**Re: Phase I Environmental Site Assessment**
***Brookfield Commons Phase 3 – White Plains, New York***
***AKRF Project Number: 210122***

Dear Musa:

AKRF, Inc. (AKRF) is pleased to submit this Phase I Environmental Site Assessment (ESA) Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, and an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13, unless noted otherwise in Section 8.0: "Limitations and Data Gaps."

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,

Rebecca A. Kinal, P.E.
Vice President

Gregory Baird
Senior Professional

# EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Trinity New York Development, LLC (Trinity) to prepare a Phase I Environmental Site Assessment (ESA) of the property located 159 South Lexington Avenue (part of White Plains Tax Block 7 Lot 1 Section 125.83) in White Plains, Westchester County, New York, hereinafter referred to as the "Property." At the time of reconnaissance, the Property was developed with a nine-story apartment building with a basement and surrounding lawns and walkways, which were part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The remainder of the complex was located to the north and east of the Property. The surrounding area was mixed-use, including residential and commercial uses, a filling station, a hospital, churches, and municipal buildings.

The objective of this assessment was to identify any potential environmental concerns associated with the Property resulting from past or current site usage or the usage of neighboring properties. Historical Sanborn maps indicated that the Property was vacant in 1900. Between 1900 and 1942, the Property was developed with small residential buildings and associated garages, multiple three to four-story apartment buildings, an upholster and an auto repair shop with two garages. These structures were demolished for construction of the existing apartment building and grounds, which were constructed in 1949-1950 as part of the Winbrook housing complex.

This Phase I ESA was performed in conformance with the American Society for Testing and Materials (ASTM) Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice,* which satisfies the United States Environmental Protection Agency's (EPA's) "all appropriate inquiries" (AAI) requirement for landowner liability defenses under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC, Controlled REC and *De Minimis* Condition.

A summary of the assessment findings is presented below.

***Recognized Environmental Conditions***

- Historical land uses on the Property included auto repair and an upholster.
- Numerous nearby active- and closed-status petroleum spills, petroleum bulk storage facilities, hazardous waste generators (including generators of chlorinated solvents), and a State Brownfield Cleanup Program Site were reported in regulatory databases, including closed-status spills located on off-site areas of the Winbrook complex.
- Active-status New York State Department of Environmental Conservation (NYSDEC) Spill No. 9713110 was reported at a former filling station at 26 East Post Road, approximately 100 feet south of the Property. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling station onto the Winbrook complex (south-adjacent parking lot of the Property). Remedial activities included removal of contaminated soil, groundwater, and soil vapor, and installation and sampling of numerous groundwater monitoring wells. Groundwater sampling of wells associated with this spill in August and November 2016 did not identify significant concentrations of petroleum-related volatile organic compounds (VOCs) in the wells located on the Property. However, some wells on the Winbrook complex contained chlorinated VOCs, including tetrachloroethylene (PCE) at up to 1,000 parts per billion (ppb) and trichloroethene (TCE) at up to 55 ppb. The source of these chlorinated VOCs has not been identified.

- Active-status NYSDEC Spill No. 1608924 was reported in September 2015 at the gas station at 34 East Post Road, approximately 90 feet southeast of the Property. According to the listing and information provided to AKRF, soil and groundwater contamination was reported downgradient of this facility, and additional investigations were conducted in 2014-2016. Listing detail indicated: a Consent Order was executed by the NYSDEC in February 2018; a Remedial Action Work Plan was submitted to the NYSDEC in January 2019; and, as of August 2019, the City of White Plains intended to take over ownership of the property through the eminent domain process. Three additional closed-status spills were reported at this address.

***De Minimis Condition***

- Demolition debris from historical structures on the Property and/or fill materials of unknown origin may be present in the subsurface.
- Chemical storage at the Property included two 5-gallon bucket of hydraulic oil, and cleaning and maintenance chemicals in containers up to one-gallon, which were stored in the basement. The observed chemicals were generally neatly stored and labeled

***Other on-site environmental concerns [items outside the scope of E1527-13 like asbestos-containing materials (ACM), lead-based paint (LBP) and/or Polychlorinated Biphenyls (PCBs) in building materials or fill/debris]***

- Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic compactor equipment may contain PCBs. In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury.
- Suspect ACM were observed at the Property. Suspect ACM were noted to be in generally good to damaged condition. ACM may also be present in demolition debris in the subsurface at the Property.
- Based on the age of the Property building, LBP may be present on indoor and/or outdoor surfaces. Painted surfaces were observed to be in generally god to fair condition. LBP may also be present in demolition debris in the subsurface at the Property.

***Potential for Vapor Encroachment***

- This Phase I assessment identified a potential for subsurface vapors, and thus a potential for vapor encroachment into current or future buildings at the Property, based on the RECs noted above.

***Recommendations***

- Based on the RECs identified, a Phase II (Subsurface Investigation) is recommended.
- During any future renovation/redevelopment activities requiring subsurface soil disturbance, all excavated soil requiring off-site disposal should be managed in accordance with applicable regulatory requirements. All soil and any other materials intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal should be in accordance with federal, state, and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- If any underground storage tanks (USTs) are discovered during redevelopment activities, the tanks should be registered with NYSDEC, and closed and removed from the Property in accordance with city, state, and federal rules and regulations. Any petroleum contamination associated with the tanks identified in the subsurface should be removed from the Property and transported to a state-licensed disposal facility, and any petroleum spill should be reported to the NYSDEC Spills Hotline.
- Any known or suspect ACM needs to be maintained in good condition in accordance with applicable regulations. Prior to demolition with the potential to disturb known or suspect ACM, known ACM

should be removed and, where suspect ACM are present, an asbestos survey of the areas to be disturbed should be conducted. Any ACM that would be disturbed should be removed and disposed of in accordance with local, state, and federal requirements.

- Any renovation or demolition activities with the potential to disturb LBP must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—*Lead Exposure in Construction*). If the Property is visited regularly by children under 6 years of age, the building may be considered a Child Occupied Facility by EPA.
- Unless there is labeling or test data indicating that electrical equipment, fluorescent lighting fixtures, and hydraulic equipment in the building do not contain PCBs, and that electrical equipment and fluorescent lamps are not mercury-containing, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- All excess chemicals or other wastes or surplus materials should be properly disposed of in accordance with applicable requirements.

# 1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Trinity New York Development, LLC (Trinity) to prepare a Phase I Environmental Site Assessment (ESA) of the property located 159 South Lexington Avenue (part of White Plains Tax Block 7 Lot 1 Section 125.83) in White Plains, Westchester County, New York, hereinafter referred to as the "Property." At the time of reconnaissance, the Property was developed with a nine-story apartment building with a basement and surrounding lawns and walkways, which were part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The remainder of the complex was located to the north and east of the Property. The surrounding area was mixed-use, including residential and commercial uses, a filling station a hospital, churches, and municipal buildings. A Property location map and Property detail plan are provided as Figures 1 and 2, respectively.

The scope of services for this assessment was in conformance with the American Society for Testing and Materials (ASTM) Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice)*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) were conducted to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs); drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; and/or stressed vegetation, leaks, and odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint. However, no samples were collected or analyzed, and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (EPA) guidelines.
- Historical fire insurance maps for the Property and nearby properties were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and properties within the ASTM-specified radii: the National Priority List (NPL); Superfund Enterprise Management System (SEMS); CORRACTS (Corrective Actions Report); RCRIS (Resource Conservation and Recovery Information System); and Emergency Response Notification System (ERNS). Federal ASTM supplemental records reviewed included Toxic Chemical Release Inventory System (TRIS); Delisted NPL (National priority List Deletions); and United States Brownfields; and EDR Historic Auto and Historic Cleaner Listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the Property, adjacent properties, and properties within a predetermined study area; hazardous material spills (SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); New York Brownfield Cleanup Program (BCP); and Registered Dry Cleaners.

- Local agency reviews, including online Buildings and Tax and Zoning Department records were conducted for the Property only.

# 2.0 PHYSICAL SITE DESCRIPTION

Visual inspection of the Property was performed on April 23, 2021 by Mr. Gregory Baird of AKRF, accompanied by Mr. Luis Sanchez of the White Plains Housing Authority (WPHA), who answered pertinent questions. At the time of the inspection, the weather was sunny and approximately 40ºF with good visibility. The Property was inspected for the presence of stained surfaces and soil, evidence of storage tanks, drums, leaking pipes, transformers, and any other evidence of hazardous material usage and storage on-site. Neighboring properties were also viewed, but only from public rights-of-way. Photographs documenting the inspection are included in Appendix A.

## 2.1 General Site Conditions

The Property was developed with a nine-story apartment building with a basement and was surrounded by lawns and asphalt-paved walkways. The building was heated by steam provided by an off-site heating plant, illuminated by fluorescent and incandescent lights, and served by two cable-driven electrical elevators. The Property is located in the southwest portion of a multi-story apartment building complex identified as Brookfield Commons or Winbrook, with a collective address of 223 Dr. Martin Luther King Jr. Boulevard.

The building's ground floor contained a lobby, a slop sink room, a mail room, and apartments. One vacant apartment on the ground floor was entered; it contained a kitchen, bedrooms, living room, and bathroom.

The basement contained a trash compactor room, a utility meter room, a steam equipment room, and a large open space used for storage. Each floor had a trash chute in the corridor leading to the trash compactor room in the basement. The steam equipment room contained a gas-fired hot water heater, two insulated hot water tanks, and pipes used to supply the steam heat and return condensate water to the off-site boiler. Apparent water staining was noted on the concrete floor near the hot water storage tanks and throughout the large storage area. Sump pumps were observed in the open storage space; no evidence of oil or sheen was noted on the water in the sump.

Two 5-gallon buckets of hydraulic oil were observed in the trash compactor room, along with a 5-gallon hydraulic tank and associated hoses, which served the trash compactor. Dirt and general refuse were observed on the floor of the trash compactor room. Chemical storage in the basement included cleaning and maintenance chemicals in containers up to one gallon. No staining was noted near the stored chemicals.

A two-level structure occupied by a stairwell bulkhead and the elevator motor room was located on the roof. The roof was covered with gravel mixed with tar; the underlying roofing was not visible. Rubberized and bituminous flashing was noted on the parapet around the edges of the roof. The visible roofing materials were in good condition.

Interior finishing materials consisted of concrete, ceramic tile, and vinyl tile flooring; concrete, drywall, plaster, and ceramic tile walls; and concrete, drywall, and plaster ceilings. These materials were observed to be in good to damaged condition. Peeling paint was noted in the corridors at the trash chutes and in the basement.

The on-site lawns and walkways surrounding the building were noted to be in good condition, with no odors, staining, or evidence of petroleum storage tanks. Based on plans for the Winbrook complex provided by WPHA, floor drains and storm drains on the Property were connected to the municipal sewer system.

## 2.2 Topography and Hydrogeology

The Property is located at the southern end of a topographic depression, with surrounding land sloping slightly down toward it from the southeast and southwest. Based on reports compiled by the U.S. Geological Survey (White Plains, NY Quadrangle), the Property is approximately 200 feet above the North American Vertical Datum of 1988, an approximation of mean sea level.

Based on previous studies, groundwater in the vicinity of the Property is anticipated to be approximately 5 to 8 feet below grade, flowing in a northwesterly direction toward the Bronx River, located approximately 1,600 feet away. However, actual groundwater flow at the Property can be affected by many factors, including past filling activities; underground utilities; other subsurface openings or obstructions such as basements; and other factors beyond the scope of this study. According to the 2014 Annual Water Quality Report prepared by the City of White Plains Department of Public Works, groundwater supply wells formerly providing potable water for White Plains were decommissioned in 2009. The City of White Plains was subsequently supplied with potable water from a reservoir in the NYC potable water supply system.

## 2.3 Storage Tanks

### 2.3.1 Underground Storage Tanks (USTs)

A review of regulatory databases did not reveal records of current underground petroleum storage at the Property.

During the reconnaissance, no evidence, such as vent pipes, fill caps, or concrete patches, was observed that would indicate USTs are or were present on the Property.

Off-site USTs are discussed in Section 6.2.2.

### 2.3.2 Aboveground Storage Tanks (ASTs)

No records pertaining to ASTs on the Property were identified in the regulatory database. During the reconnaissance, no evidence of ASTs, such as vent pipes, fill ports, tanks, or vaults, was noted on the Property.

Off-site ASTs are discussed in Section 6.2.2.

## 2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, PCBs, which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic trash compactor equipment may contain PCBs. In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury. No leaks or stains from such equipment and fixtures was noted.

## 2.5 Lead-Based Paint (LBP)

LBP was generally not used inside residential buildings after 1977 nationwide. After 1977, its use inside commercial structures was also restricted and its use elsewhere became less common, but LBP may still sometimes be used outdoors. LBP can present a hazard, particularly to children, especially when it is in poor condition.

Painted surfaces in the accessible areas were observed to be in good to fair condition. Based on the age of the building, lead-based paint may be present on interior painted and exterior painted

surfaces (e.g., painted brick walls). During the reconnaissance, the apartment building was occupied and children were observed at the Property.

Activities (such as renovation or demolition) with the potential to disturb LBP are subject to a variety of requirements, including United States Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.62 (Lead Exposure in Construction). If the Property building is occupied for residential or childcare uses, additional requirements (e.g., tenant notification, inspections, and abatement) may apply, even if no disturbance is planned.

### 2.6 Utilities

The Property was supplied with natural gas and electricity by Consolidated Edison and was connected to the municipal water and sewer systems.

### 2.7 Waste Management and Chemical Handling

Chemical storage at the Property included two 5-gallon buckets of hydraulic oil, a 5-gallon hydraulic tank and cleaning and maintenance chemicals in containers up to one gallon, that were stored in the basement trash compactor room. According to Mr. Sanchez, proper disposal of waste chemicals is arranged by the WPHA. The observed chemicals were stored on the floor and labeled, with no evidence of a release.

General refuse was collected from the trash compactor and disposed of by the WPHA.

### 2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. According to a New York State Department of Health database, the average radon level in White Plains is 2.87 picocuries/liter in basements and 3.70 picocuries/liter on ground floors, both below the USEPA recommended action level of 4.0 picocuries/liter.

## 3.0 PREVIOUS STUDIES

*Phase I Environmental Site Assessment (ESA), 135 South Lexington Avenue, AKRF, Inc. – June 2017*

AKRF completed a Phase I ESA in June 2017 of the north-adjacent site, also part of the Winbrook public housing apartment complex. The Phase I ESA revealed the following Recognized Environmental Conditions (RECs) and Controlled RECs:

***Recognized Environmental Conditions (RECs)***

- Historical land uses in the vicinity of the site included the White Plains Hospital, auto sales, auto and bicycle repair shops, filling stations and stores with gasoline USTs, woodworking and painting shops, dry cleaners, a rug cleaner, undertakers, sheet metal works, electrical businesses, and a printer. A reconnaissance of the surrounding area also identified the hospital, active and former filling stations, auto repair shops, car dealerships, two laundries (including one identified on historical land use maps and in the regulatory database as a dry cleaner), and a hardware shop with a glass cutting service in close proximity to the Property.
- Numerous active- and closed-status spills, petroleum bulk storage facilities, hazardous waste generators (including generators of chlorinated solvents), and a State Brownfield Cleanup Program Site with some potential to affect the site were reported in regulatory databases.
- One of the spills reported near the site was active-status spill No. 9713110 at a former filling station at 26 East Post Road, approximately 100 feet south of the site. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling

station onto the Winbrook complex. Remedial activities included removal of contaminated soil and installation and sampling of numerous groundwater monitoring wells. The nearest of these wells were located approximately 60 to 240 feet south and east of the site. Groundwater sampling of the wells nearest the site in August 2016 indicated no evidence of significant concentrations of petroleum-related VOCs. However, these wells contained elevated concentrations of volatile organic compounds (VOCs) associated with chlorinated solvents, including tetrachloroethylene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (cis-1,2-DCE). Since no potential source of chlorinated VOCs had been identified on the site, these VOCs may have originated from an off-site source.

***Controlled RECs (CRECs)***

- The Winbrook complex, including the site, was heated by steam generated at a heating plant located in a basement of an off-site building (33 Fisher Avenue) approximately 230 feet southeast of the site. The plant's boilers were supplied by two, 20,000-gallon No. 4 fuel oil USTs located beneath a lawn west of the boiler room. Five closed-status spills were reported in connection with these USTs, including three tightness test failures in 1989-2010, a minor surface spill in 1993, and an approximately 700-gallon release due to overfill in 2000 which reportedly required cleanup of a nearby playground area. The playground is approximately 200 feet southeast of the site. As noted above, no evidence of significant petroleum contamination was identified in groundwater in the vicinity of the site in 2016; thus, the historical spills were considered to be Controlled RECs (CRECs) rather than RECs.

*Subsurface (Phase II) Investigation, 135 South Lexington Avenue, AKRF, Inc. – September 2017*

Based on the findings of the June 2017 Phase I ESA, AKRF conducted a subsurface (Phase II) investigation at the north-adjacent site in July 2017. The Phase II study was intended to determine whether past or present on- or off-site activities had adversely affected the site.

The investigation included:

- A geophysical survey across accessible outdoor portions of the site to identify subsurface utilities and locate other potential buried structures;
- The advancement of six soil borings, four of which were retrofitted as temporary groundwater monitoring wells and four soil vapor sampling points; and
- The collection of eight soil, four groundwater, and four soil vapor samples for laboratory analyses.

Soil encountered during the borings (which extended to approximately 15 feet below grade) was characterized generally as historical fill (approximately 5 to 10 feet thick), underlain by native materials consisting of varying amounts of silt, clay, sand, and gravel. Photoionization detector (PID) readings were encountered in two of the soil borings ranging from 0.1 to 1.1 parts per million (ppm). No odors or staining were observed in any of the soil borings. Groundwater was first encountered at depths ranging from 7.3 to 7.9 feet below grade. No free phase product was detected in any of the wells (using a multi-parameter interface probe).

Results from the soil samples were compared to the 6 NYCRR Part 375-6.4 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs). No VOCs, SVOCs or PCBs exceeded any of the SCOs. Lead was detected in only one sample (at 472 ppm) above the RRSCO of 400 ppm. Barium, chromium, and zinc were detected above the UUSCOs, but not RRSCOs.

Results from the groundwater samples were compared to NYSDEC Class GA Ambient Water Quality Standards (AWQSs). Three VOCs (cis-1,2-DCE, PCE, and TCE) exceeded the AWQSs and were attributed to an off-site source.

Results from the soil vapor samples were compared to the NYSDOH indoor air guideline values (AGVs). These values are for inside buildings, but they were used for comparison in the absence of soil vapor standards or guidelines. PCE was detected in all four samples, but only one [with a result of 80 microgram per cubic meter ($\mu g/m^3$)] that exceeded the AGV of 30 $\mu g/m^3$ for PCE. Additional VOCs, for which there are no AGVs, were also detected, the majority of which are typically associated with gasoline.

No evidence of USTs was encountered by the geophysical survey or the sampling program.

*Soil Waste Characterization Investigation, 135 South Lexington Avenue, AKRF, Inc. – October 18, 2018*

AKRF conducted a waste characterization investigation at the north-adjacent site in September 2018. The investigation included the collection of eight waste characterization samples from 12 borings. The borings were advanced within the proposed footprint of the new building and ancillary excavation areas around its perimeter.

Soil encountered included fill extending from ground surface to approximately 5 to 7 feet below grade. The fill included sand, silt, and gravel with varying amounts of ash, brick, coal, concrete, fabric, glass, slag, tile, and wood. Apparent native soils composed of varying amounts of sand, silt, gravel, and clay were identified underlying the fill extending to approximately 10 feet below grade (the maximum boring depth). No odors or PID detections or other evidence of gross contamination were noted during soil screening. Groundwater was first encountered at approximately 7 to 7.5 feet below grade.

Composite samples were analyzed for SVOCs, Target Analyte List (TAL) metals, Toxicity Characteristic Leaching Procedure (TCLP) Resource Conservation and Recovery Act (RCRA) 8 Metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver) plus copper, nickel, and zinc, mercury, hexavalent chromium, PCBs, pesticides, herbicides, New Jersey Extractable Petroleum Hydrocarbons (NJEPH), total petroleum hydrocarbons (TPH) for diesel range organics (DRO), total sulfur, total cyanide, and RCRA characteristics of ignitability, corrosivity, and reactivity. One composite sample for the entire Site was also analyzed for paint filter. Grab samples were analyzed for VOCs plus tentatively identified compounds (VOCs+10).

PCB Aroclor 1260 was detected at a concentration of 0.38 milligrams per kilogram (mg/kg) in one sample. Low concentrations of VOCs, including the common laboratory contaminants acetone and methylene chloride, were detected in some samples. SVOCs, metals, and pesticides were the detected at concentrations typical of historic fill. None of the soil samples analyzed for TCLP metals had concentrations exceeding hazardous waste thresholds.

*Phase I Environmental Site Assessment (ESA), 135 South Lexington Avenue, AKRF, Inc. – January 2019*

AKRF completed an updated Phase I ESA of the north-adjacent site in January 2019. The updated Phase I identified the same RECs as the June 2017 Phase I ESA and concluded that VOCs detected in soil vapor and groundwater during the 2017 Phase II investigation were likely attributable to off-site RECs.

*Winbrook Apartments – White Plains, NY Building Plans, Alfred Fellheimer, Steward Wagner, Carl A. Vollmer Architects & Engineers, September 20, 1948*

Pre-construction Winbrook plans were provided to AKRF. The plans indicated that in 1948, the Property was developed with apartment buildings, dwellings, and small parking garages. The plans also showed that the Property building (labeled as Building 4) would be heated by steam from the Winbrook heating plant, shown at its current location approximately 100 feet east of the Property. A "tank room" containing a hot water tank was shown on the northeastern side of the basement. No fuel oil storage tanks were shown on the Property. The trash compactor room observed during the reconnaissance was identified as an incinerator room.

*Semi-Annual Monitoring Report – Former Getty Service Station No. 00369, 26 East Post Road, White Plains, NY – NYSDEC Spill No. 9713110, Tyree Environmental Corp., November 2012; Endpoint Sampling Data, Tyree Environmental Corp., December 2014; Remedial Action Summary Report – Getty Station No. 00369, 26 East Post Road, White Plains, New York 10601, Tyree Environmental Corp., July 2015; Amended Groundwater Monitoring Report – Third Quarter 2016, NYSDEC Spill No. 9713110, Former Getty Service Station No. 00369, 26 East Post Road, White Plains, Westchester County, NY, Antea USA, Inc., October 31, 2016; Spill No. 97-13110 Spill Closure Request Letter, Tetra Tech, December 2016; and Groundwater Monitoring Report – Fourth Quarter 2016/Site Investigation Report/Spill Closure Request, NYSDEC Spill No. 9713110, Former Getty Service Station No. 00369, 26 East Post Road, White Plains, Westchester County, NY, Antea USA, Inc., February, 10 2017.*

Documents associated with remediation of off-site Spill No. 9713110 were provided by WPHA. These included: a semi-annual groundwater monitoring report for the period of February through November 2012; soil and groundwater sampling data for October and December 2014; a Remedial Action Summary Report dated July 2015; a groundwater monitoring report dated October 2016; a spill closure letter report dated December 2016; and a groundwater monitoring report/site investigation report/spill closure request dated February 2017. The following findings were relevant to the Property:

- 26 East Post Road, located approximately 100 feet south of the Property, was historically a filling station. In 1988, four 10,000-gallon gasoline USTs and associated piping were removed from this facility, which was subsequently occupied by used auto sales. The 26 East Post Road site reportedly became vacant in the 1990s. Soil and groundwater contamination was identified during a subsurface investigation in 1997. As a result, Spill No. 9713110 was reported to NYSDEC.
- Multiple sampling rounds were conducted on and near 26 East Post Road starting in 1998. These included installation of monitoring wells and soil vapor monitoring points in areas of the Winbrook complex, including PW-105, MW-205-33, MW-106, MW-104, MW-103, MW-102 and SG-1 through SG-4, located on the Property (see Figure 2 of the report for location). Groundwater in the wells was delineated as flowing in a northwesterly direction and was approximately 4.8 to 7.8 feet below grade. The 2016 report (but not the 2011 report) noted groundwater mounding (i.e., an area of localized higher elevation) at the boundary between Winbrook and 26 East Post Road, with flow toward the southeast at 26 East Post Road. The reason for the mounding was not specified.
- Remedial activities included groundwater and soil vapor extraction in 2001-2009. In 2014, approximately 5,400 tons of petroleum-contaminated soil were excavated from 26 East Post Road and the southern portion of Winbrook (the parking lot located south-adjacent to the Property) for off-site disposal. Although endpoint sampling indicated areas of residual contamination, further removal was reportedly not feasible due to safety considerations. The endpoint sampling data appeared to indicate that portions of the excavation encountered bedrock approximately 12 to 13 feet below grade.
- A Remedial Action Summary Report was completed in July 2015 summarizing the remedial activities and sampling conducted at the site as described above. The report also indicated that 81,541 gallons of petroleum impacted water was encountered during excavation, which was either treated on-site and subsequently discharged into the local sewer or removed via vac truck. Residual contamination was limited to shallow depths on-site. The report indicated that post remedial action monitoring will be conducted in accordance with the Redial Action Plan, including the installation replacement monitoring wells and two quarters of soil vapor sampling.
- Sampling indicated that petroleum contamination was migrating northwest from the 26 East Post Road site and affecting groundwater beneath the Winbrook complex. August 2016 sampling data indicated that a gasoline additive (MTBE) at 41 parts per billion (ppb), and chlorinated VOCs including PCE at 1,000 ppb, TCE at 55 ppb, and DCE at 19 ppb were detected in MW-204-33. The sample from PW-105 contained chlorinated VOCs DCE at 20 ppb, and vinyl chloride at 6.8 ppb. The samples from MW-104 contained benzene at 1.3 ppb, DCE at 39 ppb, PCE at 44 ppb, TCE at 14 ppb, and vinyl chloride

at 17 ppb. No elevated VOC concentrations were detected in MW-103. The sample from MW-102 contained PCE at 38 ppb and DCE at 6.6 ppb. As summarized in Tetra Tech's Spill Closure Letter Report, the November 2016 sampling data indicated that groundwater quality within the former excavation area had improved significantly since the first round of sampling before the 2013 remedial excavation. No elevated VOCs were detected from MW-201, MW-202 or MW-203. Based on the finding, Tetra Tech requested closure of the Spill. The sampling results indicated that the petroleum-contaminated groundwater plume did not appear to be significantly affecting areas near the Property, but elevated levels of chlorinated solvents were present in groundwater (and thus, potentially, in soil vapor). Soil vapor sampling was not conducted in August or November 2016, and any previous soil vapor sampling data was not provided to AKRF.

- The February 2017 Spill Closure Request concluded that current groundwater data indicated that VOCs are not present at concentrations exceeding NYSDEC standards in monitoring wells MW-201 through MW-203, located within the remedial excavation footprint and downgradient of the former Getty Station. It also shows that the results from a January 2017 subsurface investigation are consistent with the remedial excavation sidewall samples collected in 2014. Based on the finding, Antea USA requested closure of the Spill.
- In January 2011, petroleum floating on groundwater was reported in monitoring wells on the former service station property, MW-8, and MW-14. The petroleum in MW-14 was identified as diesel or No. 2 fuel oil, while the petroleum in MW-8 could not be identified. Both affected wells were located at or in close proximity to 22-24 East Post Road, which was subsequently determined to be the source of the spill, reported to NYSDEC as Spill No. 1101872 (see Section 6.2.2).

*Groundwater Monitoring Report – Third Quarter 2016, NYSDEC Spill No. 9713110, Former Getty Service Station No. 00369, 26 East Post Road, White Plains, Westchester County, NY, Antea USA, Inc., October 31, 2016*

A groundwater monitoring report associated with groundwater sampling for off-site Spill No. 9710575 (see Section 6.2.2) at 11 East Post Road were provided by WPHA. Sampling was performed in March 2016 and indicated that elevated benzene, toluene, ethylbenzene, and xylene (BTEX) and MTBE concentrations were present across the site. As of 2016, additional remedial activities were under consideration and a revised RAP was being submitted.

*Project WPHA 0001, Hampton-Clarke – March 12, 2019; and Figure 4 – BTEX Concentration History, First Environmental – March 2, 2021*

Documents associated with groundwater sampling for off-site active-status Spill No.1608924 at 34 East Post Road were provided by WPHA. These included a lab report from Hampton-Clarke with groundwater sampling data from March 2019 and an accompanying figure with BTEX concentrations from 2014, 2015, 2016, and 2019 completed by First Environmental on behalf of WPHA in April 2021. The BTEX concentrations ranged from 2,379 microgram per liter (µg/l) to 15,010 µg/l in 2014, non-detect to 7,780 µg/l in 2015, non-detect to 5,131 µg/l in 2016, and non-detect to 528 µg/l in 2019. Wells located in the eastern portion of the Property included MW-106, MW-205, and TWB-6 with BTEX concentrations ranging from non-detect to 75.3 µg/l.

Copies of the previous reports are included in Appendix F.

## 4.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, drywall, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks, and other products. Materials containing more than one percent asbestos are

considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Property representatives were unaware of any asbestos abatement conducted during previous renovation activities. Suspect ACM were observed during the reconnaissance and included: roofing materials, exterior coatings, drywall, thermal system insulation, mortar, caulk, and putty. Suspect ACM were noted to be in good to damaged condition. Suspect ACM may also be present in other locations not readily accessible during the reconnaissance. This reconnaissance does not constitute and cannot substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by an NYS-certified asbestos inspector to determine if the project will disturb ACM. Any such ACM must be removed prior to renovation or demolition.

## 5.0 ADJACENT LAND USE

The Property was bounded to the north and east by the construction site of the new Brookfield Commons multi-story residential apartment building, known as "Phase 2"; to the south by a parking lot associated with the Winbrook complex, followed by a vacant lot approximately 100 feet south of the Property at 26 East Post Road (the former Getty filling station and source of Spill No. 9713110) and various commercial businesses including a hardware store and laundromat; and to the west by South Lexington Avenue, followed by various commercial businesses including a laundromat. The heating plant for the Winbrook complex was located in the basement of the apartment building at 33 Fisher Avenue, on the east side of the Winbrook public housing apartment complex, approximately 100 feet east of the Property. This plant was toured during the reconnaissance and contained two duel-fuel natural gas- and oil-fired boilers. Water staining was noted on the concrete floor of the heating plant, but no odors or oil staining were observed. According to WPHA staff, the boilers were supplied by two, 20,000-gallon No. 2 fuel oil USTs located beneath the lawn west of the boiler room. The USTs were converted over from No. 4 fuel oil several years ago. Access ports and fill ports for these USTs were observed during the reconnaissance. In addition, the Winbrook complex included: three additional existing multi-story apartment buildings, one new multi-story apartment building, one under-construction multi-story apartment building, a playground, asphalt-paved walkways and parking areas, and lawns. Several monitoring well covers were observed on the Property. Based on previous reports summarized in Section 3.0, these covers were associated with monitoring wells and soil vapor monitoring points installed during investigations of off-site Spill No. 9713110 at 26 East Post Road.

The greater surrounding area was mixed-use, including residential and commercial uses, White Plains Hospital, churches, municipal buildings (primarily north of the Property). The Property superblock included: a vacant lot approximately 100 feet south of the Property at 26 East Post Road (the source of Spill No. 9713110); an auto repair shop and a former BP filling station surrounded by chain-link fence approximately 130 feet southeast of the Property at 34 East Post Road (the source of Spill No. 1608924); and a laundromat approximately 200 feet south of the Property. A filling station and an auto repair shop were observed approximately 400 feet northwest of the Property at Fisher Avenue. An auto dealership was observed approximately 170 feet southwest of the Property. A laundromat was observed on the west-adjacent block, approximately 70 feet west of the Property, and the White Plains Hospital was located on the south-adjacent block, approximately 300 feet south of the Property.

# 6.0 PROPERTY HISTORY AND RECORDS REVIEW

## 6.1 Prior Ownership and Usage

### 6.1.1 Historical Land Use Maps

Historical insurance maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage, or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1900, 1905, 1911, 1930, 1942, 1950, 1987, 1989, 1990, 1992-1995, and 2002-2004 were reviewed and are provided in Appendix B.

*1900*

The Property was shown as mostly vacant land on a block bounded by Fisher Avenue to the north, South Lexington Avenue to the west, New York Post Road to the south, and Brookfield Avenue to the east (with a portion of the Brookfield Avenue roadway located on the Property).

Two small, two-story dwellings and a grocery store were shown in the southwestern corner of the greater Property block.

The surrounding area was moderately developed with small dwellings with yards. A small carpentry shop was noted southeast-adjacent the Property.

*1905*

A two and a half-story dwelling was shown in the western portion of the Property and two apartment buildings (three and four stories) were shown in the eastern portion the Property.

Significant residential and some commercial development was shown in the surround area. Multiple dwellings and sheds were shown in the northern portion of the greater Property block. Multiple stores and dwellings and a shed were shown in the southern portion of the greater Property block.

No further significant changes from the 1900 map were noted in the surrounding area.

*1911*

In addition to the buildings shown on the 1905 map, five additional apartment buildings (three and four stories), and a two-story dwelling with a shed were shown on the Property. The Property and the larger block was shown divided into several smaller lots.

The surrounding area was more densely developed compared to the 1905 map. The northern portion of the Property block included a church and apartment buildings. The southern portion of the Property block included a wagon shed, small apartment buildings, garages, a bakery, and stores. The White Plains Hospital complex was noted to the southeast of the Property across New York Post Road. Additional dwellings, a drug store, stores, stables, a church, and a synagogue were shown on surrounding blocks.

*1930*

In addition to the structures shown on the 1911 map, an auto repair shop with two garages was shown in the northern portion of the Property, and three additional three-story apartment buildings with associated small garages, and two commercial storefronts, including an upholster were shown in the southwest corner of the Property.

A filling station with three gasoline USTs was shown at the southeastern corner of the Property block. Two auto repair shops, one vulcanizing (tire conditioning) facility and an

upholster were shown to the north and south of the Property on the same block. A filling station with five gasoline USTs, and a store with one gasoline UST, were shown northwest of the Property across South Lexington Avenue. Three auto repair shops, a dress factory, and a plumbers and tin shop with a gasoline tank were shown east of the Property. The White Plains Hospital complex to the southwest had been expanded.

*1942*

The Property and surrounding area were shown without land use information but appeared to be similar in layout to the 1930 map.

*1950*

The Property had been redeveloped with the existing nine-story building as part of the Winbrook apartment complex. The Winbrook buildings were noted to have been built in 1949-1950.

The Property block, part of the Brookfield Place roadway, and two east-adjacent blocks had been merged into a superblock, most of which had been redeveloped with the Winbrook multi-story apartment building complex. A boiler house was shown in an off-site Winbrook building, approximately 100 feet east of the Property. The superblock also contained a church on its northern side; and stores, an undertaker, two filling stations including the station first shown on the 1930 map (which appeared to have been reconfigured since 1930), a mattress manufacturer, a plastic factory, and an auto repair shop on its southern side. The White Plains Hospital to the southwest appeared to have expanded compared to the 1942 map. The south-adjacent block also included an auto sales and service facility and a car wash. The filling station shown west of the Property on the 1930 map had been replaced by a large auto repair and sales facility. In addition, a roofing and sheet metal works and a filling station with three gasoline USTs were shown northwest of the Property across South Lexington Avenue at the intersection of Fisher Avenue.

*1987-1993*

No significant changes from the 1950 map were noted on the Property.

The filling stations on the southern side of the Property superblock appeared to have been reconfigured since 1950. A bicycle repair shop was also shown in the southern portion of the Property superblock and the undertaker was no longer depicted. The hospital on the south-adjacent block was shown to have expanded compared to the 1950 map, replacing the adjacent auto sales facility. New and used auto sales facilities were shown on the southwest-adjacent block. Two dry cleaners (168 and 182 South Lexington Avenue) and two auto repair shops were shown west-adjacent block. The former sheet metal works, northwest of the Property, had been replaced by a printer. Most structures shown north and northwest of the Property on the 1950 map had been demolished and replaced by parking lots. The filling station to the south of the Property was shown as vacant by 1989 and being used as new auto parking. The filling station to the southeast of the Property was noted as private parking by 1990.

*1994*

The former auto repair shop northwest of the Property across South Lexington Avenue, and one of the dry cleaners on the west-adjacent block, were shown as unspecified commercial uses. No further significant changes from the 1993 map were noted on the Property or in the surrounding area.

*1995*

The hospital on the south-adjacent block had expanded compared to the 1994 map. No further significant changes from the 1994 map were noted on the Property or in the surrounding area.

*2002-2004*

No significant changes from the 1995 map were noted on the Property or in the surrounding area.

To summarize, historical Sanborn maps indicated that the Property was vacant in 1900. Between 1900 and 1930, the Property was developed with small residential buildings and associated garages, multiple three to four-story apartment buildings, an upholster and an auto repair shop with two garages. These structures were demolished for construction of the existing apartment building and grounds, which were constructed in 1949-1950 as part of the Winbrook housing complex.

The surrounding area was primarily residential in the early 20th century, with commercial uses shown by 1911, and gasoline filling stations and auto-related uses shown by 1930. The White Plains Hospital was shown on the south-adjacent block by 1911, and subsequently expanded to cover a larger portion of this block. An undertaker was shown by 1950, and drycleaners were shown by 1987. Potential uses of concern on or in close proximity to the Property included: auto repair and an upholster on the Property, and filling stations and stores with gasoline USTs, dry cleaners, the White Plains Hospital, auto sales, auto and bicycle repair shops, a vulcanizing (tire conditioning) facility, an undertaker, sheet metal works, and a printer.

### 6.1.2 Historical Topographic Maps and Aerial Photographs

Since historical fire insurance maps were available for the Property (and surrounding area) and these maps included information relating to land use, aerial photographs and topographic maps would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs and topographic maps were not reviewed.

### 6.1.3 Property Tax Files and Zoning Records

Based on the online White Plains tax and zoning map available on the Westchester County Geographic Information Systems (GIS) website, the Property was zoned as B-3 (business, office and commercial) and classified as 411 (apartments).

### 6.1.4 Recorded Land Title Records

A Chain of Title report was prepared by Environmental Data Resources, Inc. (EDR) as part of the 2017 Phase I ESA for the north-adjacent site, part of the same Winbrook public housing apartment complex, summarized in Section 3.0. The report included a search of public records of Westchester County, New York from January 1, 1940 to June 7, 2017. One Quit Claim Deed, dated May 19, 1982, was on file, listing the City of White Plains as the Grantor and the White Plains Housing Authority as the Grantee. The Chain of Tile report also indicated that the City of White Plains has owned the Property since the early 1930s. The 2018 Assessment Year Tax Assessors record listed site name as "White Plains Housing Authority" and indicated no recorded sales.

### 6.1.5 Local Street Directories

A City Directory prepared by Environmental Data Resource, Inc. was reviewed as part of this Phase I ESA. The City Directory consisted of residential and commercial listings for

the Property and adjacent/nearby properties, compiled from city and reverse telephone directories, with the earliest records starting in 1965. Copies of the city directories are provided as Appendix C, and descriptions and interpretations from the review of the historical city directory listings are provided in Table 1.

**Table 1**

Note: Facilities in underlined text are adjacent to the Property.

The Property was identified with residential listings between 1965 and 2017. Historically, the surrounding area included residential, commercial (including drycleaners), and automotive uses.

The City Directory identified potential uses of concern off-site along South Lexington Avenue and East Post Road, to the west, east, and south of the Property, in 1979-2017. These included dry cleaners, auto service stations, a printer, a towing company, a tire shop, auto sales, a hospital, a pharmacy, a dentist, and a paint shop

## 6.2 Regulatory Review

The regulatory database report, provided in Appendix D, was obtained from Environmental Data Resources, Inc. of Shelton, Connecticut. It includes summaries of the databases searched, their radii around the Property, and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

### 6.2.1 Federal

Federal ASTM standard records reviewed included: the National Priority List (NPL); Superfund Enterprise Management System (SEMS); SEMS-ARCHIVE; CORRACTS (Corrective Actions Report); RCRIS (Resource Conservation and Recovery Information System); and Emergency Response Notification System (ERNS).

Federal ASTM supplemental records reviewed included: Toxic Chemical Release Inventory System (TRIS); Delisted NPL (National priority List Deletions); United States Brownfields and EDR Historic Auto and Historic Cleaner Listings.

*National Priority List (NPL)*

The NPL is the EPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially affecting property values.

The Property was not listed in the NPL database and no NPL sites were identified within a one-mile radius of the Property.

*Superfund Enterprise Management System (SEMS), including Superfund Enterprise Management System Archive (SEMS-ARCHIVE)*

The SEMS (formerly known as CERCLIS) list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by EPA but have not been elevated to the status of a Superfund (NPL) site. Former CERCLIS sites that have been granted the status of No Further Remedial Action Planned (NFRAP), currently known as Superfund Enterprise Management System Archive (SEMS-ARCHIVE) sites, are also included in this database.

The Property was not listed in the SEMS or SEMS-Archive databases and no SEMS or SEMS-Archive sites were identified within a ½-mile radius of the Property.

*CORRACTS (Corrective Actions Report)*

The CORRACTS database identifies hazardous waste handlers with Resource Conservation and Recovery Act (RCRA) corrective action activity.

The Property was not listed in the CORRACTS database and no CORRACTS sites were identified within a one-mile radius of the Property.

*RCRIS (Resource Conservation and Recovery Information System)*

This database lists sites that have filed notification forms regarding hazardous waste activity, including treatment, storage, and disposal facilities (TSDs); very small-quantity generators (VSQG), small-quantity generators (SQG), and large-quantity generators (LQG); non-generators (Non-Gen); and transporters regulated under RCRA.

No TSD were identified within a ½-mile radius of the Property.

One LQG facility, one VSQG facility, and 21 Non-Gens were identified within a ⅛-mile radius of the Property. No SQG facilities were identified within a ⅛-mile radius of the Property. The nearest facilities with some potential to affect subsurface conditions beneath the Property, based on proximity and/or the nature of the listings, are as follows:

- Swank Cleaners, located at 168 South Lexington Avenue, approximately 50 feet west of the Property, was listed as a Non-Gen of spent halogenated solvents since 2007, including: PCE, TCE, methylene chloride, 1,1,1-Trichloroethane (1,1,1-TCA), chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluormethane, and spent solvent mixtures/blends of halogenated. The facility was listed as a historic Non-Gen in 1999 and 2006 and a historic SQG in 1991.
- Bright Side Cleaners, located at 182 South Lexington Avenue, approximately 50 feet southwest of the Property, was listed as a Non-Gen of spent halogenated solvents since 2007, including: PCE, TCE, methylene chloride, 1,1,1-TCA, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluormethane, and spent solvent mixtures/blends of halogenated. The facility was listed as a historic Non-Gen in 1999 and 2006 and a historic SQG in 1992.
- The White Plains Hospital Center, located at 41 East Post Road, approximately 155 feet southeast of the Property, was listed as a LQG of ignitable and corrosive solid waste; heavy metal waste; phenol; chloroform; spent non-halogenated solvents; 1,2-dichloroethane (DCA); benzene; and various laboratory and drug wastes between 1993 and 2016. The facility was listed as a historic LQG in 2013, 2014 and 2016, a historic SQG in 2005 and 2007, and a historic conditionally exempt SQG in 2006. Three RCRA violations associated with universal waste were reported in 2012, with a return to compliance on the same day.
- Getty Petroleum Co., located at 11 East Post Road, approximately 210 feet south of the Property, was listed Non-Gen of spent halogenated solvents in 2007 and 2015. The facility was listed as a historic Non-Gen in 1999, 2006 and 2007 and a historic SQG in 1994.
- Bridgestone/Firestone, located at 60 East Post Road, approximately 275 feet east of the Property, was listed as a Non-Gen of ignitable waste, heavy metals, and PCE in 2007 and 2015. The facility was listed as a historic Non-Gen in 2006 and 2007 and a historic SQG in 1998.
- Biscardi Cleaners, located at 201 South Lexington Avenue, approximately 300 feet south of the Property, was listed as a Non-Gen of spent halogenated solvents since 2007, including: PCE, TCE, methylene chloride, 1,1,1-Trichloroethane (1,1,1-TCA), chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluormethane, and spent solvent mixtures/blends of halogenated. The facility was listed as a historic Non-Gen in 2006 and 2007, a historic SQG in 1999 and a historic LQG in 1985.

Based on listing details, distance and/or the anticipated groundwater flow direction, other RCRA listings are not anticipated to have significantly affected the Property. Details of all RCRA listings are included in Appendix D.

*Emergency Response Notification System (ERNS)*

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

The Property was not listed in the ERNS database and no ERNS listings were identified on the Property.

*Toxic Chemical Release Inventory System (TRIS)*

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

The Property was not listed in the TRIS database and no TRIS sites were identified within a ⅛-mile radius of the Property.

*Delisted NPL (National Priority List Deletions)*

This database describes former NPL sites that are removed from the NPL list by the EPA. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) established the criteria used by the EPA to delist sites where no further federal response is needed.

The Property was not listed in the delisted NPL database and no delisted NPL sites were identified within a one-mile radius of the Property.

*US Brownfields*

The US Brownfields program is for properties that clean up and report to the EPA and are served by Brownfields grant programs.

No US Brownfields sites were identified within a ½-mile radius of the Property.

*EDR Historic Auto Station and Historic Cleaner Listings*

The EDR Historic Auto Station and Historic Cleaner databases were researched to identify listings for the Property and within a ⅛-mile radius of the Property. These databases list properties that might include gas/filling station establishments and/or drycleaners based on EDR's search of select national business directories.

Five historic automobile stations and four historic dry cleaners were identified within ⅛-mile radius of the Property:

- Cilim Cleaners Corp/Swank Cleaners, located at 168 South Lexington Avenue, approximately 50 feet west of the Property across South Lexington Avenue, is listed as a dry-cleaning plant, except rugs, under various names between 1971 and 1997.
- Bright Side Cleaners/Silvermans Cleaners, located at 182 South Lexington Avenue, approximately 50 feet southwest of the Property across South Lexington Avenue, is listed as a dry-cleaning plant, except rugs, under various names between 1976 and 2008.

- Post-Davis Service Station/Barrier White Plains Citgo, located at 34 East Post Road, approximately 90 feet southeast of the Property, is listed as a gasoline service station under various names between 1969 and 2009.
- Power Test Corp/Getty, located at 26 East Post Road, approximately 100 feet southeast of the Property, is listed as a gasoline service station under various names between 1982 and 1986.
- Post Road Getty/Prestos, located at 11 East Post Road, approximately 210 feet south of the Property, is listed as a gasoline service station between 1969 and 1982 and between 1998 and 2014 and as an automotive repair shop between 1982 and 1995.
- Biscardi Cleaners Inc, located at 201 South Lexington Avenue, approximately 300 feet south of the Property, is listed as a dry-cleaning plant, except rugs, and garment pressing and cleaners agent under various names between 1979 and 2011.
- GEIS Service Station, located at 124 South Lexington Avenue, approximately 300 feet northwest of the Property, is listed as a gasoline service station under various names between 1969 and 1997.

Details for all listed EDR Historic Auto Station and Historic Cleaner listings are included in Appendix D.

### 6.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Site Registry (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); New York Brownfield Cleanup Program (BCP); and Registered Dry Cleaners.

*New York State Spills Information Database (NY Spills)/Leaking Underground Storage Tanks (LTANKs)*

This database includes releases reported to NYSDEC, including tank test failures (for USTs only) and tank failures.

The Property was listed on the NY Spills database:

- NYSDEC Spill No. 1610459 was reported at 159 South Lexington Avenue in February 2017. According to the listing, a sewer line was damaged, and 100 gallons of raw sewage was washed down the street into a catch basin. The spill was closed the next day.

Four hundred and seventy-two spills, which included 161 leaking tanks and 310 spills, were reported within a ½-mile radius of the Property. Based on their proximity (within 400 feet), assumed hydraulic relationships, and/or listing details, the following listings had some limited potential to affect subsurface conditions at the Property:

- NYSDEC Spill No. 2001101 was reported in May 2020 at the north-adjacent apartment building construction site at 135 South Lexington Avenue. According to the listing, two USTs were discovered during an investigation. The USTs were removed along with 18.97 tons of contaminated soil and post excavation soil samples were below the NYSDEC guidance values.

- Active-status NYSDEC Spill No.1608924 was reported in September 2015 at the gas station at 34 East Post Road, approximately 90 feet southeast of the Property. According to the listing, soil and groundwater contamination was reported downgradient of this facility, and additional investigations were conducted in 2014-2016. Listing details indicated a Remedial Action Work Plan (RAWP) was to be completed in July 2017 and a Consent Order was executed by the NYSDEC in February 2018. In January 2019 a RAWP was completed and received by the NYSDEC. Listing details indicated, as of August 2019, the City of White Plains intended to take over ownership of the property through the eminent domain process. Three additional closed-status spills were reported at this address.
- NYSDEC Spill No. 1007861 was reported in October 2010 at the WPHA facility at 33 Fisher Avenue (i.e., the Winbrook heating plant located approximately 100 feet east of the Property). According to the listing, two 20,000-gallon USTs failed tank tightness testing. Tank piping was repaired, and the tanks subsequently passed retests in 2010 and 2011. No contamination was reportedly observed, and the spill listing was closed in July 2011. NYSDEC Spill No. 9912180 was reported at the heating plant in January 2000 due to a No. 4 fuel oil release from an overfill. This spill was initially reported to be approximately 30 gallons but was subsequently indicated to be up to 700 gallons. The playground area to the southwest of the boiler room was noted to require cleanup. The spill listing was closed in May 2000. Three additional closed-status spills were reported, including two tank test failures in 1989 and 2002, and a minor surface spill in 1993.
- NYSDEC Spill No. 9713110 was reported in February 1998 at a closed Getty filling station at 26 East Post Road, approximately 100 feet south of the Property. According to the listing, soil and groundwater contamination was found during a subsurface investigation. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling station onto the Winbrook complex parking lot (south-adjacent of the Property). Remedial activities included removal of contaminated soil, groundwater, and soil vapor, and installation and sampling of numerous groundwater monitoring wells, as summarized in Section 3.0 of this report. The spill was closed in August 2017. The spill listing also noted that in 2016, the groundwater monitoring identified oil floating on groundwater at 22-24 East Post Road, and new Spill No. 1607837 was reported, as noted below.
- Active-status Spill No. 1101872 was reported in May 2011 at 22-24 East Post Road, approximately 143 feet south-southeast of the Property, reportedly due to detection of low concentrations of diesel or No. 2 fuel oil during groundwater monitoring for Spill No. 9713110 at east-adjacent 26 East Post Road. In addition, in November 2016, Spill No. 1607837 was reported at the same address. According to the listing, suspected No. 2 fuel oil was discovered floating on groundwater in a monitoring well at this site. The well was installed for investigation of Spill No. 9713110; however, the fuel oil was indicated to be unrelated to Spill No. 9713110. The listing noted that a 1,000-gallon No. 2 fuel oil UST was located at 22-24 East Post Road. The UST was reportedly removed in February 2017, at which time holes were noted in the tank. The listing indicated that subsequent remedial soil excavation uncovered contamination. Spill No. 1700425 was reported based on these observations, but was closed for consolidation with Spill No. 1607837, which was subsequently closed in February 2018. One additional closed-status spill was reported at this address.

- NYSDEC Spill No. 9710575 was reported in December 1997 at the Getty Service Station, located at 11 East Post Road, approximately 210 feet south of the Property. According to the listing, a leaking fuel line caused the release of petroleum into a storm drain. Remedial activities included groundwater monitoring, extraction, and chemical remediation. Removal of four USTs and contaminated soil was performed in September 2017. Additional excavation was performed in January 2018 and the spill was closed in July 2018. Fourteen additional closed-status spills were reported at this address.
- Sixteen closed-status spills were reported at various White Plains Hospital locations. The nearest portion of the hospital is approximately 156 feet southeast of the Property. The closed-status spills reported for the hospital campus, included releases of fuel oil requiring soil removal and remediation of utilizing recovery wells.
- NYSDEC Spill No. 0100630 was reported in April 2001 at Biscardi Cleaners, located at 201 South Lexington Avenue, approximately 300 feet south of the Property. The listing indicated that a storage tank failure caused the release of approximately 150 gallons of wood alcohol (methanol) in a basement. The spill was reportedly cleaned up, and the listing was closed in May 2006.

Based on their locations, assumed hydraulic relationships, and/or listing details, the remaining listings are not likely to have significantly affected subsurface conditions at the Property. Details for all listed NY Spills and LTANKS sites are included in Appendix D.

*Chemical Bulk Storage (CBS) Database*

The New York CBS database is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

The Property was not listed in the CBS database. No CBS facilities were identified within a ¼-mile radius of the Property.

*Solid Waste Facilities/Landfill Sites (SWF/LF)*

The SWF/LF database is a comprehensive listing of state permitted/recorded solid waste management facilities including certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

The Property was not listed in the SWF/LF database. No SWF/LF sites were identified within a ½-mile radius of the Property.

*Petroleum Bulk Storage (PBS) Database*

The PBS database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

Five AST and 12 UST facilities were identified within a ⅛-mile radius of the Property, Details of the facilities with the potential to have affected the Property based on distance (less than 200 feet) are shown in Table 2.

**Table 2**
**Area Petroleum Bulk Storage Facility Data**

| Location | Capacity (gallons) | Product Stored | Status | Distance/Direction from Property |
|---|---|---|---|---|
| East Post Road<br>Gasmart<br>34 East Post Road | 2 x 10,000 UST<br>6,000 UST | Gasoline<br>Diesel | In Service | 90 feet southeast |
| Power Test/Getty<br>26 East Post Road | 10,000 UST<br>3 x 10,000 UST | Unspecified<br>Gasoline | Closed-Removed | 100 feet south |
| Phillip Werbel<br>12 East Post Road | 2,000 UST<br>1,500 UST | Unspecified | Closed-Removed<br>Closed-In-Place | 170 feet south |
| Station #58108<br>11 East Post Road | 4 x 4,000 UST<br>550 UST<br>240 AST<br>180 AST | Gasoline<br>No. 2 Fuel Oil<br>No. 2 Fuel Oil<br>Waste Oil | Closed-Removed | 210 feet south |
| White Plains Hospital<br>41 East Post Road | 20,000 UST<br>75 AST<br>15,000 UST<br>300 AST<br>2 x 250 AST<br>8,000 AST<br>660 AST<br>20,000 UST<br>10,000 UST<br>1,000 AST<br>3,800 AST<br>2,000 UST<br>5,000 UST<br>2 x 275 AST<br>150 AST | No. 6 Fuel Oil<br>Diesel<br>Diesel<br>Diesel<br>Diesel<br>No. 2 Fuel Oil<br>Diesel<br>No. 6 Fuel Oil<br>Diesel<br>Diesel<br>No. 2 Fuel Oil<br>Diesel<br>Diesel<br>Diesel<br>Diesel | Closed-Removed<br>In Service<br>In Service<br>In Service<br>In Service<br>In Service<br>In Service<br>Closed-In-Place<br>Closed-In-Place<br>In Service<br>In Service<br>Closed-Removed<br>In Service<br>In Service<br>In Service | 156 feet southeast |
| Winbrook Housing Development<br>223 Dr. Martin Luther King Blvd. | 2 x 20,000 UST | No. 4 Fuel Oil | In Service | 100 feet east |

**Notes**: AST - aboveground storage tank
UST - underground storage tank

Based on their locations, assumed hydraulic relationships, and/or listing details, the remaining listings are not likely to have significantly affected subsurface conditions at the Property. Details for the PBS facilities are included in Appendix D.

*State Inactive Hazardous Waste Disposal Site Registry (SHWS)*

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

The Property was not listed in the SHWS database. Two SHWS sites were identified within a one-mile radius of the Property. Based on their locations, assumed hydraulic relationships, and/or listing details, these sites are not likely to have significantly affected subsurface conditions at the Property.

*Hazardous Substance Waste Disposal Site Inventory (HSWDS)*

This list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites for which EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites.

The Property was not listed in the HSWDS database. No HSWDS sites were identified within a ½-mile radius of the Property.

*Major Oil Storage Facilities (MOSF) Database*

These facilities have petroleum storage of 400,000 gallons or more.

The Property was not listed in the MOSF database. No MOSF facilities were reported within a ⅛-mile radius of the Property.

*Environmental Restoration Program (ERP)*

These sites (which are generally municipally owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

The Property was not listed in the ERP database. No ERP sites were identified within a ½-mile radius of the Property.

*Voluntary Cleanup Program (VCP)*

The VCP is a NYSDEC program for investigation and remediation of (generally) privately owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether-contamination is present.

The Property was not listed in the VCP database. One VCP site was identified within a ½-mile radius of the Property. Based on its location approximately 2,400 feet north of the Property (in an anticipated cross-gradient groundwater flow direction), this facility is not anticipated to have affected the Property. Details for the VCP site are included in Appendix D.

*Brownfield Cleanup Program (BCP)*

This NYSDEC program is the successor to the VCP. Some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Four BCP sites were identified within a ½-mile radius of the Property. The nearest site with some potential to affect the Property, based on listing details, was as follows:

- Post Road Corridor – White Plains, mapped at 77 West Post Road, approximately 1,000 feet southwest of the Property. The site is listed as a set of vacant lots historically occupied by commercial and auto-related uses, including dry cleaning, auto repair, and filling stations. Identified contamination reportedly included VOCs associated with petroleum and chlorinated solvents in soil, groundwater and soil vapor, and evidence of a chlorinated VOC plume migrating from the site. Groundwater contaminants reportedly included PCE at concentrations up to 3,300 ppb, and TCE at concentrations up to 420 ppb. Initial remedial activities (removal of USTs and contaminated soil and

groundwater) were reportedly conducted in 2010-2012. Groundwater was reported to flow toward the northeast.

Based on listing details, distance, and/or anticipated groundwater flow direction, the above site may have affected subsurface conditions beneath the Property. Based on distance, anticipated groundwater flow direction, and/or listing details, other identified BCP sites are unlikely to have affected the Property. Details for the BCP sites are included in Appendix D.

*Registered Dry Cleaners*

The Registered Dry Cleaners database was researched to identify listings within ¼-mile of the Property.

The Property was not listed on the database. One Registered Dry Cleaner was listed within a ¼-mile radius of the Property, details as follows:

- Biscardi Cleaners, located at 201 South Lexington Avenue, approximately 300 feet south of the Property, is listed with an install date of December 1992. No further details were provided.

Based on listing details, distance, and/or anticipated groundwater flow direction, the above site may have affected subsurface conditions beneath the Property. Details for the Registered Dry Cleaners site are included in Appendix D.

### 6.2.3 Local Agency File Review

A review of available records maintained by The City of White Plains Tax Assessor's, Building Department, and Department of Public Works, and the Westchester County Department of Health was conducted to obtain any information pertinent to the assessment of the environmental condition of the Property. Specifically, records regarding past and present on-site fuel oil tanks and historical uses were requested. Local records are included in Appendix E.

*Tax Assessor*

A FOIL request was submitted to the White Plains Tax Assessor Office. In an email dated April 15, 2021, the Tax Assessor indicated that no records were identified for the Property.

*Building Department*

Records maintained by the White Plains Building Department typically include fuel oil, gasoline and waste oil tank installation applications and permits, and records of prior uses. A Freedom of Information Letter (FOIL) was submitted to the White Plains Building Department. On April 23, 2021, AKRF reviewed the available records at the White Plains Building Department office, the records included:

- A closed 2014 permit, No. 2014-0703BLDG, for the excavation of contaminated soil and backfill/restoration of the site conditions in the parking lot south-adjacent of the Property. The permit was closed in 2015.
- A 2014 permit for the installation of Cat IV boilers for the new 10-story WPHA Winbrook Phase I.
- A 2013 Certificate of Compliance for an oil line repair at 33 Fisher Avenue, the Winbrook heating plant.

- A 2010 application by a contractor to repair an oil line at 33 Fisher Avenue, the Winbrook heating plant.
- A 1973 permit for the demolition of existing incinerators and installation of refuse compactors at the Property.
- A 1972 permit for the installation, operation, and removal of one 600 HP steam boiler (temporary boiler) at 33 Fisher Avenue, the Winbrook heating plant; and
- Various elevators compliance violations from 2015 through 2017.

*Department of Public Works*

A FOIL request was submitted to the White Plains Department of Public Works. In an email dated April 19, 2021, the Department of Public Works indicated that no records were identified for the Property.

*Westchester County Department of Health*

A FOIL request letter was sent to the Westchester County Department of Health (WCDOH) to gain access to information regarding area complaints, spills, discharges, or other health-related issues. To date, no response has been provided to AKRF. Any pertinent results will be presented as an addendum to this Phase I ESA report.

### 6.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in the judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable and useful, accurate, and complete in light of the objective of the records review. These records include:

- Local brownfields lists;
- Local lists of landfill/solid waste disposal sites;
- Local lists of hazardous waste/contaminated sites;
- Local lists of registered tanks;
- Local land records (for activity use limitations);
- Records of emergency release reports; and
- Records of contaminated public wells.

Sources for these records include:

- Local/Regional Water Quality Agency; and
- Local Electric Utility (for PCB records).

In addition to the Local Agency File Review, AKRF sent a FOIL request to NYSDEC on April 13, 2021 for the Property to determine whether pertinent environmental records for the Property could be obtained for further review. In a response dated, May 12, 2021, a spill report form for closed-status Spill No. 1610459, involving the sewage leak, were provided. The details of this Spill are summarized in Section 6.2.2 of this report. Per the NYSDEC website, additional details regarding Spill Nos. 9713110, 1607837, 1608924 and 1607837 are still pending. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

AKRF sent a FOIL request to NYSDOH on April 15, 2021 for the Property to determine whether pertinent environmental records for the Property could be obtained for further review. As of the date of this report, NYSDOH has not responded to the records request. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

On April 15, 2021, AKRF reviewed EPA's computerized database for any environmental records for the Property. The Property was not identified in the EPA's computerized database.

In AKRF's judgment, no other local records meeting the ASTM criteria are pertinent for the Property. FOIL requests are included in Appendix E.

# 7.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that Trinity provide any pertinent information regarding the Property, specifically:

- The reason for performing the Phase I ESA;
- Whether they were aware of any pertinent current or historical activities at or near the Property, including but not limited to: hazardous substances or petroleum, waste management practices, filling or disposal drains, septic/sewer systems, and potable and non-potable wells;
- Owner and occupant information and whether they were aware of any previous Phase I ESAs or other potentially pertinent reports, plans or information;
- Whether any *environmental liens* or *activity and land use limitations* are in place or have been filed or recorded against the Property, or whether there was pending, threatened, ongoing or past violations, litigation, or enforcement action relevant to hazardous substances or petroleum products;
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of the chemicals used by this type of business);
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated; and
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property, including current/past uses of the Property and adjacent properties.

According to Trinity's representatives, this Phase I ESA was performed to evaluate the Property as part of due diligence related to a proposed redevelopment that would entail demolition of the existing building, followed by the construction of a new multi-story residential apartment building. Trinity provided contact information for Mr. Luis Sanchez of WPHA, who was not aware of any: environmental liens or activity use limitations on the Property; Property value reduction due to environmental issues; any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products; or any obvious indicators of contamination on the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report. Mr. Sanchez indicated that the south-adjacent parking lot, part of the Winbrook complex, had contaminated soil excavated and backfill/restored in association with the Spill No. 9713110 as summarized elsewhere in this report.

A copy of the Phase I ESA user questionnaire is included in Appendix E.

# 8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- The inspection was limited to common areas, the basement, mechanical and storage spaces, one representative apartment on the first floor, and the roof. AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property and area history was not conducted in five-year intervals. However, sufficient information about the history of the Property and surrounding area could be obtained from the available historical Sanborn maps, city directories, and available local records, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 6.0). AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.
- To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

# 9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The term "Recognized Environmental Condition" means the presence or likely presence of hazardous substances or petroleum at the property, including the ground, groundwater, or surface water at or under the Property. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

The Property was vacant in 1900. Between 1900 and 1942, the Property was developed with small residential buildings and associated garages, multiple three to four-story apartment buildings, an upholster and an auto repair shop with two garages. These structures were demolished for construction of the existing apartment building and grounds, which were constructed in 1949 -1950 as part of the Winbrook housing complex.

At the time of the reconnaissance, the Property was developed with a nine-story apartment building with a basement on the southwest side of the Winbrook public housing apartment complex. The building was heated by steam provided by an off-site heating plant and served by two cable-driven electrical elevators. The Property is part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook, with a collective address of 223 Dr. Martin Luther King Jr. Boulevard. Chemical and petroleum storage was observed in the basement of the Property, including two 5-gallons buckets of hydraulic oil used in association with the hydraulic trash compactors, and general cleaning and maintenance chemicals in containers up to one-gallon.

A summary of the assessment findings is presented below.

***Recognized Environmental Conditions (RECs)***

- Historical land uses on the Property included auto repair and an upholster.
- Historical land uses in the vicinity of the Property included: filling stations and stores with gasoline USTs, dry cleaners, the White Plains Hospital, auto and bicycle repair shops, a paint shop, an undertaker, sheet metal works, and a printer in close proximity to the Property.
- Numerous nearby active- and closed-status petroleum spills, petroleum bulk storage facilities, hazardous waste generators (including generators of chlorinated solvents), and a State Brownfield Cleanup Program Site were reported in regulatory databases, including closed-status spills located on off-site areas of the Winbrook complex.
- Active-status New York State Department of Environmental Conservation (NYSDEC) Spill No. 9713110 was reported at a former filling station at 26 East Post Road, approximately 100 feet south of the Property. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling station onto the Winbrook complex (south-adjacent parking lot of the Property). Remedial activities included removal of contaminated soil, groundwater, and soil vapor, and installation and sampling of numerous groundwater monitoring wells. Groundwater sampling of wells associated with this spill in August and November 2016 did not identify significant concentrations of petroleum-related VOCs in the wells located on the Property. However, some wells on the Winbrook complex contained chlorinated VOCs, including PCE at up to 1,000 ppb and TCE at up to 55 ppb. The source of these chlorinated VOCs has not been identified.
- Active-status NYSDEC Spill No. 1608924 was reported in September 2015 at the gas station at 34 East Post Road, approximately 90 feet southeast of the Property. According to the listing and information

provided to AKRF, soil and groundwater contamination was reported downgradient of this facility, and additional investigations were conducted in 2014-2016. Listing detail indicated: a Consent Order was executed by the NYSDEC in February 2018; a Remedial Action Work Plan was submitted to the NYSDEC in January 2019; and, as of August 2019, the City of White Plains intended to take over ownership of the property through the eminent domain process. Three additional closed-status spills were reported at this address.

***De Minimis Condition***

- Demolition debris from historical structures on the Property and/or fill materials of unknown origin may be present in the subsurface.
- Chemical storage at the Property included two 5-gallon bucket of hydraulic oil, and cleaning and maintenance chemicals in containers up to one-gallon, which were stored in the basement. The observed chemicals were generally neatly stored and labeled.

***Other on-site environmental concerns (items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris)***

- Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic compactor equipment may contain PCBs. In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury.
- Suspect ACM were observed at the Property. Suspect ACM were noted to be in generally good to damaged condition. ACM may also be present in demolition debris in the subsurface at the Property.
- Based on the age of the Property building, LBP may be present on indoor and/or outdoor surfaces. Painted surfaces were observed to be in generally god to fair condition. LBP may also be present in demolition debris in the subsurface at the Property.

***Potential for Vapor Encroachment***

- This Phase I assessment identified a potential for subsurface vapors, and thus a potential for vapor encroachment into current or future buildings at the Property, based on the RECs noted above.

***Recommendations***

- Based on the RECs identified, a Phase II (Subsurface Investigation) is recommended.
- During any future renovation/redevelopment activities requiring subsurface soil disturbance, all excavated soil requiring off-site disposal should be managed in accordance with applicable regulatory requirements. All soil and any other materials intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal should be in accordance with federal, state, and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- If any USTs are discovered during redevelopment activities, the tanks should be registered with NYSDEC, and closed and removed from the Property in accordance with city, state, and federal rules and regulations. Any petroleum contamination associated with the tanks identified in the subsurface should be removed from the Property and transported to a state-licensed disposal facility, and any petroleum spill should be reported to the NYSDEC Spills Hotline.
- Any known or suspect ACM needs to be maintained in good condition in accordance with applicable regulations. Prior to demolition with the potential to disturb known or suspect ACM, known ACM should be removed and, where suspect ACM are present, an asbestos survey of the areas to be disturbed should be conducted. Any ACM that would be disturbed should be removed and disposed of in accordance with local, state, and federal requirements.

- Any renovation or demolition activities with the potential to disturb LBP must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—*Lead Exposure in Construction*). If the Property is visited regularly by children under 6 years of age, the building may be considered a Child Occupied Facility by EPA.
- Unless there is labeling or test data indicating that electrical equipment, fluorescent lighting fixtures, and hydraulic equipment in the building do not contain PCBs, and that electrical equipment and fluorescent lamps are not mercury-containing, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- All excess chemicals or other wastes or surplus materials should be properly disposed of in accordance with applicable requirements.

# 10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Rebecca A. Kinal, P.E.
Vice President

Gregory Baird
Senior Professional

# 11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Trinity New York Development, LLC and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

# EXECUTIVE SUMMARY

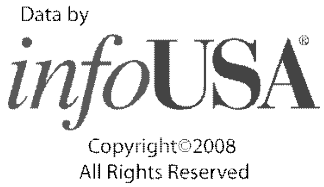
## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

## RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.



## RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

# EXECUTIVE SUMMARY

## TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

## DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

***Exclusive Recovered Govt. Archives***

NY RGA HWS Recovered Government Archive State Hazardous Waste Facilities List
NY RGA LF Recovered Government Archive Solid Waste Facilities List

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.125 miles of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |
|---|---|---|---|---|
| WHITE PLAINS HOSPITA<br>EPA ID:: NYR000129965 | 41 E POST RD | ESE 0 - 1/8 (0.030 mi.) | B28 | 73 |

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.125 miles of the target property.

***State- and tribal - equivalent CERCLIS***

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/09/2020 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

***State and tribal leaking storage tank lists***

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/09/2020 has revealed that there are 161 NY LTANKS sites within approximately 0.5 miles of the target property.

***State and tribal registered storage tank lists***

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 12 NY UST sites within approximately 0.125 miles of the target property.

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there are 2 NY SPILLS 90 sites within approximately 0.5 miles of the target property.

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 21 RCRA NonGen / NLR sites within approximately 0.125 miles of the target property.

FUSRAP: DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations.

A review of the FUSRAP list, as provided by EDR, and dated 08/08/2017 has revealed that there is 1 FUSRAP site within approximately 1 mile of the target property.

# EXECUTIVE SUMMARY

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

| Lower Elevation | Address | Direction / Distance | Map ID | Page |
|---|---|---|---|---|
| WHITE PLAINS MGP SIT | 9 NEW STREET AND 12 | NNW 1/4 - 1/2 (0.438 mi.) | BX479 | 984 |

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist

# EXECUTIVE SUMMARY

Cleaner sites within approximately 0.125 miles of the target property.

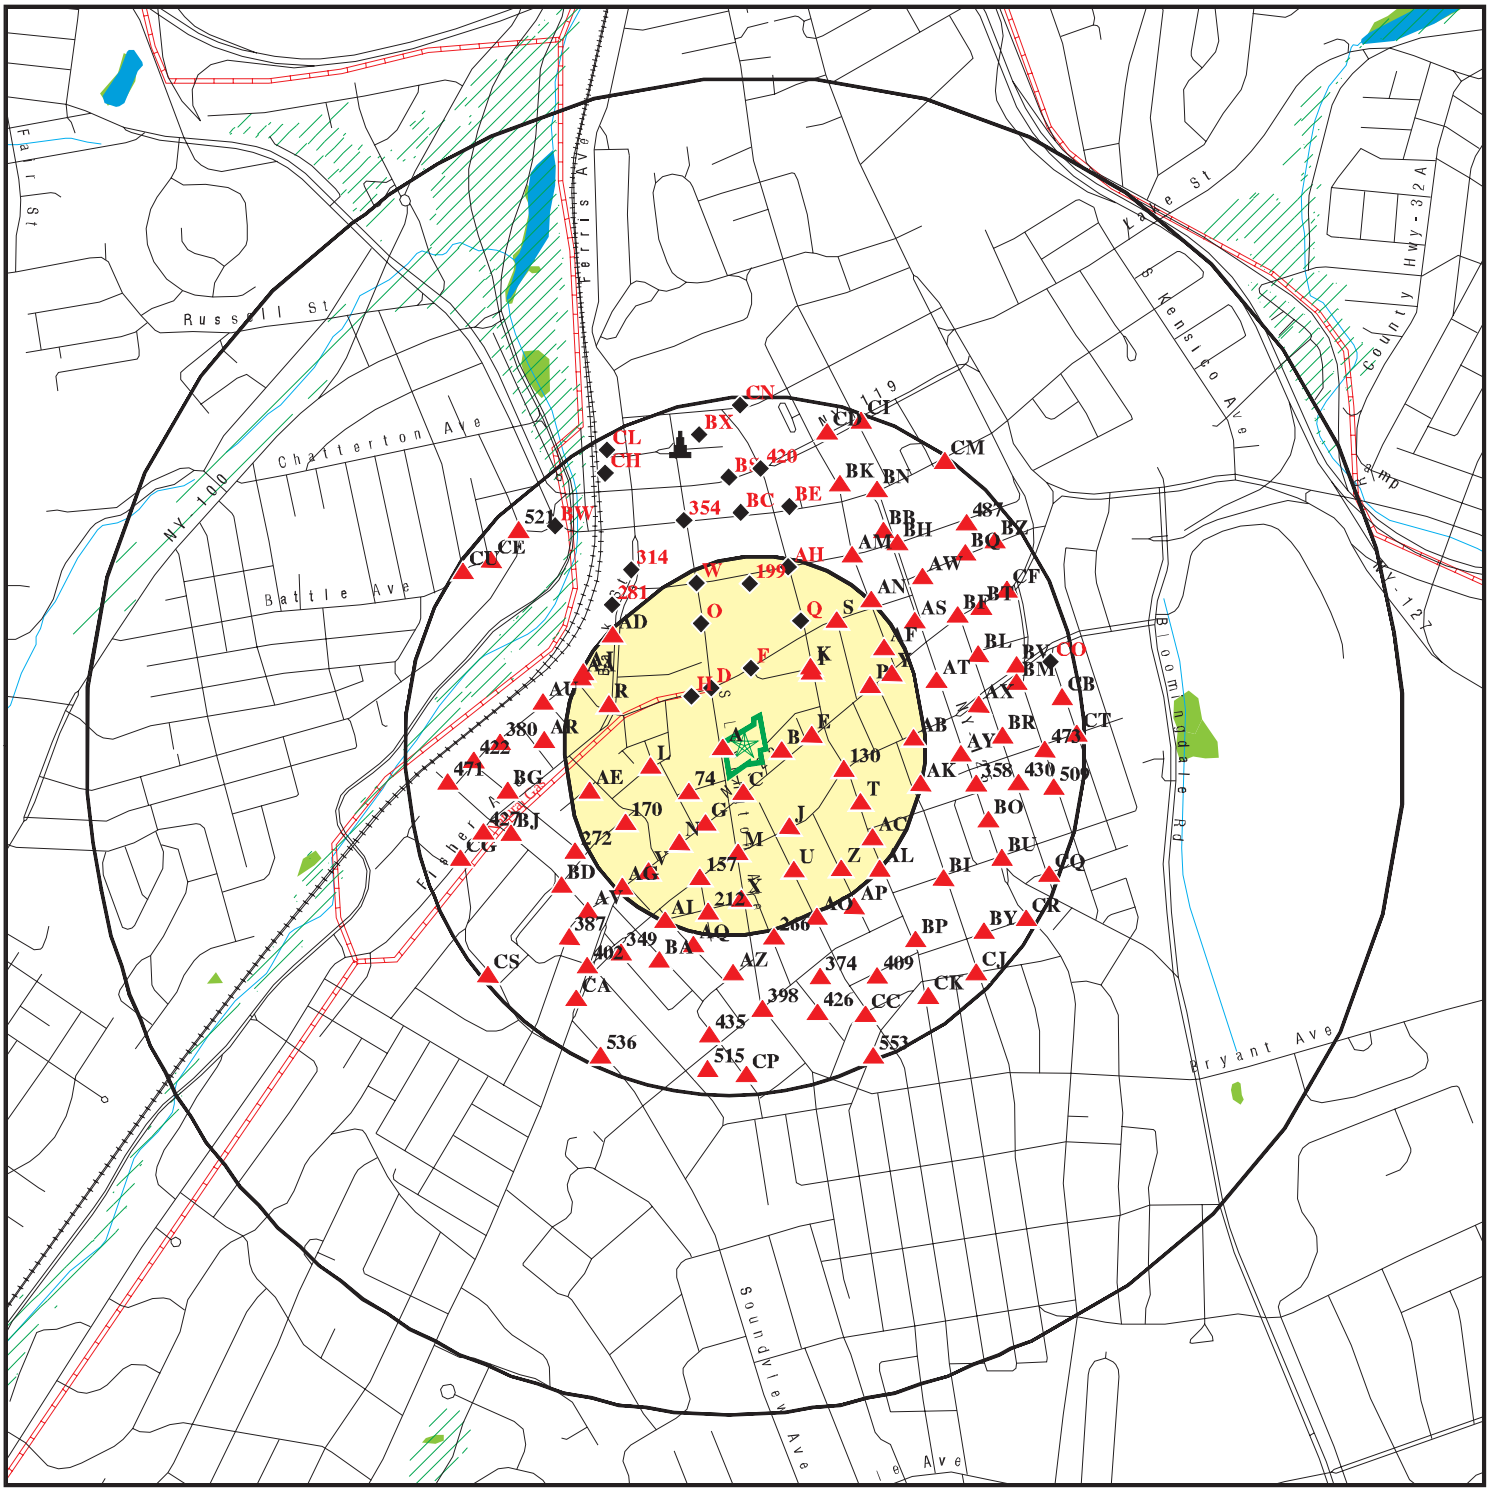
| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |
|---|---|---|---|---|
| BRIGHT SIDE CLEANERS | 182 S LEXINGTON AVE | SW 0 - 1/8 (0.010 mi.) | A6 | 15 |
| CILIM CLEANERS CORP | 168 S LEXINGTON AVE | WSW 0 - 1/8 (0.010 mi.) | A8 | 22 |
| BISCARDI CLEANERS IN | 201 S LEXINGTON AVE | S 0 - 1/8 (0.056 mi.) | C61 | 156 |
| CILIM CLEANERS CORP | 82-84 E POST RD | ENE 0 - 1/8 (0.118 mi.) | I118 | 277 |

# EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 4 records.

| Site Name | Database(s) |
|---|---|
| PETERSON/PURITAN, INC. | PRP |
| GEDNEY WAY LANDFILL | NY SHWS, NY HSWDS |
| MICA PRODUCTS LANDFILL | NY SWF/LF |
| FORECLOSED - TTF | NY LTANKS |

# OVERVIEW MAP - 6447603.2S



- Target Property
- Sites at elevations higher than or equal to the target property
- Sites at elevations lower than the target property
- Manufactured Gas Plants
- National Priority List Sites
- Dept. Defense Sites
- Indian Reservations BIA
- Pipelines
- Special Flood Hazard Area (1%)
- 0.2% Annual Chance Flood Hazard
- National Wetland Inventory
- State Wetlands

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | "12/9/15 - WCDOH conduct an inspection and did not find active leak. WCDOH recommended spill to be closed. WCDOH email and report are in DecDocs. NFA. KAB" |
| Remarks: | "What Occurred: Gas Pump #7 does not shut off automatically when the fuel tank is full. As a result, the tank overflows and a significant amount of gas overflows and pools on the ground. This first occurred to me about 2 months ago. At that time, I thought there was a problem with my car and I had it checked out by the dealer. I used the same pump again this morning at 7:30am and the same problem occurred. I informed the gas station attendant and it appeared he knew this pump was a problem. I am concerned because it appears they have not corrected the issue in at least two months (based upon the two times it happened to me) and significant amounts of gas are routinely spilling on the ground." |

| DEC Memo: | "Samples collected in September 2014, December 2015, and August 2016 reveal soil and groundwater contamination down gradient of this facility. RDB 12-22-*16 Marianina Oil Corp Owner RP letter sent to both owner and operator- RDB 01-4-17 call from Papito 01-6-17 email from TBishop, I met with the property owner, their counsel and Vince Papitto this morning at the site regarding your December 21, 2016 letter addressed to Marianina Oil Corp. I will be proposing a day of borings to determine soil and groundwater quality as well as calculate groundwater flow direction. I expect to begin drilling next week. RDB 1-9-17 followed up with 3 emails to Bishop; 2014 tyree report, 2016 Antea report, & 2016 Tetratech report. RDB 2-15-17 check on status? report should be submitted this week? RDB 3-7-17 report submitted- RDB 06-13-17 drove by site; on going demo work? June 2017- Citizen NOI filed?- RDB 07-17 email sent to Carlos looking for status- RDB 07-17- phone call from Jeff Papitto 914 447-1279 and Phil Decaro esq 914-835-6200 07-18-17 spoke to Jeff, he has spoken to Frank, he is on board would like some additional time, they will be using Tim Bishop of Ct. Expressed concern to OGC regarding possible Citizen's suit brought by WPHA. RDB 7-21-17 email from Jeff, So sorry Tim Bishop has gotten in touch with you as of yet. I know he is vactioning with his family and will be back Monday, July 24, 2017. We have forwarded him all site analyticals last week and he has acknolwedged receiving all the information.We have submitted a budget estimate to Mr. Frank Codella as well and have sent all information to Soil Safe for clearance for disposal. Papitto Construction Co., Inc. plans on mobilizing the first week of August as discussed previously with you.Tim's cell is 914-224-6268 if you need him he will be back on Monday.Any questions please feel frre to contact me at 914 447 1279. RDB 7-24-17 email from TIm Bishop, I spoke with Jeff last week while I was away and he filled me in about 34 East Post Road in White Plains. I ll be putting together a RAWP for the station in White Plains that Papitto is proposing soil excavation at. I understand the station is currently closed and they re expecting to remove at least 800 tons of contaminated soil... (plus groundwater monitoring).I ll be working on this today, submit it to the client for review and expect to have it to you for review by Wednesday. RDB 8-14-17 status email to Tim Bishop, response, I spoke to Jeff today |

**BP STATION- EAST POST RD GASMART (Continued)** **S119028898**

and neither him nor me have the gotten the green light for anything yet. RDB 8-*22-17 spoke to Phil Decarlo, asked him to contact Ben- RDB 8-28-17, So this is your two week follow-up.Any progress? / response, I took a call from Phil Decaro last week and he said Frank was going to be securing the funds late last week, but I haven t heard anything since nor do I have a signed contract. RDB 09-28-17 RP letter with settlement letter sent- RDB 10-6-17 Owner and attorney came in; asked to have tanks pumped by 10-10-17- RDB 10-11-17 draft OC sent to owner's att; WCHD reports tanks are not pumped out- RDB 10-13-17 email from att; tanks empty 10-13-17 NOV sent to Northville Industries Corp. BTR 10-16-17 email to WCHD to check tanks- RDB 11-6-17, email sent, Frank and Phil,We met with both of you on October 6, 2017 and forwarded you an Order on Consent on October 11, 2017. To date, we have not received neither an executed Order on Consent nor documentation that the tanks have been pumped out. The Department would like to meet with both of you on Friday November 17th at 11:00 am to discuss the investigation and remediation of this site.Please confirm your attendance. rdb 11-10-17 email from Phil Decaro received I have been in depositions all week and traveling today so I do not have access to all my files, but I have attached a copy of the receipt for the pump-out of the tanks at 34 East Post Rd. I will be able to send you an executed copy of the Consent Order on Monday, but in the meantime please accept this email as a representation that my client agrees with and accepts the terms of the Consent Order. Tank pump out record is on DECDOCs. BTR 12-1-17, Upon arrival at the site at approximately 11am, the manhole was opened, PID reading was 0. Began to evacuate with vacuum truck. Significant recharge. Highest PID reading during evacuation process was 125 ppm. Evacuated 2 existing drums of purge water staged on site. Total evacuated 1360 gallons. RDB 02-08-18 Consent Order executed by DEC. GZA has not been contracted for any of the work proposed in November. BTR 08-07-18 Asked Frank & Phil to meet in the New Paltz Office on Friday, August 10. Counsel responded that they are not available until first week of September. BTR 08-14-18 Scheduled meeting for Friday Sept. 7, at 11AM. No response received from Frank & Phil. BTR 08-30-18 B. Conlon asked to confirm meeting attendance. Still no response. BTR 10-9-18 deposed by WPHA counsel- RDB 11-21-18 Notified Mr. Codella of December 18 meeting in New Paltz. BTR 12-12-18 Mr. Decaro sent email asking for adjournment. No adjournment was granted. BTR 12/18/18 Met with Codella and Dicarro, at the meeting they agreed to let the department conduct the work. 12/30/18 Codella and Dicarro advised department RP is now willing to do the work and sign Orrder on Consent. TJP 1/22/19 RAWP received and uploaded to D2. TJP 1/25/19 Workplan put on hold until Order on Consent is signed, OGC sent out Order on Consent. TJP 02/15/19 First Environment letter received 1/9/2019 and uploaded to D2 --- IN 06-25-2019 No work progressing; OGC working on site- RDB 7/3/19 email sent to white plains I am the contact person for the site located at 34 East Post Road moving forward. I know you and Dan Bendell had spoken a few times but I wanted to let you know that this Department has not approved any remedial work that is being conducted on the site. This Department has instructed Mariana Oil to cease pumping operations and remove their tanks via consent order, to date we have not received a signed consent order and will be having pre-hearing conference in the NYSDEC Region 3 New Paltz office on July 16, 2019 regarding a notice of hearing and complaint for failure to sign and complete the original consent order. BW 8-23-19 email from RP's

| DEC Memo: | "11/10/16 Getty Realty and White Plains Housing Authority working on nearby site. There is what appears to be #2fo in MW-14 from Spill # 9713110 at 26 East Post Road. There is a #2 UST approximately 40' from MW-14 on 22-24 East Post Rd. mt 12-15-16 This spill is not associated with 97-13110; just so happens that during that investigation, this was detected. RDB 12-22-16 Adeogun owonikoko company LLC owner- RP letter sent - RDB 1-10-17 met on site with property owner, Oladipo Olatunde 914-262-2583. explained the situation and the need to remove his tank that is still in the ground, provided him pieces from both First environment and Antea . still need to send him names, figures, PBS FIR and tetra's report- RDB 1-13-17, Attached is a letter from TetraTech. Tetratech is an environmental consultant representing Singer Properties, the property owner of 26 East Post Road. Also attached is a copy of the Westchester County Dept. of Health records for the tanks previously registered at 26 East Post Road. The records indicate that the site only stored gasoline at the station and not diesel. RDB 2/3/17 Spoke to Lina from Envirostar. Tank was pulled today - was 1000 gal. UST. Multiple holes found in tank. Samples to be pulled for CP-51. ga. 2-7-17, response to Envirostar, I am disappointed that you did not contact me prior to the removal of this tank. If you had, I would have been able to provide you with the background and explained what I needed accomplished at the site. For now, I need a summary of the work completed and the plan forward. I do not need several unlabeled photos spread out over multiple emails. Please assemble the photos and resubmit in a letter format. Please do not send emails without the Spill number referenced in the subject line. RDB 3-24-17, email We are planning to start the initial soil remediation work at the site starting on Monday April 3, 2017. The initial plan is to excavate an area approximately 12 by 12 by 8 feet (estimating about 25-50 tons of soil) immediately surrounding the tank grave. I will be |

**OFF SITE FOR MONITORING SITE (Continued)** **S111012101**

on site with the contractor (Envirostar) to record conditions (PID readings, observations) and to collect site assessment soil samples.Please email me back to let me know that you have received this email and if want to meet us on site during the excavation work. My direct cell is 914-382-8673. RDB 4/13/17 Contamination discovered in tank grave. New spill reported, #17-00425, closed and referred back to this one..mm 4-19-17 stopped by site, email from Gallinger on 4-20- RDB 02-2018 TCR reviewed NFA RDB"

Remarks: "free product discovered in a monitoring well. Suspected to be fuel oil at this time. clean up is undetermined at this time."

getting Monthly reports JO'M 9/21/10: Updates received from Royal Environmental. Royal was hired to remove free product from the sump pit and change out pads as needed. Royal was NOT hired to remove the leaking USTs which are the suspected source of the leak. Between April thru August of 2009, Royal Environmental removed and disposed of a total of 74 drums of contaminted sorbants from the sump, and removed a total of 6,805 gallons of #6 Oil and contaminated water using a vacuum truck. Royal provided a letter from Robert Biddiscombe, Director of Engineering for the White Plains Hospital, dated August 12th 2009 and addressed to Chris Lalak of WCDOH which states AKF Engineers will now handle the remediation. Royal has had no further involvement. jod 10/16/12: See letter from Chris Lalak of WCDoH in EDocs. jod 11/16/12: Update from Chris Lalak of WCDoH PBS: Lalak, Chris cjl1@westchestergov.com greater than 10/26/2012 4:01 PM:: Spill 0900120 Todd know about this one. Three years ago 6 oil started getting into the basement of the White Plains Hospital. They went to abandon tank 1 in place a 20 k UST. It cant possibly be removed and hit free product seeping back into the tank. Castlton Broke thru the bottom of the tank and thru a 2 foot thick concrete pad and set up a sump to recover the oil. They are building a second sump and putting the oily water into a holding tank. The spill is a nightmare and the hospital has been slow to act. And they have their own hospital issues about being self sufficient in case of emergencies. The put in a new Large AST and have a temp tank. They also have another 20k that is being removed any day now. -Chris jod 12/19/12: Update from Chris Lalak. The 20K UST is scheduled to be removed tomorrow. Elite Environmental will be doing the work. Several tons of contaminated soil has already been removed. This is the #6 Oil tank. WCDoH will be on site to inspect. jod 10-16-13 another tank at facility being removed, Need and update on this spill. RDB 0402-14 letter from WCHD in edocs RDB 2-27-15 Attached are the samples collected from White Plains Hospital this month. 06-15- june data submitted; checking with WCHD"

Remarks: "3RD PARTY CALL: CALLER STATES THAT THEY FOUND ABOUT 200 GALLONS OF PRODUCT IN THE SUMP PIT UNK IF ANY RESOURCES ARE AFFECTED UNK SOURCE. CLEAN UP IS PENDING."

| DEC Memo: | "8/10/11 - During a tank test of a 20K UST, No. 6 fuel oil was discovered in the sump. Caller is scheduling for 8/11/11: I responded to the location yesterday. I first checked outfall at Bronx River and no oil or sheen was noted. I spoke with Ray Hilyer, Elite was scheduled to test the tank last week and did not after finding an uncapped feed line. Ray states he notified WCDOH Wayne Schneider. Elite returned yesterday and found a large quantitiy of #6 Oil in a manway sump next to the UST. I met with Hospital Engineer Bob Biddiscombe and observed the oil in the sump. He states it is contained within the secondary containment and stated Elite was en route to vac it out. I again contacted Elite, they have not been hired. Bob Biddiscombe spoke with Elite via phone directly while I was there. Elite will be there first thing in the morning. No oil was observed in the basement sump where previous major spills have occurred. Mr Biddiscombe stated the sump has been re-piped, and now discharges to the sanitary sewer instead of the storm drain. WCDOH will follow up. Chris Lalak is enroute this morning to confirm the |

**WHITE PLAINS HOSPITAL CENTER (Continued)** **S104284805**

sump has been vacuumed out and investigation will continue. jod *Chris Lalak reports that the manway has still not been vacuumed out this morning. Email update from Chris: Lalak, Chris 8/11/2011 11:52 AM They still didn't pump it out Robert Biddiscombe was going to call Elite or Island pump and tank to get it pumped. He doesn't know if it is a contained sump. I gave him 1 week to TT tank and lines. 1 month for env. Investigation and. pump it out today and check daily. I also stated if it is visually found that the sump is leaking an immediate investigation is needed. jod 8/12/11: Chris Lalak reports Envirowaste completed pump out. Further investigation required. jod 10/16/12: See letter from Chris Lalak of WCDoH in EDocs. jod 5/30/13: Report from Elite dated Jan 14th 2013 entered into Edocs. Message sent to Chris Lalak requesting status report. jod 040417- Email, This spill started on 2009 with 6 oil entering a basement Sump. The sump apparently collects water the buildings footing drains. White Plains hospital is a huge urban hospital complex, occupying a full city block. The spill was determined to be from piping leaks associate with two old 6 oil tanks. Tank 1 (20K ust was abandoned in place by Castlton). Removal of this tank was not possible. Free product was encountered around this tank. Castlton installed a monitoring/recovery well thru the tank. The well is identified as 15 . Free product was recovered from the well, into a holding tank. The well was then sampled 4 times 2014/2015. Some minor volatile and semi-volatiles are still present. The highest is 29 PPB pyrene. MW number 4 is located next to the abandoned tank and was sampled at the same time and was essentially clean. Tank 2 was removed by Elite. (the other old 20K UST) Royal remediated the sump for approximately 2 years.(2009-2010) Hydro Environmental Technologies (HETI) performed a GW monitoring investigation in 2012. The Hospital has been cooperatively remediating a very difficult spill. No oil has been found in the sump since 2013. The monitoring/recovery well installed thru the 20 K 6 oil UST, (and thru the concrete Pads) has been substantially remediated. Pristine remediation is not possible in this case. Well sampling performed by Castlton in 2014 and 2015 is attached. The hospital is located in an urban city with no drinking water wells near by. The abandoned UST has been filled in with slurry Concrete except for the recovery well. It could not be removed. NFA- RDB "

Remarks: "sump is full of oil/investigation underway"

| Contact Name: | JIM INGERSOLL |
| DEC Memo: | "8/6/20 White Plains Hospital, PBS #3-177148. A 20k-gal #6 Fuel Oil UST was previously closed-in-place in 2013 by Castlton. The hospital says it's Tank #1, but based on PBS record it looks like Tank #2. At the time of closure, a 18 dewatering well was installed and the tank was filled with K-Crete flowable fill. The Hospital is currently doing major construction and their engineering department opened the dewatering well manhole and observed product. There are two sumps within 20 ft and no impact observed in either sump. Bill Jacobson from Castlton is on-site now. They will mobilize a vac truck to remove product and water from the dewatering well, but the Hospital needs to move a lot of equipment first to make room for the vac truck and it might not be accessible until tomorrow. Tank could not be removed because it is beneath foundations of a 5-story and a 6-story building. JG 08-24-20 Rec'd closure report from Castlton. BTR 08-27-20 Closure report reviewed. Castlton removed approximately 2,200 gallons of petroleum and water mixture from the recovery well. The last round of sampling on 08/17 indicated there were no detections of VOCs in the recovery well. Oil absorbing snares were placed in the recovery well and were removed at the end of the project for disposal. A nearby monitoring well MW-4 was tested and at no point during the project were VOCs detected. NFA. BTR" |
| Remarks: | "Contained to put...cleanup pending" |

HARDY; PROVIDE SCHEDULE FOR INSTALLATION OF NEW EQUIPMENT AT THIS SITE WITHIN 7DAYS 3/6/08 following sent to tyree:confirming our tel conversation you may shut down this system. continue vacuum removals and monitoring.(levels in recovery wells low, system not productive--no off site problems and hi vac removals to continue) jh Periodic VEFR to supplement the Dual Phase High Vacuum remedial system is continueing at 3 of the more impacted wells. QMRs in eDocs. PJD Apr. 2009. DPHV system continueing with minor but consistent removals. GP-4A was drilled in late 2009 and connected to the system in early 2010. GW quality conitnues to improve w/ 3 wells at moderate concentrations. PJD Sept. 2010 DPHV System down as of 2010. Review of additional monitoring data in the interim and the last few months of system data lead the DEC to accept that additional system operation |

**GETTY 58108 (Continued)** **S102962370**

is not warranted at this time. Targeted removal by VEFR with the addition of biosolve approved for use in June 2013. DOH found inventory discrepency in early 2013 and required subsurface investigation. DOH requested DEC review. Most severe soil impacts found just downgradient of pump island. No significant new release indicated. Current remedial plan sufficient at this time. PJD July 2013 5-29-2014: RDB & SWC met with Getty Realty. RAP approved by DEC awaiting UIC from EPA. 1-26-15 3q and 4th quarter 2014 data submitted; biosolve injection in June 2014; planned for Feb 2014 RDB 6-10-15 met with Antea and Getty to discuss;- going to check construction plans and await results of Lake Katrine and Shrub Oak injections RDB second quarter results submitted RDB 11-20-15 third quarter results 12-2- met with Antea and Getty need to address the contamination, need a workplan for the soil removal around gp4 and the dispenser island possibly removing MW4. RDB 1-12-16 sent email to Getty for update RDB 1-23-17 met with Antea and Getty; owner is planning to remove tanks in next 2 months and Getty will overexcavate the dispenser area and around canopy ; In addition consultant for WPH called looking for data. ; sent last report RDB 2-15-17 Consultant calling returned call LM RDB 2-15-17 reported that they found gw contamination on edge of property at levels that do not match Getty's numbers RDB 04-21-2017- first QMR submitted; emailed Antea looking for station updatel supposed to be razed, response, Yes it is.Note to John Have you received an update from the current owner on their schedule? Please see below note from Dan as reference. RDB 7-6-17 call from TFisher, the new owner Atlantis is planning to remove tanks this summer, Getty will remove contamination, building demo up in air- RDB 09-6-17 email from Antea, We have a schedule for the start date of the UST removal, canopy removal, and remedial soil excavation activities for Spill No. 97-10757 - 11 E. Post Road, White Plains Getty 58108.The work is currently scheduled to begin Monday Sept. 11. The work is being conducted by Metro Environmental Services (MES). MES will be removing the USTs on behalf of the White Plains Hospital and will be performing remedial activities on-behalf of Getty to include the excavation of impaced soil below the dispensers. Antea Group will be on-site on-behalf of Getty and I believe Woodward & Curran will be on-site on behalf of the White Plains Hospital. RDB 09-13-17, email from Antea, As an update to the below e-mail chain, MES removed the two USTs located on the southern side of the UST pit today. By 9am tomorrow (9/14) they expect to be ready to remove the two remaining UST located on the northern half of the UST pit. As reference attached is a site plan showing the approx. location, depth, and, PIDs of the endpoint soil samples that were collected today by Woodard & Curran as part of the UST closure. Four sidewall samples, and two bottom samples have been collected. PIDs have been low, with the exception of the sidewall toward the dispensers. On that sidewall a PID of 1,080ppm was observed. Not unexpected as we plan to over-excavate impacted soil below the dispenser. RDB new spill 17- 05804 called in RDB 9-14-17 Email from Antea, MES was able to remove the two additional USTs today, so all four USTs have now been removed.Attached is an updated map showing the UST removal endpoint soil samples collected by Woodard & Curran.You ll see on the attachment that some higher PID readings were observed along the northwest, north, and northeast sidewalls today. Further excavation in the northwest and north directions is not safe due to the proximity to the adjacent property and the sidewalk. We have stockpiled impacted soil from these areas for transport off-site &

**GETTY 58108 (Continued)** **S102962370**

disposal. We will be excavation the eastern side of the tank pit as part of the remedial excavation below the dispenser.Today MES observed a concrete slab below the former tanks. Soil above the concrete slab did not exhibit impacts, with the exception of endpoint soil sample S-11 at the northeastern corner of the tank pit. A PID reading of 480ppm was recorded at this location and that soil was removed down to the concrete slab that is present at approx. 10 feet below ground surface. - RDB 9-29-17, update from Antea, MES has completed the tank pit over-excavation. Please see attached map for details regarding sample locations, depths, and associated PID readings. MES was unable to remove any additional soil on the sidewall and bottom along East Post Road due to the close proximity of the sidewalk. We began the over-excavation beneath the dispenser area today. A White Plains Department of Buildings inspector, Cris Dellaripa, implement a stop work. He cited non-conformance with permit requirements MES is addressing these items. We re hoping to have the issues resolved and be excavating again towards the end of next week. Antea Group will be on site to screen soil and collect samples when MES continues the excavation beneath the former dispenser island. Depending on the PID readings of the sidewall samples, we may request a spill closure at that point or recommend additional excavation when the site building is demolished. The building is likely not going to be demoed until next year due to the pending permit process. RDB 1-16-18, MES and Antea Group conducted additional excavation activities at this site last week since the building has been removed. We submitted sidewall and bottom samples on a quick turnaround to understand if we needed to excavate further. There were no exceedances in the endpoint soil samples collected last week. Please see attached updated map and soil analytical table. We ll be on site tomorrow with MES to extend the northeastern-most portion of the excavation to a depth of 12 ft. The majority of the excavation in that area extends to around 10 ft. We collected a sample (B-8) at 11.5-12 ft, and we will be removing the soil in that area to a final depth of 12 ft. The northwestern-most portion of the excavation had a final depth of 9 ft, and the middle portion of the excavation had a depth of 11 ft. These details are included on the attached site map. RDB 02-07-18 Stopped by site to observe the open excavation. Photos on D2. BTR 4/27/18 email sent to Tim Fisher of Antea Group requesting site update. BW"

| DEC Memo: | "5/19/20 Caller was doing a phase 1 assessment. Site is an apartment complex. Came across a UST said to date from 1950, according to caller. They also found a 2nd tank. Soil samples have been taken to determine what the product is/was. dw 06/01/20 Colleen Griffith called and stated that the tank was removed along with 200 cubic yds. of soil. She will be submitting a report shortly. TG 06/24/20 AKRF submitted a Spill Closure Report. See report in DedDocs. AKRP reported that A 1000 gallon UST was excavated and removed along with 18.97 tons of contaminated soil. Post excavation soil sample results were below DEC soil guidance values. NFA. TG" |

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name: DEPUTY CHIEF
DEC Memo: "01/25/07 Contacts: Trucking company: All Aboard Transport - owner David Board 2 Kit Court Monroe, NY 845-782-4727 Station owner: JKSG Inc. 124 South Lexington Ave White Plains, NY Dharminder Singh 46 Beaumaont Circle Yonkers, NY 914-482-2560 All Aboard Transport driver Joseph Graff reported that he arrived at the station at approximately 6:30 am to deliver 8500 gallons of gas, 7500 gallons of regular and 1000 gallons of premium. The regular load was dropped into three tanks, 1800 gallons into a 2k reserve tank , 2500 gallons into a 4k tank which is connected to the reserve tank, and the remaining 3200 was dropped into another 4k tank. A pump in the 2k is used to tranfer gas from the 2k tank to the 4k tank when the level in the 4k tank is low. Driver Joseph Graff stated that the delivery was made with without incident. Paperwork was completed and he was about to leave the station when gasoline unexpectedly began gushing out of the dispensers and then out a vent pipe located next to Efficiency Printing. Gasoline ran across the station asphalt into a storm drain and also puddled on the rooftop of the print shop. Station owner Dharminder Singh attempted to shut the power to the dispensers, but this failed to stem the discharge of gas. He then called 911 to the FD who responded and foamed the gasoline. The USTs were later gauged and the 2k tank only contained 7 of product, indicating that the pump in the 2k tank was activated, transferring product into the 4K tank. Once the ullage space in the 4k tank was filled, the product discharged out of the tank at the points outlined above. The station owner hired Castlton Environmental Contractors (CEC). CEC crew deployed booms in the Bronx river and vacuumed gas from the rooftop, the station property, and a gw monitoring well that had been impacted. WCHD a delegated PBS county followed up with the PBS issues. TG June 11, 2007 JKSG 124 South Lexington Avenue White Plains, NY 10601 Re 124 South Lexington Avenue, White Plains NY PBS 3-497231 Spill number 06-11782 Dear Sirs This Department has received an interim closure report from American Petroleum regarding the tank removal and spill clean up at your facility. Staff from this office inspected the tank removals. Significant contamination was removed. However, significant accessible and inaccessible contamination remains. Further remediation is required. This Department understands the site limitation and the need to perform the remediation in stages. Your contractor has requested that the tanks be installed before further excavation is performed in the southern edge of the property near the printing company. This is acceptable only if a remediation plan has been submitted and approved prior to the tank installation. This accessible area of contamination must be remediated. At least three monitoring wells are required to be installed. The wells must be positioned across the property. The wells must be sampled quarterly for one year, and then the need for continued sampling will be reviewed. The well must be sampled for volatiles (EPA method 624). A remediation plan must be submitted by July 1, 2007. The submittal from interim closure report from American Petroleum may be modified into the remediation plan. This letter was prepared in conjunction with the New York State Department of Environmental Conservation. Please continue to address all submittals to both agencies. Sincerely, Christopher J. Lalak Radiological and Chemical Analyst 12/17/10: Letter entered into eDocs - notice of overdue for sampling sent from WCDOH. jod 12/10/11: Letter to RP from

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | "7-16-13 Spoke with Brian. They did borings around tank and found contamination. Owner has agreed that they will be removing tank. They believe it is a 550. Told Brian to contact WP office regarding work schedule. jm Email from Envirostar::9/5/2013 5:16:01 PM: We pulled a 1000 Gallon UST yesterday. Scott Jerutis 234 Dr. Martin Luther King Boulevard White Plains 914-299-4778 It s a commercial building He sold the property but held money in escrow. I will keep you informed jod Email from Envirostar::9/19/2013 4:39:25 PM: We removed 4 containers of contaminated soil today its still dirty. The owner hired Tom Gallinger to do oversite during the clean up and close the spill. jod 11/27/13: Tank removal and cleanup of contaminated soil completed by Envirostar. Tank closure report from Tom Gallinger reviewed and entered into eDocs. Based upon the information provided, no further action is required at this time. jod" |
| Remarks: | "Phase 1 on old UST. Positive reading on PID from nearby soil sample." |

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | "2/10/11 Spoke to Stu Freeman at Advanced Environmental, who referred me to the person at the site , Declan MacAnnanie (Zack) at cell # 914-906-8878. 550 UST was pulled, and there is contaminated dirt and groundwater impact reported by Advanced. They will be continuing the remediation pending insurance coverage. dw 3/28/11: DEC site inspection, met with Advanced Environmental and rep from the Church Board. Contamination is extensive, ground water has been impacted. Approx 40 tons of contaminated soil has been removed to date. Remediation is being hampered by a sewer main pipe and a large tree. Main excavation is being backfilled, and overburden will be removed on the other side of the sewer pipe to access additional contamination. jod 4/18/2011: Clean up completed by Advanced Environmental. Report reviewed and entered into eDocs. Based upon the information provided, no further action is required at this time. jod" |

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | "7/6/17 Spoke to Castlton - building inspector asked them to call in a spill - AST with staining under the filter and the lines on concrete basement floor. No staining under tank proper. PID readings of 70-80. Castlton to give owner proposal for possible remediation / investigation of soil under concrete. Spoke to homeowner. She said the staining was from when Palisades Oil was cleaning the filter, and some oil spilled over. AST has been removed - home is being switched to gas. Carmine from Castlton will do soil borings to see if further remediation is needed. Sending Draft Guidance by regular mail. ga 7/11/17: There is no spill, stain on floor. Message sent to Castlton. DEC requires no further action at this time. jod" |
| Remarks: | "basement concrete stain clean up pending insurance" |

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

**CON EDISON GAS MAIN: TRANSMISSION MAIN (Continued)** **1016149200**

has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | "9/24/15 Spoke to Kathy Morgan at TT. Mr. Tirone is the buyer. Owner is unknown. dw 2/06/19: I spoke with Kathy Morgan at US Tank Tech, she pulled the file on this TTF. She states there is a note on the file indicating #6 and #8 Chester Ave were together on one parcel. She states #8 had an out of service 1K gallon underground fuel tank at the time they tested #6. She believes #6 was still in service at the time they tested it for a prospective buyer. Tank failed with hissing, may have been an ullage failure. US Tank Tech did not test #8 tank. They only other info provided is that this property was a Robison customer at the time of the test and Robison was notified of the failure. US Tank Tech forwarded a site diagram showing the location of the UST at #6. There was a direct fill in the center of the front yard and a remote curb fill that was capped. Diagram will be entered into DecDocs. jod I then spoke to Tony Magnotta of the White Plains Bldg Dept. He is checking his files and will forward any information on permits that may have been filed for UST removals at this property. jod 2/06/19: White Plains Bldg Dept issued a permit for removal of USTs at this property in October of 2018. Certificate of completion was issued by the Bldg Dept on Dec 20, 2018. Work was performed by Madison Environmental. Permit and Certificate scanned into DecDocs. jod 2/07/19: I sent a message to Joe Tomasulo of Madison Environmental. He states they removed both tanks. He will forward soil sample results. He states he was never informed about the tightness test failure or the open spill number. Sample results from Madison indicate some SVOC contamination below CP-51 Guidance values. Samples will be entered into DecDocs. I left a message with Joe Tomasulo stating I will need more information on the removal of these USTs. jod 2/08/19: I spoke to Joe at Madison. He has forwarded the sample results for the UST removal at 8 Chester as well. He states neither tank was leaking. The two buidings are currently part of a construction project and are being demo'ed. Joe states White Plains Buildning Dept was onsite to inspect the removals. I also spoke with Tony Magnotta at the Bldg Dept again. He confirms the USTs and the excavations were inspected by his Dept, no evidence of any leak or release was noted. Photos and additional sample results in |

| Update By: | AMOMOROG |
| Site Description: | Site Location: The site is located in the City of White Plains, Westchester County. To the west of the site is Rathbun Avenue and commercial properties, to the north are residential properties, to the east is South Lexington Avenue, and to the south is Maple Avenue and residential properties. Site Features: The site consists of several tax parcels adjacent to the Post Road Corridor BCP site C360129. Several commercial buildings and parking lots make up the site. Current Zoning and Land Use: The site is zoned B-3, which is a |

**POST ROAD CORRIDOR - WHITE PLAINS (Continued)** **S111458201**

| | |
|---|---|
| | general retail district allowing retail, office and service business uses and multi-family dwellings. Surrounding land use is mixed, consisting of residential and commercial properties. Past Use of the Site: Former commercial uses at the Post Road Corridor BCP site included dry cleaners; gas stations with underground storage tanks (USTs); automobile sales and service facilities with USTs, above ground storage tanks (ASTs), hydraulic lifts, and associated parking lots; various commercial businesses and offices; and commercial parking lots. Site Geology and Hydrogeology: The site geology consists of historic fill material, native till, highly weathered bedrock. The depth to bedrock ranges from approximately 17 to 52 feet below grade. Groundwater at the site most likely ranges from 3 to 11 feet below ground surface and flows to the northeast. |
| Env Problem: | The on-site investigation results shows potential for off-site impact from the previous uses on-site as well as a potential upgradient source of contamination as groundwater impacted with both petroleum related hydrocarbons and chlorinated volatile organic compounds appears to be migrating on-site. An off-site investigation has not been conducted at this time. High concentrations of tetrachloroethene (PCE) in groundwater lead to an on-site significant threat determination. The potential exists for vapor intrusion impacts in off-site buildings. |
| Health Problem: | Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available. |

| Update By: | AMOMOROG |
| Site Description: | Location: The Post Road Corridor - White Plains site is located at 77 West Post Road in the City of White Plains, Westchester County. This site is made up of 10 tax parcels occupying 3.69 acres of the overall 5-acre redevelopment project. The site is bounded by West Post Road to the north, Maple Avenue to the south, Rathbun Avenue to the west, and South Lexington Avenue to the east, with a separate out-parcel lot on the northwest corner of West Post Road and South Lexington Avenue. Site Features: All 10 parcels are currently vacant. Abandoned former commercial buildings of varying size on the site have been demolished, leaving only grass, trees and former parking lots. Current Zoning and Land Use: Nine of the 10 parcels are zoned B-3, which is a general retail district allowing retail, office and service business uses and multi-family dwellings. The other parcel is zoned B-2, which is an intermediate business district. The site is part of a planned mixed-use (commercial and residential) development. Surrounding land use is mixed, consisting of residential and commercial properties including a church. Past Use of the Site: The site's 10 parcels initially contained residential buildings as early as 1905 which later were used for commercial purposes beginning in the 1930s. Former commercial uses included dry cleaners; gas stations with underground storage tanks (USTs); automobile sales and service facilities with USTs, aboveground storage tanks (ASTs), hydraulic lifts, and associated parking lots; various commercial businesses and offices; and commercial parking lots. In 2005 two in-ground hydraulic lifts were removed from the site. In 2010 two USTs, eleven in-ground hydraulic lifts, a floor drain and an oil water separator were also removed from the site. Approximately 408 tons of impacted soil and 1,180 gallons of contaminated groundwater were removed from the site during this work. In 2012 four USTs and approximately 360 tons of petroleum impacted soil were removed from the site. These removals were completed under the DEC spill program and associated spill numbers have been closed. Site Geology and Hydrogeology: The site geology consists of historic fill material, native till, and highly weathered bedrock. The depth to bedrock ranges across the site from approximately 17 to 52 feet below grade. Groundwater at the site ranges from approximately 3 to 11 feet below ground surface and flows to the northeast. |
| Env Problem: | Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigation conducted to date, the primary contaminants of concern include chlorinated VOCs, petroleum related compounds and metals. No other VOCs, SVOCs, metals or PCBs/pesticides than those identified below were found in soil or groundwater at levels exceeding restricted residential soil cleanup objectives, protection of groundwater soil cleanup objectives or groundwater |

**POST ROAD CORRIDOR - WHITE PLAINS (Continued)** **S111458201**

standards. Soil - Soil samples collected from across the site indicate the presence of certain contaminants in varying degrees generally consistent with the former use of each parcel. VOCs, including acetone up to 0.51 parts per million (ppm)(protection of groundwater soil cleanup objective (PGWSCO)of 0.50 parts per million (ppm)), benzene up to 3.4 ppm (PGWSCO of 0.060 ppm), cis-1,2-dichloroethene (cis-1,2-DCE) up to 1.2 ppm (PGWSCO of 0.25 ppm), ethylbenzene up to 140 ppm (PGWSCO of 1 and restricted residential soil cleanup objective (RRSCO) of 41 ppm), tetrachloroethene (PCE) up to 2.32 ppm (PGWSCO of 1.3 ppm), toluene up to 37 ppm (PGWSCO of 0.7 ppm) and xylenes up to 430 ppm (PGWSCO of 1.6 ppm and RRSCO 100 ppm), SVOCs, including benzo(a)anthracene up to 8.9 ppm (PGWSCO and RRSCO of 1 ppm), benzo(b)fluoranthene up to 8.8 ppm (PGWSCO of 1.7 ppm and RRSCO of 1 ppm), benzo(k)fluoranthene up to 3.7 ppm (PGWSCO of 1.7 ppm), benzo(a)pyrene up to 7 ppm (RRSCO of 1 ppm), chrysene up to 7.6 ppm (PGWRSCO of 1 ppm and RRSCO of 3.9 ppm), naphthalene up to 26 ppm (PGWSCO of 12 ppm), indeno(1,2,3-cd)pyrene up to 4.6 ppm (RRSCO of 0.5 ppm) and dibenzo(a,h)anthracene up to 2 ppm (RRSCO of .33 ppm) and metals including arsenic up to 18 ppm (PGWSCO and RRSCO of 16 ppm), barium up to 490 ppm (RRSCO of 400 ppm), lead up to 1,100 ppm (PGWSCO of 450 ppm and RRSCO of 400 ppm), and mercury up to 2.9 ppm (PGWSCO of 0.73 ppm and RRSCO of 0.81 ppm) were detected in the soil above PGWSCOs and/or RRSCOs. There is no evidence of off-site contamination in soils. Groundwater - Groundwater samples collected from across the site indicate the presence of certain contaminants in varying degrees generally consistent with the former use of each parcel. VOCs, including benzene up to 530 parts per billion (ppb) (SCG of 1 ppb), cis-1,2-DCE up to 340 ppb (SCG of 5 ppb), ethylbenzene up to 1,100 ppb (SCG of 5 ppb), isopropylbenzene up to 95 ppb (SCG of 5 ppb), xylene (total) up to 3,000 ppb (SCG of 5 ppb), methyl tert-butyl ether (MTBE) up to 120 ppb (SCG of 10 ppb), tetrachloroethene up to 3,300 ppb (SCG of 5 ppb), toluene up to 110 ppb (SCG of 5 ppb), trans-1,2-dichloroethene up to 18 ppb (SCG of 5 ppb), trichloroethene up to 420 ppb (SCG of 5 ppb) and vinyl chloride up to 49 ppb (SCG of 2 ppb), SVOCs, including naphthalene up to 180 ppb (SCG of 10 ppb) and pentachlorophenol up to 2 ppb (SCG of 1 ppb) and metals including antimony up to 5.03 ppb (SCG of 3 ppb), iron up to 35,500 ppb (SCG of 300 ppb), manganese up to 4,724 ppb (SCG of 300 ppb) and sodium up to 583,000 ppb (SCG of 20,000 ppb) were found in excess of ambient water quality standards and guidance. Groundwater contaminated with chlorinated VOCs appear to be migrating from the site to off-site locations. Soil Vapor - On-site soil vapor was not completed during the RI based on the lack of existing structures, but is presumed to be contaminated given the results in other environmental media. Some petroleum related compounds, including 2-hexanone up to 75 ug/m3, ethanol up to 211 ug/m3, hexane up to 20.4 ug/m3, benzene up to 17.6 ug/m3, toluene up to 68.2 ug/m3, xylenes up to 92.1 ug/m3, heptane up to 23.7 ug/m3, and cyclohexane up to 164 ug/m3 were detected in off-site soil vapor samples along Maple Avenue. The potential exists for soil vapor intrusion impacts in off-site buildings.

Health Problem: People will not come into contact with soil and groundwater contamination unless they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into

**POST ROAD CORRIDOR - WHITE PLAINS (Continued)** **S111458201**

| | |
|---|---|
| | the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for the inhalation of contaminants due to soil vapor intrusion for any future on-site development. An evaluation is needed to determine whether soil vapor intrusion is a concern for any off-site buildings. |

| DEC Memo: | "2/6/12: Tank removal at former car dealership. This does not appear to be a PBS regulated site. Chris Lalak of WCDoH is checking records. Message sent to Royal Environmental requesting additional information on the property owner. jod 3/15/12: Closure report from DRE (received from Royal Environmental) entered into Edocs. It appears this property is part of the Sholz Ford Property at 55 West Post, Spill numbers 0901783 and 0901804. Report states that no ground water was encountered during excavation, so no ground water samples were taken. Next paragraph states ground water samples results were negative for contamination. Later in report, photographs show ground water within the excavation. jod 4/9/12: Message sent to Royal requesting clarification on ground water sampling. jod 4/12/12: I received a corrected copy of the closure report from DRE - entered into eDocs. jod 9/25/13: No further action is required on this tank removal spill number. Spill 0709611 is the active spill number for the ground water contamination at this site. jod" |

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

| DEC Memo: | "11/17/16 Spoke to Wayne at Barrier, who said he went 9' below grade, and is fairly sure there is a groundwater impact. Spoke to homeowner who confirmed these remarks, and is contacting insurance. dw 2/14/17: Email update received from Tim Bishop of Hydro Environmental: We covered a claim here on behalf of MetLife and Barrier completed the cleanup of 120.03 tons of contaminated soil. We just completed our first round of post-remedial groundwater sampling and the results were favorable, no VOCs and a few SVOCs (usual PAHs). I ll send you our Closure Report in the coming weeks jod 3/8/2017: Barrier Environmental disposed of the leaking UST and a total of 120.03 tons |

**CACSIRE - UST (Continued)** **S119028073**

of petroleum contaminated soil. Post excavation soil sample results were submitted for review. Ground water was also impacted and sampled. Report from Hydro (HES) entered into DecDocs database. Based upon information provided, no further action required at this time.
jod"

Remarks: "550 gal ust removed/loss of oil to soil/clean up pending sample results and contract"

| DEC Memo: | "3/6/2020 - Talked to Cathy Morgan of US Tank: they had tested 3-5000 gal tanks on 2/25 and all failed. They then removed all fittings and replaced with plugs and then retested but 2 have failed. PBS # 3-039128. No leakage has been observed. Tanks are in vaults. Westchester Co (Chris Lalak) was called. No product to the environment. fjk 03/30/20 Emailed Chris Lalak for a status. TG" |
| Remarks: | "Retest failure. Already spill # in place for the location, but R3 Spills wants a new spill number for a retest on the same tank." |

DEC Memo: "1-2-15 Same as 15-09837 and referred to that number. NFA jm 1-2-15 Spoke with Bill Lougheed (maintenance man for WJLE Equities Corp) and then Mark from Royal Environmental. This is an apartment bldg. with a 5k vaulted tank in the basement. Koexol Fuel filled tank and caused an overfill from the vent by the remote fill at the curb. No standing oil in boiler room but there is some minor staining. There is a sump and drain in this room but was not affected. Estimate is 50-80 gallons from vent. Royal on site performing cleanup. Spill is contained to soils by vent pipe. Did not enter drains or any waterways. jm"
Remarks: "Caller advised aprx 50-80 gal of oil spilled onto soil due to faulty vent. Clean up is pending."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | "4-10-15: Chris/WCHD e-Mail: Vinny, William Eilbacker will check this out. (new guy) County Building. During a tank pad upgrade. Leaking Return line found. Saturated Pea gravel found. Further work planned-next week? This may be a mess. Contamination may be around tank. Unknown amount of oil. 3-801262. Chris 4-10-15: V.Mc. call to Pat Dunn/Am.Petro.: Am.Petro. to remove UST and complete clean up. 10-1-1-15 report submitted by American 1-19-16 report submitted RDB 1-20-16, email from WCHD, After review of the Quarterly Monitoring Report for the 4th Quarter of 2015 regarding Spill No. 15-00310, WESTHAB Coachman Facility, 123 East Post Road, White Plains, the sampling event that occurred on 12/31/15 revealed the following conditions: approximately one foot of fuel oil was discovered in monitoring well MW-3 during sampling, and monitoring well MW-1 was covered by a concrete barrier and could not be sampled for this sampling event. Because one foot of fuel oil was found in monitoring well MW-3, the Health Department requires that this fuel oil in monitoring well MW-3 is vacuumed out and removed as soon as possible. This well must then be monitored to determine if the fuel oil is recharging into MW-3. If fuel oil re-enters MW-3 after it has been removed, periodic vacuuming of this well may be required to remove the oil from this well. The concrete barrier that is covering monitoring well MW-1 must be moved so that this well is accessible to be sampled. All four monitoring wells must be accessible for sampling. Are there plans in place to convert this building to gas heat? RDB 1-20-16 sent an email to county; need to revise their request with dates! RDB 1-20-16 WCHD comments revised RDB 02-5-16, Update, We completed the second vacuum extraction event on MW-3 this week. The technician skimmed product off the top foot for approximately 30-45 minutes and recovered approximately 50-gallons of oil-water mixture.Today (2/5/16) we completed the weekly gauging event and had the following results: Depth to Product = 13.05 Depth to Water = 13.36 Weekly vacuum extraction and gauging events will continue. Please note the next sampling event is currently schedule for February. RDB 02-10-16, AP update, We completed the third vacuum extraction event on MW-3 this week. The technician skimmed product off the top foot for approximately 30 minutes and recovered approximately 47-gallons of oil-water mixture. Today (2/10/16) we |

**WEST HAB COACHMAN FAMILY CENTER (Continued)** **S117851995**

completed the weekly gauging event and had the following results:Depth to Product = 12.65 Depth to Water = 12.80 Weekly vacuum extraction and gauging events will continue. Additionally we completed the quarterly groundwater sampling event from MW-1, MW-2, and MW-4 and no product was detected in these locations RDB 02-11-16 Need something more aggressive RDB 2-22-16 no weekly data; send email 2-22-16 email from American, Monitoring well MW-3 was vac'd on for a half hour (skimming the top as previously) on February 17th. A total of 37-gallons was removed. We are headed to the site this afternoon to determine if product has returned and whether another extraction event is necessary this week. We will follow up with the gauging data later today or first thing tomorrow morning RDB 2-23-16, email from KB As promised:DTP = 12.40-DTW = 12.70;An extraction event will be conducted again this week and we will gauge afterward. RDB 2-23-16, DEC response, Thanks for the update. The amount of free product still present is disturbing. This spill needs a more aggressive approach to have a significant impact on the contamination. Has American proposed a remedial alternative to the RP? By Monday, February 29, Please provide me with a summary of actions conducted thus far and a proposal to expedite the remediation of this spill. RDB 2-26-16 WCHS sent out letter requiring more work. RDB 3-7-16, update from American, American Petroleum completed the required weekly vacuum extraction and gauging events on monitoring well MW-3 for the week of February 29th as follows: -3/2/16: vacuum extraction event removed 51-gallons of product/groundwater mixture. -3/4/16 (am): gauging event -DTP = 11.58 ft-DTW = 11.78 ft -3/4/16 (pm): vacuum extraction event removed 45-gallons of product/groundwater mixture. 3/7/16: Gauging event- -DTP = 11.72 ft -DTW = 11.85 ft American Petroleum is in the process of scheduling the two times per week vacuum extractions events and will provide an email summary after the last post extraction gauging event of the week. RDB 5-9-16, The product recovery canister (PRC) was checked on 4/29 and today 5/9 and contained approximately a 1/8 and 9 of free product respectively. The latter may be impart due to the large amount of rain we received last week. The PRC was emptied into the 55-gallon onsite drum and then re-installed in MW-3. We will complete another PRC event near the end of this week. The site monitoring wells will be sampled in the next 2 weeks and a Quarterly Monitoring Report will be provided. RDB 070716 report QMR submitted; pumpin to continue RDB 3-27-17 sent email to APECCO looking for update. RDZB 3-27-17 response, Still completing week product removal via a passive collection bailer and quarterly sampling. Completed GW event on Friday. RDB 0410-17 1qtr submitted; lots of product, response, It looks like the amount of oil being recovered is increasing? Something more needs to be done. Please prepare and submit a more aggressive remedial proposal by Friday April 14. RDB 04-17 met on site with County and APECCO 05-3-17, received a draft proposal from APECCO, As discussed attached is a site plan indicating the propose boring locations. Fitting the 3 across the top may be a tight fit with the presence of the gas line but think it s worth a try. If you do a street view you can see the temp patch of the gas line and valve in the entrance. I should be able to finalize the client proposal today and we have been conducting weekly vac events (beginning of the week) and PRC events (end of the week) on MW-3 while we get everything in order to submit a formal workplan. RDB 5-3-17 please proceed- RDB 5-23-17 formal workplan submitted and approved- RDB 12-26-17 email for status- RDB 1-9-18, I will inspect the PRC bailer this week and provide an update

**WEST HAB COACHMAN FAMILY CENTER (Continued)** **S117851995**

by Monday. Sorry for the delay. RDB 0116-18, We are going to complete the following in January: " Vacuum Extraction Events on MW-3 and RW-1 the week of the January 15th and 22nd. " Gauging events post each vacuum extraction event. " Completion of purging (all site wells) and groundwater sampling the week of the 29th. A quarterly monitoring report will be provided in February summarizing field activities and laboratory groundwater sampling results. RDB 04-09-18 email from WC looking at spill site 15-06711 across street, they are boring, see D2- RDB 07-23-18 Last week met with APECCO; Mary and Jim to handle need to see the QMR- RDB 2/11/2019 Updates from jod, who spoke with Kathy Morgan at US Tank Tech. The TTF from Tank Tech states that #6 and #8 Chester are together on one tax parcel. The tank at #6 Chester failed a tank test, #8 Chester was not tested. White Plains Buidling Dept. issued a permit for removal in October of 2018, Madison Environmental did the work. Updates from jod are as follows: 2/08/19: I spoke to Joe at Madison. He has forwarded the sample results for the UST removal at 8 Chester as well. He states neither tank was leaking. The two buidings are currently part of a construction project and are being demo'ed. Joe states White Plains Buildning Dept was onsite to inspect the removals. I also spoke with Tony Magnotta at the Bldg Dept again. He confirms the USTs and the excavations were inspected by his Dept, no evidence of any leak or release was noted. Photos and additional sample results in DecDocs. Based upon the information received, no further action is required at this time. jod spill no. 1506711 at 6 Chester Ave has been closed. TJP 2/28/19 STIP was sent to Thomas Rooney of Westchester County on February 13th, Thomas informed me that he forwarded the STIP to Melissa Rotini of Westchester County and Hugh Greechan who is the Westchester County Public Works Comissioner, updates to come. TJP 5/22/2019 1st Quarterly Monitoring Report received from American Petroleum, quarterly monitoring to continue for one full round. A signed STIP has not yet been returned regarding this site. TJP 7/26/2019 2nd Quarterly Monitoring Report received from American Petroleum, quarterly monitoring to continue for one full round. A signed STIP has not yet been returned regarding this site. TJP 10/24/2019 3rd QMR received and reviewed, quarterly monitoring to continue through the rest of the round. A signed STIP has not yet been received regarding the site. TJP 8/26/2020 1st QMR 2020 received and reviewed, APECCO was advised the following that at a minimum vacuum extractions on MW 3 will be required monthly. If you would like to conduct vacuum extractions more frequently in an attempt to speed up the remediation of the site that would be acceptable as well, however the minimum requirement will be monthly on MW 3. TJP 10/1/2020 2nd QMR 2020 from APECCO received and review, APECCO to continue quarterly work as previously discussed. TJP"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| Update By: | DACROSBY |
| Site Description: | Location: The site is located at 55 Bank Street in White Plains, Westchester County. The site is located in the Central Business District of the City of White Plains on the west side of Bank Street, just south of the intersection of Main Street and Bank Street. To the west is the Metro-North railroad right of way. Bank Street is located along the eastern border, a car dealership is located adjacent to the southern border, and a parking lot for the Bank Street Commons Apartment building is located to the north. Site Features: The site is presently under construction as a commercial/residential building. The site was formerly a 2.24-acre parking lot for the nearby commuter railroad station. The site was used as a parking lot for over 40 years. Current Zoning/Use: The current zoning of the site is Core Business-4 (CB-4). Municipally-operated parking lots and multifamily dwellings, a restricted residential use, are permitted uses in CB-4 zones. Past Uses of the Site: The property was used as a coal and lumber yard starting in 1885. The lumber yard comprised of a mill, several small sheds, coal and lumber storage areas, and railroad spurs. By 1911, the property was being used for manufacturing sashes, blinds and trim, and for the storage of grain, fertilizer, and feed. During the late 1800s and early 1900s, portions of the eastern side were occupied by several residential homes. By 1953, the southeastern corner of the property was improved with a commercial building, while the remaining portions were public parking lots. The commercial building was razed by 1974, and the site has been operated as a parking lot since that time. Site Geology and Hydrogeology: The site is level ground and covered with asphalt. Surface water drains to a storm sewer system that runs to the Bronx River which is about 500 yards to the west. The shallow soil horizon consists of historic fill found at a depth from 1.5 -26 feet below grade. Below the fill, subsurface soils consist of predominantly sands with some silts and gravels. Bedrock was located at 80-120 feet below grade and is believed to by gneiss and schist. Overburden groundwater was encountered at a depth of 28 feet below grade and flows to the south. The Bronx River, which flows to the south, is located about 0.25 mile west of the site. However, the site is located above the current 100 year flood elevation. Site storm water is transported via storm drains to a storm water collection system and discharges to the Bronx River. The Bronx River Parkway is located adjacent to the Bronx River just west of the site. |
| Env Problem: | Nature and Extent of Contamination: Remediation of the site to track 1 soil cleanup objectives was completed in November 2016. Soil: Remediation is complete. The entire site was excavated to a depth of approximately 26 feet. No surface soils remain. Based on the investigations conducted the primary contaminants of concern in subsurface soils were inorganics (metals) including mercury, copper lead and zinc. These metals were present above the unrestricted soil cleanup objectives. These compounds were present in the fill materials used to grade the site and surrounding areas, and contamination did not migrated from the site to adjacent parcels. These inorganics were not found in on-site groundwater above NYS Groundwater Standards in filtered samples. Aluminum, iron, and sodium |

**YOUNG COAL & LUMBER SITE (Continued)** **S113492634**

| | |
|---|---|
| | were detected above standards in onsite groundwater but are considered to be naturally occurring. Groundwater: Chlorinated volatile organic compounds (CVOCs) were detected in on-site groundwater including tetracholoethylene (PCE) at a maximum level of 13 parts per billion (ppb), and trichloroethene (TCE) at a maximum level of 28 ppb. The groundwater quality standard for both of these compounds is 5 ppb. CVOCs were not detected in the subsurface soil samples collected from the site, the groundwater investigation suggests that the source originates from an off-groundwater source. The site remediation is complete. The site has a basement foundation that includes a vapor barrier and a subsurface parking garage which is ventilated. Because there is a vapor barrier and a ventilated subsurface parking garage a soil vapor intrusion investigation was not conducted. |
| Health Problem: | People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. A vapor barrier has been installed beneath the building foundation to minimize the potential of vapors from entering the building. Additionally, a sub-grade parking garage ventilation system required by building codes will be installed prior to building occupancy to prevent vapors from accumulating in the structure. |

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | "1-2-09 Spoke to Ms. Zamora. Gave me her daughter Katherine's number 914-434-6300 who is handling this. Katherine has advised me she is working with her lawyer to hire a contractor to remove the tank in question. Will be contacting J. O'Dee with what is going to happen and when. dvw 1/8/09: Spoke with caller, Kelly Sandler; neighbor of Ms Zamora at 29 Odell Ave. She states there was a court appearence today (that was adjorned to Feb) concerning violations issued by the White Plains Bldg Dept for inproper abandonment of the UST and no permit on the installation of the new AST. She states owner has not yet hired a contractor. I called Katherine Zamora; she gave me the name and number of the attorney she says is handling the situation; Jeff Kline 914-946-8855. jod 1/15/09: Call back from Jeff Klein. Envirostar has been contracted to remove the tank. Work has not yet been scheduled - awaiting permits from WP Bldg Dept. jod 3/18/09: Call from Elizabeth Mirisola, City of WP DOL. FOIL request on status of spill. jod 3/19/09: I spoke with Marc DiBartolo from Envirostar. He confirmed that he was contracted to remove the tank in January and had submitted a work plan proposal to the Zamoras, but he was still awaiting a work permit from the Bldg Dept before scheduling work. |

**ZAMORA / SANDLER (Continued)** **S109414080**

Copy of spill report sent to White Plains Law Dept. jod 6/18/09: Site inspection. Could not access basements of either property. Nothing of note outside. jod 6/23/09: Conversation with Jeff Klein, attorney for Justine Zamora. A permit for removal of the tank was issued to Conklin Environmental Services by the City of White Plains. Owner of the neighboring property Kelly Sandler has denied access to the property to remove the tank. I spoke with Kelly Sandler earlier today, and she confirmed she has denied access pending a list of provisions from the Zamoras. I also confirmed with Pete Russo that the permit was issued, but the work is on hold awaiting the outcome of a law suit. Also received photographs via e-mail from Carl Finger, attorney for Kelly Sandler. The photos were reportedly taken in October of 2008 during excavation work to resurface the Sandler's half of the driveway. See eDocs. jod 7/24/09: I spoke with both Jeff Klein and Pete Russo. The current plan of action is to excavate the tank on only the Zamora's side of the property line; and to have the tank cut, cleaned and inspected. If no leak or contamination are evident, the tank will be abandoned in place. Mr Klein stated he will forward documentation to the DEC today. jod Permit for removal was filed in February by Conklin Environmental Services. Proof of insurance listing coverage for 27 Odell was sent to Carl Finger attorney for Sandler. Proposal for removal (access agreement) was refused by Carl finger 3-20-09. jod 8/3/09: Conversation with Jeff Klein. Work is tentatively scheduled to begin next week. 8/14/09: Site inspection (late AM). No activity noted. jod 8/14/09: Call from Kelly Sandler. Plumbing contractor for the Zamoras - Phil McGovern (cell 914 588 7269) was on site today to locate the tank. I spoke with him and stated that he was to cease all work without DEC onsite. jod 8/15/09: I spoke with Jeff Klein. He has contacted the plumbing contractor to confirm when the work will begin. jod 8/17/09: On site with Phil McGovern, Edward Zamora, Jeff Klein, and Tony Magnotta. Tank exposed, contamination evident around the fill port. Tank has approx 41 water with 9.5 of free product on top - 48 diameter tank is filling with rain water over time, oil being pushed up and out of the fill port. Also located a remote fill approx 20 feet from the tank toward the rear of the property using a metal detector. NES contracted to pump tank out tomorrow and proceed with abandonment once contaminted soil on top has been removed. jod 8/18/09: NES pumped out tank; cut, cleaned and inspected. Bottom of the tank is sound. Additional contaminted soil will need to be removed from the top of the tank. Some contamination extends across property line. Kelly Sandler and Carl Finger arrived on site later in the day. Inspection of Sandler's basement at 27 Odell shows capped fill and vent lines through basement wall in line with the tank. Sandlers' state the property was never serviced by a UST. Furhter investigation work schedlued for tomorrow. jod 8/20/09: Remainder of the tank exposed. Additional contaminted soil discovered going toward the rear of the property. Two corrosion holes in the top of the tank discovered. Evidence of possible GW impact observed. Tank cannot be abandoned, DEC will now require removal. Also uncovered a second set of lines (feed and return) directly in line with the capped lines in the basement of 27 Odell. The 1K tank was once utilized by both 27 and 29 Odell at some point in the past. Although the lines in the basement of 27 Odell are currently capped, the tank and piping system are currently connected to both structures. I notified the Zamoras and Jeff Klein and also spoke with Kelly Sandler. The two owners and/or their attorneys will now have to agree on jointly hiring a

**ZAMORA / SANDLER (Continued)** **S109414080**

contractor to remove the UST and complete the remediation. jod 10/21/09: Photos from August inspections entered into eDocs. An index of the photos was also added to the eDocs image folder. jod 6/15/10: Jeffrey Klein submitted a new work plan/access agreement to Sandler/Finger, proposing to remove the UST, complete the clean up, and restore the driveway at the Zamora's (and their insurance carrier's) expense. Response dated June 8th, 2010 from Carl Finger denying access. Both documents frowarded to DEC. jod 8/10/10: Jeffrey Klein forwarded a copy of a report he had just received from Carl Finger. The report from EnviroClean Services is dated April 14, 2010 and outlines a limited site assessment conducted on March 31st. EnviroClean excavated the top of the tank on the Zamora's side of the property, took samples and then backfilled. All sample results are just at or below Part 375 clean up levels for unrestricted use, but report states petroeum sheen was once again observed on the ground water within the excavation. jod I discussed the ongoing issues at this site with John O'Mara. Propsal to PIN this spill under consideration. jod 3/16/11: Conversation with Jeff Klein. A tentative agreement has been reached between the parties involved. He states NES will be hired to remove the tank and complete the remediation. jod 6/16/11: NES removed the UST today with DEC on site for inspection. NES removed approx 10 to 12 yards of contaminated soil for disposal. Some additional contaminated soil will be excavated tomorrow. Exit samples will be taken and excavation will be backfilled - report from NES will follow. jod 10/5/11: Received messages from Jeff Klein. He states the work has been completed, there is now a dispute over payment with NES. Soil samples have not been released. Message sent to NES requesting status on the closure report. jod 10/12/11: NES stockpiled approximately 25 tons of contaminated soil at the rear of the property on June 16-17. NES took exit samples and then back filled with clean soil. Al Cianflone from NES states the exit samples were Clean , but he has released the sample results and has not disposed of the stockpiled soil because he has not been paid for any of the work he has done. Reportedly another contractor may have been contacted. jod 12/28/11: Call from Liz Marisola, City of White Plains Attorney, 914-422-5146 She states there is now a claim being made by the new contractor hired by Zamora/Klein that the soil stockpiled by NES is not contaminated and does not need to be disposed of. New contractor is Al Nesheiwat from Sustainable Development. He reportedly took soil samples from the stockpiled soil and submitted them to a lab for analysis. DEC has not received any sample results or information from Sustainable. The stockpiled soil still needs to be disposed of properly. jod 4/30/12: Recived a request for closure of the Spill, from Al Nesheiwat of Sustainable Development. He submitted a closure letter and copy of sample results - entered into edcos. Closure request states soil disposal recipts are included. DEC did not received disposal receipts. Message sent to Sustainable denying closure request at this time. jod 6/4/12: Received a copy of the soil disposal recipt from Jeff Klein via e-mail. Receipt entered into edocs. DEC still has not received the post-ex sample results from NES. NES is not releasing the sample results because they state they have not been paid for their work. Based upon DEC inspection at the time of the UST removal - no further action is required at this time. Spill report is being left as not meeting standards until post-ex sample results are received. jod"

Remarks: "Caller states she lives at 27 Odell Ave and shares a driveway with

| DEC Memo: | "11/18/19- This was a scheduled tank removal. The tanks are encased in concrete in the basement. The removal and clean up has begun and will continue tomorrow based on conversation with the property owner. Jamie hired Quality Fuel Oil and Trucking, POC: Jimmy 914-665-0775 Castlton was on site today, details are in the attached email. The home is on White Plains city water supply and there are no bodies of water on the property. -KJ 11/25/19 Update from Castlton: Tanks have been removed. A lot of holes in the tank and contaminated sand around the tank. This is near a sump pump - at the moment the sump is clear. Will be doing a Soil boring today in the stained area. ga 3/2/2020: Castlton Environmental removed the two ASTs and disposed of 7.46 tons of petroleum contaminated soil. Post excavation soil sample results were below CP-51 Guidance values. Report has been reviewed and entered in DecDocs. Based upon the information provided, no further action is required at this time. jod" |
| Remarks: | "There was hole inside the tank that caused the unknown amount of spill. Cleaning pending." |

DEC Memo: "10/05/05 Phase II Environmental Site Assessment report submitted by Advanced Cleanup Technologies, Inc. Soil contamination found in a boring located east of the building at a depth of 6 to 9 feet bg. total VOC's = 69,489 ppb. Test pits and further investigation proposed to the owner of Triangle Deli. TG 01/04/07 Subsurface Investigation and proposed excavation report submitted by Kleinfleder on behalf of the former site owner, Mobil Oil Corp. Six soil boring were completed on site. Based in the info developed from that boring program, Kleinfelder has proposed the excavtion of impacted soil in two areas. TG 01/12/07 Jesse Gallo of Kleinfelder reported that the excavation in the parking lot will take place in the spring since the asphalt plants are currently closed and the lot would nend to be resurfaced. TG 04/28/07 to 05/25/07 the 3000 gallon tank was abandoned in place and and 27 tons of PCS was excavated and disposed. 09/11/07 Tank removal report submitted by Kleinfelder. On etank was removed and another was abandoned in place. TG 10/03/07 Two monitoring wells were installed and quarterly sampling is being performed. TG 01/16/08 ND VOC levels in MW2. NFA TG"

| DEC Memo: | "5-23-17 Hotline described caller as saying a small spill, but some amount of transformer oil was washed into sewer. Spoke with PD. Officer said that overhead transformer exploded. FD responded and put out fire. During fire, an unknown amount of oil was washed into sewer. He said that Con Ed was on scene now and DPW was coming to location also. Called ERT and spoke to Chris. Chris confirmed they have an emergency crew on scene de-energizing unit. He confirms an unknown amount washed into sewer. Chris estimates that type of transformer involved in incident holds a maximum of about 30 gallons. I thas been reported to him that top of transformer was on fire, so it spill is not believed to be near that amount. They will know more once they can inspect transformer. TG will be updated by EMIS report. jc 05/23/17 Transformer on pole 44 at W. Post Rd, White Plains has been updated. Transformer is a 150 kVa sensing transformer which has a capacity of 113 gallons. It is a 7/15/2010 unit which is non PCB. Emergency crew is estimating possibly half the capacity is out of the unit and it remains unknown amount of material into the drain. Crew remain on location. TG 05/23/17 Inspected the Bronx River at Exit 21 the White Plains exit since that is where the storm drain discharges. An oil slick was present on the water surface and no absorbents were in place. So I went to the spill origin on West Post Rd and met with the on scene supervisor, Gregory C. Lee Sr. He was not aware that the transformer oil traveled to the Bronx River. He was advised that a crew was a the river to deploy booms. He called his office for guidance. Meanwhile, I called Tri State who said they had a crew at their facility that they could send without delay. Gregory Lee could not provide and ETA for his cleanup crew, so he said he would like me to call TriState to have them respond to the outfall. I then left the site to travel back to meet TriState at the outfall. They deployed absorbents at the outfall. Con Ed operations supervisor, Jos Detres arrived and was briefed. Mr. Detres met Nanci from TriState. Jose advised Nanci that she should email him the invoice and he would see that TriState would be paid directly by Con Ed. I then returned again to West Post Road location and by then Allstate Power Vac was on scene waiting to begin the street and storm drain catch basin cleaning. TG 06/12/17 Excerpt from EMIS 258350/7: 5/23/2017 9:10 AM Emergency No 9 reported transformer fire out and transformer off line. BTicket WE17020993, WR 3927931. Serial number is 61009057096 ERNCO unit with blue date 07-15-2010. Unit badged as holding 113 gallons and is a 150 kVa sensing transformer. Possibility of half capacity spilled out to street and unknown amount into drain mixed with water from white plains FD operations. Blaich, Christopher 5/23/2017 11:40 AM Transformer off line and bagged. DEC spill |

**MARIO'S S/S (Continued)** **U001842534**

response reported a sheen in the water at exit 21 on Bronx River Expressway. Env Ops J. Detres responded and reported there is a sheen on the water and DEC boomed area. DEC called Tri-State Env for a response. Env ops took sample of material on the water for analysis. Unclear at this time is product is a CE material and from the overhead transformer on West Post Road at pole 44. Env ops has a contractor on location to begin cleaning the area at pole 44 and to investigate the drain at the location that was reported as being impacted. Blaich, Christopher 5/23/2017 7:40 PM All-State double washed and rinsed (Using Safe Wash) street, sidewalk, 4 catch basins and 1 sewer Manhole and clean customer (107 W. Post Rd) driveway. Unit has been bagged up. The unit is removed and bagged up and OH crew in the process of putting up the new unit. Baxter, Brandon 5/26/2017 10:39 AM EH&S Senior Specialist R.Young (85857) to report that NYSDEC Reg III Rep Todd Ghiosay had contacted Tri-State Environmental Services (Hawthorne, NY) requesting that the two booms be removed from the Bronx River; booms located just north of Exit 21...one boom at the outfall and one boom at the pedestrian bridge. Duke, David "

| DEC Memo: | "Prior to Sept, 2004 data translation this spill Lead_DEC Field was WADSWORTH 3/24/2010 - Email to WCDOH for input. ELM 4/1/10 WCDOH awaiting response back from their archive. JO'M 8/10/12 Mtg notes:The August 9, 2012 meeting at the DEC office reviewed the current status of the 107 West Post Road Sunoco Station. The discussion concluded the two sets of groundwater sample data available, one from each 2009 and 2010, was insufficient to make any determine on the current status of the site. As per our discussion, the department is requiring that groundwater samples from the two wells be collected, analyzed and the results be submitted quarterly for a minimum of 8 quarters. A site map locating the wells on the site must be included in each report. Additionally, relative groundwater elevations are to be measured at each sampling event and included in the quarterly status report. After review of a minimum of 6 quarters and a maximum of 8 quarters of analytical data, the site status will be discussed and further work may be necessary. Once the contamination is remediated, spill numbers 9406301 and 9416930 will be closed concurrently.--mt 7/9/2013 -- When asked, the attorney said he would work on it. The contractor said he had plans. Waiting for true schedule to conduct sampling. Unknown if or how many rounds of samples have been collected to date. ELM 11/25/13 Site visit on 11/22/13, There are two separate sites, the repair garage at 107 Post Road and the gas station at 115 Post Road. Two wells were recently installed proximal to the old tank farm at 107 Post Road. Samples have been taken and sent to a lab. A report is pending. mt 5/27/14 GW analytical data slight continual decrease over the past years, NFA. MT" |

| DEC Memo: | "1/24/2020 Northeastern Env. was doing property assessment for commercial transaction. Property has building encompassing most of property, with elevated loading dock. Tank is under floor of building, may be in vault in basement. Northeast was unable to gain access to the tank at this time, but did drill outside the building just in front of tank, (tests came back clean) and opposite end (came up with small hits to ground water). Plan to gain access to tank, see if tank is leaking or can be abandoned in place. Tank believed to be 500 gallons - has been out of use for years. ga" |

DPW responding and may be hairing Tri.St. J.O'Dee handling. 9/04/13: Bill McMahon from DPW called me directly when the spill occured yesterday. At first he stated fluid had entered a catch basin and they were calling Tri-State. He also stated that there was a multi-vehicle traffic accident as a result of this spill, a car reportedly slid through a traffic light. Bill called back later and stated that no material had entered the catch basin and DPW was completing the clean up themselves. I called back this morning and left a message asking him for an update. jod 10/07/13: Tri-State was contacted but never hired to perform any work. White Plains DPW reports the clean up was completed and no drains were impacted. No disposal documentation was provided. jod" |

| DEC Memo: | "9/16/19- I spoke to the consultant: demo'd 2 bldgs and found a 330-gal UST that was previously in a basement. It had been filled with sand and was in bad shape w/ holes. Sand inside has an odor. There is probably soil impacted along the side of tank. The contractor plans to pull the tank, clean and scrap on Monday, and assess/sample the soil. Not sure about GW but not visible now with the tank still in the ground. The contractor said that he's not sure if it was ever a registered/regulated site but he would do some research. I'm sending him a WCDOH PBS app now. Update from Beynan via email: This site is owned by Devon Plaza Realty who also owns 9 Mitchell Place, an unregulated facility, and the adjoining parking lot between the two parcels. The parcel number for 9 Mitchell Place is 125.76-5-2 and PBS No. 3-412384 has 4 closed USTs and one active 500 gallon UST. Status is unregulated. The lot is owned by Devon Plaza Realty c/o Stillman Management. The address for the parcel at 109 Mamaroneck Ave is 131 Mamaroneck Ave in White Plains. Parcel 125.84-2-1 is owned by Devon Plaza Realty c/o Stillman Management. The adjoining parking lot parcel is 125.76-5-17 and the owner listed as Devon Plaza Realty c/o Stillman Management. Stillman Management 141 Halstaed Avenue Mamaroneck, NY 10543 And here is the PBS No. 3-050067 for 170 East Post Road, AKA 131 Mamaroneck Avenue, AKA 109 Mamaroneck Avenue White Plains. Unregulated facility with one 3,000 gallon #2 oil tank that was closed removed in 1995. 9 Mitchell Place was demolished in 2012 resulting in spill no. 12-00312 and the tank closure report is on D2. -MS 09-19-19 Brookside removed the 330 gallon heating oil UST. BTR 10-01-19 Reviewed analytical data submitted by vertex engineering. CP-51 list was non-detect except for low exceedances of ethylbenzene in four samples. No groundwater was observed and soil was excavated until PID readings were below 50ppm. Requested closure report and ok'd backfill. BTR 10-18-19 Closure report submitted to the Department. BTR 11-14-19 Closure report was reviewed. 77 tons of soil was disposed at Clean Earth and the tank was crapped at Two Brothers Scrap Metal in Farmingdale. Sample results are favorable per October 1st update. NFA. BTR" |
| Remarks: | "Abandoned in-ground fuel oil tank and the tank is currently filled with sand. The contractor is planning on removing the tank on Monday 9/16/19 and there maybe affected soil around the tank." |

Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.

Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials.

**AUTOMOBILE CLUB OF NEW YORK (Continued)** **S105057848**

Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

Site Code: 374633
Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear

**AUTOMOBILE CLUB OF NEW YORK (Continued)** **S105057848**

to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.

Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.
Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.
