EXECUTIVE SUMMARY

Gallagher Bassett Technical Services (GBTS) performed a Combined Phase I and Phase II Environmental Site Assessment (ESA) of the property located at 18 Lagrange Avenue, 57 and 9 Collegeview Avenue, Town of Poughkeepsie, Dutchess County, New York. This ESA identifies Recognized Environmental Conditions (RECs) in conformance with the scope and limitations of ASTM Practice E 1527-21, as well as conditions that do not meet the threshold to be considered a REC but represent a significant existing or likely environmental liability (de minimis conditions and items outside the ASTM Phase I ESA scope are noted as appropriate). Findings, conclusions and recommendations are summarized below and in Section 4.0.

Subject Property Description and History

The subject property is a 0.73-acre mixed-use (commercial and residential) parcel, consisting of three contiguous tax parcels located in an urban setting. Available historical information documents residential use of the subject property as early as 1913 and small commercial use as early as 1950 (no evidence of industrial or other significant commercial use of the property was found during the review of historical records). No further investigation of historical Records is recommended.

The nearby property at 50 Raymond Avenue (present-day Gladmore Cleaners, located approximately 60 feet northwest), has likely contained a dry cleaning facility since as early as 1937. In response to this historical finding, GBTS conducted a Phase II subsurface investigation at Lot A to screen for any impacts from chlorinated solvents. Laboratory data identified peak levels of tetrachloroethene (PCE; 292 $\mu\text{g}/\text{m}^3$) and trichloroethene (TCE; 39.6 $\mu\text{g}/\text{m}^3$), solvents associated with dry cleaning activities, beneath the building slab, potentially indicating a historical release from the dry cleaner. This contamination is considered a REC.

Lot A of the subject property was identified as the site of closed NYSDEC spill number 9511747, which was reported due to a tank test failure, and is considered a HREC. According to documentation provided by the property owner, a 1,000-gallon underground storage tank (UST) at Lot A passed a subsequent tank test and was closed-in-place circa November 1996 (residual liquids were pumped from the tank and disposed off-site). A Phase II subsurface investigation by GBTS indicated no impacts to soils located in close proximity to the former UST. These findings support the conclusion that impacts from the former UST and closed spill event, if any, are likely to be minimal.

The potential exists that debris from the demolition of former on-site structures may be present in the subsurface (such debris could contain lead, asbestos, or other regulated materials).

Relevant environmental conditions at the subject property are summarized in the following table.

Identified Areas of Environmental Concern

Category	Specific Environmental Concerns	Recommendations
RECs *	Documented low-grade sub-slab vapor contamination by chlorinated solvents	Install active sub-slab depressurization system
HRECs	Closed NYSDEC spill event reported for subject property	No further investigation/action
General Concerns	Closed-in-place fuel-oil underground storage tank (subsurface investigation indicates no significant contamination)	Petroleum impacts are unlikely, but former tank may require management during site development
	Potential demolition debris in subsurface	Properly manage any materials encountered during site development/use
	Empty aboveground storage tanks (ASTs)	Dispose off-site
	On-site debris	Dispose off-site
	Small quantities of cleaning and maintenance products	Properly store containers
De Minimis Conditions	None Identified	No further investigation/action
Non-Scope Considerations	Asbestos-containing materials (ACM) and lead-based paint (LBP)	Test suspect materials as needed; handle materials in accordance with applicable regulations
	Potentially elevated radon levels	Test indoor air for radon

1.0 INTRODUCTION

1.1 Purpose

This Combined Phase I and Phase II Environmental Site Assessment (Report) identifies recognized environmental conditions (RECs) and/or other significant environmental liabilities resulting from or associated with the storage, use, transport or disposal of hazardous or other regulated materials on the property described in Section 2.1.

1.2 Methodology

This Report was prepared in conformance with the attached Scope of Services and with guidelines set by American Society for Testing and Materials (ASTM) Method E1527-21 (no exceptions to or deletions from this practice have occurred). All work was performed under the direct supervision and responsible charge of a qualified environmental professional, following requirements for “all appropriate inquiry” as defined in 40 CFR Part 312. Gallagher Bassett Technical Services (GBTS) performed the following work:

1. Investigation of the subject property’s history and characteristics through the analysis of available physical settings maps, historical documents, local municipal records, and information provided by subject property representatives and/or other knowledgeable individuals.
2. Review of Federal, State, and/or Tribal regulatory-agency databases and printed records for documentation of potential environmental liabilities relevant to the property, consistent with (or exceeding) applicable ASTM requirements. All interviews, and the review of government records, were completed on or after the date of the site reconnaissance.
3. Inspection of the property by Megan King of GBTS on June 6, 2023. Stephen G. Guernsey, the property owner, and David Kaminski, representing the prospective purchaser, were present during the site inspection.
4. Phase II investigation performed by Megan King of GBTS on August 1 and 17, 2023, including a ground penetrating radar (GPR) survey, extension of soil borings, and collection of soil and soil vapor samples at the portion of the subject property located at 5-7 Collegeview Avenue.

1.3 Limitations

This Report is a representation and evaluation of the property described in Section 2.1 below as of the dates that services were provided, and is not valid for any other property or location. This Report is based in part on information provided in writing or verbally by federal, state, and local officials (including public records) and other referenced parties. The accuracy or completeness of this information was not independently verified. Unless specifically noted, the findings and conclusions contained herein must be considered not as scientific certainties, but as probabilities based on professional judgment. Limitations specific to the site inspection (if any) are detailed in Section 3.3.

1.4 Definitions

Definitions of some key terms found in this Environmental Site Assessment (ESA) are provided below.

Recognized Environmental Condition (REC)

A REC is defined as (1) the presence of hazardous substances or petroleum products in, on or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment. Note: A material threat is an obvious threat likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Controlled Recognized Environmental Condition (CREC)

A CREC is a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of controls (e.g., activity and use limitations).

Historical Recognized Environmental Condition (HREC)

A HREC is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities *and* meeting unrestricted use criteria established by the applicable regulatory authority or authorities, without subjecting the property to any controls (e.g., activity and use limitations).

De Minimis Conditions

An environmental condition is considered “de minimis” when that condition generally does not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies.

Conditions determined to be de minimis are not recognized environmental conditions.

Sensitive Environmental Receptors

Sensitive Environmental Receptors (SERs) are valued physical (natural or human-made) or biological features that may be adversely impacted by environmental contamination, and where a discharge or release could pose a greater threat than a discharge or release to other less valued areas. SERs include (but are not limited to) potable supply wells, wetlands, and protected wildlife habitat.

2.0 SITE LOCATION AND PHYSICAL SETTING

This ESA was performed for the parcel of land (“subject property”) located at 18 Lagrange Avenue, and 5-7 and 9 Collegeview Avenue, Town of Poughkeepsie, Dutchess County, New York (tax IDs: Map 6161, Block 12, Lots 845685, 834673 and 841671). Note: This Report references 5-7 Collegeview Avenue as “Lot A”, 9 Collegeview Avenue as “Lot B”, and 18 Lagrange Avenue as “Lot C”. Site maps are located on Pages 7 and 8 and photographs are provided in Appendix A. Information sources are cited in Section 5.0 and site-specific topographic, wetlands and/or other maps are provided in Appendix B.

2.1 Description of Subject Property

The subject property is an irregularly-shaped 0.73-acre parcel consisting of three contiguous tax lots located on the northern side of Collegeview Avenue (Lots A and B) and the southern side of Lagrange Avenue (Lot C). Lot A contains a three-story mixed-use (commercial and residential) building located on the southern portion of the parcel, with a restaurant patio area at the eastern exterior of the structure, and a paved alleyway at the western exterior. Lot B contains a two-story mixed-use (commercial and residential) structure located on the southern portion of the parcel and Lot C contains a three-story residential structure located on the northern portion of the parcel. Both Lots B and C have paved driveways present at the easternmost portions of the property, which lead to a connected rear parking area. Comprehensive observations from a physical inspection of the property are provided in Section 3.3.

2.2 Description of Adjoining and Surrounding Area Properties

The property is located in an urban setting, with most properties developed for residential and commercial uses. Current uses of adjoining and surrounding area properties are summarized below (note that all adjoining uses to the west are tenants of a single commercial building):

Direction	Adjoining Use(s)	Vicinity Use(s)
North	• Residential	• Residential • Commercial
East	• Residential • Parking Lot	• Residential • Commercial • Institutional • Vassar College
South	• Vassar College	• Vassar College
West	• Savona’s Trattoria and Bar • The Three Arts (Bookstore) • Fresco Tortillas • Berkshire Hathaway (Real Estate) • Vassar College Bookstore • Delta Pi Real Greek	• Residential • Commercial • Vassar College

2.3.1 Topography

Local area topography is varied. Surface relief in the immediate vicinity of the subject property is generally level, with overall downward slopes to the east, towards Casperkill Creek, a tributary to the Hudson River.

The USGS Topographic map providing coverage for the subject property indicates approximate on-site surface elevations ranging from 170 to 180 feet above mean sea level. The map did not indicate the presence of any soil/gravel mining operations or unusual topographic patterns indicative of landfilling activities on the property. Observations made during the site inspection are in general agreement with conditions depicted on the map.

2.3.2 Local Geology and Hydrogeology

Soils in the vicinity of the subject property are likely to be derived from glacial till deposits, which overlie sedimentary bedrock. Soil survey maps indicate that Knickerbocker-Urban Land complex, nearly level (0-3% slopes) soils are likely to be located on the property. The Urban Land designation identifies areas where at least 50% of the surface is covered by buildings, parking areas or other impervious structures, and specific soil and bedrock characteristics are generally not well known. The Knickerbocker complex is a deep, somewhat excessively drained, gently sloping soil formed in deltas and terraces derived from sandy glaciofluvial deposits or deltaic deposits. The presence of on-site structures suggests that soils located on the property may have been altered by cutting, regrading and/or filling activities. Depth to bedrock in Knickerbocker complex soils is likely to be greater than 80 inches. Depth to bedrock is not reported for Urban Land soils. Bedrock outcrops were not observed on the property.

Soils recovered during the Phase II subsurface investigation at 5-7 Collegeview Avenue (see Selected Site Features Map, Page 8) generally consisted of medium to coarse sands with a layer of silty clay from approximately 2.5 to 5 feet below grade surface (bgs). All borings were extended to a maximum depth of 10 feet bgs; no bedrock were encountered during the extension of soil borings (see Section 4.2.2).

Soil survey data indicate generalized groundwater depths greater than 6 feet in on-site soils. Groundwater was not encountered during the extension of soil borings (see Section 4.2.2). Shallow groundwater flow in the vicinity of the property is likely to generally follow surficial topography and be in an overall easterly direction, toward the Casperkill creek (approximately 0.5-mile from the property).

2.3.3 Surface Hydrology and Wetlands

No waterbodies or wet areas were observed on the subject property or in the immediate vicinity during the site inspection. Federal and state mapping data do not identify any classified surface waterbodies, wet areas, or regulated wetlands on or in the immediate vicinity of the property.

2.3.4 Sensitive Environmental Receptors

The review of maps and observations made during the site inspection indicate that no SERs are located on or in the immediate vicinity of the subject property. The Casperkill Creek is approximately 0.5-mile east.

3.0 INVESTIGATION

3.1 Site History

The history of the property was researched by interviewing knowledgeable individuals and reviewing standard ASTM historical sources (local agency records, historical maps, aerial photographs or city directories) and additional sources (if reasonably ascertainable and sufficiently useful, accurate, and complete considering the objective of the records review).

3.1.1 User-Reported Information

ASTM Practice E 1527-21, Section 6, requires the User (the party seeking to complete the environmental site assessment [ESA] of the property) to provide specific information to the Environmental Professional to meet the requirements for “all appropriate inquiry”.

David Kaminski, representing Van DeWater & Van DeWater, LLP (the User), responded to a questionnaire provided by GBTS requesting information regarding the subject property as specified in Section 6. Mr. Kaminski indicated that he had no specialized knowledge or experience, actual knowledge, or knowledge of commonly known or reasonably ascertainable information regarding: 1) information material to recognized environmental conditions or other environmental liabilities in connection with the property; 2) the results of a review of title and/or judicial records for environmental liens/AULs; or 3) reason(s) for a purchase price that does not reasonably reflect fair market value because of known or suspected contamination.

GBTS assumes that the User requested that the Phase I ESA be performed in order to qualify for one or more Landowner Liability Protections (LLPs) to CERCLA liability and to document potential environmental liabilities on the subject property.

3.1.2 Interviews

Stephen G. Guernsey (the property owner) was identified as a Key Site Manager (a person having good knowledge of the uses and physical characteristics of the subject property) and was interviewed regarding specific site conditions and recent uses, as well as the topics detailed in the User Questionnaire (see Section 3.1.1, above). Mr. Guernsey indicated that he has owned the subject property for over 30 years and that prior to his ownership the property was similarly used for small commercial (Lots A and B only) and residential uses. According to Mr. Guernsey, Lots B and C have always been heated with natural gas. Mr. Guernsey stated that the structure on Lot A was initially heated with fuel oil, but converted to using natural gas at some point in the past several years (exact date unknown). Mr. Guernsey provided documentation regarding a former fuel oil underground storage tank (UST), which was used to heat the on-site structure on Lot A prior to being closed-in-place (see Sections 3.2.2, *State Chemical and Petroleum Spill and Leaking Underground Storage Tank Events* and 3.3.3, *Petroleum Storage*).

Copies of these documents are provided in Appendix C and pertinent information from this interview is provided in relevant report sections, where appropriate.

3.1.3 Ownership Records

Property ownership information, based on Town of Poughkeepsie Assessor's Office records, is summarized below. "Date of Ownership" indicates a time the property was owned by the specified entity.

Tax Lot Parcel	Owner	Date of Ownership
Lot 834673 (Lot A)	Vassar East (Current Owner)	1/17/2012
	Guernsey, Stephen & Perry, Rochelle	1/18/2002
	Guernsey, Stephen & Quartararo, Anthony M.	7/26/1988
	Vassar East, Ltd	1968
	King, Frances	Unknown
Lot 841671 (Lot B)	Guernsey, Stephen G. IV & Quartararo, Anthony M. & Jack Q.	10/6/1983
	Fabian, Jess & Jeanette	9/1970
	Smith, Stanley J.	1964
	Smith, Mary A. & Stanley J.	Unknown
Lot 845685 (Lot C)	Guernsey, Stephen & Perry, Rochelle	1/8/2002
	Guernsey, Stephen G. IV & Quartararo, Anthony M. & Jack Q.	10/6/1983
	Fabian, Jess & Jeanette	1970
	Smith, Stanley J.	1964

3.1.4 Standard ASTM Historical Sources

This section provides a summary of environmentally significant information from a review of standard historical sources (topographic maps, fire insurance maps, aerial photographs, and/or city directories). Information sources are included below if they were reasonably ascertainable, applicable to the subject property, and likely be useful in determining whether activities were conducted that would be expected to result in a release. [Note: Property outlines on supporting documents are reasonable approximations.]

Historical Topographic Maps

GBTS reviewed historical USGS topographic maps dated 1893 and 1943 (copies of reviewed maps are provided in Appendix D). Map resolution is not sufficient to show specific uses on the subject property, and the property is generally noted to be in a developed area where only notable structures (e.g., churches) are typically shown. Railroad tracks are depicted nearby to the east.

- 1893: The subject property is bordered to the north by Lagrange Avenue and to the south by Collegeview Avenue. Railroad tracks are depicted nearby to the east. The surrounding area is moderately developed with likely residential structures.
- 1943: The subject property now appears to contain structures, likely used for residential purposes. Development in the surrounding area has increased.

Sanborn Fire Insurance Maps

GBTS reviewed historical Sanborn Fire Insurance Company Maps dated 1913, 1950, 1952, 1984, and 1990 (relevant copies of these maps are provided in Appendix E).

- 1913: Three, two-story dwellings are present on the subject property in locations corresponding to that of the current-day structures. An automobile garage is located at the northern-central portion of Lot A and two sheds are located at the northwestern and western-central portions of Lot B. Adjoining properties to the north, east, and west contain dwellings and sheds. The adjoining property to the south is not shown. No petroleum or chemical bulk storage tanks are noted at the subject property or adjoining properties.
- 1950-1952: Municipal water is depicted as being available to the subject property which is now shown in its present day configuration with the dwelling on Lot A now an expanded 2½-story structure containing two stores and apartments. The dwelling on Lot B now contains a store and apartments. The garage on Lot A and northernmost shed on Lot B are now gone, and two new garages are now present at the northwestern corner of Lot A and the southwestern corner of Lot C. Several stores and a building labeled “Juliet Theatre Movies” are now present on the adjoining property to the west. Adjoining properties to the east, north and west now have automobile garages. Adjoining properties to the north and west have added a dwelling and a store (1952 only), respectively. The subject property to the south is labeled as “Tennis Courts” and “Hockey Field,” associated with Vassar College. A nearby property at 50-52 Raymond Avenue, located approximately 60 feet west of the subject property, is labeled for dry cleaning. The surrounding area is more developed, with both dwellings and stores.
- 1984-1990: No significant changes are noted at the subject or adjoining properties. A nearby property to the northwest at 49 Raymond Street is labeled as a filling station. The surrounding area now contains more commercial uses.

City Directories

GBTS reviewed historical city directories dated 1937, 1942, 1946, 1948, 1953, 1958, 1963, 1965, 1970, 1975, 1980, 1985, 1988, 1992, 1995, 2000, 2005, 2010, 2014, 2017, and 2020 for the subject property and for several adjoining properties (data sources are provided in Appendix F). Occupants of the on-site buildings have included numerous retail stores and restaurants, including Pizzeria Bacio, Sunsations Tanning, Hair, and Nail Salon, Morrison Jewelers, and Vassar Antique Center, and individual residential tenants. No uses of adjoining properties were identified that are likely to represent a significant environmental threat to the subject property.

Supporting information for the database review presented in Section 3.2 includes a non-ASTM database of potential dry cleaners, based on historical business directories. One site, the nearby property at 50 Raymond

Avenue (present-day Gladmore Cleaners; previously identified in Sanborn maps as 50-52 Raymond Avenue), located approximately 60 feet northwest of the subject property, has been identified as a potential historical dry cleaner. Historical city directories identify the site as a dry cleaner as early as 1937.

3.1.5 Municipal and Regulatory Agency Records

Assessor's Office Records

Town of Poughkeepsie Assessor's Office property card records for the subject property were reviewed on July 6, 2023. According to card notations, the date of construction for the structures located on Lots B and C was unknown (listed only as "old") and the structure on Lot C was built circa 1900. All three structures are identified as having been heated with "oil burners" at some point in their history and a notation on the property card for Lot C states that "no oil pipes" were identified as being present on-site (the nature of the investigation leading to that statement was not indicated in the records provided for review). No other information pertinent to the environmental integrity of the subject property was present in these records. Readily available property ownership information is summarized in Section 3.1.3.

Building Department Records

Town of Poughkeepsie Building Department records for the subject property were reviewed on July 6, 2023. A certificate of compliance (March 2017) for the installation of a natural gas-fired boiler was present in the file for Lot A. No information pertinent to the environmental integrity of the subject property was present in the records provided for Lot B. The following documents were present in the file for Lot C: a building permit (January 2002) for installation of a natural gas-fired boiler; and, certificates of compliance (March 2018) for the demolition of a garage and the installation of a new natural gas-fired boiler.

No other information pertinent to the environmental integrity of the subject property was present in Building Department records provided for review.

NYSDEC

A request was made on June 13, 2023 to search available NYSDEC records for information regarding the subject property. In response to that request the NYSDEC provided GBTS with spill file records associated with the address identified with Lot A of the subject property (see Section 3.2.2, *State Chemical and Petroleum Spill and Leaking Underground Storage Tank Events*).

According to the NYSDEC, that agency does not maintain files identified with the addresses associated with Lots B and C of the subject property.

3.1.6 Previous Environmental Reports

GBTS did not review any relevant previous environmental reports (e.g., due diligence site assessments, subsurface investigation, remediation or closure reports, or similar documents) for the subject property.

3.2 Review of Federal and State Agency Records

Federal and state records were reviewed for documentation of environmental conditions and/or liabilities relevant to the property.

3.2.1 Methodology

The following ASTM Standard Environmental Record Sources (as available for the subject property's locality) were reviewed (search distances are consistent with, or exceed, ASTM requirements).

- Federal National Priority List (1.0 mile) and delisted National Priority List sites (0.5 mile)
- Federal SEMS (formerly CERCLIS) list and SEMS NFRAP site list (0.5 mile)
- Federal RCRA CORRACTS facilities list (1.0 mile)
- Federal RCRA non-CORRACTS TSD facilities list (0.5 mile)
- Federal RCRA generators list (subject/adjoining properties)
- Federal ERNS list (subject property)
- Federal, State, and Tribal Institutional Control / Engineering Control registries (subject property)
- State- and Tribal-equivalent NPL (1.0 mile)
- State- and Tribal-equivalent SEMS (0.5 mile)
- State and Tribal Brownfield and voluntary cleanup sites (0.5 mile)
- State and Tribal leaking storage tank lists (0.25 mile; reduced distance due to high level of development)
- State (including locally administered) and Tribal registered storage tank lists (subject/adjoining properties)
- State and Tribal landfill and/or solid waste disposal site lists (0.5 mile)

Additional Environmental Record Sources (as available for the subject property's locality) were reviewed to enhance and supplement the review of standard sources, including: spill file records; oil storage facility lists; radon data; wastewater discharge permits; and federal Toxic Release Information System (TRIS) and Facility Index System (FINDS) databases.

A copy of relevant portions of a database search conducted by Environmental Data Resources, Inc. (EDR) for GBTS is provided in Appendix G. Not all sites identified in the attached database search may be referenced below, as some sites may have been excluded based on one or more of the following: ASTM requirements; GBTS's scope of services or professional opinion; and/or information obtained during the review of historical records and the site inspection. Some information may have been deemed to not be practically reviewable as defined in ASTM E1527 (e.g., records lack adequate address information). Sites or additional information not included in the EDR report may also be referenced based on GBTS's search of additional records and/or knowledge of the subject property area.

GBTS's opinion is presented for any sites identified within the specified approximate minimum search distances as to any possible impacts that might result in RECs in connection with the subject property, arising from the migration of contaminated soil, soil vapor and/or groundwater. Evaluation of potential impacts to the subject property is based on: distance and direction to the identified site; type of regulated materials and other relevant information found in available records; presence of intervening roadways and/or other

physical conduits; local physical setting (topography, soil conditions, geology, hydrology, etc.); and other information known to GBTS.

In accordance with ASTM requirements, this Report assesses the potential for hazardous vapors to migrate onto or within the target property. To accomplish this task, GBTS has performed an evaluation of potential Vapor Encroachment Conditions (VECs) arising from identified sites, consistent with a “Tier 1” screening as specified in ASTM E2600-15 (including a review of database records as well as analysis of historical uses, physical setting information and other known information).

3.2.2 Findings of Regulatory Records Review

Federal Hazardous Waste-Contaminated Sites

The subject property is not identified on the United States Environmental Protection Agency’s (USEPA): National Priority List (NPL) of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions; Superfund Enterprise Management System (SEMS, formerly CERCLIS) list of sites that are proposed to the NPL or that are in the screening and assessment phase for possible proposal to the NPL; SEMS-Archive list (formerly CERCLIS NFRAP), which are former SEMS sites that were delisted because no significant contamination was found, or because the site has been remediated; or Federal Brownfields list of sites with known or potential contaminants receiving federal cleanup funding. The subject property is not identified on available USEPA Institutional Control/Engineering Control registries.

The following relevant site has been identified:

<u>Site Name</u>	<u>Site ID</u>	<u>Distance/Direction</u>	<u>Database</u>
Town and Country Cleaners	NYD071092233	0.44 mile, NW	SEMS

Based on a review of reported information, this site is not likely to impact the property.

State Sites

Inactive Hazardous Waste Disposal Sites

NYSDEC maintains a Registry of Inactive Hazardous Waste Disposal Sites (IHWDS), a state equivalent to the federal NPL, which are commonly referred to as “Registry” or “Superfund” sites. Sites are placed on the Registry if there is evidence that hazardous waste was disposed and a determination has been made that a significant threat to public health is present. Once a Registry site has been remediated, it is reclassified or removed (delisted) to indicate that the significant threat(s) has been addressed. Non-Registry sites may (but usually do not) also present significant threats. The property is not identified as a NYSDEC IHWDS site, and has not been listed as a site under investigation for inclusion in the IHWDS Registry (a state equivalent to the federal SEMS List).

The following relevant sites have been identified:

<u>Site Name</u>	<u>Site ID</u>	<u>Distance/Direction</u>	<u>Classification Code</u>
Main Street/ Grand Avenue Site	314087	0.50 mile, NW	N – no further action

<u>Site Name</u>	<u>Site ID</u>	<u>Distance/Direction</u>	<u>Classification Code</u>
Harris Corporation	314061	0.84 mile, E	4 – closed, management required
Vandewater Property (Rt 44 Plaza)	314039	0.88 mile, NE	N – no further action
Vandewater Property	314040	0.88 mile, NE	N – no further action

Based on a review of reported information, these sites are not likely to impact the property.

Voluntary Cleanup, Brownfields Cleanup, and Environmental Restoration Programs

Contaminated properties that are not Registry sites may be listed in database records under the NYSDEC Voluntary Cleanup (VCP), Brownfields Cleanup (BCP) or Environmental Restoration (ERP) programs. The property is not identified as a NYSDEC remedial program site. No participating properties are located within a half mile of the property.

New York Institutional and Engineering Controls

The subject property is not identified in NYSDEC Institutional and Engineering Control databases.

Federal Hazardous Waste Handlers

The SEMS database details facilities that report treatment, storage or disposal of hazardous waste (TSD facilities) or generation or transportation of hazardous waste. Facilities that have been notified by USEPA to take corrective action regarding their handling of hazardous waste are classified as CORRACTS facilities.

The subject property is not registered with the USEPA as a CORRACTS and/or TSD facility, and no sites are located within one mile of the property. The subject property and adjoining properties are not registered with the USEPA as generators or transporters of hazardous waste.

Landfills and Solid Waste Disposal Facilities

The state Facility Register does not list the subject property as an active or inactive landfill or solid waste disposal facility.

The following relevant site has been identified:

<u>Site Name</u>	<u>Site Status</u>	<u>Distance/Direction</u>	<u>Type</u>
Vassar College Farm Compost Facility	Inactive	0.48 mile, S	Composting

Based on a review of reported information, this site is not likely to impact the property.

Chemical Bulk Storage (CBS)

The subject property and adjoining properties are not identified in database records as CBS facilities. Observations made during the site inspection did not indicate the presence of chemical bulk storage on the subject property or at adjoining properties.

Petroleum Bulk Storage (PBS)

Subject Property

The subject property is not identified in database records as either a regulated or unregulated PBS facility. Observations made during the site inspection indicated the presence of three empty, disconnected 275-gallon fuel oil aboveground storage tanks (ASTs) in the basement of the structure on Lot A (see Section 3.3.3, *Petroleum Storage*).

According to Mr. Guernsey a 1,000-gallon UST was closed-in-place at the eastern exterior of the structure on Lot A. Prior to being closed-in-place, a NYSDEC spill event (No. 9511747) was reported for the subject property due to the UST failing a tank tightness test (see the State Chemical and Petroleum Spill and Leaking Underground Storage Tank Events subsection, below).

Adjoining Properties

No adjoining properties are identified in database records as regulated or unregulated PBS facilities.

Major Oil Storage Facilities

The subject property is not listed with the NYSDEC as a major oil storage facility (MOSF). No MOSFs are located within a half mile of the property.

Federal Chemical and Petroleum Spills

The USEPA Emergency Response Notification System (ERNS) database documents releases of oil and hazardous substances as reported to federal authorities. There are currently no chemical or petroleum spills on record for the subject property.

State Chemical and Petroleum Spill and Leaking Underground Storage Tank Events

NYSDEC database records were reviewed to determine possible impacts from leaking tanks and other reported releases within a quarter mile of the subject property. The following spill event is reported for the subject property (except as noted, spill quantities for reported releases are unknown).

<u>Spill File ID and Status</u>	<u>Location</u>	<u>Material Spilled</u>	<u>Spill Date (Closure Date)</u>
9511747 – closed	subject property	#2 fuel oil	December 16, 1995 (March 29, 1996)

Spill number 9511747 was reported due to a tank test failure; state cleanup standards are listed as having been met. No other relevant spill events were identified in database records. According to documentation provided by Mr. Guernsey, the tank passed its tightness test on December 21, 1995 and was subsequently closed-in-place circa November 1996 at which point approximately 500-gallons of fuel and waste water were pumped from the tank and trucked off-site. Based on available information, the tightness-test failure was likely related to an air leak in piping above the stored fuel, rather than a hole in the tank body.

Air Discharges

No NYSDEC permits for air discharges from the subject property are known to exist. No operations likely to require a NYSDEC air discharge permit were noted on the subject property.

Wastewater Discharges

No USEPA National or NYSDEC State Pollutant Discharge Elimination System (NPDES or SPDES) permit was identified for the subject property. No operations likely to require a NPDES or SPDES permit were noted on the subject property. According to available information, the subject property is connected to the municipal wastewater system. No adjoining properties are registered as NPDES or SPDES facilities.

Radon

The USEPA maintains a Map of Radon Zones to identify areas with the potential for elevated indoor radon levels, and has established a guidance value (the level where mitigation measures may be appropriate) for radon concentrations of 4.0 or greater picoCuries/liter (pCi/l). The subject property is located in Dutchess County, which is designated as Zone 1, indicating predicted average indoor radon screening levels greater than 4 pCi/L. New York State Department of Health (NYSDOH) data indicate that the average radon level in the Town of Poughkeepsie (1,105 homes tested) is 3.46 pCi/L, and that 48.5 percent of homes exceed USEPA guidance. GBTS has not reviewed any radon test data for the subject property.

Based on the NYSDOH data, radon above actionable levels may be present at the subject property.

Vapor Encroachment Conditions at Identified Sites

Information obtained during the database review was evaluated consistent with the Tier 1 screening process presented in ASTM E2600-15. Based on this review as well as information obtained from the results of the on-site soil vapor investigation, potential historical releases from the nearby dry cleaner located at 50 Raymond Avenue may have resulted in vapor encroachment at the subject property (see Section 4.0); no other relevant sites were identified.

3.3 Site Inspection

The subject property was inspected by GBTS on June 6, 2023. The weather at the time of the inspection was sunny and warm. The site reconnaissance was performed at the following areas: the interior of the structure on Lot A including the basement, common areas, and one occupied apartment; the basement and first floor of the structure on Lot B; the basement of the structure on Lot C; and all exterior areas. The following relevant conditions are noted:

- There was no physical access to the residential portions of the structures on Lots B and C

Based on the findings of the site inspection, records review, interviews, and other available information, GBTS does not consider these limitations to represent a significant data gap.

3.3.1 Protocol

The site inspection was conducted to address any potential concerns raised during the investigation of site history (Section 3.1) and the regulatory agency records review (Section 3.2), and to identify any additional indications of contamination from the use, storage, or disposal of hazardous or regulated materials. To the extent possible, on-site structures, vegetation, topography, surface waters, and other property features were examined for obvious evidence of existing or previous contamination or unusual patterns (e.g., soil staining, vegetative stress, surface water sheen, or the physical presence of contaminants), which would indicate that the environmental integrity had been or could be impacted.

Section 3.3.2 describes the physical characteristics of the subject property. Section 3.3.3 is divided into topics on specific environmental conditions or concerns, actual or potential, noted on the subject property during the site inspection. Section 3.3.4 describes the physical characteristics of adjoining properties as they concern the potential or actual environmental condition of the subject property.

A Selected Site Features Map illustrating the subject property layout and locations of specific areas of concern (if any) is provided on Page 8, and photographs of the property are provided in Appendix A.

3.3.2 Physical Characteristics of the Subject Property

3.3.2.1 Property

The subject property is an irregular-shaped, 0.73-acre parcel, consisting of three contiguous tax lots, which has approximately 150 feet of frontage on the northern side of Collegeview Avenue, 50 feet of frontage on the southern side of Lagrange Avenue, and a maximum depth of approximately 300 feet. Lot A contains a three-story mixed-use (commercial and residential) building located on the southern portion of the parcel, adjacent to Collegeview Avenue, with a restaurant patio area at the eastern exterior of the structure, and a paved alleyway at the western exterior. Lot B contains a two-story mixed-use building located on the southern portion of the parcel, adjacent to Collegeview Avenue. Lot C contains a three-story apartment building located on the northern portion of the parcel, adjacent to Lagrange Avenue (see below). Both Lots B and C have paved driveways present at the easternmost portions of the property which lead to a connected rear parking area. The remainder of the property is composed of landscaped areas. City-owned sidewalks define the northern and southern borders, and a chain link fence defines a portion of the western border. Wood fences mark the boundary between Lots A and B, and define the majority of the eastern border; the remaining property lines are undefined.

3.3.2.2 Structures

The building on Lot A is a three-story wood-frame structure with a full basement and a gabled roof. Exterior siding is vinyl and the roof is covered by asphaltic materials. Town of Poughkeepsie Assessor's Office records indicate that the building is "old"; Sanborn maps suggest a construction date as early as 1913. The building contains twelve apartments distributed between the rear of the first floor and the upper floors. Pizzeria Bacio and House of Nutrition occupy the commercial storefronts on the first floor adjacent to Collegeview

Avenue. Interior floors are covered with composite floor tiles and wood, or are concrete (basement only). Walls and ceilings are generally covered with wallboard.

The building on Lot B is a two-story wood-frame structure with a full basement and a gabled roof. Exterior siding is vinyl and the roof is covered by asphaltic materials. Town of Poughkeepsie Assessor's Office records indicate that the building is "old"; Sanborn maps suggest a construction date as early as 1913. The building contains two apartments on the upper floors and the Barber Haus occupies the first floor commercial space. Interior floors are covered with wood, or are earthen (basement only). Walls and ceilings are generally covered with wallboard.

The building on Lot C is a three-story wood-frame structure with a full basement and a gabled roof. Exterior siding is vinyl and the roof is likely to be covered by asphaltic materials. Town of Poughkeepsie Assessor's Office records indicate that the building was constructed circa 1900; Sanborn maps show the building present as early as 1913. The building contains four apartments. The basement floor is concrete and foundation walls are stone and brick. The first through third floors were not accessible at the time of the inspection.

Potable Water Supply and Sanitary Waste

According to available information, the subject property is serviced by the public water supply and sanitary sewer systems. No water supply wells were noted on the subject property during the site inspection and no on-site uses of groundwater are known to exist for the subject property. A debris filled potential cistern is located just south of the structure on Lot C.

Heating/Cooling

The on-site structure on Lots A and C are heated with hot water generated by oil-fired boilers located in the basement of each building. The on-site structure on Lot B is heated with hot air generated by an oil-fired furnace located in the basement. Cooling in commercial storefronts on Lot A is provided by exterior air condensing units located along the eastern wall of the structure, adjacent to the patio area. Cooling for the on-site structure on Lots B and C, and in the residential areas on Lot A, is provided by window-mounted air conditioning units. Natural-gas water heaters are located in each structure adjacent to the heating systems.

3.3.3 Specific On-Site Environmental Conditions

Debris Areas

Approximately 5 cubic yards of debris is present in the cistern on Lot C. No other significant quantities of debris were noted on the subject property.

Petroleum Storage

Two empty, disconnected, manifolded 275-gallon fuel oil aboveground storage tanks (ASTs) are located at the eastern portion of the basement of the structure on Lot A. According to Mr. Guernsey, the tanks have been empty and disconnected since the heating system was converted to natural gas (likely circa 2017 based on notations in Town of Poughkeepsie Building Department records). The fill port and vent pipe associated

with the ASTs are located beneath the porch at the eastern exterior of the structure (the portion of the fill port that extruded past the edge of the porch has been broken off).

A second empty, disconnected 275-gallon fuel oil AST, which was previously used for on-site heating according to Mr. Guernsey, was noted to be discarded at the western portion of the basement on Lot A. No evidence of the fill port or vent pipe associated with that former tank was observed during the site inspection. No evidence of staining, leaking, or other signs of contamination was noted on or around the tanks during the site inspection.

According to Mr. Guernsey a 1,000-gallon UST was closed-in-place at the eastern exterior of the structure on Lot A. Prior to being closed-in-place, a NYSDEC spill event (No. 9511747) was reported for the subject property due to the UST failing a tank tightness test (see the State Chemical and Petroleum Spill and Leaking Underground Storage Tank Events subsection, below); the tank, however, passed a subsequent re-test, likely after being repaired.

A discarded fuel line was noted in the basement of the structure on Lot C. No other evidence of fuel oil tanks was noted on that property.

Chemical Storage

Several small containers of common cleaning and maintenance products were observed in the commercial storefronts on the first floors of the structures on Lots A and B. No staining or other evidence of a release from these containers was observed during the site inspection. No other small quantities of chemical products, aboveground chemical storage tanks or indications of underground chemical storage tanks (e.g., fill ports or vent pipes) were observed on the property.

Asbestos-Containing Materials

Asbestos-containing materials (ACM) contain over 1% of any type of asbestos. Asbestos has been used in a wide variety of building products based on its thermal and resilient qualities, including insulation, floor and ceiling tiles, wallboard systems, texture-finished ceiling and wall materials, sprayed- or troweled-on structural coverings, and siding and roofing materials. Although ACM are no longer used as extensively as they were prior to the 1970s, asbestos may still be found in common building products used today. The presence or absence of asbestos can only be determined through physical analysis of material samples. GBTS has not reviewed any asbestos surveys for the property.

Suspect building components observed during the site inspection included roofing, siding, floor coverings, wallboard systems, and ceiling tiles. All materials appeared to be in good condition. Construction materials not readily observable during the site inspection (e.g., mastics, caulking, pipe insulation present within walls, etc.) could potentially contain asbestos. According to Mr. Guernsey, a limited survey for ACM was conducted circa 1996, however no documentation of that survey was available for review.

Lead-Based Paint

Lead-based paint (LBP) contains at least 0.5% lead by weight. The presence of LBP presents a risk of both environmental contamination and potential health impacts from inhalation and/or ingestion of paint dust or chips (lead in paint has been regulated since 1978). The presence or absence of lead in painted surfaces can only be determined through the physical analysis of material samples. GBTS has not reviewed any LBP surveys for the property. Based on the likely earliest date of construction and/or subsequent maintenance work, LBP may be present at the subject property. All painted surfaces observed during the site inspection were in good condition.

Wastewater Discharges

The term “wastewater” indicates water that: (1) is or has been used in an industrial or manufacturing process; (2) or is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant; (3) or conveys or has conveyed sewage (water originating on or passing through or adjacent to a site, such as stormwater flows, is not generally considered to be wastewater). No evidence of wastewater discharges into drains, ditches, or streams on or adjacent to the property was observed during the site inspection.

Interior Floor Drains/Sumps/Conduits

A floor drain and a sump pump were noted in the basement of Lot A. No staining, odors, or other evidence of contamination was noted in or near the drain or sump pump. According to available information, all floors drains and sumps inside the buildings lead to the municipal sewage system. No other floor drains, sumps, or conduits to the subsurface were noted inside on-site structures.

Stormwater Management and Exterior Drains/Sumps/Conduits

No exterior stormwater catch basins, drains, sumps, or other potential significant conduits to the subsurface, or indications of liquid discharges into drains, ditches, or streams on or adjacent to the property, were observed during the site inspection.

Staining/Corrosion/Leaks

No evidence of corrosion, leaks, or staining (indicative of an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products onto the property, including on-site structures and paved areas) was observed on the property.

Topographic Irregularities

No overt topographic irregularities (e.g., sinkholes or berms) indicative of the presence of non-natural materials (including debris) in the subsurface were observed on the property.

Vegetative Features

No overt areas of stressed or dying vegetation indicative of the presence of contaminants in surface or subsurface soils were observed on the property.

Pits, Ponds, or Lagoons

No pits, ponds, or lagoons exhibiting evidence (e.g., discolored water, distressed vegetation, obvious wastewater discharge) of holding liquids or sludge containing hazardous substances or petroleum products were observed on the property.

Surface Waters

No surface water bodies are located on the subject property.

Odors

No unusual odors indicative of the presence of contamination were noted during the site inspection.

PCBs

Polychlorinated biphenyls (PCBs) were widely used in equipment such as transformers, capacitors, and hydraulic equipment until 1979 when the USEPA regulated their use in this capacity. No equipment likely to contain PCBs was noted on the subject property.

3.3.4 Environmental Concerns at Adjoining and Nearby Properties

Adjoining and nearby properties were observed from the subject property and from public thoroughfares to identify any recognized environmental conditions or other potential environmental concerns. A dry cleaning facility (Gladmore Cleaners) is located approximately 60 feet northwest of the subject property (see Section 3.1.4, *City Directories*); potential impacts from this site are discussed in Section 4. No other potentially significant environmental conditions were noted on adjoining or nearby properties.

4.0 PHASE II SUBSURFACE INVESTIGATION

Environmental sampling was conducted on Lot A of the subject property by GBTS in conjunction with the Phase I ESA in order to evaluate the potential for petroleum impacts from the closed-in-place 1,000-gallon fuel oil UST and the associated spill event, as well as potential solvent impacts from a nearby historical dry cleaner.

4.1 Summary of Services

GBTS documented the presence or absence of contamination through a ground penetrating radar (GPR) survey, collection of soil samples from mechanized soil borings, and collection of soil vapor samples. A map indicating relevant site information and fieldwork locations is provided on Page 8.

4.2 Fieldwork Activities

4.2.1 Site Preparation Services

GBTS requested a complete utility markout of the site (as required by New York State Department of Labor regulations) and on-site personnel reviewed the markout and underground utility locations prior to the initiation of fieldwork.

A private utility markout and GPR survey was performed for GBTS by East Coast Geophysics, Inc. on August 1, prior to extending soil borings (see Appendix H). The survey was conducted at the entirety of the subject property. The survey was limited in certain areas on Lots B and C by the presence of parked cars and vegetation. The survey indicated the presence of a subsurface anomaly in the suspected location of the closed-in-place 1,000-gallon UST at the eastern exterior of the structure on Lot A, just north of the restaurant patio area (see Selected Site Features Map, Page 8). No other significant subsurface anomalies were encountered in any surveyed areas.

4.2.2 Fieldwork Methodology and Observations

General Protocols

All encountered material was screened with a properly calibrated MiniRAE Lite (Model PGM 7300) 3000 (Model PGM 7320) photo-ionization detector (PID) for the presence of any volatile organic vapors where appropriate (reading in parts per million [ppm]). GBTS described all encountered media in field log books, including specific characteristics, the presence of foreign materials, and field and instrument indications of contamination (e.g., staining, odors, PID readings). Relevant information from GBTS logs for each soil boring location is provided in Appendix I.

GBTS collected samples in general conformance with NYSDEC and NYSDOH sample collection and decontamination protocols. All field personnel wore dedicated, disposable gloves during fieldwork activities, and any non-dedicated sampling instruments were decontaminated prior to media collection. Soil samples were collected directly from disposable acetate sleeves at boring locations utilizing clean, dedicated

sampling tools. Soil collection for analysis of volatile organic compounds (VOCs) was conducted according to USEPA Method 5035 fieldwork protocols, utilizing laboratory sampling kits.

All samples were placed in laboratory-supplied containers and maintained at proper temperatures (using ice-packs and coolers as appropriate) while in GBTS's custody. Samples were transported via courier to York Analytical Laboratories, Inc. (York; soil) and Alpha Analytical, Inc. (Alpha; soil vapor), NYSDOH certified laboratories (ELAP Certification Nos. 10602 and 11148, respectively). Appropriate chain-of-custody procedures were followed.

Extension of Soil Borings

GBTS extended four (4) soil borings within approximately 1 foot of the edge of the UST (as determined by the GPR survey). The extent of the structure and the attached porch prevented access to the western and southern sides of the UST.

All soil borings were extended by personnel from Core Down Drilling using a tracked Geoprobe (7822DT) equipped with a direct-push, macro-core sampler lined with disposable sleeves. Sampling was conducted at each boring location at intervals of 5 feet to a maximum depth of 10 feet bgs.

Subsurface soils encountered at the Site during the extension of the soil borings consisted of medium to coarse sands to a depth of approximately 2.5 feet bgs, silty clay from approximately 2.5 to 5 feet bgs, and medium to coarse sands from 5 to 10 feet bgs. All borings were extended to a maximum depth of 10 feet bgs; no groundwater and no bedrock were encountered during the extension of soil borings. No overt signs of contamination (odors, staining, or elevated PID readings) were observed during the collection of soil samples.

Collection of Soil Vapor

GBTS constructed three (3) soil vapor probes through the concrete at the westernmost (SV-01), northernmost (SV-02), and easternmost (SV-03; adjacent to area of 1,000-gallon closed-in-place UST) portions of the basement of the on-site structure on August 17, 2023. Each vapor probe was constructed by drilling a hole to approximately 6-8 inches below the surface, and inserting a ½-inch diameter sampling port attached to ¼" Teflon tubing. The installed vapor probes were screened with a photoionization detector for VOCs) prior to sampling; no significant readings were recorded. Three borehole and tubing volumes were purged prior to sampling using a GilAir air-sampling pump (maximum rate 0.2 L/minute). Samples were collected into 6-liter Summa Canisters equipped with two-hour flow controllers (rate not exceeding 0.2 liters/minute). No overt signs of contamination (elevated PID readings) were detected during the collection of soil vapor samples.

4.3 Laboratory Analysis

4.3.1 Standards, Criteria and/or Guidance

Soil

Laboratory results for all compounds in soils are compared to NYSDEC Remedial Program Soil Cleanup Objectives (SCOs) for Unrestricted Use (UU) and Restricted-Residential Use (RRU) as provided in 6 NYCRR Subpart 375, Tables 375-6.8(a) and 375-6.8(b).

Soil Vapor

The State of New York does not have any standards, criteria or guidance values (SCG) for volatile chemicals in subsurface vapors; the NYSDOH, however, utilize several decision matrices for evaluating potential soil vapor intrusion for a limited number of compounds under specific circumstances (see NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York [October 2006]). Potentially applicable matrix values and/or relatively high concentrations of VOCs are identified in the report text and in data summary tables, as warranted.

4.3.2 Sample Submission

Based on an absence of field evidence of contamination, one soil sample was submitted per boring from the interval intercepting the likely invert of the UST (approximately 8 feet bgs).

Samples were transported on August 18, 2023 via courier to York (soil) and Alpha (soil vapor) for chemical analyses, under appropriate chain-of-custody procedures. Soil samples were submitted for laboratory analysis of NYSDEC CP-51 VOCs (USEPA 8260), and semi-volatile organic compounds (SVOCs; US EPA 8270). Sub-slab vapor samples were submitted for analysis of VOCs using USEPA TO-15.

4.3.3 Laboratory Results

Laboratory results are summarized below. Results are reported as milligrams per kilogram (ppm) for soil and micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) for soil vapor. Data summary tables and the laboratory reports are provided in Appendix J and Appendix K, respectively.

No VOCs or SVOCs were detected in any soil sample submitted for analysis.

Two VOCs identified in NYSDOH decision matrices, tetrachloroethene (PCE; peak $292 \mu\text{g}/\text{m}^3$) and trichloroethene (TCE; peak $39.6 \mu\text{g}/\text{m}^3$), were detected in vapor at all sampling locations (peak SV-02). These values potentially indicate that monitoring or mitigation would be required if high levels of this compound were found inside an on-site structure. PCE and TCE are solvents associated with dry cleaning activities, and are potentially indicative of a historical release of solvents from the nearby dry cleaner at 50 Raymond Avenue.

5.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

Gallagher Bassett Technical Services (GBTS) performed a Combined Phase I and Phase II Environmental Site Assessment in conformance with the scope and limitations of ASTM E 1527-21 to identify recognized environmental conditions (RECs), historical RECs (HRECs) and/or other significant environmental liabilities resulting from or associated with the storage, use, transport, or disposal of hazardous or regulated materials at the property located at 18 Lagrange Avenue, and 5-7 and 9 Collegeview Avenue, Town of Poughkeepsie, Dutchess County, New York. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report.

Identified RECs are presented in Section 4.1. GBTS's findings, conclusions and recommendations regarding RECs, other potential environmental liabilities associated with the property, and de minimis conditions are presented in Sections 4.2 through 4.5.

5.1 Recognized Environmental Conditions

Significant Data Gaps

The Environmental Professionals preparing this report have not identified any significant data gaps that affect their ability to identify RECs.

Overview of Identified RECs

This assessment has revealed evidence of the following REC in connection with the property:

- Elevated levels of chlorinated solvents in on-site soil vapor – Section 5.2

This assessment has revealed evidence of the following HREC in connection with the property.

- One closed NYSDEC spill event – Section 5.3

5.2 Site History

Available historical information documents residential use of the subject property as early as 1913 and small commercial use as early as 1950 (no evidence of industrial or other significant commercial use of the property was found during the review of historical records).

No further investigation of historical records is recommended.

The potential exists that debris from the demolition of former on-site structures may be present in the subsurface (such debris could contain lead, asbestos, or other regulated materials).

Any future development activities at the property should be conducted with an awareness of the potential presence of subsurface debris and provision should be made for the proper management of any materials that warrant special handling.

The nearby property at 50 Raymond Avenue (present-day Gladmore Cleaners, located approximately 60 feet northwest), has likely contained a dry cleaning facility since as early as 1937. In response to this historical finding, GBTS conducted a Phase II subsurface investigation at Lot A to screen for any impacts from chlorinated solvents. Laboratory data identified peak levels of tetrachloroethene (PCE; 292 $\mu\text{g}/\text{m}^3$) and trichloroethene (TCE; 39.6 $\mu\text{g}/\text{m}^3$), solvents associated with dry cleaning activities, beneath the building slab, potentially indicating a historical release from the dry cleaner. This contamination is considered a REC.

It is recommended that an active sub-slab depressurization system be installed at 5-7 Collegeview Avenue in order to minimize the risk of soil vapor intrusion.

5.3 Review of Regulatory Records

Lot A of the subject property was identified as the site of closed NYSDEC spill number 9511747, which was reported due to a tank test failure, and is considered a HREC. According to documentation provided by the property owner, a 1,000-gallon underground storage tank (UST) at Lot A passed a subsequent tank test and was closed-in-place circa November 1996 (residual liquids were pumped from the tank and disposed off-site). A Phase II subsurface investigation by GBTS indicated no impacts to soils located in close proximity to the former UST. These findings support the conclusion that impacts from the former UST and closed spill event, if any, are likely to be minimal. No other relevant releases or other significant environmental activities were identified in regulatory records for the subject property and nearby sites.

No further investigation of regulatory records is recommended.

5.4. Relevant Site Observations and General Concerns

Three disconnected fuel oil aboveground storage tanks (ASTs) are located at the subject property.

It is recommended that all ASTs be removed from the subject property.

Small quantities common cleaning and maintenance materials are stored on site.

It is recommended that cleaning and maintenance materials be properly stored.

Debris is present in a cistern on Lot C. None of these debris materials were judged to pose a threat to the environmental integrity of the subject property.

It is recommended that debris materials be disposed off-site.

5.5 Non-scope Considerations

Asbestos-containing materials (ACM) and lead-based paint (LBP) may be present at the subject property.

Any suspect material at the subject property should be tested for asbestos or lead, or, in the absence of analytical data, be treated as though it contained asbestos or lead.

Elevated concentrations of radon may be present at the subject property.

It is recommended that radon testing be conducted at the on-site structures.

7.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

The following statements are required by 40 CFR 312.21(d) of the environmental professional(s) responsible for conducting and preparing the Combined Phase I and Phase II Environmental Site Assessment report.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

and

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Scott Spitzer – September 15, 2023

Poughkeepsie, NY 12602

SUBJECT: TANK TESTING AT THE FOLLOWING SITE(S):

VASSAR EAST / GURNSEY REAL ESTATE / Dates: 12/13-21/95
5 - 7 COLLEGEVIEW AVENUE
POUGHKEEPSIE, NY / Spill No.: 9511747

Dear Mr. Gurnsey,

Thank you for choosing our company for your tank testing needs. Enclosed please find very important information that you need to complete and send to the NYS DEC to validate this testing.

Enclosed are:

- Two (2) copies of the test report; one kept by you for a period of at least (5) years and the other mailed to the DEC.
- A statement of our technician's qualifications.
- A letter to the NYS DEC which you have to complete parts #1 and #2.
- A self-addressed envelope provided for your convenience.
- An excerpt from the NYS DEC verifying all of this necessary information.

If we've found a leak, we have already notified the NYS DEC and acquired a spill number for the site. (Spill number, if any, is listed above).

- Note to customers in Rockland County: We have already mailed a copy of the test report to Rockland County Health Department, attention of Mr. Brian Hunderfund. This is to keep our testing license valid.

QUALIFICATIONS OF TEST TECHNICIANS

All tightness tests must be performed by a technician who has an understanding of variables which affect the test, is trained in the performance of the test and meets the qualifications set forth by the department.

(2) TEST REPORTS

(i) A test report must be sent by the owner or technician to the department no later than thirty (30) days after performance of the test, except any test or inspection which shows the facility is leaking must be reported by any person with knowledge of such leak to the department within two (2) hours of the discovery of such leak. Notification must be made by calling the telephone hotline (518-457-7362).

(ii) All test reports must be in a form satisfactory to the department and must include the following information:

- a. facility registration number
- b. identification number used on the application form required in subdivision 613.2(f) of this title for tank and piping system tested.
- c. date of test
- d. results of test
- e. test method
- f. certification by the technician that test complies with the criteria for a tightness test in paragraph 613.5(a)(6)
- g. statement of technician's qualifications
- h. address of technician
- i. signature of technician

(iii) A copy of the test report(s) must be maintained by the owner of the facility for at least five (5) years.

3. REPAIR, REPLACEMENT AND CLOSURE OF LEAKING SYSTEMS

Any part of the storage facility which is not tight must be promptly repaired, replaced or repaired in accordance with Part 614 of this title or taken out of service in accordance with section 613.9.

4. CRITERIA FOR TIGHTNESS TEST

A tightness test is a test acceptable to the department which will determine if a tank and piping system is tight or not tight. The test must be capable of detecting a tank or piping leak as small as five hundredths (0.05) of a gallon in one hour accounting for variables such as vapor pockets, thermal expansion of product, temperature stratification, groundwater level, evaporation, pressure and end deflection.

These regulations were excerpted from the December 27, 1985 edition of the DEC Publications.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP..... EDR Proprietary Manufactured Gas Plants

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 SEMS site within approximately 1/4 to 1/2 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 CORRACTS site within approximately 1 of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
J & J MFG EPA ID:: NYD001328236	350 DUTCHESS TNPK ST	NE 1/4 - 1/2 (0.434 mi.)	M51	152

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-TSDF site within approximately 1 of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 RCRA-VSQG site within approximately 1 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/06/2023 has revealed that there are 4 NY SHWS sites within approximately 1 of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/21/2022 has revealed that there is 1 NY SWF/LF site within approximately 1 miles of the target property.

VASSAR COLLEGE FARM	124 RAYMOND AVENUE;	S 1/4 - 1/2 (0.484 mi.)	N54	243

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/06/2023 has revealed that there are 12 NY LTANKS sites within approximately 1 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/06/2023 has revealed that there are 27 NY Spills sites within approximately 1 miles of the target property.

EXECUTIVE SUMMARY

Site ID: 641813
Spill Date: 2022-08-26

NY SPILLS 80: Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.

A review of the NY SPILLS 80 list, as provided by EDR, and dated 11/02/2010 has revealed that there is 1 NY SPILLS 80 site within approximately 1 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
Not reported	3 FOWLER AVE.	N 1/8 - 1/4 (0.213 mi.)	I32	102

Other Ascertainable Records

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 03/06/2023 has revealed that there are 2 NY DRYCLEANERS sites within approximately 1 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2022 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 1 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

NY RGA HWS: The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

A review of the NY RGA HWS list, as provided by EDR, has revealed that there are 2 NY RGA HWS sites within approximately 1 of the target property.

DEC Memo: "6-14-13: Spoke with Jess Hicks/EnviroCl. This bldg is the old Juliet Theatre which is being renovated. Asbestos abatement is going on at this time. Crew noticed oil under plastic at furnace. Jess says small qty of oil appears to have leaked from a crimped line at furnace and gone under wall into another room and into a sump. Sump pump not on - no electricity in bldg. They will return after weekend to investigate further. jm 9-05-13: V.Mc.: See 3 page update, inc. site inspections noting: *) Also see 130-3319, dup spill report. *) 6-19-13: No activity on site. *) 6-19-13: V.Mc. at EnviroClean, meet w/Stacy Smit. problem with feed line to furnace caused spill. Clean up with speedy drier. Some impacts to adj. building, boom/pads deployed. Sump pump shut down, no power. Dept. of Labor shut down job, asbestos removal. *) 7-10-13: V.Mc. at EnviroClean. Meet with Stacy. Report forwarded to DEC, not received. To be re-submitted. *) 7-25-13: No report to date. *) 7-26-13: p.2: Meet with Mr. W.Effron/3 Arts. No odor on 1st floor or basement. Meet with employee at Fresco Tort, No odor on 1st floor or basement. Inspected sump pit in basement, bio-sheen noted. Employee noted that pit overflows each night and that he mops it up. #48 Raymond Ave. Asbestos Project suspended by NYS Dept. of Labor. Zorona Rest. & Cafe and Chan's Rest. both close due to fire at Chan's. #60 Raymond Building permit # 20130875, dated 5-21-13 for DEMO. Foreign Affairs closed. *) 7-26-13: V.Mc. at EnviroClean, meet with Jackie and Adam. Stage project manager, away on vacation for a week. Req. sent by e-Mail, no response yet. *) 9-3-13: Spill Remed. Report from EnviroClean, dated 8-27-13, e-Doc. *) 9-4-13: p.3: Meet with Jackie & Adam/EnviroClean, Stacey in field. Report submitted incomplete. Sample from sump pit needs to meet, or at least be close to standards. Sump pit should be vac out until clean water sample can be obtained. 10-1-13: V.Mc.: See Spill Remediation report from EnviroClean, dated 9-16-13. Sump pit re-sampled, results meet standards. NFA."

Remarks: "concrete floor bleed into secondary room floor - sub pump in second room - no pump contained clean up pending"

MINDFUL DENTAL (Continued)

S118260426

Remarks: Called and spoke to office assistant, who said that owner was one of the dentists there, Dr. Nazmar Zahangir. She would be calling him, and would have him call back. Anonymous caller said that several people noted this happening, and that the dentists were asked about it, but got no info. At my visit, neighbor across the street claimed he saw some activity at the house. Spoke to the wife of the Dr., Dr. Indira Rocha, who is also a dentist at this practice. Her cell is 917-664-1183. She said the basement was being cleaned out due to moisture-related issues, and carpenter ants. There is a 275 AST in the basement with a small amount of fuel oil in it. They are looking to get rid of it, and she has several contractor contacts for this. She and her husband are in Florida at this time, but will be back next week to address this. dw 10/6/15 Spoke to Dr. Rocha, who said that basement AST was pumped out, and removed. There was no fuel spill. Basement has been fumigated and cleaned up. NFA dw "

"Unknown named tank removal contractor removing tank from dental practice and dumping the old oil from the old tank in the bushes behind the practice. The caller states he advised that what they were doing was illegal and they ignored his advise."

DEC Memo: "9/11/15: I spoke with Adam Scheu at Optima. This UST is at the Dutchess County Office of Information Services. Optima has already begun stockpiling soil. No evidence of ground water impact at this time. Adam states they should complete digging out the contamination on Monday. The closure report will follow when work is complete. jod Reports of contaminated soil being moved without a valid 364 permit to an unlicensed 360 facility. Optima utilizing Conklin's permit, which needed to be transferred; DLE investigating RDB Spill re-assigned to Melissa RDB
9/16/15 Received an email from ECO Whalen to check on soil pile. Went to site, no soil at site....mm 9/17/15 ECO Whalen issued a ticket to Optima for transporting waste to an unlicensed facility. 9/22/15 Went to site, product is weeping into excavation along the foundation wall. Optima was on site. They are vac'ing excavation every morning prior to excavating and as of today, soil is being stored in roll-offs on site. Went to DCDPW on Rt44/55 and Burnett Blvd. Contaminated soil from the site was brought to DPW which is not a permitted storage facility. The County and Optima were instructed in an email from Mastro to remove the soil immediately...mm 9/24/15 Went to DCDPW at 3:30pm. Most of the contaminated soil has been removed and there was a Conklin truck being loaded. At the spill site, two wells were installed in the excavation. JK OMara approved the workplan from Optima for this spill yesterday....mm 1/08/16 Based on the data contained in the UST/Spill Closure Report prepared by Optima, no further action is required...mm"
Remarks: "Found contamination during removal of tank. Clean up is pending."

Modified By: MJGRIFFI
Last Modified: 05/09/2022
Material Name: lube oil

Tank Number: 11
Tank Id: 83200
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
G00 - Tank Secondary Containment - None
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
I99 - Overfill - Other
H00 - Tank Leak Detection - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 11/16/2003
Capacity Gallons: 275
Tightness Test Method: NN
Date Test: Not reported

Spiller Company: 999
Contact Name: ARLINGTON FIRE CHIEF BILL STEENBURGH
DEC Memo: "3/03/21: I spoke to the Arlington Fire Chief on scene. This property is about two blocks north of Vassar College. Basement 275 received a delivery from Empire Fuel earlier today. FD says there is now an active leak in a seam on the tank. Fuel has impacted a basement sump. The sump pump has been unplugged. It is currently unknown if the pump goes to the storm drain or sanitary line. Empire Fuel is on scene at this time. They are pumping oil from the tank into 55 gallon drums. FD has put down pads and speed-dry. Fire Chief states he was told contractor has been contacted and is en route but he does not have an ETA at this time. jod Update: I spoke with Empire Fuel. Home owner is Audrey Casals at 845-505-0592. Empire reports they contact VazCo on behalf of the homeowner and Vazco is on scene. I then spoke with Vazco and confirmed they have a crew on site pumping out the AST. Home owner is contacting insurance. jod 3-4-21 Spoke to Vaz-co

regarding the site. Vaz-co has put blowers and scrubbers in the house to mitigate the strong odors. The impacted sump leads to a collection basin that drains into the homes septic system. Vaz-co believed that the septic tank may be filled with oil. Vaz-co is conducting a mixed waste and investigation/remediation of the leach field may be needed. TJP to inspect. ML Update: Left voicemail for homeowner to contact DCDOH for health related concerns. Notified DCDOH of the indoor air issue. TJP inspected the site and determined that the home is on public water and sewer. The shower drain that filled with fuel oil is connected to the impacted sump by a 2' PVC pipe. The sump drains the sanitary sewer. The sump was off prior to the spill. Surface cleaning of the concrete and the sump will be needed. ML 3-15-21 on 3/12 empire oil responded to NOV and notified DEC that their insurance has been notified. ML 6-14-21 since last update Mid-Hudson Geosciences was retained and remediating the spill. Free product was discovered during investigations around the sump pump. Mid-Hudson Geoscience installed a diaphragm pump, sand filter, oil water separator and a carbon treatment bed. Also plan to propose SVE system. ML 9-1-21 Received update report showing oil water separator is successful. ML 11-19-21 Received summary report showing soil and water is at or close to standards. DEC Memo:	"8/26/22- I spoke to Chief Mills with Town of Poughkeepsie: Substance is not foamy, more like milk. Neutral pH They tried to follow the creek but it disappears under the road. Here they can almost see the substance separately from the water that it is mixing with. At this point is the boundary between town of Pk and City of Pk. Likely some storm drains along the road that discharge to the stream. Nothing reported by the neighboring city of Pk (such as dumping, MVAs) -MS"
Remarks:	"UNKNOWN WHITE FLUID ON WATER NO CLEANUP"

DEC Memo: "4/5/12: Spill reported in relation to 4/4/12 inspection. The following was found: -SIR report shows loss for regular (tank 1) during period of 7/29-8/28 2011. Leak rate given as 0.46 gal/hr. -A number of uninvestigated/poorly investigated inventory exceedences for all 3 tanks within last 4 months. jc 05-29-14 questioned antea and legal no available update RDB 1-8-15 there has been no response from Getty/Tyree/Antea/ since may 2014; now they acknowledge and a plan to remove and replace tanks is in place. RDB 7-27-15, Just a follow up from last week. Paragon Environmental is mobilizing equipment and personnel today to start the tank pull work on behalf of the property owner. They will not officially start pulling tanks until tomorrow, but they are going to try to test pit for me today around 2:00pm so that we can collect a soil waste class sample just incase. If any impacts are discovered we will call in a new spill number and keep you informed. If you need anything else let me know, thanks. 12/09/2015 December 1, 2015 UST Closure/Soil Excavation Report & Closure Request from T-Environmental reviewed, filed in D2, NFA. mt"

COMMERICAL - USED CAR LOT (Continued)

S129127880

Spiller Company: 999
Contact Name: JAY
DEC Memo: "11/21/22 - Removing a 1K gal. gasoline UST. Groundwater has not been encountered. The UST had holes and no product. There is impacted soils. There are probably at least two additional USTs that need to be remove. KAB 12-19-22 100 ton of soil. no product but has odor. Hit. close to 9' have 3 tanks to remove. 96. 12-23-22 Site meeting on 12/22 with Jay, FJT and ML followed by onsite call with property representative (Kyle). While onsite the excavation has approximately 2' of groundwater present. -Groundwater has suspended fined which made observing the bottom difficult. No sheen on the groundwater but minor areas of weather product visible at the edges of parts the excavation. Jay recovered an excavator bucket of material from the base of the excavation. Soils have a strong petroleum odor and is visually impacted. Jay indicated that this soil screened ~350ppm on the PID. We discussed the installation of wells with VEFR events, and the Department determined that method would not be appropriate to address gross soil contamination. To address wet soil JD Tank will stage soils in a section of the excavation above the water table to allow them to drain into the excavation. Discusses reuse of soil from another site and what requirements would be to use it. Discussed PBS requirements for piping and vent lines including removing vs capping the vent piping. Email sent summarizing site visit and call. ML 1-24-23 Spoke to Jay regarding excessive groundwater impacting remediation. Discussed possibility of entering into Stip to allow for discharge of treated groundwater. Stip guidance sent. ML"

Remarks: "unk amount/ tank leaked/ clean up pending"

Updated By: JAQUINN

Site Description: "The site is located between 721 and 753 Main Street in a commercial/light industrial area in the eastern part of the City of Poughkeepsie, Dutchess County, NY. The area of investigation occupies approximately two blocks (approximately 300 feet by 800 feet) and comprises 17 separate businesses and properties on both the north and south sides of Main Street. The present and former businesses that occupied this area included two dry cleaners, a gas station, a transmission shop, an auto parts store and other businesses. The nearest private residence is located approximately 200 feet to the east-northeast and to the south. An investigation of a Cumberland Farms gas station under spill number 8804896 revealed the presence of PCE, TCA, TCE and DCA in addition to petroleum contamination. A soil vapor extraction system was installed in April 1990 to address the petroleum release, and the spill case was closed in October 1997. "

Env Problem: "A preliminary site assessment (PSA) conducted by the NYSDEC from 1994 to 1995 to investigate the chlorinated solvent contamination included subsurface soil borings and monitoring wells. The conclusion of the PSA was to leave the site with the P classification and continue the investigation to locate the source of these contaminants. A Site Characterization (SC) began in 2008 to locate the source(s) of contamination and address if the site may pose a significant threat. Minor contamination was found and no hazardous waste disposal was documented, and it was determined that the site should not be added to the Registry of Inactive Hazardous Waste Disposal sites. The contaminant of concern at the site was initially from PCE and breakdown products. Early investigations indicated a plume of groundwater contamination extends northwest from Cumberland Farms. Exceedances of groundwater standards were detected for PCE and TCE in most of the wells installed along Main Street. Subsequent investigations revealed no groundwater contamination with PCE or TCE any longer. In addition, neither PCE nor TCE was detected in any soil samples. The potential for a significant threat through soil vapor intrusion into structures in the area was addressed through soil vapor sampling conducted in 2008 and indoor air sampling conducted in 2009. Only low levels of PCE and TCE was revealed through soil vapor sampling conducted in 2008. The NYSDOH PERC badge sampling in 2009 did not reveal any detectable levels of PCE. The area is served by public water supply, which is supplied by the Hudson River."

Name: HARRIS CORPORATION
Address: MID-HUDSON INDUSTRIAL PARK & 70A OVEROCKER ROAD
City,State,Zip: POUGHKEEPSIE, NY 12603
Program: HW
Site Code: 58933
Classification: Site is properly closed - requires continued management.
Region: 3
Acres: 6.660
HW Code: 314061
Record Add: 11/18/1999
Record Upd: 03/30/2022
Updated By: JEBROWN
Site Description: "Location: The site is located at 70A Overocker Road in the Town of Poughkeepsie, County of Westchester, New York. The site is an approximately 7-acre parcel bounded by residential properties to the north, abandoned railroad bed (now a rail trail)and residential and commercial properties to the south, vacant land to the east, and industrial land and residential properties to the west. Site Features: The site consists of one building surrounded by paved parking areas to the east, south and west. Current Zoning and Land Use: The site is currently used by Abilities First, a non-[profit

which works to enhance the lives of disabled people and is zoned for commercial use. Past Use of the Site: Various chemicals were used in the work area as part of the manufacturing process at the Harris Corporation. In 1981, Harris Corporation personnel discovered a leak in the gravity drainage system for the facility. The gravity drainage system was used to collect waste liquid, mostly solvents, from a number of ventilation hoods. The waste liquid consisted primarily of methanol, along with lesser amounts of cellusolve (2-ethoxyethanol), xylene, n-butyl acetate, isopropanol, and acetone, all of which can be generally categorized as volatile organic compounds (VOCs). During the 1980s, Harris Corp. installed a total of 20 groundwater monitoring wells, including three recovery wells, at the site Site Geology and Hydrogeology: Groundwater flows to the south-southeast at a depth of approximately eight feet below ground surface. The site consists of fractured shale bedrock overlain by an unconsolidated soil layer. Generally, the bedrock is the primary pathway for groundwater. The primary water-bearing zones of the site are discrete, relatively deep fractures within the bedrock. The water-bearing zones vary in depth from 13 feet below ground surface to 99 feet below ground surface. "

Env Problem:

"Post-remediation: The primary contaminants of concern (COCs) at the site prior to remediation included trichloroethene (TCE), tetrachloroethene (PCE), 1,1,1-trichloroethane (TCA), ethylbenzene, xylenes, methanol, isopropanol, 1,2-dichlorobenzene (1,2-DCB), and 1,4-dichlorobenzene (1,4-DCB) in groundwater. Remediation of the site groundwater is ongoing utilizing a groundwater extraction system. Concentrations of the remaining COCs detected in groundwater are slightly above standards. As an example, maximum TCE concentration during the most recent monitoring period was 24 parts per billion (ppb). Historically it was as high as 1,290 ppb compared to a standard of 5 ppb. the groundwater extraction system is preventing migration of the contaminants in groundwater. A sub-slab depressurization system (SSDS) prevents migration of soil vapor to the indoor air of the on-site commercial building. Long-term operation, monitoring and maintenance is conducted according to the Site Management Plan. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. There were no exceedances of the screening levels in groundwater for any contaminant. "

Health Problem:

"Contact with contaminated groundwater is not expected as a deed restriction is in place that limits use of groundwater at the site. In addition, excavation on-site is limited in areas where groundwater is known to be impacted. Public drinking water is available to residents near the site, however, five nearby private water wells are still in use. Annual sampling has not detected any site-related contamination in the private wells. Contact with residual soil contamination is unlikely because it is located beneath the on-site building. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed into the on-site building to prevent vapors located beneath the slab from entering the building and impacting indoor air quality. Sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Past Use of the Site: Various chemicals were used in the work area as part of the manufacturing process at the Harris Corporation. In 1981, Harris Corporation personnel discovered a leak in the gravity drainage system for the facility. The gravity drainage system was used to collect waste liquid, mostly solvents, from a number of ventilation hoods. The waste liquid consisted primarily of methanol, along with lesser amounts of cellusolve (2-ethoxyethanol), xylene, n-butyl acetate, isopropanol, and acetone, all of which can be generally categorized as volatile organic compounds (VOCs). During the 1980s, Harris Corp. installed a total of 20 groundwater monitoring wells, including three recovery wells, at the site Site Geology and Hydrogeology: Groundwater flows to the south-southeast at a depth of approximately eight feet below ground surface. The site consists of fractured shale bedrock overlain by an unconsolidated soil layer. Generally, the bedrock is the primary pathway for groundwater. The primary water-bearing zones of the site are discrete, relatively deep fractures within the bedrock. The water-bearing zones vary in depth from 13 feet below ground surface to 99 feet below ground surface. "

Env Problem: "Post-remediation: The primary contaminants of concern (COCs) at the site prior to remediation included trichloroethene (TCE), tetrachloroethene (PCE), 1,1,1-trichloroethane (TCA), ethylbenzene, xylenes, methanol, isopropanol, 1,2-dichlorobenzene (1,2-DCB), and 1,4-dichlorobenzene (1,4-DCB) in groundwater. Remediation of the site groundwater is ongoing utilizing a groundwater extraction system. Concentrations of the remaining COCs detected in groundwater are slightly above standards. As an example, maximum TCE concentration during the most recent monitoring period was 24 parts per billion (ppb). Historically it was as high as 1,290 ppb compared to a standard of 5 ppb. the groundwater extraction system is preventing migration of the contaminants in groundwater. A sub-slab depressurization system (SSDS) prevents migration of soil vapor to the indoor air of the on-site commercial building. Long-term operation, monitoring and maintenance is conducted according to the

Site Management Plan. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. There were no exceedances of the screening levels in groundwater for any contaminant. "

Health Problem: "Contact with contaminated groundwater is not expected as a deed restriction is in place that limits use of groundwater at the site. In addition, excavation on- site is limited in areas where groundwater is known to be impacted. Public drinking water is available to residents near the site, however, five nearby private water wells are still in use. Annual sampling has not detected any site-related contamination in the private wells. Contact with residual soil contamination is unlikely because it is located beneath the on-site building. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed into the on-site building to prevent vapors located beneath the slab from entering the building and impacting indoor air quality. Sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

The primary water-bearing zones of the site are discrete, relatively deep fractures within the bedrock. The water-bearing zones vary in depth from 13 feet below ground surface to 99 feet below ground surface. "

Health Problem: "Post-remediation: The primary contaminants of concern (COCs) at the site prior to remediation included trichloroethene (TCE), tetrachloroethene (PCE), 1,1,1-trichloroethane (TCA), ethylbenzene, xylenes, methanol, isopropanol, 1,2-dichlorobenzene (1,2-DCB), and 1,4-dichlorobenzene (1,4-DCB)in groundwater. Remediation of the site groundwater is ongoing utilizing a groundwater extraction system. Concentrations of the remaining COCs detected in groundwater are slightly above standards. As an example, maximum TCE concentration during the most recent monitoring period was 24 parts per billion (ppb). Historically it was as high as 1,290 ppb compared to a standard of 5 ppb. the groundwater extraction system is preventing migration of the contaminants in groundwater. A sub-slab depressurization system (SSDS) prevents migration of soil vapor to the indoor air of the on-site commercial building. Long-term operation, monitoring and maintenance is conducted according to the Site Management Plan. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. There were no exceedances of the screening levels in groundwater for any contaminant. "

"Contact with contaminated groundwater is not expected as a deed restriction is in place that limits use of groundwater at the site. In addition, excavation on- site is limited in areas where groundwater is known to be impacted. Public drinking water is available to residents near the site, however, five nearby private water wells are still in use. Annual sampling has not detected any site-related contamination in the private wells. Contact with residual soil contamination is unlikely because it is located beneath the on-site building. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed into the on-site building to prevent vapors located beneath the slab from entering the building and impacting indoor air quality. Sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Description: "This site was a municipal landfill with limited vegetative cover, which later was covered and developed into a large shopping area; the 44-Plaza Shopping Center. During construction of Caldors in 1973, municipal waste was excavated and disposed of 100 feet north of the foundation. At present, this site is covered with vegetation. Casper Kill Creek flows south along the site. Much of the site is flat, except for the creek, which is located in a gully. The site forms a five to ten foot embankment near the access road at the side of Caldors. Leachate runoff was observed at the bottom of this embankment. The Town maintained approximately 10 acres of the site for storage and disposal of leaves and construction debris, but the area is no longer used for that purpose. Residences are nearby to the west and the site is very accessible; most of the residences are serviced by offsite municipal water. "
Env Problem: "Air monitoring identified 600 ppm of methane on the top of this embankment. An EPA Site Investigation has been completed. A Phase I Investigation was completed in 1984 and a Preliminary Site Assessment (PSA) is nearing completion. A final PSA Report is expected in late

1995. The Town of Poughkeepsie performed a sub-surface investigation on a 14.5 acre portion of the VanDeWater site known as the Espie property. The property is located on the west side of Tucker Road, approximately 1200 feet north of the intersection of Tucker Road and Friendly Lane. The investigation included the excavation of 23 test pits and 10 split spoon samples. The results of this investigation did not document the disposal of hazardous waste on the 14.5 acre Espie property. A petition from the Town of Poughkeepsie requesting the deletion of the 14.5 acre Espie property from the site description of the VanDeWater site was granted on March 1, 1995. In the past, leachate was discharged to Casperkill Creek."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 04/27/2022	Source: Environmental Protection Agency

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

PFAS 3: PFAS Environmental Site Remediation List

Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings are blends of resins and lubricants used in products such as water-repellent clothing, furniture, adhesives, paint and varnish, food packaging, heat-resistant non-stick cooking surfaces and insulation of electrical wires. Chemicals in this group include perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS).

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City's Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

18 LAGRANGE AVENUE, 5-7 AND 9 COLLEGEVIEW AVENUE
18 LAGRANGE AVENUE
POUGHKEEPSIE, NY 12603

TARGET PROPERTY COORDINATES

Latitude (North):	41.692139 - 41° 41' 31.70"
Longitude (West):	73.899519 - 73° 53' 58.27"
Universal Transverse Mercator:	Zone 18
UTM X (Meters):	591580.4
UTM Y (Meters):	4615967.5
Elevation:	179 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14123669 POUGHKEEPSIE, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
36027C0359E	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
36027C0358E	FEMA FIRM Flood data

36027C0367E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
POUGHKEEPSIE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Knickerbocker

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6 Min: 4.5
2	9 inches	18 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6 Min: 4.5
3	18 inches	29 inches	loamy sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
4	29 inches	72 inches	loamy sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6 Min: 4.5

Soil Map ID: 2

Soil Component Name: Haven

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 141	Max: 6 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
2	11 inches	22 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 141	Max: 6 Min: 4.5
3	22 inches	72 inches	stratified very gravelly sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 141	Max: 6 Min: 4.5

Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: 1.4 Min: 0	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 4

Soil Component Name: Cardigan

Soil Surface Texture: channery silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 38 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	channery silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.42 Min: 0.014	Max: Min:
2	7 inches	20 inches	channery loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.42 Min: 0.014	Max: Min:
3	20 inches	29 inches	channery silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.42 Min: 0.014	Max: Min:
4	29 inches	33 inches	unweathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.42 Min: 0.014	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 5

Soil Component Name: Fredon

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 23 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 5.6
2	9 inches	31 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 5.6
3	31 inches	70 inches	stratified very gravelly sand to loamy fine sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 5.6

Soil Map ID: 6

Soil Component Name: Udorthents

Soil Surface Texture: gravelly loam

Hydrologic Group: Class A/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5
2	3 inches	70 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Regards:

Michael Mesaros
East Coast Geophysics Inc.
501 Cambria Avenue Suite 281, Bensalem, Pennsylvania, 19020

1. BACKGROUND AND PROJECT OBJECTIVES

On August 1st, 2023 East Coast Geophysics personnel performed a limited geophysical investigation at 5-7, and 9 Collegeview Avenue and 18 Lagarange Avenue in Arlington, New York. The subject properties contain mixed use buildings with full basements. Surface conditions were gravel, concrete, asphalt, and tended lawn. Site project objectives are:

- Scan accessible areas of each property for metallic anomalies consistent with UST's.
- Locate all detectable underground utilities adjacent to the client proposed soil borings. Proposed borings were located adjacent to any anomalies of interest.

2. EQUIPMENT

This project used the following equipment to perform the geophysical survey on the property.

- *GSSI SIR-3000 Cart Mounted Ground Penetrating Radar System*

Ground Penetrating Radar is a non-invasive geophysical method in which electromagnetic pulses probe the subsurface, allowing targets to be imaged in real time. The EM pulses that are transmitted into the subsurface are reflected from various interfaces within the ground, including soil horizons, ground water, and manmade features such as underground storage tanks and utilities. The GPR antenna consists of a transmitter, which is used to create the EM pulse, and a receiver which collects returning signals. The high frequency waves created by the antenna can be generated in a range of 10 MHz to 2.6 GHz. The frequency of the antenna will vary the depth of penetrations, signal clarity, and attenuation into the subsurface. The antenna used for general field work by ECG is 400 MHz; this frequency range has the capability to transmit to a depth of up to 10 feet below ground surface. Surface and subsurface conditions can greatly reduce the effective depth of the signal penetration; these conditions include conductive soils, slag/fill material and standing water.

- *Radiodetection RD7000+*

RD7000 is an advanced high-range precision utility detector capable of detecting utilities up to 15 feet below ground surface. The RD7000+ has the capability of locating a variety of pipes and cables using either passive or active modes. **Passive** signals can be traced with only the transmitter using "natural" signals present in many conductors. These signals can be generated from an array of sources including power cables, power system return currents, and long wave radio frequencies. **Active** signals are known AC frequencies induced onto a target pipe or cable. User induced signals can help positively identify lines throughout areas of congested utilities.

- *Fisher TW-6 Pipe and Cable Locator*

The Fisher TW-6 Pipe and cable locator uses electromagnetic induction to locate conductive materials, such as manholes, tanks, pipes, cables, and other metallic materials in the subsurface. The transmitter generates an AC current which produces an electromagnetic field similar to a dipole magnet. When the transmitter passes over a conductive feature, the generated electromagnetic field becomes distorted as a result of the interference with the

natural electromagnetic field created by the conductive feature. The distortion of the generated field is detected by the receiver which emits a tone that is correlated to the conductivity of the feature.

3. PROCEDURE

ECG personnel began with a utility survey utilizing active detection with the RD-7000+. This is done by directing hooking up to known surface features across the site such as lamp posts, electric / communication boxes, and valves. The surveyor then performed a passive scan with the RD-7000+ receiver to detect any energized utilities that may have not been located with the active scan. Any detected utilities were then marked in the field.

ECG personnel then walked across the survey area with the TW-6 in 3-5 foot spacing increments. The approximate size and shape of any conductive targets detected was then marked in white and will be further investigated with GPR.

GPR was then utilized to confirm the approximate depth of any utilities detected with the RD-7000+ and the size, shape, and depth of any anomalies located with the TW-6. ECG personnel then scanned the remaining portions of the property in 3-5 foot spacing increments for any other anomalous features or utilities not detected with the RD-7000+ or TW-6.

4. RESULTS

- Underground Utilities – All utilities were marked in APWA designated colors.
 - o Electric (Red) – 2-3' bgs
 - o Natural Gas (Yellow) – 2-3' bgs
 - o Sanitary Sewer (Green) – 3-4' bgs. Note the sewer traverses into the rear lots behind each building and each property may contain onsite septic systems.
- Metallic Anomalies / UST's – TW-6 transects in the grass adjacent to the east side of 5-7 Collegeview Avenue detected a metallic anomaly. Approximate dimensions measured 10 feet by 5 feet. GPR transects over the area imaged a cylindrical feature at 2-3' bgs. The metallic anomaly is consistent with a UST.

No metallic anomalies consistent with UST's were detected adjacent to the buildings at 9 Collegeview or 18 Lagarange Avenue.

5. SITE LIMITATIONS

- Ground Penetrating Radar – GPR depth of penetration was limited to 3-5 feet bgs. The limiting factor was signal attenuation from near surface soils.
- Only areas adjacent to the client proposed soil borings were surveyed for utilities.
- Only areas in close proximity to the onsite structures were surveyed for metallic anomalies consistent with UST's.

6. DISCLAIMER

The limitations of a geophysical survey from both the site and equipment are important to consider when performing intrusive work at a survey site. The equipment is unable to maintain a constant depth of penetration or a constant level of effectiveness over the course of a survey due to subsurface and environmental conditions. The results provided both in this report and in the field should be used in conjunction with other methods including but not limited to, site plans, as-builts, sanborn maps, field observations, public-mark out services, soft-digging, pre-clearing, and historical documentation of the site. No survey or survey method can accurately show an exact image of all subsurface conditions. The presence of non-detectable subsurface utilities and structures is always a risk at any site. Please take caution when proceeding with invasive work.

Poughkeepsie NY, 12601
Attention: Megan King

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 18, 2023 and listed below. The project was identified as your project: **22003-0109**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 23H1437

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on August 16, 2023. The canister certification results are provided as an addendum.

L2348098-03: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2348098-03D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name: 22003-0109
Project Number: 22003-0109

Lab Number: L2348098
Report Date: 09/05/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name: 22003-0109
Project Number: 22003-0109

Lab Number: L2348098
Report Date: 09/05/23

Data Qualifiers

- ND** - Not detected at the reporting limit (RL) for the sample.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

APPENDIX L

Scope of Services

Phase I Environmental Site Assessment
Scope of Services

Task 1.0 Description of Subject Property and Surrounding Area Physical Settings

- 1.1 Description of property location, topography, geology, hydrogeology, surface hydrology and wetlands
- 1.2 Identification of adjoining and surrounding area properties

Task 2.0 Historic Investigation (Review of Applicable, Reasonably Ascertainable Sources)

- 2.1 Review of historic maps and plans (to the earliest date of available maps)
- 2.2 Review of aerial photographs
- 2.3 Review of local records (e.g., building department), including cursory ownership information and City Directories, if applicable.
- 2.4 Interviews with User, Key Site Manager, and other knowledgeable individuals
- 2.5 Review of User or property owner provided documents and/or analytical results

Task 3.0 Federal and State Regulatory Agency Records Review

- 3.1 Review of ASTM-required federal, state, and/or tribal databases at required search distances and analysis of the relationship of each Site (e.g., upgradient, downgradient) to the Subject Property;
 - Federal NPL (1.0 mile) and delisted NPL sites (0.5 mile)
 - Federal SEMS list and CERCLIS NFRAP site list (0.5 mile)
 - Federal RCRA CORRACTS facilities list (1.0 mile)
 - Federal RCRA non-CORRACTS TSD facilities list (0.5 mile)
 - Federal RCRA generators list (subject/adjoining properties)
 - Federal ERNS list (subject property)
 - Federal, state, and tribal institutional control/engineering control registries (subject property)
 - State- and tribal-equivalent NPL (1.0 mile)
 - State- and tribal-equivalent SEMS (0.5 mile)
 - State and tribal Brownfield and voluntary cleanup sites (0.5 mile)
 - State and tribal leaking storage tank lists (0.5 mile)
 - State (including locally administered) and tribal registered storage tank lists (subject/adjoining)
 - State and tribal landfill and/or solid waste disposal site lists (0.5 mile)
 - NYC E-Designation List
- 3.2 Review of additional federal and state environmental databases:
 - State spill file records (0.5 mile)
 - State MOSF list (0.5 mile)
 - State radon data (by local municipality as available)
 - Federal and state wastewater discharge permits (subject/adjoining properties)
- 3.3 Interviews (as applicable) with government representative regarding regulatory compliance

Task 4.0 Physical Inspection

- 4.1 Inspection of property and structures for potential contamination and contaminant sources, including:
 - Hazardous/medical/radioactive waste storage and disposal areas
 - Petroleum and/or chemical storage (including tanks and associated piping)
 - Spatial extent and current condition of suspect asbestos-containing materials (ACM), suspect lead-based paint (LBP) and mold
 - Site conditions that may indicate the potential for radon and lead in drinking water
 - If ACM or LBP is identified as presumed or suspect, provide estimates of the quantity of such material and costs for abatement to the extent feasible.
 - Wastewater and stormwater discharge systems
 - Equipment potentially containing polychlorinated biphenyls (PCBs)
- 4.2 Inspection of property for the following:
 - Presence of contamination (e.g., debris, soil staining)
 - Evidence of prior structures and uses
 - Unusual or man-made topographical formations (e.g., berms, sinkholes)
 - On-site surface water quality
 - Evidence and location of wells
 - Vegetative stress
- 4.3 Identification of overt on-site sensitive environmental receptors (e.g., wetlands)
- 4.4 Limited inspection of adjoining and nearby properties for:
 - Potential off-site sources of contamination
 - Sensitive environmental receptors
- 4.5 If appropriate, interviews with owners/tenants/operators and other available knowledgeable individuals present during physical inspection

Task 5.0 Preparation of Written Summary Report

- 5.1 Summary of findings of Tasks 1.0 through 4.0
- 5.2 Identification of any Recognized Environmental Conditions and/or other potential concerns
- 5.3 Conclusions and Recommendations, including any specific additional investigatory or remedial work
- 5.4 Production and transmission of the final Phase I ESA to Client in PDF format, and hard copy if requested.

APPENDIX M

Qualifications of Environmental Professionals

Scott Spitzer*Director of Environmental Investigations*

scott_spitzer@gbtpa.com

PROFESSIONAL EXPERIENCE*Director of Environmental Investigations, Gallagher Bassett Services Inc., Poughkeepsie, NY* 2019- present*Director of Environmental Investigations, WCD Group, Poughkeepsie, NY* 2017 - 2019*Director of Environmental Investigations, Ecosystems Strategies, Poughkeepsie, NY* 2013 - 2017

Management and quality review of environmental site assessments, technical environmental investigations, and remedial projects including Brownfield sites. Conducts research to obtain field and regulatory information about the environmental status of a designated area. Reviews all documents prepared by GBSI Poughkeepsie Office to ensure consistency and technical accuracy. Responsibilities associated with the preparation of site assessments include: investigating site histories, conducting facility inspections, reviewing regulatory agency records, documenting facility compliance with relevant State and Federal regulations, and preparing reports. Management of complex technical environmental investigations (including sites currently on the NYSDEC Registry of Inactive Hazardous Waste Sites), including coordinating subcontractors, overseeing fieldwork, designing and implementing sampling plans, preparing technical reports, and interfacing with regulatory agency personnel.

Senior Project Manager, Long-Form Reports, The 451 Group, Inc., New York, NY 2008-2011

- Managed the production of over 150 technical white papers.

Senior Project Manager, Ecosystems Strategies, Inc., Poughkeepsie, NY 2001 - 2008

- Conducted Environmental Site Investigations and prepared final site assessment reports. Over 300 Investigations and Final Reports completed as lead manager.
- Investigated site histories.
- Conducted facility inspections.
- Reviewed regulatory agency records.
- Documented facility compliance with relevant State and Federal regulations.
- Conducted Phase II Technical Environmental Investigations and prepared technical reports.
- Researched field and regulatory information.
- Managed tank removals.
- Coordinated subcontractors.
- Oversaw fieldwork and handled collection of material, soil and water samples.

Select Projects***Scenic Hudson Land Trust, Inc., Beacon Waterfront Project, Beacon, NY***

ESI conducted soil and groundwater investigations on a former MOSF and adjacent scrap yard. Projects involved soil remediation of both petroleum and PCB-contaminated soils and long-term groundwater monitoring. Both projects were classified as Voluntary Clean-Up projects by the NYSDEC and closure status was attained.

Sakmann Restaurant Corporation Site, Fort Montgomery, NY

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigations for former filling station and automotive repair garage contaminated by solvent and waste-oil discharges to an on-site drywell.

Designed and implemented a sampling plan for soils impacted by chlorinated hydrocarbons, petroleum, and metals. Created Workplan (in coordination with the NYSDEC Voluntary Cleanup Program) for remediation of on-site contamination and long-term sampling of on-site groundwater monitoring wells.

Staten Island Marina Site, Staten Island, NY

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigation for an active marine facility engaged in boat painting and engine maintenance activities. Coordinated the delineation of metals contamination over a three-acre area and analyzed potential impacts from on-site fill materials. Submitted remedial and budgetary analysis in support of regulatory agency approval for conversion of boatyard into a public park.

Octagon House Development Site, Roosevelt Island, NY

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigations at the former site of a large, urban hospital. Interpreted the results of geotechnical studies, extended test pits, and conducted extensive soil sampling, to document subsurface soil conditions in support of client's application to the U.S. Housing and Urban Development Agency (HUD). Created Workplan (in coordination with the NYCDEP Office of Environmental Planning and Assessment) for site-wide remediation of contaminated soils and secured NYCDEP approval for site remediation as required by HUD.

Camp Glen Gray Boy Scout Facility, Mahwah, NJ

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigations at an approximately 800-acre campground containing numerous structures. Documented subsurface soil conditions at the locations of aboveground and underground storage tanks, and delineated lead contamination at a former firing range. Assisted in design and implementation of remediation plans for removal of petroleum and lead contaminated soils, and obtained NJDEP approvals.

EDUCATION

SUNY at Stony Brook, Bachelor of Science - Biology, SUNY at Stony Brook
SUNY at Purchase, extensive studies in Environmental Science
