

APPENDIX I

**Laboratory Sample Summaries and DUSR's For Samples
Collected April 4, 2005**

ANALYTICAL REPORT

JOB NUMBER: 209203

Prepared For:

LEGGETTE, BRASHEARS & GRAHAM
110 Corporate Park Drive
Suite 112
White Plains, New York 10604

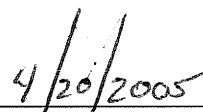

Project: WESTCHESTER CNTY. AI

Attention: Ed Destefanis

Date: 04/19/2005

Signature

Date

Name: William D. Goodman

Title: Project Manager

E-Mail: wgoodman@stl-inc.com

STL Connecticut
128 Long Hill Cross Road
Shelton, CT 06484

This Report Contains (655) Pages

STL Report : 209203
LEGGETTE, BRASHEARS, & GRAHAM

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature.

Organic Extraction - Samples were extracted according to method 3541. No problems were encountered.

Semi-Volatile Organics - Semi-volatile organic samples were analyzed by capillary GC/MS according to NYSDEC Protocols using guidance provided in Method 8270C. The instrumentation used was a Hewlett-Packard Gas Chromatograph interfaced with a Mass Selective Detector.

A 1ul injection was used for all samples and standards. Refer to the standard concentration form behind the Form 8's for specific compound concentrations in each of the calibration levels. Internal standards were added to all samples and standards at 20ng/ul.

Samples SW-N, SW-W1 and B-3 had one surrogate out of recovery criteria, but within laboratory sample acceptance criteria.

Sample Calculation:

Sample ID – SW-E1
 Compound - phenanthrene

$$\frac{(273236\text{Area})(20\text{ng})(1000\text{ul})}{(765882\text{Area})(1.071\text{Area/ng})(1\text{ul})(15.3\text{g})(.834)} = 522 = 520\text{ug/kg}$$

Volatile Organics – Volatile organics were determined by purge and trap GC/MS using guidance provided in Method 5030B/8260B.

The spike compound percent recoveries were within the laboratory generated guidelines in the independent source quality control samples except for chloroethane in 46900-2LCS and 46989-2LCS.

The target compounds, methylene chloride and acetone, are common laboratory contaminants. The presence of these compounds in the method blanks and associated samples at values less than the reporting limit (“J” values) is common. If these compounds are detected in the method blanks, the associated samples will have a “B” flag on these compounds.

Sample Calculation:

Sample ID-SW-N

Compound- Methylene chloride

$$\frac{(24760 \text{ area})(125\text{ng})}{(286011 \text{ area})(.549 \text{ area/ng})(5\text{g})(.844)} = 4.67 = 4.7 \text{ ug/Kg.}$$

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

Customer Sample ID: STOCKPILE COMPOSITE 2

Date Sampled.....: 04/04/2005

Time Sampled.....: 16:20

Sample Matrix.....: Soil

Laboratory Sample ID: 209203-16

Date Received.....: 04/05/2005

Time Received.....: 19:15

TEST METHOD	PARAMETER/TEST DESCRIPTION	SAMPLE RESULT	Q	FLAGS	MDL	RL	DILUTION	UNITS	BATCH	DT	DATE/TIME	TECH
	Pyrene, Solid*	ND	U		52	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Butyl benzyl phthalate, Solid*	ND	U		49	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Benzo(a)anthracene, Solid*	ND	U		51	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Chrysene, Solid*	ND	U		48	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	3,3-Dichlorobenzidine, Solid*	ND	U		100	750	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Bis(2-ethylhexyl)phthalate, Solid*	ND	U		50	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Di-n-octyl phthalate, Solid*	ND	U		40	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Benzo(k)fluoranthene, Solid*	ND	U		110	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Benzo(a)pyrene, Solid*	ND	U		42	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Indeno(1,2,3-cd)pyrene, Solid*	ND	U		46	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Dibenzo(a,h)anthracene, Solid*	ND	U		38	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm
	Benzo(ghi)perylene, Solid*	ND	U		42	370	1.00000	ug/Kg	47097		04/10/05 2114	dmm

* In Description = Dry Wgt.

REPORT COMMENTS

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 10604
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviation

Inorganic Qualifiers (Q-Column)

- U Analyte was not detected at or above the reporting limit.
- < Not detected at or above the reporting limit.
- J Result is less than the RL, but greater than or equal to the method detection limit.
- B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.
- S Result was determined by the Method of Standard Additions.

Inorganic Flags (Flag Column)

- ICV,CCV,ICB,CCB,ISA,ISB,CRI,CRA,MRL: Instrument related QC exceed th upper or lower control limits.
- * LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.
- + MSA correlation coefficient is less than 0.995.
- 4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
- E SD: Serial dilution exceeds the control limits.
- H MB, EB: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.
- N MS, MSD: Spike recovery exceeds the upper or lower control limits.
- W PS: Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

- U Analyte was not detected at or above the reporting limit.
- ND Compound not detected.
- J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).
- Q Result was qualitatively confirmed, but not quantified.
- C Pesticide identification was confirmed by GC/MS.
- Y The chromatographic response resembles a typical fuel pattern.
- Z The chromatographic response does not resemble a typical fuel pattern.
- E Result exceeded calibration range, secondary dilution required.

Organic Flags (Flags Column)

- MB,EB,MLE: Batch QC is greater than reporting limit.
- * LCS, LCD, CCV, MS, MSD, Surrogate, RS:Batch QC exceeds the upper or lower control limits.
- A Concentration exceeds the instrument calibration range or below the reporting limit.
- B Compound was found in the blank.
- D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.
- H Alternate peak selection upon analytical review
- I Indicates the presence of an interference, recovery is not calculated.
- M Manually integrated compound.
- P The lower of the two values is reported when the % difference between the results of two GC columns is greater than 25%.

QUALITY ASSURANCE METHODS

REFERENCES AND NOTES

Report Date: 04/19/2005

Abbreviations

Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation Analysis
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
Dil Fac	Dilution Factor
DL	Secondary dilution and analysis
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB	Extraction Blank
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A
ISB	Interference Check Sample B
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group
Lab ID	An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PACK	Packed Column
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PS	Post Spike
PSD	Post Spike Duplicate
RA	Re-analysis
RE	Re-extraction and analysis
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RS	Reference Standard
RT	Retention Time
RTW	Retention Time Window
SampleID	A 9 digit number unique for each sample, the first six digits are referred as the job number
SCB	Seeded Control Blank
SD	Serial Dilution
UCB	Unseeded Control Blank

One or a combination of these data qualifiers and abbreviations may appear in the analytical report.

Westchester County Airport – April 2005 Sampling Event
Data Usability Summary Report: Volatile and Semivolatile Organics

Table of Contents:

- Introduction
- Data Qualifier Definitions
- Sample Receipt

- 1.0 Volatile Organics by GC/MS SW846 Method 8260
 - 1.1 Holding Time
 - 1.2 System Monitoring Compound (Surrogate) Recovery
 - 1.3 Matrix Spikes (MS), Matrix Spike Duplicates (MSD)
 - 1.4 Laboratory Control Sample
 - 1.5 Blank Contamination
 - 1.6 GC/MS Instrument Performance Check
 - 1.7 Initial and Continuing Calibrations
 - 1.8 Internal Standards
 - 1.9 Target Compound List Identification
 - 1.10 Compound Quantification and Reported Detection Limits
 - 1.11 Overall System Performance

- 2.0 Semivolatile Organics by GC/MS SW846 Method 8270
 - 2.1 Holding Time
 - 2.2 Surrogate Recovery
 - 2.3 Matrix Spikes (MS), Matrix Spike Duplicates (MSD)
 - 2.4 Laboratory Control Sample
 - 2.5 Method Blanks
 - 2.6 GC/MS Instrument Performance Check
 - 2.7 Initial and Continuing Calibrations
 - 2.8 Internal Standards
 - 2.9 Target Compound List Identification
 - 2.10 Compound Quantification and Reported Detection Limits
 - 2.11 Overall System Performance

APPENDICES:

- A. Data Summary Sheets with Qualifications
- B. Chain of Custody Documents
- C. Case Narrative

Introduction:

A validation and usability study was performed on sixteen (16) soil and the associated quality control samples for organic analysis for samples collected under chain of custody documentation by Leggette, Brashears & Graham and submitted to STL Connecticut for subsequent analysis. This report contains the laboratory and validation results for the sixteen (16) field samples and corresponding Trip Blank itemized on the following page. The samples were collected on April 04, 2005.

The samples were analyzed by STL Connecticut, utilizing SW846 Methods and submitted under NYSDEC ASP Category B equivalent deliverable requirements for the associated analytical methodologies employed. The analytical testing consisted of the Target Compound List (TCL) of analytes for Volatile Organics and the Target Compound List (TCL) for Semivolatiles.

The data was evaluated in accordance with the National Functional Guidelines for Organic and Inorganic Data Review and in conjunction with the analytical methodologies for which the samples were analyzed, where applicable and relevant.

The data validation report pertains to samples identified on the following page.

Sample Identification*	Laboratory Identification	Sample Matrix	Collection Date
SW-N	209203-1	Soil	4/04/05
SW-W1	209203-2	Soil	4/04/05
SW-W2	209203-3	Soil	4/04/05
SW-W3	209203-4	Soil	4/04/05
SW-W4	209203-5	Soil	4/04/05
SW-S	209203-6	Soil	4/04/05
SW-E1	209203-7	Soil	4/04/05
SW-E2	209203-8	Soil	4/04/05
SW-E3	209203-9	Soil	4/04/05
SW-E4	209203-10	Soil	4/04/05
B-1	209203-11	Soil	4/04/05
B-2	209203-12	Soil	4/04/05
B-3	209203-13	Soil	4/04/05
B-4	209203-14	Soil	4/04/05
Stockpile Composite 1	209203-15	Soil	4/04/05
Stockpile Composite 2	209203-16	Soil	4/04/05
Trip Blank*	209203-17	Aqueous	4/04/05

*Denotes sample was analyzed for Volatile Organic analysis only.

Data Qualifier Definitions:

The following definitions provide brief explanations of the qualifiers assigned to results in the data review process.

- U** - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J** - The analyte was positively identified, the associated numerical value is the approximate concentration of the analyte in the sample.
- UJ** - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R** - The sample results are rejected due to deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
- N** - The analysis indicates the presence of an analyte for which there is presumptive evidence to make a “tentative identification.”
- NJ** - The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate quantity.

Sample Receipt:

The Chain of Custody documents indicates that the samples were received at STL Connecticut via laboratory courier on April 05, 2005. Sample login notes were generated and the temperature recorded and determined to be acceptable (2.8 degrees) sample cooler. No problems and/or discrepancies were noted, consequently, the integrity of the remaining samples has been assumed to be good.

The data summary sheets included in Appendix A includes all usable (qualified) and unusable (rejected) results for the samples identified above. These sheets summarize the detailed narrative section of the report. All data validation qualifications have been reported in bold for ease of review and verification.

Actual sample concentrations where an analyte was detected is listed in the "results" column of the spreadsheet. In cases where the compound was not detected, the reporting limit" column should be utilized as the non-detect value.

NOTE:

L.A.B. Validation Corp. believes it is appropriate to note that the data validation criteria utilized for data evaluation is different than the method requirements utilized by the laboratory. Qualified data does not necessarily mean that the laboratory was non-compliant in the analysis that was performed.

1.0 Volatile Organics by GC/MS SW846 Method 8260

The following method criteria were reviewed: holding times, SMCs, MS, MSD, LCS, Blanks, Tunes, Calibrations, Internal Standards, Target Component Identification, Quantitation, Reported Quantitation Limits and Overall System Performance. The volatile results were considered to be valid with the exception of Chloroethane which was rejected, "R" for all soil samples due to high %RSD (93%) in the soil initial calibration and as noted on the data summary sheets in Appendix A and within the following text:

1.1 Holding Time

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the technical holding time is exceeded, the data may not be considered valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimates, "J". The non-detects (sample quantitation limits) are required to be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

All samples pertaining to this SDG were analyzed within the SW846 Method 8260 requirement of 14 days from sample collection. No data validation qualifiers were required based upon holding time.

1.2 System Monitoring Compound (Surrogate) Recovery

All samples are spiked with surrogate compounds prior to sample analysis to evaluate overall laboratory performance and efficiency of the analytical technique. If the measure of surrogate concentrations is outside contact specification, qualifications are required to be applied to associated samples and analytes.

Surrogate recoveries (%R) were found to be within acceptable limits for surrogate compounds pertaining to this SDG. No qualifiers were applied based upon surrogate recovery criteria.

1.3 Matrix Spikes (MS)/ Matrix Spike Duplicates (MSD)

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices.

MS/MSD analysis was not conducted for this SDG. Data could not be evaluated based on recovery and RPD results.

1.4 Laboratory Control Sample

The LCS data for laboratory control samples (LCS) are generated to provide information on the accuracy of the analytical method and on the laboratory performance.

LCS was analyzed for this SDG for each GC/MS sequence. Recovery values were acceptable with the exception of Chloroethane which recovered low (48%, 51%) applicable to samples Stockpile Composite 1, Stockpile Composite 2, SW-N, SW-W1, SW-W2, SW-W3, SW-W4, SW-S, SW-E1, SW-E2, B-1, B-2, B-3 and B-4. Non-detects for this analyte have been qualified, "UJ" (biased low) as required.

1.5 Blank Contamination

Quality assurance (QA) blanks; i.e. method, trip and field blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Trip blanks measure cross-contamination of samples during shipment. Field blanks measure cross-contamination of samples during field operations. Storage blanks measure cross-contamination during sample storage of the field samples and are not mandated by SW-846 Method 8260.

The following table was utilized to qualify target analyte results due to contamination. The largest value from all the associated blanks is required to be utilized:

For:	Flag Sample Result with a "U" when:	Report CRQL & Qualify "U" when:	No Qualification is Needed when:
Methylene Chloride, Acetone, Toluene & 2-Butanone	Sample Conc. Is >CRQL, but $\leq 10x$ blank value	Sample Conc. is <CRQL and $\leq 10x$ blank value	Sample Conc. is >CRQL and $> 10x$ blank value
Other Contaminants	Sample Conc. Is >CRQL, but $\leq 5x$ blank value	Sample Conc. Is <CRQL and $\leq 5x$ blank value	Sample Conc. is >CRQL and $> 5x$ blank value

Below is a summary of the compounds in the sample and the associated qualifications that have been applied:

A) Method Blank Contamination:

Methylene Chloride was detected at acceptable levels in the method blanks associated with Stockpile Composite 1, Stockpile Composite 2, SW-N, SW-W1, SW-W2, SW-W3, SW-E3, SW-E4 and the Trip Blank. Blank concentrations were evaluated compared to associated sample values based on the above criteria and negated in associated field samples.

Acetone was also detected at acceptable levels in the method blank associated with samples SW-E3 and SW-E4. Acetone was negated, "U" since the samples concentrations were determined to be <10x the blank value.

Although Acetone was not detected in the method blank associated with samples SW-W2, SW-W4 and Stockpile Composite 1, the low concentrations (5.1 ug/kg, 4.8 ug/kg, 5.1 ug/kg) are consistent with common laboratory contamination levels and based upon professional judgment, the "presence" of these analytes as reported by the laboratory were negated during the validation process as notated by "U" in the summary tables.

B) Field Blank Contamination:

Field Blank analysis is not applicable to this sample set.

C) Trip Blank Contamination:

Methylene Chloride was detected (2.9 ug/L) in the Trip Blank associated with all field samples. Where methylene chloride was not previously negated due to method blank contamination, it has been reported in the summary tables as "CRQL U" in the remaining field samples and the presence of this analyte can be attributed to Trip contamination and is not considered "real."

1.6 GC/MS Instrument Performance Check

Tuning and performance criteria are established to ensure adequate mass resolution, proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The Tuning standard for volatile organics is Bromofluorobenzene (BFB).

Instrument performance was generated within acceptable limits and frequency for Bromofluorobenzene (BFB) for all analyses conducted for this SDG.

1.7 Initial and Continuing Calibrations

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence.

The continuing calibration checks document that the instrument is giving satisfactory daily performance.

A) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for all compounds must be ≥ 0.05 in both initial and continuing calibrations. A value < 0.05 indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound in the corresponding samples will be rejected, "R".

All the response factors for the target analytes reported were found to be within acceptable limits (≥ 0.05), for the initial and continuing calibrations for all reported analytes.

B) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentrations. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be $< 30\%$ and %D must be $< 25\%$. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detect data may be qualified, "R", unusable. Additionally, in cases where the %RSD is $> 30\%$ and eliminating either the high or the low point of the curve does not restore the %RSD to less than or equal to 30% then positive results are qualified, "J". In cases

where removal of either the low or high point restores the linearity, then only low or high level results will be qualified, “J” in the portion of the curve where non linearity exists.

Initial Calibrations: The initial calibrations provided and the %RSD were within acceptable limits (30%) for all compounds with the following exceptions:

COMPOUND	CALIBRATION DATE/INSTRUMENT	%RSD	ACTION
Acetone	04/02/05 MSL	33.1	“UJ” Trip Blank
Chloroethane	04/06/05 MSN	93.0	“UJ” all soil samples
Acetone	04/06/05 MSN	63.6	“UJ” all soil samples
Methylene Chloride	04/06/05 MSN	63.3	“UJ” all soil samples

Results for the above initial calibration compounds, non-detects have been qualified, “UJ” for Acetone and Methylene Chloride.

Non-detects that were previously qualified, “UJ” due to low LCS recoveries have been rejected, “R” due to %RSD >90%. Results for this compound in the associated soil samples are unusable.

Continuing Calibrations: The continuing calibrations provided and the %D was within acceptable limits (25%) for all compounds with the following exceptions:

COMPOUND	CALIBRATION DATE/INSTRUMENT	%D	AFFECTED SAMPLES
Chloroethane	04/07/05 MSN	42.2	Previously qualified “R” due to ICAL
Chloroethane	04/08/05 MSN	49.2	Previously qualified “R” due to ICAL
Chloroethane	04/11/05 MSN	40.6	Previously qualified “R” due to ICAL
Methylene Chloride	04/07/05 MSN	28.6	Previously qualified “UJ” due to ICAL
Methylene Chloride	04/08/05 MSN	39.2	Previously qualified “UJ” due to ICAL
2-Butanone	04/07/05 MSN	35.3	“UJ” non detects all soil samples
2-Butanone	04/08/05 MSN	25.2	“UJ” non detects all soil samples
2-Butanone	04/08/05 MSN	31.9	“UJ” non detects all soil samples
1,1,1-Trichloroethane	04/07/05 MSN	28.3	“UJ” Stockpile Comp 1, Stockpile Comp 2, SW-N, SW-W1, SW-W2, SW-W3
1,1,1-Trichloroethane	04/08/05 MSN	26.6	“UJ” SW-W4, SW-S, SW-E1, SW-E2, B-1, B-2, B-3, B-4
Carbon Tetrachloride	04/07/05 MSN	29.5	“UJ” Stockpile Comp 1, Stockpile Comp 2, SW-N, SW-W1, SW-W2, SW-W3
Carbon Tetrachloride	04/08/05 MSN	26.8	“UJ” SW-W4, SW-S, SW-E1, SW-E2, B-1, B-2, B-3, B-4
2-Hexanone	04/07/05 MSN	38.0	“UJ” Stockpile Comp 1, Stockpile Comp 2, SW-N, SW-W1, SW-W2, SW-W3

2-Hexanone	04/08/05 MSN	26.9	"UJ" SW-W4, SW-S, SW-E1, SW-E2, B-1, B-2, B-3, B-4
Bromoform	04/07/05 MSN	26.3	"UJ" Stockpile Comp 1, Stockpile Comp 2, SW-N, SW-W1, SW-W2, SW-W3
Bromoform	04/08/05 MSN	27.5	"UJ" SW-W4, SW-S, SW-E1, SW-E2, B-1, B-2, B-3, B-4

Results for the above continuing calibration compounds, non-detects have been qualified, "UJ".

1.8 Internal Standards

Internal Standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than +/- 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using That IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, professional judgment will be used to determine either partial or total rejection of the data for that sample fraction.

All internal standards met acceptance limits.

1.9 Target Compound List Identification

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within $\pm 0.06\text{RRT}$ units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound.

GC/MS spectra met the qualitative criteria for identification. All retention times were within required specifications.

1.10 Compound Quantification and Reported Detection Limits

GC/MS quantitative analysis is considered to be acceptable. Correct internal standards per SW846; response factors and moisture content were used to calculate final concentrations.

1.11 Overall System Performance

Good resolution and chromatographic performance were observed.

2.0 Semivolatile Organics by GC/MS SW846 Method 8270

The following method criteria were reviewed: holding times, Surrogates, MS, MSD, LCS, Blanks, Tunes, Calibrations, Internal Standards, Target Component Identification, Quantitation, Reported Quantitation Limits and overall system performance. The semivolatile results were considered to be valid and usable as noted on the data summary sheets in Appendix A and within the following text:

2.1 Holding Time

The amount of an analyte in a sample can change with time due to chemical instability, degradation, volatilization, etc. If the technical holding time is exceeded, the data may not be considered valid. Those analytes detected in the samples whose holding time has been exceeded will be qualified as estimates, "J". The non-detects (sample quantitation limits) are required to be flagged as estimated, "J", or unusable, "R", if the holding times are grossly exceeded.

All samples were extracted and analyzed within the method required holding times and the technical holding times required for data validation. No qualifications were applied based upon holding time criteria.

2.2 Surrogate Recovery

All samples are spiked with surrogate compounds prior to sample preparation/extraction to evaluate overall laboratory performance and efficiency of the analytical technique. Additionally, the sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Since the effects of the sample matrix are frequently outside the control of the laboratory and may present relatively unique problems, the evaluation of the data is dependent upon reextraction and/or reanalysis to confirm/negate laboratory error or matrix related problems. Discussion of surrogate recoveries that fell outside (above/below) QC guidelines is itemized below:

All surrogate recovery values fell within QC limits for all analyses pertaining to this SDG with the exception of Terphenyl-d14 which recovered high (151%, 148%, 149%) in samples SW-N, SW-W1 and B-3.

In accordance with the National Functional Guidelines, no data qualifications are required where one (1) surrogate recovers above acceptance limits. No laboratory action was required.

2.3 Matrix Spikes (MS)/Matrix Spike Duplicates (MSD)

The MS/MSD data are generated to determine the long-term precision and accuracy of the analytical method in various matrices.

MS/MSD analysis was not performed on samples pertaining to this data set.

Based upon professional judgment and acceptable LCS analysis, no data qualifications were applied based upon MS/MSD data.

2.4 Laboratory Control Sample

The LCS data for laboratory control samples (LCS) are generated to provide information on the accuracy of the analytical method and on the laboratory performance.

Acceptable LCS was analyzed for this SDG. Recovery values fell within acceptance limits for all spiked constituents.

2.5 Method Blanks

Quality assurance (QA) blanks; i.e. method, trip and field blanks are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Field blanks measure cross-contamination of samples during field operations.

The following table was utilized to qualify target analyte results due to contamination. The largest value from all the associated blanks is required to be utilized:

For:	Flag Sample Result with a "U" when:	Report CRQL & Qualify "U" when:	No Qualification is Needed when:
Phthalates (common laboratory contaminants)	Sample Conc. is >CRQL, but $\leq 10x$ blank value	Sample Conc. Is <CRQL and $\leq 10x$ blank value	Sample Conc. is >CRQL and $> 10x$ blank value
Other Contaminants	Sample Conc. is >CRQL, but $\leq 5x$ blank value	Sample Conc. Is <CRQL and $\leq 5x$ blank value	Sample Conc. is >CRQL and $> 5x$ blank value

Below is a summary of the compounds in the sample and the associated qualification that have been applied:

A) Method Blank Contamination:

No target analytes were detected in the method blanks applicable to sample analysis.

B) Field Blank Contamination:

Field blank analysis was not required for this SDG.

2.6 GC/MS Instrument Performance Check

Tuning and performance criteria are established to ensure adequate mass resolution proper identification of compounds and to some degree, sufficient instrument sensitivity. These criteria are not sample specific. Instrument performance is determined using standard materials. Therefore, these criteria should be met in all circumstances. The Tuning standard for semivolatile organics is decafluorotriphenylphosphine (DFTPP).

Instrument performance was generated within acceptable limits and frequency for decafluorotriphenylphosphine (DFTPP) for all analyses.

2.7 Initial and Continuing Calibrations

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of giving acceptable performance at the beginning of an experimental sequence. The continuing calibration checks document that the instrument is giving satisfactory daily performance.

C) Response Factor GC/MS:

The response factor measures the instrument's response to specific chemical compounds. The response factor for all compounds must be ≥ 0.05 in both initial and continuing calibrations. A value < 0.05 indicates a serious detection and quantitation problem (poor sensitivity). Analytes detected in the sample will be qualified as estimated, "J". All non-detects for that compound in the corresponding samples will be rejected, "R".

All the response factors for the target analytes reported were found to be within acceptable limits (≥ 0.05), for the initial (average RRF) and continuing calibrations.

D) Percent Relative Standard Deviation (%RSD) and Percent Difference (%D):

Percent RSD is calculated from the initial calibration and is used to indicate the stability of the specific compound response factor over increasing concentrations. Percent D compares the response factor of the continuing calibration check to the mean response factor (RRF) from the initial calibration. Percent D is a measure of the instrument's daily performance. Percent RSD must be $< 30\%$ and %D must be $< 25\%$. A value outside of these limits indicates potential detection and quantitation errors. For these reasons, all positive results are flagged as estimated, "J" and non-detects are flagged "UJ". If %RSD and %D grossly exceed QC criteria, non-detect data may be qualified, "R", unusable. Additionally, in cases where the %RSD is $> 30\%$ and eliminating either the high or the low point of the curve does not restore the %RSD to less than or equal to 30% then positive results are qualified, "J". In cases where removal of either the low or high point restores the linearity, then only low or high level results will be qualified, "J" in the portion of the curve where non linearity exists.

Initial Calibrations: The initial calibrations provided and the %RSD were within acceptable limits (30%) for all compounds with the following exceptions:

COMPOUND	CALIBRATION DATE/INSTRUMENT	%RSD	ACTION
Benzoic Acid	04/07/05 MSP	32.1	Non-detects, "UJ" samples SW-S, SW-E1, SW-E2, SW-E3, SW-E4, B-1, B-2
2,4-Dinitrophenol	04/10/05 MSU	32.5	Non-detects, "UJ" samples Stockpile Comp 1, Stockpile Comp 2, SW-N, SW-W1, SW-W2, SW-W3, SW-W4, B-3, B-4

Continuing Calibrations: The continuing calibrations provided and the %D was within acceptable limits (25%) for all compounds with the following exceptions:

COMPOUND	CALIBRATION DATE/INSTRUMENT	%D	ACTION
Benzoic Acid	04/11/05 MSP	43.8	Previously qualified due to ICAL
Benzoic Acid	04/12/05 MSP	46.9	Previously qualified due to ICAL
Benzoic Acid	04/12/05 MSU	27.7	Non-detects, "UJ" B-3, B-4
Hexachlorocyclopentadiene	04/12/05 MSU	29.7	Non-detects, "UJ" B-3, B-4
2,4-Dinitrophenol	04/12/05 MSU	32.3	Previously qualified due to ICAL
Diethylphthalate	04/12/05 MSU	28.7	Non-detects, "UJ" B-3, B-4
Di-n-Butylphthalate	04/12/05 MSU	29.9	Non-detects, "UJ" B-3, B-4
Pyrene	04/12/05 MSU	26.0	Non-detects, "UJ" B-3, B-4
Bis (2-ethylhexyl)phthalate	04/12/05 MSU	27.3	Non-detects, "UJ" B-3, B-4
Hexachlorocyclopentadiene	04/11/05 MSU	27.8	Non-detects, "UJ" samples SW-N, SW-W1, SW-W2, SW-W3, SW-W4
2,4-Dinitrophenol	04/11/05 MSU	36.9	Previously qualified due to ICAL
Pyrene	04/11/05 MSU	36.7	Non-detects, "UJ" samples SW-N, SW-W1, SW-W2, SW-W3, SW-W4
Benzo (g,h,i) Perylene	04/11/05 MSU	32.2	Non-detects, "UJ" samples SW-N, SW-W1, SW-W2, SW-W3, SW-W4

2.8 Internal Standards

Internal Standards (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during every experimental run. The internal standard area count must not vary by more than a factor of 2 (-50% to +100%) from the associated continuing calibration standard. The retention time of the internal standard must not vary more than +/- 30 seconds from the associated continuing calibration standard. If the area count is outside the (-50% to +100%) range of the associated standard, all of the positive results for compounds quantitated using that IS are qualified as estimated, "J", and all non-detects as "UJ", or "R" if there is a severe loss of sensitivity.

If an internal standard retention time varies by more than 30 seconds, professional judgment will be used to determine either partial or total rejection of the data for that sample fraction.

Data qualifications are summarized below:

Internal Standard Outlier	Sample Identification	Qualified Compounds
None		

2.9 Target Compound List Identification

TCL compounds are identified on the GC/MS by using the analyte's relative retention time (RRT) and by comparison to the ion spectra obtained from known standards. For the results to be a positive hit, the sample peak must be within ± 0.06 RRT units of the standard compound and have an ion spectra which has a ratio of the primary and secondary m/e intensities within 20% of that in the standard compound.

2.10 Compound Quantification and Reported Detection Limits

GC/MS quantitative analysis is considered to be acceptable. Correct internal standards, response factors and moisture content were used to calculate final concentrations.

Polyaromatic hydrocarbons were detected at the levels presented in Appendix A in samples SW-E1, SW-E2, SW-E3 and B-2. Target analytes were not detected in any of the field samples collected as part of this data set.

2.11 Overall System Performance

Acceptable system performance was maintained throughout the analysis.

Appendix C

Case Narrative

STL Report : 209203
LEGGETTE, BRASHEARS, & GRAHAM

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature.

Organic Extraction - Samples were extracted according to method 3541. No problems were encountered.

Semi-Volatile Organics - Semi-volatile organic samples were analyzed by capillary GC/MS according to NYSDEC Protocols using guidance provided in Method 8270C. The instrumentation used was a Hewlett-Packard Gas Chromatograph interfaced with a Mass Selective Detector.

A 1ul injection was used for all samples and standards. Refer to the standard concentration form behind the Form 8's for specific compound concentrations in each of the calibration levels. Internal standards were added to all samples and standards at 20ng/ul.

Samples SW-N, SW-W1 and B-3 had one surrogate out of recovery criteria, but within laboratory sample acceptance criteria.

Sample Calculation:

Sample ID – SW-E1
Compound - phenanthrene

$$\frac{(273236\text{Area})(20\text{ng})(1000\text{ul})}{(765882\text{Area})(1.071\text{Area/ng})(1\text{ul})(15.3\text{g})(.834)} = 522 = 520\text{ug/kg}$$

Volatile Organics – Volatile organics were determined by purge and trap GC/MS using guidance provided in Method 5030B/8260B.

The spike compound percent recoveries were within the laboratory generated guidelines in the independent source quality control samples except for chloroethane in 46900-2LCS and 46989-2LCS.

The target compounds, methylene chloride and acetone, are common laboratory contaminants. The presence of these compounds in the method blanks and associated samples at values less than the reporting limit (“J” values) is common. If these compounds are detected in the method blanks, the associated samples will have a “B” flag on these compounds.

Sample Calculation:

Sample ID-SW-N

Compound- Methylene chloride

$$\frac{(24760 \text{ area})(125\text{ng})}{(286011 \text{ area})(.549 \text{ area/ng})(5\text{g})(.844)} = 4.67 = 4.7 \text{ ug/Kg.}$$

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.
