CERTIFICATIONS

I, Fuad Dahan, am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Interim Remedial Measures was implemented and that all construction activities were completed in substantial conformance with the Department-approved Interim Remedial Measure Work Plan (IRMWP).

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class “A” misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Fuad Dahan, of SESI Consulting Engineers, DPC, 959 Route 46E, Parsippany, New Jersey, am certifying as Owner’s Designated Site Representative for the site.

Construction Completion Report

1.0 BACKGROUND AND SITE DESCRIPTION

Port Chester OZ Fund III QOZB, LLC (the Volunteer) entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in March 2022, to investigate and remediate a 0.449-acre property located in Port Chester, New York.

The Site is located in the County of Westchester, New York, and is identified as Block 2, Lot 65 on the Westchester County Tax Map # 142-30-2-65 (formerly Lots 65 and 17, but lots have been consolidated). The Site is situated on an approximately 0.449-acre property bounded by Westchester Avenue, restaurants, a theater, and apartments to the north, JP Upholstery Shop to the south, Pearl Street and parking lot to the east, and New Broad Street and commercial/residential properties to the west (see **Figure 1.1**).

SESI Consulting Engineers DPC (SESI) conducted a Phase I Environmental Site Assessment (ESA) in June 2021 on behalf of the Volunteer. Historically, the Site was initially developed with dwellings as early as 1890. Former Lot 17 is depicted with a saloon and a two and a half story building on historical maps as of 1890. In maps from 1895, an additional three-story building and a tin smith are located on the southern edge of the lot. A store building was also located next to the saloon. In 1902, the storefront was vacant, and the tin smith shop was replaced by a blacksmith shop. A plumbing supply store filled the vacant storefront by 1908. A carpet cleaning store replaced the blacksmith shop. In addition, a small building, identified as a cigar store, is present in maps from 1908. By 1915, the saloon was subdivided, and a portion of the building was used as a barber shop. A vacant building is located next to the barber shop, and the tin shop replaced the carpet cleaner store. Maps from 1919 depict a similar configuration to earlier maps. By 1934, the tin shop was no longer present on the lot. In maps from 1942, the buildings appear in a similar configuration to earlier maps, but the uses are not apparent. In 1950, the on-Site buildings were used as stores. In 1990, the buildings are in a similar configuration to earlier maps. A portion of one (1) of the buildings is vacant in maps from 1993. In 1994, one (1)

of the buildings contains apartments in the upper levels. Between 1995 and 2006 there were no significant changes in the lot configuration.

On Lot 65, a three-story dwelling was present in 1890. In 1895, the lot was occupied by Young's Hotel and Young's Livery. By 1902, a saloon and carriage house were added to the hotel. In 1908, the hotel building was occupied by the Grand Union Hotel. By 1915, another building was constructed behind the hotel. The building was used as a hall. A dwelling was also constructed next to the former carriage house, which was used as a restaurant and for lodging in 1915. In 1918, the bottom floor of the hotel was used for offices and shops. The hall was also used as a bowling alley. The former hotel operations may have used dry cleaning solvents, and the bowling alley may have used trichloroethene (TCE) to clean the lanes because the Site groundwater has fairly significant volatile organic compound (VOC) contamination.

By 1934, a storefront was constructed on the lot near Westchester Avenue in front of the two-story dwelling. A paint shop and warehouse were also added to the lot adjacent to the hotel. The former bowling alley was identified as a pool in maps from 1934. The lot appears to be in a similar configuration in maps from 1942, but the uses are not apparent. In 1950, the former two-story dwelling located at the back of the small shop is no longer present. The shop in front of the dwelling was then used as a restaurant. In addition, the pool building is now used as by the American Legion Club House. Aerial photographs from 1966 through 1971 depict a clearing located behind two (2) of the large buildings on Lot 65. By 1974, there are no longer buildings present on Lot 65. The lot was developed into a parking lot by 1985. Aerial photographs from 1991 through 1996 depict a parking lot with a patch of barren soil in the northeastern portion of the lot. The soil patch was present until approximately 2008, when it was covered by asphalt. Maps from 2011 until the present depict no significant changes from the 2008 map.

The Site structures were demolished as a site preparation activity in order to remediate the contamination identified in the Remedial Investigation (RI). The RI was conducted between July 2022 and February 2025 in general accordance with the Remedial Investigation Work Plan (RIWP), which was last revised in June 2022, and subsequently approved by the NYSDEC on July 1, 2022, and the NYSDEC's Technical Guidance for

Site Investigation and Remediation (DER-10), to delineate the nature and extent of contaminated soils, soil vapor, and groundwater that may be present at the Site. The investigation included the collection of 13 soil samples, 24 groundwater samples, five (5) soil vapor samples, and one (1) ambient air sample and submittal of these samples for laboratory analyses. The results of this investigation are summarized in the Remedial Investigation Report (RIR), dated April 2024, revised April 2025, and subsequently revised in 2026.

Since the remedial plan is to perform a Track 1 remedy, the RI was completed to determine the extent of soils exceeding the NYSDEC Unrestricted Use Soil Cleanup Objectives (USCOs), and therefore requiring remediation. The RI determined the remedial excavation depths of the soils exceeding the Track 1 USCOs that needed to be excavated in order to achieve a Track 1 remedy.

2.0 SUMMARY OF THE IRM

SESI has prepared this Interim Remedial Measures Construction Completion Report (IRM-CCR) to summarize the Interim Remedial Measures (IRMs) completed between July 2024 and March 2025. The IRMs were completed in accordance with the Interim Remedial Measures Work Plan (IRMWP), dated April 2023 and approved by the NYSDEC on June 1, 2023. The selected Track 1 soil remedy for the Site detailed in the IRMWP included the following Site preparation activities:

- Installation of a perimeter fence
- Construction of a tracking pad and equipment staging areas
- Asbestos abatement and demolition of site structures
- Installation of support of excavation [SOE] along the Brownfield Cleanup Program (BCP) Site boundaries
- Installation and operation of a pump-and-treat dewatering system, with approximately 4,618 gallons of groundwater treated prior to off-site disposal
- Excavation and off-site disposal of approximately 5,785.16 tons of contaminated soil exceeding the USCOs
- Collection of bedrock elevations to confirm the remedy has achieved the Track 1 USCO levels.

The Site boundary/extent of the BCP Site area is shown on **Figure 2.1**.

No bottom or sidewall endpoint samples were collected, as the SOE was installed along the BCP boundaries and the excavation extended to the top of bedrock across the Site. The extent of excavation is documented by survey points and photographs (**Appendix A**).

2.1 REMEDIAL ACTION OBJECTIVES FOR IRM

Based on the results of the Remedial Investigation, the following Remedial Action Objectives (RAOs) were identified for this site.

2.1.1 GROUNDWATER RAOs

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Restore groundwater aquifer, to the extent practicable, to pre-disposal/pre-release conditions.
- Remove the source of ground or surface water contamination

2.1.2 SOIL RAOs

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.
- Prevent impacts to biota due to ingestion/direct contact with contaminated soil that would cause toxicity or bioaccumulation through the terrestrial food chain.

2.1.3 SOIL VAPOR

RAOs for Public Health Protection

- Mitigate impacts to public health resulting from potential present and future soil vapor intrusion into buildings at the Site.

2.2 DESCRIPTION OF THE IRM

The Site was remediated in accordance with the NYSDEC-approved IRMWP dated April 2023. The following is a summary of the Site preparation and IRM actions performed to achieve the USCOs (Track 1) for soil.

1. A remedial program was implemented to provide the details necessary for the construction, operation, optimization, maintenance, and monitoring of the remedial program. Green remediation principles and techniques were implemented to the extent feasible in the design, implementation, and site management of the remedy as per DER-31. The major green remediation components are as follows:
    - Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
    - Reducing direct and indirect greenhouse gases and other emissions;
    - Increasing energy efficiency and minimizing use of non-renewable energy;
    - Conserving and efficiently managing resources and materials;
    - Reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste;
    - Maximizing habitat value and creating habitat when possible;
    - Fostering green and healthy communities and working landscapes which balance ecological, economic and social goals;
    - Integrating the remedy with the end use where possible and encouraging green and sustainable re-development; and
    - Additionally, to incorporate green remediation principles and techniques to the extent feasible in the future development at this site, any future on-site buildings shall be constructed, at a minimum, to meet the 2020 Energy Conservation Construction Code of New York (or most recent edition) to improve energy efficiency as an element of construction.
2. Asbestos abatement and demolition of existing Site structures and features.
3. Installation of SOE along the sidewalls of the Site to a depth of 18.5 ft bgs for structural stability of the 21 ft bgs deep excavation and to prevent impact to off-

Site structures. The SOE acts as a support for the excavation of the on-Site contaminated soil. The SOE consists of concrete piers (or buttons) and timber lagging to support the neighboring properties, existing sidewalks and roadways. In areas where the depth of the excavation had to extend to 30.5 ft below existing grade at the property line, lateral bracing was used to provide lateral support to the SOE system.

4. All soils exceeding USCOs were excavated and disposed of off-Site at appropriate facilities in accordance with Federal, State and local rules and regulations for handling, transport, and disposal as part of the IRM work.
5. The soil excavation extended down to bedrock at variable depths across the Site from 1 to 12.5 ft bgs. A Track 1 remedy for soils was achieved through the removal of all contaminated fill and soil at the Site in exceedance of the USCOs within the property boundary. There is no end point sample data because all contaminated soil was removed to bedrock. These IRM activities are documented in this IRM-CCR.
6. Treatment of 4,618 gallons of groundwater encountered during the excavation.

2.3 GREEN SUSTAINABLE REMEDIATION

During the course of the remedial action field activities, SESI considered NYSDEC DER-31 “Green Remediation” implementation objectives. The NYSDEC DER’s approach to remediating sites in the context of the larger environment is a concept known as “Green Remediation”. Green Remediation is defined in NYSDEC DER-31 as “the practice of considering all environmental effects of remedy implementation and incorporating options to minimize the environmental footprint of cleanup actions.” The approach is intended to improve the overall sustainability of the remediation by promoting the use of more sustainable practices and technologies. Green Remediation practices and technologies are less disruptive to the environment, generate less waste, increase reuse and recycling, and emit fewer pollutants, including greenhouse gases, to the atmosphere. Green Remediation concepts and techniques considered during the remedial investigation included:

- Eliminated idling vehicles and equipment when possible; reducing emission of CO_2, N_2O, CH_4, and other greenhouse gases contributing to climate change:

- Operation of particulate detectors to monitor and minimize dust export of contaminants:
- Operation of VOC detectors to monitor and minimize VOC exposures: and
- Conducting sampling events planned simultaneously to maximize level of efforts while traveling to/from the Site (economy of scale implementing multiple sampling events).

3.0 INTERIM REMEDIAL MEASURES

3.1 GOVERNING DOCUMENTS

3.1.1 SITE SPECIFIC HEALTH & SAFETY PLAN (HASP)

All remedial work performed under this IRM was in full compliance with governmental requirements, including Site and worker safety requirements mandated by Federal OSHA. The Health and Safety Plan (HASP) was complied with for all remedial and invasive work performed at the Site. The HASP was included as Appendix E of the IRMWP.

3.1.2 QUALITY ASSURANCE PROJECT PLAN (QAPP)

The QAPP was included as Appendix F of the IRMWP approved by the NYSDEC. The QAPP describes the specific policies, objectives, organization, functional activities and quality assurance/ quality control activities designed to achieve the project data quality objectives.

3.1.3 SOIL/MATERIALS MANAGEMENT PLAN (S/MMP)

Stockpiles of excavated soil were contained within the general area in which they were excavated. Loaded vehicles leaving the Site were lined, securely covered, manifested, and placarded in accordance with appropriate Federal, State, local, and New York State Department of Transportation requirements (and other applicable transportation requirements) and soil and fill excavated and removed from the Site were handled as contaminated and regulated material. Locations where vehicles entered or exited the Site were inspected daily for evidence of off-Site soil tracking. The qualified environmental professional was responsible for observing that egress points for trucks and equipment from the Site were properly maintained. The transport of materials was performed by licensed haulers in accordance with appropriate local, State, and Federal regulations, including 6 NYCRR Part 364. The soil materials management plan was included in Section 3.5 of the IRMWP.

3.1.4 STORMWATER POLLUTION PREVENTION PLAN (SWPPP)

The erosion and sediment controls for all remedial construction were performed in conformance with requirements presented in the New York State Guidelines for Urban Erosion and Sediment Control and the site-specific Storm Water Pollution Prevention

Plan. A Sediment and Erosion Control Plan (SECP), approved by the Village of Port Chester, was implemented during construction activities and included haybales for sediment control, soil staging requirements, truck tracking pads to minimize off-site tracking of soil, and dust control requirements. During the field work, routine inspections were conducted to monitor the condition of the Sediment and Erosion Control Plan elements. Maintenance and repairs to the controls were conducted as needed. A SWPPP was also prepared for the Site. The SECP and the SWPPP are attached as **Appendix B**.

3.1.5 COMMUNITY AIR MONITORING PLAN (CAMP)

The Community Air Monitoring Plan (CAMP) for the Site is included in Appendix F of the IRMWP. The CAMP was implemented during ground-intrusive Site activities and included the monitoring of particulates (dust) and VOCs. CAMP results are discussed in Section 3.2.5.

3.1.6 CITIZEN PARTICIPATION PLAN

The Citizen Participation Plan (CPP) provides members of the affected and interested public with information about the methods in which the NYSDEC will inform and involve the public during the investigation and remediation of the Site. To date, community participation procedures have been implemented in accordance with the CPP. The CPP is provided in **Appendix C**.

3.2 REMEDIAL PROGRAM ELEMENTS

3.2.1 CONTRACTORS AND CONSULTANTS

Table 3.1 below provides the list of contractors and consultants who performed the remedial activities on the BCP Site.

3.2.2 SITE PREPARATION

Prior to implementation of the IRM, the following Site preparation activities were conducted.

Summary of Activities

1. Obtained Demolition Permits from the City of Port Chester Department of Buildings. Copies of the permits are included in **Appendix D**.
2. Installed a Site fence for security during the abatement and demolition activities.
3. Installed a 20-foot-wide gates and Site perimeter chain link fencing for Site security.
4. Completed asbestos abatement in existing structures.
5. Demolished the existing structures.
6. Imported clean fill and aggregate and constructed tracking pads.
7. Identified underground utilities.
8. Mobilized and set-up the dewatering system.

3.2.3 GENERAL SITE CONTROLS

The following general Site controls were established at the BCP Site to minimize off-Site and on-Site impacts of remedial activities:

- The Site was a closed Site, accessible only to Site contractors, owners, and authorized entrants. A security fence with gates was installed at the Site during remedial activities.
- The gates to the BCP Site were locked when construction personnel were not

present.

3.2.4 NUISANCE CONTROLS

- Truck wash and egress housekeeping: One (1) rip-rap truck-tire wash station was installed at the entrance of the construction area. Prior to the trucks leaving the Site, the tires were washed on the wash station in order to minimize soil tracking off-Site.
- Dust control: The Site was sprayed with water, when needed, to minimize dust generation during Site work and loading of trucks.

3.2.5 CAMP RESULTS

There were no particulate or VOC readings recorded that exceeded the action levels for a 15-minute period during the remedial action. However, there were instances where elevated particulate levels were recorded for less than 15 minutes due to soil excavation and loading, concrete work, steel cutting and grinding of SOE, and equipment steam/exhaust. Dust-suppression measures, including spraying water and pausing work as needed were implemented until readings taken post exceedances returned to background levels. Negative dust readings were recorded on certain dates due to calibration issues caused by moisture from scattered storm activity. No dust, odor, or noise complaints were received during IRM activities. CAMP data is provided in electronic format in **Appendix E**.

3.2.6 BEST MANAGEMENT PRACTICES

Best management practices (BMPs) were implemented at the Site to reduce the environmental footprint of the remedy. These BMPs included:

- Deploy machinery that is suitably sized to considerably increase efficiencies.
- Use machine models capable of performing assorted tasks, whenever feasible, to avoid field deployment of multiple types of machines (ie. a single excavator can be equipped with a bucket for digging, a breaker for demolition or a grapple for land clearing).
- Use an automated coupling system rather than a manual pin-on system for changing excavator attachments, to reduce machine operating time.
- Use machines with variable-speed control technology, which automatically

reduces engine speed during low workload requirements, or with pump torque control, which allows a machine operator to change a machine's hydraulic pump torque.

- Use machines with repowered or newer engines that are more fuel efficient.
- Implement an engine idle reduction plan to avoid fuel consumption when machinery is not actively engaged. Options include manual shutdown after a specified time such as five minutes, engagement of automatic shutdown devices, or use of auxiliary power units to heat or cool machinery cabs.
- Perform routine, on-time maintenance such as oil changes to assure fuel efficiency.
- Deploy direct-push technology instead of rotary drilling rigs whenever feasible for additional subsurface sampling or for monitoring well installation.
- Deploy mobile power systems to operate construction equipment or tools such as electricity generators, chainsaws, or temporary lighting fixtures.
- Spray water onto surfaces of vulnerable work areas, in conjunction with water conservation and runoff management techniques.
- Emplace a fabric cover over excavated material that is loaded into open trucks for on-Site or off-Site hauling.
- Contain and properly dispose of all decontamination fluids to prevent their entrance into storm drains or ground surfaces.
- Construct permanent earthen berms or dikes to prevent erosion in low-lying onsite or adjacent areas that might remain vulnerable to stormwater flows.

3.2.7 REPORTING

SESI submitted weekly reports to the NYSDEC for field activities beginning on September 13, 2024. Electronic copies of the weekly reports are included in **Appendix F**. Raw CAMP data was also sent to the New York State Department of Health and NYSDEC on a weekly basis. Photos to document the progress of the work were taken regularly during the remedial activities and are included as part of the weekly reports.

3.3 CONTAMINATED MATERIALS REMOVAL

3.3.1 ASBESTOS ABATEMENT

Federal Property Maintenance Corp. completed the removal and disposal of asbestos building materials prior to building demolition. The Completion of Work report is included in **Appendix D**.

3.3.2 SOIL EXCAVATION

The Site soil required remediation due to concentrations of VOCs, semi-volatile organic compounds, pesticides, per and polyfluoroalkyl substances, metals and polychlorinated biphenyls. An SOE system, designed and installed for the purpose of restraining earth to a depth of 30.5 feet at the property line, was installed to facilitate the excavation of the entire Site to remove impacted soil exceeding the USCOs to a maximum depth of 21.48 ft-amsl, and prevent impact to off-Site structures. The SOE system also includes horizontal and vertical waterproofing. The SOE construction plans are provided in **Appendix G**.

For soil disposal and excavation organization purposes the Site was subdivided into 22 cells. As part of the RI, waste characterization samples were collected at a frequency of one (1) composite sample per 750 cubic yards of soil based on site grid of 50-foot wide by 50-foot long and 7-foot-deep intervals. Grab samples were collected during the RI at 5-foot depth intervals. The waste characterization sample results and site cells were provided in Appendix E of the RIR. The results of the waste characterization were sent to Earth Efficient for pre-approval prior to shipping. Facility approvals are provided in **Appendix H**.

The contaminated fill and soil were removed from the footprint of the Site to a maximum depth of approximately elevation 21.48 ft-amsl on bedrock. In total, 5,785.16 tons of contaminated soil were removed from the Site as described in Section 3.3.3.

Bedrock was encountered throughout the Site, and therefore, no post-excavation confirmatory samples were collected. Photographic documentation of the progress of the excavation from beginning to end was provided to the Department via weekly reports, copies of which are included in **Appendix F**. Photographic documentation of the completion of excavation to the bedrock surface as appropriate is provided in **Appendix A**.

The pre-existing grade and Site conditions is presented in **Appendix I**. The post-excavation final topographic elevation survey is provided in **Appendix J**.

3.3.3 CONTAMINATED SOIL REMOVAL SUMMARY

From September 4, 2024, to December 30, 2024, a total of 5,785.16 tons of non-hazardous contaminated soil was excavated and removed from the Site for off-site disposal, including 4,444. 27 tons at Earth Efficient HBR in Phillipsburg, New Jersey, and 1,340.89 tons at Earth Efficient MSM of East Stroudsburg, Pennsylvania. **Table 3.2** below shows the total quantities of each category of material removed from the Site and the disposal locations. A tabular listing of soil disposal and facility-signed manifests are provided in **Appendix K**. Part 364 trucking permits are included in electronic format in **Appendix L** of this report.

Table 3.2 Summary of Contaminated Soil Removed from the Site

Date	Area	Description	Facility	Quantity (Tons)
September 2024	Site-wide	Excavated Non-hazardous Soil	Earth Efficient HBR	4,444.27
September 2024-December 2024	Site-wide	Excavated Non-hazardous Soil	Earth Efficient MSM	1,340.89

3.4 REMEDIAL PERFORMANCE/DOCUMENTATION SAMPLING

No bottom or sidewall endpoint samples were collected, as the SOE was installed along the BCP boundaries and the excavation extended to the top of bedrock across the Site. The final excavation elevation ranged from 40.27 ft-amsl to 21.48 ft-amsl. The extent of excavation is documented by survey points and photographs (**Appendix A**).

3.5 IMPORTED BACKFILL

A table of all sources of imported backfill with quantities for each source is shown in **Table 3.3**. The material was used for construction of the tracking pad and other miscellaneous grading for Site development. A total of 2,552.7 tons of materials was imported to the Site. The approval letters and a detailed material import summary table are included in **Appendix M**.

Table 3.3 Summary of Imported Backfill

Material	Quantity (Tons)
¾-inch Stone	1,198.7
Item #4	1,354

3.6 CONTAMINATION REMAINING AT THE SITE

There is no contaminated soil remaining on the Site since all Site soil was excavated to bedrock.

3.7 DEVIATIONS FROM THE INTERIM REMEDIAL MEASURES WORK PLAN

All deviations from the Interim Remedial Measure Work Plan are noted below.

- No bottom or sidewall endpoint samples were collected, as the SOE was installed along the BCP boundaries and the excavation extended to the top of bedrock across the Site.

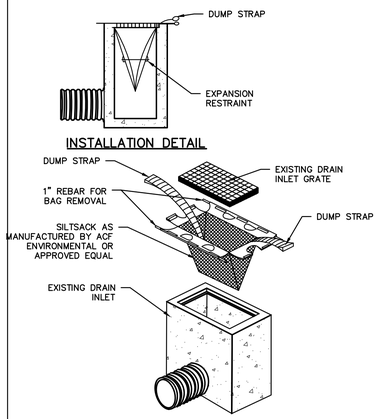
NOTES:

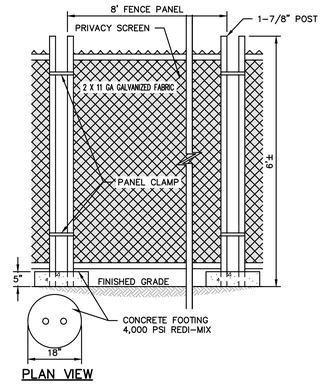
1. CONCRETE WASHOUT AREA TO BE INSTALLED PRIOR TO CONCRETE PLACEMENT ON SITE. CONCRETE WASHOUT AREA TO BE ENTIRELY SELF CONTAINED.
2. HAY BALES SHALL BE PROVIDED AROUND THE PERIMETER OF CONCRETE WASHOUT AREA FOR CONTAINMENT.
3. WASHOUT AREA SHALL BE LINED WITH PLASTIC SHEETING NO THINNER THAN 10 MILS. SHEETING SHALL HAVE NO HOLES OR TEARS AND SHALL BE ANCHORED BY SAND BAGS ON ALL SIDES EXCEPT ACCESS SIDE. PLASTIC LINING TO BE REPLACED WITH EACH CLEANING
4. SIGNS SHALL BE PROVIDED AT THE CONSTRUCTION ENTRANCE AND CONCRETE AREAS INDICATING LOCATION OF WASHOUT AREA.
5. WASHOUT AREA TO BE ENCLOSED IN CONSTRUCTION FENCE.
6. WASHOUT AREAS TO BE INSPECTED DAILY TO ENSURE LINER IS INTACT AND ADEQUATE CAPACITY IS AVAILABLE AT ALL TIMES. WASHOUT AREAS SHALL BE INSPECTED IMMEDIATELY AFTER HEAVIER RAINS. DAMAGED OR LEAKING WASHOUT AREAS TO BE DEACTIVATED AND REPAIRED IMMEDIATELY.
7. CONCRETE WASTE SHALL BE REMOVED AND DISPOSED OF ONCE IT REACHES THREE-QUARTERS OF THE WASHOUT AREA'S HEIGHT. ALL WASTE SHALL BE DISPOSED OF IN A MANNER CONSISTENT WITH APPLICABLE LAWS, REGULATIONS, AND GUIDELINES OF MUNICIPALITY.
8. PREFABRICATED CONCRETE WASHOUT CONTAINERS MAY BE UTILIZED ONLY WITH PRIOR APPROVAL FROM THE CITY'S ENGINEERING DEPARTMENT.

CONCRETE WASHOUT AREA

Siltsack Inlet Protection



NOTE:
1. EACH SILTSACK SHALL BE PROPERLY SIZED FOR EACH INLET.
2. ALL CURB INLETS SHALL UTILIZE SILTSACK MODELS WITH BUILT IN CURB DEFLECTOR
3. SILTSACKS SHOULD ONLY BE UTILIZED ON DRAIN INLETS OUTSIDE OF THE DISTURBED AREAS TO PREVENT CONTAMINATION OF DOWN STREAM STORMWATER STRUCTURES.
4. SEDIMENT SHALL BE REMOVED FROM EACH SILTSACK WHEN SILT DEPTH EXCEEDS 6-INCHES.
5. SILTSACKS SHOULD BE INSPECTED REGULARLY FOR DAMAGE. ANY DAMAGED SILTSACKS SHOULD BE REPLACED.



NOTES:

1. CONTRACTOR SHALL PROVIDE PERIODIC INSPECTION AND MAINTENANCE OF FENCE INCLUDING REPAIRS AS NECESSARY AND REQUIRED.
2. CONTRACTOR SHALL INSTALL GREEN PRIVACY SCREENING FABRIC OR APPROVED EQUAL AROUND THE PERIMETER OF THE TEMPORARY CONSTRUCTION FENCING.
3. PRIOR TO CONSTRUCTION THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS AND SAMPLES OF THE PRIVACY SCREENING TO THE ENGINEER FOR REVIEW AND APPROVAL.
4. NO PORTION OF THE FENCE SHALL EXCEED 6-FEET IN HEIGHT

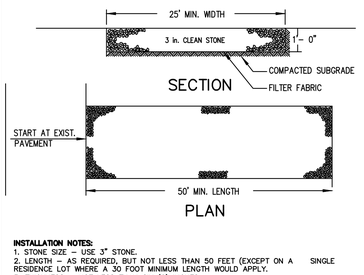
INSTALLATION NOTES:

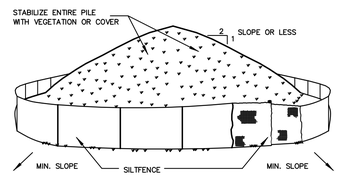
1. EXCAVATE A 4 INCH * 4 INCH TRENCH ALONG THE LOWER PERIMETER OF THE SITE.
2. UNROLL A SECTION AT A TIME AND POSITION THE POSTS AGAINST THE BACK (DOWNSTREAM) WALL OF THE TRENCH (NET SIDE AWAY FROM DIRECTION OF FLOW).
3. DRIVE THE POST INTO THE GROUND UNTIL THE NETTING IS APPROXIMATELY 2 INCHES FROM THE TRENCH BOTTOM.
4. LAY THE TOE-IN FLAP OF FABRIC ONTO THE UNDISTURBED BOTTOM OF THE TRENCH, BACKFILL THE TRENCH AND TAMP THE SOIL. STEEPER SLOPES REQUIRE AN INTERCEPT TRENCH.
5. JOIN SECTIONS AS SHOWN ABOVE.

Stabilized Construction Entrance



INSTALLATION NOTES:
1. STONE SIZE – USE 3" STONE.
2. LENGTH – AS REQUIRED, BUT NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY.
3. THICKNESS – NOT LESS THAN SIX (6) INCHES.
4. WIDTH – 25 FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCUR.
5. FILTER CLOTH – WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE. FILTER CLOTH WILL NOT BE REQUIRED ON A SINGLE FAMILY RESIDENCE LOT.
6. SURFACE WATER – ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE – THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHT OF WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHT OF WAY MUST BE REMOVED IMMEDIATELY.
8. WASHING – WHEELS SHALL BE CLEANED TO REMOVE SEDIMENT PRIOR TO ENTRANCE ONTO PUBLIC RIGHT OF WAY. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

SOIL STOCKPILING



INSTALLATION NOTES

INSTALLATION NOTES:
1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. SOILS OR FILL TO BE STOCKPILED ON SITE DURING CUTTING AND FILLING ACTIVITIES SHOULD BE LOCATED ON LEVEL PORTIONS OF THE SITE WITH A MINIMUM OF 50-75 FOOT SETBACKS FROM TEMPORARY DRAINAGE SWALES.
3. MAXIMUM SLOPE OF STOCKPILE SHALL BE 1:2.
4. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SURROUNDED WITH EITHER SILT FENCING OR STRAWBALES, THEN STABILIZED WITH VEGETATION OR COVERED.
5. STOCKPILES REMAINING IN PLACE FOR MORE THAN A WEEK SHOULD BE SEEDED AND MULCHED OR COVERED WITH GEOTEXTILE FABRIC SURROUNDED BY SILT FENCE.
6. SEE SPECIFICATIONS FOR INSTALLATION OF SILT FENCE.

STORMWATER POLLUTION PREVENTION PLAN
Proposed Mixed-Use Building
140-150 Westchester Avenue
Port Chester - New York

A. INTRODUCTION

This Stormwater Pollution Prevention Plan & Stormwater Analysis presents the proposed Best Management Practices (BMPs) to control erosion, sedimentation, and manage stormwater during the construction of a proposed mixed-use building and associated site work located at 140-150 Westchester Avenue in the Village of Port Chester, Westchester County, New York.

This plan consists of this narrative and a plan set entitled: "Proposed Mixed-Use Building, 140-150 Westchester Avenue, Village of Port Chester, Westchester County, New York", all as prepared by Hudson Engineering and Consulting, P.C., Elmsford, New York, last revised June 3, 2022. The plans have been prepared to meet the requirements of the Village of Port Chester. Since the project proposes to disturb less than 1.0 acre, this plan is not required to obtain coverage by the New York State Department of Environmental Conservation (NYSDEC) pursuant to the Phase II regulations under General Permit GP-0-20-001.

B. METHODOLOGY

The stormwater analysis was developed utilizing the Soil Conservation Service (SCS) TR-20 methodologies (HydroCad®) to assist with the drainage analysis and design of the mitigating practice. The "Complex Number" (CN) value determination is based on soil type, vegetation and land use. *See Soil Map & Report contained herein.* The "Time of Concentration" (T_c) is determined by the longest flow path, time wise, within each watershed. The CN and T_c data is input into the computer model. This project involves modifications to an existing developed property; therefore, this project will be classified as redevelopment.

In accordance with the NYS Stormwater Design Manual, since the project is classified as a redevelopment activity with a decrease in impervious area (see coverage calculations below), water quality treatment shall be provided in accordance with the regulations of Chapter 9.

Pre- Vs. Post- Coverage Development		
	Pre-	Post-
Impervious	19,234	16,388
Pervious	300	3,146
Total	19,534	19,534

The stormwater management design is based on the NYSDEC "New York State Stormwater Management Design Manual", latest edition and "Controlling Urban Runoff: A practical Manual for Planning and Designing Urban BMP'S", by the Metropolitan Washington Council of Governments. Stormwater quality has been analyzed in accordance with the guidelines set forth in the New York State General Permit for Storm Water Discharge, GP-0-20-001.

C. LIST OF PERMITS

The following is a list of permits and approvals required for the project along with the status.

- Village of Port Chester – Building Permit – Pending
- Village of Port Chester – Planning Board Approval – Pending

D. PRE-DESIGN INVESTIGATIVE ANALYSIS

Due to the configuration of the proposed site buildout, it was determined that conventional stormwater management practices could not be utilized in the stormwater design (i.e. infiltration chambers, infiltration basins, etc.). Therefore, no deep hole testing or percolation testing was performed.

E. BACKGROUND INFORMATION

The existing site consists of two three-story buildings that front Westchester Avenue with associated driveways that access the site from South Pearl Street. Additionally, the site contains a parking lot that has access from New Broad Street. The current build out of the site is almost completely impervious with only approximately 300 square feet of pervious area. The site contains no conventional stormwater management system. Based on the Village mapping

available, as well as the surveyed information, the entire site is tributary to the drainage line within Westchester Avenue and flows west.

F. PRE-DEVELOPED CONDITIONS

In the pre-developed conditions, the proposed building was modeled as two watersheds, Watershed 1 and Watershed 2 both tributary to the design point.

Watershed 1 contains approximately 13,353-square feet of tributary area, all of which is impervious in the form of the existing parking lot. This watershed has a weighted complex number (CN) value of 98 and a calculated Time of Concentration (Tc) of 1.1 minute. Runoff from this area originates in the southwest corner of the parking lot and flows generally in a northerly direction where it exits the site in the area of the New Broad Street & Westchester Avenue intersection. From there the runoff runs along the curb line to a catch basin located approximately 100-feet east of the site (design point).

Watershed 2 contains approximately 6,181-square feet of tributary area, of which 5,918 square feet is impervious in the form of the parking area and existing buildings and 263 square feet is pervious in the form of a small landscaped area in HSG 'Type D' soils. This watershed has a weighted complex number (CN) value of 97 and a calculated Time of Concentration (Tc) of 0.6 minute. Runoff from this area originates in existing parking area and flows generally in a northwesterly direction where it exits the site to the South Pearl Street Right-of-way Where it flows over the sidewalk to an existing catch basin at the intersection of South Pearl Street and Westchester Avenue. The runoff is then conveyed via pipe to the design point.

The combined runoff rates in the pre-developed condition were calculated as follows at the design point:

Pre-Developed Conditions - Peak Rate of Runoff			
	1- Year	10-Year	25-Year
	cfs	cfs	cfs
	1.42	2.60	3.27

G. POST-DEVELOPED CONDITIONS

In the post-developed conditions, the proposed building was modeled as one watershed, Watershed 1.

Watershed 1 contains approximately 19,534-square feet of tributary area, of which approximately 3,146 square feet is pervious in the form of a LiveRoof green roof system and 16,388 square feet is impervious in the form of the remainder of the building area. This watershed has a weighted complex number (CN) value of 91 and a direct entry Time of Concentration (Tc) of 1.0 minute.

Runoff from this area is collected and conveyed via a comprehensive internal drainage system to a proposed 3'-Diameter First Defense hydrodynamic separator. The device is sized to treat 100 percent of the water quality volume from the tributary area and bypass the 25-year storm event. The runoff is then conveyed via pipe to the design point.

The runoff rates in the post-developed condition were calculated as follows at the design point:

Post-Developed Conditions - Peak Rate of Runoff			
	1- Year	10-Year	25-Year
	cfs	cfs	cfs
	1.05	2.30	3.01

The development includes alterations to the municipal drainage system. The portion of the Village's system from the site's connection point (approximately 100 feet southwest of the intersection of New Broad Street and Westchester Avenue) to the downstream drainage structure located at the intersection of New Broad Street and Westchester Avenue is to be replaced with 15" RC Pipe (currently 12" RC). By increasing the size of the pipe from a 12" pipe to a 15" pipe, the flowing full capacity was increased from 7.97 cfs to 14.47 cfs resulting in a total increase in capacity of 6.50 cfs. The proposed development has a discharge rate of 3.01 cfs for the 25-year event. The development of the site results in a net increase in capacity of the municipal drainage line within New Broad Street of 3.49 cfs. Calculations for the capacity of the municipal drainage pipe are included later in this report.

H. WATER QUALITY VOLUME

The Water Quality Volume (WQv) calculations were performed for the overall watershed as follows:

WATERSHED 1

P= 90% Rainfall 1.5 -inches for Westchester County

A_i = Impervious Area = 16,388 -square feet

A_i = 0.3762 -acres

A_t = Tributary Area = 19,534 -square feet

A_t = 0.4484 -acres

I = % Impervious = 83.89%

R_v= 0.05+0.009(I); where I = Percent Impervious written as a percent

R_v= 0.805 **(0.20 minimum)**

R_v= 0.805

$$WQ_v = \frac{(P \times R_v \times A_t)}{12} = 0.04513 \text{ acre-feet} = 1965.74 \text{ cubic feet}$$

Rainfall Equivalent = 2.30 -inches → 1,973 cubic feet OKAY

The entire water quality volume is treated by a 3-foot Diameter First Defense Unit hydrodynamic device. The water quality practice is sized to treat the entire water quality volume from the site, exceeding the minimum volume required under the NYSDEC regulations. The device has also been sized to bypass the 25-year storm event. *Water Quality routing calculations are contained within Section 3 of this report.*

I. CONSTRUCTION PHASE

During the construction phase of the project, a sediment and erosion control plan shall be implemented in accordance with the New York State Department of Environmental Conservation's Best Management Practices (BMP). The primary goals of the sediment and erosion control plan are to prevent the tracking of dirt and mud onto adjacent roads, to prevent mud and silt from entering into existing and proposed drainage facilities, and to protect the receiving waters from contamination during the construction.

During construction, the party responsible for implementing the temporary (during construction) Stormwater Management facilities Maintenance Program will be the Owner & Contractor. Contact information for each will be filed with the Village.

The projects anticipated start date is Spring 2023 and the anticipated completed date is Fall 2024.

J. CONSTRUCTION SEQUENCING

The following erosion control schedule shall be utilized:

1. Install construction entrance to the development area.
2. Establish construction staging area.
3. Install silt fence down slope of all areas to be disturbed as shown on the plan.

4. Remove trees where necessary (clear & grub) for the proposed construction.

5. Demolish any existing site features and/or structures noted as being removed on the construction documents, and dispose of off-site.

6. Rough grade site.

7. Install additional silt fencing as necessary.

8. Excavate and construct building foundation.

9. Install drainage work tributary to existing city infrastructure including all water quality devices, catch basins and piping.

10. Construct buildings. Connect interior roof drain system to previously installed water quality device.

11. Install curbing, and sidewalks.

12. Clean pavement, drain lines, catch basins and water quality devices.

13. Install landscape plantings. Spread salt hay over any seeded areas.

14. Remove all remaining temporary soil erosion and sediment control measures after the site is stabilized with vegetation.

* Soil erosion and sediment control maintenance must occur weekly and prior to and after every ½" or greater rainfall event.

K. EROSION AND SEDIMENT CONTROL COMPONENTS

The primary aim of the soil and sediment control measures is to reduce soil erosion from areas stripped of vegetation during and after construction and to prevent silt from reaching the off-site drainage structures and downstream properties. As outlined in the Construction Sequencing schedule, the Sediment and Erosion Control Components are an integral component of the construction sequencing and will be implemented to control sedimentation and re-establish vegetation as soon as practicable.

Planned erosion and sedimentation control practices during construction include the installation, inspection and maintenance of the inlet protection, soil stockpile areas, and silt fencing and construction sequencing. Dust control will be accomplished by sprinkling.

All proposed soil erosion and sediment control practices have been designed in accordance with the following publications:

- New York State standards and Specifications for Erosion and Sediment Control, latest edition.

- New York State General Permit for Stormwater Discharges, GP-0-20-001 (General permit).

- "Reducing the Impacts of Stormwater Runoff from New Development", as published by the New York State Department of Environmental Conservation (NYSDEC), second edition, April, 1993.

The proposed soil erosion and sediment control devices include the planned erosion control practices outlined below. Maintenance procedures for each erosion control practice have also been outlined below.

- **SILT FENCE**

  Silt fence (geo-textile filter cloth) shall be placed in locations depicted on the approved plans. The purpose of the silt fence is to reduce the velocity of sediment laden stormwater from small drainage areas and to intercept the transported sediment load. In general, silt fence shall be used at the toe of slopes or intermediately within slopes where obvious channel concentration of stormwater is not present.

  Maintenance

  Silt fencing shall be inspected at a minimum of once per week and prior to and within 48 hours following a rain event ½" or greater. Inspections shall include ensuring that the fence material is tightly secured to the woven wire and the wire is secured to the wood posts. In addition, overlapping filter fabric shall be secure and the fabric shall be maintained a minimum of six (6) inches below grade. In the event that any "bulges" develop in the fence, that section of fence shall be replaced within 48 hours with new fence section. Any sediment build-up against the fence shall be removed within 48 hours and deposited on-site a minimum of 100 feet outside of any wetland or watercourse.

- **INLET PROTECTION**

  After catch basins and surface inlets have been installed, these drain inlets will receive stormwater from the roadway and surrounding overland watersheds. In order to protect the receiving waters from sedimentation, the contractor shall install manufactured inserts to protect inlets as illustrated on the approved plans. This barrier will allow stormwater to be filtered prior to reaching the basins outlet.

Maintenance

The Structure insert shall be inspected daily by a trained contractor. stone aggregate shall be inspected weekly prior to and within 48 hours following a rain event ½" or greater. Care shall be taken to ensure that all stone aggregate are properly located and secure and do not become displaced. The stone aggregate shall be inspected for accumulated sediments and any accumulated sediment shall be removed from the device and deposited not less than 100 feet from wetland or watercourse.

- **SOIL/SHOT ROCK STOCKPILING**

All soil and shot rock stripped from the construction area during grubbing and mass grading shall be stockpiled in locations approved by the Town/Village's representative, but in no case shall they be placed within 100' of a wetland or watercourse. The stockpiled soils shall be re-used during finish-grading to provide a suitable growing medium for plant establishment. Soil stockpiles shall be protected from erosion by vegetating the stockpile with rapidly – germinating grass seed or covering the stockpile with tarpaulin and surrounding it with either silt fence.

Maintenance

Sediment controls (silt fence) surrounding the stockpiles shall be inspected according to the recommended maintenance outline above. All stockpiles shall be inspected for signs of erosion or problems with seed establishment weekly and prior to and within 48 hours following a rain event ½" or greater.

- **DEWATERING**

Prevent surface water and subsurface or ground water from flowing into excavations and trenches. Pump out any accumulated water.

Do not allow water to accumulate in excavations or trenches. Remove water from all excavations immediately to prevent softening of foundation bottoms, undercutting footings, and soil changes detrimental to the stability of subgrades and foundations. Furnish and maintain pumps, sumps, suction and discharge piping systems, and other system components necessary to convey the water away from the Site.

Convey water removed from excavations, and rain water, to collecting or run-off area. Cut and maintain temporary drainage ditches and provide other necessary diversions outside excavation limits for each structure. Do not use trench excavations as temporary drainage ditches.

Provide temporary controls to restrict the velocity of discharged water as necessary to prevent erosion and siltation of receiving areas.

L. CONSTRUCTION PRACTICES TO MINIMIZE STORMWATER CONTAMINATION

General:

Adequate measures shall be taken to minimize contaminant particles arising from the discharge of solid materials, including building materials, grading operations, and the reclamation and placement of pavement, during project construction, including but not limited to:

- Building materials, garbage, and debris shall be cleaned up daily and deposited into dumpsters, which will be periodically removed from the site and appropriately disposed of. All dumpsters and containers left on-site shall be covered and surrounded with silt fence in order to prevent contaminants from leaving the site. Silt fencing shall be inspected on a weekly basis.

- Dump trucks hauling material from the construction site will be covered with a tarpaulin.

- The paved street adjacent to the site entrance will be swept daily to remove excess mud, dirt, or rock tracked from the site.

- Petroleum products will be stored in tightly sealed containers that are clearly labeled.

- All vehicles on site will be monitored for leaks and receive regular preventive maintenance to reduce the chance of leakage.

- All spills will be cleaned up immediately upon discovery. Spills large enough to reach the storm system will be reported to the National Response Center at 1-800-424-8802.

- Materials and equipment necessary for spill cleanup will be kept in the temporary material storage trailer onsite. Equipment will include, but not be limited to, brooms, dust pans, mops, rags, gloves, goggles, kitty litter, sand, saw dust, and plastic and metal trash containers.

- All paint containers and curing compounds will be tightly sealed and stored when not required for use. Excess paint will not be discharged to the storm system, but will be properly disposed according to the manufacturer's instructions.

- Sanitary waste will be collected from portable units a minimum of two times a week to avoid overfilling. All sanitary waste units shall be surrounded by silt fence to prevent contaminants from leaving the site. Silt fencing shall be inspected on a weekly basis.

- Any asphalt substances used on-site will be applied according to the manufacturer's recommendation.

- Fertilizers will be stored in a covered shed and partially used bags will be transferred to a sealable bin to avoid spills and will be applied only in the minimum amounts recommended by the manufacturer and worked into the soil to limit exposure to stormwater.

- No disturbed area shall be left un-stabilized for longer than 14 days during the growing season.

- When erosion is likely to be a problem, grubbing operations shall be scheduled and performed such that grading operations and permanent erosion control features can follow within 24 hours thereafter.

- As work progresses, patch seeding shall be done as required on areas previously treated to maintain or establish protective cover.

- Drainage pipes and swales/ditches shall generally be constructed in a sequence from outlet to inlet in order to stabilize outlet areas and ditches before water is directed to the new installation or any portion thereof, unless conditions unique to the location warrant an alternative method.

Spill Control & Spill Response:

- For all hazardous materials stored on site, the manufacturer's recommended methods for spill clean up will be clearly posted. Site personnel will be made aware of the procedures, and the locations of the information and cleanup supplies.
- Appropriate cleanup materials and equipment will be maintained by the Contractor in the materials storage area on-site. As appropriate, equipment and materials may include items such as booms, dust pans, mops, rags, gloves, goggles, kitty litter, sand, sawdust, and plastic and metal trash containers specifically for clean up purposes.
- All spills will be cleaned immediately after discovery and the materials disposed of properly.
- The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with a hazardous substance.
- After a spill, a report will be prepared describing the spill, what caused it, and the cleanup measures taken. The spill prevention plan will be adjusted to include measures to prevent this type of spill from reoccurring, as well as clean up instructions in the event of reoccurrences.
- The Contractor's site superintendent, responsible for day-to-day operations, will be the spill prevention and cleanup coordinator. The Contractor is responsible for ensuring that the site superintendent has had appropriate training for hazardous materials handling, spill management, and cleanup.
- The Contractor's site superintendent will be notified immediately when a spill or the threat of a spill is observed. The superintendent will assess the situation and determine the appropriate response.
- If spills represent an imminent threat of escaping erosion and sediment controls and entering receiving waters, personnel will be directed to respond immediately to contain the release and notify the superintendent after the situation has been stabilized.
- Spill kits containing appropriate materials and equipment for spill response and cleanup will be maintained by the Contractor at the site.
- If oil sheen is observed on surface water, action will be taken immediately to remove the material causing the sheen. The Contractor will use appropriate materials to contain and absorb the spill. The source of the oil sheen will also be identified and removed or repaired as necessary to prevent further releases.

- If a spill occurs the superintendent or the superintendent's designee will be responsible for completing the spill reporting form and for reporting the spill to the contacts listed below.
- Personnel with primary responsibility for spill response and clean up will receive training by the Contractor's site superintendent or designee. The training must include identifying the location of the spill kits and other spill response equipment and the use of spill response materials.
- Spill response equipment will be inspected and maintained as necessary to replace any materials used in spill response activities.

Spill Control Notification:

- A reportable spill is a quantity of five (5) gallons or more or any spill of oil which: (1) violates water quality standards, (2) produces a "sheen" on a surface water, or (3) causes a sludge or emulsion. This spill must be reported immediately to the agencies listed below.

- Any spill of oil or hazardous substance to waters of the state must be reported immediately by telephone to the following agencies:

  - 911 – Police, Fire and EMS
  - NYS Department of Environmental Conservation (NYSDEC)
    Spill Reporting Hotline
    (1800) 457–7362

M. STORMWATER MANAGEMENT FACILITIES MAINTENANCE PROGRAM

The following maintenance plan has been developed to maintain the proper function of all drainage and erosion and sediment control facilities:

- Erosion & Sediment Control Maintenance:

  During the construction of the project, a trained contractor shall be on-site during all soil disturbance activities. Additionally, The trained contractor shall inspect all erosion and sediment control measures daily to ensure compliance with the approved SWPPP. Any repairs required shall be performed in a timely manner. Additionally, and a qualified inspector (P.E) weekly and/or within 24 hours following a rainstorm ½" or greater.

  General Stormwater Facilities Maintenance (Storm Sewer, Catch Basins/Drain Inlets, Manholes, Pre-treatment Device and Subsurface Infiltration System)

  All stormwater facilities shall be inspected immediately after completion of construction, and then monthly for the first three (3) months following the completion of the Project. Within the first three (3) months, inspections shall immediately be performed following a large storm event (i.e. producing 1/2" (one-half inch) of rain or greater. Thereafter, these facilities shall be inspected as described as follows. Upon inspection, facilities shall be immediately maintained and/or cleaned as may be required. Any site areas exhibiting soil erosion of any kind shall be immediately restored and stabilized with vegetation, mulch or stone, depending on the area to be stabilized.

  Upon each inspection, all visible debris including, but not limited to, twigs, leaf and forest litter shall be removed frames and grates of drainage structures.

- Sumps − Catch Basin/Drain Inlets and Drain Manholes

  All catch basin/drain inlets and drain manholes with sumps have been designed to trap sediment prior to its transport to the infiltration practice and, ultimately, downstream. These sumps will require periodic inspection and maintenance to ensure that adequate depth is maintained within the sumps.

  All sumps shall be inspected once per month for the first three (3) months (after drainage system has been put into service). Thereafter, all sumps shall be inspected every four (4) months. The Owner, or their duly authorized representative, shall take measurements of the sump depth.

If sediment has accumulated to 1/2 (one-half) the depth of the sump, all sediment shall be removed from the sump. Sediments can be removed with hand-labor or with a vacuum truck.

The use of road salt shall be minimized for maintenance of roadway and driveway areas.

- Hydrodynamic Separator:

  The hydrodynamic separator (First Defense Unit) shall be inspected every six (6) months (Spring and Fall) for excess sediment accumulation. During dry weather conditions, accumulated sediments shall be vacuumed out when sediment has reached 1/2 (one-half) the capacity of the isolated sump, or when an appreciable level of hydrocarbons and trash has accumulated, whichever occurs first.

  Upon completion of construction, the First Defense Unit should be inspected quarterly during the first year in order to develop an appropriate schedule of maintenance. When the sediment pile is within 30 to 36 inches of the water surface, the system should be maintained. A vacuum truck shall be used to remove the accumulated sediment and debris. Refer to manufacturer's literature for detailed maintenance instructions.

N. CONCLUSION:

The stormwater management plan proposed meets and exceeds all the requirements set forth by the Village of Port Chester and the New York State Department of Environmental Conservation (NYSDEC) for redevelopment projects. Design modification requirements that may occur during the approval process, will be performed and submitted for review to the Village of Port Chester.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Westchester County, New York
Survey Area Data: Version 16, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

I. First Defense® by Hydro International

Introduction

The First Defense® is an enhanced vortex separator that combines an effective and economical stormwater treatment chamber with an integral peak flow bypass. It efficiently removes total suspended solids (TSS), trash and hydrocarbons from stormwater runoff without washing out previously captured pollutants. The First Defense® is available in several model configurations to accommodate a wide range of pipe sizes, peak flows and depth constraints.

The two product models described in this guide are the First Defense® High Capacity and the First Defense® Optimum; they are inspected and maintained identically.

Operation

The First Defense® operates on simple fluid hydraulics. It is self-activating, has no moving parts, no external power requirement and is fabricated with durable non-corrosive components. No manual procedures are required to operate the unit and maintenance is limited to monitoring accumulations of stored pollutants and periodic clean-outs. The First Defense® has been designed to allow for easy and safe access for inspection, monitoring and clean-out procedures. Neither entry into the unit nor removal of the internal components is necessary for maintenance, thus safety concerns related to confined-space-entry are avoided.

Pollutant Capture and Retention

The internal components of the First Defense® have been designed to optimize pollutant capture. Sediment is captured and retained in the base of the unit, while oil and floatables are stored on the water surface in the inner volume (Fig.1).

The pollutant storage volumes are isolated from the built-in bypass chamber to prevent washout during high-flow storm events. The sump of the First Defense® retains a standing water level between storm events. This ensures a quiescent flow regime at the onset of a storm, preventing resuspension and washout of pollutants captured during previous events.

Accessories such as oil absorbent pads are available for enhanced oil removal and storage. Due to the separation of the oil and floatable storage volume from the outlet, the potential for washout of stored pollutants between clean-outs is minimized.

Applications

- Stormwater treatment at the point of entry into the drainage line
- Sites constrained by space, topography or drainage profiles with limited slope and depth of cover
- Retrofit installations where stormwater treatment is placed on or tied into an existing storm drain line
- Pretreatment for filters, infiltration and storage

Advantages

- Inlet options include surface grate or multiple inlet pipes
- Integral high capacity bypass conveys large peak flows without the need for “offline” arrangements using separate junction manholes
- Long flow path through the device ensures a long residence time within the treatment chamber, enhancing pollutant settling
- Delivered to site pre-assembled and ready for installation

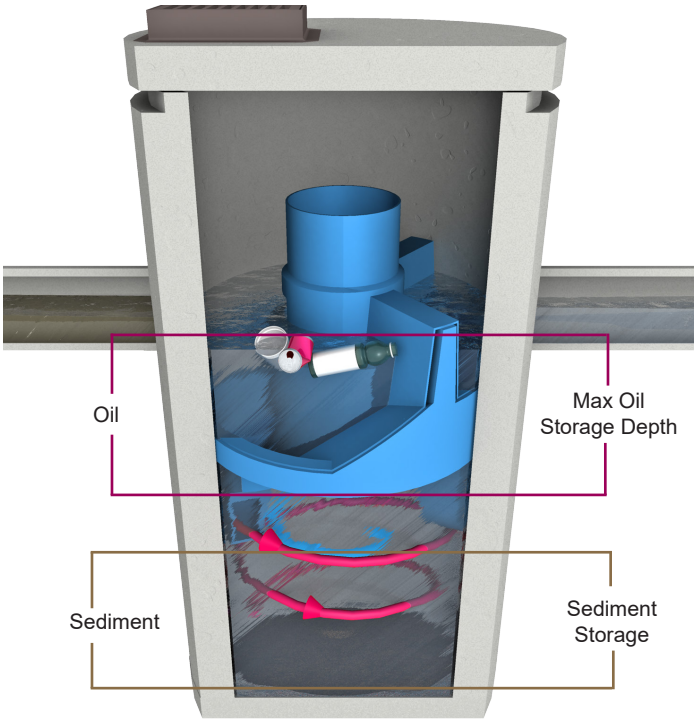

Fig.1 Pollutant storage volumes in the First Defense®.

II. Model Sizes & Configurations

The First Defense® inlet and internal bypass arrangements are available in several model sizes and configurations. The components have modified geometries allowing greater design flexibility to accommodate various site constraints.

All First Defense® models include the internal components that are designed to remove and retain total suspended solids (TSS), gross solids, floatable trash and hydrocarbons (Fig.2). First Defense® model sizes (diameter) are shown in Table 1.

Overview

The First Defense® protects the environment by removing a wide range of pollutants from stormwater runoff. Periodic removal of these captured pollutants is essential to the continuous, long-term functioning of the First Defense®. The First Defense® will capture and retain sediment and oil until the sediment and oil storage volumes are full to capacity. When sediment and oil storage capacities are reached, the First Defense® will no longer be able to store removed sediment and oil.

The First Defense® allows for easy and safe inspection, monitoring and clean-out procedures. A commercially or municipally owned sump-vac is used to remove captured sediment and floatables. Access ports are located in the top of the manhole.

Maintenance events may include Inspection, Oil & Floatables Removal, and Sediment Removal. Maintenance events do not require entry into the First Defense®, nor do they require the internal components of the First Defense® to be removed. In the case of inspection and floatables removal, a vactor truck is not required. However, a vactor truck is required if the maintenance event is to include oil removal and/or sediment removal.

Maintenance Equipment Considerations

The internal components of the First Defense® have a centrally located circular shaft through which the sediment storage sump can be accessed with a sump vac hose. The open diameter of this access shaft is 15 inches in diameter (Fig.3). Therefore, the nozzle fitting of any vactor hose used for maintenance should be less than 15 inches in diameter.

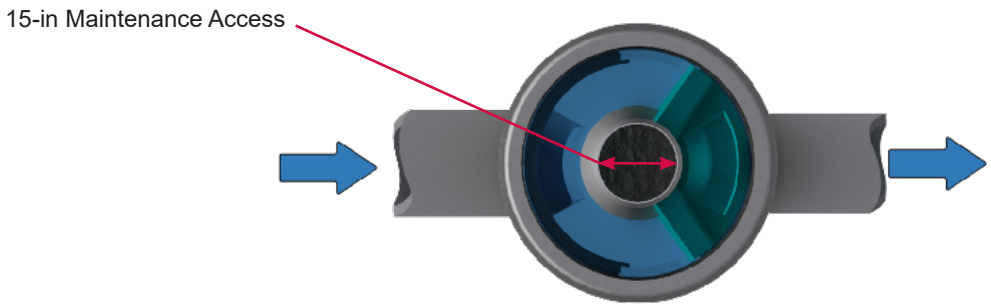

Fig.3 The central opening to the sump of the First Defense®is 15 inches in diameter.

Determining Your Maintenance Schedule

The frequency of clean out is determined in the field after installation. During the first year of operation, the unit should be inspected every six months to determine the rate of sediment and floatables accumulation. A simple probe such as a Sludge-Judge® can be used to determine the level of accumulated solids stored in the sump. This information can be recorded in the maintenance log (see page 9) to establish a routine maintenance schedule.

The vactor procedure, including both sediment and oil / flotables removal, for First Defense® typically takes less than 30 minutes and removes a combined water/oil volume of about 765 gallons.

Inspection Procedures

1. Set up any necessary safety equipment around the access port or grate of the First Defense® as stipulated by local ordinances. Safety equipment should notify passing pedestrian and road traffic that work is being done.

2. Remove the grate or lid to the manhole.

3. Without entering the vessel, look down into the chamber to inspect the inside. Make note of any irregularities. Fig.4 shows the standing water level that should be observed.

4. Without entering the vessel, use the pole with the skimmer net to remove floatables and loose debris from the components and water surface.

5. Using a sediment probe such as a Sludge Judge®, measure the depth of sediment that has collected in the sump of the vessel.

6. On the Maintenance Log (see page 9), record the date, unit location, estimated volume of floatables and gross debris removed, and the depth of sediment measured. Also note any apparent irregularities such as damaged components or blockages.

7. Securely replace the grate or lid.

8. Take down safety equipment.

9. Notify Hydro International of any irregularities noted during inspection.

Floatables and Sediment Clean Out

Floatables clean out is typically done in conjunction with sediment removal. A commercially or municipally owned sump-vac is used to remove captured sediment and floatables (Fig.4).

Floatables and loose debris can also be netted with a skimmer and pole. The access port located at the top of the manhole provides unobstructed access for a vactor hose to be lowered to the base of the sump.

Scheduling

- Floatables and sump clean out are typically conducted once a year during any season.

- Floatables and sump clean out should occur as soon as possible following a spill in the contributing drainage area.

Fig.4 Floatables are removed with a vactor hose

Recommended Equipment

- Safety Equipment (traffic cones, etc)
- Crow bar or other tool to remove grate or lid
- Pole with skimmer or net (if only floatables are being removed)
- Sediment probe (such as a Sludge Judge®)
- Vactor truck (flexible hose recommended)
- First Defense® Maintenance Log

Floatables and Sediment Clean Out Procedures

1. Set up any necessary safety equipment around the access port or grate of the First Defense® as stipulated by local ordinances. Safety equipment should notify passing pedestrian and road traffic that work is being done.

2. Remove the grate or lid to the manhole.

3. Without entering the vessel, look down into the chamber to inspect the inside. Make note of any irregularities.

4. Remove oil and floatables stored on the surface of the water with the vactor hose or with the skimmer or net

5. Using a sediment probe such as a Sludge Judge®, measure the depth of sediment that has collected in the sump of the vessel and record it in the Maintenance Log (page 9).

6. Once all floatables have been removed, drop the vactor hose to the base of the sump. Vactor out the sediment and gross debris off the sump floor

7. Retract the vactor hose from the vessel.

8. On the Maintenance Log provided by Hydro International, record the date, unit location, estimated volume of floatables and gross debris removed, and the depth of sediment measured. Also note any apparent irregularities such as damaged components, blockages, or irregularly high or low water levels.

9. Securely replace the grate or lid.

Maintenance at a Glance

Inspection	- Regularly during first year of installation - Every 6 months after the first year of installation
Oil and Floatables Removal	- Once per year, with sediment removal - Following a spill in the drainage area
Sediment Removal	- Once per year or as needed - Following a spill in the drainage area
NOTE: For most clean outs the entire volume of liquid does not need to be removed from the manhole. Only remove the first few inches of oils and floatables from the water surface to reduce the total volume of liquid removed during a clean out.

9.) LiveRoof Operation and Maintenance Manual

LiveRoof® BRAND LiveRoof Operation Manual

v2019-08-14

The LiveRoof Operation Manual is simple and takes you through each year season-by-season. It is based upon sound horticulture and lean processes, and is designed to protect owner investment with minimal time and costs.

DOCUMENTATION

Always record each maintenance event. By keeping records (in spreadsheet format), you will learn the particular nuances of caring for your LiveRoof®. A printable log sheet is included on the last page of this guide.

Name of Person	Date	Activity	Observations
		If soil test, which lab, what test, and what were the results?	
		If fertilizer, record type and amount applied per 1000 sf	
		Time needed for bi-weekly weed walk and drain inspection.	
		If irrigation, duration and weather conditions?	

The following recommendations are generally tailored to LiveRoof® systems planted with low-growing, drought tolerant succulents. Deep & Maxx systems planted with traditional landscape perennials & ornamental grasses typically have different maintenance requirements and increased irrigation needs.

Maintenance training by LiveRoof representative is required for registration of the LiveRoof® module warranty. Consult your LiveRoof® Grower to confirm maintenance recommendations / watering regimen recommended for your specific application and plant mix(es).

Biweekly Weed Walks

Twice monthly, during any time that the roof is not frozen, conduct an inspection of your green roof system. This will only take a few minutes. In fact, it's like a walk through a meadow, and it's easy. Simply pull any and all weeds, before they have a chance to flower and set seed. You might only fill up your hand with tiny weeds, this is the goal, to catch them when they are small and to prevent the development of a "seed bank" within your green roof. And, it is what keeps your total maintenance time to a minimum.

During inspections, BE SAFE. Use protective equipment, including harnesses if needed, and make sure that the roof is free of frost or other slipping hazards.

PULL WEEDS

Doing this is efficient, and the reason for the two week interval is that by pulling weeds when they are tiny, you keep them from maturing and creating seed.

By weeding every two weeks, you weed smart, not hard, and minimize the time needed for weeding. In fact, you can maintain an acre sized LiveRoof in just 30 minutes every two weeks, using this method. That's a total of only 8 hours per year in areas of temperate climate!

On the other hand, if you neglect your bi-weekly weed walk, weeds can become plentiful and time consuming to remove.

It is especially important that no woody plant ever be allowed to establish in a green roof system. Woody plants have extensive root systems that can damage roofing membranes.

INSPECT FOR POTENTIAL ISSUES

Other things to check for when taking your Weed Walk:

DISPLACED SOIL: Nesting birds can displace soil. Any displaced soil should immediately be replaced.

DRAIN INSPECTION: Roof drains should be inspected every two weeks and any debris, pebbles, or leaves should be removed to keep drains flowing freely. After inspecting drains, replace lids and ensure secured against wind uplift with pins. Failure to secure lids can result in damage or injury.

PLANT HEALTH: Most plant issues are a result of watering issues. Check the soil with your finger. If it is overly dry, decrease the interval between waterings and/or check irrigation system to ensure it is running properly. If it is too wet, cut back on irrigation.

PEST CONTROL: Occasionally pest insects such as aphids may show up and bother the plant material, and while not commonplace, fungal problems like mildew occasionally affect green roof plants. Most pest problems are the result of an imbalance in the relationship of the pest organism and its natural biological controls (beneficial insects like ladybugs and lacewings). Many pests and fungal infirmities (like blight or mildew) are usually triggered by unusual weather events that cause the pest to multiply faster than it's biological control. In time, the biological control usually catches up and most pest and disease issues tend to be temporary in nature.

On the other hand, if you detect persistent pest problems, LiveRoof suggests the use of organic and natural biological control agents instead of conventional pesticides. Conventional pesticides may runoff into sensitive areas and might also damage roofing membranes. Consult a professional prior to applying any biocontrol or pest or disease fighting agent.

Dog waste (urine and excrement) are toxic to and will kill succulent green roof plants. Therefore, unless you have a green roof that is specifically developed for dog traffic, keep dogs off the roof.

If your green roof has been specifically developed for dog traffic, then it is likely vegetated with either a turf grass or a lily-turf, such as Liriope spicata. Such roofs require a minimum of 6 inches of soil (the LiveRoof deep system), and should be cared for so as to preserve the plant material. Excrement should be picked up and the plants should be watered regularly, not just for hydration, but to flush the urine from the soil.

Water Management

In northern North America, irrigation may not be needed to keep your green roof alive during some summers, provided it is populated with Sedums and a contains a minimum of 4 ¼" soil (LiveRoof Standard modules).

- For the LiveRoof® Lite system, expect to irrigate more frequently, typically weekly during hot, dry weather.
- Likewise, the Deep (6") and Maxx (8") systems, when populated with native or conventional (non-succulent) perennials, often require very frequent irrigation.

When in doubt, consult your LiveRoof® Grower for watering recommendations for your specific plant mix(es) and site conditions.

In warmer climates, regular irrigation is required. Regardless of climate, LiveRoof® recommends a permanent irrigation system, as practical and efficient for the scale of the installation, as an "as needed" management tool during the hottest, driest months of the year.

At any soil depth, prolonged hot dry weather without supplemental irrigation will result in plant thinning or death.

HOT DRY WEATHER is generally defined as periods of 75 degree weather, with less than 1 inch of rainfall per month. This "ballpark" time period will tend to be less if the temperatures are hotter, or on sloping roofs and roofs exposed to persistent winds or reflected sunlight. Such conditions can dry out the soil and cause the plants to go dormant, or in extreme cases, to dry up and die.

During prolonged hot dry weather or when plants become drought stressed, irrigation should be applied, temporarily, to re-wet the soil to the point of saturation. This will keep plants from going dormant, keep them plump and healthy so they can cover the soil effectively, and optimize their appearance. It also enhances the evaporative cooling effect of the green roof.

There are no absolutes when it comes to drought stress and irrigation. Check the plants for wilting, especially in the afternoon. If the plants are wilting, it is time to irrigate.

WATERING SEASON

Generally, the green roof system will be deactivated during traditional "winter" months, where snow or rainfall and cold weather persist. In warmer climates, irrigation may be required year round. During periods of unusually warm, dry winter weather, the green roof may need to be irrigated.

Areas beneath building overhangs will not receive direct rainfall, thus require regular irrigation regardless of plant type and soil depth.

HOW MUCH WATER?

Drenching the soil periodically, just to the point of runoff, is better than more frequent, light irrigation events. Light irrigation can encourage shallow rooting and create a build-up of salts in the soil. The duration of the irrigation run and the volume of water to apply will depend upon the soil depth, and available water pressure and volume at the rooftop.

In areas of shade, less irrigation will be required.
DO NOT OVER WATER as this can cause widespread plant losses.

Thoroughly irrigating, as indicated above, will pay off significantly.

Not only will the plants be healthier and fuller, bringing reduced maintenance costs, but the actual cost of irrigation is minimal compared to the energy savings derived from enhancing the evaporative cooling of the green roof.

Spring Maintenance

Spring Maintenance begins 3-4 weeks before the spring "growth flush," which varies with locale. It is the time when plants "wake up" and grow very fast. This typically coincides with spring rain and "spring flowers" such as Forsythia, Daffodils, and Wisteria. In Tennessee, for example, it occurs around mid March, while in Minnesota it begins around mid April. In climates without cold winters, this could be February.

Resume biweekly "weed walks" and inspections. Weeds are opportunists, and many weeds actually grow during winter. Therefore, you will probably have a few weeds waiting for you in spring. Once your roof is thawed out it is time to walk your roof and pull any and all weeds, no matter how small—every two weeks.

EARLY TO MID MARCH (ADJUST EARLIER OR LATER FOR LOCAL CLIMATE)

PERFORM ANNUAL SOIL TEST

LiveRoof soils are formulated for sustainable nutrient content, but rainstorms and snowmelt can leach nutrients and deplete fertility. Soil testing is best conducted during late winter which leaves time to apply fertilizer, before the spring growth flush, the time when plants most require adequate nutrition.

To test soil, gather a two cup sample by digging soil out in small quantities (using a large spoon) from at least 15-20 separate places throughout the roof. Place these small samples ("sub-samples") in a labeled, sealed, plastic bag, or test kit from your testing lab. LiveRoof, LLC strongly recommends the following lab and test procedures.

EARLY APRIL (ADJUST EARLIER OR LATER FOR LOCAL CLIMATE)

APPLY FERTILIZER (if needed)

Upon receipt of your soil test results from the lab, interpret the information and determine the need, if any, for fertilization. Pay attention to the various nutrient levels; such as Nitrogen (N or NO_3-N), Potassium (K), Phosphorus (P). For each of these, the soil report will indicate if there is a Low (L), Moderate (M), or High (H) amount of that nutrient in the soil. The most important of these, in terms of plant vigor, is Nitrogen. If your soil contains less than a Moderate (M) amount of nitrogen, the plants will thin out and create areas of exposed soil. Therefore, if the Nitrogen level is Low, it is advisable to apply supplemental fertilizer.

- When applying fertilizer to green roofs, it is important to be sensitive of runoff potential. Ask yourself, where is the runoff water going, and what might it affect (e.g., fish, frogs, etc.)? In all cases, it is imperative to use a "Slow Release" fertilizer rather than a conventional fertilizer to minimize nutrient runoff. Slow release fertilizers are coated with a waxy or sulphur covering that allows the fertilizer to release into the soil over time, rather than all at once. Such fertilizers are more readily absorbed by the plants, and therefore are less likely to contaminate runoff water.
- Always choose a high quality slow release granular fertilizer—available at your local garden center. Good brands are Osmocote® and Nutricote®, but there are others. High quality fertilizers are designated "Coated Slow Release Fertilizer", and the label will typically indicate something to the effect of "provides 4 to 6 months of continuous feeding". Some high quality "turf-grade" fertilizers may work well on the green roof, but they too must indicate "slow release", and must contain NO Herbicides or other Pesticides. The best of these, in our opinion, is Lesco 14-14-14 sulfur coated, available from John Deere Landscapes. If fertilizers containing phosphorus are banned from local use, we recommend Lesco 21-0-21.
- Fertilization is best conducted during the spring, with a single annual application. Spring is the correct time because the plants are actively growing and not under drought stress.

© 2007-2019 LiveRoof Global, LLC

- All fertilizers will be labeled with three numbers, which indicate the % by weight of Nitrogen (N), Phosphorus (P), and Potassium (K), in the fertilizer. Common formulations are 21-0-21, 18-6-12 or 14-14-14, but there are many others. In some communities, Phosphorus-containing fertilizers are prohibited due to the potential for creating algae growth in waterways. If in doubt, check with your local cooperative extension agency (https://nifa.usda.gov/land-grant-colleges-and-universities-partner-website-directory).
- A Rotary Spreader (push type or belly-crank type) can be used to ensure that fertilizer is applied evenly.

In all cases, fertilizer should be applied in accord with manufacturer's recommendations, and evaluated by the applicator for runoff potential in accord with site specifics. The greater the runoff potential, the lower the application rate should be.
Applicator assumes all risks associated with fertilizer application.

pH

The acidity or alkalinity of the soil is determined by its pH. Plants have a preferred pH range for optimal utilization of nutrients, and in the case of most green roof plants, this range is 6.5 to 7.0. Below 6.0 is too acid, and above 7.5 is too alkaline. If your soil pH is below 6.5, consult your soil testing lab for recommendations to increase alkalinity. Typically, this means adding lime. And, if the soil is above 7.5, it can be made more acid with elemental sulphur or an application of acidifying fertilizer, such as Lesco 14-14-14 sulfur coated fertilizer. Since LiveRoof soils are formulated to buffer against pH changes, the need to adjust pH is relatively uncommon.

MOWING

Mowing is recommended to tidy up the roof after winter. Persistent dried seed heads can detract from the aesthetic qualities of the green roof. And, in some cases they are so thick as to shade the foliage. If this occurs, you may choose to mow the green roof and the time to do this is early April (adjust accordingly to precede spring growth flush). In especially humid climates (such as US Southeast), a spring trimming helps to prevent fungal issues that may result from excessive humidity buildup beneath the plant canopy. Do not mow plants in summer.

If you choose to mow your green roof, set the mower blade just above the foliage. The idea is to mow the dried seed heads, but avoid cutting the foliage. Do not bag the clippings, instead blow them into the vegetated portion of the roof so that they can decompose and nourish the soil. You can also do this with a string trimmer.

Deep and Maxx Systems: The Deep and Maxx systems are often populated with perennials and grasses. In addition to the maintenance outlined above, any non evergreen perennials should be trimmed down at this time of year to tidy them up. Vegetable plants should be removed and the soil raked smooth and any weeds removed before replanting.

APRIL TO MAY

Continue biweekly "weed walks" and inspections, and activate irrigation system and/or adjust watering schedule as needed for changing weather.

Summertime Maintenance

JUNE TO SEPTEMBER (ADJUST EARLIER OR LATER FOR LOCAL CLIMATE)

Continue biweekly "weed walks" and inspections, and activate or adjust watering schedule as needed for changing weather. During the hottest, most humid months of the year, be sure to water as needed to maintain healthy plants.

© 2007-2019 LiveRoof Global, LLC

Fall Maintenance

OCTOBER TO NOVEMBER (ADJUST EARLIER OR LATER FOR LOCAL CLIMATE)

Continue biweekly "weed walks" and inspections, and activate or adjust watering schedule as needed for changing weather.

Many weeds germinate and grow during fall. Weeding up until snow fall in cold winter climates can save a lot of work the following year. Stay off the roof if there is frost or ice. Many weeds are capable of reproducing during winter, even under the snow, so you will want to have the roof "weed-free" going into winter.

Use care to avoid walking on the plants in the presence of ice, frost or other slipping hazards.

In addition

- In climates with cold winters, DO NOT fertilize during fall. It may stimulate tender growth and compromise the cold hardiness of the plant material. In warm winter climates, without freezes, fall fertilizer may be desirable.
- Rake up any fallen and matted tree leaves. These can smother the green roof plants.
- Be sure the drains are free-flowing and not impaired by fallen leaves. Impaired drainage can damage the roof and damage or kill the plants.
- If the green roof is cantilevered with no heat under it, install heat tape or heat cable in the drains to keep the drains from freezing shut during winter.

Deep and Maxx Systems: The Deep and Maxx systems will likely contain vegetable, perennial, and grass species. During fall, these plants may be trimmed and tidied up for winter. Vegetable plants may be removed altogether; however, we recommend leaving the vegetable plants over the winter to prevent wind erosion. In spring, they may be removed and replanted.

Winter Maintenance

DECEMBER TO FEBRUARY (ADJUST EARLIER OR LATER FOR LOCAL CLIMATE)

In Northern Temperate Regions: Across the northern temperate region of North America, the plants will be dormant and the soil will usually be frozen during the winter season. This is the time to stay off the roof as it may be slippery and dangerous. While the roof is frozen, the only winter maintenance required may be snow removal from rooftop walkways--if roof ingress and egress is required.

- Should you have to shovel pathways on your roof during winter, AVOID USING SALT AND OTHER DEICING CHEMICALS. They will kill the plants and damage the pavers. Instead, use sand or cat litter as an anti-slip agents.
- In some cases, electronic heat tape or cable snow-melt systems may be appropriate, but must be installed in a manner that does not heat up the soil in modules adjacent to walkways. Take care and seek approval from the membrane manufacturer to confirm that such systems will not compromise or damage the membrane.
- Avoid piling all the snow in one place. Instead disperse it evenly over the green roof plantings. Excess snow can potentially damage the plant material by insulating the plants and keeping them too warm, thereby triggering fungal diseases.

In Warm Climate Regions: In areas of warm climate, the plants will likely be dormant or semi-dormant during winter, but the weeds will not be. Therefore, you must continue biweekly "weed walks" and inspections, and activate or adjust watering schedule as needed for changing weather.

1. What is New York's Brownfield Cleanup Program?

New York's Brownfield Cleanup Program (BCP) works with private developers to encourage the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and developed. These uses include recreation, housing, and business.

A *brownfield* is any real property that is difficult to reuse or redevelop because of the presence or potential presence of contamination. A brownfield typically is a former industrial or commercial property where operations may have resulted in environmental contamination. A brownfield can pose environmental, legal, and financial burdens on a community. If a brownfield is not addressed, it can reduce property values in the area and affect economic development of nearby properties.

The BCP is administered by the New York State Department of Environmental Conservation (NYSDEC) which oversees Applicants who conduct brownfield site investigation and cleanup activities. An Applicant is a person who has requested to participate in the BCP and has been accepted by NYSDEC. The BCP contains investigation and cleanup requirements, ensuring that cleanups protect public health and the environment. When NYSDEC certifies that these requirements have been met, the property can be reused or redeveloped for the intended use.

For more information about the BCP, go online at:
http://www.dec.ny.gov/chemical/8450.html .

2. Citizen Participation Activities

Why NYSDEC Involves the Public and Why It Is Important

NYSDEC involves the public to improve the process of investigating and cleaning up contaminated sites, and to enable citizens to participate more fully in decisions that affect their health, environment, and social well-being. NYSDEC provides opportunities for citizen involvement and encourages early two-way communication with citizens before decision makers form or adopt final positions.

Involving citizens affected and interested in site investigation and cleanup programs is important for many reasons. These include:

- Promoting the development of timely, effective site investigation and cleanup programs that protect public health and the environment

- Improving public access to, and understanding of, issues and information related to a particular site and that site's investigation and cleanup process

- Providing citizens with early and continuing opportunities to participate in NYSDEC's site investigation and cleanup process

- Ensuring that NYSDEC makes site investigation and cleanup decisions that benefit from input that reflects the interests and perspectives found within the affected community

- Encouraging dialogue to promote the exchange of information among the affected/interested public, State agencies, and other interested parties that strengthens trust among the parties, increases understanding of site and community issues and concerns, and improves decision making.

This Citizen Participation (CP) Plan provides information about how NYSDEC will inform and involve the public during the investigation and cleanup of the site identified above. The public information and involvement program will be carried out with assistance, as appropriate, from the Applicant.

Project Contacts

Appendix A identifies NYSDEC project contact(s) to whom the public should address questions or request information about the site's investigation and cleanup program. The public's suggestions about this CP Plan and the CP program for the site are always welcome. Interested people are encouraged to share their ideas and suggestions with the project contacts at any time.

Locations of Reports and Information

The locations of the reports and information related to the site's investigation and cleanup program also are identified in Appendix A. These locations provide convenient access to important project documents for public review and comment. Some documents may be placed on the NYSDEC web site. If this occurs, NYSDEC will inform the public in fact sheets distributed about the site and by other means, as appropriate.

Site Contact List

Appendix B contains the site contact list. This list has been developed to keep the community informed about, and involved in, the site's investigation and cleanup process. The site contact list will be used periodically to distribute fact sheets that provide updates about the status of the project. These will include notifications of upcoming activities at the site (such as fieldwork), as well as availability of project documents and announcements about public comment periods.
The site contact list includes, at a minimum:

- Chief executive officer and planning board chairperson of each county, city, town and village in which the site is located;
- Residents, owners, and occupants of the site and properties adjacent to the site;
- The public water supplier which services the area in which the site is located;
- Any person who has requested to be placed on the site contact list;
- The administrator of any school or day care facility located on or near the site for purposes of posting and/or dissemination of information at the facility;
- Location(s) of reports and information.

The site contact list will be reviewed periodically and updated as appropriate. Individuals and organizations will be added to the site contact list upon request. Such requests should be submitted to the NYSDEC project contact(s) identified in Appendix A. Other additions to the site contact list may be made at the discretion of the NYSDEC project manager, in consultation with other NYSDEC staff as appropriate.

Note: The first site fact sheet (usually related to the draft Remedial Investigation Work Plan) is distributed both by paper mailing through the postal service and through DEC Delivers, its email listserv service. The fact sheet includes instructions for signing up with the appropriate county listserv to receive future notifications about the site. See http://www.dec.ny.gov/chemical/61092.html .

Subsequent fact sheets about the site will be distributed exclusively through the listserv, except for households without internet access that have indicated the need to continue to receive site information in paper form. Please advise the NYSDEC site project manager identified in Appendix A if that is the case. Paper mailings may continue during the investigation and cleanup process for some sites, based on public interest and need.

CP Activities

The table at the end of this section identifies the CP activities, at a minimum, that have been and will be conducted during the site's investigation and cleanup program. The

flowchart in Appendix D shows how these CP activities integrate with the site investigation and cleanup process. The public is informed about these CP activities through fact sheets and notices distributed at significant points during the program. Elements of the investigation and cleanup process that match up with the CP activities are explained briefly in Section 5.

- **Notices and fact sheets** help the interested and affected public to understand contamination issues related to a site, and the nature and progress of efforts to investigate and clean up a site.

- **Public forums, comment periods and contact with project managers** provide opportunities for the public to contribute information, opinions and perspectives that have potential to influence decisions about a site's investigation and cleanup.

The public is encouraged to contact project staff at any time during the site's investigation and cleanup process with questions, comments, or requests for information.

This CP Plan may be revised due to changes in major issues of public concern identified in Section 3 or in the nature and scope of investigation and cleanup activities. Modifications may include additions to the site contact list and changes in planned citizen participation activities.

Technical Assistance Grant

NYSDEC must determine if the site poses a significant threat to public health or the environment. This determination generally is made using information developed during the investigation of the site, as described in Section 5.

If the site is determined to be a significant threat, a qualifying community group may apply for a Technical Assistance Grant (TAG). The purpose of a TAG is to provide funds to the qualifying group to obtain independent technical assistance. This assistance helps the TAG recipient to interpret and understand existing environmental information about the nature and extent of contamination related to the site and the development/implementation of a remedy.

An eligible community group must certify that its membership represents the interests of the community affected by the site, and that its members' health, economic well-being or enjoyment of the environment may be affected by a release or threatened release of contamination at the site.

The site is located in an Environmental Justice Area. Environmental justice is defined as the fair treatment and meaningful involvement of all people regardless of race, color,

national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.

Environmental justice efforts focus on improving the environment in communities, specifically minority and low-income communities, and addressing disproportionate adverse environmental impacts that may exist in those communities.

The site includes a community with a sizable Hispanic-American population, therefore, all future fact sheets will be translated into Spanish.

As of the date the declaration (page 2) was signed by the NYSDEC project manager, the significant threat determination for the site had not yet been made.

To verify the significant threat status of the site, the interested public may contact the NYSDEC project manager identified in Appendix A.

For more information about TAGs, go online at
http://www.dec.ny.gov/regulations/2590.html

Note: The table identifying the citizen participation activities related to the site's investigation and cleanup program follows on the next page:

Citizen Participation Activities	Timing of CP Activity(ies)
Application Process:	
• Prepare site contact list • Establish document repository(ies)	At time of preparation of application to participate in the BCP.
• Publish notice in Environmental Notice Bulletin (ENB) announcing receipt of application and 30-day public comment period • Publish above ENB content in local newspaper • Mail above ENB content to site contact list • Conduct 30-day public comment period	When NYSDEC determines that BCP application is complete. The 30-day public comment period begins on date of publication of notice in ENB. End date of public comment period is as stated in ENB notice. Therefore, ENB notice, newspaper notice, and notice to the site contact list should be provided to the public at the same time.
After Execution of Brownfield Site Cleanup Agreement (BCA):	
• Prepare Citizen Participation (CP) Plan	Before start of Remedial Investigation **Note:** Applicant must submit CP Plan to NYSDEC for review and approval within 20 days of the effective date of the BCA.
Before NYSDEC Approves Remedial Investigation (RI) Work Plan:	
• Distribute fact sheet to site contact list about proposed RI activities and announcing 30-day public comment period about draft RI Work Plan	Before NYSDEC approves RI Work Plan. If RI Work Plan is submitted with application, public comment periods will be combined and public notice will include fact sheet. Thirty-day public comment period

Citizen Participation Activities	Timing of CP Activity(ies)
• Conduct 30-day public comment period	begins/ends as per dates identified in fact sheet.
After Applicant Completes Remedial Investigation:	
• Distribute fact sheet to site contact list that describes RI results	Before NYSDEC approves RI Report
Before NYSDEC Approves Remedial Work Plan (RWP):	
• Distribute fact sheet to site contact list about draft RWP and announcing 45-day public comment period • Public meeting by NYSDEC about proposed RWP (if requested by affected community or at discretion of NYSDEC project manager) • Conduct 45-day public comment period	Before NYSDEC approves RWP. Forty-five day public comment period begins/ends as per dates identified in fact sheet. Public meeting would be held within the 45-day public comment period.
Before Applicant Starts Cleanup Action:	
• Distribute fact sheet to site contact list that describes upcoming cleanup action	Before the start of cleanup action.
After Applicant Completes Cleanup Action:	
• Distribute fact sheet to site contact list that announces that cleanup action has been completed and that NYSDEC is reviewing the Final Engineering Report • Distribute fact sheet to site contact list announcing NYSDEC approval of Final Engineering Report and issuance of Certificate of Completion (COC)	At the time the cleanup action has been completed. **Note:** The two fact sheets are combined when possible if there is not a delay in issuing the COC.

3. Major Issues of Public Concern

This section of the CP Plan identifies major issues of public concern that relate to the site. Additional major issues of public concern may be identified during the course of the site's investigation and cleanup process.

There will be areas on the Site where soil excavation is necessary. Therefore, once the remediation commences, there may be concerns regarding odors, noise or truck traffic coming from the Site. However, these impacts will be mitigated through implementation of a Health and Safety Plan and Soil Management Plan approved by the Department, which will be designed to minimize these impacts. A Community Air Monitoring Plan (CAMP) will also be implemented to monitor dust and vapors to ensure the community is not impacted. CAMP implementation involves the placement of air monitoring stations downwind and upwind of where work is occurring to capture both dust and vapor emissions. If dust or emissions exceed a set threshold established by DEC and the Department of Health, then work must cease and the cause of the issue must be corrected before work can proceed.

4. Site Information

Appendix C contains a map identifying the location of the site.

Site Description

- **140 and 148-150 Westchester Avenue**
- **Setting – urban**
- **Site size – 0.449 acres**
- **Adjacent properties – residential, commercial**

History of Site Use, Investigation, and Cleanup

The Site consists of two lots with a different historic uses on each lot. In 1895, Lot 65 was occupied by Young's Hotel and Young's Livery. By 1902, a saloon and carriage house were added to the hotel. In 1908, the hotel building was occupied by the Grand Union Hotel. By 1915, another building was constructed behind the hotel, which was used as a hall and by 1918, the hall was also used as a bowling alley. The former hotel operations may have used dry cleaning solvents and the bowling alley may have also used solvents to clean the lanes because the Site's groundwater has fairly significant solvent related contamination. The former bowling alley was identified as a pool in maps from 1934. The lot appears to be in a similar configuration in maps from 1942, but the uses are not apparent. By 1950, the pool hall building was used as by the American Legion Club House. Aerial

photographs from 1966 through 1971 depict a clearing located behind two of the large buildings on Lot 65. By 1974, there are no longer buildings present on Lot 65 and by 1985 the lot was developed into a parking lot. Aerial photographs from 1991 through 1996 depict a parking lot with a patch of barren soil in the northeastern portion of the lot. The soil patch was present until approximately 2008 when it was covered by asphalt. Maps from 2011 until the present depict no significant changes from the 2008 map.

As of 1902, a tin smith shop had been present on Lot 17, which was replaced by a blacksmith shop. A carpet cleaning store replaced the blacksmith shop which by 1919 was back to being used as a tin shop. By 1934, the tin shop was no longer present but the site uses were not apparent from accessible historical records. These prior operations may have affected the soil and groundwater at the Site. From 1950's through the 1990's, the on-site buildings were used as stores. In 1994, one of the buildings contained apartments on the upper levels. Between 1995 and 2006 there were no significant changes in the lot configuration or lots uses.

In June 2021, a subsurface investigation of soil, soil vapor, and groundwater identified the contaminants of concern as Semi-Volatile Organic Compounds ("SVOCs"), metals and pesticides in soil, and Volatile Organic Compounds ("VOCs"), SVOCs, and metals in groundwater. The groundwater sample located in the vicinity of the former hotel/bowling alley/ paint shop/warehouse, exhibited the highest concentration of contaminants. Additional investigation was deemed warranted to determine the full extent of contamination at the Site.

5. Investigation and Cleanup Process

Application

The Applicant has applied for and been accepted into New York's Brownfield Cleanup Program as a Volunteer which means that the Applicant was not responsible for the disposal or discharge of the contaminants or whose ownership or operation of the site took place after the discharge or disposal of contaminants. The Volunteer must fully characterize the nature and extent of contamination onsite, and must conduct a "qualitative exposure assessment," a process that characterizes the actual or potential exposures of people, fish and wildlife to contaminants on the site and to contamination that has migrated from the site.

The Applicant in its Application proposes that the site will be used for unrestricted purposes.

To achieve this goal, the Applicant will conduct investigation activities at the site with

oversight provided by NYSDEC. The Brownfield Cleanup Agreement executed by NYSDEC and the Applicant sets forth the responsibilities of each party in conducting these activities at the site.

Investigation

The Applicant will conduct an investigation of the site officially called a “remedial investigation” (RI). This investigation will be performed with NYSDEC oversight. The Applicant must develop a remedial investigation workplan, which is subject to public comment.

The site investigation has several goals:

1) define the nature and extent of contamination in soil, surface water, groundwater and any other parts of the environment that may be affected;
2) identify the source(s) of the contamination;
3) assess the impact of the contamination on public health and the environment; and
4) provide information to support the development of a proposed remedy to address the contamination or the determination that cleanup is not necessary.

The Applicant has submitted a draft “Remedial Investigation Work Plan” to NYSDEC for review and approval. NYSDEC made the draft plan available to the public review during a 30-day public comment period which occurred from May 4th through June 3rd, 2022. However, the public can submit comments at any time.

When the investigation is complete, the Applicant will prepare and submit a report that summarizes the results. This report also will recommend whether cleanup action is needed to address site-related contamination. The investigation report is subject to review and approval by NYSDEC.

NYSDEC will use the information in the investigation report to determine if the site poses a significant threat to public health or the environment. If the site is a “significant threat,” it must be cleaned up using a remedy selected by NYSDEC from an analysis of alternatives prepared by the Applicant and approved by NYSDEC. If the site does not pose a significant threat, the Applicant may select the remedy from the approved analysis of alternatives.

Interim Remedial Measures

An Interim Remedial Measure (IRM) is an action that can be undertaken at a site when a source of contamination or exposure pathway can be effectively addressed before the site investigation and analysis of alternatives are completed. If an IRM is likely to represent all or a significant part of the final remedy, NYSDEC will require a 30-day

public comment period.

Remedy Selection

When the investigation of the site has been determined to be complete, the project likely would proceed in one of two directions:

1. The Applicant may recommend in its investigation report that no action is necessary at the site. In this case, NYSDEC would make the investigation report available for public comment for 45 days. NYSDEC then would complete its review, make any necessary revisions, and, if appropriate, approve the investigation report. NYSDEC would then issue a "Certificate of Completion" (described below) to the Applicant.

or

2. The Applicant may recommend in its investigation report that action needs to be taken to address site contamination. After NYSDEC approves the investigation report, the Applicant may then develop a cleanup plan, officially called a "Remedial Work Plan". The Remedial Work Plan describes the Applicant's proposed remedy for addressing contamination related to the site.

When the Applicant submits a draft Remedial Work Plan for approval, NYSDEC would announce the availability of the draft plan for public review during a 45-day public comment period.

Cleanup Action

NYSDEC will consider public comments, and revise the draft cleanup plan if necessary, before approving the proposed remedy. The New York State Department of Health (NYSDOH) must concur with the proposed remedy. After approval, the proposed remedy becomes the selected remedy. The selected remedy is formalized in the site Decision Document.

The Applicant may then design and perform the cleanup action to address the site contamination. NYSDEC and NYSDOH oversee the activities. When the Applicant completes cleanup activities, it will prepare a final engineering report that certifies that cleanup requirements have been achieved or will be achieved within a specific time frame. NYSDEC will review the report to be certain that the cleanup is protective of public health and the environment for the intended use of the site.

Certificate of Completion

When NYSDEC is satisfied that cleanup requirements have been achieved or will be

achieved for the site, it will approve the final engineering report. NYSDEC then will issue a Certificate of Completion (COC) to the Applicant. The COC states that cleanup goals have been achieved, and relieves the Applicant from future liability for site-related contamination, subject to certain conditions. The Applicant would be eligible to redevelop the site after it receives a COC.

Site Management

The purpose of site management is to ensure the safe reuse of the property if contamination will remain in place. Site management is the last phase of the site cleanup program. This phase begins when the COC is issued. Site management incorporates any institutional and engineering controls required to ensure that the remedy implemented for the site remains protective of public health and the environment. All significant activities are detailed in a Site Management Plan.

An *institutional control* is a non-physical restriction on use of the site, such as a deed restriction that would prevent or restrict certain uses of the property. An institutional control may be used when the cleanup action leaves some contamination that makes the site suitable for some, but not all uses.

An *engineering control* is a physical barrier or method to manage contamination. Examples include: caps, covers, barriers, fences, and treatment of water supplies.

Site management also may include the operation and maintenance of a component of the remedy, such as a system that pumps and treats groundwater. Site management continues until NYSDEC determines that it is no longer needed.

To:	KINGS CAPITAL CONSTRUCTION
Location:	140-150 Westchester Avenue
Work Description:	Curb Excavation and Sewer Connection
CODE ID #	08233-000-648-00

NOTE: This permit is being issued with the understanding that the Contractor/Applicant shall comply with Article I, Section 283 of the Village of Port Chester Code for Excavating in Streets and is responsible for complying with the specifications and standards for replacement of sidewalk and street pavement areas in accordance with good engineering practice. All safety precautions are to be complied with for workman, pedestrian and vehicular traffic. Proper notices are to be given to the Village Engineer of commencement of work and the Police Department for work within the right of way.
Contractor to note the following conditions (if applicable) and Specifications:
Sidewalk blocks must be saw-cut *prior* to removal.
Area under sidewalk and driveways must be compacted.
Proposed sidewalks must be 5" thick. Proposed driveways and aprons must be 7" thick.
Truck-delivered NYDOT Class "A" Concrete must be used for all work in the Right of Way. Hand mixed concrete shall not be used.
Full depth expansion joint material ½" x 5" or ½" x 7" must be used where the new concrete meets the old, and at approximate 25-foot intervals.
Curing/sealing compound must be applied to the fresh concrete.
Concrete trucks must not be washed out in street or storm drains.
Excavated walks must be barricaded if left unattended.

ITEM 20SW - CONCRETE SIDEWALKS:

20SW.1. WORK INCLUDED:

Under this item the Contractor shall build new concrete sidewalks within set limits by the Engineer. The concrete sidewalks shall be constructed in accordance with these specifications and the contract drawings and as directed by the Engineer. This item shall also include the removal and disposal of existing sidewalks within the set limits as shown on the contract drawings

20SW.2. MATERIALS:

A. The Contractor shall provide a 4,000 lb. concrete with a minimum cement ratio of six (6) bags per cubic yard, with a minimum and maximum slump of 1 1/2" and 3" respectively. The cement shall conform to the "Specifications for Portland Cement, A.S.T.M, and C-150-Type II." The concrete shall have an air content of not less than three (3%) percent, nor more than six (6%) percent, accomplished by including an air- entraining admixture conforming to N.Y.S.D.O.T standard specifications for Class "A" concrete. The concrete sidewalk shall be five (5") inches in thickness and poured in one operation with one quarter inch pre-molded joint filler, transverse expansion joints to the full depth of the concrete spaced twelve (12) to sixteen (16) feet apart, and the edges of such joints finished with an edging tool of one quarter inch radius. In driveway areas, the sidewalk shall be seven (7) inches thick The top surface shall be finished as directed by the Engineer, and shall be scored at intervals of four (4) feet so that the finished walk will be marked in squares both longitudinally and transversely.

B. Synthetic Fibers specifically engineered and manufactured for use as secondary concrete reinforcement shall be used. Fiber shall be manufactured by one of the following, or an approved equal:

1. Grace Fibers, as manufactured by W.R. Grace & Company, construction Products, 60 Whittemore Ave., Cambridge, MA 02140-1692, (800) 852-6055, www.graceconstrucUon.com.
2. In Force e3, as manufactured by Fiber mesh Company, division of Synthetic Industries, Inc., 4019 Industry Dr., Chattanooga, TN 37416, (615) 892-7243, www.fibermesh.com.
3. Econo Net, as manufactured by Forta Corporation, 100 Forta Dr., Grove City PA 16127, (800) 245-0306, www.fortacorp.com.

The reinforcement shall be added at a dosage rate of 1.5 lbs. per cubic yard, and shall be added to the concrete mixing system during or after the batching of the other ingredients and mixed at the time and speed recommended by the mixer manufacturer. Fibers shall be uniformly dispersed in the concrete, and concrete shall be free of fiber balls or lumps when discharged at the site.

C. Pre-molded bituminous joints shall be placed between all construction joints, and between joints at curbs, buildings, brick pavers and trees as directed.

D. Sub-Base

1. The subbase course material used shall be bank run gravel (NYSDOT 304.02).

INSTALLATION:

A. Excavation and disposal of existing ground to the sub-base surface and/or as indicated on the plans. Care is to be taken not to damage adjacent sidewalk and other appurtenances. Any damage caused by the Contractor's operations will be repaired by the Contractor at no expense to the Owner and as approved by the Engineer. In the areas to receive new concrete pavement the Contractor shall completely remove all existing pavement and shall excavate to the depths required to meet existing finish line and grade. Materials removed shall become the property of the contractor and shall be disposed of legally, off-site. Contractor shall saw cut in straight, clean lines where new concrete pavement abuts existing sidewalk pavement, and in any other location as required to complete the work. The cost of such saw cutting shall be included in the unit price for new concrete sidewalks. Address

B. Subgrade

1. The Contractor shall saw cut the existing pavement and excavate the sidewalk to the proposed subgrade. If such sub-grade is of unsuitable materials, all such materials, shall be removed and replaced with select materials, as called for by the Engineer, tamped, and brought up to the proper grade.

C. Sub-Base

1. The sub-base course shall be placed and compacted in accordance with §304-3.01 through §304-3.05 of the New York Department of Transportation's Standard Specifications and/or as detailed in the plans.

2. The concrete sidewalk shall be placed on a well prepared sub-base, with a minimum depth of six (6) inches. The sub-base shall be compacted and of the typo and depth indicated on the detail drawings.

D. Finishing

1. Concrete shall be placed in a continuous pour. No more than one and one half (1 1/2) hours shall separate each continuous pour, unless an expansion joint is used.

2. Two standard test cylinders are to be made with each truck load, if directed by the Engineer, and cured under conditions equal to the sidewalk. The Contractor is responsible for preparing the cylinders in accordance with A.C.I. standards, storing and protecting the cylinders onsite, delivery to and testing at a

testing facility approved by the Engineer. The Contractor shall bear all costs and related expenses for testing. One cylinder from each pour shall be tested at 28 days. If the test results are satisfactory, the second test cylinder shall be discarded by the Contractor. If the results of the first test cylinder are not satisfactory, the second test cylinder shall be tested immediately. The Contractor shall bear all related costs. A copy of ail test result must be submitted to the Engineer.

3. The surface shall be a "strike off" surface using a "sawing" motion.

4. Bull Float shall be done as soon as possible after strike-off with an overlapping pattern.

5. The Contractor shall make the initial run with jointer and edger.

6. No further work shall be done on the concrete until all the water sheen has disappeared.

7. Rerun joints and finish edges.

8. Broom lightly for a textured surface. Broom shall be cleaned after each application. Failure to keep broom free of concrete may require the Engineer to order that a new broom be used to acquire the desired texture.

9. Textured surfaces of handicapped ramps shall meet all requirements of ANSI Code 4.7:7, Al 17.1.

E. Curing and Anti-Spalling Compound

1. At the initial set of the concrete, or as directed by the Engineer, all exposed concrete shall be cured and protected in accordance with N.Y.S.D.O.T. Item 502-3.10, Method A.

F. Sidewalk shall meet latest ADA Accessibility Guidelines for Buildings and Facilities as outlined in the Federal Register's Rules and Regulations.

G. Testing: As directed by the engineer, the Contractor shall be required to pour one (1) test cylinder per placement regardless of size and thereafter at a rate of one per 200 cubic yards for the duration of that placement. This rate shall be increased by the Engineer whenever indication of non-acceptable concrete is noticed. The concrete crush and slump test shall be performed at a laboratory approved by the Engineer.

§ 283-8. Street Opening Specifications:

A. The street opening and the final restoration shall be performed in accordance with rules and regulations promulgated and approved by the Engineer, but shall include the following as minimum requirements.

1) All excavations shall be backfilled with controlled density backfill material (K-Krete).
2) If a new patch is to be made where there is an existing patch, the entire area shall be removed and replaced.
3) Restoration of pavement shall be curb to curb and shall extend two feet on either side of the trench.
4) The new patch shall have the same contour as the adjacent road surface. If the street pavement is asphalt, the replacement shall be asphalt. The existing pavement shall be saw-cut to its base or binder course and shall be 12 inches wider than the trench. A binder course of 4 1/2 inches and a top course of 1 1/2 inches shall be required. The seam between the new and existing pavement shall be sealed with hot asphaltic cement.
5) If the street pavement is concrete, the replacement shall be concrete. The existing pavement shall be saw cut to its base, drilled and doweled to a minimum depth of 12 inches with the dowels two feet on center. The seam shall be sealed with hot asphaltic cement.
6) If there are multiple patches and the area of disturbance exceeds 20% of the

length of a street block multiplied by one foot, then the entire road in the block shall be resurfaced.

B. Unless it is an emergency, no work shall be done on weekends or a legal holiday.

C. All work shall be done in a good and workman-like manner, and will be inspected by the Engineer, as follows:

1) Standard inspection: Covering inspection at excavation; at compaction of base; prior to and during backfill of utility lines and road restoration.

2) Resident inspection: Covering installations, repairs or new connections to Village sanitary sewer or storm drains.

Security; traffic mitigation plan

1) The permittee shall erect and maintain suitable barricades and fences around all of the work until it is completed, as well as arrange for the work to be done in such a manner so as to cause a minimum of inconvenience and delay to vehicular and pedestrian traffic. As a condition of approval of an application for a permit, the Village Manager, or his or her designee, may, upon the recommendation of the Police Chief or his or her designee require a traffic mitigation plan from the applicant.

2) The permittee shall provide warning flags or signs, suitably lighted flashing lights, and watchmen in such number as deemed necessary by the Village, in accordance with the New York State Department of Transportation Manual on Uniform Traffic Control Devices.

3) Where the free flow of traffic is interfered with, the permittee shall designate competent persons to direct and expedite traffic by means of lights or flags.

4) Unless otherwise authorized by the Village, vehicular traffic shall be maintained at all times during the progress of the work being performed under the permit.

5) The aforementioned security and protective measures shall be performed in accordance with the New York State Department of Transportation Manual on Uniform Traffic Control Device.

The permittee shall keep the original copy of the permit and an approved copy of the plan at all times while such work is in progress at the location for which the permit was granted and show such permit or plan upon demand by the Village.

The Police Department and the Department of Public Works shall be provided a copy of the permit and all approved plans.

The OSHA Technical Manual (OTM) provides technical information about workplace hazards and controls to OSHA's Compliance Safety and Health Officers (CSHOs). This information supports OSHA's enforcement and outreach activities to assure safe and healthful working conditions for working men and women. The content is based on currently available research publications, OSHA standards, and consensus standards. The OTM is available to the public for use by other health and safety professionals, employers, and anyone involved in developing or implementing an effective workplace safety and health program.
The OTM is not a substitute for OSHA standards and is not used for establishing agency compliance policies. In the unlikely event of any inconsistencies between material in the manual and the requirements of the Occupational Safety and Health Act and the standards and regulations promulgated there under, the latter are controlling.

I. Introduction

Excavating is recognized as one of the most hazardous construction operations. OSHA recently revised Subpart P, Excavations, of 29 CFR 1926.650, 29 CFR 1926.651, and 29 CFR 1926.652 to make the standard easier to understand, permit the use of performance criteria where possible, and provide construction employers with options when classifying soil and selecting employee protection methods.
This chapter is intended to assist OSHA Technical Manual users, safety and health consultants, OSHA field staff, and others in the recognition of trenching and shoring hazards and their prevention.

II. Definitions

A. Accepted Engineering Practices are procedures compatible with the standards of practice required of a registered professional engineer.
B. Adjacent Structures Stability refers to the stability of the foundation(s) of adjacent structures whose location may create surcharges, changes in soil conditions, or other disruptions that have the potential to extend into the failure zone of the excavation or trench.
C. Competent Person is an individual who is capable of identifying existing and predictable hazards or working conditions that are hazardous, unsanitary, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate or control these hazards and conditions.

D. Confined Space is a space that, by design and/or configuration, has limited openings for entry and exit, unfavorable natural ventilation, may contain or produce hazardous substances, and is not intended for continuous employee occupancy.
E. Excavation. An Excavation is any man-made cut, cavity, trench, or depression in an earth surface that is formed by earth removal. A Trench is a narrow excavation (in relation to its length) made below the surface of the ground. In general, the depth of a trench is greater than its width, and the width (measured at the bottom) is not greater than 15 ft (4.6 m). If a form or other structure installed or constructed in an excavation reduces the distance between the form and the side of the excavation to 15 ft (4.6 m) or less (measured at the bottom of the excavation), the excavation is also considered to be a trench.
F. Hazardous Atmosphere is an atmosphere that by reason of being explosive, flammable, poisonous, corrosive, oxidizing, irritating, oxygen-deficient, toxic, or otherwise harmful may cause death, illness, or injury to persons exposed to it.
G. Ingress and Egress mean "entry" and "exit," respectively. In trenching and excavation operations, they refer to the provision of safe means for employees to enter or exit an excavation or trench.
H. Protective System refers to a method of protecting employees from cave-ins, from material that could fall or roll from an excavation face or into an excavation, and from the collapse of adjacent structures. Protective systems include support systems, sloping and benching systems, shield systems, and other systems that provide the necessary protection.
I. Registered Professional Engineer is a person who is registered as a professional engineer in the state where the work is to be performed. However, a professional engineer who is registered in any state is deemed to be a "registered professional engineer" within the meaning of Subpart P when approving designs for "manufactured protective systems" or "tabulated data" to be used in interstate commerce.
J. Support System refers to structures such as underpinning, bracing, and shoring that provide support to an adjacent structure or underground installation or to the sides of an excavation or trench.
K. Subsurface Encumbrances include underground utilities, foundations, streams, water tables, transformer vaults, and geological anomalies.
L. Surcharge means an excessive vertical load or weight caused by spoil, overburden, vehicles, equipment, or activities that may affect trench stability.
M. Tabulated Data are tables and charts approved by a registered professional engineer and used to design and construct a protective system.
N. Underground Installations include, but are not limited to, utilities (sewer, telephone, fuel, electric, water, and other product lines), tunnels, shafts, vaults, foundations, and other underground fixtures or equipment that may be encountered during excavation or trenching work.
O. Unconfined Compressive Strength is the load per unit area at which soil will fail in compression. This measure can be determined by laboratory testing, or it can be estimated in the field using a pocket penetrometer, by thumb penetration tests, or by other methods.
P. Definitions That Are No Longer Applicable. For a variety of reasons, several terms commonly used in the past are no longer used in revised Subpart P. These include the following:
Angle of Repose. Conflicting and inconsistent definitions have led to confusion as to the meaning of this phrase. This term has been replaced by Maximum Allowable Slope.
Bank, Sheet Pile, and Walls. Previous definitions were unclear or were used inconsistently in the former standard.
Hard Compact Soil and Unstable Soil. The new soil classification system in revised Subpart P uses different terms for these soil types.
III. Overview: Soil Mechanics
A number of stresses and deformations can occur in an open cut or trench. For example, increases or decreases in moisture content can adversely affect the stability of a trench or excavation. The following diagrams show some of the more frequently identified causes of trench failure.

A. Tension Cracks. Tension cracks usually form at a horizontal distance of 0.5 to 0.75 times the depth of the trench, measured from the top of the vertical face of the trench. See the accompanying drawing for additional details.

C. Toppling. In addition to sliding, tension cracks can cause toppling. Toppling occurs when the trench's vertical face shears along the tension crack line and topples into the excavation.

D. Subsidence and Bulging. An unsupported excavation can create an unbalanced stress in the soil, which, in turn, causes subsidence at the surface and bulging of the vertical face of the trench. If uncorrected, this condition can cause face failure and entrapment of workers in the trench.

IV. Determination of Soil Type

OSHA categorizes soil and rock deposits into four types, A through D, as follows:
A. Stable Rock is natural solid mineral matter that can be excavated with vertical sides and remain intact while exposed. It is usually identified by a rock name such as granite or sandstone. Determining whether a deposit is of this type may be difficult unless it is known whether cracks exist and whether or not the cracks run into or away from the excavation.
B. Type A Soils are cohesive soils with an unconfined compressive strength of 1.5 tons per square foot (tsf) (144 kPa) or greater. Examples of Type A cohesive soils are often: clay, silty clay, sandy clay, clay loam and, in some cases, silty clay loam and sandy clay loam. (No soil is Type A if it is fissured, is subject to vibration of any type, has previously been disturbed, is part of a sloped, layered system where the layers dip into the excavation on a slope of 4 horizontal to 1 vertical (4H:1V) or greater, or has seeping water.
C. Type B Soils are cohesive soils with an unconfined compressive strength greater than 0.5 tsf (48 kPa) but less than 1.5 tsf (144 kPa). Examples of other Type B soils are: angular gravel; silt; silt loam; previously disturbed soils unless otherwise classified as Type C; soils that meet the unconfined compressive strength or cementation requirements of Type A soils but are fissured or subject to vibration; dry unstable rock; and

layered systems sloping into the trench at a slope less than 4H:1V (only if the material would be classified as a Type B soil).

D. Type C Soils are cohesive soils with an unconfined compressive strength of 0.5 tsf (48 kPa) or less. Other Type C soils include granular soils such as gravel, sand and loamy sand, submerged soil, soil from which water is freely seeping, and submerged rock that is not stable. Also included in this classification is material in a sloped, layered system where the layers dip into the excavation or have a slope of four horizontal to one vertical (4H:1V) or greater.

E. Layered Geological Strata. Where soils are configured in layers, i.e., where a layered geologic structure exists, the soil must be classified on the basis of the soil classification of the weakest soil layer. Each layer may be classified individually if a more stable layer lies below a less stable layer, i.e., where a Type C soil rests on top of stable rock.

VI. Shoring Types

Shoring is the provision of a support system for trench faces used to prevent movement of soil, underground utilities, roadways, and foundations. Shoring or shielding is used when the location or depth of the cut makes sloping back to the maximum allowable slope impractical. Shoring systems consist of posts, wales, struts, and sheeting. There are two basic types of shoring, timber and aluminum hydraulic.

This figure illustrates an example of timber shoring, including various parts such as sheeting, crossbrace struts, uprights, and wales. The crossbrace struts connect to the wales, which provide support to the sheeting and uprights.

This figure illustrates an example of timber shoring, including various parts such as sheeting, crossbrace struts, uprights, and wales. The crossbrace struts connect to the wales, which provide support to the sheeting and uprights.

A. Hydraulic Shoring

The trend today is toward the use of hydraulic shoring, a prefabricated strut and/or wale system manufactured of aluminum or steel. Hydraulic shoring provides a critical safety advantage over timber shoring because workers do not have to enter the trench to install or remove hydraulic shoring. Other advantages of most hydraulic systems are that they:
Are light enough to be installed by one worker;
Are gauge-regulated to ensure even distribution of pressure along the trench line;
Can have their trench faces "preloaded" to use the soil's natural cohesion to prevent movement; and
Can be adapted easily to various trench depths and widths.
All shoring should be installed from the top down and removed from the bottom up. Hydraulic shoring should be checked at least once per shift for leaking hoses and/or cylinders, broken connections, cracked nipples, bent bases, and any other damaged or defective parts.

This figure illustrates four vertical aluminum hydraulic shoring variations: Vertical Aluminum Hydraulic Shoring with Spot Bracing, Vertical Aluminum Hydraulic Shoring with Plywood, Vertical Aluminum Hydraulic Shoring (Stacked), and Aluminum Hydraulic Shoring Water System (Typical). The first variation uses a hydraulic cylinder to exert force against a vertical roll, which transfers the force the wale. The second variety adds plywood between the vertical roll and wale. The third variety stacks multiple arrangements of the first type vertically. The fourth variety uses a hydraulic cylinder exerting force on a horizontal wale that presses against upright sheeting.

B. Pneumatic Shoring

works in a manner similar to hydraulic shoring. The primary difference is that pneumatic shoring uses air pressure in place of hydraulic pressure. A disadvantage to the use of pneumatic shoring is that an air compressor must be on site.

Screw Jacks. Screw jack systems differ from hydraulic and pneumatic systems in that the struts of a screw jack system must be adjusted manually. This creates a hazard because the worker is required to be in the trench in order to adjust the strut. In addition, uniform "preloading" cannot be achieved with screw jacks, and their weight creates handling difficulties.

Single-Cylinder Hydraulic Shores. Shores of this type are generally used in a water system, as an assist to timber shoring systems, and in shallow trenches where face stability is required.

Underpinning. This process involves stabilizing adjacent structures, foundations, and other intrusions that may have an impact on the excavation. As the term indicates, underpinning is a procedure in which the foundation is physically reinforced. Underpinning should be conducted only under the direction and with the approval of a registered professional engineer.

VII. Shielding Types

A. Trench Boxes are different from shoring because, instead of shoring up or otherwise supporting the trench face, they are intended primarily to protect workers from cave-ins and similar incidents. The excavated area between the outside of the trench box and the face of the trench should be as small as possible. The space between the trench boxes and the excavation side are backfilled to prevent

lateral movement of the box. Shields may not be subjected to loads exceeding those which the system was designed to withstand.

B. Combined Use. Trench boxes are generally used in open areas, but they also may be used in combination with sloping and benching. The box should extend at least 18 in (0.45 m) above the surrounding area if there is sloping toward excavation. This can be accomplished by providing a benched area adjacent to the box.

Earth excavation to a depth of 2 ft (0.61 m) below the shield is permitted, but only if the shield is designed to resist the forces calculated for the full depth of the trench and there are no indications while the trench is open of possible loss of soil from behind or below the bottom of the support system. Conditions of this type require observation on the effects of bulging, heaving, and boiling as well as surcharging, vibration, adjacent structures, etc., on excavating below the bottom of a shield. Careful visual inspection of the conditions mentioned above is the primary and most prudent approach to hazard identification and control.

X. Special Health and Safety Considerations

A. Competent Person

The designated competent person should have and be able to demonstrate the following:

- Training, experience, and knowledge of:
- soil analysis;
- use of protective systems; and
- requirements of 29 CFR Part 1926 Subpart P

Ability to detect:

- conditions that could result in cave-ins;
- failures in protective systems;
- hazardous atmospheres; and
- other hazards including those associated with confined spaces.
- Authority to take prompt corrective measures to eliminate existing and predictable hazards and to stop work when required.

B. Surface Crossing of Trenches

Surface crossing of trenches should be discouraged; however, if trenches must be crossed, such crossings are permitted only under the following conditions:

Vehicle crossings must be designed by and installed under the supervision of a registered professional engineer.
Walkways or bridges must be provided for foot traffic. These structures shall:

- have a safety factor of 4;
- have a minimum clear width of 20 in (0.51 m);
- be fitted with standard rails; and
- extend a minimum of 24 in (.61 m) past the surface edge of the trench.

C. Ingress and Egress
Access to and exit from the trench require the following conditions:

- Trenches 4 ft or more in depth should be provided with a fixed means of egress.
- Spacing between ladders or other means of egress must be such that a worker will not have to travel more than 25 ft laterally to the nearest means of egress.
- Ladders must be secured and extend a minimum of 36 in (0.9 m) above the landing.
- Metal ladders should be used with caution, particularly when electric utilities are present.

D. Exposure to Vehicles
Procedures to protect employees from being injured or killed by vehicle traffic include:
Providing employees with and requiring them to wear warning vests or other suitable garments marked with or made of reflectorized or high-visibility materials.
Requiring a designated, trained flag person along with signs, signals, and barricades when necessary.
E. Exposure to Falling Loads
Employees must be protected from loads or objects falling from lifting or digging equipment. Procedures designed to ensure their protection include:

- Employees are not permitted to work under raised loads.
- Employees are required to stand away from equipment that is being loaded or unloaded.
- Equipment operators or truck drivers may stay in their equipment during loading and unloading if the equipment is properly equipped with a cab shield or adequate canopy.

F. Warning Systems for Mobile Equipment
The following steps should be taken to prevent vehicles from accidentally falling into the trench:

- Barricades must be installed where necessary.
- Hand or mechanical signals must be used as required.
- Stop logs must be installed if there is a danger of vehicles falling into the trench.
- Soil should be graded away from the excavation; this will assist in vehicle control and channeling of run-off water.

INSTRUCTION SHEET

APPLICATIONS ARE TO BE FILED WITH THE VILLAGE ENGINEER AT THE ADDRESS LISTED ABOVE. SEPARATE CHECKS ARE REQUIRED FOR THE FEE AND DEPOSIT (UNLESS A SURETY BOND IS PROVIDED)

1. STREET OPENING PERMIT: NOTE: NO PERMIT WILL BE ISSUED UNLESS CODE 53 # IS PROVIDED

Street opening application to be approved by the Village Engineer or Superintendent of Public Works. Certificate of Liability Insurance required $100,000/300,000 and must name the Village of Port Chester as additional insured. If a contractor is performing the work for the property owner, it will be his responsibility to obtain the permit.

Applicant must obtain a Code 53 No. by calling 1-800-962-7962.

There are both a fee and a deposit required, both of which are figured by the size of the opening (square footage).

FEE: See attached Fee Chart. THE FEE IS NOT REFUNDABLE.

DEPOSIT: The deposit is $1.70 per square foot or the applicant can provide the Village with a $5,000 Surety Bond. THE DEPOSIT IS REFUNDABLE upon permanent restoration of the roadway and inspection by the Village Engineer or Superintendent of Public Works.

2. SIDEWALK OPENING PERMIT: NOTE: NO PERMIT WILL BE ISSUED UNLESS CODE 53 # IS PROVIDED

Sidewalk opening, Application to be approved by the Village Engineer or Superintendent of Public Works. Insurance requirements, Applicant must obtain a Code 53 No. by calling 1-800-962-7962.

There is both a fee and deposit required both of which are figured by the size of the opening (square footage).

FEES: The application fee is $20.00 for the first 25 square feet plus $5.00 for each additional square feet. THE FEE IS NOT REFUNDABLE.

DEPOSITS: The deposit is $2.10 per square foot or the applicant can provide the Village with a Surety Bond. THE DEPOSIT IS REFUNDABLE upon completion of the work and inspection by the Village Engineer or Superintendent of Public Works.

3. CURB CUT PERMIT:

Applicant must provide a drawing of the plot plan showing the boundaries, where the house is on the lot, where the curb cut will be and purpose for the curb cut. Application must be reviewed and approved by the Village Engineer/ Superintendent of Public Works, and Traffic Sgt. before permit can be issued.

FEE: The fee is $65.00, which is NOT REFUNDABLE. A deposit is NOT required for Curb Cuts.

4. PARKING SPACE OBSTRUCTION PERMIT FOR METERED SPACES ISSUED THROUGH VILLAGE CLERK'S OFFICE

Article I. Excavating in Streets

[Amended 8-7-1972; 1-6-1975; 4-5-1982 by L.L. No. 17-1982; 11-3-1997 by L.L. No. 17-1997; 11-2-2009 by L.L. No. 13-2009]

§ 283-1. Definitions.

The following words, when used in this article, shall have the meaning as scribed to them in this article:

APPLICANT: Any person who makes application for a permit.

EMERGENCY: Any unforeseen circumstance, occurrence or other condition calling for the immediate opening of a street to prevent imminent loss or injury to property.

ENGINEER: The consulting engineer of the Village of Port Chester or engineer employed by the Village.

PERMITTEE: Any person who has been issued a permit and has agreed to fulfill all the terms of this article.

PERSON: Includes any natural person, partnership, firm, corporation, company, association or joint-stock company.

STREET: Includes a public street, public easement, public right-of-way, public highway, public alley, public way, public sidewalk or public road accepted and maintained by the Village of Port Chester.

SUPERINTENDENT OF PUBLIC WORKS: The Superintendent of Public Works of the Village of Port Chester.

§ 283-2. Permit required.

A. Unless otherwise excepted, no person shall open or cause to be opened, by cutting or excavating, the surface or soil of any street for any purpose, including but not limited to construction, reconstruction or maintenance of cable television, gas services, fiber optic, electric services, Telephone services, installation of water mains, storm drains, sewers and appurtenances, without first obtaining a permit under the provisions of this article.

B. Underground vaults shall be considered an appurtenance requiring a permit. Signposts with gauging stations for gas mains are also appurtenances requiring a permit before installation.

§ 283-3. Application requirements.

It shall be the duty and responsibility of an applicant to:

A. Application. Make a written application for a street opening permit with the Village Manager or his or her designee. No work shall commence until the Village Manager or his or her designee has approved the application and plan as complete and in compliance with all permit requirements, together with payment of all fees required in the schedule of fees contained in Chapter 175.

B. Plan. Furnish, in triplicate, a plan showing the work to be performed under such permit. Such plan shall include plans for erosion and sediment control, manner of street opening, excavation and backfill, restoration and maintenance and control of traffic. All applications must demonstrate compliance with the notification provisions of 16 NYCRR Part 753 regarding protection of underground facilities. If said application is approved by the Village Manager or his or her designee upon review and recommendation, one copy of such plan shall be returned to the applicant.

C. Insurance:

(1) No permit for a street opening shall be issued until the applicant shall have first placed on file with the Village Manager or designee, without cost to the Village, satisfactory evidence of general liability insurance in the amounts set forth herein and satisfactory evidence that the insurance has been approved as to form, correctness and adequacy by the Village Attorney to insure the Village against any loss, injury or damage due to the negligence or wrongful act of the applicant, his or her agents, servants or employees in connection with the opening of the street or any work related thereto.

(2) Such insurance must remain in force throughout the effective period of the permit, as well as any authorized extensions thereof, and shall carry an endorsement to the effect that the insurance company will give at least 10 days' written notice to the Village of any modification or cancellation of any such insurance.

(3) Each application for a permit shall be accompanied by a certificate of insurance, in form approved by the Village Attorney, and issued by an insurance company rated A.M. Best A- or better, duly authorized to do business in the State of New York, evidencing that the applicant has provided general liability insurance of not less than $2,000,000 per person/aggregate and $5,000,000 excess coverage to save and hold harmless the Village from all claims, actions and proceedings brought by any person for injury to person or property resulting from or occasioned by any negligent or wrongful act or omission of the permittee or anyone acting on his or her behalf. The Village shall be included as an additional insured on the policy. A certificate evidencing statutory workers' compensation and employer's liability shall also be provided.

D. Amount of work. No person to whom a permit has been granted shall perform any of the work Authorized by such permit in any amount or quantity greater than that specified in the permit. However, upon the approval of the Village Manager or designee, additional work may be done under the provisions of the permit in an amount that does not exceed 10% of the amount specified in the permit. Any deposit posted in connection with the original permit shall be deemed to cover the additional work that may be approved.

§ 283-4. Commencement and completion time; renewals and extensions; permits nontransferable.

A. The work for which a permit has been issued shall commence within 30 days after the issuance of the permit. A permit may be renewed for a period of 15 days from the original expiration date without payment of additional permit fees. If not so commenced by the expiration of the renewal expiration date, the permit may be renewed only upon the payment of an additional permit fee as originally required.

B. Every permit issued under this article shall expire at the end of the period of time set out in the permit. If the permittee shall be unable to complete the work within the specified time, he or she shall, prior to the expiration of the permit, present, in writing, to the Village Manager or designee a request for an extension of time, setting forth the reasons for the requested extension. If such an extension is necessary and not contrary to the public interest, the permittee may be granted additional time to complete the work.

C. Permits are not transferable and may not be assigned. The work shall not be made in any place other than the location specifically designated in the permit.

§ 283-5. Revocation of permit.

A. A permit may be revoked by the Village Manager or designee after notice to the permittee for:

(1) Violation of any condition of the permit or of any provision of this article;

(2) Violation of any provision of any other applicable provision of law, rule or regulation relating to the work;

(3) Existence of any condition or the performance of any act or omission creating a public nuisance or endangering persons or the property of others.

B. Written notice of any such violation or condition shall be served upon the permittee or agent engaged in the work. The notice shall contain a brief statement of the grounds relied upon for the proposed revocation of the permit and an opportunity to be heard with respect thereto. Notice may be given either by personal delivery or by regular and certified or registered United States mail addressed to the applicant at the address given in the application for a permit.

C. When any permit has been revoked and the work authorized by the permit has not been completed, the Village may do such work as may be necessary to restore the street or part thereof to ensure that it is in as good a condition as it was before the opening was made. All expenses incurred by the Village may be recovered from the deposit the permittee has filed.

§ 283-6. Deposit.

A. An applicant shall, at the time of application, make a deposit to cover the cost of restoration of the street. Such deposit may be in the form of a certified, treasurer's or cashier's check or in lawful money of the United States.

B. The amount of deposit shall be computed by the applicant in accordance with good engineering practice and prevailing costs in Westchester County and contain an itemized estimate of costs which would be incurred in replacing pavements and other areas that are the subject of the opening. The amount of such estimate shall deem the deposit. An additional deposit may be required if deemed necessary by the Engineer.

C. The amount of deposit shall be retained by the Village during the term of the permit and for the duration of the period of maintenance as defined in the following section.

D. Upon the failure or default by the permittee to restore the street to the satisfaction of the Engineer, upon five days' written notice, or in the case of an emergency, upon notice that is practicable, the Village may perform the restoration work and utilize the deposit. In the event that the costs of such restoration are greater than the deposit, the permittee shall be liable to the Village for the overage.

E. The period of maintenance for all work performed under a permit shall be six months from the date the opening was closed as certified by the Engineer. However, in the event that the termination of the six-month period shall fall within the months of December, January, February, March or April, then the commencement of the period of maintenance shall be deemed extended until the first day of June next thereafter.

F. The permittee shall be responsible for the entire work subject to the permit and shall keep every portion of such work in good order and repair during the period of maintenance.

G. The deposit, or any balance therefrom, shall be promptly returned to the permittee after the period of maintenance has expired and the Engineer has certified the final restoration as having been made in accordance with the specifications hereafter.

§ 283-7. Blanket bond; hold harmless agreement.

In lieu of a deposit for each individual street opening, a public service corporation or regulated utility may file with the Village and maintain a blanket bond in the amount set forth in Chapter 175, to guarantee the restoration of the street. In addition to the insurance requirements, a public service corporation or regulated utility shall file with the Village an agreement to indemnify and save the Village harmless, approved as to form by the Village Attorney.

§ 283-8. Specifications.

A. The street opening and the final restoration shall be performed in accordance with rules and regulations promulgated and approved by the Engineer, but shall include the following as minimum requirements:

(1) All excavations shall be backfilled with controlled density backfill material (K-Krete).

(2) If a new patch is to be made where there is an existing patch, the entire area shall be removed and replaced.

(3) Restoration of pavement shall be curb to curb and shall extend two feet on either side of the trench.

(4) The new patch shall have the same contour as the adjacent road surface.

(5) If the street pavement is asphalt, the replacement shall be asphalt. The existing pavement shall be saw-cut to its base or binder course and shall be 12 inches wider than the trench. A binder course of 4 1/2 inches and a top course of 1 1/2 inches shall be required. The seam between the new and existing pavement shall be sealed with hot asphaltic cement.

(6) If the street pavement is concrete, the replacement shall be concrete. The existing pavement shall be saw cut to its base, drilled and doweled to a minimum depth of 12 inches with the dowels two feet on center. The seam shall be sealed with hot asphaltic cement.

(7) If there are multiple patches and the area of disturbance exceeds 20% of the length of a street block multiplied by one foot, then the entire road in the block shall be resurfaced.

B. Unless it is an emergency, no work shall be done on weekends or a legal holiday.

C. All work shall be done in a good and workman-like manner, and will be inspected by the Engineer, as follows:

(1) Standard inspection: Covering inspection at excavation; at compaction of base; prior to and during backfill of utility lines and road restoration.

(2) Resident inspection: Covering installations, repairs or new connections to Village sanitary sewer or storm drains.

D. Security; traffic mitigation plan

(1) The permittee shall erect and maintain suitable barricades and fences around all of the work until it is completed, as well as arrange for the work to be done in such a manner so as to cause a minimum of inconvenience and delay to vehicular and pedestrian traffic. As a condition of approval of an application for a permit, the Village Manager, or his or her designee, may, upon the recommendation of the Police Chief or his or her designee require a traffic mitigation plan from the applicant.

(2) The permittee shall provide warning flags or signs, suitably lighted flashing lights, and watchmen in such number as deemed necessary by the Village, in accordance with the New York State Department of Transportation Manual on Uniform Traffic Control Devices.

(3) Where the free flow of traffic is interfered with, the permittee shall designate competent persons to direct and expedite traffic by means of lights or flags.

(4) Unless otherwise authorized by the Village, vehicular traffic shall be maintained at all times during the progress of the work being performed under the permit.

(5) The aforementioned security and protective measures shall be performed in accordance with the New York State Department of Transportation Manual on Uniform Traffic Control Devices.

E. The permittee shall keep the original copy of the permit and an approved copy of the plan at all times while such work is in progress at the location for which the permit was granted and show such permit or plan upon demand by the Village.

F. The Police Department and the Department of Public Works shall be provided a copy of the permit and all approved plans.

§ 283-9. Emergencies.

A. In the event of an emergency, application may be made to the Village Manager or his or her designee for an emergency permit in person or by telephone or fax, and authority shall be granted to proceed with the necessary work.

B. If such emergency should develop outside the regular business hours of the Village Manager or his or her designee, notification of such emergency shall be made to the Police Department in person or by telephone before proceeding with the street opening.

C. It shall be the duty of every person who undertakes to open a street under the provisions of this section to place warning signs, lights and barriers to protect the public and otherwise provide adequate security and protection to protect the public as hereinbefore required.

D. Within 24 hours of the onset of the emergency or the next following business day of the Village Manager or his or her designee, such person shall make application in the course of this article, or be held in violation of this article.

§ 283-10. Penalties for offenses.

A violation of the provisions of this article shall be punishable by a fine of not more than $500 per day or by imprisonment for not more than 15 days, or both. Each day's violation shall constitute a separate and distinct offense.

§ 283-11. (Reserved)

Part 3. Enforcement

Article VII. Penalties

§ 283-35. Penalties for offenses.

[Amended 2-22-2011 by L.L. No. 3-2011]
Unless another penalty is otherwise provided, a violation of the provisions of this chapter shall be punishable by a fine not to exceed $100 per day for the first violation and fine not to exceed $250 per day for the second and any subsequent violation. Each day's violation shall constitute a separate and distinct offense.

ITEM 20SW - CONCRETE SIDEWALKS

20SW.1. WORK INCLUDED:

A. Under this item the Contractor shall build new concrete sidewalks within set limits by the Engineer. The concrete sidewalks shall be constructed in accordance with these specifications and the contract drawings and as directed by the Engineer. This item shall also include the removal and disposal of existing sidewalks within the set limits as shown on the contract drawings

20SW.2. MATERIALS:

A. The Contractor shall provide a 4,000 lb. concrete with a minimum cement ratio of six (6) bags per cubic yard, with a minimum and maximum slump of 1 1/2" and 3" respectively. The cement shall conform to the "Specifications for Portland Cement, A.S.T.M, and C-150-Type II." The concrete shall have an air content of not less than three (3%) percent, nor more than six (6%) percent, accomplished by including an air-entraining admixture conforming to N.Y.S.D.O.T standard specifications for Class "A" concrete. The concrete sidewalk shall be five (5") inches in thickness and poured in one operation with one quarter inch pre-molded joint filler, transverse expansion joints to the full depth of the concrete spaced twelve (12) to sixteen (16) feet apart, and the edges of such joints finished with an edging tool of one quarter inch radius. In driveway areas, the sidewalk shall be seven (7) inches thick The top surface shall be finished as directed by the Engineer, and shall be scored at intervals of four (4) feet so that the finished walk will be marked in squares both longitudinally and transversely.

B. Synthetic Fibers specifically engineered and manufactured for use as secondary concrete reinforcement shall be used. Fiber shall be manufactured by one of the following, or an approved equal:

1. Grace Fibers, as manufactured by W.R. Grace & Company, construction Products, 60 Whittemore Ave., Cambridge, MA 02140-1692, (800) 852-6055, www.graceconstrucUon.com.
2. In Force e3, as manufactured by Fiber mesh Company, division of Synthetic Industries, Inc., 4019 Industry Dr., Chattanooga, TN 37416, (615) 892-7243, www.fibermesh.com.
3. Econo Net, as manufactured by Forta Corporation, 100 Forta Dr., Grove City PA 16127, (800) 245-0306, www.fortacorp.com.

The reinforcement shall be added at a dosage rate of 1.5 lbs. per cubic yard, and shall be added to the concrete mixing system during or after the batching of the other ingredients and mixed at the time and speed recommended by the mixer manufacturer. Fibers shall be uniformly dispersed in the concrete, and concrete shall be free of fiber balls or lumps when discharged at the site.

C Pre-molded bituminous joints shall be placed between all construction joints, and between joints at curbs, buildings, brick pavers and trees as directed.

D. Sub-Base

1. The subbase course material used shall be bank run gravel (NYSDOT 304.02).

20SW.3. INSTALLATION:

A. Excavation and disposal of existing ground to the sub-base surface and/or as indicated on the plans. Care is to be taken not to damage adjacent sidewalk and other appurtenances. Any damage caused by the Contractor's operations will be repaired by the Contractor at no expense to the Owner and as approved by the Engineer. In the areas to receive new concrete pavement the Contractor shall completely remove all existing pavement and shall excavate to the depths required to meet existing finish line and grade. Materials removed shall become the property of the contractor and shall be disposed of legally, off-site. Contractor shall saw cut in straight, clean lines where new concrete pavement abuts existing sidewalk pavement, and in any other location as required to complete the work. The cost of such saw cutting shall be included in the unit price for new concrete sidewalks. Address

B. Subgrade

1. The Contractor shall saw cut the existing pavement and excavate the sidewalk to the proposed subgrade. If such sub-grade is of unsuitable materials, all such materials, shall be removed and replaced with select materials, as called for by the Engineer, tamped, and brought up to the proper grade.

C. Sub-Base

1. The sub-base course shall be placed and compacted in accordance with §304-3.01 through §304-3.05 of the New York Department of Transportation's Standard Specifications and/or as detailed in the plans.

2. The concrete sidewalk shall be placed on a well prepared sub-base, with a minimum depth of six (6) inches. The sub-base shall be compacted and of the typo and depth indicated on the detail drawings.

D. Finishing

1. Concrete shall be placed in a continuous pour. No more than one and one half (1 1/2) hours shall separate each continuous pour, unless an expansion joint is used.
2. Two standard test cylinders are to be made with each truck load, if directed by the Engineer, and cured under conditions equal to the sidewalk. The Contractor is responsible for preparing the cylinders in accordance with A.C.I. standards, storing and protecting the cylinders onsite, delivery to and testing at a testing facility approved by the Engineer. The Contractor shall bear all costs and related expenses for testing. One cylinder from each pour shall be tested at 28 days. If the test results are satisfactory, the second test cylinder shall be discarded by the Contractor. If the results of the first test cylinder are not satisfactory, the second test cylinder shall be tested immediately. The

Contractor shall bear all related costs. A copy of ail test result must be submitted to the Engineer.

3. The surface shall be a "strikeoff" surface using a "sawing" motion.

4. Bull Float shall be done as soon as possible after strike-off with an overlapping pattern.

5. The Contractor shall make the initial run with jointer and edger.

6. No further work shall be done on the concrete until all the water sheen has disappeared.

7. Rerun joints and finish edges.

8. Broom lightly for a textured surface. Broom shall be cleaned after each application. Failure to keep broom free of concrete may require the Engineer to order that a new broom be used to acquire the desired texture.

9. Textured surfaces of handicapped ramps shall meet all requirements of ANSI Code 4.7:7, Al 17.1.

E. Curing and Anti-Spalling Compound

1. At the initial set of the concrete, or as directed by the Engineer, all exposed concrete shall be cured and protected in accordance with N.Y.S.D.O.T. Item 502-3.10, Method A.

F. Sidewalk shall meet latest ADA Accessibility Guidelines for Buildings and Facilities as outlined in the Federal Register's Rules and Regulations.

G. Testing: As directed by the engineer, the Contractor shall be required to pour one (1) test cylinder per placement regardless of size and thereafter at a rate of one per 200 cubic yards for the duration of that placement. This rate shall be increased by the Engineer whenever indication of non-acceptable concrete is noticed. The concrete crush and slump test shall be performed at a laboratory approved by the Engineer.

20SW.4. MEASUREMENT:

A. The quantity of sidewalk to be paid for shall be actual square yards of sidewalk placed. Sidewalk that has been damaged due to the actions of the Contractor shall not be paid for. Only sidewalk that is ordered placed by the Engineer shall be paid for. Driveway sidewalk shall be measured in this item.

20SW.5. PAYMENT:

A. Payment shall be at the unit price bid for this item and shall include all labor, materials, excavation of and removal of existing sidewalk, furnish and install the subbase, furnishing, installing and finishing of the concrete along with protection during curing. Payment under this item shall be for all concrete sidewalks, including driveways.

Guidelines for Steel Plate Usage: Steel plates must be fixed in place to avoid movement. If they are not firmly in contact with the pavement, they can rock and displace, exposing the hazard to which they were protecting motorists and pedestrians. In addition to being firmly in contact with the pavement, they should be either pinned, recessed into the pavement, or secured with asphalt wedges around the perimeter. Pinning into the pavement involves driving pins into the pavements along the edges of the steel plates to prevent movement. Recessing involves cutting out the area where the steel plate will be placed. If a 1 inch steel plate is used, the cutout will be 1 inch deep. This results in the steel plate being flush with the pavement. In addition, when multiple steel plates are used and butt up to each other, they should be welded together at the longitudinal seams.

- Select the correct size.
- Ensure adequate overlap. Normally, steel plates must extend at least one foot beyond the pavement opening onto firm ground.
- Edges must be properly secured and feathered with asphalt.
- Welding is used when more than one steel plate is used and they butt up to each other.
- Plates must be countersunk when necessary due to uneven roadways.
- Plates should be coated with an anti-skid coating.
- The edges of the steel plates should be marked/painted to improve visibility.
- Proper advance warning signs should be used. For example, "Steel Plate Ahead", or "Bump".
- Roadway and trench wall conditions must be constantly reevaluated throughout the day to ensure safety.
- Notify proper authorities of plate locations in the winter.
- End of the day inspections must be made before leaving job.

INSTALLATION NOT ACCEPTABLE – NO BEDDING, NO RAMP MATERIAL, NO PINNING.

ACCEPTABLE METHODS FOR SECURING ROAD PLATES (During Winter plates to be countersunk):

§319-34B - USE OF METERED SPACES FOR RESERVING FOR SPECIAL EQUIPMENT WITHIN R.O.W. - SEPARATE PERMIT REQUIRED THRU VILLAGE CLERK'S OFFICE FOR PARKING SPACE OBSTRUCTION PERMIT:

In the event that any work is done next to a parking meter space so that the parking meter space is obstructed for the parking of motor vehicles at the space reserved for parking, then in that event the person who is doing the work shall purchase from the Village Clerk Department a permit for the obstruction of said space for each day the space is obstructed while the work progresses, at a cost as set forth in Chapter 175, Fees. Parking Space Obstruction Permit (18 feet) for single space $20.00.

[Amended 5-18-2015 by L.L. No. 4-2015]

SHORING: In addition to the above, the contractor has to comply with OSHA standards for proper shoring of trenches greater than 4 feet in depth.

Occupational Safety and Health Administration (OSHA)

OSHA Technical Manual (OTM)

OSHA Instruction TED 01-00-015 [TED 1-0.15A]

The OSHA Technical Manual (OTM) provides technical information about workplace hazards and controls to OSHA's Compliance Safety and Health Officers (CSHOs). This information supports OSHA's enforcement and outreach activities to assure safe and healthful working conditions for working men and women. The content is based on currently available research publications, OSHA standards, and consensus standards. The OTM is available to the public for use by other health and safety professionals, employers, and anyone involved in developing or implementing an effective workplace safety and health program.

The OTM is not a substitute for OSHA standards and is not used for establishing agency compliance policies. In the unlikely event of any inconsistencies between material in the manual and the requirements of the Occupational Safety and Health Act and the standards and regulations promulgated there under, the latter are controlling.

Additional Instructions for Form DB-120.1

By signing this form, the insurance carrier identified in Box 3 on this form is certifying that it is insuring the business referenced in Box 1a for disability and/or Paid Family Leave benefits under the NYS Disability and Paid Family Leave Benefits Law. The insurance carrier or its licensed agent will send this Certificate of Insurance (Certificate) to the entity listed as the certificate holder in Box 2.

The insurance carrier must notify the above certificate holder and the Workers' Compensation Board within 10 days IF a policy is cancelled due to nonpayment of premiums or within 30 days IF there are reasons other than nonpayment of premiums that cancel the policy or eliminate the insured from coverage indicated on this Certificate. (These notices may be sent by regular mail.) Otherwise, this Certificate is valid for one year after this form is approved by the insurance carrier or its licensed agent, or until the policy expiration date listed in Box 3c, whichever is earlier.

This Certificate is issued as a matter of information only and confers no rights upon the certificate holder. This Certificate does not amend, extend or alter the coverage afforded by the policy listed, nor does it confer any rights or responsibilities beyond those contained in the referenced policy.

This Certificate may be used as evidence of a NYS disability and/or Paid Family Leave Benefits contract of insurance only while the underlying policy is in effect.

Please Note: Upon the cancellation of the disability and/or Paid Family Leave benefits policy indicated on this form, if the business continues to be named on a permit, license or contract issued by a certificate holder, the business must provide that certificate holder with a new Certificate of Insurance Coverage for NYS disability and/or Paid Family Leave Benefits or other authorized proof that the business is complying with the mandatory coverage requirements of the NYS Disability and Paid Family Leave Benefits Law.

NYS DISABILITY AND PAID FAMILY LEAVE BENEFITS LAW

§220. Subd. 8

(a) The head of a state or municipal department, board, commission or office authorized or required by law to issue any permit for or in connection with any work involving the employment of employees in employment as defined in this article, and not withstanding any general or special statute requiring or authorizing the issue of such permits, shall not issue such permit unless proof duly subscribed by an insurance carrier is produced in a form satisfactory to the chair, that the payment of disability benefits and after January first, two thousand and twenty-one, the payment of family leave benefits for all employees has been secured as provided by this article. Nothing herein, however, shall be construed as creating any liability on the part of such state or municipal department, board, commission or office to pay any disability benefits to any such employee if so employed.

(b) The head of a state or municipal department, board, commission or office authorized or required by law to enter into any contract for or in connection with any work involving the employment of employees in employment as defined in this article and notwithstanding any general or special statute requiring or authorizing any such contract, shall not enter into any such contract unless proof duly subscribed by an insurance carrier is produced in a form satisfactory to the chair, that the payment of disability benefits and after January first, two thousand eighteen, the payment of family leave benefits for all employees has been secured as provided by this article.

CONSTRUCTION DEWATERING PLAN NOTES:

1) GROUNDWATER EXISTS AT A DEPTH OF 5-8 FEET BELOW THE STREET ELEVATION. THE BOTTOM OF THE PROPOSED EXCAVATION MAY EXTEND SEVERAL FEET BELOW THE WATER TABLE. THE ELEVATION OF THE WATER TABLE VARIES IN RESPONSE TO RAINFALL.

2) IT WILL BE NECESSARY TO DEWATER THE SITE FOR INSTALLATION OF THE SOE AND COMPLETION TO THE EXCAVATION. THIS MAY BE ACCOMPLISHED USING DEWATERING SUMPS INSTALLED WITHIN THE EXCAVATION.

3) BASED ON LIMITED AVAILABLE GROUNDWATER DATA, THE GROUNDWATER IS IMPACTED WITH VOLATILE ORGANIC COMPOUNDS (VOCs), SEMIVOLATILE ORGANIC COMPOUNDS (SVOCs), METAL's AND PER AND POLY FLUOROALKYL SUBSTANCES (PFAs) ABOVE NYSDEC TECHNICAL OPERATIONAL GUIDANCE SERIES (TOGS) 1.1.1 GA AMBIENT WATER QUALITY STANDARDS (AQWS).

4) TREATMENT OF THE GROUNDWATER, PRIOR TO OFF-SITE DISCHARGE, WILL BE ACCOMPLISHED USING SETTLING, FILTRATION, AND CARBON ABSORPTION. OFF-SITE DISCHARGE WILL BE TO EITHER THE STORM SEWER OR TRUCKED TO TREATMENT FACILITY. ALL APPROPRIATE PERMITS WILL BE OBTAINED PRIOR TO OFF-SITE DISCHARGE, IF NEEDED.

5) CONSTRUCTION DEWATERING IS EXPECTED TO BE REQUIRED FOR APPROXIMATELY 3-MONTHS.

6) PERIODIC SAMPLING WILL BE CONDUCTED TO ENSURE THE DISCHARGE REQUIREMENTS ARE MET. SESI CONSULTING ENGINEERS WILL COLLECT EFFLUENT SAMPLES PRIOR TO DISCHARGE. ANALYSIS AND FREQUENCY OF SAMPLE COLLECTION WILL BE PROVIDED BY VILLAGE OF PORT CHESTER UPON PERMIT APPROVAL.

7) A STORAGE TANK WILL ACT AS A BUFFER FOR STORAGE TO MAINTAIN COMPLIANCE WITH THE DAILY, MONTHLY, AND TOTAL DISCHARGE ALLOWANCES PER THE COUNTY OF WESTCHESTER.

8) A FLOW METER AND TOTAL VOLUME LOGGER WILL BE INSTALLED PRIOR TO DISCHARGE INTO THE STORM SEWER TO REPORT THE TOTAL DISCHARGE INTO THE STORM SEWER.

9) ALL EQUIPMENT TO BE CLEANED AND DEMOBILIZED AT THE COMPLETION OF DEWATERING ACTIVITIES AND SLUDGE FROM THE SYSTEM CLEANOUT TO BE SAMPLED AND DISPOSED OF AT APPROVED FACILITIES.

10) DISCHARGE PIPING MATERIAL IN THE CITY RIGHT-OF-WAY SHALL BE DUCTILE IRON PIPE CLASS 54 OR EXTRA HEAVY DUTY CAST IRON (XHCI)

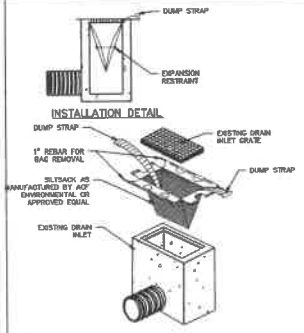
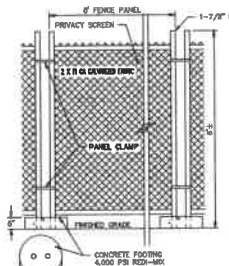
Siltsack Inlet Protection



NOTES:
1. EACH SILTSACK SHALL BE PROPERLY SIZED FOR EACH INLET.
2. ALL CURB INLETS SHALL UTILIZE SILTSACK MODELS WITH BUILT IN CURB DEFLECTOR
3. SILTSACKS SHOULD ONLY BE UTILIZED ON DRAIN INLETS OUTSIDE OF THE DISTURBED AREAS TO PREVENT CONTAMINATION OF DOWN STREAM STORMWATER STRUCTURES.
4. SEDIMENT SHALL BE REMOVED FROM EACH SILTSACK WHEN SILT DEPTH EXCEEDS 6" INCHES.
5. SILTSACKS SHOULD BE INSPECTED REGULARLY FOR DAMAGE. ANY DAMAGED SILTSACKS SHOULD BE REPLACED.



NOTES:
1. CONTRACTOR SHALL PROVIDE PERIODIC INSPECTION AND MAINTENANCE OF FENCE INCLUDING REPAIRS AS NECESSARY AND REQUIRED.
2. CONTRACTOR SHALL INSTALL GREEN PRIVACY SCREENING FABRIC OR APPROVED EQUAL AROUND THE PERIMETER OF THE TEMPORARY CONSTRUCTION FENCING.
3. PRIOR TO CONSTRUCTION THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS AND SAMPLES OF THE PRIVACY SCREENING TO THE ENGINEER FOR REVIEW AND APPROVAL.
4. NO PORTION OF THE FENCE SHALL EXCEED 8-FEET IN HEIGHT

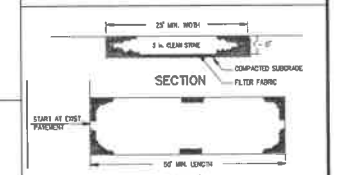
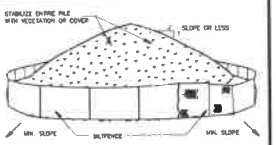
INSTALLATION NOTES:
1. EXCAVATE A 4-INCH × 4-INCH TRENCH ALONG THE LOWER PERIMETER OF THE SITE.
2. UNROLL A SECTION AT A TIME AND POSITION THE POSTS AGAINST THE EACH (DOWNSTREAM/FINAL OF THE TRENCH (WET SIDE AWAY FROM DIRECTION OF FLOW).
3. DRIVE THE POST INTO THE GROUND UNTIL THE NOTING IS APPROXIMATELY 2 INCHES FROM THE TRENCH BOTTOM.
4. LAY THE TOE-IN FLAP OF FABRIC ONTO THE UNDISTURBED BOTTOM OF THE TRENCH. BACKFILL THE TRENCH AND TAMP THE SOIL. STEEPER SLOPES REQUIRE AN INTERCEPT TRENCH.
5. JOIN SECTIONS AS SHOWN ABOVE.

Stabilized Construction Entrance



SPECIFICATIONS NOTES:
1. STONE SIZE – USE 3" STONE.
2. LENGTH – AS REQUIRED, BUT NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY.
3. THICKNESS – NOT LESS THAN SIX (6) INCHES.
4. WIDTH – 25 FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS.
5. FILTER CLOTH – WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE. FILTER CLOTH WILL NOT BE REQUIRED ON A SINGLE FAMILY RESIDENCE LOT.
6. SURFACE WATER – ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE – THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHT-OF-WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHT-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WASHING – WHEELS SHALL BE CLEANED TO REMOVE SEDIMENT PRIOR TO ENTRANCE ONTO PUBLIC RIGHT-OF-WAY. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

SOIL STOCKPILING



INSTALLATION NOTES:
1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. SOILS OR FILL TO BE STOCKPILED ON SITE DURING CUTTING AND FILLING ACTIVITIES SHOULD BE LOCATED AWAY FROM DRAINAGE COURSES ON SITE WITH A MINIMUM OF 50-75 FOOT BUFFER OF UNDISTURBED, VEGETATED GROUND.
3. MAXIMUM SLOPE OF STOCKPILE SHALL BE 1:1.
4. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SURROUNDED WITH EITHER SILT FENCING OR BALE BARRIERS, BOTH STABILIZED WITH VEGETATION OR EQUIVALENT.
5. STOCKPILES REMAINING IN PLACE FOR MORE THAN A WEEK SHOULD BE SEEDED AND MULCHED OR COVERED WITH GEOTEXTILE FABRIC SURROUNDED BY SILT FENCE.
6. SEE SPECIFICATIONS FOR INSTALLATION OF SILT FENCE.

COMPLETION OF WORK

FDL Management
17 Cliff Street
New Rochelle, NY 10801

April 28, 2023

Attn: Dawn Randazzo

Project Location: Portchester OZ Fund III
148 – 150 Westchester Avenue
Portchester, NY 10573

Dear Ms. Randazzo

Federal Property Maintenance Corp, has completed the removal and disposal of asbestos building materials from the above project locations in accordance with the NYS DOL Regulation part 56 – 11 pre abatement for demolition.

Employees:

All work was performed by New York State DOL (code rule 56) certified and trained asbestos handlers in the proper handling of asbestos containing building products. All workers are trained and fit tested in the proper use of a HEPA filtered respirator, workers utilize full personal protective equipment (Tyvek suites, gloves, hardhat, boots and glasses) for above completed work.

Disposal:

All asbestos waste was disposed of at a certified EPA waste disposal facility

Thank you

Richard Efferen President
Federal Property Maintenance Corp.
