EXECUTIVE SUMMARY

1 Water Street L.L.C. entered into a Brownfield Cleanup Agreement (BCA) Index No. C360235-06-23 on October 2, 2023 with the New York State Department of Environmental Conservation (NYSDEC) to investigate and remediate the property known as the One Water Street Blacksmith & Wheelwright Site in the Brownfield Cleanup Program (BCP) identified as Site No. C360235 located at 1 Water Street, Westchester County, White Plains, New York (the "Site"). The BCA was amended on April 11, 2024 (Amendment No. 1), to remove a 0.059-acre portion of the Site that included a Consolidated Edison utility easement, reducing the Site from 1.237 acres to 1.178 acres. The BCA was further amended on February 14, 2025 (Amendment No. 2) to add 1 Water Street Acquisition LLC as a Volunteer in the BCP. 1 Water Street L.L.C. and 1 Water Street Acquisition LLC, are collectively referred to herein as the "Applicant."

Site History

Review of historical Sanborn maps identified the Site historical uses included single-family dwellings on the northern portion of the Site in 1889. From 1894 to 1900 there is also a wagon storage, sheds, a carport, and a dwelling on the southern portion of the Site. In 1905 a previously existing and unlabeled building in the central portion of the Site is labeled G.F. Coombs House Mover. In 1911, a blacksmith was depicted on the southwestern portion of the Site and an auto shed on the southeastern portion of the Site. In 1930, there were two (2) residential apartment buildings (Flats), the blacksmith building was razed, there was a structure on the southern portion of the Site labeled "Old Machines", and a new structure labeled BL SM Wheelwright appeared on the map. In 1950, most of the structures in the southern portion of the Site were razed, along with the former Wheelwright and machine storage. From 1987 to 2004, the Site is depicted with the former commercial office building. Most recently, the Site was improved with a four-story commercial office building that was reportedly built in the early 1980s and contained a footprint of approximately 11,500 square feet, which yielded a total floor area of approximately 46,000 square feet. The building was razed in 2021.

Summary of the Remedial Investigation

The Remedial Investigation (RI) has determined that soil underlaying the entire Site is impacted with volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), and/or metals at depths ranging from 1.0 to 19.0 feet below

ground surface (ft bgs). The estimated volume of soil exceeding the NYSDEC Unrestricted Use Soil Cleanup Objectives (USCOs) is approximately 21,000± to 22,000± cubic yards.

The RI has also identified groundwater underlying the Site is found to be impacted with VOCs, metals, and per- and polyfluoroalkyl substances (PFAS) above the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (AWQSGVs), which may pose a risk to human health. Finally, the RI has determined the presence of petroleum hydrocarbon (PHC) VOCs and chlorinated VOCs (CVOCs) in soil vapor, which present the potential for soil vapor intrusion into proposed developments.

1.0 INTRODUCTION

1 Water Street L.L.C. entered into a Brownfield Cleanup Agreement (BCA) Index No. C360235-06-23 on October 2, 2023 with the New York State Department of Environmental Conservation (NYSDEC) to investigate and remediate the property known as the One Water Street Blacksmith & Wheelwright Site in the Brownfield Cleanup Program (BCP) identified as Site No. C360235 located at 1 Water Street, Westchester County, White Plains, New York (the "Site"). The BCA was further amended on February 14, 2025 (Amendment No. 2) to add 1 Water Street Acquisition LLC as a Volunteer in the BCP. 1 Water Street L.L.C. and 1 Water Street Acquisition LLC, are collectively referred to herein as the "Applicant."

This document consists of a Remedial Investigation Report (RIR). This RIR is a summary of the investigative work that was performed in accordance with the January 14, 2025 Remedial Investigation Work Plan (RIWP), conditionally approved by the NYSDEC on January 24, 2025 and fully approved via email on March 20, 2025. This RIR includes a summary of samples collected in January, August, and September, 2025.

The Remedial Investigation (RI) was completed in accordance with the NYSDEC Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10) to provide a systematic assessment of environmental conditions on the Site. The RI defines the nature and extent of contamination on Site, identifying contaminant source areas, and producing data of sufficient quantity and quality to complete an on-Site exposure assessment and a qualitative off-Site exposure assessment for purposes of designing the remedial action for the Site.

2.0 BACKGROUND

2.1. SITE DESCRIPTION

The Site is located at 1 Water Street, Westchester County, White Plains, New York. The Site was formerly made up of a 1.237-acre area parcel (125.66.2-1.11) that included a 0.059-acre Consolidated Edison utility easement on the southeastern portion of the Site. A BCA Amendment was submitted to exclude the easement, reducing the Site to 1.178 acres in size. The Site is identified as a portion of parcel 125.66.2-1.11 on the Westchester County tax map. The Site

currently has no aboveground buildings or structures. There is a concrete pad and paved parking lot that are associated with the historical four-story commercial building that was razed in 2021.

The Site is currently located in the CB-4 (Core-Business 2) zoning district. The Site is bound to the north by a parking lot that was formerly associated with the Site building with residences beyond, to the west by Ferris Avenue and a municipal service building with the White Plains Fire Department beyond, to the south by Water Street with a New York Metropolitan Transit Authority bus terminal beyond, and to the east by a public parking lot with a Cadillac auto dealer and auto repair shop beyond.

2.2. PROPOSED DEVELOPMENT

The planned redevelopment of the Site entails a 380-unit multifamily apartment project with 4,000 square feet of retail along its Water Street and Ferris Avenue frontages. The proposed construction is an 18-story building consisting of 14 stories of residential apartments over 4 levels of above-grade and 1 level of below-grade parking, with a retail area running along Water Street to the intersection with Ferris Avenue.

2.3. SITE HISTORY

Review of historical Sanborn maps identified the Site historical uses included single-family dwellings on the northern portion of the Site in 1889. From 1894 to 1900 there is also a wagon storage, sheds, a carport, and a dwelling on the southern portion of the Site. In 1905 a previously existing and unlabeled building in the central portion of the Site is labeled G.F. Coombs House Mover. In 1911, a blacksmith was depicted on the southwestern portion of the Site and an auto shed on the southeastern portion of the Site. In 1930, there were two (2) residential apartment buildings (Flats), the blacksmith building was razed, there was a structure on the southern portion of the Site labeled “Old Machines”, and a new structure labeled BL SM Wheelwright appeared on the map. In 1950, most of the structures in the southern portion of the Site were razed, along with the former Wheelwright and machine storage. From 1987 to 2004, the Site is depicted with the former commercial office building. Most recently, the Site was improved with a four-story commercial office building that was reportedly built in the early 1980s and contained a footprint of approximately 11,500 square feet, which yielded a total floor area of approximately 46,000 square feet. The building was razed in 2021.

2.4. PREVIOUS ENVIRONMENTAL INVESTIGATION

2.4.1 ENVIRONMENTAL SAMPLING AND TESTING, SESI MARCH 2018

SESI completed environmental sampling and testing at the Site in conjunction with the geotechnical investigation performed by SESI for the Site in February 2018 (See 2.4.2 below). The investigation included a geophysical survey and the collection of four (4) soil samples from eight (8) geotechnical soil borings advanced during the geotechnical investigation. The results of the investigation identified the following:

- Two (2) of the four (4) soil samples contained several polycyclic aromatic hydrocarbon (PAH) exceedances. Specifically, sample B-2 (2 feet below grade surface [ft bgs]) contained exceedances to the Restricted-Residential Use Soil Cleanup Objectives (RRSCOs) for benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene, and an exceedance of the Residential Use Soil Cleanup Objectives (RSCOs) for chrysene. Sample B-7 (4 ft bgs) contained exceedances of the RRSCOs for benzo(a)anthracene and benzo(b)fluoranthene and an exceedance of the RSCOs for chrysene.
- Two (2) of the four (4) samples, B-7 (4 ft bgs) and B-8 (5 ft bgs), contained exceedances of the Unrestricted Use Soil Cleanup Objectives (USCOs) for one (1) pesticide compound, 4,4'-DDD.
- All four (4) samples contained exceedances for lead, two (2) samples, B-2 (2 ft bgs) and B-7 (4 ft bgs), were above both the RRSCO and Protection of Groundwater Soil Cleanup Objective (PGWSCO). Two (2) samples, B-6 (5 ft bgs) and B-8 (5 ft bgs), were above the USCO. Three (3) samples, B-2 (2 ft bgs), B-6 (5 ft bgs), and B-7 (4 ft bgs), contained exceedances of the USCOs for mercury. Exceedances of the SCOs for other metals were also detected in several samples, namely for aluminum, copper, iron, and zinc
- All four (4) samples contained exceedances of both the USCO and PGWSCO for acetone.

2.4.2 GEOTECHNICAL INVESTIGATION REPORT, SESI MARCH 2018

SESI conducted a geotechnical investigation of the Site in February 2018, with the report submitted in March 2018. The field investigation consisted of the drilling of eight (8) soil borings to depths up to 52± ft bgs. Results of the investigation identified fill that was encountered below the surface materials in all of the borings to depths ranging from 5 to 9± ft bgs. The fill typically consists of brown coarse to fine sand with varying amounts of silt and gravel, with concrete, brick,

ash, cinders, asphalt, and wood. Beneath the existing fill are the natural soil deposits consisting primarily of a brown coarse/medium to fine sand with varying amounts of silt and gravel. Bedrock was encountered in the majority of the borings at depths ranging from 8 to 55± ft bgs. Groundwater was encountered in the geotechnical borings ranging from 9 to 13± ft bgs, which correlates to a groundwater elevation of 180 to183 above mean sea level (amsl).

2.4.3 PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT, SESI MARCH 2018

SESI prepared a Phase I Environmental Site Assessment (ESA) of the Site in March 2018. Results of the ESA identified the following Recognized Environmental Conditions (RECs):

- **REC 1 – Historical Use of the Site:** In the 1930s, the Site was occupied by a blacksmith. Based on the historic presence of the blacksmith. SESI conducted a limited Geotechnical/Environmental investigation of the Site on February 26, 2018. Soil samples that were collected from the historic blacksmith area identified metal levels detected in the soils that are also typically contained in urban fill.
- **REC 2: Historic Fill Material:** Potentially-contaminated historic fill material containing varying amount of brick, concrete, asphalt, and ash was identified at the Site during the SESI February 2018 geotechnical investigation. In addition, the environmental quality of the groundwater present at the Site was unknown and may be subject to environmental impacts based on the historical use of the Site.

2.4.4 PHASE II ENVIRONMENTAL SITE INVESTIGATION REPORT, SESI SEPTEMBER 2022

SESI prepared a Phase II Environmental Site Investigation report dated September 2022. The report summarized the results of environmental soil sampling conducted in February 2018, and soil, soil vapor, and groundwater sampling conducted in June 2021 and June 2022. The report summarized the results of fifty-two (52) soil samples that were collected from thirty-two (32) soil borings, six (6) groundwater samples that were collected from six (6) temporary wells, nine (9) soil vapor samples that were collected from nine (9) temporary vapor points, and two (2) ambient air samples.

The field investigation identified the presence of brick, concrete, asphalt, and ash fragments in soil, indicative of historic fill that extends to an approximate depth of 13 ft bgs. Acetone was identified at concentrations exceeding the USCO in several samples. Polycyclic aromatic

hydrocarbons (PAHs) and metals were identified at concentrations exceeding their respective USCO, RSCO, and/or RRSCO, and pesticides were identified exceeding their respective USCOs. The PAHs, pesticides, and metals exceedances in soil and groundwater, identified across the entire Site, were attributable to the Site's historical blacksmith and wheelwright uses.

The chlorinated volatile organic compounds (VOCs) cis-1,2-dichloroethylene and trichloroethene (TCE) were detected in soil vapor at concentrations exceeding the New York State Department of Health (NYSDOH) Matrix A lower threshold. In addition, several chlorinated solvents, and petroleum hydrocarbon-related VOCs detected in soil vapor across the Site suggested on-Site or nearby source(s) of these compounds are present.

The VOC trichlorofluoromethane was detected in groundwater sample GW-1 at a concentration exceeding its NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (AWQSGVs) and Groundwater Effluent Limitations. Several PAHs, the pesticides pentachlorophenol and 4,4'-DDD, and several metals were detected at concentrations in groundwater exceeding their respective AWQSGVs.

3.0 SITE SETTING

3.1. TOPOGRAPHY

According to the United States Geological Survey (USGS) White Plains, NY, 2013, 7.5-minute Series topographic map, the Site's average topographic elevation is approximately 189 feet amsl. The topographic map indicates that the topographic gradient at the Site slopes downward from north to south, ranging from approximately from 197 feet amsl to 186 feet amsl, respectively.

3.2. SURFACE WATER AND DRAINAGE

There are no surface water bodies or streams on or directly adjacent to the Site. SESI did not observe any areas suspected to be wetlands on the Site. Storm water drainage patterns are generally consistent with the surrounding topography and primarily flow to the south/southwest toward the Bronx River, located about 600 feet to the west of the Site.

3.3. POTABLE WATER SUPPLY AND WELLS

The City of White Plains Department of Public Works (DPW) Bureau of Water provides water service to the Site. According to records provided by DPW, water mains exist in all the streets

adjacent to the Site. According to the City's Annual Drinking Water Quality Report for 2024, the City's water source is the New York City Reservoir System and is drawn from the Kensico Reservoir by Westchester County Water District No. 1 that is located approximately 3 miles north of the Site.

3.4. SURROUNDING LAND USE

A mix of land uses surround the Site. These include governmental and communication facilities, office and research buildings, multifamily housing, retail, personal services, food establishments, and institutional uses. Government and community facilities in the vicinity of the Site include the White Plains Police Department headquarters and White Plains Fire Department Station 4, the Westchester County governmental offices, the White Plains Public Library, as well as state and federal courthouses. Nearby, there are also transportation hubs including the Metro-North Station and Westchester County Bee-Line Bus Terminal.

3.5. NEARBY INFRASTRUCTURE

Water mains, sewer mains, and storm water drains to the Site exist in all adjacent streets. These utilities are at elevations above the groundwater table and therefore are not anticipated to influence contaminant migration.

3.6. GEOLOGY

The surficial geology has been characterized as fill that was encountered below the surface materials to depths ranging from 0.5 to 20.0± ft bgs. The fill typically consists of gray/brown/black coarse to fine sand with varying amounts of silt and gravel, with concrete, brick, ash, asphalt, and wood. Beneath the existing fill are the natural soil deposits consisting primarily of a brown coarse-to-fine sand with varying amounts of clayey silt and gravel. Bedrock was not encountered during the investigation.

3.7. HYDROGEOLOGY

During the remedial investigation groundwater sampling in January 2025 groundwater was encountered between 13.68 and 19.67. Groundwater elevations ranged from 176.68 ft amsl (RI-MW1) on the northern portion of the Site to 176.68 ft amsl (RI-MW-4) on the southern portion of

the Site and 169.67 ± amsl. The direction of groundwater flow has been calculated to flow to the southwest.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

The RI was conducted in accordance with NYSDEC DER-10 and the NYSDEC-approved RIWP. The objective of the RI was to complete the investigation of soil, groundwater, and soil vapor to define the nature and extent of contamination , identify contaminant source areas, and produce data of sufficient quantity and quality to complete an on-Site exposure assessment and a qualitative off-Site exposure assessment for purposes of designing the remedial action for the Site.

4.1. RI SAMPLING SUMMARY

The RI field activities were completed between January 2025 and September 2025. A total of twenty (20) soil borings were drilled and six (6) groundwater monitoring wells and six (6) sub-slab soil vapor points were installed. **Table 4.1** located at the back end of this report includes a summary of the samples collected and their analyses during the remedial investigation. **Figures 4.1, 4.2, and 4.3** present the sample locations for soil, groundwater, and soil vapor, respectively.

The soil and groundwater samples that were collected as part of the RI were analyzed for TCL+30/TAL including metals (USEPA Methods 6010/7471), SVOCs (USEPA Method 8270), VOCs (USEPA Method 8270), PCBs, pesticides (USEPA Methods 8081/8082), PFAS (USEPA EPA Method 1633), and 1,4 dioxane (USEPA Method 8270). Field blanks were collected each day sampling was conducted and trip blanks accompanied all samples analyzed for VOCs. The soil vapor samples were analyzed for VOCs in accordance with EPA Method TO-15.

Analytical results were compared to the applicable standards in effect as of the date of this RIR, including the updated 2025 SCOs.

4.2. INVESTIGATION METHODOLOGY

All the field work was completed under the on-Site observation of a SESI field engineer and the environmental professional engineer (PE). The field work involved advancing soil borings, installation of soil vapor points, and installation of permanent monitoring wells. Disposable field

equipment was utilized to collect soil and groundwater samples. SESI observed the work completed by the following subcontractors:

- PG Environmental Services Inc.: Installed soil borings, monitoring wells, and vapor points utilizing direct-push (Geoprobe) drilling techniques. Conducted ground penetrating radar (GPR) and utility locating.
- SGS North America (NY ELAP Certification #10983) – Analyzed soil, groundwater, and vapor/air samples as per requested analytical methods.

4.3. GREEN SUSTAINABLE REMEDIATION

During the course of the RI field activities, SESI considered NYSDEC DER-31 "Green Remediation" implementation objectives. The NYSDEC DER's approach to remediating sites in the context of the larger environment is a concept known as "Green Remediation". Green Remediation is defined in NYSDEC DER-31 as "the practice of considering all environmental effects of remedy implementation and incorporating options to minimize the environmental footprint of cleanup actions". The approach is intended to improve the overall sustainability of the remediation by promoting the use of more sustainable practices and technologies. Green Remediation practices and technologies are less disruptive to the environment, generate less waste, increase reuse and recycling, and emit fewer pollutants, including greenhouse gases, to the atmosphere. Green Remediation concepts and techniques considered during the remedial investigation included:

- Eliminated idling vehicles and equipment when possible; reducing emission of CO_2, N_2O, CH_4, and other greenhouse gases contributing to climate change;
- Operation of particulate detectors to monitor and minimize dust export of contaminants;
- Operation of VOC detectors to monitor and minimize VOC exposures; and
- Conducting sampling events planned simultaneously to maximize level of efforts while traveling to/from the Site (economy of scale implementing multiple sampling events).

4.4. CAMP IMPLEMENTATION

Particulate and VOC monitoring was conducted in locations upwind and downwind of the RI activities in accordance with the Community Air Monitoring Program (CAMP, Appendix E of the RIWP). No particulate or VOC exceedances were recorded throughout the RI during ground-

intrusive activities. The CAMP data is provided in **Appendix A**.

4.5. INVESTIGATION DERIVED WASTE

All equipment used for sampling purposes was dedicated and disposable. This non-hazardous sampling equipment waste, including macro-core liners, sample tubing, bailers, gloves, bags, paper towels, and personal protective equipment, was double bagged and disposed of as municipal trash by the drilling contractor. Excess soil cores remaining after sampling and water generated from monitoring well sampling were stored in a 55-gallon drums for off-site disposal on a later date.

4.6. SOIL BORINGS AND SAMPLING

Prior to drilling activities, a geophysical survey was conducted across the Site to locate any underground utilities not identified by the one-call system. Between August 22 and 26, 2025, a total of eighty (80) soil samples were collected from twenty (20) soil borings (RI-SB1 through RI-SB20). The borings were advanced utilizing direct-push to 20 ft bgs. Soil samples were collected utilizing macro-core samplers. Samples for laboratory chemical analyses were collected based on field screening, which included visual and olfactory observations and screening with photo-ionization detector (PID). **Table 4.1** at the back end of this report presents a summary of soil samples collected and their analyses. **Figure 4.1** depicts the soil boring locations. The soil boring logs are provided in **Appendix B**.

4.7. MONITORING WELL INSTALLATIONS

On January 27 and 28, 2025, six (6) groundwater monitoring wells were installed to investigate the Site's groundwater. Monitoring wells were installed using direct-push drilling equipment and constructed utilizing 2-inch PVC pipe with 10-slot (0.010 inches) screen. Bentonite about 1 foot thick was then placed on top of the filter sand and the remaining annular space around the PVC riser was grouted with cement/bentonite mix. The wells were subsequently completed with protective steel manholes as flush mount. **Figure 4.2** depicts the monitoring well locations. The monitoring well construction logs are provided in **Appendix B.**

The monitoring wells were developed until the purge water being pumped was free of sediment, or the well no longer had groundwater present, whichever was encountered first. The development water was collected in drums for disposal off-Site at a later date.

4.8. GROUNDWATER SAMPLING

On January 29 and 30, 2025, the monitoring wells were gauged and sampled in accordance with USEPA low flow sampling procedures. Approximately three (3) well volumes were purged, and the purge water was piped to a "flow cell," where groundwater geochemical parameters such as pH, redox potential, specific conductance, dissolved oxygen, salinity and turbidity were measured at three (3) minute intervals. Drawdown during the well sampling was also measured. Field parameters including pH, dissolved oxygen, turbidity, specific conductance and oxidation/reduction potential (ORP) were measured. "Redi-flow" purging techniques were implemented to achieve stabilization. Groundwater samples were collected once the geochemical parameters stabilized for three consecutive readings. **Table 4.1** at the back end of this report presents a summary of groundwater samples collected and their analyses. **Appendix C** includes the purge data for the groundwater monitoring wells.

Groundwater contour maps were developed using well gauging and surveying data. A groundwater contour map depicting the groundwater flow direction is included as **Figure 4.4**. This map depicts groundwater flowing in a southwesterly direction across the Site.

4.9. SOIL VAPOR INVESTIGATION

Between August 27 and September 2, 2025, SESI collected six (6) sub-slab vapor samples (RI-SV1 through RI-SV6) across the Site. **Figure 4.3** depicts the soil vapor sample locations. Soil vapor implants were installed using a direct push Geoprobe® to attain the desired depths. Porous, inert backfill packer sand was used to create a sampling column around each vapor point. The implants were fitted with inert Teflon® tubing to the surface. Soil vapor probes were sealed above the sampling zone with a bentonite slurry. Soil vapor probes were installed with an adequate surface seal to prevent outdoor air infiltration at each sampling location.

As a quality assurance/quality control check, a shroud and helium tracer gas was used at each vapor point prior to sampling. Prior to sampling, the soil vapor points were purged three (3) times the volume of the sample probe and tube. Soil vapor and ambient air samples were collected in accordance with the Guidance for Evaluating Soil Vapor Intrusion in the State of New York into certified 6-L Summa® canisters provided by the laboratory. **Table 4.1** at the back end of this report

presents a summary of soil vapor samples collected and their analyses. The soil vapor sampling logs are presented in **Appendix D.**

5.0 REMEDIAL INVESTIGATION RESULTS

For purposes of evaluating the remedial alternatives associated with the proposed Site redevelopment, the analytical results of the soil samples were compared to the 2025 updated NYSDEC SCOs as presented on **Table 5.1** at the back end of this report. Soil exceedances of the SCOs are presented on **Tables 5.2, 5.3**, and **5.4** below. The constituent concentrations in groundwater were compared to the applicable NYSDEC AWQSGVs as presented on **Table 5.5** at the back end of this report. A summary of groundwater results exceeding the AWQSGVs is presented on **Table 5.6** below. The sub-slab soil vapor data where applicable was compared to the NYSDOH Decision Matrices as presented on **Table 5.7** at the back end of this report. A summary of sub-slab soil vapor detections is presented on **Table 5.8** below. Sampling locations and concentrations maps for soil, groundwater, and sub-slab soil vapor are identified in **Figures 4.1, 4.2, and 4.3**, respectively. The laboratory data packages for soil, groundwater, and sub-slab soil vapor results are included as **Appendix E**. The Data Usability Summary Report (DUSR) and verification of electronic data deliverable (EDDs) are included as **Appendix F**. The goal of the remedial investigation and remedial actions for the Site is to achieve a “Track 1” cleanup of soil to the USCOs and the AWQSGVs for groundwater.

5.1. SOIL INVESTIGATION RESULTS

The analytical results of the soil samples were compared to the NYSDEC RRSCOs, USCOs, and PGWSCOs, as presented on **Table 5.1** at the back end of this report. A summary of the SCO exceedances in soil is described below.

Volatile Organic Compounds

As shown on **Table 5.2** below and **Figure 4.1**, the results of the RI soil sampling detected acetone (0.348 mg/kg maximum) in soil samples across the Site to depths ranging from 2.0 to 18.0 ft bgs at concentrations exceeding the applicable SCOs.

Semi-Volatile Organic Compounds

As shown on **Table 5.2** below and **Figure 4.1**, the results of the RI soil sampling detected benzo(a)anthracene (6.81 mg/kg maximum), benzo(a)pyrene (10.6 mg/kg maximum), benzo(b)fluoranthene (14.2 mg/kg maximum), benzo(g,h,i)perylene (13.6 mg/kg maximum), benzo(k)fluoranthene (2.24 mg/kg maximum), chrysene (8.23 mg/kg maximum), dibenzo(a,h)anthracene (2.28 mg/kg maximum), indeno(1,2,3-cd)pyrene (7.65 mg/kg maximum, and phenanthrene (11.3 mg/kg maximum) in soil samples across the Site to depths ranging from 2.0 to 15.0 ft bgs at concentrations exceeding the applicable SCOs.

6.0 REMEDIAL INVESTIGATION FINDINGS AND SUMMARY

6.1. CONCEPTUAL SITE MODEL

The applicable standards criteria and guidance (SCGs) for Site soil are the NYSDEC SCOs. The overall depth of impacted soils ranged from 1.0 to 18.0 ft bgs. VOC impacts exceeding the SCOs were identified to depths ranging from 2.0 to 18.0 ft bgs across the Site. SVOC impacts exceeding the USCOs were identified to depths ranging from 2.0 to 15.0 ft bgs across the Site. Pesticide impacts exceeding the SCOs were identified to depths ranging from 1.0 to 13.75 ft bgs across the Site. PCB impacts exceeding the SCOs were identified in shallow soils in one (1) area near the southeastern corner of the Site to depths ranging from 3.0 to 3.5 ft bgs. Metal impacts exceeding the SCOs were identified to depths ranging from 1.0 to 16.5 ft bgs across the Site.

The applicable SCGs for Site groundwater are the NYSDEC TOGS 1.1.1 AWQSGVs. The Site's groundwater has been impacted with VOCs, metals, and PFAS above the AWQSGVs Site-wide as a result of the historical land uses. The pathway of the contaminated groundwater to human receptors is limited to the ingestion of the groundwater or direct exposure through excavation work. Groundwater in this area of White Plains is not used for drinking. The impacted Site groundwater is not likely to have an ecological pathway.

The PHC VOCs and CVOCs detected in soil vapor may result in soil vapor intrusion into the future on-Site buildings. A vapor intrusion evaluation will be needed for this Site's proposed enclosed areas to determine the extent of vapor intrusion and the potential need for mitigation.

6.2. HUMAN HEALTH EXPOSURE ASSESSMENT

This exposure assessment discusses potential migration routes by which contaminants in the environment may be able to reach human receptors in accordance with NYSDEC DER-10 sections 3.14(c)17, 3.3(c)4 and Appendix 3B. This discussion is based on current and hypothetical future Site conditions at the investigation area.

An exposure assessment must evaluate five (5) elements that comprise an exposure pathway. A complete exposure pathway includes the following:

1. A description of the contaminant source. If the original source is unknown, then a description of the contaminated environmental medium at the point of exposure;
2. An explanation of the transport mechanism;
3. An identification of all potential exposure points;
4. A description of the exposure route at the contact point; and
5. A receptor population.

There are some exposure pathways related to the contamination if left unaddressed:

- The exposure pathway can be through direct physical contact with the discharged products or contact with the impacted soils. However, the soil source will be removed through implementation of the Remedial Action Work Plan (RAWP).
- Metals exceedances of the SCOs in the Site soil that consist of contaminated fill from 1.0 to approximately 16.5 feet below grade pose a risk to human health. The exposure pathway to humans can be through direct dermal contact with the contaminated soils or incidental ingestion.
- The pathway into groundwater can be through direct physical contact with the discharged products or contact with the impacted soils. The soil source impacting groundwater will be removed through implementation of the RAWP.
- The PHC VOC and CVOC levels in the Site soil vapors were detected at concentrations that may cause a vapor intrusion risk. The exposure route for soil vapor is through the inhalation of the contaminated soil vapor that may intrude into the enclosed spaces of any planned Site development.

ON-SITE ASSESSMENT

Soil

Potential routes of exposure to impacted soil include dermal contact, ingestion, and inhalation of soil particulates. At present, potential exposure points have been eliminated by restricting public

access to the Site through fencing. During future construction activities, specifically, the disturbance of soils during remedial construction, the potential for exposure to soils would increase for on-Site workers, utility workers, visitors, and trespassers.

VOCs, SVOC, PCBs, pesticides, PFAS, and metals exceedances of the SCOs in the Site soil from 1.0 to approximately 18.0 ft bgs pose a potential risk to human health if left unaddressed. The exposure pathway to humans can be through direct dermal contact with the contaminated soils or incidental ingestion without the implementation of the remedial action. However, these potential exposures to workers will be mitigated through the implementation of the Health and Safety Plan and use of personal protective equipment, and the soil source will be removed and/or capped under a cover system through the implementation of a future RAWP. Dust generation will be managed in accordance with the CAMP during excavation operations through the use of a water truck and truck wash at the point trucks exit the Site and monitored by air monitoring stations upgradient and downgradient of future excavation activities.

Groundwater

There are potential groundwater exposure pathways as well when considering the mapped groundwater flow directions. The groundwater flow directions located in both the overburden and bedrock sub-surfaces are depicted to be approximately southwest on **Figure 4.4**.

The groundwater sampling has identified primarily metals and PFAS compounds exceeding the AWQSGVs. Potential groundwater exposure points include dermal contact and inhalation of vapors. However, the City of White Plains utilizes municipal treated water (not groundwater) for drinking purposes; therefore, ingestion of on-Site groundwater as a potential exposure point may be eliminated from further evaluation with adequate treatment. The City of White Plains water source is the New York City Reservoir System and is drawn from the Kensico Reservoir by Westchester County Water District No. 1, which is located approximately 3 miles north of the Site. Therefore, no groundwater from the area of the Site is utilized. In addition, pursuant to Chapter 873, Article VII of the Westchester County local ordinance law the use of groundwater in Westchester County is prohibited.

Potential exposure through dermal contact and vapor inhalation could arise during future excavation, redevelopment, or utility repairs where workers, visitors, or trespassers may be

exposed to on-Site groundwater. The Site currently has no aboveground buildings or structures; therefore, a potential vapor inhalation exposure pathway does not currently exist.

During the Site remediation, dewatering will be implemented during the excavation work where groundwater is encountered in order to prevent direct contact with the groundwater. The water will be properly contained, treated and disposed off-Site either in the City of White Plains sewer or shipped to an approved off-Site treatment facility. Further groundwater remediation will aim to mitigate potential groundwater and vapor concerns and try to reduce contamination to levels below the AWQSGVs or to asymptotic levels. If groundwater is discharged to the sanitary sewer, a groundwater remediation permit will be obtained for the Westchester County.

Surface Water and Sediment

Surface water and sediment is not present on the Site. Thus, this exposure pathway may be eliminated from further evaluation. However, construction water and or rainwater will be contained or managed appropriately so as to not to become a source of contamination to groundwater or surface water at the Site.

Soil Vapor

PHC VOCs and CVOCs are detected in soil vapor; therefore, there is potential exposure to future building occupants through vapors entering enclosed spaces in future structures and impacting indoor air quality. Currently, all potential human receptors are restricted from entering the Site by fencing. The Site currently has no aboveground buildings or structures; therefore, a potential exposure pathway does not currently exist. Following Site remediation and redevelopment, the planned excavation of the most contaminated source areas on the Site, combined with vapor mitigation measures, such as the installation of a sub-slab depressurization system will address this potential exposure pathway.

OFF-SITE ASSESSMENT

Soil

Potential routes of exposure to impacted soil include dermal contact, ingestion, and inhalation of soil particulates. Workers at off-Site properties are protected from these potential exposure routes by the covers systems on these properties.

Groundwater

No known monitoring, irrigation, or potable wells are located on properties adjacent to the Site. According to Chapter 873, Article VII of the Westchester County local ordinance law the use of groundwater in Westchester County is prohibited. Additionally, per a search of the immediate surrounding areas, there are no potential receptors immediately adjacent to the Site. The nearest water body is the Bronx River located approximately 600 feet to the west of the Site.

The greatest concentration of PFAS compounds were detected in monitoring well RI-MW-2 located on the northwestern portion of the Site. Due to the proximity of the monitoring well RI-MW-2 to the western property boundary, it is possible that groundwater contamination may have migrated on-Site from the upgradient White Plains Fire Department.

Soil Vapor

PHC VOCs and CVOCs detected in soil vapor samples can result in an SVI exposure pathway to off-Site buildings if not addressed. The remedial action workplan will propose a remedy that will address removal of all soil exceeding the SCOs and the treatment of groundwater, thereby eliminating any sources of VOCs on-Site that may be contributing to soil vapor concerns.

6.3. FISH AND WILDLIFE IMPACT ANALYSIS

The Site does not contain any ecologically sensitive resources and hence the contaminated soils are not expected to have any impacts on any ecological resources.

6.4. DATA USABILITY SUMMARY REPORT

To validate laboratory analytical data, Data Usability Summary Reports (DUSR) for each laboratory analytical data package will be prepared. To ensure that the field sampling and laboratory analytical practices were acceptable, the data associated with all samples will be validated by a third party in accordance with requirements of DER-10.

The DUSR will include data sets from this phase of the remedial investigation. The DUSR will be carried out as specified in DER-10 to evaluate the quality control measures that were implemented during the field and laboratory analytical programs, with the objective of determining whether the reported analytical data are representative and usable for decision making. The

DUSR will evaluate whether the data are technically defensible (i.e. were all analytical data requirements met and documented?). Data usability analysis reviews the Site data to determine whether they are adequate to draw conclusions regarding the nature and extent of contamination.

The items that will be reviewed as part of the DUSR include the following:

- Completeness (number of samples collected and analyzed compared to plans)
- Chains of custody are complete and accurate
- Holding times
- Instrument calibration
- Relative percent difference between field duplicates
- Reasonableness of data (e.g. relationships between total and soluble analytes)
- Blank contamination

The DUSR for the soil, groundwater, and soil vapor samples analyzed by SGS will be included as Appendix F.

In addition, the data will be submitted to the NYSDEC approved Electronic Data Deliverable (EDD) format. Verification of the EQuIS™ data submission and acceptance will be provided in **Appendix F**.

6.5. RECOMMENDATIONS

SUMMARY OF RI RESULTS

The RI built on prior investigations to complete the nature and extent delineation of all on-Site media contamination as required to determine a remedial action for the Site. Track 1 through 4 cleanup remedies will be evaluated in the Remedial Action Workplan (RAWP), although the Track 1 Cleanup is expected to be used for this Site.

The RI has determined that soil underlaying the entire Site is impacted with VOCs, SVOCs, pesticides, PCBs, and/or metals at depths ranging from 1.0 to 19.0 ft bgs.
The RI has also identified groundwater underlying the Site is found to be impacted with VOCs, metals, and PFAS above NYSDEC AWQSGVs, which may pose a risk to human health. Finally,

the RI has determined the presence of PHC VOCs and CVOCs in soil vapor, which present the potential for soil vapor intrusion into proposed developments.

In order to render the Site usable for future development, the RAWP will address remedial alternatives to limit human health and environmental as well as ecological exposure to the impacted soil and groundwater from on-Site sources. It will also address alternatives to mitigate exposures to any VOC-impacted soil vapor intrusion into the proposed development.

DATA LIMITATIONS AND RECOMMENDATIONS FOR FUTURE WORK

The RI results provide sufficient data to develop a feasible, conceptual remedy for the impacted groundwater, soils, and soil vapor. If required by NYSDEC and NYSDOH, additional investigation(s) may be conducted to refine design elements of the RAWP.

RECOMMENDED REMEDIAL ACTION OBJECTIVES

The RI has determined that remedial action needs to be implemented to remediate the contaminated soil and groundwater and mitigate potential vapor intrusion risks. Specific remedial alternatives will be fully evaluated in the RAWP.

7.0 DEVIATIONS FROM THE RIWP

There were no notable deviations from the RIWP.

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RRSCOs, and NYSDEC PGWSCOs.
3. Sample Depth is reported in feet below ground surface.

= concentration exceeds USCO
= concentration exceeds RRSCO
= concentration exceeds PGWSCO

U: concentration not detected.
J: indicates an estimated value.

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives
RRSCO = NYSDEC Restricted Use Soil Cleanup Objectives w/CP-51
PGWSCO = NYSDEC Protection of Groundwater Soil Cleanup Objectives
mg/kg = Miligrams per kilogram

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RRSCOs, and NYSDEC PGWSCOs.
3. Sample Depth is reported in feet below ground surface.

	= concentration exceeds USCO
	= concentration exceeds RRSCO
#	= concentration exceeds PGWSCO

U: concentration not detected.
J: indicates an estimated value.

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives
RRSCO = NYSDEC Restricted Use Soil Cleanup Objectives w/CP-51
PGWSCO = NYSDEC Protection of Groundwater Soil Cleanup Objectives
mg/kg = Miligrams per kilogram

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RRSCOs, and NYSDEC PGWSCOs.
3. Sample Depth is reported in feet below ground surface.

	= concentration exceeds USCO
	= concentration exceeds RRSCO
#	= concentration exceeds PGWSCO

U: concentration not detected.
J: indicates an estimated value.

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives
RRSCO = NYSDEC Restricted Use Soil Cleanup Objectives w/CP-51
PGWSCO = NYSDEC Protection of Groundwater Soil Cleanup Objectives
mg/kg = Miligrams per kilogram

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RRSCOs, and NYSDEC PGWSCOs.
3. Sample Depth is reported in feet below ground surface.

= concentration exceeds USCO
= concentration exceeds RRSCO
= concentration exceeds PGWSCO

U: concentration not detected.
J: indicates an estimated value.

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives
RRSCO = NYSDEC Restricted Use Soil Cleanup Objectives w/CP-51
PGWSCO = NYSDEC Protection of Groundwater Soil Cleanup Objectives

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RRSCOs, and NYSDEC PGWSCOs.
3. Sample Depth is reported in feet below ground surface.

	= concentration exceeds USCO
	= concentration exceeds RRSCO
#	= concentration exceeds PGWSCO

U: concentration not detected.
J: indicates an estimated value.

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives
RRSCO = NYSDEC Restricted Use Soil Cleanup Objectives w/CP-51
PGWSCO = NYSDEC Protection of Groundwater Soil Cleanup Objectives
mg/kg = Miligrams per kilogram

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RRSCOs, and NYSDEC PGWSCOs.
3. Sample Depth is reported in feet below ground surface.

	= concentration exceeds USCO
	= concentration exceeds RRSCO
#	= concentration exceeds PGWSCO

U: concentration not detected.
J: indicates an estimated value.

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RRSCOs, and NYSDEC PGWSCOs.
3. Sample Depth is reported in feet below ground surface.

	= concentration exceeds USCO
	= concentration exceeds RRSCO
#	= concentration exceeds PGWSCO

U: concentration not detected.
J: indicates an estimated value.

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives
RRSCO = NYSDEC Restricted Use Soil Cleanup Objectives w/CP-51
PGWSCO = NYSDEC Protection of Groundwater Soil Cleanup Objectives
mg/kg = Miligrams per kilogram

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RRSCOs, and NYSDEC PGWSCOs.
3. Sample Depth is reported in feet below ground surface.

	= concentration exceeds USCO
	= concentration exceeds RRSCO
#	= concentration exceeds PGWSCO

U: concentration not detected.
J: indicates an estimated value.

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives
RRSCO = NYSDEC Restricted Use Soil Cleanup Objectives w/CP-51
PGWSCO = NYSDEC Protection of Groundwater Soil Cleanup Objectives
mg/kg = Miligrams per kilogram

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDEC USCOs, NYSDEC RRSCOs, and NYSDEC PGWSCOs.
3. Sample Depth is reported in feet below ground surface.

	= concentration exceeds USCO
	= concentration exceeds RRSCO
#	= concentration exceeds PGWSCO

U: concentration not detected.
J: indicates an estimated value.

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives

(a) Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.
(b) More than 40 % RPD for detected concentrations between the two GC columns.
(c) Elevated detection limit due to dilution required for high interfering element.
(d) Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
(e) Associated CCV outside of control limits high.
