

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

WHITE PLAINS PORTFOLIO 55 & 77 West Post Road White Plains, NY 10606

March 29, 2010 Partner Project No. 10-66279.2

Prepared for

NOLAN AND HELLER, LLP 39 North Pearl Street, 3rd Floor Albany, New York 12207

March 29, 2010

Mr. Marco Koshykar Nolan and Heller, LLP 39 North Pearl Street, 3rd Floor Albany, New York 12207

Subject: Phase I Environmental Site Assessment 55 & 77 West Post Road White Plains, NY 10606 Partner Project No. 10-66279.2

Dear Mr. Koshykar:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in general conformance with the scope and limitations as detailed in the ASTM Practice E1527-05 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to Nolan and Heller, LLP. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (201) 984-3649.

Sincerely,

Sent Valz

Sean Daly Senior Project Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-05, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Nolan and Heller, LLP for the property located at 55 & 77 West Post Road in the City of White Plains, Westchester County, New York (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Nolan and Heller, LLP with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the south side of West Post Road within a mixed commercial and residential area of White Plains, New York. Please refer to the table below for further description of the subject property:

Address:	55 & 77 West Post Road					
Historical/Additional Address(es):	45-59 West Post Road and 61-77 West Post Road,					
	respectively					
Assessor's Parcel Number (APN):	130.34-5-4 and 130.34-5-3, respectively					
Nature of Use:	Vacant commercial property					
Number of Buildings:	Three					
Number of Floors:	Single- and two-story					
Type of Construction:	Masonry and wood					
Building Square Footage (SF):	55 West Post Road - 7,200 SF plus a basement					
	77 West Post Road - 15,176 SF and approx. 500 SF					
Land Acreage (Ac):	55 West Post Road - 0.90 Ac (39,204 SF)					
	77 West Post Road - 0.87 Ac (37,897 SF)					
Date of Construction:	55 West Post Road - 1941					
	77 West Post Road - 1942 and 1960					
Current Tenants:	Not applicable					

The subject property comprises of two separate, but contiguous parcels. One parcel known as 55 West Post Road is developed with one single-story rectangular structure with a basement which is currently vacant. The parcel at 77 West Post Road is developed with a two-story rectangular building, the lower level of which is below grade at West Post Road, and a small single-story structure, both of which are also currently vacant. The buildings were formerly operated as an auto repair facility, and an auto sales showroom with a detail/wash area. No operations are currently conducted on-site, however, some equipment formerly associated with the auto

Phase I Environmental Site Assessment Project No. 10-66279.2 March 29, 2010 Page i

business remains. In addition to the current structures, the subject property is also improved with asphalt-paved parking areas and minimal landscaping.

According to available historical sources, the subject property was developed with residential buildings and saloons as early as 1905, and developed with the current commercial structures in 1941 and 1942, with the small building constructed in 1960. Various commercial tenants including a grocery store and bowling alley have occupied the subject property from the 1940s to 1960s. The subject property has been utilized for auto sales and repair purposes from the 1970s to 2009.

The immediately surrounding properties consist of West Post Road to the north followed by a former refrigeration company, a supermarket, a multi-family residential building with a street level restaurant and the Calvary Baptist Church with associated parking areas; a lot used for parking purposes followed by Maple Avenue and residential buildings to the south; an auto sales and repair building with associated parking areas to the east; and a parcel used for auto sales with a small office to the west followed by two residential buildings and Brady Place.

According to a Phase II Environmental Site Assessment Report conducted by Woodard and Curran in 2008, the depth of groundwater in the vicinity of the subject property is inferred to be present at approximately seven feet below ground surface (bgs). Topographic map interpretation indicates that the direction of groundwater flow in the vicinity of the subject property is most likely to the northeast.

Findings

A recognized environmental condition (REC) refers to the presence or likely presence of any hazardous substance or petroleum product on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term REC includes hazardous substances and petroleum products even under conditions that might be in compliance with laws. The term is not intended to include "de minimis" conditions that do not present a threat to human health and/or the environment and that would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies. The following was identified during the course of this assessment:

• According to the historical review, the subject property has been utilized for auto sales and repair purposes since the 1970s. Auto repair facilities typically utilize petroleum products contained in above and below ground tanks, utilize hazardous materials such as solvents, operate hydraulic lift systems, and oil/water separator systems with below ground components. Partner reviewed a prior subsurface investigation report conducted for the subject property in 2007, which indicated slightly elevated levels of various contaminants in soil and groundwater at the subject property, including cis-1,2-Dichloroethane, Trichloroethylene (TCE), 2,4,6-Trichlorophenol and MTBE, which are potentially a result of on-site auto repair activities. The presence of elevated levels of contaminants in soil and groundwater above New York

State Department of Environmental Conservation (NYSDEC)'s Recommended Soil Cleanup Objectives as defined by the NYSDEC's Technical and Administrative Guidance Memorandum (TAGM) 4046 guidance values, and the NYSDEC groundwater standards, respectively, represents a REC for the subject property.

- The subject property is listed with two NY Spills listings within the regulatory database (Spill Numbers 0901783 and 0901804). Spill Number 0901783 pertains the removal of a 1,000-gallon underground storage tank (UST) on May 13, 2009. Soil contamination was evidenced during the tank removal performed by Royal Environmental, and cleanup is currently listed as pending. Spill Number 0901804 pertains to the removal of an unregistered tank which was found and removed on May 14, 2009. An unknown amount of diesel fuel was reported as spilled associated with this tank removal, and the site is listed as being in 'enforcement'. Partner notes that during the current site reconnaissance, the areas of tank excavations had been back-filled and the contaminated soil that was removed from the excavations appeared to be stock-piled on the south eastern portion of the subject property in the parking area adjacent to Maple Avenue. Additionally, several 55-gallon drums of baled waters from an installed groundwater monitoring well were identified. Given that these two Spills listings are listed as active, the presence of stock-piled soils and a groundwater monitoring well, and the lack of information provided to date, these tank removals and associated NY Spills listings are considered to be RECs for which further action and investigation is warranted.
- There appears to be discrepancies in information with respect to the number and type of current and former USTs located at the subject property, as discussed further below:

One vent pipe was observed at the rear of 55 West Post Road. The vent pipe was located adjacent to the building in the vicinity of a recent excavation and Partner was informed that the vent pipe was associated with a former 1,000-gallon fuel oil UST that was removed in May 2009 (same tank as associated Spill #0901783 above). UST closure records have not been provided for review.

An additional excavation was observed in the same area at 55 West Post Road during the site reconnaissance. According to the site manager, there were a total of three tanks in the same general area comprising of one 1,000-gallon fuel oil tank (discussed above), one 550-gallon waste oil tank, and one 4,000-gallon diesel tank. These tanks were all removed in May 2009. However, Partner notes that the 4,000-gallon diesel oil tank did not appear to have been registered with the Westchester County Department of Health. Given that one of the USTs was not registered appropriately, this indicates the potential for additional on-site USTs in this area. The potential for additional USTs represents a REC for the subject property for which further actions are required.

With respect to 77 West Post Road, Partner identified a vent pipe at the rear of the building adjacent to the boiler room. Partner was informed that this former fuel oil tank was removed from the subject property when the building was converted to gas in 1983; however, removal documentation has not been provided for review. Additionally, a prior

subsurface investigation report conducted in 2007 indicated that there were two USTs located at 77 West Post Road in the same general area as the fuel oil tank which was reportedly removed in 1983. Therefore, the information contained within the prior report seems to contradict the information provided by the site manager. Based on the lack of documentation with respect to the UST closure(s), this represents a REC and Partner recommends that additional investigations be performed in this area.

- A below ground oil/water separator is present at 77 West Post Road, in the vicinity of the entrance to one of the garage bays at the rear of the building. According to the Site Manager, the oil/water separator has always been maintained appropriately and cleaned out as required; however, Partner was not provided with any documents for review. The presence of an inground oil-water separator where the integrity of the underground vessel is unknown, represents a potential REC for the subject property.
- Additionally, Partner identified an iron plate in the rear parking area located at 77 West Post Road. It is unknown at this time what is beneath the iron plate, which represents a potential REC for which additional investigations are warranted.

A *historical recognized environmental condition (HREC)* refers to an environmental condition which would have been considered a REC in the past, but which is no longer considered a REC based on subsequent assessment or regulatory closure. The following was identified during the course of this assessment:

• According to the Westchester County Health Department, a complaint was made concerning 55 West Post Road. According to the Field Activity Report, a complaint was logged for the site (#59-09-08203) regarding a pile of dirt which smelled of gasoline. The report notes that tanks were recently removed at the site associated with two 'open' NYSDEC Spills listings. The Westchester County Health Department visited the site and stated that the dirt pile did not smell of gasoline, and no further action regarding the complaint was required. Based on the NFA status, this Westchester County Health Department complaint is considered to be a HREC for which no further action is warranted.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, require discussion. The following was identified during the course of this assessment:

- Several containers and canisters of hazardous materials and gases that are no longer required are located at 55 West Post Road. Additionally, drums of baled waters and stock-piled soils are located to the rear of the subject property.
- Staining was identified in the basement area at the northeastern corner of 55 West Post Road. It is possible that fuel oil lines leading to the boiler were present in this area, or potentially former above ground storage tanks (ASTs). However the area appeared to comprise of impermeable concrete and no floor drains were present in the vicinity. Based on this information, the staining would be considered a de minimis issue, for which regulatory action

would not be required. Stained areas should be cleaned and washed and all absorbent materials removed from the subject property by a licensed hazardous waste hauler.

- There are ten hydraulic vehicle lifts located in the repair area at 55 West Post Road. However, based on the presence of a basement beneath the repair area, the fluid reservoirs for the lifts were identified to be located in the basement and were installed on top of pouredconcrete platforms. Given that these vehicle lifts are not in-ground systems, and that none appeared to show signs of leakage during the current site reconnaissance, it is unlikely that they are considered to be RECs. Additionally, a prior report conducted by Hygienetics Environmental Services (HES) on behalf of Woodard & Curran in 2007, indicated that no PCBs were detected in hydraulic lift fluids. However, Partner notes that the oil samples from hydraulic equipment were taken from the exterior surfaces and not from the oil reservoir within. If these systems are to be decommissioned in the future, then the fluids within the reservoirs should be tested, and the lifts be removed in accordance with all applicable rules and regulations. Additional sampling at the base of the reservoirs may be necessary at that time.
- A limited asbestos survey was performed by Hygienetics Environmental Services (HES) in 2007 which summarized the asbestos and non-asbestos-containing materials at the subject property. Asbestos-containing materials include roofing components located at 55 West Post Road and pipe insulation, vinyl floor tiles and mastic, and roofing materials at 77 West Post Road. Remaining materials sampled and analyzed were confirmed to be non-asbestos containing.
- Partner identified water damage and mold growth in both structures during the current site reconnaissance. Additionally, a prior report conducted by Hygienetics Environmental Services (HES) in 2007, indicates the presence of confirmed mold growth at the subject property.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-05 of 55 & 77 West Post Road in the City of White Plains, Westchester County, New York (the "subject property"). Any exceptions to or deletions from this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

• Based on the presence of elevated levels of contaminants in soil and groundwater above New York State Department of Environmental Conservation (NYSDEC)'s Recommended Soil Cleanup Objectives as defined by the NYSDEC's Technical and Administrative Guidance Memorandum (TAGM) 4046 guidance values, and the NYSDEC groundwater standards, in addition to the historical auto repair use of the subject property, additional subsurface investigations should be conducted. The subsurface investigation should address areas where

prior contaminants were evidenced, former UST areas, in addition to sampling the vicinity of the oil/water separator and associated drains.

- Documentation pertaining to releases at the subject property and UST closures should be provided for review, to include all correspondence between the subject property owner, the environmental consultant, and the department providing regulatory oversight.
- A subsurface investigation in the form of ground-penetrating radar (GPR) should be conducted to assess the potential for additional USTs located at the subject property.
- The containers and canisters of hazardous materials and gases that are no longer in use should be removed from the subject property by a licensed hazardous waste hauler. Additionally, the drums and stock-piled soils should be removed from the subject property by the environmental contractor performing the on-site remedial activities.
- Staining was identified in the basement area at the northeastern corner of 55 West Post Road. Stained areas should be cleaned and washed and all absorbent materials removed from the subject property by a licensed hazardous waste hauler.
- There are ten hydraulic vehicle lifts located in the repair area at 55 West Post Road. If these systems are to be decommissioned in the future, then the fluids within the reservoirs should be tested, and the lifts be removed in accordance with all applicable rules and regulations. Additional sampling at the base of the reservoirs may be necessary at that time.
- Partner recommends that an Operation and Maintenance (O&M) Program be implemented in order to safely manage the asbestos-containing materials (ACMs) located at the subject property. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.
- Partner recommends that the source of water ingress be addressed at the subject property, and that all mold and water damaged finishes be removed and replaced.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Standard Practice E1527-05 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 55 & 77 West Post Road in the City of White Plains, Westchester County, New York (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E-1527-05) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property; and/or

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E-1527-05 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E 1527-05. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Nolan and Heller, LLP engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Nolan and Heller, LLP. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect,

indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-05.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past or current owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment.
- Partner was not able to document the historical use of the subject property prior to 1905, since the earliest Sanborn Fire Insurance Map depicting the subject property was dated 1905, city directories were not available prior to 1971, and aerial photographs prior to 1974 were not reasonably ascertainable. This data failure is not considered critical and does not change the conclusions of this report, as the 1905 Sanborn Fire Insurance Map revealed the subject property to be developed with residential apartment buildings.
- Partner submitted Freedom of Information Act (FOIA) request to the City of White Plains Building Department and the Westchester County Health Department for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property. As of this writing, neither of these departments has responded in full to Partner's request. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment. If issues of an environmental concern are identified upon review of these documents, Partner will issue an addendum to this report.
- Standing water was present in the basement located at 55 West Post Road. The water was a result of recent storms in the area. Due to the depth of the water in areas, access was impeded.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property is located on the south side of West Post Road within a mixed commercial and residential area of White Plains, New York. Please refer to the table below for further description of the subject property:

Address:	55 & 77 West Post Road				
Historical/Additional Address(es):					
	respectively				
Assessor's Parcel Number (APN):	130.34-5-4 and 130.34-5-3, respectively				
Nature of Use:	Vacant commercial property				
Number of Buildings:	Three				
Number of Floors:	Single- and two-story				
Type of Construction:	Masonry and wood				
Building Square Footage (SF):	55 West Post Road - 7,200 SF plus a basement				
	77 West Post Road - 15,176 SF and approx. 500 SF				
Land Acreage (Ac):	55 West Post Road - 0.90 Ac (39,204 SF)				
	77 West Post Road - 0.87 Ac (37,897 SF)				
Date of Construction:	55 West Post Road - 1941				
	77 West Post Road - 1942 and 1960				
Current Tenants:	Not applicable				

The subject property comprises of two separate, but contiguous parcels. One parcel known as 55 West Post Road is developed with one single-story rectangular structure with a basement which is currently vacant. The parcel at 77 West Post Road is developed with a two-story rectangular building which is below grade at West Post Road, and a small single-story structure, both of which are also currently vacant. The buildings were formerly operated as an auto repair facility, and an auto sales showroom with a detail/wash area. No operations are currently conducted on-site, however, some equipment remains. In addition to the current structures, the subject property is also improved with asphalt-paved parking areas and minimal landscaping.

According to the White Plains Tax Assessor, 55 West Post Road is known as Parcel ID 130.27-5-4 (Block 66, Lots 15, 16, and 16A), while 77 West Post Road is known as Parcel ID 130.27-3 (Block 66, Lots 13, 14, and 14A), and ownership is currently vested in 55 West Post Road, Inc. and 77 West Post Road, Inc., respectively.

Please refer to Figure 1: Site Location Map, Figure 2: Topographic Map, Figure 3: Site Plan, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently developed for commercial use, but is currently unoccupied. The on-site buildings were formerly operated as an auto repair facility and an auto sales showroom with a repair area as recent as October 2009. No operations are currently conducted on-site; however, some equipment remains.

The subject property is designated for B-3 Intermediate Business development by the City of White Plains and is likely considered a legal use in its current configuration.

The subject property was identified as a Resource Conservation and Recovery Act (RCRA) Non-Generator, a Facility Index System (FINDS) site, a MANIFEST site, an aboveground storage tank (AST) facility, an underground storage tank (UST) facility, and on the NY Spills list in the regulatory database report of Section 4.2.

2.3 Current Use of Adjoining Properties

The subject property is located within a mixed commercial and residential area of White Plains, New York. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

	in ounding properties			
North:	West Post Road to the north followed by a former refrigeration company (80			
	West Post Road), a supermarket (68-72 West Post Road), multi-family			
	residential building with a street level restaurant (60-64 West Post Road), and			
	the Calvary Baptist Church with associated parking areas (32-52 West Post			
	Road).			
South:	A parcel used for parking purposes followed by Maple Avenue and residential			
	buildings.			
East:	An auto sales and repair building with associated parking areas (35 West Post			
	Road) followed by similar buildings.			
West:	A parcel used for auto sales with a small office (87 West Post Road) followed by			
	two residential buildings (4 & 8 Brady Place) and Brady Place.			

Immediately surrounding properties

Several adjacent properties were identified in the regulatory database report of Section 4.2 as follows:

- 82 West Post Road (northwest) listed as a NY Spills facility
- 80 West Post Road (northwest) listed as a RCRA Non Generator, MANIFEST, LTANKS and NY Spills facility
- 35 West Post Road (east) listed as a UST facility
- Intersection of Maple and Roosevelt (southeast) listed as a NY Spills site
- 81 West Post Road (west) listed as a NY Spills facility

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS), *White Plains, NY* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 215-225 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the northeast. The subject property is depicted as being pink shaded urban development, with no site specific information available.

Please refer to Figure 2: Topographic Map.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater in the vicinity of the subject property is inferred to flow to the northeast. The nearest surface water in the vicinity of the subject property is the Bronx River located approximately one half-mile to the west of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the City of White Plains serves the subject property vicinity. According to the Annual Drinking Water Quality Report for 2008, the sources of public water for the City of White Plains are surface water from the Kensico Reservoir, three wells, and two smaller reservoirs.

According to the Phase II Environmental Site Assessment Report carried out by Woodard and Curran in 2008, the depth of groundwater in the vicinity of the subject property is inferred to be present at approximately seven feet below ground surface (bgs).

2.4.3 Geology/Soils

According to A Guide to the Geology of Westchester County, New York by Thomas Macguire (1997), Westchester County is in the Manhattan Prong region of the Highlands physiographic province. The higher ground in Westchester is composed of the Fordham Gneiss and the Manhattan Schist, both highly resistant to erosion. Inwood Marble underlies many of the valleys including the Bronx River located approximately one half mile to the west of the subject property. Most of the rocks in the area of the subject property have been dated as late Precambrian and early Paleozoic ages.

Based on the Web Soil Survey website published by the USDA Natural Resources Conservation Service the subject property is mapped as Urban Land.

Urban Land is described as an area where more than 85% of the surface is covered by asphalt, concrete, buildings, or other impervious surfaces. Soils and foundation materials are highly variable. Urban structures and works cover so much of this land type that identification of the soils is not practical. Most areas have been smoothed and the original soil material has been disturbed, filled over, or otherwise destroyed.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 36119C0269F, dated September, 28, 2010, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information

Period/Date	Source	Description/Use	
1905- 1970s	Aerial Photographs, Sanborn Maps, City Directories,	Residential and	
	Deeds, Tax Records, and Interviews	Commercial	
1970s-	Aerial Photographs, Sanborn Maps, City Directories,	Commercial, used for	
Present	Deeds, Tax Records, Interviews and Current Observations	auto sales and repair	

Potential environmental concerns were identified in association with the current and historic use of the subject property. According to the historical review, the subject property has been utilized for auto sales and repair purposes since the 1970s. Auto repair facilities typically utilize petroleum products contained in above and below ground tanks, have hazardous materials such as solvents, use hydraulic lift systems, and oil/water separator systems with below ground components. The presence of such systems is discussed further in Section 6.0, with a prior subsurface investigation discussed further in Section 5.2.6.

3.1 Aerial Photograph Review

On March 19, 2010, Partner obtained available aerial photographs of the subject property and surrounding area from www.historicaerials.com and the New York State Interactive Mapping Gateway website. The aerial photographs were reviewed for indications of previous uses, as discussed below:

Date: 1974 **Scale:** 1"=1,200'

The subject property appears to be developed with two rectangular buildings and a small structure in the same configuration to the buildings currently identified on-site. Remaining areas are used for parking purposes.

The adjacent properties are comprised of West Post Road followed by commercial buildings and parking areas to the north, commercial buildings and parking areas to the east, Maple Avenue followed by residential buildings to the south, and commercial buildings with parking areas to the west along West Post Road, with residential structures noted to be adjacent to Maple Avenue to the southwest.

Date:1995Scale: Unknown

The subject property appears to be similar to the 1974 aerial photograph.

The adjacent properties appear to be similar to the 1974 aerial photograph.

Date: 2004 **Scale:** 1"=1,200'

The subject property appears to be similar to the 1974 aerial photograph.

The adjacent properties appear to be similar to the 1974 aerial photograph.

A copy of the 1995 aerial photograph is included in Appendix B of this report. However, due to copyright laws, remaining aerial photographs are not included in the appendices, but can be viewed at www.historicaerials.com.

3.2 Sanborn Fire Insurance Maps

Sanborn maps were originally created in the late 1800s and early 1900s for assessing fire insurance liability in urbanized areas of the United States. These maps include detailed town and building information.

Partner reviewed Sanborn Fire Insurance Maps obtained from EDR's collection on March 9, 2010. Sanborn maps were available and reviewed for the years 1905-2004, as discussed below:

Date: 1905

The subject property is developed with a several residential dwellings and apartment buildings located along West Post Road, with rear sheds and stables, and undeveloped areas located further to the rear.

The adjacent properties are depicted as being comprised of several undeveloped parcels with residential development also located in all directions.

Date: 1911

The subject property is similar to the 1905 Sanborn Map, with two saloons noted.

The adjacent properties are similar to the 1905 Sanborn Map with the exception of additional residential development in the general area.

Date: 1930

The subject property is similar to the 1911 Sanborn Map, with the exception of several additions made to the residential buildings, and the presence of auto garages to the rear.

The adjacent properties are depicted being developed with residential and commercial facilities to the north. The commercial buildings are occupied by two auto sales and service buildings which have buried gasoline tanks depicted. Areas to the south, east, and west are developed for residential purposes, with large commercial buildings developed further to the east occupied by a garage and a dance school. Buried gasoline tanks are depicted to the rear of the garage building along Maple Avenue to the east.

Date: 1950

The subject property is developed with two rectangular commercial structures used for stores and as a bowling alley (same buildings as currently identified on-site), with five residential apartment buildings, some with street level retail units fronting West Post Road. The rear of the subject property leading to Maple Avenue is undeveloped and used for auto parking.

The adjacent properties are similar to the 1930 Sanborn Map with the exception of additional commercial development located to the north, and a gasoline station with three buried gasoline tanks located approximately 50 feet to the west.

Date: 1987, 1989-1990, 1992-1995, 2002

The subject property is developed with two rectangular commercial structures used for auto sales and service, and a small structure* used for auto washing (in the same configuration as currently identified on-site). Remaining site areas are used for parking. *The 2002 sanborn does not depict the small building.

The adjacent properties are depicted as being developed primarily with commercial buildings to the north occupied by a refrigeration company, grocery, and auto sales and service, with one apartment building with street level retail, residences to the south and southwest, and auto sales and repair facilities to the east and west along West Post Road.

Date: 2003, 2004

The subject property is developed with two rectangular commercial structures used for auto sales and service and a temporary trailer located to the northeast of the 55 building.

No significant changes were noted to the adjacent properties.

Copies of a selection of the reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

City directories have been produced for most urban and some rural areas since the late 1800s. The directories are generally not comprehensive and may contain gaps in time periods.

Partner reviewed historical city directories obtained from EDR on March 10, 2010 for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

Year(s)	Occupant Listed
1971	Scholz Buick Auto Service & Westchester Business CRP (77)
1976	Scholz Buick Auto Service & Westchester Business CRP (77)
1982	Sholz Parts Division (55) and Scholz Auto Service (77)
1987	Sholz Oldsmobile (55), Scholz Buick and A Reiz Jr Auto Sales (77)
1992	Sholz Oldsmobile (55) and Scholz Buick (77)

City Directory Search for 55 & 77 West Post Road (Subject Property)

Phase I Environmental Site Assessment Project No. 10-66279.2 March 29, 2010 Page 10

Year(s)	Occupant Listed
1997	Scholz Buick (77)
2001	Scholz Buick Pontiac GMC (77)
2008	Scholz Buick Pontiac GMC and Westchester Business Corp. (77)

According to the city directory review, the subject property has been occupied for commercial purposes by an auto sales and service facility since at least 1971.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Historical topographic maps were not available at the time of the assessment. The historical use of the subject property was researched through other standard historical sources.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or historic hazardous materials usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-05, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the soil or groundwater on the property.

4.1.1 State Department

Partner reviewed on-line records from the New York Department of Environmental Conservation (NYSDEC) on March 19, 2010 for the subject property. These records may contain evidence indicating current and/or historical hazardous materials usage, storage or releases, as well as the presence of underground storage tanks (USTs).

According to the NYSDEC information, records of USTs are not maintained by the NYSDEC in five delegated counties in New York State, one of which is Westchester County. According to information contained on the website, tank registration records would be maintained by Westchester County Health Department.

Additionally, Partner searched the Spills Incident Database back to first records (1978) and the Environmental Site Remediation Database. The subject property was identified on the Spills Incident Database with two Spills numbers known as 0901783 and 0901804. Both incidents are listed as occurring during tank removals. Spill Number 0901804 pertains to diesel fuel, while 0901783 pertains to waste oil. No further information was available from the database, which prompted Partner to contact the NYSDEC Region 3 for further information. To date, a response has not been received from the NYSDEC; however, given that these two Spills listings are listed as being active, they are considered RECs for which further action and investigation is warranted.

4.1.2 Health Department

Partner requested records from the Westchester County Health Department on March 12, 2010 for the subject property. These records may contain evidence indicating current and/or historical hazardous materials usage, storage or releases, as well as the presence of USTs.

To date, the Westchester County Health Department has identified the two Spill Numbers (as discussed further above in Section 4.1.1) and a complaint at the subject property, but no tank registration information has been provided. No additional information was provided with respect to the Spill Numbers; however, a complaint was called into the Westchester County Health Department concerning 55 West Post Road. According to the Field Activity Report, a complaint was logged regarding the site (#59-09-08203) regarding a pile of dirt which smelled of gasoline. The report notes that tanks were recently removed at the site associated with two 'open' NYSDEC Spills listings. However, upon further examination, the dirt pile did not smell of gasoline, and no further action regarding the complaint was required. Based on the NFA status, this Westchester County Health Department complaint is considered to be a HREC for which no further action is warranted.

As of the date of this report, Partner is waiting for additional information to be provided with respect to any registered on-site tanks.

4.1.3 Fire Department

Partner requested records from the City of White Plains Fire Prevention Department on March 15, 2010 for the subject property. These records may contain evidence indicating current and/or historical hazardous materials usage, storage or releases, as well as the presence of USTs.

A representative from the City of White Plains Fire Prevention Department stated that records or permits of USTs are maintained by the City of White Plains Building Department.

4.1.4 Building Department

Partner contacted the City of White Plains Building Department on March 15, 2010 for information regarding historical tenants and property use of the subject property. According to a representative from the City of White Plains Building, a Freedom of Information (FOI) request should be submitted and then a file review can be coordinated.

Partner submitted the FOI request has not received a response from the City of White Plains Building Department as of the release of this report.

4.1.5 Tax Assessor

Partner visited the City of White Plains Tax Assessor on March 17, 2010 for information on the subject property.

The City of White Plains Tax Assessor provided the property record cards for both 55 and 77 West Post Road. The parcel located at 55 West post Road is known as 130-34-5-4. The parcel is listed as being developed with a store (the current on-site building) in 1941 which was heated by oil.

The parcel located at 77 West Post Road is known as 130-34-5-3. The parcel is listed as being developed with a single-story frame building with a cellar in 1942 that was utilized as a store, with a cellar level bowling alley and billiards lounge. The building was converted for auto repair use in 1965. Heating is listed as being supplied by oil, but converted to gas in 1983. Additionally, a smaller structure (approximately 550 SF) was constructed of concrete masonry units in 1960 that is described as being used by Scholz for 'lubrication and undercoating'.

A copy of the provided tax information and tax map is provided in the appendices.

4.1.6 Oil & Gas Exploration

The NYSDEC Environmental Navigator Mineral Resources Map contains information regarding oil and gas development. According to the Mineral Resources Map, no oil or gas wells are located on, or adjacent to the subject property.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet. Please refer to the radius map for a complete listing (Appendix C).

The subject property was identified as a RCRA Non-Generator, a FINDS site, a MANIFEST site, an AST facility, a UST, and on the NY Spills list within the regulatory database report.

Additionally, the following adjacent properties were identified in the regulatory database report:

- 82 West Post Road (northwest) listed as a NY Spills facility
- 80 West Post Road (northwest) listed as a RCRA Non Generator, MANIFEST, LTANKS and NY Spills facility
- 35 West Post Road (east) listed as a UST facility

- Intersection of Maple and Roosevelt (southeast) listed as a NY Spills site
- 81 West Post Road (west) listed as a NY Spills facility

The subject property and the adjacent facilities are discussed further below.

Federal NPL

The National Priorities List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program.

No NPL sites are located within one mile of the subject property.

Federal CERCLIS List

The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

No CERCLIS sites are listed within ¹/₂-mile of the subject property.

Federal CERCLIS-NFRAP Sites List

The CERCLIS No Further Remedial Action Planned (NFRAP) List is a compilation of sites that the EPA has investigated, and has determined that the facility does not pose a threat to human health or the environment, under the CERCLA framework.

No CERCLIS-NFRAP sites are listed within $\frac{1}{2}$ -mile of the subject property.

Federal RCRA Generator List

The EPA Resource Conservation and Recovery Act (RCRA) Program RCRA program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste.

The subject property is listed twice as a RCRA Non-Generator facility for 35-55 West Post Road and 55 West Post Road. According to the regulatory database information, 35-55 West Post Road is listed as a Non-Generator in 2006 but was a Small Quantity Generator in 1991. No violations are associated with the listings.

The listing identified for 55 West Post Road indicates that the facility was a Non-Generator in 1999 and 2006, but was considered a Large Quantity Generator in 1987. No violations were associated with this listing either. Based on the lack of violations and that there is currently no generation of hazardous wastes at the subject property, these database listings are not considered to represent a significant concern.

Additionally, there is one Small Quantity Generator, three Conditionally Exempt Small Quantity Generators and 13 Non Generator facilities within 1/8-mile of the subject property. All of these facilities with the exception of one are located further then the adjoining properties, and as such are not considered to represent significant concerns.

The remaining adjoining facility is known as ABCO Refrigeration Supply Corp. located at 80 West Post Road. However, according to the database information, there are no violations associated with the Generator listing, and therefore, this adjoining facility is not considered to represent a significant concern.

Federal Resource Conservation and Recovery Act (RCRA) TSD Facilities List

The RCRA Treatment, Storage and Disposal (TSD) database is a compilation by the EPA of reporting facilities that treat, store or dispose of hazardous waste.

No RCRA TSD sites are listed within ¹/₂-mile of the subject property.

Federal RCRA CORRACTS Facilities List

The RCRA CORRACTS database is the EPA's list of TSD facilities subject to corrective action under RCRA.

No RCRA CORRACTS facilities are listed within one mile of the subject property.

Federal Institutional Controls/Engineering Controls (IC/EC)

The Federal IC/EC database is designed to assist the EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various Brownfield grant programs. The IC/EC sites are superfund sites that have either engineering or an institutional control in place. The data includes the control and the media contaminated.

No Federal IC/EC sites were found within ¹/₄-mile of the subject property.

Federal Emergency Notification System (ERNS)

The Emergency Response Notification System (ERNS) is a national database used to collect information or reported release of oil or hazardous substances.

No ERNS sites are listed on or adjacent to the subject property.

Facility Index System (FINDS)

The FINDS report is a computerized inventory of all facilities that are regulated or tracked by the USEPA. These facilities are assigned an identification number that serves as a cross-reference for other databases in the USEPA's program system.

The subject property is listed on the FINDS list for both 35-55 and 55 West Post Road. The listings are both associated with RCRA Generator listings discussed further above, and based on the nature of the database listings (not necessarily indicative of environmental concerns), are not considered to represent a significant concern.

State/Tribal Sites (SPL)

The New York State Department of Environmental Conservation (NYSDEC) maintains a State Priority List (SPL) of sites considered to be actually or potentially contaminated and a State CERCLIS-equivalent list (SCL) of sites under investigation that could be actually or potentially contaminated and presenting a possible threat to human health and the environment.

No SPL sites are listed within one mile of the subject property.

State Hazardous Waste (SWHS) Sites

The New York State Department of Environmental Conservation (NYSDEC) maintains a State Priority List, known as a State Hazardous Waste Sites (SHWS) a list of sites considered to be actually or potentially contaminated and a State CERCLIS-equivalent list (SCL) of sites under investigation that could be actually or potentially contaminated and presenting a possible threat to human health and the environment.

No SHWS sites are listed within one mile of the subject property.

Solid Waste/Landfill Facilities (SWLF)

A database of SWLF is prepared by the NYSDEC.

No SWLF facilities are listed within ¹/₂-mile of the subject property.

State Leaking Storage Tank Incident Reports (LTANKS)

The NYSDEC compiles lists of all leaks of hazardous substances from USTs and ASTs.

The subject property is not listed as a LTANKS facility on the regulatory database; however, there are 104 LTANKS sites listed within ½-mile of the subject property.

Of the 104 LTANKS sites, 97 have received a 'closed' status with the NYSDEC. A closure designation is awarded when adequate remediation has been performed and all of the appropriate paperwork has been completed as necessary. Based on the remedial status of the 97 LTANKS sites, they are not considered to represent a significant concern for the subject property. However, one of these 'closed' facilities is located adjacent to the subject property and is further discussed below.

The facility known as ABCO Refrig., at 80 West Post Road is located across West Post Road, adjacent to the northwest. According to the database information, a tank failure occurred in November 2006 and soil contamination was evidenced. However, the site was awarded a closed status in January 2007 indicating that the soil contamination had been remediated. Based on the

remedial status and the media listed as affected, this adjacent facility is not considered to be a significant concern for the subject property.

Five of the seven remaining LTANKS facilities are located further than $^{1}/_{8}$ -mile from the subject property, and based on the distance and urban nature of the surrounding area, are not considered to represent significant concerns. The two 'active' facilities located within $^{1}/_{8}$ -mile of the subject property are discussed further below:

- Private dwelling at 11 Roosevelt Street is located approximately 300 feet to the east southeast of the subject property, and cross-gradient with respect to the assumed direction of groundwater flow. According to the database information, a tank test failure occurred in November 2007 and it was recommended that the tank be isolated and retested. No further information was available, however, based on the inferred gradient location, this facility is not considered to represent a significant concern for the subject property.
- 115 West Post Road Service Station is located approximately 500 feet to the west southwest of the subject property, and potentially up-gradient with respect to the assumed direction of groundwater flow. According to the database information, tanks were removed at this facility in 1991 and contamination was found. The NYSDEC required a groundwater investigation. No further information was available regarding this listing; however, based on the distance of this facility from the subject property and the urban nature of the area, it is unlikely to have had an impact on the subject property and is not considered to represent a significant concern.

Partner also notes that there are 58 historical LTANKS facilities identified on the regulatory database; however, this database has not been maintained by the NYSDEC since 2002, and current information can be found solely in the LTANKS listings, described above.

State Underground Storage Tank/Aboveground Storage Tank List (UST/AST)

The NYSDEC compiles a list of UST and AST locations.

The subject property is listed as a UST and an AST facility. According to the database information, Scholz Buick, Inc. at 55 West Post Road (PBS Number 3-800357) is listed on the UST database as having an active 1,000-gallon fuel oil UST (Partner notes that this tank was removed in may 2009) that was installed in 1969 (ID 4BK), and a 550-gallon waste oil UST (ID BK5) that was installed in 1969, and since closed in place. No further information was available from the database information; however, the removal of these USTs is discussed in the NY Spills section below.

The AST listings for the subject property also pertain to 55 West Post Road (PBS Number 30800357). The facility is listed with a 275-gallon tank (ID 1BK/A) located aboveground containing 'other', a 275-gallon AST containing 'lube' (ID 2BK), a 275-gallon tank containing used oil (ID 3BK-installed in 1998), and a 275-gallon AST, also containing 'other' for a total on-site in service capacity of 2,100-gallons (including the 1,000-gallon fuel oil tank described above). Partner did not identify any of the aforementioned ASTs during the site reconnaissance, and surmises that the tanks were most likely removed at the cessation of on-site operations in October 2009.

Additionally, there are 17 UST/AST facilities located within $^{1}/_{4}$ -mile of the subject property. Sixteen of the 17 facilities are located further then the adjoining properties, and as such are not considered to be significant concerns. However, the adjacent site to the east is listed on both the UST and AST database. However, based on the inferred direction of groundwater flow and lower topographical level, this adjacent facility is not considered to represent a significant concern.

State Spills Sites (SPILLS)

The NYSDEC maintains reports of sites that have records of spills, leaks, investigations and cleanups.

The subject property is listed with two NY Spills listings.

Spill # 0901783 pertains to the removal of a 1,000-gallon UST on May 13, 2009. Soil contamination was found during the removal by Royal Environmental. Cleanup is listed as pending.

Spill # 0901804 pertains to the removal of an unregistered tank which was found and removed on May 14, 2009. An unknown amount of materials was reported as spilled and the site is listed as being in 'enforcement'. The Spill was reported to the Westchester County Health Department who requested a call back with updated information.

No further information was available from the regulatory database regarding these NY Spills listings. As previously stated in Section 4.1.1, Partner searched the NYSDEC Spills Incident Database back to first records (1978) and the Environmental Site Remediation Database. The subject property was identified on the Spills Incident Database with the two Spills numbers provided above. Spill Number 0901783 pertains to waste oil, while 0901804 reportedly pertains to diesel fuel, and the media affected in both areas is listed as soil.

Partner notes that during the current site reconnaissance, the areas of tank excavations had been back-filled and the contaminated soil that was removed from the excavations appeared to be stock-piled on the southeastern portion of the subject property, in the parking area adjacent to Maple Avenue. Additionally, several 55-gallon drums of baled waters from the installed groundwater monitoring well were identified, however, no further information has been provided to date.

As previously discussed, Partner has contacted the NYSDEC Region 3 for further information, however, a response has not been received. Given that these two Spills listings are listed as active, the presence of stock-piled soils and a groundwater monitoring well, and the lack of information provided to date, these tank removals and NY Spills listings are considered to be RECs for which further action and investigation is warranted.

An additional 13 NY Spills sites are identified within 1/8-mile from the subject property. Of the 13 NY Spills sites, 10 have received a 'closed' status with the NYSDEC. Based on the remedial status of the 10 NY Spills sites, they are not considered to represent a significant concern for the subject property. Of note, four of these closed NY Spills listings are located adjacent to the

subject property (82 West Post Road, 80 West Post Road, 81 West Post Road, and the intersection of Maple and Roosevelt); however, based on their remedial status these sites would not be considered significant concerns.

The three remaining active listings are discussed further below:

- The Zmaora Residence at 29 Odell Avenue is located approximately 150 feet to the south of the subject property. According to the database information, a tank failure occurred at this residence in January 2009, leading to oil seeping into the neighboring property basement. However, the media affected is listed as soil and the tank was to be removed from the facility. Based on the media affected and the likely cross-gradient location with respect to the assumed direction of groundwater flow, in addition to the regulatory oversight, this NY Spills listing is not considered to represent a significant concern.
- Post Road Sunoco is located at 107 West Post Road, approximately 400 feet to the west southwest of the subject property, and potentially up-gradient. According to the database information, several tanks were removed from this facility in 1995 and as the contaminated soil was being excavated, an additional four abandoned tanks were identified, containing a gas/water mixture. No further information was available from the database; however, corrective action was reportedly taken by a willing responsible party. Based on the regulatory oversight and that corrective action was reportedly undertaken, this NY Spills listing is not considered to be a significant concern.
- White Plains Mazda is located at 34 West Post Road, approximately 200 feet to the northeast of the subject property, and down-gradient with respect to the assumed direction of groundwater flow. According to the database information, contamination was evidenced while hydraulic lifts were being removed at the facility. However, a willing responsible party has since been identified and cleanup has reportedly been conducted. Based on the gradient location, regulatory oversight and presence of a willing responsible party, it is unlikely that this NY Spills listings represents a significant concern for the subject property.

Partner also notes that there are eight NY Historical Spills facilities identified on the regulatory database; however, this database has not been maintained by the NYSDEC since 2002, and current information can be found solely in the NY Spills listings, described above.

VCP Sites

The NYSDEC established the Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of Brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

No VCP sites were identified within ¹/₂-mile of the subject property.

Tribal Records

The EPA maintains a database of Indian administered lands of the United States that total 640 acres or more.

No Tribal sites are listed within ¹/₂-mile of the subject property.

Brownfields

The EPA Brownfields database was reviewed to identify facilities that qualify for federal remediation funding under the Small Business Liability Relief and Brownfields Revitalization Act (the "Brownfields" amendment to CERCLA).

No Brownfields sites were noted within the ¹/₂-mile search radius.

Engineering Controls

The EPA database of Engineering Control sites (ENG CONTROLS) was reviewed to identify sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

No ENG CONTROLS sites were noted within the ¹/₂-mile search radius.

Institutional Controls

The EPA database of Institutional Control sites (INST CONTROLS) was reviewed to identify sites where engineering and/or institutional controls remain in place as part of a remedial action to address soil and/or groundwater contamination. These restrictions ensure protection of human health and the environment as long as they are maintained.

No INST CONTROLS sites were noted within the ¹/₂-mile search radius.

MANIFEST sites

MANIFEST sites are those sites that generate and transport hazardous wastes off-site to a TSD facility.

The subject property is listed as a MANIFEST facility for 35-55 and 55 West Post Road. MANIFEST records for 35-55 West Post Road indicate that tetrachloroethane and non-listed ignitible wastes were removed from the facility between 1996 and 2001. Records for 55 West Post Road show that lead was removed between 1992 and 1993. Partner notes that these MANIFEST records are related to the RCRA Generator records previously discussed, and as such given that there were no violations, the regulatory records are not considered to be a significant concern. However, the slightly elevated levels of contaminants above soil and groundwater standards, as

further discussed in Section 5.2.6, may potentially be attributed to the former chemical uses at the subject property.

Additionally, there are 19 listings on the NY MANIFEST database for properties located within $^{1}/_{4}$ -mile of the subject property; however, based on the nature of the listing, none would be considered a significant concern.

NY DRYCLEANERS

The NY DRYCLEANERS database is a listing of all registered dry cleaning facilities.

Neither the subject property, nor the adjacent properties, were identified on this database.

EDR PROPRIETARY DATABASES

EDR Proprietary databases include the Former Manufactured Gas (CoalGas) sites, which were used from the 1800s to the 1950s to produce gas that could be used as fuel. Significant amounts of waste were produced from this process including coal tar, sludges, and oils.

One Manufactured Gas Plant site was identified within the prescribed search radius. However, this facility is located further then $\frac{1}{2}$ -mile from the subject property and is therefore not considered to be a concern.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiry* is not complete. The user is asked to provide information or knowledge of the following:

- Environmental cleanup liens that are filed or recorded against the site.
- Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry.
- Specialized knowledge or experience of the person seeking to qualify for the LLPs.
- Relationship of the purchase price to the fair market value of the *property* if it were not contaminated.
- Commonly known or *reasonably ascertainable* information about the *property*.
- The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate assessment.
- The reason for preparation of this Phase I ESA.

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E 1527-05, Partner requested the following site information from Nolan and Heller, LLP (User of this report).

Item	Provided By User	Not Provided By User	Discussed Below	Does Not Apply
Environmental Pre-Survey Questionnaire		X		
Title Records		X		
Environmental Liens or Activity and Use Limitation		X		
Specialized Knowledge		X		
Valuation Reduction for Environmental Issues		X		
Identification of Key Site Manager	X			
Reason for Performing Phase I ESA	Yes, See Section 1.1			
Prior Environmental Reports		X		
Other		X		

5.1 Interviews

5.1.1 Interview with Owner

Mr. Robert Scholz, subject property owner, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property. However, according to Mr. Scholz, the subject property has recently had several USTs removed, for which associated soil contamination was evidenced, and the Westchester County Health Department contacted. The contaminated soil was stock-piled on the subject property, and the tank excavations have been back-filled. An environmental contractor has been retained to address the remaining open issues with respect to the tank removals.

Additionally, Mr. Scholz stated that the buildings were initially constructed in the 1940s for commercial purposes with a supermarket and bowling alley being present prior to the conversion in the 1970s to an auto sales and repair facility. Additionally, there were several residential buildings located on the lots at that time. Mr. Scholz was unaware of the presence of any current oil/gasoline tanks at the subject property and stated that there may have been tanks associated with the former residential buildings, but that these would have been removed during demolition activities.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a lender, it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

According to Mr. Frank Seymour, the Key Site Manager, there were formerly three USTs located at 55 West Post Road and one UST located at 77 West Post Road. The fuel oil tank at 77 West Post Road was removed in 1983 when the building boiler was converted to gas. Soil sampling was conducted in this area in December 2007, and there were reportedly no elevated contaminants, with the exception of metals that were evidenced site wide.

However, the three USTs located at 55 West Post Road comprising of one 4,000-gallon diesel UST (this tank does not appear to have been registered), one 1,000-gallon heating oil UST, and one 550-gallon waste oil UST, were removed in 2009 by Royal Environmental. Soil contamination was identified which has since been excavated and stock-piled at the site, and the contamination was reported to the Westchester County Department of Health.

Additionally, there is a vent pipe protruding through the wall at 55 West Post Road which is an upflush vent for the building sewer line, and two oil/water separators, one located at each building. Mr. Seymour stated that the separators had been maintained as required, and he was unaware of any associated issues.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-05, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records

Partner requested title records from the User; however, title records were not provided for review.

At the request of the User, Partner contacted NETR Real Estate Research and Information to perform an environmental lien search for the subject property, as discussed further below.

5.2.2 Environmental Liens or Activity and Use Limitation

At the request of the User, Partner reviewed an Environmental Lien Report prepared for the subject property by NETR Real Estate Research and Information, dated March 10, 2010. According to the Environmental Lien Report, there are no AULs or environmental liens recorded for the two parcels located at the subject property. The Environmental Lien Report also includes legal descriptions of the subject property, which are included in the appendices.

5.2.3 Specialized Knowledge

Partner inquired with the User regarding any specialized knowledge of environmental conditions associated with the subject property. No specialized knowledge was provided by the User at the time of the assessment, with the exception that prior soil sampling had been conducted at the site as further discussed in Section 5.2.6 below.

5.2.4 Commonly Known or Reasonably Ascertainable Information

Partner inquired with the User regarding any commonly known or *reasonably ascertainable* information within the local community about the subject property that is material to *recognized environmental conditions* in connection with the subject property. Commonly known or *reasonably ascertainable* information associated with the subject property was not provided by the User at the time of the assessment.

5.2.5 Valuation Reduction for Environmental Issues

Partner inquired with the User regarding any knowledge of reductions in property value due to environmental issues. Knowledge of valuation reductions associated with the subject property was not provided by the User at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

Phase II Environmental Site Assessment Report of 35-95 West Post Road & 80 Brady Place, White Plains, New York, Woodard & Curran (January 24, 2008)

Woodard & Curran (W&C) prepared this report on behalf of Brickman Associates. The report was conducted for a selection of properties, of which the subject property is just two (Lots D and C). Therefore, large portions of the report do not pertain to the subject property.

Pertinent information indicated that five soil borings were advanced at Lot D (55 West Post Road), two of which were in close proximity to three USTs identified at that time, with the remaining three located adjacent to active garage bay doors. Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, herbicides, PCBs. TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Analysis indicated elevated levels of Beryllium, Cadmium, Chomium, Copper, Iron, Mercury, Nickel, Selenium, and Zinc. These contaminants were detected at concentrations above the NYSDEC's Recommended Soil Cleanup Objectives as defined by the NYSDEC's Technical and Administrative Guidance Memorandum (TAGM) 4046 guidance values.

Additionally, one permanent (MW-2) and two temporary groundwater wells (GP-4W and GP-6W) were also installed and samples collected (between 12 and 14 ft bgs) which were tested for the same constituents as the soils. Analysis indicated that Antimony, Arsenic, Barium, Beryllium, Cadmium, Chomium, Copper, Iron, Iron and Manganese, Magnesium, Manganese, Sodium, Lead, Mercury, Nickel, Thallium, Vanadium, Benzene, cis-1,2-Dichloroethane, n-Propylbenzene, and Vinyl Chloride were detected at levels exceeding NYSDEC groundwater standards.

Pertinent information for Lot C (77 West Post Road) indicated that three soil borings were advanced, two of which were in close proximity to two USTs identified at that time. Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, herbicides, PCBs. TAL 23 Metals, Cyanide and Hexavalent Chromium.

Analysis indicated elevated levels of Arsenic, Beryllium, Cadmium, Chomium, Copper, Iron, Mercury, Nickel, Selenium, and Zinc. These contaminants were detected at concentrations above the NYSDEC's Recommended Soil Cleanup Objectives as defined by the NYSDEC's Technical and Administrative Guidance Memorandum (TAGM) 4046 guidance values.

Additionally, one temporary groundwater well was also installed (SB-9W) and the sample collected (at 15 ft bgs) was tested for the same constituents as the soils. Analysis indicated that Iron and Manganese, Magnesium, Manganese, Sodium, Thallium, Benzene, cis-1,2-Dichloroethane, Methyl Tert-Butyl Ether (MTBE), TCE, and 2,4,6-Trichlorophenol were detected at levels exceeding NYSDEC groundwater standards.

Many of the contaminants, in particular the metals, were attributed to historic uses or fill materials at the various properties. However, Partner notes that cis-1,2-Dichloroethane, TCE, 2,4,6-Trichlorophenol and MTBE are more likely a result of on-site auto repair operations.

Based on the elevated levels of various contaminants in soil and groundwater at the subject property, this represents a REC for which further investigations are warranted.

Limited Environmental Investigation for Asbestos-Containing Materials, Lead Based Paint, Polychlorinated Biphenyls and Mold Contamination, Hygienetics Environmental Services (December 4, 2007)

Hygienetics Environmental Services (HES) prepared this report on behalf of Woodard & Curran. According to the report, the subject property has confirmed ACMs and mold growth. No lead-based paints were identified, and no PCBs were detected in exterior caulking or hydraulic lift fluids. However, Partner notes that the oil samples from hydraulic equipment were taken from the exterior surfaces and not from the oil reservoir within. The presence of ACMs and mold growth are discussed further in Sections 6.3.1 and 6.3.5 of this report.

6.0 SITE RECONNAISSANCE

The subject property was inspected by Lindsay Smith of Partner on March 17, 2010. The weather at the time of the site visit was sunny and clear. The owner of the subject property, Mr. Robert Scholz accompanied Partner during field reconnaissance activities, and provided information pertaining to the current operations and maintenance of the subject property.

All areas of the subject property were accessible at the time of the site inspection. There were no physical or visual obstructions of the subject property, with the exception of standing water located in the basement at 55 West Post Road.

The subject property is currently developed for commercial use, but is unoccupied. The on-site buildings were formerly operated as an auto repair facility and an auto sales showroom with a repair area. No operations are currently conducted on-site, however, some equipment remains.

Environmental concerns were identified during the onsite reconnaissance related to the presence of USTs, hydraulic lift systems, oil/water separators, staining, disturbed and stock-piled soils, and groundwater monitoring wells as further discussed in Sections 6.1 and 6.2. Non-ASTM issues are discussed in Section 6.3.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located in the parking areas on the subject property. An independent solid waste disposal contractor removes solid waste from the subject property. According to Mr. Scholz, minimal waste is currently being generated as the property is not currently operating.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of White Plains services the subject property vicinity. No wastewater treatment facilities or septic systems are located on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located throughout the subject property and in the adjacent city streets. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Department of Agriculture; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property.

No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were reportedly located on the subject property.

6.1.4 Source of Heating and Cooling

Heating was formerly provided to 55 West Post Road by an oil-fired boiler and ceiling-mounted blowers. However, the fuel oil tank was removed in May 2009, and there is no heating currently provided. Cooling systems are not provided to this building.

Heating is provided to 77 West Post Road by a gas-fired boiler located in the lower level providing heat to the second floor, and ceiling-mounted blowers in the lower floor level. The boiler was converted to gas in 1983, prior to which fuel oil was utilized. Cooling to upper floor offices is provided by electric roof-top systems. Electricity and natural gas is provided to the subject property by the Consolidated Edison Company of New York (Con Ed).

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

However, site observations indicate the presence of two oil/water separators located at the subject property. The separator at 55 West Post Road appears to be located in the basement and the vessel can be viewed for spills and leakages. However, the system at 77 West Post Road is located beneath the ground close to the entrance of one of the garage bays at the rear of the building. According to the Key Site Manager, the oil/water separator has always been maintained appropriately and cleaned out as required; however, Partner was not provided with any documents for review. The presence of an in-ground oil-water separator where the integrity of the underground vessel is unknown, represents a potential REC for the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

Partner identified several areas of disturbed asphalt where tank removals had been performed, in addition to stock-piled soils, evidence of soil borings, and a groundwater monitoring well. Partner has not been provided with any documentation to date regarding these activities, but notes that there are two NY Spills listings on the regulatory database pertaining to tank removals and soil contamination at the subject property.

Additionally, Partner identified an iron plate in the rear parking area located at 77 West Post Road. It is unknown at this time what is beneath the iron plate.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Materials and Petroleum Products Used or Stored at the Site

Partner identified hazardous materials and/or hazardous wastes to be used, stored, or generated on the subject property as noted in the following table:

Substance	Container Size	Location	Nature of Use	Disposal Method
Baled waters	55-gallon drums	Throughout	Not applicable	To be removed by environmental contractor
Stock-piled soils	Not applicable	NE corner	Not applicable	To be removed by environmental contractor
Solvents	Two parts washers	55 West Post Road (WPR)	Not applicable	To be removed by licensed waste hauler
Oxygen and Acetylene	Gas canisters	55 West Post Road (WPR)	Not applicable	To be removed by supplier
Waste oil	2 x 15-gallon drums	55 West Post Road (WPR)	Not applicable	To be removed by licensed waste hauler
Gasoline	Three 5-gallon gasoline containers	55 West Post Road (WPR)	Not applicable	To be removed by licensed waste hauler
Tires	Numerous	55 West Post Road (WPR)	Not applicable	To be removed by licensed waste hauler
Lubrication/Oil Dispenser	Unknown	Ceiling at 55 WPR	Not in use	Unknown

Hazardous Substances/Wastes Noted Onsite

The baled waters and stock-piled soils are a product of tank removal activities and subsequent soil contamination evidenced. The drums and soils should be removed from the subject property by the environmental contractor performing the on-site remedial activities.

The remaining aforementioned materials were stored at the southern end of the 55 West Post Road building. No major staining was identified in the vicinity. The containers are waiting to be collected by a licensed waste hauler, or supplier, as appropriate.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

During the current site reconnaissance, Partner did not identify any ASTs in either 55 or 77 West Post Road. However, three vent pipes were observed as discussed further below.

One vent pipe was observed at the rear of 55 West Post Road. The vent pipe was located adjacent to the building in the vicinity of a recent excavation and Partner was informed that the vent pipe was associated with a former 1,000-gallon fuel oil UST that was removed in May 2009.

Additionally, another excavation was observed in the same area during the site reconnaissance. According to Mr. Frank Seymour, there were three tanks in the general area comprising of one 1,000-gallon fuel oil tank, one 550-gallon waste oil tank, and one 4,000-gallon diesel tank. These tanks were removed in May 2009 (Partner notes that the 4,000-gallon diesel oil tank does not appear on the UST database). During the tank removals, soil contamination was evidenced and two Spill Numbers were assigned to the subject property. Royal Environmental are reportedly the environmental contractor performing remedial activities at the site. However, to date, Partner has not been provided with UST closure reports, documentation pertaining to levels of contamination associated with the tank removals from soil and groundwater samples collected, or correspondence between the subject property and the Westchester County Health Department. Based on the lack of information pertaining to the UST removals, that one of the USTs was not registered which indicates the potential for additional on-site USTs in this area, and the unknown levels of potential contaminants associated with the leaking tanks, this represents a REC for the subject property for which further actions are required.

Partner also identified an additional vent pipe protruding through the wall at the front of the 55 West Post Road building along the eastern facade. Further investigation at the time of the site reconnaissance indicated that the vent pipe was adjoining piping that appeared to be associated with the sewer system. Conversations with the Key Site Manager after the site reconnaissance indicated that the piping was associated with venting the sewer upflush and was not related to an additional AST or UST.

With respect to 77 West Post Road, Partner identified a vent pipe at the rear of the building adjacent to the boiler room. Partner was informed that this former fuel oil tank has been removed from the subject property; however, removal documentation has not been provided for review. Additionally, a prior report indicates that in 2007, there were two USTs located at 77 West Post Road, which seems to contradict the information provided by the site manager. Based on the lack of documentation with respect to the UST closure(s), Partner recommends that additional investigations are performed in this area.

There is also an in-ground oil/water separator as previously discussed in Section 6.1.6., located in the same general area.

6.2.3 Evidence of Releases

No major spills, stains or other indications that a surficial release has occurred at the subject property were observed, with the exception of the basement areas at the northeastern corner of 55 West Post Road. It is possible that fuel oil lines leading to the boiler were present in this area, or potentially ASTs. However the area appeared to comprise of impermeable concrete and no floor drains were present in the vicinity. Based on this information, the staining would be considered a de minimis issue, for which regulatory action would not be required. Stained areas should be cleaned and washed and all absorbent materials removed from the subject property by a licensed hazardous waste hauler.

Partner also identified minor staining consistent with auto repair activities located throughout repair and detailing areas of the subject property, and any stained areas should be addressed as recommended above.

6.2.4 Polychlorinated Biphenyls (PCBs)

Partner did not identify any on-site electrical transformers. Additionally, Partner did not identify interior transformers, oil-filled switches, hoists, dock levelers, hydraulic elevators, or balers.

There are 10 hydraulic vehicle lifts located in the repair area at 55 West Post Road. However, based on the presence of a basement beneath the repair area, the fluid reservoirs for the lifts were identified to be located in the basement and were installed on top of poured-concrete platforms. Given that these vehicle lifts are not in-ground systems, and that none appeared to show signs of leakage during the current site reconnaissance, it is unlikely that they would be considered to be RECs. Additionally, a prior report conducted by Hygienetics Environmental Services (HES) on behalf of Woodard & Curran indicated that no PCBs were detected in hydraulic lift fluids. However, Partner notes that the oil samples from hydraulic equipment were taken from the exterior surfaces and not from the oil reservoir within.

If these systems are to be decommissioned in the future, then the fluids within the reservoirs should be tested, and the lifts be removed in accordance with all applicable rules and regulations. Additional sampling at the base of the reservoirs may be necessary at that time.

The HES report also sampled exterior calking for the presence of PCBs; none of which was identified to be PCB-containing.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property, with the exception of the flooded basement areas.

6.2.7 Drains, Sumps and Clarifiers

No drains or sumps other than for storm water removal were observed on the subject property, with the exception of the two oil/water separators previously discussed.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. Asbestos is commonly used as an acoustic insulator, thermal insulation, fire proofing and in other building materials. Exposure to airborne friable asbestos may result in a potential health risk because persons breathing the air may breathe in asbestos fibers. Continued exposure can increase the amount of fibers that remain in the lung. Fibers embedded in lung tissue over time may cause serious lung diseases including: asbestosis, lung cancer, or mesothelioma.

The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1980 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were constructed in 1941-1960, and based on the date of construction, numerous suspect asbestos-containing materials would be expected to be present at the subject property.

Partner notes that a limited environmental investigation for asbestos was conducted in 2007 by Hygienetics Environmental Services (HES) which provides a detailed summary of asbestos-containing materials located at the subject property. Asbestos-containing materials include roofing components located at 55 West Post Road and pipe insulation, vinyl floor tiles and mastic, and roofing materials at 77 West Post Road. Remaining materials sampled and analyzed were confirmed to be non-asbestos containing. A copy of the report (which was conducted for several properties) is provided in the appendices.

The limited visual survey consisted of noting observable materials (materials which were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the subject property. Additional sampling, inspection, and evaluation will be warranted for any other use.

Partner was not provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

According to the US EPA, ACM and PACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. However, Partner notes that many of the materials were water damaged or observed in only fair condition, and as such these materials should be removed from the subject property by a licensed asbestos removal contractor. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.

6.3.2 Lead-Based Paint (LBP)

Due to the commercial nature of use of the subject property, lead-based paint was not considered within the scope of this assessment.

Additionally, a prior report conducted by Hygienetics Environmental Services (HES) in 2007, does not indicate the presence of confirmed lead-based paints at the subject property.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3, where average predicted radon levels are less than 2.0 pCi/L. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the City of White Plains serves the subject property vicinity. According to the 2008 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding). Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brow, black, yellow, and green. In large quantities, molds can cause allergic symptoms when inhaled or through the toxins the molds emit.

Partner observed accessible, interior areas for the subject property buildings for significant evidence of mold growth; however, this ESA should not be used as a mold survey or inspection. Additionally, this inspection was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

The following indications of water damage or mold growth were observed during Partner's visual inspection:

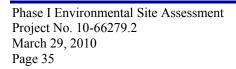

Location of area affected	Condition				
Throughout 55 West Post Road	Water leaks identified throughout, and mold observed on drywall ceilings in basement				
Throughout 77 West Post Road	Water leaks identified throughout				

Additionally, a prior report conducted by Hygienetics Environmental Services (HES) in 2007, indicates the presence of confirmed mold growth at both buildings comprising the subject property. A copy of the report (which was conducted for several properties) is provided in the appendices.

Partner recommends that the source of water ingress be addressed, and that all damaged finishes be removed from the subject property.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site inspection, including hazardous materials, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

6.4.1 Polychlorinated Biphenyls (PCBs)

Several pole-mounted transformers were observed in adjacent city streets. No staining or leakage was observed in the vicinity of the transformers. Based on these observations, the presence of adjacent transformers is not expected to represent a significant environmental concern.

6.4.2 Additional Potential Environmental Hazards

Partner identified a 55-gallon drum on the adjacent western facility (87 West Post Road-same ownership). The drum appears to be the result of soil and groundwater sampling wastes, indicating the potential for contamination at the adjacent facility.

7.0 FINDINGS AND CONCLUSIONS

Findings

A recognized environmental condition (REC) refers to the presence or likely presence of any hazardous substance or petroleum product on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term REC includes hazardous substances and petroleum products even under conditions that might be in compliance with laws. The term is not intended to include "de minimis" conditions that do not present a threat to human health and/or the environment and that would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies. The following was identified during the course of this assessment:

- According to the historical review, the subject property has been utilized for auto sales and repair purposes since the 1970s. Auto repair facilities typically utilize petroleum products contained in above and below ground tanks, utilize hazardous materials such as solvents, operate hydraulic lift systems, and oil/water separator systems with below ground components. Partner reviewed a prior subsurface investigation report conducted for the subject property in 2007, which indicated slightly elevated levels of various contaminants in soil and groundwater at the subject property, including cis-1,2-Dichloroethane, Trichloroethylene (TCE), 2,4,6-Trichlorophenol and MTBE, which are potentially a result of on-site auto repair activities. The presence of elevated levels of contaminants in soil and groundwater above New York State Department of Environmental Conservation (NYSDEC)'s Recommended Soil Cleanup Objectives as defined by the NYSDEC's Technical and Administrative Guidance Memorandum (TAGM) 4046 guidance values, and the NYSDEC groundwater standards, respectively, represents a REC for the subject property.
- The subject property is listed with two NY Spills listings within the regulatory database (Spill Numbers 0901783 and 0901804). Spill Number 0901783 pertains the removal of a 1,000-gallon underground storage tank (UST) on May 13, 2009. Soil contamination was evidenced during the tank removal performed by Royal Environmental, and cleanup is currently listed as pending. Spill Number 0901804 pertains to the removal of an unregistered tank which was found and removed on May 14, 2009. An unknown amount of diesel fuel was reported as spilled associated with this tank removal, and the site is listed as being in 'enforcement'. Partner notes that during the current site reconnaissance, the areas of tank excavations had been back-filled and the contaminated soil that was removed from the excavations appeared to be stock-piled on the south eastern portion of the subject property in the parking area adjacent to Maple Avenue. Additionally, several 55-gallon drums of baled waters from an installed groundwater monitoring well were identified. Given that these two Spills listings are listed as active, the presence of stock-piled soils and a groundwater monitoring well, and the lack of information provided to date, these tank removals and

associated NY Spills listings are considered to be RECs for which further action and investigation is warranted.

• There appears to be discrepancies in information with respect to the number and type of current and former USTs located at the subject property, as discussed further below:

One vent pipe was observed at the rear of 55 West Post Road. The vent pipe was located adjacent to the building in the vicinity of a recent excavation and Partner was informed that the vent pipe was associated with a former 1,000-gallon fuel oil UST that was removed in May 2009 (same tank as associated Spill #0901783 above). UST closure records have not been provided for review.

An additional excavation was observed in the same area at 55 West Post Road during the site reconnaissance. According to the site manager, there were a total of three tanks in the same general area comprising of one 1,000-gallon fuel oil tank (discussed above), one 550-gallon waste oil tank, and one 4,000-gallon diesel tank. These tanks were all removed in May 2009. However, Partner notes that the 4,000-gallon diesel oil tank did not appear to have been registered with the Westchester County Department of Health. Given that one of the USTs was not registered appropriately, this indicates the potential for additional on-site USTs in this area. The potential for additional USTs represents a REC for the subject property for which further actions are required.

With respect to 77 West Post Road, Partner identified a vent pipe at the rear of the building adjacent to the boiler room. Partner was informed that this former fuel oil tank was removed from the subject property when the building was converted to gas in 1983; however, removal documentation has not been provided for review. Additionally, a prior subsurface investigation report conducted in 2007 indicated that there were two USTs located at 77 West Post Road in the same general area as the fuel oil tank which was reportedly removed in 1983. Therefore, the information contained within the prior report seems to contradict the information provided by the site manager. Based on the lack of documentation with respect to the UST closure(s), this represents a REC and Partner recommends that additional investigations be performed in this area.

- A below ground oil/water separator is present at 77 West Post Road, in the vicinity of the entrance to one of the garage bays at the rear of the building. According to the Site Manager, the oil/water separator has always been maintained appropriately and cleaned out as required; however, Partner was not provided with any documents for review. The presence of an inground oil-water separator where the integrity of the underground vessel is unknown, represents a potential REC for the subject property.
- Additionally, Partner identified an iron plate in the rear parking area located at 77 West Post Road. It is unknown at this time what is beneath the iron plate, which represents a potential REC for which additional investigations are warranted.

A *historical recognized environmental condition (HREC)* refers to an environmental condition which would have been considered a REC in the past, but which is no longer considered a REC

based on subsequent assessment or regulatory closure. The following was identified during the course of this assessment:

• According to the Westchester County Health Department, a complaint was made concerning 55 West Post Road. According to the Field Activity Report, a complaint was logged for the site (#59-09-08203) regarding a pile of dirt which smelled of gasoline. The report notes that tanks were recently removed at the site associated with two 'open' NYSDEC Spills listings. The Westchester County Health Department visited the site and stated that the dirt pile did not smell of gasoline, and no further action regarding the complaint was required. Based on the NFA status, this Westchester County Health Department complaint is considered to be a HREC for which no further action is warranted.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, require discussion. The following was identified during the course of this assessment:

- Several containers and canisters of hazardous materials and gases that are no longer required are located at 55 West Post Road. Additionally, drums of baled waters and stock-piled soils are located to the rear of the subject property.
- Staining was identified in the basement area at the northeastern corner of 55 West Post Road. It is possible that fuel oil lines leading to the boiler were present in this area, or potentially former above ground storage tanks (ASTs). However the area appeared to comprise of impermeable concrete and no floor drains were present in the vicinity. Based on this information, the staining would be considered a de minimis issue, for which regulatory action would not be required. Stained areas should be cleaned and washed and all absorbent materials removed from the subject property by a licensed hazardous waste hauler.
- There are ten hydraulic vehicle lifts located in the repair area at 55 West Post Road. However, based on the presence of a basement beneath the repair area, the fluid reservoirs for the lifts were identified to be located in the basement and were installed on top of pouredconcrete platforms. Given that these vehicle lifts are not in-ground systems, and that none appeared to show signs of leakage during the current site reconnaissance, it is unlikely that they are considered to be RECs. Additionally, a prior report conducted by Hygienetics Environmental Services (HES) on behalf of Woodard & Curran in 2007, indicated that no PCBs were detected in hydraulic lift fluids. However, Partner notes that the oil samples from hydraulic equipment were taken from the exterior surfaces and not from the oil reservoir within. If these systems are to be decommissioned in the future, then the fluids within the reservoirs should be tested, and the lifts be removed in accordance with all applicable rules and regulations. Additional sampling at the base of the reservoirs may be necessary at that time.
- A limited asbestos survey was performed by Hygienetics Environmental Services (HES) in 2007 which summarized the asbestos and non-asbestos-containing materials at the subject property. Asbestos-containing materials include roofing components located at 55 West Post

Road and pipe insulation, vinyl floor tiles and mastic, and roofing materials at 77 West Post Road. Remaining materials sampled and analyzed were confirmed to be non-asbestos containing.

• Partner identified water damage and mold growth in both structures during the current site reconnaissance. Additionally, a prior report conducted by Hygienetics Environmental Services (HES) in 2007, indicates the presence of confirmed mold growth at the subject property.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-05 of 55 & 77 West Post Road in the City of White Plains, Westchester County, New York (the "subject property"). Any exceptions to or deletions from this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Based on the presence of elevated levels of contaminants in soil and groundwater above New York State Department of Environmental Conservation (NYSDEC)'s Recommended Soil Cleanup Objectives as defined by the NYSDEC's Technical and Administrative Guidance Memorandum (TAGM) 4046 guidance values, and the NYSDEC groundwater standards, in addition to the historical auto repair use of the subject property, additional subsurface investigations should be conducted. The subsurface investigation should address areas where prior contaminants were evidenced, former UST areas, in addition to sampling the vicinity of the oil/water separator and associated drains.
- Documentation pertaining to releases at the subject property and UST closures should be provided for review, to include all correspondence between the subject property owner, the environmental consultant, and the department providing regulatory oversight.
- A subsurface investigation in the form of ground-penetrating radar (GPR) should be conducted to assess the potential for additional USTs located at the subject property.
- The containers and canisters of hazardous materials and gases that are no longer in use should be removed from the subject property by a licensed hazardous waste hauler. Additionally, the drums and stock-piled soils should be removed from the subject property by the environmental contractor performing the on-site remedial activities.
- Staining was identified in the basement area at the northeastern corner of 55 West Post Road. Stained areas should be cleaned and washed and all absorbent materials removed from the subject property by a licensed hazardous waste hauler.
- There are ten hydraulic vehicle lifts located in the repair area at 55 West Post Road. If these systems are to be decommissioned in the future, then the fluids within the reservoirs should

be tested, and the lifts be removed in accordance with all applicable rules and regulations. Additional sampling at the base of the reservoirs may be necessary at that time.

- Partner recommends that an Operation and Maintenance (O&M) Program be implemented in order to safely manage the asbestos-containing materials (ACMs) located at the subject property. Prior to any disturbance of the construction materials within this facility, a comprehensive ACM survey is recommended.
- Partner recommends that the source of water ingress be addressed at the subject property, and that all mold and water damaged finishes be removed and replaced.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 55 & 77 West Post Road in the City of White Plains, Westchester County, New York in general conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, the undersigned meet the definition of an *Environmental Professional* as defined in §312.10 of 40 CFR 312 and have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

2009 Enhancements to EDR City Directory Abstract

New for 2009, the EDR City Directory Abstract has been enhanced with additional information and features. These enhancements will make your city directory research process more efficient, flexible, and insightful than ever before. The enhancements will improve the options for selecting adjoining properties, and will speed up your review of the report.

City Directory Report. Three important enhancements have been made to the EDR City Directory Abstract:

1. *Executive Summary.* The report begins with an Executive Summary that lists the sources consulted in the preparation of the report. Where available, a parcel map is also provided within the report, showing the locations of properties researched.

2. *Page Images.* Where available, the actual page source images will be included in the Appendix, so that you can review them for information that may provide additional insight. EDR has copyright permission to include these images.

3. *Findings Listed by Location.* Another useful enhancement is that findings are now grouped by address. This will significantly reduce the time you need to review your abstracts. Findings are provided under each property address, listed in reverse chronological order and referencing the source for each entry.

Options for Selecting Adjoining Properties. Ensuring that the right adjoining property addresses are searched is one of the biggest challenges that environmental professionals face when conducting city directory historical research. EDR's new enhancements make it easier for you to meet this challenge. Now, when you place an order for the EDR City Directory Abstract, you have the following choices for determining which addresses should be researched.

1. You Select Addresses and EDR Selects Addresses. Use the "Add Another Address" feature to specify the addresses you want researched. Your selections will be supplemented by addresses selected by EDR researchers using our established research methods. Where available, a digital map will be shown, indicating property lines overlaid on a color aerial photo and their corresponding addresses. Simply use the address list below the map to check off which properties shown on the map you want to include. You may also select other addresses using the "Add Another Address" feature at the bottom of the list.

2. *EDR Selects Addresses.* Choose this method if you want EDR's researchers to select the addresses to be researched for you, using our established research methods.

3. You Select Addresses. Use this method for research based solely on the addresses you select or enter into the system.

4. *Hold City Directory Research Option.* If you choose to select your own adjoining addresses, you may pause production of your EDR City Directory Abstract report until you have had a chance to look at your other EDR reports and sources. Sources for property addresses include: your Certified Sanborn Map Report may show you the location of property addresses; the new EDR Property Tax Map Report may show the location of property addresses; and your field research can supplement these sources with additional address information. To use this capability, simply click "Hold City Directory research" box under "Other Options" at the bottom of the page. Once you have determined what addresses you want researched, go to your EDR Order Status page, select the EDR City Directory Abstract, and enter the addresses and submit for production.

Questions? Contact your EDR representative at 800-352-0050. For more information about all of EDR's 2009 report and service enhancements, visit <u>www.edrnet.com/2009enhancements</u>

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Re: Freedom of Information Request No. 10-123

Dear Ms. Smith:

The following one page is the document you requested from the Westchester County Health Department under the Freedom of Information Law concerning environmental records for 55 West Post Road in White Plains, NY.

Please be advised that the Health Department is in possession of <u>no records</u> responsive to your requests concerning 2, 77, 87 and 95 West Post Road. You may wish to also contact the New York State Department of Environmental Conservation for information regarding spill number 0709611.

If you need to communicate with us, please reference the request number indicated above when calling the Records Access Office at (914) 813-5004. You may also email me at <u>hweb@westchestergov.com</u>.

Sincerely Ray Bayliss

Re: Request for Files 55 and 77 West Post Road White Plains, NY 10606 Partner # 10-66279.2

Dear Mr. Bayliss:

Partner Engineering and Science, Inc. (Partner) is conducting a Phase I Environmental Site Assessment at the above referenced property. Partner requests any information pertaining to fuel oil or motor oil storage tanks, LTANKS or Spills listings for the property.

Of note, our regulatory database indicates the following spills for 55 West Post Road:

Spill Number: 0901804 Site ID: 413817

Spill Number: 0901783 also referenced

Additionally, Partner requests information regarding citizen complaints and/or investigations on the use, handling, release, or discharge of solid or liquid wastes, hazardous materials, and any other circumstances of environmental concern for the subject property, including the presence of asbestos and mold. Partner is requesting a search of both current and historical records to the beginning of the record.

Please let us know if any records exist for this property and forward pertinent information to the following:

Lindsay C. Smith Partner Engineering and Science 135 Lakeside Drive North Piscataway, NJ 08854 (646) 262-1034; (877) 571-3920 (fax)

If you have any questions or comments, please contact Lindsay Smith at the above numbers.

Sincerely,

Lindsay C. Smith Partner Associate

The NETR Environmental Lien Search Report

WHITE PLAINS PORTFOLIO 55 AND 77 WEST POST ROAD WHITE PLAINS, NEW YORK

Wednesday, March 10, 2010

Project Number: L10-00505

2055 East Rio Salado Parkway Tempe, Arizona 85281

Telephone: 480-967-6752 Fax: 480-966-9422

The NETR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

Thank you for your business

Please contact NETR at 480-967-6752 with any questions or comments

WITNESSETH, that the party of the first part, in consideration of ten dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the beirs or successors and assigns of the party of the second part forever,

A1.1, that certain plot, piece or percel of land, with the buildings and improvements thereon created, situate, lying and being in the City of White Plains, County of Westchester, and State of New York, being bounded and described as follows:

RECINNING at a point on the southeasterly side of New York Post Road, as said Post Road, has been recently widened, opposite and distant 5.01 feet measured south 27 degrees 49 minutes 00 seconds east from a point in the southerly line of said Fest Road, before widening, which point is distant 536.04 feet easterly from the sasterly side of Rathbun Avenue; thence

From said point of beginning, South 27 degrees 49 minutes 00 seconds east a distance of 159.12 feet; thence, North 62 degrees 13 minutes 10 seconds east a distance of 45.12 feet; thence,

South 27 degrees 52 minutes 10 seconds east a distance of 89.61 feet, to the mortherly side of Maple Avenue as widened; thence,

Along the northerly side of Maple Avenue, as widened, North 63 degrees 34 minutes 08 seconds east a distance of 117.15 feat to a point of curve; thence,

Along the northerly side of Maple Avenue, as videned, on a curve to the right having a radius of 2,359.29 feet a distance of 14.75 feet to a point and lands now or formerly of Mulligan; thence, Along said lands of Mulligan and lands of Lynch; North 27 degrees 52 minutes 30 seconds west a distance of 243.78 feet to a point on the southerly side of New York

Post Road, as widened; thence,

South 64 degrees 50 minutes 30 seconds west a distance of 177.03 feet along the poutherly side of New York Post Road, as widened to the point or place of beginning. TOGETHER with an easement over a strip of land 5 feet in width and approximately

95 feet in depth along the southwesterly side of the premises herein described being over land now or formerly of John O'Brien.

The within described premises are known as Lots 15, 16 and 16A in Block 66 on the tax assessment map of the City of White Plains, New York

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurchances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forerer.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consid-eration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires. IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

1. INTRODUCTION

1.1 LIMITATIONS AND EXCEPTIONS

Found

Freihe

Steel 1

The evaluations contained in this Phase II Environmental Site Assessment (ESA) represent Woodard & Curran's professional opinions and judgments based on the current, generally accepted engineering and technical practices for the nature and scope of this Phase II ESA authorized by Brickman & Associates. This Phase II ESA is based on the conditions observed on the dates of field observation noted and records review as described herein.

In no event may a Third Party rely on the evaluation, conclusions, and professional opinions presented in the Phase II ESA Report without first obtaining the expressed written consent of Woodard & Curran. Woodard & Curran shall bear no liability for any unauthorized use of the information contained in this report. In the event that new information not contained in this report is obtained relating to environmental or hazardous waste issues at the Subject Property or nearby, such information shall be brought to Woodard & Curran's attention promptly and Woodard & Curran may, upon evaluation, modify the conclusions stated in this report.

1.2 SPECIAL TERMS AND CONDITIONS

8

This Phase II ESA is subject to the terms and conditions of our proposal dated August 22, 2007 which was authorized by Brickman & Associates on September 7, 2007.

1.3 USER RELIANCE

This Phase II ESA report has been prepared for the exclusive use of the Brickman & Associates.

1.4 PURPOSE

95 87 Woodard & Curran, Inc. (W&C) was retained by Brickman & Associates to conduct a Phase I Environmental Site Assessment (Phase I ESA) of the Sholz Auto properties (87) (85,)77, 55, 35, 2 West Post Road &(80) Brady Place) in White Plains, New York (the "Subject Property". The Phase I ESA was requested in association with potential acquisition of the Subject Property. The Phase I ESA was completed on October 29, 2007 and identified several Recognized Environmental Conditions (RECs). RECs include several former underground storage tanks (USTs), one of which has been reported closed in place and one with no documentation. Potential fill material was identified on the Subject Property, as well as in-ground hydraulic lifts. There was also possible lead based paint, PCB calking and/or asbestos containing material identified in the site structures. Based on the findings and conclusions presented in the Phase I ESA, a Phase II ESA and Building Material Survey (BMS) were deemed necessary on the Subject Property.

The Phase II ESA was conducted to determine the nature and extent of potential soil and groundwater contamination on the Subject Property.

. Eighteen (23) soil borings were installed to refusal across the site; six (11) using a drill rig equipped with hollow stem augers and twelve (12) using a Geoprobe. Soil samples were collected from each boring and the laboratory analytical results were compared with the New York State Department of Environmental Conservation's (NYSDEC) Technical and Administrative Guidance Memo #4046 - Determination of Soil Cleanup Objectives and Cleanup Levels (TAGM 4046).

1-1

 Temporary wells were installed in thirteen (13) of the soil boring locations and permanent monitoring wells were installed in three (3) of the soil boring locations. Groundwater samples were collected from each well and laboratory results were compared with NYSDEC's Part 703 Groundwater Quality Standards.

In addition, a BMS was conducted at seven (7) structures on the Subject Property. Samples were collected from each structure and analyzed for:

- Asbestos-Containing Materials (ACMs)
- Lead-based Paints (LBPs)
- Polychlorinated Biphenyls (PCBs)
- Mold Contamination

1.5 SITE DESCRIPTION

1.5.1 Site Location

New Case New Year

The Subject Property is located on West Post Road in the City of White Plains, Westchester County, New York. The property is comprised of seven parcels. The umbrella occupant of the property is listed as Sholz Automobile, which is owned by Robert Sholz. The Subject Property is immediately surrounded by commercial properties, and the larger surrounding area is predominantly residential. The Site Location is depicted in Figure 1.

1.5.2 Lot Descriptions

The Subject Property is 3.86 acres in size and includes the following lots:

- Lot A (\$7 West Post Road) has a single unoccupied stucco and concrete block building of 40,500 square feet.
 - 89
- Lot B (85 West Post Road) has a single unoccupied stucco building of 1,800 square feet.
- Lot C (77 West Post Road) consists of two occupied concrete one story buildings. The first building is 57,500 square feet and includes a basement. The second building on Lot C is 4,050 square feet.
- Lot D (55 West Post Road) includes an occupied brick and concrete one story building of 57,500 square feet with a basement. There is also one temporary trailer office of 9,900 square feet.
- Lot E (80 Brady Place) consists of an unoccupied two story residential home of about 5,500 square feet.
- Lot H (35 West Post Road) property is comprised of one parcel, located on the east side of the road. The lot is currently unoccupied. The most recent tenant being Sholz Kia, which is owned by Robert Sholz. Lot H is currently owned by RCC and is immediately surrounded by commercial businesses, though is in a mixed residential/ commercial area.
- . Lot K (2 West Post Road) is a vacant lot, with no structures on it.

These designated lot names will be used throughout this Phase II ESA report. A Site Plan showing the lot designations is included as Figure 2.

Three parcels of the Subject Property are occupied. Currently, three closed and five active above ground storage tanks (ASTs) are reported on the Subject Property. Staining of the walls and floors around the existing ASTs was observed. A total of seven former and/or active USTs. One UST (one 1,000-gallon fuel oil tank) was installed at the Subject Property in January 1969. The 1,000 gallon fuel oil tank is still reportedly in use. No hazardous waste materials are known to be stored on the Subject Property.

]

The historical uses of the properties, derived from historical Sanborn maps, aerial photos, and an interview with the site representative, include a dry cleaner, a grocery store, apartment buildings, a gas station, a bowling alley and a cabinet store. The Subject Property was also previously used as other car dealerships.

1.5.4 Adjoining Areas

The current neighboring properties are commercial; including a Lincoln Mercury car dealership, a Sunoco gas station, a bike store, a refrigeration supply store, a locksmith, a church and a few small restaurants. The whole commercial area is surrounded to the north, south, east and west by a larger residential area. Historically, the properties adjacent to the Subject Property have been part of a mixed use area. Both commercial and residential uses have existed around the Subject Property for many years.

2. SITE GEOLOGY AND HYDROGEOLOGY

A description of the regional and site specific geology and hydrogeology, compiled from published sources and site-specific sources of information, is presented in this section. Section 2.1 provides an overview of geologic information compiled during the investigation activities. Section 2.2 presents an overview of hydrogeologic information based on information gathered during the investigation and includes a discussion of groundwater elevations and flow direction.

2.1 SITE GEOLOGY

and the three the time that the time the time there there there there the time the tin time the time t

Subsurface activities conducted during the site investigation included the installation of twenty-three (23) soil borings, thirtcen (13) temporary groundwater monitoring wells, and three (3) permanent groundwater monitoring wells. A sample location plan is provided as Figure 3. The site investigation activities were completed to assess hydrogeologic conditions, stratigraphy, and to determine the presence or absence of chemical constituents of concern (COCs) in soil and groundwater on a site-wide basis. Soil boring logs and monitoring well construction details are presented in Appendix D.

The surface topography of the Subject Property varies from a high point of approximately 246 feet above mean sea level (msl) in the southernmost corner of Lot A to a low point of approximately 207 feet above msl in Lot K. The Subject Property topography generally slopes from southwest to northeast.

The surficial materials at the Subject Property are mapped as Urban Land (Web Soil Survey, USDA). The bedrock geology consists of the Manhattan Formation, consisting of a schist characterize by garnet, muscovite, biotite, and quartz (Geologic Map of New York, 1970).

Based on observations during the site investigation activities, the surficial geology encountered at the Subject Property consists primarily of historic fill material, native till, and highly weathered bedrock. Borings advanced at the Subject Property identified several feet of historic fill material consisting of brown to black sand with some einders and building debris underlain by native till, which in turn overlies several feet of highly weathered bedrock. The native till material underlying the historic fill material generally consists of a brown to gray; loose to medium dense; fine to coarse; sand with varying amounts of silt, clay, and fine to coarse gravel.

Depth to bedrock on the Subject Property may range from 17 feet below ground surface (ftbgs) at SB-1 in the northeastern portions of Lot II to possibly 52 ftbgs in the southern end of Lot D. Depth to bedrock was assumed based on auger refusal during drilling, the presence of decomposed bedrock in soil sampling devices, and the NX-Coring performed at SB-2.

2.2 SITE HYDROGEOLOGY

Woodard & Curran conducted an investigation of groundwater on the Subject Property. No surface water bodies exist on the Subject Property. The nearest surface water body is the Bronx River which lies west of the Subject Property.

The depth to groundwater was observed at approximately 13 ftbgs in Lot A, 7 ftbgs in Lot D, and 7 ftbgs in Lot H. Groundwater flow is presumed to follow site topography, flowing in general from south to north. Depth to groundwater observations were collected in monitoring wells MW-1, MW-2, and MW-3.

3. SAMPLING AND ANALYTICAL PROGRAM OVERVIEW AND METHODOLOGIES

3.1 OVERVIEW

Proved Barrend

trank that the pairs

P. VALL

The Phase II ESA at the Subject Property was comprised of sampling and analysis of soil and groundwater media. The investigation approach was outlined in the Phase II ESA Proposal Letters submitted to Brickman Associates on October 16, 2007 and October 24, 2007 (Amendment). A summary of the Phase II ESA field investigation activities including: area descriptions, sample dates, methods of investigation, number of borings/wells/, depths, media, number of samples, sample identifications, and analytical parameters is presented in Table 1. The sample locations are depicted on Figure 3.

3.1.1 Phase II Investigation Summary

A summary of the Phase II ESA investigation activities is provided in Table 1. Soil sampling and investigation was performed by the installation of twelve (12) Geoprobe⁴⁰ soil borings to depths ranging from 5.5 to 31 ftbgs and completion of eleven (11) soil borings installed using a drill rig with hollow stem augers from 18 to 51.5 ftbgs. One NX Core was completed at SB-2 from 51.9 to 61.9 ftbgs to confirm the depth to competent bedrock. The soil borings were installed to investigate the soil and groundwater quality on Lots A through K, with the exception of Lot E. The boring locations and depths were determined by historical use in the area and/or the nature of the potential release. A total of 25 soil samples were selected for laboratory analysis based on field observation and field screening results and/or the nature of the activities occurring on the given lot

In addition, twelve (12) temporary wells and three (3) permanent groundwater monitoring wells (MW 1 through MW-3), were installed at depths ranging from approximately 5 to 19 ftbgs. Groundwater samples were collected from the seven temporary wells and three permanent monitoring wells using standard low stress/low flow sampling techniques in accordance with United States Environmental Protection Agency (US EPA) Region I. Depth to groundwater measurements were collected to determine groundwater flow direction beneath the Subject Property.

The constituents of concern (COCs) analyzed for each soil and groundwater sample are as outlined in TAGM 4046. The TAGM 4046 COC list was used based on historical site use, interviews with knowledgeable personnel, review and findings of previous environmental reports and other documents, and on-site observations made during the Phase I ESA.

Soil and groundwater samples were analyzed by Spectrum Analytical of Agawam, Massachusetts, a New York State-certified environmental laboratory. Samples were analyzed by laboratory methods designed to detect COCs at detection limits suitable for TAGM 4046 comparison.

3.2 SOIL BORING INSTALLATION AND SAMPLING

Soil boring installation and soil sampling was conducted during the Phase II site investigation activities as summarized below:

Phase II Soil Borings (23 total)

A total of 23 Phase II soil borings were advanced at the Subject Property on November 1, 2007 through November 9, 2007. Soil sampling was conducted utilizing a Geoprobe® and drilling subcontractor, SITE, LLC of Seymour, Connecticut. A summary of the soil borings advanced during the investigation is provided below:

- Twelve (12) borings were advanced in Lots A through K using a track mounted model 54LT Geoprobe system drill rig and direct push technology. Soil samples were collected from each boring location.
- Eleven (11) borings were advanced in Lots A, B, C, D and H using a truck mounted 2006 CME 75 – HT Diesel Drill and a track mounted 2001 CME 45C Remote Control Rubber Belted ATV Drill. Soil samples were collected from each boring location.

All horing locations are shown in Figure 3. Soil borings were advanced to depths ranging from 5.5 to 51.5 ftbgs. A total of 25 Phase II soil samples were selected for laboratory analysis based on field observation and field screening results and/or nature of the lot being investigated.

Prior to the initiation of soil sampling/drilling activities, all proposed drilling locations were marked and "Dig Safely New York"" was notified to mark the locations of known underground utilities. In addition, a utility locating subcontractor D.R.C. Inc, of Brooklyn, New York cleared each location with line tracing and ground-penetrating radar (GPR). GPR was also used to locate USTs across the Subject Property.

Soil samples collected during site investigation activities were characterized for moisture content, color, and grain size distribution, and field screened for volatile organic compounds (VOCs) using a MiniRAE 2000 photoionization detector (PID) equipped with an 11.7 electron volt lamp. Soil samples were selected for analyses based on knowledge of the potential release area, field screening results, and field observations. Soil classification of the samples was made in the field and boring logs were subsequently prepared (see Appendix D). The drill rig and down-hole tools and equipment were inspected for any visual evidence of contamination prior to their use and after decontamination activities.

Each soil sample was homogenized using a stainless-steel spoon and mixing bowl, and the appropriate laboratory sample jars were filled. Soil samples for VOC and semi-volatile organic compounds (SVOCs) analysis were collected prior to mixing the sample using 5 gram En Core[®] samplers in accordance with EPA Method 5035. Soil samples were placed on icc in coolers and relevant sample data was recorded on a chain of custody form that accompanied the samples during the sampling event. Soil samples were transported to the analytical laboratory at the end of each day by cooler via overnight courier.

The soil samples were submitted to Spectrum Analytical for analysis for VOCs using EPA Method 8260, SVOCs using EPA Method 8270C; Pesticides using EPA Method 8081, Herbicides using EPA Method 8151A; PCBs using EPA Method 8082; TAL 23 Metals using EPA Methods 6000/7000/200, Hexavalent Chromium by EPA Method 7196; and Cyanide by EPA Method 9014.

3.3 MONITORING WELL INSTALLATION AND DEVELOPEMENT

Monitoring wells were installed at the Subject Property to: 1) investigate the groundwater quality near a specific lot, and/or 2) monitor up-gradient and down-gradient groundwater quality. The locations of the

seven temporary wells and three permanent monitoring wells are presented in Figure 3. Boring logs and construction details for the monitoring wells are included in Appendix D.

Three (3) permanent monitoring wells were installed at the Subject Property between November 7 and 9, 2007. The monitoring wells were installed by SITE, LLC, a New York State-certified well driller. The three permanent monitoring wells (MW-1 through MW-3) were installed using a truck-mounted, hollow stem auger CME drill rig equipped with 4.25 -inch diameter hollow stem augers. Monitoring wells were constructed of 2-inch ID, Schedule 40, threaded, flush-jointed, PVC riscr pipe, with 0.010-inch (10 slot) factory slotted, 2-inch ID, Schedule 40, threaded, flush-jointed, PVC well screen. Each monitoring well was screened to bridge the water table. The wells were completed at the surface within a 4-inch diameter protective casing (i.e., road box).

Well development was performed from November 13 through 16, 2007 on all newly installed groundwater monitoring wells. Each well was developed using a Waterra foot valve attached to dedicated HDPE tubing to remove fine grained materials from the filter pack and the adjacent formation, and to remove sediments from within the well casing. All development water was containerized in 55 gallon drums and stored on-site in preparation for off site disposal. Well development was performed by the removal of several well volumes of water (two or more) and monitoring water quality parameters (pH, specific conductivity, and turbidity).

Eight (8) temporary wells were installed at the Subject Property between November 1, 2007 and November 11, 2007. One temporary monitoring well (SB-6W) was found to produce insufficient groundwater for sampling and was decommissioned.

Five (5) additional temporary wells were installed at the Subject Property between December 5, 2007 and December 6, 2007.

3.4 GROUNDWATER SAMPLING AND ANALYSIS

2

1

1 - 3

Monitoring wells (permanent and temporary) were sampled form November 5 through 20, 2007. These include:

MW-1, MW-2, MW-3, SB-5W, GP-1W, GP-2W, GP-4W, GP-6W, GP-9W, and GP-12W

Additional temporary wells were sampled on December 11, 2007 These include:

SB-7W, SB-8W, SB-9W, SB-10W, and SB-11W

Prior to groundwater sampling activities, water level measurements were collected from each well. The depth to groundwater in the monitoring wells was measured using a Solinst water level meter capable of measuring to 0.01 loot. A summary of the groundwater measurements in each of the monitoring wells is provided in Table 1.

To ensure a representative groundwater sample, monitoring wells were purged and sampled consistent with EPA Region I low stress (low flow) purging and sampling techniques. Groundwater was purged from the temporary well points using a peristaltic pump and dedicated tubing.

Groundwater was purged from each permanent monitoring well using a QED 1 34 inch Sample Probladder pump with disposable bladder. Groundwater was pumped from a fixed intake at a flow rate

between 100 and 240 milliliters (ml) per minute until drawdown in the well was stabilized to minimize stress and disturbance in the well and surrounding aquifer. The pump discharge tubing was connected to a YSI Model 600XL water quality meter equipped with a flow through cell. The water quality meter enabled direct measurement of specific conductance, dissolved oxygen (DO), oxidation-reduction potential (ORP). pH, and temperature of the groundwater from the pump discharge. Groundwater turbidity was measured visually or from a sampling port installed in front of the flow-through cell utilizing a LaMotte 2020e turbidity meter.

Purging was considered complete and groundwater samples were collected when groundwater quality parameters were observed to have stabilized. Stabilization was considered achieved when three consecutive readings (taken at 3 to 5 minute intervals) were within the following limits:

- Turbidity (10% for values > than 10 NTU)
- Temperature (3%)
- DO (10%)

6

200

- pH (± 0.1 unit)
- Specific conductance (3%)
- ORP (± 10 mV)

MW-2 was sampled prior to turbidity stabilization due to time constraints.

Following purging, VOC samples were collected directly into pre-preserved sample containers in a manner that minimized turbulence to the sample. The samples for the remaining parameters were then collected using the same procedure. Groundwater samples collected in the field were placed on ice in coolers and relevant sample data was recorded on a chain-of-custody form that accompanied the samples during the sampling event. Groundwater samples were transported to the laboratory by overnight courier.

The groundwater samples were submitted to Spectrum Analytical for analysis for VOCs using EPA Method 8260; SVOCs using EPA Method 8270C, Pesticides using EPA Method 8081, Herbacides using EPA Method 8151A, PCBs using EPA Method 8082; TAL 23 Metals using EPA Methods 6000/7000/200, Hexavalent Chromium by EPA Method 7196; and Cyanide by EPA Method 9014.

3.5 QUALITY ASSURANCE / QUALITY CONTROL

During the Phase II ESA field investigation, QA/QC procedures were followed as outlined in the Work-Plans. The following QA/QC samples were collected throughout the course of the investigation:

Soil

- 9 VOC trip blanks,
- 2 duplicate soil samples;
- 6 equipment blanks;

Groundwater

2 VOC trip blanks;

3.4

1 equipment blank.

No duplicate samples were collected due to slow well recharge.

An analysis of the results of the QA/QC program is presented in Sections 4.3 and 5.3 of this report.

3.6 EQUIPMENT DECONTAMINATION AREA

Prior to the implementation of well drilling activities, a decontamination area was established. The area was set up in the asphalt-paved parking lot adjacent in Lot H. The decontamination area was designated to decontaminate all drilling and excavation equipment. The area was sloped to a low point for collection of decontamination water.

Hollow stem auger drilling equipment, including rig, tools, augers, casing, rods, and sampling devices, that came in contact with subsurface materials were decontaminated onsite, before any drilling began, between each well/soil boring location, and prior to removing any equipment from the Subject Property. Decontamination was conducted using a high pressure steam cleaner. All water generated during decontamination procedures were containerized in 55-gallon drums and stored onsite.

3.7 INVESTIGATION DERIVED WASTE MANAGEMENT

Both solid (soil cuttings) and liquid (purge water and decontamination wash-water) wastes were generated during the investigation activities. Soil and liquid generated during drilling activities were containerized in 55-gallon drums for characterization and off-site disposal.

4. PHASE II INVESTIGATION OVERVIEW AND ANALYTICAL RESULTS

4.1 OVERVIEW

Ram Barry Parts Rame

Sand I and from

E. and

-

-

The Phase II Investigation included the laboratory analysis of 25 soil and 15 groundwater samples. A summary of the Phase II Investigation field activities including: area descriptions, sample dates, methods of investigation, number of borings/wells, depths, media, number of samples, sample identifications, and parameters is presented in Table 1.

Soil borings were installed to evaluate specific Lots based on knowledge of historical operations and by field observations (i.e., staining, headspace monitoring results, etc.). Groundwater samples were collected from on-site monitoring wells. Samples were analyzed for parameters as presented in Section 2.0.

4.2 SOIL AND GROUNDWATER ANALYTICAL RESULTS

Summaries of analytical results for constituents detected in soil are presented in Table 2 through Table 9. Exceedences of NYSDEC TAGM 4046 guidance values are depicted on Figure 5 and Figure 6. A summary of analytical results for constituents detected in groundwater is presented in Table 10 through Table 12. Exceedences of NYSDEC groundwater standards are depicted on Figure 7. Groundwater analytical results were compared to NYSDEC Part 703 Groundwater Quality Standards. The laboratory analytical reports for soil and groundwater samples analyzed during this investigation are included as Appendix E.

The analytical results of the Phase II ESA soil and groundwater investigation are detailed on a Lot by Lot basis in the following subsections.

4.2.1 Lot A

Lot A is located at the southern end of the Subject Property. A total of six (6) soil borings were installed in Lot A. Four of the borings were installed using a HSA drill rig (SB-4, SB-6, SB-7, and SB-8). The remaining two soil borings were installed using the track-mounted Geoprobe (GP-8 and GP-9). Borings SB 4, SB-6, SB-7, SB-8, and GP-8 were installed in observed fill material in and around the footprint of an identified former apartment building. GP-9 was installed in the rear parking area of 95 West Post Road. During installation petroleum odors were noted in all six boring holes. One soil sample was collected from each boring and analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the soil findings for Lot A:

Soil Sample SB-4 (Sampled interval 10-14 ftbgs):

- 1,2,4-Trimethylbenzene (41.4 mg/kg), 1,3,5 Trimethylbenzene (13.5 mg/kg), Isopropylbenzene (2.86 mg/kg), n-Propylbenzene (5.22 mg/kg), Total Xylenes (6.45 mg/kg), Chromium (23.5 mg/kg), Copper (26.9 mg/kg), Iron (20,700 mg/kg), Nickel (19.0 mg/kg), and Zinc (47.9 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- 4-Isopropyltoluene, Ethylbenzene, Naphthalene, n-Butylbenzene, sec-Butylbenzene, 2-Methylnaphthalene, Naphthalene, Aluminum, Arsenic, Barium, Calcium, Cobalt, Lead,

Magnesium, Manganese, Potassium, Silver, Sodium, and Vanadium were also detected, but at concentrations TAGM 4046 guidance values.

Soil Sample SB-6 (Sampled interval 17-19 ftbgs):

Summer of

- Chromium (14.5 mg/kg), Iron (14,200 mg/kg), and Zinc (26.9) were detected at concentrations above NYSDEC TAGM 4046 guidance values.
- 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, Aluminum, Arsenic, Barium, Calcium, Cobalt, Copper, Lead, Magnesium, Manganese, Nickel, Potassium, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample SB-7 (Sampled interval 12-16 ftbgs):

- Chromium (15.2 mg/kg), Iron (13,000 mg/kg), Magnesium (9,520 mg/kg), Nickel (14.0 mg/kg), and Zinc (22.2 mg/kg) were detected at concentrations above NYSDEC TAGM 4046 guidance values.
- Aluminum, Barium, Calcium, Cobalt, Copper, Manganese, Potassium, Sodium, Vanadium, Acctone, and Tert-butanol were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample SB-8 (Sampled interval 12-14 ftbgs):

- Chromium (16.2 mg/kg), Iron (16,000 mg/kg), Magnesium (5,090 mg/kg), Zinc (30.8 mg/kg), 1,2,4-Trimethylbenzene (147 mg/kg), 1,3,5-Trimethylbenzene (40.8 mg/kg), Ethylbenzene (21.6 mg/kg), Isopropylbenzene (4.38 mg/kg), Naphthalene (15.1 mg/kg) n-Propylbenzene (21.6 mg/kg), and Total Xylenes (37.4 mg/kg) were detected at concentrations above NYSDEC TAGM 4046 guidance values.
- Aluminum, Barium, Calcium, Cobalt, Copper, Lead, Manganese, Nickel, Potassium, Sodium, Vanadium, 4-Isopropyltolucne, n-Butylbenzene, see-Butylbenzene, 1-Methylnaphthalene, 2-Methylnaphthalene, and Naphthalene were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample GP-8 (Sampled interval 8-10 ftbgs):

- 1,2,4-Trimethlybenzene (305 mg/kg), 1,3,5-Trimethlybenzene (84 mg/kg), Ethylbenzene (131 mg/kg), Isopropylbenzene (20.4 mg/kg), Naphthalene (45.6 mg/kg), n-Butylbenzene (22.4 mg/kg), n-Propylbenzene (60.0 mg/kg), Total Xylenes (368.1 mg/kg)Chromium (23 mg/kg), Iron (22,400 mg/kg), Nickel (24.7 mg/kg), and Zine (52.4 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- 4-Isopropyltoluene, sec-Butylbenzene, 1-Methylnaphthalene, 2-Methylnaphthalene, Aluminum, Barnum, Calcium, Cobalt, Copper, Lead, Magnesium, Manganese, Potassium, Silver, Sodium, Thallium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample GP-9 (Sampled interval 2-4 filips).

- 1,2,4-Trimethlybenzene (146 mg/kg), 1,3,5-Trimethylbenzene (59.4 mg/kg), Ethylbenzene (54.4 mg/kg), Isopropylbenzene (16.8 mg/kg), Naphthalene (47.0 mg/kg), n-Butylbenzene (11.4 mg/kg), n-Propylbenzene (23.1 mg/kg), Total Xylenes (147 mg/kg), Chromium (14.9 mg/kg), Copper (31.3 mg/kg), Iron (14,600 mg/kg), Mercury (70.8 mg/kg), and Zinc (114 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- 4-Isopropyltoluene, sec-Butylbenzene, 1-Methylnaphthalene, 2-Methylnaphthalene, Aluminum, Arsenic, Barium, Calcium, Cobalt, Lead, Magnesium, Manganese, Nickel, Potassium, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

One permanent monitoring well was installed in the SB-4 boring and three temporary wells were installed (GP-9W, SB-7W, SB-8W). One groundwater sample was collected from each well and analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the groundwater findings for Lot A:

Groundwater Sample GP-9W (Sampled depth 8 ftbgs):

- 1,2,4-Trimethlyhenzene (1460 ug/l), 1,3,5-Trimethylbenzene (546 ug/l), Benzene (128 ug/l), Ethylbenzene (1020 ug/l), Naphthalene (532 ug/l), n Propylbenzene (231 ug/l), Toluene (114 ug/l), Total Xylenes (2660 ug/l), 2-Methylnaphthalene (79.9 ug/l), Arsenic (0.032 mg/l), Barium (1.80 mg/l), Beryllium (0.0044 mg/l), Chromium (0.148 mg/l), Copper (0.410 mg/l), Lead (0.351 mg/l), Nickel (0.141 mg/l), Sodium (328.0 mg/l), and Vanadium (0.328 mg/l) were detected at concentrations above NYSDEC groundwater standards.
- 4-Isopropyltoluene, Isopropylbenzene, n-Butylbenzene, sec-Butylbenzene, I-Methylnaphthalene, Aluminum, Cadmium, Calcium, Cobalt, Iron, Magnesium, Manganese, Mercury, Potassium, Silver, and Zine were also detected, but at concentrations below NYSDEC groundwater standards.

Groundwater Sample SB 7W (Sampled depth 20 ltbgs):

- Iron and Manganese (2.7 mg/l). Magnesium (/1 mg/l), Manganese (2.73 mg/l), Sodium (275 mg/l), 1.2.4 Trimethylbezene (5.4 ug/l), 1.3,5-Trimethylbenzene (21.3 ug/l), Benzene (446 ug/l), Ethylbenzene (47.9 ug/l), Isopropylbenzene (11 3 ug/l), MTBE (1.120 ug/l), Naphthalene (34.9 ug/l), n Propylbenzene (6.9 ug/l), Toluene (24.6 ug/l), and Total Xylenes (99.9 ug/l) were detected at concentrations above NYSDEC groundwater standards.
- Aluminum, Barium, Calcium, Cobalt, Iron, Potassium, Nickel, Zinc, 4 Isopropyltolucne, Di-Isopropylether, sec-Butylbenzene, and Tert-butanol were also detected, but at concentrations below NYSDEC groundwater standards.

Groundwater Sample SB-8W (Sampled depth 20 ftbgs):

Iron and Manganese (3.95 mg/l), Magnesium (90.2 mg/l), Manganese (3.9 mg/l), Sodium (328.0 mg/l), 1,2,4-Trimethylbenzene (60.7 ug/l), 1,3,5-Trimethylbenzene (333 ug/l).
 Isopropyl toluene (6.5 ug/l), Benzene (28.6 ug/l). Ethylbenzene (340 ug/l), Isopropylbenzene (48.8 ug/l).

MTBE (62.5 ug/l), Naphthalene (147 ug/l), sec-Butylbenzene (17.6 ug/l), n-Propylbenzene (170 ug/l), and Total Xylenes (749 ug/l) were detected at concentrations above NYSDEC groundwater standards.

 Silver, Aluminum, Arsenic, Barium, Calcium, Cobalt, Iron, Potassium, Nickel, Lead, Toluene, 1-Methylnaphthalene, and 2-Methylnaphthalene were also detected, but at concentrations below NYSDEC groundwater standards.

Groundwater Sample MW-3 (Sampled depth 17 ftbgs):

- 1,2,4-Trimethlybenzene (877 ug/l), 1,3,5-Trimethylbenzene (265 ug/l), Ethylbenzene (706 ug/l), Isopropylbenzene (81.6 ug/l), Naphthalene (315 ug/l), Methyl Tert-Butyl Ether (MTBE) (46 ug/l), n-Propylbenzene (72.8 ug/l), Total Xylenes(1091 ug/l), Iron, Iron and Manganese (42.5 mg/l), Magnesium, (60.9 mg/l), Manganese (5.34 mg/l), Sodium (831 mg/l), and Thallium (0.009 mg/l) were detected at concentrations above NYSDEC groundwater standards.
- 4-Isopropyltoluene, Tert-Butanol/butyl alcohol, 1-Methylnaphthalene, Aluminum, Arsenic, Barium, Calcium, Lead, and Potassium were also detected, but at concentrations below NYSDEC groundwater standards.

4.2.2 Lot B

Lot B, is located in the middle of the Subject Property, east of Brady Place. Three (3) soil borings were installed in Lot B (SB-5, SB-10, and SB-11). SB-5 and SB-11 were installed in an area identified as a former "filling station". SB-10 was installed adjacent to Lot E. The borings were installed using a HSA drill rig. One soil sample was collected from each boring. The samples were analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the soil findings for Lot B:

Soil Sample SB-5 (Sampled interval 8-10 ftbgs):

- Chromium (20.4 mg/kg), Iron (17,600 mg/kg), Mercury (0.166 mg/kg), Magnesium (5,410 mg/kg), and Zinc (54.3 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Arsenic, Barium, Calcium, Cobalt, Copper, Lead, Manganese, Nickel, Potassium, Silver, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample SB-10 (Sampled interval 9-11 ftbgs):

- Chromium (18.4 mg/kg), Iron (16,200 mg/kg), Magnesium (6,280 mg/kg), Zinc (43.6 mg/kg), Benzene (0.143 ug/l), and Total Xylenes (2.70 ug/l) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Arsenic, Barium, Calcium, Cobalt, Copper, Lead, Manganese, Mercury, Nickel, Potassium, Sodium, Vanadium, 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, 4-Isopropyltoluene, Ethylbenzene, Isopropylbenzene, Naphthalene, n-Butylbenzene, n-

Propylbenzene, sec-Butylbenzene, Toluene, 2-Methylnaphthalene, and Naphthalene were also detected, but at concentrations below TAGM 4046 guidance values.

Three temporary wells were installed (SB-5W, SB-10W, and SB-11W). One groundwater sample was collected from each temporary well point and analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the groundwater findings for Lot B:

Groundwater Sample SB-5W (Sampled depth 11 ftbgs):

- Cis-1,2-Dichloroethene (15.8 ug/l), MTBE (11.5 ug/l), Vinyl Chloride (2.5 ug/l), Iron (26.8 mg/l), Iron and Manganese (36.18 mg/l), Magnesium (39.5 mg/l), Manganese (9.38 mg/l), Sodium (145 mg/l), Thallium (0.0108 mg/l), and Vanadium (0.041 mg/l) were detected at concentrations above NYSDEC groundwater standards.
- Acetone, Aluminum, Barium, Calcium, Chromium, Cobalt, Copper, Cyanide, Lead, Nickel, Potassium, and Zinc were also detected, but at concentrations below NYSDEC groundwater standards.

Groundwater Sample SB-10W (Sampled depth 15 ftbgs):

- Iron and Manganese (2.88 mg/l), Magnesium (40.8 mg/l), Manganese (2.5 mg/l), Sodium (177 mg/l), and MTBE (29.1 ug/l) were detected at concentrations above NYSDEC groundwater standards.
- Aluminum, Barium, Iron, Potassium, 1,2,4-Trimethylbenzene, Ethylbenzene, and Total Xylenes were also detected, but at concentrations below NYSDEC groundwater standards.

Groundwater SB 11W (Sampled depth 15 ftbgs).

- Magnesium (15.3 mg/l), Manganese (0.407 mg/l), and Sodium (242 mg/l) were detected at concentrations above NYSDEC groundwater guidance values.
- Silver, Aluminum, Barium, Calcium, Iron, Potassium, Zinc, cis-1,2-Dichloroethene, Tetrachloroethene, and Trichloroethene (TCE) were also detected, but at concentrations below NYSDEC groundwater standards.

4.2.3 Lot C

Lot C is the center lot of the Subject Property. A total of three (3) soil borings were installed in Lot C. Two of the borings were installed using a HSA drill rig (SB-3 and SB-9). The remaining soil boring was installed using the track-mounted Geoprobe (GP-10). Boring SB-3 was installed east of an identified UST. SB-9 was installed in the up-gradient parking lot. Boring GP-10 was installed southeast of a second identified UST. One soil sample was collected from each boring. All samples were analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the soil findings for Lot C:

Soil Sample SB-3 (Sampled interval 8-10 ftbgs):

- Arsenic (21.9 mg/kg), Beryllium (.870 mg/kg), Cadmium (1.13 mg/kg), Chromium (23.8 mg/kg), Copper (102 mg/kg), Iron (45,300 mg/kg), Mercury (.314 mg/kg), Nickel (23.6 mg/kg), Selenium (3.26 mg/kg), and Zine (584 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Barium, Calcium, Cobalt, Lead, Magnesium, Manganese, Potassium, Silver, Sodium and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample SB-9 (Sampled interval 4-6 ftbgs):

- Chromium (26 mg/kg), Copper (27.2 mg/kg), Iron (25, 600 mg/kg), Magnesium (6,050 mg/kg), Nickel (22.3 mg/kg), and Zinc (64.8 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Barium, Cadmium, Calcium, Cobalt, Lead, Manganese, Potassium, Sodium, and Vanadium were also detected, but not concentrations below TAGM 4046 guidance values.

Soil Sample GP-10 (Sampled interval 2 to 4 ftbgs):

- Barium (483 mg/kg), Chromium (16 mg/kg), Copper (123 mg/kg), Iron (12,800 mg/kg), Mercury (.118 mg/kg), Nickel (15.4 mg/kg), and Zinc (603 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Tetrachloroethane, 4,4'-DDE, 4,4'-DDT, PCB 1260, Aluminum, Arsenic, Cadmium, Calcium, Cobalt, Lead, Magnesium, Manganese, Potassium, Sodium, and Vanadium were also detected, but at concentrations above TAGM 4046 guidance values.

One temporary monitoring well was installed in the SB-9 boring (SB-9W). One groundwater sample was collected from the temporary well point and analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the groundwater findings for Lot C:

Groundwater Sample SB-9W (Sample depth 15 ftbgs):

- Iron and Manganese (3.24 mg/l), Magnesium (29.1 mg/l), Manganese (3.2 mg/l), Sodium (333 mg/l), Thallium (0.0128 mg/l), Benzene (1.4 ug/l), cis-1,2-Dichloroethene (222 ug/l), MTBE (116 ug/l), TCE (6.1 ug/l), and 2,4,6-Trichlorophenol (15.2 ug/l) were detected at concentrations above NYSDEC groundwater standards.
- Silver, Alumnum, Barum, Calcium, Iron, Potassium, Zinc, Tert-Butanol, Tetrachloroethene, Tolnene, trans-1,2-Dichloroethene were also detected, but at concentrations below NYSDEC groundwater standards

4.2.4 Lot D

Lot D is located in the northern portion of the Subject Property immediately adjacent to Lot C and Lot H. Flve soil borings were installed in Lot H, four (4) using the tract mounted Geoprobe (GP-4, GP-5, GP-6, GP-7) and one using a HSA drill rig (SB-2). Borings GP-5, GP-6, and GP-7 were installed adjacent to active garage bays at 55 West Post Road. Boring GP-4 was installed in the center of three identified USTs. Boring SB-2 was installed east of the three identified USTs. One soil sample was collected from each boring with the exception of SB-2, which had a duplicate soil sample collected for QA/QC purposes. All samples were analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the soil findings for Lot D:

Soil Sample GP-4 (Sampled interval 3.5 to 4.5 ftbgs):

- Chromium (19.2 mg/kg), Copper (38.4 mg/kg), Iron (18,300 mg/kg), Mercury (0.308 mg/kg), Nickel (13.2 mg/kg), and Zinc (185.0 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Arsenic, Barium, Calcium, Cobalt, Lead, Magnesium, Manganese, Potassium, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample GP-5 (Sampled interval 6 to 8 ftbgs):

- Chromium (20.2 mg/kg), Iron (18,600 mg/kg), Mercury (0.227 mg/kg), Nickel (13.9 mg/kg), and Zinc (103 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Arsenic, Barium, Calcium, Cobalt, Copper, Lead, Magnesium, Manganese, Potassium, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample GP-6 (Sampled interval 6 to 8 ftbgs):

- Chromium (17 mg/kg), Copper (33.1 mg/kg), Iron (19,000 mg/kg), Mercury (0.600 mg/kg), and Zinc (72 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Arsenic, Barium, Calcium, Cobalt, Lead, Magnesium, Manganese, Nickel, Potassium, Silver, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample GP-7 (Sampled interval 2 to 4 ftbgs):

- Chromium (14.9 mg/kg), Iron (14,800 mg/kg), Mercury (0.35 mg/kg), and Zinc (92.7 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Arsenic, Barium, Calcium, Cobalt, Copper, Lead, Magnesium, Manganese, Nickel, Potassium, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample SB-2 (Composite sample interval of 4 to 6 ftbgs and 8 to 10 ftbgs):

- Beryllium (1.56 mg/kg), Cadminm (1.4 mg/kg), Chromium (24.0 mg/kg). Iron (19.100 mg/kg). Nickel (18.0 mg/kg). Scienium (2.09 mg/kg), and Zinc (52.4 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Arsenic, Barium, Calcium, Copper, Lead, Magnesium, Manganese Potassium, Silver, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

One permanent monitoring well was installed (MW-2) and two temporary wells were installed (GP-4W and GP-6W). One groundwater sample was collected from each well and analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium with the exception of GP-6W with was only sampled for VOCs and TAL 23 Metals because of low groundwater recharge.

Below is a summary of the groundwater findings for Lot D:

Groundwater Sample MW-2 (Sampled depth 13.2 ftbgs):

- Iron (22.4 mg/l), Iron and Manganese (22.8 mg/l), Magnesium (34.7 mg/l), Manganese (1.43 mg/l), Sodium (136 mg/l), and Vanadium (0.0444 mg/l) was detected at concentrations above NYSDEC groundwater standards.
- Chloroform, Aluminum, Arsenic, Barium, Calcium, Chromium, Cobalt, Copper, Nickel, Potassium, and Zinc were also detected, but at concentrations below NYSDEC groundwater standards.

Groundwater Sample GP 4W (Sampled depth 14 ftbgs):

- Iron (48.6 mg/l), Iron and Manganese (48.98 mg/l), Magnesium (9.12 mg/l), Manganese (0.383 mg/l), Sodium (96.8 mg/l), Lead (0.137 mg/l). Vanadium (0.0418 mg/l), Benzene (4.6 ug/l), cis-1,2 Dichloroethene (22.4 ug/l), n-Propylbenzene (129 ug/l), and Vinyl Chloride (21.9 ug/l) were detected at concentrations above NYSDEC groundwater standards.
- Di-isopropyl ether, Tert-amyl methyl ether, Tert-Butanol/butyl alcohol, trans-1,2-Dichloroethene, Aluminum, Arsenic, Barium, Calcium, Chromium, Cobalt, Copper, Mercury, Nickel, Potassium, and Zinc were also detected, but at concentrations below NYSDEC groundwater standards

Groundwater Sample GP-6W (Sampled depth 12 fthgs):

 Antimony (0.126 mg/l), Arsenie (0.231 mg/l), Barium (6.07 mg/l), Beryllium (0.0188 mg/l), Cadmium (0.0275 mg/l), Chromuum (1.64 mg/l), Copper (1.52 mg/l), Iron (2160 mg/l). Iron and Manganese (2,157 mg/l), Magnesium (384 mg/l), Manganese (15.8 mg/l), Lead (5.75 mg/l), Mercury (0.0064 mg/l), Nickel (0.942 mg/l), Sodium (241 mg/l), Thallum (0.112 mg/l), Vanadium (1.62 mg/l), and Zine (5.08 mg/l) were detected at concentrations above NYSDEC groundwater standards.

 Acctone, MTBE, Vinyl Chloride, Aluminum, Calcium, Cobalt, Iron. Manganese, Magnesium, Potassium, and Sodium were also detected, but at concentrations below NYSDEC groundwater standards.

4.2.5 Lot E

Lot E is an uninhabited residence at this time, but was not accessible for soil or groundwater sampling. Soil and groundwater conditions are likely to be similar to those found in the eastern portion of Lot A. Further investigation is recommended for this area.

4.2.6 Lot H

Lot H is located at the northern end of the Subject Property. A total of four (4) soil borings were installed in Lot H. One of the borings was installed using a IISA drill rig (SB-1). The remaining three soil borings were installed using the track-mounted Geoprobe (GP-1, GP-2 and GP-3). Sample locations GP-1 and GP-2 were located adjacent to hydraulic lifts located in the former garage location. Sample locations SB-1 and GP-3 were located near existing/former UST locations in the parking lot. One soil sample was collected from borings SB-1, GP-2, and GP-3, and two soil samples were collected from GP-1 (GP-1A from two to four ftbgs and GP-1B from four to six ftbgs). All samples were analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the soil findings for Lot H.

Soil Sample SB-1 (Sampled interval 6 to 8 fibgs):

- Chromium (16.3 mg/kg), Iron (14.600.0 mg/kg), and Zuic (29.6 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Arsenie, Barinm, Caleinm, Cobalt, Copper, Lead, Magnesium, Manganese, Nickel, Potassium, Sodium and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

Soil Sample GP-1A (Sampled interval 7 to 4 ftbgs).

- 1,2,4-Trimethylbenzen (40.2 mg/kg), 1,3,5- Trimethylbenzene (12.8 mg/kg), Chromium (19.5 mg/kg), Iron (17,300.0 mg/kg), Naphthalene (24.4 mg/kg) Nickel (13.9 mg/kg), n-Propylbenzene (4.46 mg/kg), Zinc (143.0 mg/kg) and Xylenes (4.66 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- I-Methylnapthalene, 2 Methylnaphthalene, 4-Isopropyltolnene, Isopropylbenzene, n Butylbenzene, see-Butylbenzene, Aluminum, Arsenic, Barium, Caleium, Cohalt, Copper, Lend, Magnesium, Manganese, Mercury, Naphthalene, Potassium, Sodium and Vanadium were also detected, but at concentrations below TACM 4046 guidance values

Soil Sample GP-1B (Sampled interval 4 to 6 ftbgs).

 Arcenic (10.7 mg/kg), Benzo(a)pyrene (1.34 mg/kg), Benzo(b)fluorandhene(1.36 mg/kg), Chrysene (1.47 mg/kg), Chromium (32.1 mg/kg), Copper(415 mg/kg), Dibenzo(a,h)anthracene

(1.43 mg/kg) Iron (54,200.0 mg/kg) Mercury (.178 mg/kg), Nickel (20.7 mg/kg), and Zinc (479.0 mg/kg) were detected at concentrations above TAGM 4046 guidance values.

 1,2,4-Trimethylbenzene, 1,3,5,- Trimethylbenzene, 2-Methylnapthalene, 4-Isopropyltoluene, Isopropylbenzene, Naphthalene, n-Butylbenzene, n-Propylbenzene, sec-Butylbenzene, Aluminum, Barium, Bcnzo(g.h.i)pcrylene, Bcnzo(k)fluoranthrene, Cadmium, Calcium, Cobalt, Fluoranthene, Lead, Magnesium, Manganese, Potassium, Pyrene, Silver, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values

Soil Sample GP-2 (Sampled interval 4 to 6 ftbgs):

- Chromium (25.2 mg/kg), Iron (18,800 mg/kg), Nickel (16.2 mg/kg) and Zinc (220 mg/kg) were
 detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Arsenic, Barium, Calcium, Cobalt, Copper., Lead, Magnesium, Manganese, Mercury, Potassium, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values

Soil Sample GP-3 (Sampled interval 4 to 5.5 ftgbs):

- Chromium (21.7), Iron (26,000 mg/kg), Mercury (.178 mg/kg) and Zine (76.3 mg/kg) were
 detected at concentrations above TAGM 4046 guidance values.
- Benzo(b)fluoranthene, Aluminum, Arsenic, Barium, Calcium, Cobalt, Copper, Lead, Magnesium, Manganese, Nickel, Potassium, Sodium, and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values

One permanent monitoring well was installed (MW 1), and two temporary wells were installed in GP 1 and GP-2. One groundwater sample was collected from each well and analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the groundwater findings for Lot H:

Groundwater Sample MW-1 (Sampled depth 12.72 ftbgs):

- Vinyl Chloride (2.4 ug/l), Antimony (.0062 mg/l), and Vanadium (.0738 mg/l) were detected at concentrations above NYSDEC groundwater standards.
- Chloroform, cis 1,2 Dichloroethene, Tert Butanol/ Butyl Alcohol, Aluminum, Arsenic, Barium, Calcium, Chromium, Cohalt, Copper, Iron, Magnesium, Manganese, Nickel, Potassium, Silver, Sodium, and Zinc were also detected, but at concentrations below NYSDEC groundwater standards.

Groundwater Sample GP-TW (Sampled depth 7 ftbgs):

Iron (17.5 mg/l), Iron and Manganese (19.6 mg/l), Magnesium (42.5 mg/l)), Manganese (2.08 mg/l), Sodium (185 mg/l), 1.2.4- Trimethylbenzene (35.9 ug/l), 1.3.5- Trimethylbenzene (6.7 ug/l), and Total Xylenes (8.8 ug/l) were detected at concentrations above NYSDEC groundwater standards.

 Ethylbenzene, Isopropylbenzene, Naphthalene, n-Propylbenzene, Aluminum, Barium, Calcum, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Sodium, Vanadium and Zinc were also detected, but at concentrations below NYSDEC groundwater standards.

Groundwater Sample GP-2W (Sampled depth 7 ftbgs):

- Iron (21.5 mg/l), Iron and Manganese (23.73 mg/l), Magnesium (69.7 mg/l), Manganese (2.23 mg/l), Sodium (257 mg/l), Antimony (0.052 mg/l) and Vanadium (.0329 mg/l) were detected at concentrations above NYSDEC groundwater standards.
- Aluminum, Arsenic, Barium, Calcium, Chromium, Cobalt, Copper, Cyanide, Lead, Nickel, Potassium, and Zinc were also detected, but at concentrations below NYSDEC groundwater standards.

4.2.7 Lot K

Lot K is located at the northern end of the Subject Property on the corner of West Post Road and Lexington Avenue. A total of two (2) soil borings were installed in Lot K. The two soil borings were installed using the track-mounted Geoprobe (GP-11 and GP-12). One soil sample was collected from each boring and analyzed for VOCs, SVOCs, Pesticides, Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium.

Below is a summary of the soil findings for Lot K:

Soil Sample GP-11 (Sampled interval 0 to 4 ftbgs):

- Chromium (28.7 mg/kg), Copper (29.6 mg/kg), Iron (27,100.0 mg/kg), Mercury (.133 mg/kg), Nickel (26.1 mg/kg), and Zanc (214.0 mg/kg) were detected at concentrations above TAGM 4046 guidance values.
- Aluminum, Barium, Cadmum, Calcium, Cobalt, Lead, Magnesium, Manganese, Porassium, Pyrenc, Silver, Sodium and Vanadium were also detected, but at concentrations below TACM 4046 guidance values.

Soil Sample GP-12 (Sampled interval 6 to 8 ftbgs):

- Benzo(a)anthracene (.434 mg/kg), Benzo(a)pyrene (.366 mg/kg), Chromium (.30.9 mg/kg), Chrysene (.423 mg/kg), Copper (.30.1 mg/kg), Nickel (.27.5 mg/kg), and Zine (.89.5 mg/kg) were detected at concentrations above TACiM 4046 guidance values.
- Aluminum, Anthracene, Barium, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Calcium, Cobalt, Flouranthene, Indeno(1,2,3-ed)pyrene, Iron, Lend, Magnesium, Manganese, Mercury, Phenanthrene, Potassium, Pyrene, Silver, Sodium and Vanadium were also detected, but at concentrations below TAGM 4046 guidance values.

One temporary well was installed in GP-12. One groundwater sample was collected from the well and analyzed for VOC3. SVOC3. Posticides. Herbicides, PCBs, TAL 23 Metals, Cyanide, and Hexavalent Chromium

Below 13 a summary of the groundwater findings for Lot K:

Groundwater Sample GP-12W (Sampled depth 10 ftbgs):

- Chromium (.0546 mg/l), Iron (42.7 mg/l), Iron and Manganese (45.2 mg/l), Magnesium (68.2 mg/l), Manganese (2.5 mg/l), Sodium (27.7 mg/l), cis-1,2- Dichlorocthene (11.3 ug/l), Lead(0.12 mg/l), Methyl Tert-Butyl Ether (MTBE) (22.8 ug/l) and Vanadium (.0724 ug/l)were detected at concentrations above NYSDEC groundwater standards.
- Aluminum, Barium, Calcium, Cobalt, Copper, Nickel, Potassium, Silver, and Zine were also detected, but at concentrations below NYSDEC standards.

4.2.8 Building Materials Survey

A Building Materials Survey (BMS) was conducted at seven (7) structures on the Subject Property by Hygienetics Environmental. Samples were collected from the surface materials of each structure and analyzed for:

- Ashestos-Containing Materials (ACMs)
- Lead-based Paints (LBPs)
- Polychlorinated Biphenyls (PCBs)
- Mold Contamination

The full BMS report can be found in Appendix C. In summary, the presence of ACMs, LBPs, PCBs, and Mold Contamination was confirmed. These materials will required special handling during a building demolition and disposal.

5. DISCUSSION

5.1 REGULATORY AND REDEVELOPMENT CONSIDERATIONS

Based on the results of the Phase II site investigation activities, there are three general categories of environmentally impaired media; 1) onsite structures; 2) onsite soils; and 3) onsite and offsite groundwater. Below is a discussion of the regulatory and redevelopment considerations for each of these environmental media. Specific recommendations for each of the environmentally impaired media are discussed in Section 6.0 – Conclusions and Recommendations.

5.2 ONSITE STRUCTURES

As described in the Building Material Survey (BMS) Report (see Appendix C), asbestos containing materials and lead based paint were detected in the majority of the structures on the Subject Property. Mold contamination was also detected in one of the structures on the Subject Property (the basement of the Rosenthal building on Lot H). The recommendations for removal of these materials, as stated in the BMS Report, should be followed prior to and during the demolition of the structures. Adherence to the recommendations in the BMS Report will insure compliance with applicable federal, state, and local regulations regarding the demolition and disposal of the contaminants detected in the structures.

In addition to the buildings, there are several underground structures that will require removal. These underground structures include:

- In-ground hydraulic lifts (Lot H).
- One abandoned and six active underground storage tanks, and
- One oil/water separator.

If redevelopment of the site progresses, these underground structures will require further investigation and closure in accordance with NYSDEC regulations

5.3 ONSITE SOILS

Several contaminants were detected in onsite soils throughout the entire Subject Property at concentrations exceeding the NYSDEC's Recommended Soil Cleanup Objectives as defined in the NYSDEC's Technical and Administrative Guidance Memorandum (TAGM) #4046. Many of the contaminants that were detected throughout the Subject Property (primarily metals including chromium, iron, lead, nickel, copper, zinc, and mercury) are likely associated with historic uses and/or historic fill and not current onsite operations. Because metals were detected throughout the Subject Property, it is not practical, nor likely required, to remove all the metal contaminated soils site-wide.

However, other contaminants that were detected may be associated with current onsite operations. These contaminants include volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) as well as some metals. VOCs and SVOCs were predominately detected on Lot A and Lot II. Based on the observations made during the Phase II investigation, the VOCs detected on Lot A are likely associated with a gasoline release, potentially emanating from offsite sources. The VOCs and SVOCs detected on Lot H are likely attributed to the numerous in-ground hydraulic lifts and the use of the

building for auto repair and maintenance. Contaminated groundwater is the likely source of the VOCs detected in the Lot A soils and, therefore, is discussed in Section 5.4

In general, there are three regulatory factors to consider for the redevelopment of the Subject Property with respect to contaminated soils; 1) insuring that the soil contaminants detected are not associated with a historic or an on-going release to the environment; 2) limiting and managing human exposure to the soil contaminants; and 3) disposal considerations in the event site soils are excavated. Below is a discussion of the site soils within the context of these three regulatory considerations.

5.3.1 Soil Contaminant Source Determination

With the exception of Lot H, it does not appear that the contaminants found in the Subject Property soils are the result of a historic or on-going release. Rather, the majority of the contaminants, predominantly the metals, are likely to be associated with historic operations and/or historic fill. It is likely that the VOCs and SVOCs detected on the Subject Property (particularly those identified on Lot H), as well as some metals, are associated with onsite operations. However, the presence of the VOCs, SVOCs and some metals are likely attributed to *de minimis* releases associated with site operations (i.e. auto sales, repairs, and maintenance) and not a release from a particular structure or specific location.

5.3.2 Soil Contaminant Exposure

Overall, the Subject Property is predominantly paved and, therefore, there is currently limited exposure risk to the site soils. However, if soils were to be disturbed to facilitate redevelopment, a soil management plan would need to be prepared and submitted to the NYSDEC for approval to demonstrate that potential exposure to contaminated site soils is mitigated. The soil management plan would also likely include provisions for the excavation and disposal of soil "hot spots".

5.3.3 Soil Contaminant Disposal

In the event that a redevelopment plan includes excavation of soils for offsite disposal, the site soils will not be able to be used as clean fill offsite or disposed at a municipal landfill, but rather would have to be disposed of at a regulated facility. As such, disposal costs will be significantly higher for the site soils as compared to "clean" soils. For example, "clean" soils can be disposed of for approximately \$25 per ton, whereas the contaminated site soils would cost an average of \$225 per ton for offsite disposal.

5.4 ONSITE AND OFFSITE GROUNDWATER

Numerous contaminants were detected in the groundwater samples collected on the Subject Property at concentrations exceeding the NYSDEC Part 703 Groundwater Quality Standards. The contaminants include metals, VOCs and SVOCs. The metals detected in the groundwater were similar to those detected in the site soils. The source of the metals in groundwater is likely from the overlying contaminated soils and is attributed to historic uses and/or historic fill. In general, the number of metals detected in the temporary GeoProbe wells was greater than the number of metals detected in the permanently installed monitoring wells, indicating that some of the metals detected in the temporary GeoProbe wells may be attributed to particulate matter (turbidity) in the groundwater samples associated with the site soils. The groundwater samples collected from the permanently installed monitoring wells are more representative of ambient groundwater quality conditions.

The VOCs detected in the groundwater fall into two general categories: chlorinated organic compounds and aromatic hydrocarbons. Chlorinated compounds (vinyl chloride and cis 1.2 dichloroethene) were detected at concentrations marginally above regulatory standards in the groundwater throughout the Subject Property (with the exception of Lot A). The source of the chlorinated compounds is not known, but may be attributed to onsite sources (cleaning solvents, degreasers, etc.) associated with auto repair and maintenance. It is also possible that the chlorinated compounds are from offsite sources, such as a dry cleaner, as vinyl chloride and cis-1,2-dichloroethene are breakdown products of perchloroethylene, a chemical commonly used in the dry cleaning process.

Aromatic hydrocarbons were detected in the groundwater to some degree throughout the Subject Property. The hydrocarbons detected on Lot B, C, D, H, and K were at concentrations marginally above applicable groundwater quality standards. The hydrocarbons detected in the groundwater on Lot A, however, were at concentrations significantly above groundwater quality standards. The hydrocarbons detected in Lot A groundwater appear to be gasoline-related. The presence of methyl tert-butyl ether (a gasoline additive) in the groundwater confirms the likelihood that the detected hydrocarbons are gasoline-related. The likely source of the hydrocarbon groundwater contamination on Lot A are the two known gasoline spills located offsite and immediately upgradient of Lot A. Concentrations observed in onsite wells were at a level consistent with a gasoline spill. As such, the Property Owner notified NYSDEC of the potential spill and a spill number was opened.

As with the soils, there are three general regulatory factors to consider for the redevelopment of the Subject Property with respect to contaminated groundwater; 1) insuring that the groundwater contaminants detected are not associated with a historic or an on-going release to the environment; 2) limiting and managing human exposure to the groundwater contaminants; and 3) disposal considerations in the event dewatering is required for construction. Below is a discussion of the site groundwater within the context of these three regulatory considerations.

5.4.1 Groundwater Contaminant Source Determination

If the chlorinated compounds emanated from offsite, it is not known whether or not there is a historic or on-going release. No records of a documented release of chlorinated compounds were found. Given that no chemical precursors of the chlorinated compounds detected onsite were found, it is not likely that there is an on-going release of chlorinated compounds from offsite sources. If the chlorinated compounds are from onsite sources, their presence is likely attributed to *de minimis* releases associated with site operations (i.e. auto sales, repairs, and maintenance) and does not represent an on-going release.

Although the source of hydrocarbons in the groundwater on Lot A is likely emanating from offsite, there is a regulatory obligation to demonstrate that there is no on going release on Lot A and that the source of petroleum hydrocarbons is, in fact, emanating from offsite. The only way to close-out the active Spill Number for Lot A will be to make such a demonstration to the NYSDEC. It is not known whether or not there is an on-going offsite release to Lot A. It is possible that the petroleum hydrocarbons detected in the groundwater represents residual contamination from a historic offsite release.

5.4.2 Groundwater Contaminant Exposure

There are accord potential routes of exposure to contaminants in groundwater. These include ingestion from consumption, dermal exposure from contact, and inhalation exposure from vapors potentially emanating from the groundwater. Given that there are no known potable uses of the groundwater in the vicinity of the Subject Property, there is minimal risk of ingestion exposure to the groundwater. The

potential for dermal exposure is not likely, with the potential exception of contact during construction m installation/maintenance of utilities. There is a potential for soil vapor to emanate to the ground surface. Given that there are no structures on Lot A, and only a small unoccupied structure on Lot B, there is minimal risk for exposure. Nonetheless, any plans for redevelopment will need to evaluate if some form of soil vapor mitigation needs to be implemented (i.e. sub-slab soil venting).

5.4.3 Groundwater Contaminant Disposal

In the event that dewatering is required for redevelopment, the groundwater will require treatment prior to disposal to a storm or sanitary sewer system. While treating groundwater is not a technical challenge, it does add a significant cost to the overall construction budget.

6. CONCLUSIONS AND RECOMENDATIONS

The Phase II ESA has disclosed the presence of environmental contamination on the Subject Property. The environmental media sampled during this site assessment include:

- Soil Identified VOCs, SVOCs, and Metals that were detected above the NYSDEC TAGM 4046 guidance values.
- Groundwater Identified VOCs and Metals that were detected above the NYSDEC groundwater quality standards.
- Building Materials Identified ACMs, LBPs, PCBs, and Mold Contamination that would require special handling during building demolition and disposal activities.

In addition, the presence of one former UST and six current USTs/Oil-Water Separators were identified during utility clearance activities on the Subject Property. These USTs will require closure in accordance with NYSDEC protocols.

The petroleum contamination identified on Lot A and Lot B could be the result of offsite activities. Two open NYSDEC spill numbers were identified in areas potentially up-gradient of Lot A:

- Spill Number 0507583 was opened on September 23, 2005. The spill occurred at 102 West Post Road, currently the Triangle Deli and was attributable to gasoline leaking from a UST at a former gas station on the property. According to NYSDEC records a Phase II Environmental Report was submitted by Advanced Cleanup Technologies, Inc. in October of 2005. In April and May of 2007 a 3,000 gallon UST was abandoned in place and 27 tons of petroleum contaminated soil was removed from the site. Monitoring wells were installed in October of 2007 and quarterly sampling is in progress.
- Spill Number 9416930 was opened on March 29, 1995. The spill occurred at 107 West Post Road, the Post Road Sunoco. Gasoline was observed to leaking from USTs on the property. No further information regarding cleanup was available in the information received to date.

Contaminants such as the metals identified in soils and in groundwater in other Lots on the Subject Property may be attributable to historic use and/or historic fill of the property.

The purpose of the Phase II ESA was to identify the presence or absence of environmental contamination on the Subject Property. Depending on the anticipated redevelopment plan for the property, further environmental investigation will be required to determine the source and extent of contamination present on the Subject Property.

Below are specific recommendations that should be considered prior to acquisition and redevelopment of the Subject Property:

 A spill number has been opened with NYSDEC for the groundwater contamination detected on Lot A. The spill will require closure with NYSDEC and would include the following activities: conduct additional investigation of Lot A to confirm whether the source of the contamination is from an onsite or offsite release, conduct a detailed review of reports related to potential offsite

LIMITED ENVIRONMENTAL INVESTIGATION FOR ASBESTOS-CONTAINING MATERIALS, LEAD BASED PAINT, POLYCHLORINATED BIPHENYLS AND MOLD CONTAMINATION

Performed at:

Sholz Auto Group – Multiple Structures 35-95 West Post Road White Plains, NY 10604

Performed for:

Woodard and Curran 709 Westchester Avenue, Suite L2 White Plains, NY 10604

Hygienetics

1.0 Executive Summary

Hygienetics Environmental Services (IIES) has performed a limited inspection for the presence of Asbestos-Containing Materials (ACMs), Lead-Based Paints (LBPs), Polychlorinated Biphenyls (PCBs) and mold contamination at the commercial property known as the Sholz Auto Group located in White Plains, New York. The inspection included seven (7) separate structures located at 35-95 West Post Road and one structure located at 80 Brady Place, White Plains, NY. The inspection was conducted at the request of Woodard and Curran and took place on November 6 and 7, 2007. The intent of this inspection and site survey assessment was to locate and identify potential ACMs, LBPs, PCBs and mold contamination concerns that may require abatement and proper disposal. A preliminary cost estimate for material abatement costs associated with full scale demolition has been provided based upon the survey and sampling results.

Inspection and sampling of the property revealed the following confirmed ACMs:

- · Pipe insulation inside the 35 and 77 West Post Road structures;
- · Boiler insulation inside the 35 West Post Road structure;
- Floor tiles and mastics (9" x 9" & 12" x 12") inside the 35,77 and 95 West Post Road structures;
- Roof materials (membranes, tars, and flashings) at the 35, 55 77 and 95 West Post Road structures.

Confirmed LBPs as per EPA and HUD criteria were found at exterior painted surfaces of the 80 Brady Place structure (vacant private house). Levels of lead above the OSHA regulatory threshold were found on interior and exterior painted surfaces of the commercial structures (35-95 West Post Road) throughout the property.

Visual inspection and analytical testing confirmed the presence of mold contamination inside the 35, 55 and 77 West Post Road structures.

In addition, analytical testing of a representative suspect fluorescent light fixture ballast revealed detectable levels of PCBs residue in the ballast oil. No evidence of PCBs contamination was found in limited sampling and testing of representative suspect window caulk and suspect hydraulic oil residue associated with vehicle lifts.

The preliminary cost estimate for specialized abatement and environmental cleanup is \$701,350.

2.0 Property Description

The Sholz Auto group property is approximately 5.0 acres in size and includes seven commercial structures and one private house. Sections of the property are vacant lots as well. Construction dates and diagrams of the structures were not provided. The structures on the property that were inspected are summarized as follows:

 35 West Post Road is a two-story former auto dealership building that is currently vacant. The basement is empty storage space. The 1st floor contains an auto show room, offices and vehicle repair shop. The second floor contains office space. Hydraulic lifts are present in the first floor garage area. Construction date is estimated at the early 1950s.

- 55 West Post Road is a one story occupied mechanic shop and vehicle maintenance facility. The basement contains auto parts storage and hydraulic lift equipment. The first floor contains a vehicle repair shop with a garage area, hydraulic lift equipment and offices. Construction date is estimated at the early 1950s.
- Trailer/Modular Unit. Located between the 35 and 55 West Post Road structures is a one story pre-fabricated trailer/modular unit structure that is occupied and used as an office. This structure has been on the site for less than five years and was not sampled for ACM, LBP, PCBs or mold. It is temporary in nature and can easily be removed from the site.
- 77 West Post Road is a one story occupied auto dealership/show room facility. The basement is a storage area and car wash facility that contains hydraulic lift equipment. The first floor contains an auto show room and offices. Construction date is estimated at the early 1950s.
- Vehicle Inspection Garage. Located to the east of the 77 West Post Road structure is a one story, small garage structure that is equipped to perform vehicle inspections and auto emissions testing (one car or small truck at a time). It is currently in use. Construction date is estimated at the early 1980s.
- 95 West Post Road is a one story occupied auto dealership/show room facility. The basement is used for file storage and the first floor contains an auto show room and office. Construction date is estimated at the early 1960s.
- Used Car Lot Shed. Located on the used car lot between the 95 West Post Road and the 77
 West Post Road a building is a small one story structure. It is a single room shed used as an
 office and storage area. It is in use and holds keys for the vehicles on the used car lot.
 Construction date is estimated at the early 1980s.
- 80 Brady Place is a two story vacant private house. The house was boarded up and access
 to the interior was not provided at the time of the inspection. Construction date is estimated
 at the early 1940s.

3.0 Asbestos Survey Procedures

Guidelines used for the asbestos inspection were established by the Environmental Protection Agency (EPA) in the Guidance for Controlling Asbestos Containing Materials in Buildings, Office of Pesticides and Toxic Substances, Doc 560/5-85-024, and 40 CFR Part 763, Asbestos Hazard Emergency Response Act (AHERA).

Field information was organized in accordance with the AHERA methodology of homogenous area (HA). The survey was limited to identifying representative materials on the property structures that will be subject to future demolition. Sampling was conducted of readily accessible components and did not attempt to fully characterize all building components of the property structures. The purpose of the survey was to obtain general insight into asbestos concerns on the property in order to develop preliminary abatement cost estimates. Locating all asbestos materials can only be definitively achieved by conducting extensive exploratory demolition and sampling every portion of suspect ACM. All samples were collected by an appropriately certified NYS asbestos inspector.

Bulk samples of suspect ACM were analyzed using Polarized Light Microscopy (PLM) and when applicable Transmission Electron Microscopy (TEM). Analysis was conducted in accordance with methods described in 40 CFR Parts 61 and 763 and the National Emissions Standard for Hazardous Air Pollutants (NESHAPS). NESHAPS is the standard industry protocol for the determination of asbestos in building materials. All samples were initially analyzed by PLM. The Non-friable Organically Bound (NOB) samples required analysis by TEM. The definition of an Asbestos-Containing Material is a material that contains greater than 1% asbestos fibers by volume through laboratory analysis (PLM or TEM). PLM and TEM analysis was conducted by AmeriSci New York, a fully accredited laboratory.

4.0 Asbestos Survey Results

The asbestos inspection was characterized by observations of accessible areas. Representative suspect materials throughout the property (seven structures) were sampled and quantified.

Based upon visual inspection and bulk sample analysis results, confirmed asbestos-containing materials (materials with greater than 1% asbestos fibers) has been identified and/or assumed to exist in the following materials:

- · Pipe insulation inside the 35 and 77 West Post Road structures
- Boiler insulation inside the 35 West Post Road structure
- · Bottom layer roof membrane on upper roof, 35 West Post Road
- · Tar on parapet coping stone of upper roof, 35 West Post Road
- Bottom layer roof membrane on lower roof, 35 West Post Road
- · Flashing material on lower roof (perimeter), 35 West Post Road
- · Flashing material on vent penetration of lower roof, 35 West Post Road
- · Tar on parapet coping stone of lower roof, 35 West Post Road
- · Mastic of beige 9" x 9" floor tile on second floor stairway landing, 35 West Post Road
- · Beige 12" x 12" floor tile and mastic on garage mezzanine, 35 West Post Road
- · Bottom layer roof membrane of main roof, 55 West Post Road
- · Tar on coping stone of parapet wall of main roof, 55 West Post Road
- · Tar/coating on parapet wall surface of main roof, 55 West Post Road
- · Green 9" x 9" floor tile in basement, 77 West Post Road
- . Gray 9" x 9" floor tile and mastic in 1" floor, 77 West Post Road
- · Mastic of beige 12" x 12" floor tile in 1" floor, 77 West Post Road
- · Top layer roof membrane of main roof, 77 West Post Road
- Flashing material on main roof perimeter, 77 West Post Road
- · Tar/Flashing at sign post base on roof, 77 West Post Road
- · Top layer roof membrane of mann roof, 95 West Post Rond
- · Tar on parapet wall of main roof, 95 West Post Road

The following materials are confirmed non-asbestos containing materials or contained equal to or less than 1% asbestos fibers:

- Wall plasters (brown and white coats), 35-95 West Post Road structures
- Ceiling plasters(brown and white coats), 35-95 West Post Road structures
- 2' x 3' suspended ceiling tile, 35 & 55 West Post Road structures
- Boiler room ceiling coatings, 35 & 55 West Post Road structures

- Sheetrock w/joint compound, 35 95 West Post Road structures. Used Car Lot Shed and Vehicle Inspection Garage
- Wall block mortar, 35-95 West Post Road structures, Used Car Lot Shed and Vehicle Inspection Garage
- · Brick mortar, 35-95 West Post Road structures
- Concrete floor materials, 35-95 West Post Road structures, Used Car Lot Shed and Vehicle Inspection Garage
- · Exterior brick coating/pargetting, 35 West Post Road
- · 1' x 1' and irregular shaped suspended ceiling tile, 77 West Post Road
- · Stucco exterior wall coating, Used Car Lot Shed
- · Top layer roof membrane on upper roof, 35 West Post Road¹
- · Flashing material on upper roof perimeter, 35 West Post Road
- · Top layer roof membrane on lower roof, 35 West Post Road¹
- · Beige 9" x 9" floor tile on second floor stairwell landing, 35 West Post Road²
- Window caulk, 35 West Post Road
- Top layer roof membrane main roof, 55 West Post Road¹
- · Flashing material on main roof perimeter, 55 West Post Road
- Window caulk, 55 West Post Road
- · Window caulk, Vehicle Inspection Garage structure
- · Roof membrane, Vehicle Inspection Garage structure
- · Mastic of 9" x 9" green floor tile, 77 West Post Road
- Beige 12" x 12" floor tile, 77 West Post Road²
- Bottom layer roof membrane on main roof, 77 West Post Road¹
- · Parapet wall caulk on main roof, 77 West Post Road
- · Rool shingle at dome structure of main roof, 77 West Post Road
- · Tar/parapet wall covering of main roof, 77 West Post Road
- · Top and bottom layer roof materials, Used Car Lot Shed
- Window caulk, 77 West Post Road
- · Beige 12" x 12" floor tile and mastic on 1st floor, 95 West Post Road
- Window caulk, 95 West Post Road
- · Bottom layer roof membrane of main roof, 95 West Post Road'
- · Flashing material on roof perimeter, 95 West Post Road
- · Red 12" x 12" floor tile and mastic on 1" floor, 35 West Post Road
- · Roof shingle, 80 Brady Place
- · Blue 12" x 12" floor tile and mastic, 35 West Post Road

¹Denotes non-ashestos roofing material as part of a composite roofing system that contains confirmed-asbestos roofing in another layer. Since the layers are inseparable, this material is considered containinated by asbestos and must be removed as an asbestos containing material.

² Denotes non-asbestos floor tile that is contaminated by asbestos containing mastic and must be removed as an asbestos containing material. Since the tile and mastic are inseparable, this material is considered contaminated by asbestos and must be removed as an asbestos containing material.

Full asbestos bulk analytical results are provided in Appendix A. Staff and company licenses and laboratory certifications are provided in Appendix E.

Access was not provided to the interior of 80 Brady Place.

All confirmed ACMs and materials contaminated by ACM must be professionally removed and disposed of prior to overall demolition. Pre-demolition asbestos abatement projects are subject to state, and federal regulations. In accordance with NYS Asbestos Regulations (12 NYCRR Part 56) an all inclusive inspection and testing of all suspect asbestos containing materials is required prior to any demolition activities.

5.0 Lead Based Paint Inspection Procedures

Paint chip samples were collected from interior and exterior surfaces of the property structures and analyzed via Method #7420, SW-846: Flame Atomic Absorption for quantification of Lead percentage in paint. All paint chip samples were analyzed by EMSL Analytical, a fully accredited laboratory. Only limited representative samples of painted surfaces were collected for general information and preliminary lead removal cost estimating purposes. The inspection and sampling did not fully characterize all painted components. All paint chip samples were collected by an EPA certified Lead Based Paint Risk Assessor. Paint is considered to be "Lead-Based" (by EPA/HUD) if it contains more than 0.5% lead by weight. The OSHA Lead in Construction Standard Program is activated by any "detectable" amount of lead in paint (>0.01% lead by weight).

6.0 Lead Based Paint Inspection Results

Accessible interior and exterior painted surfaces throughout the property structures were tested for the presence of Lead Based Paint. The following table is a list of the paints that were sampled with the laboratory results indicated in the right-hand column. Paints with lead contents above the EPA/HUD lead based paint threshold are indicated in **bold**. Paints with "detectable" amounts of lead subject to OSHA regulations during demolition are *italicized*

Location	Description	Lead Concentration (% by weight)
35 West Post Road, Basement Interior	Gray Wall Paint	0.07 %
35 West Post Road, 1st Floor Interior	Gray Wall Paint	<0.01 %
35 West Post Road, 2nd Floor Interior	White Wall Paint	0.13 %
35 West Post Road, Exterior	White Wall Paint	< 0.01 %
55 West Post Road, Basement Interior	Gray Wall Paint	<0.01 %
55 West Post Road, 1" Floor Interior	Gray Wall Paint	0.02.96
55 West Post Road, Exterior	Blue Garage Door Paint	< 0.01 %
Vehicle Inspection Garage, Interior	White Wall Paint	<0.01 %
Vehicle Inspection Garage, Exterior	White Wall Paint	0.03 %
Used Car Lot Shed, Interior	White Wall Paint	<0.01 %
Used Car Lot Shed, Exterior	White Wall Paint	0.03 %
77 West Post Road, Basement Interior	Gray Wall Paint	0.03 %
77 West Post Road, 1" Floor Interior	Beige Wall Paint	<0.01 %
77 West Post Road, Exterior	White Wall Paint	< 0.01 %
77 West Post Road, 1" Floor Interior	White Wall Paint	0.09%
95 West Post Road, Basement Interior	Gray Wall Paint	0.01%
95 West Post Road, 1st Floor Interior	White Wall Paint	0.08 %
80 Brady Place, Exterior	White Wall Paint	17.0 %
80 Brady Place, Exterior	Green Window Frame Paint	4.5 %

Full paint chip analytical results are provided in Appendix B. Staff and company licenses and laboratory certifications are provided in Appendix E.

Inspection and analytical testing results for the commercial structures (35-95 West Post Road) did not reveal the presence of confirmed LBP as per US EPA and HUD criteria. However, detectable of levels of lead (results below 0.5 % lead by weight and above the analytical reporting limit of 0.01% lead by weight) were detected throughout interior and exterior surfaces of the surveyed structures. Therefore demolition of painted surfaces throughout the property must be done in accordance with the OSHA Lead in Construction rule (29 CFR 1926.62). This OSHA standard does not set a minimum amount of lead to define a lead-containing material and the potential for occupational exposure.

In addition, demolition of the structures will result in debris and wastes that may possibly contain high levels of lead, resulting in the waste stream to potentially be considered hazardous waste. Specialized waste testing of the debris and demolition waste will be required as per state and federal regulations. EPA regulations call for waste testing via the Toxicity Characteristic Leachate Procedure. TCLP analysis is designed to determine the mobility of both organic and inorganic contaminants present in liquid, solid, and multi-phasic wastes. This is used to determine if a waste may meet the definition of environmental toxicity. The TCLP analysis simulates landfill conditions. The EPA established TCLP level for Lead is 5 milligrams of Lead per 1 liter of leachate water (5 mg/L). Any waste above this criteria will be considered a hazardous waste and require special handling and disposal. No TCLP testing was conducted as part of this preliminary assessment.

7.0 Mold Contamination Investigation

During the course of surveying the property, a visual inspection was conducted in order to determine the presence of visible mold (fungal) contamination of building components throughout the property structures. In addition, bulk samples of suspect visible mold contamination were collected in order to further identify the types of mold and quantities present. Bulk samples were analyzed via direct microscopy by a fully accredited laboratory.

Location	Observations	Analytical Results
35 West Post Road	Extensive water damage, and active leaks throughout basement, 1 st and 2 ^{sd} floor Approximately 1000 square feet of mold contamination on 1 st floor sheetrock observed.	11-100 Aspergillus/Penicillium spores ≥ 1000 Hyphal Fragments ¹ ≥ 1000 Stachybotris spores,
Trailer/Modular Unit	No evidence of water damage or mold growth	n/a
55 West Post Road	Extensive water damage and active leaks throughout basement and first floor. Approximately 500 square feet of mold contamination on basement and 1 st floor sheetrock and fiberglass batt insulation	101- 1000 Ascospores 1-10 Aspergillus/Penicillium spores 101-1000 Cladosporium > 1000 Hyphal Fragments ¹

The following table summarizes the results of the mold investigation:

¹ Hyphal fragments are threadlike fungal structures indicative of viable mold growth n/a – Not applicable, no bulk sample collected

Page 6 December 4, 2007 Mold investigation summary continued:

Location	Observations	Analytical Results
77 W e st Post Road	Minor water damage present on first floor. Extensive water damage and active leaks in basement. Approximately 100 square feet of mold contamination observed in basement. No visual mold observed on 1 st floor.	> 1000 Ascospores 101-1000 Hyphal Fragments
Vehicle Inspection Garage	No visual evidence of water intrusion or mold contamination	n/a
Used Car Lot Shed	No visual evidence of water intrusion or mold contamination	n/a
95 West Post Road	Minor water damage present in basement and first floor. No visual mold observed	n/a
80 Brady Place	No access to interior. Evidence of water intrusion and roof damage observed from outside	n/a

1 Hyphal fragments are threadlike fungal structures

n/a Not applicable, no bulk sample collected

Full mold analytical reports are provided in Appendix C. Laboratory accreditations are provided in Appendix E.

Currently, there are no local, state or federal regulations pertaining to mold exposure and mold removal. However, mold is a "recognized hazard(s) likely to cause death or serious physical harm" as per the OSHA General Duty Clause (Section 5(a)(1) of the Occupational Safety and Health Act). Therefore, specialized handling and worker protection measures must be implemented during the demolition of mold contaminated materials. The results of the investigation revealed extensive visual mold growth that was confirmed by laboratory analysis. Evidence of hidden mold growth was also present due to the extensive water intrusion problems of the property structures.

8.0 Polychlorinated Biphenyl Investigation

The property structures and grounds were surveyed in order to identify building components, clectrical equipment or other items that may potentially contain Polychlorinated Biphenyls (PCBs). PCBs are compounds formed by the addition of chlorine to a biphenyl. PCB mixtures are oily and/or waxy substances that are very chemically and physically stable. The mixtures were used in hundreds of industrial applications including electrical transformers, ballasts, hydraulic equipment, adhesives, caulks, flame-retardants, and plastics. The manufacture of PCD's occurred from 1930 to the late 1970's in the United States and was discontinued after environmental and health effects were observed.

With few exceptions, PCBs were manufactured as complex mixtures. Progressive chlorination of biphenyl batches is implemented until a certain target percentage of chlorine by weight is achieved. While PCBs were manufactured and sold under many names, Monsanto Chemical manufactured the most common under the name "Aroclor". Aroclor PCBs are identified by a four digit numerical suffix after the word Aroclor. The first two digits are either a 10 or 12. The number 12 indicates a normal Aroclor while the number 10 indicates a distillation of an Aroclor.

The second two digits refer to the percentage of chlorine in the mixture by weight. (e.g. "Aroclor 1254" contains approximately 54% chlorine by weight)

Visual inspection identified the following components as suspect for PCB contamination:

- Exterior window caulks (original caulking)
- Hydraulic oil associated with vehicle lifts
- · Electrical ballasts components associated with fluorescent light fixtures

Suspect electrical transformers and suspect large scale industrial electrical equipment were not observed on the property grounds or in the structures.

To determine the presence of PCBs, six (6) bulk samples and onc (1) wipe sample were collected from representative suspect components. Samples were analyzed for PCB content by using a Gas Chromatograph and Electron Capture Detector in accordance with the Environmental Protection Agency's "Test Method for Evaluating Solid Waste, Physical/Chemical Methods" (SW846) method 8082 Aroclor Sum Method. The samples were analyzed by EMSL Analytical, a fully accredited laboratory.

A material is considered non-PCB containing if the PCB content is less than 50 parts per million (ppm) or 0.005% by weight. A PCB contaminated product is one that is 50 ppm to less than 500 ppm and a confirmed PCB product is one that contains PCBs in concentrations greater than or equal to 500 ppm. The laboratory reported results in micrograms of PCB per kilogram of total sample material (µg/kg). 1 ppm is equal to 1,000 µg/kg.

Location	Description	PCB Result
35 West Post Road	Exterior window frame caulk	Undetected
35 West Post Road	Residue from hydraulic oil associated with vchicle lifts	Undetected
35 West Post Road	Ballast wipe of residue from fluorescent light fixture	3000 µg/kg, Arocior 1260
55 West Post Road	Exterior window frame caulk	Undetected
55 West Post Road	Residue from hydraulic oil associated with vchicle lifts	Undetected
77 West Post Road	Exterior window frame caulk	Undetected
77 West Post Road	Residue from hydraulic oil associated with vchicle lifts	Undetected

The following table summarizes results of the PCB analysis:

The full analytical report is provided in Appendix D. Laboratory accreditations are provided in Appendix E.

Trace levels of PCBs were detected from one representative fluorescent light fixture ballast. A ballast is a metal box like component inside the fixture that is used to provide the starting voltage and to stabilize the current of the circuit. The sample was collected from a readily accessible fluorescent light fixture located in the mezzanine area above the garage of 35 West Post Road. This hallast was damaged and showed visual evidence of leakage in the form of oil like residue on the bottom surface. Although, the analytical results from this sample were below the criteria of 50 ppm (50,000 μ g/kg) it is likely that the actual PCB content of this ballast and other ballasts throughout the property contain much higher levels.

Before EPA banned the manufacture of PCBs in 1978, PCBs were used in the manufacturing of fluorescent light fixture ballasts. The use of PCBs in ballasts manufactured prior to 1978 was not regulated by the EPA. All light ballasts manufactured since 1978 which do not contain PCBs should be marked by the manufacturer with the statement "No PCBs". For ballasts manufactured prior to that time, or for those ballasts which contain no statement regarding PCB content, they must be assumed to contain PCBs. If the ballast docs contain PCBs, it is located inside the small capacitor inside the ballast casing. Typically there is approximately 1 to 10.5 ounces of PCB oil in the capacitor itself. If the ballast fails, the capacitor may break open, allowing the PCB oil to drip out of the fixture. The capacitor does not always leak when the ballast fails, but when it does happen, measures must be taken to limit or avoid personal exposure. Fluorescent light fixture ballasts regardless of PCB content must be disposed of as per New York State and EPA waste regulations (Universal Waste). Non-leaking ballasts can be packaged on site in drums, removed by a waste transporter and processed by a metal recycler offsite. The PCB oil associated with the capacitor is removed and the metal casing is recycled. Leaking and damaged ballasts are subject to special handling, additional packaging and labeling with subsequent disposal that does not include recycling of the easing.

The property structures contain several hundred fluorescent light fixtures. The fixtures must be properly dismantled so that the ballasts are removed and handled separately. The ballasts, fluorescent light bulbs as well as other light fixtures and bulbs (high intensity and incandescent) cannot be discarded with demolition waste, and are subject to New York State and federal regulations.

Sampling of window caulk and hydraulic oil residue for PCBs was limited to accessible representative components. Hydraulic lift equipment associated with the vehicle lifts were not dismantled to obtain access to the oil reservoirs. Limited residue sampling of oil material located on the exterior surfaces of the lift equipment was conducted for general information purposes. The hydraulic equipment regardless of PCB content must be subject to cleaning and oil separation prior to dismantling and disposal. Hydraulic oil residues most likely will be confirmed as petroleum containing wastes and subject to specialized handling and disposal. It is recommended that further sampling of hydraulic oil occurs prior to demolition. Additional sampling of window caulking is also recommended prior to demolition activities in order to further confirm these caulks as non-PCBs.

9.0 Environmental Cleanup and Abatement Cost Estimates

The unit costs listed in this section are based on projects of similar size, location and complexity and are priced as one continuous project.

Material	Location	Approximate Quantity	Remediation/ Disposal Cost	Estimated Total
Asbestos containing pipe insulation	Basement and 1 st floors of 35 and 77 West Post Road,	2,500 ln. ft.	\$8/ln. ft.	\$20,000
Asbestos containing floor tiles and mastics 2 rd floor landing and garage mezzanine of 35 West Post Road. Basement and 1 st floor of 77 West Post Road		2,000 sq. ft.	\$10/sq. ft.	\$20,000
Asbestos containing hoiler insulation	Basement of 35 West Post Road	150 sq. ft.	\$25/sq. ft.	\$3,750
Asbestos containing roof materials (membranes, flashings and tars)	Roofs of 35,55,77 and 95 West Post Road	27,000 sq. ft.	\$15/sq. ft.	\$405,000
Light fixture ballasts and bulbs	35-95 West Post Road	3,000 lbs	\$5/lb.	\$15,000
Mold contamination	Basement and 1 st floors of 35, 55 and 77 West Post Road	1,600 sq. ft.	\$7/sq. ft.	\$11,200
Hydraulic Oil	35, 55 and 77 West Post Road	500 gallons	\$15/gallon	\$7,5001
and a second second second	Full Pre-Demolitic	on Asbestos Survey a	s per NYS ICR 56	\$10,000
		Addi	tional PCB testing	\$10,000
	Site-sp	occific OSHA compl	iant Lead Program	\$75,000
Waste testing for lead content via TCLP analysis ²			\$50,000	
TOTAL	ESTIMATED ENVIRONMENTAL C	LEANUP AND AB/	TEMENT COST	\$609,870
ENVIRÓNMENTAL TEC	HNICAL SUPPORT (PROJECT DESIC MONITORIN	IN/BID DEVELOP G ETC) ESTIMATE		\$91,480
		TOTAL ESTI	MATED COSTS	\$701,350

¹Price includes specialized cleaning of hydraulic equipment and disposal of hydraulic oil as petroleum waste oil

²Cost for TCLP analysis assumes separate representative testing of waste generated from demolition of each structure to confirm it as non-hazardous. Additional costs will incur if TCLP analysis reveals that demolition waste is a confirmed lead-containing hazardous waste.

10.0 Limitations

Hygienetics inspected and sampled materials, which were observable and accessible during the course of the survey. It is possible, however, that additional suspect ACM, LBP or other hazardous materials may exist within interstitial space (i.e. pipe chases, behind walls/ceilings, above fixed ceilings, etc.), which were not accessible. The conclusions presented in this report are professional opinions based on the indicated data described in this report. They are intended only for the project location described in the report, and those accessible locations within the project location. This investigation and its conclusions are limited in nature to the scope of work described in this report. Unless otherwise specified, in writing, this investigation was not intended to be a definitive study of all Asbestos-containing Materials, Lead Based Paints and other hazardous materials throughout the project location

Opinions and recommendations presented herein may apply to the property conditions existing at the time of our inspection and those reasonably foreseeable. They do not necessarily apply to property changes of which Hygienetics was not aware of at the time of our inspection and did not have the opportunity to evaluate. Changes in property and building component conditions may occur over time due to natural causes or renovation activities. Changes to current governing regulations and standards may also occur that can potentially invalidate these findings and recommendations. Accordingly, the findings and recommendations of this report may be invalidated, wholly or in part, by changes beyond our control.

Opinions and judgments expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions.

This report is intended for use by the Client named herein, and shall not be used by any other person, entity or third party without the express written authorization from Hygienetics Environmental Services, Inc.

11.0 Report Certifications

Hygienetics Environmental Services, Inc. certifies that the information contained herein is based on the physical and visual inspections conducted by Hygienetics and data collected during the inspection survey.

Thank you for your business. Please contact EDR at 1-800-352-0050 with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Sit Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2010 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

55-77-87-95 WEST POST ROAD WHITE PLAINS, NY 10606

COORDINATES

Latitude (North):	41.023600 - 41° 1' 25.0"
Longitude (West):	73.773400 - 73° 46' 24.2"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	603126.0
UTM Y (Meters):	4541889.5
Elevation:	221 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 01/13/2010 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NU WAY CLEANERS	110 WEST POST ROAD	WSW 0 - 1/8 (0.084 mi.)	D32	180

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 11/23/2009 has revealed that there are 104 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 58 HIST LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the UST list, as provided by EDR, and dated 01/06/2010 has revealed that there are 11 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/23/2009 has revealed that there are 13 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 8 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 01/13/2010 has revealed that there are 13 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Gave me her daughter Katherine's number 914-434-6300 who is handling this. Katherine has advised me she is working with her lawyer to hire a contractor to remove the tank in question. Will be contacting J. O'Dee with what is going to happen and when. dvw 1/8/09: Spoke with caller, Kelly Sandler; neighbor of Ms Zamora at 29 Odell Ave. She states there was a court appearence today (that was adjorned to Feb) concerning violations issued by the White Plains Bldg Dept for inproper abandonment of the UST and no permit on the installation of the new AST. She states owner has not yet hired a contractor. I called Katherine Zamora; she gave me the name and number of the attorney she says is handling the situation; Jeff Kline 914-946-8855. jod 1/15/09: Call back from Jeff Klein. Envirostar has been contracted to remove the tank. Work has not yet been scheduled - awaiting permits from WP Bldg Dept. jod 3/18/09: Call from Elizabeth Mirisola, City of WP DOL. FOIL request on status of spill. jod 3/19/09: I spoke with Marc DiBartolo from Envirostar. He confirmed that he was contracted to remove the tank in January and had submitted a work plan proposal to the Zamoras, but he was still awaiting a work permit from the Bldg Dept before scheduling work. Copy of spill report sent to White Plains Law Dept. jod 6/18/09: Site inspection. Could not access basements of either property. Nothing of note outside. jod 6/23/09: Conversation with Jeff Klein, attorney for Justine Zamora. A permit for removal of the tank was issued to Conklin Environmental Services by the City of White Plains. Owner of the neighboring property Kelly Sandler has denied access to the property to remove the tank. I spoke with Kelly Sandler earlier

ZAMORA RESIDENCE (Continued)

Remarks:

today, and she confirmed she has denied access pending a list of provisions from the Zamoras. I also confirmed with Pete Russo that the permit was issued, but the work is on hold awaiting the outcome of a law suit. Also received photographs via e-mail from Carl Finger, attorney for Kelly Sandler. The photos were reportedly taken in October of 2008 during excavation work to resurface the Sandler's half of the driveway. See eDocs. jod 7/24/09: I spoke with both Jeff Klein and Pete Russo. The current plan of action is to excavate the tank on only the Zamora's side of the property line; and to have the tank cut, cleaned and inspected. If no leak or contamination are evident, the tank will be abandoned in place. Mr Klein stated he will forward documentation to the DEC today, jod Permit for removal was filed in February by Conklin Environmental Services. Proof of insurance listing coverage for 27 Odell was sent to Carl Finger attorney for Sandler. Proposal for removal (access agreement) was refused by Carl finger 3-20-09. jod 8/3/09: Conversation with Jeff Klein. Work is tentatively scheduled to begin next week. 8/14/09: Site inspection. No activity. 8/15/09: I spoke with Jeff Klein. He has contacted the plumbing contractor to confirm when the work will begin. jod 8/14/09: Call from Kelly Sandler. Plumbing contractor for the Zamoras - Phil McGovern (cell 914 588 7269) was on site today to locate the tank. I spoke with him and stated that he was to cease all work without DEC onsite. iod 8/17/09: On site with Phil McGovern. Edward Zamora, Jeff Klein, and Tony Magnotta. Tank exposed, contamination evident around the fill port. Tank has approx 41" water with 9.5" of free product on top - 48" diameter tank is filling with rain water over time, oil being pushed up and out of the fill port. Also located a remote fill approx 20 feet from the tank toward the rear of the property using a metal detector. NES contracted to pump tank out tomorrow and proceed with abandonment once contaminted soil on top has been removed. jod 8/18/09: NES pumped out tank; cut, cleaned and inspected. Bottom of the tank is sound. Additional contaminted soil will need to be removed from the top of the tank. Some contamination extends across property line. Kelly Sandler and Carl Finger arrived on site later in the day. Inspection of Sandler's basement at 27 Odell shows capped fill and vent lines through basement wall in line with the tank. Sandlers' state the property was never serviced by a UST. Furhter investigation work schedlued for tomorrow. jod 8/20/09: Remainder of the tank exposed. Additional contaminted soil discovered going toward the rear of the property. Two corrosion holes in the top of the tank discovered. Evidence of possible GW impact observed. Tank cannot be abandoned, DEC will now require removal. Also uncovered a second set of lines (feed and return) directly in line with the capped lines in the basement of 27 Odell. The 1K tank was once utilized by both 27 and 29 Odell at some point in the past. Although the lines in the basement of 27 Odell are currently capped, the tank and piping system are currently connected to both structures. I notified the Zamoras and Jeff Klein and also spoke with Kelly Sandler. The two owners and/or their attorneys will now have to agree on jointly hiring a contractor to remove the UST and complete the remediation. jod 10/21/09: Photos from August inspections entered into eDocs. An index of the photos was also added to the eDocs image folder. jod Caller states she lives at 27 Odell Ave and shares a driveway with above spiller address. Caller states above spiller does not live at

Caller states she lives at 27 Odell Ave and shares a driveway with above spiller address. Caller states above spiller does not live at the property as it is a rental. Spillers address is 16 Charles St White Plains. Caller states there was a UST that was abandoned

	Remarks:	Investigation and proposed excavation report submitted by Kleinfleder on behalf of the former site owner, Mobil Oil Corp. Six soil boring were completed on site. Based in the info developed from that boring program, Kleinfelder has proposed the excavtion of impacted soil in two areas. TG 01/12/07 Jesse Gallo of Kleinfelder reported that the excavation in the parking lot will take place in the spring since the asphalt plants are currently closed and the lot would nend to be resurfaced. TG 04/28/07 to 05/25/07 the 3000 gallon tank was abandoned in place and and 27 tons of PCS was excavated and dispo 09/11/07 Tank removal report submitted by Kleinfelder. On etank was removed and another was abandoned in place. TG 10/03/07 Two monitoring wells were installed and quarterly sampling is being performed. TG 01/16/08 ND VOC levels in MW2. NFA TG LEAKING UNDERGROUND TANK THAT HAS SATURATED THE SO IN PROCESS. PHASE 2 ASESSMWNT TODAY.	sed.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler accessibility indicator: Transferred to the program or state equivalent.

Handler Activities Summary:

U.S. importer of hazardous waste:	Unknown
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	Unknown
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	Unknown
Furnace exemption:	Unknown
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No
Off-site waste receiver:	Commercial status unknown

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	Environmental Interest/Info RCRAIr	nfo is a na	System tional information system that supp

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/01/2009 Date Data Arrived at EDR: 01/14/2010 Date Made Active in Reports: 02/18/2010 Number of Days to Update: 35 Source: EPA Telephone: N/A Last EDR Contact: 03/03/2010 Next Scheduled EDR Contact: 04/26/2010 Data Release Frequency: Quarterly

EPA Region 10 Telephone 206-553-8665

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994 Number of Days to Update: 56 Source: EPA Telephone: 202-564-4267 Last EDR Contact: 03/01/2010 Next Scheduled EDR Contact: 05/31/2010 Data Release Frequency: No Update Planned

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/01/2009 Date Data Arrived at EDR: 01/14/2010 Date Made Active in Reports: 02/18/2010 Number of Days to Update: 35 Source: EPA Telephone: N/A Last EDR Contact: 03/03/2010 Next Scheduled EDR Contact: 04/26/2010 Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/30/2009 Date Data Arrived at EDR: 08/11/2009 Date Made Active in Reports: 09/21/2009 Number of Days to Update: 41 Source: EPA Telephone: 703-412-9810 Last EDR Contact: 02/09/2010 Next Scheduled EDR Contact: 04/12/2010 Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of NPL and Base Realighnment & Closure sites found in the CERCLIS database where FERRO is involved in cleanup projects.

Date of Government Version: 06/23/2009 Date Data Arrived at EDR: 01/15/2010 Date Made Active in Reports: 02/10/2010 Number of Days to Update: 26 Source: Environmental Protection Agency Telephone: 703-603-8704 Last EDR Contact: 01/15/2010 Next Scheduled EDR Contact: 04/26/2010 Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/23/2009 Date Data Arrived at EDR: 09/02/2009 Date Made Active in Reports: 09/21/2009 Number of Days to Update: 19 Source: EPA Telephone: 703-412-9810 Last EDR Contact: 02/23/2010 Next Scheduled EDR Contact: 06/14/2010 Data Release Frequency: Quarterly

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/11/2009 Date Data Arrived at EDR: 12/29/2009 Date Made Active in Reports: 02/10/2010 Number of Days to Update: 43 Source: EPA Telephone: 800-424-9346 Last EDR Contact: 02/15/2010 Next Scheduled EDR Contact: 05/31/2010 Data Release Frequency: Quarterly

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 01/13/2010 Date Data Arrived at EDR: 01/15/2010 Date Made Active in Reports: 02/18/2010 Number of Days to Update: 34 Source: Environmental Protection Agency Telephone: (212) 637-3660 Last EDR Contact: 02/19/2010 Next Scheduled EDR Contact: 04/19/2010 Data Release Frequency: Quarterly

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010
Date Made Active in Reports: 02/18/2010
Number of Days to Update: 34

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 01/13/2010 Date Data Arrived at EDR: 01/15/2010 Date Made Active in Reports: 02/18/2010 Number of Days to Update: 34 Source: Environmental Protection Agency Telephone: (212) 637-3660 Last EDR Contact: 02/19/2010 Next Scheduled EDR Contact: 04/19/2010 Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 01/13/2010 Date Data Arrived at EDR: 01/15/2010 Date Made Active in Reports: 02/18/2010 Number of Days to Update: 34 Source: Environmental Protection Agency Telephone: (212) 637-3660 Last EDR Contact: 02/19/2010 Next Scheduled EDR Contact: 04/19/2010 Data Release Frequency: Varies

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/01/2009Source: Environmental Protection AgencyDate Data Arrived at EDR: 10/09/2009Telephone: 703-603-0695Date Made Active in Reports: 11/09/2009Last EDR Contact: 12/10/2009Number of Days to Update: 31Next Scheduled EDR Contact: 03/29/2010Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/01/2009 Date Data Arrived at EDR: 10/09/2009 Date Made Active in Reports: 11/09/2009 Number of Days to Update: 31 Source: Environmental Protection Agency Telephone: 703-603-0695 Last EDR Contact: 12/10/2009 Next Scheduled EDR Contact: 03/29/2010 Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2009	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/22/2010	Telephone: 202-267-2180

Number of Days to Update: 15	Next Scheduled EDR Contact: 06/07/2010
	Data Release Frequency: Annually

VAPOR REOPENED: Vapor Intrustion Legacy Site List

"Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil.Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 07/14/2009 Date Data Arrived at EDR: 09/09/2009 Date Made Active in Reports: 09/21/2009 Number of Days to Update: 12 Source: Department of Environmenal Conservation Telephone: 518-402-9814 Last EDR Contact: 02/24/2010 Next Scheduled EDR Contact: 06/07/2010 Data Release Frequency: Varies

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Date of Government Version: 11/23/2009 Date Data Arrived at EDR: 11/24/2009 Date Made Active in Reports: 12/09/2009 Number of Days to Update: 15 Source: Department of Environmental Conservation Telephone: 518-402-9622 Last EDR Contact: 02/23/2010 Next Scheduled EDR Contact: 06/07/2010 Data Release Frequency: Quarterly

BROWNFIELDS: Brownfields Site List

A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Date of Government Version: 11/23/2009 Date Data Arrived at EDR: 11/24/2009 Date Made Active in Reports: 12/09/2009 Number of Days to Update: 15 Source: Department of Environmental Conservation Telephone: 518-402-9764 Last EDR Contact: 02/23/2010 Next Scheduled EDR Contact: 06/07/2010 Data Release Frequency: Semi-Annually

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006 Date Data Arrived at EDR: 03/01/2007 Date Made Active in Reports: 04/10/2007 Number of Days to Update: 40 Source: Environmental Protection Agency Telephone: 202-564-2501 Last EDR Contact: 12/17/2007 Next Scheduled EDR Contact: 03/17/2008 Data Release Frequency: No Update Planned

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2007 Date Data Arrived at EDR: 02/19/2009 Date Made Active in Reports: 05/22/2009 Number of Days to Update: 92 Source: EPA/NTIS Telephone: 800-424-9346 Last EDR Contact: 02/25/2010 Next Scheduled EDR Contact: 06/07/2010 Data Release Frequency: Biennially

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

AIRS: Air Emissions Data

Point source emissions inventory data.

Date of Government Version: 12/31/2005 Date Data Arrived at EDR: 09/05/2007 Date Made Active in Reports: 10/17/2007 Number of Days to Update: 42 Source: Department of Environmental Conservation Telephone: 518-402-8452 Last EDR Contact: 02/01/2010 Next Scheduled EDR Contact: 05/17/2010 Data Release Frequency: Annually

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data Source: PennWell Corporation Telephone: (800) 823-6277 This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals: Source: American Hospital Association, Inc. Telephone: 312-280-5991 The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals. Medical Centers: Provider of Services Listing Source: Centers for Medicare & Medicaid Services Telephone: 410-786-3000 A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services. Nursing Homes Source: National Institutes of Health Telephone: 301-594-6248 Information on Medicare and Medicaid certified nursing homes in the United States. **Public Schools** Source: National Center for Education Statistics Telephone: 202-502-7300 The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states. **Private Schools** Source: National Center for Education Statistics Telephone: 202-502-7300 The National Center for Education Statistics' primary database on private school locations in the United States. Daycare Centers: Day Care Providers Source: Department of Health Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands Source: Department of Environmental Conservation Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

APPENDIX D: QUALIFICATIONS

Lindsay C. Smith Partner Associate

Education

Master of Science (MSc) in Water and Environmental Engineering, August 1999 University of Surrey, Guildford, England Concentration: Water and Wastewater Engineering, Public Health and Infectious Disease

Bachelor of Arts (BA) in Geography/Special Honors, January 1997 Hunter College, City University of New York (CUNY) New York

Registrations

Environmental Protection Agency (EPA) / Asbestos Hazard Emergency Response Act (AHERA) Asbestos Inspector New York State AHERA Asbestos Inspector Occupational safety and Health Administration (OSHA) 40-Hour Basic Safety and Hazardous Materials Handler

Summary of Professional Experience

Ms. Smith has 9 years experience in the environmental and physical needs assessment service industry. She is familiar with all aspects of Due Diligence Property Assessments and the needs and requirements of varied number of reporting standards, including the standard ASTM, EPA's All Appropriate Inquiry (AAI), and customized client formats. Ms. Smith is a certified AHERA Asbestos Building Inspector. Ms. Smith has also performed Phase II Subsurface Investigations, Regulatory Compliance Assessments, and Property Condition Assessments in the United States and Europe.

Specific project experience for Ms. Smith includes:

- Provided daily client support and management of environmental, engineering and associated projects in the due diligence process.
- Performed daily Quality Assurance/Quality Control (QA/QC) and technical reviews of Phase I Environmental Site Assessment reports and Transaction Screens performed throughout the continental United States and Europe.
- Performed Phase I ESAs, Phase II Subsurface Investigations, Property Condition Assessments, and Regulatory Compliance Assessments on numerous multi-acre, multi-tenant industrial, multi-family residential, commercial office, retail and multi-regional retail mall complexes.
- Completed Phase I ESAs on several properties valued at over \$500 million.
- Coordinated and managed a Phase II Site Investigation of a former oil refinery with respect to its residential redevelopment potential. Activities included the design and supervision of all ground works undertaken, liaison with appropriate authorities, the coordination of archaeologists, a demolition workforce and the rail network, and the continued monitoring of groundwater and ground gases.

Lyly Churchill, REA Senior Project Manager

Education

M.A. Environmental Studies, Brown University

B.S. Biology, University of California, Los Angeles - Emphasis in Ecology, Behavior and Evolution

Registrations

California Registered Environmental Assessor (REA I –08070) EPA Accredited Asbestos Inspector California Underground Storage Tank Inspector

Summary of Professional Experience

Ms. Churchill has seven years of experience in the environmental service industry. Ms. Churchill's background in environmental science and direct experience in environmental consulting and enforcement allow her to offer the most effective means of regulatory compliance.

While in graduate school, Ms. Churchill's Masters Thesis research focused on evaluating the potential of Japanese Knotweed (an invasive plant species) as an effective phytoremediator of heavy metal contaminated soils along a historically polluted river in Rhode Island. Phytoremediation refers to the natural ability of certain plants called hyperaccumulators to bioaccumulate contaminants in soil. Hyperaccumulators can be grown and harvested economically, leaving the soil with a greatly reduced level of toxic contamination.

Ms. Churchill has project experience in Phase I Environmental Site Assessments (ESAs), Environmental Transaction Screens, radon screening, asbestos inspections, and lead-based paint inspections. Ms. Churchill is familiar with all aspects of Due Diligence Property Assessments and the needs and requirements of a varied number of reporting standards, including the standard ASTM, EPA's All Appropriate Inquiry (AAI), Fannie Mae DUS, Freddie Mac, HUD and customized client formats.

For the past five years, Ms. Churchill has performed and supervised over 1,000 Phase I Environmental Site Assessments and Environmental Transaction Screens for lenders and buyers. As a senior member of the Due Diligence staff, Ms. Churchill provides senior review expertise to ensure ASTM compliance and satisfaction of client requirements for Phase I Environmental Site Assessments and Environmental Transaction Screens. Partner's review process provides for customization of reports to client needs, as well as strict conformance to ASTM standards.

Additionally, Ms. Churchill has working experience in performing biological and noise assessments, and in preparing and reviewing environmental documentation in support of CEPA and NEPA.

Project experience for Ms. Churchill includes:

- Completed hundreds of Phase I Environmental Site Assessments and Environmental Transaction Screens on multi-family properties, commercial office buildings, retail shopping centers, gasoline service stations, hotels, dry cleaning plants, auto repair and auto body shops, industrial warehouse buildings, aerospace manufacturers, plating facilities, and various manufacturing operations throughout the U.S.
- Reviewed and evaluated hundreds of third-party Phase I, Phase II and Phase III reports
- Managed portfolio projects involving properties throughout the United States, including large apartment complexes and shopping malls
- Assisted on several Phase II investigations of gasoline service stations, dry cleaning facilities and industrial sites
- Conducted several asbestos and lead-based paint inspections of commercial and residential properties
- Performed water sampling on several residential properties to detect the presence of lead in water
- Conducted radon testing at several residential properties throughout Southern California and Nevada
- Conducted biological surveys including endangered species surveys, and performed research on historical, physical and cultural resources in support of EIRs

Ms. Churchill recently worked for the City of El Segundo, where she regularly collaborated with other local CUPAs to ensure compliance with State and Federal regulations. Ms. Churchill's responsibilities included implementing and enforcing elements of the CUPA program including the following: hazardous waste generator program; underground storage tank program; Hazardous Material Release Response Plan (Business Plan) Program and the California Accidental Release Response Plan (CalARP) Programs. Ms. Churchill also worked on enforcing city specific environmental programs such as Stormwater Pollution Prevention and Industrial Wastewater Discharge. As the Principal Environmental Specialist for the City, Ms. Churchill worked with large industries such as Chevron, Northrop Grumman and International Rectifier to ensure regulatory compliance pertaining to business operations and remedial activities.

Ms. Churchill has technical experience working for the following financial institutions:

- JPMorgan Chase
- Citigroup Global Markets
- Wells Fargo Bank
- California Bank and Trust
- Union Bank of California
- East West Bank
- Comerica Bank

Lyly Churchill, REA (Continued)

- United Commercial Bank
- Countrywide Commercial Real Estate
 Morgan Stanley Mortgage Capital, Inc.
- Bank of America

Sean Daly Senior Project Manager

Education B.S. in Civil Engineering, Rutgers University

Registrations

Department of Housing and Urban Development, Multifamily Accelerated Processing (MAP) Certification

Summary of Professional Experience

Mr. Daly has successfully managed single and multi-site portfolios and Property Condition Assessment due diligence projects encompassing a broad range of property types. Mr. Daly has played an integral role in the due diligence process for commercial mortgage backed securities (CMBS) and conduit programs initiated by leading nationwide banks in accordance with the American Society for Testing and Materials (ASTM) E 2018-08: Baseline Property Condition Assessment Process.

With over six years of experience, Mr. Daly has authored, managed, and reviewed several hundred Property Condition Assessments, Probable Maximum Loss, and Phase I Environmental Site Assessments of retail, office, industrial, multi-family residential, special use properties, as well as assisted living facilities, conducted under Freddie Mac, Fannie Mae DUS and HUD guidelines, throughout the United States for a wide range of lending institutions.

Prior to joining Partner, Mr. Daly served as a Project Manager and Staff Assessor for two other nationwide due diligence firms. Mr. Daly also performed as an independent professional associate in the New York City market.

Mr. Daly has interfaced directly with bank loan officers, regulatory agencies, and numerous borrowers on subjects including code compliance and liabilities, as well as contracting and scope of work issues. Major projects include large-scale loan portfolios, due diligence assessments encompassing equity level Property Condition Assessments, which have included projects requiring aggregation of specialty service scopes within the realm of building sciences. Mr. Daly's collective experience in the field of real estate due diligence has enabled him to support property owners, prospective purchasers, and clients' legal counsel through numerous successful transactions.

Noteworthy Clients have included:

- Wells Fargo Bank
- Bank of America
- JPMorgan Chase
- Washington Mutual

- Capmark Finance, Inc.
- HFF, LP
- MidFirst Bank
- Merrill Lynch
- Column Financial
- MMA Financial
- Credit Suisse
