Re: Monthly Progress Report – May 2023
Former United Hospital – 406 Boston Post Road, Port Chester, New York
NYSDEC BCP Site No. C360202

Dear Mr. Hubicki:

This Monthly Progress Report has been prepared by AKRF, Inc. (AKRF) to summarize the work performed at the Former United Hospital site located at 406 Boston Post Road in Port Chester, New York [New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site No. C360202] (the Site) during the month of May 2023. The following activities were conducted:

- The demolition contractor continued with Phase 1 of the demolition work (Site Preparation / Pre-Asbestos Abatement), including removal of loose items (e.g., furniture, garbage, etc.) from the former hospital buildings, with Phase 2 (Asbestos Abatement) continuing concurrently in select areas of the buildings. As a component of Phase 1 (Site Preparation / Pre-Asbestos Abatement) and in accordance with the Stormwater Pollution Prevention Plan (SWPPP), the demolition contractor installed silt fencing in the northern and eastern portions of the Site on May 1 and 2, 2023. The silt fence installation required minor excavation and grading to bury the bottom approximate 6 inches of the fencing material; all excavated material was returned to the area from which it was generated following installation of the silt fencing. As this work involved minor ground disturbance with some limited potential for generation of airborne particulate, AKRF conducted environmental monitoring, including roving Community Air Monitoring Program (CAMP) monitoring utilizing hand-help equipment [a photoionization detector (PID) and dust monitor], during the work. A Daily Activity Report was prepared and submitted to NYSDEC and NYSDOH for each day, which documented the work completed that day, provided the schedule for near-term field work, and included a summary of the findings from the CAMP monitoring activities. Copies of the Daily Activity Reports are included in Attachment A of this Monthly Progress Report.

AKRF implemented full-scale environmental/CAMP monitoring beginning on May 22, 2023 as the demolition contractor began exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (partition walls, drop ceilings, mechanical equipment, etc.). A total of six CAMP stations (three fixed stations deployed at the same location each day and three portable stations that were adjusted daily for changes in wind and/or work zones) were deployed prior to the start of Site work each day. Every CAMP station was equipped with a PID and dust monitor capable of calculating 15-minute running averages for volatile organic compound (VOC) and particulate concentrations, respectively, and a Netronix™ Global System for Mobile Communication (GSM)/Global Positioning System (GPS) device capable of recording air monitoring and location data. All air monitoring data was posted on a password-protected, project-specific, online database and was

downloaded/saved on a regular basis, with real-time e-mail/mobile alerts sent to AKRF staff to indicate action level exceedances (if any). A Daily Activity Report was prepared and submitted to NYSDEC and NYSDOH for each day, which documented the work completed that day, provided the schedule for near-term field work, and included a summary of the findings from the CAMP monitoring activities. Copies of the Daily Activity Reports are included in Attachment A of this Monthly Progress Report.

- Prior to mobilization for full-scale environmental/CAMP monitoring, AKRF conducted periodic inspections of the Site on May 2, 12, and 19, 2023 to ensure that the requirements of the BCP were being followed during the building demolition activities.
- An on-site meeting with AKRF, the NYSDEC Project Manager, and the demolition contractor was conducted on May 31, 2023 to tour the Site; discuss the scope of the demolition of interior, non-loadbearing, building elements (partition walls, drop ceilings, mechanical equipment, etc.); view the exterior building material handling areas; discuss dust suppression methods; and review the CAMP station locations.
- AKRF continued preparation of the Interim Remedial Investigation Report (Interim RIR).

The following work is planned for June 2023:

- AKRF will continue implementation of full-scale environmental/CAMP monitoring during exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (partition walls, drop ceilings, mechanical equipment, etc.) and will continue through the conclusion of Phase 3 (Structural Demolition), which is anticipated to be completed in the first quarter of 2024.
- Minor exploratory excavation work will be conducted to investigate suspected underground storage tanks (USTs). All excavated material will be stockpiled on/covered with poly sheeting and will be field screened for evidence of petroleum contamination; any evidence of a petroleum spill/release will be promptly reported to the NYSDEC Project Manager. Unless evidence of gross contamination is identified (e.g., staining, elevated PID readings, oily sheens, odors, etc.), the excavated material will be returned to the location from which it was generated; grossly contaminated material (if any) will be segregated and characterized for off-site disposal. If one or more USTs are identified, the approximate size, suspected contents, and condition will be evaluated, and the findings will be used to prepare an Interim Remedial Measures (IRM) Work Plan for the removal of the tanks.
- We anticipate that the draft Interim RIR will be submitted to the NYSDEC by late June 2023.

If you have any questions regarding the information presented in this letter, please contact me at (914) 922-2374.

Sincerely,
AKRF Inc.

Comments:	The data from the UH - Downwind 2 CAMP station did not report to the online database between approximately 12:12 and the end of the work day due to an issue with the Netronix modem. The equipment vendor assisted with troubleshooting the issue ahead of the next work day, and will provide a replacement modem if the issue persists. No elevated levels of VOCs or particulates were detected with nearby CAMP equipment during the period that the UH - Downwind 2 CAMP station was not reporting.

Contractor Information								
Contracting Company		Key Personnel		Equipment				
Capital Industries Corp.		Joe Cianciulli		Various demolition equipment (e.g., excavators, skid steers, roll off containers, etc.)				
Description and Location of Work Activities Performed								
The demolition contractor continued with Phase I of the demolition work (Site Preparation / Pre-Asbestos Abatement), including the removal of loose items (e.g., furniture, garbage, etc.) from the former hospital buildings, with Phase II (Asbestos Abatement) continuing concurrently in select areas of the buildings; no ground intrusive activities were conducted. The demolition contractor continued exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); no ground intrusive activities were conducted.

Additional Information								
Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement) and Phase II (Asbestos Abatement) of the demolition activities at the former hospital buildings, including exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.).							
Comments:	The VOC data from the UH - Fixed 3 CAMP station did not upload to the online database from the start of the work day until approximately 10:23 due to a faulty data communication cable. AKRF notified the equipment vendor of the issue and a replacement communication cable was delivered to the site at approximately 10:10. The station was temporarily taken offline from approximately 10:10 to 10:23 to replace the communication cable, and the station was fully operational following the repair. No elevated levels of VOCs or particulates were detected with nearby CAMP equipment during the period that the UH - Fixed 3 CAMP station was not reporting. The VOC data from the UH - Fixed 1 CAMP station did not upload to the online database between approximately 14:24 and 14:37 and again between approximately 15:05 and the end of the work day due to a faulty data communication cable. AKRF notified the equipment vendor of the issue and coordinated the delivery of a replacement communication cable for the following work day. No elevated levels of VOCs were detected with nearby CAMP equipment during the period that VOCs were not reported at the UH - Fixed 1 CAMP station.

	Daily Activity Report							
	Former United Hospital Port Chester, NY							
	BCP No. C360202							
General Site Information								
Date:	Wednesday, May 24, 2023							
Weather:	Sunny, 55-75°F							
Wind Direction/Speed:	Wind from the north @ 3 mph							
AKRF Personnel on Site:	Mackenzie Miller							
AKRF Equipment on Site:	3 Fixed CAMP Stations (PID & Dust Monitor), 3 Portable CAMP Stations (PID & Dust Monitor), One Handheld PID, One Handheld Dust Monitor							
Visitors:	None							
Contractor Information								
Contracting Company		Key Personnel		Equipment				
Capital Industries Corp.		Joe Cianciulli		Various demolition equipment (e.g., excavators, skid steers, roll off containers, etc.)				
Description and Location of Work Activities Performed								
The demolition contractor continued with Phase I of the demolition work (Site Preparation / Pre-Asbestos Abatement), including the removal of loose items (e.g., furniture, garbage, etc.) from the former hospital buildings, with Phase II (Asbestos Abatement) continuing concurrently in select areas of the buildings; no ground intrusive activities were conducted. The demolition contractor began exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); no ground intrusive activities were conducted.

Additional Information								
Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement) and Phase II (Asbestos Abatement) of the demolition activities at the former hospital buildings, including exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.).							
Comments:	Due to a mix-up with the labels on replacement CAMP station equipment, the UH - Fixed 3 CAMP station and the UH - Downwind 1 CAMP station were inadvertently placed in the wrong locations; the CAMP station locations are shown on the "Work Area Location" map. The labels were fixed ahead of the next work day to ensure that the Fixed CAMP stations are deployed at the correct locations, with the Upwind and Downwind CAMP stations moved as necessary to account for changes in work zones and wind direction. Elevated levels of particulates (>0.100 mg/m3 above background) were detected at UH - Fixed 3 from approximately 12:49 to 13:08, 14:21 to 14:28, and 15:00 to 15:15 due to dust associated with the exterior handling of interior building demolition debris. After each occurrence, AKRF stopped site work and directed the contractor to utilize dust suppression measures (e.g., use of water to control airborne particulates) until particulate levels decreased below the action level. The contractor was informed that additional dust suppression methods (including increasing the use of water and reducing the pace of work) would have to be employed during future work to control particulate levels; additional dust suppression equipment (hoses and misters) was mobilized to the work area at the end of the work day for use during future activities. The VOC data from the UH - Fixed 1 CAMP station periodically uploaded to the online database between the start of the work day and approximately 10:34 due to the faulty data communication cable identified during site work on 5/23/2023; a replacement communication cable was delivered to the site at approximately 10:30. The station was temporarily taken offline from approximately 10:30 to 10:34 to replace the communication cable, and the station was fully operational following the repair. No elevated levels of VOCs or particulates were detected with nearby CAMP equipment during the period that the UH - Fixed 1 CAMP station was not reporting. The VOC data from the UH - Downwind 1 CAMP station did not report to the online database from the start of the work day until approximately 08:14 due to a loose data communication cable; the cable was reconnected and the station was fully operational by 08:15. No elevated levels of VOCs were detected with nearby CAMP equipment during the period that VOCs were not reported at the UH - Downwind 1 CAMP station.

Additional Information								
Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement) and Phase II (Asbestos Abatement) of the demolition activities at the former hospital buildings, including exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.).							
Comments:	The VOC data from the UH - Downwind 2 CAMP station did not report to the online database from the start of the work day until approximately 07:54 due to a loose data communication cable; the cable was reconnected and the station was fully operational by 07:54. No elevated levels of VOCs were detected with nearby CAMP equipment during the period that VOCs were not reported at the UH - Downwind 2 CAMP station.
