Re: Monthly Progress Report – September 2023
Former United Hospital – 406 Boston Post Road, Port Chester, New York
NYSDEC BCP Site No. C360202

Dear Mr. Hubicki:

This Monthly Progress Report has been prepared by AKRF, Inc. (AKRF) to summarize the work performed at the Former United Hospital site located at 406 Boston Post Road in Port Chester, New York [New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) Site No. C360202] (the Site) during the month of September 2023. The following activities were conducted:

- The demolition contractor continued with Phase 1 (Site Preparation / Pre-Asbestos Abatement), Phase 2 (Asbestos Abatement), and Phase 3 (Structural Demolition) of the demolition activities at the former hospital buildings. As the work included structural demolition and the exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (partition walls, drop ceilings, mechanical equipment, etc.), AKRF implemented the full-scale Community Air Monitoring Program (CAMP)/environmental monitoring included in the Remedial Investigation Work Plan (RIWP) during each workday. A total of six CAMP stations (three fixed stations deployed at the same location each day and three portable stations that were adjusted daily for changes in wind and/or work zones) were deployed prior to the start of each workday. Each CAMP station was equipped with a photoionization detector (PID) and dust monitor capable of calculating 15-minute running averages for volatile organic compound (VOC) and particulate concentrations, respectively, and a Netronix™ Global System for Mobile Communication (GSM)/Global Positioning System (GPS) device capable of recording air monitoring and location data. All air monitoring data was posted on a password-protected, project-specific, online database and was regularly downloaded/saved, with real-time e-mail/mobile alerts sent to AKRF staff to indicate action level exceedances (if any). A Daily Activity Report was prepared and submitted to NYSDEC and NYSDOH for each workday, which documented the work completed that day, provided the schedule for near-term field work, and included a summary of the findings from the CAMP monitoring activities. Copies of the Daily Activity Reports are included in Attachment A of this Monthly Progress Report.
- A Change of Use Notification and Supplemental Environmental Documentation were submitted to NYSDEC on September 7, 2023, which described proposed improvements related to construction of an antennae on the western portion of the Site to support relocation of telecommunication equipment located on existing structures subject to demolition. AKRF discussed the scope of work detailed in the Change of Use Notification with the NYSDEC during a conference call on October 5, 2023, and agreed to conduct additional soil sampling within the footprint of the area subject to the notification. As outlined in email correspondence from October 5, 2023, the scope of the additional sampling would

include the installation of three soil borings to bedrock refusal with the collection and laboratory analysis of three soil samples (0-2 feet, 3-5 feet, and the 2-foot interval above bedrock refusal) from each location; the deepest sample from each location would be put on hold pending the analytical results of the two shallower samples. The additional soil sampling activities, which would be conducted in accordance with the NYSDEC-approved Remedial Investigation Work Plan (RIWP), are scheduled for October 19, 2023. As the goal is to begin construction work associated with the new antenna on/about November 1, 2023, the results of the additional soil sampling will be provided to the NYSDEC in a summary (letter) report with tabulated data and recommendations; the data will be later incorporated in the Remedial Investigation Report (RIR).

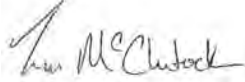

- AKRF reviewed the laboratory analytical data from the groundwater samples collected in July and August 2023 from two existing groundwater monitoring wells (SESI-GW-2 and SESI-GW-3) that were installed by others prior to our involvement in the project. The groundwater samples were analyzed for VOCs by EPA Method 8260, semivolatile organic compounds (SVOCs) by EPA Method 8270, polychlorinated biphenyls (PCBs) by EPA Method 8082, pesticides/herbicides by EPA Method 8081/8151, metals by EPA Method 6000/7000 series (total and dissolved), total cyanide by EPA method 9012, 1,4-dioxane by EPA Method 8270-SIM, and per- and polyfluoroalkyl substances (PFAS) by EPA Method 537.1. The Category B laboratory deliverables were sent to a third-party data validator to be validated.
- On-site meetings with AKRF, the NYSDEC Project Manager, and the demolition contractor were conducted on September 1 and 19, 2023 to view work progress, discuss the scope of work for continued demolition activities, and evaluate the proposed work associated with the Change of Use package that was submitted for construction of the new communications antenna and associated ancillary equipment.

The following work is planned for October 2023:

- AKRF will continue implementation of full-scale CAMP/environmental monitoring during active structural demolition and exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (partition walls, drop ceilings, mechanical equipment, etc.)
- AKRF will implement the additional soil sampling program within the footprint of the area subject to the Change of Use Notification and Supplemental Environmental Documentation were submitted to NYSDEC on September 7, 2023. As outlined above, the sampling work is scheduled for October 19, 2023, and will be conducted in accordance with the NYSDEC-approved RIWP and the scope of work outlined in email correspondence to the NYSDEC dated October 5, 2023.
- AKRF will review the validated laboratory analytical results from the groundwater samples collected from the two existing groundwater monitoring wells in July and August 2023. The validated data will be summarized in the RIR, and will be used to support decision making for additional site-wide characterization of groundwater conditions (if required).
- Minor exploratory excavation work to investigate suspected USTs at the Site is expected. All excavated material will be stockpiled on/covered with poly sheeting and will be field screened for evidence of petroleum contamination; any evidence of a petroleum spill/release will be promptly reported to the NYSDEC Project Manager. Unless evidence of gross contamination is identified (e.g., staining, elevated PID readings, odors, etc.), the excavated material will be returned to the location from which it was generated; grossly contaminated material (if any) will be segregated and characterized for off-site disposal. The findings from the exploratory excavation activities will be used to prepare an Interim Remedial Measures (IRM) Work Plan for the removal of all tanks identified at the Site.

If you have any questions regarding the information presented in this letter, please contact me at (914) 922-2374.

Sincerely,
AKRF Inc.

Timothy McClintock
Technical Director

Additional Information							
Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement), Phase II (Asbestos Abatement), and Phase III (Structural Demolition) of the demolition activities at the former hospital buildings, including structural demolition and the exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris will be loaded into containers for off-site disposal.						
Comments:	The VOC data from the UH - Upwind 1 and UH - Downwind 2 CAMP stations did not report to the online database from the start of the work day until approximately 08:17 and 08:14, respectively, due to loose data communication cables; the cables were reconnected and the stations were fully operational thereafter. No elevated levels of VOCs were detected with nearby CAMP equipment during the period that VOCs were not reported at the UH - Upwind 1 and UH - Downwind 2 CAMP stations.

Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement), Phase II (Asbestos Abatement), and Phase III (Structural Demolition) of the demolition activities at the former hospital buildings, including structural demolition and the exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris will be loaded into containers for off-site disposal.							
Comments:	Elevated levels of particulates (>0.100 mg/m3 above background) were detected at the UH - Downwind 2 CAMP station from approximately 09:39 to 09:52 due to an instantaneous spike that occurred when an excavator drove over debris in the asphalt-paved roadway adjacent to the CAMP equipment; the water truck, which routinely applies water to the roadways, was being serviced at the time and had not yet applied water to the roadways in this area of the site. Shortly thereafter, the water truck resumed routine watering of the roadways throughout the day. AKRF requested that the demolition contractor utilize alternative methods of dust suppression (hoses) on the roadways in the future when the water truck is being serviced.

Additional Information								
Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement), Phase II (Asbestos Abatement), and Phase III (Structural Demolition) of the demolition activities at the former hospital buildings, including structural demolition and the exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris will be loaded into containers for off-site disposal.							
Comments:	<p>Elevated levels of particulates (>0.100 mg/m³ above background) were detected at the UH - Downwind 2 CAMP station from approximately 09:42 to 09:56 due to an instantaneous spike that occurred when the water truck was applying water to the roadway adjacent to the CAMP equipment (unrelated to demolition work). The CAMP station was temporarily taken offline from approximately 11:59 to 12:05 so that it could be relocated away from the roadway prior to the water truck's next pass through the area. AKRF informed the demolition contractor of the presence of debris on the roadway in this area of the site and developed a plan to remove the debris/wash the roadways in high traffic areas.</p> <p>Elevated levels of particulates (>0.100 mg/m³ above background) were intermittently detected at the UH - Downwind 2 CAMP station between approximately 13:52 and 15:15 due to dust associated with the structural demolition of the eastern portion of the main hospital building. It should be noted that significant dust suppression was being implemented during the work, including an out-of-service fire truck and multiple fire hoses to apply water to the work area and the debris pile. After each occurrence, work was halted and all dust suppression efforts were focused on the debris pile to control airborne particulate; all visible dust was quickly addressed and work did not resume until the particulate detections fell below the action level. AKRF discussed the conditions with the demolition contractor and developed a plan to limit dust generation during future work in this area, including repositioning the dust suppression equipment and limiting the size of take-downs where possible.</p>

Additional Information								
Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement), Phase II (Asbestos Abatement), and Phase III (Structural Demolition) of the demolition activities at the former hospital buildings, including structural demolition and the exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris will be loaded into containers for off-site disposal.							
Comments:	The VOC data from the UH - Upwind 1 and UH - Downwind 2 CAMP stations did not report to the online database from the start of the work day until approximately 08:23 and 08:06, respectively; the CAMP stations were rebooted and the stations were fully operational thereafter. No elevated levels of VOCs were detected with nearby CAMP equipment during the period that VOCs were not reported at the UH - Upwind 1 and UH - Downwind 2 CAMP stations.

	Daily Activity Report							
	Former United Hospital Port Chester, NY BCP No. C360202							
	General Site Information							
Date:	Wednesday, September 13, 2023							
Weather:	Light Rain/Overcast 66 - 78°F							
Wind Direction/Speed:	South @ 4 mph							
AKRF Personnel on Site:	Michael Iodice							
AKRF Equipment on Site:	3 Fixed CAMP Stations (PID & Dust Monitor), 3 Portable CAMP Stations (PID & Dust Monitor), One Handheld PID, One Handheld Dust Monitor							
Visitors:	None							
Contractor Information								
Contracting Company		Key Personnel			Equipment			
Capital Industries Corp. (Demolition Contractor)		Joe Cianciulli, Eddy Caldero			Various demolition equipment (e.g., excavators, skid steers, roll off containers, etc.)			
Description and Location of Work Activities Performed								
<p>The demolition contractor continued with Phase I of the demolition work (Site Preparation / Pre-Asbestos Abatement), including the removal of loose items (e.g., furniture, garbage, etc.) from the former hospital buildings, with Phase II (Asbestos Abatement) continuing concurrently in select areas of the buildings.</p> <p>The demolition contractor continued exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris was loaded into containers for off-site disposal.</p> <p>The demolition contractor continued Phase III (Structural Demolition) in the eastern portions of the main hospital building; the demolition debris was loaded into containers for off-site disposal.</p> <p>No ground intrusive activities were conducted.</p>

Particulate Action Level Exceedance(s) Above Background:		No	No	No	No	No	No	No
Additional Information								
Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement), Phase II (Asbestos Abatement), and Phase III (Structural Demolition) of the demolition activities at the former hospital buildings, including structural demolition and the exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris will be loaded into containers for off-site disposal.							
Comments:	The VOC data from the UH - Upwind 1 CAMP station did not report to the online database from the start of the work day until approximately 08:30; the CAMP equipment was rebooted and the station was fully operational thereafter. No elevated levels of VOCs were detected with nearby CAMP equipment during the period that VOCs were not reported at the UH - Upwind 1 CAMP station.

Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement), Phase II (Asbestos Abatement), and Phase III (Structural Demolition) of the demolition activities at the former hospital buildings, including structural demolition and the exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris will be loaded into containers for off-site disposal.							
Comments:	Negative particulate concentrations were detected at the UH - Fixed 1 CAMP station between approximately 10:25 and 10:28 due to equipment malfunction. The station was temporarily taken offline and the dust monitor was recalibrated; the station was fully operational by 10:32. No elevated levels of particulates were detected with nearby CAMP equipment during the period that the UH - Upwind 1 CAMP station was reporting negative particulate concentrations.

Additional Information								
Planned Work Activity for Following Day(s):	The demolition contractor will continue with Phase I (Site Preparation / Pre-Asbestos Abatement), Phase II (Asbestos Abatement), and Phase III (Structural Demolition) of the demolition activities at the former hospital buildings, including structural demolition and the exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris will be loaded into containers for off-site disposal.							
Comments:	Particulate concentrations below 0.000 mg/m ³ were detected at the UH - Fixed 1 CAMP station between approximately 13:50 and 13:53 due to equipment malfunction. The station was temporarily taken offline and the dust monitor was recalibrated; the station was fully operational by 13:57. No elevated levels of particulates were detected with nearby CAMP equipment during the period that the UH - Fixed 1 CAMP station was reporting negative particulate concentrations.

Contractor Information

Contracting Company	Key Personnel	Equipment
Capital Industries Corp. (Demolition Contractor)	Joe Cianciulli, Eddy Caldero	Various demolition equipment (e.g., excavators, skid steers, roll off containers, etc.)

Description and Location of Work Activities Performed

The demolition contractor continued with Phase I of the demolition work (Site Preparation / Pre-Asbestos Abatement), including the removal of loose items (e.g., furniture, garbage, etc.) from the former hospital buildings, with Phase II (Asbestos Abatement) continuing concurrently in select areas of the buildings.

The demolition contractor continued exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris was loaded into containers for off-site disposal.

The demolition contractor continued Phase III (Structural Demolition) in the eastern portions of the main hospital building; the demolition debris was loaded into containers for off-site disposal.

No ground intrusive activities were conducted.

Contractor Information

Contracting Company	Key Personnel	Equipment
Capital Industries Corp. (Demolition Contractor)	Joe Cianciulli, Eddy Caldero	Various demolition equipment (e.g., excavators, skid steers, roll off containers, etc.)

Description and Location of Work Activities Performed

The demolition contractor continued with Phase I of the demolition work (Site Preparation / Pre-Asbestos Abatement), including the removal of loose items (e.g., furniture, garbage, etc.) from the former hospital buildings, with Phase II (Asbestos Abatement) continuing concurrently in select areas of the buildings.

The demolition contractor continued exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris was loaded into containers for off-site disposal.

The demolition contractor continued Phase III (Structural Demolition) in the eastern portions of the main hospital building; the demolition debris was loaded into containers for off-site disposal.

No ground intrusive activities were conducted.

Daily Activity Report

Former United Hospital
Port Chester, NY
BCP No. C360202

General Site Information

Date:	Thursday, September 28, 2023
Weather:	Cloudy 52 - 65°F
Wind Direction/Speed:	East @ 9 mph
AKRF Personnel on Site:	Michael Iodice
AKRF Equipment on Site:	3 Fixed CAMP Stations (PID & Dust Monitor), 3 Portable CAMP Stations (PID & Dust Monitor), One Handheld PID, One Handheld Dust Monitor
Visitors:	None

Contractor Information

Contracting Company	Key Personnel	Equipment
Capital Industries Corp. (Demolition Contractor)	Joe Cianciulli, Eddy Caldero	Various demolition equipment (e.g., excavators, skid steers, roll off containers, etc.)

Description and Location of Work Activities Performed

The demolition contractor continued with Phase I of the demolition work (Site Preparation / Pre-Asbestos Abatement), including the removal of loose items (e.g., furniture, garbage, etc.) from the former hospital buildings, with Phase II (Asbestos Abatement) continuing concurrently in select areas of the buildings.

The demolition contractor continued exterior handling of building materials associated with demolition of interior, non-loadbearing, building elements (e.g., partition walls, drop ceilings, mechanical equipment, etc.); the demolition debris was loaded into containers for off-site disposal.

The demolition contractor continued Phase III (Structural Demolition) in the eastern portions of the main hospital building; the demolition debris was loaded into containers for off-site disposal.

No ground intrusive activities were conducted.
