleaners, 37-26 30th Street; Citywide Cleaners, 39-28 30th Street; Queens Boro Cleaners, 39-26 30th Street; CK1 Pro Cleaners, 40-18 Crescent Street; Queensboro Cleaners, 40-35 24th Street; and New York Valet Service. 28-12 41st Avenue) were listed within a one-quarter mile radius of the subject property. Four of these six facilities were cross-referenced on the RCRA database as current or former hazardous waste generators, with no open/active violations. The two remaining facilities (39-28 30th Street and 28-12 41st Street) are located hydraulically cross- to downgradient of the subject property, Based on the information listed in the database report, their distances, and/or the presumed hydraulic gradient, it is unlikely that the listed DRYCLEANERS sites represent a significant environmental concern to the subject property.

Per- and Polyfuoroalkyl Substances (PFAS) Contamination Site List (NY PFAS): NY PFAS database includes select businesses, fire departments, fire training centers, bulk storage facilities, airports, Department of Defense facilities surveyed by the NYSDEC to help determine if these entities used or stored materials containing perfluorooctanoic acid (PFOA) and/or perfluroroctane sulfonate (PFOS) including aqueous film-forming fire-fighting foams (AFFFs) and dispersants used in Teflon coating operations.

One NY PFAS site (Double E Plating Co, 22-07 41st Street) was listed within a one-quarter mile radius of the subject property. This facility was historically occupied by a hand laundry and a service station/auto repair shop. The site was investigated under the NYC BCP and elevated concentrations of PFAS compounds were identified in groundwater. This property was subsequently remediated under the BCP, with a Site

Management Plan in-place to address residual contamination. Based on the information listed in the database report, its distance, the resumed hydraulic gradient, and/or its remedial status, it is unlikely that site represents a significant environmental concern to the subject property.

New York Spills Information Database (NYSPILLS): Nine NYSPILLS listings were identified within a one-eighth mile radius of the subject property. Each of the nine NYSPILLS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. One of the listed closed NYSPILLS sites is located adjacent to the subject property, and it is summarized as follows:

- Spill No. 19-11112 – 27-09 40th Avenue, adjacent to the south-southwest and hydraulically crossgradient of the subject property. This spill incident, which occurred on March 3, 2020, was generated in error by NYSDEC. However, chlorinated solvent impacts are associated with historic drycleaning operations at this property. This facility is listed on the NY BROWNFIELDS database, and as detailed previously, this site is considered a REC.

6.3 Tribal Records and EDR Proprietary Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
Indian Reservations	IRESERVE	1.0 mile	No	0
Indian Reservation - Leaking Underground Storage Tanks	ILTANKS	0.5 mile	No	0
Indian Reservation - Registered Underground Storage Tanks	IUST	0.25 mile	No	0
Indian Reservation – Voluntary Cleanup Program Sites	IVCP	0.5 mile	No	0
Indian Reservation – Open Dump Inventory Sites	IODI	0.25 mile	No	0
Manufactured Gas Plants	MGP	1.0 mile	No	0
Historic Cleaners	HISTCL	Site & Adjoining	No	0
Historic Auto Stations	HISTAS	Site & Adjoining	No	0

The database search did not generate any Tribal or EDR proprietary database listings for surrounding properties within ASTM radius guidelines that could potentially impact the subject property.

6.4 Orphan Site Summary

The database report also includes 17 "orphan" sites, which are properties where due to poor or inadequate address information the location of the property cannot be determined sufficiently for it to be included on the radius map. However, sites with similar street names or zip codes are summarized in the database report as these sites may present environmental risks to the subject property. BEC reviewed additional information available from EDR regarding these sites, as well as available USEPA and NYS data and maps to determine if the orphan site presents a significant environmental risk to the subject property. The listed Orphan sites do not appear to represent an environmental concern to the subject property.

7.0 SITE RECONNAISSANCE

7.1 Site Inspection

BEC representative Keith Butler inspected the subject property on September 12, 2024, accompanied by Mr. Evan Daniel of Modern Spaces, the property owner's representative. Mr. Daniel provided a brief site history and other general site information.

7.2 Methodology and Limiting Conditions

Site reconnaissance included a visual inspection of the building interiors, exterior areas, building systems (HVAC, plumbing, electrical, etc.), the sidewalk areas immediately adjoining the property, and the exteriors of adjacent properties. No limiting conditions were encountered during the survey.

7.3 Site Description

The subject property consists of a single tax parcel located on the western side of 28th Street, between 39th Avenue to the north, and 40th Avenue to the north, in the Long Island City section of the Borough of Queens, New York City, Queens County, New York. The subject property is identified by the street address of 39-36 28th Street, and as Borough 4 – Block 397 – Lot No. 31 on the NYC tax maps (Figures 1 through 4).

The property is currently developed with a 3-story multi-family residence, with a basement, and two 1-story detached garages. The residence occupies the northeastern portion of the property, fronts east along 28th Street and has a reported area of 3,120 SF. The garages (one 3-car and one-4-car) occupy the southwestern portions of the property, with estimated areas of 500 and 700 SF. The garages are accessible via a concrete-paved driveway which runs along the south side of the residence, leading from 28th Street. The area between garages is also concrete-paved. The remainder of the property consists of lawn/landscaped yard areas, except for small brick-paved patio areas at the front and rear of the residence. Site perimeters are bordered by chain-link fencing or bound by the site/adjacent buildings. The driveway entrance from 28th Street is gated. Sidewalks are east of the property along 28th Streets.

The residence is divided into three apartments (one per floor). The first and second floor apartments are occupied by residential tenants, while the third floor unit is currently vacant. The basement contains storage space, utilized by the property owner, and mechanical space. The garages are also utilized by the residential tenants.

7.4 Utilities

Based upon information provided to BEC and/or obtained during the site inspection, the following is a table of utilities supplied to the subject property and the names of the suppliers:

Utility	Provider
Domestic Water	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer	NYCDEP
Storm Sewer	NYCDEP
Electricity	Con Edison
Natural Gas	National Grid

7.5 Surrounding Land Use

The subject property is located in a densely developed, mixed-use urban area of Queens, known as Long Island City. The following surrounding land uses were observed during the Phase I ESA site inspection:

North: A 3-story multi-family residence (39-34 28th Street), followed by multi-family and single family residences

South: A 6-story residential apartment building (27-09 40th Avenue), followed by 40th Avenue, with a commercial/retail building beyond.

East: 28th Street, followed by the Growing Up Green Charter School (39-27 28th Street), with St. Patrick's Church to the southeast.

West: A 2-familty residence (39-39 27th Street) and a 9-story hotel building (39-35 27th Steet), followed by 27th Street, with a church beyond.

7.6 Interviews

Mr. Evan Daniel of Modern Spaces, the property owner's representative, provided site access and were present during the site inspection. In addition, Mr. Daniel provided a brief site history and general site information. Pertinent statements made by Mr. Daniel are included throughout this report.

7.7 Summary of Environmental Site Features

7.7.1 Chemical Use and Storage

Small quantities of paints and typical household cleaning and maintenance chemicals were observed within janitorial/storage areas throughout the residence. The identified materials are stored in retail-size containers and their storage is consistent with normal building cleaning, maintenance and construction activities. The on-site storage of these materials is not considered a REC.

7.7.2 Hazardous and Non-Hazardous Waste Storage and Disposal

No evidence that regulated hazardous materials and/or hazardous wastes are generated, treated, stored, or disposed of at the subject property was observed on the date of the survey. In addition, the regulatory records review and interviews did not reveal evidence of any activities involving the production of hazardous waste at the subject property.

Solid wastes and recyclables generated by site occupants are placed in trash cans/bags which are stored on pavement at the rear of the eastern garage. The wastes are placed curbside for collection by the NYS Department of Sanitation. No evidence of staining or liquid wastes was observed around the cans/bags. No RECs, associated with solid waste generation, storage, and disposal were identified on the subject property during the reconnaissance or through personnel interviews.

7.7.3 Underground and Aboveground Storage Tanks

The residential building is heated and supplied with hot water by fuel oil-fired equipment. A fuel oil-fired boiler was observed withing a basement mechanical room. The boiler is supplied fuel from a 275-gallon steel AST located within the basement. Fill and vent lines associated with the AST protrude through the eastern building wall and are accessible via the paved sidewalk area east of the residence. No evidence of spills, staining, or odors was observed below or adjacent to the AST or associated interior and exterior piping. In addition, no evidence of underground storage tanks (i.e., vent or fill pipes) was observed on the subject property at the time of the site inspection. The EDR database report did not identify any registered petroleum or chemical ASTs or USTs for the site, and there are no known spills/releases attributed to the property. As the capacity of the AST is below 1,100-gallons it is not required to be registered with NYSDEC. However, the tank is permitted with FDNY.

The residential building also utilizes natural gas for cooking, with multiple gas meters observed within the building basement. The garages are unheated.

Additional information may be available in files maintained by the FDNY, NYCDEP and/or NYCOER, however, no responses to BEC's FOIL requests have been received to date. Any information received from these agencies will be reviewed upon receipt and pertinent information forwarded to the client.

7.7.4 Sanitary and Stormwater Disposal

The subject property is serviced by the NYC municipal sewer system.

Storm drains and floor drains that discharge directly to subsurface soils pose a potential environmental concern because they provide a pathway for impacts to the subsurface and are classified as Class V injection wells under the USEPA's Underground Injection Control (UIC) program. These structures are required to be properly closed or permitted to stay open.

No storm drains were observed on the property at the time of the site inspection. Storm water from the subject property drains to curbside drains along 28th and infiltrates to the ground in unpaved areas. Curbside drains discharge to the NYC municipal sewer system.

No floor drains were observed within the residential building or the two garages at the time of the site inspection.

7.7.5 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

Fluorescent light ballasts were observed within some of the inspected portions of the residence, which based on the age of the building, may contain PCBs. The disposal of leaking PCB ballasts is subject to federal regulations. No evidence of leakage associated with observed light ballasts was apparent as viewed from ground level. Based on the age of the structure and the potential for the fluorescent light ballasts to contain PCBs, the light ballasts are considered an environmental concern for the subject property. No electrical transformers, hydraulic automotive lifts, elevators, or other equipment suspected to contain PCBs were identified on the property at the time of the site inspection.

7.7.6 Debris, Dumping and Surficial Staining

No evidence of chemical spills, stains or odors was observed on the subject property at the time of the site inspection. Based on the review of historical and regulatory records, no evidence of landfills, and/or direct burial activities was observed on or proximate to the subject property.

7.7.7 Stressed Vegetation

No stressed vegetation was present at the time of inspection.

7.7.8 Other Environmental Concerns

BEC also inspected the subject property for evidence of the following potential environmental concerns:

OTHER AREAS OF CONCERN		
Area of Concern	**Not Observed**	**Observed**
Chemical/Petroleum Odors	X	
Pools of Liquid	X	
Stains or Corrosion	X	
Unidentified Containers	X	
Pits, Ponds, or Lagoons	X	
Monitoring or Other Wells		X
Stained Soil or Pavement	X	
Air Quality	X	
Stressed Vegetation	X	

Monitoring or Other Wells

The site inspection identified the presence of two groundwater monitoring wells within the sidewalk area east of the subject property. Review of documents available from the NYSDEC website for the adjacent NY

BROWNFIELDS site (27-09 40th Avenue) reveals that the wells (one groundwater monitoring and one soil vapor sampling point) are part of the monitoring well network associated with the brownfields site. The most recent analytical data available (2020) revealed elevated concentrations of chlorinated solvents in both groundwater and soil vapor. As noted previously the adjacent brownfields site and the presence of impacted groundwater and soil vapor adjacent to the subject property is considered a REC.

8.0 NON-SCOPE CONSIDERATIONS

8.1 Radon

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Long Island City area is not a radon risk area. The EDR report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 81 radon tests have been conducted in Queens County. Test results indicate average radon concentrations of 0.62 pCi/L (first floor level) and 0.97 pCi/L (basements). Data indicate that approximately two percent of basements tested showed results in excess of the 4.0 pCi/L USEPA action level.

Additional data (May 2023) obtained from the NYSDOH indicates that 565 basement radon tests have been conducted in Queens County, with average radon basement concentration of 1.23 pCi/L. Based on these data, radon is not likely to represent an environmental concern for the subject property.

8.2 Lead-Based Paint

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. A visual inspection of painted surfaces conducted during the site inspection indicated that interior paint was in generally good to fair condition, with some areas of chipping or peeling within the basement of the residence. The garage interiors, where painted, fair to poor condition with areas of chipping, peeling and well-worn paint. The building exteriors (residence and garages) were finished with unpainted vinyl siding. The lead content of the paints is unknown; however, given the ages of the buildings, the presence of LBP is possible. Since the site improvements are used for residential purposes, lead-based paint is considered an environmental concern. In addition, the building may be subject to LBP testing and other requirements specified in NYC Local Law No. 1 for 2004. The disposal of lead paint waste resulting from renovation or demolition activities may be subject to federal and State regulations.

8.3 Asbestos-Containing Materials

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because

when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACMs). Suspect asbestos-containing acoustic ceiling tile, pipe insulation, and sheetrock/plaster were observed within the residence. The suspect ACMs were in good condition at the time of the site inspection. In addition, due to the age of the buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos. No sampling of suspect ACMs was conducted in coordination with this Phase I ESA.

Thermal insulation, surfacing materials, and vinyl/asphalt floor materials installed before 1981 are presumed to contain asbestos. The Occupational Safety and Health Administration (OSHA) asbestos standards (effective October 1995) require owners of commercial or industrial buildings (constructed before 1981) to identify potential asbestos hazards, keep records about potential asbestos hazards, post signs to warn of asbestos hazards, and communicate information about the hazards.

8.4 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Brooklyn, NY and Central Park, NY-NJ Quadrangles, indicates that there are no NYS freshwater wetlands located within a one-mile radius of the subject property.

Tidal wetlands line much of the saltwater shore, bays, inlets, canals, and estuaries of Long Island and New York City, and Westchester County. The tidal wetlands regulations apply anywhere tidal inundation occurs on a daily, monthly, or intermittent basis, including but not exclusively within the salt wedge. Vegetation in intertidal areas beyond the range of the salt wedge is classified as coastal fresh marsh. In accordance with the New York State Tidal Wetlands Land Use Regulations (6 NYCRR Part 661), sixteen wetland categories are defined in the regulations. Coastal and tidal freshwater wetlands categories are identified by the presence of a tide and the types of vegetation present. The categories of wetlands and the restrictions placed on activities in and around them are defined in detail in 6 NYCRR Part 661.

BEC also reviewed NYSDEC Tidal Wetlands Maps available online. The tidal wetlands map (No. 588-510) showing the subject and surrounding properties indicates that Dutch Kills, located approximately 0.7 mile south of the subject property, is classified as a Littoral Zone (LZ) tidal wetland. LZ wetlands are defined as

the tidal wetland zone that includes all lands under tidal waters which are not included in any other category. There shall be no LZ under waters deeper than six feet at mean low water.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicates that the nearest potential federal wetlands are located approximately 0.7 mile south of the subject property and associated with Dutch Kills. The wetlands are classified as E1UBLx wetlands, which are defined as excavated (man-made) subtidal estuarine water bodies with unconsolidated bottoms, which are permanently flooded. Additional information obtained from the FWS website is included in Appendix E.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the subject property is located within the 100-year or 500-year flood zones. The FIRM showing the property (No. 3604970093F) indicates that entire property is located outside the 100-year and 500-year flood zones. This indicates that there is a minimal risk of flooding at the subject property.

8.5 Mold and Water Damage

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. No visual or olfactory evidence of mold was identified at the subject property during the site inspection.

8.6 Vapor Encroachment

As part of this assessment, BEC evaluated the potential for vapor encroachment into onsite structures following the general methodology outlined in ASTM E-2600-10 utilizing professional judgment. The Tier 1 screening assessment was employed to determine if a potential vapor encroachment condition (VEC) exists at the site. The site, adjoining properties and hydraulically upgradient properties were assessed for known or suspected contaminated facilities within approximate minimum search distances. A Tier 1 screening

assessment generally consists of the following: a search distance test to identify if there are any known or suspected contaminated sites within the area of concern (AOC); a chemicals of concern (COC) test to determine if chemicals of concern exist at the known or suspected contaminated facilities and a plume test to determine whether or not COC in the contaminated plume may be within the critical distance (or AOC). The critical distance is defined as the linear distance in any direction from the nearest edge of the plume to the site. If the critical distance from the site to the nearest edge of a petroleum hydrocarbon plume is within 528 feet (1/10-mile) or within 1,760 feet (1/3-mile) for nonpetroleum COC (e.g., trichloroethylene, perchloroethylene, etc.), then it is assumed that COC are within the AOC and a potential VEC exists, and additional screening may be necessary. The critical distance and AOC may be modified using professional judgment based on hydraulic gradient direction and contaminant plume width.

The decision to recommend additional screening, even if a potential VEC is determined by distance, is based on other criteria including existing and planned use of the property, type of structures potentially impacted, physical setting, hydraulic gradient, depth to groundwater, soil characteristics, activities in the surrounding area and the presence of natural or manmade conduits. Based on an evaluation of this collective criteria, the potential for a VEC from current and surrounding land use activities is considered high due to the documented presence of chlorinated solvent impacts to soil vapor and groundwater adjacent to the south and east of the subject property, which are attributable to the former drycleaning operations at the adjacent BCP site (29-07 40th Road). The potential soil vapor intrusion risk is considered a REC and should be evaluated as part of a Phase II investigation. BEC notes that soil vapor sampling is a required part of the NYCOER E-Designation HazMat investigation program.

9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA has been prepared in conformance with the scope and limitations of ASTM Practice E1527-21 (inclusive of the USEPA all appropriate inquiry requirements) for the residential property located on the western side of 28th Street, between 39th Avenue to the north, and 40th Avenue to the north, in the Long Island City section of the Borough of Queens, New York City, Queens County, New York. The subject property is identified by the street address of 39-36 28th Street, and as Borough 4 – Block 397 – Lot No. 31 on the NYC tax maps. Any exceptions to, or deletions from, this practice are described in the section of the report entitled Limitations and Exceptions.

Based on the results of the site inspection, records review and interviews, it was determined that there was one REC identified for the subject property. RECs are those conditions, which could adversely affect the environmental integrity of the property. No historic recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs) were identified. The identified REC is summarized below:

- Information obtained from the regulatory agency database and the NYSDEC revealed that the southern adjacent property (29-07 40th Avenue) was listed on the Inactive Hazardous Waste Site (SHWS) and Brownfield Cleanup Program (BCP), as well as several other State and local databases. Investigations conducted at this property since 2008 revealed the presence of CVOCs and metals-impacted soil. Groundwater and soil vapor were also significantly impacted with CVOCs. A groundwater monitoring well, and a soil vapor sampling point associated with this site were observed in the sidewalk adjacent to the east of the subject property. A review of sampling data from these wells obtained from the NYSDEC (2020) revealed elevated CVOC concentrations in both soil vapor and groundwater samples. The documented presence of soil vapor and groundwater impacts adjacent to the subject property and the potential soil vapor intrusion risk is considered a REC.

Based upon the above findings and conclusions, BEC recommends following:

- Potential impacts to groundwater, soil vapor, and/or indoor air quality related to documented chlorinated solvent impacts attributed to the southern adjacent SHWS and BCP site, should be evaluated by conducting a subsurface investigation. At a minimum, the investigation should include

the installation of soil borings with the collection of representative samples for laboratory analysis to document subsurface conditions and determine the nature and extent of contamination (if present). Since the subject property also has an E-Designation for hazardous materials there is an option to conduct a due diligence Phase II or a more extensive investigation to satisfy the E-Designation requirements in conjunction with the re-development of the site.

In addition to the aforementioned REC, BEC identified several environmental concerns (ASTM Non-Scope issues/BERs) for the subject property. The environmental concerns/BERs and BEC's recommendations are summarized as follows:

- The subject property was listed on the E-Designation database as having an E-HazMat restriction (E-218), which was determined during the Dutch Kills Rezoning and Related Actions completed by the City in October 2008 (CEQR 08DCP021Q). The HazMat E-designation requires the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designation is considered a BER.

- Fluorescent light ballasts were observed within some of the inspected portions of the residence, which based on the age of the building, may contain PCBs. BEC recommends that a PCB survey be performed prior to demolition and/or renovation activities. Any PCB-containing equipment affected by the development of the site must be properly managed during demolition and/or renovation activities. In addition, while the disposal of non-leaking PCB ballasts is not currently regulated by the USEPA, BEC recommends that the PCB ballasts be packaged in a lined, steel drum containing an absorbent material and disposed of as PCB-waste to reduce the potential for environmental contamination and potential liability for cleanup of any environmental release of PCBs from the ballasts.

- Interior paint was in generally good to fair condition, with some areas of chipping or peeling within the basement of the residence. The garage interiors, where painted, fair to poor condition with areas of chipping, peeling and well-worn paint. The building exteriors (residence and garages) were finished with unpainted vinyl siding. The lead content of the paints is unknown; however, given the ages of the buildings, the presence of LBP is possible. Since the site improvements are used for residential purposes, lead-based paint is considered an environmental concern. Therefore, BEC recommends that a lead paint survey be conducted prior to any renovation/demolition activities. The

disposal of lead paint waste resulting from renovation or demolition activities may be subject to federal and NYS regulations. Additionally, the building may be subject to LBP testing and other requirements specified in NYC Local Law No. 1 for 2004.

- Suspect asbestos-containing acoustic ceiling tile, pipe insulation, and sheetrock/plaster were observed within the residence. The suspect ACMs were in good condition at the time of the site inspection. In addition, due to the age of the buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

  If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then BEC recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a NYS-licensed contractor must be retained to remove the asbestos in accordance with federal and NYS regulations.

10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions, ASTM Practice E1527-21, inclusive of the USEPA "All Appropriate Inquiry" requirement published in the Federal Register on November 1, 2005. The USEPA "All Appropriate Inquiry" requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under CERCLA.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 part of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the site referenced above. BEC has developed and performed the "All Appropriate Inquiries" in conformance with the standards and practices set forth in 40 CFR Part 312.

Section 11.0 contains the data gaps and deficiencies of the research data encountered during BEC's preparation of this report.

QUALIFICATIONS OF

ENVIRONMENTAL PROFESSIONAL

Keith W. Butler, Associate Senior Project Manager

PROFILE

Mr. Butler has extensive project management experience with respect to environmental due diligence and subsurface investigations. He is responsible for the preparation of project proposals, Phase I and II Environmental Site Assessments, Work Plans, Health and Safety Plans, Quality Assurance Project Plans, and investigation reports. Additionally, Mr. Butler has conducted and managed numerous Phase I and II ESAs. In these roles, Mr. Butler is responsible for applying the various state and local regulations, which govern environmental compliance and determine the need for additional investigation and/or remediation.

SELECTED PROJECTS

Madison National Bank, Various Sites, New York

Mr. Butler served as the Project Manager and principal contact for Madison National Bank. He was responsible for the preparation of Transaction Screen and Phase I/II Environmental Site Assessments (ESAs) at various sites throughout the New York metropolitan area, as required by the bank to satisfy client mortgage or construction loan requests.

Jewish Home & Hospital, Manhattan, NY

Most recently, Mr. Butler completed a Phase I ESA at their Bronx campus to obtain US. Housing and Urban Development (HUD) funding for a future construction project. Mr. Butler was also responsible for implementing a Remedial Action Work (RAW) Plan at the Bronx facility as required by the NYSDEC under a Voluntary Cleanup Agreement. The RAW included the preparation of contract documents, excavation of over 2,000 tons petroleum contaminated soils, installation of a Soil Vapor Extraction (SVE) system remedial oversight, and sampling.

Pulte Homes of New York, Patchogue, NY

Mr. Butler served as the Project Manager for the re-development of this six-acre site and was responsible for field oversight and coordination between remediation contractors and various regulatory agencies. Initial phases of the project included the completion of Phase I and II ESAs. Subsequent remediation consisted of UST removal, excavation of petroleum-impacted soils, closure of three NYSDEC spill numbers, removal of contaminated UIC sediment/sludge, the closure of commercial and residential UIC structures and the excavation of arsenic and metals contaminated soil. The project was conducted under approved Remedial Work and Soil Management Plans with oversight from the State, County and Village agencies.

Town of Islip, Blydenburgh Road Landfill, Hauppauge, NY

Mr. Butler served as the Project Manager for the groundwater and leachate monitoring program at the Blydenburgh Road Landfill - Cleanfills 1 and 2 and Leachate Impoundment Area. Mr. Butler was the principal contact for the Town's Resource Recovery Agency. He prepared the quarterly and annual monitoring reports, oversaw sampling efforts, and coordinated with the Town's analytical laboratory and data validation contractors. Mr. Butler was also responsible for preparing quarterly well condition reports and leachate quality reports for compliance with the Town's Suffolk County Discharge Certification Permit.

Ogden Aviation, Various Sites, JFK International Airport, Jamaica, New York

Mr. Butler served as the project manager for the rehabilitation of the satellite fuel farm recovery well system. Recovery wells at the fuel farm had become clogged with iron deposits and bacteria limiting product recovery efforts. Mr. Butler developed and supervised chemical cleaning and redevelopment of recovery wells under the approval of the NYSDEC. The chemical treatment has resulted in significant increases in product recovery volumes.

Brookhaven National Laboratory, Upton, NY

Mr. Butler has worked on a number of remediation system and monitoring well installation projects at BNL. His duties included oversight of installations, system pump tests, performance evaluations, and well development. He also provided oversight of soil borings, temporary well construction, soil and water sampling, and air monitoring for groundwater screening survey of two operable units in hazardous and radioactive waste storage areas. Mr. Butler also provided oversight for groundwater monitoring, well construction, well abandonment, and methane-monitoring wells for landfill closure.

metroPCS, Various Sites, New York

Mr. Butler served as the Project Manager for metroPCS' Long Island region telecommunications site acquisition and expansion program. Mr. Butler was responsible for the preparation of Phase I ESAs, the conduct of Phase II ESAs, including asbestos, lead paint and soil sampling, and coordination of National Environmental Policy Act (NEPA) reports and planning studies at various locations proposed for construction of new cellular telephone facilities. Reports and associated communications were transmitted electronically through metroPCS' data management system.

Dormitory Authority - State of New York, Harlem Hospital Center Modernization Project - Hazardous and Universal Waste Survey, Harlem Hospital, New York, NY

Mr. Butler served as the field team leader for conducting hazardous and universal waste surveys in multiple buildings affiliated with Harlem Hospital Center. The survey included the identification of hazardous and universal waste materials including chemicals, paints, fluorescent bulbs, high intensity discharge bulbs/fixtures, battery operated equipment, above and underground petroleum storage tank identification, PCB containing light ballasts and electrical equipment.

The hospital is comprised of a number of buildings, many that were abandoned and slated for demolition.

SVE Monitoring at Newark International Airport, Elizabeth, NJ
A routine leak detection test indicated that two 10,000-gallon underground storage tanks, which were used to store unleaded gasoline, had failed tightness tests. Follow-up investigation revealed that the product had impacted the subsurface environment. In response to this, a soil vapor extraction system was installed to reduce the residual concentrations of petroleum constituents in soil and groundwater and to minimize vapor migration into subsurface utility vaults. Mr. Butler was responsible for implementing the Remedial Action Work Plan, developed for the site by Ogden and the State of New Jersey. Activities conducted under the RAW include quarterly groundwater monitoring, air sampling, vacuum pressure monitoring, system maintenance and reporting.

Federal Express Site, Newark International Airport, Elizabeth, NJ
Mr. Butler worked with Ogden Aviation and the State of New Jersey to address outstanding environmental issues at the site related to a spill of jet fuel, which occurred during a construction accident. Mr. Butler performed a site assessment, which included groundwater monitoring, product gauging, and groundwater flow modeling. After reviewing these data, Mr. Butler determined that fill material at the site was contributing to soil and groundwater contamination and has petitioned the State for partial site closure. Mr. Butler is continuing to address the remaining area of concern through product recovery and continued monitoring.

Northrop Grumman, Various Sites
Mr. Butler conducted three Phase I ESAs and a Phase II investigation for the presence of PCBs in soil. He also inspected and supervised the removal of underground storage tanks, asbestos abatement projects, and sanitary system closures related to the facility decommissioning. Mr. Butler also conducted groundwater investigations and provided oversight during soil sampling, drilling and soil remediation activities.

New York City Department of Environmental Protection, Various Sites
Mr. Butler served as an Environmental Scientist for hazard investigation at seven sewage pump stations. Mr. Butler addressed a wide range of environmental concerns including asbestos, lead based paints, PCB oil, light ballasts, and other hazardous building materials. He conducted field investigations, sampling, and prepared Hazardous Materials Survey Reports for use during preparation of plans and specifications for proposed pump station construction projects.

Fresh Kills Landfill, Staten Island, New York
Mr. Butler participated in the field operations during pump and yield tests conducted on Cells 1 and 9. The tests were performed to determine the hydraulic properties of the landfill's refuse. He collected groundwater and leachate measurements in recovery wells and in adjacent observation wells under pumping and non-pumping conditions.

Form 55-25M-70141 — 155

DEPARTMENT OF HOUSING AND BUILDINGS

BOROUGH OF Queens, CITY OF NEW YORK

No. Q 33868

Date 1/9/46

CERTIFICATE OF OCCUPANCY

(Standard form adopted by the Board of Standards and Appeals and issued pursuant to Section 646 of the New York Charter, and Sections C26-181.0 to C26-187.0 inclusive Administrative Code 2.1.3.1. to 2.1.3.7. Building Code.)

This certificate supersedes C. O. No.

To the owner or owners of the building or premises:

THIS CERTIFIES that the new—altered—existing—building—premises located at XXXXXXX

Radde St. W8. 117' N. Paynter Ave. Block 397 Lot 51

, conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646F of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

N/A

N.B. or Alt. No. XXXXX 9521/27 Construction classification— Metal

Occupancy classification— Commercial Height 1 stories, 8 feet.

Date of completion— 8/25/27 Located in Bus. Use District.

B Area 1 Height Zone at time of issuance of permit

This certificate is issued subject to the limitations hereinafter specified and to the following resolutions of the Board of Standards and Appeals: (Calendar numbers to be inserted here)

PERMISSIBLE USE AND OCCUPANCY

STORY	LIVE LOADS Lbs. per Sq. Ft.	PERSONS ACCOMMODATED MALE	FEMALE	TOTAL	USE
1 On gr.					Garage for One car.

John J. Kelleher

Borough Superintendent.

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there by any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the directionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachment into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§.646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

Request a Record

Please make your request specific so you receive the fastest service. After you submit a FOIL request you will receive a confirmation number so you can track the status of the response. The agency will notify you about how much time is required to respond to your request.

Category (optional)

Selecting a category helps clarify which agency will receive the request by listing agencies grouped by categories.

Environment

Agency (required)

Select the agency that will handle your request.

Department of Environmental Protection (DEP)

Request Title (required)

Phase I ESA

79 characters remaining

Note: The agency, category, and title of your request will be visible to the public. Do not enter personal information here.

Ex: Queens Blvd Roadwork Permit.

Request Description (required)

All documents regarding the environmental condition and/or the historic use of the property at 39-36 28th Street, Long Island City, NY 11101. (Block 397, Lot No. 31). The documents are being requested in conjunction with the preparation of a Phase I Environmental Site Assessment (ESA).

4712 characters remaining

Note: The request details you write here will not be visible to the public. However, the agency may post a description of the records provided.

Ex: Roadwork permits for work done in on Queens Blvd. between 40th and 45th streets, Borough of Queens, in September and October 2017.

Upload File (optional, must be less than 20 Mb)

Choose File

No file uploaded

Re: Freedom of Information Request
39-36 28th Street
Block 397, Lot No. 31
Long Island City, New York 11101

Dear Sir or Madam:

Our firm has been retained to prepare an Environmental Assessment for the above-referenced properties. We are respectfully requesting information regarding any flammable storage permits, chemical or petroleum storage, spills, registered above or underground storage tanks, air discharge permits, investigations of environmental concern (e.g., asbestos, lead paint), etc. for the facility. We agree with the department's decision to omit any health or personal identification in the records provided.

If you require additional information to respond to this request or if there are costs associated with same, please, do not hesitate to contact me. Thank you for your cooperation.

Sincerely,

Brussee Environmental Corp,

Keith Butler
Associate Senior Project Manager

Contact: Keith Butler

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by KB Environmental Assessment were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by KB Environmental Assessment were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA
Project: BEC2415

Coordinates:

Latitude:	40.75315 40° 45' 11" North
Longitude:	-73.936305 -73° 56' 11" West
UTM Zone:	Zone 18 North
UTM X Meters:	589792.07
UTM Y Meters:	4511899.10
Elevation:	39.00' above sea level

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 05/22/2024 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 13 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 7 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/01/2024 has revealed that there are 20 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 03/25/2024 has revealed that there are

4 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 07/30/2024 has revealed that there are 56 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 44 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/30/2024 has revealed that there are 9 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 57 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that

there are 7 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 28 UST FINDER sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 12 E MANIFEST sites within approximately 0.25 miles of the target property.

NY PFAS: DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

A review of the NY PFAS list, as provided by EDR, has revealed that there is 1 NY PFAS site within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there are 99 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Record Added Date:	08/26/2020
Record Updated Date:	10/17/2023
Update By:	DKMACNEA
Site Description:	"LOCATION: This is an off-site investigation of the area near the 27-09 40th Avenue site (C241241). The site is located at 27-03 to 27-11 40th Avenue and the lot on the corner of 28th Str and 40th Avenue, designated as 39-44 28th Street. The site is in Long Island City, an urban area. SITE FEATURES: The soil vapor investigation area encompasses adjacent residential structures and a charter school across the street (in an upgradient direction) from the site. If necessary, future investigation may extend along 28th Street from 39th Ave to 40th Avenue, along 27th Street from 39th Avenue to 40th Avenue, and along 40th Ave between 27th and 28th Street. CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-2/R5D. The former buildings at this site were commercial, and commercial buildings are on the south side of 40th Ave. There are residential buildings north and east of the site. HISTORICAL USES: The site was developed by 1970 (27-03 40th Avenue), 1950 (27- 09/27-11 40th Avenue), and 1947 (39-44 28th Street), and has been used for industrial and commercial purposes since then. Historic uses at the site include an auto body shop (1977-~2006) at 27-03 40th Avenue; a dry cleaning facility (~2005-2019), auto sales (1991-2005), a woodworking shop (2005-~2017), and a scientific glass factory (1950-1991) at 27-09/27-11 40th Avenue; and a photoengraving shop (1947-2006), an auto repair facility (2000-2005)and a machine shop (2014-2019)and at 29-44 28th Street. The two eastern most lots have an are

27-09 40TH AVENUE - OFF-SITE (Continued) **S127750692**

E-Designation for hazardous materials from the New York City Office of Environmental Remediation. SITE HYDROLOGY/GEOLOGY: A 2019 geotechnical investigation described the subsurface geology as 1.5 to four (4) feet of fill underlain by sand with varying amounts of silt and gravel to approximately 60 feet bgs. Clay layers were identified between 35 and 60 feet bgs, and bedrock was reportedly encountered in one boring at a depth of 50 feet bgs. The regional groundwater flow direction is toward the west, and the depth to groundwater is approximately 35 feet bgs. "

Env Problem: "Nature and Extent of Contamination: This description reflects the limited sampling collected off-site during the supplemental RI investigation, and results from sampling of 2 off-site structures. Groundwater was analyzed for volatile organic compounds VOCs. Soil vapor, sub-slab and indoor were analyzed for VOCs. Soil- Off-site soil was not sampled during the investigation. On-site soil sampling identified primary contaminants of metals and chlorinated VOCs. Lead in soil ranges up to 767 ppm, compared to the residential soil cleanup objectives(RRSCO) of 400 ppm. Perchloroethylene (PCE) commonly used in drycleaning was detected in soil at up to 11 ppm. The RRSCO for PCE is 19 ppm, however, since PCE is also found in groundwater, the protection of groundwater soil cleanup of objective (PGSCO)of 1.3 ppm is used for comparison. Follow-up sampling in 2020 indicated the maximum PCE concentration on site was 30 ppm, approximately 3-5 feet below grade. Groundwater- Four off-site wells placed in sidewalks proximate to the site contained PCE ranging from 11 to 67 ppb. Groundwater is located at approximately 35 feet below ground surface. Samples were obtained from six on-site wells. Three contained PCE, ranging from 46-400 ppb, compared to a standard of 5 ppb. The two highest PCE concentrations were in wells on the west and north site boundaries. Groundwater on site is expected to flow west toward the East River. Soil Vapor - In 2019 on-site soil vapor samples were collected at 25' below grade at 7 locations across the site in 2019. Soil vapor contained PCE and trichloroethylene (TCE). The maximum amount of PCE measured was 1,600,000 micrograms per cubic meter (g/m3); the maximum TCE concentration was 4800 ug/m3. In 2020, on-site sampling in 2020 showed PCE up to 270,000 ug/m3 and TCE up to 1200 ug/m3. In 2020, off-site soil vapor values ranged from 180-920 ug/m3 PCE and 2.3-29 ug/m3 TCE. These levels required investigation of off-site soil vapor intrusion. Two nearby off-site structures were sampled in January 2021. One structure was offered a mitigation system and one structure falls under continue to monitor. Structure that was offered mitigation has not accepted a SSDS. Excavation at the site during 2022 has removed the soil source areas; reassessment of the affected structure is likely if an SSDS is agreed to by owner. "

Health Problem: "Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion (SVI). SVI was evaluated and actions are recommended to address potential for exposures to contaminants in indoor air coming from the C241241 site. "

Site Description: "This site has entered the NYS BCP program as C241241. Location: The 27-09 40th Avenue Site is located in Long Island City, and consists of three separate, contiguous parcels with addresses of 27-03 40th Avenue, 27-09 and 27-11 40th Avenue, and 39-44 28th Street. Site Features: The site is currently occupied by three, vacant 1-story commercial buildings (one building on each parcel). The building at 39-44 28th Street has a partial basement in the northeastern portion of the property; the other buildings are slab-on-grade. There is an alley on the northwest side of Lot 35, between the buildings at 27-03 40th Avenue and 27-09/27-11 40th Avenue. Current Zoning and Land Use: The current zoning designation for the site is M1-2/R5D, allowing for mixed residential, community facility, commercial, and light industrial uses. The site is bounded by 40th Avenue to the southwest;

27-09 40TH AVENUE (Continued) **S125896294**

a 3-story public facility associated with a house of worship/28th Street to the east; residential buildings to the north and west. Past Use of the Site: According to a Phase I Environmental Site Assessment (ESA) report dated January 28, 2019, the site was developed with the current structures by 1970 (27-03 40th Avenue), 1950 (27- 09/27-11 40th Avenue), and 1947 (39-44 28th Street). According to the Phase I ESA, the site appeared to have been used for industrial and commercial purposes since its development. Historic uses at the site that suggest the possibility for potential environmental impacts include an auto body shop (1977-~2006) at 27-03 40th Avenue; a dry cleaning facility (~2005-2019), auto sales (1991-2005), a woodworking shop (2005-~2017), and a scientific glass factory (1950-1991) at 27-09/27-11 40th Avenue; and a photoengraving shop (1947-2006), a machine shop (2014-2019), and an auto repair facility (2000-2005) at 29-44 28th Street. Historic fire insurance maps show that the site maintained residential buildings prior to 1936. The initial investigation with regulatory involvement was the 2019 site investigation for the New York City Office of Environmental Remediation, to address the requirements associated with the E-Designation for hazardous materials assigned to the eastern two parcels (27-09/27-11 40th Avenue and 29-44 28th Street). Site Geology and Hydrogeology: The report documenting a recent geotechnical investigation described the subsurface geology as 1.5 to four (4) feet of fill underlain by sand with varying amounts of silt and gravel to approximately 60 feet bgs. Clay layers were identified between 35 and 60 feet bgs, and bedrock was reportedly encountered in one boring at a depth of 50 feet bgs. The regional groundwater flow direction is toward the west, and the depth to groundwater measured in the temporary wells installed as part of a 2019 site investigation was approximately 35 feet bgs. "

Env Problem: "Site has entered the BCP Program as Site C241241. Nature and Extent of Contamination: Various investigations have occurred at the site since 2008. The investigation results are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and poly-fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- Soil sampling occurred in shallow soils (1-3 feet) and deep soil (25-27'). The primary contaminants found in soil at this site are metals and chlorinated VOCs. Lead in soil ranges up to 767 ppm, compared to the residential soil cleanup objectives(RRSCO) of 400 ppm. Perchloroethylene (PCE) commonly used in drycleaning was detected in soil at up to 11 ppm. The RRSCO for PCE is 19 ppm, however, since PCE is also found in groundwater, the proection of groundwater soil cleanup of objective (PGSCO)of 1.1 ppm is used for comparison. Data does not indicate any off-site soil impacts related to this site. Groundwater- Samples were obtained from one on-site well. It contained PCE at 64 ppb, compared to a standard of 5 ppb, and chloroform at 670 ppb compared to 7 ppb. Groundwater is located at approximately 35 feet below ground surface. Groundwater on site is expected to flow west/southwest toward the East River. For PFAs, perflurooctanoic acid (PFOA) was reported at concentration of 3.28 parts per trillion (ppt) and perfluorooctane sulfonic acid (PFOS) was not detected. Both were below the 10 ppt screening levels for groundwater. No other individual PFAs exceed the 100 ppt screening level. The total concentration of PFAs, including PFOA and PFOS, was

27-09 40TH AVENUE (Continued) **S125896294**

reported at 36.39 ppt, below the 500 ppt screening level for total PFAs in groundwater. 1,4 dioxane was reported at concentrations of up to 3.12 parts per billion (ppb) exceeding the screening level of 1 ppb in groundwater. Soil Vapor - Soil vapor samples were collected at 25' below grade at 7 locations across the site. Soil vapor contained PCE and trichloroethylene (TCE). The maximum amount of PCE measured was 1,600,000 micrograms per cubic meter (g/m3); the maximum TCE concentration was 4800 ug/m3. These values require further investigation. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description: "Location: The 27-09 40th Avenue Site is located in Long Island City,

27-09 40TH AVENUE (Continued) **S125896294**

and consists of three separate, contiguous parcels with addresses of 27-03 40th Avenue, 27-09 and 27-11 40th Avenue, and 39-44 28th Street. The three lots total 0.4 acres. Site Features:The site is currently vacant. The three 1-story commercial buildings at the site were demolished in March 2020. The building at 39-44 28th Street had a partial basement in the northeastern portion of the property; the other buildings were slab-on-grade. Current Zoning and Land Use: The current zoning designation for the site is M1-2/R5D, allowing for mixed residential, community facility, commercial, and light industrial uses. The site is bounded by 40th Avenue to the south; 28th Street to the east; and residential buildings to the north and west. Past Use of the Site: Prior to 1936, residential buildings were at the site. Two of the site parcels were developed in 1947 (29-44 28th Street) and 1950 (27-09/27-11 40th Avenue). The western parcel (27-03 40th Avenue) was developed by 1970. Historic uses include an auto body shop (1977-2006) at 27-03 40th Avenue; a dry cleaning facility (2005-2019), auto sales (1991-2005), a woodworking shop (2005-2017), and a scientific glass factory (1950-1991) at 27-09/27-11 40th Avenue; and a photoengraving shop (1947-2006), auto repair facility (2000-2005) and a machine shop (2014-2019) at 29-44 28th Street. Site Geology and Hydrogeology: Boring logs indicate 1-2 feet of historic fill, underlain by sand to approximately 10 feet below grade. Silty clays are found from 10 feet to approximately 30-35 feet across the site, underlain by a clay layer that appears to be at least five feet thick. A geotechnical investigation identified clay layers between 35 and 60 feet below ground surface (bgs), and bedrock was reportedly encountered in one boring at 50 feet bgs. The regional groundwater flow direction is toward the west. The depth to groundwater is approximately 35 feet bgs."

Env Problem:

"Nature and Extent of Contamination: Various investigations have occurred at the site since 2008. The investigation results are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides and for the emerging contaminants per- and poly-fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs.The primary contaminants found in soil at this site are metals and chlorinated VOCs. Soil- Lead in soil ranges up to 767 parts per million (ppm), compared to the unrestricted use soil cleanup objectives (UUSCO) of 63 ppm. Other metals exceed unrestricted SCOs (UUSCO) in the top two feet of soil including mercury, barium, copper and zinc.
Semi-volatile organic compounds (SVOCS) including benzo(a)anthracene and benzo(a)pyrene exceeded the UUSCO in the top two feet of soil. Two pesticides (4,4, DDT and dieldrin) slightly exceeded UUSCOs at the site. Tetrachloroethylene (PCE) commonly used in dry cleaning was detected in soil at up to 30 ppm, at 3-5 feet below grade. PCE was also found at depths ranging to 27 feet. Since PCE is also found in groundwater, the protection of groundwater soil cleanup of objective (PGSCO) of 1.3 ppm is used for comparison. Data does not indicate any off-site soil impacts related to this site. Groundwater- Samples were obtained from five on-site wells. All contained PCE, ranging from 170-400 parts per billion (ppb), compared to the ambient water quality standard (AWQS) of 5 ppb. Four wells placed in sidewalks proximate to the site contained PCE at 11 to 67 ppb. Chloroform was measured at 8.5 ppb compared to the AWQS of 7 ppb. For PFAS, perflurooctanoic acid (PFOA) was reported at concentration of 3.28 parts per trillion (ppt) and perfluorooctanoic sulfonic acid (PFOS)

27-09 40TH AVENUE (Continued) **S125896294**

	was not detected. Both were below the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater. 1,4 dioxane was reported at concentrations of up to 3.12 parts per billion (ppb) exceeding the Maximum Contaminant Level (drinking water standard) of 1 ppb in groundwater. Data indicates off-site groundwater downgradient of the site contains PCE at 67 ppb, compared to the ambient water quality standard (AWQS) of 5 ppb. Soil Vapor - Soil vapor samples were collected at 25' below grade at 7 locations across the site in 2019. Soil vapor contained PCE and trichloroethylene (TCE). The maximum amount of PCE measured was 1,600,000 micrograms per cubic meter (g/m3); the maximum TCE concentration was 4800 ug/m3. Follow-up sampling in 2020 showed PCE up to 270,000 and TCE up to 1200 ug/m3. Off-site values ranged from 180-920 PCE and 2.3-29 ug/m3 TCE. These values require further off-site investigation. Data indicates off-site impacts in soil vapor related to this site. NYSDEC performed limited off-site soil vapor intrusion sampling in January 2021, and results are pending. "
Health Problem:	"The site is fenced so people are not expected to come into contact with contaminated soil on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion (SVI). The site is vacant so inhalation of site contaminants in indoor air via soil vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion both offsite and for any future onsite development. "

Longitude: -73.9363480
DEC Memo: 06/23/08-Hiralkumar Patel. received request from ECO Jeff Conway to inspect the property. Jeff mentioned that they received complaint from community board. went to site (at that time no spill report was made). site was locked and had stop work order from NYC DOB. spoke with Ms. Ferrari, neighbour living at 39-39 27th STreet. she mentioned that contractor removed a tank (possible 550 gal) from front end of the site and buried in ground in back. during this transfer, sludge from tank was spilled on soil. then contractor mixed soil upside-down. view construction site area from Ms. Ferrari's backyard deck. found top of partially buried tank. could not see any contaminated soil or sign of spill in visible area from Ms. Ferrari's deck. asked Ms. Ferrari to call once contractor come back for work. 06/26/08-Hiralkumar Patel. received call from DEC Tony Morenzi. Tony mentioned that community board sent letter to DEC Commissioner. asked Tony to talk to DEC Jacob regarding opening of spill case (as no spill reported yet). DEC Tony spoke with DEC Jacob and Jacob asked to open spill case. created spill case at the subject site. spoke with Ms. Ferrari. she mentioned that contractor is on-site and removing tank. visited site at around 10:30 AM. met guy from construction company. tank was removed in morning. no contamination found in soil in area from where tank was removed. minor odor noticed in soil. spoke with Joe Napoli at Eastern environmental. he removed 550 gal tank in morning. he mentioned that there was about 4 inches (about 50 gal) of #2 oil inside 550 gal tank. they removed tank and cut open tank for cleaning. tank removed from site in pieces after cleaning. as per Joe, no holes noted in tank and no contaminated soil found around tank. Joe confirmed that tank was originally located in front end of site. he hasn't check original location. but as Joe mentioned that there were no holes in tank and no leak, so no investigation required currently at original location of the tank. asked Joe to submit documents about tank removal and statement regarding condition of tank (holes/leak etc.) Capital One Construction, Inc. **construction company** Tony Yin Ph. (718) 388-7900 (O) Joe Napoli Eastern Environmental Solutions, Inc. Ph. (631) 727-2700 (O) (631) 965-6553 (C) Fax (631) 727-2777 email: joenapoli@easternenviro.com 06/30/08-Hiralkumar Patel. received fax from Mr. Napoli including some black & white photographs of tank and letter regarding removal of tank. as per Mr. Napoli, an examination of the tank revealed no visual signs of corrosion or any other defects in the tank. discussed with DEC Jacob. he mentioned that document from Mr. Napoli

CONSTRUCTION SITE (Continued) **S109208363**

is sufficient. he asked to
close the case. case closed.

Remarks: caller reported that construction contractor pulled out underground tank from front portion of the site and buried in back. caller reported spill of sludge from this tank during transfer.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	DECP iper spoke w. Paul of ACT. As per Paul, he is working for potential buyer. Performed a GPR and found a buried tank. Soil around tank seemed ok though Elevated PID in

VACANT BUILDING (Continued) **S108765358**

GW headspace samples. Not
sure if buyer will go throug hwith sending damples to the lab. Need to send CSL. Paul Fax: 631
293-4986 516- 647-4211 cell jill. Preferred Env. she is working for owner, who wants ot do th
eright thing now that this has been discovered. 8/30/07- DEC Piper soke w. Bill from preferred they
are onsite and inspecting 550 ust for abandonment. Tank has fist sized corrosion hole. Tank had 4
of sludge. There is a slab beneath the tank. They will gepoprobe around pad again. 10/22/07- DEC
Piper received and reviewed tank closure report. Tank has bee nout of service for approx 50 years.
As per report, when tank was cleaned, 4 of sludge was i ntank, and a three inch corrosion hole was
identified after cleaning. Further delineation was required by state and soil samples were
collected from around the perimiter of the tank at 10-12 ft below grade. Soil analytical revealed
no elevated levels. Tank will be abandoned in place. This spill closed. See e-docs if warranted.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL CALLER COMPLAINED THAT THE GARAGE EXPOSED THE PIPING SYSTEM AND CAUSED BAD SMELL IN THE AREA AROUND. ALSO, THEY STORE OIL IN THE BASEMENT. 2/23/99 On site, spoke to a Robert Carpinelli who leases the property. According to Mr. Carpenelli, no work has been done at this property. Upon inspection, there was no evidence of recently patched floor. There is one 275 gallon waste oil tank at the property. There was no storage of oil in the basement.
Remarks:	CALLER COMPLAINED THAT THE GARAGE ARE EXPOSEING THE TANK PIPING SYSTEM AND CAUSED BAD SMELL AROUND THE AREA, THE GARAGE ALOS STORE

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO Contaminated Soil Letter has been sent to the proprty owner: Louis Kokalis 40-10 Crescent St. L.I.C., NY 11101 and cc to a consultant: Ralph Giorgio Giorgio Engineering 98 Rose Ave. Staten Island, NY 10306 (718) 667-8500 on 2/13/04. YK. 5/25/2006 - 11:50 AM - A engineering consultant, Ralph Giorgio of Giorgio Engineering, was called concerning progress regarding the spill reported 2/13/2004. Currently, the owner of the site is seeking approval from New York City for further development on the site once the spill site has been closed. Once the plan for development has been approved by the city, site cleanup will commence according to the approved Spill Closure Work Plan submitted to the NYSDEC - Region 2. Approval of the development is expected to be received within a few weeks and confirmation of the development approval should be sought within this time frame. Submitted by Johnathan W. Antonizio, NYSDEC - Albany 5/25/06 12:04 PM. Transferred back from CO (jwantoni) 11/16/06 - Austin - Reassigned to Rahman for followup/review - end 06/08/07- I inspected the site today.There is a one family house with open lot in the backyard where the contamination was discovered.I also spoke with Ralph Giorgio and he told me that he would send us the RAP shortly. 05/19/08 Report in file cabinet-missing analytical data.(sr) 06/05/08 Rec'd subsurface investigation report prapared in 09/2003 by Advanced Clean up

40-10 CRESCENT ST (Continued) **S106382753**

Technology(ACT).Six soil borings were advanced around the site.Only one sample (SB-4)exhibited a PID reading of 20 ppm, as per ACT.Two soil samples were sent to the lab for analysis.No vocs were detected above TAGM limit.Borings were advanced down to 12' below grade.Boring logs did not indicate visual or olfactory evidence of petroleum contamination.Some SVOCs(Benzoanthracene,Chrysene,Benzo Pyrene) were present slightly above the TAGM limit, but those can be attributed to historic fill mateial present at the site.No ground water was encountered at 12'.NYC DEP approved additional investigation plan under CEQR No.04DCP015Q/04DEP108Q. ACT's letter dated 09/06/06 to DEP indicated two soil samples from each of six soil borings will be taken and atleast three ground water samples will be taken to determine the flow direction.As per ACT, the site was formerly utilized for the storage of equipment from several fuel oil supply and removal companies.(sr) 09/08/08 Report in edocs.Spill can be closed due to lack of petroleum contamination presence.(sr)

Remarks: this spill occured over several years . they dont believe that it has ever been reported. they have lab results that indicate elevated levels of svoc and metals. where the spill is it used to be a former fuel oil company.

Site Code:	517267
Acres:	Not reported
HW Code:	C241163A
SWIS:	4101
Town:	New York City
Record Added Date:	11/23/2015
Record Updated Date:	06/28/2017
Update By:	MJKOMORO
Site Description:	"Location: This is an off-site investigation of the area downgradient of the Former Union Wire Site, Site Number C241163, which located at the corner of 30th Street and 40th Ave, in Long Island City, an urban area. Site Features: The investigation area encompasses sidewalks along 29th Street from 39th Ave to 40th Road, along 30th Street from 39th Avenue to approximately 40th Ave, and along 40th Ave to 31st Street. Current Zoning and Land Use: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including several three-story apt buildings along 29th Street. The downgradient block also contains a limited number of residential buildings, parking, self-storage, hotel and auto repair businesses. Past Use of the Site: This area of Long Island City has historically included mixed residential and light manufacturing. Formerly the area included a printing operation, commercial laundry and drycleaner, wire die manufacturer, gas station, warehouse operations, and churches occupied the site. Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by intermixed layers of sand and silty-sand. A clay layer was encountered in one location at approximately 32-38 feet. Bedrock was not encountered although reference material indicates bedrock is glacial and alluvial deposits from the Cenozoic age. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast."
Env Problem:	"Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminant is TCE. The off-site investigation focused on groundwater and soil vapor. Soil: Based on soil analysis from nearby off-site wells, off-site soil contamination was not expected. Groundwater: On-site, TCE was identified in groundwater with a maximum concentration of 280 ppb (parts per billion). Percholorethylene (PCE), a chemical commonly used at drycleaners, is present in groundwater (up to 730 ppb) but is believed to be from an adjacent off-site source. Off-site wells sampled at the downgradient edge of the site indicate low concentrations of TCE (11 ppb in MW6, 3.1 ppb in MW7) and PCE (99 ppb in MW6, 64 ppb in MW7) migrating off-site. In addition, a well, located immediately adjacent to the site and side-gradient, and installed by the Department for an investigation, also contained PCE at 369 ppb and TCE at 272 ppb. Soil Vapor: Eleven soil vapor points were installed as part of the adjacent site's off-site investigation. The highest soil vapor (4400 ug/m3 TCE) was located across 40th Avenue from the site, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the

FORMER UNION WIRE DIE CORP. - OFF-SITE (Continued) **S118372391**

	level decreased to 1300 ug/m3 TCE. Sub Slab and Indoor Air: Four buildings were sampled for sub-slab and indoor air. One of them was classified as mitigate due to both PCE and TCE in the sub-slab and indoor air. A second structure was classified mitigate or monitor only based on PCE, not TCE. "
Health Problem:	"People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater off-site is not used for drinking or other purposes and the area is served by a public water supply that obtains its water from a different source that is not affected by this contamination. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling, as part of the off-site investigation at the adjacent Bridge Cleaners site (C241127), indicated soil vapor intrusion is a concern at several off-site structures and actions have been recommended."

Updated By:	RECURLEY
Site Description:	"Location: The site is located in Long Island City, Queens at the corner of 30th Street and 40th Ave. Site Features: Since the COC was issued in 2017, the site has been re-developed in accordance with the Site Management Plan. A multi-story apartment building was built. Previously,there was a 2-story building on-site. The first floor was storage and the second floor was office space. Current Zoning and Land Use: The site is zoned M1-3/R7X. M1 indicates light industrial use while R7X is a higher-density residential district (apartments). The building is a combination of commercial and restricted residential use. Past Use of the Site: The site was undeveloped until sometime between 1915 and 1936. By 1936, a gas station occupied the site. The property was redeveloped by 1947 into a 2-story warehouse utilized by Optical Products Corporation for manufacturing, shipping and as an office. Other occupants of the building include Union Wire Die Corp. (1960s - 1980s), National Tea Packaging Co. Inc. (1962 - 1991) and a warehouse (1991 - 2006). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by a silty-sand. A coarse sand was noted

FORMER UNION WIRE DIE CORP. (Continued) **S116349304**

	at two of the boring locations in place of the silty-sand. The bedrock is an igneous intrusive classified as Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants were metals and semi-volatile organic compounds in shallow soils, and chlorinated volatile organic compounds (VOCS) in groundwater and soil vapor. Remedial actions have been implemented at the Site. Residual contamination in the soil, groundwater and soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code:	492945
Site Description:	"Location: The site is located in Long Island City, Queens at the corner of 30th Street and 40th Ave. Site Features: Since the COC was issued in 2017, the site has been re-developed in accordance with the Site Management Plan. A multi-story apartment building was built. Previously,there was a 2-story building on-site. The first floor was storage and the second floor was office space. Current Zoning and Land Use: The site is zoned M1-3/R7X. M1 indicates light industrial use while R7X is a higher-density residential district (apartments). The building is a combination of commercial and restricted residential use. Past Use of the Site: The site was undeveloped until sometime between 1915 and 1936. By 1936, a gas station occupied the site. The property was redeveloped by 1947 into a 2-story warehouse utilized by Optical Products Corporation for manufacturing, shipping and as an office. Other occupants of the building include Union Wire Die Corp. (1960s - 1980s), National Tea Packaging Co. Inc. (1962 - 1991) and a warehouse (1991 - 2006). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by a silty-sand. A coarse sand was noted at two of the boring locations in place of the silty-sand. The bedrock is an igneous intrusive classified as Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants were metals and semi-volatile organic compounds in shallow soils, and chlorinated volatile organic compounds (VOCS) in groundwater and soil vapor. Remedial actions have been implemented at the Site. Residual contamination in the soil, groundwater and soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 492945
Site Description: "Location: The site is located in Long Island City, Queens at the corner of 30th Street and 40th Ave. Site Features: Since the COC was issued in 2017, the site has been re-developed in accordance with the Site Management Plan. A multi-story apartment building was built. Previously,there was a 2-story building on-site. The first floor was storage and the second floor was office space. Current Zoning and Land Use: The site is zoned M1-3/R7X. M1 indicates light industrial use while R7X is a higher-density residential district (apartments). The building is a combination of commercial and restricted residential use. Past Use of the Site: The site was undeveloped until sometime between 1915 and 1936. By 1936, a gas station occupied the site. The property was redeveloped by 1947 into a 2-story warehouse utilized by Optical Products Corporation for manufacturing, shipping and as an office. Other occupants of the building include Union Wire Die Corp. (1960s - 1980s), National Tea Packaging Co. Inc. (1962 - 1991) and a warehouse (1991 - 2006). Site Geology and Hydrogeology: Subsurface soils at the site consist of a mixture of a silty non-native fill to a depth ranging from 0 to 6 feet below grade (fbg). The fill is followed by a silty-sand. A coarse sand was noted at two of the boring locations in place of the silty-sand. The bedrock is an igneous intrusive classified as Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays. The elevation of the site is 28 feet above the National Geodetic Vertical Datum. The area topography gradually slopes to the southeast. Groundwater at the site is present under water table conditions at a depth of approximately 20 feet below grade. Investigation at the site indicates groundwater flow to the south-southeast. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the

FORMER UNION WIRE DIE CORP. (Continued) **S116349304**

primary contaminants were metals and semi-volatile organic compounds in shallow soils, and chlorinated volatile organic compounds (VOCS) in groundwater and soil vapor. Remedial actions have been implemented at the Site. Residual contamination in the soil, groundwater and soil vapor is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

BROWNFIELDS:
Name: BRIDGE CLEANERS
Address: 39-26 30TH STREET
City,State,Zip: LONG ISLAND CITY, NY 11101
Program: BCP
Site Code: 464609
Acres: 0.173
HW Code: C241127
SWIS: 4101
Town: New York City
Record Added Date: 05/25/2012
Record Updated Date: 03/01/2018
Update By: MJKOMORO
Site Description: "Location: The Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features: A 7500 square foot one-story slab-on-grade building occupies the entire lot. Adjacent buildings to the north and west appear to contain residential units. To the south is a paved driveway used by the neighboring commercial structure. To the east is 30th street. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. Prior to that, the building was used as a distribution point for electrical components, bottled water and a courier service. Site Hydrology/Geology: The depth to groundwater near the site is about 18-22 feet. Soils in the area are primarily fine to medium sand with some traces of silt. One location indicated a clay layer at 6 to 9 feet below grade."
Env Problem: "NATURE AND EXTENT OF CONTAMINATION: Samples collected in 2009 on the property adjacent to the Bridge Cleaners site identified dry-cleaning related compounds trichloroethene (TCE)and tetrachloroethene (PCE) in the soil vapor and groundwater. There was no evidence of PCE use on the adjacent property. The higher results were closer to the common property line. PCE was found at 910 ppb in groundwater along the common property boundary, decreasing to 120 ppb approximately 100 feet away. PCE was measured at 16,900 ug/m3 in the soil vapor. The groundwater standard for both PCE and TCE is 5 ppb. In April 2011, the site operator obtained 2 soil samples from beneath the Bridge Cleaners slab and found tetrachloroethene (PCE) at 3.45 ppm and 0.757 ppm. The unrestricted soil cleanup objective is 1.3ppm for PCE. In September 2011, the owner independently obtained samples of soils and groundwater under the building,and provided results to DEC in

BRIDGE CLEANERS (Continued) **S128906157**

November 2011. The three groundwater results under the building were 537 ppb, 841 ppb and 1470 ppb PCE. Fifteen soil samples were below the unrestricted soil cleanup objectives for PCE. Groundwater samples also contained TCE in the 11-12.5 ppb range. After unsuccessfully attempting to obtain site access for a more thorough investigation, NYSDEC conducted an offsite investigation in February 2012. Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of PCE and TCE upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. One of 14 soil samples, at side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade, and below the water table at 25.5 feet. In the first quarter of 2014, after entering the Brownfield Program, additional groundwater, soil and soil vapor samples were obtained from within the building. Five groundwater samples ranged from 165 to 340 ppb for PCE, and TCE concentrations from 2-7 ppb. Soil samples obtained from the same 5 locations did not exceed unrestricted soil cleanup objectives.
Sub-slab soil vapor, however, ranged from approximately 20,000 ug/m3 to 668,000 ug/m3 below the slab (PCE) and up to 2140 ug/m3 TCE. PCE in indoor air was 270 ug/m3. Based on the soil vapor results, there is a need to mitigate the building. In Nov 2014, a new consultant was hired by the BCP applicant. Soil in the NW corner of the building was found at 1.8-9.6 ppm (exceeding the protection of groundwater SCOs) for PCE (1.3ppm). An IRM design has been developed to address the source area. "

Health Problem:	"People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site."

Update By:	BXANDERS
Site Description:	"LOCATION: This is an off-site investigation of the area downgradient of the Bridge Cleaners site, Site Number C241127, which located at 39-26 30th Street in Long Island City, an urban area. SITE FEATURES: The investigation area encompasses sidewalks along 29th Street from 39th Ave to 40th Road, along 30th Street from 39th Avenue to approximately 40th Ave, and along 40th Ave to 31st Street. CURRENT ZONING: This section of Long Island City is zoned Special Purpose District which allows mixed residential and commercial use. The specific designation for the site is M1-3/R7X. Buildings within the city block are primarily commercial. There are residential units including a three story apt building along 29th Street. The

BRIDGE CLEANERS - OFF-SITE (Continued) **S128906165**

downgradient block also contains a limited number of residential buildings.Recent construction in the area includes a self-storage facility and hotels. HISTORICAL USES: This area of Long Island City has historically included mixed residential and light manufacturing. Formerly the area included a printing operation, commercial laundry and drycleaner, wire die manufacturer, gas station, and distribution points for a variety of products. SITE HYDROLOGY/GEOLOGY: Groundwater elevation levels vary from 11.04 AMSL to 10.01 AMSL, which is about 20 feet below land surface in the vicinity of the site. Soils in the area are expected to be primarily sand and silty sand. C241127A projects for the off-site portion of this site are being tracked under site 241127 OU2."

Env Problem:

"NATURE AND EXTENT OF CONTAMINATION: In October 2010, a property location in this block was identified as a potential site (P-site) due to soil vapor and groundwater results collected by an adjacent property owner. After unsuccessfully attempting to obtain access for a more thorough investigation, NYSDEC conducted a limited offsite investigation in February 2012. Groundwater and soil samples were taken. Based on this investigation, the Bridge Cleaners Site (C241127) was determined to be causing a significant threat to public health and the environment. The site entered the NYS Brownfield Cleanup Program and remained in the Program until December 2016. Groundwater: Groundwater elevations show groundwater flow from northeast to southwest. Concentrations of tetrachloroethylene (PCE) and trichloroethylene (TCE) upgradient of the site were approximately 21 ppb and 1 ppb respectively. Downgradient concentrations were 440 ppb and 32 ppb respectively. The groundwater standard for both PCE and TCE is 5 ppb. Soil: One of 14 soil samples, at a side gradient monitoring well MW-4, contained PCE at 3.3 ppm. The depth of this contamination was 29-30 feet below grade. Scope of Off-Site Investigation 2016: This 2016 Remedial Investigation will define the nature and extent of contamination emanating from the Bridge Cleaners Site in groundwater, soil vapor and any other parts of the environment that may be affected. Shallow and deep groundwater wells will be installed upgradient and downgradient of the Bridge Cleaners site (C241127). After well installation, two sets of samples will be collected. Based on the initial sampling, groundwater samples will be collected for Compound Specific Isotope Analysis (CSIA). This analysis will be used to determine whether the source of the Tetrachloroethene (PCE) and Trichloroethene (TCE) groundwater contamination is exclusively from the Bridge Cleaners site or from other sources in the immediate area. Eleven soil vapor samples will also be collected initially. After the results are obtained, the Department may request access from owners of eight structures along 29th Street for sub-slab and indoor air sampling. OU2 Off-Site Investigation Results Soil: Groundwater: Eight groundwater wells were installed in addition to seven pre-existing sidewalk wells. Two rounds of sampling were completed. PCE was present at a maximum value of 389 ppb in MW-3. TCE was present at a maximum of 181 ppb in MW-3. Historically, MW-3 also contained the highest amount of PCE (440 ppb) during the 2012 site characterization. The groundwater standard for both PCE and TCE is 5 ppb. PCE and TCE were not observed in the 4 deep wells installed. Soil Vapor: Eleven soil vapor points were installed in the investigation area. The highest soil gas result at SV-104 was 4400 ug/m3 TCE and 2400 ug/m3 PCE on the south side of 40th Ave, across from MW-6. During the second set of sampling, the highest levels were also located at SV104, though the levels

BRIDGE CLEANERS - OFF-SITE (Continued) **S128906165**

	decreased to 1300 ug/m3 TCE and 590 ug/m3 PCE. Sub-slab and indoor air samples were completed in 4 structures. The highest sub-slab level was 9500 ug/m3 PCE and 7.2 ug/m3 in the indoor air. This structure was designated as Mitigate. One other was also designated as mitigate. C241127A projects for the off-site portion of this site are being tracked under site 241127 OU2."
Health Problem:	"People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that actions are needed to address potential exposures to site related contaminants via soil vapor intrusion both on and off-site. "

SHWS:

Name:	BRIDGE CLEANERS
Address:	39-26 30TH STREET
City,State,Zip:	LONG ISLAND CITY, NY 11101
Program:	HW
Site Code:	440982
Classification:	Significant threat to the public health or environment - action required.
Region:	2
Acres:	0.173
HW Code:	241127
Record Add:	10/15/2010
Record Upd:	04/19/2023
Updated By:	DKMACNEA
Site Description:	"Location: The 0.173-acre Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features : A 7500 square foot (sf) one-story slab-on-grade building occupies the entire lot. It is used for storage and is infrequently occupied. Adjacent buildings to the north and west appear to contain residential units. To the south and east across 30th Street are recently constructed multi-story residential structures. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. The site was a small quantity generator of solvent wastes under the Resource Conservation and Recovery Action (RCRA) hazardous waste program from 1997-2010. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 7500 sf lot completely covered by a one-story cement block building. OU2 is the off-site area. The off-site investigation area includes the sidewalks from 39th Avenue to 40th Road, between 29th Street and 30th Street. Site Hydrology/Geology: The depth to groundwater beneath and in the vicinity of the site is about 18-22 feet below grade (ftbg). Soils in the area are primarily fine to medium sand with some traces of silt. One boring location indicated a clay layer at 6 to 9 ftbg. In the larger OU2 investigation area, groundwater ranged from 11 to 30 ftbg, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. In one location, in the southeast corner of the investigation area, a clay layer was noted from 32 to 38 feet below grade. Groundwater flow is generally to the south/southwest. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. "

Env Problem: "OU1: On-Site Remediation at OU1 has resulted in the site being protective of public health and the environment. Prior to remediation, the primary contaminant of concern was PCE in soil, soil vapor and groundwater. TCE was present in soil vapor only. Residual contamination is being addressed through active treatment. Residual contamination in the soil, groundwater and soil vapor is being managed under an Interim Site Management Plan. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below. During the RI, prior to the IRM, soil and groundwater were analyzed for VOCs, semi-volatile organic compounds (SVOC), Metals, and PCBs/Pesticides. Soil Vapor was analyzed for VOCs. The maximum concentration of PCE in soil at the site was 9.6 parts per million (ppm), compared to the protection of groundwater soil cleanup objective of 1.3 ppm. Five groundwater wells on site contained a maximum concentration of 340 parts per billion (ppb) PCE and 6.9 ppb TCE in groundwater, compared to the AWQS of 5 ppb for both PCE and TCE. Sub-slab soil vapor ranged up to 668,000 micrograms per cubic meter (ug/m3) PCE, 2140 ug/m3 TCE. PCE in indoor air was detected at 270 micrograms per cubic meter (g/m3) above the NYSDOH air guideline for PCE of 30 g/m3. Post IRM groundwater analysis for VOCs indicates VOC concentrations have significantly been reduced and continue to decline. Of the five on-site wells, three remain above the 5 ppb AWQS for PCE. The most recent concentrations are 12 ppb, 29 ppb and 62 ppb in 2021. TCE levels are below 5 ppb. The data is shown on Figure 4. In November 2018, after construction of the AS/SVE system IRM, soil vapor monitoring was conducted. The concentrations in soil vapor ranged from 69.8 - 1,890 ug/m3 for PCE and 3.1 - 72 ug/m3 for TCE. Preliminary results from sub-slab soil vapor sampling in January 2022 indicate PCE in the range of 23-685 ug/m3 and TCE 3.1

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

to 8.8 ug/m3. Corresponding indoor air values are 0.26-0.54 ug/m3 PCE and non-detectable for TCE. OU2: Off-Site Remediation at OU2 is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil vapor and groundwater, which were suspected of migrating off-site. Soil was not sampled during the off-site work. The off-site investigation occurred during 2016. Activities at an adjacent, downgradient Brownfield Cleanup Site (C241163 Former Union Wire) also contributed to reductions in off-site contamination. In late 2016, the Former Union Wire site designed and installed an SVE system. The SVE system was installed to address indoor air issues by removing any source material in soil below the existing building, and it remained in use until September 2019. After September 2019, the building was demolished and excavation took place in accordance with a NYSDEC-approved excavation workplan. Soil endpoints samples taken to ensure any potential source of VOCs was removed from the adjacent site. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below During the OU2 RI, prior to the IRM, groundwater and soil vapor were analyzed for VOCs. Groundwater was also analyzed for emerging contaminants, as a screening tool. Of the fifteen wells sample, the maximum concentration was PCE at 369 ppb, and TCE at 272 ppb, in one well (MW-3). The AWQS for both PCE and TCE is 5 ppb. Groundwater samples at MW-3 in late 2019 identified PCE at 7 ppb and TCE at 2 ppb. For emerging contaminants, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 53 and 7 parts per trillion (ppt), respectively. PFOA exceeded the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater, while PFOS did not. 1,4 dioxane was detected in one sample at 0.2 ug/l which is below the guidance value of 0.35 ug/l. Also, during the OU2 RI, prior to the IRM, soil vapor, indoor air and sub-slab soil vapor were analyzed for VOCs. Eleven soil vapor points were sampled in 2016. The highest soil vapor result was 4400 ug/m3 TCE and 2400 ug/m3 PCE. Soil vapor data were used to define the area where property owners were offered sub-slab and indoor air sampling, which occurred in January 2017. Sub-slab and indoor air samples were completed in four (4) off-site structures, and one owner allowed access for indoor air sampling only. In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling, no action was necessary at that structure. "

Health Problem: "People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development or occupancy Actions have been taken to address exposures related to soil vapor intrusion where necessary and where access has been granted offsite. Additional investigation/evaluation is needed in the event that access is granted at other offsite structures."

In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling, no action was necessary at that structure. "

Health Problem: "People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development or occupancy Actions have been taken to address exposures related to soil vapor intrusion where necessary and where access has been granted offsite. Additional investigation/evaluation is needed in the event that access is granted at other offsite structures."

Date Record Added: 09/17/2018
Date Rec Updated: 05/15/2024
Updated By: KNLILOIA
Site Description: "Location: The 0.173-acre Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features : A 7500 square foot (sf) one-story slab-on-grade building occupies the entire lot. It is used for storage and is infrequently occupied. Adjacent buildings to the north and west appear to contain residential units. To the south and east across 30th Street are recently constructed multi-story residential structures. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. The site was a small quantity generator of solvent wastes under the Resource Conservation and Recovery Action (RCRA) hazardous waste program from 1997-2010. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 7500 sf lot completely covered by a one-story cement block building. OU2 is the off-site area. The off-site investigation area includes the sidewalks from 39th Avenue to 40th Road, between 29th Street and 30th Street. Site Hydrology/Geology: The depth to groundwater beneath and in the vicinity of the site is about 18-22 feet below grade (ftbg). Soils in the area are primarily fine to medium sand with some traces of silt. One boring location indicated a clay layer at 6 to 9 ftbg. In the larger OU2 investigation area, groundwater ranged from 11 to 30 ftbg, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. In one location, in the southeast corner of the investigation area, a clay layer was noted from 32 to 38 feet below grade. Groundwater flow is generally to the south/southwest. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. "
Env Problem: "OU1: On-Site Remediation at OU1 has resulted in the site being protective of public health and the environment. Prior to remediation, the primary contaminant of concern was PCE in soil, soil vapor and groundwater. TCE was present in soil vapor only. Residual contamination is being addressed through active treatment. Residual contamination in the soil, groundwater and soil vapor is being managed under an Interim Site Management Plan. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below. During the RI, prior to the IRM, soil and groundwater were analyzed for VOCs, semi-volatile organic compounds (SVOC), Metals, and PCBs/Pesticides. Soil Vapor was analyzed for

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

VOCs. The maximum concentration of PCE in soil at the site was 9.6 parts per million (ppm), compared to the protection of groundwater soil cleanup objective of 1.3 ppm. Five groundwater wells on site contained a maximum concentration of 340 parts per billion (ppb) PCE and 6.9 ppb TCE in groundwater, compared to the AWQS of 5 ppb for both PCE and TCE. Sub-slab soil vapor ranged up to 668,000 micrograms per cubic meter (ug/m3) PCE, 2140 ug/m3 TCE. PCE in indoor air was detected at 270 micrograms per cubic meter (g/m3) above the NYSDOH air guideline for PCE of 30 g/m3. Post IRM groundwater analysis for VOCs indicates VOC concentrations have significantly been reduced and continue to decline. Of the five on-site wells, three remain above the 5 ppb AWQS for PCE. The most recent concentrations are 12 ppb, 29 ppb and 62 ppb in 2021. TCE levels are below 5 ppb. The data is shown on Figure 4. In November 2018, after construction of the AS/SVE system IRM, soil vapor monitoring was conducted. The concentrations in soil vapor ranged from 69.8 - 1,890 ug/m3 for PCE and 3.1 - 72 ug/m3 for TCE. Preliminary results from sub-slab soil vapor sampling in January 2022 indicate PCE in the range of 23-685 ug/m3 and TCE 3.1 to 8.8 ug/m3. Corresponding indoor air values are 0.26-0.54 ug/m3 PCE and non-detectable for TCE. OU2: Off-Site Remediation at OU2 is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil vapor and groundwater, which were suspected of migrating off-site. Soil was not sampled during the off-site work. The off-site investigation occurred during 2016. Activities at an adjacent, downgradient Brownfield Cleanup Site (C241163 Former Union Wire) also contributed to reductions in off-site contamination. In late 2016, the Former Union Wire site designed and installed an SVE system. The SVE system was installed to address indoor air issues by removing any source material in soil below the existing building, and it remained in use until September 2019. After September 2019, the building was demolished and excavation took place in accordance with a NYSDEC-approved excavation workplan. Soil endpoints samples taken to ensure any potential source of VOCs was removed from the adjacent site. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below During the OU2 RI, prior to the IRM, groundwater and soil vapor were analyzed for VOCs. Groundwater was also analyzed for emerging contaminants, as a screening tool. Of the fifteen wells sample, the maximum concentration was PCE at 369 ppb, and TCE at 272 ppb, in one well (MW-3). The AWQS for both PCE and TCE is 5 ppb. Groundwater samples at MW-3 in late 2019 identified PCE at 7 ppb and TCE at 2 ppb. For emerging contaminants, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 53 and 7 parts per trillion (ppt), respectively. PFOA exceeded the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater, while PFOS did not. 1,4 dioxane was detected in one sample at 0.2 ug/l which is below the guidance value of 0.35 ug/l. Also, during the OU2 RI, prior to the IRM, soil vapor, indoor air and sub-slab soil vapor were analyzed for VOCs. Eleven soil vapor points were sampled in 2016. The highest soil vapor result was 4400 ug/m3 TCE and 2400 ug/m3 PCE. Soil vapor data were used to define the area where property owners were offered sub-slab and indoor air sampling, which occurred in January 2017. Sub-slab and indoor air samples were completed in four (4) off-site structures, and one owner allowed access for indoor air sampling only. In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

	detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling, no action was necessary at that structure. "
Health Problem:	"People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 7500 sf lot completely covered by a one-story cement block building. OU2 is the off-site area. The off-site investigation area includes the sidewalks from 39th Avenue to 40th Road, between 29th Street and 30th Street. Site Hydrology/Geology:

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

The depth to groundwater beneath and in the vicinity of the site is about 18-22 feet below grade (ftbg). Soils in the area are primarily fine to medium sand with some traces of silt. One boring location indicated a clay layer at 6 to 9 ftbg. In the larger OU2 investigation area, groundwater ranged from 11 to 30 ftbg, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. In one location, in the southeast corner of the investigation area, a clay layer was noted from 32 to 38 feet below grade. Groundwater flow is generally to the south/southwest. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. "

Env Problem: "OU1: On-Site Remediation at OU1 has resulted in the site being protective of public health and the environment. Prior to remediation, the primary contaminant of concern was PCE in soil, soil vapor and groundwater. TCE was present in soil vapor only. Residual contamination is being addressed through active treatment. Residual contamination in the soil, groundwater and soil vapor is being managed under an Interim Site Management Plan. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below. During the RI, prior to the IRM, soil and groundwater were analyzed for VOCs, semi-volatile organic compounds (SVOC), Metals, and PCBs/Pesticides. Soil Vapor was analyzed for VOCs. The maximum concentration of PCE in soil at the site was 9.6 parts per million (ppm), compared to the protection of groundwater soil cleanup objective of 1.3 ppm. Five groundwater wells on site contained a maximum concentration of 340 parts per billion (ppb) PCE and 6.9 ppb TCE in groundwater, compared to the AWQS of 5 ppb for both PCE and TCE. Sub-slab soil vapor ranged up to 668,000 micrograms per cubic meter (ug/m3) PCE, 2140 ug/m3 TCE. PCE in indoor air was detected at 270 micrograms per cubic meter (g/m3) above the NYSDOH air guideline for PCE of 30 g/m3. Post IRM groundwater analysis for VOCs indicates VOC concentrations have significantly been reduced and continue to decline. Of the five on-site wells, three remain above the 5 ppb AWQS for PCE. The most recent concentrations are 12 ppb, 29 ppb and 62 ppb in 2021. TCE levels are below 5 ppb. The data is shown on Figure 4. In November 2018, after construction of the AS/SVE system IRM, soil vapor monitoring was conducted. The concentrations in soil vapor ranged from 69.8 - 1,890 ug/m3 for PCE and 3.1 - 72 ug/m3 for TCE. Preliminary results from sub-slab soil vapor sampling in January 2022 indicate PCE in the range of 23-685 ug/m3 and TCE 3.1 to 8.8 ug/m3. Corresponding indoor air values are 0.26-0.54 ug/m3 PCE and non-detectable for TCE. OU2: Off-Site Remediation at OU2 is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil vapor and groundwater, which were suspected of migrating off-site. Soil was not sampled during the off-site work. The off-site investigation occurred during 2016. Activities at an adjacent, downgradient Brownfield Cleanup Site (C241163 Former Union Wire) also contributed to reductions in off-site contamination. In late 2016, the Former Union Wire site designed and installed an SVE system. The SVE system was installed to address indoor air issues by removing any source material in soil below the existing building, and it remained in use until September 2019. After September 2019, the building was demolished and excavation took place in accordance with a NYSDEC-approved excavation workplan. Soil endpoints samples taken to ensure any potential source of VOCs was removed from the adjacent site. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below During the OU2 RI,

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

prior to the IRM, groundwater and soil vapor were analyzed for VOCs. Groundwater was also analyzed for emerging contaminants, as a screening tool. Of the fifteen wells sample, the maximum concentration was PCE at 369 ppb, and TCE at 272 ppb, in one well (MW-3). The AWQS for both PCE and TCE is 5 ppb. Groundwater samples at MW-3 in late 2019 identified PCE at 7 ppb and TCE at 2 ppb. For emerging contaminants, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 53 and 7 parts per trillion (ppt), respectively. PFOA exceeded the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater, while PFOS did not. 1,4 dioxane was detected in one sample at 0.2 ug/l which is below the guidance value of 0.35 ug/l. Also, during the OU2 RI, prior to the IRM, soil vapor, indoor air and sub-slab soil vapor were analyzed for VOCs. Eleven soil vapor points were sampled in 2016. The highest soil vapor result was 4400 ug/m3 TCE and 2400 ug/m3 PCE. Soil vapor data were used to define the area where property owners were offered sub-slab and indoor air sampling, which occurred in January 2017. Sub-slab and indoor air samples were completed in four (4) off-site structures, and one owner allowed access for indoor air sampling only. In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling, no action was necessary at that structure. "

Health Problem: "People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development or occupancy Actions have been taken to address exposures related to soil vapor intrusion where necessary and where access has been granted offsite. Additional investigation/evaluation is needed in the event that access is granted at other offsite structures."

Site Code: 440982
Site Description: "Location: The 0.173-acre Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features : A 7500 square foot (sf) one-story slab-on-grade building occupies the entire lot. It is used for storage and is infrequently occupied. Adjacent buildings to the north and west appear to contain residential units. To the south and east across 30th Street are recently constructed multi-story residential structures. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. The site was a small quantity generator of solvent wastes under the Resource Conservation and Recovery Action (RCRA) hazardous waste program from 1997-2010. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 7500 sf lot completely covered by a one-story cement block building. OU2 is the off-site area. The off-site investigation area includes the sidewalks from 39th Avenue to 40th Road, between 29th Street and 30th Street. Site Hydrology/Geology: The depth to groundwater beneath and in the vicinity of the site is about 18-22 feet below grade (ftbg). Soils in the area are primarily fine to medium sand with some traces of silt. One boring location indicated a clay layer at 6 to 9 ftbg. In the larger OU2 investigation area, groundwater ranged from 11 to 30 ftbg, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. In one location, in the southeast corner of the investigation area, a clay layer was noted from 32 to 38 feet below grade. Groundwater flow is generally to the south/southwest. Sub-slab and indoor air samples were completed in four (4) off-site structures, and one owner allowed access for indoor air sampling only. In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling, no action was necessary at that structure. "

Health Problem: "People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development or occupancy Actions have been taken to address exposures related to soil vapor intrusion where necessary and where access has been granted offsite. Additional investigation/evaluation is needed in the event that access is granted at other offsite structures."

Site Code: 440982
Site Description: "Location: The 0.173-acre Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features : A 7500 square foot (sf) one-story slab-on-grade building occupies the entire lot. It is used for storage and is infrequently occupied. Adjacent buildings to the north and west appear to contain residential units. To the south and east across 30th Street are recently constructed multi-story residential structures. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. The site was a small quantity generator of solvent wastes under the Resource Conservation and Recovery Action (RCRA) hazardous waste program from 1997-2010. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 7500 sf lot completely covered by a one-story

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

cement block building. OU2 is the off-site area. The off-site investigation area includes the sidewalks from 39th Avenue to 40th Road, between 29th Street and 30th Street. Site Hydrology/Geology: The depth to groundwater beneath and in the vicinity of the site is about 18-22 feet below grade (ftbg). Soils in the area are primarily fine to medium sand with some traces of silt. One boring location indicated a clay layer at 6 to 9 ftbg. In the larger OU2 investigation area, groundwater ranged from 11 to 30 ftbg, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. In one location, in the southeast corner of the investigation area, a clay layer was noted from 32 to 38 feet below grade. Groundwater flow is generally to the south/southwest. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. "

Env Problem: "OU1: On-Site Remediation at OU1 has resulted in the site being protective of public health and the environment. Prior to remediation, the primary contaminant of concern was PCE in soil, soil vapor and groundwater. TCE was present in soil vapor only. Residual contamination is being addressed through active treatment. Residual contamination in the soil, groundwater and soil vapor is being managed under an Interim Site Management Plan. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below. During the RI, prior to the IRM, soil and groundwater were analyzed for VOCs, semi-volatile organic compounds (SVOC), Metals, and PCBs/Pesticides. Soil Vapor was analyzed for VOCs. The maximum concentration of PCE in soil at the site was 9.6 parts per million (ppm), compared to the protection of groundwater soil cleanup objective of 1.3 ppm. Five groundwater wells on site contained a maximum concentration of 340 parts per billion (ppb) PCE and 6.9 ppb TCE in groundwater, compared to the AWQS of 5 ppb for both PCE and TCE. Sub-slab soil vapor ranged up to 668,000 micrograms per cubic meter (ug/m3) PCE, 2140 ug/m3 TCE. PCE in indoor air was detected at 270 micrograms per cubic meter (g/m3) above the NYSDOH air guideline for PCE of 30 g/m3. Post IRM groundwater analysis for VOCs indicates VOC concentrations have significantly been reduced and continue to decline. Of the five on-site wells, three remain above the 5 ppb AWQS for PCE. The most recent concentrations are 12 ppb, 29 ppb and 62 ppb in 2021. TCE levels are below 5 ppb. The data is shown on Figure 4. In November 2018, after construction of the AS/SVE system IRM, soil vapor monitoring was conducted. The concentrations in soil vapor ranged from 69.8 - 1,890 ug/m3 for PCE and 3.1 - 72 ug/m3 for TCE. Preliminary results from sub-slab soil vapor sampling in January 2022 indicate PCE in the range of 23-685 ug/m3 and TCE 3.1 to 8.8 ug/m3. Corresponding indoor air values are 0.26-0.54 ug/m3 PCE and non-detectable for TCE. OU2: Off-Site Remediation at OU2 is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil vapor and groundwater, which were suspected of migrating off-site. Soil was not sampled during the off-site work. The off-site investigation occurred during 2016. Activities at an adjacent, downgradient Brownfield Cleanup Site (C241163 Former Union Wire) also contributed to reductions in off-site contamination. In late 2016, the Former Union Wire site designed and installed an SVE system. The SVE system was installed to address indoor air issues by removing any source material in soil below the existing building, and it remained in use until September 2019. After September 2019, the building was demolished and excavation took place in accordance with a NYSDEC-approved excavation workplan. Soil endpoints samples taken

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

to ensure any potential source of VOCs was removed from the adjacent site. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below During the OU2 RI, prior to the IRM, groundwater and soil vapor were analyzed for VOCs. Groundwater was also analyzed for emerging contaminants, as a screening tool. Of the fifteen wells sample, the maximum concentration was PCE at 369 ppb, and TCE at 272 ppb, in one well (MW-3). The AWQS for both PCE and TCE is 5 ppb. Groundwater samples at MW-3 in late 2019 identified PCE at 7 ppb and TCE at 2 ppb. For emerging contaminants, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 53 and 7 parts per trillion (ppt), respectively. PFOA exceeded the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater, while PFOS did not. 1,4 dioxane was detected in one sample at 0.2 ug/l which is below the guidance value of 0.35 ug/l. Also, during the OU2 RI, prior to the IRM, soil vapor, indoor air and sub-slab soil vapor were analyzed for VOCs. Eleven soil vapor points were sampled in 2016. The highest soil vapor result was 4400 ug/m3 TCE and 2400 ug/m3 PCE. Soil vapor data were used to define the area where property owners were offered sub-slab and indoor air sampling, which occurred in January 2017. Sub-slab and indoor air samples were completed in four (4) off-site structures, and one owner allowed access for indoor air sampling only. In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling, no action was necessary at that structure. "

Health Problem: "People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development or occupancy Actions have been taken to address exposures related to soil vapor intrusion where necessary and where access has been granted offsite. Additional investigation/evaluation is needed in the event that access is granted at other offsite structures."
