PHASE I

ENVIRONMENTAL SITE ASSESSMENT

72 Alexander Street

City of Yonkers
Westchester County, New York

Submitted to:

September 25, 2012

Prepared by:

55 Main Street, 3rd Floor
Yonkers, NY 10710

EXECUTIVE SUMMARY

On behalf of the client, PS&S conducted a Phase I Environmental Site Assessment (Phase I ESA) of 72 Alexander Street located at the intersection of Alexander Street and Ashburton Avenue in the City of Yonkers, Westchester County, New York. The location of the Site is depicted on a United States Geological Survey (USGS) Topographic Map – Yonkers, New York Quadrangle (Figure 1). The Site is approximately 0.4 acres in size and designated on the City of Yonkers Tax Map as Section 2, Block 2608, Lot 25.

The purpose of this ESA was to identify recognized environmental conditions (RECs), as defined by ASTM-1527-05, based on the past and current uses of the Site, and as limited by our scope of work, that could impact the client's future plans relative to site development or potential real estate transaction. The results of the Phase I ESA identified RECs as discussed herein that indicate that environmental contaminants are likely to be present on the Site.

The Phase I ESA Scope of Work included a review of records made available to PS&S by the client; a review of the standard environmental record databases provided by Environmental Data Resources (EDR) of Milford, Connecticut; inquiries to local, county, state and federal agencies; a review of a title abstract report; a site reconnaissance and interviews with site representatives.

PHASE I ESA FINDINGS AND RECOMMENDATIONS

PS&S performed a Phase I ESA in general conformance with the scope and limitations of ASTM E-1527-05 protocols. Exceptions to or deletions from these protocols are described in this Phase I ESA. This assessment revealed six RECs on the property that may be addressed during the recommended Phase II Environmental Site Assessment (Phase II ESA) activities.

Recognized Environmental Conditions and Recommendations

1. The Site historically contained petroleum stored in underground storage tanks (USTs) located in the western portion of the site. Two UST fill ports and a vent pipe were observed. No documentation was obtained as part of the

PS&S Phase I ESA to indicate whether USTs were removed from the Site. Based on the past use of petroleum materials, investigation was recommended to determine the condition of the surrounding soil and groundwater in the area of the suspect USTs. If evidence of impacts to the subsurface environment is identified, then an additional sampling program may be recommended. If during any exploratory investigations suspect USTs are confirmed, then the tanks should be removed in accordance with all applicable regulations.

2. Subsurface testing was also recommended to be performed on the Site in accordance with all applicable regulations to address the following potential soil and groundwater contamination issues:

    a. Interior floor drains in the loading dock area were observed during the site reconnaissance. Evidence of petroleum staining was observed on the floor near the drains and standing liquid within these drains was observed. The outflow destinations of these floor drains were not determined. There is the potential that petroleum may have been released and/or disposed into these drains. Verification of the presence of contaminated materials requires a sampling and analysis program.

    b. Junk truck storage was observed in the southern unpaved driveway during the Site reconnaissance. Evidence of petroleum staining was observed on the ground in the area of truck storage. Determining the extent of the observed petroleum staining requires a sampling and analysis program.

    c. Due to the proximity of documented and suspected contaminated facilities that are located upgradient and cross-gradient of the Site in respect to groundwater flow, the migration of off-site contamination via groundwater beneath the Site is possible. A subsurface investigation at the property boundary was recommended to determine the condition of the underlying soil and to evaluate the potential presence of off-site contamination. These facilities are identified as the

former Patclin Chemical Company located south of the Site and the former Polychrome Manufacturing facility north of the Site.

3. Because the Site building was constructed prior to 1978, it is suspected these buildings may contain lead based paint. A Lead Based Paint (LBP) Survey should be conducted prior to any demolition/construction activity to determine the presence or absence of LBP. This REC was not investigated as part of this ESA.

4. It is likely that asbestos containing building materials (ACBM) are located within the Site building since the structure was constructed prior to 1978. An ACBM Survey should be conducted to determine the presence or absence of ACBM. If it is asbestos-containing (greater than one percent), then abatement (repair, enclosure, encapsulation, or removal and disposal) should be supervised by a licensed asbestos contractor in compliance with state and federal regulations. This REC was not investigated as part of this ESA.

5. Fluorescent light ballasts were observed at the time of the site reconnaissance of the Site. Based upon the fact that the building was constructed prior to 1979, it is likely that some fluorescent light ballasts that are currently in place were manufactured with PCBs. It is recommended that in accordance with New York State Department of Environmental Conservation (NYSDEC) and appropriate state and federal regulations, replacement and proper disposal of these ballasts be conducted in order to minimize potential concert with their contents. This REC was not investigated as part of this ESA.

6. Due to the Site's former use as an auto repair shop, referred to as "Speedway Garage" during the 1970s, it is likely that the Site contains petroleum products and/or storage containers that may present subsurface contamination at the Site.

1.0 INTRODUCTION

1.1 Scope of Work and Purpose

On behalf of the client, PS&S conducted a Phase I Environmental Site Assessment (Phase I ESA) at the 72 Alexander Street in the City of Yonkers, Westchester County, New York (herein referred to as the "Site"). The location of the Site is depicted on a United States Geographical Survey (USGS) Topographic Map – Yonkers, New York Quadrangle (Figure 1). Figure 2 depicts the Site with their associated tax block and lot designations.

The purpose of the Phase I ESA was to document Recognized Environmental Conditions (RECs) associated with past and current uses of the Site that could impact the client's future plans relative to site development or potential real estate transactions. Consistent with the document, *The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E-1527-05), issued by the American Society for Testing and Materials (ASTM), RECs are defined as follows:

1. The Site historically contained petroleum stored in underground storage tanks (USTs) located in the western portion of the site. Two UST fill ports and a vent pipe were observed. No documentation was obtained as part of the PS&S Phase I ESA to indicate whether USTs were removed from the Site. Based on the past use of petroleum materials, investigation was recommended to determine the condition of the surrounding soil and groundwater in the area of the suspect USTs. If evidence of impacts to the subsurface environment is identified, then an additional sampling program may be recommended. If during any exploratory investigations suspect USTs are confirmed, then the tanks should be removed in accordance with all applicable regulations.

2. Subsurface testing was also recommended to be performed on the Site in accordance with all applicable regulations to address the following potential soil and groundwater contamination issues:

    a. Interior floor drains in the loading dock area were observed during the site reconnaissance. Evidence of petroleum staining was observed on

the floor near the drains and standing liquid within these drains was observed. The outflow destinations of these floor drains were not determined. There is the potential that petroleum may have been released and/or disposed into these drains. Verification of the presence of contaminated materials requires a sampling and analysis program.

b. Junk truck storage was observed in the southern unpaved driveway during the Site reconnaissance. Evidence of petroleum staining was observed on the ground in the area of truck storage. Determining the extent of the observed petroleum staining requires a sampling and analysis program.

c. Due to the proximity of documented and suspected contaminated facilities that are located upgradient and cross-gradient of the Site in respect to groundwater flow, the migration of off-site contamination via groundwater beneath the Site is possible. A subsurface investigation at the property boundary was recommended to determine the condition of the underlying soil and to evaluate the potential presence of off-site contamination. These facilities are identified as the former Patclin Chemical Company located south of the Site and the former Polychrome Manufacturing facility north of the Site.

3. Because the Site building was constructed prior to 1978, it is suspected these buildings may contain lead based paint. A Lead Based Paint (LBP) Survey should be conducted prior to any demolition/construction activity to determine the presence or absence of LBP. This REC was not investigated as part of this ESA.

4. It is likely that asbestos containing building materials (ACBM) are located within the Site building since the structure was constructed prior to 1978. An ACBM Survey should be conducted to determine the presence or absence of ACBM. If it is asbestos-containing (greater than one percent), then abatement (repair, enclosure, encapsulation, or removal and disposal) should be

supervised by a licensed asbestos contractor in compliance with state and federal regulations. This REC was not investigated as part of this ESA.

5. Fluorescent light ballasts were observed at the time of the site reconnaissance of the Site. Based upon the fact that the building was constructed prior to 1979, it is likely that some fluorescent light ballasts that are currently in place were manufactured with PCBs. It is recommended that in accordance with New York State Department of Environmental Conservation (NYSDEC) and appropriate state and federal regulations, replacement and proper disposal of these ballasts be conducted in order to minimize potential concert with their contents. This REC was not investigated as part of this ESA.

6. Due to the Site's former use as an auto repair shop, referred to as "Speedway Garage" during the 1970s, it is likely that the Site contains petroleum products and/or storage containers that may present subsurface contamination at the Site.

"The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with the laws. The term is not intended to include de minimus conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimus are not recognized environmental conditions." (ASTM E-1527-05).

The Phase I ESA Scope of Work included a reconnaissance of the Site; interviews with representatives of the Site; a file review and document search regarding the past and current usage of the Site; a review of available Sanborn Maps, historic aerial photographs, city directory, and historical topographic maps; a review of USEPA, NYSDEC, county and local health department records; a review of an environmental lien

report and a title abstract report. PS&S utilized a commercial environmental information service to obtain data regarding state and federal program records.

Written inquiries requesting information concerning records of storage, disposal, spills, or releases of hazardous substances requiring environmental response action on or adjacent to the Site were made via first class mail, Internet and facsimile, of federal, state, county and local agencies.

1.2 Methodology Used and Limiting Conditions

PS&S performed this Phase I ESA based on the guidelines specified in the Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-05, published by the ASTM.

1.3 Limitations and Exceptions of Assessment

The RECs identified in this Phase I ESA report are limited to those PS&S identified in the records review and site reconnaissance documented within this report. Information used to complete this Phase I ESA was reasonably ascertainable, and visually and physically observable. For the purposes of this report, the site reconnaissance was limited to evidence of potential contamination that would generally include readily visible features, such as stains, discolorations, continuing spills or leaks of liquids or solids, discharge pipes, filled or mounded areas, lagoons or bermed areas and stressed vegetation. The site reconnaissance did not include checking for the presence of: 1) materials which are products manufactured or handled on the site for purposes of resale; 2) materials used for routine custodial and maintenance operations; and 3) materials within or under buildings or structures which require invasive investigating techniques or destructive testing for discovery; 4) investigations of asbestos containing materials or lead based paint or mold; or 5) testing or sampling of air, soil, water or building materials.

2.0 SITE DESCRIPTION

The Site is located at 72 Alexander Street in the City of Yonkers, Westchester County, New York. The Site is currently owned by Mr. Ken Krasnow. The Site consists of an approximately 0.4 acre parcel of land. Photographs of the Site and surrounding area are provided in Appendix A.

2.1 Site Location

On the United States Geologic Survey (USGS) 7.5 minute series topographic map of Yonkers Quadrangle, the Site is located at the coordinates of Latitude (North) 40.939317 or 40°56'21.5" and Longitude (West) 73.900982 or 73°54'3.5" (Figure 1). The Site is designated on the City of Yonkers Tax Map as Section 2, Block 2608/ Lot 25. The Site's lot has an approximate acreage of 0.4 acres.

2.2 Site History

The Site is designated on the City of Yonkers Tax Map as Section 2, Block 2608, Lot 25. The Site is listed as 72 Alexander Street.

Based on review of available Fire Insurance Maps and the City Directory Abstract the Site was developed by 1942 with one centrally located building and several smaller buildings to the east. From 1951 to 2004 the Site is identified as Flour and Gro. Warehouse. There was also an auto garage on the Site from 1951 through 1957. According to the City Directory Abstract, the Site is also identified as Universal Glenwood Packaging from 1971 through 2001. From 1982 through 2001, the Site is also identified as Glenwood Container.

2.3 General Site Characteristics

2.3.1 Zoning

According to the City of Yonkers Zoning Map, the Site is situated within an industrially zoned district. The historic and present uses are consistent with the current zoning. However, Yonkers is in the process of a new planning effort, which is likely to result in flexible mixed use zoning for this waterfront area.

2.3.2 Physiography and Topography

Review of the United States Geologic Survey (USGS) 7.5 minute series topographic map of Yonkers Quadrangle, New York indicates that the topographic gradient for the Site is generally to the west. The elevation of the site is 7 feet above mean sea level (msl). The area surrounding the Site within a one-mile radius ranges from 0 to approximately 159 msl. A copy of the complete EDR Report is included in Appendix B.

2.3.3 Geology

According to the United States Department of Agriculture (USDA) Soil Conservation Service (SCS), the dominant soil composition in the general vicinity of the Site consists of Urban Land (Uf), which consists of surface areas that are 70 percent covered with asphalt, concrete or other impervious building material, such as, parking lots, shopping centers, and industrial parks or institutional.

Review of the EDR Report indicates that the Site and surrounding area is underlain by bedrock consisting of a stratified sequence: Paleozoic, Ordovician and Lower Ordovician and Cambrian carbonate rocks. No bedrock outcrops were observed during the site reconnaissance; the depth to bedrock is not known. Geotechnical drilling on the Site is required to determine the location of bedrock which varies significantly along the Yonkers waterfront due to both natural history with erosion and deposition from glacial and surface water actions, and urban development with significant filling activities.

2.3.4 Surface and Groundwater

Examination of the USGS Topographic Map, Yonkers Quadrangle, indicates that the elevation of the Site is approximately 7 feet above mean sea level.

Review of the EDR Federal USGS Well database identified 5 private or public supply wells between 1/8-mile and 1-mile the from Site (refer to the EDR Report included as Appendix B). As identified in the Federal Reporting Data System (FRDS) Public Water supply system database, there is one public water supply well located between a 1/4-mile and 1/2-mile south of the Site. There are 10 oil/gas wells between a 1/8-mile and ½-mile south of the Site, in the State Database of the EDR Radius Report.

Local groundwater flow direction, inferred from available topographic mapping of the area and the EDR Radius Report, is generally west toward the Hudson River. However, local variations in the groundwater flow direction may be present.

2.3.5 Wetlands and Floodplains

The New York State Department Tidal Wetland Map (Index Map No. 1, Map ID No. 592-532 of Inset A) designates the Hudson River as a Littoral Zone (LZ).

Furthermore, according to review of the National Wetlands Index Map of Yonkers, prepared by the United States Fish and Wildlife Services, the Hudson River is designated as a wetland area and is identified as E1UBL (Estuarine, Subtidal, Unconsolidated Bottom, Subtidal). This wetland type is characterized as estuarine and marine deepwater.

3.0 CURRENT CONDITIONS

3.1 Site Reconnaissance

PS&S representatives conducted an escorted site reconnaissance of the Site on [date]. Observations of the Site areas were documented in the form of photographs and field notes. Selected photographs are presented in Appendix A.

An interview was conducted with Mr. Ken Krasnow, the owner of the Site at the time of the inspection. Relevant information obtained during the interview has been included herein, where appropriate.

The building is supplied with potable water from the City of Yonkers municipal system. Sanitary sewage from the building is discharged to the sewer system maintained by the County of Westchester. According to the owner of the Site, the existing building utilizes natural gas for heating purposes.

The following sections summarize observations made during the site inspection.

3.2 Exterior Observations

3.2.1 Hazardous Substances And Petroleum Products In Connection With Identified Uses

PS&S observed junk truck storage in the southern unpaved driveway during the site reconnaissance. Evidence of petroleum staining was observed on the ground in the area of truck storage. Determining the extent of the observed petroleum staining requires a sampling and analysis program. Based on the information above, PS&S does consider these substances to be a REC. Refer to Section 5.0 for a discussion of RECs at the Site.

3.2.2 Storage Tanks

No above ground and/or below ground storage tanks, including vent pipes, fill pipes or access ways, were noted on the exterior of the Site during the site inspection.

3.2.3 Odors

No strong, pungent or noxious odors were noted on the exterior of the Site during the site inspection.

3.2.4 Pools Of Liquid

No pools of liquid containing potentially hazardous material were noted on the exterior of the Site during the site inspection.

3.2.5 Drums

PS&S did not note any aboveground drums during the Site inspection.

3.2.6 Hazardous Substances And Petroleum Products Not In Connection With Identified Uses

No hazardous substances and petroleum products not in connection with identified uses were noted on the exterior of the Site during the site inspection.

3.2.7 Unidentified Substance Containers

No unidentified substance containers were observed on the exterior portion of the Site during the site inspection.

3.2.8 PCBs

No potential PCB containing materials were noted on the exterior of the Site during the site inspection.

3.2.9 Pits, Ponds Or Lagoons

No pits, ponds or lagoons that could potentially contain hazardous materials were noted at the Site during the site inspection.

3.2.10 Stained Soil Or Pavement

PS&S observed petroleum staining on the ground in the southern unpaved driveway, near the vicinity of truck storage. Determining the extent of the observed petroleum staining requires a sampling and analysis program. Based on the information above, PS&S does consider the petroleum staining to be a REC. Refer to Section 5.0 for a discussion of RECs at the Site.

3.2.11 Stressed Vegetation

No stressed vegetation was observed at the Site during the site inspection.

3.2.12 Solid Waste

No evidence of solid waste disposal at the Site was noted during the site inspection.

3.2.13 Waste Water

No evidence of a discharge of waste water or other liquids into a drain, ditch, underground injection system or stream at the Site was noted during the site inspection.

3.2.14 Wells

No monitoring wells, irrigation wells and/or production wells were observed at the Site during the site inspection.

3.2.15 Septic Systems

PS&S did not observe evidence of a septic system at the Site during the site inspection. According to the property owner, the Site is connected to the municipal sewer system.

3.3 Interior Observations

3.3.1 Hazardous Substances And Petroleum Products In Connection With Identified Uses

No hazardous substances and petroleum products in connection with identified uses were noted in the interior of the Site during the site inspection.

3.3.2 Storage Tanks

PS&S noted two UST fill ports and a vent pipe. No documentation was obtained as part of the PS&S Phase I ESA to indicate whether underground storage tanks (USTs) were removed from the Site. Based on the past use of petroleum materials, investigation was recommended to determine the condition of the surrounding soil and groundwater in the area of the suspect USTs. If evidence of impacts to the subsurface environment is identified, then an additional sampling program may be recommended. If during any exploratory investigations suspect USTs are confirmed, then the tanks should be removed in accordance with all applicable regulations. Based on the information above, PS&S does consider the presence of these substances at the Site to be a REC. Refer to Section 5.0 for a discussion of RECs at the Site.

PS&S also observed a 200 gallon portable aboveground storage tank (AST) containing diesel fuel. This aboveground storage tank was used to service trucks on the Site. Based on the information above, PS&S does not consider the presence of the AST to be a REC.

3.3.3 Odors

No strong, pungent or noxious odors were noted on the interior of the building at the Site during the site inspection.

3.3.4 Pools Of Liquid

No pools of liquid containing potentially hazardous material were noted on the interior of the building at the Site during the site inspection.

3.3.5 Drums

No drums were noted in the interior of the building at the Site during the site inspection.

3.3.6 Hazardous Substances And Petroleum Products Not In Connection With Identified Uses

No hazardous substances and petroleum products not in connection with identified uses were noted in the building at the Site during the site inspection.

3.3.7 Unidentified Substance Containers

No unidentified substance containers were noted on the interior of the building at the Site during the site inspection.

3.3.8 PCBs

PS&S observed fluorescent light ballasts at the time of the site reconnaissance of the Site. Based upon the fact that the building was constructed prior to 1979, it is likely that some fluorescent light ballasts that are currently in place were manufactured with PCBs. It is recommended that in accordance with New York State Department of Environmental Conservation (NYSDEC) and appropriate state and federal regulations, replacement and proper disposal of these ballasts be conducted in order to minimize potential concert with their contents. Based on the information above, PS&S does consider the light ballasts to be a REC. Refer to Section 5.0 for a discussion of RECs at the Site.

3.3.9 Heating/Cooling

According to the owner of the Site the building is currently heated via natural gas and cooled via an electric powered air conditioner.

3.3.10 Stains or Corrosion

PS&S observed petroleum staining on the floor in the vicinity of floor drains located in the loading dock. There is potential that the petroleum may have been released and/or disposed into the floor drains. Verification of the presence of contaminated materials requires a sampling and analysis program. Based upon the above information, PS&S does consider the staining to be a REC. Refer to Section 5.0 for a discussion of RECs at the Site.

3.3.11 Drains and Sumps

PS&S observed interior floor drains in the loading dock area. Evidence of petroleum staining was observed on the floor near the drains and standing liquid within these drains was observed. The outflow destinations of these floor drains were not determined. There is the potential that petroleum may have been released and/or disposed into these drains. Based on the above information, PS&S does consider the drains to be a REC. Refer to Section 5.0 for a discussion of RECs at the Site.

3.4 Lead Based Paint

In 1973, the Consumer Product Safety Commission established a maximum lead paint content of 0.5 percent, which was subsequently lowered in 1978 to 0.06 percent. Because the Site building was constructed prior to 1978, it is suspected that this building contains lead based paint. Since the building on the Site was constructed prior to 1978 and there was no documentation concerning lead levels, it is possible that buildings contain lead-based paint. No testing for lead was conducted as part of this ESA. Based on the above information, PS&S does consider Lead Based Paint to be a REC. Refer to Section 5.0 for a discussion of RECs at the Site.

3.5 Radon

The United States Environmental Protection Agency (USEPA) has established an action level of 4 Pico curies/Liter (pCi/L) for residential structures. Review of the NY Radon Database, included in the EDR Report as Appendix B, indicates that the Sites are situated within the Federal EPA Radon Zone 3 for Westchester County, which is defined as an indoor average level less than 2 pCi/L. Review of data compiled by the New York State Department of Health, Westchester County indicates the test results from 130 sites in the City of Yonkers, Westchester County, which revealed an average basement activity level of 2.07 pCi/L. Therefore, radon concentration does not appear to be an environmental concern for the Site.

3.6 Asbestos

It is likely that asbestos containing building materials (ACBM) are located within the Site building since the structure was constructed prior to 1978. An ACBM Survey should be conducted to determine the presence or absence of ACBM. If it is asbestos-containing (greater than one percent), then abatement (repair, enclosure, encapsulation, or removal and disposal) should be supervised by a licensed asbestos contractor in compliance with state and federal regulations. No testing for asbestos was conducted as part of the ESA.

3.7 Polychlorinated Biphenyls (PCBs)

Fluorescent light ballasts were observed at the time of the site reconnaissance of the Site. Based upon the fact that the building was constructed prior to 1979, it is likely that some fluorescent light ballasts that are currently in place were manufactured with PCBs. It is recommended that in accordance with New York State Department of Environmental Conservation (NYSDEC) and appropriate state and federal regulations, replacement and proper disposal of these ballasts be conducted in order to minimize potential concert with their contents. No testing for PCBs was conducted as part of this ESA. Based on the above information, PS&S does consider PCBs to be a REC. Refer to Section 5.0 for a discussion of RECs at the Site.

3.8 Surrounding Properties

The adjoining properties are identified as follows:

North: former Polychrome Manufacturing facility;
South: former Patclin Chemical Company facility;
East: Metro North Hudson Line Railroad right-of-way; and
West: Alexander Street and the Altman Lighting Facility.

In addition, residential and commercial uses were also observed beyond the Metro North rail road right-of-way to the north, west and south. In order to better depict the character of the surrounding area, photographs are included in Appendix A. A potential exists for the mixed use buildings or residences to have fuel oil USTs or other facilities of potential environmental concern.

4.0 RECORDS REVIEW

PS&S requested available federal, state, county and local regulatory information concerning historical land use and potential environmental issues relating to the Site. The responses received from commercial database report, Federal, State and Local agencies are summarized below.

4.1 Environmental Database Record Research

As part of this Phase I ESA, PS&S reviewed an electronic search of the standard environmental record sources provided by Environmental Data Resources (EDR) of Milford, Connecticut. EDR uses *The EDR-Radius Map with GeoCheck* to identify potential environmental issues at or near the property in accordance with ASTM guidelines. EDR provided technical and regulatory data from multiple sources in accordance with standard practices as defined by ASTM E 1527-05. This process allows the identification of facilities of potential environmental concern at distances commensurate with their potential risk to the Sites.

The specific Federal and State databases searched by EDR are listed below. The complete report package is included in Appendix B.

Federal ASTM Standard

NPL	National Priority List
Proposed NPL	Proposed National Priority List Sites
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System
CERCLIS NFRAP	CERCLIS No Further Remedial Action Planned
CORRACTS	Corrective Action Report

The EDR database report indicates that the Site is not listed in any of the databases searched by EDR.

The EDR database search identified 232 sites within the designated Federal, State and/or Local search radii. Two sites are considered to potentially have an impact on the Site. The sites are discussed below:

- The property located at 66 Alexander Street is adjacent to the Site, to the south. This property, identified as Patclin Chemical Company, Inc., is included in the CERCLIS, RCRA-SQG, NY Spills, RCRA-Non Gen, NY Hist Spills and NY MANIFEST databases. Based on the available information, EPA performed a drum removal action at the Site but no subsurface cleanup work was performed. This site is cross-gradient of the subject Site with respect to groundwater flow.

- The property located at 80 Alexander Street is adjacent to the Site, to the north. This property, identified as Polychrome Corporation, is included on the NY UST,

US BROWNFIELDS, NY Spills, NY Hist Spills and NY MANIFEST databases. Review of the NY SPILLS and NY Hist SPILLS databases indicated that a petroleum spill that impacted the sewer occurred at the East Site address of 80 Alexander Street on April 30, 1987 (Spill Case Number 8700879). The source of the spill is unknown. Based on information provided in the EDR Report, this spill is reported as closed (or in compliance with State, Federal or local regulations).

Sites included on the above database lists are situated within the designated ASTM Radii of the Site, and sufficiently described to be accurately located by EDR, are also plotted by EDR on area maps (refer to the EDR Radius Report included as Appendix B).

Sites Not Mapped in EDR Report

As part of EDR's State and Local database search, 230 sites did not contain enough address information to be accurately mapped by EDR. None of the 230 sites are at locations that would have an adverse impact on the Site.

For further details on the records that could not be mapped by EDR due to inadequate address information, refer to the EDR Report in Appendix B.

Based on the above information, PS&S does consider 66 Alexander Street and 80 Alexander Street to be RECs due to their proximity to the Site and their history of contamination. Refer to Section 5.0 for a discussion of RECs at the Site.

4.2 Historical Records Review

In order to identify any prior use of the Site and adjacent properties which could lead to the presence of recognized environmental conditions that may pose an environmental concern on the Site, a review of historical uses was conducted. This review was conducted utilizing information provided by EDR, specifically, fire insurance maps (Sanborn maps), aerial photographs, city directories, and historic topographic maps which are described below. Freedom of Information Act (FOIA) requests were also submitted to local agencies and are provided below in Appendix C.

4.2.1 Fire Insurance Maps

PS&S requested EDR to perform a review of Sanborn maps that include the Site Area and immediate vicinity. Based upon EDR's search results, PS&S reviewed Sanborn Fire Insurance Maps for the following years: 1886, 1898, 1917, 1942, 1951, 1956, 1957, 1973, 1978, 1990, 1991 and 2004. Copies of the Sanborn Maps provided by EDR are included as Appendix D.

- **1886 Sanborn Map** – The Site is not developed in 1886. The Hudson River occupies the area where the Site is currently developed. In the surrounding area, the Metro North Hudson Line Railroad right-of-way, identified as NYC & HRR, is depicted to the east of the Hudson River. The area east of the NYC & HRR is improved with dwellings. To the north is a gas light company with oil drums, gas holder tank and miscellaneous facility buildings.

- **1898 Sanborn Map** – The Site is not developed. The Site is located on an empty parcel that was occupied by the Hudson River on the 1886 Sanborn Map. The remaining adjacent properties are not developed.

  The surrounding area includes P.A. Deyo and Son Elevator to the north, which includes a warehouse and storage buildings. Also to the north, are the Standard Oil Company and Archibald Lumber Company. These properties are improved with storage buildings, an iron tank and several offices. Property beyond the NYC & HRR to the east is occupied with dwellings and shows more improvement as compared to 1886.

- **1917 Sanborn Map** – The Site is not developed. The 1917 Sanborn Map illustrates development of Alexander Street, which now extends beyond Ashburton Avenue and divides the existing property. Property adjacent to the Site is not developed.

Pierpont & Vanderveer Hay, Feed, Flour & Produce is depicted to the north with several storage buildings. The Standard Oil Company is depicted on the southeast intersection of Ashburton Avenue and Alexander Street north and identifies several oil tanks and gasoline tanks. Hart Construction Company, William F. Harrigan Coal and Wood, and the Hudson Fuel Company are depicted north of the Site, west of Alexander Street. East of the Site depicts more commercial buildings and warehouses. The Otis Elevator Company occupies a majority of the property east of the NYC & HRR.

- **1942 Sanborn Map** – The Site is improved with an L-shaped building. There are also four and a half unidentified smaller buildings depicted on the Site property. Adjacent to the Site, to the south, five unidentified buildings are depicted. Adjacent property to the north is undeveloped. To the west is Alexander Street.

  The surrounding area appears as it does on the 1917 Sanborn Map with the following exceptions: the Standard Oil Company now occupies land to the east and west of Alexander Street. The Hudson Fuel Company occupies the southwest intersection of Ashburton Avenue and Alexander Street. The Westchester Ferry Corporation is now identified west of the Site. The City Jail is depicted south of the Site.

- **1951 Sanborn Map** – The Site is now depicted as one large, irregularly shaped building, identified as Flour and Gro. Warehouse with an attached office. There is also an unattached auto garage to the east. Adjacent property to the north is depicted as a one-story building identified as Bakery Supplies. Property to the south is identified as Jaeger & Franzmann Machine Shop, improved with several one-story buildings and an office. West of the Site is a one-story building identified as Machine Shop with unattached car storage space and a trucking warehouse.

The surrounding area appears as it does on the 1942 Sanborn Map with the following exceptions: a Post Office Garage is depicted to the north. Polychrome Corporation occupies property that was previously occupied by the Standard Oil Company at the southeast intersection of Ashburton Avenue and Alexander Street. Kolb Foundry Company is depicted to the south and also identifies a machine shop.

- **1956 Sanborn Map** – The Site appears as it does on the 1951 Sanborn Map with the following exception: a loading dock is depicted on the western side of the Site facing Alexander Street.

  Adjacent property to the north and south appear as they do on the 1951 Sanborn Map. The Machine Shop to the west depicts an additional auto repair building and auto garage.

  In the surrounding area, Polychrome Corporation is improved with additional warehouse and storage buildings. The Hudson Fuel Company is not depicted on the 1956 Sanborn Map. An auto repair building is depicted north of the Site.

- **1957 Sanborn Map** – The Site appears as it does on the 1956 Sanborn Map. Adjacent and surrounding properties appear as they do on the 1956 Sanborn Map.

- **1973 Sanborn Map** – The Site appears as it does on the 1957 Sanborn Map with the following exception: the auto garage is not depicted on the Site and parking is identified on the southern portion of the Site. Adjacent property to the south is identified as a cosmetic warehouse. Surrounding property appears similar to the 1957 Sanborn Map.

- **1978 Sanborn Map** – The Site appears as it does on the 1973 Sanborn Map. Adjacent property appears similar to the 1973 Sanborn Map with the

following exceptions: property to the north is now identified as Polychrome Corporation.

The surrounding area appears as it does on the 1973 Sanborn Map with the following exceptions: the Standard Oil Company is now identified as A. Tarricone Inc. Terminal and depicts six oil tanks and three more oil tanks to the north. Property to the east is identified as storage yard.

- **1990 Sanborn Map** – The Site and properties south of Ashburton Avenue are not depicted on the 1990 Sanborn Map.

- **1991 Sanborn Map** – The Site appears as it does on the 1978 Sanborn Map. Adjacent properties appear similar to the 1978 Sanborn Map with the following exception: property to the west depicts three additional buildings. Surrounding property appears similar to the 1978 Sanborn Map with the addition of two oil tanks.

- **2004 Sanborn Map** – The Site appears and surrounding properties appear as they do on the 1991 Sanborn Map

4.2.2 Aerial Photograph Record Review

PS&S reviewed historical aerial photographs that include the subject Site dated March 22, 1954; May 1, 1962; January 21, 1966; October 24, 1974; October 29, 1976; March 26, 1984; April 20, 1989; June 16, 1992; March 13, 1995; 2006 and 2008. Copies of these aerial photographs are provided in Appendix E.

- **March 22, 1954** – The Site and adjacent properties are developed with buildings. Surrounding properties appear to be developed. The Hudson River, the Metro North Hudson Line Railroad right-of-way, Alexander Street, Ashburton Avenue and arterial roadways are visible. Five tanks are visible north of the Site.

- **May 1, 1962** – Due to the poor quality of the photograph, the Site is not discernible in the 1962 aerial photograph.

- **January 21, 1966** – The Site appears similar to the 1962 aerial photograph. Surrounding properties depict some improvement.

- **October 24, 1974** – The Site and adjacent properties appear similar to the 1966 aerial photograph. Additional tanks are visible to the north.

- **October 29, 1976** – Due to the poor quality of the photograph, the Site is not discernible in the 1976 aerial photograph.

- **March 26, 1984** – Due to the poor quality of the photograph, the Site is not discernible in the 1984 aerial photograph.

- **April 20, 1989** – The Site appears similar to the 1974 aerial photograph. Additional buildings are visible west of the Site.

- **June 16, 1992** – Due to the poor quality of the photograph, the Site is not discernible in the 1992 aerial photograph.

- **March 13, 1995** – Due to the poor quality of the photograph, the Site is not discernible in the 1995 aerial photograph.

- **(Not Dated) 2006** – The Site appears similar to the 1989 aerial photograph. Some improvements are visible to the west. Oil tanks to the north are no longer visible.

- **(Not Dated) 2008** – The Site and surrounding area appear as they do on the 2006 aerial photograph.

4.2.3 City Directory

PS&S requested a City Directory search and abstract report from EDR for the Site. According to the City Directory coverage that is available for the Site, the following information was provided on past uses from 1971 through 2001.

- *1971 and 1976* – The Site is listed as Harold Krasnow, Speedway Garage and Universal Glenwood Packaging.
- *1982 and 1987* – The Site is listed as Glenwood Container, Harold Krasnow and Universal Glenwood Packaging.
- *1992* – The Site is listed as Glenwood Container and Universal Glenwood Packaging.
- *1997* – The Site is listed as Alltest Container, Glenwood Container, Harold Krasnow and Universal Glenwood Packaging.
- *2001* – The Site is listed as Glenwood Container, Krasnow Harold and Universal Glenwood Packaging.

No additional listings for the Site were included in the Abstract Report.

Appendix F contains a copy of the City Directory search information.

Based on the information above, PS&S does consider the former use of the Site as "Speedway Garage" to be a REC. Refer to Section 5.0 for a discussion on RECs at the Site.

4.2.4 USGS Topographic Maps

PS&S reviewed historical USGS Topographic maps from 1897, 1947, 1966, 1979 and 1998. Copies of the USGS Historical Topographic Maps are included as Appendix G.

- **1897 (Scale = 1:62,500)** – The Site is located in a developed area. Surrounding properties also appear to be located in developed areas on the 1897 topographic map. Arterial roadways and the Metro North Hudson Line Railroad right-of-way are visible

- **1947 (Scale = 1:25,000)** – The Site and surrounding properties show new development on the 1947 topographic map. Specifically, new buildings have been constructed along Alexander Street and Ashburton Avenue.

- **1966 (Scale = 1:24,000)** – New development is shown on the Site on the 1966 topographic map. New development/improvements are also depicted along Alexander Street and Ashburton Avenue. Specifically, oil tanks are visible to the north of the Site. New roadways in the vicinity of the Site are also shown.

- **1979 (Scale = 1:24,000)** – The Site appears as it does on the 1966 topographic map. Surrounding properties are shown with new developments/improvements.

- **1998 (Scale = 1:24,000)** – The Site appears as it does on the 1979 topographic map. Surrounding properties also appear the same as the 1979 topographic map.

4.2.5 Title Abstract Report

Title records were not provided as part of this Phase I ESA.

4.2.6 Environmental Lien Search Report

PS&S reviewed an Environmental Lien Search Report prepared by EDR. Based on examination of this report, an environmental lien has not been issued for the Site nor are there any other Activity and Use Limitations (AULs) for the Site. A copy of the Environmental Lien Search Report is included as Appendix H.

5.0 FINDINGS AND CONCLUSIONS

PS&S performed a Phase I ESA in general conformance with the scope and limitations of ASTM E-1527-05 issued by the ASTM. Exceptions to or deletions from this practice are described in this Phase I ESA. This assessment has revealed the following six recognized environmental conditions in connection with the Site.

5.1 Recognized Environmental Conditions and Recommendations

1. The Site historically contained petroleum stored in underground storage tanks (USTs) located in the western portion of the site. Two UST fill ports and a vent pipe were observed. No documentation was obtained as part of the PS&S Phase I ESA to indicate whether USTs were removed from the Site. Based on the past use of petroleum materials, investigation was recommended to determine the condition of the surrounding soil and groundwater in the area of the suspect USTs. If evidence of impacts to the subsurface environment is identified, then an additional sampling program may be recommended. If during any exploratory investigations suspect USTs are confirmed, then the tanks should be removed in accordance with all applicable regulations.

2. Subsurface testing was also recommended to be performed on the Site in accordance with all applicable regulations to address the following potential soil and groundwater contamination issues:

    a. Interior floor drains in the loading dock area were observed during the site reconnaissance. Evidence of petroleum staining was observed on the floor near the drains and standing liquid within these drains was observed. The outflow destinations of these floor drains were not determined. There is the potential that petroleum may have been released and/or disposed into these drains. Verification of the presence of contaminated materials requires a sampling and analysis program.

b. Junk truck storage was observed in the southern unpaved driveway during the Site reconnaissance. Evidence of petroleum staining was observed on the ground in the area of truck storage. Determining the extent of the observed petroleum staining requires a sampling and analysis program.

c. Due to the proximity of documented and suspected contaminated facilities that are located upgradient, the former Polychrome Manufacturing facility to the north, and cross-gradient of the Site, in respect to groundwater flow, the migration of off-site contamination via groundwater beneath the Site is possible. A subsurface investigation at the property boundary was recommended to determine the condition of the underlying soil and to evaluate the potential presence of off-site contamination. These facilities are identified as the former Patclin Chemical Company located south of the Site and the former Polychrome Manufacturing facility north of the Site.

3. Because the Site building was constructed prior to 1978, it is suspected these buildings may contain lead based paint. A Lead Based Paint (LBP) Survey should be conducted prior to any demolition/construction activity to determine the presence or absence of LBP. This REC was not investigated as part of this ESA.

4. It is likely that asbestos containing building materials (ACBM) are located within the Site building since the structure was constructed prior to 1978. An ACBM Survey should be conducted to determine the presence or absence of ACBM. If it is asbestos-containing (greater than one percent), then abatement (repair, enclosure, encapsulation, or removal and disposal) should be supervised by a licensed asbestos contractor in compliance with state and federal regulations. This REC was not investigated as part of this ESA.

5. Fluorescent light ballasts were observed at the time of the site reconnaissance of the Site. Based upon the fact that the building was constructed prior to 1979, it is likely that some fluorescent light ballasts that are currently in place were manufactured with PCBs. It is recommended that in accordance with New York State Department of Environmental Conservation (NYSDEC) and appropriate state and federal regulations, replacement and proper disposal of these ballasts be conducted in order to minimize potential concert with their contents. This REC was not investigated as part of this ESA.

6. Due to the Site's former use as an auto repair shop, referred to as "Speedway Garage" during the 1970s, it is likely that the Site contains petroleum products and/or storage containers that may present subsurface contamination at the Site.

5.2 Results of Phase I Environmental Site Assessment

PS&S performed a Phase I ESA in general conformance with the scope and limitations of ASTM E-1527-05. Exceptions to or deletions from this practice are described in this Phase I ESA. This assessment revealed RECs on the property that may be addressed during recommended Phase II Environmental Site Assessment (Phase II ESA) activities.

7.0 DISCLAIMERS

The scope of services performed in execution of this ESA were in general accordance with ASTM E-1527-05 and is subject to the limitations identified in this ESA and noted herein. This ESA is partially based on the conditions existing on the date of PS&S's site reconnaissance. The conclusions presented herein are professional opinions based solely on visual observations of the facility and vicinity, interpretation of information provided to PS&S or reasonably available to PS&S, and the results of limited sampling and analysis. Past conditions were considered on the basis of observations, readily available records, interviews, and recollections.

PS&S does not warrant or guarantee the correctness, completeness, and/or most recent date of the information contained in the environmental record sources and recollections used for this assessment. Such information is the product of independent investigation by parties other than PS&S and/or information maintained by government agencies.

This report is based on current environmental regulations. Future regulatory modifications, agency interpretations, and/or policy changes may affect the compliance status of the subject site, which is the subject of this ESA.

This ESA is not an environmental or compliance audit. This ESA makes no conclusion or recommendation regarding compliance with current regulations. Any references to relevant laws and regulations are not intended to be exhaustive, or to provide legal advice or interpretation. The user should seek legal advice and review the applicable laws and their implications as to overall environmental compliance or to any proposed transaction.

PS&S does not warrant or guarantee the property suitable for any particular purpose or certify the property as clean.

Lead paint, occupational health and safety, asbestos, and radon surveys, receptor analysis, sensitive environment analysis, endangered species analysis or other studies, which require specialized expertise, were not requested or included as part of this project.

EXECUTIVE SUMMARY

A search of the environmental records was conducted by Environmental Data Resources, Inc. (EDR). PAULUS, SOKOLOWSKI & SARTOR used the EDR FieldCheck System to review and/or revise the results of this search, based on independent data verification by PAULUS, SOKOLOWSKI & SARTOR. The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NPL list, as provided by EDR, and dated 03/31/2011 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the CERCLIS list, as provided by EDR, and dated 02/25/2011 has revealed that there are 2 CERCLIS sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the RCRA-LQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the RCRA-CESQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the US INST CONTROL list, as provided by EDR, and dated 03/16/2011 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NY LTANKS list, as provided by EDR, and dated 07/05/2011 has revealed that there are 51 NY LTANKS sites within approximately 0.5 miles of the target property.

NY HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NY HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 35 NY HIST LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NY UST list, as provided by EDR, and dated 07/05/2011 has revealed that there are 15 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NY AST list, as provided by EDR, and dated 07/05/2011 has revealed that there are 5 NY AST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

NY MOSF AST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NY MOSF AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF AST site within approximately 0.5 miles of the target property.

State and tribal Brownfields sites

NY ERP: In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NY ERP list, as provided by EDR, and dated 07/12/2011 has revealed that there is 1 NY ERP site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NY Spills list, as provided by EDR, and dated 07/05/2011 has revealed that there are 22 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 13 NY Hist Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the RCRA-NonGen list, as provided by EDR, and dated 06/15/2011 has revealed that there are 17 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste.

EXECUTIVE SUMMARY

Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

An online review and analysis by PAULUS, SOKOLOWSKI & SARTOR of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 2 Manufactured Gas Plants sites within approximately 1 mile of the target property.

HUDSON RIVER PCBS (Continued) **1000384273**

Pathway: SURFACE WATER PATHWAY
Scoring: 4

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated l.l million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when thelevel of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabili e the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authori e a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action atthe remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for partiespotentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower

HUDSON RIVER PCBS (Continued) **1000384273**

Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non- cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB- contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in- place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on

HUDSON RIVER PCBS (Continued) **1000384273**

Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA ?121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Environmental Interest/Information System

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

HALSTEAD-QUINN/ATI TANK FARM (Continued) **S105859118**

Region: 3
Town: Yonkers (c)
Acres: .000
Record Added: 10/30/2003 3:28:00 PM
Record Updated: 4/26/2010 3:12:00 PM
Updated By: SXDEWES
Site Description: This site is an abandoned petroleum tank farm located along the Hudson River in the Alexander Street Waterfront District of the City of Yonkers, Westchester County. The Yonkers Alexander Street Redevelopment, Inc. acquired the property in July 2002 after Halstead-Quinn Propane, Inc. declared bankruptcy. This site has been used for the storage and transfer of petroleum products since the early 1900s. Site structures included 15 aboveground storage tanks (ASTs), four 4,000 square foot buildings and 4 truck fuel fill racks equipped with vehicle fuel dispensers, as well as a barge dock, a small guard house, four 8 inch diameter pipelines and a walkway extending 280 feet out into the Hudson River. Several small ASTs and underground storage tanks found on site have been removed. The main tank farm was approximately 1-2 feet below grade and enclosed by concrete containment walls. All of these structures were located on fill placed on the site in approximately 1898. A number of spills are on record for the site; two of which were significant and have not been closed out. This site is being remediated in the BCP program (C360090). All large ASTs and associated piping and structures were demolished in 2003. All that remains on site are a dispatch office, storage building, and foam suppression house. Site contamination is petroleum related. A Proposed Remedial Action Plan (PRAP) was prepared for this site in February 2006 and a final cleanup plan, defined in a Record of Decision (ROD), was signed in March 2006. A Brownfield Cleanup Program application for this site was received in June 2006 and a BCA was signed in June 2007. For further discussion see Site #C360090.
Env Problem: Site contamination is petroleum related. Groundwater or surface runoff from the site could impact the Hudson River, which borders the site on the west. Site contamination has also impacted the groundwater resource in the water table aquifer. However, this aquifer is not a sole source aquifer and is unlikely to be used as a source of drinking water in the future. For further discussion see Site #C360090.
Health Problem: The site is located in an industrial area with limited public access. The area is served with public water. To reduce potential exposures to contaminated soil, the Record of Decision for the site proposes the removal of contaminated soil,demarcation layer and the construction of a soil cover. To address potential soil vapor intrustion to future on site structures, a site management plan will require that any on-site building structure(s) have installed a sub-slab depressurization system.

BROWNFIELDS:
Program: BCP
Site Code: 365881
Site Description: The remediation of this site is currently under the Brownfield Cleanup Program (BCP) The site consists of 8 Lots totaling 2.8 acres in the City of Yonkers, Westchester County. The Site is located at the southwest corner of the intersection of Alexander and Ashburton Avenues with the mailing address of 91 Alexander Street, Yonkers, NY 10701. This former tank farm is located in the center of the Upper

HALSTEAD-QUINN/ATI TANK FARM (Continued) **S105859118**

West Site (Alexander Street) Brownfield Opporutnity Area. Currently, the Site is mainly vacant but is also being used for bus storage. There are industrial uses in close proximity to the Site. Former Polychrome buildings surround the Site and are still used for industrial purposes. To the north is the Social Services County Offices to the west is the Hudson River. There are no proximate agricultura, recreational or residential uses immediately adjacent to the Site. Prior uses that may have contributed to possible site contamination include a manufactured gas plant and an oil terminal. Known or suspected contaminants effecting the soil and/or groundwater are petroleum, chlorinated solvents, SVOC's, and metals. There have been a number of recorded spills on this site, including but not limited to No. 8912251 and No. 9801901. A Phase I Environmental Assessment Report was prepared in September 2001 and a site investigation (SI)was conducted between August 2003 and August 2005 under ERP. This BCP application was approved on June 5, 2007. The BCA was signed June 29, 2007. A remedial action work plan was received and approved. The remedy includes excavation of contaminated soil and cover. A remedial design was completed in December 2009. With preparation work complete, soil excavation and disposal is scheduled to begin in March 2011.

Env Problem: Groundwater or surface runoff from the site could impact the Hudson River, which borders the site on the west. Site contamination has also impacted the groundwater resource in the water table aquifer. However, this aquifer is not a sole source aquifer and is unlikely to be used as a source of drinking water in the future.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

RCRA-NonGen:

Date form received by agency:	01/01/2007
Facility name:	PATCLIN CHEMICAL CO INC
Facility address:	66 ALEXANDER ST YONKERS, NY 10701
EPA ID:	NYD986925790
Mailing address:	ALEXANDER ST YONKERS, NY 10701
Contact:	Not reported
Contact address:	ALEXANDER ST YONKERS, NY 10701
Contact country:	US
Contact telephone:	Not reported
Contact email:	Not reported
EPA Region:	02
Land type:	Facility is not located on Indian land. Additional information is not known.
Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name:	MARK KLEIN
Owner/operator address:	19901 OSLO CT BOCA RATON, FL 33434
Owner/operator country:	US
Owner/operator telephone:	(212) 555-1212
Legal status:	Private
Owner/Operator Type:	Operator
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

PATCLIN CHEMICAL CO INC (Continued) **1000990039**

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006
Facility name: PATCLIN CHEMICAL CO INC
Classification: Not a generator, verified

Date form received by agency: 01/01/2001
Facility name: PATCLIN CHEMICAL CO INC
Classification: Large Quantity Generator

Date form received by agency: 07/14/1999
Facility name: PATCLIN CHEMICAL CO INC
Classification: Small Quantity Generator

Date form received by agency: 02/13/1996
Facility name: PATCLIN CHEMICAL CO INC
Site name: PATCLIN CHEMICAL COMPANY INC
Classification: Large Quantity Generator

Date form received by agency: 01/25/1995
Facility name: PATCLIN CHEMICAL CO INC
Classification: Large Quantity Generator

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 02/14/2002
Evaluation: CASE DEVELOPMENT INSPECTION
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA

Evaluation date: 10/17/2001
Evaluation: FOLLOW-UP INSPECTION
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA

Evaluation date: 08/29/2001
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to

PATCLIN CHEMICAL CO INC (Continued) **1000990039**

replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

A TARRICONE INC (Continued) **1001079914**

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Description: Location Description: The Greyston Bakery (formerly, 104 Ashburton Avenue) site is located at the corner of Ashburton Avenue and Alexander Street in the City of Yonkers, Westchester County, NY. The site is across the railroad tracks from the CE Woodworth Avenue former manufactured gas plant (MGP) site (#V00564). Predominant Site Features: This irregularly shaped site comprises 1.61 acres. A two-story structure currently used as the Greyston Bakery is located on the northwestern portion of the property; a one-story brick structure, operated as a Metro-North Substation, is located on the eastern portion of the property; and a concrete retaining wall separates the property from adjoining railroad tracks to the east. An

GREYSTON BAKERY (FORMERLY, 104 ASHBURTON AVENUE) (Continued) **S110309473**

asphalt parking lot is located on the the southern portion of the property. Current Use: The site is currently a commercial bakery operated by the Greyston Foundation. Surrounding Uses: Land use surrounding the site is industrial, commercial and institutional. The Hudson River is located approximately 400 feet west of the site. Historical Source(s)of Contamination: This site was formerly a portion of a manufactured gas plant (MGP). Raw materials were stored on this parcel and gas purification may have been performed here. Investigations/Actions Performed to Date: A combined Phase I/Phase II Environmental Site Assessment was conducted in 1999 and in November 2000, the owner of the property (Greyston Foundation) entered into the NYS Voluntary Cleanup Program. Under this program, several environmental investigations were conducted. As a result of these investigations a Remedial Action Work Plan (RAWP) was submitted to and approved by the Department in 2000. The remedial actions were completed in conjunction with construction of the Bakery, between April 2002 and October 2003. The remedial actions included the installation of a LNAPL and DNAPL recovery system, which consisted of a funnel and gate system and collection sump; the construction of a vapor barrier and sub-slab venting system under the bakery building; and the installation of a geocomposite clay-material liner over contaminated soil on portions of the site not covered by building, asphalt, pavement, or sidewalk. In May 2004 the Department determined that the RAWP was satisfactorily implemented. A Site Management Plan was approved in 2005. Current Actions: The site is in the Site Management phase. Groundwater monitoring continues pursuant to the Site Management Plan.

Env Problem: Contaminants of Concern: The primary contaminants of concern at this site are volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) relating to coal tar, petroleum, ash, and coal cinders. Impacted Media: Investigations of the environmental conditions found VOCs, polycyclic aromatic hydrocarbons (PAHS) and DNAPL petroleum products in the soils and groundwater at the site. Known SCG Exceedences: Soil beneath the cover system exceeds standards, criteria, and guidance (SCGs) for PAHs. A sub-slab depressurization system has been installed in the building, preventing exposures to contaminated soil vapor. Groundwater beneath the site exceeds water quality standards for benzene and ethyl benzene. However this contamination appears to be coming from an upgradient source and will be addressed under the CE Woodworth Avenue MGP Voluntary Cleanup Program site (V00564). More information regarding the site can be found in the documents placed in the Site Document Repository.

Health Problem: A portion of the site lies over a former manufactured gas plant. Coal tar contamination has been found in on-site soil and groundwater. Mobile coal tars are being recovered on-site and are not an exposure pathway. A sub-slab depressurization system has been installed in the building, preventing exposures from contaminated soil vapor. Residual soils on site not covered by the building or asphalt have been capped with a clay barrier, preventing direct contact exposures. The area is served by public water.

MGP Voluntary Cleanup Program site (V00564). More information regarding the site can be found in the documents placed in the Site Document Repository.

Health Problem: A portion of the site lies over a former manufactured gas plant. Coal tar contamination has been found in on-site soil and groundwater. Mobile coal tars are being recovered on-site and are not an exposure pathway. A sub-slab depressurization system has been installed in the building, preventing exposures from contaminated soil vapor. Residual soils on site not covered by the building or asphalt have been capped with a clay barrier, preventing direct contact exposures. The area is served by public water.

Site Description:	Location Description: The Greyston Bakery (formerly, 104 Ashburton Avenue) site is located at the corner of Ashburton Avenue and Alexander Street in the City of Yonkers, Westchester County, NY. The site is across the railroad tracks from the CE Woodworth Avenue former manufactured gas plant (MGP) site (#V00564). Predominant Site Features: This irregularly shaped site comprises 1.61 acres. A two-story structure currently used as the Greyston Bakery is located on the northwestern portion of the property; a one-story brick structure, operated as a Metro-North Substation, is located on the eastern portion of the property; and a concrete retaining wall separates the property from adjoining railroad tracks to the east. An asphalt parking lot is located on the the southern portion of the property. Current Use: The site is currently a commercial bakery operated by the Greyston Foundation. Surrounding Uses: Land use surrounding the site is industrial, commercial and institutional. The Hudson River is located approximately 400 feet west of the site. Historical Source(s)of Contamination: This site was formerly a portion of a manufactured gas plant (MGP). Raw materials were stored on this parcel and gas purification may have been performed here. Investigations/Actions Performed to Date: A combined Phase I/Phase II Environmental Site Assessment was conducted in 1999 and in November 2000, the owner of the property (Greyston Foundation) entered into the NYS Voluntary Cleanup Program. Under this program, several environmental investigations were conducted. As a result of these investigations a Remedial Action Work Plan (RAWP) was submitted to and approved by the Department in 2000. The remedial actions were completed in conjunction with construction of the Bakery, between April 2002 and October 2003. The remedial actions included the installation of a LNAPL and DNAPL recovery system, which consisted of a funnel and gate system and collection sump; the construction of a vapor barrier and sub-slab venting system under the bakery building; and the installation of a geocomposite clay-material liner over contaminated soil on portions of the site not covered by building.

GREYSTON BAKERY (FORMERLY, 104 ASHBURTON AVENUE) (Continued) **S110309473**

asphalt, pavement, or sidewalk. In May 2004 the Department determined that the RAWP was satisfactorily implemented. A Site Management Plan was approved in 2005. Current Actions: The site is in the Site Management phase. Groundwater monitoring continues pursuant to the Site Management Plan.

Env Problem: Contaminants of Concern: The primary contaminants of concern at this site are volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) relating to coal tar, petroleum, ash, and coal cinders. Impacted Media: Investigations of the environmental conditions found VOCs, polycyclic aromatic hydrocarbons (PAHS) and DNAPL petroleum products in the soils and groundwater at the site. Known SCG Exceedences: Soil beneath the cover system exceeds standards, criteria, and guidance (SCGs) for PAHs. A sub-slab depressurization system has been installed in the building, preventing exposures to contaminated soil vapor. Groundwater beneath the site exceeds water quality standards for benzene and ethyl benzene. However this contamination appears to be coming from an upgradient source and will be addressed under the CE Woodworth Avenue MGP Voluntary Cleanup Program site (V00564). More information regarding the site can be found in the documents placed in the Site Document Repository.

Health Problem: A portion of the site lies over a former manufactured gas plant. Coal tar contamination has been found in on-site soil and groundwater. Mobile coal tars are being recovered on-site and are not an exposure pathway. A sub-slab depressurization system has been installed in the building, preventing exposures from contaminated soil vapor. Residual soils on site not covered by the building or asphalt have been capped with a clay barrier, preventing direct contact exposures. The area is served by public water.

Site Description: The site at 35 Alexander Street, was purchased by the County of Westchester in order to joined with the 21 Alexander Street site (V00440) to form a waterfront green space and a refurbished home for the Beczak Environmental Education Center. The site had been contaminated by PCBs and metals, particularly mercury and lead. The remediation of the site, performed in conjunction with the work at 21 Alexander Street was completed in 2004.
Env Problem: Not reported
Health Problem: On-site contaminated soil is covered with two feet of clean soil. Access and use restrictions prohibit excavation at the site without notice to the NYSDEC. Therfore, direct contact is not a potential exposure pathway. No other potential exposure pathways exist at this site.

Site Description:	This site at 21 Alexander Street, owner by the County of Westchester, had been leased to the New York Ste Militia for training purposes until 1966 when it was leased to the the City of Yonkers for recreational purposes. The site was contaminated by metals and semivolatile organics (SVOCs). The remedaition of the site was completed in 2004 in conjunction with the remediation of the 35 Aleander Street.
Env Problem:	Not reported
Health Problem:	On-site contaminated soil is covered with two feet of clean soil. Access and use restrictions prohibit excavation at the site without notice to the NYSDEC. Therfore, direct contact is not a potential exposure pathway. No other potential exposure pathways exist at this site.

NORTH YONKERS PUMP STATION (Continued) **1012187101**

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D009
Waste name:	MERCURY
Violation Status:	No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

POLYCHROME CORP (Continued) **1000441180**

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

EXCELSIOR PACKAGING GROUP (Continued) **1000457297**

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No

PORT AUTH OF NY & NJ - INDUSTRIAL PARK (Continued) **1000390997**

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 01/01/2006

Facility name: PORT AUTH OF NY & NJ - INDUSTRIAL PARK
Site name: PORT AUTHORITY OF NY & NJ IND PARK YONKE
Classification: Large Quantity Generator

Date form received by agency: 04/29/1992
Facility name: PORT AUTH OF NY & NJ - INDUSTRIAL PARK
Site name: PORT AUTHORITY OF NEW YORK
Classification: Large Quantity Generator

Date form received by agency: 01/14/1987
Facility name: PORT AUTH OF NY & NJ - INDUSTRIAL PARK
Classification: Large Quantity Generator

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 05/23/1988
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

FINDS:

Registry ID: 110008023922

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003

KAWASAKI & NISSHO IWAI (Continued) **1000157869**

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F004
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: CRESOLS AND CRESYLIC ACID, AND NITROBENZENE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

DEC Memo:	Spoke to Katie. She reports oil sheen noted this AM on River along shoreline near Train Station. Unk. source. Contacted Todd Ghiosay. Todd to followup. DT 6/24/11 06/24/11 The area was inspected and a sheen was observed in the southern end of a cove where the Yonkers Canoe Club is located. The sheen may be seeping from the Riverbank in front of an area where a SPDES discharge sign is located but a followup inspection will be performed to confirm this observation. It should be noted that an intense rain event occured the day before the spill was reported (June 23). TG 07/01/11 The area was inspected and found to be free of oil. Spoke with the Commodore of the Canoe Club who said he has been on the river almost every day since last week and he hasn't noted any oil sheen. NFA TG
Remarks:	sheen noted on water - not noticeable yesterday -

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	04/25/01 Spill possibly related to spill 93-05779. 06/26/2001 LETTER SENT TO YONKERS INDUS. DEV. ASSOCIATION BY S. GOREAU (WCDOH); PER SITE CLOSURE REPORT, SOIL & GW SAMPLING SHOW THAT RESIDUAL CONTAMINATION REMAINS ON SITE IN EXCEEDANCE OF TAGM 4046. INSTALLATION OF ONE MONITORING WELL REQUIRED; WELL MUST BE SAMPLED EACH QUARTER FOR ONE YEAR AFTER WHICH A REVIEW WILL BE MADE. 10/06/03: Letter to CDP, Yonkers INc. from Stefan Goreau, WCDOH dated 09/29/2003. Another round of sampling results is due by 11/15/2003. Need for further assessment or sampling to be determined after review of report. 12/2/03: Letter to Edward Sheeran, Yonkers Industrial Development Assoc., from Stefan Goreau, WCDOH dated 26 Nov 2003. Final groundwater sampling results have been reviewed. Results were satisfactory WCDOH recommends NFA at this time.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the

POLYCHROME CORP (Continued) **1000705398**

Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Updated By:	GWHEITZM
Site Description:	Location Description: The CE - Woodworth Avenue Manufactured Gas Plant Site is located between Babcock Place, Ashburton Avenue, Woodworth Avenue, and Alexander Street in the City of Yonkers, Westchester County, NY. Predominant Site Features: The site area covers approximately 4.3 acres and is divided into western and eastern sections by rail lines of the Metro-North Commuter Railroad. Current Use: The site is currently occupied by the Metro North Railroad and commercial properties. Surrounding Uses: Land use surrounding the site is industrial and commercial. The Hudson River is located approximately 400 feet west of the site. Historical Source(s) of Contamination: This site was the location of a former Manufactured Gas Plant (MGP). Historical records indicate that most of the gas production activities occurred east of the railroad tracks and the storage of coal and oil, and gas purification occurred to the west of the railroad tracks. Investigations/Actions Performed to Date: Consolidated Edison has entered into a legal agreement with the NYSDEC to investigate this Former MGP site. Current Actions: A Site Characterization is scheduled for 2011.
Env Problem:	A Site Characterization is scheduled for 2010.
Health Problem:	DOH has insufficient information to evaluate the potential for human exposures.

OFF-SITE FORMER TEUTONIA HALL SITE
41-51 BUENA VISTA AVENUE
YONKERS, NY 10701

NY BROWNFIELDS S107787028
N/A

Relative:
Higher

Actual:
39 ft.

BROWNFIELDS:
Program: BCP
Site Code: 351168
Site Description: The investigation of this site is currently being implemented under the Brownfield Cleanup Program (BCP). The site is 0.75 acres, consisting of 4 adjacent tax lots and is located at 41-53 Buena Vista Avenue in the City of Yonkers, Westchester County. When this site entered the program it included only 41-51 Buena Vista Avenue but on April 16, 2007 the BCA was amended to include the Buena Vista Garage BCP site at 53 Buena Vista Avenue. The site is located in downtown Yonkers and consists of five vacant buildings which were formerly used as industrial buildings. There are two vacant three-story buildings, a vacant two story building with an ajoining one-story addition, a one-story auto repair garage and a parking area. This site is bounded to the west by the Metro North/Amtrack active railroad line, to the north by an old railroad repair shop known as

OFF-SITE FORMER TEUTONIA HALL SITE (Continued) **S107787028**

the "trolley barn" building, to the east by Buena Vista Avenue and several parking/vacant lots and one apartment building east of the street, and to the south by two residential dwellings, beyond which is a day care center. Historically this site has been used for a variety of industrial and petroleum-related commercial purposes, including but not limited to, auto repair, a garage with underground storage tanks, a knitting mill, a dry cleaner, a toy manufacturer, a jewelry manufacturer and a printing facility. The first phase of the Remedial Investigation is completed in 2006 and the second phase began in August July 2007. The investigation could not be completed due to access limitations and will continue when the on-site buildings are demolished. In April 2007 when a BCA amendment was signed merging two sites under a new owner, the revised CPP and Supplement RIWP were approved (July 9, 2007). A Remedial Investigation Report was submitted and comments were sent to the consultant on May 21, 2008. The groundwater characterization could not be completed due to access limitations. Once the on-site buildings are demolished, the consultant will return to the site to install permanent wells. The Department approved a June 23, 2008 extension request. The developer has met with local opposition to demolition of the buildings for historical reasons. A positive Significant Threat Determination was approved on August 14, 2008. A second site was created to address potential offsite vapor impacts from onsite VOCs (C360085a). An I&R and analytical call-out was issued on January 27, 2009 to conduct sub-slab and indoor air sampling at four residences adjacent to this site. Four homes were sampled on March 17-18, 2009 and preliminary results indicate that only minimal impacts to these homes have been found. Received final report on June 12, 2009 and comments were issued on August 27, 2009. On June 6, 2009 the developer obtained a permit to demolish the Buena Vista Garage at 53 Buena Vista Avenue. Once demoloshed, the RI may resume on this portion of the BCP site. The consultant was able to install 2 additional monitoring wells without removing the building. Drilling was conducted on December 10-11, 2009. Wells were drilled to a depth of about 33 feet, however, wells were dry when attempted to sample. Will try again in the spring when the WT is expected to be higher. Consultant preparing final RI report. A call-out was issued on January 22, 2010 to conduct a second round of vapor sampling per a request from NYSDOH. Sampling was conducted at 6 residences on March 2-3, 2010. Final data has not been received, but additional indoor air sampling will be done this winter (2010-2011).

Env Problem: PCE and TCE were detected in sub-slab soil vapor samples at significantly elevated concentrations. Other VOCS, including DCE and BTEX related compounds, were found as well but at relatively low levels. Low exceedances of SVOCs and metals were found throughout the site, mainly in surface soils. There was one sample that exceeded SCOs for PCE. No groundwater contamination has been identified to date however the full groundwater characterization effort (from the July 2007 RI) could not be completed due to access limitations. The additional wells will be installed when the on-site buildings are demolished. More information can be found at the document repository: Yonkers Public Library in Yonkers, NY.

Health Problem: There are no complete exposure pathways on the site because the site buildings are vacant. Based on soil vapor results at the site boundary, the potential exists for exposures to occur off the site via the soil vapor intrusion pathway. The NYSDEC will investigate this off-site exposure pathway.

OFF-SITE FORMER TEUTONIA HALL SITE (Continued) **S107787028**

Program: BCP
Site Code: 419363
Site Description: This site was created to investigate potential off-site vapor impacts from the Former Teutonia Hall BCP site (C360085). The area of concern is an urban mixed commercial/ residential zone consisting of mostly 2 family homes. Site boundary lies along Buena Vista Avenue between Hudson Street and Prospect Street and along Hawthorne Avenue between Hudson Street and Prospect Street. Investigation/ Response and analytical call-outs were issued on January 27, 2009, January 22, 2010 and January 31, 2011 to conduct sub-slab and indoor air sampling at multiple residences adjacent to this site. Four properties were sampled on March 17-18, 2009. Six properties were sampled on March 2-3, 2010. Seven properties were sampled on March 8-9, 2011.
Env Problem: Standby Remedial Contractors have performed 3 vapor sampling events (sub-slab and indoor air) at multiple properties during each of the past 3 heating seasons. Contaminants of concern include the chlorinated solvents trichloroethene (TCE) and perchloroethene (PCE). 1,1,1 Trichloroethane (1,1,1 TCA) and Carbon Tetrachloride have also been detected. NYSDOH has requested an additional round of sampling during the 2011-2012 heating season
Health Problem: Not reported

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/31/2011

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/31/2011

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Other Ascertainable Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

Next Scheduled EDR Contact: 09/26/2011
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Longitude (West):	73.9015 - 73° 54' 5.4"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	592475.6
UTM Y (Meters):	4532221.5
Elevation:	7 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	40073-H8 YONKERS, NJ
Most Recent Revision:	1998

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

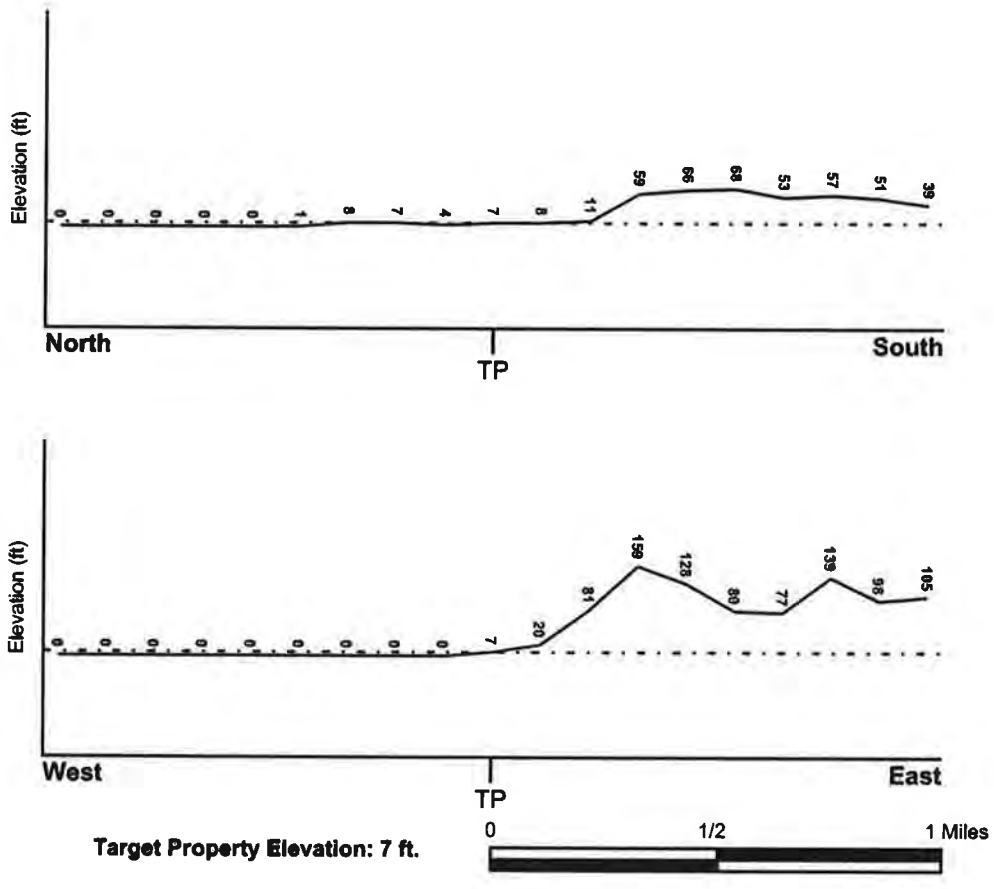

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
WESTCHESTER, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	36119C - FEMA DFIRM Flood data
Additional Panels in search area:	34003C - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
YONKERS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

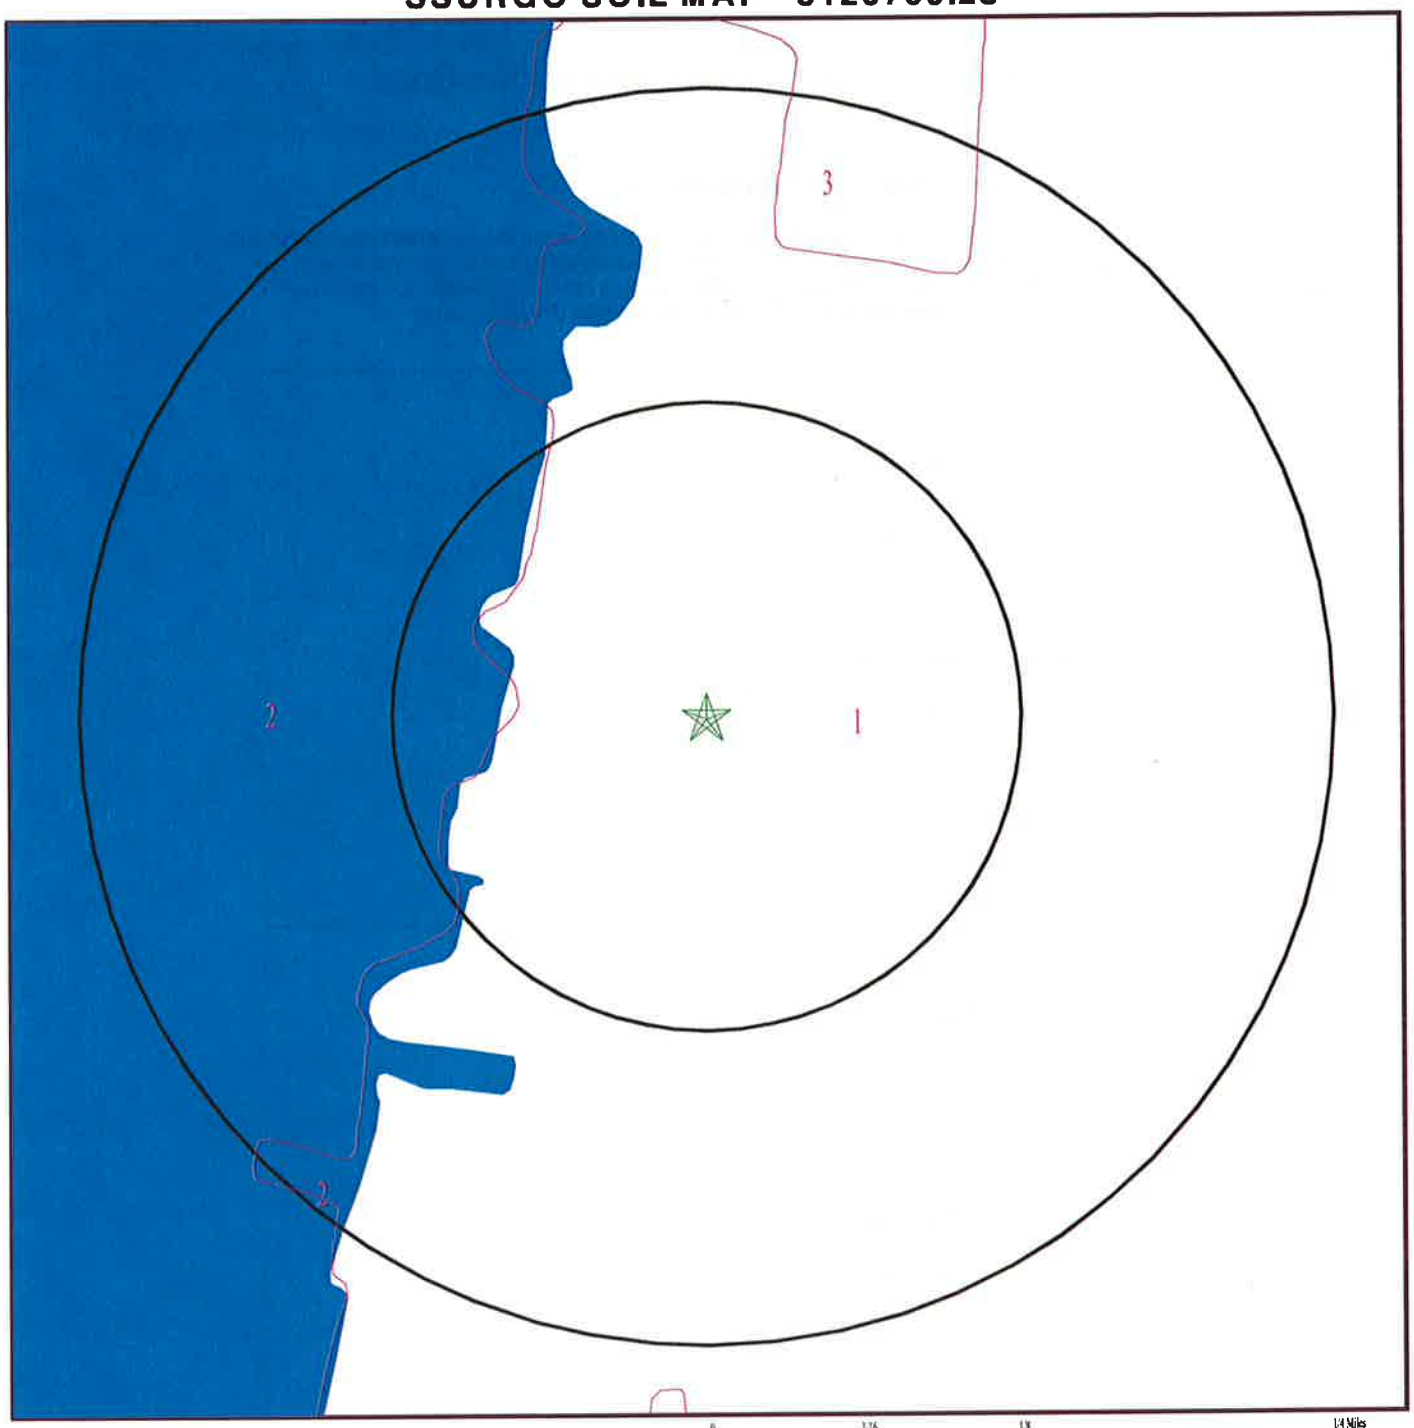

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name:	Urban land
Soil Surface Texture:	
Hydrologic Group:	Not reported
Soil Drainage Class:	
Hydric Status: Unknown	
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name:	Water
Soil Surface Texture:	
Hydrologic Group:	Not reported
Soil Drainage Class:	
Hydric Status: Unknown	
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name:	Udorthents
Soil Surface Texture:	gravelly loam
Hydrologic Group:	Not reported
Soil Drainage Class:	Somewhat poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 127 inches

Depth to Watertable Min: > 38 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5
2	3 inches	72 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

— Quitclaim Deed – Individual or Corporation (single sheet) C. - 5569

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT—THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made the 24th day of February in the year 2010

BETWEEN

Kenneth Krasnow and Bonnie Hagan (fka Haberman) as successor trustees under the Harold Krasnow Trust u/a dated 2/18/2005 c/o Michael Getman, Esq, 445 Hamilton Avenue, Suite 1102, White Plains, New York 100601

party of the first part, and BJH Properties LLC and Wrambleek LLC as tenants in common, c/o Michael Getman Esq., 445 Hamilton Avenue, Suite 1102, White Plains, New York 10601

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby remise, release and quitclaim unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the See Schedule A

Being the same premises as described in a certain deed dated 2/18/2005 recorded 6/9/2005 in the Westchester County Clerk's Office in control number 451440127.

TOGETHER with all right, title and interest, if any, of the party of the first part of, in and to any streets and roads abutting the above-described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF:

Kenneth Krasnow, TRUSTEE

Kenneth Krasnow, trustee

Bonnie Hagan Trustee

Bonnie Hagan, trustee (FKA BONNIE HABERMAN)

SCHEDULE A

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the City of Yonkers, County of Westchester and State of New York, and bounded and described and follows:

BEGINNING at a point on the easterly side of Alexander Street, distant 385.67 feet as measured in a southerly direction along the easterly side of Alexander Street from the corner formed by the intersection of the southerly side of Ashburton Avenue with the easterly side of Alexander Street; running thence in an easterly direction on a line having an interior angle of 87° 22' 00" with the easterly side of Alexander Street, a distance of 227 feet to the westerly line of land of the New York Central Railroad; running thence in a southerly direction and along the westerly line of land of the New York Central Railroad on a curve to the right having a radius of 2707.48 feet an arc distance of 77.42 feet to the northerly line of land now or formerly of Mary Eliza Saunders; running thence in a westerly direction and along the northerly line of land now or formerly of Mary Eliza Saunders, and on a line having an interior angle of 90° 47' 34" with the easterly side of Alexander Street a distance of 209.75 feet to the easterly side of Alexander Street; running thence in a northerly direction and along the easterly side of Alexander Street, a distance of 83.08 feet to the point or place of beginning.

SAID PREMISES being known as and by 72 Alexander Street, Yonkers.

BEING THE same premises as described in a certain Bargain and Sale Deed from H.K. Properties Corp. to Harold Krasnow dated May 19, 1987 and recorded in the Westchester County Land Records in Liber 8832 at Page 218 in the book of Deeds.

1.0 INTRODUCTION

On behalf of Excelsior Packaging Group, PS&S Engineering, Inc. (PS&S) conducted a Limited Phase II Environmental Site Investigation (ESI) at 72 Alexander Street located approximately 300 feet to the southeast of the intersection of Alexander Street and Ashburton Avenue in the City of Yonkers, Westchester County, New York (herein referred to as the "Site"). The location of the Site is depicted on a United States Geographical Survey (USGS) Topographic Map – Yonkers, New York Quadrangle (**Figure 1**).

The purpose of the ESI was to investigate Recognized Environmental Conditions (RECs) associated with past and current uses of the Site that were identified during the Phase I Environmental Site Assessment (ESA) conducted by PS&S. The goal of the ESI was to determine if the RECs have resulted in environmental impacts requiring additional investigation to complete characterization and delineation of the identified impacts and to support potential remedial decisions for the redevelopment of the property.

1.1 Site Description

The Site is approximately 0.41 acres and includes Yonkers City Lot 25 of Tax Block 2608 which consists of property listed at 72 Alexander Street. There is approximately eighty-percent building coverage on the site. The street frontage along Alexander Street is approximately 83 feet. North of the Site is bordered by the former Sun Chemical Site; the Metro North Rail Road Right-of-Way to the East; Alexander Street followed by mixed commercial and industrial uses to the West; and the former Patclin Chemical Company facility to the South. The Site is currently used as a warehouse for cardboard packaging materials and equipment with some truck storage in south driveway.

1.2 Phase I Results and Recommendations

PS&S performed a Phase I ESA in general conformance with the scope and limitations of ASTM E-1527-05. The Phase I ESA reported RECs for the Site and provided recommendations for addressing each REC. The RECs and associated recommendations are listed below.

The Site historically contained petroleum stored in underground storage tanks (USTs) located in the western portion of the site. Two UST fill ports and a vent pipe were observed. No documentation was obtained as part of the PS&S Phase I ESA to indicate USTs were removed from the Site. Based on the past use of petroleum materials, investigation was recommended to determine the condition of the surrounding soil and groundwater in the area of the suspect USTs. If evidence of impacts to the subsurface environment is identified, then an additional sampling program may be recommended. If during any exploratory investigations suspect USTs are confirmed, then the tanks should be removed in accordance with all applicable regulations.

Subsurface testing was also recommended to be performed on the Site in accordance with all applicable regulations to address the following potential soil and groundwater contamination issues:

- Interior floor drains in the loading dock area were observed during the site reconnaissance. Evidence of petroleum staining was observed on the floor near the drains and standing liquid within these drains was observed. The outflow destinations of these floor drains were not determined. There is the potential that petroleum may have been released and/or disposed into these drains. Verification of the presence of contaminated materials requires a sampling and analysis program.
- Junk truck storage was observed in the southern unpaved driveway during the site reconnaissance. Evidence of petroleum staining was observed on the ground in the area of truck storage. Determining the extent of the observed petroleum staining requires a sampling and analysis program.
- Due to the proximity of documented and suspected contaminated facilities that are located upgradient and cross-gradient of the Site in respect to groundwater flow, the migration of off-site contamination via groundwater beneath the Site is possible. A subsurface investigation at the property boundary was recommended to determine the condition of the underlying soil and to evaluate the potential presence of off-site contamination.

Because the Site building was constructed prior to 1978, it is suspected these buildings may contain lead based paint. A Lead Based Paint (LBP) Survey should be conducted prior to any demolition/construction activity to determine the presence or absence of LBP. This REC was not investigated as part of this ESI.

It is likely that asbestos containing asbestos containing building materials (ACBM) are located within the Site building since the structure was constructed prior to 1978. An ACBM Survey should be conducted to determine the presence or absence of ACBM. If it is asbestos-containing (greater than one percent), then abatement (repair, enclosure, encapsulation, or removal and disposal) should be supervised by a licensed asbestos contractor in compliance with state and federal regulations. This REC was not investigated as part of this ESI.

Fluorescent light ballasts were observed at the time of the site reconnaissance of the Site. Based upon the fact that the building was constructed prior to 1979, it is likely that some fluorescent light ballasts that are currently in place were manufactured with PCBs. It is recommended that in accordance with New York State Department of Environmental Conservation (NYSDEC) and appropriate state and federal regulations, replacement and proper disposal of these ballasts be conducted in order to minimize potential concert with their contents. This REC was not investigated as part of this ESI.

1.3 Areas of Investigation

Selected RECs were investigated as part of this limited Phase II ESI. The following areas of investigation (AOI) were included as part of this ESI:

- Areas downgradient of the suspect USTs;
- Area of loading dock floor drains;
- Truck storage areas in south driveway; and
- Upgradient area in the east parking area and cross-gradient area in the south driveway.

The ESI was implemented as discussed in **Section 2**.

1.4 Report Organization

Section 1, *Introduction*, includes the purpose and goals of the ESI, describes the Site, and lists the Site's RECs and AOI.

Section 2, *Site Investigation Activities*, details the field activities, sample collection procedures, analytical protocol, Quality Assurance/Quality Control (QA/QC) procedures, and the health and safety program.

Section 3, *Site Investigation Findings*, summarizes the field observations and laboratory analytical data results.

Section 4, *Conclusions*, summarized the environmental impacts documented in each environmental media and potential sources of impacts.

Section 5, *Recommendations*, proposes additional investigative activities to delineate environmental site conditions.

2.0 SITE INVESTIGATION ACTIVITIES

The field investigation program consisted of the collection and analysis of samples from various environmental media to determine the nature and extent of chemical constituents at the Site. The environmental media included surface soil, subsurface soil, sediment (floor drains), groundwater, and soil vapor.

This program was developed to address the REC's identified in the Phase I ESA and to provide an initial limited characterization of environmental impacts. Although soils, sediment and groundwater samples were obtained from all areas of the Site, the sampling locations were biased towards areas of suspect former USTs, areas in the vicinity of former operations and floor drains. Subsequent phases of the investigation may be developed to further delineate identified contaminants of concern, as well as to obtain sufficient data to complete characterization of the former operational areas of the Site and general Site conditions. **Figure 2** depicts the soil and sediment sampling locations. **Figure 3** depicts the groundwater and soil vapor sampling locations.

The environmental investigation was conducted in July 2011. The ESI program involved the following activities:

- Surface and subsurface soil sampling;
- Floor drain sediment sampling
- Groundwater sampling; and
- Soil vapor sampling.

Sample collection was performed in accordance with NYSDEC guidelines. The work conducted on site was performed in accordance with United States Department of Labor Occupational Safety and Health Administration (OSHA) regulations and a site-specific Health and Safety Plan (HASP). The soil, sediment and groundwater samples were analyzed by York Laboratories (York) of Stratford, Connecticut in accordance with USEPA SW-846 methods. York is a New York State-certified laboratory (laboratory license #10854).

Field selected soil samples were submitted to the analytical laboratory for analysis of the following:

- Target Compound List Volatile Organic Compounds (TCL VOC) plus tentatively identified compounds (TICs) by EPA Method 5053B;
- TCL Semi-Volatile Organic Compounds (TCL SVOC) plus TICs by EPA Method 3550B;
- Target Analyte List (TAL) Metals by EPA Method SW 846-3050B and Mercury by EPA Method SW 846-7471; and
- Polychlorinated Biphenyls (PCBs), Herbicides and Pesticides by EPA Method 3550B.

Collected groundwater samples were submitted to the analytical laboratory for analysis of the following:

- TCL VOC plus TICs by EPA Method 5030B;

- TCL SVOC plus TICs by EPA Method 3510C;
- TAL Metals by EPA Method SW 846-3010A and Mercury by EPA Method SW 846-7470 for both Total and Dissolved Metals; and
- Polychlorinated Biphenyls (PCBs) and Pesticides by EPA Method SW846-3510C.

The soil vapor samples were submitted to the analytical laboratory for analysis of the Full List of VOCs by EPA Method TO-15.

Exceptions these sample parameter lists are noted in the sections below.

2.1 Soil Sampling

To address USTs and subsurface areas of concerns as identified in Section 1.2, PS&S advanced thirteen soil borings within the property boundaries. These soil borings were identified as SB-GP-1 through SB-GP-14. All of the soil borings were advanced to a depth ranging from fifteen feet below ground surface (bgs). Groundwater was typically encountered at a depth of approximately eight feet bgs.

The soil borings were installed via direct push (GeoProbe) methods with continuous sampling utilizing a standard 2-inch diameter, 48-inch long sampler installed with a clear acetate liner and advanced with a hydraulic hammer. The driller inserted a new, dedicated acetate liner and decontaminate the down-hole boring equipment between boring locations. The borehole was sampled continuously and the samples were screened for VOCs utilizing a photoionization detector (PID); inspected for the presence of staining, discoloration, and Non-Aqueous Phase Liquids (NAPL); checked for odors; and logged using the Unified Soil Classification system. Boring logs are included in **Appendix A**.

Generally, one soil sample was collected from each soil boring. A sample was collected from the two-foot interval of the boring that included evidence of contamination. If no contamination was observed in the boring, then a sample was selected from the two-foot interval intersecting the water table. No soil samples were submitted for laboratory analysis from soil boring locations SB-GP-4 and SB-GP-9.

Prior to the commencement of soil probing activities and between borehole locations, all “down-hole” probing equipment, were decontaminated between each use by thoroughly washing with alconox and water, using a brush to remove particulate matter or surface film, followed by a thorough rinsing with tap water. All liquids generated from the decontamination process were pumped into 55-gallon drums for disposal after review of the analytical results.

Upon completion of each soil probe, recovered soil material not retained for laboratory analysis was returned to the probe hole. All probe holes were restored

at grade to original conditions with like surface material. For example, asphalt areas were replaced with asphalt and concrete areas were replaced with concrete.

Soil samples were submitted for laboratory analysis for the presence of TCL VOCs, TCL SVOCs, PCBs, Pesticides, Herbicides and TAL Metals.

2.2 Sediment Sampling

To address the Subsurface Testing as identified in **Section 1.2**, PS&S collected two sediment samples from the floor drains in the loading dock area. These samples were identified as SED-GP-1 and SED-GP-2. The sample locations were field selected from floor drains containing significant accumulations of sediment. Disposable scopes were utilized to collect the samples from the drains.

Sediment sample SED-GP-2 was submitted for laboratory analysis for the presence of TCL VOCs, TCL SVOCs, TAL Metals, PCBs, Pesticides, and Herbicides. Sediment sample SED-GP-21 was submitted for laboratory analysis for the presence of TCL VOCs, TCL SVOCs, and TAL Metals only due to limited sample volume collected from the drain.

2.3 Groundwater Sampling

To address the USTs and Subsurface Testing as identified in **Section 1.2**, PS&S installed three groundwater samples within the property boundaries to provide for initial representative groundwater samples. These well locations were identified as MW-GP-1, MW-GP-2, and MW-GP-3. MW-GP-1 was installed in the southeast portion of the Site which is assumed to be the upgradient portion of the groundwater gradient and may be used to determine if contamination is migrating beneath the Site from off-site sources. Monitoring wells MW-GP-2 and 3 were installed in the western portion of the Site which is generally the downgradient portion of the Site. Additionally, MW-GP-3 was located immediately downgradient of the suspect UST area. The downgradient wells were designed to determine if potential on-site of off-site sources may be have impacted the groundwater at the Site.

The groundwater samples were collected by driving GeoProbe macrocore rods to the bottom of the designated sample depth interval, inserting a pre-packed GeoProbe monitoring well, and the macrocore rods were retracted leaving the well screen. The Geoprobe pre-packed monitoring wells are constructed of threaded two-inch outside diameter schedule-40 PVC well casing equipped with 10-slot well screen that is wrapped by a stainless-steel mesh containing silica sand. The wells were installed to total depth of 15 feet included 5 feet of PVC riser and 10 feet of screen extended into the water table. The wells were screened across the first encountered water table at approximately 7 feet below grade

surface. The total installed depth of the wells was approximately 15 feet below grade surface.

Following their installation, the groundwater monitoring wells were developed, using a submersible pump until the purge water was nearly free of visible turbidity. To minimize suspended material, the wells were developed slowly using low-flow submersible pump techniques. The wells were developed at low pumping rates, on the order of 0.5 to one gallon per minute (gpm). The volume of water removed, the well development time, and field instrument readings were recorded on field forms. At least 15 gallons were purged from each well during development.

Following an equilibration period of one day, groundwater samples for laboratory analysis were collected from each groundwater monitoring well. Groundwater purging and sampling of the monitoring wells were performed in accordance with low flow sampling procedures. Prior to sampling, approximately 6 gallons of water were purged from the monitoring wells. Dedicated poly tubing was installed in each well across the middle of the screening casing for sample collection.

Upon successful collection, the groundwater samples were stored in coolers containing ice and maintained at a temperature of approximately four degrees Celsius (4^{o} C). The samples were transferred to a NYSDOH ELAP-certified laboratory, along with a properly completed Chain-of-Custody.

Samples were analyzed for TCL VOCs, TCL SVOCs, PCBs, Pesticides, and both total and dissolved TAL metals. The sample submitted for dissolved metals was filtered by the laboratory.

2.4 Soil Vapor Sampling

To address the Subsurface Testing as identified in **Section 1.2**, PS&S collected two soil vapor samples within the property boundaries. These samples were identified as SV-GP-1 and SV-GP-2. The samples were collected utilizing GeoProbe rods driven through the concrete floor of the site to a depth of approximately 4 feet below floor surface grade and above the groundwater table. Dedicated teflon tubing was connected to stainless-steel sample points that were installed through the probe hole. The concrete opening was sealed with bentonite. The tubing was connected to a laboratory-provided SUMA canister utilized to draw the soil vapor and collect the samples. Samples were collected in accordance with the New York State Department of Health Guidance. The laboratory performed analyses via Modified EPA Compendium Method TO-15 using GC/MS in the full scan mode.

2.5 Quality Assurance/Quality Control (QA/QC) Samples

QA/QC samples for this ESI were collected to ensure the integrity of the resulting analytical laboratory data. The QA/QC set included a blind duplicate for soil samples at a rate of 1 per 20 environmental samples. These blanks were submitted for the same analytical parameters as the soil, sediment and groundwater sample parameters detailed in the previous sections. One trip blank sample was submitted for each laboratory sample set and was analyzed for TCL VOCs.

2.6 Health and Safety Program

All work was performed in accordance with OSHA, state, and industry safety standards and the Health and Safety Plan. All work at the Site was performed with Level D personal protective equipment.

All air monitoring equipment was calibrated and maintained in accordance with a site-specific Health and Safety Plan. During the installation of soil probes and the collection of soil and groundwater samples, organic vapor concentrations within the work area were continuously monitored utilizing hand-held equipment to monitor VOCs. The air monitoring, response and action levels were presented in the Health and Safety Plan.

3.0 SITE INVESTIGATION FINDINGS

The characterization of soil, sediment and groundwater quality at the Site is based on the analytical data gathered during this limited Environmental Site Investigation (ESI). A total of 11 soil samples, 2 sediment samples, 3 groundwater samples and 2 soil vapor samples were collected at the Site. Summary tables of soil, sediment, groundwater, and soil vapor quality data are provided in **Tables 1** through **5.**

The analytical soil and sediment sample results were compared to the Unrestricted Use Soil Criteria of Table 375-6.8(a) within the Remedial Program Soil Cleanup Objectives 6 NYCRR Subpart 375-6. Compounds not included in Table 375-6.8(a) were compared to Technical and Administrative Guidance Manuel (TAGM) 4046, Recommended Soil Cleanup Objectives. The two soil criteria are referred to as standards, criteria and guidance values (SCGs) throughout the remainder of this report. The groundwater samples were compared to the Ambient Water Quality Standards (AWQS) listed in the Technical and Operational Guidance Series (TOGS) 1.1.1 document. The exceedances of criteria are bolded on the data summary tables contained in **Tables 1 to 4**. **Figure 4** summarizes soil and sediment sample exceedances of SCG.

Field observations and laboratory analytical data results collected during this limited ESI are summarized below.

3.1 Sediment Samples

Two sediment samples were collected on the Site. Petroleum impacts were observed on all of the sediment samples. Samples SED-GP-1 and SED-GP-1 were collected from drains in the loading dock area. Both samples included wet, black material with a petroleum and septic odor. The laboratory analytical data is summarized in **Tables 1** through **3**. The laboratory report summary reports are included in **Appendix B**.

The analytical results indicated that TCL VOCs were detected in both sediment samples. SCG exceedances were found in SED-GP-1 for the compounds Acetone, Toluene, o-Xylenes, p- & m-Xylenes, total Xylenes, and 1,2,4-Trimethylbenzene.

TCL SVOCs were detected only in the SED-GP-2 sediment sample. No SCG exceeded were found.

TAL Metals were detected in both sediment samples. The following metals were detected at concentrations exceeding their respective NYSDEC SCGs in all of the samples: arsenic, barium, cadmium, copper, lead, nickel and zinc. Additionally, selenium was found exceeding the SCG for SED-GP-1.

PCBs were detected and exceeded SCGs in sediment sample SED-GP-2. PCBs were not testing in sample SED-GP-1. The pesticides Aroclor 1254 and 1260 were detected in the sediment samples both below their respective SCGs.

3.2 Soil Samples

A total of 13 soil borings were installed with a GeoProbe, and 11 soil samples were collected and submitted for laboratory analysis. No samples were submitted from boring locations SB-GP-4 and SB-GP-9. A blind duplicate sample was submitted from boring location SB-GP-10 and was labeled sample SB-GP-25 when submitted to the laboratory.

The locations of the soil borings are included on **Figure 2**. A chemical or petroleum odor was observed on recovered soil at the borings: SB-GP-1, SB-GP-2, SB-GP-3, SB-GP-5, SB-GP-6, SB-GP-7, and SB-GP-12. PID readings were measured at the following borings with the highest VOC reading included in parts per million (ppm): SB-GP-3 (0.2 ppm), SB-GP-5 (40 ppm), SB-GP-6 (1.5 ppm), and SB-GP-12 (2.8 ppm).

Sample locations and SCG exceedances are depicted on **Figure 4**. Field logs were prepared for each soil boring and are presented in **Appendix A**. The analytical results discussed are detailed in **Tables 1** to **3**. The laboratory reports are included in **Appendix B**.

TCL VOCs were detected in all soil samples. SCG exceedances were found in the soil samples SB-GP-3(13-15'), SB-GP-5(13-15'), SB-GP-10(13-15'), SB-GP-11(3-5'), SB-GP-12(3-5') and SB-GP-13(13-15') that included exceedances of one or more of the following compounds: Naphthalene, Ethyl Benzene, Toluene, Acetone and Methylene Chloride. Acetone and Methylene Chloride were also detected in the laboratory blanks for all of the soil samples and are common laboratory contaminants.

TCL SVOCs were detected in all soil samples, except for sample SB-GP-13(13-15'). SCG exceedances were found in the soil samples SB-GP-3(13-15') and SB-GP-7(5-8') that included exceedances of one or more of the following compounds: Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Chrysene, and Indeno(1,2,3-cd)pyrene.

TAL Metals were detected in all soil samples. SCG exceedances were found in the soil samples SB-GP-1(9-10'), SB-GP-2(0-2'), SB-GP-3(13-15'), SB-GP-7(5-8'), SB-GP-8(3-5'), SB-GP-10 (13-15'), SB-GP-11(3-5'), SB-GP-12(3-5') and SB-GP-13(13-15') that included exceedances of one or more of the following metals: arsenic, copper, iron, lead, selenium and zinc.

No Pesticides, Herbicides or PCBs were detected in the soil samples.

3.3 Groundwater Samples

Groundwater samples were collected at 3 GeoProbe pre-packed well locations. The quality of recovered groundwater was generally good with limited turbidity observed after purging the well. A duplicate sample was submitted from well location MW-GP-2. The approximate locations of the groundwater wells are included on **Figure 3**. Compound detections and exceedances are summarized in **Table 4**. The laboratory reports are included in **Appendix B**.

TCL VOCs were detected and exceeded SCGs in all groundwater samples. The samples included exceedances of one or more of the following compounds: Isopropylbenzene, Acetone and Methylene Chloride. Acetone and Methylene Chloride were also detected in the laboratory blanks for all of the samples and are common laboratory contaminants. Isopropylbenzene was only detected in the sample from the well location MW-GP-3.

Acenaphthene was the only SVOC detected at two groundwater sample locations, MW-GP-1 and MW-GP-3. No SVOCs were detected above their respective SCGs.

TAL Metals were detected in all groundwater samples, including both total and dissolved metals. However, no Metals detections were above their respective SCGs.

No Pesticides or PCBs were detected in the groundwater samples.

3.4 Soil Vapor Findings

Soil vapor sampling was performed to identify existing soil vapor concentrations at the Site. **Figure 3** shows the approximate location of soil vapor samples inside of the Site building. Compound detections and exceedances are summarized in **Table 5**. The soil vapor analytical report is presented in **Appendix B**.

A total of 25 VOCs were detected in the sample collected at location SV-GP-1. A total of 15 VOCs were detected in the sample collected at location SV-GP-2. Sample results for VOCs were compared to the greater of the NYS indoor and NYS outdoor. All the detected compounds exceeded these "background" concentrations.

Methylene chloride was detected with the concentration 3,900 ug/m3 at location SV-GP-1 and with concentration 3,600 ug/m3 at location SV-GP-2 above the NYS ambient air value of 60 ug/m^3. Trichloroethene was detected with the concentration 410 ug/m3 at location SV-GP-1 and with the concentration 460 ug/m3 at the location SV-GP-2 above the NYS ambient air value of 5 ug/m^3.

4.0 CONCLUSIONS

Selected RECs were investigated as part of this limited Phase II ESI. The following four AOI were included in the scope of work:

- Areas of the suspect USTs;
- Area of loading dock floor drains;
- Truck storage areas in south driveway; and
- Documented and suspected contaminated facilities located upgradient and cross-gradient area of the Site.

4.1 Suspect USTs AOI

The western portion of the Site includes an area with two suspect petroleum USTs. A subsurface investigation was conducted to determine the condition of the surrounding soil and groundwater in the suspect UST area. Soil borings SB-GP-1 and SB-GP-13 were installed in the area downgradient of the suspect USTs. The monitoring wells MW-GP-3 and MW-GP-2 were installed downgradient of the UST area. Additionally, two soil vapor points were installed under the building slab to investigate for potential soil vapor intrusion issues.

Slight petroleum odors were observed between the depths of 10 to 15 feet in the soil boring SB-GP-1, and no PID readings were measured in the soil borings. Exceedances of VOC and SVOC SCGs associated with petroleum fuel oil were not measured in the soil samples collected downgradient of the UST area. The volatile organic compound Isopropylbenzene was detected above the NYSDEC TOGS Class GA value in the well location MW-GP-3 located downgradient of the UST area. Based on the findings of the Phase I ESA and this ESI, potential sources of the impacts may be attributable to historical releases from the suspect USTs.

4.2 Loading Dock Floor Drains AOI

Interior floor drains in the loading dock area were observed during the site reconnaissance. Evidence of petroleum staining was observed on the floor near the drains and standing liquid within these drains was observed. Sediment samples were collected from each drain. Petroleum impacts were observed on both sediment samples. VOCs exceedances of SGCs were detected in SED-GP-1 for petroleum compounds. Metals exceedances of SCGs were in both sediment samples. PCBs were detected and exceeded SCGs in sediment sample SED-GP-2. Based on the findings of the Phase I ESA and this ESI, potential sources of the impacts may be attributable to historical releases from the former and current site operations.

4.3 Truck Storage Area in South Driveway AOI

Junk truck storage was observed in the south unpaved driveway during the site reconnaissance. Evidence of petroleum staining was observed on the ground in the area of truck storage. A total of 7 soil borings (SB-GP-1 to SB-GP-7) were installed in the south driveway. A chemical or petroleum odor was observed on recovered soil at the borings: SB-GP-1, SB-GP-2, SB-GP-3, SB-GP-5, SB-GP-6, and SB-GP-7. PID readings were measured at the driveway borings with the highest VOC reading included in ppm: SB-GP-3 (0.2 ppm), SB-GP-5 (40 ppm), SB-GP-6 (1.5 ppm), and SB-GP-12 (2.8 ppm). No sample from soil boring SB-GP-4 was submitted for analysis.

TCL VOCs SCG exceedances for Naphthalene and Ethyl Benzene were found in the soil samples SB-GP-3(13-15') and SB-GP-5(13-15'). TCL SVOCs SCG exceedances were found in the soil samples SB-GP-3(13-15') and SB-GP-7(5-8') that included exceedances of one or more of the following compounds: Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Chrysene, and Indeno(1,2,3-cd)pyrene. TAL Metals SCG exceedances were found in the soil samples SB-GP-1(9-10'), SB-GP-2(0-2'), SB-GP-3(13-15'), and SB-GP-7(5-8') that included exceedances of one or more of the following metals: arsenic, copper, iron, lead, selenium and zinc. Based on the findings of the Phase I ESA and this ESI, potential sources of the impacts may be attributable to historical releases from the former and current site operations.

4.4 Upgradient and Cross-Gradient Off-Site Properties AOI

A subsurface investigation at the property boundary was recommended to determine the condition of the underlying soil and to evaluate the potential presence of off-site contamination from documented and suspected contaminated facilities located upgradient and cross-gradient of the Site.

To evaluate potential impacts from the former Patclin Chemical facility located cross-gradient and south of the Site, a total of 7 soil borings (SB-GP-1 to SB-GP-7) and two monitoring wells (MW-GP-1 and MW-GP-2) were installed along the southern boundary. A findings summary of the southern boundary soil borings are included above in **Section 4.3**. The TCL VOCs Acetone and Methylene Chloride were detected in the groundwater samples. Acetone and Methylene Chloride were also detected in the laboratory blanks for the groundwater samples and are common laboratory contaminants. No SVOCs were detected in the groundwater samples above their respective SCGs. No Metals detections were above their respective SCGs in the groundwater samples.

To evaluate potential impacts located upgradient gradient the Site, a total of 3 soil borings (SB-GP-7, SB-GP-8, and SB-GP-9) and the monitoring well MW-GP-1 were installed in the eastern portion of the Site. A chemical odor was observed on

recovered soil at the borings SB-GP-7. No sample from soil boring SB-GP-9 was submitted for analysis.

TCL SVOCs SCG exceedances were found in the soil sample SB-GP-7(5-8') that included exceedances for Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Chrysene, and Indeno(1,2,3-cd)pyrene. TAL Metals SCG exceedances were found in the soil samples SB-GP-7(5-8') and SB-GP-8(3-5') that included exceedances of one or more of the following metals: copper, lead, selenium and zinc.

Based on the findings of the Phase I ESA and this ESI, potential sources of the soil impacts may be attributable to historical releases from the former and current site operations. Additionally, the soil impacts along the southern boundary may be attributable to historical releases from the former facility located south of the Site.

5.0 RECOMMENDATIONS

5.1 Tank Recommendations

The two suspect USTs located in the western portion of the Site should be removed in accordance with all applicable regulations.

5.2 Sediment Recommendations

Impacted sediment documented in the floor drains should be removed and disposed in accordance with all applicable regulations.

5.3 Soil and Groundwater Recommendations

Based on the comparison of the analytical results to the NYSDEC criteria, there are site-wide impacts that require further delineation through the implementation of a Remedial Investigation (RI) to support future remedial action decisions. Additional soil and groundwater investigations are recommended as part of a future RI to support delineation and remedial design. Additional investigations would be designed based upon proposed site redevelopment plans and would include further site-wide sampling targeted towards the impacts identified in this report.

5.4 Soil Vapor Recommendations

NYSDOH Vapor Intrusion Guidance suggests that the soil vapor sample results indicate that consideration for further study and/or potential vapor intrusion mitigation would be warranted at the Site. A soil vapor assessment should be performed after Site demolition/remediation and prior to any new construction at the Site in accordance with the NYS Vapor Intrusion Guidance to support delineation and remedial design.

NOTES:
Any Regulatory Exceedences are color coded by Regulation
Q is the Qualifier Column with definitions as follows:
B=analyte found in the analysis batch blank
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
D=result is from an analysis that required a dilution
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

NOTES:
Any Regulatory Exceedences are color coded by Regulation
Q is the Qualifier Column with definitions as follows:
B=analyte found in the analysis batch blank
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
D=result is from an analysis that required a dilution
NT=this indicates the analyte was not a target for this sample
~=this indicates that no regulatory limit has been established for this analyte

YORK
ANALYTICAL LABORATORIES, INC.

Technical Report

prepared for:

PS&S
470 Nepperhan Avenue, Suite 220
Yonkers NY, 10701
Attention: Hal Newell

Report Date: 07/26/2011
Client Project ID: 72 Alexander St.
York Project (SDG) No.: 11G0501

Report Date: 07/26/2011
Client Project ID: 72 Alexander St.
York Project (SDG) No.: 11G0501

PS&S
470 Nepperhan Avenue, Suite 220
Yonkers NY, 10701
Attention: Hal Newell

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 15, 2011 and listed below. The project was identified as your project: **72 Alexander St.**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
11G0501-01	MW-GP-1	Water	07/15/2011	07/15/2011
11G0501-02	MW-GP-2	Water	07/15/2011	07/15/2011
11G0501-03	MW-GP-3	Water	07/15/2011	07/15/2011
11G0501-04	MW-GP-2-DUP	Water	07/15/2011	07/15/2011

General Notes for York Project (SDG) No.: 11G0501

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Approved By: 

Date: 07/26/2011

Robert Q. Bradley
Executive Vice President / Laboratory Director

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
JN	The Tentatively Identified Compound reported indicates the presence of an possible analyte or class of analyte that has been 'tentatively identified' and the associated numerical value represents its estimated concentration.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL); therefore, the result is an estimated concentration.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

Corrective Action: Do Not do Herbicides per Client because not enough sample was submitted - JG 07/18/2011

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 15, 2011 and listed below. The project was identified as your project: **72 Alexander St.**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 11G0481

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Approved By:  **Date:** 07/29/2011

YORK
ANALYTICAL LABORATORIES, INC.

Notes and Definitions

S-AC	Acid surrogate recovery outside of control limits. The data was accepted based on valid recovery of remaining two acid surrogates.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
JN	The Tentatively Identified Compound reported indicates the presence of an possible analyte or class of analyte that has been 'tentatively identified' and the associated numerical value represents its estimated concentration.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL); therefore, the result is an estimated concentration.
IS-01	Certain internal standards were suppressed due to matrix effects. The sample was reanalyzed to confirm this matrix interference.
B-Dil	Detected in method blank(s) associated with the sample analysis. This is a common lab artifact which is found at ND-25 ppb. No dilution factor has been applied to these compounds to eliminate artificially inflated results.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

Corrective Action: Lab received 1-2oz jar for SB-GP-4 (10-13) that is not on COC.
PG 7-15-11
Do not run, as per Hal Newell,7/20/11, PM

Yonkers NY, 10701
Attention: Hal Newell

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 15, 2011 and listed below. The project was identified as your project: **72 Alexander St**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
11G0479-01	SV-GP-1	Soil Vapor	07/14/2011	07/15/2011
11G0479-02	SV-GP-2	Soil Vapor	07/14/2011	07/15/2011

General Notes for York Project (SDG) No.: 11G0479

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

ND Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.

MDL METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.
