Re: Phase I Environmental Site Assessment
125 & 160 Beechwood Avenue, New Rochelle, NY
AKRF Project Number 40336

Dear Ms. Mauch:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment (ESA) Report for the above-referenced site. This report includes the findings of site inspections, an evaluation of available historical information, the interpretation of relevant federal and state environmental databases, and a review of selected City of New Rochelle and Westchester County Department of Health (WCDOH) records. AKRF, Inc. performed this Phase I ESA in accordance with the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-05, unless noted otherwise in Section 9: "Limitations".

We appreciate the opportunity to provide you with our services. If you should have any questions or comments regarding the enclosed report, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

Marc S. Godick, LEP
Senior Vice President
Enc.

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Zarin and Steinmetz to perform a Phase I Environmental Site Assessment (ESA) of an approximate 152,564 sq. ft. commercial building located at 125 Beechwood Avenue and an adjacent asphalt-paved parking lot located at 160 Beechwood Avenue in New Rochelle, New York. The City of New Rochelle identifies the 125 Beechwood and 160 Beechwood properties as Tax Block and Lot 0691-0005 and 0681-0001, respectively. The majority of the building at 125 Beechwood Avenue was occupied by the Charles Sadek Import, Co. with an empty tenant space comprising the lower level of the northeastern portion of the site building. The study site was bounded by: Metro-North rail lines and commercial/residential properties to the north; commercial properties to the east and across Second Avenue; residential property to the south across Beechwood Avenue; and Atlas Welding and Boiler Repair followed by Beechwood Cemetery to the west.

The objective of this assessment was to identify recognized environmental conditions (RECs) associated with the project site resulting from past or current usage of the site as well as similar usage of neighboring properties to the extent reasonably possible. This Phase I ESA was performed in accordance with customary principles and practices in the environmental consulting industry, and in conformance with the scope and limitations of ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 9.0 of this report. A REC is identified when there is the presence or potential presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products on the property as a result of on-site or off-site sources. Mr. Steve Grens and Mr. Bryan Zieroff, both of AKRF, performed visual inspections of the site in September 2009 and March 2012, respectively. This assessment has revealed the following RECs in connection with the study site property:

- Gries Reproducer Corp. (aka Gries Dynacast) occupied the site between 1951 and 1985 and utilized it for metal fabrication, including die-casting and plating operations. The former metal plating and die casting process took place in the central portion of the building in the area of the current warehouse.
- A network of several pipe fill caps (labeled fuel oil) and adjacent vent pipes were paired together and observed to be flush with the concrete floor in one large section of the warehouse. The fill/vent lines were likely associated with the former plating and die casting operation. Each fill and vent pipe went through to the lower level and were piped together as part of a fluid collection system that discharged into a fluid recirculation vat (Vat-1) located in the lower level in the tenant rental space. The vat contained a baffle system to remove solids and return the liquid product back upstairs into the operations area. An overflow drain within the vat was connected to the sanitary sewer system. A sump adjacent to the vat contained a pump that was piped directly into the sewer discharge pipe within Vat-1. Details associated with inspection and sampling of Vat-1 are included in Section 8.0.
- An approximately 8,000-square foot area of wood block flooring with intermittent petroleum-like staining was located in the southern and southeastern portion of the distribution warehouse. Wood block flooring was reportedly used to absorb vibrations caused by the equipment.
- An abandoned 10,000-gallon fuel oil underground storage tank (UST) was located in the northeastern portion of the building, in the employee cafeteria. The fuel oil UST was located beneath an access door in the floor. Concrete was visible in the tank and fill line. An underground tank closure site assessment report documented that visual observation of the UST during abandonment revealed no evidence of a release, and laboratory results soil samples collected from three soil borings drilled along Second Street, and approximately 50 feet downgradient of the UST, indicated that residual detections were not indicative of an adverse impact to soil quality.

- According to New Rochelle Building Department records, the study site formerly used two gasoline USTs and a gas pump. The tanks included a 3,000-gallon tank and gas pump installed in 1979 and a 4,000-gallon tank installed in 1980. The tanks and gas pump were reportedly removed on November 26, 1985. The former tanks were reportedly located on the northeastern portion of the study site in the loading dock area. Sections of patched asphalt were observed in this area, which may be indicative of the tanks being removed.
- The boiler room was located in the northeastern portion of the site building in the basement area. Two natural gas-fired/oil combination furnaces were located in the northern portion of the boiler room. Isolated petroleum-like staining was observed on the wall and floor areas in the southwestern portion of the room, in the vicinity of the former fuel oil UST supply lines. The abandoned 10,000-gallon fuel oil UST was located west-adjacent to the boiler room in the cafeteria.
- A partial basement was located on the eastern side of the building. The northeast portion of the lower level contained a vacant tenant space, which the owner previously rented to a tenant for the purpose of storing landscaping equipment. The tenant used the space for equipment storage and automobile repair. During the 2009 inspection, the space contained a 275-gallon aboveground waste oil tank, three aboveground self-contained hydraulic lifts, parts cleaners, used batteries, coolant storage and staining on the concrete floor slab. The tenant had informed AKRF that he worked for Bruno's auto dealership in Darien, CT, and that any used oils, batteries, and coolants were transported to Bruno's for disposal. The former tenant reported that he did not generate any hazardous waste. The 2012 inspection of the area revealed that the former tenant space was empty, and that the hydraulic lifts and all auto fluid storage devices were removed.
- The gas meter room was located in the northeastern portion of the building. A recirculation vat (Vat - 2), formerly used by the metal plating and die casting tenant, an aboveground storage tank (AST) (capacity and contents unknown) and sump were located in the gas meter room. The sump reportedly discharged to the municipal sewer system. Localized petroleum-like staining was noted on the concrete floor slab at random locations throughout the gas meter room. The AST in the gas meter room contained pressure gauges and product transfer pipes. The pipes were cut off and abandoned. The exact use of the tank was unable to be determined. Details associated with further inspection of the AST, and inspection and sampling of the contents of Vat-2 are included in Section 8.0.
- The formerly leased basement area contained a fork lift that was modified to be used as an elevator. A metal cage was constructed around the fork lift, and the lift was modified to transport items between the warehouse area and lower level floors. The bottom of the lift area contained a sump that discharged fluids into Vat-1.
- A drainage trap was located in the southeastern portion of the distribution warehouse where metal plating activities occurred. No staining was noted in or adjacent to the trap which reportedly discharged to the municipal sanitary sewer system. No staining was observed in or adjacent to the trap.
- A compressor area was located next to the capped groundwater well. Dark petroleum-like staining from condensate blow-down and minimal floor cracking was noted on the concrete adjacent to the compressor area.
- A hydraulic freight elevator pit and hydraulic lift gates were located in the southwestern loading dock area. The elevator pit was observed to be filled with groundwater at the time of the 2009 site inspection. According to the plant manager, the elevator pit had a tendency to flood following heavy

rain events. The pit was not flooded during the 2012 visit. There was no evidence of a line failure or hydraulic release observed.

- Numerous containers of oil, solvents, disinfectants, janitorial supplies, and paints and stains were located in the building's northeastern maintenance shop. No staining was observed on the concrete floor slab in the maintenance shop.
- Two Consolidated Edison (Con Ed) owned pad-mounted transformers were located adjacent to the southwestern exterior of the site building. Con Ed reported that the transformers were sampled between 2009 and 2011 and contained PCBs at a concentration of 23.34 and 30.82 parts per million (ppm). Discoloration associated with staining was observed around a draining port attached to the transformer, which may be associated with reported maintenance and/or sampling completed by ConEd. There was no evidence of a release observed in the area surround the transformers. A third transformer was reported as being previously removed from this area.
- A catch basin was located in the loading dock area on the southwestern portion of the site in the asphalt-paved parking area. According to the plant manager, the basin discharged to the municipal sewer system. No staining was noted adjacent to the trap.
- According to historical Sanborn maps, numerous residential dwellings and an aboveground propane tank were previously located at 160 Beechwood Avenue. The dwellings were removed prior to 1990 and the lot was developed into an asphalt-paved parking lot. According to AKRF's site contact, the houses were demolished and paved over to create the parking lot that presently exists. Building department records support this. According to the New Rochelle Fire Marshal records, a 275-gallon fuel oil tank was present in the cellar of one of the structures; however, no additional information was available.
- A review of federal and state databases indicated the following: the study site was listed in the Closed Status Tank Test Failure (SPILLS), PBS and RCRA Small Quantity Generator of hazardous waste databases. Numerous SPILLS, RCRA generators and PBS sites were listed within a ½-mile radius of the study site in anticipated upgradient groundwater flow directions from the study site. Known and potential spills from these facilities have the potential to affect groundwater beneath the study site.

In addition to RECs, additional environmental concerns documented during the assessment included:

- An abandoned groundwater supply well that was previously capped was located in the southwestern portion of the site building. According to the plant manager, the well was formerly used for cooling purposes in connection with the metal plating and die casting operations. The well was reportedly abandoned in the early 1990's.
- Based on the age of the buildings, lead-based paint may be present. Painted surfaces observed in the structures were noted to be in generally good condition. However; peeling and chipping of potential lead-based paint was observed in the northeastern basement areas of the study site building. Any demolition or renovation activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—*Lead Exposure in Construction*).
- Suspect asbestos containing materials (ACMs) were observed during the 2009 inspection. On May 3, 2010, AKRF completed an inspection of the warehouse portion of the building that included identification, collection, and laboratory analysis of readily accessible potential ACM in the ware house area. The roof, exterior, office areas, and other areas of the building were not included in the limited inspection. Based upon laboratory analysis of suspect ACM, pipe insulation, duct insulation, floor tiles, mastic and window putty were determined to be ACM. AKRF recommended that

damaged ACM piping should be abated, and the remaining identified ACMs should be removed at such time that the material will be affected by renovation. All other ACMs should be maintained in good condition.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Zarin and Steinmetz to perform a Phase I Environmental Site Assessment (ESA) of an approximate 152,564 sq. ft. commercial building located at 125 Beechwood Avenue and an adjacent asphalt-paved parking lot located at 160 Beechwood Avenue in New Rochelle, New York. The City of New Rochelle identifies the 125 Beechwood and 160 Beechwood properties as Tax Block and Lot 0691-0005 and 0681-0001, respectively. The majority of the building at 125 Beechwood Avenue was occupied by the Charles Sadek Import, Co. with an empty tenant space comprising the lower level of the northeastern portion of the site building. The study site was bounded by: Metro-North rail lines and commercial/residential properties to the north; commercial properties to the east and across Second Avenue; residential property to the south across Beechwood Avenue; and Atlas Welding and Boiler Repair followed by Beechwood Cemetery to the west.

The scope of services for this assessment included the following:

- Visual observations in accessible areas of the project site and surrounding property were made to identify potential sources or indications of chemical contamination. The potential sources of contamination included, but were not limited to, underground storage tanks (USTs), aboveground storage tanks (ASTs), objects that could contain polychlorinated biphenyls (PCBs), and areas where hazardous materials were used, stored, treated, generated and/or disposed. Indications of chemical contamination include stained surfaces and chemical odors;

  In addition, readily-observable portions of the properties immediately adjacent to the study site were viewed from public rights-of-way to identify or determine the likelihood of any of the aforementioned potential sources of contamination being present;

- A visual inspection of the property was conducted to identify and evaluate the condition of any suspect asbestos-containing building materials (ACMs) on-site;

- The property was evaluated for the potential presence of lead-based paint, and the condition of painted surfaces was assessed. No samples were collected for analysis as part of this assessment;

- A review of radon concentrations in Westchester County was conducted to determine whether radon levels in the general area comply with United States Environmental Protection Agency (USEPA) guidelines;

- Historical Sanborn fire insurance maps were reviewed evaluate previous land use of the study site and surrounding properties;

- The following federal regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the USEPA Civil Enforcement Docket; and US EPA AIRS database. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

- The following state regulatory databases were reviewed to determine the regulatory status of the site, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive

Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program; and Brownfield Cleanup Program (BCP).

- A review of available Tax Assessor, Building Department, Fire Marshal, Westchester County Department of Health (WCDOH) and New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database records was conducted to obtain any information pertinent to the assessment of the environmental condition of the subject property. Specifically, records regarding past and present on-site fuel oil tanks and historical uses were requested and reviewed.
- The scope described above was utilized to determine the presence of RECs in accordance with ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice.* A REC is identified when there is the presence or potential presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products on the property as a result of on-site or off-site sources.

2.0 PHYSICAL SITE DESCRIPTION

Mr. Steve Grens and Mr. Bryan Zieroff, both of AKRF, performed visual inspections of the site in September 2009 and March 2012, respectively. Mr. Mark Kiley, the plant manager, accompanied AKRF personnel through the site during both inspections and answered pertinent questions. The 2012 inspection was also accompanied by Mr. Sanford James Sadek, who provided information associated with the current and former site uses. At the time of each inspection, the weather was clear and approximately 65ºF. The majority of the building at 125 Beechwood was adequately illuminated with natural and/or artificial light; however portions of the building had limited lighting. The site was inspected for the presence of stained surfaces and soils, storage tanks, drums, leaking pipes, transformers, suspect asbestos-containing materials, suspect lead-containing paint, and any other evidence of hazardous material usage and storage on-site. Photographs documenting the site inspection are included in Appendix A. The project site location is shown on the Figure 1 – Project Site Location. The locations of the study site buildings are shown on the Figure 2 – Project Site Detail.

2.1 General Site Conditions

The 160 Beechwood Avenue study site parcel consisted of an asphalt-paved parking lot utilized by the employees of 125 Beechwood Avenue. According to historical Sanborn maps, 160 Beechwood Avenue was developed prior to 1911 with numerous residential dwellings. The 1990 Sanborn map indicated that the dwellings were removed prior to 1990.

The 125 Beechwood Avenue study site parcel was developed in approximately 1951 with the construction of the original one- and two-story distribution warehouse building, which covers a majority of the study site property. A northern wing was added in 1955 with additions and renovations periodically added throughout the years. According to Mr. Sadek, the roof of the original building was raised in 1990 to accommodate daily operations of the distribution warehouse.

The existing site building was constructed with a variety of construction materials, including masonry brick, masonry concrete block, and both pre-cast and poured-in-place concrete floor slabs. Exterior building construction materials included concrete masonry block and brick facades. Roofing systems consisted of foam insulation over layers of roofing over a gypsum board roof deck. Partial basements were located in the eastern and northeastern portions of the

building. A hydraulic freight elevator and hydraulic lift gates were located in the southwestern loading dock area.

Office areas and tenant spaces were located in the southern, eastern, and northeastern portions of the building. The office areas generally consisted of carpet, sheetrock, and acoustical ceiling tiles. Lighting included incandescent and fluorescent fixtures. Heating was supplied by natural gas-fired steam boilers. Oil-fired furnaces and propane-fired unit heaters were formerly utilized on-site. Storage sheds were attached to the northern portion of the building. The roof of the western most shed was in poor condition and both sheds were used for general storage.

The environmental observations included the following:

125 Beechwood Avenue

- Gries Reproducer Corp. (aka Gries Dynacast) occupied the site between 1951 and 1985 and utilized it for metal fabrication, including die-casting and plating operations. The former die casting process took place in the southern portion of the building. An approximately 8,000-square foot area of wood block flooring with isolated areas of petroleum-like staining was located in the southern and southeastern portion of the distribution warehouse.
- A network of several pipe fill caps (labeled fuel oil) and adjacent vent pipes were paired together and observed to be flush with the concrete floor in one large section of the warehouse. The fill/vent lines were likely associated with the former plating and die casting operation. Each fill and vent pipe went through to the lower level and were piped together as part of a fluid collection system that discharged into a fluid recirculation vat (Vat-1) located in the lower level in the tenant rental space. The vat contained a baffle system to remove solids and return the liquid product back upstairs into the operations area. An overflow drain within the vat was connected to the sanitary sewer system. A sump adjacent to the vat contained a pump that was piped directly into the sewer discharge pipe within Vat-1. Details associated with inspection and sampling of Vat-1 are included in Section 8.0.
- A closed-in place 10,000-gallon fuel oil underground storage tank (UST) was located in the northeastern portion of the building, in the employee cafeteria. The fuel oil UST was located beneath an access door in the floor. Concrete was visible in the tank and fill line.
- According to New Rochelle Building Department records, the study site formerly used two gasoline USTs and a gas pump. The tanks included a 3,000-gallon tank and gas pump installed in 1979 and a 4,000-gallon tank installed in 1980. The tanks and gas pump were reportedly removed on November 26, 1985. The former tanks were reportedly located on the northeastern portion of the study site in the loading dock area. Sections of patched asphalt were observed in this area, which may be indicative of the tanks being removed.
- The boiler room was located in the northeastern portion of the site building in the basement area. Two natural gas-fired/oil combination furnaces were located in the northern portion of the boiler room. Isolated petroleum-like staining was observed on the wall and floor areas in the southwestern portion of the room, in the vicinity of the former fuel oil UST supply lines. The closed 10,000-gallon fuel oil UST was located west-adjacent to the boiler room in the cafeteria.
- A partial basement was located on the eastern side of the building. The northeast portion of the lower level contained a vacant tenant space, which the owner previously rented to a tenant for the purpose of storing landscaping equipment. The tenant used the space for equipment storage and automobile repair. During the 2009 inspection, the space contained a 275-gallon

aboveground waste oil tank, three aboveground self-contained hydraulic lifts, parts cleaners, used batteries, coolant storage and staining on the concrete floor slab. The tenant had informed AKRF that he worked for Bruno's auto dealership in Darien, CT, and that any used oils, batteries, and coolants were transported to Bruno's for disposal. The former tenant reported that he did not generate any hazardous waste. The 2012 inspection of the area revealed that the former tenant space was empty, and that the hydraulic lifts and all auto fluid storage devices were removed.

- The gas meter room was located in the northeastern portion of the building. A recirculation vat (Vat -2), formerly used by the former metal plating and die casting tenant, an aboveground storage tank (AST) (capacity and contents unknown) and sump were located in the gas meter room. The sump apparently discharged to the municipal sewer system. Localized petroleum-like staining was noted on the concrete floor slab at random locations within the gas meter room. The AST in the gas meter room contained pressure gauges and product transfer pipes. The pipes were cut off and abandoned. The exact use of the tank was unable to be determined, but may have been used as part of the boiler system. Details associated with further inspection of the AST, and inspection and sampling of the contents of Vat-2 are included in Section 8.0.
- The formerly leased basement area contained a fork lift that was modified to be used as an elevator, which was located adjacent to the sump near Vat-1. A metal cage was constructed around the fork lift, and the lift was modified to transport items between the warehouse area and lower level floors. The bottom of the lift area contained a sump that discharged fluids into Vat-1.
- A drainage trap was located in the southeastern portion of the distribution warehouse where the former metal plating activities occurred. No staining was noted in or adjacent to the trap which reportedly discharged to the sanitary sewer system. No staining was observed in or adjacent to the trap.
- An abandoned groundwater supply well that was previously capped was located in the southwestern portion of the site building. According to the plant manager, the prior operator used the well for cooling purposes in connection with the metal plating operations. The well was reportedly abandoned in the early 1990's.
- A compressor area was located next to the capped groundwater well. Dark petroleum-like staining from apparent condensate blow-down and minimal floor cracking was noted on the concrete adjacent to the compressor area.
- A hydraulic freight elevator pit and hydraulic lift gates were located in the southwestern loading dock area. The elevator pit was observed to be filled with groundwater at the time of the 2009 site inspection. According to the plant manager, the elevator pit had a tendency to flood following heavy rain events. The pit was not flooded during the 2012 visit, and no evidence of a line failure or hydraulic release was observed.
- Numerous containers of oil, solvents, disinfectants, janitorial supplies, and paints and stains were located in the building's northeastern maintenance shop. No staining was observed on the concrete floor slab in the maintenance shop.
- Two Consolidated Edison (Con Ed) owned pad-mounted transformers were located adjacent to the southwestern exterior of the site building. Con Ed reported that the transformer located in vault 4666 was last sampled in October 2009 and had a recorded polychlorinated biphenyl (PCB) total of 23.34 parts per million (ppm), and the transformer located in vault 4588 was

last sampled in March 2011 and had a recorded PCB total of 30.82 ppm. Discoloration associated with staining was observed around a draining port attached to the transformer, which may be related to maintenance and/or sampling completed by ConEd. There was no other evidence of a release observed in the area surrounding the transformers. A third transformer was reported by the current tenant as previously removed from this area.

- A catch basin was located in the loading dock area on the southwestern portion of the site in the asphalt-paved parking area. According to the plant manager, the basin discharged to the municipal sewer system. No staining was noted adjacent to the catch basin.

160 Beechwood Avenue

- According to AKRF's site contact, the houses that were formerly located on the 160 Beechwood Avenue parcel were demolished, buried in-place, and paved over with asphalt to create the parking lot that exists today.

2.2 Topography and Hydrogeology

The topography of both study site parcels is relatively flat. Based on U.S. Geological Survey map of the Mount Vernon, New York Quadrangle dated 1995, the site elevation at 125 Beechwood Avenue slopes gradually from 60 feet on the western portion of the site to 48 feet on the southeastern portion of the site. The site elevation at 160 Beechwood Avenue ranges from approximately 65 feet on the southwestern portion of the site and gradually slopes down to an elevation of approximately 55 feet on the northeastern portion of the site. Regional surface water likely flows in a southeasterly direction towards the New Rochelle Harbor, located approximately 1,500 feet southeast of the study site. Localized groundwater flow in the vicinity of the site is likely influenced by this topography, but may also be affected by other factors including: past filling activities, underground utilities and other subsurface openings or obstructions, current and past pumping of groundwater, and other factors beyond the scope of this study. Based on surrounding topography, groundwater anticipated to flow in a southeasterly direction towards New Rochelle Harbor.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

One abandoned 10,000-gallon fuel oil UST was present in the northeastern portion of the site building, in the employee cafeteria. According records maintained by the New Rochelle Fire Marshal, the tank was filled with slurry in 1995. Concrete was also observed in the fill port, located adjacent to the northeastern exterior of the building. In August 1995, ENSA Environmental, Inc. submitted an Underground Storage Tank Closure Site Assessment Report, which documented an investigation to determine whether use of the fuel oil UST resulted in adverse impacts to the environment. A copy of the tank closure assessment report is included in Appendix B. The report documented that visual observation of the UST during abandonment revealed no evidence of a release, and laboratory results [samples analyzed for semivolatile organic compounds (SVOCs)] for soil samples collected from three soil borings drilled along Second Street, and approximately 50 feet downgradient of the UST, indicated that residual detections were not indicative of an adverse impact to soil quality. Groundwater samples were not collected during the investigation.

The fuel oil UST was listed in the PBS and Closed Status Tank Test Failure databases as described in Section 6.2.2. A Certificate of Occupancy (COO) letter from the New

Rochelle Department of Buildings, dated April 4, 2002, indicates that the closed-in place tank was inspected and it conformed to applicable codes, rules, and regulations. A copy of the COO letter is included in Appendix F.

According to New Rochelle Department of Buildings records, as described in Section 6.2.3, one 3,000-gallon tank and gas pump was installed in 1979 and one 4,000-gallon tank was installed in 1980. The tanks and gas pump were reportedly removed on November 26, 1985. According to AKRF's site contact, the tanks were formerly located on the northeastern portion of the study site in the loading dock area. Sections of patched asphalt were observed in this area. No additional information was available pertaining to the gasoline USTs. The PBS database reflects the tanks as being closed.

Off-site USTs are discussed in Section 6.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

The observed ASTs included the following:

- An AST (capacity and contents unknown) was located in a gas meter room in the eastern basement. No additional information was available pertaining to the tank, but it appeared to be formerly associated with the boiler system.
- One 275-gallon waste oil AST was identified in the northeastern basement of the site building in the lower level tenant space during the 2009 inspection and was subsequently removed before the 2012 inspection. Petroleum-like staining and cracking were noted on the concrete floor slab adjacent to the tank. According to the tenant, the waste oil was transferred to Bruno's auto repair in Darien, Connecticut for disposal (as needed). During the subsequent 2012 inspection, oil staining was also observed on the concrete floor below the former AST area.

Additional information related to ASTs included the following:

- According to the New Rochelle Fire Marshal records, as described in Section 6.2.3, a 275-gallon fuel oil tank was present in the cellar of one of the former structures at 160 Beechwood Avenue; however, no additional information was available.
- According to New Rochelle Building Department records (Section 6.2.3), one 30,000-gallon propane AST was formerly located at 160 Beechwood Avenue. The tank was reportedly removed on December 10, 1996. The historical Sanborn map for the year 1990, as described in Section 6.1.1, identified an aboveground gas tank (which was most likely the propane tank) on the northwestern portion of the site. The AST was not present at the time of either site inspection.

The NYSDEC PBS database did not list any ASTs for the study site.

Off-site ASTs are discussed in Section 6.2.2.

2.4 Polychlorinated Biphenyls (PCBs)

Prior to 1979, polychlorinated biphenyls (PCBs) were widely used for their cooling properties in electrical equipment such as transformers, capacitors, switches, and voltage regulators. Fluorescent lighting fixtures may also contain PCB-containing components including capacitors and potting compounds. Hydraulic lifts may contain PCB-containing hydraulic fluid.

AKRF observed a hydraulic freight elevator pit and hydraulic lift gates in the southwestern loading dock area. The elevator pit was observed to be filled with groundwater at the time of the

2009 site inspection. According to the plant manager, groundwater floods the elevator pit following heavy rain events. Two Con Ed owned pad-mounted transformers were located adjacent to the southwestern exterior of the site building. A request was made to Con Ed pertaining to the absence or presence of PCB-containing oil within the transformers. Con Ed reported that the transformer located in vault 4588 was last sampled in March 2011 and had a recorded PCB total of 30.82 ppm, and the transformer located in vault 4666 was last sampled in October 2009 and had a recorded PCB total of 23.34 ppm. Discoloration associated with staining was observed around a draining port attached to the transformer, which may be associated with maintenance and/or sampling completed by ConEd. There was no evidence of a release observed in the area surrounding the transformer. A third transformer was reported by the current tenant to have been removed by Con Ed. Transformers containing less than 50 ppm PCBs are "non-PCB transformers" and are exempt from regulation as PCB-contaminated electrical equipment.

Based on the age of the building, fluorescent lights and lighting fixtures observed during the site inspection may include PCB- and/or mercury-containing components (including capacitors and potting compounds). Electrical panels may also contain PCB-containing fluids and components. There was no evidence of leaks or stains from these fixtures and panels and they do not currently present a potential hazard to human health. Unless there is labeling or test data which indicates that they are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.

2.5 Lead-Based Paint

The residential use of lead-based paint was banned by the Consumer Products Safety Commission in 1977. The use of lead-based paint in commercial structures was severely restricted by the Consumer Products Safety Commission in 1977. Lead-based paint is potentially hazardous when in a deteriorating condition (i.e. chipped, broken, crumbling, pulverized); lead is potentially harmful to humans, particularly children, if ingested, inhaled or otherwise absorbed.

Based on the age of the buildings, lead-based paint may be present. Painted surfaces observed in the structures were noted to be in generally good condition. However; peeling and chipping of potential lead-based paint was observed in the northeastern basement areas of the study site building.

Any demolition or renovation activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—*Lead Exposure in Construction*). Current NYSDEC guidance permits the disposal of construction materials covered with lead-based paint as demolition debris within an approved landfill.

2.6 Utilities

Water and sanitary sewer service is supplied by the City of New Rochelle. Con-Ed supplies natural gas and electrical services to the study site. Heating is supplied by natural gas-fired low-pressure boilers.

2.7 Waste Management and Chemical Handling

A Waste Management owned compactor was located southwest-adjacent to the distribution warehouse. Recyclables were collected by a private hauler. Gries Reproducer (aka Gries Dynacast) was listed in the RCRA database as a Small Quantity Generator of hazardous waste. However, Sadek Importing Co., which currently occupies the site, was not listed in the RCRA database. Numerous containers of oil, disinfectant, janitorial supplies, and paints and stains in

ranging from one- to 55-gallons (labeled and unlabeled) were located in the building's northeastern maintenance shop. A 275-gallon waste oil AST, parts cleaners, used automotive batteries, motor oil, new and used coolant, and automotive parts were observed in the auto repair space in the northeastern basement area during the 2009 inspection. All equipment and waste material were removed from the space prior to the 2012 inspection. The tenant occupying the former sub-leased basement space informed AKRF in 2009 that all used oil, batteries and coolant were brought to Bruno's Auto Repair in Darien, Connecticut for disposal. Reportedly, no hazardous waste was generated by activities in the former sub-leased basement space.

2.8 Radon

Radon is a colorless, odorless gas produced by the radioactive decay of certain elements. The most common sources of radon are igneous and metamorphic rocks containing uranium (such as pitchblende), granite, shale, or phosphate, as well as soils or sediments derived from these parent materials. Radon may also be found in soils contaminated with certain industrial wastes (such as uranium or phosphate mine tailings) or in earth-derived building products which include industrial wastes that contain phosphate slag. In areas where the potential for radon accumulation is high, special ventilation systems may offset potential health hazards.

According to data compiled by the Bureau of Radiation Protection, a division of the New York State Department of Health, Westchester County has an average level of basement radon concentration of 2.5 picocuries/liter. The USEPA recommended action level is 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos, a known human carcinogen is a generic name assigned to a group of naturally occurring minerals exhibiting high tensile strength and possessing excellent fire resistance and insulating properties. These minerals include chrysotile, amosite, crocidolite, actinolite, tremolite and anthophyllite. Asbestos is commonly found as a component of building materials including: Thermal System Insulation (TSI), spray-applied fireproofing, spray- or trowel-applied surfacing materials, vinyl asbestos floor tiles and sheeting, plaster, sheetrock, ceiling tiles, fire door fill, roofing materials, thermal gaskets, mastics, and a range of other products. If the building was constructed prior to 1981, suspect-asbestos materials are presumed to contain asbestos unless otherwise proven.

Building materials containing greater than one percent asbestos are considered to be asbestos-containing materials (ACMs). ACMs are classified as friable or non-friable. Friable ACMs are those which can be crumbled, pulverized, or reduced to powder when dry by hand or other mechanical pressure. Friable ACMs, such as thermal system insulation (TSI) and spray-applied fireproofing, are generally associated with a higher risk of releasing potentially hazardous fibers than non-friable ACMs, such as vinyl floor tiles and built-up roofing materials.

Steve Grens, a New York State-certified Asbestos Inspector, conducted limited visual inspections during the 2009 inspection for potential ACMs in the accessible areas on-site. Based on the construction dates of the study site buildings (pre 1981), asbestos-containing materials (ACM) is potentially present within the buildings. According to the plant manager, ACM was previously abated within some of the study site buildings; however, no asbestos abatement reports pertaining to the study site were available. Suspect ACM was observed at the study site buildings in be in generally good to damaged condition. Damaged suspect ACM included TSI on overhead pipes in the distribution warehouse. The ACM noted to be present included, but not limited to: TSI on pipes, nine-inch and twelve-inch vinyl floor tiles and mastic;

suspended acoustical ceiling tiles; and surfacing materials (sheetrock walls and gypsum wall board). Roofing systems consisted of foam insulation over built-up roofing over a gypsum board roof deck.

On May 3, 2010, AKRF completed a limited ACM survey within limited areas of the building located at 125 Beechwood Avenue in New Rochelle, NY. The scope of services for this survey included the following:

- Inspection of the warehouse portion of the building to identify readily accessible suspect ACM;
- Collection of representative samples of suspect ACM in readily accessible areas;
- Documentation of sampling locations on a Chain of Custody form; and
- Analysis of suspect ACM at a New York State Department of Health-approved laboratory.

The roof, exterior, office areas, and other areas of the building were not included in the limited inspection area. Based upon laboratory analysis of suspect ACM, pipe insulation, duct insulation, floor tiles, mastic and window putty were determined to be ACM. The Limited Asbestos Inspection and Sampling Report is included in Appendix B.

The report included a recommendation that damaged ACM piping in the warehouse should be abated, and the remaining identified ACMs should be removed at such time that the material will be affected by renovation. If any of the aforementioned ACMs that were not damaged are to be unaffected by any future renovation activities, they can remain in the buildings and will need to be managed in accordance with applicable federal regulations (29 CFR 1910.1001 and 1926.1101) of the Occupational Health and Safety Administration (OSHA). These OSHA regulations include requirements for the training of building occupants and workers, posting of warning signs and labeling of the ACMs, appropriate maintenance procedures to avoid disturbances of ACMs, and record keeping, etc. ACMs should be regularly inspected by a New York City-certified asbestos investigator and maintained by New York State-licensed contractors to prevent deterioration.

4.0 ADJACENT LAND USE

The study site is bounded by: Metro-North rail lines and commercial/residential properties to the North; commercial properties to the east and across Second Avenue; residential property to the south across Beechwood; and Atlas Welding and Boiler Repair followed by Beechwood Cemetery to the west. Site plan details are provided on Figure 2.

5.0 USER PROVIDED INFORMATION

5.1 Title Records

Title reports were prepared for both study site parcels by Kensington Vanguard National Land Services of New York, NY and reviewed by AKRF. The title reports identified the following:

- According to the title reports, the study site parcels (and/or portions of each) were transferred from the New Rochelle Industrial Development Agency in a quick claim deed to Lars Realty on February 16, 2006. Portions of the study site were transferred from the New York, New Haven and Hartford Railroad Company to Bianco & Pepe, Inc. on December 7, 1951 and to Ninety Willow Realty Corporation on October 23, 1956, June 20, 1958 and June 5, 1963. Title and deed records were available dating back to 1900; however, the documents were illegible.

- The 160 Beechwood Avenue parcel was identified as Tax Block and Lot numbers 0681-0001. The Lots at were formerly defined by the Building Department as Lots 31, 32, 33, 34, 35, 36, 37 and 38
- No tax exemptions were on-file with the City of New Rochelle Tax assessor's office.
- No violations were on-file with the New Rochelle Building Department and Fire Marshal's Office.
- There is no record of bankruptcy on-file for the study site in the U.S. Bankruptcy Court.
- The current property owner does not appear on the Office of Foreign Assets Control under the United States Patriot Act.

5.2 Environmental Liens or Activity and use limitations

No environmental liens were on-file for the study site parcels.

5.3 Specialized knowledge

No information supplied by user.

5.4 Commonly known or recently ascertainable information

An Environmental Site Assessment Questionnaire was submitted to the current study site property owner. Mr. Sanford James Sadek, a general partner with Lars Realty Company and President of Charles Sadek Import Co. (current tenant), completed the questionnaire. Mr. Sadek provided the following pertinent information:

- Mr. Sadek has been associated with the site since 1985 when Sadek Import Co. first occupied the study site building in 1985.
- The study site was formerly utilized for metal plating and die casting since 1951. The northern addition to the study site building was completed in 1955. The study site has been utilized as a warehouse and distribution center from 1985 to the present day.
- In 1985, renovations were completed at the study site. New loading docks were constructed, exterior windows were eliminated and a conveyor belt system was installed. The roof of the distribution warehouse was raised and the offices were completely renovated. The parking lots were also re-paved.
- No historic fill (construction or demolition debris, ash, dredge spoils) was deposited on the site.
- No hazardous materials were stored on-site.
- The gasoline tanks and an aboveground propane tank were removed when Sadek Importing took ownership of the property. The 10,000-gallon fuel oil UST was used by Sadek Importing between 1985 and 1995 until the tank was closed and filled in-place with slurry in 1995.
- An Underground Storage Tank Closure Site Assessment Report (August 3, 1995 – ENSA Environmental, Inc.) documented that evidence of a release was not observed around the tank during in-place closure, and laboratory results for soil samples collected from soil borings drilling along Second Avenue, approximately 50 feet downgradient of the tank, did not indicate an adverse impact to soil quality.
- .

- No notices or correspondences, violations of environmental laws or environmental liens were on-file with any government agencies.
- No litigation, administrative proceedings or violations of environmental laws pertaining to hazardous substances at the study site were pending.

A copy of the Environmental Site Assessment Questionnaire is included in Appendix C.

5.5 Valuation Reduction for Environmental Issues

No information was obtained regarding any valuation reduction due to environmental issues.

5.6 Owner, property manager, and occupant information

The client provided the contact information for the owner and property manager of the site.

5.7 Reason for performing Phase I

The Phase I is being performed for the purpose of disclosure of environmental conditions to prospective lessees or purchasers of the project site.

6.0 SITE HISTORY AND RECORDS REVIEW

6.1 Prior Ownership and Usage

6.1.1 Historical Sanborn Maps

Sanborn maps from 1911, 1931, 1951 and 1990 were reviewed for indications of industrial usage or other evidence suggesting the use or disposal of hazardous materials on or adjacent to the subject property. Information obtained from the historical topographic maps is summarized below. Historical topographic maps are included in Appendix D.

1911

The property at 125 Beechwood Avenue site appeared to consist of vacant undeveloped land owned by the New York, New Haven and Hartford Rail R.R. Co. Sparsely distributed residential structures were present on the 160 Beechwood Avenue parcel. A commercial structure identified as Federal Leather Co. was present west-adjacent to 125 Beechwood Avenue. Railroad tracks were present north-adjacent to the study site. The Beechwood Cemetery was present west of the study site. The remainder of the surrounding area appeared to consist of sparsely distributed residential structures and vacant, undeveloped land. Properties to the east of the study site were not mapped.

1931

The study site parcels appeared similar to the 1911 map. The American Radiator Co. was present east of 125 Beechwood Avenue across Rockland (Second) Avenue. A commercial structure identified as the Westchester Service Corp. and residential structures were present northeast of the study site across Second Street and the rail road tracks. A commercial structure identified as the Cement Brick Company was located southeast of the study site across Rockdale Avenue. The remainder of the surrounding area appeared similar to the 1911 map.

1951

The study site parcels appeared similar to the 1931 map. The American Radiator Co. was identified as the Empire Coal Co., Inc. The commercial structure identified as the Westchester Service Corp. was not present on the 1931 map and the property appeared to consist of vacant land. The commercial structure identified as Federal Leather on the 1911 map was identified as a clothing factory. The Cement Brick Company structure was removed prior to 1951 and a metal stamping facility was constructed in its place. The remainder of the surrounding area appeared similar to the 1931 map.

1990

The study site building at 125 Beechwood Avenue was present on the 1990 map. The residential structures identified on previous maps at 160 Beechwood Avenue were removed prior to 1990. A gas tank and gas regulator (typically associated with aboveground propane storage tanks) was present on the northwestern portion of 160 Beechwood Avenue. The commercial structure identified as Empire Coal on the 1951 was identified as the New Rochelle Thermatool Corp., an electronic equipment manufacturer. Commercial structures including a craneway, garage and auto repair facility were present east of 125 Beechwood Avenue. The residential structures northeast of the study site and across Second Avenue and the rail road tracks were removed prior to 1990 and replaced with a commercial structure. The remainder of the surrounding area appeared similar to the 1951 map.

To summarize, the study site parcel at 125 Beechwood Avenue was developed between 1951 and 1990 and occupied by Gries Reproducer Corp. Residential dwellings occupied the property at 160 Beechwood Avenue prior to 1911 and were removed prior to 1990 for the development of an asphalt-paved parking area. A propane gas tank and regulator were present on the northwestern portion of 160 Beechwood Avenue in 1990. The area surrounding the study site historically consisted of residential dwellings to the south of the study site and commercial and industrial properties to the east and southeast. The rail road tracks were present prior to 1911.

6.1.2 Property Tax Files and Zoning Records

Tax Lot information was consistent with the historical Sanborn maps in indicating that study site buildings were constructed prior to 1911 and 1990 (160 and 125 Beechwood Avenue Respectively. Tax information also indicated that the study site properties were located in Zoning Districts LI-Light Industry (125 Beechwood Avenue) and R2-7.0 Residential (160 Beechwood Avenue).

6.1.3 Recorded Land Title Records

Recorded land title records were provided by the client and summarized in Section 5.1 of this report. A search of the Westchester County Clerks files was not performed as part of this assessment.

6.2 Regulatory Review

Toxics Targeting, Inc. of Ithaca, New York, was contracted to obtain information regarding the regulatory status of the property and the surrounding area. This information included records from databases maintained by the USEPA and New York State Department of Environmental Conservation (NYSDEC). AKRF reviewed these records to identify the use, generation, storage,

treatment and/or disposal of hazardous material and chemicals, or releases of such materials which may impact the project site. All applicable regulatory databases meet ASTM guidelines requesting utilization of information within 90 days' receipt from the appropriate agency. Copies of the pertinent sections of the Toxics Targeting, Inc. report are included in Appendix E.

6.2.1 Federal

The federal records reviewed included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the USEPA Civil Enforcement Docket; and US EPA AIRS database. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings. The study site was not listed in any of these databases. The database results for the surrounding areas are summarized below:

National Priority List (NPL)

The NPL is the USEPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially impacting property values.

Two NPL sites were identified within a one-mile radius of the project site. Crystal Cleaners, located at 113 Wolf Lane, approximately 4,435 feet west, northwest of the study site, was listed as an NPL site. Based on details and distance, discharges from this site would not likely affect soil or groundwater beneath the study site. Industrial Overall Service Corp., located at 10 Bartels Place, approximately 2,100 east northeast of the study site, was also listed as an NPL site. Discharges from Industrial Overall Service Corp. are not expected to affect the study site based on the anticipated groundwater flow direction.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of known or suspected, uncontrolled or abandoned hazardous waste sites which the USEPA has investigated, or plans to investigate, for a release, or threatened release, of hazardous substances pursuant to the Superfund Act of 1980 (CERCLA). Some of these sites may constitute a potential threat to human health and the environment. While it has been determined by the USEPA that some CERCLIS sites require no action, others could pose a real or perceived environmental threat to neighboring properties, thus affecting property values.

No CERCLIS sites were identified within a ½-mile radius of the project site.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on reported releases of petroleum and other potentially hazardous substances.

The subject property was not listed as an ERNS site.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported to the USEPA and/or NYSDEC by a variety of industries on their annual estimated releases of certain chemicals to the environment. The TRIS was mandated by Title III of the Superfund Amendments and Reauthorization Act (SARA) of 1986. Available information includes the maximum amount of chemicals stored on-site; the estimated quantity emitted into the air, discharged into bodies of water, injected underground, or released to land; methods used in waste treatment and their efficiency; and data on the transfer of chemicals off-site.

One TRIS site was listed within a ¼-mile radius of the subject property: Monarch Brass Co., located at 75 Beechwood Avenue, approximately 526 feet east of the study site. No additional information was provided in the database report. Brass manufacturing may involve the use of solvents, which is considered an environmental concern. Based on the close proximity of Monarch Brass to the study site, potential discharges from the Monarch Brass site have the potential to affect groundwater beneath the study site. Notwithstanding, based on the anticipated groundwater flow direction, Monarch Brass is expected to be downgradient of the subject site.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This federal- and state-maintained database contains a listing of sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a ¼-mile radius of the subject property.

United States Environmental Protection Agency Civil Enforcement Docket

This database is the USEPA's system for tracking civil judiciary cases filed on behalf of the agency by the Department of Justice.

No facilities were listed in the USEPA's Civil Enforcement Docket within a 1/4-mile radius of the subject property.

Air Discharge Facilities Index (ADF)

This listing of sites tracked by the US EPA AIRS Database includes address information on each facility and the source of its associated air emissions.

Five ADF sites were listed within a ¼-mile radius of the site. Based on the details provided in the database report, discharges or spills form the following two sites have the potential to affect the study site:

- Eastchester Incinerator, located at 81 Rockdale Avenue, approximately 335 feet south of the study site, was listed as being in-compliance, but permanently shut down.
- Speed Fast was also listed at 81 Rockdale Avenue as being in-compliance and operating. According to the report, Speed fast discharges less than 100 tons of volatile organic compounds (VOCs) per calendar year.

6.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program; and Brownfield Cleanup Program (BCP). The study site was listed in the SPILLS, RCRA and PBS databases. The database results for the study site and surrounding areas are summarized below:

New York SPILLS Database

The New York SPILLS database includes a list of releases reported to the NYSDEC, including those attributed to tank test failures and tank failures. The tank test failures list only covers tanks that are below ground, while the tank failures list includes those that are either below or above ground. This database also lists spills that occur during the transportation of chemicals.

The study site was listed in the Closed Status Tank Test Failure database. On September 30, 1994, a tank test failure was reported for the 10,000-gallon fuel oil tank located at 125 Beechwood Avenue. According to the report, an unknown quantity of fuel oil affected groundwater beneath the study site. A tank closure report documented that evidence of a release was not observed around the tank during in-place closure, and laboratory results for soil samples collected from soil borings drilling along Second Avenue, approximately 50 feet downgradient of the tank, did not indicate an adverse impact to soil quality. The spill was closed on September 22, 1995. According to the New Rochelle Fire Marshal's office, the tank was closed and filled with slurry on January 25, 1995. Visual observations made during the site inspection confirm the tank was abandoned in-place with slurry.

In addition, there were 281 mapped and 116 unmapped spills within a ½-mile radius of the subject site. Unmapped spills cannot be mapped due to erroneous address or spill detail information. Sixty-two of those spills were mapped within a ¼-mile radius. Based on details, distance and anticipated groundwater flow direction, four of the listed spills have the potential to have affected groundwater beneath the study site. Listed spills included the following:

- Two spills were listed for IMP Originals, located at 173 Beechwood Avenue, west-adjacent to the study site. On April 26, 2007, an unknown quantity of fuel oil was discharged due to the failure of a 1,000-gallon fuel oil UST. Holes in the tank and contaminated soil were discovered during tank removal activities. No spill closure date was provided; however, the investigator remarks indicated that a spill closure report was submitted and no further action was required. On December 28, 2006, a fuel oil spill occurred while cleaning out the tank lines. The spill was reportedly cleaned; however, no spill closure date was provided.
- On July 9, 2003, an unknown quantity of fuel oil was discharged to groundwater due to a tank failure at a private residence located at 111 Beechwood Avenue, approximately 120 feet east of the study site. According to the report, groundwater samples were collected and the analytical results indicated that groundwater was affected. On December 9, 2003, groundwater monitoring wells were installed at the site. No spill closure date was listed for the spill.

- On November 17, 1994, approximately 40 gallons of fuel oil affected soil at a private residence located at 1 Lafayette Street, approximately 500 feet north of the study site. According to the report, the spill was due to a tank overfill in the basement. The fire department responded and the spill was closed on November 29, 1994.
- On August 12, 2002, a overfill during refilling resulted in an unknown amount of fuel oil spilling to the ground at a private residence located at 60 Lafayette Street, approximately 450 feet northwest of the study site. The fire department responded and speedy dry was placed on the ground. The spill was closed on October 30, 2002.
- On November 2, 2006, equipment failure resulted in an unknown amount of diesel being released to soil during excavation work. The excavation was located at 2nd Avenue and Lafayette Street, approximately 475 feet north of the study site. According to the report, Con-Ed completed clean-up efforts and the spill was closed on the same day (November 2, 2006).

The spills listed above may potentially have affected soil and/or groundwater beneath the study site property. Details from all reported spills are included in Appendix E.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

The NYSDEC's Bureau of Hazardous Waste Facility Compliance regulates hazardous waste from the point of generation to the point of disposal. The identified sites tracked on this list are those which have filed notification forms in accordance with the Resource Conservation and Recovery Act requirements regarding their hazardous waste activity. These sites include treatment, storage and disposal facilities (TSDs); small-quantity and large-quantity generators; and transporters of hazardous waste regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

The study site was listed in the RCRA database. Gries Dynacast, which formerly occupied the study site building at 125 Beechwood Avenue, was listed as a RCRA Small Quantity Generator of hazardous waste generating 17,550 pounds of solid waste that exhibited the characteristic of reactivity in 1986. No additional information was provided. Sadek Importing Co., which currently occupies the study site building, was not listed in the RCRA Generator database.

In addition, there were 30 RCRA Generator sites listed within a ¼-mile radius of the study site. Based on details, distance and anticipated groundwater flow direction, potential discharges from five of the listed sites may have affected groundwater beneath the study site. Listed sites included the following:

- Beechwood Auto Body, located at 99 Beechwood Avenue, approximately 285 feet northwest of the study site, was listed as a Small Quantity Generator of hazardous waste. Reported quantities generated ranged from 110 gallons of solvent, petroleum and metals waste in 2010 to 800 pounds of spent non-halogenated solvents in 2006.
- Transpo Inc., located at 20 Jones Street, approximately 400 feet northeast of the study site, was listed as a Small Quantity Generator of hazardous waste for the disposal of 400 pounds of spent halogenated solvents in 2010, and over 2,000 pounds of hazardous waste between 1990 and 1993. Reported quantities generated ranged from 172 pounds of solid waste that exhibited the characteristic of corrosivity in 1990 to 976 pounds of solid waste that exhibited the characteristic of ignitability in 1993.

- Teck Laundry and Dry Cleaners, located at 254 Washington Avenue, approximately 1,130 feet north-northwest of the study site, was listed as a Conditionally Exempt Small Quantity Generator of hazardous waste for the disposal of 650 pounds of spent halogenated solvents from 2005 to 2006. Historically, Teck Laundry was listed as a Small Quantity Generator with a peak disposal of 750 pounds of spent halogenated solvent in 1993.
- Premium Auto Body, Inc., located at 245 Washing ton Avenue, approximately 1,180 feet north-northwest of the study site, was listed as a Conditionally Exempt Small Quantity Generator of hazardous waste for disposal of 605 pounds of spent halogenated solvents between 2004 and 2005.
- Ranillas Auto Body, located at 330 Union Avenue, approximately 1,280 feet west-northwest of the study site, was historically listed as a Small Quantity Generator of hazardous waste for disposal of 195 gallons of spent halogenated solvents between 1994 and 1995.

One RCRA CORRACTS site was listed within a one-mile radius of the study site. Teledyne Hydra-Power, located at 10-12 Pine Street, approximately 1,500 feet east of the study site was listed as a Conditionally Exempt Small Quantity Generator of hazardous waste with numerous violations; however, based on distance and anticipated downgradient groundwater flow direction from the study site, known and potential discharges from this facility would not likely have affected groundwater beneath the study site.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

One CBS facility was listed within a ¼-mile radius of the subject property. Hygienol Co., located at 73 Crescent Avenue, approximately 1,770 feet east- northeast of the study site, was listed in the CBS database. According to the report, two 200-gallon sodium hypochlorite ASTs were closed and removed in October 1992. Hygienol Co. was also listed in the ADF and PBS databases. Based on details, distance and anticipated groundwater flow direction, discharges from this site would not likely have affected groundwater beneath the study site.

Solid Waste Facilities (SWF)

This database includes a listing of landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

No SWF sites listed in the database report provided in Appendix E. *Petroleum Bulk Storage (PBS) Database*

The New York State PBS lists commercial facilities with registered petroleum tanks located either above or below ground in excess of 1,100 gallons and less than 400,000 gallons.

The study site was listed in the PBS database. Listed tanks included the following: one, 3,000-gallon gasoline UST installed in October 1979 and closed and removed prior to April 1, 1991; one 4,000-gallon gasoline UST installed in February 1980 and closed and

removed prior to April 1, 1991; and one 10,000-gallon fuel oil UST installed in December 1952. The 10,000-gallon fuel oil UST was listed as being in-service; however, based on visual observations made during the site inspection and records maintained by the Fire Marshal's office, the tank was closed in-place with slurry in January 1995. A tank closure report documented that there was no evidence of a release around the tank during in-place closure, and laboratory results for soil samples collected from soil borings drilling along Second Avenue, approximately 50 feet downgradient of the tank, did not indicate an adverse impact to soil quality.

Fourteen additional PBS sites were listed within a ¼-mile radius of the study site. Based on details, distance, and anticipated groundwater flow direction, any discharges from these four sites would have the potential to affect soil and groundwater beneath the study site. Details included the following:

- Closed Gas Station, located at 92 Rockdale Avenue, approximately 215 feet southeast of the study site, was listed with underground gasoline storage tanks ranging in size from 550 to 2,000 gallons, and two 550-gallon fuel oil tanks. The gasoline tanks were reported as being closed/removed from the ground in 1991, with one of the fuel oil tanks being closed in 1994. No other information was provided related to tank closure.
- Northeast Avanti, Inc., located at 245 Washington Avenue, approximately 1,175 feet north-northwest of the study site, was listed with two 1,000-gallon gasoline USTs and a 275-gallon unknown UST that are currently active.
- Church of St. Joseph, located at 280 Washington Avenue, approximately 1250 feet northwest of the study site, is listed an active 2,000-gallon fuel Oil UST, and a closed-in-place 2,000 gallon fuel oil UST. No other information was provided.
- Columbus Elementary School, located at 275 Washington Avenue, approximately 1,300 feet northwest of the study site, was listed for having an in-service 15,000 gallon fuel oil UST.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This database maintains information and aids decision-making regarding the investigation and clean-up of hazardous sites. The Registry's information includes the clean-up status, type of clean-up, types and quantities of contaminants involved, and the assessment of health and environmental concerns.

Two SHWS sites were listed within a one-mile radius of the study site. Industrial Overall Service Corp., a commercial cleaner for heavily soiled clothes, is located at 10 Bartels Place and approximately 2,100 feet east-northeast of the study site. It was listed as a significant threat to health and the environmental for a release of PCE to soil and groundwater. Crystal Cleaners, located at 113 Wolf Lane, approximately 4,420 feet west, northwest of the study site, was listed in the SHWS and NPL databases. Based on details, distance and anticipated groundwater flow direction, discharges from these sites would not likely affect soil or groundwater beneath the study site.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks waste disposal sites that may pose threats to public health or the environment, but that cannot be remediated using monies from the Hazardous Waste Remediation Fund.

No SHSWDSs were identified within a one-mile radius of the subject property.

Major Oil Storage Facilities (MOSF) Database

These facilities may be on-shore facilities or vessels with petroleum storage capacities of 400,000 gallons or more.

There were no MOSF reported within a ⅛-mile radius of the subject property.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding, through the Clean Water/Clean Air Bond Act of 1996, to reimburse costs for site investigation and remediation. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

No Environmental Restoration Programs were identified within a ½-mile radius of the subject site.

Brownfield Cleanup Program

In 2003, a New York State law established this successor to the Voluntary Cleanup Program. In addition to liability releases, it established a variety of tax credits for sites remediated through the program. Some sites in this program have known extensive contamination, whereas others have more limited contamination or have not had sufficient investigation to determine whether or not contamination is present.

One Brownfield Cleanup Site (BCP) was located within a ½-mile radius of the site. Weyman Avenue Urban Renewal, located on Weyman Avenue, approximately 2,280 feet south of the study site, was listed as a BCP site. The City of New Rochelle and The Home Depot were listed as volunteers for the clean up. Based on details, distance and anticipated groundwater flow direction, discharges from this site would not likely affect soil or groundwater beneath the study site.

6.2.3 Local

Records maintained by the City of New Rochelle Tax Assessor's office, Building Department, Fire Marshal's Office, and the Westchester County Department of Health (WCDOH) were reviewed to determine the potential presence of hazardous materials. Copies of pertinent legible information are included in Appendix F.

Building Department

The City of New Rochelle Building Department records for the study site included numerous Certificates of Occupancy, Certificates of Compliance, Additions and Alteration Plans and Building Permits. Pertinent information included the following:

125 Beechwood Avenue

- Certificates of Occupancy included a one- and two-story brick and concrete block factory issued in 1953 and 1958 (Certificate Numbers 6112 and 8387 respectively).
- Plan No. 28953 was filed on June 12, 1957 for the addition of north and west wings for manufacturing purposes. The addition included the construction of a cellar.
- Plan No. 29420 was filed on July 3, 1958 for the installation of a transformer vault.

- Plan No. 44001 was filed on April 23, 1990 to increase the height of the distribution warehouse and to install a perimeter curtain wall.
- Plan No. 39162 was filed for the installation and removal of a 3,000-gallon gas tank and gas pump. The tank and pump were installed on October 19, 1979 and removed on November 26, 1985. The plan was filed following the removal of the tank.
- Plan No. 39233 was filed for the installation and removal of a 4,000-gallon gas tank and gas pump. The tank and pump were installed in 1980 and removed on November 26, 1985. The plan was filed following the removal of the tank.
- Plan No. 46604 was filed on November 21, 1994 for the closure of the 10,000-gallon fuel oil UST.

160 Beechwood Avenue

- On Lots 1 and 5, a Certificate of Compliance (No. 8583) was issued for a two and a half-story house on June 4, 1964. The construction date of the house was listed as 1905. Plan No. 38075 was filed for the removal of a 30,000-gallon propane storage tank and associated system. The tank was installed on November 13, 1975 and removed on November 26, 1985.
- On Lot 5 (formerly Lot 63), a Certificate of Compliance was issued on November 26, 1985 for a one-story office structure and garage. The construction date of the structure was listed as 1890. A Demolition Plan (No. 41072) was issued on October 11, 1985 for the removal of a wood framed structure.
- On Lot 1, a Certificate of Compliance (No. 453-96) was issued for a one-story house on with a three-car garage on December 10, 1996. The construction date of the house was listed as 1901.
- On Lots 65, 66 and 68, a Certificate of Compliance (439-96) was issued for a one-story office structure and greenhouse constructed in 1917. Plan No. 39149 was filed on November 21, 1996 for the demolition of a two and a half-story wood-framed dwelling. Permission was granted by the Zoning Board to maintain a parking lot on the property.

Fire Marshal's Office

Records maintained by the New Rochelle Fire Marshal indicated the use of a fuel oil tank in a former residence at 160 Beechwood Avenue; however no additional information was on-file. Records indicated that the 10,000-gallon fuel oil UST at 125 Beechwood Avenue was closed on January 25, 1995.

6.2.4 Additional Environmental Record Sources

To enhance the search, additional local records should be checked when, in judgment of the environmental professional, such records are: 1) reasonably ascertainable; 2) useful, accurate and complete in light of the objective of the records review; and 3) are obtained in initial Environmental Site Assessments. These records included:

- Local brownfields lists
- Local lists of landfill/solid waste disposal sites
- Local lists of hazardous waste/contaminated sites

- Local lists of registered tanks
- Local land records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Department of Heath/Environmental Division
- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

Thorough and complete information about potential off-site impacts and recognized environmental conditions on-site was available from regulatory databases, City of New Rochelle Tax Assessor and Fire Marshal's office, Building Department and WCDOH. Information is pending from the City of New Rochelle Tax Assessor and WCDOH offices. Given that is unlikely that further significant information exists in additional environmental record sources, and given that it is unlikely that it would materially change the findings of this Phase I assessment, no additional sources were reviewed.

7.0 INTERVIEWS

7.1 Interview with owner and site managers

The site owner and site manager provided detailed information about the use and layout of the site. This information is summarized in Sections 2.1 and 5.4.

7.2 Interview with occupants

The site was a commercial importing and distribution warehouse. The plant manager accompanied AKRF on the site inspection and was interviewed per the request of the property owner.

7.3 Interview with local government officials

Federal, state and local regulatory databases were consulted for identifying recognized environmental conditions (RECs) on the property due to on-site or off-site conditions. Given that is unlikely that further significant information would be available from local government officials, and given that it is unlikely that such information would materially change the findings of this Phase I assessment, local government officials were not interviewed.

8.0 LIMITED SAMPLING PROGRAM

On March 14, 2012, AKRF completed an inspection and limited sampling of Vat-1 and Vat-2. The inspection was completed to identify the specific use and any contents, if present.

8.1 Vat-1

Vat-1 was medium sized steel box structure, with an estimated 150 to 200 gallon capacity, and contained a baffled interior to apparently separate fluids and particulate prior to recirculation. The input drain pipes, which consisted of the network of fill pipes in the upper floor operations area, discharged into the first baffled section. The first baffled section contained an elevated drain to the sewer system to control overflows. The second baffle contained two transfer pumps that recirculated the fluids back into the production system. The vat interior was empty of fluids, and the bottom contained a thin layer of oxidized solids of an orange and brown color. The walls of the vat were also oxidized. A sample (Vat-1) of the solids was collected, placed in a cooler, and designated for laboratory analysis.

8.2 Vat-2

Vat-2 was a large steel box structure, with an estimated capacity of 350 to 450 gallons, with a non-baffled interior for fluid storage. The vat was fitted with a ball float and piping that appeared to formerly be connected to a fluid transfer pump. The vat interior was empty of fluids, and the bottom contained a thin layer of oxidized solids or an orange and brown color. The walls of the vat were also oxidized. A sample (Vat-2) of the solids was collected, placed in a cooler, and designated for laboratory analysis. Pipes associated with Vat-2 were cut off and their destination was unable to be determined.

8.3 Laboratory Analysis

The vat samples were analyzed by TestAmerica, Inc., an NYSDOH certified laboratory, for volatile organic compounds (VOCs) using EPA Method 8260B, semi-volatile organic compounds (SVOCs) using EPA Method 8270D, polychlorinated biphenyls (PCBs) using EPA Method 8082, metals using EPA Method 6010B and 7471A, and flash point using EPA Method 1030. A copy of the laboratory analytical data report is included in Appendix G.

VOCs

A summary of the results are provided in Table 1. Methylene chloride and acetone were detected in Vat-1 and Vat-2 at concentrations of 29 and 7.5 micrograms per kilogram (µg/kg), and 230 and 49 µg/kg, respectively. Acetone, a typical laboratory artifact, was also detected in the laboratory method blank. Benzene, toluene, ethylbenzene, and xylenes were detected in Vat-1 at concentrations ranging from an estimated 0.46 µg/kg to 39 µg/kg. Toluene was detected in Vat-2 at an estimated concentration of 0.79 µg/kg. 2-Butanone and 4-methyl-2-pentanone were detected in each sample at estimated concentrations ranging from 0.81 to 10 µg/kg. Additional detections for Vat-1 included teatrachloroethylene (PCE) at 2-hexanone at estimated concentrations of 0.63 and 6.9 µg/kg, respectively.

SVOCs

A summary of the results are provided in Table 2. Bis(2-ethylhexyl)phthalate was detected in Vat-1 at a concentration of 2,200 µg/kg. Phenathrene was detected in Vat-2 at an estimated concentration of 53 µg/kg.

PCBs

A summary of the results are provided in Table 3. Aroclor 1260 was detected in Vat-1 at a concentration of 150 µg/kg, and Aroclor 1254 was detected in Vat-2 at an estimated concentration of 53 µg/kg.

Metals

A summary of the results are provided in Table 4. Between 12 and 18 metals, including aluminum, arsenic, barium, beryllium, cadmium, calcium, chromium cobalt, copper, iron, lead, magnesium, manganese, magnesium, nickel, selenium, vanadium, zinc, and mercury, were detected in the vat samples at concentrations ranging from 0.026 milligrams per kilogram (mg/kg) of mercury in Vat-2, to 493,000 mg/kg of iron in Vat-2. Several metals were detected at estimated concentrations below the laboratory reporting limit. The concentration of aluminum, copper, and zinc in Vat-1, which were detected at 20,900, 13,300, and 15,900 mg/kg, respectively, was higher compared to the concentrations in Vat-2, which were not-detected for aluminum, 452 mg/kg for copper, and 649 mg/kg for zinc.

The limited sampling program indicated that the contents of the vats are not considered hazardous waste.

9.0 LIMITATIONS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-05. The following limitations should be noted:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- Stored items were present in the northern storage sheds and basement storage closets obscured evidence of underground storage tanks, such as vents and fill caps, floor staining and/or hazardous materials.
- Access to the Con Ed electrical transformer room or within the transformer pad enclosure was not available at the time of the site inspections. The Con Ed transformers were viewed through chain link fencing. Issues of environmental concern may exist within and adjacent to the transformer room and transformer pads.
- A limited visual inspection for asbestos and lead-based paint was performed in readily accessible areas only. No samples were collected as part of this assessment. A limited asbestos sampling report, prepared in 2010, is provided in Appendix B.

10.0 DEVIATIONS

The User did not request any deviations from the ASTM Standard.

11.0 DATA GAPS

There were no data gaps identified where the absence of information would materially change the findings of the assessment.

12.0 CONCLUSIONS

This Phase I Environmental Site Assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in conformance with the scope and limitations of ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 9.0 of this report.

The objective of this assessment was to identify recognized environmental conditions (RECs) associated with the project site resulting from past or current usage of the site as well as similar usage of neighboring properties to the extent reasonably possible. A REC is identified when there is the presence or potential presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products on the property as a result of on-site or off-site sources. This assessment has revealed the following RECs in connection with the study site property:

- Gries Reproducer Corp. (aka Gries Dynacast) occupied the site between 1951 and 1985 and utilized it for metal fabrication, including die-casting and plating operations. The former metal plating process took place in the central portion of the building in the area of the current warehouse.
- A network of several pipe fill caps (labeled fuel oil) and adjacent vent pipes were paired together and observed to be flush with the concrete floor in one large section of the warehouse. The fill/vent lines were likely associated with the former plating and die casting operation. Each fill and vent pipe went through to the lower level and were piped together as part of a fluid collection system that discharged into a fluid recirculation vat (Vat-1) located in the lower level in the tenant rental space. The vat contained a baffle system to remove solids and return the liquid product back upstairs into the operations area. An overflow drain within the vat was connected to the sanitary sewer system. A sump adjacent to the vat contained a pump that was piped directly into the sewer discharge pipe within Vat-1. Details associated with inspection and sampling of Vat-1 are included in Section 8.0.
- An approximately 8,000-square foot area of wood block flooring with intermittent petroleum-like staining was located in the southern and southeastern portion of the distribution warehouse. Wood block flooring was reportedly used to absorb vibrations caused by the equipment.
- An abandoned 10,000-gallon fuel oil underground storage tank (UST) was located in the northeastern portion of the building, in the employee cafeteria. The fuel oil UST was located beneath an access door in the floor. Concrete was visible in the tank and fill line. An underground tank closure site assessment report documented that visual observation of the UST during abandonment revealed no evidence of a release, and laboratory results soil samples collected from three soil borings drilled along Second Street, and approximately 50 feet downgradient of the UST, indicated that residual detections were not indicative of an adverse impact to soil quality.
- According to New Rochelle Building Department records, the study site formerly used two gasoline USTs and a gas pump. The tanks included a 3,000-gallon tank and gas pump installed in 1979 and a 4,000-gallon tank installed in 1980. The tanks and gas pump were reportedly removed on November 26, 1985. The former tanks were reportedly located on the northeastern portion of the study site in the loading dock area. Sections of patched asphalt were observed in this area, which may be indicative of the tanks being removed.
- The boiler room was located in the northeastern portion of the site building in the basement area. Two natural gas-fired/oil combination furnaces were located in the northern portion of the boiler room. Isolated petroleum-like staining was observed on the wall and floor areas in the southwestern

portion of the room, in the vicinity of the former fuel oil UST supply lines. The abandoned 10,000-gallon fuel oil UST was located west-adjacent to the boiler room in the cafeteria.

- A partial basement was located on the eastern side of the building. The northeast portion of the lower level contained a vacant tenant space, which the owner previously rented to a tenant for the purpose of storing landscaping equipment. The tenant used the space for equipment storage and automobile repair. During the 2009 inspection, the space contained a 275-gallon aboveground waste oil tank, three aboveground self-contained hydraulic lifts, parts cleaners, used batteries, coolant storage and staining on the concrete floor slab. The tenant had informed AKRF that he worked for Bruno's auto dealership in Darien, CT, and that any used oils, batteries, and coolants were transported to Bruno's for disposal. The former tenant reported that he did not generate any hazardous waste. The 2012 inspection of the area revealed that the former tenant space was empty, and that the hydraulic lifts and all auto fluid storage devices were removed.
- The gas meter room was located in the northeastern portion of the building. A recirculation vat (Vat - 2), formerly used by the metal plating tenant, an aboveground storage tank (AST) (capacity and contents unknown) and sump were located in the gas meter room. The sump reportedly discharged to the municipal sewer system. Localized petroleum-like staining was noted on the concrete floor slab at random locations throughout the gas meter room. The AST in the gas meter room contained pressure gauges and product transfer pipes. The pipes were cut off and abandoned. The exact use of the tank was unable to be determined. Details associated with further inspection of the AST, and inspection and sampling of the contents of Vat-2 are included in Section 8.0.
- The formerly leased basement area contained a fork lift that was modified to be used as an elevator. A metal cage was constructed around the fork lift, and the lift was modified to transport items between the warehouse area and lower level floors. The bottom of the lift area contained a sump that discharged fluids into Vat-1.
- A drainage trap was located in the southeastern portion of the distribution warehouse where metal plating activities occurred. No staining was noted in or adjacent to the trap which reportedly discharged to the municipal sanitary sewer system. No staining was observed in or adjacent to the trap.
- A compressor area was located next to the capped groundwater well. Dark petroleum-like staining from condensate blow-down and minimal floor cracking was noted on the concrete adjacent to the compressor area.
- A hydraulic freight elevator pit and hydraulic lift gates were located in the southwestern loading dock area. The elevator pit was observed to be filled with groundwater at the time of the 2009 site inspection. According to the plant manager, the elevator pit had a tendency to flood following heavy rain events. The pit was not flooded during the 2012 visit. There was no evidence of a line failure or hydraulic release observed.
- Numerous containers of oil, solvents, disinfectants, janitorial supplies, and paints and stains were located in the building's northeastern maintenance shop. No staining was observed on the concrete floor slab in the maintenance shop.
- Two Consolidated Edison (Con Ed) owned pad-mounted transformers were located adjacent to the southwestern exterior of the site building. Con Ed reported that the transformers were sampled between 2009 and 2011 and contained PCBs at a concentration of 23.34 and 30.82 parts per million (ppm). Discoloration associated with staining was observed around a draining port attached to the transformer, which may be associated with reported maintenance and/or sampling completed by

ConEd. There was no evidence of a release observed in the area surround the transformers. A third transformer was reported as being previously removed from this area.

- A catch basin was located in the loading dock area on the southwestern portion of the site in the asphalt-paved parking area. According to the plant manager, the basin discharged to the municipal sewer system. No staining was noted adjacent to the trap.
- According to historical Sanborn maps, numerous residential dwellings and an aboveground propane tank were previously located at 160 Beechwood Avenue. The dwellings were removed prior to 1990 and the lot was developed into an asphalt-paved parking lot. According to AKRF's site contact, the houses were demolished and paved over to create the parking lot that presently exists. Building department records support this. According to the New Rochelle Fire Marshal records, a 275-gallon fuel oil tank was present in the cellar of one of the structures; however, no additional information was available.
- A review of federal and state databases indicated the following: the study site was listed in the Closed Status Tank Test Failure (SPILLS), PBS and RCRA Small Quantity Generator of hazardous waste databases. Numerous SPILLS, RCRA generators and PBS sites were listed within a ½-mile radius of the study site in anticipated upgradient groundwater flow directions from the study site. Known and potential spills from these facilities have the potential to affect groundwater beneath the study site.

In addition to RECs, additional environmental concerns documented during the assessment included:

- An abandoned groundwater supply well that was previously capped was located in the southwestern portion of the site building. According to the plant manager, the well was formerly used for cooling purposes in connection with the metal plating operations. The well was reportedly abandoned in the early 1990's.
- Based on the age of the buildings, lead-based paint may be present. Painted surfaces observed in the structures were noted to be in generally good condition. However; peeling and chipping of potential lead-based paint was observed in the northeastern basement areas of the study site building. Any demolition or renovation activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—*Lead Exposure in Construction*).
- In addition to RECs, additional environmental concerns documented during the assessment included:
- An abandoned groundwater supply well that was previously capped was located in the southwestern portion of the site building. According to the plant manager, the well was formerly used for cooling purposes in connection with the metal plating operations. The well was reportedly abandoned in the early 1990's.
- Based on the age of the buildings, lead-based paint may be present. Painted surfaces observed in the structures were noted to be in generally good condition. However; peeling and chipping of potential lead-based paint was observed in the northeastern basement areas of the study site building. Any demolition or renovation activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—*Lead Exposure in Construction*).
- Suspect asbestos containing materials (ACMs) were observed during the 2009 inspection. On May 3, 2010, AKRF completed an inspection of the warehouse portion of the building that included identification, collection, and laboratory analysis of readily accessible potential ACM in the ware house area. The roof, exterior, office areas, and other areas of the building were not included in the

limited inspection. Based upon laboratory analysis of suspect ACM, pipe insulation, duct insulation, floor tiles, mastic and window putty were determined to be ACM. AKRF recommended that damaged ACM piping should be abated, and the remaining identified ACMs should be removed at such time that the material will be affected by renovation. All other ACMs should be maintained in good condition.

13.0 SIGNATURE PAGE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Marc Godick, LEP
Senior Vice President

14.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice.* It is intended for use as a supplement to the property appraisal, and is only to be used as a guide in determining the possible presence or absence of hazardous materials on the subject property at the time of the inspection. This assessment is based upon the review of readily available records relating to previous use of both the project site and the surrounding area, as well as a visual inspection of the current condition of the property. Environmental characteristics at this site and surrounding sites may be subject to change in the future.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the site and its surrounding area. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and inspections have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Zarin & Steinmetz and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or negligent or willful acts or omissions.

Mr. Todd Ghiosay
NYSDEC
200 White Plains Road, 5th Floor
Tarrytown, New York 10591

RE: UNDERGROUND STORAGE TANK CLOSURE SITE ASSESSMENT REPORT
125 BEECHWOOD AVENUE
NEW ROCHELLE, NEW YORK
NYSDEC SPILL #9408751

Dear Mr. Ghiosay,

This letter will serve as our report of the activities conducted at the above referenced site on June 9, 1995. As outlined in our proposal dated April 26, 1995, ENSA Environmental, Inc. (ENSA) conducted a site assessment following the abandonment in place of a 10,000 gallon heating oil underground storage tank (UST). The site assessment was designed to comply with the New York State Department of Environmental Conservation (NYSDEC) documents entitled "STARS MEMO #1 Petroleum Contaminated Soil Guidance Policy" and "Spill Prevention Operation Technology Series (SPOTS) Document No. 14".

The site assessment was conducted to determine if there had been an adverse impact to the environment resulting from the use of the UST previously located at the above mentioned property. A site location map is provided as Figure 1. The UST is located approximately 2.5 feet below the foundation of the building, in the area of the lunchroom, refer to Figure 2. The UST is encased in concrete and was utilized to store heating oil for on-site consumption. At the time of the closure, the UST was free of all product. Based on the location of the UST, abandonment in place was chose as the mode of closure.

Upon abandonment in place on January 26, 1995, visual observation of the UST revealed no evidence of a release. On June 9, 1995, three soil borings were advanced in vicinity of the abandoned in place UST to approximately 10 feet below grade. Soil boring work was performed using a truck mounted earthprobe with continuous soil characterization and field screening for volatile organic compounds (VOC's) using a photoionization detector (PID). Each boring with the high PID readings was recommended for Base Neutrals plus a forward library search of 15 additional compounds (BN + 15) analysis. In addition, boring B-2, which

was located closest to the tank, had BN+15 analysis performed at two different depths. Results of soil sampling and analysis and screening results (i.e., VOC's), boring depth and location are depicted in figure 2 and summarized in Table 1.

Results of laboratory analysis indicate total semi-volatile concentrations ranging from 11,252 micrograms per kilogram (ug/kg) in B-1 to 20,020 ug/kg in sample B-3. Analysis of sample B-3 revealed the presence of several targeted compounds, but the majority of these were below the laboratory method detection limit (MDL) and are estimated values ("J" values). Phenanthrene (580 ug/kg), Fluoranthene (660 ug/kg), and Pyrene (550 ug/kg) are detected above the MDL but are below the NYSDEC Maximum Contaminant Levels(MCLs) of 1,000 ug/kg for each individual compound.

Although residual concentration of petroleum hydrocarbons exist based on the analytical results, it is ENSA's opinion that the localized low-level concentrations remaining do not pose an adverse impact to the environmental quality of the Property. This is supported by the fact that the compounds detected are below the NYSDEC MCL's. Therefore, no further sampling or remedial activities are recommended.

ENSA has undertaken this assignment using our best professional effort consistent with generally accepted environmental practices. The findings in this letter report are based upon the site conditions and information made available at the time of the site assessment. These findings and conclusions are not meant to be indicative of future conditions or operating practices at the property. Should you have any questions, please feel free to contact ENSA at (914) 268-6660.

Sincerely,

Joe Pettee

APPENDIX C

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

Environmental Site Assessment – Site Questionnaire

Please answer all questions to the best of your actual knowledge. Please call with any questions or comments.

AKRF Contact: Steve Grens/Bryan Zieroff
Cell Phone: 917-613-6022/917-583-4924

Person completing questionnaire: Sanford James Sadek

Relationship to the site: General Partner Lars Realty Company (owner) and President of Charles Sadek Import Co Inc (main building tenant)

Length of time associated with the site: Since 1985

1) When were the current buildings constructed? Do you have surveyed drawings? Blueprints? Geotechnical subsurface studies? Built in two parts in 1951 and 1955. No surveyed drawings for subsurface studies available. We do have a collection of un-catalogued blueprints.

2) Have there been any renovation or additions since initial construction? Yes. In 1985 a substantial renovation was done including new loading docks, elimination of windows, and installation of a conveyor and rack system. Later the roof of a substantial section was raised and the racks expanded. Later the offices were completely renovated. The parking lot was improved and paved.

3) Is there any historic fill on-site? (Construction and demolition debris? Ash? Dredge spoils?) Not to our knowledge.

4) Have there been any asbestos assessment or abatement activities at the property? If there is asbestos on-site do you have an operations and maintenance plan? We have not addressed these issues.

5) Please describe land use at the property prior to construction of the current buildings. Unknown

6) Please describe activities at the site since construction of the current buildings. Commercial activities such as dry cleaning and auto repair are of particular interest to this study.
From 1951-1985 metal fabrication, die casting, and plating. From 1985-present warehouse and distribution center

7) Do municipal water and sewers service the site, or does it rely on private wells and/or a septic system? Municipal water and sewer system

8) Are you aware of any wells, public or private, on or near the subject property? There is a capped well next to the air compressor in the shipping room.

9) Please indicate the nature and frequency of trash removal from the subject property. Trash is compacted into a dumpster and removed monthly.

10) Are you aware of the current or former use, storage or production of any hazardous materials (petroleum products, solvents, paints, pesticides, etc) in any part of the subject site? Yes. Plating processes by former owner involved arsenic and die casting used various petroleum products.

11) Are any environmental permits or licenses held currently, or in the past, relating to the property? None during our ownership and occupation. Holdings for prior tenants are unknown.

12) Are there any registrations held for underground or above ground storage tanks at the property (NYSDEC, WCDOH)? No current registrations. Gasoline tanks and an above ground propane tank were removed when we took possession. A below ground oil storage tank was filled some years ago.

13) Have any previous environmental reports, audits or investigations been performed at the site? If available, please provide copies, preferably prior to the site visit. We believe some report was done in 1985 at the time of our purchase but we cannot immediately locate.

14) Does the site or any part of the site operate under a community right-to-know plan, safety plan, preparedness and prevention plan, spill prevention, countermeasure or control plan? No.

15) Are you aware of any reports regarding hydrogeologic or geotechnical conditions on the property or surrounding area? No.

16) Please provide copies of any notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating environmental liens encumbering the property. None

17) Please provide copies of any hazardous waste generator notices or reports. Not applicable.

18) Please advise of:
    a. Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property? None

b. Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property? None

c. Any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? None

19) Are you aware of any environmental liens on the property? No

20) Are you aware of value reduction on the property due to environmental issues? No

21) What is the reason for performing this Phase I? Preparing to put the property on the market for partial sub lease or sale.

APPENDIX E
REGULATORY RECORDS REVIEW

TOXICS TARGETING

Phase I
Environmental Database Report

125/160 Beechwood Ave
New Rochelle, NY 10801

March 30, 2012

Privileged and Confidential.

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FIVE FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.

Section Two: Toxic Site Profiles

Section Three: Appendices

- *USEPA ERNS Check*
- *Unmappable Sites*
- *Hazardous Waste Codes*
- *How Toxic Sites Are Mapped*
- *Information Source Guide*

© Toxics Targeting, Inc. 2012

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report.* It checks for the presence of 21 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.

2. ***Estimates*** the distance and direction between the target address and each identified toxic site.

3. ***Reports*** air and water permit non-compliance and other regulatory violations.

4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.

5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information, some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

How to Use Your Report

- Check Table One to see the number of identified sites by distance intervals.

- Check Table Two to see identified sites sorted by direction.

- Check Table Three to see identified sites sorted by site categories.

- Check Table Four to see identified sites ranked by proximity to the target address.

- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report

Search Radius

One-Mile 
1) ***National Priority List for Federal Superfund Cleanup****:* a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile 
2) ***Delisted National Priority List Sites****:* a listing of NPL sites that have been removed from the National Priority List.

One-Mile 
3) ***New York Inactive Hazardous Waste Disposal Site Registry****:* a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile 
4) ***New York Inactive Hazardous Waste Disposal Site Registry Qualifying****:* a state listing of sites that qualify for possible inclusion to the NYDEC Inactive Haz. Waste Disposal Site Registry.

One-Mile

5) ***RCRA Corrective Action Activity (CORRACTS):*** waste facilities with RCRA corrective action activity reported by the USEPA.

Half-Mile 
6) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile 
7) ***CERCLIS NFRAP:*** a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile

8) ***New York State Brownfield Cleanup Sites****:* a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile 
9) ***New York Solid Waste Facilities Registry****:* active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile

10) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act..

Half-Mile

11) ***Toxic Spills: active and inactive or closed*** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Quarter-Mile

12) ***New York State Major Oil Storage Facilities****:* sites with more than a 400,000-gallon capacity for storing petroleum products.

Quarter-Mile

13) ***New York and Local Petroleum Bulk Storage Facilities****:* sites with more than a 1,100-gallon capacity for storing petroleum products.

Quarter-Mile

14) ***New York and Federal Hazardous Waste Generators and Transporters****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Quarter-Mile

15) ***New York Chemical Bulk Storage Facilities****:* sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Half-Mile 
16) ***New York Hazardous Substance Disposal Site Draft Study****:* a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites are not eligible for state clean up funding programs.

Quarter-Mile

17) ***Federal Toxic Release Inventory Facilities****:* discharges of selected toxic chemicals to air, land, water or treatment facilities.

Quarter-Mile

18) ***Federal Air Discharges****:* Air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Quarter-Mile

19) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Quarter-Mile

20) ***Federal Civil and Administrative Enforcement Docket****:* judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

Property only

21) ***ERNS: Federal Emergency Response Notification System Spills****:* a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the FIRST STEP in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. The only systematic changes that are made correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Please be aware of some other limitations of the information in your report:

- The map used by *Toxics Targeting* is the same one used by the U. S. Census. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated on the Census map. FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;

- UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 21 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;

- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in zip code areas within one mile of the target address as well as toxic sites without zip codes reported in the same county. IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING AND REFER TO THE SITE ID NUMBER.*

- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.

- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.

Section One:

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code.
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see ***How Sites are Located***, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers.
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites, or a complete description of the codes follows the profiles section.

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity**: Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity**: The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity**: The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive Toxicity**: May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced).

IRRIT TOX: **Primary Irritant**: The chemical can cause eye or skin irritation.

MCL: **Drinking Water Standard - Maximum Contaminant Level** (MCL) listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications:

1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
2 -- Significant threat to the public health or environment -- action required;
3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
4 -- Site properly closed --requires continued management;
5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law;
A -- Work underway and not yet complete;
P -- Potential Site;
$D_{1, 2, 3}$ -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed);
C -- Remediation Complete (formerly D2).

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
DIVISION OF HAZARDOUS WASTE REMEDIATION
INACTIVE HAZARDOUS WASTE DISPOSAL SITE INFORMATION

SITE CODE: 360109
CLASSIFICATION CODE: 02 REGION: 3 DEC ID: 413917
CLASSIFICATION CODE DESCRIPTION:
Significant threat to the public health or environment - action required.

NAME OF SITE: Industrial Overall Service Corp.
STREET ADDRESS: 10 Bartels Place TOWN: New Rochelle (c)
CITY: New Rochelle ZIP: 10801-7241 COUNTY: Westchester

SITE TYPE: Dump- Structure- Lagoon- Landfill- Treatment Pond- ESTIMATED SIZE: 0.42 Acre

INSTITUTIONAL/ENGINEERING CONTROLS:
None reported

CROSS REFERENCES:

IDENTIFIER	SOURCE
360087	HW Site ID

SITE OWNER/OPERATOR INFORMATION:
CURRENT OWNER(S):
NAME: WORKING MAN'S CLOSET, INC
ROBERT O'BRIEN
ADDRESS: 3 KOLBERT DRIVE

SCARSDALE, NY 10583

SITE DESCRIPTION:
Location:

Industrial Overall Service Corporation site is located at 10 Bartel's Place in the City of New Rochelle, Westchester County, NY. The site is located east of I-95 and west of US-1 (Huguenot Street) and it is bounded by Reylea Place, Bartels Place, Centre Avenue and the Metro North railroad tracks.

Site Features:

It is 0.42 acres in size and resides on a slightly sloping irregularly shaped parcel. The main site feature includes a six-sided building which occupies the majority of the property and a small parking area located to the south and southwest of the building. The surrounding area is urban with a mix of commercial and residential establishments mixed in between the commercial businesses.

Current Zoning/ Uses:
This property is zoned commercial use. The building is the location of two active businesses, Industrial Overall Service Corporation and The Working Man's Closet, Inc. The Working Man's Closet business uses the business address of 27 Centre Street.

Historic Uses:

The Industrial Overall Service Corporation business operated as a uniform and industrial cleaning facility for heavily soiled clothing such as from auto body and gasoline businesses. The Working Man's Closet is engaged in direct factory sales of work clothes both new and reclaimed. The Industrial Overall Service Corporation has operated a cleaning business at this location since 1939 and The Working Man's Closet has been in business since 1980. The prior laundry operations on the site have used various cleaning products in the past. Initial investigation has indicated a release of tetrachloroethylene (PCE) has occurred and contaminated the soil vapor and groundwater.

The potential responsible parties did not agree to conduct a remedial program, so in the Spring of 2011 a State Superfund Referral was signed and a RI/FS will be conducted using State Superfunds.

Operable Units: Only one operable unit for the site.

Site Geology and Hydrology:

Groundwater is found 10 to 15 feet below grade and flowing in a southwesterly direction.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
TETRACHLOROETHYLENE (PCE)	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Nature and Extent of Contamination:

Based upon investigations to date, the primary contaminants of concern at the site include tetrachloroethylene (PCE) and its associated breakdown products. PCE was detected in groundwater at the site and downgradient off-site. On-site PCE in groundwater was noted at 5,300 parts per billion (ppb) in a monitoring well located immediately downgradient of the site. The levels of PCE appear to diminish from the 1,000's of ppb of PCE to non detectable approximately 1000 feet to the southwest of the site.

Trichloroethylene (TCE), which is a degradation product of PCE, was also detected in the groundwater both downgradient and on the site.

Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. No significant environmental resources have been identified near the site to date.

Significant Threat: The site present a significant threat to the environment due to the ongoing release of contamination from the site into groundwater and soil vapor.

ASSESSMENT OF HEALTH PROBLEMS:
Direct contact with contaminants in soil and groundwater is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site-related contaminants in indoor air in on- and off-site buildings due to soil vapor intrusion.

PROJECT COMPLETIONS:
None reported

The New York State Department of Environmental Conservation has not publicly updated the following fields since 2003:

DIVISION OF HAZARDOUS WASTE REMEDIATION
INACTIVE HAZARDOUS WASTE DISPOSAL SITE INFORMATION

SITE CODE: 360053
CLASSIFICATION CODE: 02 REGION: 3 DEC ID: 57782
CLASSIFICATION CODE DESCRIPTION:
Significant threat to the public health or environment - action required.

NAME OF SITE: CRYSTAL CLEANERS
STREET ADDRESS: 113 Wolfs Lane TOWN: Pelham
CITY: Pelham (V) ZIP: 10803- COUNTY: Westchester

SITE TYPE: Dump- Structure- Lagoon- Landfill- Treatment Pond- ESTIMATED SIZE: 0.1 Acre

INSTITUTIONAL/ENGINEERING CONTROLS:
None reported

CROSS REFERENCES:
None reported

SITE OWNER/OPERATOR INFORMATION:
CURRENT OWNER(S):
NAME: CRYSTAL CLEANERS Owner Type: Corporate or Commercial
MYUNG H. LEE
ADDRESS: 113 WOLFS LANE
PELHAM, NY 10803

OWNER(S) DURING DISPOSAL:

OPERATOR(S) DURING DISPOSAL:
NAME: CRYSTAL CLEANERS
MYUNG H. LEE
ADDRESS: 113 WOLFS LANE
PELHAM, NY 10803

SITE DESCRIPTION:

Location: The Crystal Cleaners Site is located at 113 Wolfs Lane in the Village of Pelham, Westchester County, NY.

Site Features: Crystal Cleaners is located within a single-story building containing several businesses, adjacent to Village owned property used by the Department of Public Works.

Current Zoning/Use: Crystal Cleaners is an active dry cleaning establishment and is also listed as a large quantity hazardous waste generator which utilizes solvent materials. The surrounding area is a mix of residential and commercial properties.

Historical Use(s): The site has historically been used for dry cleaning purposes. An active dry cleaning establishment currently operates at the site.

Site Geology/Hydrogeology: Site overburden consists of a mixture of sand, gravel, silt and clay. Groundwater is located at approximately 9 to 12 feet below ground surface and generally flows to the west - southwest. Bedrock is located approximately 12 to 14 feet below grade.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
TETRACHLOROETHYLENE (PCE)	UNKNOWN
TRICHLOROETHENE (TCE)	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination:

a) The primary contaminants of concern at the site are tetrachloroetylene (PCE) and its associated breakdown products, trichloroethylene (TCE) and cis -1,2 dichloroethene (DCE).

b) The 2008 Site Characterization report documented contamination in the shallow overburden groundwater and soil vapor at concentrations which exceed standards, criteria, or guidance (SCGs).

c) PCE, TCE and DCE were detected in groundwater at maximum concentrations of 790 ppb, 54 ppb and 81 ppb respectively. PCE and TCE were found in sub-slab soil vapor at maximum concentrations of 53,000 ug/m^3 and 543 ug/m^3 respectively.

Special Resources Impacted: None

Significant Threat: The site has been listed as a class 2 on the Registry of Inactive Hazardous Waste Disposal Sites on the basis that the site is considered to pose a significant threat to human health.

ASSESSMENT OF HEALTH PROBLEMS:

The site is covered by buildings and pavement so exposure to potentially contaminated soils by the general public is not expected unless excavation occurs on the site. Public water serves the area and there are no known users of well water in the vicinity so exposure to site-related contamination via drinking water is not expected. The potential exists for site-related volatile contaminants to enter nearby homes and businesses through soil vapor intrusion and for exposure to building occupants. The soil

vapor intrusion pathway is being investigated.

NYS DEC Manifested Waste Summary:
Waste Codes, Waste Units, and Transaction Types are only shown for the most recently reported year.

WASTE CODE	WASTE DESCRIPTION	WASTE AMOUNT	WASTE UNITS	TRANSACTION TYPE	YEAR	HISTORIC MAXIMUM AMOUNT	HISTORIC MAXIMUM YEAR
More than one waste code was reported for the following waste amount:		40	POUNDS	TSD	2009		
D001	Solid waste that exhibits the characteristic of ignitability						
F003	Spent non-halogenated solvents						

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

1) Tank Failures
2) Tank Test Failures
3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
4) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

5) Tank Failures
6) Tank Test Failures
7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
8) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one-eighth mile in New York City) are mapped and profiled.

Between 0.25 mile (or one-eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:

* Tank Failures;

* Tank Test Failures;

* Unknown Spill Cause or Other Spill Cause;

* Spills greater than 100 units of quantity; and

* Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellanous Spills with less than 100 units located between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

The following tank was deleted from the reported data. Data reflects last reported information.				
3	4000	Horner EZ Check I or II	0.00	GROSS LEAK RATE

Caller Remarks:

TANK #1 - 4000 DIESEL // TANK #2 1000 - PLUS UNLEADED GAS //

TANK #3 - 4000 REG UNLEADED GAS -- TANK #3 APPEARS TO BE A

PROBLEM IN THE VAPOR RECOVERY LINE // ALL TANKS WILL BE REPAIRED

AND RETESTED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "GHIOSAY"
08/12/03: Letter to John Carara, New Rochelle Gas Corp, from C Lalak, WCDOH, dated 7/08/2003. PBS application filled out incorrectly. 3 tanks failed tightness test on 4/11/02. Environmental assessment, groundwater and soil sampling is required. Results must be submitted to WCDOH by 8/11/2003.

01/16/04 Chris Lalak reported that a gw investigation was completed and levels of contamination are high in the groundwater. He will forward the final report when it is submitted. He has refered the case to DEC. TG

03/30/04 Spoke with Patty Badding of Environmental Management Inc. She stated that the a complete report will be finalized next week and sent to DEC and WCHD. Report expected in April 2004. TG

04/22/04 Based on the Limited subsurface investigation submitted by Patty Badding, a letter was sent to New Rochelle Gas Corp requiring a full gw investigation. Report due on July 12, 2004.TG

11/10/04 Groundwater report not submitted. Warning letter sent to Carara.

11/23/04 Call rec'd from Mark Robbins of HydroTech Environmental Commack LI. He has been retained to perform the subsurface investigation. Phone is 631 462-5866.

5/05/05 Groundwater Investigation Report rec'd from Hydro Tech Environmental. Six monitoring wells were installed. Four of the six wells (bedrock wells) contained significant amounts of free product, mw-3 had 2.24', mw-4 had 3.11', mw-5 had 3.78' and mw-6 had 2.75'. High dissolved levels in Mw-2. Groundwater flow is towards the south, most likely extending into the Main Street.
Recommendatons include
1 Interim remedial measures to recover the gas
2 Add't investigation including more wells, surveying the wells and sampling
3 Development of a Remedial Action Plan. TG

02/06 Hydro Tech proposed installing two additional wells off site to further delineate the plume. TG

09/08/06 LetterSent to Carara and Kumar requiring addtional wells be installed to define the plume boundries. TG

Caller Remarks:

found contaminated soil while drilling wells.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "HARDY"
01/15/98 LETTER SENT; INVESTIGATE EXTENT OF CONTAMINATION AND SUBMIT A PROPOSAL FOR REMEDIATION;

06/18/98 LETTER SENT INVESTIGATION FOR SITE IS APPROVED

8/14/98 LETTER SENT; PROPOSED ACTION ARE APPROVED AND REQUIRED.

4/9/04: Letter to D. Bull, Amerada Hess by J. Hardy. Reduce reporting to annual.

08/19/2004 Letter rec'd from the law firm of Farrell Fritz. PC requesting that the address for this spill be changed in the DEC spill database. An affidavit signed by Louis Kizner stated that there was never a gas station at 761 Main St. The address for this spill was changed from 761 Main St to 747 Main St. TG

5/26/09 march 09 report shows as much as 1.8ft of product on site and approx .02ft in 3 off site wells. previous reports stated Hess was working on a remedial action plan. sent an email to envirotrac today asking how far along they were with that plan. will need to expedite this project

5/27/09 by telephone and email directed envirotrac as follows:confirming our telephone conversation of today please submit in a week or two a workplan and schedule for investigations and other work leading to installation of a remediation system at this site. That schedule should be aggressive due to the amount of product on and off site. Include as a priority item, if it has not been done already, investigations to insure no adverse impacts inside buildings that might be impacted. also include an interim remedial plan to include as a minimum monthly vacuum enhanced removals at one or more wells with product. Use your judgment as to whether you want to concentrate on the hottest wells on site or whether you want to hit all wells with product. Copy wdoh on all submissions and deal primarily with them regarding any investigations regarding indoor and health impacts. thank you jim hardy

7/1/09 June 09 report shows continued high contamination including up to .8ft of product in one well and lesser amounts in several others. Will begin monthly efr events as interim remedial action per our direction. Working toward a remedial action plan--sent ET email today requesting status of workplan jh

8/6/09 sent enviro trac another email asking about status jh

8/12/09 p condon of ET called with outline of workplan to be submitted shortly jh

10/2/09 9/30 qmr shows product in a number of wells and high dissolved in a few others; still no workplan; Hess not vacuuming wells per our directives--ed Moore to talk to Hess jh

11/13/09 strong directive to d bull of Hess in edocs jh

12/14/09 proposal for air sparge/ves submitted. wells to be installed onsite and off site jh

1/6/10 qmr submitted;levels still high--product in 4 wells jh

1/15/10 air sparge ves pilot test proposal approved jh

4/21/10 spill is classified as remediation as rp is actively designing and testing remediation equipment and we are confident a

system will be installed fairly soon by rp or dec. spill is not contained however so that blank is not filled in jh

11/22/10 Project transferred to Mastro.

02/07/11 Remedial action plan has been reviewed and approved,report is in edocs...mm

5/25/11 Field work to be completed this quarter...mm

New Rochelle, NY 10801

re: 245 Washington Ave .
New Rochelle
NYSDEC Spill # 9808218
PBS # 3-034061

Dear Mr. Zari:

The report of the site assessment conducted by Royal Environmental Services in April 2006 at the above referenced property was received and reviewed by this Department.

The results of the soil and groundwater sampling indicated that there was no petroleum contamination exceeding the New York State (NYSDEC) TAGM 4046 in the area previously known to have contained the underground petroleum storage tanks that were removed in 1998.000

It is the recommendation of this Department that this spill number requires No Further Action.

Furthermore, the status of this site is listed as "Unregulated" in our database, meaning that no tanks regulated by Article XXV of the Westchester County Sanitary code remain at this site.

If you have any further questions, please call me at (914) 813-5168.

Sincerely,

Stefan Goreau
Sanitarian
Office of Environmental Health Risk Control

12/20/06

Letter from Stefan Goreau of WCDOH, addressed to Peter Zari dated 06/02/06 states that the results of the soil and GW sampling indicated that there was no petroleum contamination exceeding the NYSDEC; therefore, WCDOH recommends "No Further Action."

Tank Test Failure

DEC Investigator Remarks:

11-15-10 Spoke with ATS. Real estate transaction. Buyer is Jose Reyes 914-374-9978 jm
11-16-10 Called and left message for Jose Reyes to return call to dispatch desk to give us info on realtor or homeowner. jm

11/16/10: I spoke with the seller's realtor Louise DelGiudice. She states the tank was tested and passed approx two months ago, but the tester (plumber or boiler maintainence company) gave them no paperwork. Buyer had tank tested yesterday and reportedly failed. Louise states there was a remote curb fill that was not capped during the test. They have contacted ATS to have the tank retested properly. She states she will notifiy DEC once the retest is complete. jod

12/02/10: Tank passed retest once the curb fill was capped. Report will be entered into eDocs. Based upon the information provided, no further action is required at this time. jod

3/3/09: Review of report submitted by WCC Tank Technology. Tank was tested by WCC on 1-9-09 for the property owner. The tank passed the test and documentation was submitted to the owner and the New Rochelle FD. Elite Environmental tested the tank for a prospective buyer on 2-6-09 and failed the tank, resulting in this spill report to the DEC. On 2-12-09 WCC again tested the tank with reps from New Rochelle FD and Royal Environmental. The tank passed this test. All three tests were preformed with the Horner Locator Plus system. Based upon the information received as of this date, DEC is requiring No Further Action at this time. jod

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "GHIOSAY"
10-15-2001 - CITY OF NEW ROCHELLE HIRED THE CALLER TO INVESTIGATE THE PROPERTY FOR A CITY PROJECT. IN THE REAR OF THE PROPERTY IS AN IRON WORKS COMPANY WHERE METAL RAILINGS ARE PAINTED OUTDOORS. VOC'S WERE DETECTED IN SOIL SAMPLES TAKEN FROM DRYWELLS IN THE YARD. NICK RECCHIA WILL SUBMIT A REPORT TO DEC/TARRYTOWN.

Jan 7, 2003 An excavator broke through the former basement floor when petroleum impacted soil was encountered. 175 tons of contaminated soil was excavated and removed for disposal.

Jan 9, 2003 1000 gallons of wastewater was pumped from a drywell and 125 tons of impacted soil was excavated and disposed. A remediation report prepared by American Environmental Assessment documentiong the January 7th and 9th work was submitted. Based on the information contained in that report , no further action is required. TG

REMOVAL OF A 1000 GALLON UST SOIL CONTAMINATION FOUND CLEAN UP PENDING.

DEC Investigator Remarks:

11/06/09: Property was purchased by a new owner within the past year. New owner passed away, his wife was having the tank replaced for sale of the property. Northeast installed a new AST in the basement and pulled this 1K tank. Contamination evident. New Rochelle FD inspected. Northeast will be completing clean up. jod
02/09/10 Northeast Environmental reported that they excavated and removed one tank along with 35.64 tons of petroleum contaminated soil. Post excavation TAGM soil sample results were below DEC guidance values. NFA TG

SPILL FROM A SERVICE GARAGE AUTOMOTIVE FLUIDS BEING WASHED INTO DRAINS DURING RAIN

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "GHIOSAY"
09-23-2003 A complaintant reported that petroleum runs off the site during rain events. The facitity was checked on a rainy day and the complaint was verified. Open containers of automotive fluids were present along with oily engines, transmissions and other parts, all contributing to an oily sheen running off the property and draining into the municipal storm sewer. The manager, Mr. Cochachi was directed to clean up all debris that would contribute to the discharge of petroleum from the site. (Photos taken) TG.

Caller Remarks:

GASOLINE TANKER ROLLOVER. 2500 GALLONS ON BOARD. MAJOR LEAK - UNCONTROLLABLE. GOING INTO STORM DRAINS AND LONG ISLAND SOUND. COAST GUARD AND HEALTH DEPT ADVISED.

DEC Investigator Remarks:

01/28/06 PT Petro tanker hauling 8000 gallons of gasoline and diesel rolled over when a defective fifth wheel failed. The dome on the first compartment breached, causing a spill of gasoline. Gas flowed down the street into a catch basin which discharged into the Burling Brook, a tributary to the Long Island Sound. High tide in the Sound kept the outfall totally submerged so that almost all of the gasoline was retained in a manhole on Shore Road where it could be easily pumped out. Very little gas reached the Sound. Tyree was hired by Getty to handle the cleanup activity and offload the remaining product from the compromised trailer. TG
1/30/06 D. Weitz was called to respond after-hours and remained on-site after Todd Ghiosay left site. Tyree did cleanup at accident site, and recovery at the outfall to LI Sound. Product started coming out of the Burling Brook, when the tide went down, later in the day. Tyree used their vac trucks to intercept the petroleum as it came out into the water. Hard boom and soft boom were deployed. At accident site, tanker was off-loaded, and removed from site. Tyree finished cleanup of accident site, and starting flushing sewer system. Outfall area was checked once again. ECO Read was there; his info was that the tanker was carrying 11,000+ gal (12k capacity), and lost 2500-4200 gal in the accident. LukOil officials on-site were Mr. Hanley, Figueroa,

and Geracci. WCHD officials on-site- McDonald, Badoleto, Goreau.
Ch. 12 News was also there briefly. WCHD checked site the next day, and reported no problem.
Photos were taken by this author, and sent to DEC staff.
DW

01/30/06 Scot Hanley from Getty reported that 1847 gallons of gasoline discharged from the leaking tanker. TG

THE FOLLOWING CLOSED SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/4 MILE AND 1/2 MILE FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, OR VANDALISM. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.

D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.

D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.

D003 Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.

D007 Chromium

D008 Lead

D009 Mercury

D018 BENZENE

F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F003 The following spent non-halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

F005 The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12 Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/ operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Environmental Reports contain government and other information compiled on 18 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated from: 1/13/2012. Data obtained by Toxics Targeting: 1/13/2012.
New Facilities updated through: 1/13/2012. Data obtained by Toxics Targeting: 1/13/2012.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 3/27/2012. Data obtained by Toxics Targeting: 3/27/2012.
New Facilities updated to: 12/23/2011. Data obtained by Toxics Targeting: 12/23/2011.

18) **Emergency Response Notification System (ERNS):** Federal database of spills compiled by the Emergency Response Notification System. On-site searches only.
ASTM required.* See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.[1]
Data updated through: 1/31/2000. Data obtained by Toxics Targeting: 2/15/2000

* American Society of Testing Materials: Standard Practice on Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-05).
** Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).

REMARKS

9/12/56-Bd. of Ap. on Zon. GRANTED PERMISSION to maintain a Parking Lot eliminating three feet (3') of space required for parking areas adjoining a Residence District, on condition that Article 5, Section 5.1, Supplementary Regulation II, Subdivision J of the Zoning Ordinance is com-

(over)

plied with, on Beechwood Avenue, Block 681, Lots 63, 65, 66 & 68, as per plans submitted.

BAZ CASE NO. 72-1996, RES#12-97 dated 3/7/97 GRANTED permission to reconstruct parking lot and create a trailer staging space/area; whereas proposed trailer staging space/area is not permitted by right or special permit; in an R-3A Zoned District at the premises Corner of Highland Avenue and Beechwood Avenue, Block 681, Lot 1; as per plans submitted provided that compliance is made with all local and state laws governing building, health and safety with the following conditions:

1. This site plan be referred to the PlanningBoard to work out the details of screening, fencing, lighting, and general circulation and access and egress from the site subject to the conditions that are contained in the Zoning Board resolution.
2. That the hours of operation of this truck exchange function on this lot be limited to 7am to 8pm, weekdays only, no weekends or nighttime use for that purpose.
3. That the lot receive screening ad indicated on the architect's plan and subject to the Planning Board's detailed review but providing a minimum of 8' heights of the evergreen screening around the truck staging area and a minimum of 4' on the perimeter of the site adjacent to the two residential streets.
4. The existing screening on the south side of the parcel be maintained and that the additional screening be added to the part that abuts the cemetery.
5. An 8' high solid stockade type fence as a sound barrier be erected around the three sides of the truck staging area.
6. That the property be completely screened with gates at the truck entrance and two parking lot entrances and that these gates be loced during all hours except during 6am to 8pm on weekdays when the factory is in operation.

Re: Freedom of Information Act Request
125 & 160 Beechwood Avenue
New Rochelle, New York

Dear FOI Officer,

AKRF, Inc. (AKRF) is conducting an Environmental Site Assessment on the above referenced Parcels in New Rochelle, New York. The 125 Beechwood Avenue Parcel consists of a former metal plating facility and the 160 Beechwood Avenue Parcel consists of an asphalt –paved parking lot. The legal definition of the property is Tax Block and Lots 0691-0005 and 0681-0001.

AKRF requests any information pertaining to aboveground or underground storage tanks, depth to groundwater, septic tank failure or contamination (soil, groundwater or surface water), storage of hazardous waste, on-site spills and any other environmental issues of concern on or in the vicinity of the study site. Any relevant information that can assist in the determination of the environmental condition of the study site would be greatly appreciated. Should you have any questions please do not hesitate to contact me on my cell phone at (917) 613-6022. Thank you for your assistance.

Sincerely yours,

CERTIFICATE OF TITLE

Fidelity National Title Insurance Company

Certifies to the applicant named on the following page that an examination of title to the premises described in Schedule A has been made in accordance with its usual procedure and agrees to issue its standard form of insurance policy in the amount and for the transaction set forth herein, after the closing of the transaction in conformance with procedures approved b the Company excepting (a) all loss or damage by reason of the estates, interests, defects, objections, liens, encumbrances and other matters set forth herein that are not disposed of to the satisfaction of the Company prior to such closing or issuance of the policy (b) any question or objection coming to the attention of the Company before the date of closing, or if there be no closing, before the issuance of said policy.

This Certificate shall be null and void (1) if the fees therefore are not paid (2) if the prospective insured, his attorney or agent makes any untrue statement with respect to any material fact or suppresses or fails to disclose any material fact or if any untrue answers are given to material inquiries by or on behalf of the Company (3) upon delivery of the policy. Any claim arising by reason of the issuance hereof shall be restricted to the terms and conditions of the standard form of insurance policy. If the title, interest or lien to be insured was acquired by the prospective insured prior to delivery hereof, the Company assumes no liability except under its policy when issued.

THIS CERTIFICATE IS INTENDED FOR LAWYERS ONLY. SUCH EXCEPTIONS AS MAY BE SET FORTH HEREIN MAY AFFECT MARKETABILITY OF TITLE. YOUR LAWYER SHOULD BE CONSULTED BEFORE TAKING ANY ACTION BASED UPON THE CONTENTS HEREOF. THE COMPANY'S REPRESENTATIVE AT THE CLOSING HEREUNDER MAY NOT ACT AS LEGAL ADVISOR TO ANY OF THE PARTIES OR DRAW LEGAL INSTRUMENTS FOR THEM. SUCH REPRESENTATIVE IS PERMITTED TO BE OF ASSISTANCE ONLY TO AN ATTORNEY. IT IS ADVISABLE TO HAVE YOUR ATTORNEY PRESENT AT THE CLOSING.

IF ANY OF THE CLOSING INSTRUMENTS WILL BE OTHER THAN COMMONLY USED FORMS OR CONTAIN UNUSUAL PROVISIONS, THE CLOSING CAN BE SIMPLIFIED AND EXPEDITED BY FURNISHING THE COMPANY WITH COPIES OF THE PROPOSED DOCUMENTS IN ADVANCE OF CLOSING.

THENCE still along the same, South 12 degrees 14 minutes 20 seconds East 334.27 feet to the point of BEGINNING.

Fidelity National Title Insurance Company

Title Number: 802002(D-NY-CP-MI)

SCHEDULE B
REQUIREMENTS

The following requirements must be met:

1. All parties attending the closing will be required to furnish a photo driver's license or other acceptable photo identification card and copied.
2. All personal checks in excess of $500.00 must be approved by the Company PRIOR TO CLOSING.
3. Borrower and lender must comply with the mortgage recording requirements of the New York State Department of Taxation and Finance. Every mortgage offered for recording must contain the following recital:

   "The real property, [is or is not, whichever applies] principally improved or to be improved by one or more structures containing in the aggregate not more than six residential dwelling units, each dwelling unit having its own separate cooking facilities."

   NOTE: This recital may be stated on the mortgage instrument itself or it may be included by the attachment of a separate page to the mortgage signed by the person making the statement.
4. Applicable Mortgage Recording Tax is due at closing.
5. If an Assignment or Mortgage is offered at closing for recording, then the Mortgagor and Lender must comply with the requirements of Section 275 of the Real Property Law:

   a) The Assignment of Mortgage must contain the following language:

   "This assignment is not subject to the requirements of Section 275 of the Real Property Law because it is an assignment within the secondary mortgage market."

   -or

   b) There must be affixed to, and recorded as part of the Assignment of Mortgage, an affidavit executed by the mortgagor stating that the assignee is not acting as a nominee of the mortgagor or owner of the property, and that the mortgage continues to secure a bona fide obligation.
6. If any of the closing instruments herein are to be executed by a Power of Attorney, then the following requirements must be compiled with:

   a) The proposed Power of Attorney Instrument must be submitted to this Company for Underwriting consideration prior to closing.

   b) At closing an affidavit will be required from the attorney for the Principal to show that the Power of Attorney has not been revoked and that the Principal of the Power is alive and competent at the time of closing.

   c) The Power of Attorney must be in recordable form and must be submitted at closing for recording simultaneously with the closing documents.
7. Tax Map block and lot numbers must appear on each instrument offered for recording.
8. All documents to be recorded or filed in the Office of the Clerk/Register must be executed in BLACK INK only.

SCHEDULE B

REQUIREMENTS

(Continued)

Title Number: 802002(D-NY-CP-MI)

For Conveyances in all counties except these in New York City:

9. Form TP-584 New York State Combined Real Estate Transfer Tax Return and Credit Line Mortgage Certificate, together with payment, if any, are due upon delivery of closing deed. (The transfer tax return must be signed by BOTH seller and purchaser.)

10. New York State Board of Equalization and Assessment Real Property Transfer Report (Form RP-5217) must accompany closing deed for recording. (The form must be signed by BOTH seller and purchaser.)

For Conveyances in New York City except Richmond County:

11. The New York City Register requires that certain forms submitted in connection with the transfer of real property in Bronx, Brooklyn, New York and Queens counties be completed on the Internet using the Automated City Register Information System ("ACRIS"). This includes the City's Real Property Transfer Tax Return ("RPTT"), the New York State Real Estate Transfer Tax Return ("TP-584"), the New York State Real Property Transfer Report Report ("RP5217-NYC"), the Affidavit of Compliance with the Smoke Detector requirement, the Customer Register Form for Water and Sewer Billing, and the Property Owner Registration Form. These forms, except for the Property Owner Registration Form, must be printed from ACRIS and submitted to the recording office with the closing instruments. Contact the counsel or clearance office assigned to this title for further information.

12. Contract of Sale must be furnished at or prior to closing where the premises is located in the City of New York and the consideration for the transaction is $400,000.00 or more.

13. If the purchase price exceeds $1,000,000.00 and is a conveyance of residential real property then the transaction is subject to Mansion Tax, as defined in Section 1402-A NY Tax Law, which is one (1%) percent of the purchase price. Said Tax is a change to the purchaser.

14. Under certain circumstances. The City of New York aggregates the principal amounts secured by separate mortgages to determine the applicable rate of mortgage recording tax. This Company must be advised if the mortgagor in this transaction or a "related" mortgagor (as defined in the tax code), including the person or entity who will execute the mortgage, has within the prior twelve months executed a mortgage on other property within the City of New York.

15. If the premises lies within the Suffolk County Bay Region (Towns of East Hampton, Riverhead, Shelton Island, Southampton and Southold). A sale is subject to the Peconic Bay Region Community Preservation Fund Transfer Tax said (Article 31-D, Tax Law) tax return and appropriate taxes must be collected at closing. Said tax is a charge to the purchaser.

16. For transactions subject to the Home Equity Theft Protection Act, RPL Section 265-a ("HETPA") the following applies:

    a. Proof is required, prior to closing, that the seller herein is not in default of the mortgage(s) shown herein. If said seller is in default, whether or not an action has been commenced, then this transaction falls under the provisions of the Home Equity Theft Protection Act, RPL Section 265-a and additional exceptions will be raised. At closing an affidavit, sworn to by the seller, is required.

    b. This firm must be informed prior to closing if the proposed mortgage transaction to be insured is going to be made pursuant to or together with a change of ownership of the premises, either adding or dropping parties to title, in order to insure compliance with the Home Equity Theft Protective Act, RPL Section 265-a. Additional exceptions may be raised.

c. A complete copy of the Contract of Sale must be submitted to this company prior to closing for examination. Upon review, additional exceptions regarding the Home Equity Theft Protection Act may be raised. At closing an affidavit executed and sworn to by the Equity Purchaser is required.

d. Important Notice to Lenders, Mortgage Brokers and Lender's Attorneys:

Section 595-a of the Banking Law makes Mortgage Lenders and/or their representative(s) liable for civil damages, conviction of a Class E Felony and a criminal fine for making a mortgage loan, or indirectly or directly providing for the making of a mortgage loan, to an equity purchaser, as defined in RPL Section 265-a, if the Mortgage Banker, Mortgage Broker or their agent(s) had knowledge that the equity purchaser was not complying with the provisions of RPL Section 265-a with respect to such transaction.

e. Important Notice to Purchaser(s) and Purchaser's Attorney(s):

Willful noncompliance with the Home Equity Theft Protective Act, RPL Section 265-a makes the purchaser and/or their representative(s) liable for civil damages, conviction of a Class E felony and a criminal fine.

17. Due to the implementation of a new computer system in the office of the Suffolk County Clerk, searches are not able to be conducted to date for judgments and notices of pendency. Until this problem is resolved, the seller and mortgagor for the transaction for which this report has been prepared must provide an affidavit at closing that there are no judgments against them, or actions commenced against the property, in any state or federal court, not disclosed in the title report.

18. The City of Yonkers has imposed a mortgage recording tax of .005 (1/2%) of the principal amount of the mortgage, in addition to the NYS and Westchester County portions of the tax, for an aggregate mortgage recording tax in Yonkers of 1.8%.

Fidelity National Title Insurance Company

Title Number: 802002(D-NY-CP-MI)

SCHEDULE B
EXCEPTIONS

Hereinafter set forth are additional matters which will appear in our policy as exceptions from coverage unless disposed of to our satisfaction prior to the closing or delivery of the policy.

1. Taxes, tax liens, tax sales, water rates, sewer and assessments set forth in schedule herein.

2. Mortgages returned herewith and set forth herein. NONE

3. Any state of facts which an accurate survey might show
   OR
   Survey exceptions set forth herein.

4. Rights of tenants or persons in possession.

5. Proof is required to show that the entity executing the closing documents is the same entity which acquired title by deed dated 2/16/2006 and recorded 3/26/2007 as Control No. 470780106.

6. All searches have been made against the name(s) of Lars Realty Company, no returns have been found.

7. Re: Lars Realty Company, a Limited Partnership: A copy of the partnership agreement must be submitted along with proof of compliance with the publication requirements, if any. After review of said documents, this company reserves the right to raise such additional exceptions as are deemed necessary.

   NOTE: This exception must be cleared prior to closing as a search of the New York Department of State discloses no record of said entity

8. Proof must be submitted that all the partners, both general and limited, have consented to the proposed transaction.

9. Water charges, if any. (Company cannot search for same)

10. Rights of utility companies to maintain their poles and wires along the abutting streets together with the right to trim trees along said route as necessary to keep wires clear.

11. Until a guaranteed survey is received, policy will not insure the exact location, courses, distances and dimensions of the premises or the bed of any street, road or avenue passing through the said premises or any state of facts that a survey would show.

12. The name(s) of the purchaser must be provided to this firm so that appropriate searches can be made.

PRIVACY POLICY

We Are Committed to Safeguarding Customer information
In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information- particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, we have adopted this Privacy Policy to govern the use and handling of your personal information.

Applicability
This Privacy Policy governs our use of the information which you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. We have also adopted broader guidelines that govern our use of personal information regardless of its source.

Types or information Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms or in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliate companies, or others; and
- Information we receive from a consumer reporting agency.

Use of information
We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf; on behalf of our affiliate companies, or to other financial institutions with whom we or our affiliate companies have joint marketing agreements.

Former Customers
Even if you are no longer our customer, our Privacy Policy will continue to apply to you.
Confidentiality and Security
We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to non public personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with This Privacy Policy. We currently maintain physical, electronic and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

CERTIFICATE OF TITLE

Fidelity National Title Insurance Company

Certifies to the applicant named on the following page that an examination of title to the premises described in Schedule A has been made in accordance with its usual procedure and agrees to issue its standard form of insurance policy in the amount and for the transaction set forth herein, after the closing of the transaction in conformance with procedures approved b the Company excepting (a) all loss or damage by reason of the estates, interests, defects, objections, liens, encumbrances and other matters set forth herein that are not disposed of to the satisfaction of the Company prior to such closing or issuance of the policy (b) any question or objection coming to the attention of the Company before the date of closing, or if there be no closing, before the issuance of said policy.

This Certificate shall be null and void (1) if the fees therefore are not paid (2) if the prospective insured, his attorney or agent makes any untrue statement with respect to any material fact or suppresses or fails to disclose any material fact or if any untrue answers are given to material inquiries by or on behalf of the Company (3) upon delivery of the policy. Any claim arising by reason of the issuance hereof shall be restricted to the terms and conditions of the standard form of insurance policy. If the title, interest or lien to be insured was acquired by the prospective insured prior to delivery hereof, the Company assumes no liability except under its policy when issued.

THIS CERTIFICATE IS INTENDED FOR LAWYERS ONLY. SUCH EXCEPTIONS AS MAY BE SET FORTH HEREIN MAY AFFECT MARKETABILITY OF TITLE. YOUR LAWYER SHOULD BE CONSULTED BEFORE TAKING ANY ACTION BASED UPON THE CONTENTS HEREOF. THE COMPANY'S REPRESENTATIVE AT THE CLOSING HEREUNDER MAY NOT ACT AS LEGAL ADVISOR TO ANY OF THE PARTIES OR DRAW LEGAL INSTRUMENTS FOR THEM. SUCH REPRESENTATIVE IS PERMITTED TO BE OF ASSISTANCE ONLY TO AN ATTORNEY. IT IS ADVISABLE TO HAVE YOUR ATTORNEY PRESENT AT THE CLOSING.

IF ANY OF THE CLOSING INSTRUMENTS WILL BE OTHER THAN COMMONLY USED FORMS OR CONTAIN UNUSUAL PROVISIONS, THE CLOSING CAN BE SIMPLIFIED AND EXPEDITED BY FURNISHING THE COMPANY WITH COPIES OF THE PROPOSED DOCUMENTS IN ADVANCE OF CLOSING.

SCHEDULE A
DESCRIPTION

The land referred to in this Certificate of Title is described as follows:

Parcel 1

ALL that certain plot, piece or parcel of land, situate, lying and being in the City of New Rochelle, County of Westchester and State of New York, known and designated as Lots Nos. 31, 32, 33, 34, 35, 36, 37 and 38 on a certain map entitled "Subdivision of Lots on Boston Post Road, Highland Avenue, Beechwood Avenue, and Rockdale Avenue as shown on Map of land owned by A.B. Hudson, Esq., being a portion of the Smith Farm, New Rochelle, New York", dated September 1, 1900 and filed in the Office of the County Clerk, Division of Land Records, formerly Register's Office, Westchester County, N.Y. on November 1, 1900 as Map Number 1370, and also all those certain lots known and designated as Lots 21 and 22 on a certain map entitled "Map of Subdivision of Lots 85 and 86, Land of A.B. Hudson, Esq., New Rochelle, N.Y.", prepared by Horace Crosby, C.E., dated June, 1889 and filed in the Office of the Clerk of the County of Westchester, Division of Land Records, on September 27, 1890, in Volume 8 of Maps page 101.

Parcel 2

ALL that certain plot, piece or parcel of land, situate, lying and being in the City of New Rochelle, County of Westchester and State of New York, bounded and described as follows:

BEGINNING at a point on the southerly side of Beechwood Avenue distance 55.00 feet westerly as measured along the same, from the intersection of the southerly side of Beechwood Avenue with the westerly side of Highland Avenue;

THENCE along said southerly side of Beachwood Avenue on a course, North 71 degrees 57 minutes 30 seconds West a distance of 151.47 feet to a point;

THENCE on a course, North 21 degrees 33 minutes East a distance of 7.6 feet to a point, said point being the northwesterly corner of the within described parcel;

THENCE on a course, South 70 degrees 35 minutes 00 seconds East, a distance of 151.05 feet to a point, said point being the northeasterly corner of the within described premises;

THENCE on a course, South 18 degrees 02 minutes 30 seconds West, a distance of 4 feet to the southerly side of Beechwood Avenue, the point and place of BEGINNING.

Fidelity National Title Insurance Company

Title Number: 802003(D-NY-CP-MI)

SCHEDULE B
REQUIREMENTS

The following requirements must be met:

1. All parties attending the closing will be required to furnish a photo driver's license or other acceptable photo identification card and copied.
2. All personal checks in excess of $500.00 must be approved by the Company PRIOR TO CLOSING.
3. Borrower and lender must comply with the mortgage recording requirements of the New York State Department of Taxation and Finance. Every mortgage offered for recording must contain the following recital:

   "The real property, [is or is not, whichever applies] principally improved or to be improved by one or more structures containing in the aggregate not more than six residential dwelling units, each dwelling unit having its own separate cooking facilities."

   NOTE: This recital may be stated on the mortgage instrument itself or it may be included by the attachment of a separate page to the mortgage signed by the person making the statement.
4. Applicable Mortgage Recording Tax is due at closing.
5. If an Assignment or Mortgage is offered at closing for recording, then the Mortgagor and Lender must comply with the requirements of Section 275 of the Real Property Law:

   a) The Assignment of Mortgage must contain the following language:

   "This assignment is not subject to the requirements of Section 275 of the Real Property Law because it is an assignment within the secondary mortgage market."

   -or

   b) There must be affixed to, and recorded as part of the Assignment of Mortgage, an affidavit executed by the mortgagor stating that the assignee is not acting as a nominee of the mortgagor or owner of the property, and that the mortgage continues to secure a bona fide obligation.
6. If any of the closing instruments herein are to be executed by a Power of Attorney, then the following requirements must be compiled with:

   a) The proposed Power of Attorney Instrument must be submitted to this Company for Underwriting consideration prior to closing.

   b) At closing an affidavit will be required from the attorney for the Principal to show that the Power of Attorney has not been revoked and that the Principal of the Power is alive and competent at the time of closing.

   c) The Power of Attorney must be in recordable form and must be submitted at closing for recording simultaneously with the closing documents.
7. Tax Map block and lot numbers must appear on each instrument offered for recording.
8. All documents to be recorded or filed in the Office of the Clerk/Register must be executed in BLACK INK only.

SCHEDULE B

REQUIREMENTS

(Continued)

Title Number: 802003(D-NY-CP-MI)

For Conveyances in all counties except these in New York City:

9. Form TP-584 New York State Combined Real Estate Transfer Tax Return and Credit Line Mortgage Certificate, together with payment, if any, are due upon delivery of closing deed. (The transfer tax return must be signed by BOTH seller and purchaser.)

10. New York State Board of Equalization and Assessment Real Property Transfer Report (Form RP-5217) must accompany closing deed for recording. (The form must be signed by BOTH seller and purchaser.)

For Conveyances in New York City except Richmond County:

11. The New York City Register requires that certain forms submitted in connection with the transfer of real property in Bronx, Brooklyn, New York and Queens counties be completed on the Internet using the Automated City Register Information System ("ACRIS"). This includes the City's Real Property Transfer Tax Return ("RPTT"), the New York State Real Estate Transfer Tax Return ("TP-584"), the New York State Real Property Transfer Report Report ("RP5217-NYC"), the Affidavit of Compliance with the Smoke Detector requirement, the Customer Register Form for Water and Sewer Billing, and the Property Owner Registration Form. These forms, except for the Property Owner Registration Form, must be printed from ACRIS and submitted to the recording office with the closing instruments. Contact the counsel or clearance office assigned to this title for further information.

12. Contract of Sale must be furnished at or prior to closing where the premises is located in the City of New York and the consideration for the transaction is $400,000.00 or more.

13. If the purchase price exceeds $1,000,000.00 and is a conveyance of residential real property then the transaction is subject to Mansion Tax, as defined in Section 1402-A NY Tax Law, which is one (1%) percent of the purchase price. Said Tax is a change to the purchaser.

14. Under certain circumstances. The City of New York aggregates the principal amounts secured by separate mortgages to determine the applicable rate of mortgage recording tax. This Company must be advised if the mortgagor in this transaction or a "related" mortgagor (as defined in the tax code), including the person or entity who will execute the mortgage, has within the prior twelve months executed a mortgage on other property within the City of New York.

15. If the premises lies within the Suffolk County Bay Region (Towns of East Hampton, Riverhead, Shelton Island, Southampton and Southold). A sale is subject to the Peconic Bay Region Community Preservation Fund Transfer Tax said (Article 31-D, Tax Law) tax return and appropriate taxes must be collected at closing. Said tax is a charge to the purchaser.

16. For transactions subject to the Home Equity Theft Protection Act, RPL Section 265-a ("HETPA") the following applies:

    a. Proof is required, prior to closing, that the seller herein is not in default of the mortgage(s) shown herein. If said seller is in default, whether or not an action has been commenced, then this transaction falls under the provisions of the Home Equity Theft Protection Act, RPL Section 265-a and additional exceptions will be raised. At closing an affidavit, sworn to by the seller, is required.

    b. This firm must be informed prior to closing if the proposed mortgage transaction to be insured is going to be made pursuant to or together with a change of ownership of the premises, either adding or dropping parties to title, in order to insure compliance with the Home Equity Theft Protective Act, RPL Section 265-a. Additional exceptions may be raised.

c. A complete copy of the Contract of Sale must be submitted to this company prior to closing for examination. Upon review, additional exceptions regarding the Home Equity Theft Protection Act may be raised. At closing an affidavit executed and sworn to by the Equity Purchaser is required.

d. Important Notice to Lenders, Mortgage Brokers and Lender's Attorneys:

Section 595-a of the Banking Law makes Mortgage Lenders and/or their representative(s) liable for civil damages, conviction of a Class E Felony and a criminal fine for making a mortgage loan, or indirectly or directly providing for the making of a mortgage loan, to an equity purchaser, as defined in RPL Section 265-a, if the Mortgage Banker, Mortgage Broker or their agent(s) had knowledge that the equity purchaser was not complying with the provisions of RPL Section 265-a with respect to such transaction.

e. Important Notice to Purchaser(s) and Purchaser's Attorney(s):

Willful noncompliance with the Home Equity Theft Protective Act, RPL Section 265-a makes the purchaser and/or their representative(s) liable for civil damages, conviction of a Class E felony and a criminal fine.

17. Due to the implementation of a new computer system in the office of the Suffolk County Clerk, searches are not able to be conducted to date for judgments and notices of pendency. Until this problem is resolved, the seller and mortgagor for the transaction for which this report has been prepared must provide an affidavit at closing that there are no judgments against them, or actions commenced against the property, in any state or federal court, not disclosed in the title report.

18. The City of Yonkers has imposed a mortgage recording tax of .005 (1/2%) of the principal amount of the mortgage, in addition to the NYS and Westchester County portions of the tax, for an aggregate mortgage recording tax in Yonkers of 1.8%.

Fidelity National Title Insurance Company

Title Number: 802003(D-NY-CP-MI)

SCHEDULE B
EXCEPTIONS

Hereinafter set forth are additional matters which will appear in our policy as exceptions from coverage unless disposed of to our satisfaction prior to the closing or delivery of the policy.

1. Taxes, tax liens, tax sales, water rates, sewer and assessments set forth in schedule herein.

2. Mortgages returned herewith and set forth herein. NONE

3. Any state of facts which an accurate survey might show
   OR
   Survey exceptions set forth herein.

4. Rights of tenants or persons in possession.

5. Proof is required to show that the entity executing the closing documents is the same entity which acquired title by deed dated 2/16/2006 and recorded 3/26/2007 as Control No. 470780106.

6. All searches have been made against the name(s) of Lars Realty Company, no returns have been found.

7. Re: Lars Realty Company, a Limited Partnership: A copy of the partnership agreement must be submitted along with proof of compliance with the publication requirements, if any. After review of said documents, this company reserves the right to raise such additional exceptions as are deemed necessary.

   NOTE: This exception must be cleared prior to closing as a search of the New York Department of State discloses no record of said entity.

8. Proof must be submitted that all the partners, both general and limited, have consented to the proposed transaction.

9. Water charges, if any. (Company cannot search for same)

10. Rights of utility companies to maintain their poles and wires along the abutting streets together with the right to trim trees along said route as necessary to keep wires clear.

11. Until a guaranteed survey is received, policy will not insure the exact location, courses, distances and dimensions of the premises or the bed of any street, road or avenue passing through the said premises or any state of facts that a survey would show.

12. The name(s) of the purchaser mus tb e provided to this firm so that appropriate searches can be made.

PRIVACY POLICY

We Are Committed to Safeguarding Customer information
In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information- particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, we have adopted this Privacy Policy to govern the use and handling of your personal information.

Applicability
This Privacy Policy governs our use of the information which you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. We have also adopted broader guidelines that govern our use of personal information regardless of its source.

Types or information Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms or in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliate companies, or others; and
- Information we receive from a consumer reporting agency.

Use of information
We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (I) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf; on behalf of our affiliate companies, or to other financial institutions with whom we or our affiliate companies have joint marketing agreements.

Former Customers
Even if you are no longer our customer, our Privacy Policy will continue to apply to you.
Confidentiality and Security
We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to non public personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with This Privacy Policy. We currently maintain physical, electronic and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

BY FEDERAL EXPRESS

DATE: September 1, 2009

TO: Steve Grens

FROM: Hyman Kindler

RE: Beachwood Title Documents

CC: Mark Godick
Thomas D. Kearns

As requested, enclosed are copies of documents (that I have) which were recorded against the Beachwood properties more than 40 years ago. The enclosed would not have been picked up by the 40-year searches that were done and sent to you.

Please let me know if you need any additional information. Thank you.

Exhibit A

Revenue stamps attached 3.40

THIS INDENTURE, made this 7th day of December, 1951 between THE NEW YORK, NEW HAVEN AND HARTFORD RAILROAD COMPANY, a Connecticut corporation duly authorized to do business in the State of New York and having its principal place of business at 71 Meadow Street, New Haven, Connecticut, the grantor, and BIANCO & PEPE, INC., a New York corporation having its principal place of business at 7 South Third Avenue, Mount Vernon, New York, the grantee:

W I T N E S S E T H:

That the grantor, for the consideration of One Dollar ($1.00) lawful money of the United States and for other valuable consideration, paid by the grantee, does hereby grant, release, bargain and sell to the grantee, its successors and assigns forever, all that certain piece or parcel of land situate, lying and being in the City of New Rochelle, County of Westchester and State of New York, bounded and described as follows:

BEGINNING at a point formed by the intersection of the westerly line of Second Street with the northerly line of Beechwood Avenue;
Thence running westerly along the northerly line of Beechwood Avenue a distance of 592.3 feet more or less to land now or formerly of Herbert Koenigsberg and others;
Thence northerly along said land now or formerly of Herbert Koenigsberg and others a distance of 235 feet more or less to a point distant 80 feet southerly, measured radially from station 203 + 63.06 of monumented four track center line of the railroad from New York to New Haven;
Thence easterly along remaining railroad land in a curve to the left, having a radius of 2535.70 feet, concentric with said monumented center line, a distance of 420.6 feet more or less to a point in the westerly line of Second Street, distant 80 feet southerly, measured radially from said monumented center line;
Thence southeasterly along said westerly line of Second Street, 334.69 feet more or less to the point or place of beginning;
CONTAINING 3.03 acres more or less.

Subject to existing drainage conditions.

TOGETHER with the appurtenances and all the estate and rights of the grantor in and to said premises, and all the

right, title and interest of the grantor in and to the land lying in Beechwood Avenue and Second Street where said avenue and street adjoin and lie in front of said premises, to the center line thereof. Subject to any state of facts which an accurate survey and inspection of the premises would show.

TO HAVE AND TO HOLD the premises herein granted, released, bargained and sold to the grantee, its successors and assigns forever.

The grantee, for itself, its successors and assigns, covenants at its expense to erect and thereafter maintain and keep in repair on the division line between the premises herein granted and the adjoining land of the grantor any and all fencing which hereafter shall be ordered or required by the grantor, the grantee, their successors and assigns or by any governmental or public authority, body, unit or commission, and to indemnify and hold harmless the grantor, its successors and assigns against and from any and all liability arising out of or in connection with the erection, maintenance and repair of said fencing or the failure to perform the same.

The grantor covenants in accordance with Section 13 of the Lien Law of New York that it will receive the consideration for this conveyance and will hold the right to receive such consideration as a first fund to be applied first for the purpose of paying the cost of the improvement (if any) and that it will apply the same first to the payment of the cost of such improvement before using any part of the total of the same for any other purpose.

IN WITNESS WHEREOF, the grantor has caused its corporate seal to be hereunto affixed and these presents to be signed by its duly authorized officer the day and year first above written.

NOV

THIS INDENTURE, made this 23rd day of October, 1956, between THE NEW YORK, NEW HAVEN AND HARTFORD RAILROAD COMPANY, a Connecticut corporation having its principal place of business at 54 Meadow Street, New Haven, Connecticut, the Grantor, and NINETY-WILLOW REALTY CORPORATION, a New York corporation, having its principal place of business at 125 Beechwood Avenue, New Rochelle, New York, the Grantee:

W I T N E S S E T H :

That the Grantor for the consideration of One Dollar ($1.00), lawful money of the United States, and other valuable considerations paid by the Grantee, does hereby grant, release, bargain and sell to the Grantee, its successors and assigns forever, free from the liens of the Grantor company's First and Refunding Mortgage and General Income Mortgage, each dated as of July 1, 1947, all that certain piece or parcel of land situate, lying and being in the City of New Rochelle, County of Westchester and State of New York, bounded and described as follows:

BEGINNING at a point at the southwesterly corner of the premises herein described and in the division line between said premises and land now or formerly of Herbert Koenigsberg et al., said point also being the northwesterly corner of the premises conveyed by The New York, New Haven and Hartford Railroad Company to Bianco & Pepe, Inc., by deed dated December 7, 1951, and distant 80.0 feet southwesterly from station 203 + 63.06 of the monumented four track center line of the railroad leading from New York to New Haven, measured radially thereto;

Thence northeasterly along said division line 18.31 feet to a point distant 61.72 feet southwesterly of and measured radially from station 203 + 64.11 of said center line;

Thence southeasterly, making an interior angle of 90° with the last described line and bounding northeasterly on remaining railroad land, 188.66 feet to a point distant 80.0 feet southwesterly of and measured radially from station 205 + 46.65 of said center line;

Thence in a general northwesterly direction by a curve to the right, having a radius of 2535.70 feet concentric with and distant 80.0 feet southwesterly from said center line, measured radially thereto and bounding southwesterly on land of Ninety-Willow Realty Corporation, 189.59 feet to the point or place of beginning, the chord of said curve having a length of 189.54 feet and making an interior angle of 5° 32' 35" with the last described line and an interior angle of 84° 27' 25" with the first described line;

Being triangular in shape and containing 1,952 square feet more or less.

The above described premises are subject to existing drainage conditions.

RESERVING to the Grantor, its successors and assigns, the right to maintain the existing slope as now located on the premises herein conveyed, and in the event said slope or any portion thereof is disturbed by the Grantee, its successors, or assigns, the said Grantee hereby agrees for itself, its successors and assigns, to construct and maintain in lieu thereof, and at its or their own expense a retaining wall or walls with a fence on top, if required, along the northeasterly line of the premises herein conveyed where said slope has been disturbed, the design and construction of said wall or walls, including said fence to be subject to the approval of the Chief Engineer of the Grantor, its successors and assigns.

FURTHER RESERVING to the Grantor, its successors and assigns, the guy wires and anchors as now located on the easterly portion of the premises herein conveyed, together with the right to enter said premises for the purpose of maintaining said guy wires and anchors.

TOGETHER with the appurtenances and all the estate and rights of the Grantor in and to said premises.

TO HAVE AND TO HOLD the premises herein granted, released, bargained and sold to the Grantee, its successors and assigns forever.

By the acceptance of this deed the Grantee for itself, its successors and assigns, covenants that during such times as land adjoining the premises herein granted is owned by the Grantor, or a successor or assignee railroad, it will erect at its expense and thereafter maintain and keep in repair in good and safe condition on the division line between the premises herein granted and such adjoining lands any and all fencing which hereafter shall be required by the Grantee, its successors and assigns or ordered by any governmental or public authority, body, unit or

commission, and to indemnify and hold harmless the Grantor, its successors and assigns, against and from any and all liability arising out of or in connection with the erection, maintenance and repair of said fencing. The covenants contained in this paragraph shall run with the land and shall be binding upon each subsequent owner of said premises during the period of his or its ownership, but shall be binding on the Grantee herein and any subsequent Grantee only so long as it or he is the owner of the premises herein granted. The covenants contained in this paragraph shall not inure to the benefit of any successor or assign of the Grantor which is not engaged in the operation of a railroad.

The Grantor hereby rescinds so much of a covenant relating to fencing set forth in a certain deed from the Grantor to Bianco & Pepe, Inc., dated December 7, 1951, recorded in the Westchester County Clerk's office (Division of Land Records) on January 11, 1952 in Liber 5060 of Conveyances, page 8, as applies to the southerly boundary of land to be conveyed hereunder.

The Grantor covenants in accordance with Section 13 of the Lien Law of New York that it will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and that it will apply the same first to the payment of the cost of such improvement before using any part of the total of the same for any other purpose.

IN WITNESS WHEREOF, the Grantor has caused its corporate seal to be hereunto affixed and these presents to be signed by its duly authorized officer the day and year first above written.

THIS INDENTURE, made this 20th day of June , 1958, between THE NEW YORK, NEW HAVEN AND HARTFORD RAILROAD COMPANY, a Connecticut corporation having its principal place of business at 54 Meadow Street, New Haven, Connecticut, the Grantor, and NINETY-WILLOW REALTY CORPORATION, a New York corporation, having its principal place of business at 125 Beechwood Avenue, New Rochelle, New York, the Grantee:

W I T N E S S E T H :

That the Grantor for the consideration of One ($1.00) Dollar, lawful money of the United States, and other valuable considerations paid by the Grantee, does hereby grant, release, bargain and sell to the Grantee, its successors and assigns forever, free from the liens of the Grantor company's First and Refunding Mortgage and General Income Mortgage, each dated as of July 1, 1947, all that certain piece or parcel of land situate, lying and being in the City of New Rochelle, County of Westchester and State of New York, bounded and described as follows:

BEGINNING at a point at the most westerly corner of the premises herein described, said point being distant 67.50 feet southwesterly of and measured radially from Station 204 + 39.02 of the monumented four track center line of the railroad leading from New York to New Haven;
Thence in a general southeasterly direction by a curve to the left, having a radius of 2523.20 feet, concentric with and distant 67.50 feet southwesterly of and measured radially from said monumented four track center line and bounding northeasterly on remaining railroad land 337.77 feet to a point opposite Station 207 + 67.83 of said center line;
Thence southeasterly, bounding northeasterly on Second Street, 12.82 feet to a point distant 80 feet southwesterly of and measured radially from said monumented four track center line;
Thence in a general northwesterly direction by a curve to the right, having a radius of 2535.70 feet, concentric with and distant 80 feet southwesterly of and measured radially from said monumented four track center line and bounding southwesterly on land of the Grantee herein, 231.12 feet to a point opposite Station 205 + 46.65 of said monumented four track center line;
Thence northwesterly, bounding southwesterly on said land of the Grantee, 111.57 feet to the point or place of beginning.
Containing 3,507 square feet more or less.

REVENUE STAMPS ATTACHED $ 1.10 JUL 29 1958

The above described premises are subject to existing drainage conditions.

RESERVING to the Grantor, its successors and assigns, the right to maintain the existing slope as now located on the premises herein described until such time as a retaining wall is constructed in lieu thereof as hereinafter provided.

FURTHER RESERVING to the Grantor, its successors and assigns, the guy wires and anchors as now located on said described premises, together with the right to enter said premises for the purpose of maintaining said guy wires and anchors.

TOGETHER with the appurtenances and all the estate and rights of the Grantor in and to said premises.

TO HAVE AND TO HOLD the premises herein granted, released, bargained and sold to the Grantee, its successors and assigns forever.

By acceptance of this deed the Grantee for itself, its successors and assigns covenants that in the event the aofresaid slopes or any portions thereof are disturbed by the Grantee, its successors or assigns, the said Grantee hereby agrees for itself, its successors and assigns, to construct and maintain in lieu thereof, and at its or their own expense, a retaining wall or walls along the division line between land herein described and remaining railroad land where said slope has been disturbed, the design and construction of said wall or walls to be subject to the approval of the Chief Engineer of the Grantor, its successors and assigns.

By the acceptance of this deed the Grantee for itself, its successors and assigns, covenants that during such times as land adjoining the premises herein granted is

owned by the Grantor, or a successor or assignee railroad, it will erect at its expense and thereafter maintain and keep in repair in good and safe condition on the division line between the premises herein granted and such adjoining lands any and all fencing which hereafter shall be required by the Grantee, its successors and assigns, or ordered by any governmental or public authority, body, unit or commission, and to indemnify and hold harmless the Grantor, its successors and assigns, against and from any and all liability arising out of or in connection with the erection, maintenance and repair of said fencing. The covenants contained in this paragraph and the next preceeding shall run with the land and shall be binding upon each subsequent owner of said premises during the period of his or its ownership, but shall be binding on the Grantee herein and any subsequent grantee only so long as it or he is the owner of the premises herein granted. The covenants contained in these paragraphs shall not inure to the benefit of any successor or assign of the Grantor which is not engaged in the operation of a railroad.

The Grantor covenants in accordance with Section 13 of the Lien Law of New York that it will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and that it will apply the same first to the payment of the cost of such improvement before using any part of the total of the same for any other purpose.

IN WITNESS WHEREOF, the Grantor has caused its corporate seal to be hereunto affixed and these presents to be signed by its duly authorized officer the day and year first above written.

DATA REPORTING QUALIFIERS

Client: AKRF Inc

Job Number: 460-38010-1

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	B	The analyte was found in an associated blank, as well as in the sample.
	N	This flag indicates the presumptive evidence of a compound.
GC/MS Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	A	The tentatively identified compound is a suspected aldol-condensation product.
	N	This flag indicates the presumptive evidence of a compound.
GC Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
Metals		
	U	Indicates analyzed for but not detected.
	J	Sample result is greater than the MDL but below the CRDL
General Chemistry		
	U	Indicates analyzed for but not detected.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.3°C IR#50
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A	No analysis requiring residual chlorine check assigned.
