1.0 PROJECT BACKGROUND

Terracon Consultants – NY, Inc. (Terracon) has prepared this Construction Completion Report (CCR) for the installation of a new concrete pad associated with a capital improvement project to include the Passenger Terminal Heating, Ventilation and Air Conditioning (HVAC) units HVAC-1 and HVAC-2 Upgrades project (HVAC Project) located within the Westchester County Airport (the "Airport" or "Site"). The Site is located at 240 Airport Road in West Harrison, Westchester County, New York (**Exhibit 1** and **Exhibit 2** in **Appendix A**).

The Site is currently in the New York State (NYS) Brownfield Cleanup Program (BCP) as Site No. C360174, which is administered by New York State Department of Environmental Conservation (NYSDEC or Department). The work was completed in accordance with the department approved IRM Work Plan for Concrete Pad for New HVAC Capital Improvement Project Passenger Terminal HVAC-1 and HVAC-2 Upgrades dated June 27, 2025 and in general accordance with the NYSDEC-approved Interim Site Management Plan (ISMP) for the Site.

The HVAC Project included installation of a new concrete pad located outside and adjacent to Passenger Terminal, as shown on the Site Diagram on **Exhibit 2**. The soil boring locations and approximate limits of the IRM activities and construction activities were located near Passenger Terminal are also shown on **Exhibit 3**.

A new structural concrete slab was constructed to support the new HVAC units. To construct the new concrete pad, the following activities were completed:

- Existing area surfacing (asphalt pavement) was removed.
- An approximate 20 foot by 20 foot by 3-foot-deep excavation was completed.
- Backfilling of the excavated area with pre-approved backfill materials including sand, gravel and crushed stone.
- Completion of concrete pad for use with HVAC unit.

The structural foundation engineering plans are included in **Appendix B**.

1.1 Site Description and History

The Site is located in a mixed-use area of commercial and residential parcels and is further illustrated on the United States Geological Survey (USG S) 7.5-minute Quadrangle (Glenville NY Topographic Quadrangle, 1967, Photo revised 1981) Map provided as **Exhibit 1**. The Site is approximately 688 acres, with about a third of the

Airport located in the Kensico watershed. The topography at the Airport is generally flat and slopes gently to the west towards rye Lake and south towards nearby tributaries.

The New York Air National Guard (NYANG) was a tenant at the Airport from 1947 to 1983. As part of its operations, the NYANG performed aircraft firefighting training operations on a regular basis. These firefighting exercises and training activities were performed at a "Burn Pit" that was located near the NYANG's former hanger (hereafter referred to as the "NYANG Burn Pit") on County property adjacent to the NYANG's leasehold.

The NYANG conducted these exercises from as early as 1968 until 1983 when they vacated the Airport. The NYANG, as part of its firefighting exercises, used Aqueous Film-Forming Foam (AFFF), which historically contained compounds referred to as per- and polyfluoroalkyl substances (PFAS). The duration of AFFF use at the NYANG Burn Pit and the fact that the NYANG Burn Pit likely has resulted in groundwater at this location exhibiting the highest concentrations of PFAS impacts at the Site.

The Site entered a Brownfield Site Cleanup Agreement on August 10, 2021, under Brownfield Cleanup Program (BCP) Site Number C360174.

1.2 Conditions Warranting Interim Remedial Measures

A site-wide Remedial Investigation (RI) has not yet been completed for the Site, and previous investigations were not completed within the HVAC project limits.
The construction activities were performed as an IRM and in accordance with the best practices and management plans outlined in the ISMP, including the Excavation Work Plan and approved IRM Work Plan for Concrete Pad for New HVAC Capital Improvement Project Passenger Terminal HVAC-1 and HVAC-2 Upgrades dated June 27, 2025.

2.0 SUMMARY OF INTERIM REMEDIAL MEASURES

The following sections provide a summary of the IRM objectives associated with the HVAC upgrade completed at the Site and included within the approved IRM Work Plan. All work was completed in accordance with the Interim Site Management Plan (ISMP).

2.1 Governing Documents

2.1.1 Interim Site Management Plan

Investigation and construction activities were performed in accordance with the approved IRM Work Plan and ISMP.

2.1.2 Health and Safety Plan

The Health and Safety Plan (HASP) was included as part of the department approved ISMP. IRM activities were completed in accordance with approved ISMP.

2.1.3 Quality Assurance Project Plan (QAPP)

The QAPP was included in the department approved ISMP and IRM Work Plan.

2.1.4 Community Air Monitoring Plan (CAMP)

The CAMP was included in the department approved ISMP. Real time, continuous air monitoring for airborne particulate matter at upwind and downwind locations were collected throughout the course of the work and further discussed in Section 3.5.

2.2 Descprition of Selected IRM

Terracon and associated subcontractors contacted Dig Safely New York, a minimum of three business days prior to the commencement of the field work. In addition, Terracon completed a private utility to mark/clear identifiable utilities in the HVAC Project work zone to clear the proposed drilling locations. Terracon completed the following field procedures:

- Soil sampling utilizing a direct push technology (DPT) drilling rig. Two (2) soil borings were advanced to approximate depths of 8 feet to 10 feet bgs. A summary of the sample analysis performed is presented in **Table 1**.
- Soil samples were field screened with a calibrated organic vapor meter (OVM) equipped with a photoionization detector (PID).
- OVM results and soil descriptions were recorded in the field. Soil boring logs are included in **Appendix C**.
- Soil samples were collected in accordance with the department approved IRM Workplan and ISMP.
- Samples were collected in laboratory provided pre-cleaned sample bottles and shipped in coolers with ice under chain-of-custody procedures to Eurofins Environmental Testing of Amherst, New York (an ELAP accredited laboratory).
- During the construction activities, excavated soils were staged in dumpsters. Staged soils were sampled for reuse on the Site as per NYSDEC Division of Environmental Remediation – Technical Guidance for Site Investigation and Remediation dated May 3, 2010 (DER-10). The soils were later approved for reuse by NYSDEC and reused onsite to fill in low areas as shown in **Appendix A, Exhibit 4**. NYSDEC's approval for reuse is included in **Appendix D**.

- At the completion of excavation activities, nine samples were collected from the side walls, with corresponding quality assurance/quality control (QA/QC) samples. A summary of the sample analysis performed is presented in **Table 1**.

3.0 REMEDIAL PROGRAM ELEMENTS

3.1 Contractors and Consultants

- The following contractors and consultants were involved in the construction activities summarized in this CCR:
- Environmental Consultant: Terracon Consultants NY, Inc. (Terracon) provided consulting services and oversight.
- Drilling Contractor: Sage Environmental, a Terracon company, provided drilling services.
- Excavation Contractor: SCS Excavation Concepts (SCS) provided excavation services.

3.2 Site Preparation

Prior to mobilization, Terracon completed a private utility locate to identify underground utilities and assist with soil boring locations. Terracon mobilized to the Site on July 9, 2025, to perform the drilling services that included completion of two (2) soil borings to collect soil samples in accordance with the IRM Work Plan. Soil analytical results are provided on **Table 2** and laboratory analytical reports are included in **Appendix E**. Based on analytical results, areas of significant impact within the proposed construction area were not identified.

SCS performed the excavations to facilitate the construction of the new concrete pad associated with the HVAC upgrades between August 19, 2025, and August 20, 2025. Nine samples sidewall soil samples were collected after the completion of excavation activities. Four samples were collected in each cardinal direction for the first foot below ground surface, and an additional four samples from the interval of one-to-three feet below ground surface (bgs). Additionally, a sample was collected from the bottom of the excavation. Soil analytical results are provided on **Table 3** and laboratory analytical reports are included in **Appendix E**.

3.3 General Site Controls

Temporary fencing or warning tape was used around the excavation area until backfilling was completed.

3.4 Nuisance Controls

No dust control issues; odor problems or complaints were encountered in conjunction with the remedial work.

3.5 Community Air Monitoring Results

Community air monitoring was completed in accordance with approved CAMP for particulates and total volatiles during intrusive activities including soil excavation activities and soil reuse activities at the Site. No exceedances were recorded during the intrusive activities. Visible dust was not observed within the work area. CAMP data is provided in **Appendix F.**

3.6 Decontamination Procedure

Soil excavation, investigation, and sample collection procedures were conducted in accordance with local industry standard practices. Nonexpendable sampling equipment was decontaminated between sample collection intervals using a detergent/potable water solution wash and potable water rinse per the ISMP.

Decontamination procedures were implemented as necessary during construction activities. Construction equipment that encountered potentially impacted soils were inspected and dry decontaminated prior to handling clean material or leaving the work area. Excavated soil was stored in lined dumpsters and covered once full.

3.7 Remedial Sampling

3.7.1 Soil Boring Sampling Results

In accordance with the approved IRM, Terracon completed two soil borings (SB1 and SB2) and collected soil samples as outlined in the HVAC Upgrades IRM WP. Samples were analyzed for:

- PFAS by Environmental Protection Agency (EPA) Method 1633A
- metals by EPA Methods 6010 and 7471
- herbicides by EPA method 8151
- pesticides by EPA Method 8081
- polychlorinated biphenyls (PCBs) by EPA Method 8082
- volatile organic compounds (VOCs) by EPA Method 8260

Soil sample results were compared to the applicable NYSDEC SCOs (POG SCO and CSCOs) and summarized in **Table 3**.

Based on the analytical results reported by the laboratory, no metals, pesticides, herbicides, or PCBs were detected at concentrations exceeding POG SCOs or Commercial SCOs.

Based on the analytical results reported by the laboratory, elevated PFAS were detected exceeding POG SCOs in 7 of the 10 sidewall/bottom soil samples collected at the Site. PFOS was detected exceeding its POG SCO of 1.0 ug/kg at HVAC SW Bottom 0-3 ft bgs (1.47 ug/kg), HVAC SW East 1-3 ft bgs (3.07 ug/kg), HVAC SW East 0-1 ft bgs (2.15 ug/kg), HVAC SW North 1-3 ft bgs (1.35 ug/kg), HVAC SW North 0-1 ft bgs (1.75 ug/kg), HVAC SW South 1-3 ft bgs (1.60 ug/kg) and HVAC DUP (1.27 ug/kg). No PFAS analytes were detected exceeding CSCOs.

Based on analytical results elevated VOCs were detected exceeding POG SCOs in 1 of the 10 sidewall/bottom soil samples collected at the Site. Acetone was detected exceeding its POG SCO of 0.05 ug/kg at HVAC SW North 0-1 ft bgs (0.22 ug/kg). However, Terracon notes that acetone is a common laboratory artifact detected during analysis associated with the preparation of the samples.

Based on analytical results elevated SVOCs were detected exceeding POG SCOs and CSCOs in 2 of the 5 sidewall/bottom samples collected at the Site. The following exceedances are listed below:

3.10 Soil Handling and Reuse-Disposal Management

Approximately 50 yards of soil generated during the excavation activities for the HVAC upgrade project was temporarily stored in roll off dumpsters. The soils were sampled, and an on-site reuse form was submitted to the NYSDEC for approval. Subsequent approval the soils were then transferred to the southeastern portion of the Site to fill in selected locations. Soil stockpile results are discussed in **Section 3.6.3** and NYSDEC approvals are included in **Appendix D**.

Westchester County Airport, Site No.: C360174
240 Airport Road, West Harrison, NY 10604

Dear Andrew Koons:

The New York State Department of Environmental Conservation (Department) has reviewed the Request to Import/Reuse Fill or Soil form submitted for the Westchester County Airport (site) located at 240 Airport Road, West Harrison, New York, dated November 19, 2025. The request is to reuse 0 to 50 cubic yards of soil produced during excavation for construction of a concrete pad to house a heating, ventilation and air conditioning (HVAC) unit within the boundary of the above referenced Brownfield Cleanup Program (BCP) site. The material is proposed to be reused to infill depressions in the area of the active fire testing and training area on-site. Based on the information provided, the request is hereby approved. The material meets the requirements specified in section 5.4(e)5 of DER-10. Testing in accordance with DER-10 and approval by the Department is required for any additional material to be reused on or imported to the site.

If you have questions or any issues arise, please feel free to contact me at 518-402-2029 or email: greta.kowalski@dec.ny.gov.

Sample and Data Qualifiers Relating to This Work Order

PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
HT-NFD	NFDHA was extracted outside of the 3-day holding time established by 1633A. NFDHA is not a regulated analyte, and does not have a toxicity factor or corresponding EPA Regional Screening Level. These results should not impact data usability
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
S-HI	Surrogate recovery is above acceptance limits. No target compound is detected in sample.
PF-LCS-L	The LCS recovery for this PFAS compound was below control limits.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
S-08	The recovery of this surrogate was outside of QC limits.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Sample and Data Qualifiers Relating to This Work Order

Z-01	TEMPERATURE RECORDED AT TIME OF pH ANALYSIS
S-HI	Surrogate recovery is above acceptance limits. No target compound is detected in sample.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IGN-01	Non-Ignit.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
HT-NFD	NFDHA was extracted outside of the 3-day holding time established by 1633A. NFDHA is not a regulated analyte, and does not have a toxicity factor or corresponding EPA Regional Screening Level. These results should not impact data usability
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Job Narrative
480-231006-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/10/2025 2:30 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.9º C.

Receipt Exceptions
DI water voa vials received with tcore kit did not have sample volume present in vials. Only meoh vial was used for sampling. SB1-12"-18" (480-231006-1), SB1-7'-8' (480-231006-4), SB1-7'-8' (480-231006-4[MS]), SB1-7'-8' (480-231006-4[MSD]) and SB2-9'-10' (480-231006-14)

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 751930 recovered outside acceptance criteria, low biased, for Dichlorobromomethane and Chlorodibromomethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.The following associated samples are impacted: SB1-12"-18" (480-231006-1), SB1-7'-8' (480-231006-4), SB1-5'-8' (480-231006-5), SB2-4' (480-231006-9), SB2-4' DUP (480-231006-10) and SB2-9'-10' (480-231006-14)

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-751902 and analytical batch 480-751930 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. The following associated samples are impacted: SB1-7'-8' (480-231006-4[MS]) and SB1-7'-8' (480-231006-4[MSD])

Method 8260C: The following sample(s) were analyzed using medium level soil analysis due to no low level terracore volume present. Client was contacted and instructed us to proceed with medium level analysis: SB1-12"-18" (480-231006-1), SB1-7'-8' (480-231006-4), SB1-7'-8' (480-231006-4[MS]), SB1-7'-8' (480-231006-4[MSD]), SB1-5'-8' (480-231006-5), SB2-4' (480-231006-9), SB2-4' DUP (480-231006-10) and SB2-9'-10' (480-231006-14). Elevated reporting limits (RLs) are provided.

Method 8260C: Sample was prepped via a bulk container as no terracore container was received: SB1-5'-8' (480-231006-5). The client was contacted and instructed us to proceed with bulk preparation.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
Method 1633A: The LCS and LLCS labeled isotope(s) 13C5 PFPeA recovery associated with sample: RINSATE (480-231006-6) is outside the QC acceptance limits. Since the recovery for target analytes is within the limits, the data is reported.

Job ID: 480-231006-1 (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3546: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: SB1-12'-48" (480-231006-3), SB1-5'-8' (480-231006-5), SB2-12"-5' (480-231006-12), (480-231006-B-3 MS) and (480-231006-B-3 MSD).

Method 1633A: Samples(s) RINSATE (480-231006-6) were submitted in a nonstandard container and subsampling was required. The client was contacted before proceeding.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Quantitation Limit Exceptions Summary

Client: Terracon Consultants Inc
Job ID: 480-231006-1
Project/Site: HPN HVAC Upgrades - JA257025

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Introduction

This QA review is based upon an examination of the data generated from the analyses of the 11 solid samples collected on August 20, 2025, at the HPN Environmental Management HVAC Upgrades – JA257006 site in White Plains, New York. These samples were collectively analyzed by ALS Environmental of Stratford, Connecticut (ALS Stratford), for PFAS by US EPA Method 1633A, specific conductance by US EPA Method 120.1, temperature by US EPA Method 170.1, ignitability by SW-846 Method 1030, total metals by SW-846 Method 6010D, total mercury by SW-846 Method SW7473, reactive cyanide by SW-846 Method Ch. 7.3.3.2, reactive sulfide by SW-846 Method Ch. 7.3.4.2, diesel range organics by SW-846 Method 8015D, gas range organics by SW-846 Method 8015D, for organochlorine pesticides by SW-846 Method 8081B, PCBs as Aroclors by SW-846 Method 8082A, herbicides by SW-846 Method 8151A, VOCs by SW-846 Method 8260D, SVOCs by SW-846 Method 8270E, 1,4-dioxane by SW-846 Method 8270E with SIM, pH by SW-846 Method 9045D, and percent solids by SM 2540G.

This review was performed in accordance with the above-referenced analytical methods. This review was performed with guidance from the National Functional Guidelines for Organic Data Review (US EPA, 2020); the National Functional Guidelines for Inorganic Data Review (US EPA, 2020); the National Functional Guidelines for High Resolution Superfund Methods Data Review (US EPA, 2020); Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24, (U.S. Department of Defense, 2022); Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS), (New York State Department of Environmental Conservation [NYSDEC], April 2023); and “Final DER-10, Technical Guidance for Site Investigation and Remediation, Appendix 2B - Guidance for Data Deliverables and the Development of Data Usability Summary Reports,” (NYSDEC, May 2010). These validation guidance documents specifically address analyses performed in accordance with the CLP analytical methods and are not completely applicable to the type of analyses and analytical protocols performed for the SW-846, SM, and US EPA methods utilized by the laboratory for these samples. Environmental Standards, Inc., *dba* Onterris (Onterris) used professional judgment to determine the quality of the analytical results and compliance relative to the SW-846, SM, and US EPA, and methods utilized by the laboratory.

Data were examined to determine the quality of the analytical results relative to the laboratory acceptance criteria and compliance relative to the requirements specified in the analytical methods. In addition, the deliverables were evaluated for completeness and correctness. Details of this QA review are presented in Section 1 of this report. The reported analytical results and any required data validation qualifications are presented on the qualified data tables in Section 3. The “Validator Qualifiers,” “Interpreted Qualifiers”, “Validated Y/N”, “Validation Level”, and “Validation Result Comment” fields on the validated data summary tables have been updated to reflect all final data validation qualifiers and results. Validation qualifier codes have been placed in the “Validator Qualifiers” fields on the data tables to enable the data user to quickly assess the qualitative and/or quantitative reliability of a result based on the criteria evaluated during this QA review. Finally, the “Validation Result Comment” field has been populated with codes that indicate the reason for the validation qualifiers. Definitions of the validation qualifiers and reason codes are presented in

Section 2. The data reviewer has included copies of validation forms, QC summary forms, COC Record, laboratory Case Narrative, and other documentation needed to support the findings in this QA review in the Data Support Documentation sections (Section 4). The cover sheets for these sections are checklists of the QC procedures required by the protocol and examined in this data review. The Project Correspondence is in Section 5.

The analytical results and associated laboratory QC samples were reviewed to determine the integrity of the reported analytical results and to ensure that the data met the established measurement quality objectives. This QA review includes all samples in ALS Stratford's SDGs 25H1532 and 25H1535. These samples have undergone a Level 4 review.

Based upon review of the data package provided, the following issues and data qualifiers are offered. Data quality issues represent an interpretation of the QC results obtained for the project samples. Quite often, data qualifications address issues relating to sample matrix problems. Similarly, the data validation guidelines routinely specify areas of the data that require qualification, yet the methods used for analysis may not require corrective action by the laboratory. Accordingly, the following issues should not be construed as an indication of laboratory performance.

Comments:

1. In the PFAS, DRO, GRO, and Herbicides fractions of SDG 25H1532, an LCSD, MSD, or laboratory duplicate were not analyzed; therefore, precision could not be evaluated for these analyses.
2. One field duplicate pair, SDG 25H1535 sample HVAC Bottom 3 ft and its field duplicate, sample HVAC DUP, was collected and analyzed with this data set. Acceptable precision and sample representativeness were observed.
3. For the samples below, the sample IDs on the COC Record were inconsistent with the sample IDs in the laboratory report. The sample IDs used on Table 1 and in this report are consistent with the laboratory report. Qualification due to this issue was not warranted.

SDG	Sample ID on COC Record	Sample ID in Laboratory Report
25H1535	HVAC SW North .5-1	HVAC SW North-S-1
25H1535	HVAC SW South .5-1	HVAC SW South-S-1
25H1535	HVAC SW East .5-1	HVAC SW East-S-1
25H1535	HVAC SW West .5-1	HVAC SW West-S-1
25H1535	HVAC Bottom 3’	HVAC Bottom 3 ft

4. The analytical data packages reviewed did not include sufficient information to confirm the reported IARs for the PFAS analyses. The reported IARs were utilized for sample evaluation. Qualification due to this issue was not warranted.
5. During the review of the SVOC fraction, the data reviewer noted inconsistencies with surrogate names. The summary forms listed the surrogate as “phenol-d6” while the corresponding surrogate in the Raw Data is listed as “phenol-d5.” Qualification due to this issue was not warranted.
6. During the review of the PFAS fraction, the data reviewer noted that the initial calibration regression lines were forced through zero for most of the target analytes. According to Section 10.3.3 of Method 1633A, the regression must not be forced through zero. Qualification due to this issue was not warranted.
7. In the percent solids fraction of SDG 25H1535, the reviewer observed the following transcription errors in the tare weight between the handwritten batch log and the laboratory calculation of the percent solids results. Qualification due to this issue was not warranted.

Sample	Tare Weight on Handwritten Log (g)	Tare Weight Used in Laboratory Calculation (g)	% Solids Reported by the Laboratory	% Solids Calculated from Handwritten Log
HVAC SW West-S-1	1.3134	1.03134	90.6	90.1
HVAC Bottom 3 ft	1.3207	1.207	91.5	91.4

Qualification:

With respect to data quality, the principal areas of concern are out-of-criteria instrument sensitivity check recoveries, out-of-criteria calibration verification recoveries, out-of-criteria internal standard recoveries, out-of-criteria LCS recoveries, differences in chromatographic patterns between the sample and calibration standard, out-of-criteria transition ion ratios, a critical mass assignment error, LD imprecision, out-of-criteria MS recoveries, MS/MSD imprecision, out of criteria PDS recoveries, SD imprecision, high surrogate recoveries, blank contamination, and results reported between the MDL and QL . Based on a review of the data provided, the following data qualifiers are offered. The following data quality issues represent an interpretation of the QC results obtained for the project samples. Accordingly, the following data quality issues should not necessarily be construed as an indication of laboratory performance.

- The reported “not-detect” results for PFNS in all samples should be considered unreliable and have been flagged “UR” on the data tables. Very low recoveries (< 30%) were observed for PFNS in the instrument sensitivity check (ISC) results associated with these samples. (Validation Reason Code: CV-)
- The reported “not-detect” results for HFPO-DA in all samples should be considered unreliable and have been flagged “UR” on the data tables. Very low recoveries (< 50%) were observed for HFPO-DA in the CCV results associated with these samples. Additionally, low recoveries (< 70% and ≥ 30%) were observed for HFPO-DA in the ISC results associated with these samples. (Validation Reason Code: CV-)

- The reported “not-detected” results for 1,4-dioxane (p-dioxane) for all samples in SDG 25H1535 should be considered unreliable and have been flagged “UR” on the data tables. The tune report indicated a critical mass assignment error in m/z ratio 442. (Validation Reason Code: TN)
- The reported “not-detected” results for the compounds on the table below should be considered unreliable and have been flagged “UR” on the data tables. Very low recoveries were observed in the LCS results associated with these samples. (Validation Reason Code: LC-)

SDG	Sample(s)	Compound flagged “UR”
25H1532	HVAC - Spoils	2-butanone
25H1535	HVAC SW North-S-1, HVAC SW South-S-1	2-butanone

- The reported “not-detected” results for 2-butanone for SDG 25H1535 samples HVAC SW North-S-1 and HVAC SW South-S-1 should be considered unreliable and have been flagged “UR” on the data tables. Very low recoveries (< the lower laboratory acceptance limit) were observed in the associated SS analyses. (Validation Reason Code: SS-)
- The reported “not-detect” results for all VOCs in SDG 25H1535 sample HVAC SW North-S-1 should be considered unreliable and have been flagged “UR” on the data tables. In addition, the reported positive results for all VOCs in this sample should be considered estimated and have been flagged “J-” on the data tables. Very low recoveries (< 25%) were observed in the associated internal standards. (Validation Reason Code: IS-)
- The MDLs and QLs for the compounds on the table below may be higher than reported, and the “not-detected” results have been flagged “UJ” (unless flagged “UR”) on the data tables. Low recoveries (< the lower laboratory acceptance limit) were observed in the LCS results associated with these samples. (Validation Reason Code: LC-)

SDG	Sample(s)	Compounds with Estimated MDLs and QLs (“UJ”) (Unless “UR”)
25H1532	HVAC - Spoils	NMeFOSAA, HFPO-DA, and PFNS

Section 2 Data Qualifiers, Reason Codes, and Acronyms

.

Data Qualifiers

Qualifiers	Definitions
U	The analyte was not detected above the associated reporting limit.
UB	The analyte should be considered “not-detected” because it was observed in an associated laboratory or field blank at a similar level. The analyte was positively identified; the associated numerical value represents the concentration reported by the laboratory but may be impacted by contamination.
UJ	The analyte was not detected above the reported sample quantitation limit; however, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity and should be considered biased high.
J-	The result is an estimated quantity and should be considered biased low.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a “tentative identification.”
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The analyte was reported as detected, but sample results are unreliable due to serious analytical deficiencies. The presence or absence of the analyte cannot be verified.
UR	The analyte was reported as not detected, but the determination that the analyte was not present in the sample is unreliable due to serious analytical deficiencies. The presence or absence of the analyte cannot be verified.

General Notes

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 21, 2025 and listed below. The project was identified as your project: **JA257006 Task 10.2**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the ***Sample and Analysis Qualifiers*** section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the ***Sample and Data Qualifiers Relating to This Work Order*** section of this report and case narrative if applicable.

All Standard method references are based on the 24th Edition of Standard Methods unless otherwise noted.

The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.

Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.

ALS's liability for the above data is limited to the dollar value paid to ALS for the referenced project.

This report shall not be reproduced without the written approval of ALS.

All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information

It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.

This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.

Analyses conducted at ALS Environmental - Richmond Hill - Stratford, CT are indicated by NYDOH-NY10854, NJDEP-CT005, PADEP-68-04440, CTDPH-PH0840; those conducted at ALS Environmental - Richmond Hill, NY are indicated by NYDOH-NY12058, NJDEP-NY037, CTDPH-PH0837, NHDES-NH2097, MDDEP-375, PADEP-68-06231.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Qualifier Definitions :

B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CCVH	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
CCVL	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased low.
HT-NFD	NFDHA was extracted outside of the 3-day holding time established by 1633A. NFDHA is not a regulated analyte, and does not have a toxicity factor or corresponding EPA Regional Screening Level. These results should not impact data usability
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
IGN-01	Non-Ignit.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
S-08	The recovery of this surrogate was outside of QC limits.
S-HI	Surrogate recovery is above acceptance limits. No target compound is detected in sample.
Z-01	TEMPERATURE RECORDED AT TIME OF pH ANALYSIS

1. Volatiles in Air-ppbv

Cx (ppbv) = Compound concentration, ppbv (parts per billion by volume)

$$Cx = \frac{(Ax)(Cis)(DF)}{(Ais)(RRF)}$$

2. Volatiles in Air-ug/m³

Cx (ug/m³)= Compound concentration in ug/m³

Soils/Waters

$$Cx = \frac{(Ax)(IS)(DF)}{(Ais)(RRF)(V)(\%\ solids)}$$

Medium Level Soils

$$Cx = \frac{(Ax)(IS)(VT)(1000)(DF)}{(Ais)(RRF)(VA)(V)(\%\ solids)}$$

4. Semi-Volatiles (waters and soils)

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(Volume\ injected,\ uL)(V)(\%\ solids)}$$

5. Pesticides/PCB (waters and soils), DRO, CTETPH

$$Cx = \frac{(Ax)(VE)(DF)}{(CF)(Volume\ injected,\ uL)(V)(\%\ solids)}$$

WHERE:
Cx = concentration of analyte as ug/L or ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF = Mean relative response factor from the initial calibration.
DF = Dilution factor calculated as described in section 2. If no dilution is performed, DF= 1
V = Volume for liquids in mL, weight for soils/solids in grams.
VA = volume of MeOH aliquot for medium level soils
VE = final volume of concentrated extract
VT = volume of MeOH for volatiles medium level soils

Summary of Non-Conformance and Data Qualifiers Related

this Work Order: 25H1532

IGN-01	Non-Ignit.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CCVH	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
CCVL	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased low.
HT-NFD	NFDHA was extracted outside of the 3-day holding time established by 1633A. NFDHA is not a regulated analyte, and does not have a toxicity factor or corresponding EPA Regional Screening Level. These results should not impact data usability
/\	Analyte is not certified but the state of sample origination offer certification for the Analyte
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
Z-01	TEMPERATURE RECORDED AT TIME OF pH ANALYSIS
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
S-08	The recovery of this surrogate was outside of QC limits.
S-HI	Surrogate recovery is above acceptance limits. No target compound is detected in sample.
HT-pH	HOLDING TIME EXCEEDED. Samples for pH must be measured in the field or within 15 minutes of sample collection.

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
MCL	MAXIMUM CONTAMINANT LEVEL for drinking water, which is the highest level of a contaminant allowed in public water systems. These are legally enforceable health-based standards set by the U.S. Environmental Protection Agency (EPA) to protect public health from contaminants in drinking water.
Secondary MCL	SECONDARY MCL (Maximum Contaminant Level) is a non-enforceable guideline for contaminants in drinking water that affect aesthetic qualities like taste, odor, and color, or that cause cosmetic effects like staining. These are intended to protect public welfare and are not based on direct health effects, though states can choose to make them mandatory.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported

Definitions and Other Explanations (Continued)

RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

General Notes

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 21, 2025 and listed below. The project was identified as your project: **HPN HVAC J4257006, 10.2**. JA257006 on the COC Record

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the ***Sample and Analysis Qualifiers*** section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the ***Sample and Data Qualifiers Relating to This Work Order*** section of this report and case narrative if applicable.

All Standard method references are based on the 24th Edition of Standard Methods unless otherwise noted.

The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.

Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.

ALS's liability for the above data is limited to the dollar value paid to ALS for the referenced project.

This report shall not be reproduced without the written approval of ALS.

All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information

It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.

This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by ALS.

Analyses conducted at ALS Environmental - Richmond Hill - Stratford, CT are indicated by NYDOH-NY10854, NJDEP-CT005, PADEP-68-04440, CTDPH-PH0840; those conducted at ALS Environmental - Richmond Hill, NY are indicated by NYDOH-NY12058, NJDEP-NY037, CTDPH-PH0837, NHDES-NH2097, MDDEP-375, PADEP-68-06231.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Qualifier Definitions :	
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CCVH	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
HT-NFD	NFDHA was extracted outside of the 3-day holding time established by 1633A. NFDHA is not a regulated analyte, and does not have a toxicity factor or corresponding EPA Regional Screening Level. These results should not impact data usability
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
IS-01	This internal standard did not meet acceptance criteria. The sample was reanalyzed to confirm matrix interference. The associated compounds have been flagged IS-HI or IS-LO accordingly.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
P	This qualifier indicates the compound detected exhibited greater than 40% between the quantitation and confirmatory columns.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
PF-LCS-L	The LCS recovery for this PFAS compound was below control limits.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
S-08	The recovery of this surrogate was outside of QC limits.
S-HI	Surrogate recovery is above acceptance limits. No target compound is detected in sample.
