EXECUTIVE SUMMARY

Langan Engineering and Environmental Services, LLC (Langan) completed a Phase I Environmental Site Assessment (ESA) of Queensboro Farm Assemblage, located at 35-19 Steinway Street, 35-13 41st Street, and 35-02, 35-22, and 35-28 42nd Street in Queens, New York 11101 (the "subject property") under the written authorization of HG Acquisitions, LLC, c/o The Hakimian Group (HG Acquisitions, LLC the "Client" and the "user"). These addresses will be referenced as Block 670, Lots 8, 20, 27, and 30; and Block 669, Lot 16 hereafter.

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence related to a potential transaction involving the subject property.

Subject Property Layout

The subject property is about 2.1 acres and is improved with the following structures and/or improvements:

- Block 670, Lot 8: One 40,000-square foot (sf), one to two-story, mixed-use industrial and commercial building, constructed in 1933 with a partial basement and roof access;
- Block 670, Lot 20: One 10,000-sf, one-story, mixed-use industrial and commercial building, constructed in 1925;
- Block 670, Lot 27: One 6,000-sf, one-story, commercial building, constructed in 1975;
- Block 670, Lot 30: One 6,000-sf, one-story, commercial building, constructed in 1925, and
- Block 669, Lot 16: An 28,500 sf-asphalt-paved parking surface with two mobile office trailers and a storage shed.

Subject Property Current Use

Current subject property uses are described below:

Block 670, Lot 8:

- An industrial metal fabrication and construction warehouse, leased by Modutank, occupies the northern and central portions of the first floor of the building located on Lot 8. Operations include the manufacture and construction of custom order storage tanks.
- An unoccupied storage space (no tenant), occupies the first and second floors of the central portion of the building on Lot 8.
- A commercial bakery occupies the first floor of the southern portion of the building on Lot 8.
- An industrial metal fabrication workshop, leased by Advanced Metal Works, occupies the eastern portion of the building on Lot 8. Operations includes the design/construction and

maintenance/repair of food trucks. Langan observed the storage and handling of raw materials, including metal sheeting and tubing, and vehicle and equipment maintenance supplies.

Block 670, Lot 20:

- A vehicle maintenance, car washing, and detailing service center, leased by On the Spot Moto, occupies the northern portion of the building on Lot 20.
- A vehicle parking and storage outpost of Luxury of Queens, Inc (Block 669, Lot 16) occupies the southern portion of the building on Lot 20.

Block 670, Lots 27 and 30:

- A vehicle storage and maintenance facility, leased by Quality Transportation, occupies the two commercial buildings on Lots 27 and 30.

Block 669, Lot 16:

- An asphalt-paved used car and sales lot, leased by Luxury of Queens, Inc, occupies Lot 16.

Subject Property History

The Subject Property has been developed for industrial and commercial uses since the 1920s (Block 670, Lots 8, 20, 27, and 30), and an asphalt-paved parking lot (Block 669, Lot 16) since the 1940s. Industrial property operations included metal fabrication facilities, while commercial property operations included a laundry facility (which may have operated as a dry cleaner), two automotive maintenance and repair shops, a chemical gases warehouse, and a dairy processing plant. The dairy processing plant closed in the 1990s.

Adjoining Properties and Surrounding Area

The adjoining properties and surrounding area were generally undeveloped until the 1910s. The surrounding areas were developed between the 1910s and 1940s with primarily industrial use properties, including factories, distribution warehouses, automotive maintenance and repair garages, gasoline filling/service stations, and truck yards. Some of the industrial properties were redeveloped as commercial properties between the 1970s through the 1990s.

Conclusions

Langan completed a Phase I ESA of the subject Property using the scope guidelines and inherent limitations of ASTM E1527-21. Table ES-1 presents the conclusions of the Phase I ESA.

Table ES-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Current and Historical Use of the Subject Property: The subject property has an over 80-year history of industrial and commercial occupants and uses of concern including multiple auto repair shops (Block 670, Lots 8, 20, and 27), a gasoline filling station (Block 669, Lot 16), automobile garages, including two with gasoline tanks (Block 670, Lots 8, 20, and 27),

ASTM E1527-21 Scope Items
manufacturing facilities (Bock 670, Lot 30), a chemical gases warehouse (Block 670, Lot 30), a dairy processing plant (Block 670, Lots 8 and 20), and a laundry facility (which may have operated as a dry cleaner; Block 670, Lot 20). Current uses of concern include metal fabrication facilities and automotive and maintenance and repair garages (with in and aboveground hydraulic lifts) with evidence of drainage structures (floor drains, oil/water separators, grease traps, and a grease trap sump), and evidence of historical petroleum bulk storage (Block 670, Lots 8, 27, and 30). A closed spill related to a failed tank tightness test of an unregistered 4,000-gallon diesel fuel underground storage tank (UST) that did not meet cleanup requirements (Spill No. 8906276) is also associated with Block 670, Lot 8. In addition, various hazardous substance and/or petroleum product containers (in used condition) with leaking, staining, and odors in the vicinity of the containers, were observed during the site reconnaissance in connection with current operations. Unreported leaks or spills of petroleum, solvents, and/or other hazardous materials from historical and current property operations may have adversely impacted soil, groundwater, and soil vapor at the subject property.
Current and Historical Use of the Surrounding Properties and Adjoining Properties: Adjoining, surrounding, and hydraulically up- and cross-gradient properties have a history of industrial uses including gasoline filling stations with gasoline tanks, auto repair shops, vehicle garages with gasoline tanks, manufacturing warehouses, and a dry cleaner. In addition, evidence of petroleum bulk storage at adjoining and adjacent properties, hydraulically up- and cross-gradient of the subject property, was observed during the site reconnaissance. Unreported releases of petroleum products, solvents, and/or other hazardous materials associated with these up- and cross-gradient uses may have migrated to and impacted groundwater and soil vapor at the subject property.
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify HRECs.
De Minimis Conditions
Floor Staining: Langan observed several areas of releases and staining on concrete slabs (some with odors) on Lots 8 and 20. Langan did not observe obvious cracking or pathways to the subsurface in the stained areas.
Significant Data Gaps
Langan did not identify any significant data gaps.
Non-ASTM E1527-21 Scope Items
Business Environmental Risks (BERs):
Unregistered Tanks: During the records review, an unregistered 4,000-gallon diesel fuel UST was identified for the subject property. In addition, during the site reconnaissance, an unregistered, 500-gallon suspect hydraulic fluid containing AST was identified on the Lot 8 roof. The lack of registration raises concerns regarding regulatory compliance, ownership responsibilities, environmental liabilities, and introduces uncertainties regarding the tanks' condition, past uses, maintenance, and compliance with applicable local and state regulations.

ASTM E1527-21 Scope Items
The presence of the tanks may also complicate or encumber interior or structural renovations and incur additional construction costs.
E-Designation Status: The Subject Property is subject to E-Designations for Hazardous Materials, Air Quality and Noise that were assigned as part of a rezoning action. The Hazardous Materials E-Designation will require that the tax lots are investigated and remediated under the jurisdiction of the NYC OER as part of any future site redevelopment.
Fill and Demolished Structures: Fill may be present on the subject property as a result of previous cycles of building construction and demolition. Fill in New York City can include brick, concrete, cinders, coal, slag, and ash and may contain contaminant concentrations above current regulatory levels and at potentially hazardous concentrations. The presence of this material may require implementation of contaminated soil handling and management procedures during site redevelopment to address excavation, re-use, handling, and off-site disposal.

1. INTRODUCTION

Langan Engineering and Environmental Services, LLC (Langan) completed a Phase I Environmental Site Assessment (ESA) of Queensboro Farm Assemblage located at 35-19 Steinway Street, 35-13 41st Street, and 35-02, 35-22, and 35-28 42nd Street in Queens, New York 11101 (the "subject property") under the written authorization of HG Acquisitions, LLC, c/o The Hakimian Group (HG Acquisitions, LLC the "Client" and the "user"). A Subject Property Location Map is provided in Appendix A (Figure 1).

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence associated with a potential transaction involving the subject property.

1.1 Purpose

The purpose of this Phase I ESA is to identify recognized environmental conditions (REC) associated with the subject property. This purpose also includes identifying controlled recognized environmental conditions (CREC), historical recognized environmental conditions (HREC), de minimis conditions, and significant data gaps. The definitions of REC, CREC, HREC, de minimis condition and other select ASTM terms used in this report are in Section 8.

1.2 Scope of Services

Langan's scope of services consisted of the completion of a Phase I ESA following the guidelines of ASTM E1527-21. Langan's scope of services as it pertains to the elements of a Phase I ESA as specified in ASTM E1527-21 is described below.

On 8 July 2024, the US EPA final rule designating two per- and polyfluoroalkyl substances (PFAS) – perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) including their salts and structural isomers – as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) became effective. Because of the complex and varied historical use of PFAS in various industries; limited prior disclosures of PFAS content on product specification sheets, Material Safety Data Sheets (MSDS), and Safety Data Sheets (SDS); the complex chemistry and chemical transformations associated with some PFAS; and the ever-growing and varied list of state regulations, it is not feasible to evaluate PFOA and PFOS without also considering other PFAS. As such, absent analytical data, Langan incorporated a review of PFAS as a general class into this Phase I ESA.

PFAS and other CERCLA hazardous substances and petroleum products have been detected in background environmental samples across the globe, including in areas removed from specific recognized sources. This Phase I ESA was not intended to evaluate background concentrations of CERCLA hazardous substances or petroleum products, regardless of whether the source is naturally occurring or anthropogenic. The objective of Langan's scope of services was to identify the presence, likely presence, and/or material threat of a release of CERCLA hazardous substances and petroleum products related to specific property uses that are generally recognized as known or potential sources of such substances and products.

1.2.1 Records Review and Local Government Interviews

Langan contracted a third-party provider to search environmental regulatory databases and provide historical records. The database search included select federal, state, local and tribal standard source environmental databases within the approximate search radii specified by ASTM E1527-21.

Langan submitted Freedom of Information Act (FOIA) requests to supplement environmental database listing information. The FOIA requests were submitted to the New York City Department of Health and Mental Hygiene (NYCDHMH), the New York State Department of Health (NYSDOH), the New York State Department of Environmental Conservation (NYSDEC), the NYSDEC DECinfo Locator database, the New York City Department of Environmental Protection (NYCDEP), and the New York City Fire Department (FDNY). Langan also reviewed online records including the New York City Department of Buildings (NYCDOB), New York City Department of Finance (NYCDF), the United States Geological Survey (USGS) mapping feature, and the United States Environmental Protection Agency (USEPA) database. Agency FOIA-requested information, where received, is discussed in relevant sections of this report, and referenced in Section 7.0. Pertinent documents are provided in Appendix B.

Langan supplemented the third-party-provided historical records with review of online historical record sources including Google Earth Pro and NETR Online.

1.2.2 Site Reconnaissance and Owner/Operator/Occupant Interviews

Langan completed the site reconnaissance on 6 December 2024. Andrew Flitt (Subject Property Controller; the "key site manager") and Rex Hakimian (Manager with The Hakimian Organization), accompanied Cristina Niclas of Langan during the site reconnaissance. Andrew Flitt and Rex Hakimian have been associated with the subject property for 26 years and four months, respectively. In addition, Tim Cutaio (Foreman with Moduank), Miguel Cimcho (Lot 8 Building Mechanic Manager), and Angel Sodo (Mechanic Manger with On the Spot Moto), accompanied Langan during portions of the site reconnaissance, having been associated with the subject property for three years, 15 years, and four years, respectively.

Langan walked the periphery of the subject property, observed the subject property from adjoining public thoroughfares, and walked the accessible interiors of structures at the subject property. Langan observed the adjoining properties and the surrounding area from the periphery of the subject property and from public thoroughfares adjoining to or traveled on to access the subject property. The weather at the time of the site reconnaissance was approximately 27 °F and clear. Photographs from the site reconnaissance are provided in Appendix C.

Langan interviewed Andrew Flitt, Rex Hakimian, Tim Cutaio, Miguel Cimcho, and Angel Sodo during the site reconnaissance, and interviewed the subject property owner, Lewis Miller (President of Queensboro Farm Products, Inc.) by phone on 6 December 2024.

1.2.3 Evaluation, Report and Parts Used in Concert

Langan evaluated the information obtained from the records reviews, site reconnaissance and interviews described above, and from the user as described in Section 1.3 in concert with each other. Langan's findings, opinions, and conclusions are discussed throughout this report. Significant assumptions, or deletions, deviations or exceptions to ASTM E1527-21 are noted in Section 1.4.

1.2.4 Non-ASTM Scope Services

The scope of services for the Phase I ESA did not include non-scope ASTM considerations.

1.3 User Responsibilities

Langan requested that the user provide the results of tasks the user is responsible for completing to satisfy the requirements of AAI. The tasks include: searching for known environmental liens and activity and use limitations (AULs) filed or recorded against the subject property, and provision of information related to specialized knowledge or experience of the user or the degree of obviousness relative to conditions indicative of releases or threatened releases; actual knowledge of the user regarding environmental liens or AULs related to the subject property; specialized knowledge or experience of the user; reasons for significantly lower purchase prices, and commonly known or reasonably ascertainable information within the local community about the subject property. Langan also requested that the user state the reason the Phase I ESA was requested. A summary of the user's responses is provided in Appendix D and relevant information provided by the user is discussed in applicable sections of this report.

Unless specifically included in the scope of services, Langan did not complete a title search or a search for environmental liens or AULs, as that is the responsibility of the user. If the user requested that Langan complete such searches on the user's behalf, the information was supplied to Langan by a vendor, and to the vendor by government sources; therefore, neither Langan nor the vendor can verify the completeness or accuracy of the title search, or AUL searches.

1.4 Limiting Conditions/Deviations

Langan was unable to observe the ground surface and interior walls throughout portions of the four subject property buildings (Block 670; Lots 8, 20, 27, and 30) due to the storage of large equipment, machinery, storage containers, and solid waste (i.e., trash/debris). Site reconnaissance observations identified two historical, suspect-petroleum bulk storage tank vent pipes and fill ports within the interior and exterior façade of the buildings located on Lots 8 and 27. In addition, Langan was unable to observe portions of the basement space below the building on Lot 8 because of unsafe structural conditions. Two out-of-service oil-fueled boilers were observed in the accessible areas of the Lot 8 basement. Our observations indicate that petroleum bulk storage tanks may be present at the subject property. Langan considers the accessibility constraints and the inability to search the areas for further evidence of petroleum bulk storage tanks a data gap; however, review of historical documentation and visibility of subject property accessible areas during the site reconnaissance, with evidence of petroleum bulk storage, Langan does not consider this to materially affect the findings of this Phase I ESA.

Langan did not delete or deviate from the ASTM E1527-21 guidelines during this Phase I ESA.

1.5 Data Gaps

Data gaps are discussed throughout the report.

2. SUBJECT PROPERTY DESCRIPTION AND CURRENT USE

The following sections describe the subject property location, ownership, physical setting, and current layout and operations.

2.1 Location, Legal Description, and Ownership

The subject property (about 2.1 acres) is located at 35-19 Steinway Street, 35-13 41st Street, & 35-02, 35-22, and 35-28 42nd Street in Queens, New York. The subject property is identified by the New York City Tax Assessor's office as Block 670, Lots 8, 20, 27, and 30; and Block 669, Lot 16. The Subject Property is owned by Queensboro Farm Products, Inc.

2.2 Physical Setting

The physical setting that includes the geologic, hydrogeologic, hydrologic, and topographic characteristics of the subject property and surrounding area is discussed below.

2.2.1 Topography

The 2017 United States Geological Survey (USGS) 7.5-minute quadrangle topographic map for Central Park, New York depicts the Subject Property at an elevation of approximately 42 feet above mean sea level (amsl), with a gentle slope downward toward the southwest. The topography observed at the subject property during the site reconnaissance was relatively flat; however, the ground surface of Block 669, Lot 16 appeared to be about one to three feet higher than the adjoining sidewalks and streets suggesting the placement of fill materials.

The regional topography slopes downward toward the southwest, in the direction of the Dutch Kills and Newton Creek, located approximately 1.2 miles southwest of the subject property.

2.2.2 Geology

According to the U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) Soil Survey Geographic (SSURGO) data for Queens County, soils at the subject property consist primarily of urban land.

Geological surface features (e.g., rock outcroppings) were not observed at the subject property. Pleistocene glacial activity modified the landscapes and surficial features of Brooklyn, Queens, and Long Island. The glaciation scoured upland areas and deposited varying amounts of till (an unsorted mixture of sand, clay, and boulders) across the lowlands and valleys. The property is within the bounds of the former glacial Lake Flushing, located in the Coastal Plain geologic province. Lake Flushing deposits consist of inter-layered fine sand, silt, and clay. Boulder-laden glacial till and below that, bedrock, underlay the lacustrine deposits.

The United States Geological Survey (USGS) "Bedrock and Engineering Geologic Maps of Bronx County and Parts of New York and Queens Counties, New York" indicates that the bedrock underlying the property consists of gray and gray-weathering, thinly laminated muscovite-biotite-quartz schist with minor garnet of the Hartland Formation.

2.2.3 Hydrogeology

Surface water bodies are not present within the boundary of the subject property. The nearest surface water body is Dutch Kills. Information regarding subject property-specific groundwater flow direction is unavailable. Groundwater flow can be influenced by several factors such as

surface water bodies, wetlands, hydrogeologic and anthropogenic variables. Based on the regional topography and project experience in the vicinity of the subject property, groundwater in the area is expected to flow northeast to southwest in the direction of Dutch Kills and Newtown Creek.

A review of the Geocheck section of the LightBox Environmental Data Resources (EDR) Regulatory Database Report (Appendix F). The EDR report also identified one additional monitoring well approximately 0.75-mile northwest of the subject property. In addition, review of historical Sanborn maps (Appendix E) identified an unspecified well on the southern portion of the building on Lot 8 (1936 and 2006). Neither well was visually observed during the site reconnaissance. Langan notes that much of the ground surface was unable to be observed throughout portions of the Lot 8 building due to the storage of large equipment, machinery, storage containers, and solid waste (i.e., trash/debris).

2.3 Subject Property Description

A description of the subject property is summarized below:

- Block 670, Lot 8: One 40,000-square foot (sf), one to two-story, mixed-use industrial and commercial building, constructed in 1933 with a partial basement and roof access;
- Block 670, Lot 20: One 10,000-sf, one-story, mixed-use industrial and commercial building, constructed in 1925;
- Block 670, Lot 27: One 6,000-sf, one-story, commercial building, constructed in 1975;
- Block 670, Lot 30: One 6,000-sf, one-story, commercial building, constructed in 1925, and
- Block 669, Lot 16: An 28,500 sf-asphalt-paved parking surface with two mobile office trailers and a storage shed.

Subject Property improvements are summarized below:

<u>Block 670, Lot 8:</u>

- An industrial warehouse occupies the northern and central portions of the building located on Lot 8. An open warehouse space encompasses the first floor with a bathroom in the southern portion of the tenant space. The second floor includes unoccupied miscellaneous storage and office spaces.
- An unoccupied office space (no tenant) occupies the first and second floors of the central portion of the building located on Lot 8. An out-of-use elevator providing access to the first and second stories was observed on the second floor with an elevator control room on the roof. Roof access is provided via the second floor. Basement access is provided via a stairwell hatch located on the exterior building façade.
- A commercial bakery occupies the first floor of the southern portion of the building positioned on Lot 8. The first floor encompasses an open baking area, including

commercial grade ovens, a food preparation and sanitation area, an employee break room, bathrooms, a bulk food product storage area, and a bulk cardboard storage area.

- An industrial metal fabrication workshop occupies the eastern portion of the building located on Lot 8. An open garage space encompasses the first floor, including various metal sheeting work stations and vehicle maintenance and equipment storage areas.

Block 670, Lot 20:

- A vehicle maintenance and car wash garage occupies the northern portion of the building on Lot 20. An open vehicle maintenance and washing area encompasses the northern and central portions of the space with a retail store/office space and bathrooms in the southern portion of the tenant space.

- A vehicle parking and storage area occupies the southern portion of the building on Lot 20, containing concrete-paved floors and ten, aboveground hydraulic lifts.

Block 670, Lots 27 and 30:

- Two vehicle storage and maintenance garages occupy the two commercial buildings on Lots 27 and 30. An open vehicle garage space encompasses the building on Lot 27 while a retail/sales office space, employee bathrooms, and a vehicle storage and maintenance garage, including designated vehicle maintenance, equipment, and bulk storage areas, encompasses the building on Lot 30.

Block 669, Lot 16:

- An asphalt-paved used car lot occupies Lot 16. Two mobile trailers are located on the southern and western portions of the property. The mobile trailer located on the southern portion of the property is primarily used as a retail/sales office space and includes employee bathrooms, while the trailer located on the western portion is used as an employee breakroom and storage space. A vehicle maintenance and equipment storage shed is located on the central portion of the property.

A Subject Property Layout Map is provided in Figure 2 of Appendix A. Photographs of the subject property and a checklist documenting Langan's observations relative to the features, activities, uses, and conditions outlined in Section 9.4 of ASTM E1527-21 are in Appendix C.

2.4 Current Subject Property Use

Current Subject Property uses are described below:

Block 670, Lot 8:

- An industrial metal fabrication and construction warehouse, leased by Modutank, occupies the northern and central portions of the first floor of the building on Lot 8. Operations include the manufacture and construction of custom order storage tanks. Langan observed the storage and handling of raw materials, including metal sheeting and tubing, wooden pallets, plywood, nuts and bolts, tires, pumicized grime grabber, an air compressor, and machinery utilized to construct the tanks. Portions of the first floor were

unable to be visually inspected during the site reconnaissance because of the placement of large equipment, machinery, and general trash/debris. The second floor includes unoccupied miscellaneous storage and office spaces.

- An unoccupied storage space (no tenant) occupies the first and second floors of the central portion of the building positioned on Lot 8. Storage spaces include wooden sitting areas and benches, bags of clothes, cardboard palettes, an electric-powered forklift and trash compactor, miscellaneous metal sheeting and tubing, building renovation products, and general trash/debris. Portions of the tenant space were unable to be visually inspected during the site reconnaissance due to the structural integrity of the space, as well as to the placement of general trash/debris. Roof access is provided via the second floor and includes building heating, ventilation, and air conditioning (HVAC) units, an elevator control room, with an adjacent out-of-service 500-gallon hydraulic fluid AST, and air ducts. Basement access is provided via a stairwell hatch, located on the exterior building façade, and includes two out-of-service oil-powered boilers. Portions of the basement were also unable to be visually inspected because of unsafe structural concerns.

- A commercial bakery occupies the first floor of the southern portion of the building on Lot 8. Operations include the preparation, mixing, baking, and storage of pastries. Commercial grade food product storage, including flour, sugar, eggs, etc., as well as cardboard packaging storage and an electric-powered cardboard compactor, are located throughout the bakery.

- An industrial metal fabrication workshop, leased by Advanced Metal Works, occupies the eastern portion of the building on Lot 8. Operations includes the design/construction and maintenance/repair of food trucks. Langan observed the storage and handling of raw materials, including metal sheeting and tubing, and vehicle and equipment maintenance supplies.

<u>Block 670, Lot 20:</u>

- A vehicle maintenance, car washing, and detailing service center, leased by On the Spot Moto, occupies the northern portion of the building on Lot 20. Langan observed the storage and handling of vehicle maintenance and car wash products, located in designated areas throughout the garage space, two in-ground hydraulic lifts, designated solid waste and recycling areas, and an air compressor.

- A vehicle parking and storage outpost of Luxury of Queens, Inc (Block 669, Lot 16) occupies the southern portion of the building on Lot 20, containing ten aboveground hydraulic lifts and associated vehicles.

<u>Block 670, Lots 27 and 30:</u>

- A vehicle storage and maintenance facility, leased by Quality Transportation, occupies the two commercial buildings on Lots 27 and 30. Langan observed the storage and handling of vehicle maintenance and car wash products located in designated areas throughout the garage space located on Lot 30, a propane-powered forklift, wooden pallets, an

aboveground hydraulic lift, an air compressor, bulk storage dry ice containers, and unlabeled bulk storage containers shipped via ARUP Laboratories.

Block 669, Lot 16:

- An asphalt-paved used car and sales lot, leased by Luxury of Queens, Inc, occupies Lot 16. Langan observed the parking and storage of vehicles and the storage of vehicle maintenance and car wash products in the vehicle maintenance and equipment storage shed.

The following table summarizes subject property utility providers.

Table 2-1 Utility Providers

Utility	Providers
Electricity (used for cooling)	Consolidated Edison Company of New York, Inc.
Natural gas (used for heating)	Consolidated Edison Company of New York, Inc.
Water	NYCDEP
Combined Sanitary, Wastewater, and Storm Sewer	NYCDEP

2.5 Hazardous Substances and Petroleum Products

Hazardous substance and petroleum product use at the subject property are summarized below. A Subject Property Layout Map is provided as Figure 2 and photographs from the site reconnaissance are provided in Appendix C.

- Block 670, Lot 8 *(Various Tenants)*
    - *Modutank:*

      Several partially used, AW hydraulic oil, five-gallon buckets, and a partially filled, unlabeled, five-gallon bucket were observed on the northwestern and central portions of the metal fabrication garage space, respectively. Langan observed leaking, staining, and petroleum-like odors on the concrete slab below and in the vicinity of the hydraulic oil buckets and unlabeled bucket. Langan did not observe obvious cracking or pathways to the subsurface in the stained area. Langan considers the staining a de minimis condition in connection with current subject property uses.

      An approximately 2.5-foot by 2.0-foot stain was observed on the concrete slab on the northern portion of the garage space, by the garage bay doors. Langan did not observe obvious cracking or pathways to the subsurface in the stained area. Langan considers the staining a de minimis condition in connection with current subject property uses.

      Various partially-used industrial grade products, including turpentine pure gem spirits, lacquer thinner, and anti-splatter Best Welds aerosol cans were observed scattered throughout the garage space. Langan did not observe evidence of leaks,

spills, pools of liquid, or releases such as staining or sheens, in the vicinity of these products.

A partially used, unlabeled 55-gallon drum was observed on the western portion of the garage space. Langan did not observe evidence of leaks, spills, pools of liquid, or releases such as staining or sheens, in the vicinity of the unlabeled drum.

Six compressed gas cylinders containing argon and carbon dioxide were observed on the central portion of the garage space. The gas cylinders appeared to be in good condition.

- *Unoccupied Storage Space:*

  An unlabeled, empty steel container was observed on the first floor of the of the unoccupied storage space. The steel container appeared to be in poor condition. Langan did not observe evidence of leaks, spills, pools of liquid, or releases such as staining or sheens, in the vicinity of the unlabeled container.

  A five-gallon, partially-used, paint container was observed on the second story of the unoccupied storage space. Langan observed dried paint (leaking) on the top and side of the container; however, the dried paint was confined to the paint container.

  Two 55-gallon, unlabeled and filled, steel drums on a pallet, were observed on the public sidewalk in front of the unoccupied storage space entrance. Andrew Flitt, subject property Controller, indicated the drums were not the property of Queensboro Farm Products, Inc. and that the drums were placed at the property by another party about one (1) week prior to the site reconnaissance.

- *Bakery:*

  Two, five-gallon, partially used, cleaning detergent buckets were observed within the bakery tenant space, adjacent to the hand washing station. Langan did not observe evidence of leaks, spills, pools of liquid, or releases such as staining or sheens, in the vicinity of the detergent buckets.

- *Advanced Metal Works*:

  Various partially-used motor oil containers, paint, wood filler, and miscellaneous vehicle maintenance and industrial grade products were observed in dedicated areas throughout the metal works garage space. Langan did not observe evidence of leaks, spills, pools of liquid, or releases such as staining or sheens, in the vicinity of the containers and products.

  Three compressed gas cylinders containing argon were observed on the western portion of the garage space. The gas cylinders appeared to be in good condition.

- <u>Block 670, Lot 20 *(Various Tenants)*</u>

  - *On the Spot Moto:*

    Various partially-used motor oil containers, used vehicle car wash and maintenance products, and three, partially-used, 55-gallon steel drums containing motor oil were observed in dedicated areas within the automotive car wash, maintenance, and garage space. Langan did not observe evidence of leaks, spills,

pools of liquid, or releases such as staining or sheens, in the vicinity of the product containers/drums.

- *Vehicle Storage Outpost of Luxury of Queens, Inc:*

  Ten approximately three-gallon, upright hydraulic fluid containers were observed in connection with several aboveground vehicle lifts throughout the vehicle storage and indoor garage space, associated with used car operations affiliated with luxury of Queens, Inc. Langan observed leaking and staining on the concrete slab below several hydraulic fluid containers. Langan did not observe obvious cracking or pathways to the subsurface in the stained area. Langan considers the staining a de minimis condition.

- Block 670, Lots 27 and 30 (Quality Transportation):

  New and used vehicle maintenance and petroleum product containers and building renovation products (i.e., paint cans, joint compound, etc.), were observed in dedicated areas within the automotive storage and garage space (Lot 30). In addition, three steel, unlabeled 55-gallon, partially-filled, drums and one unlabeled, partially-filled, plastic drum were observed near the garage bay door, adjacent to the sidewalk space, positioned along 42nd Street. Langan did not observe evidence of leaks, spills, pools of liquid, or releases such as staining or sheens, with the exception of slight odors in the vicinity of the containers/drums.

  A partially-used, steel propane cylinder was observed as a fuel source of an on-site mechanical forklift. The propane cylinder appeared to be in good condition.

  One aboveground hydraulic lift was observed in the central portion of the vehicle maintenance and storage garage. The lift and hydraulic fluid container appeared to be in good condition with no visual staining or leaking in its vicinity.

- Block 669, Lot 16 (Luxury of Queens, Inc):

  Used car wash and detailing supplies, used equipment and vehicle maintenance products, and several used gasoline containers, were observed both inside and on the rear exterior of the on-site storage shed, located on the central portion of the used car lot facility. Langan did not observe evidence of leaks, spills, pools of liquid, or releases such as staining or sheens, in the vicinity of the product/gasoline containers.

2.5.1 Underground Storage Tanks (USTs)

Langan observed two suspect, fill ports and vent pipes associated with historical petroleum bulk storage tanks during the site reconnaissance. Andrew Flitt, subject property Controller, was aware of neither active nor historical USTs associated with the subject property. The suspect fill ports and vent pipe locations are described below. A Subject Property Layout Map is provided as Figure 2 and photographs from the site reconnaissance are provided in Appendix C.

- Vent pipe/fill port: A suspect fill port was observed within the western portion of the bakery tenant space (Lot 8). A vent pipe was observed on the western building façade of the bakery tenant space, positioned along 41st Street, adjacent to the interior fill port.
- Vent pipe/fill port: A suspect vent pipe and fill port were observed on the exterior façade of the Quality Transportation tenant space (Lot 27), positioned along 42nd Street.

The EDR database report did not identify any petroleum bulk storage (PBS) listings for the subject property; however, a leaking petroleum bulk storage tanks (LTANKS) listing identified a failed routine tank tightness test associated with a 4,000-gallon diesel fuel UST for the subject property building located on Lot 8. The test tightness failure was not invested further. The case was closed by NYSDEC on 10/30/2003 due to a lack of updated information regarding the tank. NYSDEC further indicates that the case did not meet cleanup requirements. This listing is further discussed in Section 3.2.

In addition, review of historical records from NYC agencies noted evidence of oil usage and USTs at the subject property, summarized below:

- Block 670, Lot 8: Review of the NYCDOB Buildings Information System (BIS) identified a permit application for the removal of a 4,000-gallon diesel fuel UST, dated 5/5/1992. The permit application was approved; however, no information pertaining to the UST removal was provided.
- Block 670, Lot 27: Review of the NYCDOB NOW portal identified records for two active oil-fired boilers. No additional information was provided, including details pertaining to the boilers' fuel source.
- Block 670, Lot 30: Review of the NYCDOB NOW portal identified records for an active oil-fired boiler. In addition, Langan identified an application for the replacement of an oil-fired burner and oil-fired boiler, dated 8/2/2004. The permit application was approved; however, no information pertaining to the replacement of either the oil boiler or oil burner was provided. Details pertaining the boiler and burner's fuel source were also not provided.

The identification of two suspect petroleum bulk storage fill ports/vent pipes and the closed spill case (Spill No. 8906276), involving an unregistered 4,000-gallon diesel fuel UST, that failed to meet cleanup requirements, is considered a REC.

In addition, the unregistered 4,000-gallon diesel fuel UST raises concerns regarding regulatory compliance, ownership responsibilities, environmental liabilities, and introduces uncertainties regarding the tank's condition, past use, maintenance, and compliance with applicable local and state regulations and is considered a BER.

2.5.2 Aboveground Storage Tanks (ASTs)

An out-of-service, unregistered, approximately 500-gallon, suspect hydraulic-fluid containing storage tank, positioned adjacent to elevator control room, was observed on the roof of Lot 8, accessed via the second story of the storage and office space. The tank was observed to be in poor condition, with holes. Langan did not observe evidence of leaks, spills, pools of liquid, or releases such as staining or sheens, in the vicinity of the storage tank. Andrew Flitt, subject property Controller, could neither confirm nor deny if the tank currently contained hydraulic fluid. Because of tank's poor condition and lack of documentation concerning the status of the tank, the storage tank is considered part of the current and historical use REC for the subject property.

The unregistered, 500-gallon, suspect hydraulic-fluid containing AST also raises concerns regarding regulatory compliance, ownership responsibilities, environmental liabilities, and introduces uncertainties regarding the tank's condition, past use, maintenance, and compliance with applicable local and state regulations and is considered a BER.

In addition, Langan observed two out-of-service oil boilers within the basement space below Lot 8. The boilers appeared to be in poor condition. According to the NYCDOB BIS, the boilers were reported as inactive. Due to unsafe structural conditions, Langan was unable to observe the vicinity of the boilers for evidence of leaks, spills, pools of liquid, or releases such as staining or sheens, within the vicinity of the boilers. The accessibility constraints and the inability to search the areas around the boilers for further evidence of petroleum bulk storage tanks is considered a data gap.

2.5.3 Drums, Totes, and Intermediate Bulk Containers

Langan observed the following in the Modutank tenant space (Lot 8):

- One 300-lb, new and sealed, green oil base sweep with grit bulk container.

Langan observed the following in the Quality Transportation tenant space (Lot 30):

- Several, new and sealed, approximately 250-gallon dry ice totes and several pallets of products shipped by ARUP Laboratories. Andrew Flitt, Controller, had no knowledge of the contents of the ARUP Laboratories pallets.

Langan observed a variety of labelled and unlabeled, partially used, drums throughout the subject property. Information regarding the storage and handling of the drums, as well as contents, are discussed in Section 2.5.

2.5.4 Other Chemical Storage, Containers, or Equipment

Langan observed equipment and vehicle maintenance, car wash fluids, and cleaning/disinfectant detergents in retail-size containers in both dedicated areas and scattered throughout the subject property (Block 669; Lot 16 and Block 670; Lots 8, 20, 27, and 30). Information regarding the storage and handling of particular products of note (i.e., observed leaks, spills, pools of liquid, or releases such as staining or sheens) are discussed in Section 2.5.

Langan observed an out-of-use trash compactor within the central portion of the unoccupied storage and office space (Lot 8). The trash compactor was previously fueled by natural gas, supplied by Con Edison, and did not exhibit signs of release (i.e., observed leaks, spills, pools of liquid, or releases such as staining or sheens).

2.6 Air Emissions

Air emission sources at the subject property include HVAC equipment, small and large space heaters, electric air conditioning (AC) wall units, industrial grade ovens, and natural gas. Langan did not identify obvious impacts, such as visible emissions or odors, from air emission sources at the subject property.

Langan does not consider the air emissions an environmental concern for the subject property.

2.7 Waste Management

The following sections describe current hazardous and non-hazardous waste streams, and observations of fill areas or other solid waste throughout the subject property.

2.7.1 Hazardous Waste

Langan did not observe hazardous waste at the subject property.

2.7.2 Non-Hazardous Waste

Non-hazardous solid waste disposal and recycling operations at the subject property is managed by each tenant. A description of waste disposal and recycling facilities is summarized below:

- Block 670, Lot 8 *(Various Tenants)*
    - *Modutank:*

      Solid waste and recycling are collected in an on-site dumpster, located on the northern portion of the subject property, positioned along 35th Avenue, and disposed off-site by Waste Management of New York City.
    - *Unoccupied Storage Space:*

      No trash receptacles or dumpsters were observed at the property. Andrew Flitt, Subject Property Controller, had no knowledge of solid waste management practices for this space.
    - *Bakery:*

      No trash receptacles or dumpsters were observed at the property. Andrew Flitt, Subject Property Controller, had no knowledge of solid waste management practices for this space.
    - *Advanced Metal Works*:

      Trash receptacles were observed throughout the workshop garage. No dumpsters were observed. Andrew Flitt, Subject Property Controller, had no knowledge of solid waste management practices for this space.
- Block 670, Lot 20 *(Various Tenants)*
    - *On the Spot Moto:*

      Solid waste and recycling are collected in waste receptacles throughout the vehicle garage space and collected in an on-property dumpster, located on the northern portion of the subject property, positioned along 35th Avenue, and disposed off-site by Boro BW Wide Recycling.
    - *Vehicle Storage Outpost of Luxury of Queens, Inc:*

      No trash receptacles or dumpsters were observed at the property. Andrew Flitt, Subject Property Controller, had no knowledge of solid waste management practices for this space.
- Block 670, Lots 27 and 30 (Quality Transportation):

  Trash receptacles were observed throughout the vehicle maintenance and storage garage. No dumpsters were observed. Andrew Flitt, Subject Property Controller, had no knowledge of solid waste management practices for this space.
- Block 669, Lot 16 (Luxury of Queens, Inc):

  Solid waste and recycling are collected in an on-site dumpster, located on the northern portion of the subject property, positioned along 35th Avenue, and disposed off-property by Action Environmental of Teaneck, New Jersey.

2.7.3 Fill Areas or Solid Waste

During the site reconnaissance, Langan observed a partially-exposed, concrete foundation, in poor condition, below the vehicle equipment and maintenance supplies storage shed, located on the central portion of Lot 16 (Luxury of Queens, Inc). In addition, Langan observed the ground surface of Lot 16 to be about one to three feet higher than the adjoining sidewalks and streets. Both observations are indicative of previous cycles of building construction and demolition.

Solid waste (i.e., general trash and debris) was observed throughout Modutank and the first and second-floor unoccupied storage and office space. Solid waste inhibited visual inspection of floor and wall spaces; the accessibility constraints constitute a data gap. Data gaps are further described in Sections 1.4. and 5.0.

2.8 Wastewater

Sanitary and process wastewater are discharged to the New York City municipal sanitary sewer system. Andrew Flitt, Subject Property Controller, stated that the buildings were connected to the municipal sanitary sewer system at the time of their construction.

Langan observed the following above-ground drainage structures during the site reconnaissance:

- Block 670, Lot 8 *(Various Tenants)*
    - *Modutank:*

      Langan observed an oil/water separator in the central portion of the industrial warehouse space. The oil/water separator was installed during construction of the warehouse building in 1933 and appeared to be in good condition. Andrew Flitt, Subject Property Controller, had no knowledge as to the when the separator was last utilized.
    - *Unoccupied Storage Space:*

      Langan observed two oil/water separators on the southern portion of the second floor of the unoccupied storage space. The oil/water separators were installed during construction of the building in 1933 and appeared to be in poor condition. Andrew Flitt, Subject Property Controller, had no knowledge as to the when the separators were last utilized.
    - *Bakery:*

      Langan observed eleven grease traps throughout the open baking area. The grease traps were installed during construction of the property building in 1933 and appeared to be in good condition. Langan observed a steel grease trap sump on the northern portion of the baking area. The grease trap sump is piped to the grease traps. The grease traps are being utilized daily.
    - *Advanced Metal Works:*

      Langan observed an oil/water separator in the central portion of the industrial workshop space. The oil/water separator was installed during construction of the warehouse building in 1933 and appeared to be in poor condition, with a wooden board partially cover the top. Andrew Flitt, Subject Property Controller, had no knowledge as to the when the separator was last utilized.

- Block 670, Lot 20 *(Various Tenants)*
    - *On the Spot Moto:*

      Langan observed two oil/water separators on the northern portion of the car wash and maintenance garage. The separators were installed during construction of the property building in 1925 and appeared to be in good condition. The separators are being utilized daily.
- Block 670, Lots 27 and 30 (Quality Transportation):

  Langan observed one floor drain in the employee restroom and three oil/water separators throughout the vehicle maintenance and storage garage. The separators were installed during construction of the property building in 1925 and appeared to be in good condition. The floor drain and separators are being utilized daily.

Andrew Flitt, Subject Property Controller, had no knowledge as to the when the floor drain, oil/water separators, grease traps, or grease trap sump underground features were last cleaned or inspected for integrity after their last use. Based on the age and lack of integrity inspections of the features, and these facilities chemical uses, the likely potential for a release to soil or groundwater in the vicinity of the drainage features in connection with historical and current site uses is considered a REC.

Langan did not observe or identify evidence of septic systems or cesspools at the subject property.

2.9 Storm Water

Storm water at the subject property percolates through pervious areas or sheet flows to the adjoining roadways into the municipal sanitary, wastewater, and storm sewer system. Langan did not observe evidence of impact (e.g., sheens, staining) to storm water pathways.

2.10 Non-ASTM Scope Considerations

No non-scope considerations are included in this Phase I ESA.

3. SUBJECT PROPERTY HISTORY AND RECORDS REVIEW

The following sections provide summaries of the historical uses of the subject property, and available information regarding documented environmental conditions associated with the historical uses.

3.1 Historical Summary

Langan compiled the following summary of the subject property history based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in Appendix E.

Table 3-1 Subject Property History

Time Period	Historical Discussion
1890 – 1910s	Block 670, Lots 8, 20, 27, and 30: According to Sanborn maps, the subject property is depicted as 35 undeveloped lots in 1898, decreasing to 27 lots by 1915. Block 669, Lot 16: According to Sanborn maps, the subject property was depicted as 12 undeveloped lots between 1898 and 1936.
1920s – 1930s	Block 670, Lots 8, 20, 27, and 30: According to the 1924 aerial photograph, Lots 8, 27, and 30 appear undeveloped, while Lot 20 is developed. In the 1936 Sanborn map, each parcel appears developed with either one- or two-story warehouse or garage buildings, which is similar to the present-day Lot 8 building configuration, with the exception of the building on the northern portion of Lot 8. The subject property is depicted for various industrial uses, including metal products manufacturing (with lacquer spraying), chemical gas manufacturing, automotive repair, commercial laundry, and a dairy processing plant. In addition, four gasoline tanks are depicted, including three tanks on the northernmost corner of Lot 8, associated with the dairy plant, and one tank near the easternmost corner of Lot 8, located within the garage of the dairy plant. In addition, an unspecified well and an elevator are depicted near the southern, central portion of the Lot 8 building, positioned within the dairy plant garage.
1940s – 1950s	Block 670, Lots 8, 20, 27, and 30: According to the 1947 Sanborn map, several of the businesses changed use. Several storage warehouses were depicted, including one which appears to have replaced the commercial laundry facility. In addition, a paper and twine warehouse, with an associated gasoline tank, are depicted on the eastern portion of Lot 20. The three gasoline tanks on the northern portion of Lot 8 are no longer depicted. Block 669, Lot 16: According to the 1941 aerial photograph, the subject property is developed as a parking lot.
1960 – 1990s	Block 670, Lots 8, 20, 27, and 30: The warehouse building on the northern portion of Lot 8 is replaced between 1954 and 1961 with a single building, a two-story warehouse, and a one-story warehouse, with the

Time Period	Historical Discussion
	northernmost single building being utilized as a bottling and shipping plant for the dairy plant. According to the 1970 Sanborn map, an "Ammonia Mixer" label is depicted along the western side of Lot 8. According to city directories dated in the 1980's, several of the properties are depicted as automotive sales facilities, transportation facilities, courier service facilities, construction and contractor outposts, and a real estate office. Block 669, Lot 16: According to the 1994-2006 Sanborn maps, the eastern and northern portions of the parking lot are depicted as contractor storage. The subject property was identified in the 1995 city directory as an automotive sales lot.
2000s – Present	Block 670, Lots 8, 20, 27, and 30: The city directory listings remain consistent with present-day conditions, with the inclusion of a bakery beginning in 2000. Block 669, Lot 16: According to the 2022 aerial photograph, an office trailer and a storage structure are depicted on the central and southern portions of Lot 16, respectively and remains consistent with present-day conditions. Lot 16 appeared as it does today with limited changes through present.

The current and historical use of the subject property as auto repair shops (Block 670, Lots 8, 20, and 27), a gasoline filling station (Block 669, Lot 16), automobile garages, including two with evidence of petroleum bulk storage (Block 670, Lots 8, and 20), manufacturing facilities (Block 670, Lot 30), a chemical gases warehouse (Block 670, Lot 30), a dairy processing plant (Block 670, Lots 8 and 20), and a laundry facility (which may have operated as a dry cleaner; Block 670, Lot 20), is considered a REC.

3.2 Regulatory Database Review

The subject property is identified on the NY NYC Land Use, NY LTANKS, and NY E (Environmental) Designation databases. The listings included in the NY NYC Land Use and NY E Designation databases are associated with environmental restrictions assigned to the subject property by the NYC Office of Environmental Remediation (OER). The entire subject property (Block 670, Lots 8, 20, 27, and 30; Block 669, Lot 16) has been assigned a land use restriction (E1 – Warehouse, Fireproof Industrial and Manufacturing) and an E-Designation for air quality, noise, and hazardous materials.

In addition, Lot 8 was identified in the LTANKS database for a leaking storage tank (LST) incident:

- NYSDEC Spill No. 8906272: On 9/9/1989, a 4,000-gallon diesel fuel UST failed routine tank tightness testing and a single gallon of diesel fuel was spilled onto the ground surface. The test tightness failure was not investigated further. The case was closed by NYSDEC on 10/30/2003 due to a lack of updated information regarding the tank. NYSDEC further indicates that the case did not meet cleanup requirements.

Potential subsurface impacts related to the closed spill case (Spill No. 8906276) that did not meet cleanup requirements is considered a REC.

The environmental database report is attached as Appendix E.

3.3 Prior Report Review

Langan was not provided with prior reports related to the subject property.

4. ADJOINING PROPERTIES AND SURROUNDING AREA

The following sections describe current and historical uses of and database listings for adjoining properties and the surrounding area.

4.1 Current Use of Adjoining Properties and Surrounding Area

The current use of adjoining and surrounding properties is summarized in Table 4-1.

Table 4-1 Current Use of Adjoining Properties and Surrounding Area

Direction	Adjoining Properties	Surrounding Area
North	35-01 Steinway Street (NYC Parks Playground Thirty-Five), 35th Avenue, followed by 34-50 41st Street (mixed-use residential and commercial building, with laundromat & pick-up service only), 41-05 35th Avenue (multi-family residential building), 34-58 42nd Street (multi-family residential building).	Primarily multi-family residential buildings with several mixed-use residential buildings (first floor retail/commercial; second and upper floors residential), and some light manufacturing buildings.
East	42nd Street, beyond which includes 42-07 Northern Boulevard (Subaru car dealership & maintenance facility), 35-17 42nd Street (Royale Limousine Manufacturer), 35-15 42nd Street (Koeppel Kaires Automotives), and 42-08 35th Avenue (Automotive Showroom).	Manufacturing warehouses, distribution warehouses, automotive garages, car dealerships, mixed-use commercial and residential buildings with offices and retail spaces, and multi-family residential buildings.
South	35-25 Steinway Street (Mega Architect and Mechanic Design), 35-26 41st Street (food cart storage), 35-25 Steinway Steet (vacant commercial space), 35-25 Steinway Street (church), 35-24 41st Street (vacant; former Mayer Mablin, a mill, factory, and plumbing supplies manufacturer), and 35-34 42nd Street (Tomlina's Auto Center).	Manufacturing warehouses, distribution warehouses, automotive garages, car dealerships, restaurants, Northern Boulevard, self-storage center, and a grocery store with a parking lot.
West	35-01 Steinway Street (NYC Parks Playground Thirty-five), 38th Street, beyond which includes 38-18 Steinway Street (P.C. Richard & Son), 41st Street, followed by 35-25 Steinway Street (Mega Architect and Mechanic Design), 35-26 41st Street (food cart storage), and 35-42 41st Street (vacant; former Mayer Mablin).	Commercial retail and office buildings with parking lots, a movie theatre, and schools

In addition, during the site reconnaissance, three petroleum bulk storage vent pipes/fill ports were identified on the exterior façade of the property located at 35-48 Steinway Street (multi-family residential), located west-southwest, and hydrologically downgradient, of the subject property. According to the EDR database report, three active AST listings exist for the property, with no documented spills or leaks. Due to the hydraulic location of this property with respect to the subject property and the lack of documented spills, the three ASTs are not considered a REC.

Adjoining and surrounding property uses including industrial facilities and automotive maintenance and repair shops are considered a REC.

4.2 Adjoining Properties and Surrounding Area History

Langan compiled the following summaries of the adjoining properties and surrounding area history based on a review of historical resources and interviews. Historical resources are provided in Appendix E.

Table 4-2 Historical Use of Adjoining Properties

Direction	Adjoining Properties
North	The northern adjoining properties appear undeveloped between the 1890s and 1920s. By 1936, the properties were developed with several multi-family residential buildings, as well as a mixed-use residential and commercial building, located at 34-50 41st Street. The playground appears to have been developed by 1947 (Sanborn map). No significant changes were observed in the aerial photographs, Sanborn maps, or topographic maps after the 1950's. By 1995, a dry cleaner was observed at the adjacent mixed-use building to the north, beyond 35th Avenue, and a carpet cleaner and laundromat were listed at the adjacent property addresses in city directories.
East	The eastern adjoining properties are depicted as undeveloped on topographic maps from the 1890s to 1910s. By 1924, the eastern adjoining properties appear developed with present-day buildings, operating as a grocery store, vacant warehouse, and garage with a gasoline tank. By 1947, the vacant warehouse is depicted as a trucking garage, while the grocery store is depicted as a plastics manufacturer with gasoline motor repair. By 1950, these properties are depicted as trucking and automotive repair garages and automotive sales facilities, which is consistent with present-day conditions. The gasoline tank was no longer depicted by 1970.
South	The southern adjoining properties appear undeveloped between the 1890s and 1920s, with development beginning between the 1930s and 1940s as industrial warehouses. These warehouses are depicted as being occupied by automotive maintenance garages, an automotive part and tire sales facility, and a plumbing warehouse from the 1930s until present-day.
West	The western adjoining properties appear undeveloped between the 1890s and 1900s, with development beginning between the 1910s and 1940s as a playground, milk processing plant, automotive maintenance garages, a truck yard, and two manufacturing facilities. The facilities operations included roofing materials, automotive parts, tires, tin products, hardware, and paint shop. By 1974, the milk manufacturing plant and trucking facility has been demolished and redeveloped into a commercial retail store (King Kullen grocery store, per city directories), with an adjoining and parking lot by 1991. By 2000, the property had been redeveloped into the current PC Richard & Son appliance store by 2000.

According to topographic maps from the late 1800s through till the early 1910s, the surrounding area is depicted as undeveloped land, with development taking place between 1924 and 1941. Surrounding areas to the northeast and north are developed with multi-family residences and mixed-use residential and commercial buildings. Surrounding areas to the northwest, west, south, and east are developed as automotive maintenance garages, filling stations, factories, truck yards, commercial retail, a dry cleaner, and a public playground. These properties changed uses but remained industrial in nature since the 1970s. Surrounding areas to the west, north, and farther south became less industrial and more commercial between the 1970s and the present day.

Historical adjoining and surrounding uses including gasoline filling stations with gasoline tanks, auto repair shops, vehicle garages with gasoline tanks, manufacturing warehouses, and a dry cleaner, with evidence of petroleum bulk storage at adjoining and adjacent properties, hydraulically up- and cross-gradient of the subject property, was documented during the historical review and the site reconnaissance. Unreported releases of petroleum products, solvents, and/or other hazardous materials associated with these up- and cross-gradient uses may have migrated to and impacted groundwater and soil vapor at the subject property and are considered a REC.

4.3 Regulatory Database Review

Langan reviewed the environmental database report to evaluate if adjoining or surrounding area properties identified in the database report are suspected to represent an environmental concern for the subject property (see Section 8.2). Langan did not consider review of regulatory agency files necessary to evaluate potential RECs for the subject property unless discussed in Section 4.3.1 or 4.3.2 below:

4.3.1 Adjoining Properties

Database listings for adjoining properties are summarized as follows.

Chrismar Equities Corporation – 34-50 41st Street (North adjoining; Inferred Up-gradient)

According to the EDR report and the NYSDEC on-line PBS database, one in-service 6,000-gallon #2 fuel oil AST is registered at the property (PBS Facility No. 2-333778). The records indicate the AST was installed at the property in August 1983. The property is not listed in the LTANKS or Spills databases for any spills or releases. Based on the lack of reported spills and releases, this PBS listing is not considered a REC.

Block 669, Lot 13 – 35-25 Steinway Street (Western and Southern Adjoining; Inferred Cross-Gradient/Downgradient)

The adjoining property to the west and south was identified as a E-Designated site for air quality, hazardous materials, and noise. This designation is further evidence of historical uses of concern at adjoining properties is considered part of the REC for adjoining and surrounding properties.

Block 668, Lot 5 – 35-30 Steinway Street (Western Adjoining; Inferred Cross-Gradient)

The adjoining property to the west and south was identified as E-Designated site for air quality, hazardous materials, and noise. This designation is further evidence of historical uses of concern at adjoining properties is considered part of the REC for adjoining and surrounding properties.

Tomlina's Auto Center/LIC Collision Inc. – 35-40 42nd Street/35-34 42nd Street (Southern Adjoining; Inferred Downgradient)

According to the EDR report and the NYSDEC on-line PBS database, two in-service 200-gallon and 275-gallon waste oil ASTs are registered at the property (PBS Facility Nos. 2-610167, 2-612977, respectively). The records indicate the ASTs were installed at the property in August 2000 and November 2017, respectively. The property is not listed in the LTANKS or Spills databases for any spills or releases. Based on the lack of reported spills and releases, these PBS listings are not considered a REC.

Block 671, Lot 8 – 35-17 42nd Street (Eastern Adjoining; Inferred Cross-Gradient)

The adjoining property to the west was identified as a E-Designated site for air quality, hazardous materials, and noise. This designation is further evidence of historical uses of concern at adjoining properties is considered part of the REC for adjoining and surrounding properties.

Block 671, Lot 16 – 42-12 35th Avenue (Eastern Adjoining; Inferred Cross-Gradient)

The adjoining property to the east was identified as an E-Designated site for air quality and hazardous materials. This designation is further evidence of historical uses of concern at adjoining properties is considered part of the REC for adjoining and surrounding properties.

4.3.2 Surrounding Area

Langan evaluated each of the database listings for surrounding area properties (see Section 8.2). Those warranting further discussion in the context of potential to represent an environmental concern for the subject property are discussed below.

Alex Service Station/Balogh Alex – 34-49 Steinway Street (Approximately 200-feet North; Inferred Up-Gradient)

The site was reported as a historical auto station and was identified as a former service station between 1969 and 1983. No additional documentation is provided. Due to the hydraulically upgradient nature of the historical gas station and the lack of additional documentation, and its potential to release hazardous materials into the surrounding environment, this listing is considered a REC.

BP Distribution – 34-26 41st Street Apt 3D (Approximately 400-feet North; Inferred Up-Gradient)

The site was reported as a historical auto station and was identified as a former gasoline service station between 2010 and 2011. No additional documentation is provided. Due to the hydraulically upgradient nature of the historic gas station and the lack of additional documentation, and its potential to release hazardous materials into the surrounding environment, this listing is considered a REC.

Levco Metals – 34-11 36th Street (Approximately 0.17 Miles North; Inferred Up-gradient)

The former Levco Metals site was identified in the RCRA NonGen/NLR, FINDS, US Airs, PFAS ECHO, Vapor Reopened, NY SHWS, NY INST (Institutional) Control, NY VCP, NY UST, NY AST, UST Finder, NY Spills, NY Manifest, and PA Manifest databases. The site (NYSDEC Site No. V00600) was a former metal finishing facility. The contaminant of concern in soil and groundwater was trichloroethene (TCE), detected at a concentration of 3.5 parts per million (ppm) in soil. The contaminated soil was excavated in 1994 and remedial actions successfully achieved soil cleanup objectives for commercial use to the satisfaction of the NYSDEC. A fact sheet describing the cleanup and release letter to the Volunteer were issued by the NYSDEC in 2018. Residual contamination is being managed under a Site Management Plan (SMP) and therefore this listing is not considered a REC.

Adjoining and surrounding, hydraulically up-gradient and/or cross-gradient, properties have a history of industrial uses including gasoline filling stations with petroleum bulk storage tanks, automotive repair and maintenance shops, truck/vehicle garages, and manufacturing facilities, with some of these properties containing E-Designated status and were listed in regulatory databases for petroleum bulk storage. Unreported releases of petroleum products, solvents, and/or other hazardous materials associated with these up- and cross-gradient uses may have

adversely impacted soil, groundwater, and soil vapor at the Subject Property and are considered a REC.

.

5. CONCLUSIONS, FINDINGS AND OPINIONS

Langan completed a Phase I ESA consistent with the scope and limitations of ASTM E1527-21 for the subject property at Queensboro Farm Assemblage, located at 35-19 Steinway Street, 35-13 41st Street, & 35-02, 35-22, and 35-28 42nd Street in Queens, New York 11101. Exceptions to, or deletions from, ASTM E1527-21 are described in Section 8 of this report.

This assessment has revealed the following RECs, CRECs, HRECs, de minimis conditions, and significant data gaps in connection with the subject property as presented in Table 5-1.

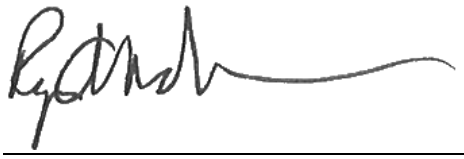

Table 5-1 Conclusions, Findings and Opinions

ASTM E1527-21 Scope Items
Recognized Environmental Conditions (RECs)
Current and Historical Use of the Subject Property: The subject property has an over 80-year history of industrial and commercial occupants and uses of concern including multiple auto repair shops (Block 670, Lots 8, 20, and 27), a gasoline filling station (Block 669, Lot 16), automobile garages, including two with gasoline tanks (Block 670, Lots 8, 20, and 27), manufacturing facilities (Bock 670, Lot 30), a chemical gases warehouse (Block 670, Lot 30), a dairy processing plant (Block 670, Lots 8 and 20), and a laundry facility (which may have operated as a dry cleaner; Block 670, Lot 20). Current uses of concern include metal fabrication facilities and automotive and maintenance and repair garages (with in and aboveground hydraulic lifts) with evidence of drainage structures (floor drains, oil/water separators, grease traps, and a grease trap sump), and evidence of historical petroleum bulk storage (Block 670, Lots 8, 27, and 30). A closed spill related to a failed tank tightness test of an unregistered 4,000-gallon diesel fuel underground storage tank (UST) that did not meet cleanup requirements (Spill No. 8906276) is also associated with Block 670, Lot 8. In addition, various hazardous substance and/or petroleum product containers (in used condition) with leaking, staining, and odors in the vicinity of the containers, were observed during the site reconnaissance in connection with current operations. Unreported leaks or spills of petroleum, solvents, and/or other hazardous materials from historical and current property operations may have adversely impacted soil, groundwater, and soil vapor at the subject property.
Current and Historical Use of the Surrounding Properties and Adjoining Properties: Adjoining, surrounding, and hydraulically up- and cross-gradient properties have a history of industrial uses including gasoline filling stations with gasoline tanks, auto repair shops, vehicle garages with gasoline tanks, manufacturing warehouses, and a dry cleaner. In addition, evidence of petroleum bulk storage at adjoining and adjacent properties, hydraulically up- and cross-gradient of the subject property, was observed during the site reconnaissance. Unreported releases of petroleum products, solvents, and/or other hazardous materials associated with these up- and cross-gradient uses may have migrated to and impacted groundwater and soil vapor at the subject property.
Controlled Recognized Environmental Conditions (CRECs)
Langan did not identify CRECs.
Historical Recognized Environmental Conditions (HRECs)
Langan did not identify HRECs.
De Minimis Conditions

ASTM E1527-21 Scope Items
Floor Staining: Langan observed several areas of releases and staining on concrete slabs (some with odors) on Lots 8 and 20. Langan did not observe obvious cracking or pathways to the subsurface in the stained areas.
Significant Data Gaps
Langan did not identify any significant data gaps.
Non-ASTM E1527-21 Scope Items
Business Environmental Risks (BERs):
Unregistered Tanks: During the records review, an unregistered 4,000-gallon diesel fuel UST was identified for the subject property. In addition, during the site reconnaissance, an unregistered, 500-gallon suspect hydraulic fluid containing AST was identified on the Lot 8 roof. The lack of registration raises concerns regarding regulatory compliance, ownership responsibilities, environmental liabilities, and introduces uncertainties regarding the tanks' condition, past uses, maintenance, and compliance with applicable local and state regulations. The presence of the tanks may also complicate or encumber interior or structural renovations and incur additional construction costs.
E-Designation Status: The Subject Property is subject to E-Designations for Hazardous Materials, Air Quality and Noise that were assigned as part of a rezoning action. The Hazardous Materials E-Designation will require that the tax lots are investigated and remediated under the jurisdiction of the NYC OER as part of any future site redevelopment.
Fill and Demolished Structures: Fill may be present on the subject property as a result of previous cycles of building construction and demolition. Fill in New York City can include brick, concrete, cinders, coal, slag, and ash and may contain contaminant concentrations above current regulatory levels and at potentially hazardous concentrations. The presence of this material may require implementation of contaminated soil handling and management procedures during site redevelopment to address excavation, re-use, handling, and off-site disposal.

6. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and I have the specific qualifications based on my education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Ryan Manderbach, CHMM
Associate Principal/VP

Resumes outlining the qualifications of the project team and the Environmental Professional are included in Appendix G.

8. LIMITATIONS AND DEFINITIONS

This Phase I ESA report was prepared for Client and is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. The Client is the sole intended beneficiary of the report. The user requested no special terms or conditions regarding this Phase I ESA.

Langan's scope of services, which is described in Section 1.2 and in the contract executed between Langan and the Client, was limited to that agreed to with the Client/user and no other services beyond those explicitly stated are implied. To the extent possible, the services performed and agreed upon for this Phase I ESA are consistent with the guidelines of ASTM E1527-21.

This report is not intended to be an exhaustive assessment of the subject property. The purpose of the Phase I ESA is to reduce uncertainty about unknown conditions at the subject property. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Therefore, Langan cannot "verify", "insure", "certify", or "guarantee" that the subject property is free of environmental concerns.

No expressed or implied representation or warranty is included or intended in this report, except that our services were completed using the care and skill ordinarily followed by professionals providing similar services under similar circumstances in similar locations at the same point in time.

The conclusions provided in this report are based solely on information obtained through completing the standard activities required by ASTM E1527-21 and are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the point in time the assessment was completed. The conclusions provided in this report do not apply to conditions and features of which Langan was not made aware of through good faith efforts to complete the activities required by ASTM E1527-21 and did not have the opportunity to evaluate.

8.1 ASTM Definitions

The following definitions are provided in ASTM E1527-21 and presented below for reference. This section is not a comprehensive list of definitions provided in ASTM E1527-21 and is intended to summarize those pertinent to this Phase I ESA report.

Activity and use limitations (AULs): legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

Adjoining properties: any real property or properties the border of which is contiguous or partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

All Appropriate Inquiries: that inquiry constituting all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in CERCLA, 42 U.S.C.§ 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the LLPs to CERCLA liability (42U.S.C. §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and§ 9607(r)), assuming compliance with other elements of the defense.

Approximate minimum search distance: the area for which records must be obtained and reviewed pursuant to ASTM E1527-21 Section 8 subject to the limitations provided in that section. This may include areas outside the subject property and shall be measured from the nearest subject property boundary. This term is used in lieu of radius to include irregularly shaped properties.

Business environmental risk (BER): a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Data gap: a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De minimis condition: a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

Engineering controls: physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on a property. Engineering controls are a type of activity and use limitation (AUL).

Environment: environment shall have the same meaning as the definition of environment in CERCLA 42 U.S.C. § 9601(8).

Historical recognized environmental condition (HREC): previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a recognized environmental condition.

Institutional controls (IC): a legal or administrative mechanism (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An institutional control is a type of activity and use limitation (AUL).

Key site manager: the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material threat: obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Obvious: that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

Property use limitation: limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous sub-stances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

Reasonably ascertainable: information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized environmental conditions: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. For the purposes of this definition, "likely" is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein.

Release: a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22). There are a number of statutory exclusions from the definition of release that may impact the environmental professional's opinions and conclusions, such as the normal application of fertilizer.

Significant data gap: a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Site reconnaissance: that part that is contained in Section 9 of ASTM E1527-21 and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.

Site visit: the visit of the subject property during which observations are made constituting the site reconnaissance section of this practice.

Subject property: the property that is the subject of the environmental site assessment described in this practice.

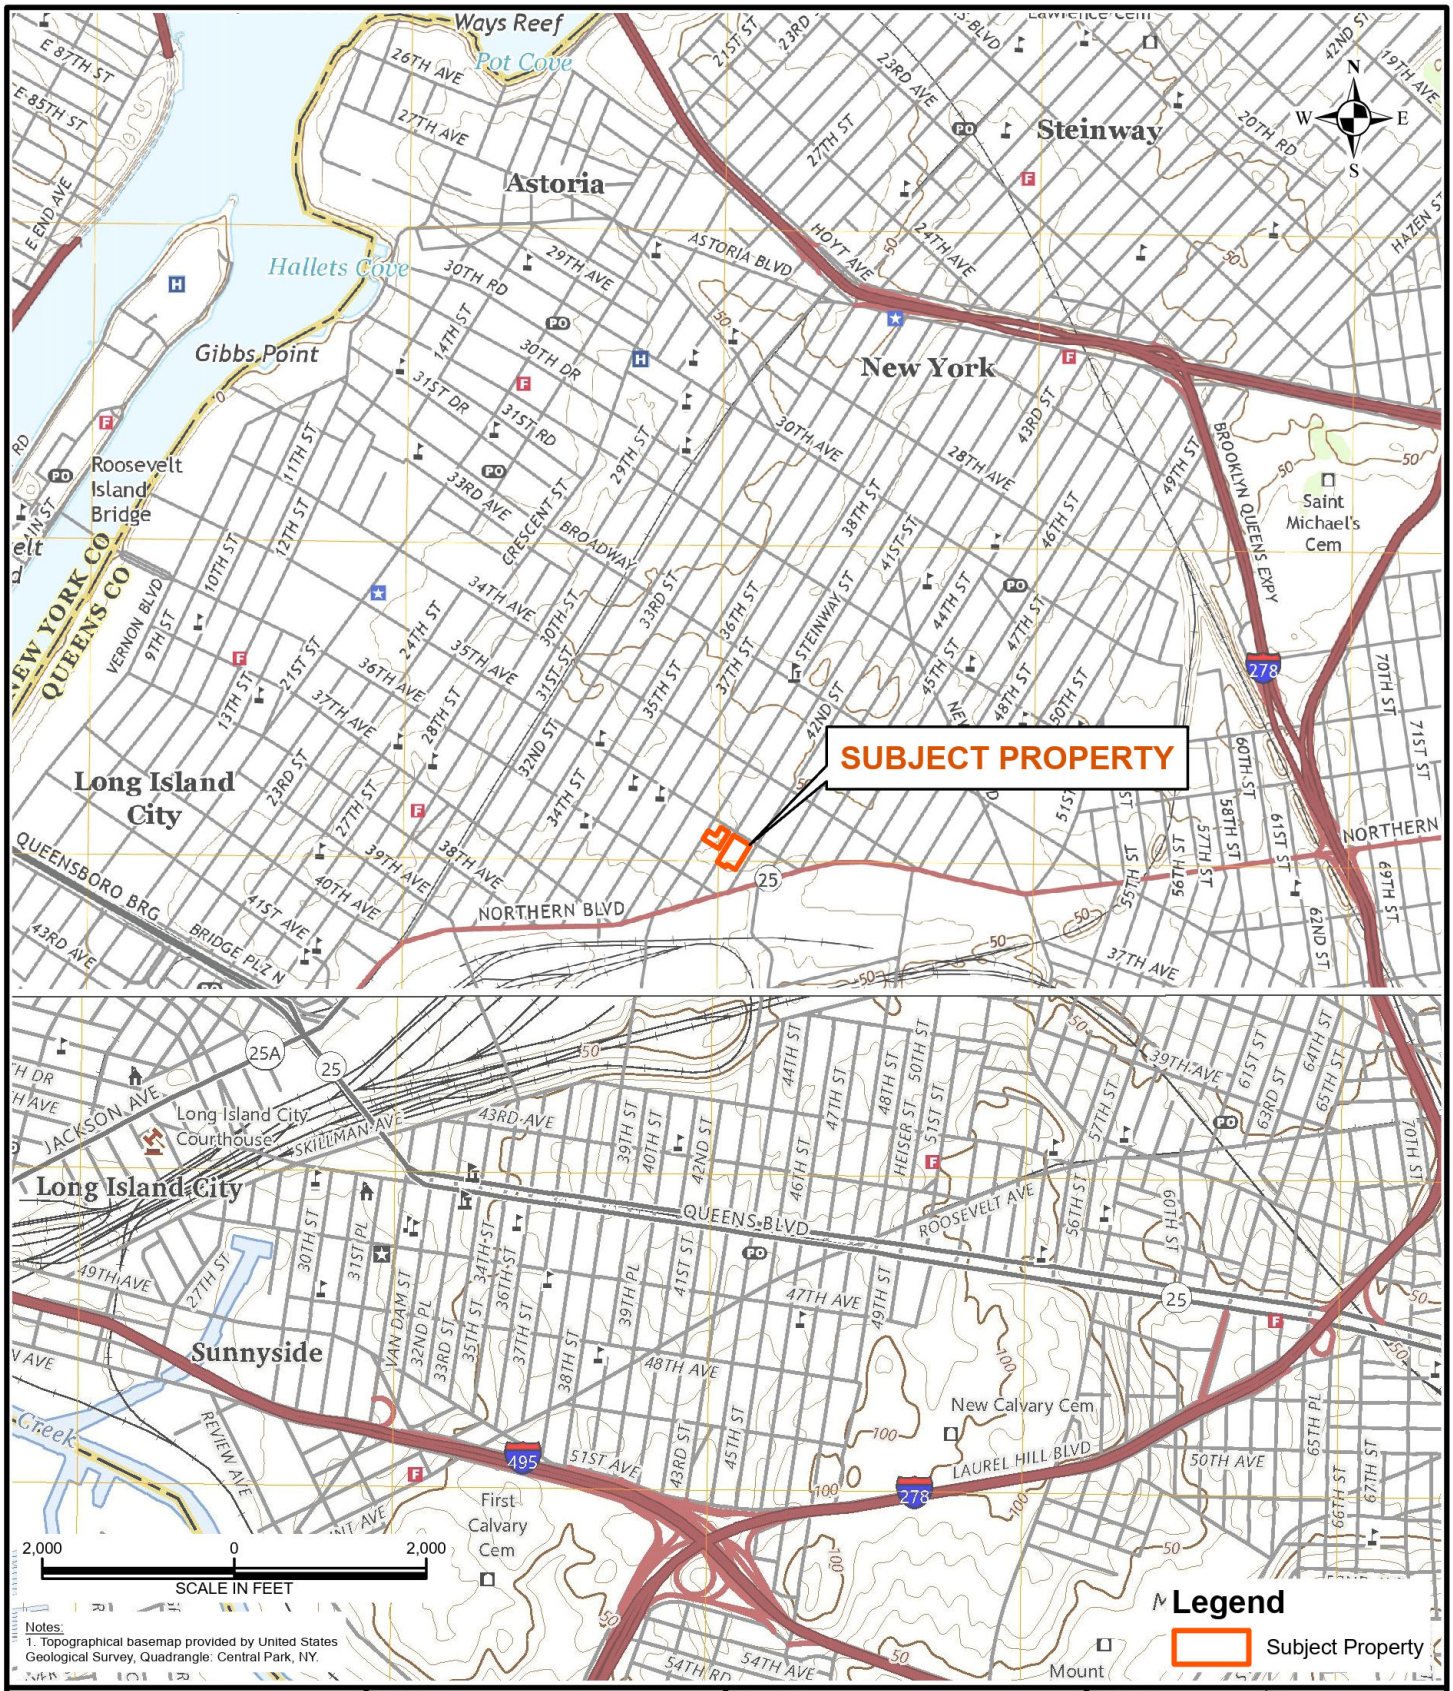

User: the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the subject property.

8.2 Standard Environmental Record Sources

Langan reviewed an environmental database search report prepared by an environmental database search provider for the subject property and surrounding area. The database search report includes a listing of properties identified on select federal, state, local and tribal standard source environmental databases within the approximate minimum search radii outlined in ASTM E1527-21. This information was supplied to Langan by the environmental database search provider, and to the environmental database search provider by government sources; therefore, neither Langan nor the environmental database search provider can verify the completeness and accuracy of the database information. Appendix F contains a copy of the report, with specific source and property descriptions, and the dates of the last update for each database searched. Langan reviewed the database search report on a record-by-record basis to evaluate if certain properties identified in the database report are likely to represent an environmental concern for the subject property. The evaluation criteria included factors such as distance, groundwater gradient, nature of the listing, and regulatory status. Unless specifically discussed in the body of this report, the facilities listed on the database do not appear to represent an environmental concern to the subject property.

Olivia Miller

From: New York DEC FOIL Center <newyorkdec@govqa.us>
Sent: Monday, December 9, 2024 2:36 PM
To: Olivia Miller
Subject: [External] FOIL Request :: W140206-120924

Dear Olivia:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 12/9/2024 and given the reference number FOIL #W140206-120924 for tracking purposes. You may expect the Department's response to your request no later than **1/8/2025**.

Record Requested: **Please provide any available information for the Leaking Storage Tank incident (Spill #8906276) at 35-13 41st Street in Queens, NY (appears to be reported under "New York City").**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Click here to login to the FOIL Center.

New York State Department of Environmental Conservation, Record Access Office

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Queens County, New York
Survey Area Data: Version 15, Aug 29, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

User Provided Information

Clear Form

ASTM E1527-21 User Questionnaire

Please complete the below form and return to Langan.

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the Landowner Liability Protections (LLP) offered under CERCLA. Missing or incomplete information for questions 1 through 6 could result in a determination that "all appropriate inquiry" is not complete. Additional information should be provided for "Yes" answers where relevant.

General Information

User/Client Names: HG Acquisitions LLC

Reason for the Phase I ESA: New purchase

Type of property: Auto/Industrial

Type of property transaction (e.g. sale, purchase, exchange): Sale

Subject property address (provide documentation of subject property boundary): 35-02 42nd STREET, 35-13 41st STREET, 35-22 42nd STREET, 35-28 42nd STREET, 35-19 STEINWAY STREET

Site Contact and Contact Information: Rex Hakimian

Relying Party(ies): HG Acquisitions LLC

Required Information

(1.) Environmental liens that are filed or recorded against the subject property (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

(2.) Activity and use limitations that are in place on the subject property or that have been filed or recorded against the subject property (40 CFR 312.26(a)(1)(v) and (vi)).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ○ No ◉

(4.) Relationship of the purchase price to the fair market value of the subject property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this subject property reasonably reflect the fair market value of the subject property?

Yes ◉ No ○

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

Yes ○ No ◉

(5.) Commonly known or reasonably ascertainable information about the subject property (40 CFR 312.30).

	Yes	No
Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases?	○	◉
For example,	Yes	No
(a.) Do you know the past uses of the subject property?	○	◉
(b.) Do you know of specific chemicals that are present or once were present at the subject property?	○	◉
(c.) Do you know of spills or other chemical releases that have taken place at the subject property?	○	◉
(d.) Do you know of any environmental cleanups that have taken place at the subject property?	○	◉

(6.) The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

	Yes	No
Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property?	○	◉
Do you have knowledge or experience with the subject property that may be pertinent to the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the property and its environmental condition)?	○	◉

(7.) Proceedings Involving the Subject Property Questions (Section 10.9 of ASTM E1527-21 and Section 10.10 of ASTM E2247-16)

Do you know of:	Yes	No
(a.) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property?	○	◉
(b.) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	○	◉
(c) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	○	◉

Signature

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Inquiry # 7840966.3	Contact: Cristina Niclas

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Inquiry # 7840966.4	Contact: Cristina Niclas

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:		*Coordinates:*

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

3513 41ST ST
LONG ISLAND CITY, NY 11101

COORDINATES

Latitude (North):	40.7541590 - 40° 45' 14.97''
Longitude (West):	73.9213930 - 73° 55' 17.01''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	591051.9
UTM Y (Meters):	4511815.0
Elevation:	42 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 9 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/01/2024 has revealed that there are 12 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 07/30/2024 has revealed that there are 44 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 28 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/30/2024 has revealed that there are 9 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 50 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 07/31/2024 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ARMY PICTURIAL CEN		NW 1/8 - 1/4 (0.159 mi.)	T147	410

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there are 3 PFAS ECHO sites within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 15 UST FINDER sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 3 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 9 E MANIFEST sites within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there are 80 NY MANIFEST sites within approximately 0.25 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2022 has revealed that there are 2 NY VAPOR REOPENED sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 11 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	20814
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None

CHRISMAR EQUITIES CORP (Continued) **U003391114**

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
K00 - Spill Prevention - None
I04 - Overfill - Product Level Gauge (A/G)
J00 - Dispenser - None
G00 - Tank Secondary Containment - None
L00 - Piping Leak Detection - None

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	08/06/1983
Capacity Gallons:	6000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	MJGRIFFI
Last Modified:	05/09/2022
Material Name:	#2 fuel oil (on-site consumption)

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: 421-1B
Tank Id: 229946
Material Code: 0015
Common Name of Substance: Motor Oil

Equipment Records:

J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
E00 - Piping Secondary Containment - None
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
K01 - Spill Prevention - Catch Basin
F00 - Pipe External Protection - None
C01 - Pipe Location - Aboveground
D10 - Pipe Type - Copper
I04 - Overfill - Product Level Gauge (A/G)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 10/28/1998
Capacity Gallons: 350
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported

Contact Name:	FRANK GALDUN
Latitude:	40.7560188
Longitude:	-73.9215085
DEC Memo:	10/29/13-Zhune spoke to Frank Galdun from (631)631-6200. He said due deligence they were doing Phase II. They found an abondoned gasoline tank and groundwater contamination. Depth to groundwater 16 feet. Additional investigation need to be done. They are working for the buyer. It will take two more weeks for the buyer to decide whether to buy the building. 12/31/14-Zhune spoke to Frank from Merrit Environmental. He said he will send a draft of the phase II and someone else will contact me with the property owner's information. 10/3/19-Maryann Wegh emailed the spill closure document dated August 5, 2019 The report stated that On July 22, 2019 Brookside trace and exposed the vent pipe to determine the area where the tank will be. However, they found was an empty concrete vault indicating the tank had been previously removed. The empty vault was

COMMERCIAL BUILDING (Continued) **S114561103**

approximately 6 feet by 5 feet
deep. The vault consisted of concrete on all four sides as well as the bottom. There was no
evidence of any odor, spills, or leak. There was no soil or loose material to sample. The concrete
of the bottom and side walls was not cracked. The vault and surrounding areas were field screened
for the presence of volatile organic compounds (VOCs)using a Mini Rae Model 2000 photoionization
detector (PID). However, PID readings were 0.0 PPM. After the vault was carefully inspected and
photographed it was backfilled to grade. 10/3/19-Maryann Wegh emailed the focused subsurface site
Investigation report dated October 28, 2013. The report stated that MECC retained a contractor to
install a total of six soil borings inside the site building . Six grab soil samples from five
selected soil borings were collected for laboratory analysis. Groundwater samples were collected
for laboratory analysis for all borings. The maximum depth of the borings was 20 feet bgs. All
borings were drill to groundwater, which was encountered at 11 feet bgs in the basement at 34-28
Astoria street, and at 16 to 17 feet bgs in all remaining borings, which were installed at the
ground floors of other buildings at the site. None of the detected VOCs exceed unrestricted Use
SCOs in any of the soil samples. B2 and B3 were installed at estimated hydraulic downgradient
positions relative to the remainder of the site. Trichloroethene (TCE a chlorinated VOC) was
detected at concentrations that slightly exceed the applicable regulatory limit in these two
groundwater sample. The primary contaminant of concern identified by this FSSI consist of elevated
concentrations of dissolved-phase gasoline-related VOCs in B6GW (no free product observed). Several
of these VOCs were detected well above applicable regulatory limit. 10/4/19-Maryann Wegh emailed
the petroleum release investigation work plan dated October 2019. The work plan stated that MECC
proposes to retain a qualified contractor to first conduct a ground penetrating radar (GPR) survey
of the southeast section of the site building interior and the adjoining sidewalk. MECC proposes to
install one soil boring at an estimated hydraulic upgradient position relative to the impacted
groundwater area to establish background conditions. One soil boring will be paced directly into
the area of previously discovered groundwater contamination, and the remaining two soil borings
will be placed at estimated hydraulic downgradient positions relative to the impacted groundwater
area. Soil and groundwater samples will be collected for laboratory analysis from all borings.
Permanent two- inch diameter flush-mount groundwater monitoring wells will be installed at all

COMMERCIAL BUILDING (Continued) **S114561103**

borings. All borings will be drilled to the water table for groundwater sample collection and laboratory analysis. The maximum proposed depth of all borings is 20 feet bgs. Depth to the water table is known to be 16 ft to 17 feet bgs. 10/8/19- A letter dated 10/8/19 approving the work plan was send to Mr. David Aronow. 5/4/20-Maryann Wegh emailed the petroleum release investigation dated November 27, 2019 this study confirmed that the groundwater quality has been impacted from gasoline -related VOCs at the southwest section of the site. Although MECC did identified a zone of discolored soil with a heavy gasoline odor below the water table at soil boring B2, which converted to MW2A. Trichloroethene (TCE)a chlorinated VOC that is not a gasoline constituent, wss detected in the MW3A groundwater sample at a concentration that exceeds the applicable regulatory limit. This substance was detected in groundwater during MECC's 2013 investigation but at low concentrations. Since TCE was detected in a single groundwater sample and the fact that no TCE or any other chlorinated VOC was detected in any of the previously collected or current soil samples, MECC does not believe that this data represents and extensive or severe groundwater condition. MECC is in the process of establishing groundwater flow through s well elevation survey. While it does not appear that total VOC concentrations in groundwater have materially changed since 2013, a subsequent set of groundwater samples will be collected within two months of the date of this report to monitor VOC levels over time. No contaminant source has been discovered at the site; completion of the well elevation survey may lead to a better understanding of a source area. 5/7/20-Maryann Wegh emailed the Second Round Groundwater Sampling Report dated March 18, 2020. Significantly and for the most part, the gasoline -related VOCs detected at elevated concentrations by previous investigations and by the initial groundwater sampling event have not been detected by this second round event. The caused or reason for this abrupt improvement in groundwater quality is unknown, but none of the previous investigations have identified on-site source of this condition. MECC proposes to collect a third round of groundwater samples from the (4)wells approximately two months of the date of this report as a means of verifying that contaminant concentrations do not increase over time. A site drawing is included as an attachment to this report. The drawing has been simplified to more clearly represent current groundwater quality data. For a more detailed drawing, which shows the historical locations of soil borings, temporary well points and possible UST areas, please refer to the previously submitted report dated November25, 2019. 5/7/20-Maryann

COMMERCIAL BUILDING (Continued) **S114561103**

Wegh emailed the Third Round
Groundwater Sampling Report dated April 29, 2020 The gasoline -related VOCs detected at elevated
concentrations by previous investigations have reduced significantly over a relatively short period
of time. In addition, the Perchloroethylene (PCE) and trichloroethene (TCE), both of which are
chlorinated VOCs that are not typically present in gasoline, have also been historically detected
at certain wells but these concentrations have also shown a reduction over time. The present data
supports this improvement in groundwater quality and none of the previous investigations have
identified an on-site source of this condition. Historical soil samples collected reported no
detected VOCs at concentrations exceeding applicable regulatory limits. Based on the reduction in
contaminant concentrations, and on the lack of any known on-site source of VOCs. A site drawing is
included as an attachment to this report. The drawing has been simplified to more clearly represent
current groundwater quality data. For a more detailed drawing, which shows the historical locations
of soil borings, temporary well points and possible UST areas, please refer to the previously
submitted report dated November 25, 2019. Spill Closed.

Remarks: Phase II study found contaminated ground water. Total 841 ppb.

DEC Memo:	Left message with caller. Waiting for callback. Assigned to runner DEMEO. 2/12/14-Vought-Above notes by DEC piper as per 'Updated By' field above. 4/15/15 TJD Received a call from Sara Smaltz of Encore Environmental (517)672-2991 requesting a status of the spill. A review of available information associated with the spill file was conducted - only the initial spill report was found. DEC (DeMeo) inquired of Ms. Smaltz if any remedial action was performed following the initial spill notification and was advised that the reported condition had been fully addressed. DeMeo requested a closure report including a narrative discussion, site plan with sample locations, available photographs, raw laboratory data and a tabulated summary of analytical results with a comparison to CP-51 SCO be provided in support of spill closure. Awaiting submission of required documentation. 4/15/15 TJD Closure documentation has been provided - a 300 gallon oil/water seperator was removed from interior to a building (former car dealership) in January 2014. Following the removal of the oil/water seperator the consultant reports visually contaminated soils were identified and 23 tons of petroleum contaminated soils were subsequently removed and properly transported offsite and disposed of in accordance with applicable regulations. Endpoint samples were collected from the open excavation and minor residual contamination was identified on the east and south sidewalls - the consultant (Arcadis) returned to the spill site and over excavated soils in these directions and resampled. All endpoint samples were within acceptable limits and no further action is required. All documentation associated with spill file has been uploaded to DECDOCS. Spill closed.
Remarks:	oil water separator removal

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	I called the home owner, he does n't speak english.He will have some body call DEC.He indicated that there was not big problem with the tank. Later on, rec'd call from Stavros Gipitas, son in law of the home owner saying the spill was cleaned by Petro Oil and there is no more problem.Spill closed.
Remarks:	Petro stopped the leakage. New tank was installed - plug was not tightened - not by Petro Spill is into dirt - no cleanup has been done Not reported

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System

MAJOR CHEVROLET (Continued) **1000340311**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	03/09/09 Left messege for FD Hazmat and spill contact Haydee Fernandez.(sr) 03/25/09 Spill clean up letter was sent to Guerra Alexander 4 Storig Ave#K Closter, NJ 07624-1119 and cc to 34-14 42nd Street LLC, 577 Prospect Avenue, Brooklyn, NY 11215.(sr) 03/30/09 Rec'd call from Alex Guerra, he indicated that he is no longer the property owner.(sr) 04/01/09 Performed site visit today.This is a two storey attached house. There is evidence of minor oil spill by the fill port. Nobody was home to access me to the basement.(sr) 04/08/09 Made another step to inspect the basement of the house,nobody home during daytime.(sr) 04/30/09 Made site inspection again yesterday afternoon.One tenant was there in the building.Strong odor of oil in the basement tank room with wet stain under the tank.Aparently, suction line near the tank leaked,unsure if the

VERONICA GMELCH (Continued) **S109416075**

leak has been fixed.CSL was
sent again to Veronica Gmelch 577 Prospect Ave#2D Brooklyn, NY 11215
ands copy was sent to site
address,too.(sr) 05/13/09 Performed site inspection today after the
home owner confirmed that the
clean up has been completed.New piece of suction line was
installed.Floor looks ok.No odor of oil
was present during my visit.2x275 gallons tank located in the semi
basement.Case closed.(sr)

Remarks: 1615 The caller advised dispatch the clean up is pending at this time. Unknown amount of oil leaked into the floor drain.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	8582
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground

KASSABIAN ASSOCIATES LLC (Continued) **U003385798**

I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	06/01/2005
Capacity Gallons:	3000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about

JEWEL SHEEN COATING INC (Continued) **1000203740**

facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

BROWNFIELDS:

Name:	NORTHERN BOULEVARD AND STEINWAY STREET
Address:	36-20 STEINWAY STREET
City,State,Zip:	QUEENS, NY 11101
Program:	BCP
Site Code:	536051
Acres:	1.134
HW Code:	C241198
SWIS:	4101
Town:	New York City
Record Added Date:	11/29/2016
Record Updated Date:	04/11/2019
Update By:	KALEWAND
Site Description:	"This site's BCP has been voluntarily terminated by the property owner/BCP applicant. Location: The site is located in an urban area and denoted on New York City tax maps as Block 665, Lot 34 (formerly Lots 5, 7, 31, 34, and 38). The site is located on the city block bordered by 38th Street to the north, 36th Avenue to the east, Steinway Street to the south, and Northern Boulevard to the west. Site Features: The site encompasses an area of approximately 49,412 square feet (1.134 acres). There is a two-story commercial use building with three 275-gallon and two 550-gallon fuel oil aboveground storage tanks (ASTs) and one 550-gallon waste oil AST in the southern portion of the lot; the south-central portion has an asphalt-paved parking lot; a one-story parking garage is located in the northern portion; there is a one-story supermarket in the central portion; and the north-central portion features a one-story storage

NORTHERN BOULEVARD AND STEINWAY STREET (Continued) **S120706192**

building for the supermarket. Current Zoning and Land Use: The Site is zoned for commercial and manufacturing use. The northernmost portion of the lot is located in a M1-1 manufacturing district. The remainder of the lot is located in a C4-2A commercial district. The surrounding area consists of commercial, industrial, residential, and transportation and utility uses. An underground New York City Transit Authority (NYCTA) structure (M, R, E and F subway lines) adjoins the site to the south. Past Use of the Site: The site has been occupied by manufacturing and industrial facilities since the early 1900s. Historic site uses include gas station, garage, auto repair, auto laundry facility, factory, used car sales, warehouse, machine shop, clothing manufacturer, and glass grinding facility. Historic gasoline tanks are associated with the auto repair on former Lots 5 and 34 and a garage on former Lot 31. Site Geology and Hydrogeology: Bedrock underlying the site consists of gray and gray-weathering, thinly laminated muscovite-biotite-quartz schist with minor garnet. Beneath the Site, surface material was observed to be urban fill predominately comprised of light brown fine to coarse sand, with varying amounts of gravel, clay, coarse stone, ash, coal, burnt wood, brick, and debris. The urban fill layer extends to approximately 2 to 6.5 feet below grade surface (bgs). Beneath the fill is a brown to black fine sand to coarse sand with gravel. The inferred regional groundwater flow direction for the area surrounding the site is to the northwest. Groundwater underlying the site ranges from approximately 20 to 25 feet below grade surface (bgs)."

Env Problem: "Nature and Extent of Contamination Soil Soil samples collected throughout the site depicted minor exceedances of Semi-Volatile Organic Compounds (SVOCs) and metals. All soil samples collected with elevated concentrations above Unrestricted Use SCOs were at or shallower than 2 feet below grade surface except for Acetone exceedances (max of 0.35 ppm) at 15 and 18 feet below grade surface in VTX-02 and VTX-04 respectively. Groundwater Sixteen groundwater locations were sampled on-site. Samples were analyzed and compared to NYSDEC TOGS groundwater guidance. Exceedances of metals existed in every sample. These metals included Iron, Magnesium, Chromium, Sodium, Manganese and Selenium. Exceedances of cis 1,2-Dichloroethene existed both up and down gradient of the center of the site. The maximum concentration of cis 1,2-Dichloroethene was in MW-10 at 20 parts per billion (ppb) (standard is 5 ppb). PCE was detected at elevated concentration in temporary well VTW-12 at a concentration of 5.5 ppb (standard is 5 ppb). Petroleum related compounds were detracted in temporary monitoring well TMW02. These compounds included Benzene (at 1.3 ppb with standard at 1 ppb) and Naphthalene (at 28 ppb with standard at 10ppb). Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Soil Vapor Four soil vapor samples and one ambient air sample were collected throughout the site. Tetrachloroethene was found at elevated concentrations in SV04 (250 micrograms per cubic meter (ug/m3)), SV03 (23.5 ug/m3), SV02 (16.5 ug/m3) and AA (1.49 ug/m3). Trichloroethene was found at elevated concentrations in SV02 (6.02 ug/m3) and SV01 (38.2 ug/m3). It has been determined by the Department that the site does NOT pose a significant threat."

Health Problem: "Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with the former building foundations and pavement. Contaminated groundwater at the site is not used for

NORTHERN BOULEVARD AND STEINWAY STREET (Continued) **S120706192**

drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank ID:	4246
Tank Status:	Closed - In Place
Material Name:	Closed - In Place
Capacity Gallons:	3000
Install Date:	Not reported
Date Tank Closed:	02/01/2002
Registered:	True
Tank Location:	Underground
Tank Type:	Steel/carbon steel
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Pipe Model:	Not reported

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	001
Tank Id:	252369

Equipment Records:

H05 - Tank Leak Detection - In-Tank System (ATG)
I04 - Overfill - Product Level Gauge (A/G)

LEXUS OF QUEENS (Continued) **A100393083**

C01 - Pipe Location - Aboveground
F00 - Pipe External Protection - None
K01 - Spill Prevention - Catch Basin
E00 - Piping Secondary Containment - None
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None
D00 - Pipe Type - No Piping

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/2008
Capacity Gallons: 280
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

Tank Info:

Tank Number:	1
Tank Id:	12722
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	B00 - Tank External Protection - None
	F00 - Pipe External Protection - None
	I05 - Overfill - Vent Whistle
	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	H00 - Tank Leak Detection - None
	C01 - Pipe Location - Aboveground
	G00 - Tank Secondary Containment - None
	J02 - Dispenser - Suction Dispenser
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	08/01/1956
Capacity Gallons:	3000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported

MARIO BEDESCU (Continued) **S107781611**

Date Tank Closed:	04/25/2001
Register:	True
Modified By:	MJGRIFFI

Hazardous Waste Summary:

Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Common Name of Substance: Gasoline/Ethanol

Tightness Test Method: 34
Date Test: 10/31/2011
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: MJGRIFFI
Last Modified: 05/09/2022

Equipment Records:

G04 - Tank Secondary Containment - Double-Walled (Underground)
J01 - Dispenser - Pressurized Dispenser
E04 - Piping Secondary Containment - Double walled UG
K01 - Spill Prevention - Catch Basin
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm
I03 - Overfill - Automatic Shut-Off
A00 - Tank Internal Protection - None
B04 - Tank External Protection - Fiberglass
D06 - Pipe Type - Fiberglass Reinforced Plastic (FRP)
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring
L07 - Piping Leak Detection - Pressurized Piping Leak Detector
F04 - Pipe External Protection - Fiberglass
C02 - Pipe Location - Underground/On-ground

Tank Number: 006
Tank ID: 62743
Tank Status: Closed - Removed
Material Name: Closed - Removed
Capacity Gallons: 600
Install Date: Not reported
Date Tank Closed: 10/18/2018
Registered: True
Tank Location: Underground
Tank Type: Equivalent technology
Material Code: 9999
Common Name of Substance: Other

Tightness Test Method: -
Date Test: Not reported

39-04 NORTHERN BOULEVARD (Continued) **U004314629**

Next Test Date: Not reported
Pipe Model: Not reported
Modified By: MJGRIFFI

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
Registry ID: 110019399051

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and

HESS CORPORATION (Continued) **1000263755**

local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.

Waste Description:	M-Cresol
Waste Code:	D026
Waste Description:	Cresol
Waste Code:	D027
Waste Description:	1,4-Dichlorobenzene
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	P001
Waste Description:	2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%
Waste Code:	P075
Waste Description:	Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts
Waste Code:	U002
Waste Description:	2-Propanone (I) (Or) Acetone (I)
Waste Code:	U035
Waste Description:	Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil
Waste Code:	U044
Waste Description:	Chloroform (Or) Methane, Trichloro-
Waste Code:	U058
Waste Description:	2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide
Waste Code:	U072
Waste Description:	Benzene, 1,4-Dichloro- (Or) P-Dichlorobenzene
Waste Code:	U122
Waste Description:	Formaldehyde
Waste Code:	U129
Waste Description:	Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane
Waste Code:	U154
Waste Description:	Methanol (I) (Or) Methyl Alcohol (I)
Waste Code:	U165
Waste Description:	Naphthalene
Waste Code:	U188
Waste Description:	Phenol
Waste Code:	U201
Waste Description:	1,3-Benzenediol (Or) Resorcinol
Waste Code:	U205
Waste Description:	Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

RITE AID #04865 (Continued) **1014926890**

Waste Code: U211
Waste Description: Carbon Tetrachloride (Or) Methane, Tetrachloro-

Waste Code: U240
Waste Description: 2,4-D, Salts & Esters (Or) Acetic Acid, (2,4-Dichlorophenoxy)-, Salts & Esters (Or) Dichlorophenoxyacetic Acid 2,4-D

Waste Code: U279
Waste Description: U279

Tank Info:

Tank Number:	001
Tank Id:	26761
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
I04 - Overfill - Product Level Gauge (A/G)
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground in subterranean vault with access for inspections..... Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	05/01/1946
Capacity Gallons:	1080
Tightness Test Method:	NN
Date Test:	Not reported

Hazardous Waste Summary:

Waste Code:	D000
Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D006
Waste Description:	Cadmium
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D011
Waste Description:	Silver
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F006
Waste Description:	Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis)

LEVCO METAL-34-11 36TH ST (Continued) **1000176946**

On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F019
Waste Description: Wastewater Treatment Sludges From The Chemical Conversion Coating Of Aluminum, Except From Zirconium Phosphating In Aluminum Can Washing When Such Phosphating Is An Exclusive Conversion Coating Process.

Waste Code: P030
Waste Description: Cyanides (Soluble Cyanide Salts), Not Otherwise Specified

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: P106
Waste Description: Sodium Cyanide (Or) Sodium Cyanide Na(Cn)

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U032
Waste Description: Calcium Chromate (Or) Chromic Acid H2cro4, Calcium Salt

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U134
Waste Description: Hydrofluoric Acid (C,T) (Or) Hydrogen Fluoride (C,T)

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.

Tank Info:

Tank Number:	001
Tank ID:	3479
Tank Status:	Closed - Removed
Material Name:	Closed - Removed
Capacity Gallons:	5000
Install Date:	Not reported
Date Tank Closed:	01/01/1998
Registered:	True
Tank Location:	Underground
Tank Type:	Steel/carbon steel
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)
Tightness Test Method:	01
Date Test:	11/01/1987
Next Test Date:	Not reported
Pipe Model:	Not reported
Modified By:	MJGRIFFI
Last Modified:	05/09/2022

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Number:	002
Tank ID:	274880

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 4/21/03 TJD UST Closure Report prepared by The Shaw Group Inc reviewed. One 4,000 gallon UST containing #2 Fuel Oil removed. Samples collected, SVOC Exceedances noted. Shaw stated suplemental investigation will be performed to further delinate petroleum impacted soils and groundwater impacts. 8/23/04 TJD Shaw submitted (8/19/04) a work plan for supplemental investigation. Site is being developed for the construction of a new public school. As part of the project a new underground parking garage is to be built, which will involve excavating soils to a depth of 15 feet. Additional soil borings are planned in the area of previously identified contamination. Work plan was verbally approved on this date with requirement that SHAW notify DEC a minimum of 48 hours prior to scheduling sampling event. 8/23/04 TJD Multiple spills on single address. Spill 0104171 closed and cross referenced to 0101345. 11/17/05 - L. Alden - Called Mike Sherwood, Shaw Group, at (845) 492-3182. Left message. 12/19/05 - L.Alden - Called Sherwood back. Shaw is not doing the additional investigation on this site. Called his client, Lee Guterman, at the NYC School Construction Authority, (718) 472-8502. This property will be the site of the Frank Sinatra School. Anna Ciecierska, (718) 752-5028, returned my call. She didn't know the specifics of the project but would look into the file to determine where they were with the investigation/cleanup effort. 12/20/05 - L. Alden - Anna Ciecierska called back today. She had a report from February 2005 where the consultant had delineated the contaminated soil. She indicated that removal of contaminated soil was to commence within a week or two. She would wait to get the report before submitting a request to close the spill. 5/01/06 - L. Alden - Mark Hudok, GZA Geoenvironmental, (973)256-7800, called. He was preparing a remediation plan and called to discuss post-excavation sampling that would be necessary after removal of contaminated soil. Recommended action: Review excavation plan and post-excavation results. 8/15/2006 Sangesland received a call from Jennifer Kahn of

ASTORIA STUDIOS (Continued) **S108129775**

SCA requesting guidance on who
the DEC case manager was for this site. Apparently in 2005 the project was sent up to DEC Albany
for work and was then transferred back to DEC Region 2. Because the site is already into the
remediation phase, the case is being transferred to the Region 2 Remediation Group (Koon Tang).
08/15/06: Transferred to Yau. (Yau) 08/16/06: Visited the school site with Joe. Met with the
representatives from SCA. Told them additional groundwater samples will be required at the soil/
groundwater interface. Will send in report as soon as results come back. (Yau) 08/24/06: Received
report along with lab analytical results from SCA. Both soil and groundwater results are good
except for N-2, N-3, and W-2. 1. The benzo(a)anthracene and benzo(a)pyrene exceeded TAGM slightly
for the soil samples. 2. The o-xylene and dibenz(a,h)anthracene exceeded the TOGS standard
slightly. DEC will approve the construction of a school building on top the this site. (Yau)
10/16/06 Re-assigned from Yau to Chanda (Chanda) 12/20/06:DEC received a phone call from Mr.Drew
Pardus, School construction Authority,Ph:(718)752-5036.He said that last week soil exavated from
the construction site and soil samples were sent to lab analysis. He will send in report as soon as
possible as result come back. (Chanda) 2/27/07:DEC received Endpoint Soil and Groundwater Sampling
Results prepared by Shaw Environmental and Infrastructure, Inc., dated 2/26/07. 3/14/07:DEC reviwed
all report and documents regarding this spill. Based on the information presented to the Department
DEC closed this spill.(Chanda) 3/15/07: A NFA letter was issued to Ms. Lee Guterman, Manager, IEH
Department, SCA, and copy to Mr. Bob Kanaparthi, SCA and Michael R. Sherwood Shaw Environmental &
Infrastructure, Inc.

Remarks: WHILE EXCAVATING A SITE, CONTAMINATED SOIL WAS DISCOVERED. SOIL IS BEING STOCKPILED.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Updated By:	JHOCONNE

Site Description: "See also Site no. V00600 Location: The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The entire site is occupied by a one story building which covers approximately 21,900 sq.ft. Historical Use: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis. "

Env Problem: "Nature and Extent of Contamination: Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues. Soil: Prior to IRM: elevated concentrations of volatile organic compounds (e.g., 2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994. Groundwater : On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The ROD recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas: An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues. "

Health Problem: "Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil

LEVCO METALS (Continued) **U003391190**

is subsurface, therefore exposure is unlikely. A soil vapor extraction system is in place on-site to remediate VOCs in soil and soil vapor. Therefore, inhalation exposure via soil vapor exposure has been minimized. Additional data is needed to evaluate the potential for off-site exposure due to soil vapor intrusion."

Site Description:	"See also Site no. 241009 Location: The Levco Metals Finishers property is located in an urban area in New York City in an industrial/residential part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The site is undergoing development. Current Zoning and Land Use: The site is under construction. The zoning is commercial. Past Use of the Site: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. The entire site was occupied by a one story building which covered approximately 21,900 sq.ft and was demolished in 2000. The site was used as a parking lot until 2017. Site Geology and Hydrogeology: Site soils removed from the sump area were described as silty, clayey sands and clay in the upper part of the aquifer with coarser sand and gravel deposits to a till layer above the bedrock. The groundwater table is at 15 feet below grade and the bedrock is 30 feet below that. Groundwater flows to the west, and the East River lies 1.5 miles west of the site."
Env Problem:	"Nature and Extent of Contamination: The remediation of the site is complete. The contaminant of concern in soil and groundwater had been trichloroethene (TCE). Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code: 57131
Site Description: "See also Site no. 241009 Location: The Levco Metals Finishers property is located in an urban area in New York City in an industrial/residential part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features: The site is undergoing development. Current Zoning and Land Use: The site is under construction. The zoning is commercial. Past Use of the Site: Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. The entire site was occupied by a one story building which covered approximately 21,900 sq.ft and was demolished in 2000. The site was used as a parking lot until 2017. Site Geology and Hydrogeology: Site soils removed from the sump area were described as silty, clayey sands and clay in the upper part of the aquifer with coarser sand and gravel deposits to a till layer above the bedrock. The groundwater table is at 15 feet below grade and the bedrock is 30 feet below that. Groundwater flows to the west,

LEVCO METALS (Continued) **U003391190**

	and the East River lies 1.5 miles west of the site."
Env Problem:	"Nature and Extent of Contamination: The remediation of the site is complete. The contaminant of concern in soil and groundwater had been trichloroethene (TCE). Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	DEC Piper spoke W. Isaac at Eastmond. There was an overfill of 6 oil out the vent. unsure if spill was to soil or concrete. Piper left message for Roger Romance requesting call back. Vought to follow up in am. 11/7/07-Vought-Performed site visit and spill out of vent. Vought spoke with AL Eastmond Issac Mungra and site was initially cleaned by Metro Fuel (spiller) and then Eastmond followed up with powerwash. Minor amounts of non impacted speedy dry on sidewalk with no odors or stainging and no spill in basement as per Mungra. Clean speedy dry dam spill visible down curb showing that spill did not reach sewer or drains. Spill on ashpalt and closed by Vought.
Remarks:	failure of the gadge; EASTMEN CREW ON SITE TO CLEAN UP ;

Tank Info:

Tank Number:	001
Tank Id:	28580
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
I00 - Overfill - None
K00 - Spill Prevention - None
L09 - Piping Leak Detection - Exempt Suction Piping
D00 - Pipe Type - No Piping
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	04/11/1991
Capacity Gallons:	20000

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System

KAUFMAN ASTORIA STUDIOS (Continued) **1005639711**

(AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	1
Tank Id:	63254
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
K00 - Spill Prevention - None
L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
F01 - Pipe External Protection - Painted/Asphalt Coating
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
A01 - Tank Internal Protection - Epoxy Liner
B00 - Tank External Protection - None
J02 - Dispenser - Suction Dispenser
D00 - Pipe Type - No Piping

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	06/15/1982
Capacity Gallons:	3000

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:
Registry ID: 110004333597

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

TEITELBAUM CLEANERS INC (Continued) **1000400106**

Region: 2
Acres: 0.260
HW Code: 241149
Record Add: 05/03/2013
Record Upd: 01/31/2014
Updated By: JHOCONNE
Site Description: "Location: The 11,200 square foot (0.26 acre) site is located at 3545 35th Street, Long Island City, NY in an urban area. The site is bordered by 35th Street and residential buildings to the west, by a 2 story commercial/industrial building to the north, by a parking lot to the east, by an Islamic center to the southeast, and by a 2 story commercial/industrial building to the south. Site Features: The site is occupied by a 1 to 2 story commercial dry cleaner. Current Zoning/Use(s): The site is zoned as M1-5, and is surrounded by industrial, commercial and residential uses. Historical Use(s): The Site is an industrial building conducting dry cleaning operations since 1975. The site is a RCRA large quantity generator (EPA ID # NYD981132459) of spent solvent, waste code F002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during investigation on a nearby site (site no. 241139) generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater in the vicinity of the site was encountered at approximately 17 to 20 feet bgs and flows towards the southwest."
Env Problem: "Nature and Extent of Contamination: Information is based on the results of a site characterization investigation performed at the nearby Former Luft Co. Inc. Cosmetics Manufacturer site (241139). That investigation was triggered by the discovery of elevated levels of cVOCs in the indoor air and sub-slab vapor of the school building on that site. The subsequent Supplemental Site Investigation (SSI) indicated that elevated concentrations of cVOCs (namely PCE) existed along the adjacent sidewalk on the western side of 35th Street and the south-eastern section of the school building. The addendum to the SSI ascertained that the Former Luft Cosmetics site was not a source of the contamination. Seven groundwater wells were installed upgradient and cross gradient of the school and samples taken at the groundwater interface. One well was installed adjacent to and another just downgradient of the Teitelbaum site. Groundwater Several cVOCs associated with chlorinated solvents, namely, tetra-chloroethylene (PCE) and its breakdown products tri-chloroethylene (TCE) and cis-1,2-dichloroethylene (cis-DCE), were detected at elevated levels from groundwater samples taken at the groundwater interface at locations along the adjacent sidewalk and downgradient of the Site. PCE, cis-DCE and TCE concentrations were at orders of magnitude of the TOGS SCG of 5 g/l; trans-DCE and 1,1-DCE were also detected at levels above the SCG. Concentrations of cVOCs decreased in the downgradient direction consistent with the inferred contaminant plume. The groundwater flow direction was identified as southwesterly by the Addendum to the Supplemental Site Investigation Report (ASSIR) of the nearby Former Luft Co. Inc. Cosmetics Manufacturer site. Significant Threat: Evaluation of significant threat will be made following completion of the Site Characterization. This Site has

TEITELBAUM CLEANERS INC (Continued) **1000400106**

	entered the Brownfield Cleanup Program (BCP). Executed Brownfiled Cleanup Agreement signed on 01/09/2014. See site no. C224149 for further updates."
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Update By: JHOCONNE
Site Description: "Location: The site is located in an urban area in the Astoria section of Queens, NY specifically at 35-45 35th street. The site is bordered by 35th Street and residential buildings to the west, by a 2-story commercial/industrial building to the north, by a parking lot to the east, by a religious center to the southeast, and by a 2-story commercial/industrial building to the south. Site Features: The site is currently improved with a commercial/manufacturing building that covers the entire site footprint with an area of 10, 000 square feet (0.23 acres). The ground floor is currently utilized for dry cleaning operations and a portion of the building contains a second floor for office space and storage. There is a small sub-grade boiler room (measuring approximately 3 ft x 5 ft) located in the northernmost corner of the property containing a fuel oil fired steam boiler, condensate tank, and sump. Current Zoning and Land Use: The site is zoned M1-5 (manufacturing and light industrial) and is surrounded by industrial, commercial and residential uses. Past Use of the Site: The site has been a commercial dry cleaner operating under various names and ownership since at least 1965 and possibly as far back as 1952. Site Geology/Hydrogeology: The site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (ft-bgs). The site is covered by two to five feet of surface fill material containing brown sandy silt with some gravel, underlain by fine to medium-grained sand with some silt. There is a minor clayey sand lens present within the first six feet in the southern portion of the property. Bedrock was not encountered during the remedial investigation. Groundwater was encountered at approximately 17 ft-bgs to 23 ft-bgs and generally flows to the south towards Newtown Creek. "
Not reported
Env Problem: "Nature and Extent of Contamination: As part of the Remedial Investigation (RI) soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for emerging contaminants (ECs). Soil vapor, sub-slab soil vapor and indoor air were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern for the site include tetrachloroethene (PCE) and its breakdown products. Soil - Highly elevated concentrations of chlorinated VOCs (CVOCs) compared to applicable Protection of Groundwater Soil Cleanup Objectives (PGSCO) or the Unrestricted Use SCO (UUSCO) were found in soils collected from the northwestern portion of the site in proximity to an abandoned underground storage tank (UST). Concentrations of CVOCs ranged from 360 to 1100 part per million (ppm) with PCE ranging from 2 to 1,100 ppm (PGSCO is 1.3 ppm), TCE concentrations ranging from 2.4 to 21 ppm (PGSCO is 0.47 ppm), Cis-1,2-DCE concentrations ranging from 0.46 to 6.4 ppm (PGSCO is 0.25 ppm) There were also minor petroleum-related impacts in this area, which were likely the results of minor spills associated with typical UST operations, including naphthalene at 26 ppm (UUSCO is 12 ppm), xylenes ranging from 1.3 to 2.1 ppm (UUSCO is 0.26 ppm), toluene ranging from 0.78 to 0.85 ppm (UUSCO is 0.07 ppm), 1,2,4 trimethylbenzene (TMB) at 3.8 to 11 ppm (UUSCO is 3.6 ppm) and 1,3,5 TMB at 9.6 ppm (UUSCO is 8.4 ppm). The UST grave likely created a depression in the subsurface resulting in a preferential pathway for CVOCs contamination to collect. This area is considered to be the source of CVOCs contamination in groundwater

TEITELBAUM CLEANERS INC (Continued) **1000400106**

and soil vapor on- and off-site. CVOC impacts in this area extend vertically from approximately 5 to 20 ft-bgs and are limited to a radius of approximately 15 to 20 feet. CVOC concentrations drastically decrease in soil outside of this radius and are generally not detected above UUSCOs outside of a 30-foot radius. Data doesn't indicate any off-site impacts in soil related to this site.
Groundwater - Groundwater results from the RI indicate that elevated concentrations of CVOCs compared to ambient water quality standards (AWQS) are present throughout the site and are migrating off-site. The most recent sampling results revealed that the on-site concentrations which exceeded AWQS for PCE ranged from 6.9 ppb to a maximum to 120 parts per billion (ppb) (AWQS is 5 ppb) in the source area mentioned above. The corresponding TCE (AWQS of 5 ppb) concentrations revealed one exceedance at 14 ppb, and cis-1,2-DCE (AWQS of 5 ppb) concentrations also revealed one exceedance of 70 ppb. CVOC contamination is consistent with current and former site operations. Off-site concentrations within the proposed plume of contamination revealed the aforementioned CVOCs at maximum concentrations of 130 ppb, 62 ppb and 860 ppb for PCE, TCE and cis-1,2-DCE respectively. PCE concentrations which exceeded AWQS ranged from 8.6 ppb to 130 ppb, TCE had one exceedance at 62 ppb and cis-1,2-DCE exceedances ranged from 8 ppb to 860 ppb. Levels of perfluorooctanesulfonic acid (PFOS) and/or perfluorooctanoic acid (PFOA) were detected at concentrations above the NYSDEC screening level of 10 ppt in all three EC groundwater samples with PFOS at a maximum concentration of 41.5 parts per trillion (ppt) and PFOA at 55.4 ppt. 1,4-dioxane was not detected in any sample. Data does not indicate that the site is a possible source of PFOS or PFOA contamination. Soil Vapor, Sub-Slab Soil Vapor and Indoor Air - The results of the RI showed PCE and TCE to be present in all eleven sub-slab vapor samples collected beneath the on-site building, as well as all indoor air samples. PCE ranged from 50.4 g/m3 to 328,000 g/m3 in sub-slab soil vapor and ranged from 10.3 g/m3 to 425 g/m3 in the indoor air samples. TCE ranged from 5.86 g/m3 to 14,500 g/m3 in sub-slab soil vapor and ranged from 2.1 g/m3 to 105 g/m3 in the indoor air samples. The soil vapor contamination extends off-site to the west, north and south where soil vapor sampling was done at seven location in surrounding sidewalks along 35th Street and 36th Avenue. PCE concentrations ranged from 274 g/m3 to 2,860 g/m3 and TCE concentrations ranged from 19.1 g/m3 to 47.2 g/m3. The NYSDEC and NYSDOH have determined that the Site poses a significant threat to human health. "

Health Problem: "People who dig below the ground surface may come into contact with contaminants in subsurface soil and groundwater. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in both on-site and off-site structures."

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number:	001
Tank Id:	33662
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	H00 - Tank Leak Detection - None
	I00 - Overfill - None
	B00 - Tank External Protection - None
	C00 - Pipe Location - No Piping
	F00 - Pipe External Protection - None
	G00 - Tank Secondary Containment - None
	J02 - Dispenser - Suction Dispenser
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - In Place
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	1500
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	06/01/1998
Register:	True

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the

PRIMO ENTERPRISES INC (Continued) **1000300972**

Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

CON EDISON (Continued) **1018277672**

storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:
Waste Code: D000

STANDARD MOTOR PRODUCTS INC. (Continued) **1000310304**

Waste Description:	Not Defined
Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	U002

STANDARD MOTOR PRODUCTS INC. (Continued) **1000310304**

SHWS:
Name: STANDARD MOTOR PRODUCTS, INC.
Address: 37-18 NORTHERN BOULEVARD
City,State,Zip: LONG ISLAND CITY, NY 11101
Program: HW
Site Code: 58682
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 1.100
HW Code: 241016
Record Add: 11/18/1999
Record Upd: 08/01/2022
Updated By: JHOCONNE
Site Description: "Site Location: The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtrak s Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features: The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and was part of a long-term lease to Standard Motor Products. Current Zoning/Use(s): The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the building s roof. Past Uses of the Site: The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in 1990. Until March 2008, automobile parts and components at the site were manufactured in the basement. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to off-site disposal at a licensed treatment, storage, and disposal (TSD) facility. Site Geology and Hydrogeology: The Site is underlain by the following units (in order by increasing depth): urban fill, Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene

STANDARD MOTOR PRODUCTS INC. (Continued) **1000310304**

glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level). The groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs). The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. The groundwater flow rate was estimated to be 0.78 feet/day. "

Env Problem: "Nature and Extent of Contamination: Soil - At one location, arsenic was detected at 19 parts per million (ppm), which is above the applicable soil cleanup objective (SCO) of 16 ppm. Groundwater - Tetrachloroethylene (PCE) has been found at concentrations of up to 17 parts per billion (ppb). Trichloroethylene (TCE) has been found at concentrations of up to 78 ppb. Cis-1,2-Dichloroethene (cis-1,2-DCE) has been found at concentrations of up to 93 ppb. Vinyl chloride (VC) has been found at concentrations of up to 31 ppb. 1,1,1-Trichloroethane 1,1,1-TCA) has been found at concentrations of up to 180 ppb. An air sparge and soil vapor extraction system was installed to remediate site groundwater and has been operating since September 2013. Soil Vapor- The highest concentrations of chlorinated VOCs were detected at SB-05. Sub-slab samples contained PCE at concentration of up to 620 ug/m3. TCE and cis-1,2-DCE have been found at concentrations of up to 2,800 ug/m3 and up to 52 ug/m3 respectively. Chlorinated ethanes were found and included 1,1,1-TCA and 1,1-DCA at concentrations up to 5,200 ug/m3 and up to 450 ug/m3 respectively. An Interim Remedial Measure (IRM) consisting of a sub-slab depressurization system (SSDS) has been installed in the building and is currently in operation. "

Health Problem: "The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area. "

DEC Memo:	8/22/07 bf: sent ttf letter to: Most Precious Blood 32-23 36th St. Long Island City, NY 11103 10/31/07 On 9/6/07, received submittal from Most Precious Blood School. No letter and no name on submittal. Included my tt failure letter. Repairs were made by Blaze Fuel Oil. Tank was pumped and cleaned. Manhole cover was replaced. Lines tested. Vent line failed and was replaced. Tank reteste and passed. called Blaze Fuel Oil and the number is no longer in service (718-578-6430). Called the school and spoke to Nancy Carol. She said it was sent tank test was sent RRR. I told her it was not included and that I needed a letter regarding the contamination found. She took my number and will call me on Friday since they are off tomorrow and they are closing the school in a few minutes. Received call from Tommy of Blaze. he will fax a letter regarding contamination and the tank test results. bf 11/1/07 Received fax from Tommy Walkowiak of Blaze stating that no contamination was found. Passing tightness test was included. NFA. bf

Updated By:	JHOCONNE

Site Description: "Location: The Site is located at 34-12 36th Avenue, Long Island City, NY in an urban area. It consists of a four-story public school building with a partial basement and a total floor area of approximately 40,000 square feet. The school occupies the first 3 floors and the owner occupies the top floor. Site Features: The Site is bounded by 36th Avenue to the north followed by two four-story residential buildings, 35th Street to the east followed by two-story commercial buildings, two-story commercial and residential properties to the south, and three- and four-story residential with first floor commercial spaces to the west. Current Zoning/Use(s): The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses. Historic Use(s): The Site was a commercial building occupied by various manufacturing and warehousing entities including

FORMER LUFT CO. INC. COSMETICS MANUFACTURER (Continued) **U001831683**

a cosmetic manufacturing firm from at least 1934 to approximately 1967. The Site was renovated for use as a public school in 2002. Site Topography, Geology and Hydrogeology: The Site is generally level and the surrounding area slopes downward from north to south. The geology of Queens County consists of unconsolidated glacial deposits overlying crystalline bedrock at about 80 feet below ground surface (bgs). Soil cores collected during prior investigations generally consisted of fill material containing brown sandy silt with some gravel, to a depth of 8 feet bgs. The Site is located 1.1 miles east of the East River and approximately 1.5 miles northeast of Newtown Creek. Groundwater is at 18 to 21 feet bgs. The hydraulic gradient direction is towards the southwest. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites. The source of the contamination noted on-site was determined to be from an upgradient property. See site no. C241149 for further updates."

Env Problem: "Nature and Extent of Contamination: The Supplemental Site Investigation (SSI) dated April 2012 indicated that the presence of tetra-chloroethylene (PCE) and its breakdown products at elevated concentrations in the underlying groundwater. The subsequent Addendum to the SSI performed in June 2012 revealed the presence of these chlorinated volatile organic compounds (CVOCs) at even higher concentrations in nearby upgradient locations. Soil - There were no volatile organic compounds detected in soil samples at concentrations at or above the Unrestricted Use Soil Cleanup Objectives (UUSCOs). Twelve of sixty-five semi-volatile organic compounds (SVOCs) were detected in one or more soil samples. However, none were detected above the UUSCOs. Seven of the eight metals analyzed for were detected, but only lead and silver were detected at concentrations exceeding the UUSCOs. These were attributed to the characteristics of the fill material. PCBs were not detected in any of the soil samples. Groundwater - On-site: Three VOCs, namely PCE (450 ppb), tri-chloroethylene (TCE-15 ppb), and cis-1,2-dichloroethylene (DCE-24 ppb)were detected in groundwater samples at levels exceeding groundwater standards. Off-site: PCE and one or more of its breakdown products were detected above Class GA Standards in all of the groundwater samples save one. The highest concentrations of these CVOCs were detected in samples from monitoring wells located directly in front of the dry cleaning concern at 35-45 35th Street (13,600 ppb) and at the intersection of 35th Street and 36th Avenue (5,500 ppb -50 feet southwest of the dry cleaning concern) northeast of and directly upgradient of the Site. Sub-slab soil vapor - Sixteen petroleum and chlorinated solvent related VOCs were detected in one or more of the four sub-slab soil vapor samples. Concentrations of 1,1-Dichloroethane (DCA), 1,2,4-Trimethylbenzene (TMB), 1,3,5-Trimethylbenzene, cis-1,2-Dichloroethene (DCE), PCE and TCE were detected at concentrations greater than the range of published background concentrations. PCE and TCE were detected at concentrations exceeding the NYSDOH Air Guideline Values (AGVs) in all four samples. Indoor Air - Fifteen petroleum and chlorinated solvent related VOCs were detected in at least one of the two indoor air samples. The concentrations of 1,2,4-TMB, 1,3,5-TMB and PCE exceeded the range of corresponding background indoor air concentrations. However, the concentration of PCE was below the corresponding NYSDOH AGV. A subsequent indoor air sampling event confirmed these findings. Outdoor Air - PCE was detected in the outdoor air sample at a concentration well below the concentrations

FORMER LUFT CO. INC. COSMETICS MANUFACTURER (Continued) **U001831683**

found in indoor air and TCE was not detected in the outdoor air sample, indicating that the presence of these compounds in indoor air did not originate from ambient conditions. Significant Threat: The results of the SSI groundwater analysis revealed that PCE, TCE and cis-1,2-DCE were detected at concentrations above the NYSDEC groundwater standard on-site. The presence of these VOCs in groundwater did not appear to be attributable to an on-site source as there was no corresponding detections at high concentrations in soil samples. However, as the Addendum to the SSI revealed there are greater levels of CVOC contamination in nearby off-site upgradient locations and this is most likely the source of on-site CVOC contamination. CVOCs detected at elevated concentrations in sub-slab soil vapor and indoor air are attributable to the the contamination in groundwater. Comparisons of the sub-slab soil vapor concentrations of PCE and TCE to indoor air concentrations indicate that the vapor intrusion pathway is complete and, as per the NYSDOH decision matrices, mitigation is the recommended action. Therefore, a Sub-Slab Depressurization System was installed and is operating to prevent soil vapor migration into the building."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 6/4/2002 - Sangesland called Dave Fazin at Crown Leak Detection (516-939-2959) to find out if repair work was ever done to this tank. If so, Crown needs to submit a letter stating that: tank was welded, past a tank test, no visible sign of leakage. 4/14/06 - L. Alden - suggested action: Re-establish contact with Crown Leak Detection or site owner. 11/16/06 - Austin - Reassigned to Ketani for followup/review - end 12/1/06 - Raphael Ketani. The original caller was David Fazin of Crown Leak Detector (516) 939-2959. The TTF was on 3/26/02 and was the result of a failed epoxy patch. The patch was supposed to be rewelded and the tank system retested. Gus Tsambas (718) 721-2688 was involved with the site. PBS case #2-607845 with a 1500 gal. tank in service with #2 oil. The owners are Algus Realty Co., 25-26 33 Street, Astoria, NY, 11103, (718) 721-2688. I made contact with Mr. Tsambas. The phone number was his home. He said he has the passing test results and he will send it to me. He said that the tank sits on the concrete floor and the patch is on the top of the tank. He said that no oil was released. 12/12/06 - Raphael Ketani. Mrs. Gallun of the Gallun Agency (718) 728-8120 called to ask what DEC needed to close the spill case. I told her we needed a new tank system test showing that the system is tight. She said she will have the super. call the oil company and arrange such a test, and send me the results. 1/4/07 - Raphael Ketani. I received the passing tank test results from Mr. Tsambos. Based upon these results and Mr. Tsambos' statement to me on 12/1/06 that no oil was released, I am closing the spill case. 1/10/07 - Raphael Ketani. I received a copy of the passing tank test results from the Gallan Agency - Insurance and Real Estate.
Remarks:	EPOXY PATCH ON TANK - WILL BE CLEANED,WELDED AND RETESTED

Tank Info:

Tank Number:	004
Tank Id:	33616
Material Code:	0013
Common Name of Substance:	Lube Oil

Equipment Records:

	B00 - Tank External Protection - None
	C00 - Pipe Location - No Piping
	D02 - Pipe Type - Galvanized Steel
	F00 - Pipe External Protection - None
	A00 - Tank Internal Protection - None
	E00 - Piping Secondary Containment - None
	H00 - Tank Leak Detection - None
	I00 - Overfill - None
	K00 - Spill Prevention - None
	L09 - Piping Leak Detection - Exempt Suction Piping
	G00 - Tank Secondary Containment - None
	J02 - Dispenser - Suction Dispenser
Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	01/01/1966
Capacity Gallons:	550
Tightness Test Method:	03
Date Test:	12/01/1993
Next Test Date:	Not reported

Site Code: 490213
Site Description: "Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is

SILVER STAR AUTO RESOURCES LLC (Continued) **U000409049**

identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies, including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of poorly-sorted fine to course sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code: 490213
Site Description: "Location: The site is located at 37-14 36th Street on the corner of 36th Street and Northern Boulevard in Long Island City, NY and is identified as Block 377 and Lot 23 on the New York City Department of Finance map. The site is 0.47 acres in size. Site Features: Prior to remediation, the site was an automobile dealership parking lot and maintenance facility. A mixed-use building was being constructed on-site. The basement will be used for car parking; the first floor will be a retail automobile showroom and the remaining floors will be used as residences. Current Zoning and Land Use: The site is zoned M1-3/R7X which is a Special Long Island City Mixed Use district that allows a combination of commercial and residential uses at the same site. Past Use of Site: The site had been used by several companies, including a gasoline service station, an automotive repair shop, carwash and an automobile dealership. Site Geology and Hydrogeology: The underlying geology that was encountered consisted of

SILVER STAR AUTO RESOURCES LLC (Continued) **U000409049**

poorly-sorted fine to course sands and gravel. The site elevation is approximately 23-feet above mean sea level. The nearest water body is the East River which is located 1.18 miles to the west of the site. Groundwater was encountered between 10 and 14 feet below ground surface flows toward the southwest."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were low-level concentrations of volatile organic compounds (VOCs) including benzene, toluene and ethylbenzene (collectively referred to as BTEX) in the soil and groundwater. Additionally, tetrachloroethene (PCE) and trichloroethene (TCE) were identified in the groundwater from an off-site source located upgradient of the site. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Post-remediation groundwater sampling demonstrated that the groundwater was also successfully remediated. The environmental easement will be extinguished and the site now meets Track 1 objectives. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

DEC Memo:	Need to send CSL Sangesland spoke to Dennis (DEP rep) who was at the site. Construction company was pumping out water at a site and #6 oil came out. Building appears to be an old school building that is now being demolished. Contractor on site: Red Hook Construction, 575 Broadway, Amityville, NY 631-841-4502 Owner: Mr. Steven Novstein 50 Main St, White Plains, NY 10606 Nov 25, 2005 A Contaminated Soil Letter was sent to: Owner Mr.Steven Novstein 50 Main Street White Plains, NY 10606 12/3/05 - Raphael Ketani. I received a call from Axel of AKRF Environmental ((646) 388-9529). He is the consultant for Storage Deluxe. He wanted to know how the spill happened. 12/6/05 - Raphael Ketani. I received a call from John Marra (516) 785-2700 of Allied All City Plumbing and Environmental Services. He said that he was called by the DEP to come out to the site and clean up the liquid that was on the street. He said that another contractor was dismantling the boiler in the basement and water spilled onto the boiler room floor. He said it was this water that was pumped onto the street. He said that there were no PID readings and that this liquid was iron sludge from the recirculated heating system water. He boomed the catch basin and power washed the street. Then he vacuumed the wash water. Mr. Marra will send a letter to this effect. 12/19/05 Feroze. Spill is transferred from Ketani to Feroze. 12/29/05.Feroze Called Mr. John Marra 516-785-2700 and he informed that the site is cleaned up and he will send DEC that document shortly. 01/17/06. Feroze. Mr. John Marra submitted the proper documents regarding the spill. On the basis of those reports and consultation with DEC Raphael Ketani the spill is closed.

DEC Memo:	03/06/12- Zhune spoke to Ray from PTC. He said they test the UST and failed. The tank was emptied and cleaned. PTC installed a temporary tank. Management Company Pistilli Real Estate Co. 3501 30th Ave, Astoria, NY 11103 718-204-1600 07/16/13 - Spill Case is transferred from Moses Ajoku (PBS Unit) to Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 08-03-2018 As per Remediation Section B Chief Vadim Brevdo, this spill case is reassigned from Vadim Brevdo to MD. S. Hoque as project manager effective on August 3, 2018. -MDH 9/20/2018-M.Hoque: called to PTC at 718-624-4842 several times to get an updated status report but couldn't reach them. The phone number is out of work(continues busy). (MDH) 4/5/2021-M.Hoque: Spoke to Dafine (718-204-1600) of Pistilli Real Estate Co. regarding the 5,000 gallons #2 fuel UST. She told that the tank was excavated and removed from the site and report sent to DEC/CO office on 1/26/2020. Spill case still open in UIS. I requested her to send me the same report for review.(MDH) 4/5/2021-M.Hoque: Received an email below from Pistilli Real Estate: Hi Mr. Hoque, I don't know anything about the spill case. If there was a spill case It would have been remedied by the oil company that was delivering the fuel at the time. What date was the incident? I will call the company that was delivering the fuel to get you the paperwork. Dafne Panayiotou 35-01 30th Ave, Suite 300 Astoria, New York 11103 dafne@pistilli.com T 718.204.1600 x 30 F 718.204.5889 W www.pistilli.com 4/22/2021-M.Hoque: Haven't received site remediation report yet. Sent an email requesting to send me the report. (MDH) 5/4/2021-M. Hoque: On May 4, 2021, Ms. Dafne of Pistilli Real Estate informed me that she contacted to the previous oil supply company and provided me a contact name and phone number: Name:Alex Montoya Company: Sprague Energy Contact number: 718-579-3413. Email: AMontoya@spragueenergy.com 6/8/2021-M. Hoque: June 8, 2021 Re: Apartment Building, 34-20 32nd Street, Queens, NY NYSDEC Spill Case # 1113642 The site is currently occupied by a multi-story residential building. In March 2012, the spill was reported when a 5,000-gallon no. 2 fuel oil underground storage tank (UST) failed tightness test. No seepage has occurred at the site. The tank was emptied, cleaned, and a temporary tank was installed. On April 5, 2021, DEC contacted

UNK APT BLD (Continued) **S111738863**

Pistilli Real Estate Company which manages the property. On May 15, 2021, Pistilli Real Estate submitted a tank abandonment report including spill closure request. The report stated that the contractor, Oil Burning Installer, purged the tank and abandoned in-place the 5,000-gallon tank and installed a new 5,000-gallon tank in August 2017. Prior to abandonment, the tank was disconnected, cleaned of all remaining oils, and all related piping was capped. The fill port was sealed with concrete and vent pipe was removed from the premises. Pistilli Real Estate concluded that the tank test failure was associated with the ullage (dry) portion of tank and no discharge was occurred at the site. Proper protective/mitigation measures have been undertaken and no further work is warranted. Pistilli Real Estate requested closure of the historical open spill case. DEC reviewed the May 2021 report submitted by Pistilli, and concluded that the site no longer poses threat to human health and environment for use as a residential building, and is protective of the current tenants of building. DEC closed spill case on June 8, 2021. Spill closure approval letter sent to the PR. (MDH)

Remarks: tank emptied, temp in place.

DEC Memo:	TTF letter sent to PBS address - see eDocs 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 11/07/2013 - V. Brevdo Received call from Chief Operating Officer for Real Estate Company Ms. Duffney Panayiotou - 718-204-1600 Ext. 30. I explained to Ms. Panayiotou that I need infomation and/or documents about what type of tank test failure it was - dry or actual leak. If they have confirmaton it was a dry leak and no oil leaked and no impacts, I would look into available documents and may consider closing spill. If it was not a dry leak and oil was released that we need to negotiate appropriate course of action. Ms. Panayiotou stated she will look into this matter and get back to me by end of the day. I stated that I would like to hear back from her no later than 3 weeks from today. VB 03/24/2014 - V. Brevdo Called Ms. Duffney Panayiotou - left voice mail that we need to discuss this spill case as per our 11/07/2013 telephone conversation. Ms. Duffney Panayiotou returned call stated that she will submit (via e-mail)appropriate documentation confirming this case was a dry leak with no product released. I provided my e-mail address over the phone. V. Brevdo 03/24/2014 - V. Brevdo e-mail from Pistilli Group: Dear Mr. Brevdo, Attached please find the tank tightness tests for 34-20 32nd Street, Astoria, NY and 25-90 35th Street, Astoria, NY. Please note that the tank for 34-20 32nd Street had a dry leak. The building has since converted to Gas and the tank has since been abandoned. I will forward you paper work on it tomorrow as soon as I receive it from the company that did the work. The tank for 25-90 35th Street passed the tank tightness test and there are no known leaks at that location. Thank you, Dafne Panayiotou Pistilli Realty Group 35-01 30th Avenue, Suite 300 Astoria, NY 11103 Dafne@pistilli.com Tel. (718) 204-1600 Fax (718) 204-5889 March 25, 2014 - V. Brevdo e-mail to Pistilli Group: March 25, 2014 Dear Ms. Panayiotou: This is to acknowledge receipt of your 3/24/2014 5:55 PM e-mail and attached tank tightness tests documents. Could you please confirm that there have been no complaints and/or occurences of petroleum odor in the subject buildings over the period of time from August 31, 2010 to date? Thank you. Vadim Brevdo 03/25/2014 - V. Brevdo e-mail from

APARTMENT BUILDING TTF (Continued) **S110540952**

Pistilli Group: Dear Mr. Brevdo, This e-mail shall confirm that from August 31, 2010 to present there have been no complaints or occurrences of petroleum odor in the properties 34-20 32nd Street, Astoria, NY nor in 25-90 35th Street, Astoria, NY. Please feel free to call me in the event you have any further questions or need any additional information. Thank you, Dafne Panayiotou 04/02/2014 - V. Brevdo Spill Case Closure Decision 34-20 35nd Street Long Island City Spill Case No. 1006024 No release of product appears to have occurred from this tank test failure on 8/31/2010 which is confirmed by tank test report (dry ullage leak). According to Ms. Panayiotou, Chief Operating Officer at Pistilli Group, there has been no petroleum odor or petroleum odor complaints in the building. The Department determined that it is unlikely that this tank test failure resulted in any impact to soil and/or groundwater. Human Health Threat is unlikely. There is no human health and/or environmental benefit in continuing keeping this spill case open. Spill Case is closed effective 04/02/2014. V. Brevdo

SANGESLAND 4/29/2002 - Sangesland spoke to property owner (Mr. Ron Levy). Mr. Levy did not feel comfortable with ProTest and requested information on how to close out this spill. Isolate and retest just the tank and just the piping. Once the spill is closed out, owner will abandon the tank and switch to gas. 6/10/2002 Man hole on top of tank was left open. Gasket was replaced and the tank passed the retest. 7/3/2002 Mr. Levy called. He will send a copy of the tank test which shows that the tank passed the second test. He also said that he will be pulling the tank out and wanted to know the proper procedures. Sangesland provided Mr. Levy with a contact at PBS. 6/16/05 Heitzman: See PBS 2-607788. Tank was removed July 2002. Closed.

Classification: N
Region: 2
Acres: 0.471
HW Code: 241191
Record Add: 09/27/2016
Record Upd: 03/30/2021
Updated By: SMQUANDT
Site Description: "Location: The 20,500 square-foot lot is surrounded by commercial, industrial, and mixed use residential and commercial buildings. Commercial and industrial buildings are located to the south, 33rd street followed by a commercial building to the east, and 32nd street followed by mixed-use residential and commercial buildings to the west. The site was a vacant lot prior to redevelopment. Site Features: The site has recently been developed with a 7-story residential apartment building with retail stores on the first floor Current Zoning and Land Use: The property is zoned as M1-2/R6A, which allows for mixed residential and commercial buildings. Past Use of the Site: As of 1898, the subject property contained a two-story bottling and laboratory facility occupied by Hiscox & Company Patent Medicines. By 1915, the building was occupied by Mercury Motor Works and two two-story dwellings were constructed in the western portion. By 1936, the main building expanded, occupying more of the property and was occupied by Renner-Maras Inc. Ornamental Iron Works. In addition, one of the dwellings was identified as an office. By 1947, the building was identified as a loft and electro-plating facility. By 1970, the western building was built-out to the property and was identified as Bliss Display Corp, a manufacturer. The eastern portion was used for painting and the southern was used for woodworking. By 1995, the property was occupied by one manufacturer. By 1996, a small portion was used for parking. The property remained substantially unchanged through 2006. Site Geology and Hydrogeology: The topography of the site is generally level and is approximately 36 feet above mean sea level. The site is located approximately 0.87 miles northeast of Dutch Kills and 1.1 miles east of the East River. Depth to groundwater is approximately 30 feet below ground surface (bgs).

MOTOR AND IRON WORKS (Continued) **S118705940**

Groundwater flows to the west towards Dutch Kills. The major aquifer systems beneath the subject property are the Upper Glacial and Lloyd aquifers. The subsurface beneath the site consists of unconsolidated sand and gravel layers from the ground surface to approximately 50 ft bgs where the Raritan confining unit is encountered. Bedrock beneath the subject property is located approximately 200 ft bgs. The lithology generally consisted of up to five feet of fill material underlain by a silt or clay lens extending to a maximum observed depth of seven feet followed by poorly graded sand to the terminal depth of the investigation at 23 ft bgs. The historic fill encountered was evidenced by brick and concrete, which predominantly was embedded in a silty sand matrix."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related volatile organic compounds in soil and groundwater, and trichloroethene and tetrachloroethene in soil vapor. Post excavation samples collected at 14 feet below grade demonstrated achievement of soil cleanup objectives for residential use, and a sub-slab depressurization system was installed to mitigate building occupant exposures related to soil vapor intrusion. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."

DEC Memo:	6/27/2016: Rashad 37-21 32 Street has an alternate address of 37-13 - 37-23 32 Street and 37-12 - 37-18 33 Street. No additional spills or PBS registrations found for this site. Called Mark, this site is an OER site and they found contamination during RIR field work. Shaminder contacted us this morning with regards to this site: I am reviewing an RIR which indicated VOCs in soils at 20 feet depths. Groundwater was not sampled due to refusal at 27 feet depths. Soil/fill samples results were compared to New York State Department of Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples collected during the RI showed that no PCBs were detected in any of the soil samples. VOCs including 1,2,4-Trimethylbenzene (42,000 ug/kg), 1,3,5-Trimethylbenzene (13,000 ug/kg), Ethyl Benzene (3,800 ug/kg), n-Propylbenzene (6,700 ug/kg) and total Xylenes (19,000 ug/kg) were detected above Unrestricted Use SCO in one deep soil sample SB-9 (21-23). The email had two documents attached. First document has site maps with soil

MOTOR AND IRON WORKS (Continued) **S118705940**

concentrations as well as soil vapor results. Soil vapor results are as follows: SV-1: Tetrachloroethene-150ug/m3, SV-2: tetrachloroethene-230ug/m3, SV-3: Tetrachloroethene-170ug/m3, SV-4 Tetrachloroethene-160ug/m3, trichloroethene-400ug/m3, SV-5: tetrachloroethene-260ug/m3, trichloroethene-170ug/m3, SV-6 tetrachloroethene-220ug/m3, trichloroethene-200ug/m3, SV-7 tetrachloroethene-96ug/m3, trichloroethene-420ug/m3. Soil analyticals found contamination at SB-9 21-23 feet: 1,2,4 Trimethylbenzene-42,000ppb, 1,3,5 Trimethylbenzene-13,000ppb, Ethyl Benzene-3,800ppb, n-propylbenzene-6,700ppb, and total xylene-19,000ppb. 7/7/2016: Rashad Sent contaminated soil letter to NYCOER for site, it has been uploaded to D2 and mailed to owner.
9/6/2016: Rashad Received call from Paul Stewart of Advanced Cleanup Technologies. He said that he is working with OER on site and that the RAWP is in the final stages of approval. Received email from Shaminder: Above spill was recently called in during Site investigations. Since then, RIR and RAWP have been prepared. A copy of RAWP is attached for your review. Development includes excavations of full footprint of property to more than 22 feet deep for cellar and sub-cellar (to be used as parking garage) and a seven story residential building. Remedy includes: 1. Excavation and removal of soil/fill exceeding Track 4 Site Specific SCOs. 2. Performance of a remedial action for the petroleum spill #16-03003 under New York State Department of Environmental Conservation (NYSDEC) Spill program. 3. Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs. End point samples for spill closure will be performed per DER-10 requirements. 4. Construction of an engineered composite cover 5. Installation of a vapor barrier system 6. Installation of a passive sub-slab depressurization system (SSDS) 7. parking garage with high volume air exchange in conformance with NYC Building Code. Attached to email was RIR and summary. It has been uploaded to D2. Review or RAWP is as follows: Site is in VCP. The proposed future use of site will be a seven story mixed use building with retail stores on first floor, and residential apartments on the upper six floors. The cellar will be built to a max depth of 10 feet bgs, the subcellar will be built to a depth of 20 feet bgs.
The majority of the property will be excavated to a depth of 22 ftbgs. Elevator pits will be excavated to depth of 26 ft bgs, the excavation is not expected to reach the groundwater table. The sub-cellar will contain 45 parking spots. The cellar will contain 25 parking sports. Groundwater was not encountered, refusal was reached at 27 ft bgs. The proposed

MOTOR AND IRON WORKS (Continued) **S118705940**

remedial action will consist
of: community air monitoring, excavation and removal of soil for the majority of the site to a
depth of 22 feet below grade except for two recessed area to the northwest and northeast, which
will be excavated to 2 feet bgs. A small portion will be excavated to 27 ft bgs. Removal of all
USTs that are encountered during soil removal actions and registrations of all found tanks.
Performance of remedial actions for the open spill case on property which include installation and
monitoring of off site groundwater wells as required and approved by NYSDEC, and may include the
removal of LNAPL present beneath the site, treatment of groundwater plume via injections of biorem
and chem ox if required by NYSDEC, excavation and removal of petroleum impacted soil, where
feasible to 2 feet below groundwater and the implementation of a groundwater monitoring program. A
separate RAWP Addendum may be required by NYSDEC. Construction of an engineered composite cover of
a min of 6 inch thick reinforced concrete building slab. Installation of a vapor barrier system
consisting of vapor barrier beneath the building slab and outside of sub-grade foundation
sidewalls. Vapor barrier will be 20 mill in thickness. Installation of passive SSDS. Property is
also E-designated. 9/7/2016: Rashad Spoke to DEC Vought and sent report review letter approving
RAWP to NYCOER pending proposed monitoring well locations. 10/5/2016: Rashad Shaminder submitted
addendum to myself and John Durnin, John is DEC project manager for hazardous waste remediation
project on this site. Sent email to John seeking if I should administratively close this spill and
refer it to his hazardous waste project. 10/6/2016: Rashad Review of the addendum is as follows;
they are proposing installation of two down gradient groundwater monitoring wells along the western
boundary of the site. Also five additional soil vapor samples have been proposed along the northern
and southern boundaries of the site. Discussions with John continue on possible case transfer
(Remediation ID number 241191). 10/13/2016: Rashad On 10/12 DEC Durnin sent comments to Shaminder
for the RAWP Addendum which include: Revised RAWP Addendum (see figure below) Site investigation
decisions for this P site are based on the entire property being excavated to the depth of at least
22 feet. The north corner of the site along 32nd Street (recessed area) and the east corner of the
site along 33rd Street (recessed area) both are only going to be excavated to a depth of 2 feet.
Should the developer not implement this excavation plan, the soil investigation would require
additional sampling from 2 feet to 22 feet across to entire property. Soil Vapor According to the

MOTOR AND IRON WORKS (Continued) **S118705940**

June 22, 2016 draft RIR (page 20), nine soil vapor samples (SV-1 through SV-9) were collected but only 7 are documented (SV-1 to SV-7). This should be corrected in the final RIR. Relocate proposed SV-11 away from the former basement area to ensure the soil vapor sample (6 -7 probe depth) is representative of the soil conditions without any influence of the former basement. Add soil vapor sample points SV-13 and SV-14 at each end of the site near 32nd Street and 33rd Street to evaluate the potential for off-site migration. Soil There is only one soil sample, SB-9 (21 -23) below the two foot depth. All the other soil samples are from the 0 to 2 depth. The off-site soil borings for MW-1 and MW-2 must be logged continuously and screened with a PID. Any visual evidence of contamination or elevated PID readings will require soil sample collection and laboratory analysis for VOCs, SVOCs and Metals. Groundwater Based on groundwater data from other OER Brownfield Sites in the area, the groundwater flow direction is most likely in the westerly direction and approximately 20 feet deep. Indicate the diameter of the proposed wells and the type of well drilling rig to be used. Since refusal was encountered at 27 feet during a previous attempt, a larger drill rig is needed to install the four proposed monitoring wells. Provide well construction details for all new wells. MW-1 and MW-2 must be greater than 20 feet apart to be representative of a broader area of groundwater, to not influence one another and to enhance the verification of the groundwater flow direction. MW-2 needs to be far enough along 32nd Street to reasonably be downgradient of the site. MW-3 should be located near SB-9 where elevated levels of Trimethylbenzenes, Ethyl Benzene, n-Propylbenzene and total Xylenes were encountered in the soil at 21 to 23 feet. MW-4 will show if there is off-site groundwater impacting the site (assuming a westerly groundwater flow). As per DEC Vought, no further comments are needed for petroleum remediation as DEC Durnin has taken the lead and addressed the Departments comments/concerns.
10/31/2016: Rashad On 10/28 DEC Durnin asked for update to revised addendum. Alysha from OER sent revised addendum report. It has been uploaded to D2. 11/9/2016: Rashad John Durnin sent email:
There has been a question raised regarding the revision of the RAWP Addendum for 37-21 32nd Street, Spill #16-03003. The consultant, Advanced Cleanup Technologies, Inc. (ACT) prepared the revised addendum to the Remedial Action Work Plan (RAWP) and RAWPs required a P.E. to do the work. However, the work I ve been reviewing and commented on involves investigative work necessary to evaluate if this project (NYSDEC P Site) will be in the NYCOER BF program or the

MOTOR AND IRON WORKS (Continued) **S118705940**

NYSDEC BF program, typically
investigative work not requiring a P.E. Is it possible that this is
actually an addendum to an
existing RIWP prepared by ACT in early 2016? Alysha replied: The
addendum is for the existing RIWP
and will be also included as an appendix in the Stipulation List.
1/5/2017: Rashad Emailed DEC
Durnin about possible case transfer due to my resignation at DEC,
received no response. 1/6/2017:
Rashad After meeting with RSE Austin spill will be assigned to DEC
Durnin. There is a DEC approved
RI Work Plan addendum for additional wells and SVI sampling. Waiting
for this to be done. DEC sent
a sidewalk opening permit request letter on February 23, 2017.
(3/31/2017) The additional well
samples and SVI sampling were completed in May 2017. Site
remediation/construction began in January
2018. Daily reports are available on the NYCOER EPIC website
(16TMP0372M). Once the site
remediation is completed, DEC will evaluate the open spill and
determine if it can be closed. The
DEC Project Manager, John Durnin, will retire in April 2018. The new
Project Manager will be Kyle
Forster. (3/29/2018), Remedial Action Report acceptable to DEC. A memo
has been filed documenting
the remedial actions taken and summarizes remaining contamination.
Both filed in D2 (4/1/2021). -
K. Forster

DEC Memo:	4/6/04 TTF letter sent out to Cary Wolf. 9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(Consultant, National Env.) with J. Rommel and L. Oliva. BP is doing cleanup under spill #8402855. Provided copy ot TTF letter dated 4/6/04. B. Beck to provide response by 10/8/04. 10/20/04 Received repair record for the premium tank line performed by Alvin Petroleum. Alvin excavated over the premium tank on 4/9/04. They found plastic in the check valve over the tank and removed the plastic and insert on valve. DIsconnected suction line from tank, tested the line at 50lbs. and found the line tight. Reconnected and installed drop in check valve. Received passing tightness test of previously failing premium line gas tank performed by Crompco. There was no release to the environment. 10/21/04 NFA letter mailed.
Remarks:	TANK WILL BE PUMPED OUT AND INVESTIGATE FURTHER

Site Description:	"Location: The 4,000 square feet site is located at 34-14 31st Street in the Borough of Queens, Queens County, NY in an urban area. Site Features: The Site currently consists of a 2-story commercial building which has been utilized as an auto repair shop since around 1936. Current Zoning and Land Use: The site is currently zoned as R5 (lower density residential districts) and is adjacent to an elevated subway track along 31st Street. The site is bounded to the north by a residential building, to the east by 31st Street, to the south by a commercial building, and to the west by residential buildings along

34-14 31ST STREET (Continued) **S118256210**

30th Street. Past Use of the Site: The Site is currently occupied by a 2-story structure which operates as an auto repair shop. A Phase I conducted in May 2015 identified the site s current and past use as an auto repair shop as well as the presence of 2 above-ground storage tanks as recognized environmental conditions. Site Geology and Hydrogeology: Boring logs were not provided with the Phase II ESA and a description of site-specific geology and hydrogeology was not included as part of the report."

Env Problem: "Nature and Extent of Contamination: Prior to Completion of Remediation Based on preliminary investigations, the primary contaminants of concern were volatile organic compounds (VOCs). Soil The chlorinated solvent tetrachloroethylene (PCE) was identified in one of four soil samples above the Unrestricted Use SCOs (UUSCOs) in parenthesis. PCE was detected at a concentration of 4.8 ppm (1.3 ppm). Several metals were detected above UUSCOs and included lead up to 193 ppm (63 ppm), mercury up to 0.47 ppm (0.18 ppm), and nickel up to 39.6 ppm (30 ppm). No SVOCs, PCBs, or pesticides were detected above the UUSCOs. Groundwater Several attempts were made to collect groundwater samples, but groundwater was not encountered to the maximum depth investigated. Soil Vapor PCE and trichloroethene (TCE) were found in the indoor sub-slab air sample at 918 ug/m3 and 54.6 ug/m3 respectively. A corresponding indoor air sample found PCE at 0.215 ug/m3. Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE in soil and PCE and TCE in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use and applicable guidance values for soil vapor and indoor air samples. "

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants."

DEC Memo:	1/19/06- DEC Piper contacted homeowner to get info. As per homowner, he had a delivery two days ago. When the delivery was completed he checked the gauge and it read 7/8ths, approx 1 hour later, the gauge read 5/8ths. This morning he could not get the boiler started and contacted Stuyvesant. Homeowner does not see or smell fuel. Stuyvesant (Len Fronc, Stew Levy, and Eric Kasden- ops manager 718.665.5700) contacted PTC (Big Anthony) to perform inspection. PTC visited site and broke wall to access tank. They confirmed that there was no oil in the tank. Due to the missing wall, vapors became heavy. DEC Piper arrived on site at approx 345pm just missing PTC. DEC Piper observed oil staining outside vent on porch and confirmed w/ the homeowner that oil did come out the vent line. Approx 1 gal was cleaned up immediately. Piper inspected tank and area. Heavy odors no sign of oil though staining exisited beneath tank. Concrete may be in bad condition. The floor is raised on 2x4s and plywood and then covered w/ Linoleum tiles. Therefore seeing the bottom of the tank was very difficult. Big Anthony from PTC noted that there was some rust present on bottom left of tank. Piper notified Stuyvesant that theyt were responsible since there was an overpressurization of the tank system during the overfill. Stuyvesant contacted Mystic Bulk carriers (subcontractor) regarding delivery. Mystic Joe Lombardi (917.335.0005) to visit site and inspect. DEC Piper spoke w/ Joe at 6pm and as per conversation will contact me in the morning regarding a strategy for locating and removing petroleum contaminated debris, soil. 1/20/06- DEC Piper contacted Joe L at 837am. Joe stated that it was not Mystics fault and the homeowner had a faulty vent alarm. DEC Piper contacted Len Fronc of Stuyvesant stating that whistle or no whistle (which was sounding through the delivery) that Both Stuyvesant and Mystic are still liable. DEC Piper was contacted by conference call from Stuyvesant and Mystic. As per conversation, Woman, Leslie??? says, the Martinez' contacted Stuyveant for a delivery and reported that they have approx 50 gal. remaining, Mystic delivered approx 230 gal (need copy of ticket). Mystic stated that the driver had to pump at half speed since the slarm was low(poss leak in vent line- though irelavant to gross failure). I explained to both parties that they are still liable since the tank held oil prior to the delivery and could not afterwards. The failure WAS caused by

MARTINEZ HOME (Continued) **S107523423**

an over pressurization during the delivery. The vent leak is unrelated. Mystic and Stuyvesant to pay for a tightness test. DEC to be there at time Will copy Nav Law Art 12 for handout. DEC Piper met at site w/ PTC and Mystic reps (Joe L., Sam and ???). PTC performed pressure test of tank to determine where leak is. Mystic persistantly stated that the leak was from the valve beyond the tank. when loss of pressure was observed. DEC Piper observed large spray from back left of tank depicting gross failure and explained this to Mystic. Mr. Martinez's plumber arrived on site and felt under the tank and stated that it was rotting/ rusting. Vacuum test perofrmed after sludge had clogged fissure. Vacuum test resulted in large amounts of air bubbling in tank. It was also determined that the floor beneath the raised basement is concrete/soil. DIG OUT WARRANTED. DEC Piper issued CSL letter to Stuyvesant Mystic, and homeowner. Responsible parties. DEC Piper contacted Insurance Co. State Farm, John Donahue Agency 718.932.4456. Redirected to Rose (no last name.) at 631.351.7341. As per her statement, they do not wnat anyone to touchh the tank until the tank is inspected by Adjuster. 2/28/06- DEC Piper spoke w/ Lee at Windmill Env. As per conversation and as per instructions, a soil boring was conducted today. during which 75ppm was detected by a PID at 2' bgs. At 3' BGS, no PID reading was observed. Requirements will be slotted pvc matrix covered by gravel, vaporbarrier, sand, and then concrete. He will provide drawing for approval. 5/8/06- DEC Piper left message for Lee at windmill requesting callback and info. 5/15/05- DEC Piper reviewed closure report. Approx 17. yards of impacted soil/ debris was removed form the basement. Endpoint samples revealed slight levels of contaminants. Vapor barrier w/ passive vent systme installed before pouring new floor. Upon satisfactory inspection, DEC to close. 7/19/06- DEC Piper left message w/ Kevin Taylor of H2M returning his call regarding status. DEC Piper stated DEPT has not received closure request/report w/ manifests, etc. 8/14/06- DEC Piper reviewed closure request dated 8/1/06 As per reort approx 17 cu yds of contaminated debris was removed. Endpoints revealed slight concentrations of contaminatnts. A passive venting syatem was installed if need be at a later date. However report mentions that concrete restoration to be completed by others. Will visit site to deterimine if additional work is warranted. 8/24/06- DEC Piper resonded to site to perform final inspection. Upon entry, no odors present. Basemnt was refinished w/ tile and sheetrock. A passive vent extended outside. The owner has changed to gas heat. This spill is closed.

Update By:	RKCORCOR

31/32 LIC LLC (Continued) **S118457875**

Site Description:	"Location - The 31/32 LIC LLC site is a 0.40-acre parcel located in a well-developed urban area with a mix of commercial and residential buildings. The site address is 37-29 31st Street, Long Island City, NY (formerly 37-26 32nd Street and 37-27 31st Street). The site fronts both 31st Street and 32nd Street and is located between 37th and 38th Avenue. Elevated New York City Subway tracks are located along the 31st Street frontage of the property. Site Features - Previously the site was developed with two one-story structures. Prior to demolition, there was no open space on the property as the buildings fully covered the lot. The structures were both slab on grade with small partial cellars. The slab was left in place during demolition activities until it could be tested and disposed of properly. Current Zoning and Land Use The current zoning designation is M1-2/R6A which includes light manufacturing and residential use. The site has been dug out completely, a vapor barrier placed and a parking garage & business building has been erected. The proposed use is consistent with existing zoning for the property. Past Uses of the Site The site and its surrounding properties were undeveloped until about 1915 when 3rd Avenue traversed the site from northeast to southwest until 1936. Since 1936, the property has hosted multiple tenants which included: tool manufacturing and plating works (1947-1950); lighting factory (1953); welding equipment warehouse (1970-1979); food cart manufacturer, refrigeration facility, and metal shop (1977- 2015); and an auto body facility (1980 present). Past uses most likely contaminated the property through on-site disposal of materials through historic drains, sumps, and pits. Site Geology and Hydrogeology - The property is underlain by glacial and alluvial deposits with Harrison Gneiss underlying. Medium grain sand and fill extend to three feet below grade and medium grain sand from three to 23 feet below grade. The site is relatively level and has no natural or artificial surface water bodies or impoundments. The depth of the shallow groundwater ranges from 22 to 23 feet below grade. Shallow groundwater beneath the site flows to the southwest towards the East River and Dutch Kills. Underlying groundwater in this area of Queens is not used for potable supply purposes. Potable water is provided to the residents by the NYC Department of Environmental Protection. "
Env Problem:	"Remediation at the site is complete and a Track 1 (unrestricted) cleanup was achieved. A full sitewide excavation was conducted in preparation for new construction. Prior to remediation, the primary contaminants of concern were trichloroethene (TCE) in soil vapor, SVOCs, and various metals consistent with historic fill identified in the top 5 feet of soil. Remedial actions have successfully achieved soil cleanup objectives for residential & commercial use. "
Health Problem:	"Remedial actions are complete and have addressed the potential for contact with site-related contaminants. "

Update By:	HMDUDEK
Site Description:	"The area of concern subject to this work is considered off-site from BCP site C241182 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C241182 for further information regarding the status of the site in the Brownfield Cleanup program. Location- The 31/32 LIC LLC site is a 0.40-acre parcel located in a well-developed urban area with a mix of commercial and residential buildings. The site address is 37-29 31st Street, Long Island City, NY, 11101 (formerly 37-26 32nd Street and 37-27 31st Street). The site fronts both 31st Street and 32nd Street and is located between 37th and 38th Avenue. Elevated New York City Subway tracks are located along the 31st Street frontage of the property. Site Features- Previously the site was developed with two one-story structures. Prior to demolition, there was no open space on the property as the buildings fully covered the tax lot. The structures were both slab on grade with small partial cellars. The slab was left in place during demolition activities. Current Zoning and Land Use The current zoning designation is M1-2/R6A which includes light manufacturing and residential use. The site is currently vacant. The proposed use is consistent with existing zoning for the property. Past Uses of the Site The site and its surrounding properties were undeveloped until about 1915 when 3rd Avenue traversed the site from northeast to southwest until 1936. Since 1936, the property has hosted multiple tenants which included: tool manufacturing and plating works (1947-1950); lighting factory (1953); welding equipment warehouse (1970-1979); food cart manufacturer, refrigeration facility, and metal shop (1977- 2015); and an auto body facility (1980 present). Past uses most likely contaminated the property through on-site disposal of materials through historic drains, sumps, and pits. Site Geology and Hydrogeology - Medium grain sand and fill extend to three feet below grade and medium grain sand from three to 23 feet below grade. The site is relatively level and has no natural or artificial surface water bodies or impoundments. The depth of the shallow groundwater ranges from 22 to 23 feet below grade. Shallow groundwater beneath the site flows to the southwest towards the East River and Dutch Kills. Underlying groundwater in this area of Queens is not used for potable supply purposes. Potable water is provided to the residents by the NYC Department of Environmental Protection."

31/32 LIC LLC - OFF-SITE (Continued) **S121933768**

Env Problem:	"Nature and Extent of Contamination: Based upon the remedial investigation at the BCP site #C241182, the primary contaminants of concern are expected to be trichloroethene (TCE) which was found in the BCP site soil vapor. The BCP site soils also contained semi-volatile organic compounds (SVOCs) and metals, such as benzo(a)pyrene, benzo(a) anthracene and benzo(b)fluoranthene, indenp(1,2,3-CD)pyrene, dibenz[a,h]anthracene, lead, copper, chromium, and zinc. The site was fully remediated under the Brownfield cleanup Program and received a Track 1 certificate of completion. A full sitewide excavation was conducted in preparation for new construction. The off-site investigation has not begun, therefore this section will be updated to reflect the investigation results as data become available. Significant Threat: It is not yet known whether there is a significant off-site environmental threat due to contamination at the BCP site. This section will be updated as data become available. "
Health Problem:	"People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion at off-site structures."

DEC Memo:	10/12/2011 - Sangesland reviewed a Request for Closure submittal from Riteway Tank dated Oct 12, 2011. Problem was a Tank Test Failure that was traced to a hole in the sidewalk fill line. The sidewalk was opened and 58 drums of contaminated soil was removed. The line was replaced and 4 end point samples were taken. Clean fill was put back and the sidewalk was repoured. Based on the end point lab results, this spill case has been closed out. Lab results, manifests, photos etc are all in eDocs attachments.
Remarks:	tank test failure. retest pending, believed to be line failure

made. May be associated with spill #9713085. LNK. 09/07/2005: Spoke with Henry Kimpel, representative of Holy Trinity Lutheran Church on 09/07/2005 1130 hrs. Regarding tank test failure, according to Mr. Kimpel, tank was repaired and re-tested and results were hand carried to Region 2 Long Island City office. Files were not found by M. Brand during this review. Kimpel will check his files and send copies/information to Albany. Spill #9713085, also associated with this facility, was closed on 09/07/2005 due to lack of environmental problems and added to this spill for tracking purposes. M. Brand NYSDEC DER Albany. 09/08/2005: Henry Kimpel and Richard Kuhn of Trinity Lutheran Church faxed documentation of tank testing at 1435 hrs. Tank was repaired and successfully re-tested on 08/19/2003. Documentation is sufficient to close spill effective 09/08/2005. M. Brand NYSDEC DER Albany.

Remarks: recommend uncover evaulate and retest

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 8/18/2004 Sangesland spoke to Manny Caruana, Building Supervisor at See Factor Industry Inc. to discuss the specifics of what the DEC needs to close out this spill 9/13/2004 Sangesland spoke again with Manny Caruana and asked him to send in the soil borings he has along with the tank closure documents. 9/15/2004 Mr. Caruana hand delivered a package of documents to the DEC office. Included was a summary letter outlining the testing and closure of the tank. After the tank failed the tank test in 1998, it was not retested, however Mr. Caruana says he inspected the interior of the tank and said it was still secure. He states that the initial test was faulty because of a dry leak on the vent line. In 2000 the tank was abandoned by USA

SEE FACTOR INDUSTRY (Continued) **S103238355**

tanks and an abandonment certification was forwarded to the NYC Fire Dept. The building now operates on natural gas. In Feb 2000 several soil borings were taken on the site (3 in the tank area) as part of a structural investigation for a possible building expansion. Three of these borings were approx. 10 ft from the abandoned tank and went down to 20 ft depth. There was no evidence of any soil contamination. Based on this information, the DEC believes that there was no actual petroleum spill at this site and this case has been closed out effective 9/15/2004.

Update By:	CXMAYCOC
Site Description:	"Location: The site is located in an urban area at 37-11 30th Street and 30-14 37th Avenue in the Long Island City neighborhood of Queens and is identified on the Queens Borough Tax Map as Block 372, Lot 107 and Lot 121. The 26,853 square-foot (0.616-acre) site is situated on the northwest corner of the block bound by 37th Avenue to the north, 31st Street to the east, 38th Avenue to the south, and 30th Street to the west. The elevated N and Q subway tracks run north-south above 31st Street, which are about 100 feet east of the site. Site

37-11 30TH STREET (Continued) **S121933807**

Features: The site had been developed with a two-story residential building on Lot 21 (30-14 37th Avenue) and a one-story and partial three-story warehouse building with multiple partial cellar levels and a stockyard/storage area in the northern portion of Lot 8 (37-11 30th Street). All on-site buildings were demolished. Following completion of remediation, a new seven-story, mixed-use residential, commercial, and light manufacturing building was constructed; the new building includes one full cellar level with parking, tenant amenity space and utility rooms. Current Zoning and Land Use: The site is located within the Long Island City Special Mixed Use Paired District (M1-2/R6A). This paired district promotes development and expansion of the longstanding mix of residential, commercial, industrial, and cultural use throughout the area. M1 districts typically include retail and light industrial uses such as woodworking shops, repair shops, and wholesale service and storage facilities, and R6A districts promote residential development. Zoning is consistent with the proposed mixed-use development. The surrounding area is primarily commercial and industrial, but also includes residential buildings, public facilities, day care centers, and schools. As a result of the CEQR process, Block 372, Lot 21 was assigned an E-Designation (E-218) on October 7, 2008 by the NYCDCP as part of the Dutch Kills Rezoning (CEQR No. 08DCP021Q). The E-Designation requires coordination with NYC OER to obtain a building permit. Past Use of the Site: The site was an undeveloped vacant lot until at least 1915. The existing warehouse building at Lot 8 was constructed around 1920 and historically operated as a plastics manufacturer (The Marblette Corp. Mfg. of Plastic Materials) from at least 1930 to about 1980. Following 1980, the site operated as a warehouse for audio and lighting equipment. Lot 21 was developed with a two-story residential dwelling as early as 1898. From the 1930s through the 1980s, Marblette Corp. manufactured plastics, which primarily included production of synthetic resins. During this time, plastic was typically made using a mixture of synthetic chemicals, solvents, and petroleum products. An abandoned water supply well was observed in the northwest portion of the site during the June/July 2014 Limited Subsurface Investigation by Merritt Environmental Consulting Corp. The water supply well was reportedly abandoned prior to 1980 when the site transitioned from plastics manufacturing to warehousing. Site Geology and Hydrogeology: The site consists of a historic fill layer beneath concrete-paved surfaces that is predominately brown, medium-grained sand with varying amounts of gravel, silt, brick, coal, metal, clay, slag, glass, ceramics and concrete to depths ranging from 2 to 8.5 feet below ground surface (bgs). Fill material is underlain by a native brown fine- to coarse-grained sand layer observed to depths of about 32 to 69 feet bgs, with occasional layers of silt. In one deep boring advanced to 70 feet bgs, the sand layer is underlain by an olive clay layer, which was observed to depths of about 59 to 70 feet bgs. In a second deep boring advanced in the northern portion of the site, weathered rock fragments, potentially indicative of weathered bedrock or glacial till, were observed between 69 and 72 feet bgs. Bedrock was not encountered in any of the soil borings. Depth to groundwater was measured between about 22.76 to 27.77 feet bgs. The groundwater elevation is highest in the northern region of the site and flows south toward Sunnyside Yards and Newtown Creek. "

Env Problem: "Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern

37-11 30TH STREET (Continued) **S121933807**

include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, chromium, lead, tetrachloroethene (PCE) and trichloroethene (TCE). Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Residual contamination in the groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), Target Analyte List (TAL) metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for Per- and Polyfluoroalkyl Substances (PFAS) and 1,4-dioxane. Based upon investigations conducted to date, the primary contaminants of concern include benzo(a)anthracene, benzo(a)ayrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, chromium, lead, tetrachloroethene (PCE) and trichloroethene (TCE). Soil - SVOCs present at the site include benzo(a)anthracene, which is found at a concentration up to 6.1 parts per million, or ppm (as compared to the unrestricted use soil cleanup objective, or UUSCO of 1 ppm), benzo(a)pyrene at a concentration up to 4.5 ppm (UUSCO is 1 ppm), benzo(a)fluoranthene at a concentration up to 6.2 ppm (UUSCO is 1 ppm), and chrysene at a concentration up to 5.2 ppm (UUSCO is 1 ppm). Metals including chromium were detected in the central eastern portion of the site above their hazardous waste threshold in an 18-foot by 15-foot area of shallow fill up to 8 feet. Hexavalent chromium is present at a concentration up to 1,080 ppm, which exceeds the UUSCO of 1 ppm. Lead is found at a concentration up to 8,750 ppm (UUSCO is 63 ppm). Data does not indicate any off-site impacts in soil related to this site. Groundwater - Total chromium is found at a concentration up to 1,146 parts per billion (ppb) which exceeds the Ambient Water Quality Standard (AWQS) of 50 ppb; hexavalent chromium is found at a concentration up to 654 ppb (groundwater standard is 50 ppb); perfluorooctanoic acid (PFOA) is found at a concentration up to 34.8 parts per trillion (ppt) and perfluorooctanesulfonic acid (PFOS) is found at a concentration up to 11.3 ppt. Data does not indicate any off-site impacts in groundwater related to this site. Sub-slab, Soil Vapor and Indoor Air - In sub-slab soil vapor, TCE is found at a concentration up to 22.3 micrograms per cubic meter (g/m3), PCE is found at a concentration up to 12,000 g/m3. In indoor air, TCE is found at a concentration up to 0.296 g/m3 and PCE is found at a concentration up to 6.66 g/m3. In soil vapor, TCE was not detected, PCE is found at a concentration up to 26.9 g/m3. Data does not indicate any off-site impacts in soil vapor related to this site. "

Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with any residual contamination at the site."

Site Description:	"Location: Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York. Site Features: The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. The Site is bordered by commercial/residential properties, with Northern Boulevard located to the north, 42nd Place located to the east, Thompson Avenue to the west, and Skillman Avenue located to the south. Newtown Creek, which defines the border between Queens and Kings Counties, is located less

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

than 0.5 mile south of the western portion of the Site. Current Zoning/Use: The Site is located in Manufacturing Zone (M1-1) and used as a railroad maintenance and storage facility Historic Use: The Yard was originally constructed in the early 1900s by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later known as the Penn Central Transportation Company). On April 1, 1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. LIRR is constructing tunnels through the Yard as part of its East Side Access (ESA) project. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S & I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S & I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology: Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits or native deposits. The saturated native deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the former Dutch Kills Creek. In the deeper deposits, groundwater predominantly flows west across the Site. "

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOCs) were identified. Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern, lead and total PAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD) for OU2. Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the contaminants of concern. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs, lead and PAHs. The maximum PCB concentration was 25,000 ppm; PAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs for PCBs, lead and PAHs. The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and PAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in sediment from the sewers at concentrations ranging from 0.053 ppm to 120 ppm, which exceeds the SSSCL of 25 ppm. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to 83 ppb. Five of the unfiltered samples also exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the contaminants of concern. Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010. "

Health Problem: "Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 7/9/07: Reassigned to Kartik Chanda (Chanda) 9/10/07: Kartik Chanda of DEC has reviewed this spill case and sent a letter to National Railroad Passenger, 400 West 31st St., 4th Floor, NY, NY 10001, Attn: Emma Cattafi requiring that the following information be submitted to DEC for review by 10/25/07: 1. An explanation of the cause of the tank/equipment failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/17/07: Chanda received a letter from Emma Cattafi, Senior Environmental Coordinator, Amtrak with enclosed: 1. Invoices from Eadtmond describing work performed. 2.Invoices and scope of work from CHES. 3. Soil sample analysis report. 4.Tightness test tesults. 5.Shipping paper for soil disposal. 11/19/07: Chanda reviewed soil sample analytical results and UST tightness test results for this spill and has the following comments: 1. On May 14, 2004, the oil was found during the soil excavation phase of a project to upgrade/ retrofit an existing 20,000-gallon UST. 2. Amtrak

AMTRAK SUNNYSIDE YARD (Continued) **S103575644**

estimated a release of approximately 10 gallon of #2 fuel oil. 3. Clean Harbors Environmental Services(CHES) excavated the contaminated soil surrounding the tank. VOCs and SVOCs were not detected in soil analytical results. Kartik Chanda discussed with Joe Sun (NYSDEC) regarding the findings of the soil analytical results and based on the information presented to the Department, DEC closed this spill, dated 11/20/07. 11/21/07: Chanda sent an NFA letter to Ms.Emma Cattafi, Senior Environmental Coordinator, AMTRAK, by regular mail.

Remarks: LEAKING BAD FILL PIPE: IN PROCESS OF CLEANING UP:

CLEANERS PRODUCTS SUPPLY INC. (Continued) **S102638350**

Site Code: 435055
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 0.230
HW Code: 241123
Record Add: 05/20/2010
Record Upd: 07/18/2024
Updated By: SMQUANDT
Site Description: "Location: The Former Cleaners Products Supply site is a 0.23-acre parcel located at 50-45 Barnett Avenue, Sunnyside in an urban area of Queens. The site is located approximately 0.2 miles west of the intersection of Woodside Avenue and Barnett Avenue. Site Features: The site is occupied by a one-story commercial building and is equipped with a soil vapor extraction system. Current Zoning and Land Use: The site is zoned M1-1 (manufacturing) and currently occupied by a glass company. The buildings to the east of the site along Barnett Avenue consist of commercial and light industrial uses, including a cabinetry and metal shop, an automotive warehouse, and offices. Other surrounding property uses include a parking area to the west, an active railroad to the north, and an apartment complex and residential properties to the south. Approximately 0.3 miles to the east of the property is another residential area along Woodside Avenue. Past Use of the Site: Until 2007, the site was used by a dry-cleaning supply business called Cleaners Products Supply, which used aboveground storage tanks to store tetrachloroethene (PCE). This business operated at the site since 1952. The presence of dry-cleaning solvents (primarily PCE) discovered in subsurface soils, soil vapor, and groundwater is believed to be a result of materials handling during this use. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU-1) is associated with the on-site source area. OU-2 is associated with off-site groundwater and soil vapor. Site Geology and Hydrogeology: The direction of groundwater flow is in the north, northwesterly direction but may vary seasonally. According to regional groundwater flow maps and the evaluation of groundwater flow, this location appears to be at a groundwater divide, suggesting that groundwater may flow radially away from the site. Groundwater is present at approximately 24-26 feet below the ground surface."
Env Problem: "Remediation at Operable Unit 01 is complete. Prior to remediation, the primary contaminant of concern was PCE in soil, groundwater, and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. After the SVE system became operational, indoor air concentrations of PCE within the site building have been reduced to 2.6 to 4.8 micrograms per cubic meter (g/m) and are below the NYSDOH Air Guideline of 30 g/m . Prior to implementing the SVE system, indoor air concentrations ranged from 540 to 870 g/m . Residual contamination in the soil, groundwater, and soil vapor is being managed under interim site management and an Operation & Maintenance Manual until a Record of Decision for Operable Unit 02 is issued. A soil vapor intrusion evaluation will be completed, and appropriate actions implemented, in the event the SVE system is shut down in the existing OU-1 building or for any future

CLEANERS PRODUCTS SUPPLY INC. (Continued) **S102638350**

buildings developed at the site. For OU-1, On-site Areas: Soils and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyl's (PCBs), and metals. Groundwater has also been analyzed for 1,4-dioxane and per- and polyfluoroalkyl substances (PFAS). Soil: Before implementing the IRM for OU-1, PCE was detected in soil at concentrations up to 71 parts per million (ppm) which is below the 6 NYCRR commercial use soil cleanup objective (CUSCO) of 150 ppm, but above the protection of groundwater soil cleanup objective (PGWSCO) of 1.3 ppm. PCE was detected inside the building footprint at depths ranging from 5 to 17 feet below ground surface. No other compounds, (SVOCs, metals, pesticides, or PCBs) were detected above CUSCOs. Groundwater: PCE is present in on-site groundwater at concentrations up to 12 parts per billion (ppb) based on the most recent sampling. Prior to operating the SVE system, PCE was detected in on-site groundwater at concentrations up to 1,500 ppb (NYSDEC Class GA standard is 5 ppb). Off-site soil, groundwater, and soil vapor were analyzed for VOCs. Off-site areas will be addressed under a forthcoming ROD for OU-2. Off-site soil: PCE was detected at and above the PGWSCO at two off-site locations at a concentration of 1.3 ppm from 22 to 24 feet below grade to the west-southwest of the site, and at 14 ppm from 15 to 20 feet below grade immediately west of the site in the adjacent parking lot. Off-site groundwater: PCE has been detected at off-site locations at concentrations up to 22,000 ppb. However, the latest groundwater sampling indicated the highest off-site concentration of PCE to be 440 ppb on the corner of Woodside and Barnett Avenue. The off-site groundwater plume is being managed under OU-2. Off-site soil vapor: Soil vapor intrusion evaluations were performed at properties near the site.. The results did not warrant any further action, provided the on-site source was addressed. Continued evaluation of off-site soil vapor will ensure potential exposures to soil vapor intrusion are addressed."

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by site related contamination. People will not come into contact with contaminated soil or groundwater unless they dig below the sites surface/site cover (concrete building foundation). Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A soil vapor extraction system (system that ventilates/removes air beneath the building) has been installed at the site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. The potential exists for indoor air impacts to site contaminants via the soil vapor intrusion pathway for offsite buildings."

HW Code:	241123
Control Code:	15
Control Type:	ENG
Date Record Added:	08/13/2021
Date Rec Updated:	01/22/2024
Updated By:	KMFORSTE
Site Description:	"Location: The Former Cleaners Products Supply site is a 0.23-acre parcel located at 50-45 Barnett Avenue, Sunnyside in an urban area of Queens. The site is located approximately 0.2 miles west of the intersection of Woodside Avenue and Barnett Avenue. Site Features: The site is occupied by a one-story commercial building and is equipped with a soil vapor extraction system. Current Zoning and Land Use: The site is zoned M1-1 (manufacturing) and currently occupied by a glass company. The buildings to the east of the site along Barnett Avenue consist of commercial and light industrial uses, including a cabinetry and metal shop, an automotive warehouse, and offices. Other surrounding property uses include a parking area to the west, an active railroad to the north, and an apartment complex and residential properties to the south. Approximately 0.3 miles to the east of the property is another residential area along Woodside Avenue. Past Use of the Site: Until 2007, the site was used by a dry-cleaning supply business called Cleaners Products Supply, which used aboveground storage tanks to store tetrachloroethene (PCE). This business operated at the site since 1952. The presence of dry-cleaning solvents (primarily PCE) discovered in subsurface soils, soil vapor, and groundwater is believed to be a result of materials handling during this use. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU-1) is associated with the on-site source area. OU-2 is associated with off-site groundwater and soil vapor. Site Geology and Hydrogeology: The direction of groundwater flow is in the north, northwesterly direction but may vary seasonally. According to regional groundwater flow maps and the evaluation of groundwater flow, this location appears to be at a groundwater divide, suggesting that groundwater may flow radially away from the site. Groundwater is present at approximately 24-26 feet below the ground surface."
Env Problem:	"Remediation at Operable Unit 01 is complete. Prior to remediation, the primary contaminant of concern was PCE in soil, groundwater, and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. After the SVE system became operational, indoor air concentrations of PCE within the site building have been reduced to 2.6 to 4.8 micrograms per cubic meter (g/m) and are below the NYSDOH Air Guideline of 30 g/m . Prior to implementing the SVE system, indoor air concentrations ranged from 540 to 870 g/m . Residual contamination in the soil, groundwater, and soil vapor is being managed under interim site management and an Operation & Maintenance Manual until a Record of Decision for Operable Unit 02 is issued. A soil vapor intrusion evaluation will be completed, and appropriate actions implemented, in the event the SVE system is shut down in the existing OU-1 building or for any future buildings developed at the site. For OU-1, On-site Areas: Soils and groundwater were analyzed for volatile organic compounds (VOCs),

CLEANERS PRODUCTS SUPPLY INC. (Continued) **S102638350**

semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyl's (PCBs), and metals. Groundwater has also been analyzed for 1,4-dioxane and per- and polyfluoroalkyl substances (PFAS). Soil: Before implementing the IRM for OU-1, PCE was detected in soil at concentrations up to 71 parts per million (ppm) which is below the 6 NYCRR commercial use soil cleanup objective (CUSCO) of 150 ppm, but above the protection of groundwater soil cleanup objective (PGWSCO) of 1.3 ppm. PCE was detected inside the building footprint at depths ranging from 5 to 17 feet below ground surface. No other compounds, (SVOCs, metals, pesticides, or PCBs) were detected above CUSCOs. Groundwater: PCE is present in on-site groundwater at concentrations up to 12 parts per billion (ppb) based on the most recent sampling. Prior to operating the SVE system, PCE was detected in on-site groundwater at concentrations up to 1,500 ppb (NYSDEC Class GA standard is 5 ppb). Off-site soil, groundwater, and soil vapor were analyzed for VOCs. Off-site areas will be addressed under a forthcoming ROD for OU-2. Off-site soil: PCE was detected at and above the PGWSCO at two off-site locations at a concentration of 1.3 ppm from 22 to 24 feet below grade to the west-southwest of the site, and at 14 ppm from 15 to 20 feet below grade immediately west of the site in the adjacent parking lot. Off-site groundwater: PCE has been detected at off-site locations at concentrations up to 22,000 ppb. However, the latest groundwater sampling indicated the highest off-site concentration of PCE to be 440 ppb on the corner of Woodside and Barnett Avenue. The off-site groundwater plume is being managed under OU-2. Off-site soil vapor: Soil vapor intrusion evaluations were performed at properties near the site.. The results did not warrant any further action, provided the on-site source was addressed. Continued evaluation of off-site soil vapor will ensure potential exposures to soil vapor intrusion are addressed."

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by site related contamination. People will not come into contact with contaminated soil or groundwater unless they dig below the sites surface/site cover (concrete building foundation). Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A soil vapor extraction system (system that ventilates/removes air beneath the building) has been installed at the site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. The potential exists for indoor air impacts to site contaminants via the soil vapor intrusion pathway for offsite buildings."

Site Description:	"Location: The Former Cleaners Products Supply site is a 0.23-acre parcel located at 50-45 Barnett Avenue, Sunnyside in an urban area of Queens. The site is located approximately 0.2 miles west of the intersection of Woodside Avenue and Barnett Avenue. Site Features: The site is occupied by a one-story commercial building and is equipped with a soil vapor extraction system. Current Zoning and Land Use: The site is zoned M1-1 (manufacturing) and currently occupied by a glass company. The buildings to the east of the site along Barnett Avenue consist of commercial and light industrial uses, including a cabinetry and metal shop, an automotive warehouse, and offices. Other surrounding property uses include a parking area to the west, an active railroad to the north, and an apartment complex and residential properties to the south. Approximately 0.3 miles to the

CLEANERS PRODUCTS SUPPLY INC. (Continued) **S102638350**

east of the property is another residential area along Woodside Avenue. Past Use of the Site: Until 2007, the site was used by a dry-cleaning supply business called Cleaners Products Supply, which used aboveground storage tanks to store tetrachloroethene (PCE). This business operated at the site since 1952. The presence of dry-cleaning solvents (primarily PCE) discovered in subsurface soils, soil vapor, and groundwater is believed to be a result of materials handling during this use. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU-1) is associated with the on-site source area. OU-2 is associated with off-site groundwater and soil vapor. Site Geology and Hydrogeology: The direction of groundwater flow is in the north, northwesterly direction but may vary seasonally. According to regional groundwater flow maps and the evaluation of groundwater flow, this location appears to be at a groundwater divide, suggesting that groundwater may flow radially away from the site. Groundwater is present at approximately 24-26 feet below the ground surface."

Env Problem: "Remediation at Operable Unit 01 is complete. Prior to remediation, the primary contaminant of concern was PCE in soil, groundwater, and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. After the SVE system became operational, indoor air concentrations of PCE within the site building have been reduced to 2.6 to 4.8 micrograms per cubic meter (g/m) and are below the NYSDOH Air Guideline of 30 g/m . Prior to implementing the SVE system, indoor air concentrations ranged from 540 to 870 g/m . Residual contamination in the soil, groundwater, and soil vapor is being managed under interim site management and an Operation & Maintenance Manual until a Record of Decision for Operable Unit 02 is issued. A soil vapor intrusion evaluation will be completed, and appropriate actions implemented, in the event the SVE system is shut down in the existing OU-1 building or for any future buildings developed at the site. For OU-1, On-site Areas: Soils and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyl's (PCBs), and metals. Groundwater has also been analyzed for 1,4-dioxane and per- and polyfluoroalkyl substances (PFAS). Soil: Before implementing the IRM for OU-1, PCE was detected in soil at concentrations up to 71 parts per million (ppm) which is below the 6 NYCRR commercial use soil cleanup objective (CUSCO) of 150 ppm, but above the protection of groundwater soil cleanup objective (PGWSCO) of 1.3 ppm. PCE was detected inside the building footprint at depths ranging from 5 to 17 feet below ground surface. No other compounds, (SVOCs, metals, pesticides, or PCBs) were detected above CUSCOs. Groundwater: PCE is present in on-site groundwater at concentrations up to 12 parts per billion (ppb) based on the most recent sampling. Prior to operating the SVE system, PCE was detected in on-site groundwater at concentrations up to 1,500 ppb (NYSDEC Class GA standard is 5 ppb). Off-site soil, groundwater, and soil vapor were analyzed for VOCs. Off-site areas will be addressed under a forthcoming ROD for OU-2. Off-site soil: PCE was detected at and above the PGWSCO at two off-site locations at a concentration of 1.3 ppm from 22 to 24 feet below grade to the west-southwest of the site, and at 14 ppm from 15 to 20 feet below grade immediately west of the

CLEANERS PRODUCTS SUPPLY INC. (Continued) **S102638350**

site in the adjacent parking lot. Off-site groundwater: PCE has been detected at off-site locations at concentrations up to 22,000 ppb. However, the latest groundwater sampling indicated the highest off-site concentration of PCE to be 440 ppb on the corner of Woodside and Barnett Avenue. The off-site groundwater plume is being managed under OU-2. Off-site soil vapor: Soil vapor intrusion evaluations were performed at properties near the site.. The results did not warrant any further action, provided the on-site source was addressed. Continued evaluation of off-site soil vapor will ensure potential exposures to soil vapor intrusion are addressed."

Health Problem:	"People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by site related contamination. People will not come into contact with contaminated soil or groundwater unless they dig below the sites surface/site cover (concrete building foundation). Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A soil vapor extraction system (system that ventilates/removes air beneath the building) has been installed at the site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. The potential exists for indoor air impacts to site contaminants via the soil vapor intrusion pathway for offsite buildings."

compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A soil vapor extraction system (system that ventilates/removes air beneath the building) has been installed at the site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. The potential exists for indoor air impacts to site contaminants via the soil vapor intrusion pathway for offsite buildings."

Site Code: 435055
Site Description: "Location: The Former Cleaners Products Supply site is a 0.23-acre parcel located at 50-45 Barnett Avenue, Sunnyside in an urban area of Queens. The site is located approximately 0.2 miles west of the intersection of Woodside Avenue and Barnett Avenue. Site Features: The site is occupied by a one-story commercial building and is equipped with a soil vapor extraction system. Current Zoning and Land Use: The site is zoned M1-1 (manufacturing) and currently occupied by a glass company. The buildings to the east of the site along Barnett Avenue consist of commercial and light industrial uses, including a cabinetry and metal shop, an automotive warehouse, and offices. Other surrounding property uses include a parking area to the west, an active railroad to the north, and an apartment complex and residential properties to the south. Approximately 0.3 miles to the east of the property is another residential area along Woodside Avenue. Past Use of the Site: Until 2007, the site was used by a dry-cleaning supply business called Cleaners Products Supply, which used aboveground storage tanks to store tetrachloroethene (PCE). This business operated at the site since 1952. The presence of dry-cleaning solvents (primarily PCE) discovered in subsurface soils, soil vapor, and groundwater is believed to be a result of materials handling during this use. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU-1) is associated with the on-site source area. OU-2 is associated with off-site groundwater and soil vapor. Site Geology and Hydrogeology: The direction of groundwater flow is in the north, northwesterly direction but may vary seasonally. According to regional groundwater flow maps and the evaluation of groundwater flow, this location appears to be at a groundwater divide, suggesting that groundwater may flow radially away from the site. Groundwater is present at approximately 24-26 feet below the ground surface."
Env Problem: "Remediation at Operable Unit 01 is complete. Prior to remediation, the primary contaminant of concern was PCE in soil, groundwater, and

CLEANERS PRODUCTS SUPPLY INC. (Continued) **S102638350**

soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. After the SVE system became operational, indoor air concentrations of PCE within the site building have been reduced to 2.6 to 4.8 micrograms per cubic meter (g/m) and are below the NYSDOH Air Guideline of 30 g/m . Prior to implementing the SVE system, indoor air concentrations ranged from 540 to 870 g/m . Residual contamination in the soil, groundwater, and soil vapor is being managed under interim site management and an Operation & Maintenance Manual until a Record of Decision for Operable Unit 02 is issued. A soil vapor intrusion evaluation will be completed, and appropriate actions implemented, in the event the SVE system is shut down in the existing OU-1 building or for any future buildings developed at the site. For OU-1, On-site Areas: Soils and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyl's (PCBs), and metals. Groundwater has also been analyzed for 1,4-dioxane and per- and polyfluoroalkyl substances (PFAS). Soil: Before implementing the IRM for OU-1, PCE was detected in soil at concentrations up to 71 parts per million (ppm) which is below the 6 NYCRR commercial use soil cleanup objective (CUSCO) of 150 ppm, but above the protection of groundwater soil cleanup objective (PGWSCO) of 1.3 ppm. PCE was detected inside the building footprint at depths ranging from 5 to 17 feet below ground surface. No other compounds, (SVOCs, metals, pesticides, or PCBs) were detected above CUSCOs. Groundwater: PCE is present in on-site groundwater at concentrations up to 12 parts per billion (ppb) based on the most recent sampling. Prior to operating the SVE system, PCE was detected in on-site groundwater at concentrations up to 1,500 ppb (NYSDEC Class GA standard is 5 ppb). Off-site soil, groundwater, and soil vapor were analyzed for VOCs. Off-site areas will be addressed under a forthcoming ROD for OU-2. Off-site soil: PCE was detected at and above the PGWSCO at two off-site locations at a concentration of 1.3 ppm from 22 to 24 feet below grade to the west-southwest of the site, and at 14 ppm from 15 to 20 feet below grade immediately west of the site in the adjacent parking lot. Off-site groundwater: PCE has been detected at off-site locations at concentrations up to 22,000 ppb. However, the latest groundwater sampling indicated the highest off-site concentration of PCE to be 440 ppb on the corner of Woodside and Barnett Avenue. The off-site groundwater plume is being managed under OU-2. Off-site soil vapor: Soil vapor intrusion evaluations were performed at properties near the site.. The results did not warrant any further action, provided the on-site source was addressed. Continued evaluation of off-site soil vapor will ensure potential exposures to soil vapor intrusion are addressed."

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by site related contamination. People will not come into contact with contaminated soil or groundwater unless they dig below the sites surface/site cover (concrete building foundation). Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A soil vapor extraction system (system that ventilates/removes air beneath the building) has been installed at the site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. The potential exists for indoor air

Before implementing the IRM for OU-1, PCE was detected in soil at concentrations up to 71 parts per million (ppm) which is below the 6 NYCRR commercial use soil cleanup objective (CUSCO) of 150 ppm, but above the protection of groundwater soil cleanup objective (PGWSCO) of 1.3 ppm. PCE was detected inside the building footprint at depths ranging from 5 to 17 feet below ground surface. No other compounds, (SVOCs, metals, pesticides, or PCBs) were detected above CUSCOs. Groundwater: PCE is present in on-site groundwater at concentrations up to 12 parts per billion (ppb) based on the most recent sampling. Prior to operating the SVE system, PCE was detected in on-site groundwater at concentrations up to 1,500 ppb (NYSDEC Class GA standard is 5 ppb). Off-site soil, groundwater, and soil vapor were analyzed for VOCs. Off-site areas will be addressed under a forthcoming ROD for OU-2. Off-site soil: PCE was detected at and above the PGWSCO at two off-site locations at a concentration of 1.3 ppm from 22 to 24 feet below grade to the west-southwest of the site, and at 14 ppm from 15 to 20 feet below grade immediately west of the site in the adjacent parking lot. Off-site groundwater: PCE has been detected at off-site locations at concentrations up to 22,000 ppb. However, the latest groundwater sampling indicated the highest off-site concentration of PCE to be 440 ppb on the corner of Woodside and Barnett Avenue. The off-site groundwater plume is being managed under OU-2. Off-site soil vapor: Soil vapor intrusion evaluations were performed at properties near the site.. The results did not warrant any further action, provided the on-site source was addressed. Continued evaluation of off-site soil vapor will ensure potential exposures to soil vapor intrusion are addressed."

Health Problem: "People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by site related contamination. People will not come into contact with contaminated soil or groundwater unless they dig below the sites surface/site cover (concrete building foundation). Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A soil vapor extraction system (system that ventilates/removes air beneath the building) has been installed at the site to prevent the indoor air quality from being affected by the contamination in soil vapor beneath the buildings. The potential exists for indoor air impacts to site contaminants via the soil vapor intrusion pathway for offsite buildings."

Site Description: "Location: The Former Cleaners Products Supply site is a 0.23-acre parcel located at 50-45 Barnett Avenue, Sunnyside in an urban area of Queens. The site is located approximately 0.2 miles west of the intersection of Woodside Avenue and Barnett Avenue. Site Features:

CLEANERS PRODUCTS SUPPLY INC. (Continued) **S102638350**

The site is occupied by a one-story commercial building and is equipped with a soil vapor extraction system. Current Zoning and Land Use: The site is zoned M1-1 (manufacturing) and currently occupied by a glass company. The buildings to the east of the site along Barnett Avenue consist of commercial and light industrial uses, including a cabinetry and metal shop, an automotive warehouse, and offices. Other surrounding property uses include a parking area to the west, an active railroad to the north, and an apartment complex and residential properties to the south. Approximately 0.3 miles to the east of the property is another residential area along Woodside Avenue. Past Use of the Site: Until 2007, the site was used by a dry-cleaning supply business called Cleaners Products Supply, which used aboveground storage tanks to store tetrachloroethene (PCE). This business operated at the site since 1952. The presence of dry-cleaning solvents (primarily PCE) discovered in subsurface soils, soil vapor, and groundwater is believed to be a result of materials handling during this use. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable Unit 1 (OU-1) is associated with the on-site source area. OU-2 is associated with off-site groundwater and soil vapor. Site Geology and Hydrogeology: The direction of groundwater flow is in the north, northwesterly direction but may vary seasonally. According to regional groundwater flow maps and the evaluation of groundwater flow, this location appears to be at a groundwater divide, suggesting that groundwater may flow radially away from the site. Groundwater is present at approximately 24-26 feet below the ground surface."

Env Problem: "Remediation at Operable Unit 01 is complete. Prior to remediation, the primary contaminant of concern was PCE in soil, groundwater, and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. After the SVE system became operational, indoor air concentrations of PCE within the site building have been reduced to 2.6 to 4.8 micrograms per cubic meter (g/m) and are below the NYSDOH Air Guideline of 30 g/m . Prior to implementing the SVE system, indoor air concentrations ranged from 540 to 870 g/m . Residual contamination in the soil, groundwater, and soil vapor is being managed under interim site management and an Operation & Maintenance Manual until a Record of Decision for Operable Unit 02 is issued. A soil vapor intrusion evaluation will be completed, and appropriate actions implemented, in the event the SVE system is shut down in the existing OU-1 building or for any future buildings developed at the site. For OU-1, On-site Areas: Soils and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyl's (PCBs), and metals. Groundwater has also been analyzed for 1,4-dioxane and per- and polyfluoroalkyl substances (PFAS). Soil: Before implementing the IRM for OU-1, PCE was detected in soil at concentrations up to 71 parts per million (ppm) which is below the 6 NYCRR commercial use soil cleanup objective (CUSCO) of 150 ppm, but above the protection of groundwater soil cleanup objective (PGWSCO) of 1.3 ppm. PCE was detected inside the building footprint at depths ranging from 5 to 17 feet below ground surface. No other compounds, (SVOCs, metals, pesticides, or PCBs) were detected above CUSCOs. Groundwater: PCE is present in on-site groundwater at concentrations

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

SHWS:
Name: BRIDGE CLEANERS
Address: 39-26 30TH STREET
City,State,Zip: LONG ISLAND CITY, NY 11101
Program: HW
Site Code: 440982
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 0.173
HW Code: 241127
Record Add: 10/15/2010
Record Upd: 04/19/2023
Updated By: DKMACNEA
Site Description: "Location: The 0.173-acre Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features : A 7500 square foot (sf) one-story slab-on-grade building occupies the entire lot. It is used for storage and is infrequently occupied. Adjacent buildings to the north and west appear to contain residential units. To the south and east across 30th Street are recently constructed multi-story residential structures. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. The site was a small quantity generator of solvent wastes under the Resource Conservation and Recovery Action (RCRA) hazardous waste program from 1997-2010. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 7500 sf lot completely covered by a one-story cement block building. OU2 is the off-site area. The off-site investigation area includes the sidewalks from 39th Avenue to 40th Road, between 29th Street and 30th Street. Site Hydrology/Geology: The depth to groundwater beneath and in the vicinity of the site is about 18-22 feet below grade (ftbg). Soils in the area are primarily fine to medium sand with some traces of silt. One boring location indicated a clay layer at 6 to 9 ftbg. In the larger OU2 investigation area, groundwater ranged from 11 to 30 ftbg, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. In one location, in the southeast corner of the investigation area, a clay layer was noted from 32 to 38 feet below grade. Groundwater flow is generally to the south/southwest. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. "
Env Problem: "OU1: On-Site Remediation at OU1 has resulted in the site being protective of public health and the environment. Prior to remediation, the primary contaminant of concern was PCE in soil, soil vapor and groundwater. TCE was present in soil vapor only. Residual contamination is being addressed through active treatment. Residual

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

contamination in the soil, groundwater and soil vapor is being managed under an Interim Site Management Plan. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below. During the RI, prior to the IRM, soil and groundwater were analyzed for VOCs, semi-volatile organic compounds (SVOC), Metals, and PCBs/Pesticides. Soil Vapor was analyzed for VOCs. The maximum concentration of PCE in soil at the site was 9.6 parts per million (ppm), compared to the protection of groundwater soil cleanup objective of 1.3 ppm. Five groundwater wells on site contained a maximum concentration of 340 parts per billion (ppb) PCE and 6.9 ppb TCE in groundwater, compared to the AWQS of 5 ppb for both PCE and TCE. Sub-slab soil vapor ranged up to 668,000 micrograms per cubic meter (ug/m3) PCE, 2140 ug/m3 TCE. PCE in indoor air was detected at 270 micrograms per cubic meter (g/m3) above the NYSDOH air guideline for PCE of 30 g/m3. Post IRM groundwater analysis for VOCs indicates VOC concentrations have significantly been reduced and continue to decline. Of the five on-site wells, three remain above the 5 ppb AWQS for PCE. The most recent concentrations are 12 ppb, 29 ppb and 62 ppb in 2021. TCE levels are below 5 ppb. The data is shown on Figure 4. In November 2018, after construction of the AS/SVE system IRM, soil vapor monitoring was conducted. The concentrations in soil vapor ranged from 69.8 - 1,890 ug/m3 for PCE and 3.1 - 72 ug/m3 for TCE. Preliminary results from sub-slab soil vapor sampling in January 2022 indicate PCE in the range of 23-685 ug/m3 and TCE 3.1 to 8.8 ug/m3. Corresponding indoor air values are 0.26-0.54 ug/m3 PCE and non-detectable for TCE. OU2: Off-Site Remediation at OU2 is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil vapor and groundwater, which were suspected of migrating off-site. Soil was not sampled during the off-site work. The off-site investigation occurred during 2016. Activities at an adjacent, downgradient Brownfield Cleanup Site (C241163 Former Union Wire) also contributed to reductions in off-site contamination. In late 2016, the Former Union Wire site designed and installed an SVE system. The SVE system was installed to address indoor air issues by removing any source material in soil below the existing building, and it remained in use until September 2019. After September 2019, the building was demolished and excavation took place in accordance with a NYSDEC-approved excavation workplan. Soil endpoints samples taken to ensure any potential source of VOCs was removed from the adjacent site. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below During the OU2 RI, prior to the IRM, groundwater and soil vapor were analyzed for VOCs. Groundwater was also analyzed for emerging contaminants, as a screening tool. Of the fifteen wells sample, the maximum concentration was PCE at 369 ppb, and TCE at 272 ppb, in one well (MW-3). The AWQS for both PCE and TCE is 5 ppb. Groundwater samples at MW-3 in late 2019 identified PCE at 7 ppb and TCE at 2 ppb. For emerging contaminants, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 53 and 7 parts per trillion (ppt), respectively. PFOA exceeded the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater, while PFOS did not. 1,4 dioxane was detected in one sample at 0.2 ug/l which is below the guidance value of 0.35 ug/l. Also, during the OU2 RI, prior to the IRM, soil vapor, indoor air and sub-slab soil vapor were analyzed for VOCs. Eleven soil vapor points were sampled in 2016. The highest soil vapor result was 4400 ug/m3 TCE and 2400 ug/m3 PCE. Soil vapor data were used to define the

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

area where property owners were offered sub-slab and indoor air sampling, which occurred in January 2017. Sub-slab and indoor air samples were completed in four (4) off-site structures, and one owner allowed access for indoor air sampling only. In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling, no action was necessary at that structure. "

Health Problem: "People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development or occupancy Actions have been taken to address exposures related to soil vapor intrusion where necessary and where access has been granted offsite. Additional investigation/evaluation is needed in the event that access is granted at other offsite structures."

Site Description:	"Location: The 0.173-acre Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features : A 7500 square foot (sf) one-story slab-on-grade building occupies the entire lot. It is used for storage and is infrequently occupied. Adjacent buildings to the north and west appear to contain residential units. To the south and east across 30th Street are recently constructed multi-story residential structures. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. The site was a small quantity generator of solvent wastes under the Resource Conservation and Recovery Action (RCRA) hazardous waste program from 1997-2010. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 7500 sf lot completely covered by a one-story cement block building. OU2 is the off-site area. The off-site

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

investigation area includes the sidewalks from 39th Avenue to 40th Road, between 29th Street and 30th Street. Site Hydrology/Geology: The depth to groundwater beneath and in the vicinity of the site is about 18-22 feet below grade (ftbg). Soils in the area are primarily fine to medium sand with some traces of silt. One boring location indicated a clay layer at 6 to 9 ftbg. In the larger OU2 investigation area, groundwater ranged from 11 to 30 ftbg, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. In one location, in the southeast corner of the investigation area, a clay layer was noted from 32 to 38 feet below grade. Groundwater flow is generally to the south/southwest. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. "

Env Problem: "OU1: On-Site Remediation at OU1 has resulted in the site being protective of public health and the environment. Prior to remediation, the primary contaminant of concern was PCE in soil, soil vapor and groundwater. TCE was present in soil vapor only. Residual contamination is being addressed through active treatment. Residual contamination in the soil, groundwater and soil vapor is being managed under an Interim Site Management Plan. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below. During the RI, prior to the IRM, soil and groundwater were analyzed for VOCs, semi-volatile organic compounds (SVOC), Metals, and PCBs/Pesticides. Soil Vapor was analyzed for VOCs. The maximum concentration of PCE in soil at the site was 9.6 parts per million (ppm), compared to the protection of groundwater soil cleanup objective of 1.3 ppm. Five groundwater wells on site contained a maximum concentration of 340 parts per billion (ppb) PCE and 6.9 ppb TCE in groundwater, compared to the AWQS of 5 ppb for both PCE and TCE. Sub-slab soil vapor ranged up to 668,000 micrograms per cubic meter (ug/m3) PCE, 2140 ug/m3 TCE. PCE in indoor air was detected at 270 micrograms per cubic meter (g/m3) above the NYSDOH air guideline for PCE of 30 g/m3. Post IRM groundwater analysis for VOCs indicates VOC concentrations have significantly been reduced and continue to decline. Of the five on-site wells, three remain above the 5 ppb AWQS for PCE. The most recent concentrations are 12 ppb, 29 ppb and 62 ppb in 2021. TCE levels are below 5 ppb. The data is shown on Figure 4. In November 2018, after construction of the AS/SVE system IRM, soil vapor monitoring was conducted. The concentrations in soil vapor ranged from 69.8 - 1,890 ug/m3 for PCE and 3.1 - 72 ug/m3 for TCE. Preliminary results from sub-slab soil vapor sampling in January 2022 indicate PCE in the range of 23-685 ug/m3 and TCE 3.1 to 8.8 ug/m3. Corresponding indoor air values are 0.26-0.54 ug/m3 PCE and non-detectable for TCE. OU2: Off-Site Remediation at OU2 is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil vapor and groundwater, which were suspected of migrating off-site. Soil was not sampled during the off-site work. The off-site investigation occurred during 2016. Activities at an adjacent, downgradient Brownfield Cleanup Site (C241163 Former Union Wire) also contributed to reductions in off-site contamination. In late 2016, the Former Union Wire site designed and installed an SVE system. The SVE system was installed to address indoor air issues by removing any source material in soil below the existing building, and it remained in use until September 2019. After September 2019, the building was demolished and excavation took place in accordance with a NYSDEC-approved excavation workplan. Soil endpoints samples taken to ensure any potential source of VOCs was removed from the adjacent

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

site. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below During the OU2 RI, prior to the IRM, groundwater and soil vapor were analyzed for VOCs. Groundwater was also analyzed for emerging contaminants, as a screening tool. Of the fifteen wells sample, the maximum concentration was PCE at 369 ppb, and TCE at 272 ppb, in one well (MW-3). The AWQS for both PCE and TCE is 5 ppb. Groundwater samples at MW-3 in late 2019 identified PCE at 7 ppb and TCE at 2 ppb. For emerging contaminants, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 53 and 7 parts per trillion (ppt), respectively. PFOA exceeded the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater, while PFOS did not. 1,4 dioxane was detected in one sample at 0.2 ug/l which is below the guidance value of 0.35 ug/l. Also, during the OU2 RI, prior to the IRM, soil vapor, indoor air and sub-slab soil vapor were analyzed for VOCs. Eleven soil vapor points were sampled in 2016. The highest soil vapor result was 4400 ug/m3 TCE and 2400 ug/m3 PCE. Soil vapor data were used to define the area where property owners were offered sub-slab and indoor air sampling, which occurred in January 2017. Sub-slab and indoor air samples were completed in four (4) off-site structures, and one owner allowed access for indoor air sampling only. In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling, no action was necessary at that structure. "

Health Problem: "People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development or occupancy Actions have been taken to address exposures related to soil vapor intrusion where necessary and where access has been granted offsite. Additional investigation/evaluation is needed in the event that access is granted at other offsite structures."

Sub-slab soil vapor ranged up to 668,000 micrograms per cubic meter (ug/m3) PCE, 2140 ug/m3 TCE. PCE in indoor air was detected at 270 micrograms per cubic meter (g/m3) above the NYSDOH air guideline for PCE of 30 g/m3. Post IRM groundwater analysis for VOCs indicates VOC concentrations have significantly been reduced and continue to decline. Of the five on-site wells, three remain above

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

the 5 ppb AWQS for PCE. The most recent concentrations are 12 ppb, 29 ppb and 62 ppb in 2021. TCE levels are below 5 ppb. The data is shown on Figure 4. In November 2018, after construction of the AS/SVE system IRM, soil vapor monitoring was conducted. The concentrations in soil vapor ranged from 69.8 - 1,890 ug/m3 for PCE and 3.1 - 72 ug/m3 for TCE. Preliminary results from sub-slab soil vapor sampling in January 2022 indicate PCE in the range of 23-685 ug/m3 and TCE 3.1 to 8.8 ug/m3. Corresponding indoor air values are 0.26-0.54 ug/m3 PCE and non-detectable for TCE. OU2: Off-Site Remediation at OU2 is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil vapor and groundwater, which were suspected of migrating off-site. Soil was not sampled during the off-site work. The off-site investigation occurred during 2016. Activities at an adjacent, downgradient Brownfield Cleanup Site (C241163 Former Union Wire) also contributed to reductions in off-site contamination. In late 2016, the Former Union Wire site designed and installed an SVE system. The SVE system was installed to address indoor air issues by removing any source material in soil below the existing building, and it remained in use until September 2019. After September 2019, the building was demolished and excavation took place in accordance with a NYSDEC-approved excavation workplan. Soil endpoints samples taken to ensure any potential source of VOCs was removed from the adjacent site. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below During the OU2 RI, prior to the IRM, groundwater and soil vapor were analyzed for VOCs. Groundwater was also analyzed for emerging contaminants, as a screening tool. Of the fifteen wells sample, the maximum concentration was PCE at 369 ppb, and TCE at 272 ppb, in one well (MW-3). The AWQS for both PCE and TCE is 5 ppb. Groundwater samples at MW-3 in late 2019 identified PCE at 7 ppb and TCE at 2 ppb. For emerging contaminants, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 53 and 7 parts per trillion (ppt), respectively. PFOA exceeded the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater, while PFOS did not. 1,4 dioxane was detected in one sample at 0.2 ug/l which is below the guidance value of 0.35 ug/l. Also, during the OU2 RI, prior to the IRM, soil vapor, indoor air and sub-slab soil vapor were analyzed for VOCs. Eleven soil vapor points were sampled in 2016. The highest soil vapor result was 4400 ug/m3 TCE and 2400 ug/m3 PCE. Soil vapor data were used to define the area where property owners were offered sub-slab and indoor air sampling, which occurred in January 2017. Sub-slab and indoor air samples were completed in four (4) off-site structures, and one owner allowed access for indoor air sampling only. In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling, no action was necessary at that structure. "

Health Problem: "People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development or occupancy Actions have been taken to address exposures related to soil vapor intrusion where necessary and where access has been granted offsite. Additional investigation/evaluation is needed in the event that access is granted at other offsite structures."

Site Code: 440982
Site Description: "Location: The 0.173-acre Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features : A 7500 square foot (sf) one-story slab-on-grade building occupies the entire lot. It is used for storage and is infrequently occupied. Adjacent buildings to the north and west appear to contain residential units. To the south and east across 30th Street are recently constructed multi-story residential structures. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. The site was a small quantity generator of solvent wastes under the Resource Conservation and Recovery Action (RCRA) hazardous waste program from 1997-2010. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate,

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 7500 sf lot completely covered by a one-story cement block building. OU2 is the off-site area. The off-site investigation area includes the sidewalks from 39th Avenue to 40th Road, between 29th Street and 30th Street. Site Hydrology/Geology: The depth to groundwater beneath and in the vicinity of the site is about 18-22 feet below grade (ftbg). Soils in the area are primarily fine to medium sand with some traces of silt. One boring location indicated a clay layer at 6 to 9 ftbg. In the larger OU2 investigation area, groundwater ranged from 11 to 30 ftbg, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. In one location, in the southeast corner of the investigation area, a clay layer was noted from 32 to 38 feet below grade. Groundwater flow is generally to the south/southwest. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. "

Env Problem: "OU1: On-Site Remediation at OU1 has resulted in the site being protective of public health and the environment. Prior to remediation, the primary contaminant of concern was PCE in soil, soil vapor and groundwater. TCE was present in soil vapor only. Residual contamination is being addressed through active treatment. Residual contamination in the soil, groundwater and soil vapor is being managed under an Interim Site Management Plan. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below. During the RI, prior to the IRM, soil and groundwater were analyzed for VOCs, semi-volatile organic compounds (SVOC), Metals, and PCBs/Pesticides. Soil Vapor was analyzed for VOCs. The maximum concentration of PCE in soil at the site was 9.6 parts per million (ppm), compared to the protection of groundwater soil cleanup objective of 1.3 ppm. Five groundwater wells on site contained a maximum concentration of 340 parts per billion (ppb) PCE and 6.9 ppb TCE in groundwater, compared to the AWQS of 5 ppb for both PCE and TCE. Sub-slab soil vapor ranged up to 668,000 micrograms per cubic meter (ug/m3) PCE, 2140 ug/m3 TCE. PCE in indoor air was detected at 270 micrograms per cubic meter (g/m3) above the NYSDOH air guideline for PCE of 30 g/m3. Post IRM groundwater analysis for VOCs indicates VOC concentrations have significantly been reduced and continue to decline. Of the five on-site wells, three remain above the 5 ppb AWQS for PCE. The most recent concentrations are 12 ppb, 29 ppb and 62 ppb in 2021. TCE levels are below 5 ppb. The data is shown on Figure 4. In November 2018, after construction of the AS/SVE system IRM, soil vapor monitoring was conducted. The concentrations in soil vapor ranged from 69.8 - 1,890 ug/m3 for PCE and 3.1 - 72 ug/m3 for TCE. Preliminary results from sub-slab soil vapor sampling in January 2022 indicate PCE in the range of 23-685 ug/m3 and TCE 3.1 to 8.8 ug/m3. Corresponding indoor air values are 0.26-0.54 ug/m3 PCE and non-detectable for TCE. OU2: Off-Site Remediation at OU2 is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil vapor and groundwater, which were suspected of migrating off-site. Soil was not sampled during the off-site work. The off-site investigation occurred during 2016. Activities at an adjacent, downgradient Brownfield Cleanup Site (C241163 Former Union Wire) also contributed to reductions in off-site contamination. In late 2016, the Former Union Wire site designed and installed an SVE system. The SVE system was installed to address indoor air issues by removing any source material in soil below the existing building, and

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

Site Description: "Location: The 0.173-acre Bridge Cleaners site is located at 39-26 30th Street in Long Island City, an urban area. Site Features : A 7500 square foot (sf) one-story slab-on-grade building occupies the entire lot. It is used for storage and is infrequently occupied. Adjacent buildings to the north and west appear to contain residential units. To the south and east across 30th Street are recently constructed multi-story residential structures. Current Zoning and Land Use: The site is zoned M1-3/R7X (Manufacturing and Residential) under the special Long Island City Mixed Use District. The surrounding area is a mix of residential and commercial uses. The site is currently being used for fabric storage and fabric cutting. Past use of the Site: The site was occupied by a commercial laundry and dry cleaner until 2011. Records indicate at least 10 years of use as a commercial dry-cleaner. The site was a small quantity generator of solvent wastes under the Resource Conservation and Recovery Action (RCRA) hazardous waste program from 1997-2010. Prior to that, the building was used as a distribution point for electrical components, bottled water and as a courier service. Operable Units: The site was divided into two operable units (OUs). An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 is the on-site area, consisting of a 7500 sf lot completely covered by a one-story cement block building. OU2 is the off-site area. The off-site investigation area includes the sidewalks from 39th Avenue to 40th Road, between 29th Street and 30th Street. Site Hydrology/Geology: The depth to groundwater beneath and in the vicinity of the site is about 18-22 feet below grade (ftbg). Soils in the area are primarily fine to medium sand with some traces of silt. One boring location indicated a clay layer at 6 to 9 ftbg. In the larger OU2 investigation area, groundwater ranged from 11 to 30 ftbg, with deeper groundwater closer to 29th Street, and shallower groundwater southeast of 30th Street. In one location, in the southeast corner of the investigation area, a clay layer was noted from 32 to 38 feet below grade. Groundwater flow is generally to the south/southwest. Operable Unit (OU) Numbers 01 and 02 are the subject of this document. "

Env Problem: "OU1: On-Site Remediation at OU1 has resulted in the site being protective of public health and the environment. Prior to remediation, the primary contaminant of concern was PCE in soil, soil vapor and groundwater. TCE was present in soil vapor only. Residual contamination is being addressed through active treatment. Residual contamination in the soil, groundwater and soil vapor is being managed under an Interim Site Management Plan. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below. During the RI, prior to the IRM, soil and groundwater were analyzed for VOCs, semi-volatile organic compounds (SVOC), Metals, and PCBs/Pesticides. Soil Vapor was analyzed for VOCs. The maximum concentration of PCE in soil at the site was 9.6 parts per million (ppm), compared to the protection of groundwater soil cleanup objective of 1.3 ppm. Five groundwater wells on site contained a maximum concentration of 340 parts per billion (ppb) PCE and 6.9 ppb TCE in groundwater, compared to the AWQS of 5 ppb for both PCE and TCE. Sub-slab soil vapor ranged up to 668,000 micrograms per cubic meter (ug/m3) PCE, 2140 ug/m3 TCE. PCE in indoor air was detected at 270 micrograms per cubic meter (g/m3) above the NYSDOH

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

air guideline for PCE of 30 g/m3. Post IRM groundwater analysis for VOCs indicates VOC concentrations have significantly been reduced and continue to decline. Of the five on-site wells, three remain above the 5 ppb AWQS for PCE. The most recent concentrations are 12 ppb, 29 ppb and 62 ppb in 2021. TCE levels are below 5 ppb. The data is shown on Figure 4. In November 2018, after construction of the AS/SVE system IRM, soil vapor monitoring was conducted. The concentrations in soil vapor ranged from 69.8 - 1,890 ug/m3 for PCE and 3.1 - 72 ug/m3 for TCE. Preliminary results from sub-slab soil vapor sampling in January 2022 indicate PCE in the range of 23-685 ug/m3 and TCE 3.1 to 8.8 ug/m3. Corresponding indoor air values are 0.26-0.54 ug/m3 PCE and non-detectable for TCE. OU2: Off-Site Remediation at OU2 is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil vapor and groundwater, which were suspected of migrating off-site. Soil was not sampled during the off-site work. The off-site investigation occurred during 2016. Activities at an adjacent, downgradient Brownfield Cleanup Site (C241163 Former Union Wire) also contributed to reductions in off-site contamination. In late 2016, the Former Union Wire site designed and installed an SVE system. The SVE system was installed to address indoor air issues by removing any source material in soil below the existing building, and it remained in use until September 2019. After September 2019, the building was demolished and excavation took place in accordance with a NYSDEC-approved excavation workplan. Soil endpoints samples taken to ensure any potential source of VOCs was removed from the adjacent site. The investigation results, prior to implementation of the IRM described in Section 6.2, are discussed below During the OU2 RI, prior to the IRM, groundwater and soil vapor were analyzed for VOCs. Groundwater was also analyzed for emerging contaminants, as a screening tool. Of the fifteen wells sample, the maximum concentration was PCE at 369 ppb, and TCE at 272 ppb, in one well (MW-3). The AWQS for both PCE and TCE is 5 ppb. Groundwater samples at MW-3 in late 2019 identified PCE at 7 ppb and TCE at 2 ppb. For emerging contaminants, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 53 and 7 parts per trillion (ppt), respectively. PFOA exceeded the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater, while PFOS did not. 1,4 dioxane was detected in one sample at 0.2 ug/l which is below the guidance value of 0.35 ug/l. Also, during the OU2 RI, prior to the IRM, soil vapor, indoor air and sub-slab soil vapor were analyzed for VOCs. Eleven soil vapor points were sampled in 2016. The highest soil vapor result was 4400 ug/m3 TCE and 2400 ug/m3 PCE. Soil vapor data were used to define the area where property owners were offered sub-slab and indoor air sampling, which occurred in January 2017. Sub-slab and indoor air samples were completed in four (4) off-site structures, and one owner allowed access for indoor air sampling only. In the sub-slab vapor, the TCE concentrations ranged from non-detect (ND) to 440 ug/m3, while PCE ranged from 64 ug/m3 to 9500 ug/m3. In indoor air, TCE was detected at a maximum concentration of 1.4 ug/m3 and PCE was detected a maximum of 7.2 ug/m3. Both of these are below the corresponding NYSDOH Air Guidance Value (AGV) of 2 ug/m3 (TCE) and 30 ug/m3 (PCE). One structure indicated the need for vapor intrusion mitigation, and a sub-slab depressurization system (SSDS) was installed as an IRM. The SSDS is inspected and maintained by NYSDEC. Subsequent to the IRM, an additional structure requested sampling in 2018. Samples were performed in July and December. Based on the result of the sampling,

FRESH CLEANERS & LAUNDRY INC (Continued) **1001125032**

no action was necessary at that structure. "
Health Problem: "People are not expected to come into contact with contaminated soil since the site is covered with buildings and pavement. People are not drinking site-related contaminants in the groundwater since the area is served by a public water supply not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for any future on-site development or occupancy Actions have been taken to address exposures related to soil vapor intrusion where necessary and where access has been granted offsite. Additional investigation/evaluation is needed in the event that access is granted at other offsite structures."

Acres: 0.480
HW Code: 241102
Record Add: 12/13/2006
Record Upd: 03/19/2024
Updated By: WBBENNET
Site Description: "Location: The Site is located in a mixed residential/commercial/light industrial area of Long Island City (Borough of Queens), NY. The location of the Site is the west corner of the intersection of 24th Street and 37th Avenue. Site Features: The site consists of four lots. Current owner owns three lots and the other lot foreclosed by NYC as tax lien property. Recently the other lot (lot 26) was bought by a different owner who demolished the single-story old building that was existed on this lot. The main current site features include a newly built eleven story building on one lot which is being developed, and in other two lots began excavation under an IRM. Excavation initiated in absence of consultant's oversight. During excavation an water main break happened in Dec of 2018, since then no work has been going on until early May of 2022 when newly hired consultant initiated Site Characterization sampling. The whole site is currently secured with a fence and a lockable gate. Current Zoning and Land Use: The site s property is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial and utility rights-of-way. The nearest residential area is located north (up gradient) of the site, on the other side of 37th Avenue. There is also a residential area approximately 500 feet south (downgradient) of the Site, on the south side of 38th Avenue. Past Use of the Site: From the 1930 s to the late 1980 s, the Site was used as a commercial laundry. The Site was utilized as a commercial dry cleaner from the late 1980 s to the mid 1990 s. It appears that site contamination resulted from poor housekeeping and spills associated with the dry-cleaning operation. Site Geology and Hydrogeology: Subsurface material consists of sand and some silt and urban fill. The depth to the groundwater varies from approximately 13 to 15 feet below the ground surface. On-site groundwater flow direction is relatively flat; the general flow direction appears to be towards the south-southeast. "
Env Problem: "Nature and Extent of Contamination: The primary contaminants of concern at the site are tetrachloroethene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride (VC). Soil - During the remedial investigation, PCE, TCE and cis-1,2-DCE were found in on-site soils at concentrations up to 83 parts per million (ppm), 0.22 ppm and 0.17 ppm respectively. The concentration of PCE on-site significantly exceeded the Soil Cleanup Objective (SCO) for unrestricted use as well as for protection of groundwater (1.3 ppm). Groundwater - PCE, TCE, cis-1,2-DCE, trans-1,2-DCE and VC were detected in on-site shallow groundwater at concentrations up to 4,000 parts per billion (ppb), 1200 ppb, 12000 ppb, 130 ppb and 240 ppb respectively. Groundwater standards have been exceeded for PCE, TCE, cis-1,2-dichloroethene, trans-1,2-Dichloroethene, vinyl chloride and chloroform. As per April and June 2012 and March 2014 groundwater data, the PCE plume in groundwater has migrated approximately 400 feet down gradient from the site (off-site) towards southeast. Soil Vapor - PCE and TCE were detected in on-site soil vapor at levels up to 2,800,000 microgram per cubic meter (g/m3) and 130,000 g/m3 respectively and off-site at levels up to 13,000 g/m3 and 420 g/m3,

JUNG SUN LAUNDRY SITE (Continued) **S110246984**

	respectively. Soil Vapor Intrusion (SVI) evaluation As part of SVI evaluation, vapor samples were collected from under the basement slab and basement indoor air from 5 surrounding structures. Two structures need mitigation and one structure needs monitoring or mitigation. To mitigate one of the structures located adjacent to the site an SSDS system has installed which currently in operation. "
Health Problem:	"Contact with contaminated soil is not expected since it is located at depth and covered by buildings, asphalt and concrete. Ingestion of contaminated groundwater is not likely since the area is served with public water. Site-related contaminants are present in soil vapor. Therefore, there is a potential for soil vapor intrusion to occur in on-site and off-site structures. Investigation of this potential pathway is recommended. "

Site Description:	"This site has entered the NYS BCP program as C241241. Location: The 27-09 40th Avenue Site is located in Long Island City, and consists of three separate, contiguous parcels with addresses of 27-03 40th Avenue, 27-09 and 27-11 40th Avenue, and 39-44 28th Street. Site Features: The site is currently occupied by three, vacant 1-story commercial buildings (one building on each parcel). The building at 39-44 28th Street has a partial basement in the northeastern portion of the property; the other buildings are slab-on-grade. There is an alley on the northwest side of Lot 35, between the buildings at 27-03 40th Avenue and 27-09/27-11 40th Avenue. Current Zoning and Land Use: The current zoning designation for the site is M1-2/R5D, allowing for mixed residential, community facility, commercial, and light industrial uses. The site is bounded by 40th Avenue to the southwest; a 3-story public facility associated with a house of worship/28th Street to the east; residential buildings to the north and west. Past

27-09 40TH AVENUE (Continued) **S125896294**

Use of the Site: According to a Phase I Environmental Site Assessment (ESA) report dated January 28, 2019, the site was developed with the current structures by 1970 (27-03 40th Avenue), 1950 (27- 09/27-11 40th Avenue), and 1947 (39-44 28th Street). According to the Phase I ESA, the site appeared to have been used for industrial and commercial purposes since its development. Historic uses at the site that suggest the possibility for potential environmental impacts include an auto body shop (1977-~2006) at 27-03 40th Avenue; a dry cleaning facility (~2005-2019), auto sales (1991-2005), a woodworking shop (2005-~2017), and a scientific glass factory (1950-1991) at 27-09/27-11 40th Avenue; and a photoengraving shop (1947-2006), a machine shop (2014-2019), and an auto repair facility (2000-2005) at 29-44 28th Street. Historic fire insurance maps show that the site maintained residential buildings prior to 1936. The initial investigation with regulatory involvement was the 2019 site investigation for the New York City Office of Environmental Remediation, to address the requirements associated with the E-Designation for hazardous materials assigned to the eastern two parcels (27-09/27-11 40th Avenue and 29-44 28th Street). Site Geology and Hydrogeology: The report documenting a recent geotechnical investigation described the subsurface geology as 1.5 to four (4) feet of fill underlain by sand with varying amounts of silt and gravel to approximately 60 feet bgs. Clay layers were identified between 35 and 60 feet bgs, and bedrock was reportedly encountered in one boring at a depth of 50 feet bgs. The regional groundwater flow direction is toward the west, and the depth to groundwater measured in the temporary wells installed as part of a 2019 site investigation was approximately 35 feet bgs. "

Env Problem: "Site has entered the BCP Program as Site C241241. Nature and Extent of Contamination: Various investigations have occurred at the site since 2008. The investigation results are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Groundwater was also analyzed for the emerging contaminants per- and poly-fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs. Soil- Soil sampling occurred in shallow soils (1-3 feet) and deep soil (25-27'). The primary contaminants found in soil at this site are metals and chlorinated VOCs. Lead in soil ranges up to 767 ppm, compared to the residential soil cleanup objectives(RRSCO) of 400 ppm. Perchloroethylene (PCE) commonly used in drycleaning was detected in soil at up to 11 ppm. The RRSCO for PCE is 19 ppm, however, since PCE is also found in groundwater, the proection of groundwater soil cleanup of objective (PGSCO)of 1.1 ppm is used for comparison. Data does not indicate any off-site soil impacts related to this site. Groundwater- Samples were obtained from one on-site well. It contained PCE at 64 ppb, compared to a standard of 5 ppb, and chloroform at 670 ppb compared to 7 ppb. Groundwater is located at approximately 35 feet below ground surface. Groundwater on site is expected to flow west/southwest toward the East River. For PFAs, perflurooctanoic acid (PFOA) was reported at concentration of 3.28 parts per trillion (ppt) and perfluorooctane sulfonic acid (PFOS) was not detected. Both were below the 10 ppt screening levels for groundwater. No other individual PFAs exceed the 100 ppt screening level. The total concentration of PFAs, including PFOA and PFOS, was reported at 36.39 ppt, below the 500 ppt screening level for total PFAs in groundwater. 1,4 dioxane was reported at concentrations of up

27-09 40TH AVENUE (Continued) **S125896294**

to 3.12 parts per billion (ppb) exceeding the screening level of 1 ppb in groundwater. Soil Vapor - Soil vapor samples were collected at 25' below grade at 7 locations across the site. Soil vapor contained PCE and trichloroethylene (TCE). The maximum amount of PCE measured was 1,600,000 micrograms per cubic meter (g/m3); the maximum TCE concentration was 4800 ug/m3. These values require further investigation. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description: "Location: The 27-09 40th Avenue Site is located in Long Island City, and consists of three separate, contiguous parcels with addresses of 27-03 40th Avenue, 27-09 and 27-11 40th Avenue, and 39-44 28th

27-09 40TH AVENUE (Continued) **S125896294**

Street. The three lots total 0.4 acres. Site Features:The site is currently vacant. The three 1-story commercial buildings at the site were demolished in March 2020. The building at 39-44 28th Street had a partial basement in the northeastern portion of the property; the other buildings were slab-on-grade. Current Zoning and Land Use: The current zoning designation for the site is M1-2/R5D, allowing for mixed residential, community facility, commercial, and light industrial uses. The site is bounded by 40th Avenue to the south; 28th Street to the east; and residential buildings to the north and west. Past Use of the Site: Prior to 1936, residential buildings were at the site. Two of the site parcels were developed in 1947 (29-44 28th Street) and 1950 (27-09/27-11 40th Avenue). The western parcel (27-03 40th Avenue) was developed by 1970. Historic uses include an auto body shop (1977-2006) at 27-03 40th Avenue; a dry cleaning facility (2005-2019), auto sales (1991-2005), a woodworking shop (2005-2017), and a scientific glass factory (1950-1991) at 27-09/27-11 40th Avenue; and a photoengraving shop (1947-2006), auto repair facility (2000-2005) and a machine shop (2014-2019) at 29-44 28th Street. Site Geology and Hydrogeology: Boring logs indicate 1-2 feet of historic fill, underlain by sand to approximately 10 feet below grade. Silty clays are found from 10 feet to approximately 30-35 feet across the site, underlain by a clay layer that appears to be at least five feet thick. A geotechnical investigation identified clay layers between 35 and 60 feet below ground surface (bgs), and bedrock was reportedly encountered in one boring at 50 feet bgs. The regional groundwater flow direction is toward the west. The depth to groundwater is approximately 35 feet bgs."

Env Problem:

"Nature and Extent of Contamination: Various investigations have occurred at the site since 2008. The investigation results are described below: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides and for the emerging contaminants per- and poly-fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor was analyzed for VOCs.The primary contaminants found in soil at this site are metals and chlorinated VOCs. Soil- Lead in soil ranges up to 767 parts per million (ppm), compared to the unrestricted use soil cleanup objectives (UUSCO) of 63 ppm. Other metals exceed unrestricted SCOs (UUSCO) in the top two feet of soil including mercury, barium, copper and zinc.
Semi-volatile organic compounds (SVOCS) including benzo(a)anthracene and benzo(a)pyrene exceeded the UUSCO in the top two feet of soil. Two pesticides (4,4, DDT and dieldrin) slightly exceeded UUSCOs at the site. Tetrachloroethylene (PCE) commonly used in dry cleaning was detected in soil at up to 30 ppm, at 3-5 feet below grade. PCE was also found at depths ranging to 27 feet. Since PCE is also found in groundwater, the protection of groundwater soil cleanup of objective (PGSCO) of 1.3 ppm is used for comparison. Data does not indicate any off-site soil impacts related to this site. Groundwater- Samples were obtained from five on-site wells. All contained PCE, ranging from 170-400 parts per billion (ppb), compared to the ambient water quality standard (AWQS) of 5 ppb. Four wells placed in sidewalks proximate to the site contained PCE at 11 to 67 ppb. Chloroform was measured at 8.5 ppb compared to the AWQS of 7 ppb. For PFAS, perflurooctanoic acid (PFOA) was reported at concentration of 3.28 parts per trillion (ppt) and perfluorooctanoic sulfonic acid (PFOS) was not detected. Both were below the Maximum Contaminant Level (drinking water standard) of 10 ppt in groundwater. 1,4 dioxane was

27-09 40TH AVENUE (Continued) **S125896294**

	reported at concentrations of up to 3.12 parts per billion (ppb) exceeding the Maximum Contaminant Level (drinking water standard) of 1 ppb in groundwater. Data indicates off-site groundwater downgradient of the site contains PCE at 67 ppb, compared to the ambient water quality standard (AWQS) of 5 ppb. Soil Vapor - Soil vapor samples were collected at 25' below grade at 7 locations across the site in 2019. Soil vapor contained PCE and trichloroethylene (TCE). The maximum amount of PCE measured was 1,600,000 micrograms per cubic meter (g/m3); the maximum TCE concentration was 4800 ug/m3. Follow-up sampling in 2020 showed PCE up to 270,000 and TCE up to 1200 ug/m3. Off-site values ranged from 180-920 PCE and 2.3-29 ug/m3 TCE. These values require further off-site investigation. Data indicates off-site impacts in soil vapor related to this site. NYSDEC performed limited off-site soil vapor intrusion sampling in January 2021, and results are pending. "
Health Problem:	"The site is fenced so people are not expected to come into contact with contaminated soil on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion (SVI). The site is vacant so inhalation of site contaminants in indoor air via soil vapor intrusion is not a current concern. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion both offsite and for any future onsite development. "

HW Code: 241197
Record Add: 11/04/2016
Record Upd: 10/06/2017
Updated By: JHOCONNE
Site Description: "Location - The 0.5 acre site is located at 32-01 57th Street in the Borough of Queens, Queens County, NY in an urban area. Site Features - The site currently consists of a building undergoing renovation and a partial addition which is planned as a community center for the Tibetan Community of New York & New Jersey. Current Zoning and Land Use - The site is currently zoned as M1-1 (light industrial zone which also allows for commercial and residential uses) and is surrounded by both light industrial and residential parcels. The site is bounded on the North by 32nd Avenue, to the East by 58th Street, to the South by Northern Blvd, and to the West by 57th Street. Past Use of the Site - The site was most recently occupied by a one story brick and concrete block warehouse building and a paved parking lot. The warehouse was most recently occupied by a clothing factory and a food storage facility. Historical on-site uses included hardware manufacturing which may have used solvents and heavy metals. Petroleum Bulk Storage number 2-601962 is assigned to this site for a 1,080 gallon UST converted to non-regulated use in 1996, a 1,080 gallon #2 fuel oil UST closed in place in 1994, and a 3,000 gallon #2 fuel oil UST closed in place in 2004. Site Geology and Hydrogeology: Soil borings conducted in 2011 and 2012 indicate a mix of brown silt, sand, and fine gravel. Groundwater is present at approximately 38 feet below grade. The East River is located approximately 2.5 miles west of the subject property."
Env Problem: "Nature and Extent of Contamination: Data was collected during 2 different investigations: one by AKRF in 2011 and one by AirTek in 2012. Soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and PCBs. Soil vapor samples were analyzed for VOCs. Based on the results of the investigations, the primary contaminants of concern at the site are chlorinated VOCs including tetrachloroethene (PCE) and trichloroethene (TCE). Soil No petroleum-related or chlorinated VOCs were identified in shallow soil at concentrations above the unrestricted use soil cleanup objectives. Groundwater one groundwater sample was taken which detected PCE at 0.96ppb. Soil Vapor Chlorinated VOCs were detected at up to 7,000 ug/m3 for PCE and up to 20,000 ug/m3 for TCE. "
Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/25/2024
Date Data Arrived at EDR: 10/01/2024
Date Made Active in Reports: 10/23/2024
Number of Days to Update: 22

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024
Date Data Arrived at EDR: 10/01/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database
EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/05/2024
Date Data Arrived at EDR: 08/06/2024
Date Made Active in Reports: 10/25/2024
Number of Days to Update: 80

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

South Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

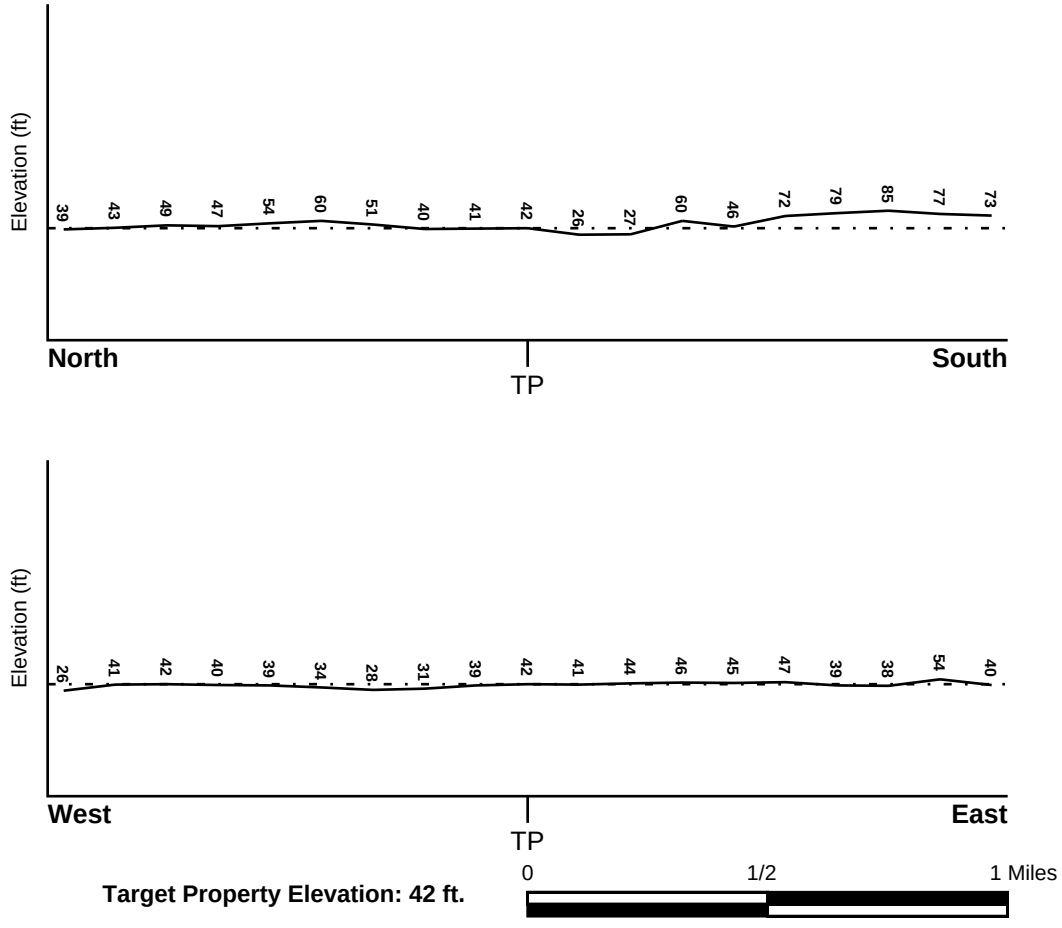

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 42 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970093F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970041B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OLIVIA MILLER

STAFF GEOLOGIST

ENVIRONMENTAL ENGINEERING

Ms. Miller is a staff geologist with over 4 years of experience in Phase I ESA's and due diligence. She has worked on various projects throughout Long Island, New York City, New Jersey, Connecticut, and Massachusetts. Ms. Miller is responsible for providing site exploration activities including, contaminated site investigation and remediation work; soil and groundwater sampling; vapor intrusion investigation; remedial investigation, design, implementation, and monitoring; pilot tests; data management, processing, and evaluation; and report preparation.

SELECTED PROJECTS

- Vital Brooklyn, Brooklyn, NY
- 95 Lombardy Street, Brooklyn, NY
- 98 Anthony Street, Brooklyn, NY
- 250 Water Street, New York, NY
- 305 Nevins Street, Brooklyn, NY
- 36-24 12th Street, Astoria, NY
- 111 Washington Street, New York, NY
- President Street Properties, Brooklyn, NY
- 353-361 Bedford Avenue, Brooklyn, NY
- Bronx Point, BCP Services, Bronx, NY
- Willets Point Redevelopment, Flushing, NY
- NYPD 116th Precinct, Rosedale, NY
- 8 Carlisle Street, New York, NY
- Jamaica Hospital Medical Center, Jamaica, NY
- 77-57 Vleigh Pl., BCP Services, Flushing, NY*
- LaGuardia Airport, Queens, NY*
- Former Darby Drugs, 80-100 Banks Avenue, Rockville Centre, NY*
- Georgica Ventures, East Hampton, NY*
- Residential fuel spill, Nesconset, NY*
- Alphamed Bottles, Central Islip, NY*

CRISTINA NICLAS

SENIOR STAFF SCIENTIST

ENVIRONMENTAL ENGINEERING

Ms. Niclas is a senior staff scientist with over five years' experience preparing Phase I and Phase II Environmental Site Assessments and state required regulatory reports, performing the investigation and sampling of site with petroleum, chlorinated solvents, polychlorinated biphenyls (PCBs) and heavy metal contamination; remediation oversight; underground storage tank (UST) closure and removal oversight; assisting with the management of a variety of environmental sampling programs including groundwater, drinking water, soil, sediment and soil gas.

Ms. Niclas successfully completed a graduate school course at the University of Massachusetts, Lowell, titled "Understanding the Massachusetts Contingency Plan" and is skilled in the understanding and completion of the Massachusetts Department of Environmental Protection phased site compliance and closure program.

SELECTED PROJECTS

- Rise Light and Power, Vibracore and Benthic Macroinvertebrate Sampling: Off-Shore Solar, Queens, New York*
- NYCSCA Environmental Due Diligence, Phase I ESA and Phase II ESI New York, New York*
- NYPA Converter Station Geotechnical Investigation, Queens, New York*
- Block Island, petroleum and Heavy Metal Investigation, Block Island, RI*
- Confidential Client, Arsenic and Pesticide Impacted Soila and Groundwater Investigation, FL*
- Environmental Media and Air Investigation, Alamogordo, NM*
- Verizon Wireless Telecommunications Investigations and APE-VE Surveys, Boston, MA*
- Underground Storage Tank Closure and Removal, Boston, MA*
- Soil Disposal Waste Characterization Sampling and Disposal Oversight, Boston, MA & New York, NY*
- NYCSCA PCB Remediation and Oversight, New York, New York*
- NYPA Environmental Due Diligence, Phase I ESA*
- Con-Edison, Remediation and Oversight, Queens, NY
- LIRR, SWPPP MS4 General Permit, Long Island, NY*
- CHPE, High Voltage Transmission Line Manifesting & Oversight, Albany, NY*
- President St Properties, Brooklyn, NY

EDUCATION

B.S., Biology –
Concentration in Biomedical Sciences
B.S., Environmental Science
Trinity College – Hartford

GREGORY C. WYKA, PG, LEED AP

SENIOR PROJECT GEOLOGIST

ENVIRONMENTAL ENGINEERING

Mr. Wyka is a professional geologist with 16 years of experience in regulatory government, brownfield redevelopment, and environmental liability consulting. His expertise includes due diligence, real estate development, site characterizations, remedial investigations, conceptual site modeling, remedial strategies and designs, remedial action implementation and management. Mr. Wyka maintains an understanding of how to integrate remediation with property redevelopment and he provides technical, regulatory, logistical, and risk management guidance to clients, including developers, owners, and environmental attorneys. Mr. Wyka manages construction projects and remediation projects in the New York State Inactive Hazardous Waste Disposal Site Program (State Superfund Program), New York State Spill Response Program, New York State Brownfield Cleanup Program, and the New York City E-Designation and Voluntary Cleanup Programs. Through many of these projects, Mr. Wyka has routine exposure to other real estate development services, including civil engineering, geotechnical engineering, surveying, natural resources and permits, land use planning, hazardous building materials, environmental compliance, landscape architecture, and waterfront engineering, that has shaped him into a resourceful and practical asset to his clients.

SELECTED PROJECTS

- The Dupont, Brooklyn, NY
- Greenpoint Landing, Brooklyn, NY: Brownfield Redevelopment, BCP, E-Designation, NYC VCP
- Anable Basin, Long Island City, NY; Brownfield Redevelopment, BCP.
- NYCSCA Due Diligence, Phase I ESA and Phase II ESI, New York, NY
- Fulfillment Center Due Diligence, Phase I ESA and Phase II ESI, New York, NY
- 489 State Street/100 Flatbush Avenue, Brownfield Redevelopment, NYC VCP, Brooklyn, NY
- One Third Avenue, Brownfield Development, NYC VCP, Brooklyn, NY
- One45 – Phase I and II, Brownfield Redevelopment, BCP, New York, NY
- 25-01 Queens Plaza North, Brownfield Redevelopment, BCP, Long Island City, NY
- Alafia/Jamaica Bay Landing, Brownfield Redevelopment, Brooklyn, NY
- 111 Washington Street, Brownfield Redevelopment, BCP, New York, NY
- 41 Kensico Drive, Brownfield Development, BCP, Mt. Kisco, NY
- 2409 Jerome Avenue, Brownfield Redevelopment, BCP, Bronx, NY
- 82 King Street, Brownfield Redevelopment, BCP, New York, NY

RYAN MANDERBACH, CHMM

ASSOCIATE PRINCIPAL

ENVIRONMENTAL ENGINEERING & SITE ASSESSMENTS

Mr. Manderbach has experience in New York, New Jersey, Massachusetts, Maine, Rhode Island, New Hampshire, and Connecticut. His recent experience includes New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup, Voluntary Cleanup and Spill Programs, and New York City Office of Environmental Remediation (OER) E-designated site investigation, and remediation. He has managed and performed Phase I and II Environmental Site Assessments; Underground Storage Tank (UST) removals and closures; soil vapor intrusion investigations; and site investigations and remediation. He also has extensive experience with Hazard Ranking System (HRS) evaluations, site assessments, removal actions, and emergency response activities under the EPA Regions I and II Superfund program.
