Formulae Used for Sample Calculations

1. Volatiles in Air-ppbv

Cx (ppbv) = Compound concentration, ppbv (parts per billion by volume)

$$Cx = \frac{(Ax)(Cis)(DF)}{(Ais)(RRF)}$$

2. Volatiles in Air-ug/m³

Cx (ug/m³)= Compound concentration in ug/m³

$$Cx\ (ug/m^3) = \frac{(ppbv \times Molecular\ wt.)}{(24.45)}$$

3. Volatile Organics (water and soil), ug/L or ug/kg

Soils/Waters

$$Cx = \frac{(Ax)(IS)(DF)}{(Ais)(RRF)(V)(\%\ solids)}$$

Medium Level Soils

$$Cx = \frac{(Ax)(IS)(VT)(1000)(DF)}{(Ais)(RRF)(VA)(V)(\%\ solids)}$$

4. Semi-Volatiles (waters and soils)

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(Volume\ injected,\ uL)(V)(\%\ solids)}$$

5. Pesticides/PCB (waters and soils), DRO, CTETPH

$$Cx = \frac{(Ax)(VE)(DF)}{(CF)(Volume\ injected,\ uL)(V)(\%\ solids)}$$

WHERE:
Cx = concentration of analyte as ug/L or ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF = Mean relative response factor from the initial calibration.
DF = Dilution factor calculated as described in section 2. If no dilution is performed, DF= 1
V = Volume for liquids in mL, weight for soils/solids in grams.
VA = volume of MeOH aliquot for medium level soils
VE = final volume of concentrated extract
VT = volume of MeOH for volatiles medium level soils
CF = calibration factor for external calibration used in GC pest/pcb
Cis = Concentration of the internal standard spiking mixture, ppbv

Summary of Non-Conformance and Data Qualifiers Related

this Work Order: 25H1535

J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CCVH	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
HT-NFD	NFDHA was extracted outside of the 3-day holding time established by 1633A. NFDHA is not a regulated analyte, and does not have a toxicity factor or corresponding EPA Regional Screening Level. These results should not impact data usability
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
/\	Analyte is not certified but the state of sample origination offer certification for the Analyte
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
S-HI	Surrogate recovery is above acceptance limits. No target compound is detected in sample.
P	This qualifier indicates the compound detected exhibited greater than 40% between the quantitation and confirmatory columns.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
PF-LCS-L	The LCS recovery for this PFAS compound was below control limits.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
S-08	The recovery of this surrogate was outside of QC limits.
IS-01	This internal standard did not meet acceptance criteria. The sample was reanalyzed to confirm matrix interference. The associated compounds have been flagged IS-HI or IS-LO accordingly.

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
MCL	MAXIMUM CONTAMINANT LEVEL for drinking water, which is the highest level of a contaminant allowed in public water systems. These are legally enforceable health-based standards set by the U.S. Environmental Protection Agency (EPA) to protect public health from contaminants in drinking water.

Definitions and Other Explanations (Continued)

Secondary MCL	SECONDARY MCL (Maximum Contaminant Level) is a non-enforceable guideline for contaminants in drinking water that affect aesthetic qualities like taste, odor, and color, or that cause cosmetic effects like staining. These are intended to protect public welfare and are not based on direct health effects, though states can choose to make them mandatory.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, ALS reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Hi Steve and Andrew,
We have gathered all the raw data for all the calibration equations used for both SDGs in the attached excel documents. Please advise if this will suffice as we do not have a formal report to include the calibration equations.
A revised package will be generated to include the known concentrations of the CCV samples for Reactive Cyanide in 25H1532. Attached are the batch and calibration's for reactive cyanide batches for SDG 25H1532.
We are working on getting the PFAS fraction to provide you with summary forms for the MS/MSD analysis for SDG 25H1535.
I hope to have this updated for you by early next week.
Best,
Giovanna

Good Morning Stephen,

Your email was received, we are working on getting you revised data packages as soon as we can. I requested Ean EOW due date as you requested and will keep you posted on when we can expect the revisions.

In the interim, to answer your first question, all 8260 Terrorcore kits are provided pre-preserved, low-level vials are preserved with DI, high level vial is preserved with MeOH. All terrorcore kit are frozen upon receipt.

The Chain of Custody for these projects did not have a fully filled out COC showing the preservation.

Best,

Giovanna

Ms. DeLoca,

Hope that all is well for you this Spring. Please confirm receipt of this email.

Terracon has retained Environmental Standards to perform data validation of the HPN site samples in SDGs 25H1532 and 25H1535.

The chemists noted that the data sets were missing some additional information.

1. What was the sample preservation for the soil VOCs in both SDGs? (Was sodium sulfate or freezing used for the low-level samples)
2. The calibration equations were not included for compounds that were calibrated with a model other than average RF in the VOC, SVOC, SVOC-SIM, pesticide, PFAS, and metals fractions of both SDGs, and the DRO fraction of SDG 25H1532. Please provide the calibration equations that were used.
3. For the PFAS fraction of SDG 25H1535, please provide the summary forms for the MS/MSD analyses.

4. In the reactive cyanide analysis of SDG 25H1532, please provide the known concentrations of the CCV samples associated with the sample analysis.

Can you provide the requested information? Can you provide revised data packages by 4/17?

If you have any questions, please contact me or Terracon.

Regards - Steve

Andrew,

We are working through the revised data sets. The chemists noted that the data sets were missing some additional information.

2. The calibration equations were not included for compounds that were calibrated with a model other than average RF in the VOC, SVOC, SVOC-SIM, pesticide, PFAS, and metals fractions of both SDGs, and the DRO fraction of SDG 25H1532. Please provide the calibration equations that were used.

4. In the reactive cyanide analysis of SDG 25H1532, please provide the known concentrations of the CCV samples associated with the sample analysis.

If requested, we can identify the limitations for the data validation report. Alternatively, the laboratory can be requested to provide the information. Please advise on how you would like to approach these issues.

INTRODUCTION

This QA review is based upon an examination of the data generated from the analyses of the 13 solid samples collected on July 9, 2025, at the HPN Environmental Management HVAC Upgrades – JA257025 site in White Plains, New York. These samples were collectively analyzed by Eurofins Environment Testing Northeast, LLC (Eurofins Buffalo) of Amherst, New York, and by Eurofins Lancaster Laboratories Environment Testing, LLC (Eurofins Lancaster) of Lancaster, Pennsylvania, for SVOCs by SW-846 Method 8270D; VOCs by SW-846 Method 8260C; herbicides by SW-846 Method 8151A; PCBs as Aroclors by SW-846 Method 8082A; organochlorine pesticides by SW-846 Method 8081B; metals by SW-846 Method 6010D; and mercury by SW-846 Method 7471B; and for PFAS by US EPA Method 1633A.

This review was performed in accordance with the above-referenced analytical methods. This review was performed with guidance from the National Functional Guidelines for Organic Superfund Methods Data Review (US EPA, 2020), the National Functional Guidelines for Inorganic Superfund Methods Data Review (US EPA, 2020); the National Functional Guidelines for High Resolution Superfund Methods Data Review (US EPA, 2020); “Data Validation Guidelines Module 6: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-24,” (U.S. Department of Defense, 2022); “Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS),” (New York State Department of Environmental Conservation [NYSDEC], April 2023); and “Final DER-10, Technical Guidance for Site Investigation and Remediation, Appendix 2B - Guidance for Data Deliverables and the Development of Data Usability Summary Reports,” (NYSDEC, May 2010). These validation guidance documents specifically address analyses performed in accordance with the CLP analytical methods and are not completely applicable to the type of analyses and analytical protocols performed for the SW-846 and US EPA methods utilized by the laboratory for these samples. Environmental Standards, Inc. (Environmental Standards) used professional judgment to determine the quality of the analytical results and compliance relative to the SW-846 and US EPA methods utilized by the laboratory.

Data were examined to determine the quality of the analytical results relative to the laboratory acceptance criteria and compliance relative to the requirements specified in the analytical methods. In addition, the deliverables were evaluated for completeness and correctness. Details of this QA review are presented in Section 1 of this report. The reported analytical results and any required data validation qualifications are presented on the qualified data tables in Section 3. The “Validator Qualifiers,” “Interpreted Qualifiers,” “Validated Y/N,” “Validation Level,” and “Result Comment” fields on the validated data summary tables have been updated to reflect all final data validation qualifiers and results. Validation qualifier codes have been placed in the “Validator Qualifiers” fields on the data tables to enable the data user to quickly assess the qualitative and/or quantitative reliability of a result based on the criteria evaluated during this QA review. Finally, the “Result Comment” field has been populated with codes that indicate the reason for the validation qualifiers. Definitions of the validation qualifiers and reason codes are presented in Section 2. The data reviewer has included copies of validation forms, QC summary forms, COC Record, laboratory Case Narrative, and other documentation needed to support the findings in this QA review in the Data Support Documentation sections (Section 4). The cover sheets for this section are checklists of the QC procedures required by the protocol and examined in this data review. The Project Correspondence is in Section 5.

The analytical results and associated laboratory QC samples were reviewed to determine the integrity of the reported analytical results and to ensure that the data met the established measurement quality objectives. This QA review includes all samples in Eurofins Buffalo Report Number 480-231006-1. These samples have undergone a Level 4 review.

Based upon review of the data package provided, the following issues and data qualifiers are offered. Data quality issues represent an interpretation of the QC results obtained for the project samples. Quite often, data qualifications address issues relating to sample matrix problems. Similarly, the data validation guidelines routinely specify areas of the data that require qualification, yet the methods used for analysis may not require corrective action by the laboratory. Accordingly, the following issues should not be construed as an indication of laboratory performance.

COMMENTS

1. In the general chemistry fraction, the reported percent moisture information on the LECO form did not correspond to the reported values on the General Chemistry Batch Worksheet. Upon Environmental Standards' inquiry, the laboratory confirmed that the values reported on the Batch Worksheet were accurate and no edits were needed. Qualification due to this issue was not warranted.

2. In the PFAS fraction, the summary forms and raw data for CCV 410-675863/72 and CCB 410-675863/73 analyzed 7/25/2026, on instrument ID 30569, were not included in the original laboratory analytical report. Upon Environmental Standards' request, Eurofins Buffalo provided a revised analytical report with the requested summary forms and raw data included.

3. According to the Case Narrative, sample SB1-5'-8' was prepped via bulk container per the client's request as no Terra Core container was received by the laboratory. Qualification due to this issue is addressed in the section below.

4. The data reviewer noted a discrepancy between the relinquish time listed on page one, 7/10/25 at 12:30, and page two, 7/10/25 at 14:30, of the COC Record. Qualification due to this issue was not warranted.

5. According to the Sample Summary, all samples were received at the laboratory on 7/10/25, at 14:30. This time cannot be confirmed as the times received on the COC Record are illegible.

6. Samples SB1-12**’**-48”, SB2-4**’** DUP, and RINSATE were recorded on the COC Record as SB1-12**”**-48”, SB2-4, and RINS**E**ATE, respectively. The samples were logged in as SB1-12’-48”, SB2-4’ DUP, and RINSATE, respectively, and are consistent throughout the rest of the analytical laboratory report and the EDD. Qualification due to this issue was not warranted.

7. In the SVOC, herbicides, and mercury fractions, an LCSD, MSD, or laboratory duplicate were not analyzed; therefore, precision could not be evaluated for these analyses.

8. In the pesticides fraction, the MS/MSD pair was run at a dilution, which led to the spike amount being less than the RL. For this reason, matrix interference could not be evaluated. Qualification due to this issue was not warranted.

9. Two field duplicate pairs (sample SB2-12"-18" and its duplicate, sample SB2-12"-18" DUP; as well as sample SB2-4' and its duplicate, sample SB2-4' DUP) were collected and analyzed with this data set. Acceptable precision and sample representativeness were observed.

QUALIFICATION

With respect to data quality, the principal areas of concern are an improper sample container, out-of-criteria MS/MSD percent recoveries, high SD %D, high initial calibration RSD, high surrogate recovery, high CCV %Ds, and results reported below the RL. Based on a review of the data provided, the following data qualifiers are offered. The following data quality issues represent an interpretation of the QC results obtained for the project samples. Accordingly, the following data quality issues should not necessarily be construed as an indication of laboratory performance.

- The MDLs and RLs for all VOCs in sample SB1-5’-8’ may be higher than reported, and the “not-detected” results have been flagged “UJ” on the data tables. According to the Case Narrative, sample SB1-5’-8’ was prepped for analysis by Method 8260C via a bulk container per the client’s request as Terra Core containers were not received by the laboratory. (Reason Code: OT)

- The reported positive results for methyl acetate in sample SB1-7'-8' should be considered estimated and has been flagged “J+” (unless otherwise flagged “J”) on the data tables. High recoveries (> upper laboratory acceptance limit) were observed in the associated MS/MSD analyses. (Reason Code: MS+)

- The reported positive results for calcium and magnesium in all samples should be considered estimated and have been flagged “J+” on the data tables. High recoveries (> 125%) were observed in the associated MSD analysis. (Reason Code: MS+)

- The MDLs and RLs for antimony in all samples may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. Low recoveries (< 75%) were observed in the associated MS/MSD analyses. (Reason Code: MS-)

- The reported positive results for iron in all samples should be considered estimated and have been flagged "J" on the data tables. A large discrepancy (%D > 10% when the initial result was > 50× the MDL) was observed in the associated SD analysis. (Reason Code: SD)

- The reported positive results for iron in all samples should be considered estimated and have been flagged "J" on the data tables. A large discrepancy (RSD > 20%) was observed in the replicate exposures of an associated initial calibration standard for iron. (Reason Code: IC)

- The reported positive result for 4,4'-DDT in sample SB1-5'-8' should be considered estimated and has been flagged "J+" (unless otherwise flagged "J") on the data tables. A high surrogate recovery was observed in the analysis of this sample. (Reason Code: SR+)

- The MDLs and RLs for PCB-1260 and PCB-1254 in sample SB1-12'-48" may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. Low percent recoveries (< laboratory limit) were observed in the associated MS/MSD analyses. (Reason Code: MS-)

- The MDLs and RLs for PCB-1260 and PCB-1254 in all samples may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. High %Ds (> 20%) coupled with a sensitivity decrease were observed in an associated CCV analysis. (Reason Code: CV-)

- The MDLs and RLs for 1,2-dibromo-3-chloropropane; bromodichloromethane; bromoform; and dibromochloromethane in all samples may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. High %Ds (> 20%) coupled with a sensitivity decrease were observed in an associated CCV analysis. (Reason Code: CV-)

- The MDLs and RLs for hexachlorocyclopentadiene in all samples may be higher than reported, and the "not-detected" results have been flagged "UJ" on the data tables. A high percent drift (> 20%) coupled with a sensitivity decrease was observed in an associated CCV. (Reason Code: CV-)

- All positive results reported between the MDL and RL should be considered estimated and have been flagged "J" on the data tables. (Reason Code: RL)

- When sample results were qualified both as estimated with a direction of bias ("J+" or "J-") and as estimated with unknown bias ("J") or the opposite bias, only the unknown bias qualifier has been included in the EDD and on the data tables.

This QA review has identified several aspects of the data that required qualification. In order to use any of the data, the data user should understand the qualifications and limitations specified in this QA review.

SECTION 2

DATA QUALIFIERS, REASON CODES, AND ACRONYMS AND ABBREVIATIONS

DATA QUALIFIERS

U The analyte was not detected above the associated reporting limit.

UB The analyte should be considered “not-detected” because it was observed in an associated laboratory or field blank at a similar level. The analyte was positively identified; the associated numerical value represents the concentration reported by the laboratory but may be impacted by contamination.

UJ The analyte was not detected above the reported sample quantitation limit; however, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity and should be considered biased high.

J- The result is an estimated quantity and should be considered biased low.

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a “tentative identification.”

NJ The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.

R The analyte was reported as detected, but sample results are unreliable due to serious analytical deficiencies. The presence or absence of the analyte cannot be verified.

UR The analyte was reported as not detected, but the determination that the analyte was not present in the sample is unreliable due to serious analytical deficiencies. The presence or absence of the analyte cannot be verified.

Job Narrative
480-231006-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 7/10/2025 2:30 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.9° C.

Receipt Exceptions
DI water voa vials received with tcore kit did not have sample volume present in vials. Only meoh vial was used for sampling. SB1-12"-18" (480-231006-1), SB1-7'-8' (480-231006-4), SB1-7'-8' (480-231006-4[MS]), SB1-7'-8' (480-231006-4[MSD]) and SB2-9'-10' (480-231006-14)

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) associated with batch 751930 recovered outside acceptance criteria, low biased, for Dichlorobromomethane and Chlorodibromomethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.The following associated samples are impacted: SB1-12"-18" (480-231006-1), SB1-7'-8' (480-231006-4), SB1-5'-8' (480-231006-5), SB2-4' (480-231006-9), SB2-4' DUP (480-231006-10) and SB2-9'-10' (480-231006-14)

Method 8260C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 480-751902 and analytical batch 480-751930 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. The following associated samples are impacted: SB1-7'-8' (480-231006-4[MS]) and SB1-7'-8' (480-231006-4[MSD])

dif reporting levels with low level vs mid etc

Method 8260C: The following sample(s) were analyzed using medium level soil analysis due to no low level terracore volume present. Client was contacted and instructed us to proceed with medium level analysis: SB1-12"-18" (480-231006-1), SB1-7'-8' (480-231006-4), SB1-7'-8' (480-231006-4[MS]), SB1-7'-8' (480-231006-4[MSD]), SB1-5'-8' (480-231006-5), SB2-4' (480-231006-9), SB2-4' DUP (480-231006-10) and SB2-9'-10' (480-231006-14). Elevated reporting limits (RLs) are provided.

Method 8260C: Sample was prepped via a bulk container as no terracore container was received: SB1-5'-8' (480-231006-5). The client was contacted and instructed us to proceed with bulk preparation.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS
Method 1633A: The LCS and LLCS labeled isotope(s) 13C5 PFPeA recovery associated with sample: RINSATE (480-231006-6) is outside the QC acceptance limits. Since the recovery for target analytes is within the limits, the data

is reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3546: The following samples required a Florisil clean-up, via EPA Method 3620C, to reduce matrix interferences: SB1-12'-48" (480-231006-3), SB1-5'-8' (480-231006-5), SB2-12"-5' (480-231006-12), (480-231006-B-3 MS) and (480-231006-B-3 MSD).

Method 1633A: Samples(s) RINSATE (480-231006-6) were submitted in a nonstandard container and subsampling was required. The client was contacted before proceeding.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Good morning Stephen,

The missing raw data for mercury analysis is now included in the Category B report, This will be submitted to MyEOL shortly for your review/use. Specific to your inquiry regarding % solids, the Principal Chemist at our Lancaster laboratory provided the following response:

- The PDF form is reporting the crucible mass where we are exporting the curable weight into TALs. In theory this would not be an issue except that the manufacture has a nominal density entered for the crucibles. That is where the discrepancy is coming from.

The data in the LIMS is the weight that is being registered on the internal balance of the system so that is correct. No changes need to be made to the data as reported.

We have updated the report formatter so that the system will report the crucible weight and match the LIMS data.

The system only reports out the sample weight to 2 decimal places where the crucible reports out to 4 decimal places so the last 2 digits. The calculation the LIMs performs on the samples means that the last two digits of the sample weight will not show on the report PDF. It should not be an issue for completing the calculation manually but we cannot change the sig figs the instrument reports.

Please let me know if I can assist you with anything else.

Thank you.

Mr. Beninati,

Please confirm receipt of this email.

Environmental Standards has been retained by Terracon to validate the HPN HVAC Upgrades - JA257025 analytical data.

The chemist reviewing SDG 480-231006-1 noted that following items missing from the package.

- The raw data for the mercury analysis (calibrations, samples, and QC samples)
- The information for the percent solids information on pages 5528-5530 (samples 480-231006-2, -7, -8, 11, and -13) did not correspond to the reported percent solids on the General Chemistry Batch Worksheet (page 5533). The percent solids on page 5533 matched the sample summaries and EDD. Please confirm which percent solids is correct.

Contact me with any questions. Please advise on tentative schedule for response.

Regards - Steve

Andrew,
The files are downloaded.

We will get this turned around as quick as possible.

For future events, would you like to have us participate in the kick-off meetings? We can work directly with the laboratory and copy Terracon on lab requests. We can discuss next week.

Hi John,

We appreciate the revised data set.

During the completion of the review, the chemist noted that in the PFAS fraction of Report 480-231006-1, the summary forms and raw data for CCV 410-675863/72 and CCB 410-675863/73 analyzed 7/25/2026 on instrument ID 30569 were not included.

Please provide a revised data package that includes this information.

Good morning Stephen,

The missing raw data for mercury analysis is now included in the Category B report, This will be submitted to MyEOL shortly for your review/use. Specific to your inquiry regarding % solids, the

Principal Chemist at our Lancaster laboratory provided the following response:

- The PDF form is reporting the crucible mass where we are exporting the curable weight into TALs. In theory this would not be an issue except that the manufacture has a nominal density entered for the crucibles. That is where the discrepancy is coming from.

The data in the LIMS is the weight that is being registered on the internal balance of the system so that is correct. No changes need to be made to the data as reported.

We have updated the report formatter so that the system will report the crucible weight and match the LIMS data.

The system only reports out the sample weight to 2 decimal places where the crucible reports out to 4 decimal places so the last 2 digits. The calculation the LIMs performs on the samples means that the last two digits of the sample weight will not show on the report PDF. It should not be an issue for completing the calculation manually but we cannot change the sig figs the instrument reports.

Please let me know if I can assist you with anything else.

Thank you.

Mr. Beninati,

Please confirm receipt of this email.

Environmental Standards has been retained by Terracon to validate the HPN HVAC Upgrades - JA257025 analytical data.

The chemist reviewing SDG 480-231006-1 noted that following items missing from the package.

- The raw data for the mercury analysis (calibrations, samples, and QC samples)
- The information for the percent solids information on pages 5528-5530 (samples 480-231006-2, -7, -8, 11, and -13) did not correspond to the reported percent solids on the General Chemistry Batch Worksheet (page 5533). The percent solids on page 5533 matched the sample summaries and EDD. Please confirm which percent solids is correct.

Contact me with any questions. Please advise on tentative schedule for response.

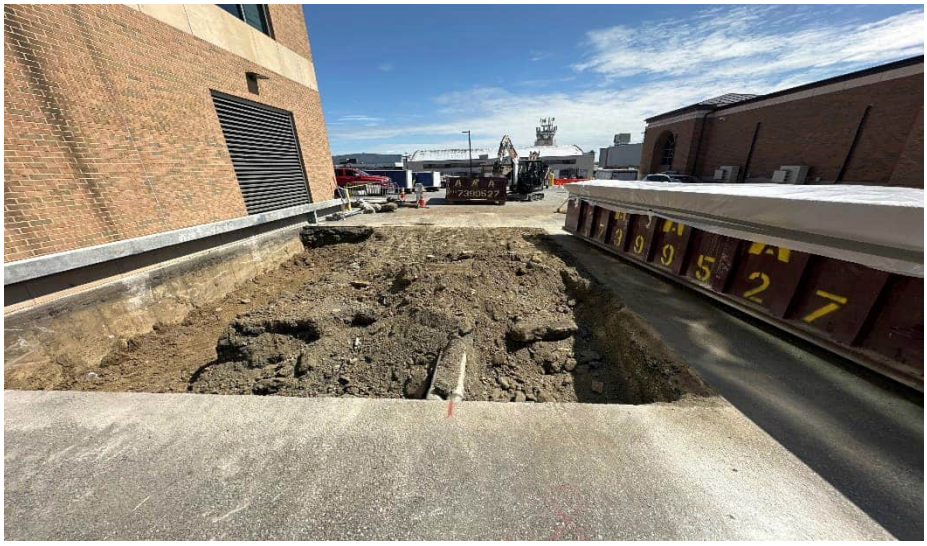
- 1005: SCS finishes lining the dumpster and they begin to fill it with dirt from the pit.

- 1030: SCS continues to dig and place the dirt in the dumpster. They have reached the high voltage electric lines and are digging around them.

- 1105: SCS continues digging and placing dirt in the lined dumpster.

- 1130: SCS continues digging and placing soil in the lined dumpster.

- 1300: Pit excavation continues.



- 1330: The first lined dumpster has been filled with dirt from the pit. Another dumpster will be delivered to the work area at 1415, and the full dumpster will be covered and taken to Building 10 area.

- 1400: SCS has covered the lined dumpster in poly and is still waiting for a new dumpster. They are done digging for the day and will be leaving once the new dumpster arrives and the full dumpster is taken away.

- 1430: BM stops running the DustTraks.
- 1440: The new dumpster arrives on site. The old dumpster is taken to the Building 10 area.

The material is to be used as backfill associated with construction of a concrete pad for a heating, ventilation and air conditioning (HVAC) unit. Based on the information provided, these requests are hereby approved. The proposed fill material meets the requirements for material other than soil (i.e., gravel, rock, stone, recycled concrete or recycled brick) as specified in section 5.4(e)5 of DER-10. This material may be placed above the water table. Testing in accordance with DER-10 and approval by the Department is required for any additional material imported to or reused on the site.
