

August 10, 2023

Ms. Greta White  
Project Manager, Remedial Bureau C  
Division of Environmental Remediation  
New York State Department of Environmental Conservation (NYSDEC)  
625 Broadway  
Albany, NY 12233-7014

Re: NYSDEC Site No. 360174; BCP C361074  
July – August 2023 Monthly Progress Report  
Westchester County Airport  
240 Airport Road  
Harrison, New York 10604

Dear Ms. White:

### **Actions Taken/Accomplishments (July to August 2023)**

A schedule of completed and projected activities is included as Appendix A.

1. On July 25, 2023, First Environment submitted the updated Remedial Investigation Workplan (RIWP) to the New York State Department Environmental Conservation (NYSDEC).
2. On August 3, 2023, the NYSDEC approved the Site Characterization Report (SCR) for Westchester County Airport.
3. First Environment is working with the County, Airport, and Triumph Construction to provide air monitoring and oversight/sampling for the dewatering treatment system during the water line construction. Construction began on June 26. As of July 27, installation has been completed from B0+00 to B24+50 as well as C10+61 to C01+00 and is illustrated in Figure 1. First Environment has conducted continuous air monitoring during the entire process. The daily report, data collection table, and air monitoring results are included in Appendix B.
4. While the temporary water treatment system is operational, sufficient recoverable groundwater has not been encountered; therefore, no groundwater has been treated and analyzed for the required chemical constituents. The first water was collected on July 6, and approximately 16,000 gallons have been collected as of July 28. Once groundwater is available, those constituents will be tested before entering and after leaving the treatment system as required by Westchester Department of Environment Facilities (DEF). Once demonstrated that chemical constituents are below

acceptable levels, the water will be discharged to the designated sanitary sewer.

5. First Environment initiated the estimated three-month pilot test to reduce PFAS concentrations discharging to OF-7. The week of July 3, 2023, First Environment installed a continuous-duty submersible pump at manhole 7006. The pilot system was installed on July 10 through July 13, 2023. The water collected from manhole 7006 is pumped through three exterior bag filters to remove sediment before entering an equalization tank used to maintain a treatment flow rate of between 8 and 12 gallon per minute (gpm). Dedicated pumps provide up to a 6-gpm flow rate from the equalization tank to separate treatment lines: one using granular activated carbon (GAC) and the other ion exchange resin (IX resin) as the treatment media. The treated water is immediately discharged downstream of the water intake leading to OF-7. The weeks of July 17 and July 24, 2023, First Environment has been working to optimize pilot system performance and maintain operation.
6. Continued the update of Electronic Data Deliverables (EDDs) sample locations.

### **August to September Planned Activities**

1. Provide Westchester County an American Disabilities Act (ADA) version of the SCR as well as continued monthly progress reports for County's website.
2. First Environment will collect influent and effluent samples from the water line treatment system associated with dewatering activities, evaluate water quality data, and record water flow leaving the treatment system per DEF permit requirements once the system has begun operation. Triumph, the waterline installation contractor, is responsible for the treatment system operation and maintenance.
3. Upon NYSDEC approval, First Environment will initiate the RIWP and provide a schedule for completion of RIWP activities.
4. First Environment will continue to provide Continuous Air Monitoring during waterline intrusive construction activities as described in First Environment's Community Air Monitoring Program (CAMP) submittal to the NYSDEC/NYSDOH.
5. The 2021 constructed stormwater system has reduced the flow of PFAS impacted water leaving the Airport at OF-7 by as much as 50 times. The water flow leaving OF-7 during dry conditions is approximately one gallon per minute (gpm), and during the wet season flow leaving OF-7 is generally between 5 to 10 gpm (non-rain event conditions). The water leaving OF-7 under these conditions is attributed to groundwater entering the storm sewer system through leaks and daylighting to storm drains. The mass of PFAS leaving OF-7 has been reduced; however, PFAS levels remain elevated in water leaving OF-7 as well as at the downgradient New York City

Department Environmental Protection (NYCDEP) E-10 measuring station, as shown in Figure 2.

6. First Environment will continue the estimated three-month pilot test at OF-7 to treat water. The purpose of the system is to evaluate the treatment system performance as well as the effectiveness of the treatment in reducing PFAS concentrations downgradient of the treatment system.
7. The County will retain an independent third-party contractor in the third quarter of 2023 who specializes in stormwater systems to evaluate the presence of groundwater leaks and provide solutions to try to eliminate PFAS impacted groundwater from entering the stormwater system leading to OF-7.
8. Revisions of the EDDs will continue for submittal to the NYSDEC.

If you have any questions, please do not hesitate to call.

Regards,

FIRST ENVIRONMENT, INC.

## **APPENDIX B**

## APPENDIX B – FIELD SUMMARY AND AIR MONITORING DATA

### Field Summary

July 2023

Wednesday, 7/5

Triumph and First Environment mobilized to the site at 06:15. Triumph's scope-of-work for the day was to grade the topsoil along the newly installed pipeline, from approximately B0+00 to B15+00. By 13:15, all topsoil grading and cleanup activities were completed and all parties exited the site. Throughout the day, dust monitors and a PID were used to monitor airborne particulate and VOC levels, but no significantly elevated levels were observed. Other data gathered included flow measurements/estimates from OF-7, E-10 (+ stream gauge level), Trib 1, and Trib 2. Rainfall (cumulative over the weekend), PM10 AQI, and PM2.5 AQI were also recorded.

Thursday, 7/6

Triumph and First Environment mobilized to the site at 06:25. Triumph resumed excavation at approximately B15+00 until they reached FAA lines, and a vacuum truck was used to continue. An electric line was also encountered at approximately B17+00. By 11:20, Triumph had successfully excavated and installed pipe to approximately B17+10, approaching the perimeter fence. At 13:50, backfill and cleanup activities concluded, and all parties exited the site. Throughout the day, dust monitors and a PID were used to monitor airborne particulate and VOC levels, but no significantly elevated levels were observed. Other data gathered included flow measurements/estimates from OF-7, E-10 (+ stream gauge level), Trib 1, and Trib 2. Water level measurements were taken from wells P1-P3, P5, MW13-16, Trib 1, Trib 2, NKS 2, ES DS, and 4R. Rainfall, PM10 AQI, and PM2.5 AQI were also recorded.

Friday, 7/7

Triumph and First Environment mobilized to the site at 06:15. Triumph resumed excavation at approximately B17+10 and approached the perimeter fence. After reaching the perimeter fence, Triumph encountered groundwater. However, it was not enough to warrant active dewatering. Triumph placed stone at the bottom of the trench, from approximately B16+75 to beyond the fence line, before installing the watermain pipe. Triumph backfilled the trench before starting excavation on the outer side of the perimeter fence. At approximately B18+75, Triumph encountered groundwater. Again, it was not enough to warrant active dewatering, so stone was placed in the trench before watermain pipe installation. Triumph successfully excavated and installed pipe to approximately B19+00 and began backfill and cleanup activities. At 14:50, backfill and cleanup activities concluded, and all parties exited the site. Throughout the day, dust monitors and a PID were used to monitor airborne particulate and VOC levels, but no significantly elevated levels were observed. Other data gathered included

flow measurements/estimates from E-10 (+ stream gauge level), Trib 1, and Trib 2. OF-7 has been temporarily blocked off while a treatment system is installed. Rainfall, PM10 AQI, and PM2.5 AQI were also recorded.

The first picture below shows groundwater encountered at the perimeter fence. The second shows groundwater encountered at approximately B18+75.

Monday, 7/10

First Environment and Triumph mobilized to the site at 06:50. Cloudy, post-heavy rain conditions were observed. Triumph began by pumping water that had accumulated in the trench at approximately B19+00 and resumed excavation at 07:50. Multiple lines were encountered between B19+00 and B19+50; a smaller bucket on the excavator and hand excavation were both used to continue. By 12:15, Triumph had reached approximately B19+50 and stopped just before Airport Rd. Groundwater was encountered at B19+50 and Triumph will pump it Tuesday morning. Backfill and cleanup activities concluded at 14:40. Dust monitors and a PID were used to monitor airborne particulate and VOC levels, but no significantly elevated levels were observed throughout the day. Other data gathered included flow measurements/estimates from Trib 1, Trib 2, and E-10 (+stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.

Tuesday, 7/11

First Environment and Triumph mobilized to the site at 06:10. Triumph pumped accumulated water from the trench at approximately B19+50 and laid stone before installing pipe at that location. Triumph continued with excavation and pipe installation along Airport Rd. By 13:00, Triumph had successfully excavated and installed pipe to approximately B21+50, and

backfill/cleanup activity commenced. Minimal amounts of groundwater were encountered and did not warrant dewatering. By 14:10 all sweeping and dust-generating activities were completed, and the dust monitors were broken down during Triumph's final cleanup. Dust monitors and a PID were used to monitor airborne particulate and VOC levels, but no significantly elevated levels were observed throughout the day. Other data gathered included flow measurements/estimates from Trib 1, Trib 2, and E-10 (+stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.

Wednesday, 7/12

First Environment and Triumph mobilized to the site at 06:13. Triumph resumed excavation and pipe installation at approximately B21+50 along Airport Rd. At approximately B24+25, Triumph encountered a previously installed storm sewer line and elected to proceed under it. Triumph excavated under the line to a depth of approximately 9 feet and encountered groundwater; stone was placed before pipe was installed. By 15:05, Triumph had successfully excavated and installed pipe to approximately B24+50 and began backfilling/cleaning. At 15:40, all cleaning activities were completed. Dust monitors and a PID were used to monitor airborne particulate and VOC levels, but no significantly elevated levels were observed throughout the day. Other data gathered included flow measurements/estimates from Trib 1, Trib 2, and E-10 (+stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.

Thursday, 7/13

First Environment and Triumph mobilized to the site at 06:20. Triumph began excavating a test pit at C10+61 to locate the existing watermain. A suspected fiber optic line was encountered during excavation – the duct was cracked, but all lines remained intact. Triumph proceeded, avoiding the line. By 08:00, the existing watermain had been located and excavation was completed at this location. Triumph intend to tie into the existing watermain at this location beginning at 04:00 Friday morning. Triumph relocated to the B18+00 to B21+00 area for various tasks – backfilling, thrust block installation, and a valve junction + hydrant installation at B19+75. Groundwater was present at approximately B19+50, which was pumped out; Triumph had also laid stone at B19+75 before installing the valve junction and hydrant. Cleanup activity began at 12:50 and concluded at 14:20. Dust monitors and a PID were used to monitor airborne particulate and VOC levels, but no significantly elevated levels were observed throughout the day. Other data gathered included flow measurements/estimates from Trib 1, Trib 2, and E-10 (+stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI. Before leaving the site, pressure readings were taken from various parts of the OF-7 treatment system.

Friday, 7/14

First Environment arrived to the site at 04:50. Triumph had arrived to the site at 04:00 and began cutting and tying into the existing watermain at C10+61. No excavation had occurred since the test pit was dug Thursday morning. By 06:10, the tie-in was completed and Triumph continued excavating along Airport Rd from C10+61. Groundwater was present at C10+61 which was dewatered and laid with stone. At 07:52, heavy rain began, but Triumph continued work. At 06:28, no rain had fallen; at 11:02, approximately 1.5" of water had accumulated in a measuring bucket. By 10:05, Triumph had successfully excavated and installed pipe to approximately C8+00. Groundwater was encountered between approximately C8+00 and C10+00, but was not enough to warrant dewatering. Large amounts of groundwater and runoff had accumulated in the trench near C10+61, which was dewatered by Triumph. By 14:02, cleanup had completed and the dust monitors were broken down. Dust monitors and a PID were used to monitor airborne particulate and VOC levels, but no significantly elevated levels were observed throughout the day. Other data gathered included flow estimates from Trib 1, Trib 2, E-10's stream gauge level, rainfall, PM10 AQI, and PM2.5 AQI. Flow from E-10 was not able to be accurately measured due to the volume and speed of the water exiting the V-notch. All of the data gathered related to streams occurred after rainfall.

Monday, 7/17

Triumph and First Environment mobilized to the site at 06:24. A significant amount of water had accumulated at C10+61 over the weekend and was dewatered. Triumph continued excavation and watermain installation along Airport Rd, starting from approximately C8+00. At approximately C7+75, Triumph encountered a storm sewer line and elected to install the pipe underneath. By 13:15, excavation and watermain installation had been completed to approximately C7+40 and backfill/cleanup activity commenced. Minimal other groundwater was encountered between C8+00 and C7+40; stone was laid before watermain installation in said areas. This concluded at 14:50. Dust monitors and a PID were used to monitor airborne particulate/VOC levels, but no significantly elevated levels were observed. Other data gathered throughout the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+ stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.

Tuesday, 7/18

Triumph and First Environment mobilized to the site at 06:22. Triumph resumed excavation and pipe installation along Airport Rd at approximately C7+40. By 11:15, excavation and pipe installation was completed to approximately C4+00 and backfill/cleanup activity commenced. At 14:13, cleanup activities had concluded. Dust monitors and a PID were used to monitor airborne particulate/VOC levels, but no significantly elevated levels were observed. Other data gathered throughout the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+ stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI. Rain had started at 11:12 and ended before the workday concluded. Note that the flow measurements taken this day were taken shortly after rain began.

Wednesday, 7/19

Triumph and First Environment mobilized to the site at 06:12. Triumph pumped water that had accumulated at approximately C4+00 and continued excavation and pipe installation. At approximately C3+00, Triumph encountered an existing storm sewer line and elected to continue under it. During excavation under the storm sewer line, groundwater was encountered; this was pumped and the area was stabilized with stone before pipe installation. At this point, Triumph estimates that 12,000 gallons of water has been put into the treatment system tank. By 13:30, excavation and pipe installation had been completed to approximately C2+75. Backfill and cleanup activity commenced immediately after and concluded at 14:47. Dust monitors and a PID were used to monitor airborne particulate/VOC levels, but no significantly elevated levels were observed. Other data gathered throughout the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+ stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI. Elevated AQI levels and a slight haze in the air were both observed. This is theorized to be a result of Canadian wildfire smoke being carried south. The photo below shows the watermain installed under the sewer line at ~C3+00.

Thursday, 7/20

Triumph and First Environment mobilized to the site at 06:25. Triumph pumped water that had accumulated at approximately C2+75 and resumed excavation and pipe installation. Triumph was simultaneously installing thrust blocks, extending hydrants, and grading topsoil within the airfield. By 10:28, excavation and pipe installation had been completed to approximately C1+00 and backfill/cleanup activity commenced. This concluded at 13:30. Dust monitors and a PID were used to monitor airborne particulate/VOC levels along the watermain

installation, but no significantly elevated levels were observed. Other data gathered throughout the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+ stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI. Water level measurements were also taken from monitoring wells P1-P3, P5, MW13-16, Trib 1, Trib 2, ES DS, 4R, and NKS 2.

Friday, 7/21

Triumph and First Environment mobilized to the site at approximately 05:22. Triumph began grading and laying topsoil at B0+00. Triumph continued along the previously installed watermain line and concluded activity at approximately B17+00 (11:28). Dust monitors were used to monitor airborne particulate levels, but no significantly elevated levels were observed. Other data gathered throughout the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+ stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.

Monday, 7/24

Triumph and First Environment mobilized to the site at 06:22. Triumph will be grading minimal amounts of topsoil, installing thrust blocks, backfilling, and performing other restoration work in the approximate area of B18+00 to B22+00. This concluded at 12:30, and cleanup activity concluded at 13:15. Dust monitors and a PID were used to monitor airborne particulate/VOC levels throughout the day, but no significantly elevated levels were observed. Other data gathered during the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.

Tuesday, 7/25

Triumph will only be pouring thrust blocks on Tuesday, 7/25. Because no intrusive activity will be occurring, First Environment will not be on site this day.

Wednesday, 7/26

Triumph and First Environment mobilized to the AOA at 06:15. Triumph was to perform a final rake/grade along the newly installed pipeline between B0+00 and B17+00. Triumph was simultaneously pouring thrust blocks and doing minimal backfilling in various locations along Airport Rd. By 11:32, raking/grading had been completed and all parties left the site. Dust monitors and a PID were used to monitor airborne particulate/VOC levels along the raking/grading work area, but no significantly elevated levels were observed throughout the day. Other data gathered during the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.

Thursday, 7/27

Triumph and First Environment mobilized to Airport Rd at 06:17. Triumph began preparation for a thrust block pour at approximately B24+00. After the thrust block was poured, Triumph backfilled the area with sand and concrete. All work for the day concluded at 13:55 and all parties left the site. Dust monitors and a PID were used to monitor airborne particulate/VOC levels throughout the day, but no significantly elevated levels were observed. Other data gathered during the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.

Friday, 7/28

Triumph and First Environment mobilized to Airport Rd at 06:13. Triumph continued excavation along Airport Rd starting from approximately B24+00. By 10:20, Triumph had successfully excavated and installed pipe to approximately B25+25, and approximately 50 feet further up Airport Rd from B24+75, where the watermain crosses Airport Rd. This stretch of pipeline approaches the proposed flow meter building location. Triumph had also pumped a minimal amount of water from B24+50. At 14:00, work concluded for the day and all parties left the site. Dust monitors and a PID were used to monitor airborne particulate/VOC levels throughout the day, but no significantly elevated levels were observed. Other data gathered during the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.

Monday, 7/31

Triumph and First Environment mobilized to the site at 22:35. Triumph continued excavation and pipe installation at approximately B25+25. By 05:30 on Tuesday, 8/1, Triumph had successfully excavated and installed pipe to approximately B26+00. Cleanup activity commenced shortly after and concluded at 05:50, and all parties left the site. Dust monitors and a PID were used to monitor airborne particulate/VOC levels throughout the day, but no significantly elevated levels were observed. Other data gathered during the day included flow measurements/estimates from Trib 1, Trib 2, E-10 (+stream gauge level), rainfall, PM10 AQI, and PM2.5 AQI.
