**Re: Soil Vapor Intrusion Summary
1-45 Orangetown Shopping Center
Orangeburg, New York
Site #C344066**

Dear Mr. Squire:

Enclosed is the *Soil Vapor Intrusion Summary Report* for the above referenced site prepared by Groundwater & Environmental Services, Inc. (GES) on behalf of UB Orangeburg, LLC. The report summarizes the results of the soil vapor and indoor air quality investigation performed at a portion of the Orangetown Shopping Center located at 1-45 Orangetown Road, Orangeburg, New York during the 4th Quarter of 2019.

If you have any questions or comments regarding this submittal, please contact Michael DeGloria of GES at (866) 839-5195 at extension 3839.

Sincerely,

Groundwater & Environmental Services, Inc.

Jessica M. Thomas

VOC	volatile organic compound

1 Objective

The objective of this report is to summarize the soil vapor and indoor air quality investigation for volatile organic compounds (VOCs) completed on December 10 and 11, 2019 at a portion of the Orangetown Shopping Center located at 1-45 Orangetown Road, Orangeburg, New York. The investigation was completed in accordance with the New York State Department of Environmental Conservation (NYSDEC) approved Work Plan submitted to the NYSDEC on October 3, 2017 with subsequent modifications outlined in GES' *Soil Vapor Intrusion Summary Report* dated February 12, 2019. The investigation was also completed in accordance with the New York State Department of Health (NYSDOH) *Indoor Air Sampling and Analysis Guidance*, dated February 1, 2005, the NYSDOH *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, dated October 2006 and Updates to *Soil Vapor/Indoor Air Decision Matrices*, dated May 2017. The investigation was conducted at the former Sparkle Cleaners tenant space (currently a Verizon store) located within Building #2 of the Orangetown Shopping Center (the "site"). The other (2) tenant spaces at the site (former Deli Spot and New China House) were not resampled based on previous soil vapor intrusion (SVI) investigation results which recommended *No Further Action* at all sampling locations within those tenant spaces. The NYSDEC and NYSDOH approved conducting the investigation at only the former Sparkle Cleaners tenant space in an email dated June 7, 2019. Correspondence with the NYSDEC and NYSDOH are included as **Appendix A**.

This investigation was conducted for the purpose of evaluating current sub-slab and ambient air quality at the former Sparkle Cleaners tenant space as well as evaluating the potential for soil vapor intrusion in the subject tenant space located within Building #2 in support of permanent removal of the remaining sub-slab depressurization (SSD) systems and cessation of additional sub-slab or ambient air testing. A site location map and a site map indicating pertinent site features are presented as **Figures 1 and 2**.

1.1 Background Information

The subject site is a 1.2-acre portion of the shopping plaza, located near the southeast corner of the parcel. The shopping plaza is located at the southeast corner of Orangeburg and Dutch Hill Roads in Orangeburg, New York, and is comprised of an 11-acre parcel that contains several commercial buildings. The site has been utilized as farmland, a camp, an amphitheater, and the current retail shopping center. The plaza is situated in a suburban area of mixed land use, and is surrounded predominantly by commercial and residential properties. It is served by a public water supply system. There had previously been a dry cleaner operating at the shopping center since approximately 1966. The Sparkle Cleaners, which operated as a dry cleaning facility within Building #2, is currently a Verizon store. Historical investigations identified the presence of contamination caused by the release of dry cleaning fluids.

In January 2007, JLJ Management Company entered into Brownfield Cleanup Agreement (BCA) #A3-0563-0906BCA with the NYSDEC to remediate a 1.2-acre portion of the 11-acre parcel. This BCA required the Remedial Party, JLJ Management Group, to investigate and remediate contaminated media at the site.

An environmental easement for the site was executed by the NYSDEC on September 16, 2011. The site is currently managed by GES in accordance with an approved *Site Management Plan*, *Remedial Action Work Plan* and *Final Engineering Report* completed by Kleinfelder, Inc. and approved by the NYSDEC in December of 2011.

A property transfer of the shopping center was completed on March 28, 2012. UB Orangeburg, LLC acquired the property from JLJ Management Company, Inc. at that time.

2 Scope of Work

All activities described in this report were completed in accordance with published NYSDOH guidance for indoor air and vapor intrusion evaluation for a building. This effort was undertaken to determine the actions recommended to address current and potential exposures related to soil vapor intrusion as outlined in the May 2017 Soil Vapor/Indoor Air Matrices A through C. Field activities included a pre-sampling inspection, a chemical inventory, and collection of sub-slab soil vapor and indoor air samples over an 8 hour period from designated sampling points and/or locations within the former Sparkle Cleaners tenant space. The remaining sub-slab depressurization system at the former Sparkle Cleaners has been idled since August 17, 2015. Laboratory analysis and reporting followed these field activities.

3 Pre-Sampling Requirements

3.1 Pre-sampling Inspection and Preparation of Property

On December 10, 2019, GES conducted a pre-sampling inspection within the former Sparkle Cleaners tenant space to confirm the type of structure, floor layout and physical conditions of the building being studied and to identify conditions that may affect or interfere with the planned testing. GES also confirmed the presence and integrity of the sampling points. A crack in the foundation floor was observed in the vicinity of sample point VP-5 in the former Sparkle Cleaners tenant space on December 10, 2019. GES utilized hydraulic cement to seal the crack prior to testing. This information along with information on sources of potential indoor contamination are identified on the NYSDOH Indoor Air Quality Questionnaire and Building Inventory Forms, which are provided as **Appendix B**. GES also utilized a photo-ionization detector (PID) to evaluate and determine any potential interference during the sampling event. Items that were evaluated during the building inventory included but were not limited to the use or storage of chemical products. Potential interferences are noted on the NYSDOH Indoor Air Quality Questionnaire and Building Inventory Forms.

3.2 Product Inventories

Because some consumer products contain ingredients which can contribute to levels of VOCs in the air, a product inventory was completed prior to completion of the air sampling activities on December 11, 2019 to provide an accurate assessment of the potential contribution of noted products. Each room in the former Sparkle Cleaners tenant space was inspected and the products containing or potentially containing VOCs were listed on the Products Inventory Form (attached)

along with PID readings obtained near such products. In addition, the known volatile ingredients were also recorded for each product. Several items were observed that did not register a PID reading. The product inventory is included on the attached NYSDOH Indoor Air Quality Questionnaire and Building Inventory Forms (**Appendix B**).

4 Soil Vapor Intrusion Investigation

4.1 Sampling Collection

To characterize contaminant concentration trends and potential exposures, indoor air and sub-slab vapor samples were collected over an 8-hour period from the approximate locations shown on the attached **Figure 3** and as summarized below in text and table format:

- Former Sparkle Cleaners (currently a Verizon store): Vapor extraction wells VP-5 and VP-6
- Ambient Outdoor Sample: Sample taken outside the building

Sample Location	Sample Identification	Sample Description
Former Sparkle Cleaners	Sparkle VP-5	Sub-slab
Former Sparkle Cleaners	Sparkle VP-5 Ambient	Indoor Air
Former Sparkle Cleaners	Sparkle VP-6	Sub-slab
Former Sparkle Cleaners	Sparkle VP-6 Ambient	Indoor Air
Outside (East of Building)	Outside Ambient	Ambient

4.2 Quality Assurance/Quality Control

Care was taken during all aspects of the sample collection to ensure that high quality data was obtained. Sub-slab samples were collected from the sub-slab vapor points at the approximate locations shown on **Figure 3**. To verify the integrity of the sample vapor points, a tracer gas was used to test the seal. On December 10, 2019, prior to sampling, the sub-slab vapor points were first purged of three (3) times the volume of the sampling point using a GILIAN personal air sampling system and a flow module (vacuum pump) set at a maximum flow rate of 0.2 liters per minute. Helium tracer gas was then used to confirm an adequate seal was in place at each vapor point location prior to collection of the soil gas samples.

4.3 Sub-Slab and Ambient Air Sample Collection

Once the helium tracer tests were complete and it was confirmed that each point was adequately sealed, sub-slab vapor and ambient air samples were collected using SUMMA canisters equipped with 8-hour regulators. A total of five (5) air samples were collected on December 11, 2019. Upon completion of the 8-hour sampling period, each sample collection apparatus was stored according to the sample collection method protocol and delivered to SGS-Accutest Laboratories of Dayton,

New Jersey under proper chain of custody for analysis of VOCs via Environmental Protection Agency (EPA) Method TO-15.

4.4 Sample Analysis

Laboratory analytical results indicated the presence of individual VOCs above laboratory detection limits and/or above regulatory guidelines in each sub-slab and indoor air samples collected. The analytical data is summarized on **Tables 1** and **2** and the laboratory analytical report is included as **Appendix C**. In addition, a data usability summary report (DUSR) for all samples was completed by RemVer of Colchester, Connecticut and is provided as **Appendix D**. The DUSR found all results acceptable for use.

The following compounds exceeded regulatory guidelines in one or more samples, based on the upper fence indoor air values in Appendix C of the NYSDOH Soil Vapor Intrusion Guidance document or the 90th percentile indoor air values from the EPA 2001 Building Assessment and Survey Evaluation (BASE) Database:

- Acetone
- Chloroform
- cis-1,2-Dichloroethylene (c12-DCE)
- Ethanol
- Tetrachloroethylene
- Trichloroethylene

Laboratory analytical results for the constituents of concern (COCs), carbon tetrachloride, 1,1-Dichloroethylene (11-DCE), c12-DCE, tetrachloroethylene (PCE), 1,1,1-trichloroethane (111-TCA), methyl chloride, vinyl chloride, and trichloroethylene (TCE), were then compared to the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, section 3.4.2, Indoor Air Matrices A, B, and C (attached as **Appendix E**). Based on the comparison, continued monitoring of the former Sparkle Cleaner tenant space is recommended. Refer to the Constituents of Concern Summary Comparison detailed on **Table 3**. A summary of the COCs and the matrix recommendation are detailed below:

- TCE
 - Sub-slab: 2.7 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) at sample location VP-5 to $9.7 \mu\text{g}/\text{m}^3$ at sample location VP-6
 - Indoor air: Non-detect to $0.42 \mu\text{g}/\text{m}^3$ (VP-6)
 - Recommendation: Monitor (Matrix A)
- c12-DCE
 - Sub-slab: $5.2 \mu\text{g}/\text{m}^3$ at sample location VP-5 to $26 \mu\text{g}/\text{m}^3$ at sample location VP-6
 - Indoor air: Non-detect in all samples

- Recommendation: Monitor (Matrix A)
 - The indoor air sample at sample location VP-6 is below detection limits; however, the reporting limit ($0.63 \mu\text{g}/\text{m}^3$) is greater than $0.2 \mu\text{g}/\text{m}^3$. This result combined with a sub-slab detection between 6 to $<60 \mu\text{g}/\text{m}^3$ results in a monitoring recommendation in accordance to the Soil Vapor/Indoor Air Matrix A.
- 11-DCE
 - Sub-slab: Non-detect in all samples
 - Indoor air: Non-detect in all samples
 - Recommendation: No Further Action (Matrix A)
 - The indoor air sample at location VP-5 and VP-6 is below detection limits; however, the reporting limit ($0.63 \mu\text{g}/\text{m}^3$) is greater than $0.2 \mu\text{g}/\text{m}^3$. The sub-slab detections were also below detection limits, which were reported as non-detect $<0.79 \mu\text{g}/\text{m}^3$, which is below the recommended $1.0 \mu\text{g}/\text{m}^3$. The combined results yield a no further action recommendation in accordance to the Soil Vapor/Indoor Air Matrix A.
- Carbon tetrachloride
 - Sub-slab: Non-detect in all samples
 - Indoor air: Non-detect in all samples
 - Recommendation: No Further Action (Matrix A)
- PCE
 - Sub-slab: $3.1 \mu\text{g}/\text{m}^3$ at sample location VP-5 to $18 \mu\text{g}/\text{m}^3$ at sample location VP-6
 - Indoor air: Non-detect to $6.2 \mu\text{g}/\text{m}^3$ (VP-6)
 - Recommendation: No Further Action (Matrix B)
- 1,1,1-TCA
 - Sub-slab: Non-detect in all samples
 - Indoor air: Non-detect in all samples
 - Recommendation: No Further Action (Matrix B)
- Methylene Chloride
 - Sub-slab: Non-detect to $5.9 \mu\text{g}/\text{m}^3$ (VP-5)
 - Indoor air: Non-detect to $0.56 \mu\text{g}/\text{m}^3$ (VP-6)
 - Recommendation: No Further Action (Matrix B)
- Vinyl Chloride
 - Sub-slab: Non-detect in all samples

- Indoor air: Non-detect in all samples
- Recommendation: No Further Action (Matrix C)

5 Conclusions/Recommendations

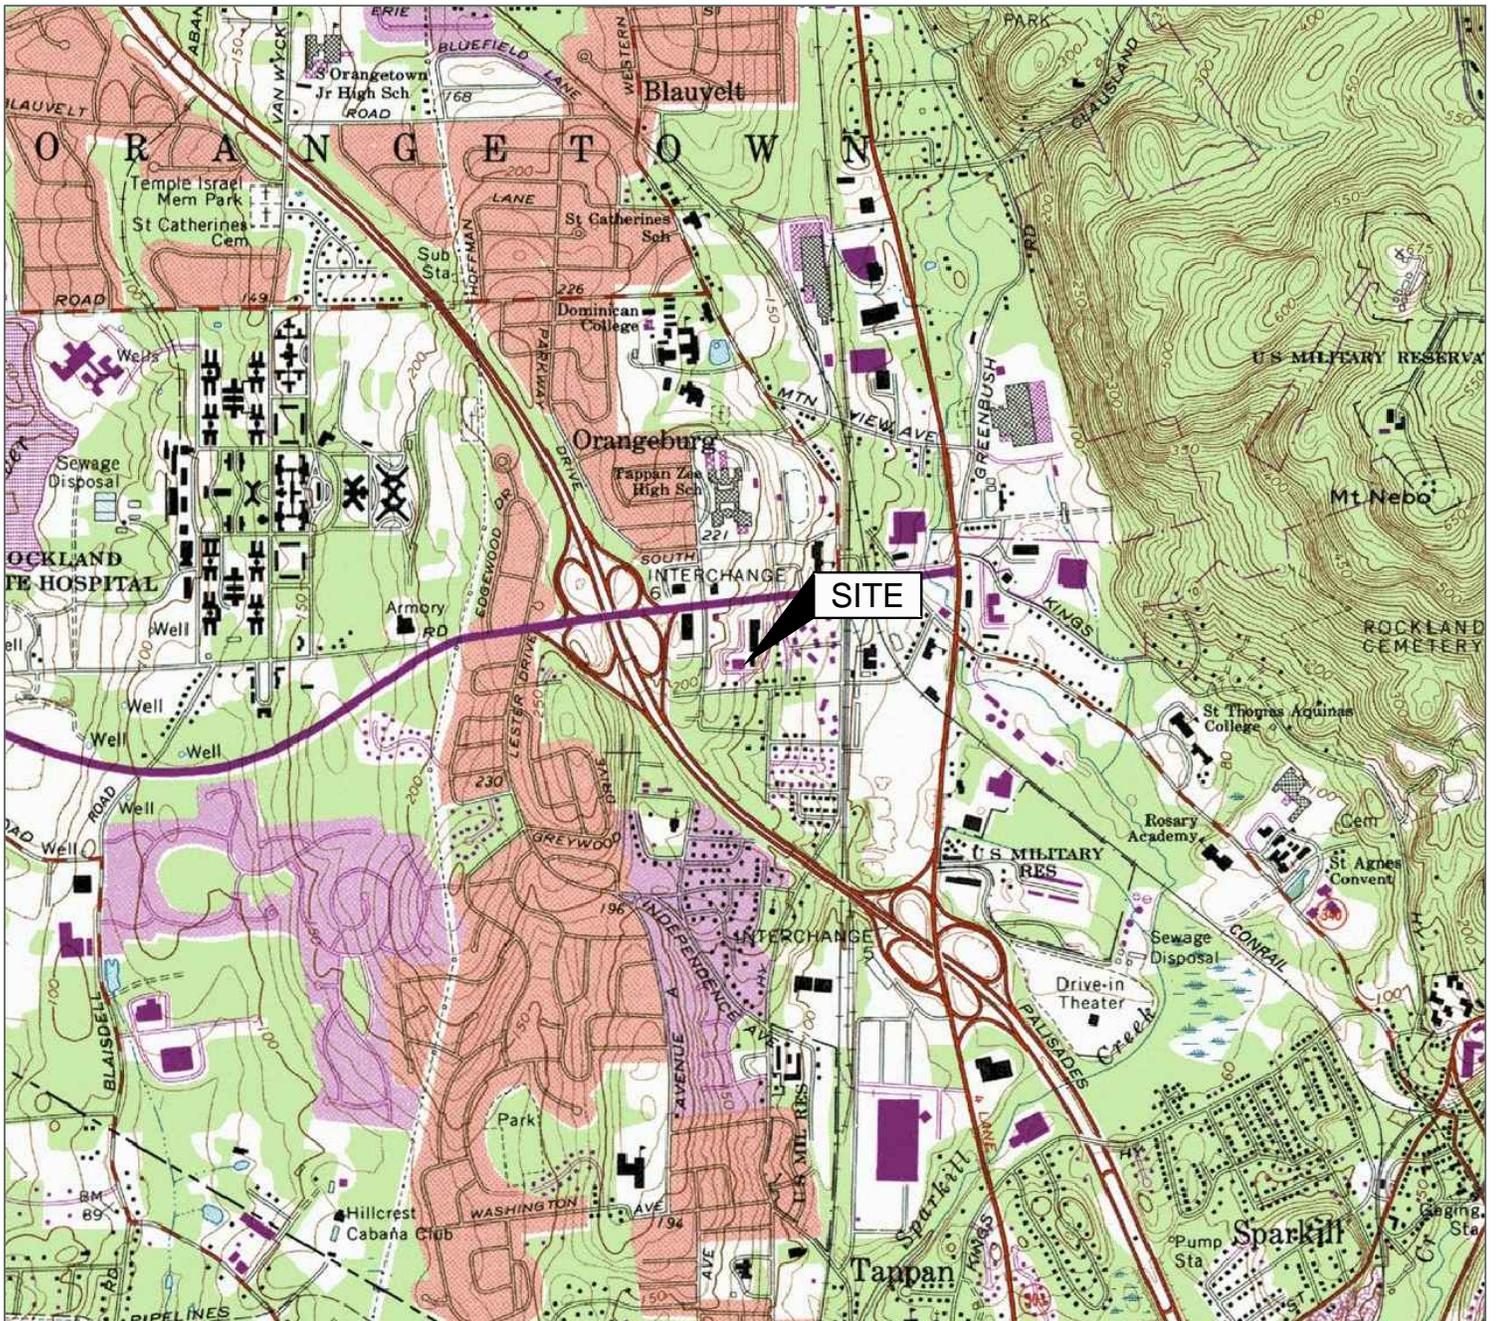

On December 10 and 11, 2019 a SVI investigation was completed at former Sparkle Cleaners tenant space (currently and a Verizon store) located within Building #2 of the Orangetown Shopping Center. This investigation was conducted for the purpose of evaluating current soil vapor and indoor air quality and the potential for soil vapor intrusion in the tenant space located within Building #2.

Based on the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, section 3.4.2, Indoor Air Matrices A, B, and C, a recommendation for Monitor at the former Sparkle Cleaners is supported by the TCE and c12-DCE concentrations at sample location VP-6, which were $0.22 \mu\text{g}/\text{m}^3$ and $0.43 \mu\text{g}/\text{m}^3$ above the no further action to monitor threshold, respectively. Furthermore, the building inventory did not identify any apparent use or storage of chemical products that could potentially contribute to the detections of the COCs in the indoor air samples.

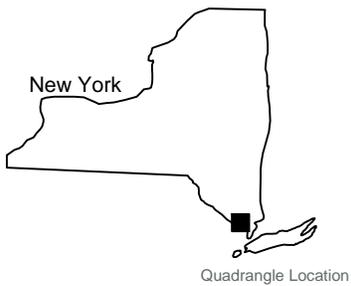

GES recommends an additional annual SVI sampling event, targeting the former Sparkle Cleaner tenant space (sample locations Sparkle VP-5 and Sparkle VP-6) during the next heating season (typically November 15th through April 15th). In addition, these and prior results continue to demonstrate that the SSD systems can remain off-line at this time.

Note:

Results and Standards expressed in micrograms per cubic meter (µg/m3)

ND<# = Not detected, less than the laboratory reporting limit

NS = No Standard

E = The concentration indicated for this analyte is an estimated value above the calibration range of the instrument.

A = Result is from run #2.

BOLD = results exceed NYSDOH 2003 Soil Vapor Indoor Upper Fence (1) standard

ITALIC = results exceed NYSDOH 2003 Soil Vapor Intrusion Air Guidance Value (2) standard

"Gray" = results exceed EPA 2001 BASE 90th Percentile (3) standard

BOLD, *ITALIC*, or "Gray" indicators in the Regulatory Guidance columns indicate at least one historic exceedence was observed.

(1) Upper fence indoor air values from "Table C1. NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes", published in the NYSDOH Soil Vapor Intrusion Guidance Document, Appendix C" (October 2006)

(2) NYSDOH Air Guideline Values (AGVs) from "Table 3.1 Air guideline values derived by the NYSDOH" presented in the Final Guidance for evaluating Soil Vapor Intrusion in the State of New York, dated October 2006 ("NYSDOH Vapor Intrusion Guidance Document")

(3) 90th percentile indoor air values from "Table C-2. EPA 2001: Building Assessment and Survey Evaluation (BASE) Database, SUMMA canister method" published in the NYSDOH Soil Vapor Intrusion Guidance Document, Appendix C" (October 2006)

Subject: FW: Soil Vapor Intrusion Summary for C344066 Orangeburg Shopping Center

From: Squire, Michael H (DEC) <Michael.Squire@dec.ny.gov>
Sent: Friday, June 7, 2019 12:06 PM
To: Michael C. DeGloria <MDeGloria@gesonline.com>
Subject: Soil Vapor Intrusion Summary for C344066 Orangeburg Shopping Center

Michael,

I've looked over the Q1 2019 Progress Report and 2019 Soil Vapor Intrusion Summary for C344066 Orangeburg Shopping Center. DOH has sent me a letter stating they have no comments for the Q1 2019 report, and I don't either. I concur with the recommendation in the SVI summary to monitor the former Sparkle Cleaners space based on the results for TCE and PCE at VP-6.

Michael Squire

Appendix B – NYSDOH Indoor Air Quality Questionnaire and Building Inventory Form

**NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH**

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Rich Brown Date/Time Prepared 12-11-2019 @ 10:00

Preparer's Affiliation Groundwater & Environmental Services, Inc. Phone No. 866-839-5195

Purpose of Investigation Indoor air quality

1. OCCUPANT:

Interviewed: Y N

Last Name: Verizon Representative First Name: _____

Address: 1-45 Orangetown Shopping Center

County: Rockland

Home Phone: _____ Office Phone: 845-680-8800

Number of Occupants/persons at this location 1 Age of Occupants <30

2. OWNER OR LANDLORD: (Check if same as occupant)

Interviewed: Y / N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential
Industrial

School
Church

Commercial/Multi-use
Other: _____

If the property is residential, type? (Circle appropriate response)

- | | | |
|--------------|-----------------|-------------------|
| Ranch | 2-Family | 3-Family |
| Raised Ranch | Split Level | Colonial |
| Cape Cod | Contemporary | Mobile Home |
| Duplex | Apartment House | Townhouses/Condos |
| Modular | Log Home | Other: _____ |

If multiple units, how many? 1

If the property is commercial, type?

Business Type(s) Telecommunications

Does it include residences (i.e., multi-use)? Y / N If yes, how many? _____

Other characteristics:

Number of floors 1

Building age Unknown

Is the building insulated? Y / N

How air tight? Tight / Average / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Not applicable

Airflow near source

Not applicable

Outdoor air infiltration

Infiltrates in through doors.

Infiltration into air ducts

Infiltrates up into the return duct and down around supply vent.

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other N/A
- c. Basement floor: concrete dirt stone other N/A
- d. Basement floor: uncovered covered covered with N/A
- e. Concrete floor: unsealed sealed sealed with carpet floor tiles
- f. Foundation walls: poured block stone other
- g. Foundation walls: unsealed sealed sealed with paint
- h. The basement is: wet damp dry moldy
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: N/A (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Slight crack in slab along side sampling point VP-5. The crack was filled with hydraulic cement.

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- | | | |
|---|------------------|-----------------------|
| <input checked="" type="checkbox"/> Hot air circulation | Heat pump | Hot water baseboard |
| <input checked="" type="checkbox"/> Space Heaters | Stream radiation | Radiant floor |
| Electric baseboard | Wood stove | Outdoor wood boiler |
| | | Other <u> </u> |

The primary type of fuel used is:

- | | | |
|---|----------|----------|
| <input checked="" type="checkbox"/> Natural Gas | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Tenant does not know

Boiler/furnace located in: Basement Outdoors Main Floor Other Ceiling or Roof

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? Y / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Six (6) supply vents and air return on the ceiling. Supply vents are separated about 10 feet apart.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

Basement	N/A
1 st Floor	Verizon Wireless Store
2 nd Floor	N/A
3 rd Floor	N/A
4 th Floor	N/A

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

- a. Is there an attached garage? Y / N
- b. Does the garage have a separate heating unit? Y / N / NA
- c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / NA
Please specify _____
- d. Has the building ever had a fire? Y / N When? _____
- e. Is a kerosene or unvented gas space heater present? Y / N Where? _____
- f. Is there a workshop or hobby/craft area? Y / N Where & Type? _____
- g. Is there smoking in the building? Y / N How frequently? _____
- h. Have cleaning products been used recently? Y / N When & Type? Daily _____
- i. Have cosmetic products been used recently? Y / N When & Type? Daily _____

- j. Has painting/staining been done in the last 6 months? Y / N Where & When? _____
- k. Is there new carpet, drapes or other textiles? Y / N Where & When? _____
- l. Have air fresheners been used recently? Y / N When & Type? _____
- m. Is there a kitchen exhaust fan? Y / N If yes, where vented? _____
- n. Is there a bathroom exhaust fan? Y / N If yes, where vented? to roof
- o. Is there a clothes dryer? Y / N If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y / N When & Type? _____

Are there odors in the building? Y / N

If yes, please describe: _____

Do any of the building occupants use solvents at work? Y / N

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

No

Unknown

Is there a radon mitigation system for the building/structure? Y / N Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: Public Water Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: Public Sewer Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

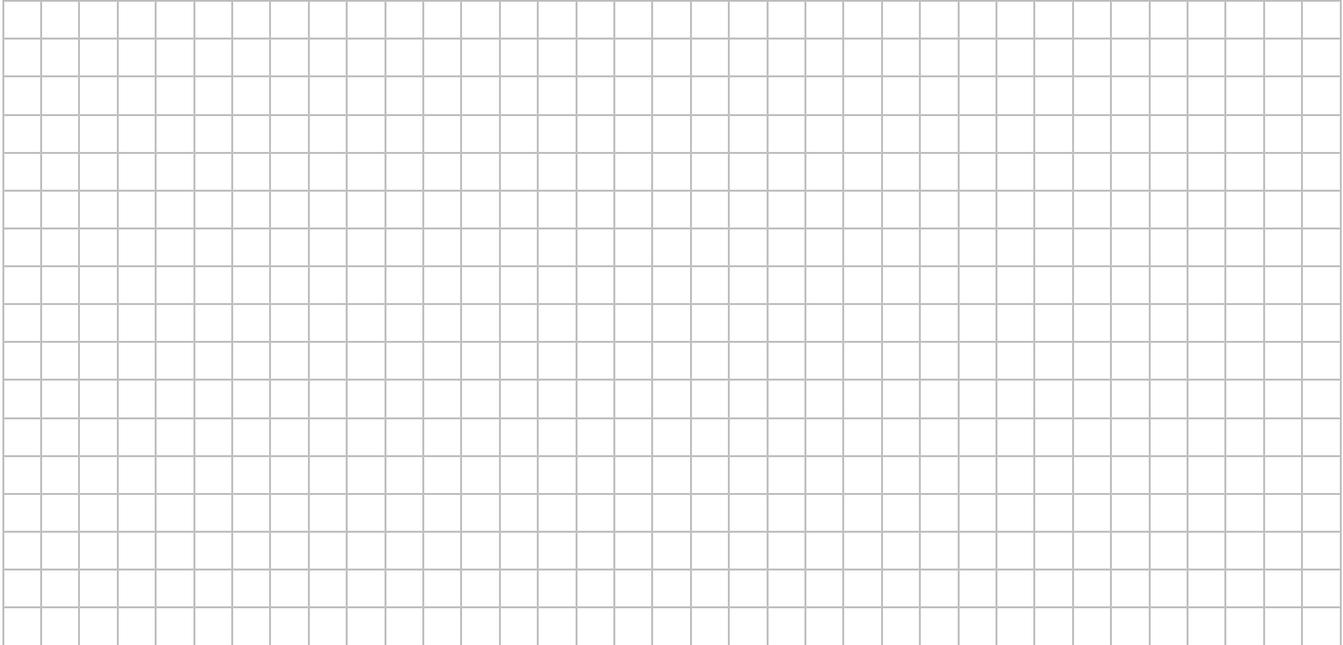

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

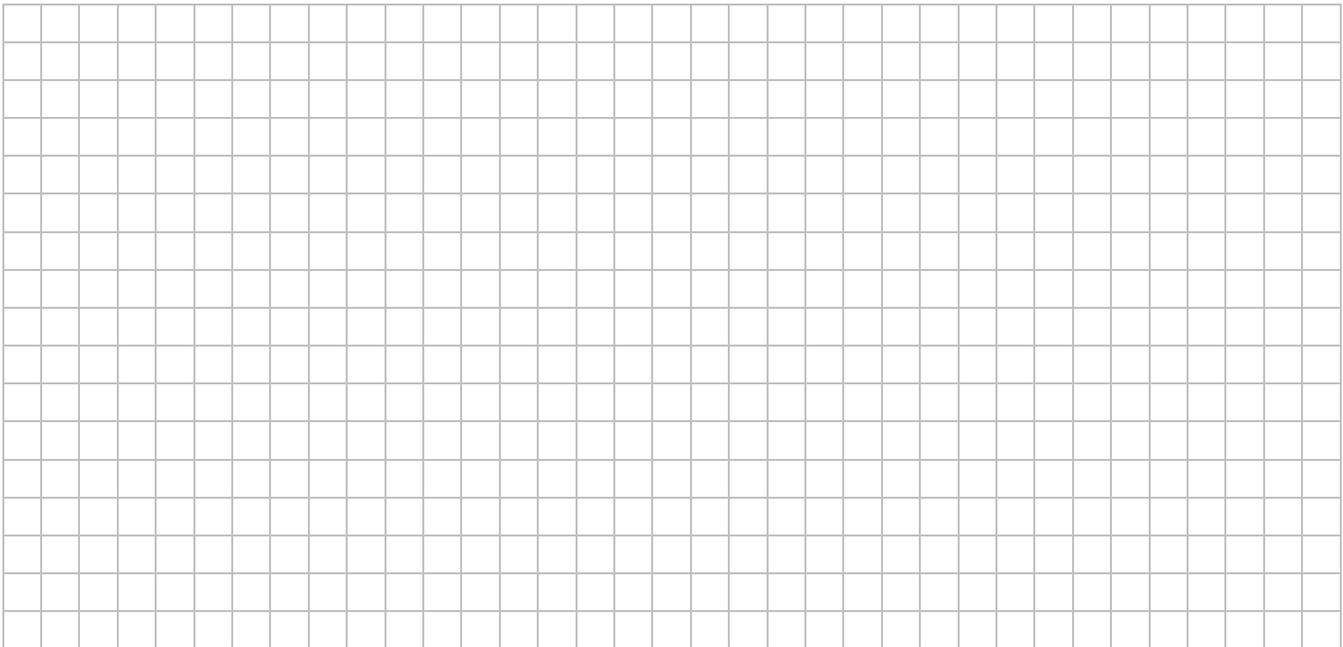

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

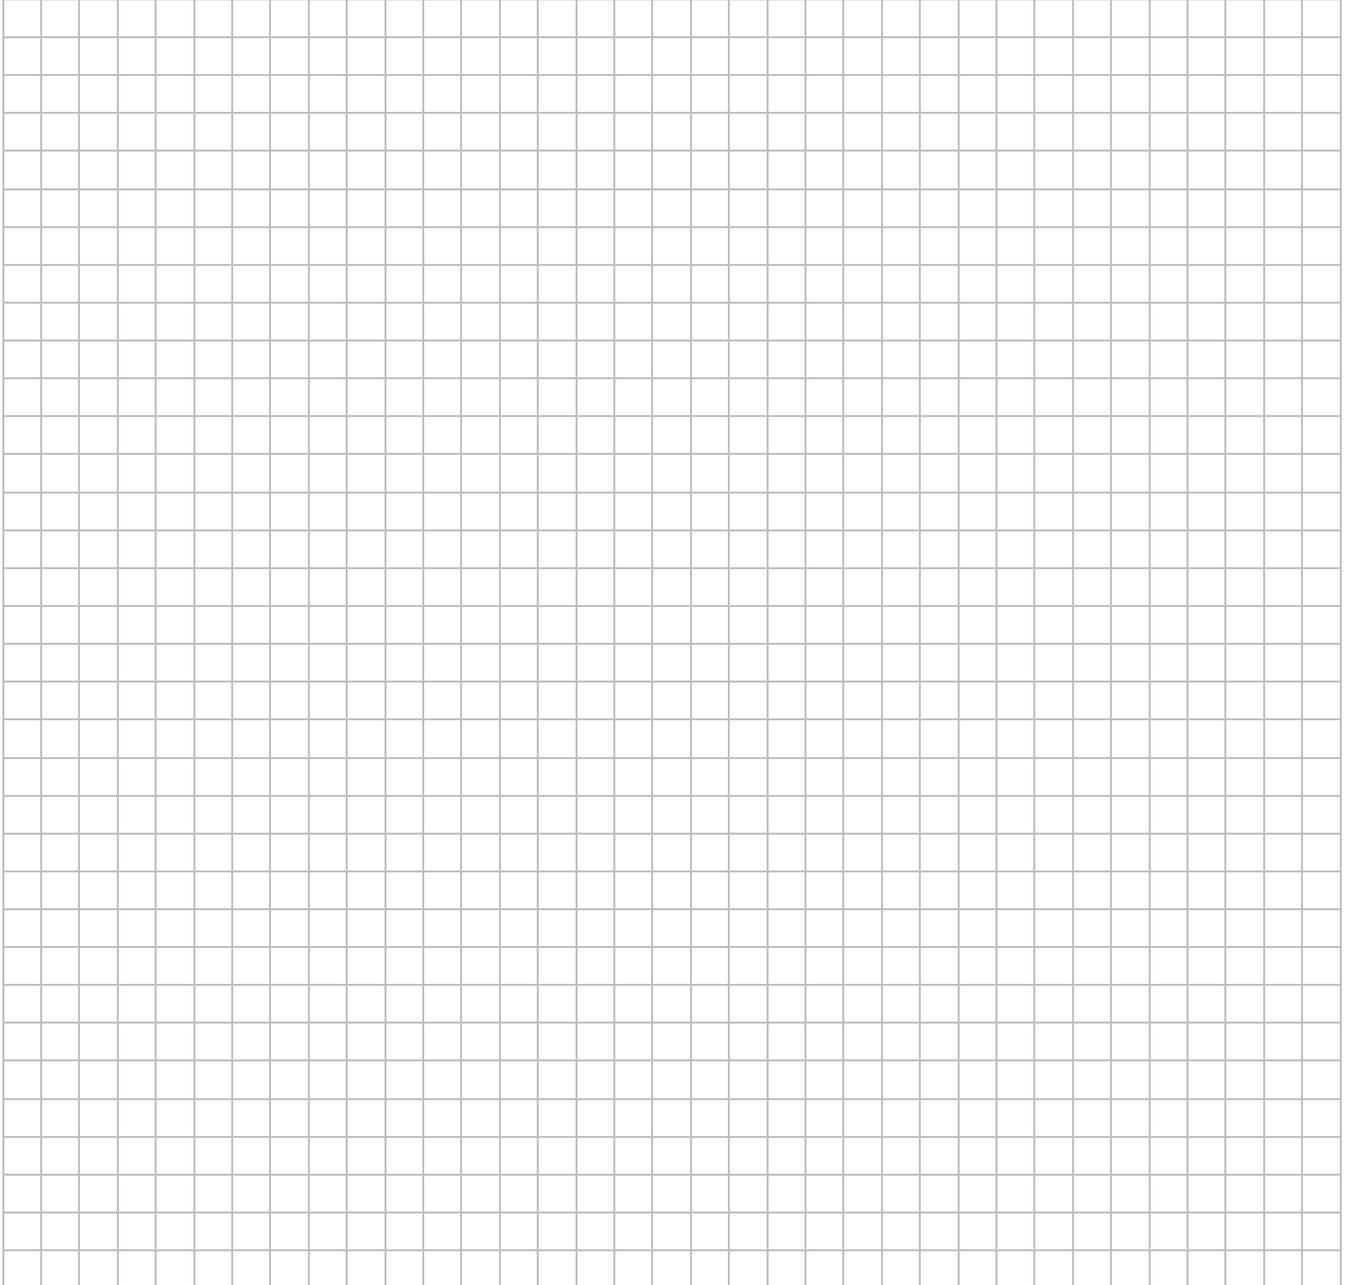

First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: _____

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition *	Chemical Ingredients	Field Instrument Reading (units)	Photo ^{**} <u>Y/N</u>
Backroom	Clorox Disinfecting	2 lbs	U		0 ppb	N
Backroom	Swiffer Sweeper (wet)	24	U		0 ppb	N
Backroom	Windex	1 Qt	U		0 ppb	N
Backroom	Swiffer Duster	18	U		0 ppb	N

* Describe the condition of the product containers as **Unopened (UO)**, **Used (U)**, or **Deteriorated (D)**
 ** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

RE: SGS – Dayton, Job # JD234 - Reissues

Dear Mr. DeGloria,

The final report for SGS jobs number JD234 has been edited to reflect corrections to the final results. These edits have been incorporated into the revised report which is attached. .

Specifically, this report has been upgraded to NYASPB per Ms. Jessica Thomas's request. The attached revised report incorporates these revisions.

SGS apologizes for this occurrence and for any inconvenience this situation may have caused. Please contact me if I can be of further assistance in this matter.

Sincerely,

Report Department

SGS North America Inc.

CONTINUOUS SERVICE IMPROVEMENT!

Our goal is to continuously improve our service to you. Please share your ideas about how we can serve you better at

EHS.US.CustomerCare@sgs.com. Your feedback is appreciated!

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Groundwater & Environmental Services

Job No JD234

Site: Orangetown Shopping Center, Orangeburg, NY

Report Date 1/13/2020 4:46:55 PM

On 12/12/2019, 5 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. A SGS North America Inc. Job Number of JD234 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

MS Volatiles By Method TO-15

Matrix: AIR	Batch ID: V5W1621
--------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD235-4DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- RPD(s) for Duplicate for Chloroform, Tetrachloroethylene are outside control limits for sample JD235-4DUP. High RPD due to low concentration of hit
- JD234-2 for 4-Bromofluorobenzene: Outside control limits due to matrix interference.

Matrix: AIR	Batch ID: V5W1622
--------------------	--------------------------

- All samples were analyzed within the recommended method holding time.
- Sample(s) JD398-1DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JD234-2, JD234-4 have compounds reported with "E" qualifiers indicating estimated value exceeding calibration range.
- RPD(s) for Duplicate for Acetone, Ethanol are outside control limits for sample JD398-1DUP. High RPD due to low concentration of hit

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover

MS Volatiles

QC Data Summaries

Includes the following where applicable:

- Method Blank Summaries
- Blank Spike Summaries
- Matrix Spike and Duplicate Summaries
- Instrument Performance Checks (BFB)
- Internal Standard Area Summaries
- Initial Calibration RT/ISTD Area Summaries
- Surrogate Recovery Summaries
- Initial and Continuing Calibration Summaries
- Run Sequence Reports

Canister Secondary Dilution Log

Test Gauge ID : TG-

				Secondary Canister Dilution						Final Canister Dilution		
Date	Initials	SGS Sample ID	Canister ID	Vacuum in "Hg at time of Dilution	Final Pressure psig	Dilution Factor	Canister Volume CC	Sample Volume Added CC	Final Pressure psig	Equip Total Volume CC	Dilution Factor	Final Canister Dilution Factor
12/27/19	OR	JD928-3	70AG	NA	NA	1	0.5mL	→ 500mL for 1000x				

Definition:

$$\text{Final DF} = (\text{Original Canister DF}) \times (\text{Secondary Canister DF})$$

$$\text{Dilution Factor at Instrument} = (\text{Final Canister Dilution Factor}) \times (\text{Normal Sampling Volume in cc})$$
 (Sample Volume in cc Injected)

Example:
 Original Canister is diluted 2x for manual sample draw. 75cc from this canister is added to a 375cc minican and brought to 14.7 psig or 750cc equiv volume. This results in an additional dilution of 750/75 or 10. The final canister dilution factor is 2 x 10 = 20. From the dilution canister 20cc is injected at the instrument where normal volume is 400cc. This is an additional instrument dilution factor of 20. The final dilution multiplier is 20(from canister dilution) x 20(from instrument dilution) = 400

Notes:

All strikeouts must be initial, dated and reason code applied as follows: # 1 = Reviewer Correction Error; # 2 = Transcription Error; # 3 = Computer Miscalculation; # 4 = Analyst's Correction Error

Appendix D – Data Usability Summary Report

Quality Assessment Data Usability Summary Report

RemVēr Project #2019GE01			
Client Project # 1102707-02-210			
Site:	Orangetown Shopping Center	Site #:	C344066
Client:	GES, Inc.	Site Owner:	UB Orangeburg, LLC (UBO)
Sample Delivery Group (SDG)	JD234		
Sample Matrix:	<input type="checkbox"/> Drinking water	<input type="checkbox"/> Groundwater	<input type="checkbox"/> Surface water
	<input type="checkbox"/> Soil	<input type="checkbox"/> Sediment	<input checked="" type="checkbox"/> Air
	<input type="checkbox"/> Biota (tissue, type: _____)		<input type="checkbox"/> Other: _____

Introduction

RemVēr performed a data quality assessment (DQA) on analytical data reported in Sample Delivery Group (SDG) #JD234 for air samples. The DQA evaluated the performance of the analytical procedures and the quality of the resulting data. RemVēr followed the requirements of the New York State Department of Environmental Conservation (NYSDEC) Data Usability Summary Report (DUSR) guidelines for an Analytical Services Protocol (ASP) Category B Data Deliverable. This report includes a narrative discussion of sample results qualified during the DQA. Table 1 describes qualification flags applied to the data either by SGS or during the DQA process.

|---|---|

Intended Use of Data under Review

The client collected air samples during a two-consecutive day collection event beginning December 10, 2019 at the referenced New York State Brownfields site. The site is under a Site Management Plan (SMP) that requires several kinds of monitoring. The sampling event provided ambient and sub-slab/soil vapor monitoring (see §3.3 of Kleinfelder, 2011).

Significant Data Usability Issues Identified for SDG: #JD234

Of the five samples (two soil gas, two indoor ambient air, and one outdoor ambient) discussed herein, RemVēr rejected no results, but flagged certain analytes as estimated due to the quality of the analysis and the results are acceptable for use. Some analytes had quality issues associated with results falling beyond the calibrated range requiring qualifier flagging. Please refer to the Lab Results and Data Usability Narrative section for further detail.

JD234	Y	None

Do the raw data confirm the results provided in the data summary sheets and quality control verification forms?		
Laboratory Report	Confirmation (Y/N)	Exception Comment
JD234	Y	None

Were correct data qualifiers used and are they consistent with the most current guidance?		
Laboratory Report	Qualifiers (Y/N)	Comment
JD234	Y	The laboratory generally applied appropriate qualifiers. To prepare the DUSR, it was necessary to apply additional qualifications or adjust qualifications to certain results as shown in Attachments 3 and 4.

Were quality control (QC) exceedances specifically noted in this DUSR and the corresponding QC summary sheets from the data packages referenced?		
Laboratory Report	QC Exceedances Documented (Y/N)	Comment
JD234	Y	Several data qualifications were applied as described below

Data Quality and Usability Narrative

Field Notes Inspection

The air samples came from a collection event over two-consecutive days, beginning December 10, 2019. GES provided air sampling field notes related to the effort with the COC.

Laboratory Report Inspection

The laboratory produced SDG report #JD234. The original report was issued on 27Dec2019 and a full ASP Category B report issued 13Jan2020. The final report contained the required data and information.

RemVēr

Chain of Custody (COC) Evaluation

GES produced one COC for the referenced fieldwork (#JD234, single, one-page COC). The laboratory noted no quality issues.

Sample Preservation & Holding Time Evaluation

Laboratory received the canister samples on 12/12/2019 @ 10:40 (designated as SDG-JD234) in proper condition. Holding times and preservation requirements were met. There were no issues noted with either the canisters or flow controllers.

Analytical

The laboratory ran the samples in two batches:

<u>Sample</u>	<u>V5W1621</u>	<u>V5W1622</u>
#-1 SV	X	
#-2 IA	X	X
#-3 IA	X	
#-4 SV	X	X
#-5 OA	X	

The second batch was to make another analytical run due to certain analytes being out of calibration in the first run. Each batch included the required method blank, lab duplicate, and associated QA/QC samples and calibration checks.

Calibration Standards and Continuing Calibration Verification (CCV)

Calibration standard (external or internal) were acceptable in both batches for all analytes, with the following exceptions:

- The laboratory flagged Batch V5W1621 Samples #-01 and #-02 Ethanol results as “E,” indicating it is estimated and exceeding calibration range. Therefore, they re-ran the samples in a second batch (V5W1622) and achieved the same result. Thus, RemVēr flagged these results with E J+.

CCV were acceptable in both batches for all analytes.

Blank Evaluation

There were no associated blanks, other than the ambient indoor and outdoor air samples. All laboratory method blanks performed within acceptable parameters.

Laboratory Control Samples (LCS)

The various LCS' were within the acceptable range for their particular analyses in SDG JD234.

Surrogates

Surrogates added to a sample allow testing of preparatory and instrument behavior resulting in recoveries within appropriate method ranges for all analytes. The surrogate 4-Bromofluorobenzene performed within acceptable parameters across all Method TO-15 batches and sample runs in SDG JD234, with one exception. Sample #-2 (Batch V5W1621) was greater than the upper control limit (>UCL) due to matrix interference. RemVēr flagged all results in that sample as estimated or J-flagged (either UJ or J).

RemVēr

Site-Specific Matrix Spikes and Matrix Spike Duplicates

No matrix spike/matrix spike duplicate (MS/MSD) runs were required for the analyses per TO-15 Method.

Duplicates

The laboratory used internal duplicates for these VOC analytes; most laboratory duplicate analytes met the RPD performance criteria of <25% with exceptions. These analytical exceptions, therefore, required a J-flag in their particular batch as estimated results due to the lack of analytical precision. The resultant high RPD was due to low analyte concentrations.

Tentatively Identified Compounds (TICs)

This SDG had no analysis of TICs.

Sample Result and Usability Evaluation

All samples were run as two batches, where the second batch provided a check on Acetone and Ethanol due to high concentrations. Due to certain sample issues or laboratory performance (result beyond calibration range for Ethanol in Samples #-02 and #-04, some results were qualified; however, the data are usable. No data received an R (rejected) flag. If an analyte was above the MDL but below the RL, then it was flagged as "UJ".

RemVēr modified SGS's laboratory electronic data reports by adding quality flags, highlighted in yellow (see Attachment #4 [separate file]: Orangetown_2019Q4air_DUSR.xlsx [EXCEL file]).

GES PO# 1107983

Table 1
Qualifier Flags

Qualifier	Quality Implication
U	Analyte analyzed for, but not detected above the sample's reported quantitation limit
J	Analyte positively identified at a numerical value that is the approximate concentration of the analyte in the sample
J +	Sample likely to have a high bias
J –	Sample likely to have a low bias
UJ	Analyte not detected above the sample quantitation limit; the associated quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample
N	The analysis indicates the present of an analyte for which there is presumptive evidence to make a "tentative identification."
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
R	Sample result rejected due to serious deficiency in ability to analyze sample and meet quality control criteria; the presence or absence of the analyte cannot be confirmed. This qualifier also may apply when more than one sample result is generated for a target analyte (<i>i.e.</i> , dilutions or re-analyses), the most technically acceptable result is considered acceptable.
B EB TB BB	An analyte identified in method blank (B), aqueous equipment (EB), trip (TB), or bottle blanks (BB) used to assess field contamination associated with soil or sediment samples mandates these qualifiers for only soil and sediment sample results.
P	Use professional judgment based on data use. It usually has an "M" with it, which indicates that a manual check should be made if the data that are qualified with the "P" are important to the data user. In addition, "PM" also means a decision is necessary from the Project Manager (or a delegate) concerning the need for further review of the data (<i>see below</i>).
PM	A manual review of the raw data is recommended to determine if the defect affects data use, as in "R" above. This review should include consideration of potential affects that could result from using the "P" qualified data. For example, in the case of holding-time exceedance, the Project Manager or delegate can decide to use the data with no qualification when analytes of interest are known not to be adversely affected by holding-time exceedances. Another example is the case where soil sample duplicate analyses for metals exceed the precision criteria; because this is likely due to sample non-homogeneity rather than contract laboratory error, then the manager or delegate must decide how to use the data.

Notes: † RPD—Relative Percent Difference

‡ Bias High—Reported result may be lower, Reporting Limit (RL) is acceptable as reported. Bias Low—Reported results may be higher, RL may be higher than reported.

Appendix E – NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York

Soil Vapor/Indoor Air Matrix A

May 2017

Analytes Assigned:

Trichloroethene (TCE), *cis*-1,2-Dichloroethene (c12-DCE), 1,1-Dichloroethene (11-DCE), Carbon Tetrachloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m ³)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m ³)		
	< 0.2	0.2 to < 1	1 and above
< 6	1. No further action	2. No Further Action	3. IDENTIFY SOURCE(S) and RESAMPLE or MITIGATE
6 to < 60	4. No further action	5. MONITOR	6. MITIGATE
60 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

No further action: No additional actions are recommended to address human exposures.

Identify Source(s) and Resample or Mitigate: We recommend that reasonable and practical actions be taken to identify the source(s) affecting the indoor air quality and that actions be implemented to reduce indoor air concentrations to within background ranges. For example, if an indoor or outdoor air source is identified, we recommend the appropriate party implement actions to reduce the levels. In the event that indoor or outdoor sources are not readily identified or confirmed, resampling (which might include additional sub-slab vapor and indoor air sampling locations) is recommended to demonstrate that SVI mitigation actions are not needed. Based on the information available, mitigation might also be recommended when soil vapor intrusion cannot be ruled out.

Monitor: We recommend monitoring (sampling on a recurring basis), including but not necessarily limited to sub-slab vapor, basement air and outdoor air sampling, to determine whether concentrations in the indoor air or sub-slab vapor have changed and/or to evaluate temporal influences. Monitoring might also be recommended to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitoring is determined based on site-, building- and analyte-specific information, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated.

Mitigate: We recommend mitigation to minimize current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building-specific basis, taking into account building construction and operating conditions. Mitigation is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated.

These general recommendations are made with consideration being given to the additional notes on page 2.

ADDITIONAL NOTES FOR MATRIX A

This matrix summarizes actions recommended to address current and potential exposures related to soil vapor intrusion. To use the matrix appropriately as a tool in the decision-making process, the following should be noted:

- [1] The matrix is generic. As such, it may be appropriate to modify a recommended action to accommodate analyte-specific, building-specific conditions (e.g., dirt floor in basement, crawl spaces, thick slabs, current occupancy, etc.), and/or factors provided in Section 3.2 of the guidance (e.g., current land use, environmental conditions, etc.). For example, collection of additional samples may be recommended when the matrix indicates "no further action" for a particular building, but the results of adjacent buildings (especially sub-slab vapor results) indicate a need to take actions to address exposures related to soil vapor intrusion. Mitigation might be recommended when the results of multiple contaminants indicate monitoring is recommended. Proactive actions may be proposed at any time. For example, the party implementing the actions may decide to install sub-slab depressurization systems on buildings where the matrix indicates "no further action" or "monitoring." Such an action might be undertaken for reasons other than public health (e.g., seeking community acceptance, reducing costs, etc.). However, actions implemented *in lieu* of sampling will typically be expected to be captured in the final engineering report and site management plan, and might not rule out the need for post-implementation sampling (e.g., to document effectiveness or to support terminating the action).
- [2] Actions provided in the matrix are specific to addressing human exposures. Implementation of these actions does not preclude investigating possible sources of soil vapor contamination, nor does it preclude remediating contaminated soil vapor or the source of soil vapor contamination.
- [3] Appropriate care should be taken during all aspects of sample collection to ensure that high quality data are obtained. Since the data are being used in the decision-making process, the laboratory analyzing the environmental samples must have current Environmental Laboratory Approval Program (ELAP) certification for the appropriate analyte and environmental matrix combinations. Furthermore, samples should be analyzed by methods that can achieve a minimum reporting limit of 0.20 microgram per cubic meter for indoor and outdoor air samples. For sub-slab vapor samples and dirt floor soil vapor samples, a minimum reporting limit of 1 microgram per cubic meter is recommended.
- [4] Sub-slab vapor and indoor air samples are typically collected when the likelihood of soil vapor intrusion is considered to be the greatest (i.e., worst-case conditions). If samples are collected at other times (typically, samples collected outside of the heating season), then resampling during worst-case conditions might be appropriate to verify that actions taken to address exposures related to soil vapor intrusion are protective of human health.
- [5] When current exposures are attributed to sources other than soil vapor intrusion, the agencies should be given documentation (e.g., applicable environmental data, completed indoor air sampling questionnaire, digital photographs, etc.) to support a proposed action other than that provided in the matrix box and to support agency assessment and follow-up.
- [6] The party responsible for implementing the recommended actions will differ depending upon several factors, including but not limited to the following: the identified source of the volatile chemicals, the environmental remediation program, and analyte-specific, site-specific and building-specific factors.

Soil Vapor/Indoor Air Matrix B

May 2017

Analytes Assigned:

Tetrachloroethene (PCE), 1,1,1-Trichloroethane (111-TCA), Methylene Chloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m ³)	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m ³)		
	< 3	3 to < 10	10 and above
< 100	1. No further action	2. No Further Action	3. IDENTIFY SOURCE(S) and RESAMPLE or MITIGATE
100 to < 1,000	4. No further action	5. MONITOR	6. MITIGATE
1,000 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

No further action: No additional actions are recommended to address human exposures.

Identify Source(s) and Resample or Mitigate: We recommend that reasonable and practical actions be taken to identify the source(s) affecting the indoor air quality and that actions be implemented to reduce indoor air concentrations to within background ranges. For example, if an indoor or outdoor air source is identified, we recommend the appropriate party implement actions to reduce the levels. In the event that indoor or outdoor sources are not readily identified or confirmed, resampling (which might include additional sub-slab vapor and indoor air sampling locations) is recommended to demonstrate that SVI mitigation actions are not needed. Based on the information available, mitigation might also be recommended when soil vapor intrusion cannot be ruled out.

Monitor: We recommend monitoring (sampling on a recurring basis), including but not necessarily limited to sub-slab vapor, basement air and outdoor air sampling, to determine whether concentrations in the indoor air or sub-slab vapor have changed and/or to evaluate temporal influences. Monitoring might also be recommended to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed.
