RE: **Former BICC Cables Site**
City of Yonkers, Westchester County, New York
United States Environmental Protection Agency (USEPA) Approval of Risk-Based Cleanup and Disposal of Polychlorinated Biphenyl Remediation Waste
OU-2 (DCU Area 2B) Multi-Layer Sediment Cover System (SCS)
2018 Periodic Review Report (PRR)

Dear Mr. Conetta:

Paulus, Sokolowski and Sartor Engineering PC (PS&S) was retained by Extell Hudson Waterfront, LLC (Extell) to prepare the attached 2018 Periodic Review Report (PRR) for the Former BICC Cables Site (hereinafter referred to as "the Site"). The Site is identified as New York State Department of Environmental Conservation (NYSDEC) Site No. C360051 and was remediated in accordance with the Brownfield Cleanup Agreement (BCA) Index # W3-1063-05-03.

As detailed in the USEPA Risk Based Approval, dated November 6, 2017 (RB Approval), annual reporting is required as part of the NYSDEC-approved Site Management Plan, dated April 14, 2017 (SMP), and as referenced in the Environmental Easement, which will run with the Site in perpetuity. An annual report (i.e., a PRR) is to be submitted to the United States Environmental Protection Agency (USEPA) Region 2 (and to NYSDEC) beginning one-year post Certificate of Completion (COC), which was issued by NYSDEC on August 18, 2017.

In accordance with the RB Approval, please find attached the 2018 PRR which was prepared for the August 18, 2017 to August 17, 2018 annual reporting period. The PRR contains the information as outlined in Sections 3 and 5 of the SMP, which includes an inspection of the OU-2 (DCU Area 2B) Multi-Layer Sediment Cover System (SCS).

Should you have any questions or require additional information, please call Scott Caporizzo at 914-226-3722 or me at 732-584-0437.

2018 PERIODIC REVIEW REPORT

-FOR-

Former BICC Cables Site

City of Yonkers, New York
NYSDEC Site No. C360051
BCA Index # W3-1063-05-03

Submitted by:

Extell Hudson Waterfront, LLC

525 East County Line Road, Suite 13
Lakewood, New Jersey 08701

October 16, 2018

Prepared by:

One Larkin Plaza, 2nd Floor
Yonkers, New York 10701

I, Janos M. Szeman, certify that I am currently a New York State licensed Professional Engineer as defined at 6 NYCRR Part 375-1.2(aj) and paragraph 1.3(b)47 and that this Remedial Investigation Report was prepared in accordance with applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and that activities were performed in full accordance with the DER-approved work plan and any DER-approved modifications.

Date: **16 October 2018** *Signature:* Janos M. Szeman

EXECUTIVE SUMMARY

Paulus, Sokolowski and Sartor Engineering, PC (PS&S) was retained by Extell Hudson Waterfront, LLC to prepare this 2018 Periodic Review Report (PRR) for the Former BICC Cables Site (hereinafter referred to as "the Site"). The Site is identified as New York State Department of Environmental Conservation (NYSDEC) Site No. C360051 and was remediated in accordance with the Brownfield Cleanup Agreement (BCA) Index # W3-1063-05-03.

As noted in the NYSDEC-approved Site Management Plan, dated April 14, 2017 (SMP), a PRR is to be submitted to NYSDEC and the United States Environmental Protection Agency (USEPA) annually beginning one-year post Certificate of Completion (COC), which was issued by NYSDEC on August 18, 2017. This PRR was prepared for the August 18, 2017 to August 17, 2018 annual reporting period.

The purpose of this 2018 PRR is to document on-going Site management activities associated with the Engineering and Institutional Controls (ECs/ICs) in place at the Site, and to certify that the ECs/ICs are being maintained in accordance with the SMP and the USEPA's Approval for Risk-Based Disposal of Polychlorinated Biphenyl Remediation Waste, dated November 6, 2017 (2017 RB Approval). This 2018 PRR includes documentation and an assessment of the Monitoring Plan results, Operation and Maintenance (O&M) Plan activities, and certification of ECs/ICs identified in the SMP. Site management activities conducted in this reporting period are summarized in Table 1 below (derived from Table 3.1.2.1 of the SMP).

Table 1: Media Monitoring/Inspection Schedule

Monitoring Program	Frequency	Matrix	Analysis	Completion Date
Groundwater	Semi-annual for minimum of two years	Water	Volatile Organic Compounds (VOCs) and Polychlorinated biphenyls (PCBs)	February 21, 2018 and August 7, 2018
Shoreline Stabilization Measures (Bulkheads and Revetment Stone)	Annual	Sediment and Soil	Visual observation and photo documentation	August 6, 2018
Current Pavement and Concrete Cover Systems (existing Upland Site-wide Cover System)	Annual	Soil	Visual observation and photo documentation	August 7, 2018
Perimeter Controls[1]	Annual	Site-wide	Visual observation and photo documentation	August 7, 2018
Underwater Multi-Layer Sediment Cover System for OU-2 (DCU Area 2B)	Annual Bathymetry and Annual SCS Remote Sensing Cable	Sediment	Visual observation, bathymetric survey, and SCS Remote Sensing Program on an Annual Basis with annual bathymetric surveys	August 7, 2018
Future Site Cover Systems	Annual	Soil	Visual observation and photo documentation	August 7, 2018

1. Table 3.1.2.1 of the SMP does not include Perimeter Controls, however, inspection of this control is required in the annual inspection forms provided in the SMP.

Based on the inspection/monitoring conducted during this reporting period in accordance with the procedures outlined in the SMP Monitoring Plan, PS&S finds the Site in compliance with the SMP IC/EC Plan, Monitoring Plan, and O&M Plan requirements. ICs/ECs at the Site are in place and functioning in accordance with the Environmental Easement and the 2017 RB Approval.

As noted in Section 4.2.1, off-site disposal of non-compliant imported fill material is planned in October 2018, and as noted in Section 6.1, groundwater monitoring well RMW-2 is scheduled to be replaced in kind prior to the next groundwater sampling event. Further, PS&S recommends that the IC/EC Certification Form be modified for future PRRs for consistency with the SMP, as detailed in Section 4.3 and reflected on the IC/EC Certification Form presented in Attachment A.

No other corrective measures are proposed and no changes to the SMP are recommended at this time.

1.0 INTRODUCTION

PS&S was retained by Extell Hudson Waterfront, LLC to prepare this 2018 Periodic Review Report (PRR) for the Former BICC Cables Site (hereinafter referred to as "the Site"). The Site is identified as New York State Department of Environmental Conservation (NYSDEC) Site No. C360051 and was remediated in accordance with the Brownfield Cleanup Agreement (BCA) Index # W3-1063-05-03.

This 2018 PRR was prepared for the August 18, 2017 to August 17, 2018 annual reporting period. This 2018 PRR includes documentation and an assessment of the Site Management Plan (SMP) Monitoring Plan results, details on necessary Operation and Maintenance (O&M), and certification of engineering and institutional controls (ECs/ICs) identified in the SMP.

This 2018 PRR was prepared in accordance with Section 6.3(b) of New York State Department of Environmental Conservation (NYSDEC) DER-10, *Technical Guidance for Site Investigation and Remediation*, dated May 3, 2010, the USEPA Approval for Risk-Based Disposal of Polychlorinated Biphenyl Remediation Waste, dated November 6, 2017 (2017 RB Approval), and the NYSDEC-approved SMP, dated April 14, 2017 (SMP) prepared by PS&S.

2.0 SITE BACKGROUND

This section provides general information obtained from the SMP on the setting of the Site. Also, a description of the land uses, the historical operations performed at the Site, an overview of the regional and local geology, and the hydrogeology of the Site are summarized below.

2.1 Site Location and Description

The Site is situated at One Point Street in the City of Yonkers, Westchester County, New York and is identified by the following City of Yonkers Tax Map Block/Lot numbers of Section 2: 2114/17, 2114/20-35, 2620/35, 2620/40, 2625/15, 2625/17, 2625/21, 2625/23, 2630/1, 2630/2, 2630/3, and 2630/10 (refer to Table 1.1.1 of the SMP).

The Site measures approximately 21.2 acres (approximately 15.8 acres of upland and 5.4 acres of underwater land). A majority of the upland area of the Site (approximately 14.6 acres) is bounded to the north and west by the Hudson River, to the south by a former plastic packaging manufacturing plant, and to the east by the Metro North railroad tracks, a Metropolitan Transportation Authority (MTA) bus depot facility and vacant land. This upland part of the Site is detailed in the SMP as three subdivided soil areas: South Yard, North Yard, and the Demolition/Below Building Area.

The Site also includes an upland area (approximately 1.2 acres) referred to in the SMP as the BICC Parking Lot which not contiguous with the upland Site area detailed above, but is separated from the rest of the Site by the Metro North railroad tracks. The BICC Parking Lot is bounded to the west by the Metro North railroad tracks, to the east by Ravine Avenue, to the north by Point Street, and the south by vacant property owned by the City of Yonkers.

The underwater land (the western part of the Site within the Hudson River) contains five Dredge Certification Unit (DCU) Areas: I through V, with DCU Area II was subdivided further into 2A, 2B, and 2C (as described in the SMP).

2.2 Geology and Hydrogeology

The Site is developed on historic fill of varying composition and thickness (up to 20 feet beneath the Site's cover system). The historic fill is underlain by native Hudson River Valley overburden which is composed of silts, clays, sands, and gravels with glacial, lacustrine, and marine origins. The underlying bedrock is of Grenville age (approximately 1 billion years ago) crystalline metamorphic rocks, consisting of Fordham Gneiss/Inwood Marble/Manhattan Formation.

The Site's groundwater table is tidally influenced and ranges in depth from 0.5 feet bgs to 13.5 feet bgs with a southwesterly direction of flow towards the Hudson River.

2.3 Historical and Current Land Use and Ownership

An early industrial proprietor of the Site was S.S. Hepworth & Company, a sugar machinery and tools manufacturer, which occupied the Site from 1886 to 1890. From 1890 to 1915, the India Rubber Percha Insulating Company, a wire and cable manufacturer, operated at the Site, followed by the Habirshaw Wire Company from 1915 to 1930. Habirshaw fabricated paper-insulated, lead-jacketed cables, rubber-insulated and jacketed cables, and armored submarine cables at the facility until 1930, when it was acquired by Phelps Dodge. Phelps Dodge continued manufacturing cables in a similar process at the Site.

During the 1960s, production of the rubber-insulated/jacketed cables and armored submarine cables at the Site was discontinued in favor of cables insulated with polyethylene and ethylene propylene rubber that included the use of highly refined rosins and later refined hydrocarbon oils (e.g., PCBs) as the dielectric fluids to replace the rosins.

Phelps Dodge's ownership lasted until 1984, when the property was acquired by Cablec, which later merged with the BICC Cables Corporation. Cablec/BICC Cables Corporation continued manufacturing Phelps Dodge products until 1996 which then ceased due to declining demand for paper-insulated, lead-jacketed cables.

On October 14, 1998, this Site, previously referred to as the former BICC Cables Corporation Site, was listed on the Registry of Inactive Hazardous Waste Disposal Sites as a Class 2 Superfund Site. BICC Cables Corporation entered into an Administrative Order on Consent (AOC) with NYSDEC on March 17, 2000, to conduct a Remedial Investigation/Feasibility Study (RI/FS). The RI/FS was completed and a Record of Decision (ROD) documenting the selected remedial actions for the Site was issued by NYSDEC in March 2005.

In May 2005, One Point Street. Inc. (OPSI) entered into a Brownfield Cleanup Agreement (BCA) with NYSDEC as a Volunteer under the Brownfield Cleanup Program (BCP) to investigate and remediate the Site. In July 2014, NYSDEC issued a second ROD (OU-2 ROD) to address the Site remedy for DCU Area 2B, defined as Operable Unit # 2 (OU-2). The OU-2 ROD defines the balance of the Site (all upland areas, and all underwater land areas of the Site other than DCU Area 2B) as Operable Unit #1 (OU-1). The OU-2 ROD established the remedial requirements for DCU Area 2B, which is the Site's underwater land located under the northeast corner of the EPRI Building. In addition to the OU-2 ROD, the DCU Area 2B was remediated in accordance with the USEPA's Approval for Risk-Based Disposal of Polychlorinated Biphenyl Remediation Waste, dated September 15, 2015 (2015 RB Approval), which also contained conditions for post-remedial monitoring and compliance with the Environmental Easement. The post-remedial obligations of the 2015 RB Approval are now set forth in and required pursuant to the 2017 RB Approval that replaced the 2015 RB Approval.

The Site was remediated in several phases by OPSI (with NYSDEC oversight) between 2005 and 2016. The Site received its Certificate of Completion (COC) from NYSDEC on August 17, 2017. The Site's current environmental conditions are further detailed in Section 3.0 below.

As summarized in Table 2.3 below, the Site is currently subdivided into 12 City of Yonkers parcels. Extell Hudson Waterfront, LLC purchased the Site parcels west of the Metro North railroad tracks from OPSI on September 29, 2017 and remains the owner of these 12 parcels. This part of the Site has been used (from 2017 to present) for school bus and car valet parking services. OPSI maintains ownership of the Site parcels east of the Metro North railroad track (i.e., the BICC Parking Lot), which is vacant.

Table 2: Site Ownership by Parcel

Address	City of Yonkers Parcel (Section, Block, and Lot)	Ownership
35 Babcock Place	*2-2620-35*	*Extell Hudson Waterfront, LLC*
39 Water Grant	*2-2620-40*	*Extell Hudson Waterfront, LLC*
39-B Water Grant	*2-2625-15*	*Extell Hudson Waterfront, LLC*
40 Water Grant	*2-2625-17*	*Extell Hudson Waterfront, LLC*
41 Water Grant	*2-2625-21*	*Extell Hudson Waterfront, LLC*

42 Water Grant	*2-2630-1*	*Extell Hudson Waterfront, LLC*
42-A Water Grant	*2-2630-2*	*Extell Hudson Waterfront, LLC*
42-B Water Grant	*2-2630-3*	*Extell Hudson Waterfront, LLC*
76 Point Street	*2-2114-17*	*One Point Street. Inc.*
60 Point Street	*2-2114-20 to 35*	*One Point Street. Inc.*

2.4 Anticipated Future Land Use

Current and future Site use requires compliance with the Environmental Easement, the SMP, and the 2017 RB Approval, in perpetuity or until the Environmental Easement (granted to NYSDEC and recorded with the Westchester County Clerk) is extinguished in accordance with the current version of the New York Environmental Conservation Law (ECL) Article 71, Title 36 (Section 71-3605, Environmental Easements).

The Environmental Easement allows for future restricted residential, commercial or industrial uses at the Site, as defined in 6 NYCRR Part 375-1.8. The part of the Site west of the Metro North railroad tracks is also located within the City of Yonkers Alexander Street Urban Renewal Area and is subject to the City of Yonkers Alexander Street Master Plan, approved by City of Yonkers Counsel in May 2009.

Anticipated future land use of the part of the Site west of the Metro North railroad tracks (currently owned by Extell Hudson Waterfront, LLC) is mixed restricted-residential and commercial development, with public open space, including public access to the waterfront. The future land use of the part of the Site east of the Metro North railroad tracks (currently owned by OPSI) is under evaluation.

3.0 CURRENT ENVIRONMENTAL CONDITIONS

The current environmental conditions are managed in accordance with the SMP, dated April 14, 2017. As detailed in the SMP, ECs/ICs are installed/implemented at the Site to protect human health and the environment by controlling exposure to remaining contamination (defined in Section 3.1) during redevelopment and future Site use. Compliance with the Environmental Easement, the SMP and implementation of the requirements set forth in the 2017 RB Approval is required in perpetuity or until the Environmental Easement is extinguished. Proper implementation, management and certification of these ECs/ICs is defined in the SMP and the 2017 RB Approval.

3.1 Remaining Contamination

As noted in the SMP, contamination remains on-site in upland soils in the South Yard, North Yard, and the Demolition/Below Building; and in the Site's underwater sediments in DCU Area 2B (located under the EPRI Building). The remaining contamination in both upland soils and DCU Area 2B underwater sediments consists most predominantly of PCBs and lead at levels exceeding restricted-residential use Soil Cleanup Objectives (SCOs) as defined in the SMP. In addition, on-Site groundwater contamination predominantly consisting of VOCs exceeding Effluent Groundwater Limitations (Class GA) is present as a result of an upgradient source.

Exposure to remaining contamination at the Site is controlled by ECs/ICs summarized in Section 5.0 of this PRR.

4.0 ENGINEERING & INSTITUTIONAL CONTROLS PLAN COMPLIANCE REPORT

The Engineering and Institutional Control Plan and Compliance Report below provides a description of each EC/IC, its objective, and how performance of the control is evaluated. The IC/EC Certification is discussed in Section 4.3 and is included in Appendix A of this 2018 PRR.

4.1 Engineering Controls

A description of each EC, its objective, and how performance of the EC is evaluated is summarized in Sections 4.1.1 through 4.1.6.

4.1.1 Upland Site-wide Cover System

Exposure to remaining contamination in upland soils (located in the South Yard, North Yard, and the Demolition/Below Building) is prevented by cover system components which consist of either the 6-Inch-Thick Asphalt Pavement Cover System, the 6-Inch-Thick Concrete Cover System, or the 12-Inch-Thick Asphalt Pavement Cover System (together referred to as the "Upland Site-wide Cover System"). The Upland Site-wide Cover System is a permanent control and the quality and integrity of this system will be inspected at annual intervals (or in the event of an emergency, such as a hurricane, storm, or other event, causing severe conditions that might adversely impact this control) in perpetuity unless the future Site development includes excavation activities that remove the residual contamination, or as otherwise approved by NYSDEC.

As specified in this SMP, if imported fill material or other materials replace components of the current Upland Site-wide Cover System, or are placed above the existing Upland Site-wide Cover System during development (e.g., new building foundations, constructed in accordance with the SMP), future Site inspections would then focus on the integrity and performance of such NYSDEC-approved Upland Site-wide Cover System components to confirm that the ECs are functioning as designed.

The Upland Site-wide Cover System may also be replaced during the development of the Site with cover system components of equivalent integrity, in accordance with the SMP. As new permanent Site development Upland Site-wide Cover System components are constructed, the SMP will require modifications to document these changes.

4.1.2 Shoreline Stabilization Measures (Bulkhead and Revetment Stone)

A combination of composite/steel bulkhead systems and revetment stone are present to contain Site historical fill material on the upland part of the Site and prevent erosion of fill into the Hudson River. Bulkhead/Revetment Stone are

permanent controls and the quality and integrity of this system will be inspected at annual intervals (and in the event of an emergency, such as a hurricane, major SMP defined storm(s), or other event, causing severe conditions that might adversely impact this control) in perpetuity unless the future Site development includes excavation activities that remove the residual upland contamination.

4.1.3 Underwater Multi-Layer Sediment Cover System for OU-2 (DCU Area 2B)

A Multi-Layer Sediment Cover System (Multi-Layer SCS) controls exposure to remaining contamination in the Site's underwater sediments located in DCU Area 2B (located under the EPRI Building). The Multi-Layer SCS consists of the following five key components: Cushion Layer, Active Treatment and Containment Layer, Ballast Layer, Armor Protection Layer, and Habitat Mitigation Layer. The Multi-Layer SCS also has a fiber optic remote sensing component to monitor the top of the Multi-Layer SCS and to assess the long-term integrity of the Multi-Layer SCS. The Multi-Layer SCS is expected to remain in place in perpetuity and will be inspected at annual intervals (and in the event of an emergency, such as a hurricane, storm, or other event causing severe conditions that might adversely impact this control).

4.1.4 Perimeter Controls

Site access to the upland part of the Site west of the Metro North railroad tracks is controlled by an 8-foot-tall chain link fence on the northern, eastern, and southern perimeter of the Site. Along the western perimeter, and a part of the northern perimeter, the BICC Site is protected by a natural barrier, the Hudson River. Site access to the upland part of the Site east of the Metro North railroad tracks (i.e., the BICC Parking Lot) is controlled by perimeter fencing to the north, south, east, and west.

The Site's perimeter fencing control may be removed as the Site is developed and the Upland Site-wide Cover System is replaced by new, publicly accessible Site development components, constructed with concrete, asphalt and soil development cover system, in accordance with the SMP.

4.1.5 Groundwater Monitoring Program

Semi-annual groundwater monitoring will be required from five wells that have been installed on the Site for a minimum of two years after the date of the COC to monitor post-remedial groundwater concentrations. The wells must be protected and replaced as necessary to confirm that the groundwater wells function in the manner specified in the SMP. Whether additional groundwater monitoring will be required beyond two years will be based on the results of the first two years of sampling, as further detailed in the SMP.

4.1.6 Vapor Mitigation Study and/or Systems

The need for a vapor mitigation system (VMS) must be evaluated in connection with construction of any buildings on the Site. If the need for such a system is indicated, a VMS must be designed, submitted to and approved by the NYSDEC and the New York State Department of Health (NYSDOH), constructed and operated in accordance with the NYSDEC DER regulatory requirements and guidance documents, and NYSDOH Vapor Guidance Document in place at that time.

4.2 Institutional Controls

A series of Institutional Controls is required by the 2005 ROD and 2014 OU-2 ROD in order to:

1. Implement, maintain and monitor EC systems;
2. Prevent future exposure to remaining contamination by controlling disturbances of the subsurface contamination; and
3. Limit the use and development of the Site to restricted residential, commercial, or industrial uses only.

Adherence to the following ICs is required by the Environmental Easement and will be implemented in accordance with the Site Management Plan:

1. The Grantor and the Grantor's successors and assigns must comply with the Environmental Easement and the SMP;
2. All ECs must be operated and maintained as specified in the SMP;
3. All ICs and ECs on the Controlled Property (the Site) must be inspected and certified on, at a minimum, an annual basis, or at a frequency and in a manner defined in the SMP if more frequent, in accordance with Part 375-1.8(h)(3);
4. Groundwater and other environmental or public health monitoring must be conducted as defined in this SMP;
5. Data and information pertinent to Site Management for the Controlled Property must be reported in the manner and at the frequency defined in the SMP;
6. On-Site environmental monitoring devices, including but not limited to groundwater monitoring wells as detailed in Section 3.3 of the SMP, must be protected and replaced as necessary to confirm that the groundwater devices function in the manner specified in the SMP;
7. The use and development of the Controlled Property is limited to restricted residential, commercial and industrial uses as defined by Part 375-1.8(g), subject to local zoning laws;
8. The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the NYSDOH or the Westchester County

Department of Health to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the NYSDEC;

9. Future activities on the Site that will disturb remaining contaminated material must be conducted in accordance with the SMP;
10. Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP;
11. Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical components of the remedy will be performed as defined in the SMP;
12. Access to the Site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by the Environmental Easement;
13. USEPA, its agents, employees, or other authorized representatives may enter the OU-2 Area, and any other location where non-privileged records are stored related to the OU-2 Area, at reasonable times for any purpose authorized by Section 11 of TSCA, 15 U.S.C. §2610;
14. The Controlled Property will not be used for raising livestock or producing animal products for human consumption, and the above-stated engineering controls may not be discontinued without an amendment or extinguishment of this Environmental Easement;
15. Vegetable gardens and all forms of farming (including dairy and livestock) on the Site property are prohibited unless within the top 2 feet of clean soil cover or above;
16. The potential for vapor intrusion must be evaluated for any buildings developed on the Site in the vapor intrusion area, and any potential impacts that are identified must be mitigated; and
17. ICs identified in the Environmental Easement may not be discontinued without the Environmental Easement being amended or extinguished.

4.2.1 Excavation Work Plan

The SMP requires that excavation work that will extend through the cover systems or encounter or disturb the remaining contamination, including any modifications or repairs to the existing cover systems, and import of fill to the Site, must be carried out in compliance with the Excavation Work Plan (EWP).

Documentation retained as part of Excavation Work Plan compliance (e.g., Community Air Monitoring Plan (CAMP) data, NYSDEC-approved import material quantities/bills of lading, disposal quantities and associated facility acceptance letters and waste characterization data) must be provided to NYSDEC in the PRR.

During this 2018 PRR reporting period, no intrusive activity beneath the cover systems occurred, however, material import activities occurred as discussed below.

As previously documented with NYSDEC between 2015 and 2018, fill material was delivered and placed at the Site above the Upland Site-wide Cover System and additional fill was placed during this 2018 PRR reporting period; source location(s) documentation had not been submitted to NYSDEC for review and approval prior to import to the Site. After consultation with NYSDEC, in March 2018, PS&S conducted a topographic survey of the observed limits of fill at the Site above the Upland Site-wide Cover System, as shown in Attachment C. This March 2018 topographic survey was used to estimate the approximate amount of fill placed at the Site above the Upland Site-wide Cover System by comparing current topographic conditions to the Site's topographic mapping prepared by Ward Carpenter in December 2011 (i.e., prior to fill operations above the asphalt pavement cover system). Based on a comparison of the two surveys, it was estimated an approximate 43,000 cubic yard volume differential exists between the two topographic surfaces.

Following NYSDEC approval of the Existing Fill Sampling Work Plan, dated April 13, 2018, PS&S performed characterization sampling of the estimated 43,000 cubic yards of imported fill materials placed at the Site above the Upland Site-wide Cover System. Based on the results, the majority of fill material was observed to be in compliance with "Backfill from Off-Site Sources" criteria, detailed in Section A-10 of the EWP, with the exception of approximately 25 cubic yards (representative of an area near sample TP-20) identified as non-compliant imported fill material. Documentation related to these activities was previously submitted to NYSDEC and is attached to this 2018 PRR as Appendix F.

The off-site disposal of the non-compliant materials is planned to occur in October 2018 in accordance with EWP protocol and will be documented in the subsequent 2019 PRR.

4.2.2 Esplanade Development

As detailed in the SMP, a future esplanade is planned in association with the future redevelopment of the Site. In the event future work in the underwater land will impact the Multi-Layer SCS, the work must be coordinated with the NYSDEC Project Manager.

No Site activities that would trigger the requirements of the Esplanade Development have occurred during this reporting period.

4.2.3 DCU Area IV-N and Area II 2A2

As detailed in the SMP, replacement of the building slab that was previously over DCU Area IV-N and a part of DCU Area II (denominated as Area II-2A2) together

with the installation of supporting piles and/or replacement of existing piles may be undertaken during redevelopment. Work in these designated areas must be completed in accordance with the requirements SMP.

No Site activities that would trigger the requirements of these areas occurred during this reporting period.

4.3 Engineering and Institutional Control Compliance and Certification

An engineering assessment and certification of Site ECs/ICs detail above is required to certify the IC/ECs. As required, a Professional Engineer licensed to practice in New York State, has prepared and signed the NYSDEC PRR IC/EC Certification Form, which was provided by NYSDEC as Enclosure 2 within the Reminder Notice: Site Management PRR and IC/EC Certification Submittal Letter, dated July 23, 2018 (Reminder Notice Letter). A copy of the Reminder Notice and the completed IC/EC Certification Form is provided as Appendix A.

As discussed with the NYSDEC Project Manager (Mr. Matthew Hubicki) on September 12, 2018, PS&S identified inconsistencies between the SMP, the Reminder Notice Letter, and the IC/EC Certification Form. The inconsistencies and recommendations are noted below:

1. PRR Deadline: The PRR deadline was stated in the Reminder Notice Letter to be January 17, 2019. The SMP states that the first PRR would be due in October 2018. As discussed with NYSDEC, PS&S recommends that NYSDEC update the due date in their system for consistency with the October 2018 due date noted in the SMP and the COC.

2. IC/EC Certification Form: The IC/EC Certification Form (provided as Enclosure 2 of the Reminder Notice Letter) identified ECs that are not in concurrence with SMP and include the following two items.
    a. As noted in the SMP, the BICC Parking Lot did not require remedial action and therefore no Upland Site-wide Cover System coverage is required for that part of the Site. Further, the BICC Parking Lot inspection form (provided in Attachment 12 of the SMP) only note inspection of the Fencing/Access Control and Monitoring Well (RMW-5) ECs as a requirement. This is inconsistent with the IC/EC Certification Form received with the Reminder Notice Letter which identifies “Cover System” as a listed EC for the parcels associated with the BICC Parking Lot.
        i. PS&S recommends that “Cover System” be removed from the IC/EC Certification Form as a listed EC for the parcels associated with the BICC Parking Lot.

b. Vapor Mitigation is listed as an EC for parcel 2-2114-29 in the IC/EC Certification Form. The SMP requires that the potential for vapor intrusion be evaluated for any buildings developed on the Site, and any potential impacts that are identified must be mitigated through installed vapor mitigation ECs. At this time; however, no buildings exist on Site, and therefore there are no vapor mitigation system ECs in place at the Site.
    i. PS&S recommends that the IC/EC Certification Form is modified accordingly.

To comply with the October 2018 deadline, NYSDEC has instructed PS&S to use the EC/IC forms included in Reminder Notice Letter, dated July 23, 2018, and to complete the inspection forms in the SMP as written. PS&S recommends that the modifications to IC/EC Certification Form detailed above (and reflected on the IC/EC Certification Form included in Appendix A) be adopted for future PRR inspections.

5.0 MONITORING PLAN COMPLIANCE REPORT

This SMP Monitoring Plan describes the procedures for evaluating the performance and effectiveness of the Site's implemented ICs/ECs (detailed above). The SMP Monitoring Plan also provided details for preparing the necessary reports for the various monitoring/inspection activities. In accordance with the SMP Monitoring Plan, PS&S performed the required inspection and monitoring activities for the August 18, 2017 to August 17, 2018 annual reporting period on the dates and as summarized in Table 1 below (derived from Table 3.1.2.1 of the SMP).

Table 1: Media Monitoring/Inspection Schedule

Monitoring Program	Frequency	Matrix	Analysis	Completion Date
Groundwater	Semi-annual for minimum of two years	Water	Volatile Organic Compounds (VOCs) and Polychlorinated biphenyls (PCBs)	February 21, 2018 and August 7, 2018
Shoreline Stabilization Measures (Bulkheads and Revetment Stone)	Annual	Sediment and Soil	Visual observation and photo documentation	August 6, 2018
Current Pavement and Concrete Cover Systems (existing Upland Site-wide Cover System)	Annual	Soil	Visual observation and photo documentation	August 7, 2018
Perimeter Controls[1]	Annual	Site-wide	Visual observation and photo documentation	August 7, 2018
Underwater Multi-Layer Sediment Cover System for OU-2 (DCU Area 2B)	Annual Bathymetry and Annual SCS Remote Sensing Cable	Sediment	Visual observation, bathymetric survey, and SCS Remote Sensing Program on an Annual Basis with annual bathymetric surveys	August 7, 2018
Future Site Cover Systems	Annual	Soil	Visual observation and photo documentation	August 7, 2018

4. Table 3.1.2.1 of the SMP does not include Perimeter Controls, however, inspection of this control is required in the annual inspection forms provided in the SMP.

5.1 Site-Wide Comprehensive Inspection

A Site-wide comprehensive inspection was conducted by PS&S between August 6, 2018 and August 7, 2018 to visually evaluate the performance and effectiveness of the Groundwater Monitoring Wells, Shoreline Stabilization Measures, Upland Site-wide Cover System, Perimeter Controls, the Underwater Multi-Layer SCS, and the condition of NYSDEC-approved fill materials imported and placed above the Upland Site-wide Cover System, that will be incorporated into the Upland Site-wide Cover System during Site development (i.e., Future Site Cover Systems). Site-wide inspection forms (derived from Appendix 7 and Appendix 12 of the SMP) and photographs are included in Appendix B.

During the Site-wide comprehensive inspection, PS&S observed and documented several areas where the Upland Site-wide Cover System was found to have eroded or been

damaged (e.g., sinkholes and potholes). Maintenance/repairs to the Upland Site-wide Cover System are further discussed in Section 6.0.

In addition, PS&S observed on August 6, 2018 that the Northwest Bulkhead timber boardwalk cap remains damaged (e.g., ripping and splintering) by the March 2, 2018 Emergency Event, previously documented with NYSDEC on March 5, 2018. On August 6, 2018, PS&S further inspected the Northwest Bulkhead steel sheet piles and associated tie back rod bolts and concluded that the damaged timber boardwalk cap has not impacted the structural integrity of the Northwest Bulkhead. The Northwest Bulkhead was observed to be in good condition and continues to adequately perform as the waterfront stabilization measure EC. The adjacent Asphalt Pavement Cover System EC was also observed in stable condition. Photographs are provided in Appendix B.

5.2 Multi-Layer SCS Fiber Optic Remote Sensing Program and Bathymetric Survey

An analysis of the fiber optic remote sensing component of the Multi-Layer SCS (as further detailed in Appendix 16 of the SMP and in the 2017 RB Approval) was conducted by SmarTec on August 7, 2018. PS&S also conducted a bathymetric survey of the Multi-Layer SCS on August 7, 2018 in accordance with the SMP and 2017 RP Approval inspection requirements. SmarTec DiTeSt (fiber optic) Measurement Results and bathymetric survey results are provided as Appendix C.

5.3 Groundwater Monitoring Program

Semi-annual groundwater monitoring was also completed by PS&S during this reporting period on February 21, 2018 (1st round) and August 7, 2018 (2nd round). The results of the Groundwater Monitoring Program activities are provided as Appendix D. PCBs were not detected above NY TOGS GA in any of the groundwater samples collected during both the 1st and 2nd round of sampling. Tetrachloroethene was the only volatile organic compound (VOC) detected in both the 1st and 2nd rounds and was only detected in RMW-1. Tetrachloroethene was detected at 6.1 ug/L in the 1st round and at 12 ug/L in the 2nd round, both of which are above the NY TOGS GA of 5 ug/L. PS&S will utilize the next round of semi-annual groundwater sampling (scheduled for February 2019) to better evaluate the trend of Tetrachloroethene concentrations in RMW-1.

Based on an evaluation of the Inspection/Monitoring Program results detailed above, PS&S concludes that the Site's implemented ICs/ECs remain effective in protecting public health and the environment from remaining contamination.

6.0 OPERATION AND MAINTENANCE (O&M) COMPLIANCE REPORT

This SMP O&M Plan describes the procedures for operating mechanical components and maintaining the integrity of the Site's ICs/ECs. Please note the Site does not currently rely on the operation of any mechanical systems, therefore, this section pertains solely to maintenance performed on ECs during this reporting period.

6.1 RMW-2 Groundwater Monitoring Well Replacement

As discussed in the Semi-annual Groundwater Monitoring Results Reports (provided in Appendix B), one of the five SMP groundwater monitoring wells (RMW-2) was not sampled during either semi-annual 2018 sampling event due to an obstruction in the well at approximately nine feet below the top of the newly installed PVC riser. As noted in the Groundwater Monitoring Results Reports (Appendix D), RMW-2 will be decommissioned, replaced in kind, and sampled during the next reporting period (August 18, 2018 to August 17, 2019), in accordance with SMP protocol and will be documented in the subsequent 2019 PRR.

6.2 Upland Site-wide Cover System Repairs

During the Site-wide comprehensive inspection, PS&S observed and documented several areas where the Upland Site-wide Cover System was found to have eroded or been damaged (e.g., sinkholes and potholes). Maintenance/repairs to the Upland Site-wide Cover System were performed on September 14, 2018 by Precise Contracting in accordance with the SMP. Upland Site-wide Cover System maintenance/repair documentation (i.e., before/after photographic log) is provided as Appendix E.

Other than the replacement in kind of monitoring well RMW-2, there are no other maintenance/repairs actions due or recommended at the time of this PRR.

7.0 CONCLUSIONS

This PRR was developed in accordance with Section 6.3(b) of New York State Department of Environmental Conservation (NYSDEC) DER-10, *Technical Guidance for Site Investigation and Remediation,* dated May 3, 2010, and the SMP dated April 14, 2017.

Based on the inspection/monitoring conducted during this reporting period pursuant to the procedures outlined in the SMP Monitoring Plan, PS&S finds the Site in compliance with the SMP IC/EC Plan, Monitoring Plan, and O&M Plan requirements. ICs/ECs at the Site are in place and functioning in accordance with the Environmental Easement and the 2017 RB Approval.

As noted in Section 4.2.1, off-site disposal of non-compliant imported fill material is planned in October 2018, and as noted in Section 6.1 above, groundwater monitoring well RMW-2 is scheduled to be replaced in kind prior to the next groundwater sampling event. Further, PS&S recommends that the IC/EC Certification Form is modified for future PRRs for consistency with the SMP as detailed in Section 4.3.

No other corrective measures are proposed and no changes to the SMP are recommended at this time.

Re: Reminder Notice: Site Management Periodic Review Report and IC/EC Certification Submittal
Site Name: BICC Cables
Site No.: C360051
Site Address: 1 Point Street
Yonkers, NY 10701

Dear Abba Barnett:

This letter serves as a reminder that sites in active Site Management (SM) require the submittal of a periodic progress report. This report, referred to as the Periodic Review Report (PRR), must document the implementation of, and compliance with, site specific SM requirements. Section 6.3(b) of DER-10 *Technical Guidance for Site Investigation and Remediation* (available online at http://www.dec.ny.gov/regulations/67386.html) provides guidance regarding the information that must be included in the PRR. Further, if the site is comprised of multiple parcels, then you as the Certifying Party must arrange to submit one PRR for all parcels that comprise the site. The PRR must be received by the Department no later than **January 17, 2019**. Guidance on the content of a PRR is enclosed.

Site Management is defined in regulation (6 NYCRR 375-1.2(at)) and in Chapter 6 of DER-10. Depending on when the remedial program for your site was completed, SM may be governed by multiple documents (e.g., Operation, Maintenance, and Monitoring Plan; Soil Management Plan) or one comprehensive Site Management Plan.

A Site Management Plan (SMP) may contain one or all of the following elements, as applicable to the site: a plan to maintain institutional controls and/or engineering controls ("IC/EC Plan"); a plan for monitoring the performance and effectiveness of the selected remedy ("Monitoring Plan"); and/or a plan for the operation and maintenance of the selected remedy ("O&M Plan"). Additionally, the technical requirements for SM are stated in the decision document (e.g., Record of Decision) and, in some cases, the legal agreement directing the remediation of the site (e.g., order on consent, voluntary agreement, etc.).

When you submit the PRR (by the due date above), include the enclosed forms documenting that all SM requirements are being met. The Institutional Controls (ICs) portion of the form (Box 6) must be signed by you or your designated representative. The Engineering Controls (ECs) portion of the form (Box 7) must be signed by a Qualified Environmental Professional (QEP). If you cannot certify that all SM requirements are being met, you must submit a Corrective Measures Work Plan that identifies the actions to be taken to restore compliance. The work plan must include a schedule to be approved by the Department. The Periodic Review process will not be considered complete until all necessary corrective measures are completed and all required controls are certified. Instructions for completing the certifications are enclosed.

NEW YORK
STATE OF
OPPORTUNITY
Department of
Environmental
Conservation

All site-related documents and data, including the PRR, are to be submitted in electronic format to the Department of Environmental Conservation. The Department will not approve the PRR unless all documents and data generated in support of that report have been submitted in accordance with the electronic submissions protocol. In addition, the certification forms are required to be submitted in both paper and electronic formats.

Information on the format of the data submissions can be found at:
http://www.dec.ny.gov/regulations/2586.html

The signed certification forms should be sent to Matthew Hubicki, Project Manager, at the following address:

New York State Department of Environmental Conservation
Division of Environmental Remediation, BURC
625 Broadway
Albany, NY 12233-7014

Phone number: 518-402-9605. E-mail: matthew.hubicki@dec.ny.gov

The contact information above is also provided so that you may notify the project manager about upcoming inspections, or for any other questions or concerns that may arise in regard to the site.

Enclosure 1

Certification Instructions

I. Verification of Site Details (Box 1 and Box 2):

Answer the three questions in the Verification of Site Details Section. The Owner and/or Qualified Environmental Professional (QEP) may include handwritten changes and/or other supporting documentation, as necessary.

II. Certification of Institutional Controls/ Engineering Controls (IC/ECs)(Boxes 3, 4, and 5)

1.1.1. Review the listed IC/ECs, confirming that all existing controls are listed, and that all existing controls are still applicable. If there is a control that is no longer applicable the Owner / Remedial Party should petition the Department separately to request approval to remove the control.

2. In Box 5, complete certifications for all Plan components, as applicable, by checking the corresponding checkbox.

3. If you cannot certify "YES" for each Control listed in Box 3 & Box 4, sign and date the form in Box 5. Attach supporting documentation that explains why the **Certification** cannot be rendered, as well as a plan of proposed corrective measures, and an associated schedule for completing the corrective measures. Note that this **Certification** form must be submitted even if an IC or EC cannot be certified; however, the certification process will not be considered complete until corrective action is completed.

If the Department concurs with the explanation, the proposed corrective measures, and the proposed schedule, a letter authorizing the implementation of those corrective measures will be issued by the Department's Project Manager. Once the corrective measures are complete, a new Periodic Review Report (with IC/EC Certification) must be submitted within 45 days to the Department. If the Department has any questions or concerns regarding the PRR and/or completion of the IC/EC Certification, the Project Manager will contact you.

III. IC/EC Certification by Signature (Box 6 and Box 7**):**

If you certified "YES" for each Control, please complete and sign the IC/EC Certifications page as follows:

- For the Institutional Controls on the use of the property, the certification statement in Box 6 shall be completed and may be made by the property owner or designated representative.

- For the Engineering Controls, the certification statement in Box 7 must be completed by a Professional Engineer or Qualified Environmental Professional, as noted on the form.

Description of Institutional Controls	

Parcel	Owner	Institutional Control
2-2114-17	One Point Street, Inc.	Ground Water Use Restriction Soil Management Plan Landuse Restriction Monitoring Plan Site Management Plan O&M Plan IC/EC Plan

Require the remedial party or site owner to complete and submit to the Department a periodic certification of institutional and engineering controls in accordance with Part 375-1.8 (h)(3);

Allow the use and development of the controlled property for restricted residential, commercial or industrial use as defined by Part 375-1.8(g), although land use is subject to local zoning laws;

Restrict the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDOH or NYCDOH;

Groundwater monitoring and other environmental or public health monitoring must be performed as defined in this SMP;

Require compliance with the Department approved Site Management Plan;

The potential for vapor intrusion must be evaluated for any buildings developed on the Site, and any potential impacts that are identified must be mitigated;

Data and information pertinent to Site Management for the Controlled Property (i.e., the Site) must be reported at the frequency and in a manner defined in this SMP;

On-Site environmental monitoring devices, including but not limited to groundwater monitoring wells and soil vapor probes as well as the required annual OU-2 Area SCS monitoring and reporting program, must be protected and replaced as necessary to confirm that the ECs continue to function in the manner specified in this SMP;

All future activities on the property that would disturb remaining contaminated material must be conducted in accordance with the Soil Management Plan (Soil MP) part of the Excavation Work Plan (refer to SMP Attachment 13,) for any soils excavated in accordance with Section 2.3 of this SMP;

Any breach of the upland area Site cover system(s), including for purposes of construction or utilities work, must be replaced or repaired according to the Excavation Work Plan. Site soil excavated and removed from the Site must be managed, characterized, and properly disposed of in accordance with the NYSDEC regulations and directives and Excavation Work Plan. Guidelines
for management of subsurface soils/fill and long-term maintenance of the upland area Site cover systems are provided in the Excavation Work Plan (refer to SMP Attachment 13);

Any breach of the OU-2 Area SCS after an emergency, such as a hurricane, storm, or other event, recorded by the SCS Remote Sensing Program will require sampling in the vicinity of the breach to determine if PCBs have escaped from the breached area and the OU-2 Area SCS.

Vegetable gardens and farming on the property are prohibited unless within
the top 2 feet of clean Soil Cover System or above;

The Site shall not be used for raising livestock or producing animal products
for human consumption;

The ECs may not be discontinued without an amendment or extinguishment of the Environmental Easement;

The Site owner or remedial party will submit to NYSDEC a written statement that certifies on an annual basis, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP;

NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by an expert that the NYSDEC finds acceptable.

All future activities on the property that would disturb remaining contaminated material must be conducted in accordance with the Soil Management Plan (Soil MP) part of the Excavation Work Plan (refer to SMP Attachment 13,) for any soils excavated in accordance with Section 2.3 of this SMP;

Any breach of the upland area Site cover system(s), including for purposes of construction or utilities work, must be replaced or repaired according to the Excavation Work Plan. Site soil excavated and removed from the Site must be managed, characterized, and properly disposed of in accordance with the NYSDEC regulations and directives and Excavation Work Plan. Guidelines
for management of subsurface soils/fill and long-term maintenance of the upland area Site cover systems are provided in the Excavation Work Plan (refer to SMP Attachment 13);

Any breach of the OU-2 Area SCS after an emergency, such as a hurricane, storm, or other event, recorded by the SCS Remote Sensing Program will require sampling in the vicinity of the breach to determine if PCBs have escaped from the breached area and the OU-2 Area SCS.

Vegetable gardens and farming on the property are prohibited unless within
the top 2 feet of clean Soil Cover System or above;

The Site shall not be used for raising livestock or producing animal products
for human consumption;

The ECs may not be discontinued without an amendment or extinguishment
of the Environmental Easement;

The Site owner or remedial party will submit to NYSDEC a written statement that certifies on an annual basis, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP;

NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by an expert that the NYSDEC finds acceptable.

Require the remedial party or site owner to complete and submit to the Department a periodic certification of institutional and engineering controls in accordance with Part 375-1.8 (h)(3);

Allow the use and development of the controlled property for restricted residential, commercial or industrial use as defined by Part 375-1.8(g), although land use is subject to local zoning laws;

Restrict the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDOH or NYCDOH;

Groundwater monitoring and other environmental or public health monitoring must be performed as defined in this SMP;

Require compliance with the Department approved Site Management Plan;

The potential for vapor intrusion must be evaluated for any buildings developed on the Site, and any potential impacts that are identified must be mitigated;

Data and information pertinent to Site Management for the Controlled Property (i.e., the Site) must be reported at the frequency and in a manner defined in this SMP;

On-Site environmental monitoring devices, including but not limited to groundwater monitoring wells and soil vapor probes as well as the required annual OU-2 Area SCS monitoring and reporting program, must be protected and replaced as necessary to confirm that the ECs continue to function in the manner specified in this SMP;

All future activities on the property that would disturb remaining contaminated material must be conducted in accordance with the Soil Management Plan (Soil MP) part of the Excavation Work Plan (refer to SMP Attachment 13,) for any soils excavated in accordance with Section 2.3 of this SMP;

Any breach of the upland area Site cover system(s), including for purposes of construction or utilities work, must be replaced or repaired according to the Excavation Work Plan. Site soil excavated and removed from the Site must be managed, characterized, and properly disposed of in accordance with the NYSDEC regulations and directives and Excavation Work Plan. Guidelines
for management of subsurface soils/fill and long-term maintenance of the upland area Site cover systems are provided in the Excavation Work Plan (refer to SMP Attachment 13);

Any breach of the OU-2 Area SCS after an emergency, such as a hurricane, storm, or other event, recorded by the SCS Remote Sensing Program will require sampling in the vicinity of the breach to determine if PCBs have escaped from the breached area and the OU-2 Area SCS.

Vegetable gardens and farming on the property are prohibited unless within
the top 2 feet of clean Soil Cover System or above;

The Site shall not be used for raising livestock or producing animal products
for human consumption;

The ECs may not be discontinued without an amendment or extinguishment
of the Environmental Easement;

The Site owner or remedial party will submit to NYSDEC a written statement that certifies on an annual basis, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP;

NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by an expert that the NYSDEC finds acceptable.

of the Environmental Easement;

The Site owner or remedial party will submit to NYSDEC a written statement that certifies on an annual basis, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP;

NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by an expert that the NYSDEC finds acceptable.

Require the remedial party or site owner to complete and submit to the Department a periodic certification of institutional and engineering controls in accordance with Part 375-1.8 (h)(3);

Allow the use and development of the controlled property for restricted residential, commercial or industrial use as defined by Part 375-1.8(g), although land use is subject to local zoning laws;

Restrict the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDOH or NYCDOH;

Groundwater monitoring and other environmental or public health monitoring must be performed as defined in this SMP;

Require compliance with the Department approved Site Management Plan;

The potential for vapor intrusion must be evaluated for any buildings developed on the Site, and any potential impacts that are identified must be mitigated;

Data and information pertinent to Site Management for the Controlled Property (i.e., the Site) must be reported at the frequency and in a manner defined in this SMP;

On-Site environmental monitoring devices, including but not limited to groundwater monitoring wells and soil vapor probes as well as the required annual OU-2 Area SCS monitoring and reporting program, must be protected and replaced as necessary to confirm that the ECs continue to function in the manner specified in this SMP;

All future activities on the property that would disturb remaining contaminated material must be conducted in accordance with the Soil Management Plan (Soil MP) part of the Excavation Work Plan (refer to SMP Attachment 13,) for any soils excavated in accordance with Section 2.3 of this SMP;

Any breach of the upland area Site cover system(s), including for purposes of construction or utilities work, must be replaced or repaired according to the Excavation Work Plan. Site soil excavated and removed from the Site must be managed, characterized, and properly disposed of in accordance with the NYSDEC regulations and directives and Excavation Work Plan. Guidelines
for management of subsurface soils/fill and long-term maintenance of the upland area Site cover systems are provided in the Excavation Work Plan (refer to SMP Attachment 13);

Any breach of the OU-2 Area SCS after an emergency, such as a hurricane, storm, or other event, recorded by the SCS Remote Sensing Program will require sampling in the vicinity of the breach to determine if PCBs have escaped from the breached area and the OU-2 Area SCS.

Vegetable gardens and farming on the property are prohibited unless within
the top 2 feet of clean Soil Cover System or above;

The Site shall not be used for raising livestock or producing animal products
for human consumption;

The ECs may not be discontinued without an amendment or extinguishment

of the Environmental Easement;

The Site owner or remedial party will submit to NYSDEC a written statement that certifies on an annual basis, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP;

NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by an expert that the NYSDEC finds acceptable.

Require the remedial party or site owner to complete and submit to the Department a periodic certification of institutional and engineering controls in accordance with Part 375-1.8 (h)(3);

Allow the use and development of the controlled property for restricted residential, commercial or industrial use as defined by Part 375-1.8(g), although land use is subject to local zoning laws;

Restrict the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDOH or NYCDOH;

Groundwater monitoring and other environmental or public health monitoring must be performed as defined in this SMP;

Require compliance with the Department approved Site Management Plan;

The potential for vapor intrusion must be evaluated for any buildings developed on the Site, and any potential impacts that are identified must be mitigated;

Data and information pertinent to Site Management for the Controlled Property (i.e., the Site) must be reported at the frequency and in a manner defined in this SMP;

On-Site environmental monitoring devices, including but not limited to groundwater monitoring wells and soil vapor probes as well as the required annual OU-2 Area SCS monitoring and reporting program, must be protected and replaced as necessary to confirm that the ECs continue to function in the manner specified in this SMP;

All future activities on the property that would disturb remaining contaminated material must be conducted in accordance with the Soil Management Plan (Soil MP) part of the Excavation Work Plan (refer to SMP Attachment 13,) for any soils excavated in accordance with Section 2.3 of this SMP;

Any breach of the upland area Site cover system(s), including for purposes of construction or utilities work, must be replaced or repaired according to the Excavation Work Plan. Site soil excavated and removed from the Site must be managed, characterized, and properly disposed of in accordance with the NYSDEC regulations and directives and Excavation Work Plan. Guidelines
for management of subsurface soils/fill and long-term maintenance of the upland area Site cover systems are provided in the Excavation Work Plan (refer to SMP Attachment 13);

Any breach of the OU-2 Area SCS after an emergency, such as a hurricane, storm, or other event, recorded by the SCS Remote Sensing Program will require sampling in the vicinity of the breach to determine if PCBs have escaped from the breached area and the OU-2 Area SCS.

Vegetable gardens and farming on the property are prohibited unless within
the top 2 feet of clean Soil Cover System or above;

The Site shall not be used for raising livestock or producing animal products for human consumption;

The ECs may not be discontinued without an amendment or extinguishment of the Environmental Easement;

The Site owner or remedial party will submit to NYSDEC a written statement that certifies on an annual basis, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP;

NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by an expert that the NYSDEC finds acceptable.

Box 5

Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

   a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;

   b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete.

YES	NO
X	

2. If this site has an IC/EC Plan (or equivalent as required in the Decision Document), for each Institutional or Engineering control listed in Boxes 3 and/or 4, I certify by checking "YES" below that all of the following statements are true:

   (a) the Institutional Control and/or Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;

   (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;

   (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;

   (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and

   (e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES	NO
X	

IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

A Corrective Measures Work Plan must be submitted along with this form to address these issues.

APPENDIX B

Site-Wide Inspection Forms and Photographs

Former BICC Cables Site - NYSDEC Site No. C360051
Site-Wide Inspection Form

Date of Inspection: 8/6/18 - 8/7/18

Name of Inspector/Company: J. Szeman/S. Caporizzo; PS&S Engineering, PC

Items Inspected: (check items that were inspected)

X Groundwater Monitoring Wells
X Northwest Bulkhead
X North Bulkhead
X Open Water Steel Sheet Pile Bulkhead
X Containment Bulkhead
X Former Building 8 Vinyl Sheet Pile Bulkhead
X 6-inch Thick Pavement Cover System
X 12-inch Thick Pavement Cover System
X 6-inch Thick Concrete Cover System
X Future Soil Cover System
X Operable Unit #2 (OU-2) DCU Area 2B2 Sediment Cover System
X Rip-Rap (Revetment Stone) Shoreline
X Former West Warehouse
X South Yard and North Yard
X Site-Wide Perimeter Fencing and Locks

South Yard

Describe the condition of each item inspected:

- Pavement Cover System

  The pavement cover system was visible in the eastern portion of the South Yard (remaining portions were covered with fill materials as discussed below). Several small potholes (1'-2' diameter) were observed near the bus lot entrance. Repairs were made to the potholes using asphalt.

- Future Soil Cover Systems

  NYSDEC-approved imported fill materials were observed in the South Yard placed above the Pavement Cover System. The limits of fill materials placed in the South Yard are identified in the Site Plan (Figure 1). Materials were observed in good condition.

- Monitoring Wells

  RMW-5 was buried beneath NYSDEC-approved imported fill materials placed for regarding purposes. RMW-5 was located by temporarily removing the overlaying imported fill materials. For ease of access during future sampling, approximately 8.15' of PVC riser was installed on RMW-5 to raise the top of casing above the new elevated grade (includes an approximately 3' long stick-up). A well cap was installed on the stick-up. RMW-5 was operational during the two Semi-Annual GW Monitoring events performed during this reporting period.

- Rip-Rap (Revetment Stone) along the Hudson River

  Rip-Rap (Revetment Stone) observed in stable condition. Miscellaneous debris observed.

North Yard

Describe the condition of each item inspected:

- Pavement and Concrete Cover Systems

  The Pavement Cover System was visible in the eastern part of the North Yard (remaining areas were covered with fill materials as discussed below). Several small potholes (1'-2' diameter) were observed near the main Site entrance. Repairs were made to the potholes using asphalt.

- Future Soil Cover Systems

  NYSDEC-approved imported fill materials were observed in the North Yard placed above the Pavement Cover System. The limits of fill materials placed in the North Yard are identified in the Site Plan (Figure 1). Materials were observed in good condition.

- Monitoring Wells

  RMW-3 and RMW-4 were buried beneath NYSDEC-approved imported fill materials placed for regrading purposes. RMW-3 and RMW-4 were located by temporarily removing the overlaying imported fill materials. For ease of access during future sampling, approximately 16.6' of PVC riser was installed on RMW-3 and 8' of PVC riser was installed on RMW-4 to raise the top of casing above the new elevated grade (includes an approximately 3' long stick-up). A well cap was installed on the stick-up. RMW-3 and RMW-4 were operational during the two Semi-Annual GW Monitoring events performed during this reporting period.

- Rip-Rap along the Hudson River (Former West Warehouse Revetment Stone)

  Rip-Rap (Revetment Stone) observed in stable condition. Miscellaneous debris observed.

Demolition/Below Building Area

Describe the condition of each item inspected:

- Pavement Cover Systems

  The Pavement Cover System was visible in the northern and western part of the Demolition/Below Building Area (remaining portions were covered with fill materials as discussed below). Several small potholes (1'-2' diameter) were observed inland and several small to moderate sized sinkholes (1'-4' diameter) were observed along to northern Site edge adjacent to the northern bulkhead. Repairs were made to the inland potholes using asphalt. On-site stone was used to fill the sink holes as an effort to reduce erosion and stabilize the cover system.

- Future Soil Cover System

  NYSDEC-approved imported fill materials were observed in the Demolition/Below Building Area placed above the Pavement Cover System. The limits of fill materials placed in the Demolition/Below Building Area are identified in the Site Plan (Figure 1). Materials were observed in good condition.

- Monitoring Well RMW-2

  RMW-2 was not sampled in either of the Semi-Annual GW Monitoring events due to an obstruction in the well. RMW-2 will be decommissioned, replaced in kind, and sampled during the next reporting period (August 18, 2018 to August 17, 2019) in accordance with SMP protocol and will be documented in the subsequent PRR.

- North and Northwest Bulkheads

  Damage to north and northwest bulkhead timber cap (from March 2018 barge incident). Sinkholes and horizontal displacement along the north bulkhead was observed. Repairs made are documented in the photolog.

BICC Parking Lot

Describe the condition of each item inspected:

- Monitoring Wells

  RMW-1 was identified in the BICC Parking Lot. RMW-1 was observed in good condition. RMW-1 was operational during the two Semi-Annual GW Monitoring events performed during this reporting period.

Site-Wide

Describe the condition of each item inspected:

- Perimeter Fencing and Locks:

  Fencing along the northern, eastern and southern perimeter of the upland area of the Site west of the MTA railroad tracks was observed in good condition. Two gated entrances with locks (both in the South Yard) observed. Along the western perimeter, and a part of the northern perimeter, the BICC Site is protected by a natural barrier, the Hudson River.

  The perimeter fence along the western, eastern, and southern perimeter of the BICC Parking Lot was observed in good condition. Minor damage was observed on the northern Site perimeter fencing (bent). There was also a portion (approximately 10' length) which was replaced by bin-blocks.

  Overall the perimeter fencing/barriers and locks were observed to be effective at controlling access to the Site.

OU-2 Area (DCU Area 2B) Sediment Cover System

Former BICC Cables Site - NYSDEC Site No. C360051

Site-Wide Inspection Form

Site-Wide Features

Date of Inspection: 8/7/18

Name of Inspector/Company: Scott Caporizzo/PS&S

Enter Yes or No in the spaces below. Please explain any "Yes" notes in the comments section below, and any actions to be taken.

1. **Perimeter Fencing**

Yes Is there any damage to the fence?
1. See comments

Yes Have any portions of the fence been knocked down?
1. See comments

No Are there any holes in the fence?

2. **Perimeter Locks**

Yes Are the locks easily accessible?

Yes Do the locks work when using the appropriate key?

No Are the locks rusted?

No Are any of the locks missing?

No Are any locks damaged or not serving their purpose?

Comments:

Fencing along the northern, eastern and southern perimeter of the upland area of the Site west of the MTA railroad tracks was observed in good condition. Two gated entrances with locks (both in the South Yard) observed. Along the western perimeter, and a part of the northern perimeter, the BICC Site is protected by a natural barrier, the Hudson River. The perimeter fence along the western, eastern, and southern perimeter of the BICC Parking Lot was observed in good condition. Minor damage was observed on the northern Site perimeter fencing (bent). There was also a portion (approximately 10' length) which was replaced by bin-blocks. Overall the perimeter fencing/barriers and locks were observed to be effective at controlling access to the Site.

Site-Wide Inspection Form

South Yard Area

Date of Inspection: 8/7/18

Name of Inspector/Company: Scott Caporizzo/PS&S

Enter Yes or No in the spaces below. Please explain any "Yes" notes in the comments section below, and any actions to be taken.

1. Pavement cover system

   No Any damage or evidence of bad housekeeping to the engineering control?

   Yes Any changes since the last inspection?
   - See comment #1 in comments section.

   No Is the engineering control **not** performing as designated in the SMP?

   No Is the engineering control **not** protective of human health and the environment?

2. Soil cover system

   No Any damage or evidence of bad housekeeping to the engineering control?

   Yes Any changes since the last inspection?
   - See comment #2 in comments section.

   No Is the engineering control **not** performing as designated in the SMP?

   No Is the engineering control **not** protective of human health and the environment?

3. Monitoring Wells

   No Any damage to the concrete pad?

   No Any damage to the manhole, including the cover?

   No Is there debris and/or standing water in the manhole?

   No Is there a loose fitting plug on the PVC riser?

   Yes Is access to the well impeded in any way? - See comment #3 in comments section.

   No Is the well screen and riser in bad condition and/or contains debris?

   No Is the soil surrounding the well showing signs of erosion, settlement, or other condition that could compromise the well?

4. Additional areas identified during the inspection. Please list areas in the comments section, which engineering control is in place, and whether the engineering control is in conformance with the SMP and protective of human health and the environment.

Comments:

1. NYSDEC-approved fill material placed above the pavement cover system. Several areas of the pavement cover system are no longer visible for inspection. Per the SMP, Site-wide inspection will focus on the integrity of the overlying NYSDEC-approved fill materials.

2. NYSDEC-approved fill materials have been placed above the pavement cover system in in the South Yard. The limits of fill materials placed in the South Yard are identified in the Site Plan (Figure 1). Materials were observed in good condition.

3. RMW-5 was buried beneath NYSDEC-approved imported fill materials placed for Site grading purposes. RMW-5 was located by temporarily removing the overlaying imported fill materials. For ease of access during future sampling, approximately 8.15' of PVC riser was installed to raise the top of casing above the new elevated grade (includes an approximately 3' long stick-up). A well cap was installed on the stick-up. RMW-5 was operational during the two Semi-Annual GW Monitoring events performed during this reporting period.

Site-Wide Inspection Form

Demolition/Below Building Area

Date of Inspection: 8/7/18

Name of Inspector/Company: Scott Caporizzo/PS&S

Enter Yes or No in the spaces below. Please explain any "Yes" notes in the comments section below, and any actions to be taken.

1. 6-inch-thick pavement cover system

No — Any damage or evidence of bad housekeeping to the engineering control?

Yes — Any changes since the last inspection?
- See Comment #1 in comments section.

No — Is the engineering control **not** performing as designated in the SMP?

No — Is the engineering control **not** protective of human health and the environment?

2. North and Northwest Bulkheads

Yes — Any damage or evidence of bad housekeeping to the engineering control?
- See Comment #4 in comments section.

No — Any changes since the last inspection?

No — Is there any damage or distortion to the structure that supports the bulkhead?

Yes — Is the bulkhead damaging the North End asphalt cap?
- See Comment #4 in comments section.

No — Does the bulkhead move?

No — Is the engineering control not performing as designated in the SMP?

No — Is the engineering control not protective of human health and the environment?

3. Soil cover system

No — Any damage or evidence of bad housekeeping to the engineering control?

Yes — Any changes since the last inspection?
- See Comment #2 in comments section.

No — Is the engineering control **not** performing as designated in the SMP?

No — Is the engineering control **not** protective of human health and the environment?

4. Monitoring Wells

No Any damage to the concrete pad?

No Any damage to the manhole, including the cover?

No Is there debris and/or standing water in the manhole?

No Is there a loose fitting plug on the PVC riser?

Yes Is access to the well impeded in any way?
- See Comment #3 in comments section.

Yes Is the well screen and riser in bad condition and/or contains debris?
- See Comment #3 in comments section.

No Is the soil surrounding the well showing signs of erosion, settlement, or other condition that could compromise the well?

4. Additional areas identified during the inspection. Please list areas in the comments section, which engineering control is in place, and whether the engineering control is in conformance with the SMP and protective of human health and the environment.

Comments:

1. NYSDEC-approved fill material placed above the pavement cover system. Several parts of the pavement cover system are no longer visible for inspection. Per the SMP, Site-wide inspection will focus on the integrity of the overlying NYSDEC-approved fill materials.

2. NYSDEC-approved fill materials have been placed above the pavement cover system in in the South Yard. The limits of fill materials placed in the South Yard are identified in the Site Plan (Figure 1). Materials were observed in good condition.

3. RMW-2 was not sampled during the semi-annual groundwater monitoring events due to an obstruction in the well. RMW-2 will be decommissioned, replaced in kind, and sampled during the next reporting period (August 18, 2018 to August 17, 2019) in accordance with SMP protocol and will be documented in the subsequent 2019 PRR.

4. Damage to north and northwest bulkhead timber cap (from March 2018 barge incident). Sinkholes and horizontal displacement along the north bulkhead observed. Repairs made are documented in the photolog.

TABLE A7.1 – EXISTING BULKHEADS		
EXISTING BULKHEAD	MATERIAL OF CONSTRUCTION	APPROXIMATE LENGTH
1. Building 8 Bulkhead	Vinyl sheet pile with timber waler and tieback system connected to the existing building foundation system	170 linear feet (LF)
2. Repaired Building 8 Bulkhead	Reinforced concrete existing Building 8 foundation system	300 lF
3. Non-Structural Containment Bulkhead	Composite vinyl and fiberglass sheet pile (Evercomp 26.1[FRP])	280 LF
4. Restored Bulkhead	Steel sheet pile	430 LF
5. Northwest Bulkhead	55'0" long steel sheet piling (ASTM A572 Grade 50) with waling and bracing (ASTM A36)	240 LF
6. Existing Concrete and Timber Bulkhead	Timber and concrete beams with deadman anchors	240 LF
7. South Yard Revetment Stone Shoreline	Revetment stone	1,030LF
8. Former West Warehouse Revetment Stone Shoreline	Revetment stone	150 LF

TABLE A7.2 – OPERATIONS & MAINTENANCE INSPECTION FORM
FORMER BICC CABLES SITE

Date of Inspection: **MONDAY – 6 AUGUST 2018**
Project Number: **05697.0006**
Inspector's Name: **Janos Szeman & Andrew Rush**
Conditions: **Good, Calm Seas**
Tide: **Low Tide at 1115 Hours**
Weather: **Sunny, High of 95º F and Low of 75º F**

Existing Bulkhead and Location	**Condition of Bulkhead**	**Visible Damage (Y/N)**	**Photo Number**	**Observations and Remarks**
1. Building 8 Bulkhead	Good Condition	No	Refer to Log	Note 1
2. Repaired Building 8 Bulkhead	Good Condition	No	Refer to Log	Note 2
3. Non-Structural Containment Bulkhead	Good Condition	No	Refer to Log	Note 3
4. Restored Bulkhead	Good Condition	No	Refer to Log	Note 4
5. Northwest Bulkhead	Good Condition	Yes, Timber Cap Only	Refer to Log	Note 5
6. Existing Concrete and Timber Bulkhead	Poor Condition	Yes, Sinkholes & Horizontal Movement	Refer to Log	Note 6
7. South Yard Revetment Stone Shoreline	Good Condition	No	Refer to Log	Note 7
8. Former West Warehouse Revetment Stone Shoreline	Good Condition	No	Refer to Log	Note 8

NOTES:

1. The Building 8 Vinyl Sheet Pile Bulkhead was observed to be in good condition and continues to serve as an engineering control.
2. The Repaired Building 8 Vinyl Sheet Pile Bulkhead was observed to be in good condition and continues to serve as an engineering control.
3. The Non-Structural Containment Bulkhead was observed to be in good condition and continues to serve as an engineering control.
4. The Restored Bulkhead was observed to be buried under Site soils; where, no differential settlement and scour was observed. Therefore, the Restored Bulkhead appeared to be in good condition and continues to serve as an engineering control.
5. The Northwest Bulkhead was observed to be in good condition and continues to serve as the waterfront stabilization measure engineering control. The Northwest Bulkhead continues to be protective of human health and the environment. The Northwest Bulkhead steel sheet piles and associated tie back rod bolts were observed at the surface to be stable and no apparent loss of structural integrity was observed from the March 3, 2018 Barge 211 accidental hit. Small, minor scrapes on the top of the Northwest Bulkhead steel sheet pile were observed on the northern exposure. Larger, minor scrapes on the face and top of the Northwest Bulkhead steel sheet pile were observed on the western exposure. Refer to the attached photographs. As noted on the attached photographs, the August 6, 2018 on-water Site visit revealed that the Barge 211 apparently first struck the Northwest Exterior Corner of the Northwest Bulkhead and then shifted and moved along the western exposure of the Northwest Bulkhead. The initial Barge 211 contact appeared to have lifted the timber boardwalk cap on the Northwest Bulkhead northern exposure. Then, the Barge 211 contact appeared to run along the top of the Northwest Bulkhead western exposure which resulted in the ripping and splintering of the timber boardwalk cap. The timber boardwalk cap on top of the Northwest Bulkhead was severely damaged by the March 3, 2018 Barge 211 accident as noted on the attached photographs. The damaged timber boardwalk cap has not impacted the structural integrity of the Site asphalt pavement Cover System. The damaged timber boardwalk cap should be monitored to confirm that the Northwest Bulkhead and the Site asphalt pavement Cover System are in good condition.
6. The Northern Concrete Bulkhead was observed to be in fair condition; where, several small sinkholes and one large sinkhole was observed along the top of the concrete beam Bulkhead. The large sinkhole was observed to have resulted in the loss of structural integrity of an approximately 6-foot-wide section of the Northern Concrete Bulkhead. The location of the large sinkhole coincided with the existing 8-inch-diameter black corrugated plastic drainage pipe and outfall to the Hudson River.
7. The South Yard revetment stone was observed to be stable, in good condition and continues to serve as a waterfront stabilization measure engineering control.
8. The West Warehouse revetment stone was observed to be stable, in good condition and continues to serve as a waterfront stabilization measure engineering control.

Photograph 1 – View of revetment stone along South Yard western perimeter. Observed in stable condition. View to the south.

Photograph 2 – View of revetment stone along South Yard western perimeter. Observed in stable condition. View to the south.

Photograph 3 – View of revetment stone along South Yard western perimeter. Observed in stable condition. View to the south.

Photograph 4 – View of revetment stone along North Yard western perimeter. Observed in stable condition. View to the south.

Photograph 5 – View of revetment stone along North Yard western perimeter (former West Warehouse) and southern Building 8 Existing Bulkhead. Observed in stable condition. View to the north.

Photograph 6 – Debris observed on edge of revetment stone along North Yard western perimeter (former West Warehouse). View to the northeast.

Photograph 7 – View of Building 8 Bulkhead along western edge of Building 8 concrete foundation. Observed in stable condition. View to the east.

Photograph 8 – View of Building 8 Bulkhead along western edge of Building 8 concrete foundation. Observed in stable condition. View to the south.

Photograph 9 – View of Building 8 Bulkhead timber boardwalk damage. No impacts the structural integry of the bulkhead observed. View to the south.

Photograph 10 – View of the northern Building 8 Existing Bulkhead and Non-Structural Containment Bulkhead. Observed in stable condition. View to the west.

Photograph 11 – View of the northern Building 8 Existing Bulkhead. Observed in stable condition. View to the southeast.

Photograph 12 – View of the Non-Structural Containment Bulkhead. Observed in good condition. View to the north.

Photograph 13 – View of the Restored Bulkhead (majority covered in soil). Observed in good condition. View to the west.

Photograph 15 – View of the northwest corner of the Northwest Bulkhead. Observed in good condition. View to the southeast.

Photograph 14 – View of the western edge of the Northwest Bulkhead. Observed in good condition. View to the southeast.

Photograph 16 – View of the Northwest Bulkhead timber cap damage along western edge. View to the northeast.

Photograph 17 – View of the northern edge of the Northwest Bulkhead. Observed in good condition. View to the southeast.

Photograph 18 – View of the Existing Concrete and Timber Bulkhead. Observed in poor condition (heavy weathering and sink holes). Repairs made to sink holes documented in the O&M section.

Former BICC Cables Site - NYSDEC Site No. C360051

Site-Wide Inspection Form

OU-2 (DCU Area 2B)

Sediment Cover System

Date of Inspection: 8/7/18

Name of Inspector/Company: Janos Szeman/PS&S; Scott Caporizzo/PS&S

Enter Yes or No in the spaces below. Please explain any "Yes" notes in the comments section below, and any actions to be taken.

1. Sediment cover system

No Any damage or evidence of bad housekeeping to the engineering control?

Yes Any changes since the last inspection?

- Refer to the SmarTec Measurement Report

No Is the engineering control **not** performing as designated in the SMP?

No Is the engineering control **not** protective of human health and the environment?

4. Additional areas identified during the inspection. Please list areas in the comments section, which engineering control is in place, and whether the engineering control is in conformance with the SMP, and protective of human health and the environment.

    1. Refer to bathymetric survey and SmarTec DiTeSt Measurement Report.

Photograph 1 – View of H-pile, H-pile cap, and conduit containing fiber optic cable (connecting control panel to load cell). No damage observed to conduit during under EPRI building inspection.

Photograph 3 – View of fiber optic (remote sensing cable) control panel located within the EPRI Building interior. Control panel observed in good condition.

Photograph 2 – View of H-pile, H-pile cap, and conduit containing fiber optic cable (connecting control panel to load cell). No damage observed to conduit during under EPRI building inspection.

Photograph 4 – View of SmarTec DiTeSt Reading Unit (used to obtain measurements from the fiber optic cable). Refer to SmarTec Measurement Report for additional information.

APPENDIX C

Note:

ROCTEST/SMARTEC sales representative(s) will be contacted for the rental and use of the DiTeSt System Reading Unit. The Site Management Plan (SMP) contractor must budget a minimum of **1 month, with an executed service contract**, for the rental order and delivery of the DiTeSt System Reading Unit to the site for the required, routine SMP SCS remote sensing system measurements.

Brief Introduction and History

The SCS was installed by OPS between November 2015 and February 2016 and commissioning of this DiTeSt system was completed on 12 August 2016.

As identified in the SMP, this DiTeSt system will be used as a tool to monitor the top of the SCS and will allow the SMP Designated Engineering Control Inspection Engineer to study the long-term integrity of the SCS (refer to Attachment A for the SCS Record of Construction plans, and to Attachment B for the SCS-03 and SCS -04, prepared by PS&S and dated 19 August 2016).

This DiTeSt system is managed by Smartec SA and Roctest Ltd; where Smartec is responsible for the manufacturing, commissioning, reading, and repair of the DiTeSt system and Reading Unit and Roctest is responsible for the rental, scheduling of said rental, and general communication with the client. During the 2015 and 2016 design, permitting, and construction of the SCS and the associated SCS Remote Sensing System (DiTeSt System), Roctest and Smartec worked with OPS and PS&S. For the long-term SMP monitoring of the SCS, Roctest and Smartec will work with the property owner (i.e. OPS or OPS' assigned successor) and the designated SMP Engineering Control Inspection Engineer.

The site specific DiTeSt system and this Technical Report were developed for the exclusive use of OPS and OPS' assigned successor and the designated SMP Engineering Control Inspection Engineer.

1 Cable Integrity / Continuity Check

The second measurement campaign after the DiTeSt system commissioning was carried out the 7th of August 201 by Mr. Fabio Zanini, SMARTEC SA, under the supervision of PS&S representatives Mr. Janos M. Szeman, Mr. Scott Caporizzo.

Within the measurement campaign routine the first carried out activity was cable integrity / continuity check. In order to carry out a quick but reliable test a red laser fault locator was used: all the sensing lines were found operational and with a good light intensity.

2 Measurement campaign _ 2nd campaign

The aim of this measurement campaign is to assess the stability of the former BICC cable manufacturing building. This is checked through the strain analysis carried out on the sensing loop installed at the site, by checking that no excessive strain has been experienced by the underwater sections where the most sensitive part of the line is installed.

In order to provide an easy and comprehensive analysis the installation layout, HG cable layout and connection scheme are reported below in Figure 1 and Figure 2.

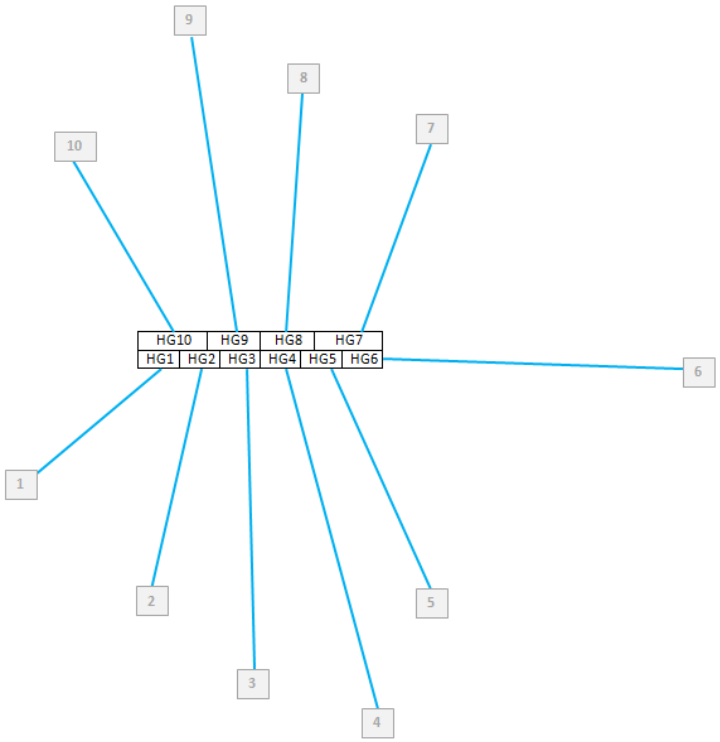

Figure 1: *schematic, single wire, HG cable layout*

A total of 10 load cells were installed using HG cable. For each load cell, an HG cable loop is installed. Both ends of the sensing loop end at HG splice box.

NOTE: A certain HG cable extra length was left below each HG splice box; this will allow an easy maintenance in case of necessary maintenance or re-splicing operation.

NOTE: A suitable extra length of HG cable, approximately 1 meter, was left in each junction box used to protect the transition between the building floor and the underwater section. This extra length was left with the main aim to leave a margin in case a load cell drastically changes its position, due to an external mechanical action. Possible location change can, in fact, induce some strain and traction on the HG cable that is not supposed to be damaged.

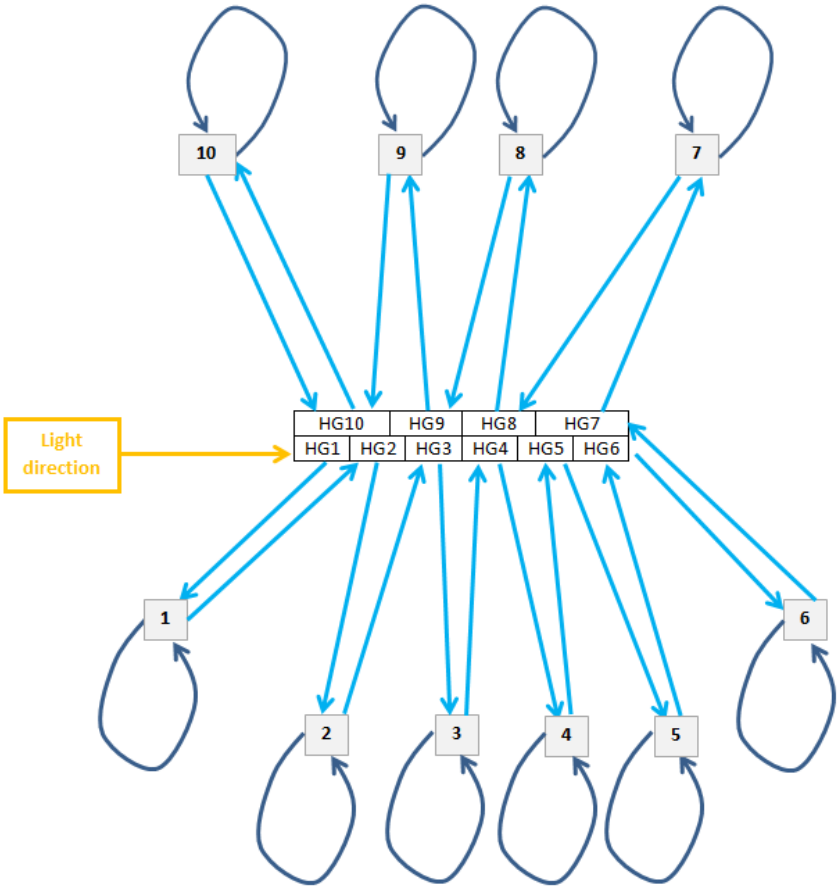

Figure 2: *schematic HG cable connection scheme with light direction*

For sake of simplicity during the design and installation phases of the system, 10 independent sensing lines were installed, one for each load cell. In a further stage by means of fusion splicing, these 10 sensing loops were connected together, in series, to provide a single, long, sensing loop. The main advantage of this configuration was to minimize the number of optical channels needed to scan all the sensors, and to measure them simultaneously in a single scan.

During the first measurement campaign a detailed analysis of the data enabled refinement of the coordinate system drafted during the system commissioning. In detail, the underwater areas have been clearly defined through the data analysis. In this phase of the project a coordinate system table with progressive lengths has been defined to provide an effective means of comparison for the next measurement campaigns.

Table 1: DiTeSt system coordinate system _ as built

Sensor ID	Underwater start [m]	Underwater end [m]
1	21	34
2	78	92
3	142	162
4	219	235
5	286	306
6	341	361
7	400	418
8	467	484
9	547	560
10	617	628

The obtained results are in good agreement with the installation report.

In order to better present the results obtained during the first measurement campaign a small review of the measurement technique of the sensing line is necessary. In order to have a complete view of the system, and provide several means of comparison, different sensing layouts and sets of parameters were defined. In particular:

- 2, different sensing layouts:

    i. *Loop configuration* → 2, fibers of the HG cable are spliced together in HG10 to create a loop, forth and back, with the existing sensing line.
    ii. *Single End configuration* → light is injected in one fiber of the HG cable and collected in HG10 at the far end of the sensing loop.

There is not a big difference between these 2 configurations except the fact that when measuring in *loop* each load cell is measured 2 times in a single scan, while with the *single end* only once.

- 2 different set of parameters are defined:

    i. *1 m spatial resolution* → the sensing line is scanned with a light pulse of 1 m. Sampling resolution is set to 0.4 m to provide an oversampling factor of 2.5.
    ii. *0.5 m spatial resolution* → the sensing line is scanned with a light pulse of 0.5 m. Sampling resolution is set to 0.2 m to provide an oversampling factor of 2.5.

The main difference between the 2 sets of parameters is the capability to discriminate events / occurrences that involve very short sections of HG cable. From the theory and the physics beyond the DiTeSt, a smaller spatial resolution allows discrimination of short events acting on the cable and localizes them more precisely. As a drawback, the smaller the spatial resolution, the higher the intrinsic measurement noise / statistic fluctuations are along the measured profile.

During the 1st measurement campaign the same system configuration and parameter sets used during the commissioning were used with no modification-

In Table 2, the sensitive measurement parameters are summarized.

Table 2: measurement configuration, parameters resume

	OPS loop 1	**OPS loop .5**	**OPS Single end 1**	**OPS Single end .5**
Sensor length [m]	2000	2000	1100	1100
Frequency start [GHz]	10.7	10.7	10.7	10.7
Frequency end [GHz]	10.9	10.85	10.9	10.9
Frequency step [GHz]	0.001	0.001	0.001	0.001
Spatial resolution [m]	1	0.5	1	0.5
Sampling Interval [m]	0.4	0.2	0.4	0.2

2.1 Results and data interpretation

The analysis was mainly focused on analyzing the underwater sections that, in facts, represent the *load cells system.*
The goal is to check if big deviations are detected over these areas.

Before presenting the data some general remarks:

- When measured through the DiTeSt, both sensor layouts have shown an optical signal absolutely in line with the one measured during system commissioning. The analysis of the power traces show that the signal amplitude / power has not deviated from its original value. This is already a good indicator that no major forces have acted on the cable and no additional attenuation was induced by mechanical action.

- For each measurement configuration, a set of 3 measurements were taken. The signal residual measured on this set is in line with the expected system performances and therefore is enough to assess the coherence and reliability of the collected data.

- The frequency response measured over the cable *ground sections* are coherent with the environmental temperature difference measured during system commissioning and the 1st measurement.

In conclusion all the above listed points are a clear indicator of the reliability of the results provided in this report.

In order to offer a solid base to support our analysis, calibration results of the HG cables are reported. The aim is to compare the order of magnitude of the strain evolution under laboratory known conditions and what was measured during the 1st campaign.

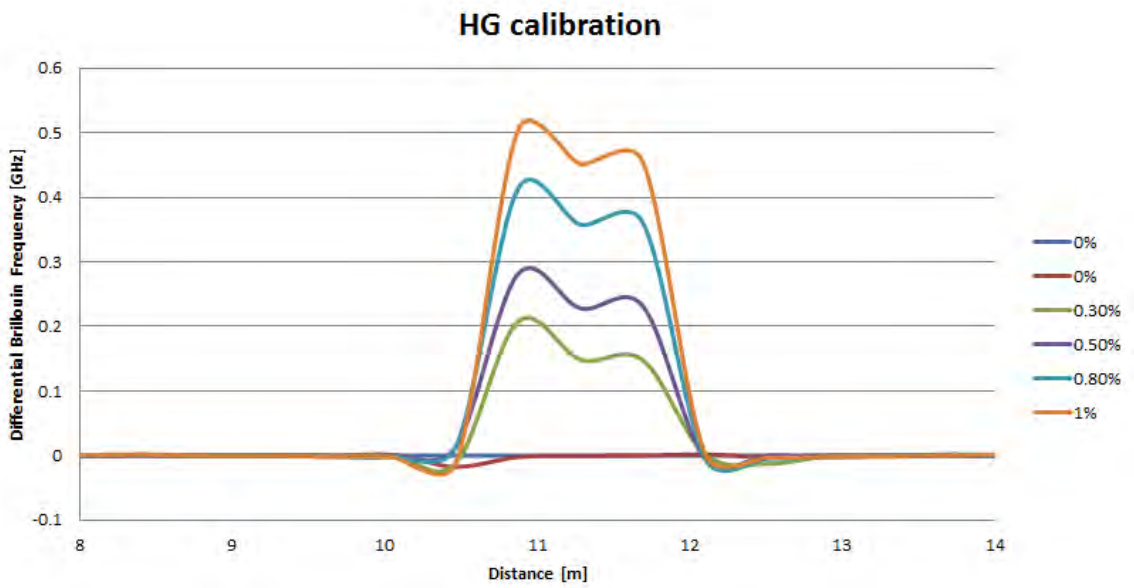

Figure 3: *Brillouin Frequency evolution during HG calibration*

Figure 3 shows the Brillouin Frequency evolution during HG calibration: the HG sensing cable is subject to known elongation, expressed in %, over a 1 m section. The frequency response evolution is recorded and analyzed to define a calibration coefficient used to transform the frequency information into a strain value.

In the section below, the method and approach used to provide data interpretation is presented. The 1st measurement campaign analysis is described step by step for the first case and repeated for the remaining others.

- 2 set of measurements, 3 measurements for each set, are compared. The 1st set corresponds to the system commissioning and represents our measurement baseline, August 2016. The 2nd set corresponds to the measurement campaign carried out in August 2017, Figure 4.

- Differential analysis is carried out: as per definition, the baseline represents the reference / zero measurement to which all the following measurements will be compared, Figure 5.

A careful analysis shows how most of the sensing line measured in August 2017 shows a shift of about 0.02 GHz with respect to the baseline, with a few other smaller sections appearing to have a very similar value to the baseline, Figure 6 . The differential analysis clearly shows how, at these distances, the deviation / shift between baseline and 1st measurement appear to be null or very close to 0, Figure 7.

From a quick correlation between distances and Frequency shift it is possible to assess:

a. Ground cable, not of interest in this monitoring project, does show a shift in the order of 0.02 GHz. This shift can be explained with the different environmental temperature at the moment of the 2nd measurement campaign. August 2016 was much warmer than August 2017, at least during the test day.

b. The section where the absolute trend is similar and the differential analysis shows a negligible variation, corresponds to the underwater sections.

c. The frequency variation measured along the underwater sections is much smaller than the variations measured during HG calibration. This is clear proof that the system can be considered in a stable state, not having deviated significantly since the baseline measurement campaign.

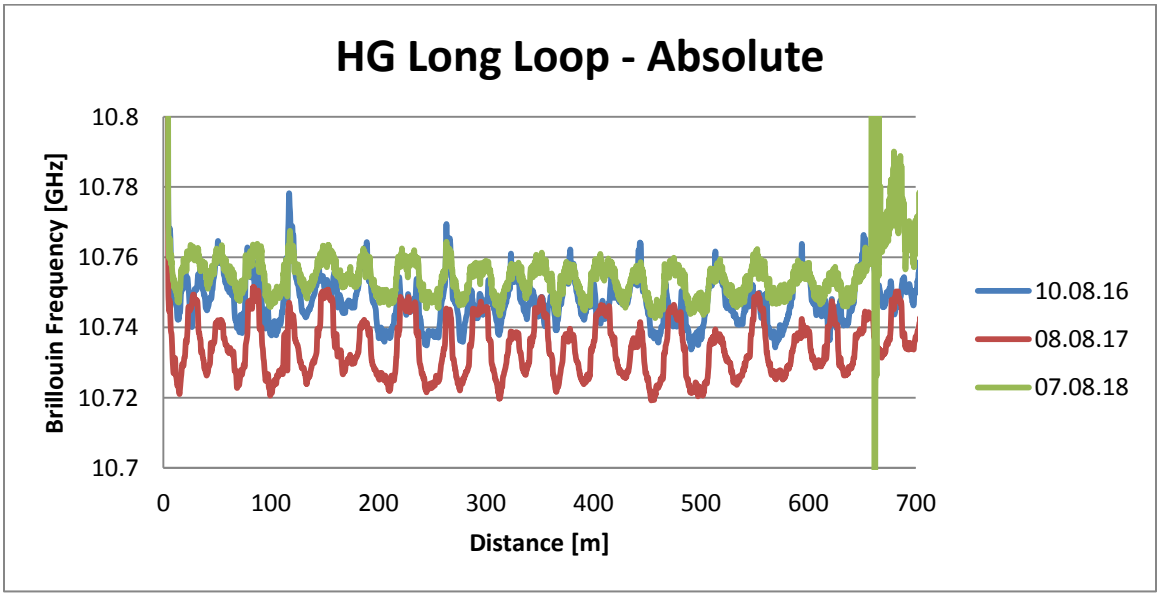

Figure 4: *Brillouin Frequency along the sensing line _ loop configuration 0.5 m spatial resolution*

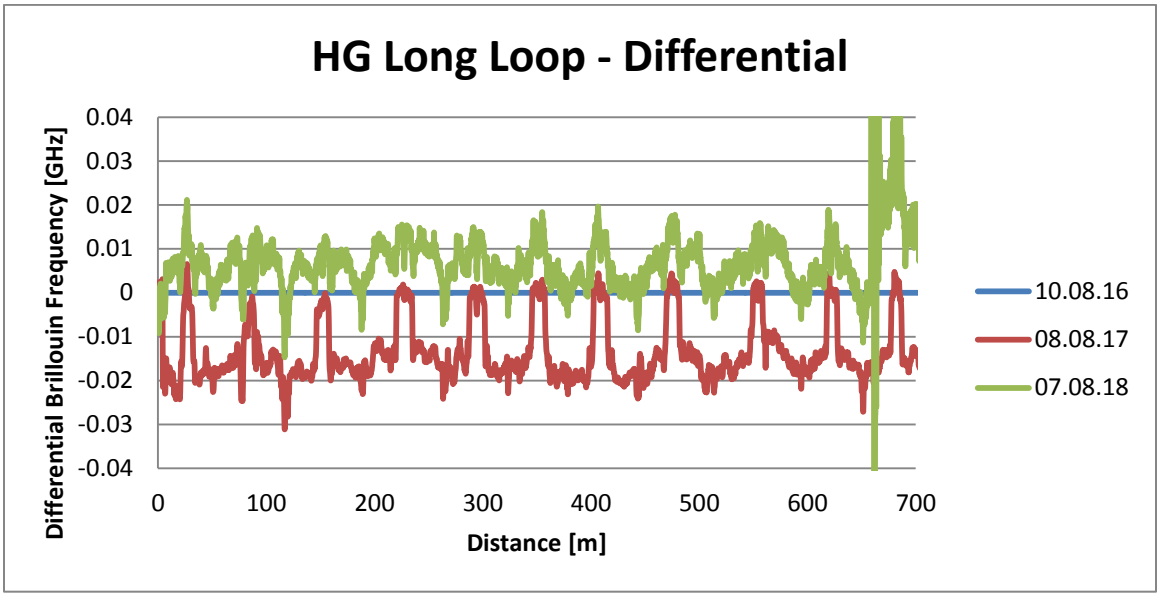

Figure 5: *differential Brillouin Frequency along the sensing line _ loop configuration 0.5 m spatial resolution*

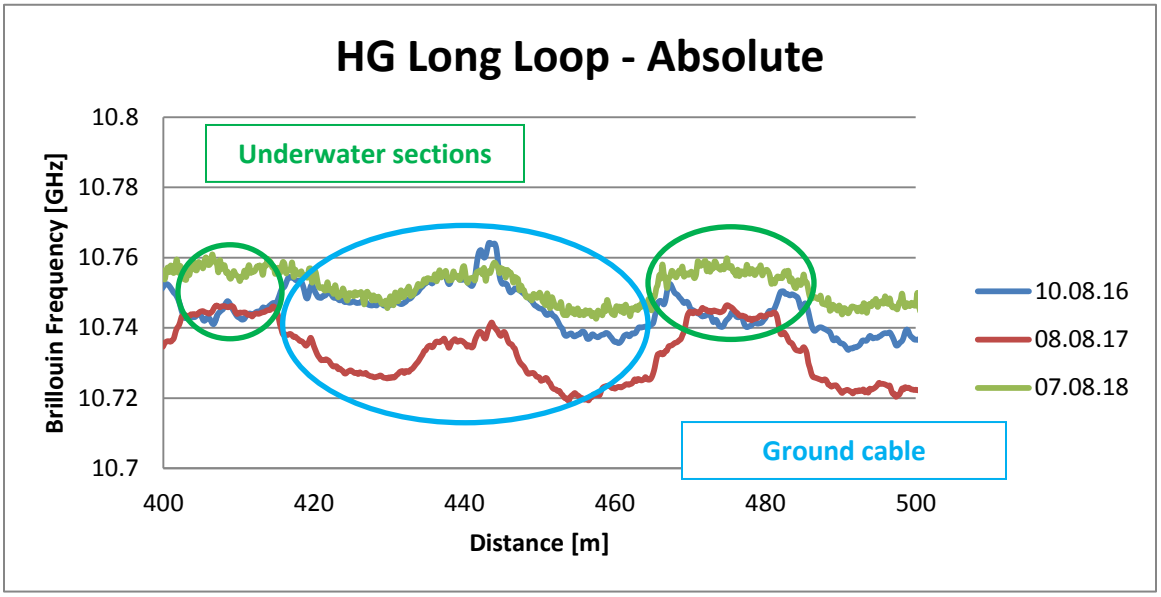

Figure 6: *detail of Brillouin Frequency along the sensing line _ loop configuration 0.5 m spatial resolution*

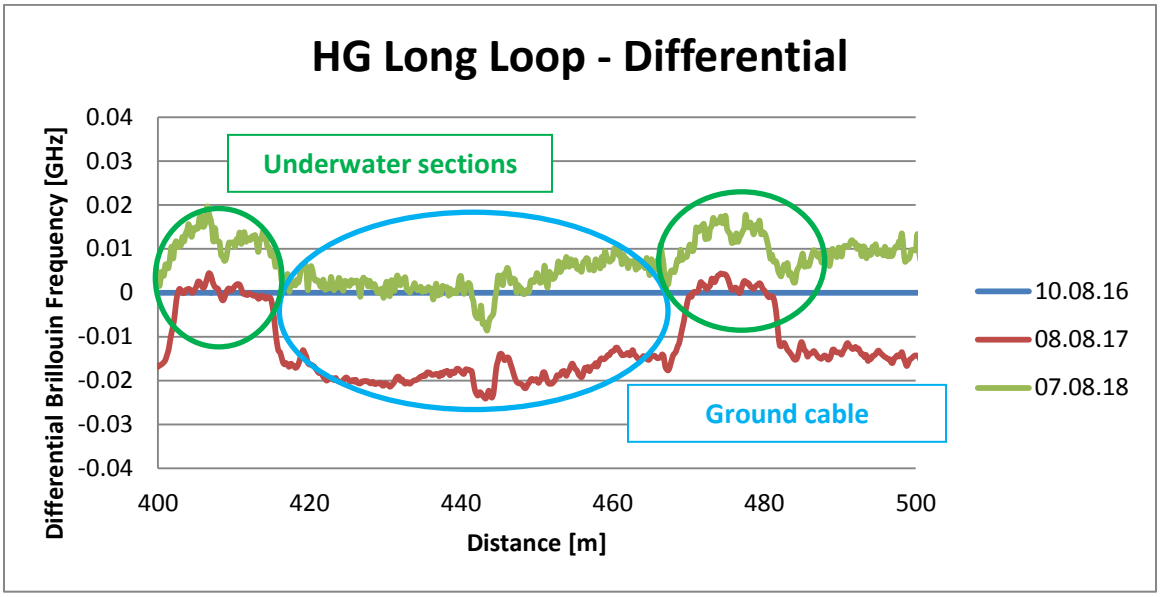

Figure 7: *detail of differential Brillouin Frequency along the sensing line _ loop configuration 0.5 m spatial resolution*

The approach described above is then repeated for all the 2 measurement configurations. All the collected data are in good agreement and lead to the main conclusion that the system appears to be in a stable state with no significant variations from the baseline reading.

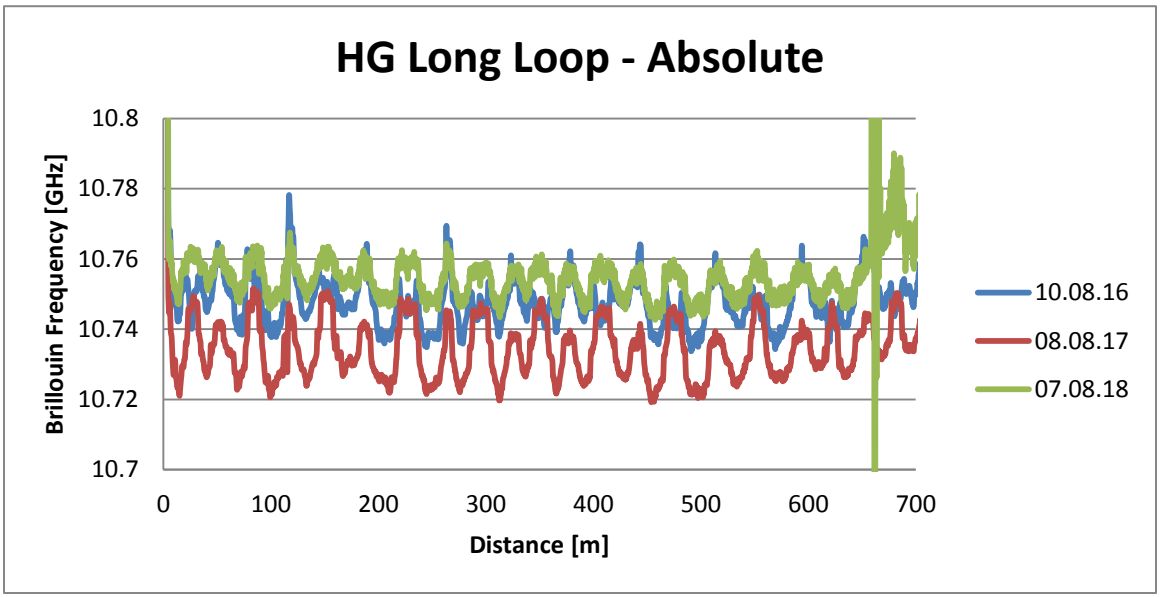

Figure 10: *Brillouin Frequency along the sensing line _ loop configuration 0.5 m spatial resolution*

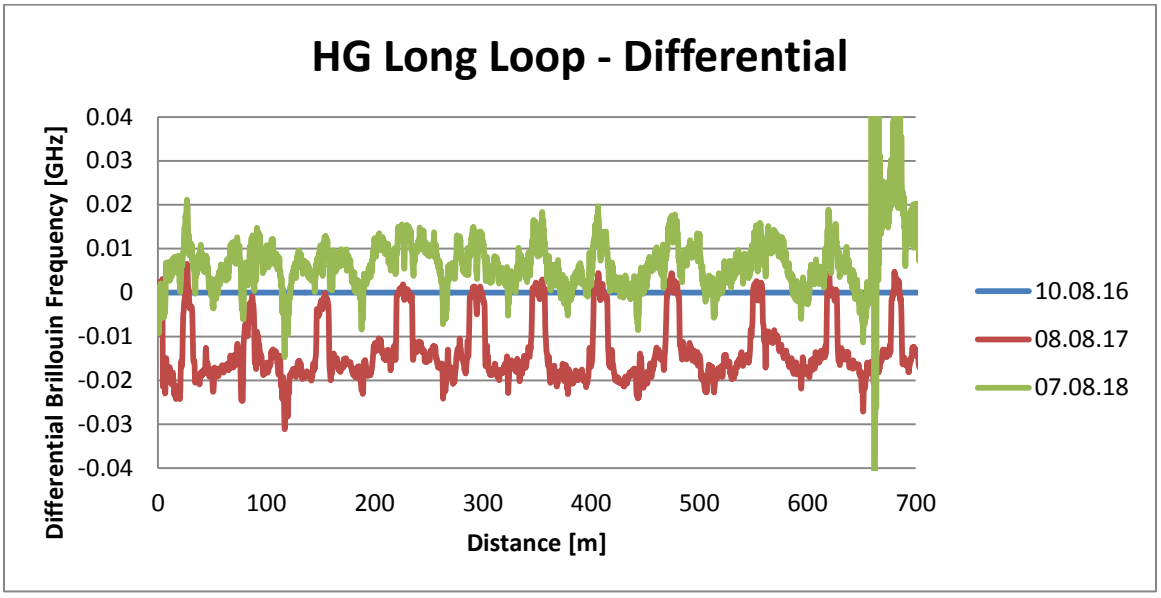

Figure 11: *differential Brillouin Frequency along the sensing line _ loop configuration 0.5 m spatial resolution*

3 Conclusion & Next Steps

The scope of the work, for which SMARTEC and ROCTEST were requested at site, has been fulfilled.
The 2nd measurement campaign after system installation, commissioning and baseline reading have been carried out.
The data analysis leads to the main conclusion that the load cell system is actually in a nearly stable state, because no major strain is occurring over the piles where the sensors have been installed. In particular we can assess:

a. Ground cable does show a close correspondence to the baseline. This close correspondence and the supposition that no further mechanical forces are acting on the cables, makes us think this measurement campaign has been carried out at a similar temperature to the one when the baseline was taken. In this scenario, based on this assumption, we can assess that the deviation measured in the underwater section, can be, in fact, purely mechanical.
b. The sections of HG sensing cable do show a shift / deviation from the baseline that can be considered of small importance and typically limited to < 20MHz. Based on that assumption made at point "a", we can think about a purely mechanical effect that, nevertheless remains very limited if compared to the calibration chart presented at page 12 in Figure 3.
c. The frequency variation measured along the underwater sections is much smaller than the variations measured during HG calibration. This is a clear proof the system can be considered in a stable state, not having deviated significantly since the baseline measurement campaign.

Thanks to the multiple system configurations it has been possible to compare different data sets that led to very similar conclusions: the data collected with the same fiber layout but different spatial resolution appears to be coherent with each other.

Nevertheless, during this 2nd measurement campaign it was not possible to collect data through the Single Ended Sensor. Despite the several attempts no measurement was taken due to an unusual attenuation of the optical fiber. Despite the fact that a very weak red light was exiting the far end of the sensing loop, no measurement was possible using the DiTeSt reading unit. A preliminary analysis of the occurrence has been carried out directly at site by means of a red laser fault locator. As a result, it seems the issue is limited to cable 9. This means the cable that goes from box HG9 to box HG10, that is to say, the monitoring cable looking over load cell 9. As a corrective action a more dedicated OTDR scan can be run to evaluate where exactly is the location of the problem to allow the PS&S and SMARTEC team to, if and where possible, a visual inspection to determine the nature of the issue.
In a second stage, if the issue is confirmed to be on the cable 9, the same section can be replaced by means of another one, or more simply, only for the single ended configuration, that section can be excluded by means of a proper rerouting / splicing.

As a final and general conclusion we can claim the system has not suffered major variations with respect to the baseline.

On the basis of the collected results, it is now possible to fill in the evolution Table 3a and 3b proposed in the document *3284 - Installation and baseline report -v2 (Table 4a and 4b).*

Albany, New York 12233-7017

RE: **Former BICC Cables Corporation Site (Site)**
City of Yonkers, Westchester, New York
NYSDEC Site No. C360051
Semi-Annual Groundwater Monitoring Results Report (2nd Round)

Dear Mr. Hubicki,

On behalf of Extell Waterfront Development, LLC (Extell), Paulus, Sokolowski and Sartor Engineering, PC (PS&S) has prepared this Semi-Annual Groundwater Monitoring Results Report (the Report) for the Former BICC Cables Corporation Site (the Site) located in the City of Yonkers, New York. This Report presents the findings of the 2nd round of Semi-Annual Groundwater Monitoring completed at the Site in compliance with the New York State Department of Environmental Conservation (NYSDEC)-approved Site Management Plan (SMP), dated April 14, 2017.

1.0 Introduction

As per the SMP, Section 3.2, and further detailed in SMP Attachment 8 (Groundwater Monitoring Work Plan), groundwater level and quality monitoring will be performed periodically on the established Site groundwater monitoring wells. Groundwater monitoring will be conducted on a semi-annual basis for a minimum of 2 years to assess groundwater conditions after the remediation and to determine the nature and extent of the impact to groundwater being caused by the off-Site source of VOCs/PCBs entering the Site.

This report documents and presents the findings of the 2nd round of semi-annual groundwater sampling activities completed in August 2018.

2.0 Groundwater Sampling

2.1 Groundwater Sampling Activities

As noted in the previous Semi-Annual Groundwater Monitoring Results Report (1st Round), dated April 13, 2018, groundwater monitoring well RMW-2 was not sampled due to an obstruction in the well at approximately nine feet below the top of

1 Larkin Plaza
2nd Floor
Yonkers, NY 10701

t. 914.509.8600

www.psands.com

the installed PVC riser. Per discussions with NYSDEC, RMW-2 will be decommissioned and reinstalled in kind for sampling prior to the February 2019 semi-annual groundwater sampling event.

In accordance with the SMP, PS&S collected one sample from RMW-1, RMW-3, RMW-4 and RMW-5 on August 7, 2018 using low-flow purging and sampling techniques. Samples were submitted to Alpha Analytical (Alpha) for TCL VOC and PCB analysis. Required quality assurance and quality control samples (e.g., field blanks, trip blanks and matrix spikes) were also collected and submitted to Alpha.

The Groundwater Monitoring Well Location Map (Enclosure 1 of the SMP Attachment 8) is provided as **Attachment A.** In addition, SMP Groundwater Monitoring Well Construction Logs (Enclosure 4 of the SMP Attachment 8) are provided as **Attachment B**. Purged groundwater (from both the 1st and 2nd round of 2018 Semi-Annual Groundwater Sampling) was stored in two 55-gallon drums. Following proper waste characterization, the investigation derived waste (IDW) was disposed of off-site by Brookside Environmental to Clean Water of New York. IDW disposal manifests for purge water generated from the 1st and 2nd rounds are provided in **Attachment F.**

2.2 Groundwater Sample Results

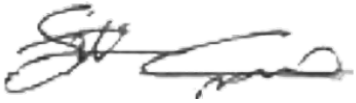
Groundwater sample results were compared to Division of Water Technical and Operational Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, Class GA, dated June 1998 (TOGS GA).

All sample results reported below laboratory reporting limits for PCBs and VOCs except for the following:

- Tetrachloroethene was detected at 12 micrograms/liter (ug/L) in sample RMW-1, which is above the NY TOGS GA of 5 ug/L.
- Trichloroethene was detected at 0.75 ug/L in sample RMW-5, which is below the NY TOGS GA of 5 ug/L.

Please see **Attachment C** for the groundwater sample results summary table and **Attachment D** for full lab reports.

3.0 Conclusions and Recommendations



PCBs were not detected above NY TOGS GA in any of the groundwater samples collected, and only VOC Tetrachloroethene was detected above NY TOGS GA in one of the four groundwater samples (detected in RMW-1 at 12 ug/L). Tetrachloroethene was also detected in RMW-1 during the 1st Round of sampling conducted in February 2018 at 6.1 ug/L. PS&S

will utilize the next round of semi-annual groundwater sampling (scheduled for February 2019) to better evaluate the trend of Tetrachloroethene concentrations in RMW-1.

Extell and PS&S appreciate your review of this Report. In accordance with the SMP Appendix 8, electronic data deliverables (EDDs) were completed and submitted to NYSDEC on September 28, 2018. In addition, Data Usability Summary Reports (DUSRs) have been completed and are provided as **Attachment E**. The next round of semi-annual groundwater sampling is scheduled for February 2019.

Should you have any questions or require additional information, please contact Scott Caporizzo at 914-226-3722 or scaporizzo@psands.com, or L. Miguel Salinas at 732-584-0435 or lsalinas@psands.com.

Very truly yours,

Scott P. Caporizzo, E.I.T.
PAULUS, SOKOLOWSKI AND SARTOR ENGINEERING, P.C.

Report Date: 08/21/18

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 056970006/BICC **Lab Number:** L1830670
Project Number: 056970006 **Report Date:** 08/21/18

Case Narrative (continued)

Report Submission

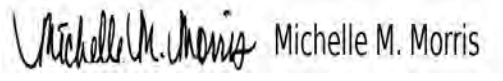
All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L1830670-01: The sample was received below the appropriate pH for the Sulfide - EPA 9030 analysis. The laboratory added additional Zn Acetate/NaOH; however, the pH would not adjust into the proper range.
The project number and analyses performed were specified by the client.

Volatile Organics

L1830670-01: The sample has elevated detection limits due to the dilution required by the sample matrix (heavy foam).
L1830670-09: The Trip Blank has a result for acetone present above the reporting limit. The sample was verified as being labeled correctly by the laboratory and the previous analysis showed there was no potential for carry over.



Semivolatile Organics by SIM

L1830670-01: The sample has elevated detection limits due to the dilution required by the sample matrix.

Total Metals

L1830670-01: The sample has an elevated detection limit for thalium due to the dilution required by the high concentrations of target and non-target elements.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Michelle M. Morris

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample¿s toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Report Format: DU Report with 'J' Qualifiers

Project Name:	056970006/BICC	**Lab Number:**	L1830670
Project Number:	056970006	**Report Date:**	08/21/18

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Albany, New York 12233-7017

RE: **Former BICC Cables Corporation Site (Site)**
City of Yonkers, Westchester, New York
NYSDEC Site No. C360051
Semi-Annual Groundwater Monitoring Results Report (1st Round)

Dear Mr. Hubicki,

On behalf of Extell Waterfront Development, LLC (Extell), Paulus, Sokolowski and Sartor Engineering, PC (PS&S) has prepared this Semi-Annual Groundwater Monitoring Results Report (the Report) for the Former BICC Cables Corporation Site (the Site) located in the City of Yonkers, New York. This Report presents the findings of the 1st round of Semi-Annual Groundwater Monitoring completed at the Site in compliance with the New York State Department of Environmental Conservation (NYSDEC)-approved Site Management Plan (SMP), dated April 14, 2017.

1.0 Introduction

As per the SMP, Section 3.2, and further detailed in SMP Attachment 8 (Groundwater Monitoring Work Plan), groundwater level and quality monitoring will be performed periodically on the five established Site groundwater monitoring wells for 2 years on a semi-annual basis to assess groundwater conditions after the remediation and to determine the nature and extent of the impact to groundwater being caused by the off-Site source of VOCs/PCBs entering the Site.

This report documents and presents the findings of the 1st round of semi-annual groundwater sampling activities completed in February 2018.

2.0 Groundwater Sampling

2.1 Groundwater Sampling Activities

During a February 2018 Site visit, four of the five SMP Monitoring Plan groundwater monitoring wells (RMW-2 through RMW-5) were not visible at the surface and had to be located via test pits. After locating the four groundwater monitoring wells, PVC

1 Larkin Plaza
2nd Floor
Yonkers, NY 10701

t. 914.509.8600

www.psands.com

risers were installed for ease of access and in anticipation of future access. In addition, each groundwater monitoring well was gauged for depth to water and depth to bottom. Measurements are summarized in **Table 2.1** below.

TABLE 2.1- Groundwater Monitoring Plan - Well Measurements

Well ID	Length of Riser Installed (ft.)	Observed Depth to Bottom (ft.)	Depth to Water (bgs.)	Depth to Sample (bgs.)
RMW-1	No Riser	31.0	25.39	30.35
RMW-2	5	N/A	N/A	N/A
RMW-3	16.61	31.56	1.33	7.63
RMW-4	8	5.96	2.24	5.1
RMW-5	8.15	18.80	5.44	10.5

In accordance with the SMP, PS&S collected one sample from RMW-1 and RMW-4 on February 21, 2018, one sample from RMW-5 on February 22, 2018 and one sample from RMW-3 on February 23, 2018 using low-flow sampling techniques. Samples were submitted to Hampton-Clarke (HC) for TCL VOC and PCB analysis. One field blank (FB_02212018), one duplicate sample (DUP), one test blank (TB) and one matrix spike (MW-4_02212018 MS/MSD) were also collected and submitted to HC during the February 21, 2018 sampling event.

Groundwater monitoring well RMW-2 was not sampled due to an obstruction in the well at approximately nine feet below the top of the newly installed PVC riser.

The Groundwater Monitoring Well Location Map (Enclosure 1 of the SMP Attachment 8) is provided as **Attachment A.** In addition, SMP Groundwater Monitoring Well Construction Logs (Enclosure 4 of the SMP Attachment 8) are provided as **Attachment B**.

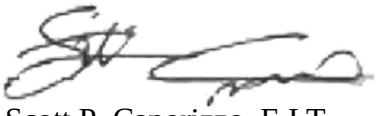
2.2 Groundwater Sample Results

Groundwater sample results were compared to Division of Water Technical and Operational Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, Class GA, dated June 1998 (TOGS GA).

All sample results reported non-detects for PCBs and VOCs except for the following:

- Chloroform was detected at 1.4 micrograms/liter (ug/L) in sample RMW-1_02212018, which is below the TOGS GA of 7 ug/L.
- Tetrachloroethene was detected at 6.1 ug/L in sample RMW-1_02212018, which is above the TOGS GA of 5 ug/L.

Please see **Attachment C** for the groundwater sample results summary table and **Attachment D** for full lab reports.



3.0 Conclusions and Recommendations

PCBs were not detected in any of the groundwater samples collected and only Tetrachloroethene was detected above NY TOGS GA in one of the four groundwater samples. Based on our review of groundwater sample results (and provided as an option in Section 3.2.4 of the SMP with NYSDEC approval), PS&S proposes that RMW-2 (i.e., the groundwater monitoring well with the observed obstruction) be decommissioned without replacement and that future sampling events proceed with the four operable groundwater monitoring wells.

Extell and PS&S appreciate your review of this Report and requested approval of the proposed decommissioning of RMW-2. In accordance with the SMP Appendix 8, electronic data deliverables (EDDs) were completed and submitted to NYSDEC on April 9, 2018. In addition, Data Usability Summary Reports (DUSRs) have been completed and are provided as **Attachment E**. The second round of semi-annual groundwater sampling is scheduled for August 2018.

Should you have any questions or require additional information, please contact Scott Caporizzo at 914-226-3722 or scaporizzo@psands.com or me at 732-584-0435 or lsalinas@psands.com.

Very truly yours,

Scott P. Caporizzo, E.I.T.
PAULUS, SOKOLOWSKI AND SARTOR ENGINEERING, P.C.

Attn: Scott Caporizzo

Received Date: 2/22/2018

Report Date: 3/26/2018

Deliverables: NYDOH-CatB

Lab ID: AD02764

Lab Project No: 8022222

This report is a true report of results obtained from our tests of this material. The report relates only to those samples received and analyzed by the laboratory. All results meet the requirements of the NELAC Institute standards. Laboratory reports may not be reproduced, except in full, without the written approval of the laboratory.

In lieu of a formal contract document, the total aggregate liability of Hampton-Clarke to all parties shall not exceed Hampton-Clarke's total fee for analytical services rendered.

SDG Narrative

HC Case Narrative

Client: Paulus, Sokolowski & Sartor, Inc. **HC Project:** 8022222
Project: Former BICC Cables Site

Hampton-Clarke (HC) received the following samples on 02/22/2018:

Client ID	HC Sample ID	Matrix	Analysis
RMW-1_02212018	AD02764-001	Aqueous	VO (8260C), PCB (8082A)
RMW-5_02212018	AD02764-002	Aqueous	VO (8260C), PCB (8082A)
RMW-4_02212018	AD02764-003	Aqueous	VO (8260C), PCB (8082A)
RMW-4_02212018 MS	AD02764-004	Aqueous	VO (8260C), PCB (8082A)
RMW-4_02212018 MSD	AD02764-005	Aqueous	VO (8260C), PCB (8082A)
DUP	AD02764-006	Aqueous	VO (8260C), PCB (8082A)
FB_02212018	AD02764-007	Aqueous	VO (8260C), PCB (8082A)
TB	AD02764-008	Aqueous	VO (8260C)

This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.

Volatile Organic Analysis:

The Method Blank Spike for batch 67258 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batches 67240 and 67258 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and Matrix Spike Duplicate in batches 67240 and 67258 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

PCB Analysis:

Data conforms to method requirements.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Robin Cousineau
Quality Assurance Director

Or

Jean Revolus
Laboratory Director

Reporting Limit Definitions

HC Reporting Limit Definitions/Data Qualifiers

REPORTING DEFINITIONS

DF = Dilution Factor

MDL = Method Detection Limit

RL* = Reporting Limit

ND = Not Detected

RT = Retention Time

NA = Not Applicable

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

DATA QUALIFIERS

A- Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

B- Indicates analyte was present in the Method Blank and sample.

d- For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

E- Indicates the concentration exceeded the upper calibration range of the instrument.

J- Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

R- Retention Time is out.

Y- Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

12672-29-6	Aroclor-1248	0.25	U	1336-36-3	Aroclor (Total)	0.25	U

Worksheet #: 457381

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Additional Notes

Comments, Notes, Special Requirements, HAZARDS

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270D SIM)
- [ ] VOC (8260C SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

Cooler Temperature: 2.8, 3.1

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

CONDITION UPON RECEIPT

Batch Number AD02764 Entered By: maxwell

Date Entered 2/22/2018 4:19:00 PM

1	Yes	Is there a corresponding COC included with the samples?
2	Yes	Are the samples in a container such as a cooler or Ice chest?
3	NO	Are the COC seals intact?
4	T0054	<--- Thermometer ID. Please specify the Temperature inside the container (in degC). 2.8,3.1
5	Yes	Are the samples refrigerated (where required)/have they arrived on ice?
6	Yes	Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples:
7	Yes	Are all of the sample bottles intact? If no, specify sample numbers broken/leaking
8	Yes	Are all of the sample labels or numbers legible? If no specify:
9	Yes	Do the contents match the COC? If no, specify
10	Yes	Is there enough sample sent for the analyses listed on the COC? If no, specify:
11	Yes	Are samples preserved correctly?
12	Yes	Was temperature blank present (Place comment below if not)? If not was temperature of samples verified?
13	YES	Other comments ...Specify TRIP BLANK DATE 2/20/18
14	NA	Corrective actions (Specify item number and corrective action taken).

I1 =	Fluorobenzene	I4 =	I7 =	625/8270 Internal Standard concentration = 40 mg/L (in final extract)
I2 =	Chlorobenzene-d5	I5 =		624/8260 Internal Standard concentration = 30ug/L
I3 =	1,4-Dichlorobenzene-d4	I6 =		524 Internal Standard concentration =5ug/L

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Worksheet #: 457092 *Total Target Concentration* 7.5 ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration usea
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 457092

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 457092 *Total Target Concentration* 1900 ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration usea

Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 457092

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags	*Note:* Avg Rsd: 11.4
a - failed the min rf criteria	*Corr 1 = Correlation Coefficient for linear Eq.*
c - failed the minimum correlation coeff criteria(if applicable)	*Corr 2 = Correlation Coefficient for quad Eq.*
	Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 7.82
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 7.82

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

8022222 0131

Method: EPA 8260C

Form 6
Initial Calibration

Instrument: GCMS_8

Flags
a - failed the min rf criteria
c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 7.82
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Worksheet #: 457092

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Worksheet #: 457092

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used.
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

12672-29-6	Aroclor-1248	0.25	U				

Worksheet #: 457381

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Received Date: 2/26/2018

Report Date: 3/23/2018

Deliverables: NYDOH-CatB

Lab ID: AD02799

Lab Project No: 8022605

This report is a true report of results obtained from our tests of this material. The report relates only to those samples received and analyzed by the laboratory. All results meet the requirements of the NELAC Institute standards. Laboratory reports may not be reproduced, except in full, without the written approval of the laboratory.

In lieu of a formal contract document, the total aggregate liability of Hampton-Clarke to all parties shall not exceed Hampton-Clarke's total fee for analytical services rendered.

SDG Narrative

HC Case Narrative

Client: Paulus, Sokolowski & Sartor, Inc. **HC Project:** 8022605
Project: Former BICC Cables Site

Hampton-Clarke (HC) received the following samples on 02/26/2016:

Client ID	HC Sample ID	Matrix	Analysis
RMW-3_02232018	AD02799-001	Aqueous	VO (8260C), PCB (8082A)
WC_02232018	AD02799-002	Aqueous	VO (8260C), BNa (8270D), PCB (8082A), TPH (8015D), Metals (6010C/6020A/7470A), Reactive Cyanide (SW846 7.3.3), Flash Point (1010), pH (SM4500-H+B-00), Reactive Sulfide (SW846 7.3.4)

This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.

Volatile Organic Analysis:

The Method Blank Spike for batch 67265 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The Matrix Spike and Matrix Spike Duplicate for batch 67265 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and Matrix Spike Duplicate in batch 67265 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

Base Neutral/Acid Extractable Analysis:

The Method Blank Spike for batch 66108 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

The MS/MSD RPD, Matrix Spike and Matrix Spike Duplicate for batch 66108 had recoveries outside QC limits. Please refer to the applicable Form 3 for the recoveries.

Samples AD02667-001, -001 (MS), and -001 (MSD) had a surrogate recovery outside QC limits, but the recovery is greater than 10%, therefore, no corrective action was necessary. Please refer to the applicable Form 2 for the recoveries.

PCB Analysis:

Data conforms to method requirements.

Total Petroleum Hydrocarbon Analysis:

Data conforms to method requirements.

Metals Analysis:

Sample AD02799-002: Na reported at dilution due to concentration above linear range.

The serial dilution for batch 66498 is outside QC limits for one or more analytes. Please refer to the applicable Form 6/9 for the recoveries.

Wet Chemistry Analysis:

Sample AD02799-002 was received and analyzed outside the 15 minute hold time for pH.

Sample AD02799-002 was analyzed for Reactivity using SW-846 7.3. SW-846 7.3 is not a NELAP accredited parameter.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Reporting Limit Definitions

HC Reporting Limit Definitions/Data Qualifiers

REPORTING DEFINITIONS

DF = Dilution Factor

MDL = Method Detection Limit

RL* = Reporting Limit

ND = Not Detected

RT = Retention Time

NA = Not Applicable

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

DATA QUALIFIERS

A- Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

B- Indicates analyte was present in the Method Blank and sample.

d- For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

E- Indicates the concentration exceeded the upper calibration range of the instrument.

J- Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

R- Retention Time is out.

Y- Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

Worksheet #: 455644

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Additional Notes

Comments, Notes, Special Requirements, HAZARDS

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270D SIM)
- [ ] VOC (8260C SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

For NJ LSRP projects, indicate which standards need to be met:
- [ ] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [ ] NJ LSRP Project (also check boxes above/right)

Cooler Temperature: 2.0 2.5

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

CONDITION UPON RECEIPT

Batch Number AD02799 Entered By: Ricardo
Date Entered 2/26/2018 2:15:00 PM

1	Yes	Is there a corresponding COC included with the samples?
2	Yes	Are the samples in a container such as a cooler or Ice chest?
3	NO	Are the COC seals intact?
4	T0054	<--- Thermometer ID. Please specify the Temperature inside the container (in degC). 2.0,2.5
5	Yes	Are the samples refrigerated (where required)/have they arrived on ice?
6	Yes	Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples:
7	Yes	Are all of the sample bottles intact? If no, specify sample numbers broken/leaking
8	Yes	Are all of the sample labels or numbers legible? If no specify:
9	Yes	Do the contents match the COC? If no, specify
10	Yes	Is there enough sample sent for the analyses listed on the COC? If no, specify:
11	Yes	Are samples preserved correctly?
12	Yes	Was temperature blank present (Place comment below if not)? If not was temperature of samples verified?
13	NA	Other comments ...Specify
14	NA	Corrective actions (Specify item number and corrective action taken).

I1 =	Fluorobenzene	I4 =	I7 =	625/8270 Internal Standard concentration = 40 mg/L (in final extract)
I2 =	Chlorobenzene-d5	I5 =		624/8260 Internal Standard concentration = 30ug/L
I3 =	1,4-Dichlorobenzene-d4	I6 =		524 Internal Standard concentration =5ug/L

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Worksheet #: 455624

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 11.4

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 11.4

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

802605 0060

Method: EPA 8260C

Form 6
Initial Calibration

Instrument: GCMS_3

Worksheet #: 455624

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Worksheet #: 455669

Total Target Concentration 0.52

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used

N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine

Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 7.39

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

8022605 0177

Method: EPA 8270D

Form 6
Initial Calibration

Instrument: GCMS_5

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 11.3

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

8022605 0207

Method: EPA 8270D

Form 6
Initial Calibration

Instrument: GCMS_10

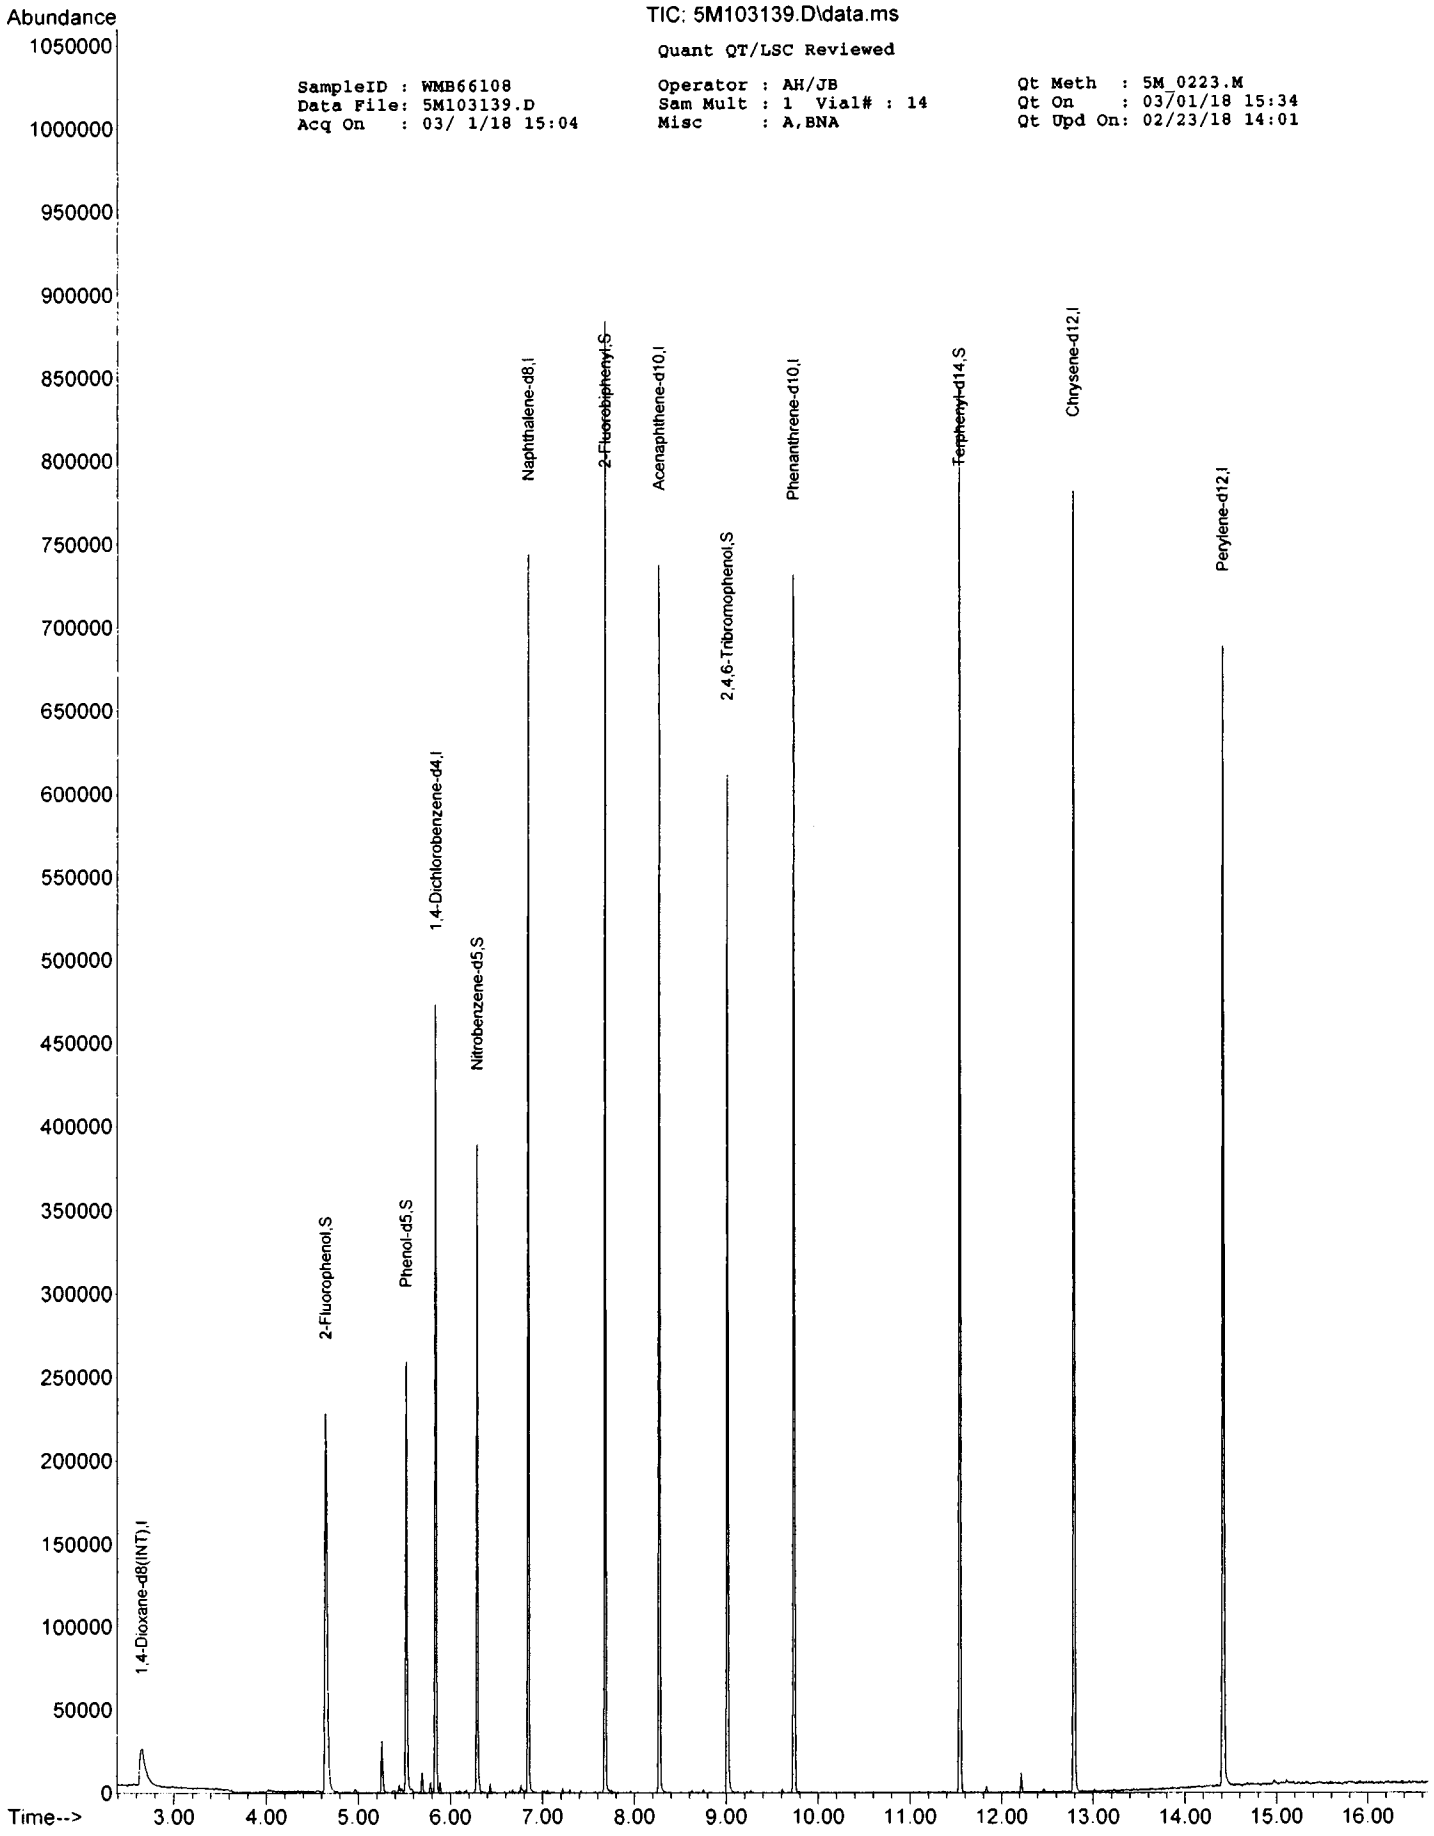
Worksheet #: 455669

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used

N-Nitrosodiphenylamine decomposes in the GC inlet and is detected as diphenylamine



Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Extraction of Semi-volatile – Aqueous
Method 3510 C

Method Blank No. WMB- _____
Blank Spike (MBS): _____
Start extraction time: 8:00 AM
End extraction time: 3:00 PM
Recirculator: Start temp: 15.5°C
End temp: 15.5°C

Date: 3/1/18
Matrix Spike: 66108
Shaker Used: 4,5,6,7
Condenser used: 6,7,8
Condenser Flow: 2500 CCM

Worksheet #: 455644

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags

c - failed the initial calibration criteria(if applicable)

Note:

Col = Column Number
Mr = MultiPeak Analyte 0=single peak analyte >0=multi peak analyte (i.e. pcb/chlordane etc.)
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.

All Response Factors = Response Factors / 10000
Initial Calibration Criteria: either %RSD <=20 or Corr >= .995
Columns: Signal #1 db-1701 ; Signal #2 db-608

^Lvl: These compounds use a single pt calibration as specified by the method. The file used to update this calibration point is listed in the header under level #

12672-29-6	Aroclor-1248	0.25	U				

Worksheet #: 455644

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

ORGANICS PETROLEUM HYDROCARBON REPORT

Sample Number: AD02799-002
Client Id: WC_02232018
Data File: 4G60131.D
Analysis Date: 03/01/18 12:32
Date Rec/Extracted: 02/26/18-02/28/18
Column: DB-5MS 30M 0.250mm ID 0.25um film

Method: EPA 8015D
Matrix: Aqueous
Initial Vol: 1000ml
Final Vol: 1ml
Dilution: 1
Solids: 0

Units: ug/L

Cas #	Compound	RL	Conc	Cas #	Compound	RL	Conc
	Total Petroleum Hydrocar	**300**	**680**				

Worksheet #: 454976

Total Target Concentration 680

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration usea
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.
