NYS.....	New York State
NYSDEC.....	New York State Department of Environmental Conservation
NYSDOH.....	New York State Department of Health
LOIWP	Limited Offsite Investigation Work Plan
ORP	Oxidation – Reduction Potential
PAHs	Polycyclic Aromatic Hydrocarbons
PCBs	Polychlorinated Biphenyls

LIST OF ACRONYMS (Continued)

PCE	Tetrachloroethene (Perchloroethene)
PID	Photo Ionization Detector
PPE	Personal Protective Equipment
PVC	Polyvinyl Chloride
QAPP	Quality Assurance Project Plan
RAWP	Remedial Action Work Plan
RI	Remedial Investigation
RIR	Remedial Investigation Report
RIWP	Remedial Investigation Work Plan
SCOs	Soil Cleanup Objectives
SVOCs	Semivolatile Organic Compounds
TAL	Target Analyte List
TCE	Trichloroethene
TCL	Target Compound List
USEPA	United States Environmental Protection Agency
USGS	United States Geological Survey
VOCs	Volatile Organic Compounds

CERTIFICATION

I, Joseph D. Duminuco, certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and that this Remedial Investigation Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10); and that all activities were performed in full accordance with the DER-approved work plan and any DER-approved modifications.

Date

1.0 INTRODUCTION

Roux Associates, Inc. (Roux Associates), on behalf of Post Maple 77, LLC (Volunteer), has prepared this Remedial Investigation Report (RIR) for the property identified as Post Road Corridor – White Plains, located at 77 West Post Road in the City of White Plains, Westchester County, New York (Site). The Site location is shown on Figure 1. The Site consists of ten separate Parcels (identified as Parcels A through D and Parcels F through K), nine of which are located between West Post Road and Maple Avenue. One additional parcel (Parcel K) is located at the intersection of West Post Road and South Lexington Avenue. The Site Layout is depicted on Figure 2.

All Remedial Investigation (RI) activities were completed in accordance with the October 9, 2013 New York State Department of Environmental Conservation (NYCDEC) approved Remedial Investigation Work Plan (RIWP), a April 14, 2014 letter modifying the sample interval depths for soil samples collected within Parcel A, the July 22, 2014 Focused Supplemental Remedial Investigation Work Plan (FSRIWP) approved by NYSDEC on August 25, 2014 and the Limited Offsite Investigation Work Plan (LOIWP) approved by NYSDEC on June 17, 2015. The RI was completed in accordance with the draft Brownfield Cleanup Program (BCP) Guide (May 2004) and the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation (May 2010).

The objectives of the RI were to determine the nature and extent of impacted soil and groundwater at the Site, qualitatively assess the potential exposure of receptors to Site impacts, and generate sufficient data necessary to support the development of a Remedial Action Work Plan (RAWP) to address the impacted media. The redevelopment plans for the Site include construction of a multi-level, mixed use development including subgrade parking with commercial and retail space.

The Site was accepted into the BCP; and the Brownfield Cleanup Agreement (BCA) was signed on April 11, 2013. The Site has been assigned NYSDEC BCP Number C360129.

1.1 RIR Organization

This RIR contains the following sections:

- a background section (Section 2) describing the Site, its history, and results of previous environmental investigations;
- a Conceptual Site Model (Section 3) explaining the occurrence of contaminant sources and their fate and transport at the Site in the context of the local Site stratigraphy and hydrogeology;
- a section describing the completed field work activities (Section 4);
- a section summarizing the laboratory analytical results (Section 5);
- a qualitative exposure assessment that evaluates exposures to contaminated media including soil, groundwater and soil vapor (Section 6); and
- a section describing the RI findings and conclusions (Section 7).

Tables and maps are provided that summarize all RI data, locations and results of sampling efforts, and geologic cross-sections.

2.0 BACKGROUND

This section provides pertinent background information, including a description of the Site and its setting, the documented history of the Site, and the results of previous environmental investigation work conducted at the Site.

2.1 Site Description and Setting

The Site is located at 77 West Post Road in the City of White Plains, County of Westchester and State of New York. The Site is comprised of 10 individual parcels.

Details regarding the Site location and pertinent Site information details are provided below.

Property Location	
Property Name:	Post Road Corridor – White Plains
Property Description:	10 separate tax lots (identified as Parcels A through D and F through K); all currently vacant
Property Address:	77 West Post Road
Property Town, County, State:	White Plains, Westchester County, New York
Property Tax Identification:	Parcel A – 130.34-6-1 Parcel B – 130.34-6-6 Parcel C – 130.34-6-4 Parcel D – 130.34-6-3 Parcel F – 130.34-5-2 Parcel G – 130.34-5-3 Parcel H – 130.34-5-4 Parcel I – 130.34-5-5 Parcel J – 130.34-5-6 Parcel K – 130.27-8-3
Property Topographic Quadrangle:	White Plains, New York
Nearest Intersection:	West Post Road and Rathbun Avenue
Area Description:	Mixed-use to the north consisting of street level retail stores with residences above. Primarily residential to the south and predominately commercial-use properties to the east and west.
Current Site Zoning:	Business District B-3 (All Parcels except Parcel B) and Business District B-2 (Parcel B).

Property Information	
Property Acreage:	3.69 (combined total)
Property Shape:	Irregular
Property Use:	Vacant
Improvements:	None

A review of the United States Geological Survey (USGS) 7.5-minute series topographic quadrangle map (White Plains, New York [Figure 1]) indicated that the maximum elevation of nine of the parcels (excluding Parcel K) is approximately 242 feet above mean sea level (ft amsl) in the western portion (Parcels A and B) of the Site. The topography of the Site slopes to the northeast until it reaches a low of approximately 214 ft amsl in the northeastern portion of Parcel I. This represents a change in elevation of approximately 28 feet across the Site. This change in elevation is reflected by a moderate to steep slope in Parcel C through a series of retaining walls, with milder slopes in each of the remaining contiguous parcels. The elevation on the north side of the contiguous parcels (along West Post Road) is generally higher than in the south side of the Site (i.e., slopes to the south). The elevation of Parcel K is approximately 205 ft amsl and the grade is relatively flat.

According to water-level data collected during this RI and previous environmental investigations completed by others, the water table at the Site ranges from approximately 3 feet below land surface (ft bls) to approximately 11 ft bls. Groundwater flow direction was calculated to be in a northeasterly direction.

According to “A Guide to the Geology of Westchester County, New York” by Thomas McGuire (1997), the area of Westchester County containing the Site is in the Manhattan Prong region of the Hudson Highlands physiographic province. The higher ground in Westchester is composed of the Fordham Gneiss and the Manhattan Schist, both highly resistant to erosion. Inwood Marble underlies many of the valleys, including the Bronx River located approximately three-quarters of a mile to the west of the Site. Most of the rocks in the area of the Site have been dated to be of late Precambrian and early Paleozoic ages.

Based on data collected during this RI, historic fill is present beneath the Site at varying thicknesses at depths to 8 ft bls. Parcels F, G and H consist primarily of fine to coarse sands with varying amounts of gravel from about 5 to 20 ft bls interbedded with a lens of silt approximately 2 to 10 ft in thickness. Parcels A through D, I and J consist primarily of fine to medium sands with varying amounts of silt, coarse sand and gravel from about 5 to 30 ft bls interbedded with small lenses of silt about 1 to 3 ft in thickness. Generalized Geologic Cross-sections are provided at Figures 5 and 6.

2.2 Site History

The following summary of Site history was based on a review of the following documents:

- Woodard & Curran (January 24, 2008); Phase II Environmental Assessment Report, 35-95 West Post Road and 80 Brady Place, White Plains, New York; Prepared for Brickman Associates (Phase II).
- Partner Engineering and Science, Inc. (March 29, 2010); Phase I Environmental Site Assessment Report, White Plains Portfolio, 55 and 77 West Post Road, White Plains, New York; Prepared for Nolan and Heller, LLP.
- Partner Engineering and Science, Inc.(March 29, 2010); Phase I Environmental Site Assessment Report, White Plains Portfolio, 2 West Post Road, White Plains, New York; Prepared for Nolan and Heller, LLP.
- Partner Engineering and Science, Inc. (March 30, 2010); Phase I Environmental Site Assessment Report, White Plains Portfolio, 87 and 95 West Post Road, White Plains, New York; Prepared for Nolan and Heller, LLP.
- Jade Environmental Inc. (December 31, 2010); Facility Closure and Site Remediation Report, Former White Plains Mazda, 35 West Post Road, White Plains New York; prepared for BRK Acquisition Holdings, LLC.
- DRE Environmental, Inc. (March 2012); Tank Removal & Closure Report; 55 West Post Road, White Plains, New York.
- DRE Environmental, Inc. (March 2012); Tank Removal & Closure Report; 55 West Post Road, White Plains, New York.

According to the above noted sources, historical Site operations predominately involved automobile sales and repair for approximately 50 years. Each of the individual Parcels were either directly utilized for automobile sales, storage and/or repair, or were located adjacent to Parcels that were. Additional historical Site operations included former uses as a gasoline service station

and a drycleaner. Details on historical Site use, based on the above noted documentation, for each Parcel are provided below.

- **99-103 W. Post Road (Parcel A)**

Parcel A is 0.21 acres in area and is currently vacant without improvements. The Parcel was first developed with residential buildings as early as 1905 and for commercial purposes from the 1930s onward. Parcel A was also formerly used as a gas station which utilized four underground storage tanks (USTs) for an unknown amount of time. There is no available information regarding UST removal activities and/or building demolition.

- **5 Rathbun Avenue (Parcel B)**

Parcel B is 0.09 acres in area and is currently vacant without improvements. The Parcel was first developed with residential buildings as early as 1905. Additional historical use information specific to this Parcel is limited; however, available information suggests that the immediately surrounding properties have been used for automobile repairs and sales for at least 30 years. There is no available information regarding demolition activities in Parcel B.

- **3 Brady Place (Parcel C)**

Parcel C is 0.06 acres in area and is currently vacant without improvements. Available information indicates that Parcel C has been improved by various structures since 1905. A building used by an electrical contractor was demolished in the late 1980s. No additional information regarding demolition activities in Parcel B is available.

- **95 West Post Road (Parcel D)**

Parcel D is 0.09 acres in area and is currently vacant and without improvements. The Parcel was previously utilized as an automobile sales office. An associated parking area was located south of the building. The Parcel was first developed with residential buildings as early as 1905 and developed for commercial purposes from the 1930s onward. The current onsite structure was reportedly constructed in 1935. The Parcel was occupied by a dry cleaner in the 1970s and possibly as early as the 1940s.

All aboveground structures were demolished starting in August 2013 by Capital Industries Corporation (Capital). Foundation slabs were left in place in order to prevent potential exposure to Site contaminants. Asbestos abatement for the buildings occurred at the same time.

- **79-83 West Post Road (Parcel F)**

Parcel F is 0.38 acres in area and is currently vacant and without improvements. The Parcel was initially developed with residential buildings as early as 1905 and developed for commercial purposes from the 1930s onward. There is no available information regarding demolition activities in Parcel F.

- **77 West Post Road (Parcel G)**

Parcel G is 0.88 acres in area and is currently vacant and is without improvements. The Parcel was formerly utilized for automobile repairs and sales from the 1970s through 2008. The Parcel was utilized for mixed commercial and residential uses up to the 1970s. USTs were previously removed from Parcel G. UST cleaning and removal of a single

500 gallon UST was completed by Royal Environmental Services in February 2012. While uncovering the UST, contaminated soils were encountered, and a spill was called to the NYSDEC (Spill No. 1112748). Approximately 210 tons of petroleum contaminated soils were removed from the excavation and disposed of at a licensed landfill. Soil samples of the walls and floor of the UST excavation were collected. All samples were analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) as listed in the NYSDEC's Spills Technology and Remediation Series (STARS) Memo #1 "*Petroleum Contaminated Soil Guidance Policy*". The laboratory analysis of the soils found all samples below NYSDEC guidelines for the petroleum compounds analyzed (EPA Methodology 8260/8270). All aboveground structures were demolished starting in August 2013 by Capital. Foundation slabs were left in place in order to prevent potential exposure to Site contaminants. Asbestos abatement for the buildings occurred at the same time.

- **55 West Post Road (Parcel H)**

Parcel H is 0.91 acres in area and is currently vacant and without improvements. The Parcel was formerly used for automobile sales and service from the 1950s through 2008. Three adjoining USTs (550-gallon, 1,000-gallon, and a 4,000-gallon) all reported to be waste oil USTs were removed from the parcel in 2012. During removal, impacted soils were observed (based on olfactory and visual observations) and removed. Spill Numbers 09-01783 and 09-01804 were generated subsequent to the discovery of impacted soils. In total 150 tons of petroleum impacted soil was removed from the excavation. Post remedial samples consisted of one composite soil sample for the four sidewalls and one bottom sample from each UST and analyzed for the STARS list of VOCs and SVOCs. Analytical results indicated that no VOCs or SVOCs were detected above regulatory limits. Spill Numbers 09-01783 and 09-01804 were closed on April 7, 2012 and March 31, 2011 respectively.

All aboveground structures were demolished starting in August 2013 by Capital. Foundation slabs were left in place in order to prevent potential exposure to Site contaminants. Asbestos abatement for the buildings occurred at the same time.

- **41-45 and 35 West Post Road (Parcels I and J)**

Parcel I (0.28 acres) consists of an asphalt paved parking lot that serves Parcel J (0.32 acres) which is currently vacant and without improvements. The two Parcels (I and J) were reportedly used as a parking garage from development in 1928 until being converted into an auto repair and sales facility in 1958. The Parcels were utilized for automobile repair and sales for the next 50 years until being abandoned in 2008. There is a documented use of tetrachloroethene (PCE) on Parcel J. USTs were previously removed from Parcel J. Tank cleaning and removal of two 1000-gallon USTs was completed by Jade Environmental, Inc. (Jade). All work was completed in October 2010. Approximately 300 tons of contaminated soil was removed from beneath the fuel oil tanks and adjacent leaking lifts. All samples were analyzed for the STARS list of VOCs and SVOCs. No VOCs or SVOCs typical of heavy oil were identified above the analysis method detection limit in any of the soil samples collected. Moreover, no VOCs were detected in any of the water samples collected from the three exterior wells, thus requiring no SVOC analysis to be conducted. These analytical results support Jade's earlier field

screening which failed to yield any evidence of petroleum contamination. As no detectable levels of VOCs and SVOCs were found, no further analysis was conducted.

All aboveground structures were demolished starting in August 2013 by Capital. Foundation slabs were left in place in order to prevent potential exposure to Site contaminants. Asbestos abatement for the buildings occurred at the same time.

- 190-192 South Lexington Avenue (Parcel K)

Parcel K is approximately 0.47 acres in area is currently vacant and is undeveloped. The Parcel is comprised of grass and small trees along a perimeter fence located adjacent to West Post Road and South Lexington Avenue. The Parcel was initially developed sometime between 1900 and 1930 with several residential buildings with street level retail units one of which was occupied by a drycleaner for some time. In the 1970s, the buildings were demolished and the Parcel was utilized for car storage for the dealership located across West Post Road until 2008 when the Parcel was vacated. There is no available information regarding demolition activities in Parcel K.

2.3 Site Environmental Conditions

The following section provides a brief overview of the results of previous environmental investigations at the Site that have documented the existence of several Areas of Concern (AOCs). More detailed information regarding these investigations was previously reported in the RIWP. Analytical results from previous investigations are summarized on Tables 1 through 7 of Appendix D and are compared to NYSDEC Part 375 Restricted Residential Use Soil Cleanup Standards (Restricted Residential SCOs).

Prior investigations identified multiple contaminants of concern (COCs) primarily, petroleum related VOCs in the soil and groundwater, likely a result of historical Site operations related to automotive service and repair. Exceedances of the NYSDEC Part 375 Restricted Residential Use Standards (Restricted Residential Use Standards) for SVOCs were limited to poly-cyclic aromatic hydrocarbons (PAHs). Metal exceedances included arsenic, barium, copper, lead, and mercury. The metal and PAH exceedances are likely attributable to the use of historic fill at the Site.

Chlorinated volatile organic compounds (CVOCs) were previously detected in the groundwater at concentrations above the Ambient Water Quality Standards and Guidance Values (AWQSGVs) in groundwater samples collected at Parcels F, G, H, I and K. Two SVOCs were previously detected in groundwater samples above their AWQSGVs: 2-methylnaphthalene in one sample and naphthalene in three samples. Multiple metals were previously detected at concentrations above their respective AWQSGVs in many of the groundwater samples collected previously; however,

many of the samples were collected from temporary points as such, it is likely that the metal detections in the groundwater samples are a result of turbid samples and not representative of dissolved phase conditions.

Poly-chlorinated biphenyls (PCBs) were not previously detected at concentrations above applicable standards.

2.4 Areas of Concern

Based on the previous investigations completed at the Site, the following AOCs were identified for further investigation:

Parcel A

- Petroleum related VOCs in soil and groundwater

Parcel B

- Petroleum related VOCs in soil and groundwater

Parcel C

- Petroleum related VOCs in soil (no groundwater data)

Parcel D

- Petroleum related VOCs in soil and groundwater
- Potential for chlorinated VOC impacts due to former use as a drycleaner

Parcel F

- Petroleum related VOCs in soil and groundwater
- Chlorinated VOCs in groundwater

Parcel G

- Chlorinated VOCs in soil
- polychlorinated biphenyls were previously detected in soil
- Petroleum related VOCs in groundwater
- Potential orphaned USTs

Parcel H

- Petroleum related VOCs in groundwater
- Chlorinated VOCs groundwater

- Potential orphaned USTs

Parcel I and J

- Petroleum related VOCs, chlorinated VOC and SVOCs in soil and groundwater

Parcel K

- Petroleum related VOCs in groundwater
- Chlorinated VOCs in groundwater
- Potential orphaned USTs

3.0 CONCEPTUAL SITE MODEL

Historical information and previous investigations indicate that historical Site use included the following: automotive service station (Parcel A); auto sales/service (Parcels C, G, H, and J); drycleaner and auto sales/service (Parcel D); dry cleaner (Parcel K). Environmental investigations suggest that historical Site use has impacted the subsurface either through inadvertent releases to the subsurface (i.e., spills or overfills), leaking underground storage tanks or faulty equipment (i.e., hydraulic lifts). This has the potential to result in localized soil hot-spots at various areas across the Site. Groundwater at the Site is impacted with petroleum related VOCs and CVOCs; however, there are several potential upgradient sources.

The Site is currently vacant and without improvements. As such there is no potential for additional releases.

4.0 RI FIELD ACTIVITIES

Investigation activities proposed in the RIWP were completed in April of 2014. Following a preliminary review of data generated during that investigation several data gaps were identified. The FSRIWP proposed additional investigation activities to assess the identified data gaps which included the potential for onsite migration of groundwater contamination from upgradient source(s) and identification of potential CVOC source area(s) in Parcels D and J. The LOIWP was completed pursuant to NYSDEC requirement that an offsite investigation be completed in order to perform a qualitative offsite exposure assessment. Field activities proposed in the FSRIWP and the LOIWP were completed in January and August 2015 respectively. All RI field activities (activities proposed in the RIWP, FSRIWP and the LOIWP) performed by Roux Associates were completed in accordance with the RIWP, the April 14, 2014 letter modifying the sample depth intervals for soil samples collected within Parcel A, the FSRIWP, the LOIWP and associated project plans (Health and Safety Plan [HASP], Field Sampling Plan [FSP], and Quality Assurance Project Plan [(QAPP)]. Field activities completed during the RI included the following:

- Site inspection to identify AOCs, identify physical obstructions (i.e., structures, buildings, and utilities) and determine final locations of proposed sample locations.
- Installation of 73 soil borings along with the collection and analysis of 101 discrete soil samples from 70 locations (soil samples were not collected during installation of the three offsite upgradient monitoring wells).
- Installation of 25 new monitoring wells (24 water table monitoring wells and one deep monitoring well) along with the collection and analysis of 33 discrete groundwater samples (25 from newly installed monitoring wells, two from pre-existing monitoring wells and six groundwater grab samples from two groundwater profile borings).

In accordance with the RIWP, soil vapor sampling was not completed onsite during the RI; however, two temporary soil vapor points were installed offsite as part of the LOIWP. The redevelopment plans include demolition of the existing buildings and excavating most of the Site which in many areas may extend to, and sometimes into the water table. For this reason, redevelopment plans include a pressurized slab (i.e., water proof) to be used under future Site structures anticipated to be installed at or in the water table that will provide waterproofing and mitigate any potential vapor intrusion issues. In addition, the redevelopment plans include parking or unoccupied space beneath the majority of the development.

The field activities completed during the RI are discussed in the following subsections.

4.1 Site Reconnaissance

Roux Associates along with NYSDEC completed a Site reconnaissance on April 7, 2014. At that time NYSDEC requested that the onsite identified drainage structures be investigated to the extent practical. A backhoe was utilized to explore multiple locations; ultimately one drywell (DW-1) was identified in Parcel G. A sample was collected from the bottom of DW-1 (DW-1/4-6) and submitted for laboratory analysis. All other structures were identified as catch basins with solid bottoms. At the direction of NYSDEC, a sample was collected for laboratory analysis from catch basin CB-2 located in the middle of Parcel G.

4.2 Soil Boring and Sampling Activities

From April 7 through April 21, 2014, in accordance with the RIWP, 65 soil borings (45 soil borings [RB-1 through RB-45 and 20 monitoring well pilot-boreholes [RW-1 through RW-20]) were installed and 93 discrete soil samples were collected for laboratory analysis.

From December 29, 2014 through January 6, 2015, in accordance with the FSRIWP, eight borings (five soil borings [RB-46 through RB-50] and three monitoring well pilot-boreholes [RW-21, RW-22, and RW-23]) were installed and eight discrete soil samples were collected for laboratory analysis. Note in accordance with the FSRIWP soil samples were not collected from the offsite upgradient monitoring wells (RW-21, RW-22, and RW-23). The soil boring locations are depicted on Figure 3.

Prior to the advancement of borings and monitoring wells utility clearances were performed using hand tools to 5 ft bls at each location to confirm that no subsurface utilities were present. Soil samples were collected using a Geoprobe® drill rig and were collected continuously using a 5-foot long macro core from the land surface to the targeted terminal depth of each soil boring. As per the RIWP, soil samples were collected for laboratory analysis from the interval immediately below the excavation envelope. The proposed depth of excavation across the Site is shown on Figure 3 and is presented on Table 2 along with soil sample depths intervals, laboratory analysis and sample rationale. During installation of the soil borings, the lithology was recorded and soil

was visually inspected for evidence of contamination and field-screened for VOCs using a photoionization detector (PID). Soil boring logs are provided in Appendix A.

At each soil boring location, a soil sample was collected for laboratory analysis from the following intervals:

- Immediately below the bottom of the proposed excavation (i.e., pre-excavation endpoint samples);
- In areas where the extent of the construction envelope was above the water table, an additional soil sample was collected at the water table interface;
- When odor/visual evidence of contamination or PID readings were observed at or below the limit of the excavation envelope, additional samples were collected from the interval that exhibited the highest contamination (as determined through visual, olfactory and/or PID readings) and from the next clean interval below the interval(s) with observed contamination.

Soil samples collected in accordance with the RIWP were analyzed for the following:

- Full Target Compound List (TCL) plus the 30 (10 VOCs and 20 SVOCs) highest concentration, tentatively identified compounds (TICs) via United States Environmental Protection Agency (USEPA) Methods 8260 and 8270.
- Target Analyte List (TAL) metals via USEPA Method 6010.
- Twenty-five percent of soil samples collected in accordance with the RIWP was analyzed for polychlorinated biphenyls (PCBs) and pesticides via USEPA Method 8082.

In accordance with the FSRIWP, soil samples collected from borings B-46 through B-50 were analyzed for TCL VOCs only. All soil samples were analyzed by Alpha Analytical (Alpha), a laboratory with a current New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) Contract and Laboratory Protocol (CLP) certification for each of the parameters noted above. Samples were analyzed on a standard turnaround time of five days and reported using Category B data deliverables. The laboratory analytical data was submitted to an independent data validator and a Data Usability Summary Report (DUSR) was prepared (Appendix C).

4.3 Monitoring Well Installation

As proposed in the RIWP, twenty shallow (i.e., screening the water table) monitoring wells (RW-1 through RW-20) were installed. Additionally, as proposed in the RIWP water table monitoring well RW-5 was clustered with a deep monitoring well (RW-5D, screened from 17 to 27 ft bls [approximately eight feet below the water table]). Monitoring wells RW-1 through RW-20 and RW-5D were installed between April 7, 2014 and May 2, 2014. Note two deep monitoring wells were proposed in the RIWP (RW-3D and RW-5D); however, refusal was encountered at RW-3 at 14 ft bls preventing installation of a deep monitoring well. This was communicated to NYSDEC via email on April 28, 2014. As per the FSRIWP, three offsite upgradient monitoring wells (RW-21, RW-22, and RW-23) were installed between January 5 and January 6, 2015. Monitoring well locations are depicted on Figure 3. As per the LOIWP, one offsite downgradient monitoring well (RW-24) was installed on August 5, 2015. Monitoring well locations are depicted on Figure 3.

RW-1 through RW-23 were installed in the borings completed for soil borings SB-1 through SB-23 (Figure 3). All monitoring wells were constructed with 10 feet of 2-inch diameter, 0.02-inch slot poly vinyl chloride (PVC) screen. All water table monitoring wells have well screens that span the water table, with approximately seven feet of screen below and three feet of screen above the water table. Monitoring well MW-5D is constructed with well screen from 17 ft bls to 27 ft bls. Monitoring well construction logs are provided in Appendix A.

Following well installation activities, each well was developed to ensure proper hydraulic connection with the aquifer and to reduce/eliminate turbidity. Monitoring wells were developed using a submersible pump and a surge block, which was surged periodically until well yield was consistent and turbidity was below 50 NTUs, when possible. Detailed procedures regarding well development are also found in the FSP (Appendix A of the RIWP). All monitoring wells were surveyed by a surveyor licensed in the State of New York to obtain horizontal and vertical survey coordinates.

All soil cuttings, and water generated during well installation and development activities were containerized in 55-gallon drums and staged in a drum storage area at the Site for eventual disposal at an approved facility.

4.3.1 Groundwater Gauging and Sampling

On May 14, 2014, and January 15, 2015 (following installation of monitoring wells (RW-21, RW-22, and RW-23), all accessible monitoring wells were gauged. A summary of water-level data is provided on Table 1. Groundwater contour maps based on the data collected during the May 14, 2014 gauging event is provided as Figure 4. Note that, due to an accumulation of snow and ice during the January 2015 gauging event, multiple monitoring wells could not be accessed. As such, a groundwater contour diagram was not generated for the January 2015 gauging event.

During both gauging events, the depth to groundwater ranged from approximately 3 to 11 ft bls. Groundwater is deeper at Parcels A and B and shallower at Parcels C, D and G. Groundwater flow direction was calculated to be in a southwest to northeast direction, flowing generally across the Site.

Following the groundwater gauging event of May 14, 2014, a comprehensive groundwater sampling event was completed. From May 14 to May 16, 2014, 23 groundwater samples were collected (21 samples from newly installed monitoring wells [RW-1 through RW-20 and RW-5D] and two samples from existing monitoring wells). Following the January 15, 2015, gauging event only the three offsite upgradient monitoring wells (RW-21, RW-22 and RW-23) installed as per the FSRIWP, and one offsite downgradient monitoring well (RW-24) installed as per the LOIWP were sampled. On April 22, 2016, existing monitoring well MW-1 was sampled at NYSDEC request because it had not been previously sampled.

Monitoring wells were purged prior to sample collection using low flow sampling procedures in accordance with the USEPA document “Low Stress (Low Flow) Purging and Sampling Procedures for the Collection of Groundwater Samples From Monitoring Wells” (USEPA, 2010). Additional information regarding groundwater sampling procedures can be found in the FSP (Appendix A of the RIWP).

Groundwater samples collected in accordance with the RIWP were analyzed for:

- the full TCL list plus the 30 (10 VOC and 20 SVOC) highest concentration TICs using USEPA Method 8260 and 8270;
- TAL metals using USEPA Method 6010;

- pesticides and PCBs using USEPA Methods 8081 and 8082 respectively; and
- field parameters (pH, dissolved oxygen, conductivity, temperature, turbidity and oxidation reduction potential [ORP]) were also collected during well purging and sampling and recorded on field-sampling forms (Appendix B).

Groundwater samples collected as per the FSRIWP (RW-21, RW-22, and RW-23), and LOIWP (RW-24) were analyzed for TCL VOCs in addition to the field parameters listed above. All groundwater samples were analyzed by Alpha. Samples were analyzed on a standard turnaround time and reported as Category B data deliverables. The laboratory analytical data was submitted to an independent data validator and a DUSR was prepared (Appendix C). More information on sample analysis is provided in the QAPP (Appendix B of the RIWP).

4.4 Groundwater Profile Borings

Groundwater vertical profiling (GWP) samples were collected in accordance with the FSRIWP at borings RB-50 and RB-51 to vertically delineate CVOCs observed in a groundwater sample collected at monitoring well RW-17 on May 16, 2014.

The two GWP borings (RB-50 and RB-51) were completed using the Geoprobe® SP-16 Groundwater Sampler. GWP borings RB-50 and RB-51 were installed 15 feet and 45 feet, respectively, from monitoring well RW-17.

Groundwater vertical profiling samples were collected as follows:

- One groundwater profile sample was collected from the upper two feet of each 10-foot interval beginning at the water table, and continued until the termination depth of the boring.
- Groundwater vertical profile samples were collected and submitted for laboratory analysis of TCL VOCs.
- The groundwater profile borings where terminated when drilling refusal was encountered (30 ft bls in each boring).

The GWP boring locations are shown on Figure 3.

4.5 Offsite Soil Vapor Sampling

Two temporary soil vapor points (SV-1 and SV-2) were installed in the sidewalk along Maple Avenue at the locations shown on Figure 3. Due to the anticipated shallow water table (approximately 4 feet bls) and the concrete overburden of the sidewalk, the two soil vapor points were installed at a depth of approximately 2 feet bls and consisted of a 6-inch stainless steel screen attached to Teflon-lined tubing. The soil vapor points were backfilled with No. 2 Morie sand to approximately 1 foot bls; the remainder of the borehole was backfilled with bentonite to land surface. Following installation, a helium tracer test was performed on each vapor point prior to sample collection in accordance with the procedures outlined in New York State Department of Health (NYSDOH) guidance documents.

Soil vapor samples were collected using pre-cleaned, batch certified summa canisters with regulators calibrated to collect samples over a two-hour period. Soil vapor samples were analyzed using USEPA Method TO-15 for VOCs.

All samples collected during the offsite investigation were analyzed at a NYSDOH Environmental Laboratory Approval Program-certified laboratory. Samples were analyzed on a standard turnaround time and reported as Category B data deliverables. The Laboratory analytical data was submitted to an independent data validator and a Data Usability Summary Report (DUSR) was prepared.

4.6 Surveying Activities

Existing and newly installed monitoring well, soil boring, and groundwater profile boring locations installed in accordance with the RIWP and the FSRIWP were surveyed to obtain horizontal and vertical coordinates. All survey activities were conducted by Link Land Surveyors of Mahopac New York on two separate dates: May 14, 2014; and, January 15, 2015 for RIWP and FSRIWP activities respectively. Elevations were measured in feet relative to the North American Vertical Datum of 1988 (NAVD 88). Monitoring well survey data was used to calculate water-level elevations for each well, which was used to construct groundwater elevation contour maps (Figures 4 and 5).

5.0 SAMPLING RESULTS

The following sections summarize soil and groundwater quality data based on laboratory analyses completed during the RI.

5.1 Soil Sample Results

A total of 101 soil samples and six duplicate samples were collected during the RI:

- 93 discrete soil samples and five duplicate samples were collected as part of the RIWP; and
- eight soil samples and one duplicate sample were collected as part of the FSRIWP.

The soil sample laboratory analytical results were compared to NYSDEC Subpart 375-6: Restricted Use Soil Cleanup Objectives (SCOs) for Protection of Groundwater, Restricted Residential Use, and Commercial Use. Laboratory analytical data for soil is summarized in Tables 3 through 7; sample locations with exceedances of the Subpart 375-6 SCOS are shown on Plates 1 through 3.

5.1.1 Volatile Organic Compounds

Table 3 presents a summary of the VOC analytical data for soil samples collected during this RI. 101 discrete soil samples in addition to six duplicate samples were analyzed for VOCs.

Exceedances of Subpart 375-6: Restricted Use SCOS were as follows:

- Protection Of Groundwater SCOS were exceeded in 26 samples at 21 locations
- Restricted Use (Restricted Residential) SCOS were exceeded in 2 samples at 2 locations (RB-11/2-4 and RB-48/4-6)
- There were no exceedances of Restricted Use (Commercial) SCOS

Analytical data for VOCs indicated detections above SCOS for seven compounds: acetone, benzene, cis-1,2-dichloroethene (cis-1,2-DCE), ethylbenzene, PCE, toluene and xylene. All seven compounds exceeded the Protection of Groundwater SCOS and two of the seven compounds, ethylbenzene and xylenes, exceeded the Restricted Use (Restricted Residential) SCOS. VOC exceedances are summarized below.

- Acetone was detected in 70 soil samples, ranging in concentration from 12 micrograms per kilogram ($\mu\text{g}/\text{kg}$) (estimated) to 510 $\mu\text{g}/\text{kg}$ (estimated).
 - The Protection of Groundwater SCO (50 $\mu\text{g}/\text{kg}$) was exceeded at fifteen locations: RB-2, RB-4, RB-10, RB-14, RB-16, RB-17, RB-20, RB-28, RB-30, RB-31, RB-40, RB-42, RW-1, RW-7, and RW-14.
 - Concentrations were not detected above either the Restricted Residential Use or Restricted Commercial Use SCOs.

Note acetone is a common laboratory artifact.

- Benzene was detected in 10 soil samples, ranging in concentration from 2 $\mu\text{g}/\text{kg}$ to 3,400 $\mu\text{g}/\text{kg}$ (estimated).
 - The Protection of Groundwater SCO (60 $\mu\text{g}/\text{kg}$) was exceeded at three locations: RB-10/1-3, RB-11/2-4 and 5-7, RB-47/4-6.
 - Concentrations were not detected above either the Restricted Residential Use or Restricted Commercial Use SCOs.
- Cis-1,2-DCE was detected in 10 soil samples, ranging in concentration from 1.2 $\mu\text{g}/\text{kg}$ to 1,200 $\mu\text{g}/\text{kg}$.
 - The Protection of Groundwater SCO (250 $\mu\text{g}/\text{kg}$) was exceeded at only one location, RB-48/6-8, at a concentration of 1,200 $\mu\text{g}/\text{kg}$.
 - Concentrations were not detected above either the Restricted Residential Use or Restricted Commercial Use SCOs.
- Ethylbenzene was detected in 25 soil samples, ranging in concentration from 0.16 $\mu\text{g}/\text{kg}$ (estimated) to 140,000 $\mu\text{g}/\text{kg}$.
 - The Protection of Groundwater SCO (1,000 $\mu\text{g}/\text{kg}$) was exceeded at nine locations: RB-1/10-12, RB-2/10-12, RB-7/1-3, RB-10/1-3, RB-11/2-4 and 5-7, RB-47/4-6, RB-484-6 and 6-8, RW-1/13-15 and RW-4/1-3.
 - The Restricted Residential Use SCO (41,000 $\mu\text{g}/\text{kg}$) was exceeded at two locations: RB-11/2-4 and RB- 48/4-6.
 - The Restricted Commercial Use SCO was not exceeded.
- PCE was detected in 20 soil samples, ranging in concentration from 0.7 $\mu\text{g}/\text{kg}$ (estimated) to 2,200 $\mu\text{g}/\text{kg}$.
 - The Protection of Groundwater SCO (1,300 $\mu\text{g}/\text{kg}$) was exceeded at only one location, RB-48/4-6, at a concentration of 2,200 $\mu\text{g}/\text{kg}$.
 - Concentrations were not detected above either the Restricted Residential Use or Restricted Commercial Use SCOs.

- Toluene was detected in 61 soil samples, ranging in concentration from 0.24 µg/kg (estimated) to 37,000 µg/kg.
 - Toluene exceeded the Protection of Groundwater SCOs (700 µg/kg) at 3 locations: RB-11/2-4 and 5-7, RB-47/4-6, and RB-48/4-6.
 - Concentrations were not detected above either the Restricted Residential Use or Restricted Commercial Use SCOs.
- Xylenes (total) were detected in 30 soil samples, ranging in concentration from 0.49 µg/kg (estimated) to 430,000 µg/kg.
 - The Protection of Groundwater SCO (1,600 µg/kg) was exceeded at eight locations: RB-1/10-12, RB-2/10-12, RB-7/15-17, RB-10/1-3, RB-11/2-4 and 5-7, RB-47/4-6, RB-48/4-6 and 6-8, and RW-1/13-15.
 - The Restricted Residential Use SCO (100,000 µg/kg) was exceeded at two locations: RB-11/2-4 and RB-48/4-6.
 - Concentrations were not detected above the Restricted Commercial Use SCO.

5.1.2 Semivolatile Organic Compounds

Table 4 presents a summary of SVOC analytical data collected during the RI. Ninety-three discrete soil samples were analyzed for SVOCs in addition to five duplicate samples. Exceedances for Subpart 375-6: Restricted Use Soil Cleanup Objectives (SCOs) were as follows:

- Protection of Groundwater SCOs were exceeded in 12 samples at 10 locations.
- Restricted Residential Use SCOs were exceeded in 13 samples at 11 locations.
- Restricted Commercial Use SCOs were exceeded in 10 samples at 8 locations.

Analytical data for SVOCs indicate detections above SCOs for eight compounds: benzo[a]anthracene, benzo[b]fluoranthene, benzo[k]fluoranthene, benzo[a]pyrene, chrysene, dibenzo[a,h]anthracene, Indeno[1,2,3-cd]pyrene, and naphthalene. Laboratory analytical data for soil exceedances for SVOCs are summarized below.

- Benzo[a]anthracene was detected in 38 soil samples, ranging in concentration from 39 µg/kg (estimated) to 8,900 µg/kg (the highest concentration for any compound).
 - The Protection of Groundwater SCO (1,000 µg/kg) was exceeded at nine locations: CB2, DW1/4-6, RB-14/11-12, RB-19/5-7, RB-22/4-6, RB-28/5-7 and 7-8, RB-34/4-6, RW-8/5-7, and RW-12/5-7 and 7-8.

- The Restricted Residential Use SCO (1,000 µg/kg) was exceeded at nine locations: CB2, DW-1/4-6, RB-14/11-12, RB-19/5-7, RB-22/4-6, RB-28/5-7 and 7-8, RB-34/4-6, RW-8/5-7, and RW-12/5-7 and 7-8.
 - The Restricted Commercial Use SCO (1,000 µg/kg) was exceeded at three locations: RB-22/4-6, RB-28/5-7 and 7-8, and RW-12/5-7.
- Benzo[b]fluoranthene was detected in 40 soil samples, ranging in concentration from 44 µg/kg (estimated) to 8,800 µg/kg.
 - The Protection of Groundwater SCO (1,700 µg/kg) was exceeded at seven locations: CB2, DW-1/4-6, RB-19/5-7, RB-22/4-6, RB-28/5-7, RB-34/4-6, and RW-12/5-7 and 7-8.
 - The Restricted Residential Use SCO (1,000 µg/kg) was exceeded at nine locations: CB2, DW-1/4-6, RB-14/11-12, RB-19/5-7, RB-22/4-6, RB-28/5-7 and 7-8, RB-34/4-6, RW-8/5-7 (1,100 µg/kg), and RW-12/5-7 and 7-8.
 - The Restricted Commercial Use SCO (5,600 µg/kg) was exceeded at three locations: RB-22/4-6, RB-28/5-7, and RW-12/5-7.
- Benzo[k]fluoranthene was detected in 34 soil samples, ranging in concentration from 39 µg/kg (estimated) to 3,700 µg/kg.
 - The Protection of Groundwater SCO (1,700 µg/kg) was exceeded at three locations: RB-22/4-6, RB-28/5-7 and 7-8, and RW-12/5-7.
 - Concentrations were not detected above either the Restricted Residential Use or Restricted Commercial Use SCOs.
- Benzo[a]pyrene was detected in 36 soil samples, ranging in concentration from 48 µg/kg (estimated) to 7,000 µg/kg.
 - Concentrations were not detected above the Protection of Groundwater SCO.
 - The Restricted Residential and Commercial Use SCOs (1,000 µg/kg for each) was exceeded at eight locations: CB2, DW-1/4-6, RB-14/11-12, RB-19/5-7, RB-22/4-6, RB-28/5-7 and 7-8, RB-34/4-6, and RW-12/5-7 and 7-8.
- Chrysene was detected in 41 soil samples, ranging in concentration from 37 µg/kg (estimated) to 7,600 µg/kg.
 - The Protection of Groundwater SCO (1,000 µg/kg) was exceeded at nine locations: CB2, DW-1/4-6, RB-14/11-12, RB-19/5-7, RB-22/4-6, RB-28/5-7 and 7-8, RB-34/4-6, RW-8/5-7, and RW-12/5-7 and 7-8.
 - The Restricted Residential Use SCO (3,900 µg/kg) was exceeded at three locations: RB-22/4-6, RB-28/5-7, and 7-8, and RW-12/5-7.
 - Concentrations were not detected above Restricted Commercial Use SCOs.

- Naphthalene was detected in 19 soil samples, ranging in concentration from 15.6 µg/kg (estimated) to 26,000 µg/kg.
 - The Protection of Groundwater SCO (12,000 µg/kg) was exceeded at only one location, RB-11/2-4, at a concentration of 26,000 µg/kg.
 - Concentrations were not detected above either the Restricted Residential Use or Restricted Commercial Use SCOs.
- Dibenzo[a,h]anthracene was detected in 20 soil samples, ranging in concentration from 50 µg/kg (estimated) to 2,000 µg/kg.
 - Concentrations were not detected above the Protection of Groundwater SCO.
 - The Restricted Residential Use SCO (330 µg/kg) was exceeded at four locations: DW-1/4-6, RB-22/4-6, RB-28/5-7 and 7-8, and RW-12/5-7.
 - The Restricted Commercial Use SCO (560 µg/kg) was exceeded at three locations: RB-22/4-6, RB-28/5-7 and 7-8 and RW-12/5-7.
- Indeno[1,2,3-cd]pyrene was detected in 16 soil samples, ranging in concentration from 49 µg/kg (estimated) to 4,600 µg/kg.
 - Concentrations were not detected above the Protection of Groundwater SCO.
 - The Restricted Residential Use SCO (500 µg/kg) was exceeded at eleven locations: CB2, DW-1/4-6, RB-9/11-13, RB-14/11-12, RB-19/5-7, RB-22/4-6, RB-28/5-7 and 7-8, RB-30/5-7, RB-34/4-6, RW-8/5-7, and RW-12/5-7 and 7-8.
 - Concentrations were not detected above the Restricted Commercial Use SCO.

5.1.3 Metals

Table 5 presents a summary of metals analytical data collected during the RI. Ninety-three discrete soil samples along with five duplicate samples were analyzed for metals. As shown on Plate 3, analytical data for metals indicate NYSDEC Subpart 375-6: Restricted Use SCOs were exceeded in eight samples at seven locations. Four metals were detected above SCOs: Arsenic, Barium, Lead, and Mercury. Laboratory analytical data for soil exceedances for metals are summarized below.

- Arsenic was detected in all 98 soil samples ranging in concentration from an estimated 2 milligrams per kilogram (mg/kg) to 18 mg/kg.
 - The Protection of Groundwater SCO and the Restricted Residential and Commercial Use SCOs (16 mg/kg for all three) was exceeded at one location, RB-28/5-7 with a concentration of 18 mg/kg.

- Barium was detected in all 98 soil samples ranging in concentration from 32 mg/kg to 490 mg/kg.
 - Concentrations were not detected above the Protection of Groundwater SCOs.
 - The Restricted Residential and Commercial Use SCOs (400 mg/kg for both) were exceeded at one location RB-26/5-7 with a concentration of 490 mg/kg.
- Lead was detected in all 98 soil samples ranging in concentration from 1.7 mg/kg (estimated) to 1,100 mg/kg.
 - The Protection of Groundwater SCO and the Restricted Residential Use SCO (450 mg/kg and 400 mg/kg, respectively) were exceeded at three locations: DW-1/4-6, RW-10/6-8 and RW-11/4-6.
 - The Restricted Commercial Use SCO (1,000 mg/kg) was exceeded at one location. RW-10/6-8.
- Mercury was detected in all 98 soil samples ranging in concentration from 0.02 mg/kg (estimated) to 2.9 mg/kg
 - The Protection of Groundwater SCO (0.73 mg/kg) and the Restricted Residential Use SCO (0.81 mg/kg) were exceeded at two locations: RB-22/4-6 and RB-33/4-6.
 - The Restricted Commercial Use SCO (2.8 mg/kg) was exceeded at one location: RB-22/4-6.

5.1.4 Polychlorinated Biphenyls (PCBs)

Table 6 presents a summary of PCB analytical data collected during the RI. Thirty-three discrete soil samples and three duplicate samples were analyzed for PCBs. PCBs were detected in five samples, concentration ranged from an estimated 21.3 µg/kg to an estimated 146.5 µg/kg. There were no exceedances of the Protection of Groundwater SCOs or the Restricted Residential and Commercial Use SCOs.

5.1.5 Pesticides

Table 7 presents a summary of pesticides analytical data collected during the RI. A total of 33 discrete soil samples and three duplicate samples were analyzed for pesticides. Pesticides were only detected in two samples: DW-1/4-6 and RB-28/5-7. None of the pesticides analyzed were detected at concentrations above the Protection of Groundwater SCOs or the Restricted Residential and Commercial Use SCOs.

5.2 Groundwater Sampling Results

The following sections summarize groundwater quality based on laboratory analytical data that was generated during this RI. A total of 33 groundwater samples and four duplicate samples were collected during the RI.

Groundwater samples were collected during four events:

- Initial sampling event – May 14 through 16, 2014; 23 locations (RW-1 through RW-05, RW-5D, RW-6 through RW-20, SB-2/MW-2, and SB-4/MW-3).
- December 30, 2014 – six groundwater grab samples were collected during the installation of groundwater profile borings RB-50 and RB-51.
- Additional sampling event (FSRIWP) – January 9, 2015; three locations (RW-21, RW-22, and RW-23).
- Additional sampling event (LOIWP) – August 14, 2015; one location (RW-24) for VOCs only.
- Additional sampling event – April 22, 2016; one location (SB-1/MW-1).

The groundwater laboratory analytical results were compared to NYSDEC AWQSGVs for Class GA groundwater. Laboratory analytical data for groundwater are summarized in Tables 8 through 12. Exceedances of the AWQSGVs are shown on Plate 4.

5.2.1 Volatile Organic Compounds

A summary of laboratory analytical data for VOCs in groundwater is summarized on Table 8. Thirty-three discrete groundwater samples were analyzed for VOCs, in addition to four duplicate samples. Analytical data for VOCs indicated detections above AWQSGVs for 13 compounds, as summarized below:

- Benzene was detected in 19 samples ranging in concentration from an estimated 0.19 µg/L to 530 µg/L and exceeded the AWQSGV (1 µg/L) at ten locations: RB-50/20, RW-1, RW-3, RW-4, RW-5D, RW-11, SB-4/MW-3, R-21, RW-22, and R-23.
- Cis-1,2-Dichloroethene was detected in 17 samples ranging in concentration from an estimated 1.1 µg/L to 340 µg/L and exceeded the AWQSGVs (5 µg/L) at ten locations: RB-50/10, RB-50/20, RB-51/20, RW-3, RW-5D, RW-9, RW-10, RW-11, RW-16, RW-17, SB-1/MW-1 and RW-21.

- Ethylbenzene was detected in ten samples ranging in concentration from an estimated 0.72 µg/L to 1,100 µg/L and exceeded the AWQSGVs (5 µg/L) at eight locations: RW-1, RW-3, RW-4, RW-9, SB-4/MW-3, R-21, RW-22, and R-23.
- Isopropylbenzene was detected in seven samples ranging in concentration from 6.5µg/L (estimated) to 95 µg/L and exceeded the AWQSGVs (5 µg/L) at all seven locations: RW-22, RW-1, RW-23, RW-3, RW-4, RW-9, and SB-4/MW-3.
- M+p-Xylene was detected in fourteen samples ranging in concentration from 0.9 µg/L (estimated) to 2,500 µg/L and exceeded the AWQSGVs (5 µg/L) at eight locations: RW-1, RW-3, RW-4, RB-50/10, RB-50/20, SB-4/MW-3, R-21, RW-22, and R-23.
- MTBE was detected in thirteen samples ranging in concentration from 0.72 µg/L (estimated) to 120 µg/L and exceeded the AWQSGVs (10 µg/L) at six locations: RW-5D, RW-8, RW-9, RW-11, RW-22, and R-23.
- O-xylene was detected in seven samples at concentrations ranging from 5.6 µg/L (estimated) to 310 µg/L and exceeded the AWQSGV (5 µg/L) at six locations: RW-1, RW-3, RW-4, SB-4/MW-3, RW-22, and R-23 DUP.
- Tetrachloroethene was detected in seventeen samples ranging in concentration from .38 µg/L (estimated) to 3300 µg/L and exceeded the AWQSGVs (5 µg/L) at ten locations: RB-50/10, RB-50/20, RB-50/30, RB-51/10, RB-51/20, RB-51/30, RW-3, RW-5D, RW-9, RW-10, RW-16, RW-17, and RW-21.
- Toluene was detected in twelve samples ranging in concentration from 0.8 µg/L (estimated) to 110 µg/L and exceeded the AWQSGVs (5 µg/L) at five locations: RB-50/10, RB-50/20, RB-50/30, RW-1, RW-3, and RW-22, and R-23.
- Trans-1,2-Dichloroethene was detected in one sample, RW-17, at a concentration of 18µg/L, above its AWQSGV (5 µg/L).
- Trichloroethene was detected in fifteen samples ranging in concentration from 0.17 µg/L (estimated) to 420 µg/L and exceeded the AWQSGVs (5 µg/L) at eight locations: RB-50/10, RB-50/20, RB-50/30, RB-51/10, RB-51/20, RB-51/30, RW-5D, RW-9, RW-10, RW-16, RW-17, and RW-21.
- Vinyl chloride was detected in ten samples ranging in concentration from 0.42 µg/L (estimated) to 49 µg/L and exceeded the AWQSGVs (2 µg/L) at seven locations: RB-50/10, RW-3, RW-5D, RW-8, RW-9, RW-11, and RW-17.
- Total xylenes were detected in fourteen samples at concentrations ranging from 0.9 µg/L (estimated) to 3000 µg/L and exceeded the AWQSGVs (5 µg/L) at eight locations: RW-1, RW-3, RW-4, RB-50/10, RB-50/20, SB-4/MW-3, R-21, RW-22, and R-23.

5.2.2 Semivolatile Organic Compounds

Table 9 presents a summary of SVOC analytical data collected during the RI. Groundwater samples were collected from 24 locations and analyzed for SVOCs. Two SVOCs were detected at five locations and were above the AWQSGVs concentrations at all locations, as summarized below.

- Naphthalene was detected in thirteen samples ranging in concentration from 0.07 µg/L (estimated) to 180 µg/L and exceeded the NYSDEC AWQSGV (10 µg/L) at four locations: RW-1, RW-3, RW-4, and SB-4/MW-3.
- Pentachlorophenol was detected in one sample, RW-12, at a concentration of 2 µg/L above the AWQSGV (1 µg/L).

5.2.3 Metals

Laboratory analytical data for metals detected in groundwater samples is summarized in Table 10. Groundwater samples were collected from 24 locations and analyzed for TAL metals. Four metals were detected that exceed their respective AWQSGVs, as summarized below.

- Antimony was detected in 25 samples ranging in concentration from 0.11 µg/L (estimated) to 5.03 µg/L and exceeded the AWQSGVs at one location, RW-5.
- Iron was detected in 24 samples ranging in concentration from 33.8 µg/L to (35,500 µg/L) and exceeded the AWQSGVs (300 µg/L) at 17 locations: RW-1, RW-3, RW-4, RW-5, RW-5D, RW-6, RW-7, RW-8, RW-9, RW-11, RW-13, RW-16, RW-18, RW-20, SB-1/MW-1, SB-2/MW-2 and SB-4/MW-3.
- Manganese was detected in 26 samples ranging in concentration from 164 µg/L to 4,724 µg/L and exceeded the AWQSGVs (300 µg/L) at 20 locations: RW-1, RW-3, RW-4, RW-5, RW-5D, RW-6, RW-7, RW-8, RW-9, RW-10, RW-11, RW-12, RW-14, RW-16, RW-18, RW-19, RW-20, SB-1/MW-1, SB-2/MW-2, and SB-4/MW-3.
- Sodium was detected in 25 samples ranging in concentration from 11,300 µg/L to 583,000 µg/L and exceeded the AWQSGVs (20,000 µg/L) at 21 locations: RW-1, RW-2, RW-3, RW-4, RW-5, RW-5D, RW-6, RW-7, RW-8, RW-9, RW-10, RW-11, RW-12, RW-13, RW-14, RW-15, RW-16, RW-17, RW-18, SB-2/MW-2, and SB-4/MW-3.

5.2.4 Polychlorinated Biphenyls (PCBs)

Table 11 presents a summary of PCB analytical data collected during the RI. Twenty-four discrete groundwater samples were analyzed for PCBs in addition to two duplicate samples. As shown on Table 11, PCBs were not detected in any of the groundwater samples.

5.2.5 Pesticides

Table 12 presents a summary of pesticides analytical data. A total of twenty-four discrete groundwater samples were analyzed for pesticides in addition to two duplicate samples. Only one pesticide (dieldrin) was detected at a concentration above its AWQSGV in one sample, RW-12.

5.3 Offsite Soil Vapor Sampling Results

Two offsite temporary soil vapor points (SV-1 and SV-2) were installed in the sidewalk along Maple Avenue. Multiple VOCs were detected in the samples including some petroleum related compounds (2-hexanone, ethanol, hexane, benzene, toluene, xylenes, heptane, and cyclohexane).

Regulatory guidance on soil vapor and indoor air quality is presented in Matrix 1 and Matrix 2 from the NYSDOH Center for Environmental Health (CEH) Bureau of Environmental Exposure Investigation (BEEI) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006. Matrix 1 addresses TCE, carbon tetrachloride, and vinyl chloride, and Matrix 2 addresses 1,1-dichloroethene, *cis*-1,2-dichloroethene, PCE, and 1,1,1-trichloroethane. The matrices establish the conditions that require a response (i.e., monitoring, mitigation, or source identification) based on an evaluation of indoor air concentrations and sub-slab vapor concentrations. None of the seven compounds included in the NYSDOH Guidance were detected in either of the soil vapor samples analyzed.

6.0 QUALITATIVE EXPOSURE ASSESSMENT

As described in Appendix 3B of DER-10, “The overall purpose of the Qualitative Human Health Exposure Assessment (or the exposure assessment) is to evaluate and document how people might be exposed to site related contaminants, and to identify and characterize the potentially exposed population(s) now and under the reasonably anticipated future use of the site.” The following section details the Qualitative Human Health Exposure Assessment based on data collected during the RI.

6.1 Soil Exposure

As described above in Section 5.1, soil samples collected during the RI indicated the presence of VOCs, SVOCs, and metals at concentrations above the NYSDEC Subpart 375-6 Protection of Groundwater SCOs, Restricted Residential Use SCOs and, with the exception of VOCs, Restricted Commercial Use SCOs. An individual could be exposed to these contaminants through direct contact with Site soil during ground intrusive work at the Site. Direct contact without the use of proper personal protective equipment (PPE) and personal hygiene measures could lead to dermal contact and incidental ingestion of these compounds. Since the Site will be fully fenced during construction activities, and access is controlled, potential contact with Site soil is restricted to remedial and construction contract workers at the Site performing ground intrusive activities in addition to trespassers and passersby. The general public will not be exposed to direct contact with Site soil. PPE will be required during any intrusive Site work. A community air monitoring program (CAMP) will be implemented during intrusive activities to minimize the potential for off-site exposures from soil/dust leaving the Site.

The proposed plan for Site redevelopment consists of substantial excavation for the construction of a multi-level, mixed-use development including parking, retail space and medical office space. The proposed remedy to be described in the RAWP will include addressing impacted soil. Some soil impacted above SCOs may remain in-place. However, the Site will be completely capped by the proposed complex.

6.2 Groundwater Exposure

Groundwater is not used for drinking or other potable purposes (the area is connected to the public water supply), and there is no direct contact with or ingestion of groundwater by the general public

(on or offsite). Furthermore, no public water supply wells are located in the area surrounding the Site. The proposed onsite buildings will be serviced by the public water supply.

Individuals who perform intrusive work (i.e., utility construction and/or repair), perform groundwater sampling or remedial activities may come into contact with contaminated groundwater. Proper PPE and personal hygiene measures will be required to prevent dermal contact and the potential for incidental ingestion of these compounds. Based on this, the potential for public exposure by direct contact with contaminated groundwater will be reduced or eliminated.

The potential for offsite migration of contamination is expected to be mitigated by addressing nearby, upgradient soil and groundwater impacts as proposed in the RAWP.

6.3 Soil Vapor Exposure

Individuals who perform groundwater or soil vapor sampling, remedial construction or redevelopment construction activities may come into contact with contaminated soil vapor. Potential worker exposure to contaminated soil vapor during these activities will be mitigated through the implementation of the Site-Specific HASP, required PPE, and required worker training. Potential environmental exposures will be mitigated by engineering controls implemented during remedial construction (i.e., vapor/odor control). In addition, the construction of the building utilizing a pressure slab over roughly half of the Site footprint and a vapor barrier over the remainder will minimize the potential for onsite soil vapor intrusion. The potential for offsite migration of contamination is expected to be mitigated by addressing nearby, upgradient soil and groundwater impacts as proposed in the RAWP.

6.4 Exposure Assessment Summary

The following table summarizes the exposure assessment.

Environmental Media and Exposure Route	Human Exposure Assessment
Direct contact with subsurface soils (and incidental ingestion)	<ul style="list-style-type: none"> • Demolition, construction and remedial contractors can come into contact with soil if they complete ground intrusive work at the Site. • During remediation, remedial workers, trespassers, passersby, and utility workers could come into contact with contaminated soil contained in dust through inhalation, incidental ingestion and dermal contact.
Direct contact with subsurface soils (and incidental ingestion) <i>[continued]</i>	<ul style="list-style-type: none"> • Future exposure will be eliminated though addressing contaminated soil in the RAWP and full capping of the Site by the newly constructed building.
Ingestion of groundwater	<ul style="list-style-type: none"> • Contaminated groundwater is not used for drinking water, as the Site will be connected to the public water supply.
Direct contact with groundwater (and incidental ingestion)	<ul style="list-style-type: none"> • Remedial workers, trespassers, and utility workers could come into contact with contaminated groundwater through dermal contact and incidental ingestion during ground intrusive work, and groundwater remediation and sampling activities. • Future onsite exposure will be reduced or eliminated by addressing contaminated soil that is acting as a source of contamination to groundwater, and addressing groundwater contamination in the RAWP.
Inhalation of air (exposures related to soil vapor intrusion)	<ul style="list-style-type: none"> • No current vapor intrusion pathway exists since the Site is unoccupied. • Remedial workers, trespassers, and utility workers may be exposed to contaminated soil vapor within open excavations. • Future onsite exposure will be reduced or eliminated by addressing soil vapor contamination in the RAWP and through passive and mechanical means proposed as part of the building design.

Pursuant to the NYSDEC's request to complete a limited offsite investigation for the purposes of performing a qualitative offsite exposure assessment, Roux associates installed one groundwater monitoring well on the adjacent downgradient property and two temporary soil vapor points downgradient of the Site in the sidewalk along Maple Avenue. Laboratory analytical results for the groundwater sample were non-detect for all compounds analyzed for; and, the soil vapor samples were non-detect for the seven compounds for which NYSDOH has established guidance values. At NYSDEC and NYSDOH request, Roux Associates attempted to install sub-slab soil vapor points at the adjoining property to the east, an active car dealership and service center; however, access was denied by the property owner. Since additional offsite sampling was not able to be performed to confirm that there is no offsite transport, there is the potential for contamination to be migrating offsite and if so, it could possibly affect off-site receptors. The potential for offsite migration of contamination is expected to be mitigated by addressing nearby, upgradient soil and groundwater impacts as proposed in the RAWP.

7.0 FINDINGS AND CONCLUSIONS

The data collected during the RI and described in this report confirm and delineate AOCs for soil, and groundwater at the Site. The following section summarizes the findings for each of the AOCs for each matrix.

7.1 Findings

Groundwater

Thirteen VOCs, including petroleum related hydrocarbons and CVOCs were detected at concentrations above the AWQSGVs at 12 onsite monitoring wells. Exceedances occurred at Parcels A, C, D, F, G, J and I. Ten of the 13 VOCs were also detected in one or more offsite upgradient monitoring wells. The three remaining VOCs (cis-1,2-dichloroethene, trans-1,2-dichloroethene, and vinyl chloride) are decay products of PCE which was also detected in offsite upgradient monitoring wells.

Naphthalene was detected at three locations (RW-1, RW-3, and MW-3 [Parcels A and D]) and pentachlorophenol at one location (RW-12 [Parcel H]) above the AWQSGVs.

Iron, manganese, antimony, and sodium were detected in several monitoring wells at concentrations above the AWQSGVs. These metals are naturally-occurring in shallow groundwater and are not believed to be associated with an onsite source of contamination as such they are not discussed further.

Soil

For the purposes of determining if the Protection of Groundwater Standards are an appropriate Standard for soil, exceedances of the AWQSGVs were compared to exceedances of the Protection of Groundwater Standards on a parcel by parcel basis. Seven compounds (six VOCs [benzene, ethylbenzene, toluene, xylenes, PCE and cis-1,2-DCE] and one SVOC [naphthalene]) were detected in both soil and groundwater samples at concentrations above the Protection of Groundwater Standards and the AWQSGVs respectively. These compounds were detected at nine locations (RB-1, RB-2, RB-7, RB-10, RB-11, RB-47, RB-48, RW-1, and RW-4) at four Parcels (A, B, C, and D). However, onsite migration of VOCs from an offsite upgradient source (discussed below) is contributing to the results at Parcel A. Further, the soil samples

collected from within Parcel A were all collected within the smear-zone. Two of the six compounds were detected in boring B-7 located in Parcel B; however, the six compounds were all below the AWQSGVs (five of the six were undetected) in the groundwater sample collected from Parcel B (RW-2). As such, the Protection of Groundwater Standards are only appropriate when discussing Parcels C and D.

Acetone, a common laboratory artifact, was detected at multiple locations at concentrations below the Restricted Residential and Commercial Use Standards. Acetone was detected at concentrations above the Protection of Groundwater Standards at multiple locations; however, was not detected in groundwater samples at concentrations above its AWQSGV; as such, it is not considered a constituent of concern and is not discussed further.

In accordance with the RIWP, soil vapor sampling was not completed during the RI. The redevelopment plans include demolition of the existing buildings and excavating most of the Site which in many areas may extend to, and sometimes into the water table. For this reason, redevelopment plans include a pressurized slab (i.e., water proof) to be used under future Site structures anticipated to be installed at or in the water table which will provide waterproofing and mitigate any potential vapor intrusion issues. In addition, the redevelopment plans include parking or unoccupied space beneath the majority of the development.

The findings of the RI for each AOC (i.e., Parcel) is as follows:

Parcel A

Soil

Seven soil borings were installed at Parcel A (RB-1 through RB-6, and RW-1). No parameters were detected above either the Restricted Residential or Commercial Use SCOs within Parcel A.

Groundwater

Two groundwater samples collected from Parcel A (RW-1 and SB-4/MW-3) had exceedances of benzene, ethylbenzene, isopropylbenzene, m&p xylenes, o-xylenes, toluene, total xylenes and naphthalene. However, offsite upgradient monitoring wells adjacent to Parcel A (RW-21, RW-22 and RW-23) also had exceedances of the same compounds (with the exception of naphthalene as the offsite wells were not analyzed for SVOCs). An automotive service station with a documented

history of releases is located upgradient of Parcel A and is a likely source of the groundwater impacts observed in Parcel A.

Parcel B

Soil

Three soil borings were installed at Parcel B (RB-7, RB-8, and RW-2). No parameters were detected at concentrations above either the Restricted Residential or Commercial Use SCOs within Parcel B.

Groundwater

The AWQSGVs were not exceeded in the groundwater sample collected from Parcel B (RW-2).

Parcel C

Soil

Two soil borings were installed at Parcel C (RB-9 and RW-4). Ethylbenzene was detected above the Protection of Groundwater Standards in sample RW-4/1-3. A deeper sample collected from boring RW-4 (RW-4/7-9) was non-detect for ethylbenzene thereby establishing vertical delineation. No parameters analyzed were detected at concentrations above either the Restricted Residential or Commercial Use SCOs within Parcel C.

Groundwater

Benzene, ethylbenzene, isopropylbenzene, m&p xylenes, o-xylenes, total xylenes and naphthalene were each detected at concentrations above the AWQSVs. Note, only ethylbenzene was detected in soil samples collected from Parcel C at a concentration above the Protection of Groundwater Standards suggesting that a source area located within Parcel C is unlikely.

Parcel D

Soil

Six borings were installed at Parcel D (RB-10, RB-11, RB-46, RB-47, RB-48, and RW-3).

The Protection of Groundwater Standards were exceeded in the following samples:

- RB-10/1-3 Benzene, ethylbenzene and total xylenes
- RB-11/2-4 Naphthalene

- RB-11/2-4 and 5-7 Benzene, ethylbenzene, toluene and total xylenes
- RB-47/4-6 Benzene, ethylbenzene, toluene and total xylenes
- RB-48/4-6 Ethylbenzene, toluene and total xylenes
- RB-48/6-8 Cis-1,2-DCE, ethylbenzene, PCE, and total xylenes

With the exception of RB-10/1-3, each of the samples noted above was collected at or below the water table; therefore, there is the potential that impacted groundwater may have biased the sample. Further, with the exception of RB-48, at each of the locations listed above a deeper sample was collected and analyzed; the Protection of Groundwater Standards were not exceeded in any of the deeper samples thereby establishing vertical delineation.

Ethylbenzene and total xylenes were both detected at concentrations above the Restricted Residential Use SCOs (below the Restricted Commercial Use Standards) in two samples at two locations (RB-11/2-4 and RB-48/4-6). Both samples were either collected at the water table (RB-11/2-4) or below the water table (RB-48/4-6); therefore, impacted groundwater may have biased the sample. A deeper sample collected RB-11 (15-16 ft bls) did not exceed the Restricted Residential Use SCOs for any parameter analyzed thereby indicating that the impacts are limited to the shallow soils. CVOCs were identified in soil samples collected from Parcel D; however, at concentrations below Standards.

Groundwater

Benzene, cis-1,2-DCE, ethylbenzene, isopropylbenzene, m&p xylenes, o-xylenes, PCE, toluene, vinyl chloride, total xylenes, and naphthalene were each detected at concentrations above the AWQSGVs. Available documentation indicates Parcel D was formerly utilized as a drycleaner. As such, the soil and groundwater data suggest a limited CVOC source area is present on Parcel D.

Parcel F

Soil

Six borings were installed at Parcel F (RB-12, RB-13, RB-14, RW-5, RW-6, and RW-7). No VOCs were detected above either the Restricted Residential or Commercial Use SCOs. Only

one sample (RB-14/11-12) exceeded the Restricted Residential Use SCOs for various SVOCs. Of those, only Benzo[a]pyrene was detected at a concentration above the Restricted Commercial Use Standards. These SVOCs were limited to PAHs typically associated with historic fill and are not indicative of a petroleum release.

Groundwater

Only one of the four groundwater samples (MW-5D) collected from Parcel F had exceedances of benzene, cis-1,2-DCE, MTBE, PCE, TCE, and vinyl chloride. MW-5D is located adjacent to the Parcels western border and is screened below the water table. As such, the impacts observed in MW-5D are likely from an upgradient source.

Parcel G

Soil

Fifteen soil borings were installed at Parcel G (RB-15 through RB-25 and RW-8 through RW-11). No VOCs were detected in soil above either the Restricted Residential or Commercial Use SCOs. Several SVOCs (limited to PAHs which are not indicative of a petroleum release) were detected in three samples (RB-19/5-7, RB-22/4-6, and RW-8/5-7) and metals in three samples (RW-10/6-8 [lead], RW-11/4-6 [lead], RB-22/4-6 [mercury]) at concentrations above the Restricted Residential Use SCOs. Additionally, the Restricted Commercial Use Standards were exceeded in two samples (RB-19/5-7 and RB-22/4-6) for various non-petroleum related SVOCs (i.e., PAHs) and two samples for metals (RW-10/6-8 [lead] and RB-22/4-6 [mercury]). The PAHs exceedances were detected in borings proximate to former waste oil UST excavations; however, no SVOC petroleum indicators were detected above the Restricted Residential Use Standards. Further, when the USTs were removed, 210 tons of impacted soils were also removed and endpoint samples were below CP-51 guidance. As such, The PAH and metals exceedances are suggestive of historic fill and are not indicative of a petroleum release.

The samples collected from DW-1 and CB2 were non-detect for VOCs and pesticides. Multiple SVOCs, limited to PAHs, were detected at concentrations above both the Restricted Residential and commercial Use Standards. Benzo[a]pyrene was the only compound detected (in both samples) at a concentration above its Restricted Commercial Use Standard. Lead was the only metal detected at a concentration above its Restricted Residential Use Standard in sample

DW-1/4-6. No metals were detected above the Restricted Residential or Commercial Use Standards in sample CB2. PCBs were not detected above the Restricted Residential or Commercial Use Standards in either sample. These results are typical of drainage structures and are not a concern.

Groundwater

Benzene, cis-1,2-DCE, ethylbenzene, isopropylbenzene, MTBE, PCE, TCE and vinyl chloride were detected in Parcel G at concentrations above the AWQSGVs. Since no VOCs in soil samples were detected at Parcel G at significant concentrations (i.e., Protection of Groundwater Standards) the impacts observed in the groundwater at Parcel G are likely from an upgradient source.

Parcel H

Soil

Thirteen soil borings were installed at Parcel H (RB-26 through RB-35 and RW-12, RW-13, and RW-14). No VOCs were detected in soil at concentrations above either the Restricted Residential or Commercial Use SCOs. SVOCs (limited to PAHs) were detected at three locations (RB-28/5-7 and 7-8, RB-30/5-7, RB-34/4-6) and metals at three locations (RB-26/5-7 [barium], RB-28/5-7, [arsenic] and RB-33/4-6 [mercury]) above the Restricted Residential Use SCOs. The Restricted Commercial Use Standards were exceeded at two locations (RB-28/5-7 and 7-8, RW-12/5-7, and 7-8) for various SVOCs and two locations for metals (RB-26/5-7 [barium] and RB-28/5-7 [arsenic]). These exceedances are suggestive of historic fill and are not indicative of a petroleum release.

Groundwater

Only pentachlorophenol and dieldrin were detected at concentrations of above the AWQSGVs at Parcel H. Pentachlorophenol was not detected in any sample (soil and groundwater) anywhere else on the Site. Dieldrin was not detected in any other groundwater samples and was only detected in one soil boring (RB-28/5-7) at a concentration below the Protection of Groundwater Standards. As such, neither compound is a constituent of concern.

Parcel I

Soil

Four borings were installed at Parcel I (RB-36, RB-37, RB-38 and RW-15). None of the parameters analyzed were detected at concentrations above either the Restricted Residential or Commercial Use Standards.

Groundwater

Cis-1,2-DCE was detected in Parcel I at a concentration above the AWQSGVs. Since no VOCs in soil samples were detected at Parcel I at significant concentrations (i.e., Protection of Groundwater Standards) the impacts observed in the groundwater at Parcel I are likely from an upgradient source.

Parcel J

Soil

Eight soil borings were installed at Parcel J (RB-39 through RB-42, RB-49, RB-50, RW-16 and RW-17). None of the parameters analyzed were detected at concentrations above either the Restricted Residential or Commercial Use SCOs.

Groundwater

Benzene, cis-1,2-dichloroethene, m&p xylenes, Toluene, TCE, PCE, trans-1,2-dichloroethene, total xylenes and vinyl chloride were detected at concentrations above the AWQSGVs at Parcel J. Neither petroleum related VOCs nor CVOCs were detected in soil samples above the Protection of Groundwater Standards at Parcel J. Further the groundwater profile boring RB-50 exhibits an increasing of CVOC concentrations with depth. There is a documented use of PCE at the Parcel and the area in which RW-17 is located was previously remediated for PCE. As such it appears that a limited source area remains likely the saturated soils within Parcel J.

Parcel K

Soil

Six soil borings were installed at Parcel K (RB-43 through RB-45and RW-18 through RW-20). None of the parameters analyzed were detected at concentrations above ether the Restricted Residential or Commercial Use SCOs.

Groundwater

None of the parameters analyzed were detected at concentrations above the AQSGVs.

Offsite Investigation

Laboratory analytical results of samples collected during the LOIWP indicate that offsite exposure to Site contaminants is likely not a concern; however, since additional offsite sampling was not able to be performed to confirm this there is the potential for contamination to be migrating offsite and if so, it could possibly affect off-site receptors. The potential for offsite migration of contamination is expected to be mitigated by addressing nearby, upgradient soil and groundwater impacts as proposed in the RAWP.

7.2 Conclusions

In summary, the data generated during the RI suggest the following:

- Depth to groundwater ranged from approximately 3 ft bls to approximately 11 feet ft bls.
- Groundwater was calculated to flow to the northeast across the Site.
- Groundwater impacted with both petroleum related hydrocarbons and CVOCs is migrating onsite from an upgradient source.
- Soils within Parcel D are impacted with petroleum related hydrocarbons above the Restricted Residential Use Standards. CVOCs detected in groundwater may be from an upgradient source or may indicate that CVOC impacted residual soils are present on Parcel D.
- Parcels F, G, and H are impacted with historic fill.
- No parameters were detected above the Restricted Residential Use SCOs at Parcel J; however, CVOC impacted groundwater suggests a limited CVOC source area is present at Parcel J.

Remedial action to address the impacted areas beneath Parcel D and J is recommended. However, since this is a Track 4 cleanup, impacts on all other parcels will be addressed through the use of engineering controls. An evaluation of potential remedial alternatives and the recommended course of action will be presented in an Alternative Analysis Report/Remedial Action Work Plan.

* Laboratory will report to their minimum possible standards for each method (QAPP Table 2)

bbls - below land surface

TCL + 30/TAL - includes TCL VOCs + 10 TICs, TCL BNA (SVOCs) + 20 TICs + TAL Metals

TCL - USEPA Contract Laboratory Program Target Compound List

TAL - USEPA Contract Laboratory Program Target Analyze List

VOCs - Volatile Organic Compounds

SVOCs - Semivolatile Organic Compounds

PCBs - Polychlorinated Biphenyls

TICs - Tentatively Identified Compounds

NA - not analyzed

QA/QC samples were collected as described in the QAPP (RIWP - Appendix B)

QAPP - Quality Assurance Project Plan

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

D - a secondary analysis after dilution due to exceedance
of the calibration range in the original sample.

DUP - Duplicate sample

µg/kg - Micrograms per kilogram

ft bls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standard

Boxed data indicates that parameter was detected above the NYSDEC Part 375 Commercial Standards

V - Value altered or qualifier added during data validation

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

D - a secondary analysis after dilution due to exceedance
of the calibration range in the original sample.

DUP - Duplicate sample

µg/kg - Micrograms per kilogram

ft bbls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standard

Boxed data indicates that parameter was detected above the NYSDEC Part 375 Commercial Standards

V - Value altered or qualifier added during data validation

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

D - a secondary analysis after dilution due to exceedance
of the calibration range in the original sample.

DUP - Duplicate sample

µg/kg - Micrograms per kilogram

ft bbls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standard

Boxed data indicates that parameter was detected above the NYSDEC Part 375 Commercial Standards

V - Value altered or qualifier added during data validation

Pyrene	1000000	100000	500000		120 U	110 U	120 U	110 U	110 U

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

D - a secondary analysis after dilution due to exceedance

of the calibration range in the original sample.

DUP - Duplicate sample

µg/kg - Micrograms per kilogram

ft bls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

Boxed data indicates that parameter was detected above the NYSDEC Part 375 Commercial Standards

V - Value altered or qualifier added during data validation

UJ - Analyte was not detected. The associated reported quantitation limit is an estimate

R - Sample results rejected by validator

Pyrene	1000000	100000	500000		1700 D	59 J	170	1000 D	3000

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

D - a secondary analysis after dilution due to exceedance

of the calibration range in the original sample.

DUP - Duplicate sample

µg/kg - Micrograms per kilogram

ft bls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

Boxed data indicates that parameter was detected above the NYSDEC Part 375 Commercial Standards

V - Value altered or qualifier added during data validation

UJ - Analyte was not detected. The associated reported quantitation limit is an estimate

R - Sample results rejected by validator

J - Estimated value

U - Indicates that the compound was analyzed for but not detected

D - a secondary analysis after dilution due to exceedance

of the calibration range in the original sample.

DUP - Duplicate sample

µg/kg - Micrograms per kilogram

ft bls - Feet below land surface

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Standards available

Bold data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

Boxed data indicates that parameter was detected above the NYSDEC Part 375 Commercial Standards

V - Value altered or qualifier added during data validation

UJ - Analyte was not detected. The associated reported quantitation limit is an estimate

R - Sample results rejected by validator

NYSDEC - New York State Department of Environmental Conservation

AWQSGVs - Ambient Water-Quality Standards and Guidance Values

µg/L - Micrograms per liter

J - Estimated Value

U - Compound was analyzed for but not detected

D - Secondary analysis after dilution due to exceedance

DUP - Duplicate

-- No NYSDEC AWQSGV available

Bold data indicates that parameter was detected above the NYSDEC AWQSGVs

V - Value altered or qualifier added during data validation

R - Sample results rejected by validator

UJ - Analyte was not detected. The associated reported quantitation limit is an estimate

NJ - Detection is tentative in identification and estimated in value

NYSDEC - New York State Department of Environmental Conservation

AWQSGVs - Ambient Water-Quality Standards and Guidance Values

µg/L - Micrograms per liter

J - Estimated Value

U - Compound was analyzed for but not detected

D - Secondary analysis after dilution due to exceedance

DUP - Duplicate

-- No NYSDEC AWQSGV available

Bold data indicates that parameter was detected above the NYSDEC AWQSGVs

V - Value altered or qualifier added during data validation

R - Sample results rejected by validator

UJ - Analyte was not detected. The associated reported quantitation limit is an estimate

NJ - Detection is tentative in identification and estimated in value

NYSDEC - New York State Department of Environmental Conservation

AWQSGVs - Ambient Water-Quality Standards and Guidance Values

µg/L - Micrograms per liter

J - Estimated Value

U - Compound was analyzed for but not detected

D - Secondary analysis after dilution due to exceedance

DUP - Duplicate

-- No NYSDEC AWQSGV available

Bold data indicates that parameter was detected above the NYSDEC AWQSGVs

V - Value altered or qualifier added during data validation

R - Sample results rejected by validator

UJ - Analyte was not detected. The associated reported quantitation limit is an estimate

NJ - Detection is tentative in identification and estimated in value

J - Estimated value

E - Indicates value exceeded calibration range

U - Indicates that the compound was analyzed for but not detected

 $\mu\text{g}/\text{m}^3$ - Micrograms per cubic meter

Bold data indicates that parameter was detected

Shaded data indicates that parameter was detected above levels to be monitored in accordance

with the Final NYSDOH CEH BEEI Soil Vapor Intrusion Guidance of October 2006

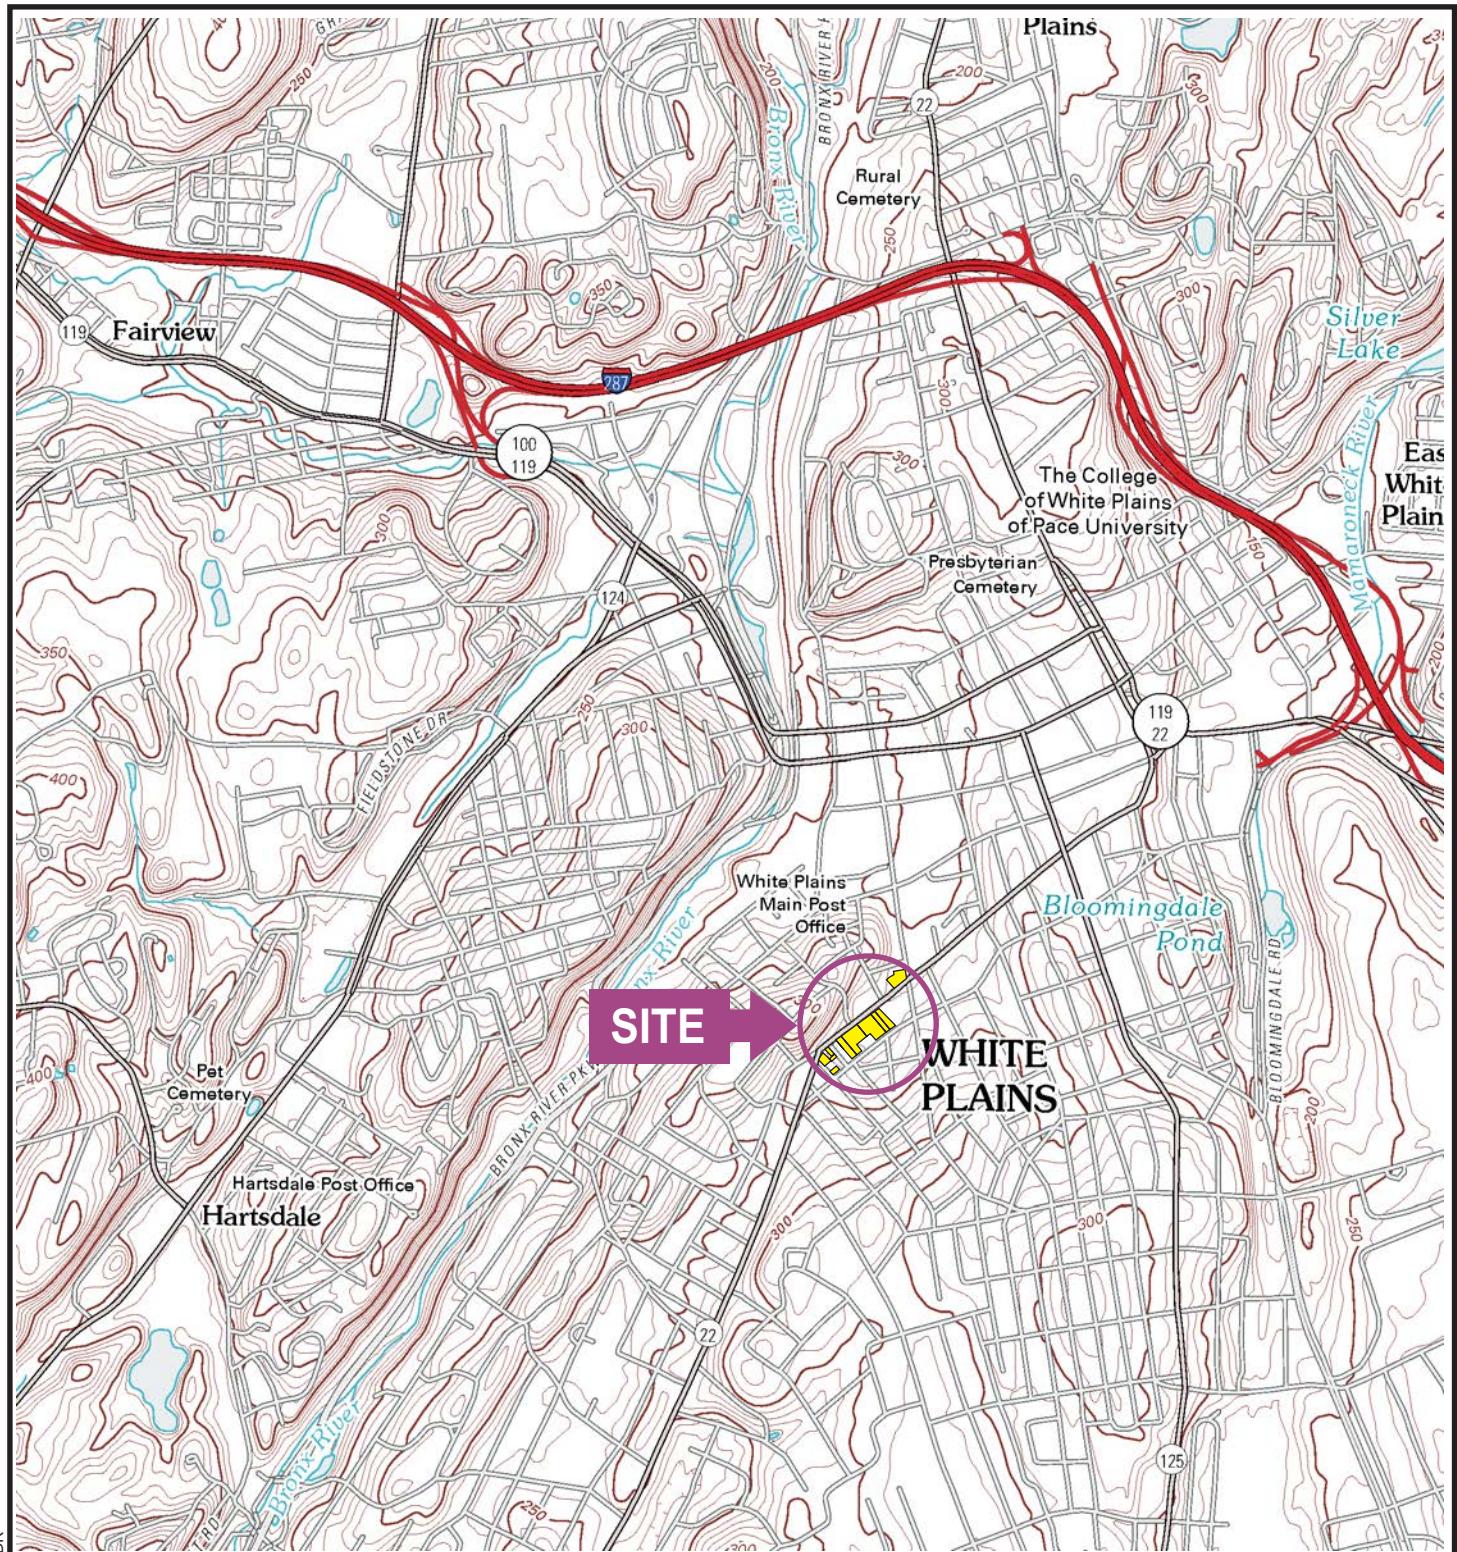

Boxed data indicates that parameter was detected above levels to be mitigated in accordance

with the Final NYSDOH CEH BEEI Soil Vapor Intrusion Guidance of October 2006

 SOIL BORING, INSTALLED BY ROUX ASSOCIATES
 GROUNDWATER PROFILE BORING, INSTALLED BY ROUX
 SOIL/GROUNDWATER PROFILE BORING, INSTALLED BY ROUX
 EXISTING SOIL BORING COMPLETED AS TEMPORARY WELL, INSTALLED BY OTHERS
 EXISTING BORING COMPLETED AS MONITORING WELL, INSTALLED BY OTHERS
 EXISTING SOIL BORING
 TEMPORARY SOIL VAPOR SAMPLING POINT
 MANHOLE
 CATCH BASIN A—A' LINE OF GEOLOGIC CROSS SECTION
 BELL TELE. MANHOLE
 DRAIN
 DRAIN  TREE PIT (TYP. 5' x 5' & 2" dia. TREES)
 ELECTRIC MANHOLE ALONG THE NEW YORK POST RD.
 UTILITY POLE D.C. DROP CURB
 SEWER MANHOLE O.H.W. OVER HEAD WIRES

A—A' LINE OF GEOLOGIC CROSS SECTION

A horizontal scale bar with markings at 60' and 0. The bar consists of a black segment followed by a white segment with diagonal hatching.

NOTES

1. ELEVATIONS SHOWN HEREON REFER TO THE CITY OF WHITE PLAINS DATUM.
 2. ELEVATIONS AT AREAS OUTSIDE SHOWN EXCAVATIONS ARE NOT EXPECTED TO CHANGE

Remedial Investigation Report
Post Road Corridor – White Plains, New York

APPENDIX B

Groundwater Sampling Logs

Well Sampling Data Log

Client: Grid Properties **Project Number:** 2195.00

Site Location: 95 West Post Road, White Plains, NY

Well No: MW-1 Weather: 50's, mostly sunny

Date: 4/22/2016 Purge Water Disposal: 55-gallon drum for transport

Sampled By: CS Well Diameter / Type: 2" PVC

Depth to Product (ft): N/A Water Column (ft): 7.52

Depth to Water(ft): 4.78 **Volume of Water in Well (gal)** <5 gal

Depth to Bottom (ft): 12.30

Well Diameter:	1 in	2 in	4 in	6 in	8 in
Gallons per Foot:	0.041	0.163	0.653	1.469	2.611

Start Purging: 7:25 Purge Rate: ~200 ml/min

End Purging: 7:50 Volume of Water Removed (gal): _____ ~1 gal

Method of Purge: Peristaltic Pump **Method of Sampling:** Low-Flow

Physical Appearance/Comments: Mostly clear, some sediment, no apparent odor

Samples Collected: TCL VOCs (8260), TCL SVOCs (8270), TCL Pesticides, TCL PCBs, TAL Metals
(analyses / no. bottles)

Sample Time: #####

Re: Data Usability Summary Report for Post Rd Corridor, White Plains, NY
Alpha Analytical Lab Numbers L1518340 and L1519659

Dear Mr. Maxwell:

Data review was performed for the data packages generated by Alpha Analytical (Lab Numbers L1518340 and L1519659). Analytical data for two (2) soil vapor samples, one (1) groundwater sample, one (1) field blank, and one (1) trip blank collected by Roux Associates on 8/5/2015 and 8/14/2015 are discussed in this DUSR. USEPA method 8260C was used for the analysis of the water samples, and USEPA method TO-15 was used for the analysis of the soil vapor samples. The data validation was performed in accordance with the guidelines presented in the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008*, and in consideration of the specific requirements of USEPA method TO-15.

The data packages provided by the labs contained full deliverables for validation. This DUSR is generated from review of the summary form information, with review of raw data for samples, and limited review of associated raw data for QC samples.

The data review included the following items:

- Data deliverable completeness,
- Laboratory case narratives,
- Chain of custody documentation,
- Holding times,
- Blank results,
- Surrogate recoveries,

- Internal standard results,
- Laboratory control/laboratory control duplicate samples/(LCS/LCSD),
- Matrix spike/matrix spike duplicate samples (MS/MSD),
- Instrument tunes,
- Initial calibration, initial calibration verification, and continuing calibration results,
- Method compliance, and
- Sample result verification.

No data qualifiers are applied to this data set based on the data validation. Copies of the validated sample results are presented in **Appendix A**. Copies of the chain-of-custodices and lab case narratives are presented in **Appendix B**.

Data Deliverable Completeness

Full deliverable data packages (i.e., NYSDEC Category B or equivalent) were provided by the laboratory, which included reporting forms and raw data necessary to validate the reported analytical results.

Sample Receipt/Holding Times

All samples were received by the laboratory intact and under proper COCs. All samples were analyzed within the required holding times.

VOC Analyses for Soil Vapor Samples by USEPA Method TO-15

Alpha Analytical Lab Number L1518340:

No analytical or quality control issues affecting the usability of the data were noted.

VOC Analyses for Water Samples by USEPA Method 8260C

Alpha Analytical Lab Number L1519659:

No analytical or quality control issues affecting the usability of the data were noted.

Summary

Sample analyses were found generally compliant with the method requirements. No analytical or quality control issues that affect the data quality were noted. Method blank results, internal standard recoveries, LCS/LCSD and MS/MSD results were within the laboratory control limits; results of instrument tunes, initial calibration, initial calibration

Mr. Richard Maxwell

September 11, 2015

Page 3

verification, and continuing calibration were in compliance with the method requirements. All sample data are usable as reported.

Please do not hesitate to contact me if you have any comments or questions regarding this report.

Sincerely

ROUX ASSOCIATES, INC.

Enclosure: Definitions of Validation Data Qualifiers

Definitions of Validation Data Qualifiers

Qualifier	Definition
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is an estimate and may be inaccurate or imprecise.
R	The sample results are rejected and unusable. The analyte may or may not be present.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on August 4, 2015. The canister certification results are provided as an addendum.

Samples L1518340-01 and -02: The samples have elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the samples.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Re: Data Usability Summary Report for Post Rd Corridor, White Plains, NY
Alpha Analytical SDG Numbers L1407298, L1407549, L1407555, L1407631,
L1407819, L1408044, L1408252, L1408416, and L1410637

Dear Mr. Maxwell:

Data review was performed for the data packages generated by Alpha Analytical. Analytical data for ninety-three (93) soil samples, twenty-three (23) groundwater samples, seven (7) soil waste characterization samples, five (5) soil and two (2) groundwater duplicate samples, fourteen (14) field blanks, and twenty-two (22) trip blanks collected by Roux Associates from 4/7/2014 to 5/16/2014 are discussed in this DUSR. USEPA SW846 methods were used for the sample analyses. The data validation was performed in accordance with the guidelines presented in the following USEPA documents:

- USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, OSWER 9240.1-48, USEPA-540-R-08-01, June 2008.
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, OSWER 9240.1-51, USEPA-540-R-10-011, January 2010.

The data packages provided by the labs contained full deliverables for validation. This DUSR is generated from review of the summary form information, with review of raw data for samples, and limited review of associated raw data for QC samples.

The data review included the following items:

- Data deliverable completeness,
- Laboratory case narratives,
- Chain of custody documentation,
- Holding times,
- Blank results,
- Surrogate recoveries,
- Internal standard results,
- Laboratory control samples (LCS),
- Matrix spike/matrix spike duplicate samples (MS/MSD),
- Laboratory duplicate samples,
- Field duplicate samples,
- ICP serial dilutions,
- Instrument tunes,
- Initial calibration, initial calibration verification, and continuing calibration results,
- Method compliance, and
- Sample result verification.

Qualifiers applied to the data during the data validation process include “UJ” (estimated quantitation limit), “J” (estimated value), and “R” (results are rejected). Copies of the validated results (result tables annotated to reflect the data qualifiers recommended based on the data validation) and documentation supporting the qualification of the data are presented in **Appendix A**. Copies of the chain-of-custodices and lab case narratives are presented in **Appendix B**. Only problems potentially affecting data usability are discussed in this report.

Data Deliverable Completeness

Full deliverable data packages (i.e., NYSDEC Category B or equivalent) were provided by the laboratory, which included reporting forms and raw data necessary to validate the reported analytical results.

Sample Receipt/Holding times

All samples were received by the laboratory intact, properly preserved, and under proper COCs. All samples were analyzed within the required holding times.

VOC Analyses by USEPA Method 8260C

Alpha Analytical SDG Number L1407298:

Toluene, bromomethane, and 2-butanone were detected in method blank WG681906-3 above the method detection limits (MDLs) but below the reporting limits (RLs) at 0.47 ug/kg, 0.34 ug/kg, and 0.70 ug/kg, respectively. Results of toluene and bromomethane above the MDLs but below the RLs, as well as results of 2-butanone below 2x of the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits.

Compound 2-butanone was detected in method blank WG682050-9 above the MDL but below the RL at 3.9 ug/kg. Result of 2-butanone above the MDL but below the RL in associated sample RB-9/20-21 is edited to non-detect ("U") at the corresponding detection limit.

Alpha Analytical SDG Number L1407549:

Toluene, bromomethane, and acetone were detected in method blank WG682050-6 above the MDLs but below the RLs at 0.27 ug/kg, 0.51 ug/kg, and 3.9 ug/kg, respectively. Results of toluene and bromomethane above the MDLs but below the RLs, as well as results of acetone below 2x of the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits.

Compound 2-butanone was detected in method blank WG682050-9 above the MDL but below the RL at 3.9 ug/kg. Result of 2-butanone in associated sample RW-7/0-10-WC was non-detect, and therefore no qualifier is applied.

Alpha Analytical SDG Number L1407555:

Toluene and 2-butanone were detected in method blank WG682612-3 above the MDLs but below the RLs at 0.24 ug/kg and 4.2 ug/kg, respectively. Results of toluene above the MDLs but below the RLs, as well as results of 2-butanone below 2x of the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits.

Toluene, ethylbenzene, and p/m-xylene were detected in method blank WG682676-3 above the MDLs but below the RLs at 0.72 ug/kg, 0.24 ug/kg, and 0.75 ug/kg,

respectively. Results of these compounds in associated samples were either non-detect or positively detected above the RLs, and therefore no qualifiers are applied.

Alpha Analytical SDG Number L1407631:

Toluene and bromomethane were detected in method blank WG683644-3 above the MDLs but below the RLs at 0.22 ug/kg and 0.35 ug/kg, respectively. Results of toluene above the MDLs but below the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits. Bromomethane was non-detect in all the associated samples, and therefore no qualifiers are applied.

Alpha Analytical SDG Number L1408044:

Toluene was detected in method blank WG684057-3 above the MDL but below the RL at 0.36 ug/kg. Results of toluene above the MDLs but below the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits.

Compound 2-butanone was detected in method blank WG684131-3 above the MDL but below the RL at 2.2 ug/kg. Results of 2-butanone below 2x of the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits.

Alpha Analytical SDG Number L1408252:

Toluene, chloromethane, bromomethane, and acetone were detected in method blank WG685116-3 above the MDLs but below the RLs. Results of toluene, chloromethane, and bromomethane above the MDLs but below the RLs, as well as results of acetone below 2x of the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits.

Bromomethane and acetone were detected in method blank WG685116-8 above the MDLs but below the RLs. Results of bromomethane above the MDLs but below the RLs, as well as results of acetone below 2x of the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits.

Toluene was detected in method blank WG685183-3 above the MDL but below the RL. Results of toluene above the MDLs but below the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits.

Alpha Analytical SDG Number L1408416:

Toluene and 2-butanone were detected in method blank WG685456-3 above the MDLs but below the RLs. Results of toluene above the MDLs but below the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits. Compound 2-butanone was non-detect in all associated samples, and therefore no qualifiers are applied.

Alpha Analytical SDG Numbers L1407819 and L1410637:

No analytical or quality control issues affecting the usability of the data were noted.

SVOC Analyses by USEPA Method 8270D

Alpha Analytical SDG Number L1407555:

Bis(2-ethylhexyl)phthalate was detected in method blank WG682185-1 above the MDL but below the RL at 89 ug/kg. Results of bis(2-ethylhexyl)phthalate below 5x of the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits.

Recoveries of 2,4-dinitrophenol in the MS and MSD (spiked on background sample RW-3/8-9) were 0%. Non-detect result of 2,4-dinitrophenol in the background sample RW-3/8-9 is rejected ("R") and not usable.

Alpha Analytical SDG Number L1407631:

Recoveries of surrogate 2-fluorophenol in samples RB-29/5-7 and RB-28/7-8 were below the lab control limits at 4% and 6%, respectively. The two samples were re-extracted, but the recoveries of surrogate 2-fluorophenol in the re-extracted samples were still below the lab control limits at 3% and 5%, respectively. Non-detect results of acid compounds in the two samples are rejected ("R") and not usable; positive results of acid compounds in these samples are qualified estimated ("J").

Alpha Analytical SDG Number L1408044:

Recoveries of hexachlorocyclopentadiene, 2,4-dinitrophenol, and 4,6-dinitro-o cresol in the MS and MSD (spiked on background sample RB-22/4-6) were 0%. Non-detect results of these compounds in the background sample RB-22/4-6 are rejected ("R") and not usable.

Recoveries of 11 PAHs in the MSD (spiked on background sample RB-22/4-6) exceeded the lab control limits. Positive results of these PAHs in the background sample RB-22/4-6 are qualified estimated ("J").

Alpha Analytical SDG Number L1408252:

Recovery of 2,4-dinitrophenol in the MSD (spiked on background sample RB4/10-12) was 0%. Non-detect result of 2,4-dinitrophenol in the background sample RB4/10-12 is rejected ("R") and not usable.

Alpha Analytical SDG Numbers L1407298, L1407549, L1407819, L1408416, and L1410637:

No analytical or quality control issues affecting the usability of the data were noted.

Gasoline Range Organics and Diesel Range Organics by USEPA Method 8015C(M)

Alpha Analytical SDG Number L1407549:

In the gasoline range organics analysis, recovery of surrogate 1,1,1-trifluorotoluene in sample RW-7/0-10-WC exceeded the lab control limits at 160%. Positive result of gasoline range organics in the sample is qualified estimated ("J").

PCB Analyses by USEPA Method 8082A

Alpha Analytical SDG Numbers L1407298, L1407549, L1407555, L1407631, L1407819, L1408044, L1408252, L1408416, and L1410637:

No analytical or quality control issues affecting the usability of the data were noted.

Pesticides Analyses by USEPA Method 8081B

Alpha Analytical SDG Number L1407631:

In sample RB-28/5-7, relative percent differences (RPDs) between the positively-detected results of heptachlor and dieldrin from the two GC columns exceeded the laboratory control limits of < 25%. Results of heptachlor and dieldrin in the sample are qualified estimated ("J").

Alpha Analytical SDG Number L1410637:

Dieldrin was detected in method blank WG690857-1 at a concentration above the MDL but below the RL. Result of dieldrin in associated sample RW-12 is edited to non-detect ("U") at the corresponding detection limit. No qualifiers are applied to non-detect results of dieldrin in the other associated samples.

Alpha Analytical SDG Numbers L1407298, L1407549, L1407555, L1407819, L1408044, L1408252, and L1408416:

No analytical or quality control issues affecting the usability of the data were noted.

Herbicides Analyses by USEPA Method 8151A

Alpha Analytical SDG Number L1407549:

No analytical or quality control issues affecting the usability of the data were noted.

Metals Analyses by USEPA Methods 6010C/6020A and 7470A/7471B

Alpha Analytical SDG Number L1407298:

Antimony and arsenic were detected in method blank WG681074-1 for soil samples at concentrations above the MDLs but below the RLs. In addition, iron was detected in the method blank at a concentration above the RL. Results of these metals in the associated

samples are either non-detect or at concentrations at least 10 times higher than the concentrations in the method blank, and therefore no qualifiers are applied.

Chromium, copper and sodium were detected in method blank WG681310-1 for water samples at concentrations above the MDLs but below the RLs. Positive results of chromium and copper above the MDLs but below the RLs in the associated sample FB040714 are edited to non-detect ("U") at the corresponding detection limits. No qualifier is applied to sodium result in the sample which was above the RL.

Alpha Analytical SDG Number L1407549:

In TCLP metals analysis, lead was detected in method blank WG682241-1 at a concentration above the MDL but below the RL. Results of lead above the MDLs but below the RLs in the associated samples are edited to non-detect ("U") at the corresponding detection limits; no qualifiers are applied to lead results that were non-detect or above the RLs in the associated samples.

In total metals analysis, recovery of lead in the MS (spiked on background sample RB-13/0-11-WC) exceeded the lab control limits. Positive result of lead in the background sample RB-13/0-11-WC is qualified estimated ("J").

In total metals analysis, RPDs between the results of barium, chromium and lead in the original sample of RB-13/0-11-WC and its lab duplicate sample exceeded the lab control limits of <20%. Results of these elements in sample RB-13/0-11-WC are qualified estimated ("J").

Alpha Analytical SDG Number L1407555:

In total metals analysis for water samples, arsenic and sodium were detected in method blank WG682110-1 at concentrations above the MDLs but below the RLs. Results of arsenic and sodium above the MDLs but below the RLs in the associated samples are edited to non-detect ("U") at the corresponding detection limits; no qualifiers are applied to non-detect results of the two metals in the associated samples.

In total metals analysis for soil samples, copper was detected in method blank WG682658-1 at a concentration above the MDL but below the RL. No qualifiers are applied to results of copper in associated samples because copper was positively detected above the RLs in these samples.

In total metals analysis for soil samples, iron was detected in method blank WG682710-1 at a concentration above the MDL but below the RL. No qualifiers are applied to results of iron in associated samples because iron was positively detected well above the RLs in these samples.

Recoveries of chromium, manganese, potassium, sodium, and zinc in the MS and/or MSD (spiked on background sample RW-3/8-9) were outside the lab control limits. Positive results of these metals in the background sample RW-3/8-9 are qualified estimated ("J").

Alpha Analytical SDG Number L1407631:

In total metals analysis for water samples, antimony, barium, sodium, and zinc were detected in method blank WG682382-1 at concentrations above the MDLs but below the RLs. Results of these metals above the MDLs but below the RLs in the associated samples FB0410/14 and FB0411/14 are edited to non-detect ("U") at the corresponding detection limits; no qualifiers are applied to non-detect results of these metals in the associated samples.

In total metals analysis for soil samples, iron was detected in two method blanks (WG683075-1 and WG683103-1) at concentrations above the MDLs but below the RLs. No qualifiers are applied to results of iron in associated samples because iron was positively detected well above the RLs in these samples.

Recoveries of calcium, copper, lead, and zinc in the MS and/or MSD (spiked on background sample RW-15/1-3) were outside the lab control limits. Positive results of these metals in the background sample RW-15/1-3 are qualified estimated ("J").

RPD between the results of mercury in the original sample of RB-27/5-7 and its lab duplicate sample exceeded the lab control limits of <20%. Results of mercury in sample RB-27/5-7 is qualified estimated ("J").

Alpha Analytical SDG Number L1407819:

In total metals analysis for water samples, antimony, copper, manganese, silver, sodium, and zinc were detected in method blank WG682904-1 at concentrations above the MDLs but below the RLs. Results of these metals above the MDLs but below the RLs in the associated sample FB041414 are edited to non-detect ("U") at the corresponding detection limits; no qualifiers are applied to results of these metals that were non-detect in the associated sample.

RPD between the results of lead in the original sample of RB-37/1-3 and its lab duplicate sample exceeded the lab control limits of <20%. Results of lead in sample RB-37/1-3 is qualified estimated ("J").

Alpha Analytical SDG Number L1408044:

In total metals analysis for water samples, aluminum was detected in method blank WG683901-1 at a concentration above the MDL but below the RL. Result of aluminum above the MDL but below the RL in the associated sample FB041514 is edited to non-

detect ("U") at the corresponding detection limit; no qualifiers are applied to non-detect results of aluminum in the other associated samples.

Alpha Analytical SDG Number L1408252:

In total metals analysis for water samples, aluminum was detected in method blank WG683901-1 at a concentration above the MDL but below the RL. Results of aluminum above the MDLs but below the RLs in the associated samples FB041714 and FB041814 are edited to non-detect ("U") at the corresponding detection limits.

Alpha Analytical SDG Number L1408416:

In total metals analysis for water samples, antimony, arsenic, copper, and zinc were detected in method blank WG685074-1 at concentrations above the MDLs but below the RLs. Results of antimony, arsenic, and copper above the MDLs but below the RLs in the associated sample FB042114 are edited to non-detect ("U") at the corresponding detection limits; no qualifier is applied to zinc result which was above the RL.

In total metals analysis for soil samples, calcium and selenium were detected in method blank WG685452-1 at concentrations above the MDLs but below the RLs. Result of selenium above the MDL but below the RL in associated sample RB-6/9-11 is edited to non-detect ("U") at the corresponding detection limit. No qualifier is applied to calcium result in the sample which was well above the RL.

Recoveries of calcium, copper, and thallium in the MS and MSD (spiked on background sample RB-6/9-11) were outside the lab control limits. Positive results of calcium, copper in the background sample RB-6/9-11 are qualified estimated ("J"); non-detect result of thallium in the sample is qualified with a "UJ", indicating that the detection limit is estimated.

Alpha Analytical SDG Number L1410637:

In total metals analysis for water samples, antimony, chromium, copper, sodium, and zinc were detected in method blank WG690721-1 at concentrations above the MDLs but below the RLs. Results of these metals above the MDLs but below the RLs in the associated samples are edited to non-detect ("U") at the corresponding detection limits. No qualifiers are applied to non-detect results or results above the RLs in the associated samples.

In total metals analysis for water samples, aluminum, chromium, magnesium, manganese, nickel, sodium, and zinc were detected in method blank WG690956-1 at concentrations above the MDLs but below the RLs. Results of these metals above the MDLs but below the RLs in the associated samples are edited to non-detect ("U") at the corresponding detection limits.

Recoveries of cadmium, iron, magnesium, manganese, potassium, and zinc in the MS and/or MSD (spiked on background sample RW-5) were outside the lab control limits. Positive results of these metals in the background sample RW-5 are qualified estimated (“J”).

Total Cyanide by USEPA Methods 9010C/9012B

Alpha Analytical SDG Number L1407549:

No analytical or quality control issues affecting the usability of the data were noted.

Field Duplicate Evaluation:

The data packages include seven blind field duplicate samples. The field duplicate samples, their corresponding parent samples, and associated data packages are listed in the table below. The parent samples and their field duplicates were analyzed for VOCs, SVOCs, and metals; selected parent and duplicate samples were also analyzed for pesticides and PCBs. Results for most of the analytes were either non-detect or detected above the MDLs but below the RLs; an evaluation is not required for these results. RPDs are calculated for analytes detected above the RLs in parent and/or field duplicate samples, and the RPD values are compared with QC limit of 50%. For analytes with RPDs within the 50% QC limit, no qualifiers are applied. For analytes with RPDs exceeding the 50% QC limit, a “J” qualifier (estimated result) is applied to the positively detected results, and a “UJ” qualifier (estimated detection limit) is applied to non-detect results. Results of the parent/duplicate sample comparison and qualifiers applied are summarized in the table below.

Mr. Richard Maxwell

Summary

Sample analyses were found generally compliant with the method requirements. Most of the sample data are usable, with qualification of the sample results/detection limits as quantitatively estimated ("J" or "UJ" qualifier), or with edit of positive results to non-detect ("U") at the corresponding detection limits. However, acid compounds with non-detect results in samples RB-29/5-7 and RB-28/7-8 from SVOC analyses are rejected ("R") and not usable because of the low recoveries (<10%) of surrogate compound 2-fluorophenol. In addition, several SVOC compounds in samples RW-3/8-9, RB-22/4-6, and RB4/10-12 are also rejected ("R") and not usable because of the 0% recoveries of the compounds in the MSs and/or MSDs which used these samples as background samples.

Please do not hesitate to contact me if you have any comments or questions regarding this report.

Sincerely

Enclosure: Definitions of Validation Data Qualifiers

Definitions of Validation Data Qualifiers

Qualifier	Definition
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is an estimate and may be inaccurate or imprecise.
R	The sample results are rejected and unusable. The analyte may or may not be present.

Re: Data Usability Summary Report for Post Rd Corridor, White Plains, NY
Alpha Analytical SDG Numbers L1431207, L1431335, and L1501018

Dear Mr. Maxwell:

Data review was performed for the data packages generated by Alpha Analytical. Analytical data for eight (8) soil samples, nine (9) water samples, one (1) soil and two (2) water field duplicate samples, three (3) field blanks, and three (3) trip blanks collected by Roux Associates from 12/29/2014 to 1/15/2015 are discussed in this DUSR. USEPA Method 8260C was used for the analysis of volatile organic compounds (VOCs) in the samples. The data validation was performed in accordance with the guidelines presented in the following USEPA documents:

- *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, OSWER 9240.1-48, USEPA-540-R-08-01, June 2008.*

The data packages provided by the labs contained full deliverables for validation. This DUSR is generated from review of the summary form information, with review of raw data for samples, and limited review of associated raw data for QC samples.

The data review included the following items:

- Data deliverable completeness,
- Laboratory case narratives,
- Chain of custody documentation,
- Holding times,
- Blank results,

- Surrogate recoveries,
- Internal standard results,
- Laboratory control samples (LCS),
- Matrix spike/matrix spike duplicate samples (MS/MSD),
- Field duplicate samples,
- Instrument tunes,
- Initial calibration, initial calibration verification, and continuing calibration results,
- Method compliance, and
- Sample result verification.

Qualifiers applied to the data during the data validation process include “UJ” (estimated quantitation limit), “J” (estimated value), and “R” (results are rejected). Copies of the validated results (result tables annotated to reflect the data qualifiers recommended based on the data validation) and documentation supporting the qualification of the data are presented in **Appendix A**. Copies of the chain-of-custodices and lab case narratives are presented in **Appendix B**. Only problems potentially affecting data usability are discussed in this report.

Data Deliverable Completeness

Full deliverable data packages (i.e., NYSDEC Category B or equivalent) were provided by the laboratory, which included reporting forms and raw data necessary to validate the reported analytical results.

Sample Receipt/Holding times

All samples were received by the laboratory intact and under proper COCs. All samples were analyzed within the required holding times.

VOC Analyses by USEPA Method 8260C

Alpha Analytical Lab Number L1431207:

Acetone was detected in method blank WG753890-3 above the method detection limit (MDL) but below the reporting limit (RL) at 1.6 ug/kg. Results of acetone detected below 2x of the RLs in associated samples are edited to non-detect (“U”) at the corresponding detection limits. No qualifiers are applied to acetone results that were non-detect or detected above 2x of the RLs in the associated samples.

Recoveries of trichlorofluoromethane, p/m-xylene, cyclohexane, and methylcyclohexane in the MS and/or MSD (spiked on background sample RB-47 (4-6')) were outside the lab control limits. Non-detect result of trichlorofluoromethane in the background sample is qualified with a "UJ", indicating that the detection limit for the compound is estimated. Positive results of p/m-xylene, cyclohexane, and methylcyclohexane in the background sample are qualified estimated ("J"). In addition, recoveries Freon-113 were 0% in both the MS and the MSD. Non-detect result of Freon-113 in the background sample RB-47 (4-6') is rejected ("R") and not usable because of the 0% recoveries in the MS and MSD.

Alpha Analytical Lab Number L1431335:

Acetone was detected in method blank WG753583-3 above the MDL but below the RL at 1.9 ug/kg. Acetone was also detected in FB-123014 associated with this batch above the MDL but below the RL at 1.7 ug/l. Results of acetone detected below 2x of the RLs in associated samples are edited to non-detect ("U") at the corresponding detection limits. No qualifiers are applied to acetone results that were non-detect or detected above 2x of the RLs in the associated samples.

Recoveries of tetrachloroethene and methyl cyclohexane in the MS and/or MSD (spiked on background sample RB-51 10') were outside the lab control limits. Positive results of tetrachloroethene and methyl cyclohexane in the background sample are qualified estimated ("J").

Alpha Analytical Lab Number L1501018:

No analytical or quality control issues affecting the usability of the data were noted.

Field Duplicate Evaluation:

The data packages include three blind field duplicate samples. The field duplicate samples, their corresponding parent samples, and associated data packages are listed in the table below. The parent samples and their field duplicates were analyzed for VOCs. Results for most of the analytes were either non-detect or detected above the MDLs but below the RLs; an evaluation is not required for these results. Relative percent differences (RPDs) are calculated for analytes detected above the RLs in parent and/or field duplicate samples, and the RPD values are compared with QC limit of 50%. For analytes with RPDs within the 50% QC limit, no qualifiers are applied. For analytes with RPDs exceeding the 50% QC limit, a "J" qualifier (estimated result) is applied to the positively detected results, and a "UJ" qualifier (estimated detection limit) is applied to non-detect results. Results of the parent/duplicate sample comparison and qualifiers applied are summarized in the table below.

Mr. Richard Maxwell

February 23, 2015

Page 4

Data Package	Parent Sample	Duplicate Sample	Summary of Qualifiers Applied to Both Parent and Duplicate Samples
Alpha L143207	RB-47/4'-6'	DUP 122914	<ul style="list-style-type: none">“J” or “UJ” qualifiers to 9 VOCs.
Alpha L1431335	RB-51 20'	DUP 123014	<ul style="list-style-type: none">“J” qualifiers to 1 VOC.
Alpha L1408044	RW-23	DP-11515	<ul style="list-style-type: none">No qualifiers to VOCs

Summary

Sample analyses were found generally compliant with the method requirements. Most of the sample data are usable, with qualification of the sample results/detection limits as quantitatively estimated (“J” or “UJ” qualifier), or with edit of positive results to non-detect (“U”) at the corresponding detection limits. However, Non-detect result of Freon-113 in sample RB-47 (4-6') is rejected (“R”) and not usable because of the 0% recoveries in the MS and MSD which used the sample as background sample.

mg/kg - Milligrams per kilogram

NYSDEC - New York State Department of Environmental Conservation

-- No NYSDEC Part 375 Restricted Residential Standards available

ft bls - Feet below land surface

ND - Compound was analyzed for but not detected

Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use Standards

Shaded data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater Standards

Boxed data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential Standards

Table 3. Summary of Metals in Soil, Remedial Investigation Work Plan

* In addition to the sample intervals listed, the 2-foot interval above the water table will be collected only if the water table is observed below the listed intervals. Additionally, should field observations indicate impacted soil at the above listed intervals, soil borings will be advanced until impacts are no longer observed, the next clean interval will be collected for laboratory analysis.

** Laboratory will report to their minimum possible standards for each method (QAPP Table 2)

bls - below land surface

TCL + 30/TAL - includes TCL VOCs + 10 TICs, TCL BNA (SVOCs) + 20 TICs + TAL Metals

TCL - USEPA Contract Laboratory Program Target Compound List

TAL - USEPA Contract Laboratory Program Target Analyze List

VOCs - Volatile Organic Compounds

SVOCs - Semivolatile Organic Compounds

PCBs - Polychlorinated Biphenyls

TICs - Tentatively Identified Compounds

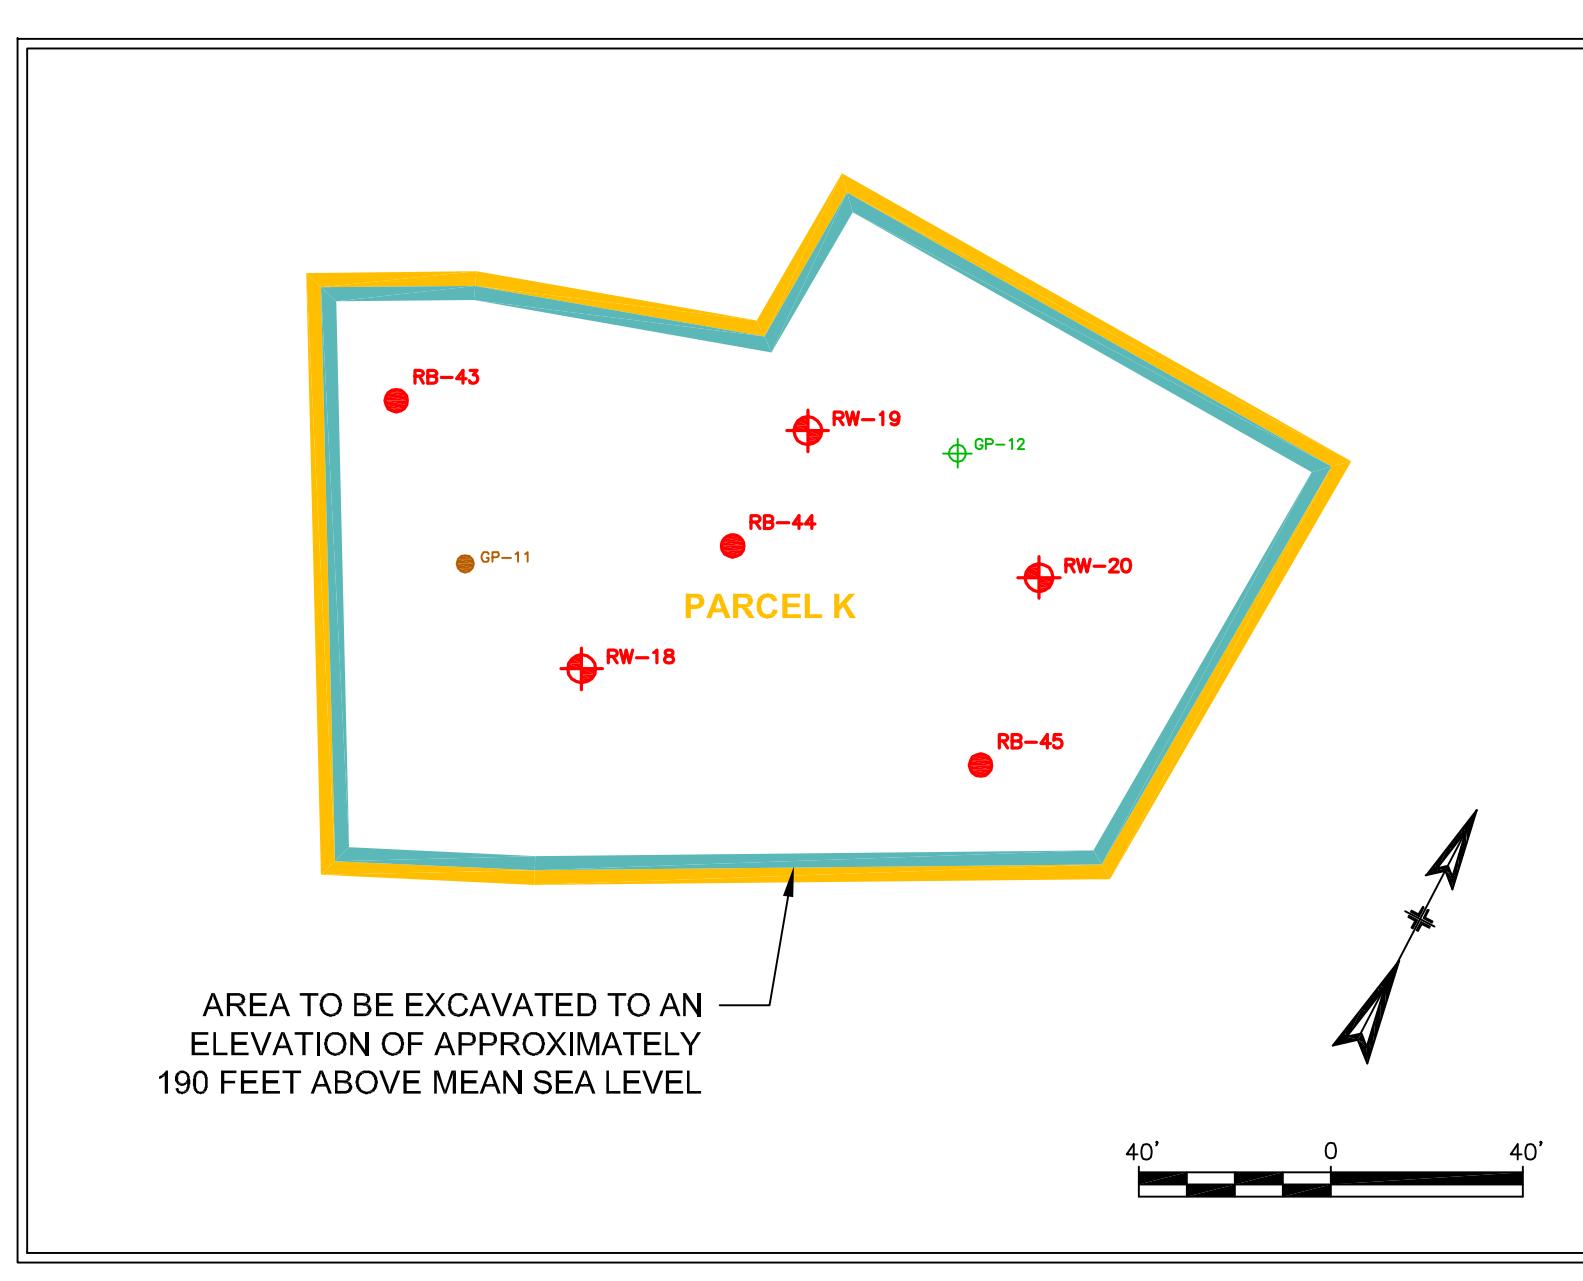

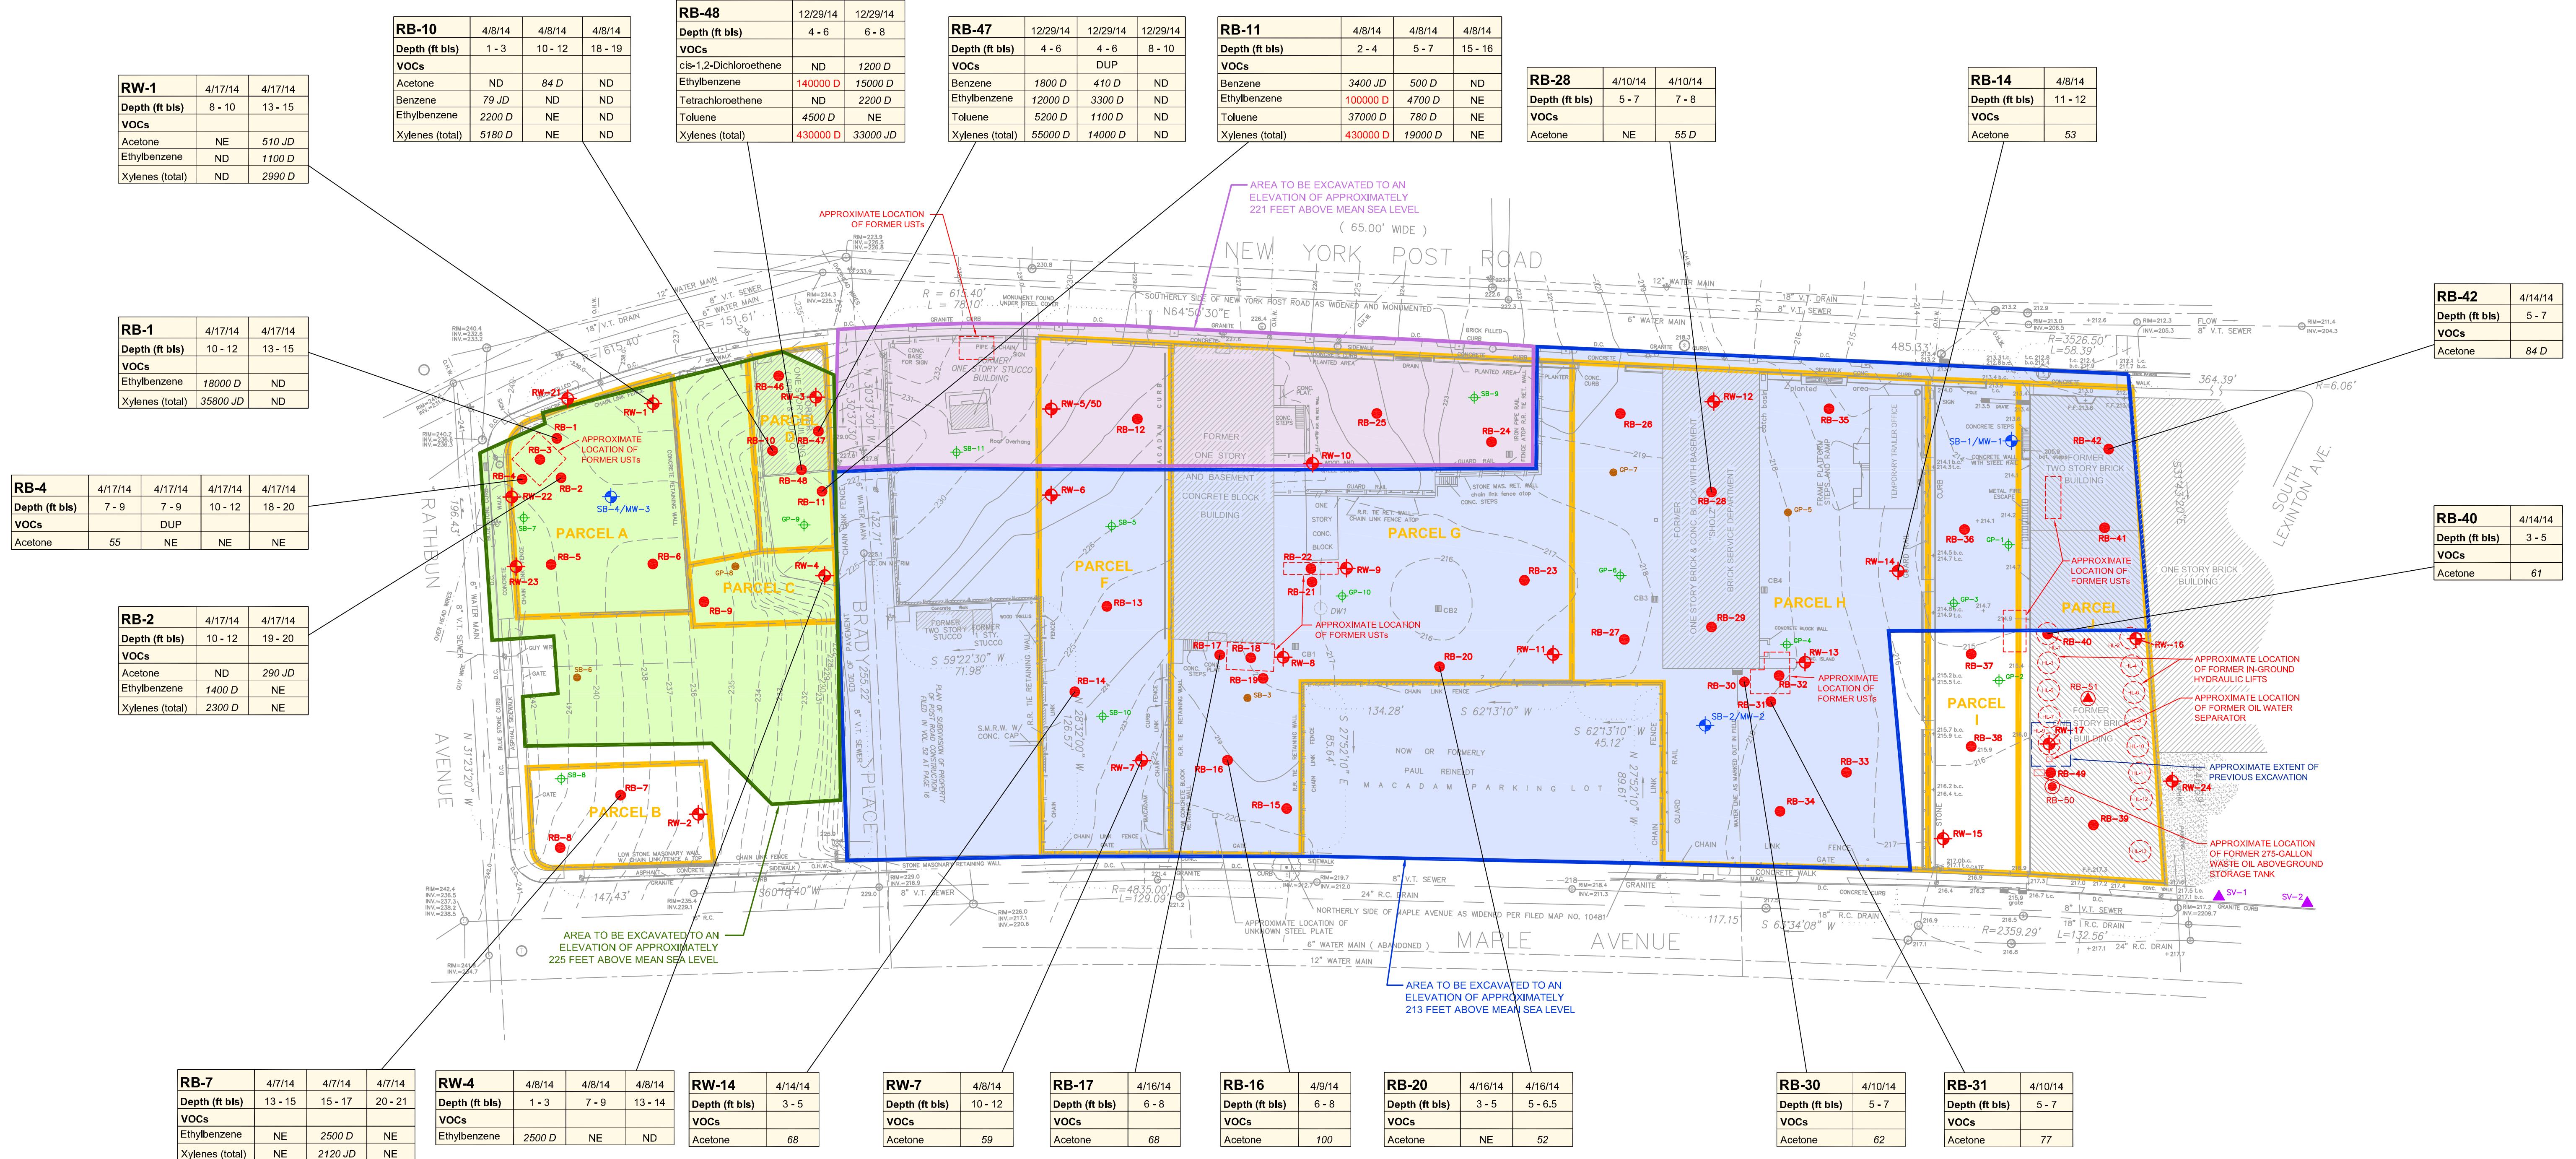

TBD - To Be Determined

QA/QC samples will be collected as described in the QAPP (Appendix B)

Remedial Investigation Report
Post Road Corridor – White Plains, New York

PLATES

1. Exceedances of Volatile Organic Compounds in Soil Samples
2. Exceedances of Semivolatile Organic Compounds in Soil Samples
