DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is:

Have Ecological Resources been identified?

Is this soil originating from the site?

How many cubic yards of soil will be imported/reused?

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone?

Does it contain less than 10%, by weight, material that would pass a size 80 sieve?

Is this virgin material from a permitted mine or quarry?

Is this material recycled concrete or brick from a DEC registered processing facility?

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Location where fill was obtained:

Identification of any state or local approvals as a fill source:

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

The information provided on this form is accurate and complete.

Re: **Characterization Report for Proposed Fill Material:** Hudson River Psychiatric Center - North Area, 3532 North Road, Town of Poughkeepsie, Dutchess County, New York 12601
NYSDEC BCP Site #C314121
PVE File #560909

Dear Mr. Pratt:

Partridge Venture Engineering, PC dba PVE Engineering ("PVE"), has been contracted by the owner and volunteer, EFG/Saber SC, LLC (EFG/Saber), for the investigation and remediation of the former Hudson River Psychiatric Center (HRPC). While no Remedial Action Work Plan (RAWP) has been approved for this Site, the volunteer intends to import fill needed for a site-wide cover system and achieve a Track 4 – Restricted Residential remedy. This imported fill and proposed site-wide cover system will not be constructed until the NYSDEC has reviewed and approved the draft RAWP. Any imported fill will be stockpiled, and best management practices will be implemented to prevent erosion of the stockpiled materials including berms and silt fences.

According to an obtained NYSDEC Request to Import/Reuse Fill or Soil form signed/dated January 20, 2015, the material now stockpiled at the One Dutchess Site originated from a Marist College excavation project and was imported to the One Dutchess Site, formerly known as the AC Dutton Greenway North Town Site. The January 2015 request was for 20,000 cubic yards of material meeting the intended site use, restricted residential soil cleanup objectives (RRSCOs), as defined by 6 NYCRR Part 375. According to the NYSDEC Remediation Database, the AC Dutton Greenway North Town Site is a remediated NYSDEC BCP site receiving its Certificate of Completion on December 28, 2016.

PVE has completed the collection and analysis of samples from the stockpiled material. Below is a summary of field activities, analytical data, conclusions, recommendations, and a request to import/reuse these materials.

1.0 FIELD ACTIVITIES

PVE personnel inspected the stockpiled fill, located in the eastern portion of the site, on March 16, 2021. The total volume of material proposed for reuse is estimated by others to be approximately 5,000 cubic yards. The

stockpile measures approximately 140-feet from north to south, 57-feet from west to east and 17-feet in height (gradually sloped). Stockpiled fill was screened by a PVE technician for volatile organic compounds (VOCs) using a photoionization detector (PID) and headspace techniques. No elevated readings were observed.

A total of fifteen (15) grab and six (6) composite soil samples were collected from the stockpiled material in accordance with the sampling frequency outlined in NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation document, Table 5.4(3)10. Additionally, composite soil samples were collected for the analysis of Per- and Polyfluoroalkyl Substances (PFAS) in accordance with 6NYCRR Part 375 and NYSDEC's Guidelines for Sampling and Analysis of PFAS dated January 2021. Soil samples were submitted to York Analytical Laboratories, a New York State Department of Health – Environmental Laboratory Approval Program (NYSDOH-ELAP) certified laboratory for analysis of the following:

- Part 375 VOCs via USEPA Method 8260;
- Part 375 Semi-Volatile Organic Compounds (SVOCs) via USEPA Method 8270;
- Part 375 Metals via USEPA Method 6010;
- Part 375 Pesticides, Herbicides and Polychlorinated Biphenyls (PCBs) via USEPA Method 8081/8082; &
- PFAS via USEPA Method 537.1M.

2.0 RESULTS

2.1 Sample Analytical Data

Sample results are summarized in Tables 1-3 and compared to Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs) as defined by 6 NYCRR Part 375. Analytical reports are attached.

2.1.1 VOCs

One (1) VOC was detected in thirteen (13) of the fifteen (15) grab soil samples collected. No VOCs were detected at concentrations exceeding the lower of UUSCOs and PGW.

2.1.2 SVOCs

SVOCs were detected in all of the six (6) composite soil samples collected. No SVOCs were detected at concentrations exceeding the lower of UUSCOs and PGW.

2.1.3 Metals

Multiple metals were detected in each of the six (6) composite soil samples collected. One (1) metal was detected in one (1) of the six (6) composite soil samples at concentrations exceeding PGW. Exceedances are listed below.

- OK WC Comp 6 20210316
 - Chromium, Total (20.8 mg/kg)

2.1.4 PCBs, Pesticides and Herbicides

No PCBs, pesticides and herbicides were detected in any of the six (6) composite soil samples collected.

2.1.5 Emerging Contaminants

No PFAS compounds were detected in any of the six (6) composite soil samples collected.

3.0 CONCLUSIONS

1. A total of fifteen (15) grab samples and 6 (six) composite soil samples were collected from the 5,000-cubic yards of stockpiled material for analysis in accordance with NYSDEC requirements to demonstrate that this material is approved to be imported to the HRPC BCP site.
2. No contaminants were detected in any of the soil samples collected at concentrations that would prevent the site from achieving a Track 4 Restricted Residential remedy.

Based on the information provided herein, we are requesting approval from NYSDEC to import the characterized fill.

If you have any questions, please do not hesitate to contact us. We look forward to receiving your response to this request.

Sincerely,

PVE ENGINEERING,

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 16, 2021 and listed below. The project was identified as your project: **560909-Onekey**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 21C0750

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

- S-08 The recovery of this surrogate was outside of QC limits.
- QM-07 The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
- QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
- QC-LCS LCS/LCS Dup recovery was above laboratory control limits. Sample does not contain any target compounds; therefore sample results are acceptable.
- PF-LCS-H The LCS recovery was slightly above acceptable limits for the qualified compound. However, sample results are not biased high because results are corrected for isotope recovery.
- M-SRD1 The serial dilution for this element was outside control limits.
- M-SPKM The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
- M-ICV2 The recovery for this element in the ICV was outside the 90-110% recovery criteria.
- M-CRL The RL check for this element recovered outside of control limits.
- J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
- CCV-E The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence . This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.
