Gallagher Bassett Technical Services conducted a Phase I Environmental Site Assessment in accordance with ASTM Method E 1527-21.

The undersigned have prepared and reviewed this Combined Phase I and Phase II Environmental Site Assessment and certify to Van DeWater & Wan DeWater, LLP that the information provided in this document is to the best of our abilities considered accurate as of the date of issuance by this office.

EXECUTIVE SUMMARY

Gallagher Bassett Technical Services (GBTS) completed a Combined Phase I and Phase II Environmental Site Assessment (ESA) of property located at 50 Raymond Avenue, Town of Poughkeepsie, Dutchess County, New York. This ESA identifies Recognized Environmental Conditions (RECs) in conformance with the scope and limitations of ASTM Practice E 1527-21, as well as conditions that do not meet the threshold to be considered a REC but represent a significant existing or likely environmental liability (de minimis conditions and items outside the ASTM Phase I ESA scope are noted as appropriate). Findings, conclusions, and recommendations are summarized below and in Section 4.0.

Subject Property Description and History

The subject property is an approximately 0.14-acre commercial parcel located in a suburban setting. Reasonably ascertainable and useful historical records document that the property was vacant from at least 1893 to 1903, contained an unspecified store and dwelling as early as 1913, and was developed with a dry cleaner since at least the 1950s (presently Gladmore Cleaners). Additional current site uses include restaurants. No further investigation of historical records is recommended.

Historical Sanborn maps show an on-site solvent tank from 1950 through 1990 (on-site use of chlorinated solvents [PCE] for drycleaning reportedly ceased in the 2010s, and the facility currently utilizes non-chlorinated materials). A Phase II investigation conducted by GBTS at the subject property in June 2024 documented elevated levels of PCE and breakdown products, as well as non-chlorinated solvents and gasoline constituents, in vapor collected from beneath the on-site building, and a spill event (No. 2402735) was reported to NYSDEC.

Historical use of the subject property as a dry cleaning facility (including evidence of a former solvent storage tank), and documented vapor contamination by dry cleaning solvents, are collectively considered to be a REC.

The subject property was identified as the site of a closed NYSDEC spill event (No. 0209962), reported in January 2003 due to a failure of a #2 fuel-oil underground storage tank (UST). Available records of cleanup activities indicate the removal of the tank and contaminated soil; a tank closure report, however, documenting site conditions after the tank was removed, was not available for review.

The potential for the presence of residual petroleum contamination associated with the spill at the former UST is considered a REC.

Relevant environmental conditions at the subject property are summarized in the following table.

Summary: Identified Areas of Environmental Concern

Category	Specific Environmental Concerns	Recommendations
RECs	Known and potential releases associated with long-term dry cleaning activities at the subject property, including documented chlorinated solvents in sub-slab vapor and an associated open NYSDEC spill event	Perform additional investigation to define nature and extent of contamination. Vaper mitigation is required.
	Potential impacts from former leaking fuel oil underground storage tank (note: associated with a closed NYSDEC spill event)	
HRECs	None identified	No further investigation/action
General Concerns	Potential future releases from interior 275-gallon fuel-oil aboveground storage tank	Proper maintenance and periodic inspections
	Small quantities of petroleum and chemical products, including non-chlorinated solvent	Properly store containers; dispose wastes off-site
De Minimis Conditions	Floor staining in boiler room	Properly clean stained area
Non-Scope Considerations	Asbestos-containing materials (ACM) and lead-based paint (LBP)	Test suspect materials as needed; handle materials in accordance with applicable regulations
	Potentially elevated radon levels	Test indoor air for radon

1.0 INTRODUCTION

1.1 Purpose

This Combined Phase I and Phase II Environmental Site Assessment (Report) identifies recognized environmental conditions (RECs) and/or other significant environmental liabilities resulting from or associated with the storage, use, transport, or disposal of hazardous or other regulated materials on the property described in Section 2.1.

1.2 Methodology

This Report documents an Environmental Site Assessment (ESA) prepared in conformance with the attached Scope of Services and with guidelines set by American Society for Testing and Materials (ASTM) Method E1527-21 (no exceptions to or deletions from this practice have occurred, and there were no client imposed limitations to the ESA investigation. All work was performed under the direct supervision and responsible charge of a qualified environmental professional, following requirements for "all appropriate inquiry" as defined in 40 CFR Part 312. Gallagher Bassett Technical Services (GBTS) performed the following work:

1. Investigation of the subject property's history and characteristics through the analysis of available physical settings maps, historical documents, local municipal records, and information provided by subject property representatives and/or other knowledgeable individuals.
2. Review of Federal, State, and/or Tribal regulatory-agency databases and printed records for documentation of potential environmental liabilities relevant to the property, consistent with (or exceeding) applicable ASTM requirements. All interviews, and the review of government records, were completed on or after the date of the site reconnaissance.
3. Inspection of the property by Hannah Brown of GBTS on October 15, 2024. David Kaminski, a representative of the User, and Jongwon Chung, the property owner and manager, were present during portions of the inspection.
4. Phase II investigation performed by Erick Salazar and Richard Hooker of GBTS on June 7, 2024, including the collection of soil vapor samples.

1.3 Limitations

This Report is a representation and evaluation of the property described in Section 2.1 below as of the dates that services were provided, and is not valid for any other property or location. This Report is based in part on information provided in writing or verbally by federal, state, and local officials (including public records) and other referenced parties. The accuracy or completeness of this information was not independently verified. Unless specifically noted, the findings and conclusions contained herein must be considered not as scientific certainties, but as probabilities based on professional judgment. Limitations specific to the site inspection (if any) are detailed in Section 3.3.

1.4 Key Terms and Definitions

Recognized Environmental Condition (REC)

A REC is defined as (1) the presence of hazardous substances or petroleum products in, on or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment. [Note: A material threat is an obvious threat likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.] A **Controlled Recognized Environmental Condition (CREC)** is a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of controls (e.g., activity and use limitations).

Historical Recognized Environmental Condition (HREC)

A HREC is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities *and* meeting unrestricted use criteria established by the applicable regulatory authority or authorities, without subjecting the property to any controls (e.g., activity and use limitations).

De Minimis Conditions

An environmental condition is considered de minimis when that condition generally does not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies.

Conditions determined to be de minimis are not recognized environmental conditions.

Data Gap

A data gap is the lack of, or inability to obtain, required information despite good faith efforts by the environmental professional to gather such information (data gaps are common during performance of a Phase I ESA). A “significant data gap” exists when the lack of required information affects the ability of the environmental professional to identify a REC.

Sensitive Environmental Receptors

Sensitive Environmental Receptors (SERs) are valued physical (natural or human-made) or biological features that may be adversely impacted by environmental contamination, and where a discharge or release could pose a greater threat than a discharge or release to other less valued areas. SERs include (but are not limited to) potable supply wells, wetlands, and protected wildlife habitat.

2.0 SITE LOCATION AND PHYSICAL SETTING

This ESA was performed for the parcel of land ("subject property") at 50 Raymond Avenue, Town of Poughkeepsie, Dutchess County, New York (tax ID: 134689-6161-12-818683-0000). Site maps are located on Pages 7 and 8 and photographs are provided in Appendix A. Information sources are cited in Section 5.0 and site-specific topographic, wetlands, and/or other maps are provided in Appendix B.

2.1 Description of Subject Property

The subject property is an irregularly-shaped 0.14-acre parcel located on the eastern side of Raymond Avenue, occupied by a two-story commercial building. Current tenants include Gladmore Cleaners, Twisted Soul Desserts, and New Nelly's Restaurant. Comprehensive observations from a physical inspection of the property are provided in Section 3.3.

2.2 Description of Adjoining and Surrounding Area Properties

The property is located in the Arlington section of the Town of Poughkeepsie, with most properties developed for residential (single- and multi-family) and small commercial uses. The property is adjoined to the north by a vacant commercial lot used as a park, to the east by a salon and apartment home with a shared parking lot, to the south by the old Juliet Theatre (now occupied by the Vassar store and La Vickyna Latin Fusion restaurant), and to the west by a commercial building containing a laundromat, restaurants, a grocery store, and a discount store. The surrounding area is developed with residential, commercial, and institutional uses (Vassar College is located nearby to the south); see Selected Site Features/Fieldwork Map.

2.3 Physical Setting

2.3.1 Topography

Local area topography is generally level. Surface relief in the immediate vicinity of the subject property is relatively uniform, with overall downward slopes to the east, towards Casperkill Creek, a tributary to the Hudson River located approximately 0.5-mile from the property.

The USGS Topographic map providing coverage for the subject property indicates approximate on-site surface elevations ranging from 170 to 180 feet above mean sea level. No specific on-site structures are depicted on the map (note: current USGS maps generally only show select landmark buildings, such as large structures and institutional uses). The map did not indicate the presence of any soil/gravel mining operations or unusual topographic patterns indicative of landfilling activities on the property. Observations made during the site inspection are in general agreement with conditions depicted on the map.

2.3.2 Local Geology and Hydrogeology

Soils in the vicinity of the subject property are likely to be derived from glacial till deposits, which overlie clastic sedimentary bedrock. Soil survey maps indicate that Urban Land and Knickerbocker-Urban land complex (0-3% slopes) soils are likely to be located on the property.

The Urban Land designation identifies areas where at least 50% of the surface is covered by buildings, parking areas or other impervious structures, and specific soil and bedrock characteristics are generally not well known. The Knickerbocker-Urban land complex is a deep, somewhat excessively drained, nearly level soil formed in deltas and terraces derived from sandy deltaic or glaciofluvial deposits. The presence of an on-site structure suggests that soils located on the property may have been altered by cutting, regrading, and/or filling activities.

Depth to bedrock in Knickerbocker soils is likely to be greater than 80 inches. Depth to bedrock is not reported for Urban Land soils. Bedrock outcrops were not observed on the property.

Soil survey data indicate generalized groundwater depths greater than 6 feet in on-site soils. Shallow groundwater flow in the vicinity of the property is likely to generally follow surficial topography and be in an overall easterly direction, toward Casperkill Creek.

GBTS has not reviewed any reports or other information documenting site-specific geological or hydrogeological subsurface conditions.

2.3.3 Surface Hydrology and Wetlands

No waterbodies or wet areas were observed on the subject property or in the immediate vicinity during the site inspection. Federal and state mapping data do not identify any classified surface waterbodies, wet areas, or regulated wetlands on or in the immediate vicinity of the property.

2.3.4 Sensitive Environmental Receptors

The review of maps and observations made during the site inspection indicate that no SERs are located on or in the immediate vicinity of the subject property. The Casperkill Creek is located approximately 0.5 mile to the east.

3.0 INVESTIGATION

3.1 Site History

The history of the property was researched by interviewing knowledgeable individuals and reviewing standard ASTM historical sources (local agency records, historical maps, aerial photographs, and/or city directories) and additional sources (if reasonably ascertainable and sufficiently useful, accurate, and complete considering the objective of the records review).

3.1.1 User-Reported Information

ASTM Practice E 1527-21, Section 6, requires the User (the party seeking to complete the environmental site assessment [ESA] of the property) to provide specific information to the Environmental Professional to meet the requirements for "all appropriate inquiry". The User has not responded to a questionnaire provided by GBTS, which requested information regarding the subject property as specified in Section 6. GBTS assumes that the User requested that the Phase I ESA be performed in order to qualify for one or more Landowner Liability Protections (LLPs) to CERCLA liability and to document potential liabilities.

3.1.2 Interviews

Jongwon Chung (subject property owner and operator of Gladmore Cleaners) was identified as a Key Site Manager (a person having good knowledge of the uses and physical characteristics of the subject property) and was interviewed regarding specific site conditions and recent uses. Mr. Chung indicated that use of chlorinated solvents (tetrachloroethylene [PCE]) for dry cleaning was discontinued circa 2014, and non-chlorinated solvents have been utilized at the dry cleaning facility since that time. Mr. Chung had no other specialized knowledge or experience, actual knowledge, or knowledge of commonly known or reasonably ascertainable information regarding potential environmental conditions and/or liabilities in connection with the property. Pertinent information from interviews is provided in relevant report sections, where appropriate.

3.1.3 Ownership Records

Property ownership information, based on Town of Poughkeepsie Assessor's Office records, is summarized below. "Date of Ownership" indicates a time the property was owned by the specified entity.

Owner	Date of Ownership
KNC Management Inc. (Current Owner)	11/12/2008
Hilda B. Best Trustee	08/24/2006
Hilda B. Best	05/08/2006
Best Family Trust	05/16/1995
Murray and Hilda B. Best	11/08/1979
Mur-Hil Realty Corp	08/01/1978
Morris and Gladys Lutz	02/28/1977
Gladmore Realty Co.	1957

3.1.4 Standard ASTM Historical Sources

This section provides a summary of environmentally significant information from a review of standard historical sources (topographic maps, fire insurance maps, aerial photographs, and/or city directories). [Note: Property outlines on supporting documents are reasonable approximations.]

Historical Topographic Maps

GBTS reviewed historical USGS topographic maps dated 1893, 1894, 1903, 1936, 1943, 1947, 1957, 1981/1982, and 1995 (copies of reviewed maps are provided in Appendix C).

1893 - 1903: The subject property is bordered to the west by Raymond Avenue. The subject property is vacant with a structure adjoining to the south. Lagrange Avenue and Collegeview Avenue border the surrounding land to the north and south respectively. A likely residential structure adjoins the subject property to the west across Raymond Avenue. The surrounding area is lightly developed with likely residential or small commercial structures and Vassar College is to the southeast.

1936 - 1995: The map shows the subject property and adjoining properties to be developed (building uses not discernable), with increasing development of the surrounding area over time, including large likely commercial structures and new structures at Vassar College.

Sanborn Fire Insurance Maps

GBTS reviewed historical Sanborn Fire Insurance Company Maps dated 1913, 1950, 1952, 1984, and 1990 (relevant copies of these maps are provided in Appendix D).

1913: The subject property is occupied by a dwelling to the northwest and an unspecified small store to the south. The adjoining property to the north contains a combined dwelling and store; all other adjoining properties contain dwellings. The surrounding area is moderately developed with dwellings and stores. The subject property is adjoined to the east by residential properties. The subject property is adjoined to the south by a dwelling and stable. Across Raymond Avenue to the west, the subject property is adjoined by one dwelling surrounded by vacant land.

1950 - 1990: The subject property is fully developed with what appears to be the existing on-site structure. Two storefronts face Raymond Avenue, with a dry cleaner located at remaining portions of the property (a solvent tank is located at the central-southern portion of the facility). Juliet Theatre adjoins to the south along with multiple new stores. The adjoining building to the north is used as a restaurant (1950s) and then as a store, the property to the west contains multiple new stores, and the eastern property (7 Lagrange Avenue) contains an apartment building. The surrounding area is well developed

Aerial Photographs

GBTS reviewed historical aerial photographs dated 1936*, 1943*, 1946, 1956*, 1958*, 1984, 1995, 2008, 2011, 2015, and 2019 (copies of reviewed images are provided in Appendix E). The small scale and quality of some photographs (noted with *) made distinguishing details difficult.

For all image years, the subject property appears to be developed (the current existing building is only clearly seen beginning in the 2000s). Development at adjoining properties and the surrounding area is consistent with conditions shown on the Sanborn maps.

City Directories

GBTS reviewed historical city directories dated 1942, 1948, 1963, 1965, 1970, 1975, 1980, 1985, 1988, 1992, 1995, 2000, 2005, 2010, 2014, 2017, and 2020 for the subject property and for several adjoining properties (data sources are provided in Appendix F). Occupants of the on-site building have included numerous restaurants, shops, salons, residential tenants, and a dry cleaner. No uses of adjoining properties were identified that are likely to represent a significant environmental threat to the subject property. Supporting information for the database review presented in Section 3.2 includes a non-ASTM database of potential dry cleaners, based on historical business directories, which identifies the subject property as a potential historical dry cleaner from 1970 to 1998 (note: Sanborn maps indicate an on-site dry cleaner as early as 1950).

3.1.5 Municipal and Regulatory Agency Records

Assessor's Office Records

Town of Poughkeepsie Assessor's Office property card records for the subject property, reviewed on June 13, 2024, indicate installation of a vapor barrier in 1998 and a 275-gallon oil tank in 2003. Additional documentation included related building permits and certificates of occupancy (C.O.). Ownership information is summarized in Section 3.1.3. No other information pertinent to the environmental integrity of the subject property was present in these records.

Building Department Records

Town of Poughkeepsie Building Department records, reviewed on June 13, 2024, include C.O, building permits, and certificates of compliance. Building and heating permits detail installation of a 275-gallon oil tank in the rear of Gladmore Cleaners. No other information pertinent to the environmental integrity of the subject property was present in Building Department records provided for review.

NYSDEC

A request was made on June 3, 2024 to search available NYSDEC records for information regarding the subject property. The NYSDEC provided a state form for spill No. 0209962 reported June 25, 2024 (solvent impacts in vapor; see Section 4.0); and air-facility information for Gladmore Cleaners, indicating use of "Intense" solvent (a non-chlorinated synthetic hydrocarbon) for use in on-site dry cleaning equipment. According to the NYSDEC, that agency does not maintain any other files identified with the subject property address.

3.1.6 Previous Environmental Reports

Based on the presence of documented vapor contamination (see Section 4), the owner of the subject property retained Labella Associates to perform indoor air sampling in July 2024. All VOCs detected in indoor air (four locations within the building), including PCE and trichloroethylene (TCE), were below NYSDOH air guideline values (note, however, that testing was conducted in the summer, outside of the heating season). A copy of this report is provided in Appendix G.

3.2 Review of Federal and State Agency Records

Federal and state records were reviewed for documentation of environmental conditions and/or liabilities relevant to the property.

3.2.1 Methodology

The following ASTM Standard Environmental Record Sources (as available for the subject property's locality) were reviewed (search distances are consistent with, or exceed, ASTM requirements).

Federal National Priority List (1.0 mile) and delisted National Priority List sites (0.5 mile)
Federal SEMS (formerly CERCLIS) list and SEMS NFRAP site list (0.5 mile)
Federal RCRA CORRACTS facilities list (1.0 mile)
Federal RCRA non-CORRACTS TSD facilities list (0.5 mile)
Federal RCRA generators list (subject/adjoining properties)
Federal ERNS list (subject property)
Federal, State, and Tribal Institutional Control / Engineering Control registries (subject property)
State- and Tribal-equivalent NPL (1.0 mile)
State- and Tribal-equivalent SEMS (0.5 mile)
State and Tribal Brownfield and voluntary cleanup sites (0.5 mile)
State and Tribal leaking storage tank lists (0.5 mile)
State (including locally administered) and Tribal registered storage tank lists (subject/adjoining properties)
State and Tribal landfill and/or solid waste disposal site lists (0.5 mile)

Additional Environmental Record Sources (as available for the subject property's locality) were reviewed to enhance and supplement the review of standard sources, including: spill file records; oil storage facility lists; radon data; wastewater discharge permits; and federal Toxic Release Information System (TRIS) and Facility Index System (FINDS) databases.

A copy of relevant portions of a database search conducted by Environmental Data Resources, Inc. (EDR) for GBTS is provided is provided in Appendix H. Not all sites identified in the attached database search may be referenced below, as some sites may have been excluded based on one or more of the following: ASTM requirements; GBTS's scope of services or professional opinion; and/or information obtained during the review of historical records and the site inspection. Some information may have been deemed to not be practically reviewable as defined in ASTM E1527 (e.g., records lack adequate address information). Sites or additional information not included in the EDR report may also be referenced based on GBTS's search of additional records and/or knowledge of the subject property area.

GBTS's opinion is presented for any sites identified within the specified approximate minimum search distances as to any possible impacts that might result in RECs in connection with the subject property, arising from the migration of contaminated soil, soil vapor, and/or groundwater. Evaluation of potential impacts to the subject property is based on: distance and direction to the identified site; type of regulated materials and other relevant information found in available records; presence of intervening roadways and/or other physical conduits; local physical setting (topography, soil conditions, geology, hydrology, etc.); and other information known to GBTS.

In accordance with ASTM requirements, this Report assesses the potential for hazardous vapors to migrate onto or within the target property. To accomplish this task, GBTS has performed an evaluation of potential Vapor Encroachment Conditions (VECs) arising from identified sites, consistent with a "Tier 1" screening as specified in ASTM E2600-15 (including a review of database records as well as analysis of historical uses, physical setting information and other known information).

3.2.2 Findings of Regulatory Records Review

Federal Hazardous Waste-Contaminated Sites

The subject property is not identified on the United States Environmental Protection Agency's (USEPA): National Priority List (NPL) of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions; Superfund Enterprise Management System (SEMS, formerly CERCLIS) list of sites that are proposed to the NPL or that are in the screening and assessment phase for possible proposal to the NPL; SEMS-Archive list (formerly CERCLIS NFRAP), which are former SEMS sites that were delisted because no significant contamination was found, or because the site has been remediated; or Federal Brownfields list of sites with known or potential contaminants receiving federal cleanup funding. The subject property is not identified on available USEPA Institutional Control/Engineering Control registries.

The following relevant site was identified:

Site Name	Site ID	Distance/Direction	Database
Town & Country Cleaners	0203829	0.426 mile, NW	SEMS

Based on a review of reported information, this site is not likely to impact the property. No NPL sites are located within one mile of the property and no other SEMS sites or delisted NPL sites are located within a half mile of the property.

State Sites

Inactive Hazardous Waste Disposal Sites

NYSDEC maintains a Registry of Inactive Hazardous Waste Disposal Sites (IHWDS), a state equivalent to the federal NPL, which are commonly referred to as "Registry" or "Superfund" sites. Sites are placed on the Registry if there is evidence that hazardous waste was disposed and a determination has been made that a significant threat to public health is present. Once a Registry site has been remediated, it is reclassified or removed (delisted) to indicate that the significant threat(s) has been addressed. Non-Registry sites may (but usually do not) also present significant threats. The property is not identified as a NYSDEC IHWD site, and has not been listed as a site under investigation for inclusion in the IHWDS Registry (a state equivalent to the federal SEMS List).

The following relevant sites were identified:

Site Name	Site ID	Distance/Direction	Classification Code
Main Street/Grand Avenue Site	314087	0.481 mile, NW	N – no further action
Harris Corporation	314061	0.906 mile, E	4 – closed, management required
Vanderwater Prop. Van Wagner Road	314040	0.932 mile, NE	N – no further action
Vanderwater Prop. Route 44 Plaza	314039	0.934 mile, NE	N – no further action

Based on a review of reported information, these sites are not likely to impact the property.

Voluntary Cleanup, Brownfields Cleanup, and Environmental Restoration Programs

Contaminated properties that are not Registry sites may be listed in database records under the NYSDEC Voluntary Cleanup (VCP), Brownfields Cleanup (BCP), or Environmental Restoration (ERP) programs. The property is not identified as a NYSDEC remedial program site. No participating properties are located within a half mile of the property.

New York Institutional and Engineering Controls

The subject property is not identified in NYSDEC Institutional and Engineering Control databases.

Federal Hazardous Waste Handlers

The SEMS database details facilities that report treatment, storage or disposal of hazardous waste (TSD facilities) or generation or transportation of hazardous waste. Facilities that have been notified by USEPA to take corrective action regarding their handling of hazardous waste are classified as CORRACTS facilities.

CORRACTS and/or TSD Facilities

The subject property is not registered with the USEPA as a CORRACTS and/or TSD facility for hazardous waste or materials. The following relevant site was identified:

Site Name	Site ID	Distance/Direction	Database
J & J MFG	NYD001328236	0.497 mile, ENE	CORRACTS and TSDF

Based on a review of reported information, this site is not likely to impact the property.

Generators or Transporters (Non-CORRACTS)

Gladmore Cleaners, located at the subject property, is currently identified in USEPA records as a RCRA – Very Small Quantity Generator (VSQG). Gladmore Cleaners was a Large Quantity Generator in 1985, and a Conditionally Exempt Small Quantity Generator in 1995, 2006, 2007, and 2011. Listed materials include chromium, 1,1-dichloroethylene (DCE), PCE, TCE, and solvents containing 10% or more of various spent halogenated solvents. Halogenated solvent use, associated with dry cleaning, may have impacted the environmental integrity of the subject property. No generators or transporters of hazardous waste are located on adjoining properties.

Landfills and Solid Waste Disposal Facilities

The state Facility Register does not list the subject property as an active or inactive landfill or solid waste disposal facility. No landfills or solid waste disposal facilities are located within a half mile of the property.

Chemical Bulk Storage (CBS)

The subject property and adjoining properties are not identified in database records as CBS facilities. Observations made during the site inspection did not indicate the presence of chemical bulk storage on the subject property or at adjoining properties.

Petroleum Bulk Storage (PBS)

The subject property and adjoining properties are not identified in database records as either regulated or unregulated PBS facilities. A 275-gallon unregistered above ground storage tank (AST) is present on the subject property in the boiler room at the southeastern corner of Gladmore Cleaners. According to Town of Poughkeepsie Building Department records, this tank was installed in January 2003. Observations made during the site inspection did not indicate the presence of petroleum bulk storage at adjoining properties.

Major Oil Storage Facilities

The subject property is not listed with the NYSDEC as a major oil storage facility (MOSF). No MOSFs are located within a half mile of the property.

Federal Chemical and Petroleum Spills

The USEPA Emergency Response Notification System (ERNS) database documents releases of oil and hazardous substances as reported to federal authorities. There are currently no chemical or petroleum spills on record for the subject property.

State Chemical and Petroleum Spill and Leaking Underground Storage Tank Events

NYSDEC database records were reviewed to determine possible impacts from leaking tanks and other reported releases within a quarter mile of the subject property. The following spill events are reported for the subject property and adjoining properties (except as noted, release quantities are unknown).

Spill File ID and Status	Location	Material Spilled	Spill Date (Closure Date)
2402735 – open	subject property	PCE and TCE	June 25, 2024
0209962 – closed	subject property	#2 fuel oil (150 gal)	January 2, 2003 (February 24, 2003)
9902478 – closed	48 Raymond Avenue	Unknown	May 7, 1999 (July 8, 1999)
0208303 – closed	48 Raymond Avenue	Hydraulic oil (6 gal)	Nov. 11, 2002 (Nov. 21, 2002)
1302823 – closed	60 Raymond Avenue	#2 fuel oil (4 gal)	June 14, 2023 (September 16, 2013)
9312510 – closed	Lagrange & Fulton Ave	Gasoline (20 gal)	January 24, 1994 (January 26, 1994)

Spill number 2403735 was reported due to the presence of elevated sub-slab vapor (based on the results from the GBTS Phase II investigation, presented in Section 4); the spill is open, and investigation is ongoing.

Spill number 0209962 was reported due to an underground storage tank (UST) failure at Gladmore Cleaners. Available records indicate that cleanup activities were performed from January to February 2003, resulting in removal of the tank and contaminated soil; a tank closure report documenting site conditions after the tank was removed, however, was not available for review. State cleanup standards are listed as having not been met. This spill event may have impacted the subject property (potential residual contamination associated with this spill is considered to be a REC).

Spill number 9902478 was reported due to the presence of two abandoned drums (labeled corrosive and combustible), and the remaining spills at adjoining properties were reported due to minor releases; these spill events are not likely to have impacted the subject property.

No other relevant spill events were identified in database records.

Air Discharges

Gladmore Cleaners Inc., located at the subject property, is registered as a NYSDEC Air Facility (Registration ID: 3-1346-00221/02000). Available documentation indicates historical use of PCE.

Wastewater Discharges

No USEPA National or NYSDEC State Pollutant Discharge Elimination System (NPDES or SPDES) permit was identified for the subject property. According to municipal records, the subject property is connected to the municipal wastewater system. No adjoining properties are registered as NPDES or SPDES facilities.

Radon

The USEPA maintains a Map of Radon Zones to identify areas with the potential for elevated indoor radon levels, and has established a guidance value (the level where mitigation measures may be appropriate) for radon concentrations of 4.0 or greater picoCuries/liter (pCi/l). The subject property is located in Dutchess County, which is designated as Zone 1, indicating predicted average indoor radon screening levels greater than 4 pCi/L. New York State Department of Health (NYSDOH) data indicate that the average radon level in the Town/City of Poughkeepsie (1,105 homes tested) is 5.56 pCi/L, and that 48.5 percent of homes exceed USEPA guidance. GBTS has not reviewed any radon test data for the subject property.

Based on the NYSDOH data, radon above actionable levels may be present at the subject property.

Vapor Encroachment Conditions at Identified Sites

Information obtained during the database review was evaluated consistent with the Tier 1 screening process presented in ASTM E2600-15. Based on this review, releases at identified sites are not likely to have resulted in vapor encroachment at the subject property; note, however, that vapor contamination has been documented at the subject property, likely from historical on-site releases (see Section 4).

3.3 Site Inspection

The subject property was inspected by GBTS on June 7, 2024. The weather at the time of the inspection was mostly sunny and cool. The site reconnaissance was generally performed at all interior and all exterior areas (there were no relevant limitations to the inspection of the subject property).

3.3.1 Protocol

The site inspection was conducted to address any potential concerns raised during the investigation of site history (Section 3.1) and the regulatory agency records review (Section 3.2), and to identify any additional indications of contamination from the use, storage, or disposal of hazardous or regulated materials. To the extent possible, on-site structures, vegetation, topography, surface waters, and other property features were examined for obvious evidence of existing or previous contamination or unusual patterns (e.g., soil staining, vegetative stress, surface water sheen, or the physical presence of contaminants), which would indicate that the environmental integrity had been or could be impacted.

Section 3.3.2 describes the physical characteristics of the subject property. Section 3.3.3 is divided into topics on specific environmental conditions or concerns, actual or potential, noted on the subject property during the site inspection. Section 3.3.4 describes the physical characteristics of adjoining properties as they concern the potential or actual environmental condition of the subject property.

A Selected Site Features Map illustrating the subject property layout and locations of specific areas of concern (if any) is provided on Page 8, and photographs of the property are provided in Appendix A.

3.3.2 Physical Characteristics of the Subject Property

3.3.2.1 Property

The subject property is an irregular-shaped, approximately 0.14-acre parcel, which has 50 feet of frontage on the eastern side of Raymond Avenue and a maximum depth of 135 feet. A two-story commercial building occupies the entirety of the property, with exception of a marginal area of pavement at the southeastern corner of the property.

3.3.2.2 Structures

The on-site structure is a two-story commercial building with a full basement and partial attic. The roof is covered by asphaltic materials. The date of construction is likely between 1913 and 1950, potentially as early as circa 1930s. The building contains a dry cleaner (Gladmore Cleaners), two restaurant spaces (New Nelly's Restaurant and Twisted Soul Desserts), and an unoccupied commercial space on the second floor.

The basement is shared between Gladmore Cleaners and New Nelly's Restaurant. Exterior siding is brick, vinyl, and exposed masonry. Interior areas are generally covered with wallboard or are exposed masonry. Interior floors are covered with composite floor tiles and wood or are exposed concrete.

Potable Water Supply and Sanitary Waste

According to Assessor's Office records, the subject property is serviced by the public water supply and sanitary sewer systems. No water supply wells were noted on the subject property during the site inspection and no on-site uses of groundwater are known to exist for the subject property.

Heating/Cooling

The on-site dry cleaner is heated with hot air generated by an oil burner located in the boiler room at the southeastern corner of the property. The restaurants are heated with a natural-gas water heater located in the shared basement. Cooling is provided by window-mounted air conditioning units.

3.3.3 Specific On-Site Environmental Conditions

Debris Areas

No significant quantities of debris were noted on the subject property.

Petroleum Storage

One, 275-gallon fuel oil AST is located at the southeastern corner of the property in the Gladmore Cleaners boiler room; this tank appeared to be sound. The fill port and vent pipe servicing the AST are located on the southeastern exterior wall of the building. A 5-gallon container of hydraulic oil is located in the boiler room. No staining or evidence of a release was observed near the AST, fill port and vent, or at the oil container. No other small quantities of petroleum products, aboveground storage tanks, or indications of underground petroleum storage tanks (e.g., fill ports or vent pipes) were observed on the property.

Chemical Storage

Numerous small containers of laundry and dry cleaning products are located on storage shelves at Gladmore Cleaners, and containers of a halogen-free solvent are present throughout the dry cleaner (there was no evidence of current PCE use). Several small maintenance product containers (paint, primer, floor adhesive, etc.) were found in the boiler room and on the second-floor. A container labeled Non-Hazardous Waste containing "hydrocarbon soaked debris" from equipment filter replacements was located in the southeastern corner of the property in the Gladmore Cleaners boiler room in front of a work bench. No other small quantities of chemical products, aboveground chemical storage tanks, or indications of underground chemical storage tanks (e.g., fill ports or vent pipes) were observed on the property. De minimis staining was observed in the boiler room, likely caused by the stored maintenance products; no other evidence of a release was observed during the site inspection.

Asbestos-Containing Materials

Asbestos-containing materials (ACM) contain over 1% of any type of asbestos. Although ACM are no longer used as extensively as they were prior to the 1970s, asbestos may still be found in common building products used today. The presence or absence of asbestos can only be determined through physical analysis of material samples. GBTS has not reviewed any asbestos surveys for the property.

Suspect building components observed during the site inspection included floor tiles and roofing. All materials appeared to be in good condition. Construction materials not readily observable during the site inspection (e.g., mastics, caulking, pipe insulation present within walls, etc.) could potentially contain asbestos.

Lead-Based Paint

Lead-based paint (LBP) contains at least 0.5% lead by weight. The presence of LBP presents a risk of both environmental contamination and potential health impacts from inhalation and/or ingestion of paint dust or chips (lead in paint has been regulated since 1978). The presence or absence of lead in painted surfaces can only be determined through the physical analysis of material samples.

GBTS has not reviewed any LBP surveys for the property. Based on the likely earliest date of construction and/or subsequent maintenance work, LBP may be present at the subject property. Most painted surfaces observed during the site inspection were in good condition.

Wastewater Discharges

The term “wastewater” indicates water that: (1) is or has been used in an industrial or manufacturing process; (2) or is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant; (3) or conveys or has conveyed sewage (water originating on or passing through or adjacent to a site, such as stormwater flows, is not generally considered to be wastewater). No evidence of wastewater discharges into drains, ditches, or streams on or adjacent to the property was observed during the site inspection.

Interior Floor Drains/Sumps/Conduits

A drain is located in the shared basement. No staining, odors, or other evidence of contamination was noted in or near the drain. No other floor drains, sumps, or conduits to the subsurface were noted inside on-site structures.

Stormwater Management and Exterior Drains/Sumps/Conduits

Stormwater drains are in the adjoining parking lot on the southeastern side of the building. No staining, odors, or other evidence of contamination was noted in or near any of the drains. No other exterior stormwater catch basins, drains, sumps, or other potential significant conduits to the subsurface, or indications of liquid discharges into drains, ditches, or streams on or adjacent to the property, were observed during the site inspection.

Staining/Corrosion/Leaks/Odors

De minimis staining was observed in the boiler room, likely caused by the stored maintenance products; no other evidence of contamination was observed. No other evidence of corrosion, leaks, or staining (indicative of an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products onto the property) was observed during the site inspection.

Topographic Irregularities

No overt topographic irregularities (e.g., sinkholes or berms) indicative of the presence of non-natural materials (including debris) in the subsurface were observed on the property.

Vegetative Features

No overt areas of stressed or dying vegetation indicative of the presence of contaminants in surface or subsurface soils were observed on the property.

Pits, Ponds, Lagoons, Surface Waters

No pits, ponds, or lagoons exhibiting evidence (e.g., discolored water, distressed vegetation, obvious wastewater discharge) of holding liquids or sludge containing hazardous substances or petroleum products were observed on the property.

PCBs

No equipment likely to contain polychlorinated biphenyls (PCBs) was noted on the subject property.

3.3.4 Environmental Concerns at Adjoining and Nearby Properties

Adjoining and nearby properties were observed from the subject property and from public thoroughfares to identify any recognized environmental conditions or other potential environmental concerns. No relevant conditions were observed during the site inspection.

4.0 PHASE II SUBSURFACE INVESTIGATION

Environmental sampling was conducted on the subject property by GBTS in conjunction with the Phase I ESA in order to evaluate the potential for chlorinated solvent impacts from historical dry cleaner use.

4.1 Summary of Services

GBTS documented the presence or absence of contamination through the collection of soil vapor samples. A map indicating relevant site information and fieldwork locations is provided on Page 8.

4.2 Fieldwork Activities

4.2.1 General Protocols

All encountered material was screened with a properly calibrated MiniRAE Lite (Model PGM 7300) 3000 (Model PGM 7320) photo-ionization detector (PID) for the presence of any volatile organic vapors where appropriate (reading in parts per million [ppm]. GBTS described all encountered media in field log books, including specific characteristics, the presence of foreign materials, and field and instrument indications of contamination (e.g., staining, odors, and PID readings).

GBTS collected samples in general conformance with NYSDEC and NYSDOH sample collection and decontamination protocols. All field personnel wore dedicated, disposable gloves during fieldwork activities, and any non-dedicated sampling instruments were decontaminated prior to media collection, as needed. Sampling was performed on June 7, 2024.

All samples were placed in laboratory-supplied containers and maintained at proper temperatures while in GBTS's custody. Samples were transported on June 10, 2024 via courier to York Analytical Laboratories, Inc. (York), a NYSDOH certified laboratory (ELAP Certification Nos. 10602). Appropriate chain-of-custody procedures were followed.

4.2.2 Collection of Soil Vapor

GBTS collected (4) soil vapor samples from beneath the concrete building slab as follows: southwestern corner (dry cleaner storefront; SV-01); central-southern portion (storage entrance; SV-02); southern side in the vicinity of a former large solvent tank depicted on historical Sanborn Fire Insurance Maps (beside dry cleaning machine; SV-03); and, the southeastern corner (workshop; SV-04). Vapor probes were constructed by drilling a hole to approximately 6-8 inches below the surface, and inserting a ½-inch diameter sampling port attached to ¼" Teflon tubing. The installed vapor probes were screened with a PID for volatile organic compounds (VOCs) prior to sampling; SV-04 had a PID reading of 173.8 ppm, while remaining locations ranged from 1.2 to 9.5 ppm. Four borehole and tubing volumes were purged prior to sampling using a GilAir air-sampling pump (maximum rate 0.2 L/minute). Samples were collected into 6-liter Summa Canisters equipped with two-hour flow controllers (rate not exceeding 0.2 liters/minute).

4.3 Laboratory Analysis

4.3.1 Standards, Criteria and/or Guidance

The State of New York does not have any standards, criteria or guidance values (SCG) for volatile chemicals in subsurface vapors; the NYSDOH, however, utilize several decision matrices for evaluating potential soil vapor intrusion for a limited number of compounds under specific circumstances (see NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York [October 2006]). Elevated PCE and breakdown products and notable non-chlorinated VOC concentrations are identified in the report text and in the data summary table.

4.3.2 Sample Submission

Sub-slab vapor samples were submitted for analysis of VOCs using USEPA TO-15.

4.3.3 Laboratory Results

Laboratory results, reported in micrograms per cubic meter (µg/m^3), are summarized below. A data summary table and the laboratory reports are provided in Appendix I and Appendix J, respectively.

Significant chlorinated VOC (CVOC) contamination was reported at SV-01 (PCE 5,200, TCE 160, and vinyl chloride [VC] 8.6 µg/m^3) and SV-02 (DCE 1,800, PCE 550, and TCE 11,000 µg/m^3).

CVOC impacts were more limited at SV-03 (PCE 260 and TCE 35 µg/m^3) and were minimal at SV-04 (maximum analyte level of 10 µg/m^3).

Notable levels of non-chlorinated VOCs included acetone and benzene (1,600 and 950 µg/m^3, respectively) at SV-01, which also contained low-levels of gasoline compounds. VOCs impacts at SV-04 were low, consistent with conditions typically encountered in urban settings.

Vapor is present at levels exceeding NYSDOH guidance, indicating the potential for soil vapor intrusion into the on-site building (existing indoor air data, conducted outside of the heating season, indicate an absence of significant contamination).

5.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

Gallagher Bassett Technical Services (GBTS) performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E 1527-21 to identify recognized environmental conditions (RECs), Controlled RECs (CRECs), Historical RECs (HRECs) and/or other significant environmental liabilities resulting from or associated with the storage, use, transport, or disposal of hazardous or regulated materials at the property located at 50 Raymond Avenue, Town of Poughkeepsie, Dutchess County, New York. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report.

Identified RECs are presented in Section 4.1, and findings, conclusions, and recommendations regarding RECs, other potential environmental liabilities associated with the property, and/or de minimis conditions, are presented in Sections 4.2 through 4.5.

5.1 Recognized Environmental Conditions

Significant Data Gaps

The Environmental Professionals preparing this report have not identified any significant data gaps that affect their ability to identify RECs.

Overview of Identified RECs

This assessment has revealed evidence of the following RECs in connection with the property:

- Potential releases associated with long-term on-site dry cleaning activities, including documented chlorinated solvents in sub-slab vapor and an associated open NYSDEC spill event (No. 2403735)
- Potential residual petroleum contamination associated with a release at a former on-site fuel oil underground storage tank (UST; closed NYSDEC spill No. 0209962)

This assessment has revealed no evidence of HRECs in connection with the property (the closed spill at subject property is considered a REC).

5.2 Site History

The subject property is an approximately 0.14-acre commercial parcel located in a suburban setting. Reasonably ascertainable and useful historical records document that the property was vacant from at least 1893 to 1903, contained an unspecified store and dwelling as early as 1913, and was developed with the existing building prior to or circa 1950. The property contains Gladmore Cleaners and restaurants.

Historical Sanborn maps show an on-site dry cleaner with a solvent tank from 1950 through 1990. Use of use of chlorinated solvents at Gladmore Cleaners reportedly ceased in the 2010s, and the facility currently utilizes non-chlorinated materials.

No further investigation of historical records is recommended.

In response to the historical and current presence of an on-site dry cleaner, GBTS conducted a Phase II investigation to screen for any impacts from chlorinated solvent use. Laboratory data identified peak levels of the dry cleaning solvent tetrachloroethylene (PCE; 5,200 µg/m^3), PCE breakdown products, including trichloroethene (TCE; 11,000 µg/m^3), and non-chlorinated VOCs including acetone (1,600 µg/m^3) and benzene (950 µg/m^3). Based on these findings, a spill event (No. 2403735) was reported to NYSDEC. Documented chlorinated solvents in sub-slab vapor, the potential for associated soil and/or groundwater contamination, and the open NYSDEC spill event, are collectively considered to be a REC. Although existing indoor air-quality sampling indicates an absence of volatile organic compounds (VOCs) above NYSDOH Air Guideline Values and other relevant guidance, the sampling was conducted outside the heating season and may, therefore, not be fully indicative of the potential for soil vapor intrusion at the on-site building.

The nature and extent of contamination is incompletely understood. Further work is required to delineate CVOC impacts to the subsurface. It is recommended that vapor mitigation measures be implemented at the subject property in order to minimize risk of soil vapor intrusion.

5.3 Review of Regulatory Records

The subject property was identified as the site of closed NYSDEC spill No. 0209962, which was reported due to a UST failure at Gladmore Cleaners, with a reported release of 150 gallons of #2 fuel oil. Regulatory records indicate that the tank and contaminated soil were removed; a tank closure report documenting site conditions after the tank was removed, however, has not been reviewed. The potential presence of residual petroleum impacts from the leaking UST is considered a REC.

Any residual impacts from the petroleum release can be addressed using a SSDS; see Section 5.2.

Gladmore Cleaners, located at the subject property, is identified in USEPA records as a Very Small Quantity Generator of hazardous wastes and was formerly a Large Quantity Generator, and has a NYSDEC Air Facility registration (ID: 3-1346-00221/02000). Open NYSDEC spill No. 2402735 was reported in June 2024 after discovery of elevated levels of VOCs in soil vapor. Potential impacts associated with these findings are addressed in Section 5.2. The subject property was not otherwise identified in the review of regulator records. No adjoining or nearby properties were identified that are likely to impact the environmental integrity of the subject property.

No further investigation of regulatory records is recommended.

5.4. Relevant Site Observations and General Concerns

A 275-gallon above ground storage tank (AST) is located on the subject property.

It is recommended that the AST be properly maintained and periodically inspected.

Small quantities of petroleum and chemical products, including non-chlorinated solvent, are stored on site; releases from these containers could potentially impact the property.

It is recommended that all petroleum and chemical products be properly stored.

The following de minimis environmental conditions were observed: concrete floor surface staining in the Gladmore Cleaners boiler room.

Floor staining should be properly cleaned.

5.5 Non-scope Considerations

Environmental issues and/or concerns that are outside the scope of ASTM E 1527-21 are discussed below.

Limited visual observations by GBTS and the likely dates of building construction suggest that asbestos-containing materials (ACM) and lead-based paint (LBP) may be present. No surveys for ACM or LBP are known to have been conducted.

Any suspect material encountered during maintenance, renovation, or demolition activities should be tested for asbestos or lead, or, in the absence of analytical data, be treated as though it contained asbestos or lead. All maintenance, renovation, or demolition activities should be conducted in accordance with applicable regulations.

Elevated concentrations of radon may be present at the subject property.

It is recommended that radon testing be conducted at the on-site structure.

7.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

The following statements are required by 40 CFR 312.21(d) of the environmental professional(s) responsible for conducting and preparing the Phase I Environmental Site Assessment report.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

and

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Re: Indoor Air Sampling Summary Report
50 Raymond Avenue, Poughkeepsie, NY
Gladmore Cleaners Site – NYSDEC Spill No. 2402735
LaBella Project No. 2243037

Dear Ms. Mossey,

LaBella Associates, D.P.C. ("LaBella") has prepared this report to summarize the results of an indoor air assessment that was performed at 50 Raymond Avenue, Town of Poughkeepsie, Dutchess County, New York, hereinafter referred to as the "Site."

PROJECT BACKGROUND

LaBella was retained to provide environmental consulting services at the Site following receipt of results from a sub-slab vapor sampling event performed by a consultant for an outside party. In June 2024, Gallagher Bassett Technical Services (GBTS) collected samples from four (4) locations within the first-floor slab-on-grade portion of the Site building. Analytical results from each of the sub-slab vapor locations indicated elevated concentrations of tetrachloroethene (PCE) and trichloroethene (TCE). The PCE concentrations ranged from 10 to 5,200 µg/m^3 and TCE concentrations ranged from 6.8 to 11,000 µg/m^3, which are concentrations that warrant mitigation. On behalf of the owner, LaBella notified the New York State Department of Environmental Conservation (NYSDEC) of the findings on June 25, 2024, and Spill No. 2402735 was assigned to the Site. NYSDEC requested indoor air sampling be conducted to evaluate air quality within the structure, recognizing that this sampling would be performed outside of the heating season, which is when indoor air sampling should be conducted to be consistent with NYS Department of Health (NYSDOH) guidance. Steps were immediately taken to initiate that effort and this letter-report summarizes the results of the investigation.

The Site consists of a two-story brick building with a small partial basement in the northwestern building footprint and finished attic. Based on available information, it appears the original two-story residence was expanded prior to 1950 for commercial use, with additions on both the first and second floor. The building is currently comprised of three (3) first/ground floor tenant spaces (Gladmore Cleaners, New Nelly Restaurant, and Twisted Soul Desserts), two vacant commercial units on the second floor, and a vacant unit in the finished attic on the third level.

SCOPE OF WORK

Indoor air quality (IAQ) sampling was performed between July 2 and 3, 2024 in accordance with LaBella's "*Environmental Consulting Services and Indoor Air Sampling*" proposal dated June 26, 2024. The day before conducting the sampling, LaBella received floor plans that identified a

basement; this additional information warranted an adjustment to our sampling approach. LaBella reallocated a sample canister that was planned for use as a duplicate to be used to collect a basement air sample.

LaBella initially performed a walkthrough of the site to identify sample locations and potential interferences. Prior to sample collection, LaBella staff completed an inventory and monitored indoor air with a photoionization detector (PID) that presents readings in parts per billion (ppb). Results were recorded on the New York State Department of Health (NYSDOH) "Indoor Air Quality Questionnaire and Building Inventory" form, that is included as **Attachment 1.**

The highest PID readings (400 to 500 ppb) were detected in the general area of a 55-gallon drum of "Intense" brand alternative dry-cleaning solvent and related one-gallon soaps and detergents, and readings of 10 to 20 ppb were detected in the general area of 100-lb containers of "Nutra-Sour" powdered laundry sour and Tiger Comb Bleach products. LaBella reviewed the Safety Data Sheet (SDS) of the "Intense" brand solvent that confirmed the absence of PCE and its daughter products.

Observations made during the walkthrough and inventory were taken into consideration when selecting final sample locations. Locations avoided areas where the presence or use of oils and chemicals could potentially interfere with sample analysis and the laboratory's ability to achieve sufficiently low reporting limits.

LaBella staff collected a total of six (6) samples in 6-liter SUMMA®-type canisters equipped with 24-hour flow regulators, including five (5) indoor air (IA) samples and one (1) outdoor ambient (OA) air sample. Sample information is presented in the table below. Using Teflon-lined tubing, samples were collected three to five (3-5) feet above the floor surface to represent the breathing zone. Sample locations were spaced throughout the Site building to evaluate conditions in different tenant spaces, as described in the following table. No sample was collected in the finished attic space.

Sample ID	Sample Type	Tenant Space	Building Level
50Ray-B	Indoor Air	Beneath New Nelly Restaurant	Basement
50Ray-A	Indoor Air	Gladmore Cleaners (Break Room)	First Floor
50Ray-C	Indoor Air	Twisted Soul Desserts	First Floor
50Ray-D	Indoor Air	New Nelly's Restaurant	First Floor
50Ray-E	Indoor Air	Former Tattoo Voodoo space	Second Floor (southern unit)
50Ray-F	Outdoor Air	N/A	Outdoor Air

To reduce the potential for sample interference over the 24-hour period, the OA canister was placed in the northern second-story unit near a north-facing window. LaBella extended Teflon tubing out the window down to a collection height of approximately six feet above the ground surface outside the Site building.

The six (6) samples were collected concurrently, and the flow valves were closed approximately 24 hours after initiating sample collection. Samples were submitted for analysis of Volatile Organic Compounds (VOCs) by EPA Method TO-15 under standard chain-of-custody procedures to York Analytical Laboratories, Inc. of Stratford, CT. Canisters were picked up at LaBella's Poughkeepsie office by laboratory courier and a rush (3-5 day) turnaround time was requested on the analysis. York Analytical Laboratories, Inc. is certified by the National Environmental Laboratory Accreditation Conference (NELAC) and holds certification in New York, New Jersey, Connecticut, and Pennsylvania.

LABORATORY ANALYTICAL RESULTS

The IAQ results, along with June 2024 sub-slab vapor results, were compared to the NYSDOH Decision Matrices as per their Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006, with amendments). The attached tables include a summary of the analytical results for the July IAQ sampling event, as well as the June 2024 sub-slab sampling event. Data is presented in **Table 1** (Decision Matrix Compounds only) and **Table 2** (Non-Matrix VOCs). Sample locations and a summary of PCE and TCE results are depicted on **Figure 1**, overlaid on a Site Plan provided to LaBella.

The analytical results for the July 2024 IAQ sampling reported VOCs above laboratory detection limits. The basement air sample (50Ray-B) exhibited PCE at 4.0 µg/m^3 and TCE at 0.97 µg/m^3. First floor IA concentrations of PCE ranged from 1.4 to 3.5 µg/m^3 and TCE ranged from 0.17 to 1.2 µg/m^3. PCE was reported at 0.69 µg/m^3 on the second floor and TCE was not detected above method detection limits. Indoor air concentrations of PCE and TCE were less than their respective NYSDOH Air Guideline Values (AGVs), of 30 µg/m^3 and TCE of 2 µg/m^3, which were established to be protective of public health.

GBTS sample SV-01, closest to Raymond Avenue, also exhibited Benzene at elevated concentrations (950 µg/m^3) where mitigation would be recommended; however, indoor air concentrations for Benzene were at or below background concentrations in outdoor air.

IAQ results reported the presence of 18 other compounds in indoor air that do not have associated NYSDOH guidance values. In general, these concentrations were relatively low and consistent with commercial conditions and/or outdoor air (background) concentrations. Of these compounds, acetone was the most elevated, with indoor air concentrations ranging from 14 to 310 µg/m^3. The laboratory report identified acetone in the outdoor air sample (50Ray-F) at 9,300 µg/m^3. Elevated acetone was also reported by Gallagher Bassett in sub-slab vapor sample SV-01 at 1,600 µg/m^3. The source of the acetone cannot be confirmed; however, acetone is not listed in the ingredients section of the Safety Data Sheet for the Intense Solvent.

The full laboratory report is provided as **Attachment 2**.

DISCUSSION AND RECOMMENDATIONS

LaBella prepared a comparison of existing GBTS and LaBella data to NYSDOH guidance matrixes and the comparison indicates the following:

- Although indoor air concentrations of PCE and TCE were less than NYSDOH AGVs, sub-slab vapor results alone identified PCE and TCE at concentrations above “Mitigate” thresholds at the Site building. NYSDOH recommends mitigation for sites where TCE concentrations in sub-slab vapor are greater than 60 µg/m^3 and PCE concentrations are greater than 1,000 µg/m^3. Additionally, elevated concentrations of 1,1-Dichloroethylene (1,1-DCE) trigger a Mitigate recommendation.

- The concentrations in GBTS sample SV-01, closest to Raymond Avenue, identified Benzene at a concentration also warranting mitigation; however, this compound was not reported in indoor air above background levels. Spill #0209962 was reported at the site in 2003 for a release of 150 gallons of #2 fuel oil from a storage tank, which was subsequently closed. It is possible that petroleum VOCs are related to that spill.

Based on a review of the results, LaBella offers the following recommendations:

Since sub-slab vapor data identified concentrations of PCE and TCE above mitigation guidance values, LaBella recommends design and installation of a sub-slab depressurization system (SSDS) to eliminate the potential for soil vapor intrusion into the building and satisfy NYSDOH requirements.

- The extent of subsurface impacts related to historical release of dry-cleaning solvents is unknown; therefore, LaBella recommends submitting this report to NYSDEC and scheduling further discussion regarding appropriate next steps for Spill 2402735.

If you have any questions regarding this transmittal, please do not hesitate to contact me at (838) 946-5170.

Respectfully submitted,
LABELLA ASSOCIATES, D.P.C.

"ND" indicates the concentration was not detected above the reporting limit

(1) *New York State Department of Health (NYSDOH), Guidance for Evaluating Soil Vapor Intrusion in the State of New York* , October 2006 and subsequent updates. [Note: This Guidance uses a combination of indoor air and sub-slab soil vapor when comparing to the matrices. In addition, for compounds not listed in the matrices an overall site approach is employed which utilizes the USEPA BASE Database (see 2. below) as typical background for commercial buildings and also uses the outdoor air sample, refer to Guidance document for details.]

(2) USEPA Building Assessment and Survey Evaluation (BASE) Database (90th Percentile). As recommended in Section 3.2.4 of the NYSDOH Guidance (Refer to Footnote "1") this database is referenced for the indoor air sampling results. This database is also referenced to provide initial benchmarks for comparison to the air sampling data and does not represent regulatory standards or compliance values.

(3) Values obtained from NYSDOH, Guidance for Evaluating Soil Vapor Intrusion in the State of New York, updated February 2024. Recommended action depends on comparision of both sub-slab and indoor air results to matrices.

***NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York* , May 2017/February 2024 Decision Matrices Notes:**

MONITOR:

NYSDOH recommends monitoring (sampling on a recurring basis), including but not necessarily limited to sub-slab vapor, basement air and outdoor air sampling, to determine whether concentrations in the indoor air or sub-slab vapor have changed and/or to evaluate temporal influences. Monitoring might also be recommend to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitoring is determined based on site-, building-, and analyte-specific information, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated.

MITIGATE:

NYSDOH recommends mitigation to minimize current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building-specific basis, taking into account building construction and operating conditions. Mitigation is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated.

--Note that results in unshaded cells are designated "No Further Action" recommended to address human exposure for that compound in that location; however, results from other locations in the same building may yield other recommendations.

Design Sketch

Design Sketch Guidelines and Recommended Symbology

- Identify and label the locations of all sub-slab, indoor air, and outdoor air samples on the layout sketch.
- Measure the distance of all sample locations from identifiable features, and include on the layout sketch.
- Identify room use (bedroom, living room, den, kitchen, etc.) on the layout sket
- Identify the locations of the following features on the layout sketch, using the appropriate symbols:

B or **F**	Boiler or Furnace	o	Other floor or wall penetrations (label appropriately)
HW	Hot Water Heater	**xxxxxxx**	Perimeter Drains (draw inside or outside outer walls as appropriate)
FP	Fireplaces	**######**	Areas of broken-up concrete
WS	Wood Stoves	● SS-1	Location & label of sub-slab samples
W/D	Washer / Dryer	● IA-1	Location & label of indoor air samples
S	Sumps	● OA-1	Location & label of outdoor air samples
@	Floor Drains	● PFET-1	Location and label of any pressure field test holes.

Structure Sampling Questionnaire and Building Inventory

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 03, 2024 and listed below. The project was identified as your project: **2243037 Gladmore Cleaners**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received

General Notes for York Project (SDG) No.: 24G0188

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

YORK
ANALYTICAL LABORATORIES INC

Sample and Data Qualifiers Relating to This Work Order

TO-VAC	The final vacuum in the canister was less than -2" Hg. The optimum pressure range for constant flow rate is full vacuum to -2" Hg. Bias is not suspected provided there was constant flow to the can to 75% full.
TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Revision Description: This report has been revised to correct VOA results.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/22/2024 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA-TSDF site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

EPA ID:: NYD001328236				

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/06/2024 has revealed that there are 4 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/06/2024 has revealed that there are

EXECUTIVE SUMMARY

10 NY LTANKS sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/06/2024 has revealed that there are 24 NY Spills sites within approximately 0.25 miles of the target property.

NY SPILLS 80: Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.

A review of the NY SPILLS 80 list, as provided by EDR, and dated 11/02/2010 has revealed that there is 1 NY SPILLS 80 site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY SPDES: New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

A review of the NY SPDES list, as provided by EDR, and dated 01/12/2024 has revealed that there is 1 NY SPDES site within approximately 0.125 miles of the target property.

VASSAR INN & INSTITU Permit Number: NYR11K028	157-171 COLLEGE AVEN	SSW 0 - 1/8 (0.118 mi.)	16	79

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 01/01/2022 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 14 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 4 UST FINDER sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

Sites may be listed in more than one database

A1 Target Property — **GLADMORE QUALITY CLEANER**, **52 RAYMOND AVE**, **POUGHKEEPSIE, NY 12603**

NY LTANKS **S105997780**
NY DRYCLEANERS **N/A**
NY MANIFEST

Site 1 of 7 in cluster A

Actual: 180 ft.

LTANKS:

Name:	BEST / GLADMORE
Address:	50 RAYMOND AVE
City,State,Zip:	POUGHKEEPSIE, NY
Spill Number/Closed Date:	0209962 / 2003-02-24
Facility ID:	0209962
Site ID:	312140
Spill Date:	2003-01-02
Spill Cause:	Tank Failure
Spill Source:	Commercial/Industrial
Spill Class:	B3
Cleanup Ceased:	Not reported
SWIS:	1446
Investigator:	VPMCCABE
Referred To:	Not reported
Reported to Dept:	2003-01-02
CID:	257
Water Affected:	Not reported
Spill Notifier:	Other
Last Inspection:	Not reported
Recommended Penalty:	True
Meets Standard:	False
UST Involvement:	False
Remediation Phase:	0
Date Entered In Computer:	2003-01-02
Spill Record Last Update:	2004-08-11
Spiller Name:	Not reported
Spiller Company:	GLADMORE CLEANERS
Spiller Address:	50 RAYMOND AVE
Spiller County:	001
Spiller Contact:	DAN HALBERT
Spiller Phone:	(845) 452-4560
Spiller Extention:	Not reported
DEC Region:	3
DER Facility ID:	251703
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was MCCABE 01/13/2003 LETTERS SENT TO PROPERTY OWNER BY V. MCCABE AND M. MASTRO. This spill was updated 08/11/2004 from info in V. McCabe's data files. 'Date:' = 01/02/03, 'Phone' = 1/2/2003, 'Site Insp' = 1/29/2003.
Remarks:	caller is trying to pump out tank - contained to a pit

All Materials:

Site ID:	312140
Operable Unit ID:	861216
Operable Unit:	01
Material ID:	513376
Material Code:	0001A
Material Name:	#2 fuel oil
Case No.:	Not reported
Material FA:	Petroleum
Quantity:	150.00
Units:	G
Recovered:	.00

Hazardous Waste Summary:

Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D029
Waste Description:	1,1-Dichloroethylene
Waste Code:	D039
Waste Description:	Tetrachloroethylene
Waste Code:	D040
Waste Description:	Trichlorethylene
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	NONE

DEC Memo:	6-14-13: Spoke with Jess Hicks/EnviroCl. This bldg is the old Juliet

N/F JULIET THEATRE: BASEMENT (Continued) **S113817987**

Theatre which is being
renovated. Asbestos abatement is going on at this time. Crew noticed oil under plastic at furnace.
Jess says smaill qty of oil appears to have leaked from a crimped line at furnace and gone under
wall into another room and into a sump. Sump pump not on - no electricity in bldg. They will return
after weekend to investigate further. jm 9-05-13: V.Mc.: See 3 page update, inc. site inspections
noting: *) Also see 130-3319, dup spill report. *) 6-19-13: No activity on site. *) 6-19-13: V.Mc.
at EnviroClean, meet w/Stacy Smit. problem with feed line to furnace caused spill. Clean up ith
speedy dri. Some impacts to adj. building, boom/pads deployed. Sump pump shut down, no power.
Dept.of Labor shut down job, asbestos removal. *) 7-10-13: V.Mc. at EnviroClean. Meet with Stacy.
Report forwarded to DEC, not recived. To be re-submitted. *) 7-25-13: No report to date. *)
7-26-13: p.2: Meet with Mr. W.Effron/3 Arts. No odor on 1st floor or basement. Meet with employee
at FrescoTort, No odor on 1st floor or basement. Inspected sump pit in basement, bio-sheen noted.
Employee noted that pit overflows each night and that he mops it up.
#48 Raymond Ave. Asbestos
Project suspended by NYS Dept.of Labor. Zorona Rest.& Cafe and Chan's Rest. both close due to fire
at Chan's. #60 Raymond Building permit # 20130875, dated 5-21-13 for DEMO. Forigen Affairs closed.
*) 7-26-13: V.Mc. at EnviroClean, meet with Jackie and Adam. Stace project manerger, away on vac
for a week. Req. sent by e-Mail, no responce yet. *) 9-3-13: Spill Remed.Report from EnviroClean,
dated 8-27-13, e-Doc. *) 9-4-13: p.3: Meet with Jackie & Adam/EnviroClean, Stacey in field. Report
submitted incomplete. Sample from sump pit needs to meet, or at least be close to standards. Sump
pit should be vac out untill clean water sample can be obtainned.
10-1-13: V.Mc.: See Spill
Remediation report from EnviroClean, dated 9-16-13. Sump pit re-sampled , results meet standards.
NFA.

Remarks: concrete floor bleed into secondary room floor - sub pump in seconmd room - no pump contained clean up pending

DEC Memo:	8-6-10: V.Mc. to George/Luzon: Likely a fitting problem, leak above liq.level. In touch w/school , to work out who will be exc. top of UST for inspection / Repairs. 8/20/10: D.W. visited site: Luzon has not come back yet to address UST condition. Person in charge is Henry Cibelli, at Arlington Central School District office at 845-486-4977. 9/16/2010: e-mail from Luzon in response to my e-mail: Status for spill # 1005154 - Arthur May School is as follows: On August 31, 2010 Luzon returned to the school to expose top of tank and make necessary repairs. Tank was re-tested on Sept 1, 2010 and passed. Report is being written and should be in the mail by the end of this week. ELM 9-17-10: V.Mc.: See 1 page update, voice mail only. Take passed retest, as per Henry Cibeli/Arl.Cent.Sch.Dist., NFA.
Remarks:	TANK TEST FAILURE.

Contact Name:	ADAM SCHEU
DEC Memo:	9/11/15: I spoke with Adam Scheu at Optima. This UST is at the Dutchess County Office of Information Services. Optima has already begun stockpiling soil. No evidence of ground water impact at this time. Adam states they should complete digging out the contamination on Monday. The closure report will follow when work is complete. jod Reports of contaminated soil being moved without a valid 364 permit to an unlicensed 360 facility. Optima utilizing Conklin's permit, which needed to be transferred; DLE investigating RDB Spill re-assigned to Melissa RDB 9/16/15 Received an email from ECO Whalen to check on soil pile. Went to site, no soil at site....mm 9/17/15 ECO Whalen issued a ticket to Optima for transporting waste to an unlicensed facility. 9/22/15 Went to site, product is weeping into excavation along the foundation wall. Optima was on site. They are vac'ing excavation every morning prior to excavating and as of today, soil is being stored in roll-offs on site. Went to DCDPW on Rt44/55 and Burnett Blvd. Contaminated soil from the site was brought to DPW which is not a permitted storage facility. The County and Optima were instructed in an email from Mastro to remove the soil immediately...mm 9/24/15 Went to DCDPW at 3:30pm. Most of the contaminated soil has been removed and there was a Conklin truck being loaded. At the spill site, two wells were installed in the excavation. JK OMara approved the workplan from Optima for this spill yesterday....mm 1/08/16 Based on the data contained in the UST/Spill Closure Report prepared by Optima, no further action is required...mm
Remarks:	Found contamination during removal of tank. Clean up is pending.

DEC Memo:	8/13/15 Stopped by 8/12 after-hours, walked around the house, which was unoccupied at the time, and did not see any evidence of dumping, although it was getting dark. Did not smell any evidence of fuel oil. Spoke to anonymous caller, who gave me the # of the dental practice 845-454-0490. Called and spoke to office assistant, who said that owner was one of the dentists there, Dr. Nazmar Zahangir. She would be calling him, and would have him call back. Anonymous caller said that several people noted this happening, and that the dentists were asked about it, but got no info. At my visit, neighbor across the street claimed he saw some activity at the house. Spoke to the wife of the Dr., Dr. Indira Rocha, who is also a dentist at this practice. Her cell is 917-664-1183. She said the basement was being cleaned out due to moisture-related issues, and carpenter ants. There is a 275 AST in the basement with a small amount of fuel oil in it. They are looking to get rid of it, and she has several contractor contacts for this. She and her husband are in Florida at this time, but will be back next week to address this. dw 10/6/15 Spoke to Dr. Rocha, who said that basement AST was pumped out, and removed. There was no fuel spill. Basement has been fumigated and cleaned up. NFA dw
Remarks:	Unknown named tank removal contractor removing tank from dental practice and dumping the old oil from the old tank in the bushes behind the practice. The caller states he advised that what they were doing was illegal and they ignored his advise.

Spiller Address:	142 COLLEGE AVE
Spiller Company:	999
Contact Name:	CHIEF MILLS
DEC Memo:	8/26/22- I spoke to Chief Mills with Town of Poughkeepsie: Substance is not foamy, more like milk. Neutral pH They tried to follow the creek but it disappears under the road. Here they can almost see the substance separately from the water that it is mixing with. At this point is the boundary between town of Pk and City of Pk. Likely some storm drains along the road that discharge to the stream. Nothing reported by the neighboring city of Pk (such as dumping, MVAs) -MS 7-7-23 Reviewed notes. No additional action is needed. ML

Tank Info:

Tank Number: 10
Tank Id: 83199
Material Code: 0013
Common Name of Substance: Lube Oil

Equipment Records:

H00 - Tank Leak Detection - None
G00 - Tank Secondary Containment - None
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
I99 - Overfill - Other

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 08/04/2002
Capacity Gallons: 275
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 10/01/2008
Register: True

City,State,Zip: POUGHKEEPSIE, NY 12601-
Program: HW
Site Code: 55991
Classification: N
Region: 3
Acres: 5.000
HW Code: 314087
Record Add: 11/18/1999
Record Upd: 03/18/2009
Updated By: JAQUINN

Site Description: The site is located between 721 and 753 Main Street in a commercial/light industrial area in the eastern part of the City of Poughkeepsie, Dutchess County, NY. The area of investigation occupies approximately two blocks (approximately 300 feet by 800 feet) and comprises 17 separate businesses and properties on both the north and south sides of Main Street. The present and former businesses that occupied this area included two dry cleaners, a gas station, a transmission shop, an auto parts store and other businesses. The nearest private residence is located approximately 200 feet to the east-northeast and to the south. An investigation of a Cumberland Farms gas station under spill number 8804896 revealed the presence of PCE, TCA, TCE and DCA in addition to petroleum contamination. A soil vapor extraction system was installed in April 1990 to address the petroleum release, and the spill case was closed in October 1997.

Env Problem: A preliminary site assessment (PSA) conducted by the NYSDEC from 1994 to 1995 to investigate the chlorinated solvent contamination included subsurface soil borings and monitoring wells. The conclusion of the PSA was to leave the site with the P classification and continue the investigation to locate the source of these contaminants. A Site Characterization (SC) began in 2008 to locate the source(s) of contamination and address if the site may pose a significant threat. Minor contamination was found and no hazardous waste disposal was documented, and it was determined that the site should not be added to the Registry of Inactive Hazardous Waste Disposal sites. The contaminant of concern at the site was initially from PCE and breakdown products. Early investigations indicated a plume of groundwater contamination extends northwest from Cumberland Farms. Exceedances of groundwater standards were detected for PCE and TCE in most of the wells installed along Main Street. Subsequent investigations revealed no groundwater contamination with PCE or TCE any longer. In addition, neither PCE nor TCE was detected in any soil

MAIN STREET / GRAND AVENUE SITE (Continued) **S113916844**

samples. The potential for a significant threat through soil vapor intrusion into structures in the area was addressed through soil vapor sampling conducted in 2008 and indoor air sampling conducted in 2009. Only low levels of PCE and TCE was revealed through soil vapor sampling conducted in 2008. The NYSDOH PERC badge sampling in 2009 did not reveal any detectable levels of PCE. The area is served by public water supply, which is supplied by the Hudson River.

Updated By: JEBROWN
Site Description: Location: The site is located at 70A Overocker Road in the Town of Poughkeepsie, County of Westchester, New York. The site is an approximately 7-acre parcel bounded by residential properties to the north, abandoned railroad bed (now a rail trail)and residential and

HARRIS CORPORATION (Continued) **S105114251**

commercial properties to the south, vacant land to the east, and industrial land and residential properties to the west. Site Features: The site consists of one building surrounded by paved parking areas to the east, south and west. Current Zoning and Land Use: The site is currently used by Abilities First, a non-[profit which works to enhance the lives of disabled people and is zoned for commercial use. Past Use of the Site: Various chemicals were used in the work area as part of the manufacturing process at the Harris Corporation. In 1981, Harris Corporation personnel discovered a leak in the gravity drainage system for the facility. The gravity drainage system was used to collect waste liquid, mostly solvents, from a number of ventilation hoods. The waste liquid consisted primarily of methanol, along with lesser amounts of cellusolve (2-ethoxyethanol), xylene, n-butyl acetate, isopropanol, and acetone, all of which can be generally categorized as volatile organic compounds (VOCs). During the 1980s, Harris Corp. installed a total of 20 groundwater monitoring wells, including three recovery wells, at the site Site Geology and Hydrogeology: Groundwater flows to the south-southeast at a depth of approximately eight feet below ground surface. The site consists of fractured shale bedrock overlain by an unconsolidated soil layer. Generally, the bedrock is the primary pathway for groundwater. The primary water-bearing zones of the site are discrete, relatively deep fractures within the bedrock. The water-bearing zones vary in depth from 13 feet below ground surface to 99 feet below ground surface.

Env Problem: Post-remediation: The primary contaminants of concern (COCs) at the site prior to remediation included trichloroethene (TCE), tetrachloroethene (PCE), 1,1,1-trichloroethane (TCA), ethylbenzene, xylenes, methanol, isopropanol, 1,2-dichlorobenzene (1,2-DCB), and 1,4-dichlorobenzene (1,4-DCB)in groundwater. Remediation of the site groundwater is ongoing utilizing a groundwater extraction system. Concentrations of the remaining COCs detected in groundwater are slightly above standards. As an example, maximum TCE concentration during the most recent monitoring period was 24 parts per billion (ppb). Historically it was as high as 1,290 ppb compared to a standard of 5 ppb. the groundwater extraction system is preventing migration of the contaminants in groundwater. A sub-slab depressurization system (SSDS) prevents migration of soil vapor to the indoor air of the on-site commercial building. Long-term operation, monitoring and maintenance is conducted according to the Site Management Plan. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department’s Emerging Contaminants initiative. There were no exceedances of the screening levels in groundwater for any contaminant.

Health Problem: Contact with contaminated groundwater is not expected as a deed restriction is in place that limits use of groundwater at the site. In addition, excavation on- site is limited in areas where groundwater is known to be impacted. Public drinking water is available to residents near the site, however, five nearby private water wells are still in use. Annual sampling has not detected any site-related contamination in the private wells. Contact with residual soil contamination is unlikely because it is located beneath the on-site building. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to

HARRIS CORPORATION (Continued) **S105114251**

	as soil vapor intrusion. A sub-slab depressurization system has been installed into the on-site building to prevent vapors located beneath the slab from entering the building and impacting indoor air quality. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Name: HARRIS CORPORATION
Address: MID-HUDSON INDUSTRIAL PARK & 70A OVEROCKER ROAD
City,State,Zip: POUGHKEEPSIE, NY 12603
Site Code: 58933
HW Code: 314061
Control Code: 36
Control Type: ENG
Date Record Added: 04/30/2007
Date Rec Updated: 11/03/2023
Updated By: MDKILMER
Site Description: Location: The site is located at 70A Overocker Road in the Town of Poughkeepsie, County of Westchester, New York. The site is an approximately 7-acre parcel bounded by residential properties to the north, abandoned railroad bed (now a rail trail)and residential and commercial properties to the south, vacant land to the east, and industrial land and residential properties to the west. Site Features: The site consists of one building surrounded by paved parking areas to the east, south and west. Current Zoning and Land Use: The site is currently used by Abilities First, a non-[profit which works to enhance the lives of disabled people and is zoned for commercial use. Past Use of the Site: Various chemicals were used in the work area as part of the manufacturing process at the Harris Corporation. In 1981, Harris Corporation personnel discovered a leak in the gravity drainage system for the facility. The gravity drainage system was used to collect waste liquid, mostly solvents, from a number of ventilation hoods. The waste liquid consisted primarily of methanol, along with lesser amounts of cellusolve (2-ethoxyethanol), xylene, n-butyl acetate, isopropanol, and acetone, all of which can be generally categorized as volatile organic compounds (VOCs). During the 1980s, Harris Corp. installed a total of 20 groundwater monitoring wells, including three recovery wells, at the site Site Geology and Hydrogeology: Groundwater flows to the south-southeast at a depth of approximately eight feet below ground surface. The site consists of fractured shale bedrock overlain by an unconsolidated soil layer. Generally, the bedrock is the primary pathway for groundwater. The primary water-bearing zones of the site are discrete, relatively deep fractures within the bedrock. The water-bearing zones vary in depth from 13 feet below ground surface to 99 feet below ground surface.
Env Problem: Post-remediation: The primary contaminants of concern (COCs) at the site prior to remediation included trichloroethene (TCE), tetrachloroethene (PCE), 1,1,1-trichloroethane (TCA), ethylbenzene, xylenes, methanol, isopropanol, 1,2-dichlorobenzene (1,2-DCB), and 1,4-dichlorobenzene (1,4-DCB)in groundwater. Remediation of the site groundwater is ongoing utilizing a groundwater extraction system. Concentrations of the remaining COCs detected in groundwater are slightly above standards. As an example, maximum TCE concentration during the most recent monitoring period was 24 parts per billion (ppb). Historically it was as high as 1,290 ppb compared to a standard of 5 ppb. the groundwater extraction system is preventing migration of the contaminants in groundwater. A sub-slab

HARRIS CORPORATION (Continued) **S105114251**

depressurization system (SSDS) prevents migration of soil vapor to the indoor air of the on-site commercial building. Long-term operation, monitoring and maintenance is conducted according to the Site Management Plan. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. There were no exceedances of the screening levels in groundwater for any contaminant.

Health Problem:	Contact with contaminated groundwater is not expected as a deed restriction is in place that limits use of groundwater at the site. In addition, excavation on- site is limited in areas where groundwater is known to be impacted. Public drinking water is available to residents near the site, however, five nearby private water wells are still in use. Annual sampling has not detected any site-related contamination in the private wells. Contact with residual soil contamination is unlikely because it is located beneath the on-site building. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed into the on-site building to prevent vapors located beneath the slab from entering the building and impacting indoor air quality. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

xylene, n-butyl acetate, isopropanol, and acetone, all of which can be generally categorized as volatile organic compounds (VOCs). During the 1980s, Harris Corp. installed a total of 20 groundwater monitoring wells, including three recovery wells, at the site Site Geology and Hydrogeology: Groundwater flows to the south-southeast at a depth of approximately eight feet below ground surface. The site consists of fractured shale bedrock overlain by an unconsolidated soil layer. Generally, the bedrock is the primary pathway for groundwater. The primary water-bearing zones of the site are discrete, relatively deep fractures within the bedrock. The water-bearing zones vary in depth from 13 feet below ground surface to 99 feet below ground surface.

Env Problem: Post-remediation: The primary contaminants of concern (COCs) at the site prior to remediation included trichloroethene (TCE), tetrachloroethene (PCE), 1,1,1-trichloroethane (TCA), ethylbenzene, xylenes, methanol, isopropanol, 1,2-dichlorobenzene (1,2-DCB), and 1,4-dichlorobenzene (1,4-DCB)in groundwater. Remediation of the site groundwater is ongoing utilizing a groundwater extraction system. Concentrations of the remaining COCs detected in groundwater are slightly above standards. As an example, maximum TCE concentration during the most recent monitoring period was 24 parts per billion (ppb). Historically it was as high as 1,290 ppb compared to a standard of 5 ppb. the groundwater extraction system is preventing migration of the contaminants in groundwater. A sub-slab depressurization system (SSDS) prevents migration of soil vapor to the indoor air of the on-site commercial building. Long-term operation, monitoring and maintenance is conducted according to the Site Management Plan. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department’s Emerging Contaminants initiative. There were no exceedances of the screening levels in groundwater for any contaminant.

Health Problem: Contact with contaminated groundwater is not expected as a deed restriction is in place that limits use of groundwater at the site. In addition, excavation on- site is limited in areas where groundwater is known to be impacted. Public drinking water is available to residents near the site, however, five nearby private water wells are still in use. Annual sampling has not detected any site-related contamination in the private wells. Contact with residual soil contamination is unlikely because it is located beneath the on-site building. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system has been installed into the on-site building to prevent vapors located beneath the slab from entering the building and impacting indoor air quality. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 58933
Site Description: Location: The site is located at 70A Overocker Road in the Town of Poughkeepsie, County of Westchester, New York. The site is an approximately 7-acre parcel bounded by residential properties to the north, abandoned railroad bed (now a rail trail)and residential and commercial properties to the south, vacant land to the east, and industrial land and residential properties to the west. Site Features: The site consists of one building surrounded by paved parking areas to the east, south and west. Current Zoning and Land Use: The site is currently used by Abilities First, a non-[profit which works to enhance the lives of disabled people and is zoned for commercial use. Past Use of the Site: Various chemicals were used in the work area as part of the manufacturing process at the Harris Corporation. In 1981, Harris Corporation personnel discovered a leak in the gravity drainage system for the facility. The gravity drainage system was used to collect waste liquid, mostly solvents, from a number of ventilation hoods. The waste liquid consisted primarily of methanol, along with lesser amounts of cellusolve (2-ethoxyethanol), xylene, n-butyl acetate, isopropanol, and acetone, all of which can be generally categorized as volatile organic compounds (VOCs). Site Description: This site was a municipal landfill with limited vegetative cover, which later was covered and developed into a large shopping area; the 44-Plaza Shopping Center. During construction of Caldors in 1973, municipal waste was excavated and disposed of 100 feet north of the foundation. At present, this site is covered with vegetation. Casper Kill Creek flows south along the site. Much of the site is flat, except for the creek, which is located in a gully. The site forms a five to ten foot embankment near the access road at the side of Caldors. Leachate runoff was observed at the bottom of this embankment. The Town maintained approximately 10 acres of the site for storage and disposal of leaves and construction debris, but the area is no longer used for that purpose. Residences are nearby to the west and the site is very accessible; most of the residences are serviced by offsite municipal water.
Env Problem: Air monitoring identified 600 ppm of methane on the top of this embankment. An EPA Site Investigation has been completed. A Phase I Investigation was completed in 1984 and a Preliminary Site Assessment (PSA) is nearing completion. A final PSA Report is expected in late 1995. The Town of Poughkeepsie performed a sub-surface investigation on a 14.5 acre portion of the VanDeWater site known as the Espie property. The property is located on the west side of Tucker Road, approximately 1200 feet north of the intersection of Tucker Road and Friendly Lane. The investigation included the excavation of 23 test pits and 10 split spoon samples. The results of this investigation did not document the disposal of hazardous waste on the 14.5 acre Espie property. A petition from the Town of Poughkeepsie requesting the deletion of the 14.5 acre Espie property from the site description of the VanDeWater site was granted on March 1, 1995. In the past, leachate was discharged to Casperkill Creek.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

MGP: Manufactured Gas Plants Listing

From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

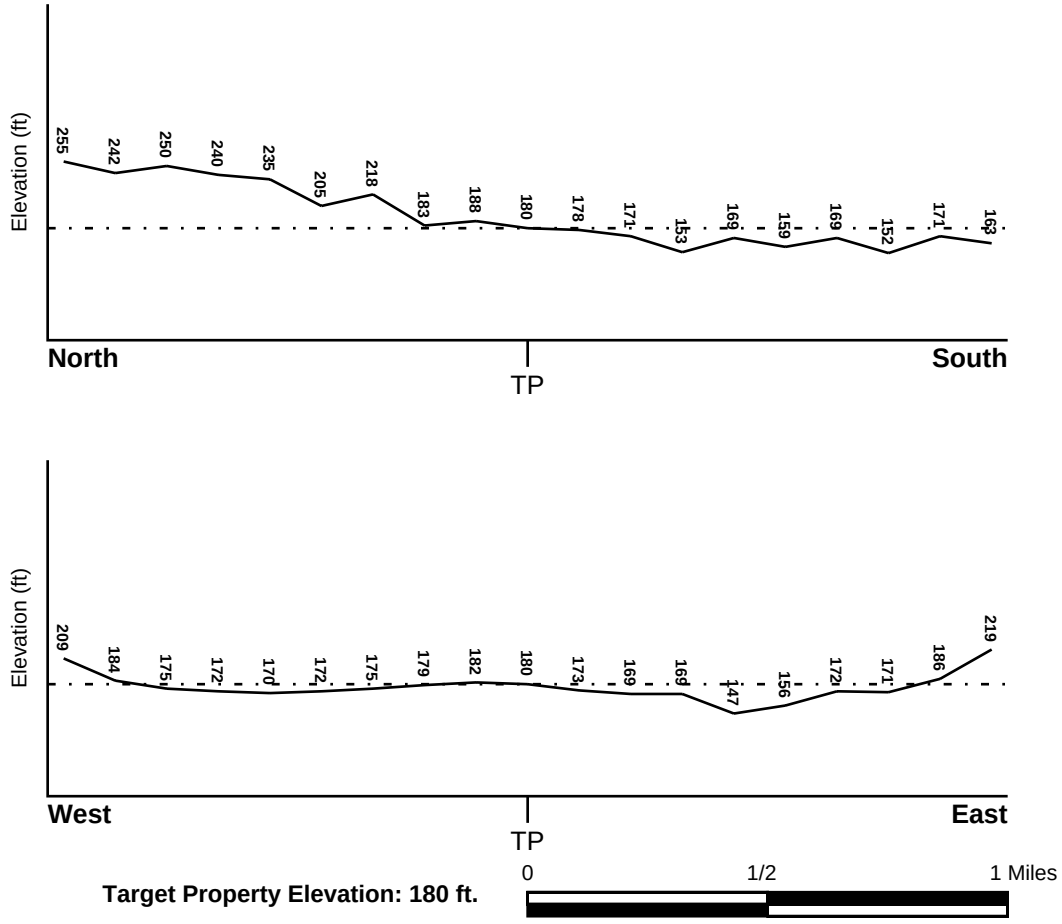
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36027C0359E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
36027C0358E	FEMA FIRM Flood data
36027C0366E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
POUGHKEEPSIE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: 1.4 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Knickerbocker

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6 Min: 4.5
2	9 inches	18 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6 Min: 4.5
3	18 inches	29 inches	loamy sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6 Min: 4.5
4	29 inches	72 inches	loamy sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6 Min: 4.5

Soil Map ID: 3

Soil Component Name: Haven

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 141	Max: 6 Min: 4.5
2	11 inches	22 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 141	Max: 6 Min: 4.5
3	22 inches	72 inches	stratified very gravelly sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 141	Max: 6 Min: 4.5

Soil Map ID: 4

Soil Component Name: Cardigan

Soil Surface Texture: channery silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 38 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Report Date: 06/12/2024
Client Project ID: 24003-0026
York Project (SDG) No.: 24F0628

Gallagher Bassett - NY
22 IBM Road, Suite 101
Poughkeepsie NY, 12601
Attention: Richard Hooker

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 10, 2024 and listed below. The project was identified as your project: **24003-0026**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
24F0628-01	SV-01	Soil Vapor	06/07/2024	06/10/2024
24F0628-02	SV-02	Soil Vapor	06/07/2024	06/10/2024
24F0628-03	SV-03	Soil Vapor	06/07/2024	06/10/2024
24F0628-04	SV-04	Soil Vapor	06/07/2024	06/10/2024

General Notes for York Project (SDG) No.: 24F0628

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

YORK
ANALYTICAL LABORATORIES INC

Sample and Data Qualifiers Relating to This Work Order

TO-LCS-L	The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.
TO-CCV	The value reported is ESTIMATED for this compound due to its behavior during continuing calibration verification (>30% Difference from initial calibration).
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

APPENDIX K

Scope of Services

Phase I Environmental Site Assessment
Scope of Services

Task 1.0 Description of Subject Property and Surrounding Area Physical Settings

1.1 Description of property location, topography, geology, hydrogeology, surface hydrology and wetlands
1.2 Identification of adjoining and surrounding area properties

Task 2.0 Historic Investigation (Review of Applicable, Reasonably Ascertainable Sources)

2.1 Review of historic maps and plans (to the earliest date of available maps)
2.2 Review of aerial photographs
2.3 Review of local records (e.g., building department), including cursory ownership information and City Directories, if applicable.
2.4 Interviews with User, Key Site Manager, and other knowledgeable individuals
2.5 Review of User or property owner provided documents and/or analytical results

Task 3.0 Federal and State Regulatory Agency Records Review

3.1 Review of ASTM-required federal, state, and/or tribal databases at required search distances and analysis of the relationship of each Site (e.g., upgradient, downgradient) to the Subject Property;

- Federal NPL (1.0 mile) and delisted NPL sites (0.5 mile)
- Federal SEMS list and CERCLIS NFRAP site list (0.5 mile)
- Federal RCRA CORRACTS facilities list (1.0 mile)
- Federal RCRA non-CORRACTS TSD facilities list (0.5 mile)
- Federal RCRA generators list (subject/adjoining properties)
- Federal ERNS list (subject property)
- Federal, state, and tribal institutional control/engineering control registries (subject property)
- State- and tribal-equivalent NPL (1.0 mile)
- State- and tribal-equivalent SEMS (0.5 mile)
- State and tribal Brownfield and voluntary cleanup sites (0.5 mile)
- State and tribal leaking storage tank lists (0.5 mile)
- State (including locally administered) and tribal registered storage tank lists (subject/adjoining)
- State and tribal landfill and/or solid waste disposal site lists (0.5 mile)
- NYC E-Designation List

3.2 Review of additional federal and state environmental databases:

- State spill file records (0.5 mile)
- State MOSF list (0.5 mile)
- State radon data (by local municipality as available)
- Federal and state wastewater discharge permits (subject/adjoining properties)

3.3 Interviews (as applicable) with government representative regarding regulatory compliance

Task 4.0 Physical Inspection

4.1 Inspection of property and structures for potential contamination and contaminant sources, including:

- Hazardous/medical/radioactive waste storage and disposal areas
- Petroleum and/or chemical storage (including tanks and associated piping)
- Spatial extent and current condition of suspect asbestos-containing materials (ACM), suspect lead-based paint (LBP) and mold
- Site conditions that may indicate the potential for radon and lead in drinking water
- If ACM or LBP is identified as presumed or suspect, provide estimates of the quantity of such material and costs for abasement to the extent feasible.
- Wastewater and stormwater discharge systems
- Equipment potentially containing polychlorinated biphenyls (PCBs)

4.2 Inspection of property for the following:

- Presence of contamination (e.g., debris, soil staining)
- Evidence of prior structures and uses
- Unusual or man-made topographical formations (e.g., berms, sinkholes)
- On-site surface water quality
- Evidence and location of wells
- Vegetative stress

4.3 Identification of overt on-site sensitive environmental receptors (e.g., wetlands)
4.4 Limited inspection of adjoining and nearby properties for:

- Potential off-site sources of contamination
- Sensitive environmental receptors

4.5 If appropriate, interviews with owners/tenants/operators and other available knowledgeable individuals present during physical inspection

Task 5.0 Preparation of Written Summary Report

5.1 Summary of findings of Tasks 1.0 through 4.0
5.2 Identification of any Recognized Environmental Conditions and/or other potential concerns
5.3 Conclusions and Recommendations, including any specific additional investigatory or remedial work
5.4 Production and transmission of the final Phase I ESA to Client in PDF format, and hard copy if requested.

APPENDIX L

Qualifications of Environmental Professionals

Scott Spitzer
Director of Environmental Investigations
scott_spitzer@gbtpa.com

PROFESSIONAL EXPERIENCE

Director of Environmental Investigations, Gallagher Bassett Services Inc., Poughkeepsie, NY *2019- present*
Director of Environmental Investigations, WCD Group, Poughkeepsie, NY *2017 - 2019*
Director of Environmental Investigations, Ecosystems Strategies, Poughkeepsie, NY *2013 - 2017*

Management and quality review of environmental site assessments, technical environmental investigations, and remedial projects including Brownfield sites. Conducts research to obtain field and regulatory information about the environmental status of a designated area. Reviews all documents prepared by GBSI Poughkeepsie Office to ensure consistency and technical accuracy. Responsibilities associated with the preparation of site assessments include: investigating site histories, conducting facility inspections, reviewing regulatory agency records, documenting facility compliance with relevant State and Federal regulations, and preparing reports. Management of complex technical environmental investigations (including sites currently on the NYSDEC Registry of Inactive Hazardous Waste Sites), including coordinating subcontractors, overseeing fieldwork, designing and implementing sampling plans, preparing technical reports, and interfacing with regulatory agency personnel.

Senior Project Manager, Long-Form Reports, The 451 Group, Inc., New York, NY *2008-2011*

- Managed the production of over 150 technical white papers.

Senior Project Manager, Ecosystems Strategies, Inc., Poughkeepsie, NY *2001 - 2008*

- Conducted Environmental Site Investigations and prepared final site assessment reports. Over 300 Investigations and Final Reports completed as lead manager.
- Investigated site histories.
- Conducted facility inspections.
- Reviewed regulatory agency records.
- Documented facility compliance with relevant State and Federal regulations.
- Conducted Phase II Technical Environmental Investigations and prepared technical reports.
- Researched field and regulatory information.
- Managed tank removals.
- Coordinated subcontractors.
- Oversaw fieldwork and handled collection of material, soil and water samples.

Select Projects

Scenic Hudson Land Trust, Inc., Beacon Waterfront Project, Beacon, NY

ESI conducted soil and groundwater investigations on a former MOSF and adjacent scrap yard. Projects involved soil remediation of both petroleum and PCB-contaminated soils and long-term groundwater monitoring. Both projects were classified as Voluntary Clean-Up projects by the NYSDEC and closure status was attained.

Sakmann Restaurant Corporation Site, Fort Montgomery, NY

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigations for former filling station and automotive repair garage contaminated by solvent and waste-oil discharges to an on-site drywell.

Designed and implemented a sampling plan for soils impacted by chlorinated hydrocarbons, petroleum, and metals. Created Workplan (in coordination with the NYSDEC Voluntary Cleanup Program) for remediation of on-site contamination and long-term sampling of on-site groundwater monitoring wells.

Staten Island Marina Site, Staten Island, NY

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigation for an active marine facility engaged in boat painting and engine maintenance activities. Coordinated the delineation of metals contamination over a three-acre area and analyzed potential impacts from on-site fill materials. Submitted remedial and budgetary analysis in support of regulatory agency approval for conversion of boatyard into a public park.

Octagon House Development Site, Roosevelt Island, NY

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigations at the former site of a large, urban hospital. Interpreted the results of geotechnical studies, extended test pits, and conducted extensive soil sampling, to document subsurface soil conditions in support of client's application to the U.S. Housing and Urban Development Agency (HUD). Created Workplan (in coordination with the NYCDEP Office of Environmental Planning and Assessment) for site-wide remediation of contaminated soils and secured NYCDEP approval for site remediation as required by HUD.

Camp Glen Gray Boy Scout Facility, Mahwah, NJ

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigations at an approximately 800-acre campground containing numerous structures. Documented subsurface soil conditions at the locations of aboveground and underground storage tanks, and delineated lead contamination at a former firing range. Assisted in design and implementation of remediation plans for removal of petroleum and lead contaminated soils, and obtained NJDEP approvals.

EDUCATION

SUNY at Stony Brook, Bachelor of Science - Biology, SUNY at Stony Brook *May 1992*
SUNY at Purchase, extensive studies in Environmental Science

PROFESSIONAL CERTIFICATIONS

OSHA Hazardous Waste Site Operations and Emergency Response (HAZWOPER) – 40 hr
