1.0 INTRODUCTION

SESI Consulting Engineers (SESI) has conducted this Phase II Environmental Site Assessment (Phase II ESA) on behalf of the MacQuesten Construction Management, LLC for the property located at 32, 36, and 38 Main Street and 1 and 3 Riverdale Avenue, Yonkers, New York (“Site”). The Site is identified on local tax maps as Block 501, Lots 18, 19, 20, 22, and 23. The Site comprises five (5) contiguous parcels totaling 0.24-acre that is currently vacant. The Site is bound to the north by Main Street, to the east by Riverdale Avenue, to the south by a four-story commercial building located at 5 Riverdale Avenue, and to the west by a one-story commercial building and a four-story building beyond.

This report complies with the 2015 American Society for Testing and Materials standard (ASTM E1903). **Figure 1.1** presents a Site Location Map. This Phase II ESA report summarizes the data of soil samples and soil vapor samples collected by SESI to further investigate the Site.

1.1 SITE SETTINGS

The Site consists of five (5) contiguous parcels totaling 0.24-acre. The Site does not contain any buildings or permanent structures; however; the eastern portion of the Site is improved by concrete walkways, brick walls and landscaping elements. Based on the United States Geological Survey (USGS) topographic map, the Site elevation is approximately 30 feet above mean sea level (ft-msl) and slopes down from the southwest to northeast. The nearest surface water body is the Hudson River located approximately 1,200-feet east of the Site. The current Site conditions are shown on **Figure 1.2**.

1.2 SITE HISTORY

SESI conducted a Phase I Environmental Site Assessment concurrent with this Phase II ESA which identified the following Recognized Environmental Condition (RECs) .

REC 1 – Historical Site Usage: Based on the review of Sanborn Maps, several businesses and storefronts were listed onsite from 1886. Most notably, a hotel was listed on the Site from 1942. Hotels are historically known to have had in-house dry cleaning services which have the potential for impacting the sub-surface. Two underground ovens are identified on the Site from 1898 to 1956. No additional details regarding the oven’s uses was identified. Paint-Dressmaking was listed onsite from 1971 to 1973. No details regarding whether the business

was manufacturing paints and/or dresses or what types of chemicals were used/stored onsite was identified. Finally, given the age of the buildings onsite, the existence of a fuel-oil UST cannot be ruled out.

In addition, the following Conditional REC (CREC) has been identified:

- **CREC 1 – Historical Spill Incidents:** According to the NY Spills list provided by EDR, there are thirty-four (34) NY Spill sites within 0.125 miles of the subject Site. Two (2) Spill incidents regarding releases of #2 fuel oil to groundwater are listed for 40 Main Street, which lies approximately twenty (20) feet west of the Site. Both incidents are listed in the NYSDEC Spill Database as closed. In addition, four (4) Spill incidents are reported for the Main Street/Riverdale Avenue intersection abutting the Site to the east, for releases of dielectric fluid and an unknown petroleum to the subsurface. These incidents are also listed in the NYSDEC Spill Database as closed. Information regarding these spill numbers has been requested from the NYDEC; a response is pending. Due to the proximity of these incidents to the subject site and as no record of environmental sampling on the subject site was reviewed, SESI recommends further investigation into the nature of the incidents, extent of impacts to the environment and current regulatory status.

2.0 SUBSURFACE INVESTIGATION

2.1 SITE GEOLOGY

Based on soil borings conducted during this investigation, a historical fill layer was encountered below the surface materials in all borings at depths at depths of 5 to 10 feet below ground surface (ft-bgs). This fill layer generally consisted of a predominately granular soil intermixed with construction debris, containing concrete and brick. The fill layer is underlain by glacial deposits to an observed depth of 35 ft-bgs and generally consisted of brown coarse to fine sand with varying amounts of silt and gravel.

2.2 SOIL BORINGS

Prior to conducting subsurface drilling, SESI's drilling contractor contacted New York's utility mark-out system. In addition, SESI retained American Geophysics, a private utility locator, to locate underground utilities not included in the one-call and to conduct a geophysical survey using ground penetrating radar (GPR) and electromagnetic (EM) detection. The GPR/EM surveying was performed on May 25, 2021 to clear soil boring locations, as well as to search for a potential UST(s). No anomalies consistent with USTs were identified. American Geophysics' report is provided in **Appendix A**.

Five (5) soil borings, two (2) temporary monitoring wells, and four (4) soil vapor points were completed using a combination of hollow-stem auger and direct-push sampling equipment. The borings were performed to depths ranging from approximately 10.0 feet to 35 feet below the ground surface using a track-mounted drill rig. Boring B-1 was drilled over the concrete patio at the rear of Lot 23. Borings B-2 and B-3 were drilled over the concrete sidewalk in Lots 20 and 22. Borings B-4 and B-5 were drilled over the grass area in Lots 18 and 19. All borings and observations were logged to identify the presence of staining, fill materials, volatile organic vapor concentrations, and groundwater depth. The investigation was completed between May 25 and 26, 2021.

In total, ten (10) soil samples were collected from five (5) soil borings, two (2) groundwater samples were collected from two (2) temporary wells, four (4) soil vapor samples were collected from four (4) temporary vapor points, and one (1) ambient air sample was collected. **Table 2.1** below presents a list of the samples collected, the dates of sampling, installation method, depth, location and sample depth rationale, sample media, sample type, and analysis completed. **Figure**

2.1 presents the soil boring locations. Soil boring logs are presented in **Appendix B**. Samples were delivered under chain-of-custody and analyzed at Alpha Analytical Laboratories (Alpha), a New York certified laboratory (NY Certification #11148). Soil samples were collected based on field screening, which included screening with a Photo Ionization Detector (PID) and visual and olfactory observations. The soil samples were collected as a discrete grab samples and were not composited.

As noted in the table below, the soil samples were analyzed for Target Compound List +30 TICs/Target Analyte List (TCL+30/TAL), which includes total volatile organic compounds (VOCs), base neutral acid extractables (BNAs), target analyte list (TAL) metals (23 metals + cyanide), pesticides, and polychlorinated biphenyls (PCBs).

2.3 GROUNDWATER INVESTIGATION

Two (2) borings were advanced into the groundwater table to install temporary monitoring wells, identified as SB-1 GW and SB-3 GW. Groundwater was observed at depths ranging between 15 to 17 ft-bg. The temporary monitoring well locations are provided in **Figure 2.1**. Groundwater samples were collected from the wells, delivered under chain-of-custody to Alpha Analytical Laboratories (Alpha), a New York certified laboratory (NY Certification #11148), and analyzed for VOCs by EPA Method 8260, SVOCs by EPA Method 8270, TAL metals, PCBs by EPA Method 8082A, pesticides by EPA Method 8081, and cyanide. Sampling was performed using a peristaltic pump, disposal tubing, and disposable bailers.

2.4 SOIL VAPOR INVESTIGATION

Four (4) soil vapor points were installed via direct push methodologies. The soil samples were collected with 2.7-L Summa Canisters with flow controllers set for a flow rate of 200 ml/min. In addition, one ambient air sample was collected with a 6-L Summa Canister with a flow controller set for a flow rate of 200 ml/min. Soil vapor and ambient air sample point locations are depicted in **Figure 2.1**. The soil vapor samples were delivered under chain-of-custody to Alpha for EPA TO-15 analysis.

3.0 ANALYTICAL RESULTS

3.1 SOIL INVESTIGATION RESULTS

Evidence of fill was observed from grade to depths up to 10 ft-bg. A summary table of the analytical results compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (USCOs), Residential Soil Cleanup Objectives (RSCOs), and Restricted Residential Cleanup Objectives (RRSCOs), is presented on **Table 3.1**, and on **Figure 3.1**. The soil laboratory deliverables are presented in **Appendix C**.

Table 3.2 below includes a summary of the soil exceedances of the NYSDEC Unrestricted Use Soil Cleanup Objectives (USCO), Restricted Use Soil Cleanup Objectives (RSCOs), and Restricted Residential Soil Cleanup Objectives (RRSCO). SVOCs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene were detected at concentrations that exceeded the USCO, RSCO, and RRSCO in six (6) samples (borings SB-1 through SB-5) at depths ranging from 1.5 to 6 ft-bgs. The SVOCs detected are polycyclic aromatic hydrocarbons (PAHs). One sample (SB-3 (5.5-6)) resulted in elevated PAH levels.

The pesticide 4,4'-DDE was detected in one (1) soil sample at a concentration exceeding USCO. The metal mercury was detected in one (1) soil sample at a concentration exceeding the RRSCO, in one (1) sample exceeding the RSCO, and in three (3) soil samples exceeding the USCO. Lead and zinc were detected in four (4) soil samples exceeding the USCOs.

3.2 GROUNDWATER INVESTIGATION RESULTS

Two (2) groundwater samples were collected from the temporary wells and analyzed for VOCs by EPA Method 8260, SVOCs by EPA Method 8270, TAL metals, PCBs by EPA Method 8082A, pesticides by EPA Method 8081, and cyanide. Groundwater analytical results summary tables are included in **Tables 3.3**. The groundwater laboratory deliverable reports are included in **Appendix D**. **Table 3.4** below presents a summary of the groundwater exceedances of the AWQS.

As shown on **Table 3.4** below, the VOCs tetrachloroethene (PCE) was detected in temporary well SB-1 GW (33 ug/L) and SB-3 GW (9.8 ug/L) at concentrations exceeding the AWQS. In addition, the VOC toluene was detected in temporary well SB-1 GW (15 ug/L) exceeding its AWQS.

The PAHs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and ideno(1,2,3-cd)pyrene were detected in groundwater samples collected SB-1GW and SB-3 GW at concentrations exceeding the AWQS. The results are presented on **Table 3.4** below.

As shown on **Table 3.4** below, numerous metals including iron, lead, magnesium, manganese, sodium, thallium, arsenic, barium, beryllium, cadmium, chromium, copper, nickel, selenium and zinc were detected in SB-1GW and SB-2 GW at concentrations exceeding the AWQS. The presence of these contaminants was attributed to sample turbidity from temporary wells. Additionally, the standards for iron, magnesium, manganese, and sodium are secondary concern metals and are not health based.

3.3 SOIL VAPOR RESULTS

Four (4) soil vapor samples were collected and analyzed for volatile vapors by U.S. EPA Method TO-15. **Table 3.5** presents a summary of soil vapor analytical data. The Soil vapor analytical laboratory deliverable report is included in **Appendix E**. A Soil vapor sample location plan and summary of the results are presented in **Figure 3.3**.

New York State does not have standards for soil vapor. However, for discussion purposes SESI has used the NYSDOH Matrices lower threshold levels to evaluate the Matrix A, B, and C listed compounds. **Table 3.6** below presents a summary of the soil vapor exceedances of the NYSDOH Matrix A Sub-Slab Vapor Concentrations Criteria (NY-SSC-A) and NYSDOH Matrix B Sub-Slab Vapor Concentrations Criteria (NY-SSC-C) lower threshold levels. Tetrachloroethene (PCE) was detected in one (1) sample at a concentration in exceedance of the NY-SSC-A lower threshold. No additional exceedances were detected. Additionally, the chlorinated VOCs (CVOCs) including trichloroethene (TCE) and 1,1,1-trichloroethane (1,1-TCA) were detected in soil vapor, but at concentrations below the NY-SSC-A and NY-SSC-B lower threshold levels. The solvents 2-butanone (265 to 740 ug/m³), acetone (61.8 to 138 ug/m³) and carbon disulfide (3.36 to 31.8 ug/m³) were detected; however, there are no NYSDOH Matrices for these compounds. The presence of chlorinated and solvent volatile organic vapors suggests an on-site or nearby source of these compounds is present.

4.0 CONCLUSIONS AND RECOMMENDATIONS

Soil, groundwater and soil vapor detections and exceedances that resulted during the investigations may be a result of the site history. Field investigation identified the presence of brick and concrete fragments in soil, indicative of historic fill that extends to an approximate depth of ten (10) feet below grade. PAHs were identified at concentrations exceeding their respective RRSCO, and metals and pesticides were identified their respective USCOs. However, PAH exceedance in one boring is much higher than typical historic fill levels. In addition dissolved PAHs were detected in groundwater at concentrations exceeding the AWQS.

Dissolved VOCs PCE and toluene were detected in groundwater at concentrations exceeding the AWQS. PCE was detected in one soil vapor sample at a concentration in exceedance of the NY-SSC-A lower threshold. Additionally, the chlorinated VOCs (CVOCs) including TCE and 1,1,1-TCA were detected, but at concentrations below the NY-SSC-A and NY-SSC-B lower threshold levels. The PCE in groundwater and soil vapor may be attributed to historic Site uses including the paint shop and possibly dressmaking.

Numerous PHC VOCs including benzene, toluene, ethylbenzene, total xylenes, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3-butadiene, ethanol, 2-butanone, n-hexane, heptane, and 2-hexanone were detected in soil vapor. There are no NYSDOH Matrices for these compounds. However, the presence of PHC vapors suggests an on-site or nearby source of these compounds is present.

Additional investigation is required to fully characterize the soil exceedances and the source of groundwater and soil vapors detects and exceedances. Remediation of the soil, groundwater and soil vapor will be needed prior to Site development.

INTRODUCTION

American Geophysics, Inc. (AGInc.), is a geophysical survey and investigation services firm which provides Environmental & Engineering Geophysics (EEG) services to the environmental consulting, construction, and engineering communities. Led by over 20 years of field experience, AGInc. takes pride in providing the highest training for our technicians and the use of the most current and state-of -the-art equipment. This winning combination of experience and technology results in the most accurate findings.

METHODOLOGY

Geophysical surveys are typically accomplished by employing the following techniques; Ground-penetrating Radar (GPR), electromagnetic metal detector (Fisher TW6), radio frequency line locating (RF), Electromagnetic Profiler (EM). Underground storage tanks (USTs), utilities, and metallic anomalies are typically traced and mapped with RF, GPR, EM, and a magnetometer depending on the size, matrix and conductive properties of the targets. Site conditions and client specifications of the areas of concern (AOCs), determine the survey approach and equipment used to provide the most comprehensive data possible.

Equipment Used:

Radiodetection RD1100 250MHz ground penetrating radar (GPR)

Radiodetection RD8000 PDL pipe and cable locator

Dowsing/Divining Rods

SCOPE OF WORK

On May 25th, 2021, a geophysical survey and investigation was performed and completed at the above mentioned location. The scope of work was to identify subsurface utilities and any unknown anomalies around the client directed exterior boring locations. The surface conditions consisted of concrete walkways and bare-soils. The property was investigated using the RD1100 250MHz (GPR), and the RD8000 pipe/cable locator.

SURVEY RESULTS

All the equipment was used in an octagonal-grid pattern over each of the AOCs. 3D data was collected and 2D locations were logged. The RD 8000 was also used in many different modes, directly and passively. All neighboring utility access points, as well as all pipes/conduits going in or out of the ground were directly induced. Please note that all depths are estimated below ground surface (BGS). The best possible data points were collected and all findings are estimated and dependent upon soil types/conditions, weather conditions and the dielectric properties of the subsurface during the time of the investigation. All findings were discussed with the client and marked on site in APWA color-coded paints and flags. All unknown subsurface anomalies were painted pink.

LISTED SURVEY RESULTS (Utility Markout/Investigation):

- 1) The electric line for the sight lights in the concrete walkway area was detected at ~1ft BGS and marked with red paint.
- 2) The client's directed boring locations were investigated with the GPR and dowsing/divining rods along with the RD8000, and were marked with pink paint and white flags, and discussed on site with the client representative.

LIMITATIONS

Areas within ~3 feet of any wall and/or any other vertical obstruction can not be fully investigated and confirmed due to the physical inability to get the center of any GPR antenna flush to the wall. Subsurface congestion can lead to coupling. This also can lead to distortion, attenuation, "bleed-off" and sympathetic signals. Due to surface conditions and the dielectric properties of the subsurface and properties of concrete, plastic polymer, and fiberglass, not all subsurface anomalies and utilities may have been detected. Buildings, concrete barriers, wet soils, saturated conditions, cracked surfaces, curb lines, and metal structures may have affected survey results near and immediately beneath them.

GPR signal penetration depth during survey/investigation: ~(5-7ft) BGS

WARRANTIES

- **American Geophysics, Inc. does not guarantee that utilities, conduit, and steel reinforcement will be avoided during drilling, cutting, trenching, and coring.**
- **All utility designating will be in compliance with ASCE 38-02 (level B).**
- **All field services were conducted in compliance with the industry standard of care guidelines found in CSDA-BP-007 and marked in appropriate colors as per the APWA (American Public Works Association).**
- **The GPR unit must have direct contact with the concrete in order to collect quality data.**
- **Any areas covered with debris cannot be scanned correctly with GPR.**
- **Wet floors will not allow proper marking with paint and/or permanent marker.**
- **All concrete slabs must be monolithic pours.**
- **Dairy brick and some types of tile may cause signal interference.**
- **New concrete can adversely affect the signal penetration and should be given a minimum of one month curing time.**
- **All areas should be clear for scanning and marking.**

The field observations and measurements reported herein are considered sufficient in detail and scope for this project. American Geophysics, Inc. warrants that the findings and conclusions contained herein have been promulgated in accordance with generally accepted geophysical methods. There is a possibility that conditions may exist which could not be identified within the scope of this project and were not apparent during the site activities performed for this project.

American Geophysics, Inc. represents that the services were performed in a manner consistent with that level of care and skill ordinarily exercised by geophysical consultants under similar circumstances. No other representations to Client, express or implied, and no warranty or guarantee is included or intended in this agreement, or in any report, document, or otherwise.

American Geophysics, Inc. believes that the information provided in this report is reliable. However, American Geophysics, Inc. cannot warrant or guarantee that the information provided by others is complete or accurate. No other warranties or guarantees are implied or expressed.

GPR data is subject to signal anomalies and operator interpretation. The GPR data is intended to provide the locations of areas of concern requiring additional investigation or the approximate location of underground structures and utilities. Great care must be utilized when excavating, drilling, and cutting around subsurface structures and utilities, since GPR data can only be used for estimation purposes and GPR data, is subject to misinterpretation. American Geophysics, Inc. cannot guarantee that utilities, post-tension cables, and/or rebar will not be incurred during drilling, cutting, coring, and excavation activities.

Hand clearing or vacuum-excavation should be performed within 2.5' of any marks. American Geophysics, Inc. does not guarantee that utilities will not be encountered during drilling and/or excavation. Mark-out services performed by American Geophysics, Inc. do not satisfy state mark out requirements. By law, the appropriate state mark-out service must be notified prior to any digging activities (i.e. NJ one-call, PA one-call, CT call before you dig, MD & VA miss utility, dig safely NY, FL one-call, 811 one-call, call before you dig, Sunshine State One-Call).

This report was prepared pursuant to the contract American Geophysics, Inc. has with the Client. That contractual relationship included an exchange of information about the property that was unique and between American Geophysics, Inc. and its client and serves as the basis upon which this report was prepared. Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

June 10, 2021: This final report includes the results of all requested analyses.

June 10, 2021: This is a preliminary report.

June 08, 2021: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2127789-05: A sample identified as "TRIP BLANK" was received, but not listed on the Chain of Custody. At the client's request, this sample was analyzed.

Semivolatile Organics

L2127789-01: The surrogate recoveries were outside the acceptance criteria for 2-fluorophenol (9%) and 2,4,6-tribromophenol (2%) ; however, re-extraction achieved similar results: 2-fluorophenol (23%) and 2,4,6-tribromophenol (7%) . The results of both extractions are reported.

WG1508673-1: The surrogate recoveries are above the acceptance criteria for phenol-d6 (121%), nitrobenzene-d5 (124%) and 2,4,6-tribromophenol (151%). Since the sample was non-detect for all target analytes, re-analysis was not required.

Total Metals

L2127789-01 through -04: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1506670-1 Method Blank, associated with L2127789-01 through -04, has concentrations above the reporting limits for chromium and iron. Since the associated sample concentrations are greater than 10x the blank concentrations for these analytes, no corrective action is required.

Case Narrative (continued)

Cyanide, Total

The WG1507364-2 LCS recovery for cyanide, total (75%), associated with L2127789-01 through -04, is outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

June 17, 2021: This final report includes the results of all requested analyses.

June 14, 2021: This is a preliminary report.

June 10, 2021: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

L2128683-10: A sample identified as "FIELD BLANK" was received, but not listed on the Chain of Custody. At the client's request, this sample was not analyzed.

Volatile Organics

L2128683-01 through -06 were analyzed with the method required holding time exceeded.

L2128683-07 was received in the proper acid-preserved containers; however, upon analysis, the pH was determined to be greater than 2, and thus the method required holding time was exceeded.

Semivolatile Organics

The WG1505891-1 Method Blank, associated with L2128683-07 and -08, has TIC(s) detected. The results are qualified with a "B" for any associated samples that have detections of the same TIC(s).

Pesticides

L2128683-01D and -05D: The sample has elevated detection limits due to the dilution required by the sample matrix.

L2128683-08 was extracted with the method required holding time exceeded.

Case Narrative (continued)

Total Metals

L2128683-01 through -06: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

L2128683-07 and -08: The sample has an elevated detection limit for mercury due to the prep dilution required by the sample matrix.

The WG1508855-1 Method Blank, associated with L2128683-01 through -06, has a concentration above the reporting limit for iron. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

Cyanide, Total

The WG1507585-2/-3 LCS/LCSD recoveries for cyanide, total (40%/74%), associated with L2128683-01 through -04, are outside our in-house acceptance criteria, but within the vendor-certified acceptance limits.

The results of the original analyses are reported. The LCS/LCSD RPD is above the acceptance criteria for cyanide, total (64%).

The WG1508623-2/-3 LCS/LCSD recoveries for cyanide, total (76%/56%), associated with L2128683-05 and -06, are outside our in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on May 21, 2021. The canister certification results are provided as an addendum.

L2127790-02D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L2127790-03D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L2127790-04D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L2127790-05D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

Sample Receipt

The canister ID number for the sample designated SVP-2 (L2127790-02) is listed on the CoC as 2491 but should be 2420.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank.
