Re: WALGREEN COMPANY STORE 02077
10 East Chester Street
Kingston, New York
BCP Site No. C356032
Corrective Measure Workplan Addendum - Revised

Dear Mr. Amin:

AECOM Technical Services, Inc. (AECOM), on behalf of the Walgreen Company (Walgreens), is submitting this revised addendum to the 2021 *Revised Corrective Measure Workplan* (*RCMWP*) to the New York State Department of Environmental Conservation (NYSDEC) for Brownfield Cleanup Program Site C356032 at 10 East Chester Street in Kingston, New York.

The objective of the corrective measures proposed is to reduce concentrations of chlorinated volatile organic compounds (CVOCs), specifically, tetrachloroethene (PCE), in groundwater migrating from the site to levels protective of human health and the environment.

Proposed RCMWP Activities

Activities proposed in the *RCMWP* included:

- Installation of a new on-site well (MW-11) on the southern side of the Walgreens property near Broadway;
- Review of available historical data to potentially identify additional injection points in the interior of the site;
- Injection of amendments to create an approximately 75-foot-long boundary treatment zone along the east (downgradient) side of the site perpendicular to groundwater flow; and
- Pre-and post-injection groundwater monitoring program.

The first two activities outlined above have been completed.

Data generated during the installation and sampling of monitoring well MW-11 is presented in this letter addendum. Once the available historical data was reviewed, AECOM shared the data with Regenesis and we have been working together to develop this addendum, which proposes targeted injection of remediation amendments in the western area of the site. An addendum to the 2021 *RCMWP* was submitted to NYSDEC on February 8, 2022.

On March 3, 2022, NYSDEC provided the following comments on the proposed addendum:

- The proposed additional injection points (A-E) in the western portion of the site were downgradient of MW-4 and, therefore would likely leave the potential source area untreated;

- Additional barrier treatment injection points should be placed downgradient of MW-11 to wrap around and stop the plume from leaving the site in that direction;
- An additional well downgradient of MW-11 is needed to perform post-injection monitoring to verify the plume is treated prior to leaving the site in that area.

A conference call to discuss the comments was held with NYSDEC, Walgreens, and AECOM on March 24, 2022. During the call it was agreed that:

- Proposed injection points A through E would be moved to the west, hydraulically upgradient;
- Two barrier treatment injection points would be placed east and southeast of MW-11, if feasible;
- An additional well would be installed downgradient of MW-11 on the neighboring property, assuming access can be obtained and there are no utilities or obstructions that would prevent installation.

Walgreens intends to complete the remedial injections on the eastern side of the site as proposed in the *RCMWP* concurrent with injections on the western side of site.

Monitoring Well MW-11 Installation

On September 3, 2021, AECOM and our subcontractors mobilized to the site to perform a private utility mark out survey and drill and install monitoring well MW-11 (**Figure 1**). Following manually preclearing the borehole 5 feet below ground surface (ft bgs), a Geoprobe was used to advance the well boring to a depth of 15 ft bgs while continuously collecting soil samples with a 5-foot long Macro-core sampler. As indicated on the boring log, fine to medium sand was encountered to a depth of 12 ft bgs below which silt and clay was encountered (**Attachment 1**). Groundwater was encountered at a depth of approximately 10 ft bgs.

One soil sample was collected for laboratory analysis from the 9.5 to 10 ft bgs interval as it exhibited the greatest apparent contamination based on photoionization detector screening. A second sample was collected from the apparent clean interval of 14 to 15 ft bgs.

Following soil sampling, the boring was enlarged using hollow stem augers to facilitate well installation. The well was constructed of 2-inch diameter schedule 40 PVC well riser with a 10-foot length of 0.020-inch slot PVC screen and completed with flush-mount road box. A well construction log is provided in **Attachment 1**.

AECOM developed monitoring well MW-11 using a Waterra pump four days after installation. The turbidity was monitored during development and did not stabilize to less than 50 Nephelometric Turbidity Units within the five well volumes removed.

On September 10, 2021, AECOM returned to the site to gauge wells, collect a groundwater sample from MW-11, and survey monitoring well MW-11. The table below summarizes the groundwater elevation data. A groundwater flow map generated using this data is provided as **Figure 1**. The data confirms a southeasterly flow, which is consistent with previous monitoring data.

Well ID	TOC Elevation	DTW 9/10/2021 feet (bgs)	Groundwater Elevation 9/10/2021
MW-1	188.72	8.66	180.06
MW-2	188.41	8.79	179.62
MW-3	188.29	8.85	179.44
MW-4	188.06	7.72	180.34
MW-5	187.62	7.31	180.31
MW-6	187.60	6.20	181.40
MW-7	187.66	8.68	178.98
MW-8	188.14	NM	NM
MW-9	188.62	NM	NM
MW-10	188.64	NM	NM
MW-11	188.36	8.48	179.88

NM: not measured, access not secured by AECOM prior to gauging
TOC: top of casing
DTW: depth to water
bgs: below ground surface

A groundwater sample was collected from MW-11 following the United States Environmental Protection Agency (USEPA) low-flow sampling protocol. During purging, AECOM measured water quality parameters (i.e., temperature, pH, specific conductivity, dissolved oxygen, oxidation-reduction potential, and turbidity) using a multi-parameter meter connected to an in-line flow-through cell. A sample was collected once parameters stabilized.

All investigation-derived waste was containerized in 55-gallon drums and temporarily staged on site for subsequent waste characterization and off-site disposal.

MW-11 Analytical Results

The soil and groundwater samples were submitted to Eurofins for analysis of Target Compound List (TCL) volatile organic compounds (VOCs) by USEPA Method 8260C. The laboratory analytical report is provided in **Attachment 2** and the analytical data review memo prepared by an AECOM chemist is provided in **Attachment 3**.

Soil

PCE, trichloroethene (TCE), and cis-1,2-dichloroethene (cis-1,2-DCE) were not detected above the reporting limits in the soil samples collected from the MW-11 borehole. PCE was detected in the soil sample collected from the 14 to 15 ft bgs interval at an estimated concentration of 1.4 micrograms per kilogram (mg/kg), which is below the reporting limit of 6 mg/kg.

Groundwater

PCE, TCE, and cis-1,2-DCE were the only compounds detected at concentrations above the reporting limits in the groundwater sample from MW-11. The concentrations of these compounds exceed the NYSDEC groundwater standard of 5 micrograms per liter (μg/L).

MW-11

Compound	Concentration (µg/L)
Tetrachloroethene (PCE)	340
Trichloroethene (TCE)	49
cis-1,2-Dichloroethene (cis-1,2-DCE)	19

Notes:

µg/L: micrograms per liter

Groundwater sample collected on September 10, 2021

Although impacts are present at MW-11, based on the groundwater flow direction, AECOM believes that the proposed remedial actions discussed below will address these impacts.

Historical Data Review

AECOM reviewed available historical analytical data to determine if there are any locations on-site that would warrant targeted treatment. AECOM reviewed the following documents.

- Brownfield Cleanup Program Remedial Investigation Report/Remedial Action Plan (RIRRAP), S&W Redevelopment of North America, LLC (S&W), August 2005, (including summary of two prior investigations performed by HTE Northeast in February and December 1998)
- Remedial Action Plan, S&W, August 2005
- Remedial Design In-Situ Chemical Oxidation, Stearns and Wheler, LLC, October 2005
- Final Engineering Report, S&W, November 2006
- Summary Report, AECOM, January 23, 2015
- April 2016 Investigation Summary and Request for Extension, AECOM, June 6, 2016
- Off-Site Investigation Results for 322 Broadway and Request for Extension, AECOM, October 18, 2016
- Site Management Periodic Review Report and Institutional and Engineering Control (IC/EC) Certification and March 2018 Investigation Results, AECOM, May 2018
- Groundwater Analytical Results Summary Report, AECOM, March 2020

Remedial actions implemented at the site have included removal of the two sumps and crawlspace structure underneath the dry cleaner and in-situ chemical oxidation with two rounds of permanganate injections performed in April and September 2006.

Review of the analytical data and field observations (e.g., photoionization readings) confirmed that the highest levels of CVOC impacts were present in the general area of the former dry cleaner building. **Figure 2** uses color-coded circles to illustrate the various levels and locations of identified impacts. The information was used to guide the selection of locations for targeted treatment. The historical analytical data demonstrates that CVOC concentration levels in on-site soil are not indicative of source material on the Walgreens property.

Continued monitoring shows concentrations of PCE in well MW-3 on the downgradient side of the site (east) and in well MW-4 located in the area of the former dry cleaner in the western area of the site. An investigation performed in 2020 by the NYSDEC identified PCE in well MW-7 installed downgradient of the site. The proposed remedial activities and schedule are discussed below.

RCMWP Addendum

The remedial plan presented in the approved *RCMWP* includes reducing CVOC impacts migrating from the site through the injection of amendments upgradient of the southeastern property boundary. Because no specific source of the PCE has been identified, the injection locations presented in the *RCMWP* were designed to create an approximately 75-foot-long boundary treatment zone along the east (downgradient) side of the site perpendicular to groundwater flow. The barrier treatment injection locations are shown in **Figure 3**. Commercially-prepared PlumeStop® Liquid Activated Carbon™ and S-MicroZVI™ (S-MZVI) manufactured by Regenesis were selected as the amendments as they are fast-acting groundwater remediation reagents which can remediate a range of contaminants through adsorption, reduction, and bioremediation.

In response to NYSDEC March 3, 2022 comments, amendment injection is proposed between MW-11 and Broadway as shown in **Figure 3**. However, previous utility mark outs, a 2009 Utility Plan for site development (**Attachment 4**), and visual observations indicate that there are multiple underground utilities and an overhead electric line in the area. Two injection points are proposed in the landscaped island, however, the actual locations and number of injection points may vary based on the presence of utilities and other structures.

AECOM met with Regenesis on November 3, 3021 at the Walgreens site and has had subsequent follow-up conversations to discuss the project, the historical data review, and logistical considerations. Regenesis has recommended that treatment in the western area of the site include nutrients, bacteria, and zero valent iron for both reduction and to enhance anaerobic biodegradation. Regenesis recommended a combination of 3-D Microemulsion® (3DME), S-Micro ZVI, and Bio-Dechlor Inoculum® (BDI) (microbe) injections for the treatment area. The 3DME serves as staged release of electron donors with a generally expected material longevity of three years or more. The S-Micro ZVI destroys contaminants directly and stimulates anaerobic degradation by promoting a reducing environment. Regenesis concluded that these amendments would work best for this area, while the prepared PlumeStop Liquid Activated Carbon and S-MicroZVI are best for barrier treatment wall applications. Product information on the proposed amendments are presented in **Attachment 5**.

Walgreens and AECOM had previously proposed to inject the treatment amendments at five locations in the area of the former dry cleaner where previous investigations identified impacts. The locations have been revised in response to NYSDEC March 3, 2022 comments as shown in **Figure 3**. The actual locations may vary based on the presence of buried utilities and other structures. The injection procedures described in the *RCMWP* would be used for these additional injections.

The remedial injections outlined in the approved *RCMWP* and proposed in this addendum will be implemented concurrently. AECOM anticipates that the combination of treatment upgradient on the western side of the property and the treatment barrier along the downgradient property boundary will achieve the objective to reduce CVOCs in groundwater migrating from the site.

In response to NYSDEC's March 3, 2022 comments, an additional downgradient well (MW-12) is proposed downgradient of the Walgreen's property as shown in **Figure 3.** Installation of the well will be dependent on obtaining access from the neighboring property owner and on the absence of utilities of other potential obstructions in the area. Well drilling and installation would follow the same procedures described for MW-11 in the *RCMWP*.

Following installation, the new well will be developed and included in the monitoring program.

Schedule

Once this revised addendum is approved by the NYSDEC, AECOM will work to secure funding with Walgreens to implement the activities in the *RCMWP* and revised addendum. The following schedule was developed with the underlying assumption that NYSDEC will approve this addendum two weeks after receipt of the document, funding will be secured from Walgreens by May 27, 2022, and access to install well MW-12 will be secured by May 27, 2022. The actual field schedule may vary based on driller and remedial contractor availability.

Task	Duration	Target Completion Date
Secure Funding and Offsite Access	-	May 27, 2022
Schedule and Perform Well Installation and Development	6 weeks	July 8, 2022
Pre-Injection GW Sampling, Hydraulic Conductivity Testing and Deploy Passive Diffusion Bag (PDB) (1-month prior to injection)	1 week	July 15 2022
Permitting, Utility Clearance, and Subcontractor Coordination	4 weeks	August 12, 2022
Implement the Injection Program	2 weeks	August 26, 2022
1st Quarterly Post-Injection GW Sampling Event (3 months after injections)	1 week	December 2, 2022
Summary Report after 1st Quarterly Post-Injection GW Sampling (6 weeks after data validation)	8 weeks	February 3, 2023
2nd Quarterly Post-Injection GW Sampling Event	4 weeks	March 3, 2023
3rd Quarterly Post-Injection GW Sampling Event	12 weeks	May 26, 2023
4th Quarterly Post-Injection GW Sampling Event	12 weeks	August 18, 2023
Summary Report after 4th Quarterly Post-Injection GW Sampling (6-weeks after data validation)	8 weeks	October 13, 2023
IC/EC Certification	2 weeks	November3, 2023

Walgreens and AECOM appreciate the continued working relationship with the NYSDEC. If you have any questions or require additional information, please do not hesitate to give me a call at 716-923-1165.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*3	ISTD response or retention time outside acceptable limits.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
vs	Reported analyte concentrations are below 200 ug/kg and may be biased low due to the sample not being collected according to 5035A-L low-level specifications.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Revision
This report has been revised to correct the sample results for DUP (480-189159-3).

Comments
No additional comments.

Receipt
The samples were received on 9/4/2021 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.4º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCVIS) associated with batch 480-595503 recovered above the upper control limit for 2-Hexanone, Carbon tetrachloride, Dibromochloromethane and Trichlorofluoromethane. The samples associated with this CCVIS were non-detect for the affected analytes; therefore, the data have been reported. The associated samples are impacted: MW-11 9.5-10' 090321 (480-189159-1) and DUP (480-189159-3).

Method 8260C: The laboratory control sample (LCS) for preparation batch 480-595491 and analytical batch 480-595503 recovered outside control limits for the following analytes: Carbon tetrachloride, Chlorodibromomethane, Bromoform and 1,2-Dibromo-3-Chloropropane. These analytes were biased high in the LCS and were not detected or below the reporting limits (RL) in the associated samples; therefore, the data have been reported. The associated samples are impacted: MW-11 9.5-10' 090321 (480-189159-1) and DUP (480-189159-3).

Method 8260C: The following samples were analyzed using medium level soil analysis and were diluted due to the nature of the sample matrix: MW-11 9.5-10' 090321 (480-189159-1) and DUP (480-189159-3). Elevated reporting limits (RLs) are provided.

Method 8260C: The following sample is a duplicate that was analyzed at a higher dilution than the parent sample due to the non-homogeneity of the sample matrix: DUP (480-189159-3).

Method 8260C: The continuing calibration verification (CCVIS) associated with batch 480-595619 recovered above the upper control limit for Vinyl chloride. The sample(s) associated with this CCVIS were non-detect for the affected analyte; therefore, the data have been reported. The associated sample is impacted: MW-11 14-15' 090321 (480-189159-2).

Method 8260C: The continuing calibration verification (CCVIS) associated with batch 480-595619 recovered above the upper control limit for Trichlorofluoromethane. The sample(s) associated with this CCVIS were non-detect for the affected analyte; therefore, the data have been reported. The associated sample is impacted: MW-11 14-15' 090321 (480-189159-2).

Method 8260C: Internal standard (ISTD) and/or surrogate standard (SS) response for the following samples were outside control limits: MW-11 14-15' 090321 (480-189159-2), MW-11 14-15' MS 090321 (480-189159-2[MS]) and MW-11 14-15' MSD 090321 (480-189159-2[MSD]). The sample(s) were re-analyzed and ISTD SS response was outside control limits.

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 480-595624 and analytical batch 480-595619 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) precision was within acceptance limits. The associated samples are: MW-11 14-15' MS 090321 (480-189159-2[MS]) and MW-11 14-15' MSD 090321 (480-189159-2[MSD]).

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-595624 and analytical batch 480-595619 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. The associated samples are: MW-11 14-15' MS 090321 (480-189159-2[MS]) and MW-11 14-15' MSD 090321 (480-189159-2[MSD]).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: AECOM
Job ID: 480-189159-1
Project/Site: 60562248, Walgreen's Site (Kingston, NY)

Client Sample ID: MW-11 9.5-10' 090321 — Lab Sample ID: 480-189159-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Methylene Chloride	880		470	93	ug/Kg	4	☼	8260C	Total/NA

Client Sample ID: MW-11 14-15' 090321 — Lab Sample ID: 480-189159-2

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Chloroform	0.40	J vs	6.0	0.37	ug/Kg	1	☼	8260C	Total/NA

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	AECOM
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	N/A	

ANALYTICAL REPORT

Job Number: 480-189431-1

Job Description: 60562248, Walgreen's Site (Kingston, NY)

For:
AECOM Technical Services Inc.
40 British American Boulevard
Latham, NY 12110

Attention: Karen Peppin

Approved for release.
Rebecca M Jones
Project Management Assistant I
9/16/2021 1:32 PM

Designee for
John R Schove, Project Manager II
10 Hazelwood Drive, Amherst, NY, 14228-2298
(716)504-9838
John.Schove@Eurofinset.com
09/16/2021

The test results in this report meet all NELAP requirements for analytes for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this test report should be directed to the TestAmerica Project Manager who has signed this report.

TestAmerica Buffalo NELAC Certifications: CADPH 01169CA, FLDOH E87672, ILEPA 200003, KSDOH E-10187, LADEQ 30708, MDH 036-999-337, NHELAP 2973, NJDEP NY455, NYDOH 10026, ORELAP NY200003, PADEP 68-00281, TXCEQ T-104704412-10-1

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Job Narrative
480-189431-1

Comments
No additional comments.

Receipt
The sample was received on 9/11/2021 8:00 AM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.5º C.

GC/MS VOA
Method 8260C: The following sample was diluted to bring the concentration of target analytes within the calibration range: MW-11 091021 (480-189431-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Memorandum

To	Karen Peppin	Page	1
CC			
Subject	Analytical Data Review Walgreens Site – Kingston, NY September 2021 Sampling Events		
From	Ann Marie Kropovitch		
Date	September 28, 2021		

Two soil samples, one soil field duplicate (FD), one matrix spike/matrix spike duplicate pair, and one water sample were collected from the Walgreens Site on September 3-10, 2021 by AECOM and sent to Eurofins Laboratories, Inc. (Amherst NY) for analysis. The samples were received by the laboratory intact, properly preserved, and under proper chain-of-custody (COC). The samples were analyzed for volatile organic compounds (VOCs) by USEPA Method 8260C. The analytical results were provided in Eurofins report numbers, 480-189159-1 and 480-189431-1.

A limited data review was performed on all samples for completeness of deliverables, and for compliance with method criteria, which includes reporting limits (RL), holding times, method blanks, surrogate recoveries, internal standard recoveries, MS/MSD recoveries, and laboratory control sample (LCS) recoveries.

All samples were analyzed within holding times, with compliant surrogate, MS/MSD and LCS recoveries.

Soil sample MW-11 14-15 showed internal standards (IS) chlorobenzene-d_5 and 1,4-dichlorobenzene-d_4 as being below the lower QC limit. Those compounds associated with IS chlorobenzene-d_5 have been qualified 'UJ'. Since the recovery of internal standard 1,4-dichlorobenzene-d_4 was extremely low (i.e., <25%) those compounds associated with this IS have been rejected (R).

The relative percent difference between sample MW-11 9.5-10 and the field duplicate performed on this sample exceeded 50% for methylene chloride. The methylene chloride results have been qualified 'J'. It should be noted while both samples were analyzed by medium level, the parent sample was analyzed at a dilution of 4 and the duplicate sample was analyzed at a dilution of 10.

Samples MW-11 9.5-10 and its field duplicate were only analyzed at a dilution due to the high concentration of methylene chloride. The RLs for the non-detect compounds are the lowest achievable at the diluted level. Results reported by the laboratory with a 'J' qualifier have concentrations between the method detection limit and RL.

Due to the dilutions required by the elevated levels of methylene chloride, the reporting limits for the non-detect target compounds were elevated. Since tetrachloroethene (PCE) is a compound of concern, the laboratory was requested to evaluate the raw data to determine if PCE was present below the elevated reporting limit. The laboratory supervisor evaluated the ion scans and determined that the ions required for identification of PCE were not present. The laboratory is confident that PCE was not present in the samples.

All data are usable as reported with the exception of the rejected compounds.

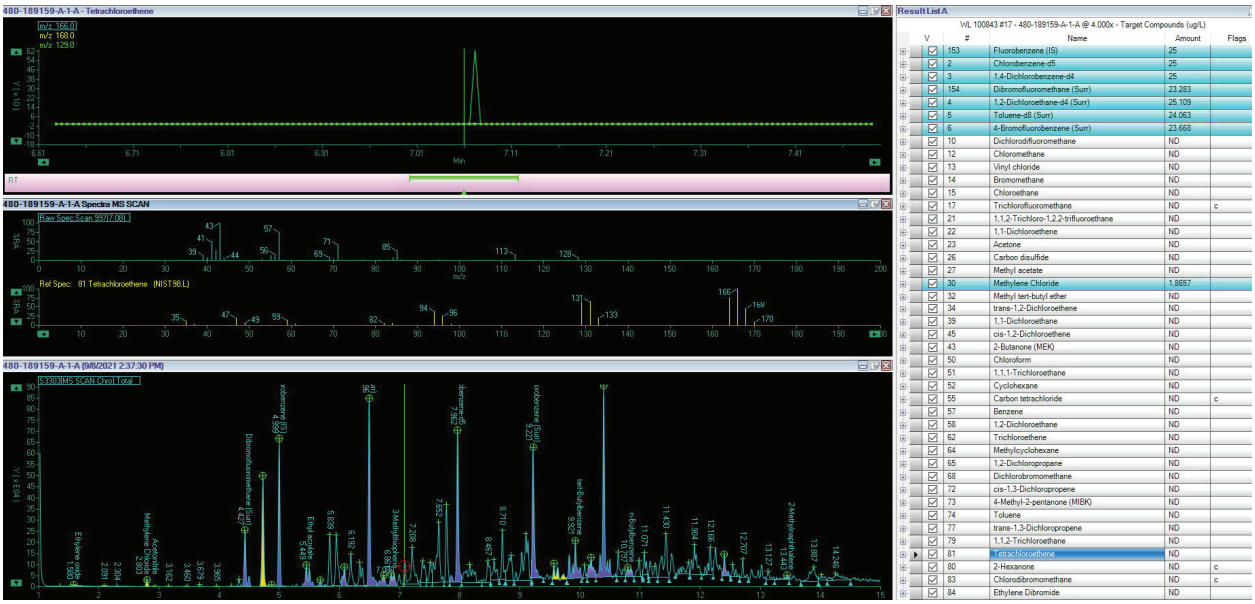
Subject: [EXTERNAL] RE: 480-189159-1 60562248, Walgreen's Site (Kingston, NY)

Ann Marie,

I had the supervisor look into this.

There were no runs at a lower dilution. She took a look at where the Tetra would elute and there is none present in either of the samples. Just a lot of noise. She sent me screen shots from the MS. If Teta was there it should have 129, 166 and 168 ions present. We just detected some low level 129 and none of the minor ions in sample 1 and none of the expected ions in sample 3.

01 No Tetra



03 No Tetra

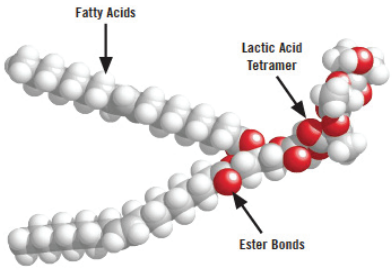
PROPOSED AMENDMENTS FOR WESTERN AREA

3-D Microemulsion® Factory Emulsified Technical Description

3-D Microemulsion (3DME®) is comprised of a patented molecular structure containing oleic acids (i.e., oil component) and lactates/polylactates, which are molecularly bound to one another (figure 1). The 3DME molecule contains both a soluble (hydrophilic) and insoluble (lipophilic) region. These two regions of the molecule are designed to be balanced in size and relative strength. The balanced hydrophilic/lipophilic regions of 3DME result in an electron donor with physical properties allowing it to initially adsorb to the aquifer material in the area of application, then slowly redistribute via very small 3DME "bundles" called micelles. These 3DME micelles spontaneously form within sections of the aquifer where concentrations of 3DME reach several hundred parts per million. The micelles' small size and mobility allow it to move with groundwater flow through the aquifer matrix, passing easily through the pore throats in between soil grains resulting in the further redistribution of 3DME within the aquifer. This allows for advective distribution of the oleic acids which are otherwise insoluble and unable to distribute in this manner, allowing for increased persistence of the lactate/polylactates component due to their initial attachment to the oleic acids.

Example of 3-D Microemulsion

FIGURE 1: THE 3-D MICROEMULSION MOLECULAR STRUCTURE



Due to its patented molecular structure, 3DME offers far greater transport when compared to blended emulsified vegetable oil (EVO) products, which fail to distribute beyond the limits of pumping. 3DME also provides greater persistence when compared to soluble substrates such as lactates or simple sugars. The 3DME molecular structures capitalize on the best features of the two electron-donor types while at the same time, minimize their limitations. 3DME is delivered to the site as a ready-to-apply emulsion that is simply diluted with water to generate a large volume of a 3DME colloidal suspension.

Suspension of 3DME generated by this mixing range from micelles on the order of .02 microns to .05 microns in diameter, to "swollen" micelles, (termed "microemulsions") which are on the order of .05 to 5 microns in diameter. Once injected into the subsurface in high volumes, the colloidal suspension mixes and dilutes in existing pore waters. The micelles/microemulsions on the injection front will then begin to sorb onto the surfaces of soils as a result of zeta potential attraction and organic matter within the soils themselves. As the sorption continues, the 3DME will "coat" pore surfaces developing a layer of molecules and in some cases a bilayer. This sorption process continues as the micelles/microemulsion moves outward and disassociates into their hydrophilic/hydrophobic components. The specialized chemistry of 3DME results in a staged release of electron donors: free lactate (immediate); polylactate esters (mid-range) and free fatty acids & fatty acid esters (long-term). Material longevity of three years or greater has been seen at most sites as determined from biogeochemical analyses.

For a list of treatable contaminants with the use of 3DME, view the Range of Treatable Contaminants Guide.

3-D MICROEMULSION
Factory Emulsified

3-D Microemulsion® Factory Emulsified Technical Description

Chemical Composition

- Fatty acid esters
- Water
- Lactate oligomers
- Sodium lactate
- Proprietary surfactants

Properties

- Density – Approximately 1.0 grams per cubic centimeter (relative to water)
- pH – Neutral (approximately 6.5 to 7.5 standard units)
- Solubility – Soluble in Water
- Appearance – White emulsion
- Odor – Not detectable
- Vapor Pressure – None
- Non-hazardous

Storage and Handling Guidelines

Storage
Store in original tightly closed container
Store in a cool, dry, well-ventilated place
Store away from incompatible materials
Recommended storage containers: plastic-lined steel, plastic, glass, aluminum, stainless steel, or reinforced fiberglass

Handling
Avoid contact with eyes, skin, and clothing
Provide adequate ventilation
Wear appropriate personal protective equipment
Observe good industrial hygiene practices

Applications

- 3DME is diluted with water prior to application. Resulting emulsion has viscosity similar to water.
- Easily injects into formation through direct push injection points, injection wells or other injection delivery systems.

Application instructions for this product are contained in the 3DME FE Application Instructions.

Health and Safety

Material is food grade and relatively safe to handle. We recommend avoiding contact with eyes and prolonged contact with skin. OSHA Level D personal protection equipment including vinyl or rubber gloves, and eye protection are recommended when handling this product. Please review the 3DME FE Material Safety Data Sheet for additional storage, usage, and handling requirements.

S-MicroZVI Specification Sheet

S-MicroZVI Technical Description

S-MicroZVI® is an *In Situ* Chemical Reduction (ISCR) reagent that promotes the destruction of many organic pollutants and is most commonly used with chlorinated hydrocarbons. It is engineered to provide an optimal source of micro-scale zero valent iron (ZVI) that is both easy to use and delivers enhanced reactivity with the target contaminants via multiple pathways. S-MicroZVI can destroy many chlorinated contaminants through a direct chemical reaction (**see Figure 1**). S-MicroZVI will also stimulate anaerobic biological degradation by rapidly creating a reducing environment that is favorable for reductive dechlorination.

Sulfidated ZVI

S-MicroZVI is composed of colloidal, sulfidated zero-valent iron particles suspended in glycerol using proprietary environmentally acceptable dispersants. The passivation technique of sulfidation, completed using proprietary processing methods, provides unparalleled reactivity with chlorinated hydrocarbons like PCE and TCE and increases its stability and longevity by minimizing undesirable side reactions.

S-MicroZVI is Best in Class For

- ☑ Longevity
- ☑ Reactivity
- ☑ Transport

In addition to superior reactivity, S-MicroZVI is designed for easy handling that is unmatched by any ZVI product on the market. Shipped as a liquid suspension, S-MicroZVI requires no powder feeders, no thickening with guar, and pneumatic or hydraulic fracturing is not mandatory. When diluted with water prior to application, the resulting suspension is easy to inject using either direct push or permanent injection wells.

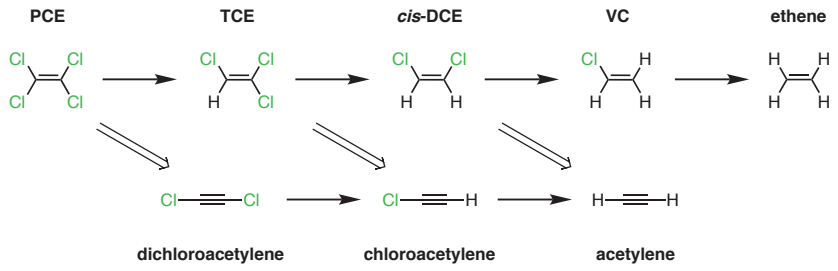

Figure 1: *Chlorinated ethene degradation pathways and products. The top pathway with single line arrows represent the reductive dechlorination (hydrogenolysis) pathway. The lower pathway with downward facing double line arrows represent the beta-elimination pathway.*

To see a list of treatable contaminants, view the S-MicroZVI treatable contaminants guide.

S-Micro ZVI®
Sulfidated Zero-Valent Iron

S-MicroZVI Specification Sheet

Chemical Composition

Iron, powders CAS 7439-89-6
Iron (II) sulfide CAS 1317-37-9
Glycerol CAS 56-81-8

Properties

Physical State: Liquid
Form: Viscous metallic suspension
Color: Dark gray
Odor: Slight
pH: Typically 7-9 as applied
Density: 15 lb/gal

Storage and Handling Guidelines

Storage:

- Use within four weeks of delivery
- Store in original containers
- Store at temperatures below 95F°
- Store away from incompatible materials

Handling:

- Never mix with oxidants or acids
- Wear appropriate personal protective equipment
- Do not taste or swallow
- Observe good industrial hygiene practices

Applications

S-MicroZVI is diluted with water on site and easily applied into the subsurface through low-pressure injections. S-MicroZVI can also be mixed with products like 3-D Microemulsion® or PlumeStop® prior to injection.

Health and Safety

The material is relatively safe to handle; however, avoid contact with eyes, skin and clothing. OSHA Level D personal protection equipment including: vinyl or rubber gloves and eye protection are recommended when handling this product. Please review the Safety Data Sheet for additional storage, and handling requirements here: S-MicroZVI SDS.

BDI PLUS® Technical Description

Bio-Dechlor INOCULUM Plus (BDI PLUS®) is an enriched natural consortium containing species of Dehalococcoides sp. (DHC). BDI PLUS has been shown to simulate the rapid and complete dechlorination of chlorinated solvents such as tetrachloroethene (PCE), trichloroethene (TCE), dichloroethene (DCE) and vinyl chloride (VC) to non-toxic end products, ethene, carbon dioxide and water.

The culture also contains microbes capable of dehalogenating halomethanes (e.g., carbon tetrachloride and chloroform) and haloethanes (e.g., 1,1,1-TCA and 1,1-DCA) as well as mixtures of these contaminants.

Species of Dehalococcoides sp. (DHC)

For a list of treatable contaminants with the use of BDI PLUS, view the Range of Treatable Contaminants Guide

Chemical Composition

- Non-hazardous, naturally-occurring, non-altered anaerobic microbes and enzymes in a water-based medium.

Properties

- Appearance – Murky, yellow to grey water
- Odor – Musty
- pH 6.0 to 8.0
- Density – Approximately 1.0 grams per cubic centimeter (0.9 to 1.1 g/cc)
- Solubility – Soluble in Water
- Vapor Pressure – None
- Non-hazardous

Storage and Handling Guidelines

Storage
Store in original tightly closed container
Store away from incompatible materials
Recommended storage containers: plastic lined steel, plastic, glass, aluminum, stainless steel, or reinforced fiberglass
Store in a cool, dry area at 4-5°C (39 - 41°F)
Material may be stored for up to 3 weeks at 2-4°C without aeration

Handling
Avoid prolonged exposure
Observe good industrial hygiene practices
Wear appropriate personal protective equipment

BDI PLUS® Technical Description

Applications

- BDI PLUS is delivered to the site in liquid form and is designed to be injected directly into the saturated zone requiring treatment.
- Most often diluted with de-oxygenated water prior to injection into either hydraulic push injection points or properly constructed injection wells.
- The typical dilution rate of the injected culture is 10 gallons of deoxygenated water to 1 liter of standard BDI PLUS culture.

Application instructions for this product are contained here BDI PLUS Application Instructions.

Health and Safety

Material is non-hazardous and relatively safe to handle; however avoid contact with eyes and prolonged contact with skin. OSHA Level D personal protection equipment including: vinyl or rubber gloves and safety goggles or a splash shield are recommended when handling this product. An eyewash station is recommended. Please review the Material Safety Data Sheet for additional storage, usage, and handling requirements here: BDI PLUS SDS.
