Flags

c - failed the initial calibration criteria(if applicable)

Note:

Col = Column Number
Mr = MultiPeak Analyte 0=single peak analyte, >0=multi peak analyte (i.e. pcb/chlordane etc.)
Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.
Corr 1 = Correlation Coefficient for linear Eq.
Corr 2 = Correlation Coefficient for quad Eq.

All Response Factors = Response Factors / 10000
Initial Calibration Criteria: either %RSD <=20 or Corr >= .995
Columns: Signal #1 db-1701 ; Signal #2 db-608

^Lvl: These compounds use a single pt calibration as specified by the method. The file used to update this calibration point is listed in the header under level #

Form1

ORGANICS PETROLEUM HYDROCARBON REPORT

Sample Number: WMB66104
Client Id:
Data File: 4G60121.D
Analysis Date: 02/28/18 11:28
Date Rec/Extracted: NA-02/28/18
Column: DB-5MS 30M 0.250mm ID 0.25um film

Method: EPA 8015D
Matrix: Aqueous
Initial Vol: 1000ml
Final Vol: 1ml
Dilution: 1
Solids: 0

Units: ug/L

Cas #	Compound	RL	Conc	Cas #	Compound	RL	Conc
	Total Petroleum Hydrocarbo	300	U				

Worksheet #: 454976

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration usea
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

FORM 3
(ICB/CCB/MB Summary)

Date Analyzed: 02/27/18
Data File: H22208SW
Prep Batch: 66498
Reporting Limits Used: 6010C/7470A,7471B,6020A
Instrument: HGCV3A
Units: All units in ppm except Hg and icp-ms in ppb
Project Number: 8022605

Lab Name: Hampton-Clarke
Lab Code:
Contract:
Nras No:
Sdg No:
Case No:

Analyte	ICB-10	CCB-21	CCB-27	MB 66498 (1)-11
Mercury	.5 U	.5 U	.5 U	.5 U

Notes: a-indicates absolute value of result found above the reporting limits in CCB/ICB or result found above reporting limit in the MB
u-indicates result below reporting limit

FORM 4
(ICSA/ICSAB Summary)

Date Analyzed: 02/28/18

Calibrate using pH 4.0 and pH 10.0/Read and record pH 7.0(the pH 7.0 must agree within ±0.1 pH units)
When using the pH meter more for analysis and more than 3 hours has passed calibration, read and record pH 7.0
If pH 7.0 is off by ± 0.2 units, re-calibrate using the pH 4.0 and pH 10.0 buffers.

Subject: RE: Former BICC Cables Site (NYSDEC Site No. C360051): Existing Fill TP-20 Delineation Sampling Letter Report

Scott – I've reviewed the step-out test borings for BICC Cables Site No. C360051 - TP-20, and you can proceed with off-site disposal of that area around TP-20 based on these results. No further sampling required.

Please remember any material imported to the site must be documented and pre-approved by the Department.

Thank you for attention in this matter.
Matt

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Matt –

Attached for your review is the Former BICC Cables Site (NYSDEC Site No. C360051) Existing Fill TP-20 Delineation Sampling Letter Report. Based on PS&S review of the delineation results, the non-compliant materials representative of TP-20 have been delineated. With NYSDEC concurrence, PS&S will proceed with off-site disposal of TP-20 representative materials. Please refer to the attached Letter Report for additional information.

The Extell team appreciates your review of this information. Feel free to call/email me with any questions.

Regards,

RE: *Former BICC Cables Site (Extell Waterfront Development)*
One Point Street
Yonkers, New York, 10701
BCP Site No. C360051
Existing Fill TP-20 Delineation Sampling Letter Report

Dear Mr. Hubicki,

1.0 Introduction

On behalf of Extell Waterfront Development, LLC (Extell), Paulus, Sokolowski and Sartor Engineering, PC (PS&S) has prepared this Existing Fill TP-20 Delineation Sampling Letter Report (Letter Report) to present the sampling and analysis of SVOC delineation sampling at test pit location TP-20. As summarized in the Existing Fill Sampling Report, dated May 25, 2018, a composite sample collected at TP-20 reported SVOCs which exceeded the lesser of the New York State Restricted Residential Use Soil Cleanup Objectives (SCOs) or Protection of Groundwater SCOs (the applicable regulatory criteria for imported fill (6 NYCRR 375-6.7(d)(1)(b)), as identified in the Site's SMP). PS&S performed delineation sampling in accordance with the NYSDEC-approved Existing Fill TP-20 Delineation Sampling Work Plan, dated July 19, 2018 (Work Plan).

2.0 Existing Fill TP-20 Delineation Sampling Results

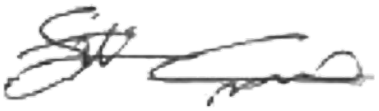
The Existing Fill Sample Location Map (Attachment A) depicts the TP-20 delineation sample locations. Delineation samples were collected on August 2, 2018 via test pits at 5 foot off-sets (to the north, south, west, and east) from the original TP-20 sample location. A composite sample was collected across the vertical profile of each test pit as the excavation was extended from the current Site grade to the top of the existing asphalt pavement cover system. Three to five discrete samples collected within each test pit comprised a composite sample for that test pit. The composite samples were submitted to Alpha Analytical, an ELAP-certified laboratory, and analyzed for SVOCs only, as previously confirmed with NYSDEC. Sample results were compared to the lesser of the New York State Restricted Residential Use Soil Cleanup Objectives (SCOs) or Protection of Groundwater SCOs, which is the applicable regulatory criteria for imported fill (6 NYCRR 375-6.7(d)(1)(b)), as identified in the Site's SMP.

1 Larkin Plaza
2nd Floor
Yonkers, NY 10701

t. 914.509.8600

www.psands.com

The SVOC results of all four delineation samples (TP-20-SVOC-W5, TP-20-SVOC-E5, TP-20-SVOC-N5, and TP-20-SVOC-S5) met the lower of Restricted Residential Use or Protection of Groundwater Soil Cleanup Objectives (SCOs). Sample result summary tables are provided as Attachment B and the full analytical lab reports are provided as Attachment D.



Work zone real-time monitoring for VOCs and particulates (i.e., dust) was conducted during test pit excavation activities. No VOC or particulate levels above background were reported due to Work Plan activities. Test pit excavation materials were also visually assessed for compliance and field screened with a photo-ionization detector (PID). No elevated PID readings were recorded during the sampling event. A photographic log of the test pits are provided as Attachment C.

3.0 Conclusions

Based on PS&S review of the Work Plan results, the non-compliant materials representative of TP-20 have been delineated. With NYSDEC concurrence, PS&S will proceed with off-site disposal of TP-20 representative materials. Prior to off-site disposal, appropriate documentation (e.g., disposal facility acceptance letter) will be provided to NYSDEC for review and approval.

PS&S appreciates your review of this Report. Should you have any questions or require additional information, please contact me at 914-226-3722 or at scaporizzo@psands.com.

Very truly yours,

Scott P. Caporizzo, E.I.T.
PAULUS, SOKOLOWSKI AND SARTOR ENGINEERING, PC

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

August 10, 2018: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

TCLP Semivolatiles

The WG1144032-2/-3 LCS/LCSD recoveries, associated with L1830036-11, are below the acceptance criteria for pyridine (1%/6%); however, it has been identified as a "difficult" analyte. The results of the associated sample are reported.

Total Metals

L1830036-11: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

Cyanide, Total

The WG1143080-3 LCSD recovery (79%), associated with L1830036-11, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample¿s toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER BICC	**Lab Number:**	L1830036
Project Number:	056970009	**Report Date:**	08/10/18

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Good afternoon Matt,

Attached for your review is the Existing Fill TP-20 Delineation Sampling Work Plan (Work Plan) for the Former BICC Cables Site (NYSDEC Site No. C360051). As discussed, this Work Plan details the proposed scope of work to perform SVOC delineation sampling at test pit location TP-20. Please refer to the attached Work Plan for additional information.

Please let me know if you have any questions/comments. The Extell team plans to proceed with the Work Plan following NYSDEC approval.

Regards,
Scott Caporizzo, E.I.T.

RE: *Former BICC Cables Site (Extell Waterfront Development)*
One Point Street
Yonkers, New York, 10701
BCP Site No. C360051
Existing Fill TP-20 Delineation Sampling Work Plan

Dear Mr. Hubicki,

1.0 Introduction

On behalf of Extell Waterfront Development, LLC (Extell), Paulus, Sokolowski and Sartor Engineering, PC (PS&S) has prepared this Existing Fill TP-20 Delineation Sampling Work Plan (Work Plan) to perform SVOC delineation sampling at test pit location TP-20. As summarized in the Existing Fill Sampling Report, dated May 25, 2018, a composite sample collected at TP-20 reported SVOCs which exceeded the lesser of the New York State Restricted Residential Use Soil Cleanup Objectives (SCOs) or Protection of Groundwater SCOs (the applicable regulatory criteria for imported fill (6 NYCRR 375-6.7(d)(1)(b)), as identified in the Site's SMP). PS&S proposes to perform delineation sampling as detailed below.

2.0 Existing Fill TP-20 Delineation Sampling Work Plan

The Existing Fill Sample Location Map (Attachment A) depicts the proposed TP-20 delineation sample locations. Test pit excavation sampling is proposed at 5 foot off-sets (to the north, south, west, and east) from the original TP-20 sample location. A composite sample will be collected across the vertical profile of each test pit as the excavation is extended from the current Site grade to the top of the existing asphalt pavement cover system. Three to five discrete samples collected within each test pit will comprise a composite sample for that test pit. The composite samples will be submitted to an ELAP-certified laboratory and analyzed for SVOCs only, as previously confirmed with NYSDEC.

In the event delineation test pit excavations exhibit field indicators (visual, odor or PID readings) of contamination, additional step-out test pit locations, in 5 foot off-set increments, will be conducted, and samples will be collected, to the extent practicable, in an effort to obtain compliant delineation samples. In addition, if timing permits, additional step-out test pits will be conducted, and samples will be collected. These samples will be retained in the

1 Larkin Plaza
2nd Floor
Yonkers, NY 10701

t. 914.509.8600

www.psands.com

lab and analyzed in the event a 5-foot step-out delineation sample reports non-compliant SVOC concentrations and/or as requested by NYSDEC.

During test pit excavation activities, work zone real-time monitoring for VOCs and particulates (i.e., dust) will be conducted. Test pit excavation materials will also be visually assessed for compliance and field screened with a photo-ionization detector (PID). Any fill materials displaying visual or olfactory signs of contamination during the test pit investigation will be segregated for off-site disposal. Further, any observed soil materials containing elevated levels (i.e., greater than trace amounts) of brick, glass, or other miscellaneous debris content will be segregated for off-site disposal.

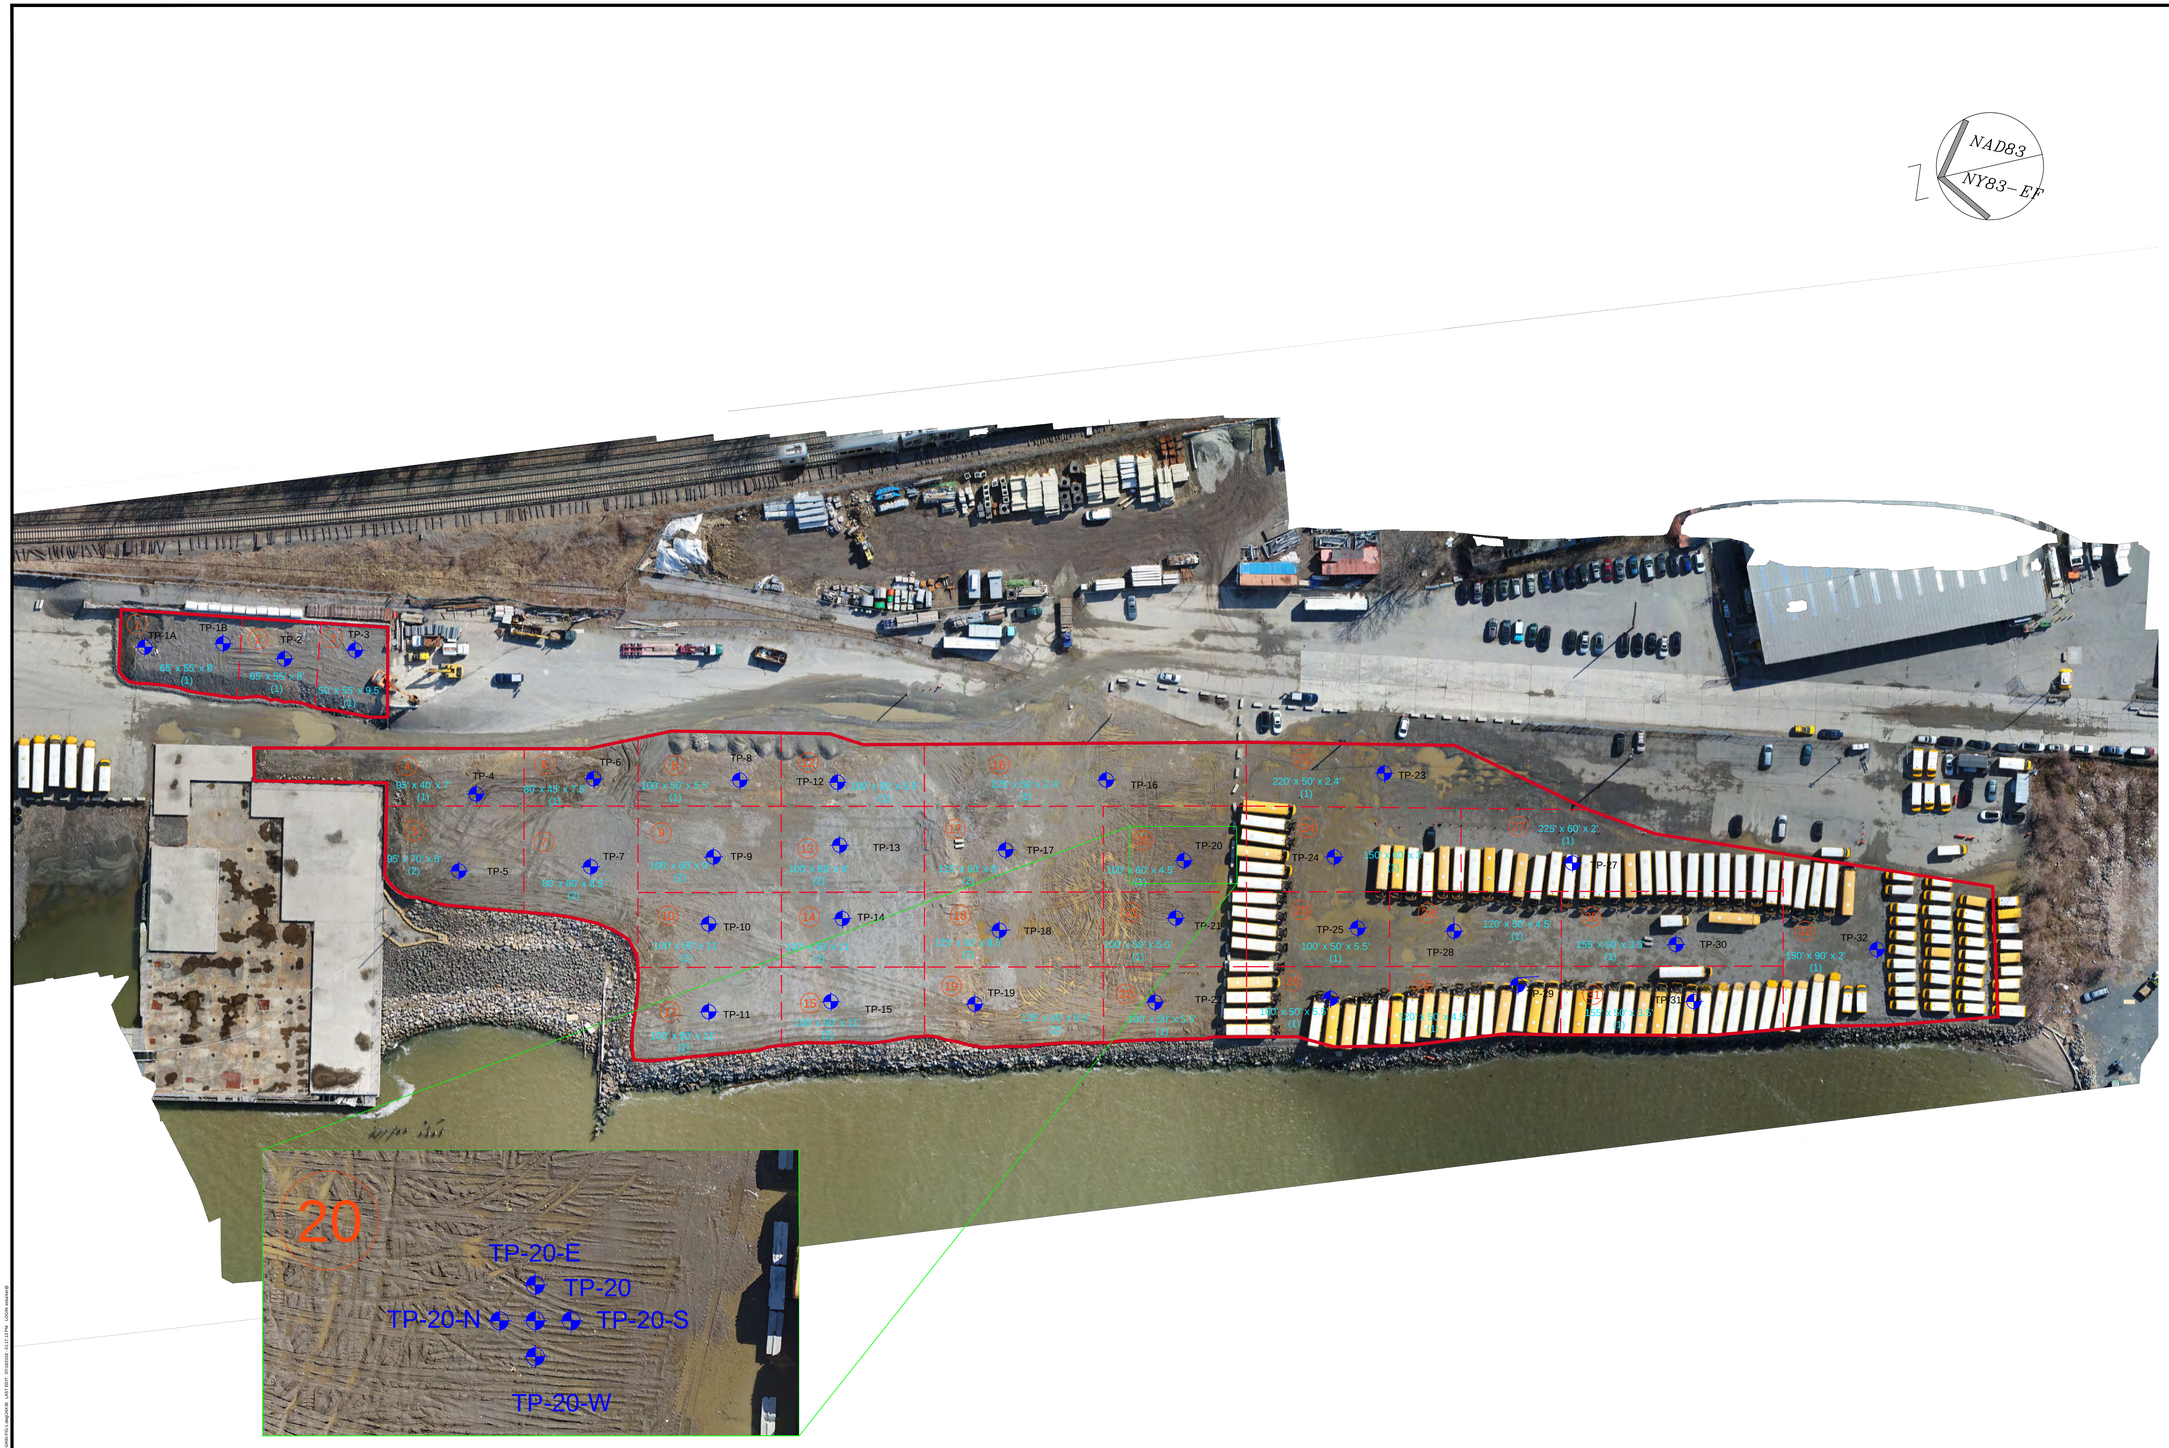
Sample results will be compared to the lesser of Restricted Residential and Protection of Groundwater Soil Cleanup Objectives (SCO), which is the allowable constituent levels for imported fill, as identified in the Site's SMP.

3.0 Waste Characterization Sampling

As an effort to expedite the transportation and disposal of identified non-compliant materials, a waste characterization sample will be collected during test pit excavation delineation sampling efforts. It is assumed that the materials will be characterized as non-hazardous, therefore, the waste characterization sample will be collected to meet sampling criteria requirements of typical disposal facilities for non-hazardous soil materials.

4.0 Reporting

PS&S will prepare a TP-20 delineation sampling letter report which will document visual (e.g., photolog) and analytical results of this Work Plan. The report will also document the materials which have been identified as non-compliant and are proposed for off-site disposal. Once a disposal facility is selected, appropriate documentation (e.g., facility acceptance letter) will be provided to NYSDEC for review and approval.



PS&S appreciates your review of this Work Plan. Should you have any questions or require additional information, please contact me at 914-226-3722 or at scaporizzo@psands.com.

Very truly yours,

Scott P. Caporizzo, E.I.T.
PAULUS, SOKOLOWSKI AND SARTOR ENGINEERING, PC

Subject: RE: Former BICC Cables Site (NYSDEC Site No. C360051): Existing Fill Sampling Report

Scott – We've reviewed the soil sampling results and photographs from the Existing Fill Report for C360051 BICC Cables. We agree that area test pit 20 requires either further investigation or removal based on number of exceedances of SVOCs above restricted residential & groundwater soil cleanup objectives for the site. No further investigation of test pit area 4 for the one exceedance of TCE.

Thank You
Matt

Good afternoon Matt,

Attached for NYSDEC review is the Former BICC Cables Site (NYSDEC Site No. C360051) Existing Fill Sampling Report which details the results of the NYSDEC-approved Existing Fill Sampling Work Plan, dated April 13, 2018. We appreciate your review of the attached information. Please feel free to contact me with any questions.

Enjoy your holiday weekend.

Scott Caporizzo

RE: *Former BICC Cables Site (Extell Waterfront Development)*
One Point Street
Yonkers, New York, 10701
BCP Site No. C360051
Existing Fill Sampling Report

Dear Mr. Hubicki,

1.0 Introduction

On behalf of Extell Waterfront Development, LLC (Extell), Paulus, Sokolowski and Sartor Engineering, PC (PS&S) has prepared this Existing Fill Sampling Letter Report (Letter Report) detailing the sampling and analysis of approximately 43,000 cubic yards (CY) of existing fill materials placed above the existing asphalt pavement cover system at the above referenced site (the Site). Sampling and analysis was conducted in accordance with the NYSDEC-approved Existing Fill Sampling Work Plan, dated April 13, 2018 (Work Plan).

2.0 Background

As detailed in the Work Plan, beginning in 2015, fill was imported to the Site for elevation grading purposes above the existing asphalt pavement cover system. As documented in Final Engineering Report (FER), dated May 8, 2017, 10,000 cubic yards of Central Park Avenue Project (CPAP) source materials were approved by NYSDEC for import to the Site. In early 2017, an additional 3,000 cubic yards of CPAP source materials were approved by NYSDEC for import to the Site.

As discussed with NYSDEC, PS&S observed in February 2018 that fill had been delivered and placed at the Site above the asphalt pavement cover system for which source location documentation was not submitted to NYSDEC for review and approval prior to import to the Site.

In March 2018, PS&S conducted a topographic survey of the observed limits of fill at the Site above the asphalt pavement cover system. This March 2018 topographic survey was used to estimate the approximate amount of fill placed at the Site above the asphalt pavement cover system by comparing current topographic conditions to the Site's topographic mapping

1 Larkin Plaza
2nd Floor
Yonkers, NY 10701

t. 914.509.8600

www.psands.com

prepared by Ward Carpenter in December 2011 (i.e., prior to fill operations above the asphalt pavement cover system). Based on a comparison of the two surveys, it is estimated an approximate 43,000 cubic yard volume differential exists between the two topographic surfaces.

PS&S submitted a Work Plan to the New York State Department of Environmental Conservation (NYSDEC) to characterize the estimated 43,000 cubic yards of fill placed at the Site above the existing asphalt pavement cover system. The Work Plan was approved by NYSDEC on April 13, 2018. The results of this characterization are detailed below.

3.0 Existing Fill Sampling Results

PS&S conducted the Work Plan from April 30, 2018 to May 4, 2018. The Existing Fill Sample Location Map (Attachment A) depicts the Site work areas where fill was previously placed above the asphalt pavement cover separated into 21 approximately 1,000 cubic yard grid units and 11 approximately 2,000 cubic yard grid units (32 grid units in total).

Test pits, approximately 6 feet long by 3 feet wide, were conducted across the vertical profile of each grid unit, with grab and composite sample frequency established using Table 5.4(e)10 of DER-10. The table presented in Attachment B summarizes for each grid: grid dimensions and volume, and sample interval and type. Based on in-field direction from the NYSDEC, test pit TP-19 was relocated (approximately 10 feet to the north of the original proposed location) to address an area of fill materials that exhibited signs of increased debris at the surface. These changes are reflected in Attachment A – Existing Fill Sample Location Map.

Grab samples and composite samples were collected across the vertical profile as the test pit excavation was extended from the current Site grade to the top of the existing asphalt pavement cover system. Three to five discrete samples collected within each test pit comprised a composite sample for that test pit. Sample locations were biased to any locations exhibiting field indicators (visual, odor or PID readings) of greatest contamination, if any. Test Pit Logs are provided as Attachment D and a photographic log is provided at Attachment E.

Grab samples were analyzed for VOCs and composite samples were analyzed for SVOCs, PCBs, Pesticides, Herbicides, and Metals as specified in DER-10, Appendix 5. Sample results were compared to the lesser of the New York State Restricted Residential Use Soil Cleanup Objectives (SCOs) or Protection of Groundwater SCOs, which is the applicable regulatory criteria for imported fill (6 NYCRR 375-6.7(d)(1)(b)), as identified in the Site's SMP. Sample results are detailed in Section 3.1.

3.1 Sample Results Summary

All sample results met the lower of Restricted Residential Use or Protection of Groundwater Soil Cleanup Objectives (SCOs) with the exception of the following.

VOCs

- 2-Butanone detected at 0.13 parts per million (ppm) in sample TP-31_Grab-1; the Protection of Groundwater SCO for this analyte is 0.12 ppm;
- Trichloroethene (TCE) detected at 1.6 parts per million (ppm) in sample TP-4_Grab-1; the Protection of Groundwater SCO for this analyte is 0.47 ppm;

These very low detections above the noted Protection of Groundwater SCOs are considered to be *de minimis* and not indicative of source contamination. Further, acetone was also detected above the Protection of Groundwater SCO (0.05 ppm) in several samples with the highest reported concentration of 0.15 ppm. Acetone is a common artifact of laboratory equipment and at these low concentrations is presumed to be not representative of Source contamination.

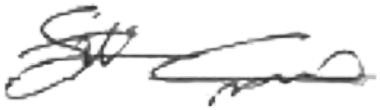
SVOCs

Soil was found to exceed allowable constituent levels for SVOCs in the composite sample for only one location, TP-20, as noted below.

- Benzo(a)anthracene detected at 24 parts per million (ppm); the Protection of Groundwater and Restricted Residential SCO for this analyte is 1 ppm;
- Benzo(a)pyrene detected at 19 ppm; the Restricted Residential SCO for this analyte is 1 ppm;
- Benzo(b)fluoranthene detected at 23 ppm; the Restricted Residential SCO for this analyte is 1 ppm and the Protection of Groundwater SCO is 1.7 ppm;
- Benzo(k)fluoranthene detected at 8 parts per million (ppm); the Protection of Groundwater SCO for this analyte is 1.7 ppm and the Restricted Residential SCO is 3.9 ppm;
- Chrysene detected at 21 ppm; the Protection of Groundwater SCO for this analyte is 1 ppm and the Restricted Residential SCO is 3.9 ppm;
- Dibenzo(a,h)anthracene detected at 2.5 ppm; the Restricted Residential SCO for this analyte is 0.33 ppm;
- Indeno(1,2,3-cd)pyrene detected at 12 ppm; the Restricted Residential SCO for this analyte is 0.5 ppm and the Protection of Groundwater SCO is 8.2 ppm;
- 3-Methylphenol/4-Methylphenol detected at 0.4 ppm; the Protection of Groundwater SCO for this analyte is 0.33 ppm; and
- Naphthalene detected at 14 ppm; the Protection of Groundwater SCO for this analyte is 12 ppm.

Work zone real-time monitoring for VOCs and particulates (i.e., dust) was conducted during test pit excavation activities. No VOC or particulate levels above background were reported due to Work Plan activities. Test pit excavation materials were also visually assessed for compliance and field screened with a photo-ionization detector (PID). No elevated PID

readings were recorded during the sampling event. PID readings can be found on the Test Pit Logs (Attachment D).



Sample result summary tables are provided as Attachment C and the full analytical lab reports are provided as Attachment F.

4.0 Conclusions and Recommendations

Based on PS&S review of the Work Plan results, it is proposed that the materials representative of TP-20 be further delineated for removal and off-site disposal. All other fill material on Site above the asphalt pavement were observed to be in compliance with criteria for backfill from off-site sources as detailed in Section A-10 of the EWP (Attachment 13 of the SMP). As such, it is recommended that NYSDEC approve use of this fill material on Site above the asphalt pavement cover system.

PS&S appreciates your review of this Report. Should you have any questions or require additional information, please contact me at 914-226-3722 or at scaporizzo@psands.com.

Very truly yours,

Scott P. Caporizzo, E.I.T.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.
2. R1 Lab IDs correspond to resamples of sample results. Only resampled data is displayed.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.
2. R1 Lab IDs correspond to resamples of sample results. Only resampled data is displayed.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.
2. R1 Lab IDs correspond to resamples of sample results. Only resampled data is displayed.

Total SVOCs			0.76	-	-	5.869	-	-

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.
2. R1 Lab IDs correspond to resamples of sample results. Only resampled data is displayed.

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

Legend:
ND - Not Detected
NA - Not Applicable
mg/kg - milligram per kilogram
Q - Data Qualifier
J - Estimated Value (below the RI, above the MDL)
E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of
I - The lower value for the two columns has been reported due to obvious interference.

P - The RPD between the results for the two columns exceeds the method-specified criteria.
MDL - Method Detection Limit
Bold and Highlighted - Exceedance of the NY-DER10-RRU
Shaded Gray - Reporting Limit exceeds NY-DER10-RRU

Notes:

1. NY-DER10-RRU: New York DER-10 Restricted Residential Use Allowable Constituent Levels for Imported Fill & Soil Criteria per DER-10 Technical Guidance for Site Investigation & Remediation issued May 3, 2010.

Project Name: FORMER BICC
Project Number: 056970006

Lab Number: L1815263
Report Date: 05/07/18

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

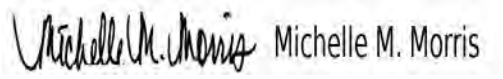
The project number was specified by the client.

Volatile Organics

The WG1113030-5 Method Blank, associated with L1815263-22, -25 and -26, has a concentration above the reporting limit for bromomethane. Since the samples were non-detect to the RL for this target analyte, no further actions were taken. The results of the original analysis are reported.

The WG1113184-5 Method Blank, associated with L1815263-23, has a concentration above the reporting limit for bromomethane. Since the sample was non-detect to the RL for this target analyte, no further actions were taken. The results of the original analysis are reported.

Total Metals



L1815263-03, -06, -09, -12, -15, -18, -21, -24 and -27: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1111986-1 Method Blank, associated with L1815263-03, -06, -09, -12, -15, -18, -21, -24 and -27, has a concentration above the reporting limit for Iron. Since the associated sample concentrations are greater than 10x the blank concentration for this analyte, no corrective action is required.

Cyanide, Total

The WG1111398-2/-3 LCS/LCSD recoveries (72%/47%), associated with L1815263-03, -06, -09, -12, -15, -18, -21, -24 and -27, are outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported. In addition, the WG1111398-2/-3 LCS/LCSD RPD (41%) is above the acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Michelle M. Morris

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER BICC	**Lab Number:**	L1815263
Project Number:	056970006	**Report Date:**	05/07/18

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water

Project Name: FORMER BICC
Project Number: 056970006

Lab Number: L1815546
Report Date: 05/08/18

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

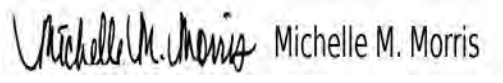
Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Total Metals

L1815546-05, -09, -12, -15, -18, -21, -24, -27, -30, -33, -36, and -39: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.



Cyanide, Total

The WG1111686-2/-3 LCS/LCSD recoveries (42%/57%), associated with L1815546-05, are outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1111754-3 LCSD recovery (79%), associated with L1815546-09 and -12, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1111815-2/-3 LCS/LCSD recoveries (79%/78%), associated with L1815546-15, -18, -21, -24, -27, -30, -33, -36, and -39, are outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Michelle M. Morris

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER BICC	**Lab Number:**	L1815546
Project Number:	056970006	**Report Date:**	05/08/18

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N**, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9221E, SM9222D.**

Mansfield Facility:

Drinking Water
EPA 200.7: Al, Ba, Be, Cd, Cr, Cu, Mn, Ni, Na, Ag, Ca, Zn. **EPA 200.8:** Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. **EPA 245.1** Hg.
EPA 522.

Non-Potable Water
EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.
EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.
EPA 245.1 Hg.
SM2340B

Project Name: FORMER BICC
Project Number: 056970006

Lab Number: L1815750
Report Date: 05/09/18

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Number:	056970006	**Report Date:**	05/09/18

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L1815750-01, -05, and -34: The surrogate recovery for 1,2-dichloroethane-d4 (151%, 138%, and 132%, respectively) is outside the acceptance criteria; however, since the sample was non-detect for all target analytes associated with this surrogate, re-analysis was not required.

L1815750-45: The Field Blank has a result for acetone present above the reporting limit. The sample was verified as being labeled correctly by the laboratory and the previous analysis showed there was no potential for carry over.

Total Metals

L1815750-03, -06, -09, -12, -15, -18, -21, -24, -27, -30, -33, -36, -39, -42, and -44: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1112090-3 MS recovery, performed on L1815750-03, is outside the acceptance criteria for mercury (176%). A post digestion spike was performed and was within acceptance criteria.

The WG1112411-3 MS recoveries, performed on L1815750-03, are outside the acceptance criteria for copper (71%), and lead (16%). A post digestion spike was performed and yielded an unacceptable recovery for lead (74%); all other compounds were within acceptance criteria. This has been attributed to sample matrix.

The WG1112411-3 MS recoveries for iron (0%), and manganese (71%), performed on L1815750-03, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1112810-3 MS recovery for calcium (40%), performed on L1815750-03, does not apply because the sample concentration is greater than four times the spike amount added.

The WG1112411-4 Laboratory Duplicate RPDs for arsenic (21%) and lead (68%), performed on L1815750-03, are outside the acceptance criteria. The elevated RPDs have been attributed to the non-homogeneous nature of the native sample.

Project Name: FORMER BICC
Project Number: 056970006
Lab Number: L1815750
Report Date: 05/09/18

Case Narrative (continued)

The WG1112810-4 Laboratory Duplicate RPD for calcium (48%), performed on L1815750-03, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

Cyanide, Total

The WG1112366-2/-3 LCS/LCSD recoveries (54%/67%), associated with L1815750-03, -06, -09, -12, -15, -18, -21, -24, -27, and -30, are outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1112367-2/-3 LCS/LCSD recoveries (53%/66%), associated with L1815750-33, -36, -39, -42, and -44, are outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

Hexavalent Chromium

The WG1112451-2 LCS recovery (79%), associated with L1815750-03, -06, -09, -12, -15, -18, -21, -24, -27, and -30, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1112452-2 LCS recovery (79%), associated with L1815750-33, -36, -39, -42, and -44, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER BICC	**Lab Number:**	L1815750
Project Number:	056970006	**Report Date:**	05/09/18

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N**, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.**

Project Name: FORMER BICC
Project Number: 056970006

Lab Number: L1815928
Report Date: 05/10/18

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: 056970006
Lab Number: L1815928
Report Date: 05/10/18

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Total Metals

L1815928-03, -06, -09, -12, -15 and -18: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1113817-3 MS recoveries for aluminum (1120%), iron (3880%), magnesium (179%), and potassium (198%), performed on L1815928-03, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1113817-3 MS recoveries, performed on L1815928-03, are outside the acceptance criteria for calcium (215%), copper (139%), manganese (196%), and thallium (72%). A post digestion spike was performed and was within acceptance criteria.

The WG1113817-4 Laboratory Duplicate RPDs for cobalt (24%), iron (24%) and nickel (26%), performed on L1815928-03, are outside the acceptance criteria. The elevated RPDs have been attributed to the non-homogeneous nature of the native sample.

Cyanide, Total

The WG1112689-2 LCS recovery (51%), associated with L1815928-03, -06, -09, -12, -15 and -18, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1112689-2/-3 LCS/LCSD RPD (50%), associated with L1815928-03, -06, -09, -12, -15 and -18, are above the acceptance criteria.

Hexavalent Chromium

The WG1112867-2 LCS recovery (76%), associated with L1815928-03, -06, -09, -12, -15 and -18, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER BICC	**Lab Number:**	L1815928
Project Number:	056970006	**Report Date:**	05/10/18

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N**, EPA 351.1, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9221E, SM9222D.**

Mansfield Facility:

Drinking Water
EPA 200.7: Al, Ba, Be, Cd, Cr, Cu, Mn, Ni, Na, Ag, Ca, Zn. **EPA 200.8:** Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. **EPA 245.1** Hg.
EPA 522.

Non-Potable Water
EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.
EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn.
EPA 245.1 Hg.
SM2340B

Project Name: FORMER BICC
Project Number: 056970006

Lab Number: L1816155
Report Date: 05/11/18

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Report Date: 05/11/18

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Pesticides

L1816155-13:The Field Blank has a concentration above the reporting limit for trans-Chlordane. Since the associated field sample concentration is greater than 10x the concentration for this analyte, no corrective action is required.

Total Metals

L1816155-03, -06, -09 and -11: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

L1816155-13: The Field Blank has a concentration above the reporting limit for Calcium. The results were confirmed.

Cyanide, Total

The WG1113153-2/-3 LCS/LCSD recoveries (27%/62%), associated with L1816155-03,-06,-09, and -11, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported. In addition, the WG1113153-2/-3 LCS/LCSD RPD (83%), is above the acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature:  Cristin Walker

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name:	FORMER BICC	**Lab Number:**	L1816155
Project Number:	056970006	**Report Date:**	05/11/18

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 300: DW: Bromide
EPA 6860: SCM: Perchlorate
EPA 9010: NPW and SCM: Amenable Cyanide Distillation
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Subject: RE: Former BICC Cables Site (NYSDEC Site No. C360051): Existing Fill Sampling Plan

Scott – We've reviewed the sampling plan for the existing fill at BICC Cable Site C360051. This existing fill sampling plan is approved, and we are able to meet on-site if you are ready to start next week. As discussed, Scott Deyette will be down in Yonkers, and I'm available Tuesday, Thurs, or Friday to meet on-site.

Thanks
Matt

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Good morning Matthew,

Attached for your review is the Existing Fill Sampling Work Plan for the Former BICC Cables Site (NYSDEC Site No. C360051). As discussed, this Work Plan details the proposed scope of work for evaluating the observed fill placed above the asphalt cover system at the Site. Please refer to the attached Work Plan for additional information.

Feel free to give me a call if you have any questions or comments.

Regards,
Scott Caporizzo, E.I.T.

RE: *Former BICC Cables Site (Extell Waterfront Development)*
One Point Street
Yonkers, New York, 10701
BCP Site No. C360051
Existing Fill Sampling Work Plan

Dear Mr. Hubicki,

1.0 Introduction

On behalf of Extell Waterfront Development, LLC (Extell), Paulus, Sokolowski and Sartor Engineering, PC (PS&S) has prepared this Existing Fill Sampling Work Plan (Work Plan) to characterize the fill placed at the Site above the existing asphalt pavement cover system for compliance with criteria for Backfill from Off-site Sources as detailed in Section A-10 of the Excavation Work Plan (EWP) [Attachment 13 of the Site Management Plan (SMP)].

2.0 Background

Beginning in 2015, fill was imported to the Site for elevation grading purposes above the existing asphalt pavement cover system. As documented in Final Engineering Report (FER), dated May 8, 2017, 10,000 cubic yards of Central Park Avenue Project (CPAP) source materials were approved by NYSDEC for import to the Site. In early 2017, an additional 3,000 cubic yards of CPAP source materials were approved by NYSDEC for import to the Site.

As discussed with NYSDEC, PS&S observed in February 2018 that fill had been delivered and placed at the Site above the asphalt pavement cover system for which source location(s) documentation was not submitted to NYSDEC for review and approval prior to import to the Site.

In March 2018, PS&S conducted a topographic survey of the observed limits of fill at the Site above the asphalt pavement cover system, as shown in Attachment A. This March 2018 topographic survey was used to estimate the approximate amount of fill placed at the Site above the asphalt pavement cover system by comparing current topographic conditions to the Site's topographic mapping prepared by Ward Carpenter in December 2011 (i.e., prior

1 Larkin Plaza
2nd Floor
Yonkers, NY 10701

t. 914.509.8600

www.psands.com

to fill operations above the asphalt pavement cover system). Based on a comparison of the two surveys, it is estimated an approximate 43,000 cubic yard volume differential exists between the two topographic surfaces.

3.0 Existing Fill Sampling Work Plan

PS&S is proposing to characterize the estimated 43,000 cubic yards of fill placed at the Site above the existing asphalt pavement cover system, using the protocol described below in order to document compliance with criteria for Backfill from Off-site Sources as detailed in Section A-10 of the EWP (Attachment 13 of the SMP).

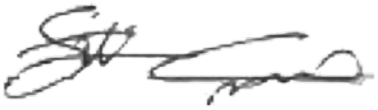
As outlined in the Site's EWP, Section A-10, Backfill from Off-Site Source's, the imported soil will be evaluated in general compliance with standards established in DER-10. Section 5.4(e)10 "Sampling fill imported to a Site".

The Existing Fill Sample Location Map (Attachment A) depicts the area of the Site where fill was placed above the asphalt pavement cover separated into 21 approximately 1,000 cubic yard grid units and 11 approximately 2,000 cubic yard grid units (32 grid units in total). Test pit excavation sampling is proposed within each grid unit, with grab and composite sample frequency established using Table 5.4(e)10 of DER-10. The table presented in Attachment B summarizes for each grid: grid dimensions and volume, and sample interval and type.

Grab samples and composite samples will be collected across the vertical profile as test pit excavation is extended from the current Site grade to the top of the existing asphalt pavement cover system. Three to five discrete samples collected within a test pit will comprise a composite sample. Sample locations will be biased to the suspected location of greatest contamination, if any.

Grab samples will be analyzed for VOCs and composite samples will be analyzed SVOCs, PCBs, Pesticides, Herbicides and Metals identified in in DER-10, Appendix 5.

As discussed with NYSDEC, during test pit excavation activities, work zone real-time monitoring for VOCs and particulates (i.e., dust) will be conducted. Test pit excavation materials will also be visually assessed for compliance and field screened with a photo-ionization detector (PID). Any fill materials displaying visual or olfactory signs of contamination during the test pit investigation will be segregated for off-site disposal. Further, any observed soil materials containing elevated levels (i.e., greater than trace amounts) of brick, glass, or other miscellaneous debris content will be segregated for off-site disposal.



Sample results will be compared to the lesser of Restricted Residential and Protection of Groundwater Soil Cleanup Objectives (SCO), which is the allowable constituent levels for imported fill, as identified in the Site's SMP.

3.0 Reporting

PS&S will prepare a report which will document visual (e.g., photolog) and analytical results of the Work Plan. The report will also document materials which are proposed for NYSDEC approval to remain on-site and, if any, materials which have been identified as non-compliant and are proposed for further delineation and/or off-site disposal.

PS&S appreciates your review of this Work Plan. Should you have any questions or require additional information, please contact me at 914-226-3722 or at scaporizzo@psands.com.

Very truly yours,

Scott P. Caporizzo, E.I.T.
