FACT SHEET

Brownfield Cleanup Program

Former CJ's Service Center
Property
5801 Amboy Road
Staten Island, NY 10309

January 2021

SITE No. C243041
NYSDEC REGION 2

NYSDEC Certifies Cleanup Requirements Achieved at Brownfield Site

The New York State Department of Environmental Conservation (NYSDEC) has determined that the cleanup requirements to address contamination related to the Former CJ's Service Center Property ("site") located at 5801 Amboy Road, Staten Island, NY under New York State's Brownfield Cleanup Program have been met. Please see the map for the site location.

The cleanup activities were performed by Shore to Shore Foster LLC ("applicant") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). NYSDEC has approved a Final Engineering Report (FER) and issued a Certificate of Completion (COC) for the site.

- Access the FER, Notice of COC and other project documents online through the DECinfo Locator:
<https://www.dec.ny.gov/data/DecDocs/C243041/>.
- The documents also are available at the location(s) identified at left under "Where to Find Information."

Completion of the Project: The following activities have been completed to achieve the remedial action objectives:

- Four underground storage tanks (USTs) and associated piping were removed and properly disposed off-site.
- 406 tons of petroleum contaminated soil, 65 tons of debris (e.g., concrete) and approximately 400 gallons of liquid waste were removed and properly disposed off-site.
- In order to isolate and contain petroleum impacted soil, groundwater and limited free product; and to prevent off-site migration, a sealed sheet pile containment wall was installed around the petroleum source area. The sheet piles were driven to approximately 25 feet below ground surface (bgs).
- Site Cover System - A cover system was installed across the site. The cover is comprised of either a minimum of two feet of clean soil, over a demarcation layer, or asphalt pavement, concrete-covered sidewalks/walkways, or concrete building slabs.

BROWNFIELD CLEANUP PROGRAM

- A sub-slab depressurization system (SSDS) and a vapor barrier were installed in the newly constructed on-site building, to address the potential for soil vapor intrusion.
- An Environmental Easement was recorded to prevent future exposure to any contamination remaining at the site and to ensure implementation of the Site Management Plan (SMP).

Final Engineering Report Approved: NYSDEC has approved the FER, which:

- 1) Describes the cleanup activities completed.
- 2) Certifies that cleanup requirements have been or will be achieved for the site.
- 3) Describes any institutional/engineering controls to be used. An *institutional control* is a non-physical restriction on use of the site, such as a deed restriction, when contamination left over after the cleanup action makes the site suitable for some, but not all uses. An *engineering control* is a physical barrier or method to manage contamination such as a cap or vapor barrier.
- 4) Certifies that a site management plan for any engineering controls used at the site has been approved by NYSDEC.

The following institutional controls have been put in place on the site:

- Site Management Plan
- Groundwater Use Restriction
- Land Use Restriction
- Environmental Easement

The following engineering controls have been put in place on the site:

- Cover System
- Groundwater Containment
- Monitoring Wells
- Vapor Mitigation

Next Steps: With its receipt of a COC, the applicant(s) is eligible to redevelop the site. In addition, the applicant(s) is eligible for tax credits to offset the costs of performing cleanup activities and for redevelopment of the site. A COC may be modified or revoked if, for example, there is a failure to comply with the terms of the order or agreement with NYSDEC.

Site Description: The site is located at 5801 Amboy Road, in the City of Staten Island, Richmond County and is

identified as Block 6896, Lot 53. The site is 0.375 acres and is located on the north side of Amboy Road, between Foster Avenue to the east and Odell Place to the west. The site was operated as a retail gasoline and service station from approximately 1937 until 2014. Leaking underground storage tanks resulted in contamination of the site with petroleum compounds which have been cleaned up under the Brownfield Cleanup Program.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C243041) at:

<https://www.dec.ny.gov/cfm/xtapps/dereexternal/index.cfm?pageid=3>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit:
