| DEC Memo: | "1/12/18 US Tank was called to try to find leaking UST at YMCA Oil was coming into the basement through the back wall. No evidence of buried tank found. A tank was removed at the front of the property years ago. Sheen was noticed at the back of the property coming up from cracks in the asphalt, believed to be coming from a retaining wall. Other side of wall is condos / townhouses. US Tank told YMCA to call Northeast, their usual cleanup contractor, to put booms in place in storm drain at parking lot, sump pump, and cubby of basement to prevent further oil impact. Rain is causing oil to sheen on parking lot, making it easy to trace path from property behind them. Spoke to Tom @ YMCA - confirmed that Northeast Env. was called, did boom the sump in the basement, the storm drain at back of parking lot, and the pipe cubby in basement were evidence of residual oil was found. Northeast would like to speak to DEC for advice on how to proceed. ga 01/17/18 Received a report prepared by US Tank Tech describing their effort to locate a tank on the property. No tank was located. Report in DecDocs. TG 02/07/18 Inspected the site on a rainy day. No sign of oil observed at the time of the inspection. TG 04/16/18 YMCA hired HydroEnvironmental Solutions to conduct an investigation both outside in the rear parking lot and inside the basement to try to determine where the oil is originating. All outside soil boring locations were clean, eliminating the idea that there is an offsite source. Report concludes that the oil is from the numerous past spills that have occurred in their basement. See report in DecDocs. TG 09/25/18 Spoke to Tom Hay. He stated that the building may be sold in the near future. GW in the basement is being pumped through an oil water separator before being discharged. Little if any oil is accumulating in the separator according to Tom. TG 07/01/20 The YMCA had no funds to do any type of cleanup and was sold to a developer. It is anticipated that the cleanup will be performed once the building is razed. TG" |

| DEC Memo: | "1/12/18 US Tank was called to try to find leaking UST at YMCA Oil was coming into the basement through the back wall. No evidence of buried tank found. A tank was removed at the front of the property years ago. Sheen was noticed at the back of the property coming up from cracks in the asphalt, believed to be coming from a retaining wall. Other side of wall is condos / townhouses. US Tank told YMCA to call Northeast, their usual cleanup contractor, to put booms in place in storm drain at parking lot, sump pump, and cubby of basement to prevent further oil impact. Rain is causing oil to sheen on parking lot, making it easy to trace path from property behind them. Spoke to Tom @ YMCA - confirmed that Northeast Env. was called, did boom the sump in the basement, the storm drain at back of parking lot, and the pipe cubby in basement were evidence of residual oil was found. Northeast would like to speak to DEC for advice on how to proceed. ga 01/17/18 Received a report prepared by US Tank Tech describing their effort to locate a tank on the property. No tank was located. Report in DecDocs. TG 02/07/18 Inspected the site on a rainy day. No sign of oil observed at the time of the inspection. TG 04/16/18 YMCA hired HydroEnvironmental Solutions to conduct an investigation both outside in the rear parking lot and inside the basement to try to determine where the oil is originating. All outside soil boring locations were clean, eliminating the idea that there is an offsite source. Report concludes that the oil is from the numerous past spills that have occurred in their basement. See report in DecDocs. TG 09/25/18 Spoke to Tom Hay. He stated that the building may be sold in the near future. GW in the basement is being pumped through an oil water separator before being discharged. Little if any oil is accumulating in the separator according to Tom. TG 07/01/20 The YMCA had no funds to do any type of cleanup and was sold to a developer. It is anticipated that the cleanup will be performed once the building is razed. TG" |
| Remarks: | "leaking at base of wall - in basement of YMCA unknown were it is coming from - off site clean up pending crew." |

| DEC Memo: | "4/7/11 Conn. Tank (203-384-6020, 888-304-8265) enroute to vac out, and do spill cleanup. ETA was approx 4:30pm. Tanks were filled by Petro this morning. Possible 800 gal release due to 3 connected 330 AST's. Sump involved but this has been unplugged. Bldg. has offices, and the people have left due to possible fumes. WCHD is sending a rep, after speaking with Carlos Torres. Updated T. Ghiosay. J. O'Dee enroute. Vaulted area is not under the building, but in an adjacent area outside. Bill Christopher is building owner at 203-644-2002 cell . John O'Dee reports from the scene that approx 900 gal has been lost, and will be checking sewer lines. dw 4/7/11: I first inspected the Mamaroneck River just north of this location. Located the outfall from the storm drains in the area of the spill. No evidence of any sheen or petroleum noted. Met on site with WCDOH Denise Heinzinger and Sebastian Bimonte. Also on site, WP Fire Dept, City Building Dept, City Highway Dept and WP police. Contact for building ownership is Bill Christopher 914-949-7600 - part owner of Urban Living Association. Office Bldg has 3 manifolded 330 gallon tanks in the basement. There is a cinder block containment vault around the three ASTs, approx 2 and 1/2 ft high. Petro had delivered approx 460 gallons at around 8:00 AM and noticed no problem. Owner of the restaurant next door states he began noticing petroleum odors around 9:30-10:00 AM. It appears the center tank had a leg break, tank collapsed unto piping. All three tanks now empty. Most of the petroleum was contained to the vault where it was recovered by CTR using a vac truck. But a significant amount leaked out thru a floor drain and into two large sumps in the sub-basement a half level below. The pump in one of the sump does not work and the other was reportedly off before and during the release. Both sumps discharge to the sanitary sewer. Manholes around the entire perimeter of the building were inspected, no petroleum was found in any. CTR continuing with the remedaiation. ASTs were being cut, cleaned and removed when I left. CTR states they will forward a report when complete. WCDOH will inspect tomorrow. jod 4/19/11: WCDOH initial inspection report entered into eDocs. Denise states she re-inspected on 08Apr11 and clean up was proceeding. jod >>> Heinzinger, Denise 4/21/2011 10:08 AM >>> I was out there yesterday. Looks pretty clean tons of deodorizer The sumps were good, a very light sheen upon the water. Barrels of contamination still on site. -CTR continuing with remediation. jod 12/08/11: Update received from WCDOH: >>> |

**URBAN LIVING ASSOC (Continued)** **S111010959**

Heinzinger, Denise 12/8/2011 9:22 AM >>> I believe we can close spill #1100238 171 East Post Rd, White Plains. Exterior, diked AST legs gave out breaking tank. Containment held most of the oil but some seeped out into a nearby floor drain which ended up in their basement sump pits. Clean up performed. May have been some cracks in the basement floor. Apart from jack hammering up I believe the clean up was satisfactory. *DEC concurs - no further action required at this time. jod "

| DEC Memo: | "9/28/20- Transformer on a pole lost 10 gal to soil, town property. Labeled non-PCB. On site personnel are working on notifying and calling a contractor for cleanup. EMIS # 278486 -MS 09/28/20 Excerpt from EMIS, Guy Noisette, employee 23759 was responding to a call of a leaking transformer (WR# ?), when he found 10 gallons of dielectric fluid from an OH transformer on pole #W-4 onto grass, concrete and asphalt. A non-PCB label was seen on the transformer. Cleanup is pending transformer removal and environmental cleanup. There are no parking restrictions. TG 10/09/20 Excerpt from EMIS, 9/29/2020 7:49 AM Update: 9/29/2020 at 0200hrs. Clean Harbors crew conducted Non-PCB oil cleanup from transformer at Pole W4 in front of 38 Rathbun Ave in White Plains. An approximate 16 x 2 area of impacted soil was removed. And an approximate area of 16 x 6 of impacted concrete was cleaned with SpeediDry. 200lbs of nonhaz waste was generated and will be transported to Clean Earth under BOL:1200381. Montoya, David TG" |

| DEC Memo: | "5/27/20 - The Caller contact DEC with a update. The tank is 10K gal. UST that passed a tank test but petroleum impacted soils were detected near the tank. DEC requested additional information and for the Caller to contact Westchester County DOH. KAB 7/17/20 - A Phase II Investigation was conducted on the property. Seven soil boring were installed in the area of the 10K UST. One sample result had levels greater for the NYS guidelines for VOCs and SVOCs. The spill |

**MARTINE NURSING REHAB CTR (Continued)** **S126399638**

was caused by an overfill event of the tank. These levels are expected to decrease to below guidelines or no detect, since the contamination source have been removed. There are no significant impacts from the spill. NFA. KAB"

Remarks: "tank test passed. soil testing confirms loss at 8-10 feet. Investigation and c/u ongoing"

| DEC Memo: | "10/3/17 Burke was replacing 1500 gal UST with 1000 gal UST, emptied the tank before removal, found holes in tank and visible product in soil. Tank under parking lot that is being redone. Property on municipal water. Unknown if GW impacted. Burke is NOT doing cleanup. Sent owner contact draft guidance and contractor list. T. Ghiosay to visit site. ga 10/03/17 Met with Walter Frost from Burke who said that they removed the 1500 gallon tank which was found to have many large holes, some exceeding 6 inches. Contaminated soil was stock piled and the tank was left on site. Burke doesn't handle remediation so another contractor will need to be called to complete the project. TG 10/23/17 New England Environmental Services reported that they excavated and disposed 1081.71 tons of contaminated soil. Post excavation soil sample results were below DEC soil guidance values. NFA. TG" |

**ASHE - TANK FAILURE (Continued)** **S118462524**

DEC Memo: "Spoke to Elite and received correct # for owner. Elite was retained by Oil Co. to conduct test because Oil Co. believed tank was leaking. Elite is recommending to owner that tank be removed and is providing estimate. Contacted owner, Ali, who reports that tank received delivery on 12/24 of some 150 gals. and is now empty. Advised him to contact his insurance company and that tank needs to be removed. Oil Co. is Tarry Oil at 914-631-2580. Spoke to Robert Corveddu. He confirmed 150 gals. delivered on 12/24 and now tank is empty. He called Elite Env. to test tank. DT 12/29/15: DEC drive by inspection. No answer at the front door. Appears to be a two unit apartment and not a signal family home. Sign taped to the front door (photo in DecDocs) indicates landlord's phone number is 914-948-7475. There is significant contamination in the side yard around the fill port. Call to Ray Hilyer at Elite, cell number, left message requesting callback. jod 12/30/15: Called and spoke with Lisa at Elite. States Mr Ash hired them for the tank test. I then spoke with Mr Ash. He states he is the owner/landlord. States they have a temp drum set up in the basement for heat. He states he is contacting DSS for assistance. I notified WCDoH and White Plains Bldg Dept of the situation. jod 12/30/15: Email from Tony Magnotta of WP Bldg Dept: John, Mr. Ash is not the owner but a tenant. Mr. Demitrios Leontitsis is the owner and lives at 1 Sterling Avenue White Plains NY 10606. He is currently employed by the White Plains Coach Diner on Westchester Avenue in White Plains as a night shift floor manager (Tel# 914-428-5700) and is in the process of evicting Mr. Ash. I will send a violation notice to Mr Leontitsis of a compliant for a leaking fuel tank. I will also reach out to Mr. Leontitsis. His home on Sterling Avenue is in it's final stages of foreclosure to another bank and he plans to move into 188 Fisher Ave. as soon as Mr.Ash moves out. TM jod 1/04/16: Robert Corveddu of Tarry Fuel states they are delivering to the temp drum in the basement almost everyday. Usage for the home looks to be approx 20 gallons per day. jod 1/06/16: Spoke with Ray Hilyer, WP Bldg Dept is requiring a permit on the temp drum. Ray has attempted to contact the actual owner Demitrios Leontitsis as his place of business as provided by the Bldg Dept. Ray states he called the White Plains Coach Diner and they state no one by that name is employed there. jod 6/28/17: Elite was never hired to perform any additional work. jod 7/20/17: Pete Russo of White Plains Bldg Dept reports permit for tank work filed on 7/17/17. The new owner hired C2G Environmental to remove the UST. jod 3/20/18: Received a call from Richie Coombs at MH Tank. He states a prospective buyer has contacted their company about the open spill number. I returned his call and left a message. jod 3/23/18: Received a voicemail from Jason Epstein C:914-441-1090 Mr Epstein states he recently purchased this foreclosure property at auction. I returned his call, could not leave a voicemail message. jod 5/09/18: Call to dispatch desk from an attorney Jonathon Klein. He represents another prospective buyer of this property. He states there have now been three sales of this house at auction, and each time the buyer has cancelled the deal after finding out about the open spill number. jod"

Remarks: "pending repair and retest"

| DEC Memo: | "12/13/12 Assitant Chief Engineer Joseph Rocuzzo reported that a contractor, DP Wolff (143 Bedford Rd, Katonah) was performing mechanical work and had 50 gallon of oil that needed to be pumped back into the diesel storage tank. They set the house pump on manual and turned on the pump. It was explained that the oil first gets pumped up to the 20th floor day tank and the excess then flows out the daytank return line back to the storage tank. However the daytank emergency vent relief valve is lower than the return line, so the oil released from that vent before it could be sent back to the tank via the return line. The oil drained down the glass curtain wall from the 19th floor to the 16th floor. Elite Environmental was on site removing oily insulation and cleaning oiled surfaces. A minor amount of oil escaped the interior of the building thru the glass curtain and landed on the sidewalk below. Some oil also entered a floor drain next to the day tank. WP sewer dept personnel reported that oil was observed in the sanitary sewer in the street but not in the storm drains. WCHD is requiring indoor air sampling before the 4 impacted floors can be reoccupied. TG " |
| Remarks: | "interior and exterior to sidewalk - cleanup in progress - spilled 14 thru 17 floor elite environmental on site" |

| DEC Memo: | " 4/11/12: Former PBS Facility, Mitchell Place Garage. Barbara McDonald from WCDOH reports all USTs were reportedly removed when the site was deregulated. She will follow up with owner and caller, then update DEC. jod 07/31/12 Northeast Environmental submitted a soil remediation report. They reported that they unearthed a 1000 gallon fuel oil tank. More than 60% of the tank was under the building making removal impossible. The soil immediately beneath the tank was impacted but left in place. All surrounding soils were removed. A gw monitoring well was installed in the vicinity of the tank and no contaminants were detected. NE Environmental recommended removing any remaining impacted soil once the building is demolished. NFA TG " |

| DEC Memo: | "6/14/06 Pro Test on site to test the 1500 gallon tank as ordered by the DEC. Tester couldn't get vacuum on the tank. Andre from ProTest said the cement on top of the tank needs to be removed to expose all of the bungs and piping. Once that is performed, then the tank can be isolated and tested. Visual observation revealed that the steel on the top of the tank was very heavily corroded. TG 06/29/06 AM - ProTest back on site retesting the lines and the tank. Andre reported that the vent line and the remote fill line both failed the test. The tank failed to hold a vacuum therefore, it also failed. Andre recommending unearthing the manway and checking that for a definitive answer on the tank failure. However this can't be accomplished until a refrigeration compressor is moved which will require a refrigeration mechanic. TG 06/29/06 John Leddy from ProTest officially reported that the tank failed and that the tank has lost two inches of oil since the 14th and the tank is not being used. Recommending emptying the tank to their client. TG 07/05/06 Joe Ostrosky from Petroleum Tank Cleaners (PTC) reported that PTC was hired to remove the oil from the tank. The tank has been emptied, cut open and cleaned. TG 11/15/06 New England Tank Services has completed the removal of the tank, allowing for an inspection. Substantial corrosion and numerous holes were observed. A letter was sent to the management company requiring the installation of two monitoring wells. 03/12/07 Monitoring well installation report submitted by JM Associates who were subcontracted by Fleet Environmental. No free product was detected in the wells. TG 07/30/07 New England Tank Services reported that they removed the tank along with 2.64 tons of petroleum contaminated soil. TG " |

DEC Memo: "2/3/2020 Spoke to Sgt. Larrier, White Plains PD. He said 20 gallons of diesel was spilled from a truck at a nearby construction site - working on finding the exact truck now. Oil ran down the curb into a sewer drain. White Plains FD on scene, White Plains Water Dept on scene, WC DPW on scene. Con Ed has been called. DPW will be organizing cleanup. FD has put down pads and speedy dry. ga 02/03/19 Responded to the spill and met with the PD and FD who had spread a lot of speedy dry on the spill. PD was checking area surveillance cameras to see if a responsible party can be identified. TriState Environmental was called to sweep up the speedy dry and remove the diesel fuel from the catch basin. The Mamaroneck River was also checked and no oil was observed. TG 02/26/2020 ISR completed and sent to the RSE for signature and processing. NFA. TG"

DEC Memo: "1-10-12 Chris, WCHD, responded to a call from White Plains DPW of sheen coming out of an outfall to the Bronx River. O'Dee responding. jc 1/10/12: I met on site with Chris Lalak and Joe Mancini of WCDOH. Also present, numerous members of the WP Fire Dept, WP DPW, and WP Highway Dept. Source of spill is a leaking 137 gallon AST for a generator at 146 Westmoreland Ave. Property owner is Home Street Holdings LLC. Property is leased by contractor Cum Laude Group - AST is owned by Cum Laude. Fire Dept deployed boom in the River and in impacted catch basins. Tri-State contacted by DEC and responded. After I arrived on site, owner of Cum Laude Chris Cacace arrived. He has accepted responsibility for the spill. Tri-State will maintain booms in River while remediation takes place. NES hired for clean up on site. jod 1/11/12: Chris Lalak of WCDOH inspected: >>> Lalak, Chris 1/11/2012 11:56 AM >>> John, The clean up is coming along. The river looks great. No sign of oil in the river. The absorbents are working properly. The spill area on westmoreland looks good. It appears that all the contamination has been excavated. I am waiting on a call back from al NES, he was on site this morning and I missed him. >>>1/11/2012 12:27:10 PM: The excavation is good. There is a heavy sheen in the water in the exc. I required that they vac it out before backfilling. They will vac it and backfill today probably. jod 4/2/12: The clean up in the Bronx River has been completed by Tri-State. Booms have been removed for disposal. The clean up on the property has been completed by NES. No further action is required at this time. jod"

Remarks: "leaking tank from filter to ground to drain to bronx river - FD on scene - cleanup pending -"

| DEC Memo: | "8/26/19 PW Grosser Consulting was doing Phase 2 investigation, took soil borings in basement by UST abandoned in 1999. PID readings came back at 3.5, 12, and 133 ppm. Groundwater impacts were noted. Property is believed to be on municipal water, no waterways on property. Owners are trying to sell the property - the contact is the owner's attorney. Attorney will send contact information for owner. ga 2/6/20 - Spoke with PW Grosser Consulting on the next step for the spill investigation/remediation. PW Grosser Consulting will submit information on the abandonment of the former UST, get a trend of free product/sheen in monitoring wells and trench and development of remedial action. KAB 4/30/20 - The spill closure report has been reviewed. Groundwater sampling is needed, before spill closure can be considered. KAB 6/29/20 - The Groundwater Sampling Report showed no NYS groundwater exceedances for VOCs or SVOCs in the onsite groundwater samples. There are no significant impacts from the spill. NFA. KAB" |

| DEC Memo: | "05/17/06 Met with Con ED rep Tim Riley who explained that the impacted manhole conatined about and inch of fuel oil floating on several hundred gallons of water. A sample was taken and results rec'd later indicate that material was similar to a light fuel oil. A curbside fill line for 189 Main Street is one possible source. Requested that when the manhole is safe for entry that Con Ed personnel attempt to determine where the furl is entering the structure. TG 07/21/06 JM Associates coordinated the testing of the remote fill and vent lines servicing 189 Main Street and both of those lines failed. The remote fill was excavated and petroleum impacted soil was present beneath the line. Local WP building Dept work permit prohibited complete removal of the line, so remediation will continue when the building is demolished. TG 06/10/08 Closure report submitted by JM Associates. 13.32 tons of PCS removed. No post excavation sample results were taken. TG" |

| DEC Memo: | "12/18/18 - Searching for the leak. The feeder line is approximately 9 miles long. KAB 12/18/18 Dave Duke from Con Ed was contacted. He stated the Con Ed crews are inspecting the entire length of the feeder route, checking rivers where the feeder crosses along with inspections of vaults and manholes. TG 12/18/18 Info from Leak Committee Conference Call 138 kV Feeder 38W14 " At 1130 hours, the leak was discovered in MH-10130, located on South Lexington Avenue and Prospect Street in White Plains. " As of 1425 hours Feeder 38W14 was clamped and holding 100% thus Terminating the leak. " The estimated total loss is 1,300 gallons of dielectric fluid and was contained to the manhole. " EMIS 270113 is associated with this incident 12/18/18Dielectric Fluid Leak Committee Conference Call, December 18, 2018 @ 2000 hours " The Leak Committee terminated the leak at 1425 hours when the leak on Feeder 38W14 was clamped in |

**CON ED FEEDER 38W14 LEAK (Continued)** **S123659446**

MH-10130. " The estimated leak rate was 150 gallons per hour and approximately 1,200 gallons of dielectric fluid was recovered from MH-10130. " Permanent repairs are in progress and a crew will remain on location to monitor the clamp. 01/14/19 Excerpt from EMIS 270113/10: 12/18/2018 3:01 PM Dielectric Fluid Leak Committee conference call, December 18, 2018 @ 0830 hours " On Tuesday, December 18, 2018 @ 0840 hours the Leak Committee declared a leak on 138kV Feeders 38W14 and 38W24 due to a system alarm, excessive pump starts and tank level discrepancies. " The estimated total loss is 140 gallons of dielectric fluid with an estimated leak rate of 94 gallons per hour. " A request will be made to take both feeders out of service Category-2. " A PFT Van will patrol the run of the feeder and crews will inspect pump houses and subsurface structures for the presence of oil. " EH&S ERRT will inspect the feeders where they traverse the Bronx, Hutchinson and Mamaroneck Rivers. " EMIS 270113 is associated with this incident. Duke, David 12/18/2018 3:01 PM Dielectric Fluid Leak Committee conference call, December 18, 2018 @ 1400 hours " At 1130 hours, the leak was discovered in MH-10130, located on South Lexington Avenue and Prospect Street in White Plains. " As of 1425 hours Feeder 38W14 was clamped and holding 100% thus Terminating the leak. " The estimated total loss is 1,300 gallons of dielectric fluid and was contained to the manhole. " EMIS 270113 is associated with this incident. Duke, David 12/27/2018 9:47 AM James Kelly reported company contractor, ACV double washed and rinsed manhole 10130 with Simple Green. A total of 1,000 gallons of non hazardous oily water was disposed at Clean Earth of New Jersey using Manifest #019594259 JJK. McCarthy, Kerry NFA. TG"

Remarks: "leak somewhere between two substations- address of second location Elmsford Substation 201 East Main Street Elmsford NY . Con Ed working to locate leak, leak rate of 94 gal/hr."

| DEC Memo: | "3-22-11 Building was demolished in Feb. There was suspected contamination in area of boiler room. While digging in that area, |

**WHITE PLAINS PROJECT LLC (Continued)** **S110769273**

found contamination and unregistered 5000 gal tank. Denise H from WCHD was at site already. Contaminated soil being removed and taken to New Windsor. jc Update from WCDOH PBS: >>> Heinzinger, Denise ->dmh3@westchestergov.com> 11/21/2012 1:30 PM >>> Hi John, This spill resulted from an unknown underground storage tank at an empty lot at 170 Westmoreland Avenue, White Plains. They were removing a registered 10,000 gallon ust then found this second unregistered 5,000 gallon tank. Grave samples came back high for the 5,000 so 2,237.85 tons of contaminated soil was then removed. End samples look good. -Denise Heinzinger *Based open the information received, no further action is required at this time. jod ''

Remarks: "an unknown tank was discovered during construction, believed to be 2000 gallons w/ either #2 or # 4 fuel, clean up and removal pending"

| Site Code: | 58997 |
| Acres: | 2.6 |
| HW Code: | C360073 |
| SWIS: | 6017 |
| Town: | White Plains (c) |
| Record Added Date: | 07/26/2004 |
| Record Updated Date: | 12/20/2007 |
| Update By: | MJRYAN |
| Site Description: | Location Description: The site is located in an urban portion of Westchester County, occupying several city tax parcels, including 221 Main Street, in the City of White Plains. Current Use: The site is currently being redeveloped. The newly constructed complex will contain approximately 125 hotel rooms, 400 condominiums and approximately 10,000 square feet of street levels stores. Surrounding Uses: The site is surrounded by commercial properties with a mix of retail and office space. Historical Source(s)of contamination: The historical source of contamination at this site included multiple leaking underground storage tanks (USTs). Investigations revealed the presence of ten USTs. Investigations/Actions Performed to date: Previous environmental investigations include a Phase I Investigation in 2002 and a Petroleum Contamination Site Investigation completed in June of 1993. Under the Brownfield Cleanup Program, a Remedial Investigation was conducted in 2005-2006. Based on RI findings, an Interim Remedial Measure (IRM) was planned and implemented which included the removal of all USTs, and contaminated soil. Current Action: A Final Engineering Report which documents the remedial activities completed has been approved. On December 19, 2006 a Certificate of Completion was issued declaring remedial activities complete, and that a Track 1 cleanup (i.e., unrestricted use) has been achieved. |
| Env Problem: | Contaminant of concern: Petroleum-related compounds including volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons. Impacted Media: Soil and groundwater. Known SCGs exceedences: Investigation revealed benzene, toluene, ethyl-benzene and xylenes, however, as part of a site-wide remedial program (2005-2006) all contaminated media has been removed and properly disposed. |
| Health Problem: | The site is located in downtown White Plains, public water serves the area. Through the implementation of an IRM the site has been remediated and nearly all the soil has been removed to bedrock eliminating potential exposure to contaminated soil. Proposed redevelopment of the site will include a ventilated below-grade parking garage with foundation drainage which will effectively eliminate the potential for soil vapor intrusion to occur. |

| DEC Memo: | "6-10-10: V.Mc. to Mr.GENE CALOLE: To ref.to WCHD for site inspection. 6-10-10: V.Mc. to WCHD/C.Tor.: Left Mess.: Req.Callbk. 06/10/10 Inspected the site and met with the homeowner. The sheen referred to in the complaint is a small biosheen coming from compost which the homeowner stated he placedin the area to improve the soil conditions. He said he converted to gas 30 years ago. He asi the tank was emptied but has little memory of what happened with the tank in the front lawn. It was suggested that he dig up the area to see if a remote fill may be conveying low levels of impacted water to the area. However it should be noted that the soil didn't exhibit any fuel oil odor. NFA TG" |
| Remarks: | "Caller states that they have noticed material spewing on the curbsied. When he lifted the sod at his father's place and an unknown rainbow sheen with a heavy sewage odor is apparent. Town has been notified and told him to contact DEC. He would like to speak with someone to figure out where and what this material is." |

Updated By: RXKEATIN
Site Description: Location Description: The site is located at 359-369 Mamaroneck Avenue in a mixed use commercial and residential area in the southern part of the City of White Plains, Westchester County NY. Site Features: The site is on approximately 0.25 acres of land which is flat and contains a 6,763 square foot building with a full basement. Current Use: The building contains a drycleaner, a nail salon, an insurance agency, and two restaurants. The remainder of the site consists of a paved parking lot. Surrounding Use: The site is surrounded with businesses to the north and south of the site and residences to the east and west. Immediately to the east of the site is a municipal parking lot. Historical Sources of Contamination: Dry cleaner operated at this location is a potential source of PCE contamination. Site Hydrology: Groundwater flows though sand at only several feet below ground surface.
Env Problem: Based upon investigations to date, the primary contaminants of concern at the site included tetrachloroetylene (PCE) and its associated breakdown products. After a thorough Site Characterization, as described in a final report dated July 2012, it was determined that this site did not qualify for the registry.

| DEC Memo: | "Anonymous report to NRC, incident report # 771716 9/7/05: VMc up. C.Tor/WCDOH: update, initial call See update 01/10/2013: This was an anonymous report to NRC, caller claimed a 5,500 gallon tank at this location was leaking. This is a PBS Registered facility, there are 4 tanks on the registration. There are two USTs that are 10K and 12K gallons. There are two ASTs that are 6K and 5,500 gallons. Subsequent inspections by Stefan Goreau of WCDoH PBS found no evidence of a spill from the ASTs. Stefan reports that any spillage was clean up by the RP, but the facility has no records due to staff changes. DEC requires no further action at this time. jod" |

| DEC Memo: | "3-18-10: V.Mc. ^ WILLIE/ELITE: Appears to be small amount of spill, UST was on concrete slab, no ins. coverage available, TCR to be submitted to J.O'D. 4/12/10: Call from Augustine at H2M. He states this was initially reported as a line leak in a basement but that Elite ended up removing a 1K UST from outside. He states Elite informed him the DEC had requested 6 separate exit samples but he was recommending 4 samples. He was onsite earlier today and the backfill is currently underway. jod 6/30/2010: DEC reviewed closure information received from Elite Environmental. Report to be entered into eDocs. Based upon the information provided, no further action is required at this time. jod" |

| DEC Memo: | "10-01-20 Site visit with the owner’s brother. Tank is a 275 basement AST. On MOnday 9/28 a delivery of 230 gallons was completed. On 09/30 there was oil leaking to the basement and Westmore pumped out 180 gallons to empty the tank. There was speedy dry under the tank but not 50 to 70 gallons of oil so it may have gone outside the building. Homeowner is going to call a contractor to remove the tank and open up the floor under the tank. Checked the nearby storm drains and they were dry or had clear standing water. BTR 10-22-20 Homeowner has hired Darriel Contracting to remove the tank and coordinate clean up. BTR" |

**DIESEL IN STREAM (Continued)** **S123661649**

Spiller Company: 999
Contact Name: RICHARD BARRETT
DEC Memo: "3/6/19 Spoke to the caller, who confirmed that this was related to an earlier report of petroleum in a stream. O'Dee had spoken with them earlier, and said he would try to meet DEP on site to investigate and determine a possible source. dw 3/07/19: DEC inspected the location with DEP HazMat. Strong diesel odors noted in a catch basin at the southeast corner of the parking lot for office building at 10 New King Street. There is a petroleum stain on the grate over the catch basin. Upgradient catch basins are clean. Some sheen noted in the impacted catch basin. Impacted basin discharges to a nearby stream. Diesel odors, sheen, and some emulsified product noted at the outfall. DEP has deployed boom which is picking up very little petroleum. It appears this spill is the result of a diesel fuel leak - most likely from a delivery truck - and the spill occurred some time ago. The diesel is weathered and breaking apart. DEP will continue to monitor and replace booms if necessary. No recoverable product. jod"
Remarks: "SOIL SAMPLES DISCOVERED CONTAMINATION 3/07/19: Update from Regional Office: Actual report to Central Office Hotline was for petroleum odors noted while DEP was taking water samples. The caller did not report soil samples. jod "

BROWNFIELDS:
Name: HAMILTON GREEN
Address: 200 HAMILTON AVENUE
City,State,Zip: WHITE PLAINS, NY 10601
Program: BCP
Site Code: 570663
Acres: 3.74
HW Code: C360177
SWIS: 6017
Town: White Plains (c)
Record Added Date: 05/22/2018
Record Updated Date: 01/28/2020
Update By: KJCARPEN
Site Description: Location The Site is located at 200 Hamilton Avenue in the City of White Plains, Westchester County, New York and is legally defined as Tax Map ID Section 125.67, Block 5, Lot 1 on the City of White Plains tax map. The 3.74-acre Site is bounded by Barker Avenue to the north followed by offices, a hotel, and commercial development; Cottage Place to the east followed by a gasoline station and commercial buildings; Hamilton Avenue to the south followed by commercial and government buildings; and Dr. Martin Luther King Jr. Boulevard to the west followed by commercial development. The surrounding area consists primarily of commercial and governmental uses, with residences further north of the Site. Site Features The Site is developed with a rectangular-shaped two-story shopping mall and an east-adjacent asphalt-paved parking lot, with additional parking on the building roof, accessed by a ramp on the northern side of the building. The topography surrounding the Site slopes downward to the west from approximately 200 feet along Cottage Place to approximately 190 feet along Martin Luther King Jr. Boulevard. Current Zoning and Land Use The Site is currently zoned as a Neighborhood Business (B-2) District, and was established and mapped to this location as a specific land use component of the City of White Plains Central Renewal Project (No. NY R-13), which was approved in 1964 and involved the redevelopment of 120 acres of downtown White Plains. The B-2 District, and resulting White Plains Mall construction in 1972, was intended to provide a relocation opportunity for retail and service businesses displaced by the Central Renewal Project. However, since that time the character of downtown White Plains has shifted. A component of the proposed Site development includes a change in the current zoning to a new Transit Development 1 (TD-1) District. This proposed new zoning district would allow for the construction of the mixed-use transit oriented community development consistent with the City of White Plains Strategic Plan to enable innovative development adjacent to the City of White Plains' transit hub, thus encouraging a more walkable and less vehicle dependent community. The current land

**HAMILTON GREEN (Continued)** **S120958439**

use is commercial and the surrounding area consists primarily of commercial and governmental uses, with residences further north of the Site. Past Use of the Site A review of historic Sanborn fire insurance maps indicated that the Site was historically bisected by a public street (William Street) and contained several private residential dwellings, a candy manufacturer, and two gasoline stations. The gasoline stations included a facility with three gasoline tanks at 230 Hamilton Avenue (southeastern portion of the Site) on the 1930 through 1950 maps, and a facility with greasing operations and four gasoline tanks at 250 Hamilton Avenue (southern portion of the Site) on the 1950 map. The former on-site structures were likely present until construction of the current two-story shopping mall and east-adjacent asphalt-paved parking lot. Based on historic records and interviews, the shopping mall was constructed in 1972 and has operated as the White Plains Mall with a variety of tenants since its construction, including potential dry cleaners listed in historic City Directories. Surrounding uses included a brush factory west-adjacent to the Site that later became a carpet cleaning business and a laundry facility, a manufactured gas plant northwest of the Site that later became a substation, and a gasoline station east-adjacent of the Site. Site Geology and Hydrogeology The topography surrounding the Site slopes downward to the west from approximately 200 feet along Cottage Place to approximately 190 feet along Martin Luther King Jr. Boulevard. Subsurface soils encountered at the Site during previous environmental and geotechnical investigations indicated that the Site is underlain by a layer of fill extending from ground surface to depths ranging from 5 to 12 feet bgs. This fill layer included sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. Apparent native soils composed of varying amounts of sand, silt, and gravel were identified underlying the fill layer. During a recent geotechnical investigation of the Site, bedrock was reported at depths ranging from approximately 13 feet below existing grade in the northeastern portion of the parking lot to approximately 37 feet below existing grade in the central portion of the parking lot, corresponding to approximate elevations of 183 and 165 feet, respectively. The water table was measured in the nine on-site groundwater monitoring wells at depths ranging from 9.58 to 23.90 feet bgs, at elevations ranging from 178.70 to 181.89 feet. The deeper groundwater depths were noted at higher elevations in the eastern portion of the Site (along Cottage Place) and at shallower depths in lower elevations in the southern and western portions of the Site (along Hamilton Avenue and Martin Luther King Boulevard). Contour maps indicate that groundwater generally flows in a southwesterly direction across the Site.

| DEC Memo: | "9/28/17 AKRF was performing Phase II, noticed some sites where soil seemed odiferous and possibly contaminated. Took soil and gw samples, soil samples came back below CP-51. GW samples came back high in MTBE, benzene, and toluene in 3 areas. Site used to be old shopping mall. AKRF states that there was a gas station at site in 1970's, and there is currently a gas station across the road from the site. Will send in copy of soil and gw analysis. ga 10/05/17 Becky called and said the report will be completed soon and she expects to submit it in a week or two. TG 12/21/17 AKRF submitted a Phase II Investigation Report (See report in DecDocs.) TG" |
| Remarks: | "historic spill, found last week after samples were taken, just ground water impacted, clean up is pending" |

Date Rec Updated: 04/02/2020
Updated By: DJEATON
Site Description: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is bounded by Water Street to the north, New Street to the South, and North Lexington Avenue to the west. It is bounded to the east by a parking lot which is located over the former road bed of Spring Street. OU1 includes the Southern Relief Holder on the manufacture gas plant (MGP) site and the off-site area to the south which includes Saint John's Catholic Church. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John s Property, but some MGP tar is present deep underground. A site management plan and monitoring plan is in place for the St. John's property. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. Nature of contamination: The Remedial Investigation identified the presence of coal tar in the subsurface soil. Contaminants of concerns in the tar include polycyclic aromatic hydrocarbons (PAHs) and the volatile compounds benzene, toluene, ethylbenzene and xylene (BTEX). Extent of contamination: Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation IRM in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Monthly monitoring of these wells did not show any significant accumulation of NAPL, and the monitoring frequency for these wells was reduced to quarterly in May 2006. A site management plan (SMP) is in place, but will be superseded by a site-wide SMP and environmental easement following the completion of the OU1 remedy. The November 8, 2005 Remedial Investigation report indicates a thin seam of MGP tar has migrated through the subsurface and is present beneath the St John s property at a depth of approximately 36 to 43 feet below the basement floor (which is in turn at least 10 feet below grade) and 52-60 feet below ground surface south of the building. Groundwater sampling indicates that the deep groundwater in close proximity to the tar seam is impacted; however, shallow groundwater is not. Furthermore, site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the school or the indoor air samples collected inside the school. No active remediation is proposed as part of the remedy presented in the 2007 Remedial Action Work Plan (RAWP). Coal tar is present under much of the parking area at 12 Water Street (OU-2). This area was remediated from December 2008 through June 2010 using in-situ solidification as described in the 2007 RAWP.
Env Problem: The site is impacted by manufactured gas plant (MGP) operations, including dense non-aqueous phase liquid (DNAPL) MGP tar at the site as well as off-site to the south. The off-site migration of tar was addressed during the 2004 interim remedial measures (IRM) by installing a down-gradient non-aqueous phase liquid (NAPL) cut-off wall. The southern gas holder was also removed during the IRM. NAPL south of the cut-off wall is sufficiently deep, and is located below clean groundwater, so exposure to environmental receptors is not likely. A Decision Document was finalized in Feb 2008, selecting in

Site Code: 58617
Site Description: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is bounded by Water Street to the north, New Street to the South, and North Lexington Avenue to the west. It is bounded to the east by a parking lot which is located over the former road bed of Spring Street. OU1 includes the Southern Relief Holder on the manufacture gas plant (MGP) site and the off-site area to the south which includes Saint John's Catholic

**CE - WHITE PLAINS MGP (Continued)** **S106906513**

Church. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John s Property, but some MGP tar is present deep underground. A site management plan and monitoring plan is in place for the St. John's property. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. Nature of contamination: The Remedial Investigation identified the presence of coal tar in the subsurface soil. Contaminants of concerns in the tar include polycyclic aromatic hydrocarbons (PAHs) and the volatile compounds benzene, toluene, ethylbenzene and xylene (BTEX). Extent of contamination: Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation IRM in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Monthly monitoring of these wells did not show any significant accumulation of NAPL, and the monitoring frequency for these wells was reduced to quarterly in May 2006. A site management plan (SMP) is in place, but will be superseded by a site-wide SMP and environmental easement following the completion of the OU1 remedy. The November 8, 2005 Remedial Investigation report indicates a thin seam of MGP tar has migrated through the subsurface and is present beneath the St John s property at a depth of approximately 36 to 43 feet below the basement floor (which is in turn at least 10 feet below grade) and 52-60 feet below ground surface south of the building. Groundwater sampling indicates that the deep groundwater in close proximity to the tar seam is impacted; however, shallow groundwater is not. Furthermore, site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the school or the indoor air samples collected inside the school. No active remediation is proposed as part of the remedy presented in the 2007 Remedial Action Work Plan (RAWP). Coal tar is present under much of the parking area at 12 Water Street (OU-2). This area was remediated from December 2008 through June 2010 using in-situ solidification as described in the 2007 RAWP.

Env Problem: The site is impacted by manufactured gas plant (MGP) operations, including dense non-aqueous phase liquid (DNAPL) MGP tar at the site as well as off-site to the south. The off-site migration of tar was addressed during the 2004 interim remedial measures (IRM) by installing a down-gradient non-aqueous phase liquid (NAPL) cut-off wall. The southern gas holder was also removed during the IRM. NAPL south of the cut-off wall is sufficiently deep, and is located below clean groundwater, so exposure to environmental receptors is not likely. A Decision Document was finalized in Feb 2008, selecting in situ stabilization for the remaining portion of OU2. Field work was completed in 2010 and the Final Engineering Report was approved in May 2012.

Site Code: 58617
Site Description: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is bounded by Water Street to the north, New Street to the South, and North Lexington Avenue to the west. It is bounded to the east by a parking lot which is located over the former road bed of Spring Street. OU1 includes the Southern Relief Holder on the manufacture gas plant (MGP) site and the off-site area to the south which includes Saint John's Catholic Church. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John s Property, but some MGP tar is present deep underground. A site management plan and monitoring plan is in place for the St. John's property. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. Nature of contamination: The Remedial Investigation identified the presence of coal tar in the subsurface soil. Contaminants of concerns in the tar include polycyclic aromatic hydrocarbons (PAHs) and the volatile compounds benzene, toluene, ethylbenzene and xylene (BTEX). Extent of contamination: Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation IRM in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Monthly monitoring of these wells did not show any significant accumulation of NAPL, and the monitoring frequency for these wells was reduced to quarterly in May 2006. A site management plan (SMP) is in place, but will be superseded by a site-wide SMP and environmental easement following the completion of the OU1 remedy. The November 8, 2005 Remedial Investigation report indicates a thin seam of MGP tar has migrated through the subsurface and is present beneath the St John s property at a depth of approximately 36 to 43 feet below the basement floor (which is in turn at least 10 feet below grade) and 52-60 feet below ground surface south of the building. Groundwater sampling indicates that the deep groundwater in close proximity to the tar seam is impacted; however, shallow groundwater is not. Furthermore, site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the school or the indoor air samples collected inside the school. No active remediation is proposed as part of the remedy presented in the 2007 Remedial Action Work Plan (RAWP). Coal tar is present under much of the parking area at 12 Water Street (OU-2). This area was remediated from December 2008 through June 2010 using in-situ solidification as described in the 2007 RAWP.

| DEC Memo: | "1/4/17 t/c with Martha at Dorson Enviro - 5K tank pull at a commercial, multi story building housing Urban League of Westchester. |

**URBAN LEAGUE OF WESTCHESTER (Continued)** **S119029206**

No holes in tank, but oily spot on it and stained soil. Took sample. Semi Volatiles ok. 2 levels of volatiles exceeded limits. Carlos requested more samples and they just sent in 4 sidewall and 4 bottom samples to lab. Asked her to email me the sample results she has. She will do so tomorrow morning and will forward to DB. cj 02/07/17
Dorson Environmental reported that a 5k tank was removed. Seven of eight post excavation soil sample results were below DEC soil guidance values. NFA. TG"

Remarks: "spill is contained and clean up is pending"

| DEC Memo: | "6/21/17 Vacant lot. Property owned by 1 Dekalb Corp. Will be putting up an apartment bldg. During site work, a 550 gal UST was discovered. Tank was very old and in bad shape. Dutchess Environmental was hired and they are on site now removing/stockpiling the contaminated soil...mm 09/12/17 Called Dutchess for an update. Patti will do some research and call back. TG 02/02/18 Keith Triccoli stated that the job has been completed and that he will submit paperwork shortly. TG 04/02/18 Called Keith Tricoli again for paperwork. TG 06/26/18 Requested closure report from Patti at Dutchess. TG 03/29/19 The |

**MANN - UST (Continued)** **S120701538**

following emailed message was sent by Keith Triccoli, As per our phone conversation yesterday pertaining to One Dekalb, spill # 17-02812. Please see attachment for the waste disposal manifests for 110.02 tons of P.C.S. P.C.S. were encountered on the site if a second (different ) location from the previous soil remediation project, the soils were found but a source was not discovered. The previous residence had a above ground 275 AST which Dutchess Environmental Construction had removed prior to the start of the One Dekalb project. Dutchess Environmental was on-site screening the soils with a hand help PID meter as excavation was being performed. The soils were stockpiled on-site on 6 mil poly sheeting. 110.02 tons was loaded and disposed of at Colonie Landfill in Cohoes. NY. Post excavation soil samples were not obtained as screening showed some elevated hits of hydrocarbons on the west sidewall. Excavation was to continue but prior approval was needed as the steep uphill slope was close to the city sidewalk and utility pole area(s). Unknown to Dutchess Environmental excavation was not able to continue, and concrete foundation installed in the area of work performed. Please review and let me know if you have any additional questions, and if you are able to close the second spill number as the client is awaiting a response from me. NFA. TG "

Remarks: "found 550 gal ust during excavation/clean up underway"

Hardy. Reduce reporting to annual. 1/08 tanks and contaminated soil were removed in 7/07; groundwater contamination dropping quickly; site very close to closeable--minimal environmental risk 5/19/09 2/17/09 qmr all wells low except mw2 at approx 5500 ppb btex; new report due shortly jh 6/12 6/09 qmr shows approx .01 to a sheen of product fairly consistent in mw2--surfactant injection planned for june--asked via email for workplan--report and email in edocs jh 6/23/09 ges submitted workplan but there are a number of questions to be resolved prior to approval--workplan and jh email both in edocs. jh 9/25/09 by email asked for workplan from ges. email in edocs jh 10/2/09 chem ox workplan submitted and is in edocs jh 10/20/09 asked ges to address production of vapor by chem ox and their monitoring. directed ges to send info to wdoh. email in edocs jh 10/23/09 ges submits revised chem ox workplan with attempt to resolve DEC questions. wp in edocs jh 10/26/09 DEC raised additional questions via email which is in edocs. questions related to perceived contradictions in workplan as to chemical reactions. jh 10/26/09 GES responded to above but not completely jh 10/26/09 DEC asked for more information concerning chemical reactions, end products, and potential impacts jh 11/5/09 transmitted injection guidelines to ges jh 12/2/09 qmr shows levels relatively unchanged; transmittal notes they have put a hold on futher chem ox injections until they answer dec questions in a new chem ox workplan jh 2/22/10 ges submitted qmr and additional details re chem ox proposal. 3/22/10 reports above reviewed. levels still persistent in one well which is to recieve chem injection. calculations seem reasonable and since only 100 gallons are being injected my previous question concerning possible plume migration are resolved. approval email sent. jh 4/21/10 site in |

**SUNOCO GAS STATION (Continued)** **S100166178**

remediation because of chem ox above--unknown if spill is contained so that date not filled in jh 11/22/10 Project transferred to Mastro. 5/25/11 RegenOx injected in 8/10, 3/11. Will continue to monitor...mm 9/15/11 Based on the data contained in the 8/29/11 QMR prepared by CEA, no further action is required. The concentrations in MW-2 remain above standards. This well is located in a right of way and cannot be excavated because of underground utilities. This well has been vac'd, and there have been ORC and Chem Ox injections. The concentrations have been decreasing and there are no receptors....mm "

| Spiller Company: | CON ED |
| Spiller Address: | 14 SOUNDVIEW AVE |
| Spiller Company: | 999 |
| Contact Name: | DISPATCHER 614 |
| DEC Memo: | "Contacted WP Fire and then spoke to FD Lt. on scene. He reports a transformer exploded and lost 60 gals., most of which entered storm drain. FD has deployed some sorbents to contain. FD did not know if there was any flow in drain or where outlet was. DEC requested FD to determine outfall area by contacting DPW. FD also stated Con Ed was on site and that a cleanup contractor, Clean Harbors, hired by Con Ed was enroute for cleanup. dt NRC# 1178618 05/18/17 Inspected the site. No Con Ed personnel on site but met with White Plains DPW drains supervisor Kevin Cullen who was on site last night during the incident. Kevin said that transformer oil entered the system but was stopped in a manhole on West Post Road near Sterling Ave. All catch basins and manholes were cleaned. During the inspection, Clean Harbors was preparing to remove impacted soil beneath the utility pole. TG 05/23/17 Excerpt from EMIS 258298/9, 5/18/2017 9:08 AM Clean Harbors, using absorbent and safe wash, double washed and rinsed the affected areas of the street, driveway and sidewalk. Clean Harbors also removed the oily soil and vacuumed 3 catch basins.. Upon customer request, the driveway was double washed and rinsed a third time. The transformer has been replaced. Sample for PCB has been taken. Clean up treated as NONPCB. 6,000 Lbs of oily debris has been generated and will be disposed of at Clean Earth North Jersey. NFA. TG" |
| Remarks: | "Spill to the drain. Fire Department and PD on scene. Con Ed on scene |

**BADDERS RESIDENCE (Continued)** **S100140324**

also. Con Ed called Paul Walsh 212-580-8383 stated 102 gallons did spill, unknown amount to the sewer. Clean Harbors is doing the clean up."

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal NPL site list***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/30/2020

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/30/2020

Next Scheduled EDR Contact: 07/12/2021
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Data Release Frequency: No Update Planned

***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/30/2020

***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019
Date Data Arrived at EDR: 04/05/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/30/2020

***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/14/2020
Date Data Arrived at EDR: 12/17/2020
Date Made Active in Reports: 12/22/2020

***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020
Date Data Arrived at EDR: 12/17/2020

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/14/2020

***State and tribal institutional control / engineering control registries***

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Date Data Arrived at EDR: 07/03/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

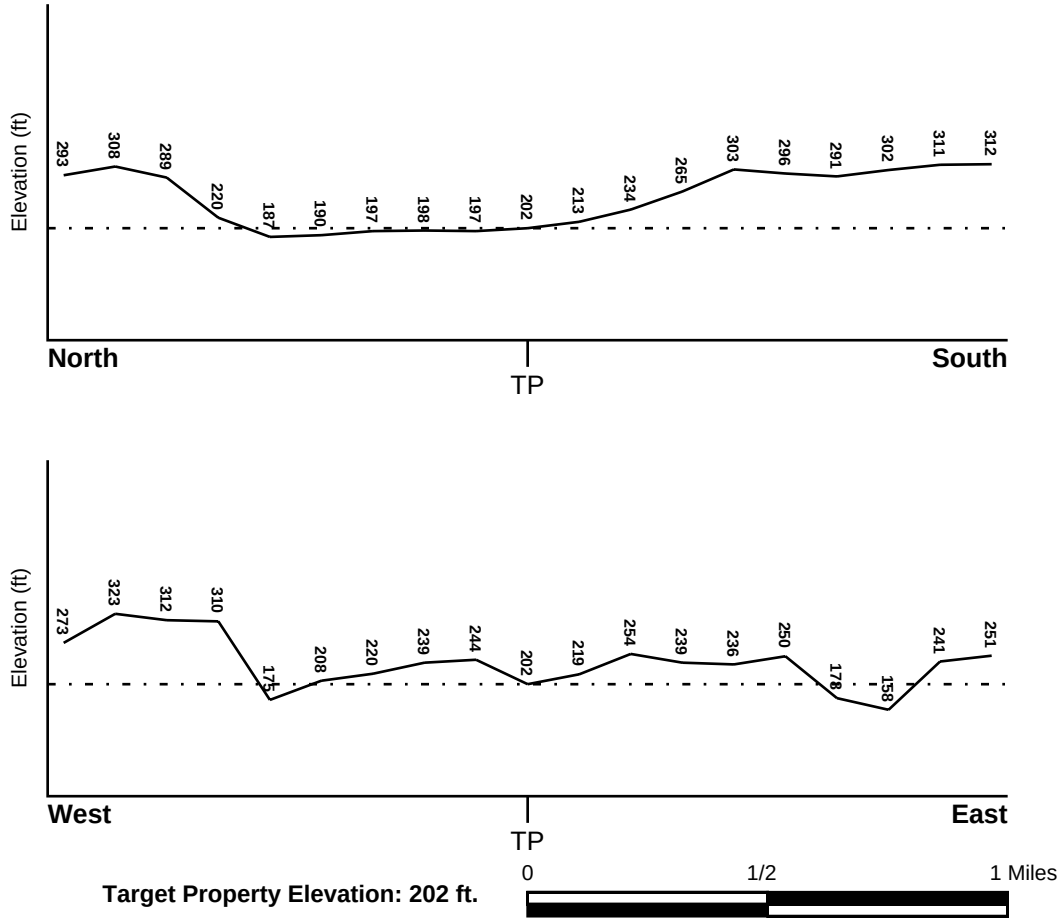
**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General NW

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

***Site-Specific Hydrogeological Data*:***

| | |
|---|---|
| Search Radius: | 1.25 miles |
| Status: | Not found |

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| MAP ID | LOCATION FROM TP | GENERAL DIRECTION GROUNDWATER FLOW |

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**ROCK STRATIGRAPHIC UNIT** **GEOLOGIC AGE IDENTIFICATION**

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

**Soil Map ID: 1**

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

---

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

FOIL #: 21-04-305
Re: 159 South Lexington Avenue, White Plains, NY

Dear Mr. Baird:

This will acknowledge receipt of your request for records under the Freedom of Information Law (FOIL), received by this office on April 15, 2021.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig

Re: FOIL Request – 159 South Lexington, records related to UST/AST, hazardous waste, fire spills and other environmental issues

Dear Mr. Baird,

This Department is in receipt of your request pertaining to possible Department of Public Works information, which you requested under the Freedom of Information (FOIL) Act.

Please be advised that the Department of Public Works, City of White Plains would not be in possession of records pertaining to this property. You may wish to direct your FOIL request to other appropriate City agencies for documents which may be available.

Sincerely,

Richard G. Hope
Commissioner of Public Works

Dear Colleen:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 4/14/2021 and given the reference number FOIL #W081291-041421 for tracking purposes. You may expect the Department's response to your request no later than **5/12/2021**.

Record Requested: **Environmental Records Hello, Please provide a spill records or other environmental records for 159 South Lexington Avenue, part of the Winbrook Houses Project in White Plains. Thank you.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Please note that due to the COVID-19 outbreak, DEC may be experiencing staffing shortages and some records custodians may be working remotely. This may result in a delayed response time to your FOIL request. We appreciate your understanding and cooperation.

# Environmental Site Assessment – Site Questionnaire

## *Brookfield Commons Phase 3 – 159 South Lexington Ave, White Plains, NY*

Please answer all questions to the best of your knowledge to support the findings of the Phase I Environmental Site Assessment (ESA) for the 159 South Lexington Avenue (part of White Plains Tax Lot 125.83-7-1) in White Plains, Westchester County, New York (the Property). Please call with any questions or comments.

AKRF Contact: Gregory
Office phone: 914-922-2372
Cell phone: 646-823-5477

Person completing questionnaire: Luis Sanchez_____

Relationship to the Property: Building Manager _____

Length of time associated with the Property: 15 years _____

1. Please provide:

   - The reason why the Phase I ESA is being performed.

     *Demolition of existing nine-story apartment building and construction of new residential apartment building.*

   - The type of property and type of property transaction (for example, sale, purchase, exchange, refinancing, etc.).

     *Nine-story apartment building, demolition and new construction.*

   - The complete and correct address for the Property (a map or other documentation showing the Property location and boundaries is helpful).

     *159 South Lexington Avenue (part of White Plains Tax Lot 125.83-7-1) in White Plains, Westchester County, New York*

2. Please provide information regarding the history of the Property, including past uses, deeds, sale/purchase prices, etc.

   Current apartment on-site since 1950s.

3. If the property is undergoing a transaction, does the purchase price being paid for the Property reasonably reflect the fair market value of the Property?

   ☐ Yes ☐ No X N/A

   If you conclude that there is a difference, are you aware of whether the lower purchase price is because of an environmental issue or contamination that is known or believed to be present at the Property?

4. Are you aware of any former studies that have been conducted at the Property, including: geotechnical surveys, environmental site assessment reports, spill investigations/remediation reports, asbestos or lead abatement, former or current environmental permits, licenses, audits, investigations, community right-to-know plans, safety plans, preparedness and prevention plans, spill prevention plans, countermeasure or control plans, or other documentation or correspondence concerning the Property. If yes, please provide copies.

   X Yes ☐ No

   *Gas service station south-adjacent to the parking lot had a spill remediated several years ago. The eastern half of the parking lot was excavated to remove petroleum contaminated soils.*

5. Are you aware of any environmental liens or activity use limitations (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Property and/or have been filed or recorded against the Property under federal, tribal, state, or local law?

   ☐ Yes X No

6. Based on your knowledge and experience related to the Property, are there any other obvious indicators that point to the presence or likely presence of releases or contamination at the Property? Please provide any commonly known or reasonably ascertainable information about the Property that would help the environmental professional identify conditions indicative of contamination, releases, or threatened releases. For example:

   - Are you aware of any spills or other chemical releases that have taken place at the Property?

   X Yes ☐ No

   *See question No. 4 response*

   - Are you aware of any cleanups that have taken place at the Property?

X Yes ☐ No

*See question No. 4 response*

- Are you aware of any specific chemicals or petroleum products that are currently present or once were present at the Property?

X Yes ☐ No

*See question No. 4 response*

- Are you aware of any former or current chemical or fuel oil storage, including storage tanks, chemical/pesticide/herbicide use, etc., at the Property?

X Yes ☐ No

*Heating plant east-adjacent to the Property provides steam heat to the entire Winbrook Complex. 2 – 20,000-gallon No. 2 fuel oil USTs are present.*

- Are you aware of the presence of any historic fill, construction and demolition debris, ash, dredge spoils, etc.?

☐ Yes X No

7. Please provide any information you have on former and/or current buildings, utilities, and operations, including past and present:

   - Water: *City of White Plains*
   - Electric: *Con Edison*
   - Gas/fuel oil: *Con Edison*
   - Heating and cooling systems: *Winbrook Heating Plant*
   - Sewer or septic/cesspool: *City sewer*
   - Trash collection: *Winbrook Complex*
   - Hazardous materials storage or use (paint, solvent, pesticides, herbicides): *No*
   - Construction/demolition date(s): *2022?*
   - Surveyed drawings, blueprints, subsurface studies, renovation/addition details, etc.:

8. Please advise whether you are aware of the following:

   - Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Property

☐ Yes **X** No

- Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Property

☐ Yes **X** No

- Any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous materials at the Property.

☐ Yes **X** No

9. Do you have any specialized knowledge or experience related to the Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes **X** No

10. Please provide:

- The identification of all parties who will rely on the Phase I ESA report.

- The identification of the Property contact and how the contact can be reached for the inspection.

- Any special terms and conditions that must be agreed upon by the environmental professional.

Re: Phase I Environmental Site Assessment
*Brookfield Commons Phase 2 – White Plains, New York*
*AKRF Project Number: 170131*

Dear Musa:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 unless noted otherwise in Section 8.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

Marcus Simons
Senior Vice President

Colleen L. Griffiths
Senior Technical Director

# EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Trinity New York Development, LLC (Trinity) to perform a Phase I Environmental Site Assessment (ESA) of the Property located at 135 South Lexington Avenue (part of White Plains Tax Lot 125.83-7-1) in White Plains, Westchester County, New York. The Property was developed with a vacant nine-story apartment building with a basement and surrounding lawns and walkways, which were part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The remainder of the complex was located to the north, south and east of the Property. The surrounding area was mixed-use, including residential and commercial uses, filling stations, a hospital, churches, and municipal buildings.

This Phase I ESA was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

Prior to the construction of the existing building and surrounding grounds, the Property was undeveloped and included a small stream flowing toward the north. In the early 20$^{th}$ century, the Property was developed with smaller structures (residential buildings with yards and parking garages). These structures were demolished in the late 1940s as part of the redevelopment of the Property (and land to the north, east and south) with the Winbrook complex. The existing building was constructed in approximately 1949 or 1950, and was residential until becoming vacant in 2016.

AKRF prepared a Phase I ESA of the Property in June 2017, a subsurface (Phase II) investigation in July 2017, and a soil waste characterization investigation in September 2018. The 2017 Phase I ESA revealed similar RECs to this assessment. The Phase II investigation found: low levels of metals in soil, with only lead in one sample above regulatory guideline levels; tetrachloroethene (PCE) and two of its breakdown products in groundwater at levels above Ambient Water Quality Standards (drinking water standards, though groundwater is not used a source of drinking water); and PCE in one soil vapor sample at a level exceeding indoor air guideline values, and detected additional VOCs for which there are no guidance values (the majority of which are typically associated with gasoline) in soil vapor samples. The waste characterization investigation soil sampling found low levels of polychlorinated biphenyls (PCBs) in one sample; low concentrations of volatile organic compounds (VOCs), including the common laboratory contaminants acetone and methylene chloride, in some samples; and semivolitile organic compounds (SVOCs), metals, and pesticides at concentrations typical of historical fill material.

This assessment revealed the following:

***Recognized Environmental Conditions (RECs)***

- Historical land uses in the vicinity of the Property included the White Plains Hospital, auto sales, auto and bicycle repair shops, filling stations and stores with gasoline underground storage tanks (USTs), woodworking and painting shops, dry cleaners, a rug cleaner, undertakers, sheet metal works, electrical businesses, and a printer. A reconnaissance of the surrounding area also identified the hospital, active and former filling stations, auto repair shops, car dealerships, two laundries (including one identified on historical land use maps and in the regulatory database as a dry cleaner), and a hardware shop with a glass cutting service in close proximity to the Property.

- Numerous active- and closed-status spills, petroleum bulk storage facilities, hazardous waste generators (including generators of chlorinated solvents), and a State Brownfield Cleanup Program Site with some potential to affect the Property were reported in regulatory databases. The subsurface (Phase II) investigation findings of PCE in groundwater and soil vapor, and likely petroleum-related VOCs in soil vapor are consistent with releases from off-site sources.
- One of the spills reported in close proximity to the Property was active-status spill No. 9713110 at a former filling station at 26 East Post Road, approximately 330 feet south of the Property. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling station onto the Winbrook complex. Remedial activities included removal of contaminated soil and installation and sampling of numerous groundwater monitoring wells. The nearest of these wells were located approximately 60 to 240 feet south and east of the Property. Groundwater sampling of the wells nearest the Property in August 2016 and on-Property in July 2017 indicated no evidence of significant concentrations of petroleum-related volatile organic compounds (VOCs). However, these wells contained elevated concentrations of VOCs associated with chlorinated solvents, including PCE, trichloroethene (TCE), and cis-1,2-dichloroethene (cis-1,2-DCE). Since no potential source of chlorinated VOCs has been identified on the Property, these VOCs may have originated from an off-site source.

***Controlled RECs (CRECs)***

- The Winbrook complex, including the Property, was heated by steam generated at a heating plant located in a basement of an off-site building (33 Fisher Avenue) approximately 230 feet southeast of the Property. The plant's boilers were supplied by two, 20,000-gallon No. 4 fuel oil USTs located beneath a lawn west of the boiler room. Five closed-status spills were reported in connection with these USTs, including three tightness test failures in 1989-2010, a minor surface spill in 1993, and an approximately 700-gallon release due to overfill in 2000 which reportedly required cleanup of a nearby playground area. The playground is approximately 200 feet southeast of the Property. As noted above, no evidence of significant petroleum contamination was identified in groundwater in the vicinity of the Property in 2016 or at the Property during the Phase II Investigation; thus, the historical spills are considered to be Controlled RECs (CRECs) rather than RECs.

***De Minimis Condition***

- Stream filling and demolition debris from historical structures on the Property may be associated with fill materials of unknown origin. Soil encountered during the 2017 subsurface investigation borings (which extended to approximately 15 feet below grade) was characterized generally as historical fill (approximately 5 to 10 feet thick), underlain by native materials.
- At the time of the reconnaissance, the Property building was equipped with a trash compactor. However, historical plans showed the compactor room in the basement as an incinerator room.
- Chemical storage at the Property included one 5-gallon bucket of hydraulic oil, paint and cleaning and maintenance chemicals in containers up to five gallons, and 55-gallon drums of cleaning chemicals, which were stored in the basement. The observed chemicals were generally neatly stored and labeled. A one gallon pail of paint was observed to be spilled in the basement, but the hardened paint appeared to be have been contained by the concrete floor and was not near the sump.

***Other on-site environmental concerns (items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris)***

- A hazardous materials survey of the Property building in 2016 included an asbestos survey, which identified asbestos-containing materials (ACM), including vinyl floor tile and mastic, linoleum and

mastic, thermal pipe insulation, window caulking, and the roof of the elevator bulkhead based on laboratory analysis. Other building materials were identified as not containing asbestos. Building materials, including the identified ACM, were noted to be in good to damaged condition.

- The 2016 hazardous materials survey included sampling for lead-based paint. This survey did not identify lead-based paint on interior painted surfaces. However, lead-based paint may be used on exterior surfaces (painted brick walls). Painted surfaces were observed to be in fair to poor condition. During the reconnaissance, there was no observation of residential occupancy, child care facilities or other facilities where the extended presence of children would be expected.
- Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic compactor equipment may contain PCBs. In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury.

**Potential for Vapor Encroachment**

This Phase I assessment identified a potential for subsurface vapors, and thus a potential for vapor encroachment into current or future buildings at the Property, based on the RECs noted above. The Phase II Investigation found levels of PCE in soil vapor above the NYS New York State Department of Health indoor Air Guidance Value.

# RECOMMENDATIONS

- Based on the above findings, AKRF has the following recommendations relating to demolition of the existing structure, excavation for a new building, and design of the new building:
    - The waterproofing to be applied to the bottom slab and below-grade sidewalls of the new building should be designed such that it would also function as a vapor barrier.
    - New landscaped areas (i.e., not areas covered by buildings, paving or other impervious surfaces) should include uppermost at least 2 feet of soils (either imported or reused from excavation at the Property) that testing indicates meet the 6 NYCRR Part 375-6.4 RRSCOs.
    - If dewatering is required during future construction activities, water must be discharged in accordance with the City of White Plains, Westchester County, and NYSDEC requirements.
    - Based on the soil sample analytical results, it is possible that all excess excavated soil can be managed as non-hazardous fill material by a variety of off-site soil disposal facilities. Notwithstanding, the contractor, soil broker, and proposed off-site disposal facilities must complete independent reviews of the complete soil sampling data to independently assess the analytical results and conduct such additional waste characterization testing as necessary to ensure proper disposal at licensed/permitted facilities.
    - Soil intended for on-site reuse or off-site disposal should also be field screened and reassessed during excavation to confirm that it does not exhibit signs of contamination. Any soil exhibiting field evidence of contamination should be segregated, resampled, and managed as a new, discrete waste stream until representative analytical data has been reviewed. All on-site reuse and/or off-site disposal of soil should be conducted in accordance with the Soil Management Plan (SMP) and Construction Health and Safety Plan (CHASP).
- If any USTs are encountered during construction, they should be closed and removed, along with any contaminated soil, in accordance with applicable regulations, including NYSDEC registration and spill reporting requirements.

- Any known or suspect ACM needs to be maintained in good condition in accordance with applicable regulations. Prior to demolition with the potential to disturb known or suspect ACM, known ACM should be removed and, where suspect ACM are present, an asbestos survey of the areas to be disturbed should be conducted. Any ACM that would be disturbed should be removed and disposed of in accordance with local, state, and federal requirements.
- Any activities (such as demolition) with the potential to disturb lead-based paint must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - *Lead Exposure in Construction*).
- Unless there is labeling or test data indicating that electrical equipment, fluorescent lighting fixtures, and hydraulic equipment in the building do not contain PCBs, and that electrical equipment and fluorescent lamps are not mercury-containing, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- All excess chemicals or other wastes or surplus materials should be properly disposed of in accordance with applicable requirements.

# 1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Trinity New York Development, LLC (Trinity) to perform a Phase I Environmental Site Assessment (ESA) of a Property located at 135 South Lexington Avenue (part of White Plains Tax Lot 125.83-7-1) in White Plains, Westchester County, New York. The Property was developed with a vacant nine-story apartment building with a basement and surrounding lawns and walkways, which were part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The remainder of the complex was located to the north, south and east of the Property. The surrounding area was mixed-use, including residential and commercial uses, filling stations, a hospital, churches, and municipal buildings.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I ESA Practice)*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor and/or groundwater) within, from and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACM) and potential lead-based paint. However, no samples were collected or analyzed and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical fire insurance maps for the Property and nearby sites were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and other properties within the ASTM-defined radii: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the Property and other properties within predetermined radii: petroleum and hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Disposal Site Draft Study; Hazardous Waste Treatment, Storage or Disposal Facilities; Major Oil Storage Facilities (MOSF); and Brownfield Cleanup Program (BCP).

- Local agency reviews, including White Plains Fire Department and Buildings Department records, were conducted for the Property only.

# 2.0 PHYSICAL SITE DESCRIPTION

On December 19, 2018, Ms. Colleen Griffiths and Mr. Ethan Denmark of AKRF conducted a reconnaissance of the Property, accompanied by Mr. Luis Sanchez of the White Plains Housing Authority (WPHA), who answered pertinent questions. Neighboring properties were also viewed, but only from public rights-of way. The weather was sunny and approximately 30°F, the visibility good, and the premises adequately illuminated. Photographs from the reconnaissance are included in Appendix A.

## 2.1 General Site Conditions

The Property was developed with a nine-story vacant apartment building with a basement on the west side of the Winbrook public housing apartment complex. The building was surrounded by lawns and asphalt-paved walkways. The building was formerly heated by steam provided by an off-site heating plant, illuminated by fluorescent and incandescent lights, and served by two cable-driven electrical elevators, which were out of service at the time of the reconnaissance. According to Mr. Sanchez, the building was vacated in 2016. The Property was part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook, with a collective address of 223 Dr. Martin Luther King Jr. Boulevard.

The building's ground floor was occupied by a lobby, a slop sink room, a mail room, a former laundry room, from which all washing machines had been removed, and vacant apartments. Windows on the lower two floors were boarded up. Some trash, abandoned furniture, and household items were noted in apartments and in hallways.

The basement contained a trash compactor room, a utility meter room, a steam equipment room, and a large open space used for storage. Each floor had a trach compactor chute to the trash compactor room in the basement. The steam equipment room contained two insulated hot water tanks, and pipes used to return condensate water to the off-site boiler. Water staining was noted on the concrete floor around the condensate return pipes and near the area waste piping exited the basement. A concrete pad was noted outside the steam equipment room; according to Mr. Sanchez, a gas-fired hot water heater was historically located on this pad. Storage of abandoned furniture, tires, and maintenance supplies was noted in the basement. A sump was observed in the open space, but could not be opened for inspection. Dirt and apparent water staining, but no evidence of oil staining, were noted on the basement floor.

A 5-gallon bucket of hydraulic oil was observed in the trash compactor room. Chemical storage in the basement included paint and cleaning and maintenance chemicals in containers up to five gallons, and 55-gallon drums of cleaning chemicals. The containers were neatly stored and labeled. A one gallon pail of paint was observed to be spilled in the basement, but the hardened paint appeared to be have been contained by the concrete floor and was not near the sump. Mr. Sanchez indicated that proper disposal of waste chemicals was arranged by the WPHA.

A two-level structure occupied by a stairwell bulkhead and the elevator motor room was located on the roof.

Interior finishing materials consisted of: concrete, ceramic tile, carpet, wood laminate tile, linoleum, and vinyl tile flooring; concrete, sheetrock, plaster, and ceramic tile walls; and concrete, smooth plaster, and popcorn plaster ceilings. These materials were observed to be in fair

to poor condition. According to Mr. Sanchez, after the building became vacant, it was used for training by the White Plains Fire Department, which had caused some damage to finishing materials. Peeling paint was noted in the cooridors and stairwell. The roof was covered with gravel mixed with tar; the underlying roofing was not visible. Rubberized and bituminous flashing was noted on the parapet around the edges of the roof. The visible roofing materials were in good condition.

The on-site lawns and walkways surrounding the building were noted to be in good condition, with no odors, staining, or evidence of petroleum storage tanks. Based on Winbrook plans provided by WPHA, floor drains and storm drains on the Property were connected to the municipal sewer system.

## 2.2 Topography and Hydrogeology

The topography at the Property slopes slightly down toward the north. The Property is located in a topographic depression, with surrounding land sloping slightly down toward it from the north and south. Based on reports compiled by the U.S. Geological Survey (White Plains, NY Quadrangle), the Property was approximately 200 feet above the North American Vertical Datum of 1988, an approximation of mean sea level. Previous studies summarized in Section 3.0 indicated that soil encountered during the borings (which extended to approximately 15 feet below grade) was seemingly historical fill (approximately 5 to 10 feet thick), underlain by native materials. Groundwater was first encountered at between 7.34 and 7.89 feet below grade. The previous study at the Prelude parcel, conducted prior to redevelopment, indicated that the north-adjacent parcel was underlain by approximately 0.5 to 1 foot of topsoil, followed downward by approximately 3 feet of fill materials, which was in turn underlain by apparent native sand and silt to approximately 10 to 18 feet below grade. The previous studies also indicated that remedial excavation for off-site Spill No. 9713110 in a Winbrook parking lot, approximately 240 feet south of the Property, may have encountered bedrock approximately 12 to 13 feet below grade.

Based on previous studies, groundwater in the vicinity of the Property is anticipated to be approximately 5 to 8 feet below grade, flowing in a northwesterly direction toward the Bronx River, located approximately 1,600 feet away. However, actual groundwater flow at the Property can be affected by many factors, including: past filling activities; underground utilities; other subsurface openings or obstructions such as basements; and other factors beyond the scope of this study. According to the 2014 Annual Water Quality Report prepared by the City of White Plains Department of Public Works, groundwater supply wells formerly providing potable water for White Plains were decommissioned in 2009. The City of White Plains was subsequently supplied with potable water from a reservoir in the NYC potable water supply system.

## 2.3 Storage Tanks

### 2.3.1 Underground Storage Tanks (USTs)

During the reconnaissance, no evidence, such as vent pipes, fill caps, or concrete patches, was observed that would indicate USTs are or were present on the Property. No records pertaining to USTs on the Property were identified in the regulatory database.

Off-site USTs are discussed in Section 6.2.2.

### 2.3.2 Aboveground Storage Tanks (ASTs)

During the reconnaissance, no evidence of ASTs, such as vent pipes, fill ports, tanks or vaults, was noted on the Property. No records pertaining to ASTs on the Property were identified in the regulatory database.

Off-site ASTs are discussed in Section 6.2.2.

## 2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic trash compactor equipment may contain PCBs. In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury. No leaks or stains from such equipment and fixtures was noted.

## 2.5 Lead-Based Paint

Lead-based paint was generally not used inside residential buildings after 1977 nationwide. Lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children, especially when it is in poor condition.

Painted surfaces in the accessible areas were observed to be in fair to poor condition, with significant areas of peeling paint in the corridors and stairwell. Based on the age of the building, lead-based paint may be present on interior painted and exterior painted surfaces (e.g., painted brick walls). However, a July 2016 survey of this building, provided by WPHA, did not identify lead-based paint on interior painted surfaces based on laboratory analysis. During the reconnaissance, the building was vacant and there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected.

Activities (such as renovation or demolition) with the potential to disturb lead-based paint are subject to a variety of requirements, including US Occupational Safety and Health Administration regulation 29 CFR 1926.62 (Lead Exposure in Construction). If the Property building is re-occupied for residential or child care uses, additional requirements (e.g., tenant notification, inspections and abatement) may apply, even if no disturbance is planned

## 2.6 Utilities

The Property was supplied with natural gas and electricity, and was connected to the municipal water and sewer systems. At the time of the reconnaissance, water supply to the Property building was shut off with the exception of fire sprinklers.

## 2.7 Waste Management and Chemical Handling

At the time of the reconnaissance, the Property building was vacant and did not generate trash. An inactive trash compactor was observed in the building's basement. Based on a 5-gallon container of hydraulic oil observed in the compactor room, this compactor may have been hydraulic. Some trash, abandoned furniture, and household items were noted in apartments and in hallways.

Chemical storage at the Property included one 5-gallon bucket of hydraulic oil, paint and cleaning and maintenance chemicals in containers up to five gallons, and 55-gallon drums of cleaning chemicals, which were stored in various basement areas. According to Mr. Sanchez, proper disposal of waste chemicals was arranged by the WPHA. The observed chemicals were neatly stored and labeled, with no evidence of a release.

### 2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. According to a New York State Department of Health database, the average radon level in White Plains is 2.91 picocuries/liter in basements and 3.77 picocuries/liter on ground floors, both below the USEPA recommended action level of 4.0 picocuries/liter.

## 3.0 PREVIOUS STUDIES

*Phase I Environmental Site Assessment (ESA), 135 South Lexington Avenue, AKRF, Inc. – June 2017*

AKRF's June 2017 Phase I ESA revealed the following:

Recognized Environmental Conditions (RECs):

- Historical land uses in the vicinity of the Property included the White Plains Hospital, auto sales, auto and bicycle repair shops, filling stations and stores with petroleum USTs, woodworking and painting shops, dry cleaners, a rug cleaner, undertakers, sheet metal works, electrical businesses, and a printer. The reconnaissance also identified the hospital, active and former filling stations, auto repair shops, car dealerships, two laundries (including one identified on historical land use maps and in the regulatory database as a dry cleaner), and a hardware shop with a glass cutting service in close proximity to the Property.
- Numerous nearby active- and closed-status petroleum spills, petroleum bulk storage facilities, hazardous waste generators (including generators of chlorinated solvents), and State Brownfield Cleanup Program Sites were reported in regulatory databases.
- One of the spills reported in close proximity to the Property was active-status NYSDEC Spill No. 9713110 at a former filling station at 26 East Post Road, approximately 330 feet south of the Property. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling station onto the Winbrook complex (south of the Property). Remedial activities included removal of contaminated soil, groundwater, and soil vapor, and installation and sampling of numerous groundwater monitoring wells. The nearest of these wells were located approximately 60 to 240 feet south and east, respectively, of the Property. Groundwater sampling of these wells in August 2016 indicated no evidence of significant concentrations with petroleum-related volatile organic compounds (VOCs) in the well nearest the Property. However, these wells contained VOCs associated with chlorinated solvents, including tetrachloroethene (PCE) at up to 1,000 parts per billion (ppb) and tetrachloroethene (TCE) at up to 55 ppb. The source of these chlorinated VOCs has not been identified.

Controlled RECs (CRECs)

- The Winbrook complex, including the Property, was heated by steam generated at a heating plant located in a basement of an off-site building. The plant's boilers were supplied by two, 20,000-gallon No. 4 fuel oil USTs located beneath a lawn west of the boiler room. Five closed-status spills were reported in connection with these USTs, including three tightness

test failures in 1989-2010, a minor surface spill in 1993, and an approximately 700-gallon release due to overfill in 2000, which reportedly required cleanup of a nearby playground area. The playground is approximately 200 feet southeast of the Property. As noted above, no evidence of significant petroleum contamination was identified in groundwater in the vicinity of the Property in 2016; thus, the historical spills are considered to be Controlled RECs (CRECs) rather than RECs.

De Minimis Conditions

- Stream filling and demolition of historical structures on the Property may be associated with fill materials of unknown origin. A 2012 subsurface investigation of the north-adjacent parcel indicated the presence of an approximately 0.5 to 1-foot topsoil layer, underlain by approximately 3 feet of fill materials (including sand, gravel, brick and glass), which were underlain in turn by apparent native soil.
- At the time of the reconnaissance, the Property building was equipped with a trash compactor. However, historical plans showed the compactor room in the basement was an incinerator room.
- Chemical storage at the Property included one 5-gallon bucket of hydraulic oil, paint and cleaning and maintenance chemicals in containers up to 5 gallons, and 55-gallon drums of cleaning chemicals, which were stored in various basement areas. The observed chemicals were neatly stored and labeled, with no evidence of a release.

Other on-site environmental concerns (items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris)

- A hazardous materials survey of the Property building in 2016 included an asbestos survey, which identified ACM, including vinyl floor tile and mastic, linoleum and mastic, thermal pipe insulation, window caulking, and the roof of the elevator bulkhead based on laboratory analysis. Other building materials were identified as not containing asbestos. Building materials, including the identified ACM, were noted to be in good to damaged condition.
- The 2016 hazardous materials survey also included sampling for lead-based paint. This survey did not identify lead-based paint on interior painted surfaces. However, lead-based paint may be used on exterior surfaces (painted brick walls). Painted surfaces were observed to be in fair to poor condition. During the reconnaissance, there was no observation of residential occupancy, child care facilities or other uses where the extended presence of children would be expected.
- Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic compactor equipment may contain PCBs. In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury.

Potential for Vapor Encroachment

The Phase I assessment identified a potential for subsurface vapors, and thus a potential for vapor encroachment into current or future buildings at the Property.

*Subsurface (Phase II) Investigation, 135 South Lexington Avenue, AKRF, Inc. – September 2017*

AKRF conducted a subsurface (Phase II) investigation at the Property in July 2017. The Phase II study was intended to determine whether past or present on- or off-site activities have adversely affected the Property. The scope of the Phase II study was based on the findings of the June 2017 Phase I ESA.

The investigation included:

- A geophysical survey across accessible outdoor portions of the Property to identify subsurface utilities and locate other potential buried structures;
- The advancement of six soil borings, four of which were retrofitted as temporary groundwater monitoring wells and four soil vapor sampling points; and
- The collection of eight soil, four groundwater, and four soil vapor samples for laboratory analyses.

Soil encountered during the borings (which extended to approximately 15 feet below grade) was characterized generally as historical fill (approximately 5 to 10 feet thick), underlain by native materials consisting of varying amounts of silt, clay, sand and gravel. Photoionization detector (PID) readings were encountered in two of the soil borings ranging from 0.1 to 1.1 parts per million (ppm). No odors or staining were observed in any of the soil borings. Groundwater was first encountered at depths ranging from 7.3 to 7.9 feet below grade. No free phase product was detected in any of the wells (using a multi-parameter interface probe).

Results from the soil samples were compared to the 6 NYCRR Part 375-6.4 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs). No VOCs, SVOCs or PCBs exceeded any of the SCOs. Lead was detected in only one sample (at 472 ppm) above the RRSCO of 400 ppm. Barium, chromium and zinc were detected above the UUSCOs, but not RRSCOs.

Results from the groundwater samples were compared to NYSDEC Class GA Ambient Water Quality Standards (AWQS), which were developed using the scenario that the groundwater would be a source of drinking water; again a scenario that does not currently and would not in the future occur. Three individual VOCs, cis-1,2-dichloroethene (cis-1,2-DCE), PCE, TCE, exceeded the AWQS. However, VOCs were found at higher concentrations in wells that were apparently hydraulically upgradient of the property, indicating both the source is likely not at the Property and that the conditions are not limited to the Property.

Results from the soil vapor samples were compared to the NYSDOH indoor air guideline values (AGVs). These values are for inside buildings, but they were used for comparison in the absence of soil vapor standards or guidelines. In reality, at most a very small proportion of soil vapor would be expected to migrate into an overlying building, especially a newly constructed building with no cracks in the slab. PCE was detected in all four samples, but only one with a result of 80 $\mu g/m^3$ exceeded the AGV of 30 $\mu g/m^3$for PCE. Additional VOCs, for which there are no AGVs, were also detected, the majority of which are typically associated with gasoline.

No evidence of USTs was encountered by the geophysical survey or the sampling program.

*Soil Waste Characterization Investigation, 135 South Lexington Avenue, AKRF, Inc. – October 18, 2018*

AKRF conducted a waste characterization investigation at the Site in September 2018. The investigation included the collection of one composite and one grab soil sample from eight approximately 800-cubic

yard or less volumes (designated zones) to satisfy typical disposal facility requirements of one sample per 800 to 1,000 cubic yards. Eight waste characterization samples were collected from 12 borings. The borings were advanced within the proposed footprint of the new building and ancillary excavation areas around its perimeter.

Soil encountered included fill extending from ground surface to approximately 5 to 7 feet below grade. The fill included sand, silt, and gravel with varying amounts of ash, brick, coal, concrete, fabric, glass, slag, tile, and wood. Apparent native soils composed of varying amounts of sand, silt, gravel, and clay were identified underlying the fill extending to approximately 10 feet below grade (the maximum boring depth). No odors or PID detectionsor other evidence of gross contamination were noted during soil screening. Groundwater was first encountered at approximately 7 to 7.5 feet below grade.

Composite samples were analyzed for SVOCs, Target Analyte List (TAL) metals, Toxicity Characteristic Leaching Procedure (TCLP) Resource Conservation and Recovery Act (RCRA) 8 Metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver) plus copper, nickel, and zinc, mercury, hexavalent chromium, PCBs, pesticides, herbicides, New Jersey Extractable Petroleum Hydrocarbons (NJEPH), total petroleum hydrocarbons (TPH) for diesel range organics (DRO), total sulfur, total cyanide, and RCRA characteristics of ignitability, corrosivity, and reactivity. One composite sample for the entire Site was also analyzed for paint filter. Grab samples were analyzed for VOCs plus tentatively identified compounds (VOCs+10).

PCB Aroclor 1260 was detected at a concentration of 0.38 milligrams per kilogram (mg/kg) in one sample. Low concentrations of VOCs, including the common laboratory contaminants acetone and methylene chloride, were detected in some samples. SVOCs, metals, and pesticides were the detected at concentrations typical of historic fill. None of the soil samples analyzed for TCLP metals had concentrations exceeding hazardous waste thresholds.

*Winbrook Apartments – White Plains, NY Building Plans, Alfred Fellheimer, Steward Wagner, Carl A. Vollmer Architects & Engineers, September 20, 1948*

Pre-construction Winbrook plans were provided to AKRF. The plans indicated that in 1948, the Property was developed with apartment buildings, dwellings, and small parking garages. The plans also showed that the Property building (labeled as Building 5) would be heated by steam from the Winbrook heating plant, shown at its current location approximately 230 feet southeast of the Property. A "tank room" containing a hot water tank was shown on the northeastern side of the basement. No fuel oil storage tanks were shown on the Property. The trash compactor room observed during the reconnaissance was identified as an incinerator room.

*Brookfield Commons Phase 1 State Environmental Quality Review (SEQR) Documents*

SEQR was conducted for the north-adjacent parcel in 2009-2012 in preparation for Prelude construction, which was the first phase (Phase 1) of the Brookfield Commons redevelopment. SEQR documents were provided to AKRF, with copies of relevant documents included in Appendix G. These documents indicated that in 2009, a portion of Winbrook including the Property was rezoned from zoning RM-0.35 (residential) to zoning B-3 (business, office and commercial). The documents also included an Environmental Assessment Form (EAF) prepared by WHPA in April 2012, which included summaries of SEQR studies. Findings relevant to the Property were as follows:

- A Phase I and Limited Phase II ESA Report was prepared by GZA GeoEnvironmental (GZA) in April 2012. A portion of this report (without appendices, tables or laboratory data) was included in the EAF. The report indicated that historical land uses included an auto repair shop on the Prelude site, and a filling station on the west-adjacent block. A filling station was also observed on the west-

adjacent block during GZA's reconnaissance. Nearby PBS facilities and reported spills were also identified as potential concerns.

The Phase II entailed installation of four borings to depths of approximately 5 to 18 feet below grade, and collection of four soil samples and two groundwater samples for laboratory analysis. The borings reportedly encountered, from the top down: approximately 0.5 to 1 foot of topsoil; approximately 3 feet of fill materials (sand, gravel, brick and glass); apparent native sand and silt between the bottom of the fill layer and approximately 10 feet below grade; and apparent native silt and fine sand approximately 10 to 18 feet below grade. The soil samples were collected within the fill layer and analyzed for metals, PCBs and SVOCs. These samples reportedly contained elevated metal concentrations, which is typical of fill materials.

Groundwater was encountered approximately 7 to 8 feet below grade. Groundwater samples were analyzed for VOCs. One of the two samples reportedly contained the chlorinated VOCs PCE and cis-1,2-DCE at "low concentrations," but above State drinking water standards. These VOCs were attributed to an off-site source. Based on the Phase II findings, the EAF indicated that a vapor barrier "may be" recommended beneath the Prelude building, and that further assessment was advised to confirm that the VOCs were from an off-site source.

- The EAF included a Phase 1A archaeological sensitivity analysis prepared by CITY/SCAPE Cultural Resource Consultants in April 2012. The Phase 1A report included a review of historical land use maps which generally pre-dated available Sanborn land use maps. These maps indicated that in 1776, the Property appeared to be vacant and was part of a sparsely developed area which was the location of the Battle of White Plains between American and British troops. In 1851-1899, the Property appeared to be vacant, with the larger surrounding area sparsely developed with small dwellings. An 1868 map showed a stream traversing the Property, flowing toward the north. This stream appeared to have been filled with materials of unknown origin. By 1914, the Property was shown as partially developed with apparent residential buildings. The Phase 1A report indicated that all historical structures on the Winbrook campus were demolished in the late 1940s, and construction of the Winbrook campus began in 1949.

*Semi-Annual Monitoring Report – Former Getty Service Station No. 00369, 26 East Post Road, White Plains, NY – NYSDEC Spill No. 9713110, Tyree Environmental Corp., November 2012; Endpoint Sampling Data, Tyree Environmental Corp., December 2014; and Amended Groundwater Monitoring Report – Third Quarter 2016, NYSDEC Spill No. 9713110, Former Getty Service Station No. 00369, 26 East Post Road, White Plains, Westchester County, NY, Antea USA, Inc., October 31, 2016*

Documents associated with remediation of off-site Spill No. 9713110 were provided by WPHA. These included: a semi-annual groundwater monitoring report for the period of February through November 2012; soil and groundwater sampling data for October and December 2014; and a groundwater monitoring report dated October 2016. The following findings were relevant to the Property:

- 26 East Post Road, located approximately 330 feet south of the Property, was historically a filling station. In 1988, four 10,000-gallon gasoline USTs and associated piping were removed from this facility, which was subsequently occupied by used auto sales. The 26 East Post Road site reportedly became vacant in the 1990s. Soil and groundwater contamination was identified during a subsurface investigation in 1997. As a result, Spill No. 9713110 was reported to NYSDEC.

- Multiple sampling rounds were conducted on and near 26 East Post Road starting in 1998. These included installation of monitoring wells and soil vapor monitoring points in off-site areas of the Winbrook complex. The nearest wells to the Property were MW-204-33 approximately 120 feet to the east, PW-105 approximately 60 feet to the south, MW-104 approximately 160 feet to the south, MW-103 approximately 215 feet to the south, and MW-102 approximately 240 feet to the south (see

Figure 2 for location). Groundwater in the wells nearest to the Property was delineated as flowing in a northwesterly direction, and was approximately 4.8 to 7.8 feet below grade. The 2016 report (but not the 2011 report) noted groundwater mounding (i.e., an area of localized higher elevation) at the boundary between Winbrook and 26 East Post Road, with flow toward the southeast at 26 East Post Road. The reason for the mounding was not specified.

- Remedial activities included groundwater and soil vapor extraction in 2001-2009. In 2014, approximately 5,400 tons of petroleum-contaminated soil were excavated from 26 East Post Road and the southern portion of Winbrook (a parking lot approximately 240 feet south of the Property) for off-site disposal. Although endpoint sampling indicated areas of residual contamination, further removal was reportedly not feasible due to safety considerations. The endpoint sampling data appeared to indicate that portions of the excavation encountered bedrock approximately 12 to 13 feet below grade.
- Sampling indicated that petroleum contamination was migrating northwest from the 26 East Post Road site and affecting groundwater beneath the Winbrook complex. The most recent sampling data provided, from August 2016, indicated that a gasoline additive (MTBE) at 41 parts per billion (ppb), and chlorinated VOCs including PCE at 1,000 ppb, TCE at 55 ppb, and DCE at 19 ppb were detected in MW-204-33. The sample from PW-105 contained chlorinated VOCs DCE at 20 ppb, and vinyl chloride at 6.8 ppb. The samples from MW-104 contained benzene at 1.3 ppb, DCE at 39 ppb, PCE at 44 ppb, TCE at 14 ppb, and vinyl chloride at 17 ppb. No elevated VOC concentrations were detected in MW-103. The sample from MW-102 contained PCE at 38 ppb and DCE at 6.6 ppb. The sampling results indicated that the petroleum-contaminated groundwater plume did not appear to be significantly affecting areas near the Property, but elevated levels of chlorinated solvents were present in groundwater (and thus, potentially, in soil vapor). Soil vapor sampling was not conducted in August 2016, and any previous soil vapor sampling data was not provided to AKRF.
- In January 2011, petroleum floating on groundwater was reported in monitoring wells MW-8 and MW-14. The petroleum in MW-14 was identified as diesel or No. 2 fuel oil, while the petroleum in MW-8 could not be identified. Both affected wells were located at or in close proximity to 22-24 East Post Road, which was subsequently determined to be the source of the spill, reported to NYSDEC as Spill No. 1101872 (see Section 6.2.2).

*Asbestos Pre-Demolition and Hazardous Materials Survey Report of Vacant Apartment Building – 135 South Lexington Avenue, White Plains, NY, Viking Environmental Corp., July 29, 2016*

A survey of the Property building for ACM and hazardous materials was conducted for WPHA in preparation for building demolition. The survey indicated that laboratory analysis identified certain vinyl floor tile and mastic, linoleum and mastic, thermal pipe insulation, window caulking, and the roof of the elevator bulkhead as ACM. Other building materials were identified as not containing asbestos. Laboratory analysis of paint chips identified no lead-based paint on interior building surfaces. Exterior building surfaces (painted brick walls) were not analyzed. In addition, the report noted the potential for mercury-containing fluorescent lamps, and refrigerators and air conditioners containing Freon. However, no sampling for mercury or Freon was conducted.

Copies of the previous reports are included in Appendix G.

# 4.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent

asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Suspect ACM observed during the reconnaissance included: window glazing and caulking; mastic for ceramic tile, carpet and wood laminate tile; linoleum and associated mastic; vinyl floor tile and associated mastic; sheetrock and plaster; thermal pipe insulation; and roofing materials, which were noted in fair to poor condition. ACM may also be present in other locations not readily accessible during the reconnaissance. AKRF's reconnaissance did not constitute and cannot substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing. However, the July 2016 survey of this building provided by WPHA, identified ACM, including vinyl floor tile and mastic, linoleum and mastic, thermal pipe insulation, window caulking, and the roof of the elevator bulkhead based on laboratory analysis. Other building materials were identified as not containing asbestos.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYS-certified asbestos inspector to determine if the project will disturb ACM. Any such ACM (and any other ACM subsequently identified) must be removed prior to the renovation or demolition.

## 5.0 ADJACENT LAND USE

The Property was surrounded to the north, east and south by residential buildings with paved and landscaped grounds. The nearest building, located approximately 70 feet north of the Property (referred to as Prelude or 301 Quarropas Street) was constructed in 2014 as part of Phase 1 of the redevelopment of Winbrook. The heating plant for the Winbrook complex was located in the basement of an apartment building, on the east side of the Winbrook public housing apartment complex, at 33 Fisher Avenue, approximately 230 feet southeast of the Property. This plant was toured during the reconnaissance and contained two duel-fuel natural gas- and oil-fired boilers. Water staining was noted on the concrete floor of the heating plant, but no odors or oil staining were observed. According to WPHA staff, the boilers were supplied by two, 20,000-gallon No. 4 fuel oil USTs located beneath a lawn west of the boiler room. Access ports and fill ports for these USTs were observed during the reconnaissance. In addition to the above, Winbrook included: three additional apartment buildings, a playground, athletic courts, asphalt-paved walkways and parking areas, and lawns. Several monitoring well covers were observed within the Winbrook complex to the south and east of the Property. Based on previous reports summarized in Section 3.0, these covers were associated with monitoring wells and soil vapor monitoring points installed during investigation of off-site Spill No. 9713110 at 26 East Post Road.

The greater surrounding area was mixed-use, including residential and commercial uses, churches, municipal buildings (primarily north of the Property). The Property superblock included: a vacant lot approximately 330 feet south of the Property at 26 East Post Road (the source of Spill No. 9713110); an auto repair shop and an apparent inactive filling station surrounded by chain-link fence approximately 350 feet southeast of the Property; a hardware store approximately 480 feet south of the Property, with a sign indicating glass cutting is performed in the store; and a laundromat approximately 520 feet south of the Property. A filling station and an auto repair shop were observed approximately 170 feet northwest of the Property. Three auto dealerships were observed approximately 290 and 500 feet southwest of the Property, and 700 feet south of the Property. A laundromat was observed approximately 250 feet southwest of the Property. The White Plains Hospital and a filling station were located on the south-adjacent block, approximately 550 feet south of the Property.

# 6.0 PROPERTY HISTORY AND RECORDS REVIEW

## 6.1 Prior Ownership and Usage

### 6.1.1 Historical Land Use maps

Historical maps were reviewed for indications of uses (or other evidence) suggesting hazardous material generation, usage or disposal on or near the Properties. Specifically, Sanborn Fire Insurance Maps from 1900, 1905, 1911, 1930, 1942, 1950, 1987, 1989, 1990, 1992-1995, and 2002-2004 were reviewed. Copies of the maps are provided in Appendix B.

*1900*

The Property was shown as vacant land on a block bounded by Fisher Avenue to the north, South Lexington Avenue to the west, Brookfield Avenue to the east, and New York Post Road to the south.

The surrounding area was moderately developed with small dwellings with yards.

*1905*

Two small, two and a half-story dwellings with yards were shown in the northwestern corner of the Property. A two-story dwelling was partially located in the southeastern corner of the Property.

Two small apartment buildings were shown in the southern portion of the Property block. A church and a small carpentry shop were shown on the east-adjacent block. No further significant changes from the 1900 map were noted in the surrounding area.

*1911*

In addition to the buildings shown on the 1905 map, two apartment buildings (three and four stories) were shown on the Property.

The surrounding area was more densely developed compared to the 1905 map. The southern portion of the Property block included small apartment buildings, a church, and stores. Additional dwellings, stores, stables, a church, and a synagogue were shown on surrounding blocks.

*1930*

In addition to the structures shown on the 1911 map, a three and a half-story apartment building and five small parking garages were shown on the Property.

Three small auto repair shops and one vulcanizing (tire conditioning) facility were shown to the north and south of the Property on the same block. A filling station with three gasoline USTs was shown at the southeastern corner of the Property block. A filling station with five gasoline USTs, and a store with one gasoline UST, were shown west of the Property across South Lexington Avenue. A warehouse with a gasoline UST was shown on the north-adjacent block. The northeast-adjacent block included a large construction company with woodworking and painting, a cabinet shop, and an auto painting shop. An auto repair shop and an auto painting shop were shown two blocks east of the Property. The White Plains Hospital was shown on the south-adjacent block.

*1942*

The Property and surrounding area were shown without land use information, but appeared to be similar in layout to the 1930 map.

*1950*

The Property had been redeveloped with the existing nine-story building, which was surrounded by Winbrook apartment complex grounds. The Winbrook buildings were noted to have been built in 1949-1950.

The Property block and the east-adjacent block had been merged into a superblock, most of which had been redeveloped with the Winbrook multi-story apartment building complex. A boiler house was shown in an off-site Winbrook building, approximately 230 feet southeast of the Property. The superblock also contained: a church on its northern side; and stores, an undertaker, two filling stations including the station first shown on the 1930 map (which appeared to have been reconfigured since 1930), and an auto repair shop on its southern side. The hospital to the south appeared to have expanded compared to the 1942 map. The south-adjacent block also included an auto sales facility and a car wash. The filling station shown west of the Property on the 1930 map had been replaced by a large auto repair and sales facility. In addition, a roofing and sheet metal works and a filling station with three gasoline USTs were shown west of the Property across South Lexington Avenue. The northeast-adjacent block included a sheet metal works, a rug cleaner, and an undertaker. Three auto repair shops and a vulcanizing facility were shown two blocks to the northeast.

*1987*

No significant changes from the 1950 map were noted on the Property.

The filling stations on the southern side of the Property superblock appeared to have been reconfigured since 1950. A bicycle repair shop was also shown in the southern portion of this superblock. The hospital on the south-adjacent block was shown to have expanded compared to the 1950 map, replacing the adjacent auto sales facility. A used auto sales facility (25 West Post Road) was shown on the southwest-adjacent block. Two dry cleaners (168 and 182 South Lexington Avenue) and an auto repair shop were shown on the west-adjacent block. The former sheet metal works west of the Property had been replaced by a printer. Most structures shown north and northwest of the Property on the 1950 map had been demolished and replaced by a community center, a playground, and parking lots.

*1989*

No significant changes from the 1987 map were noted on the Property or in the surrounding area.

*1990*

The filling stations on the southern portion of the Property superblock were shown as being used for parking; the filling station canopies shown on the 1989 map were present, but not labeled. No further significant changes from the 1989 map were noted on the Property or in the surrounding area.

*1992*

A bicycle repair shop was no longer shown in the southern portion of the Property superblock. No further significant changes from the 1990 map were noted on the Property or in the surrounding area.

*1993*

No significant changes from the 1992 map were noted on the Property or in the surrounding area.

*1994*

The former auto repair shop west of the Property across South Lexington Avenue, and one of the dry cleaners on the west-adjacent block, were shown as unspecified commercial uses. A courthouse had been constructed on the north-adjacent block. No further significant changes from the 1993 map were noted on the Property or in the surrounding area.

*1995*

The hospital on the south-adjacent block had expanded compared to the 1994 map, replacing the adjacent car wash. No further significant changes from the 1994 map were noted on the Property or in the surrounding area.

*2002-2004*

No significant changes from the 1995 map were noted on the Property or in the surrounding area.

To summarize, historical Sanborn maps indicated that the Property was vacant in 1900. Between 1900 and 1942, the Property was developed with small residential buildings and associated parking garages. These structures were demolished for construction of the existing apartment building and grounds, which were constructed in 1949 or 1950 as part of the Winbrook housing complex.

The surrounding area was primarily residential in the early 20th century, with commercial and auto-related uses shown by 1911, and auto-related uses shown by 1930. A hospital was shown on the south-adjacent block in 1930, and subsequently expanded to cover a larger portion of this block. Potential concerns in close proximity to the Property included: the hospital, auto sales, auto and bicycle repair shops, filling stations and stores with gasoline USTs, woodworking and painting shops, dry cleaners, a rug cleaner, undertakers, sheet metal works, and a printer.

### 6.1.2 Historical Aerial Photographs

Since historical fire insurance maps were available for the Property (and surrounding area) and these maps included information relating to land use, aerial photographs would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs were not reviewed.

### 6.1.3 Property Tax Files and Zoning Records

Based on the online White Plains tax and zoning map available on the Westchester County Geographic Information Systems (GIS) website, the Property was zoned as B-3 (business, office and commercial) and classified as 411 (apartments).

### 6.1.4 Recorded Land Title Records

A Chain of Title report was prepared by Environmental Data Resources, Inc. (EDR) as part of the 2017 Phase I ESA, summarized in Section 3.0. Public records of Westchester County, New York were searched from January 1, 1940 to June 7, 2017. One Quit Claim Deed, dated May 19, 1982, was on file, listing the City of White Plains as the Grantor and the White Plains Housing Authority as the Grantee. The Chain of Tile report also indicated that the City of White Plains has owned the Property since the early 1930s. The 2018 Assessment Year Tax Assessors record listed site name as "White Plains Housing Authority" and indicated no recorded sales.

The Chain of Title report is included in Appendix C.

### 6.1.5 Local Street Directories

A City Directory prepared by EDR was reviewed as part of the 2017 Phase I ESA, summarized in Section 3.0. The City Directory, provided in Appendix D, consisted of the names of businesses located on-site and in adjacent properties, compiled from city and reverse telephone directories at approximately five-year intervals starting in 1974. The City Directory identified residential uses on the Property in 1979-2013.

The City Directory also identified potential uses of concern off-site along South Lexington Avenue, to the west and south of the Property, in 1979-2013. These included a printer, a laundry (potential dry cleaner), dry cleaners, electrical businesses, a towing company, a tire shop, an auto service station, auto sales, and a painter.

## 6.2 Regulatory Review

The regulatory database listings, shown in Appendix E, were obtained from Toxics Targeting, Inc. of Ithaca, New York. It includes summaries of the databases searched, their radii around the Property and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

### 6.2.1 Federal

Databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF); and the USEPA Civil Enforcement Docket. Facilities subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) are discussed with State RCRA listings.

*National Priority List (NPL)*

The NPL is the USEPA's list of sites that probably require remedial action under the Superfund Program. Nearby NPL sites can sometimes pose a risk of stigmatizing surrounding properties and thus impacting property values.

No NPL facilities were reported within a one-mile radius of the Property.

*Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)*

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived concern).

No CERCLIS facilities were reported within a ½-mile radius of the Property.

*Emergency Response Notification System (ERNS)*

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

The Property was not identified as an ERNS site.

*Toxic Chemical Release Inventory System (TRIS)*

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

No TRIS facilities were reported within a ⅛-mile radius of the Property.

*Permit Compliance System of Toxic Wastewater Discharge (WWD)*

This database includes certain sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a ⅛-mile radius of the Property.

*United States Environmental Protection Agency Civil Enforcement Docket*

This database tracks civil judiciary cases filed on behalf of the USEPA by the Department of Justice.

Two facilities were listed in the USEPA Civil Enforcement Docket within a ⅛-mile radius of the Property. Based on their location more than 1,200 feet to the northwest and north-northwest (in an anticipated downgradient groundwater flow direction), these facilities are not anticipated to have affected the Property.

*Air Discharge Facilities Index (ADF)*

This federal database includes information on certain air emission sources.

Two Air Discharge Facilities were identified within a ⅛-mile radius of the Property. The listings were as follows:

- WP Hospital Association, located at 41 East Post Road, approximately 800 feet south of the Property, was listed with potential discharges of a "default pollutant" (possibly associated with boiler operation), and was reportedly in regulatory compliance.
- Christy Cleaners and Tailors, located at 25 West Post Road, approximately 1,000 feet south of the Property, was listed with potential emissions of PCE, with no applicable regulations noted.

Based on the listing details and anticipated groundwater flow direction, the dry cleaning facility may have affected subsurface conditions beneath the Property. Based on listing details and distance, the WP Hospital Association facility is not likely to have affected subsurface conditions beneath the Property.

### 6.2.2 State

State databases included the listings of petroleum/hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP) Sites; and Historic Utility Sites.

*New York SPILLS Database*

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

Five hundred seventy-eight spills were reported within a ½-mile radius of the Property, including 15 active-status spills and 563 closed-status spills. The nearest spill listings with some potential to affect the subsurface conditions beneath the Property are summarized below:

- Four closed-status spills, including an approximately 450-gallon gasoline spill in 2007, were reported at a filling station at 134 South Lexington Avenue, approximately 240 feet northwest of the Property.
- In October 2010, a tank tightness test failure for two 20,000-gallon USTs was reported for a WPHA facility at 33 Fisher Avenue (i.e., the Winbrook heating plant located approximately 230 feet southeast of the Property). According to the listing, tank piping was repaired, and the tanks subsequently passed retests in 2010 and 2011. No contamination was reportedly observed, and the spill listing was closed in July 2011.

  In January 2000, a No. 4 fuel oil release due to overfill was reported at this address. This spill was initially reported to be approximately 30 gallons, but was subsequently indicated to be up to 700 gallons. The playground area to the southwest of the boiler room was noted to require cleanup. The spill listing was closed in May 2000.

  Three additional closed-status spills were reported, including two tank test failures in 1989 and 2002, and a minor surface spill in 1993.
- In November 2005, a spill was reported at Allen Ame Church, located at 65 Fisher Avenue, approximately 290 feet west-northwest of the Property. The listing indicated that a damaged 1,000-gallon No. 2 fuel oil UST and contaminated soil were removed. Apparent gasoline-contaminated soil, believed to be associated with the filling station at 134 South Lexington Avenue, was also reportedly encountered in the excavation and removed. The spill listing was closed in December 2006.
- In February 1998, closed-status Spill No. 9713110 was reported at a closed Getty filling station at 26 East Post Road, approximately 515 feet southeast of the Property. According to the listing, soil and groundwater

contamination was found during a subsurface investigation. Remedial activities included groundwater monitoring and extraction. The spill listing also noted that in 2016, the groundwater monitoring for Spill No. 9713110 identified oil floating on groundwater at 22-24 East Post Road, and new Spill No. 1607837 was reported, as noted below. Additional information regarding Spill No. 9713110, which was closed in August 2017, is summarized in Section 3.0.

- In May 2011, active-status Spill No. 1101872 was reported at 22-24 East Post Road, approximately 525 feet south-southeast of the Property, reportedly due to detection of low concentrations of diesel or No. 2 fuel oil during groundwater monitoring for Spill No. 9713110 at east-adjacent 26 East Post Road. In addition, in November 2016, active-status spill No. 1607837 was reported at the same address. According to the listing, suspected No. 2 fuel oil was discovered floating on groundwater in a monitoring well at this site. The well was installed for investigation of Spill No. 9713110; however, the fuel oil was indicated to be unrelated to Spill No. 9713110. The listing noted that a 1,000-gallon No. 2 fuel oil UST was located at 22-24 East Post Road. The UST was reportedly removed in February 2017, at which time holes were noted in the tank. The listing indicated that subsequent remedial soil excavation uncovered contamination. Spill No. 1700425 was reported based on these observations, but was closed for consolidation with Spill No. 1607837. One additional closed-status spill was reported at this address.
- In September 2014, active-status Spill No. 1608924 was reported at a BP Station at 34 East Post Road, approximately 510 feet east-southeast of the Property. According to the listing, soil and groundwater contamination was reported downgradient of this facility, and additional investigation was conducted in 2014-2016. Listing details indicated a Remedial Action Work Plan (RAWP) was to be completed in July 2017, a Consent Order was exceted by DEC in February 2018, and the DEC representative was deposed by WPHA counsel in October 2018. Three additional closed-status spills were reported at this address.
- Sixteen closed-status spills were reported at various White Plains Hospital locations. The nearest portion of the hospital is approximately 550 feet south of the Property.. The closed-status spills reported for the hospital campus, included releases of fuel oil requiring soil removal and remediation of utilizing recovery wells.
- In December 1997, closed-status Spill No. 9710575 was reported at Getty 58108, located at 11 East Post Road, approximately 685 feet south-southeast of the Property. According to the listing, a leaking fuel line caused the release of petroleum into a storm drain. Remedial activities included groundwater monitoring, extraction, and chemical remediation. Removal of four USTs and contaminated soil was performed in September 2017. Additional excavation was performed in January 2018 and the spill was closed in July 2018. Fourteen additional closed-status spills were reported at this address.

- In April 2001, closed-status Spill No. 0100630 was reported at Bisscardi Cleaners, located at 201 South Lexington Avenue, approximately 820 feet south of the Property. The listing indicated that a storage tank failure caused the release of approximately 150 gallons of wood alcohol (methanol) in a basement. The spill was reportedly cleaned up, and the listing was closed in May 2006.

Based on listing details, distance, and/or anticipated groundwater flow direction, the above spill listings and other nearby spills may have affected subsurface conditions beneath the Property. Details from all spills are included in Appendix E.

*Resource Conservation and Recovery Act (RCRA) Notifiers Listings*

This database lists sites which have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

No TSD facilities were identified within a ½-mile radius of the Property. No CORRACTS facility was reported within a one-mile radius of the Property.

Ninety-seven RCRA generators/transporters were reported within a ¼-mile radius of the Property. The nearest facilities with some potential to affect subsurface conditions beneath the Property, based on proximity and/or the nature of the listings, are as follows:

- Swank Cleaners, located at 168 South Lexington Avenue, approximately 300 feet south of the Property, was listed as a generator of spent halogenated solvents in 1991.
- Bridgestone/Firestone, located at 60 East Post Road, approximately 620 feet east-southeast of the Property, was listed as a generator of PCE in 1998.
- Bright Side Cleaners, located at 182 South Lexington Avenue, approximately 460 feet south of the Property, was listed as a generator of spent halogenated solvents in 2002.
- Getty Petroleum Co., located at 11 East Post Road, approximately 700 feet south-southeast of the Property, was listed twice as a generator of ignitable solid waste in 1986 and 1998, and spent halogenated solvents in 1994.
- The White Plains Hospital Center, located at 41 East Post Road, approximately 800 feet south of the Property, was listed three times as a generator of: ignitable and corrosive solid waste; heavy metal waste; phenol; chloroform; spent non-halogenated solvents; 1,2-dichloroethane (DCA); benzene; and various laboratory and drug wastes between 2005 and 2017. Three RCRA violations associated with universal waste were reported in 2012, with a return to compliance on the same day.
- Biscardi, located at 201 South Lexington Avenue, approximately 820 feet south of the Property, was listed as a generator of spent halogenated solvents in 1986 and 1999.

- Royal Motors Incorporated, located at 32 West Post Road, approximately 960 feet south-southwest of the Property, was listed as a genereator of spent non-halogenated solvents in 1989 and ignitable solid waste in 1987.
- White Plains Lincoln Mercury, located at 25 West Post Road, approximately 1,000 feet south of the Property, was listed as a Conditonally Exempt SQG of spent halogenated solvents, ignitable solid waste, PCE, TCE, and benzene in 1986-2010.

Based on listing details, distance and/or the anticipated groundwater flow direction, other RCRA listings are not anticipated to have significantly affected the Property. Details of all RCRA listings are included in Appendix E.

*Chemical Bulk Storage (CBS) Database*

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

No CBS facilities were listed within a ¼-mile radius of the Property.

*Solid Waste Facilities (SWF)*

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

No SWFs were identified within ½-mile of the Property.

*Petroleum Bulk Storage (PBS) Database*

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

Forty-six PBS facilities were identified within a ¼-mile radius of the Property. Details of the nearest facilities with the potential to affect the Property, based on listing details and/or location, are summarized in Table 1.

**Table 1**
**Area Petroleum Bulk Storage Facility Data**

| Location | Capacity (gallons) | Product Stored | Status | Distance/Direction from Property |
|---|---|---|---|---|
| 124 South Lexington Avenue | 3 x 4,000 UST<br>10,000 UST<br>5,000 UST<br>2 x 2,000 UST<br>500 UST<br>275 UST | Gasoline<br>Gasoline<br>Gasoline<br>Gasoline<br>Waste Oil<br>Unspecified | Closed-Removed<br>In Service<br>In Service<br>Closed-Removed<br>Closed-Removed<br>Closed-Removed | 238 feet northwest |

**Notes**: AST - aboveground storage tank
UST - underground storage tank

Known and/or undocumented releases from the above facilities may have affected subsurface conditions beneath the Property. Based on listing details, distance and/or

anticipated groundwater flow direction, other PBS facilities are unlikely to have affected the Property. Details of all PBS facilities located within ⅛-mile of the Property are included in Appendix E.

*State Inactive Hazardous Waste Disposal Site Registry (SHWS)*

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

Two inactive hazardous waste disposal sites were located within a one-mile radius of the Property. Based on their distance (more than 1,600 feet away) and/or the anticipated groundwater flow direction, these facilities are unlikely to have significantly affected the Property.

*State Hazardous Substance Waste Disposal Site Study (SHSWDS)*

This database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

No SHSWDSs were identified within a ½-mile radius of the Property.

*Major Oil Storage Facilities (MOSF) Database*

These facilities have petroleum storage of 400,000 gallons or more.

No MOSFs were reported within a ¼-mile radius of the Property.

*Environmental Restoration Program*

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No ERP sites were identified within a ½-mile radius of the Property.

*Voluntary Cleanup Program*

The Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

One VCP site was identified within a ½-mile radius of the Property. Based on its location approximately 2,400 feet north of the Property (in an anticipated cross-gradient groundwater flow direction), this facility is not anticipated to have affected the Property.

*Brownfield Cleanup Program*

This NYSDEC program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Seven BCP sites were identified within a ½-mile radius of the Property. The nearest facility with some potential to affect the Property, based on listing details, was as follows:

- Post Road Corridor – White Plains, located at 77 West Post Road, approximately 690 feet south of the Property, was listed five times in the database as a set of vacant lots historically occupied by commercial and auto-related uses, including dry cleaning, auto repair, and filling stations. Identified contamination reportedly included VOCs associated with petroleum and chlorinated solvents in soil, groundwater and soil vapor, and evidence of a chlorinated VOC plume migrating from the site. Groundwater contaminants reportedly included PCE at concentrations up to 3,300 ppb, and TCE at concentrations up to 420 ppb. Initial remedial activities (removal of USTs and contaminated soil and groundwater) were reportedly conducted in 2010-2012. Groundwater was reported to flow toward the northeast.

Based on listing details, distance, and/or anticipated groundwater flow direction, the above facility may have affected subsurface conditions beneath the Property. Based on distance, anticipated groundwater flow direction, and/or listing details, other identified BCP sites, including Hamilton Green (Facility C360177), located at 200 Hamilton Avenue, are unlikely to have affected the Property.

### 6.2.3 Local Agency File Review

A review of available records maintained by The City of White Plains Tax Assessor's, Building Department, Fire Marshal's Office, and Department of Public Works, and the Westchester County Department of Health was conducted to obtain any information pertinent to the assessment of the environmental condition of the Property. Specifically, records regarding past and present on-site fuel oil tanks and historical uses were requested. Local records are included in Appendix F.

*Tax Assessor*

According to a representative of the Tax Assessor's Office, records for the Property are maintained by WPHA; however, a print-out of the Tax Assessor's computer screen was available. The computer screen print-out indicated the following: the Property had legal address of 223-225 Dr. Martin Luther King Jr. Boulevard; the legal definition of the Property was part of Section 125.83, Block 7, Lot 1; the Property was situated in an RM-0.35 designated residential zone; the Property building was constructed in 1954; and public utilities (i.e., natural gas, electricity, and water) were supplied to the building.

However, based on historical Sanborn maps, the Property building was constructed in approximately 1949 or 1950 (earlier than indicated by Tax Assessor records). Online White Plains tax maps summarized in Section 5.1.3 indicated that only the eastern half of the Winbrook complex was zoned as RM-0.35, while the western half including the Property was zoned as B-3 (business, office and commercial).

*Building Department*

Records maintained by the White Plains Building Department typically include fuel oil, gasoline and waste oil tank installation applications and permits, and records of prior uses. A Freedom of Information Letter (FOIL) was submitted to the White Plains Building Department. To date, no response has been provided to AKRF. Any pertinent information obtained from the FOIL request will be presented as an addendum to this Phase I ESA report.

*Fire Marshal*

Numerous attempts were made to contact the White Plains Deputy Fire Chief. To date, no response has been provided to AKRF. Any pertinent results will be presented as an addendum to this Phase I ESA report.

*Department of Public Works*

A FOIL request was submitted to the White Plains Department of Public Works. In an email dated December 14, 2018, the Department of Public Works indicated that no records were identified for the Property.

*Westchester County Department of Health*

A FOIL request letter was sent to the Westchester County Department of Health (WCDOH) to gain access to information regarding area complaints, spills, discharges, or other health-related issues. To date, no response has been provided to AKRF. Any pertinent results will be presented as an addendum to this Phase I ESA report.

*New York State Department of Environmental Conservation*

A FOIL request letter was sent to NYSDEC to gain access to information regarding petroleum storage tanks, spills, discharges, or other environmental issues. To date, no response has been provided to AKRF. Any pertinent results will be presented as an addendum to this Phase I ESA report.

*New York State Department of Health*

A FOIL request letter was sent to the New York State Department of Health (NYSDOH) to gain access to information regarding area complaints, spills, discharges, or other health-related issues. To date, no response has been provided to AKRF. Any pertinent results will be presented as an addendum to this Phase I ESA report.

### 6.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; and useful, accurate and complete in light of the objective of the records review. These records include:

- Local brownfields lists
- Local lists of landfill/solid waste disposal sites
- Local lists of hazardous waste/contaminated Sites
- Local lists of registered tanks
- Local land records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Fire Department

- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

State and local record searches conducted by AKRF are detailed in Section 5.2.3. In AKRF's judgment, no additional local records meeting the ASTM criteria are pertinent for the Property.

# 7.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that Trinity provide any pertinent information regarding the Property, specifically:

- Whether any *environmental liens* or *activity and land use limitations (AULs)* are in place or filed or recorded against the Property?
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of any chemicals used on-site)?
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated?
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property?
- Whether they were aware of any obvious indicators of contamination at the Property?
- Whether they were aware of any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products?

According to Trinity representatives, this Phase I ESA was performed to evaluate the Property as part of due diligence related to a proposed redevelopment that would entail demolition of the existing building, followed by the construction of a new multi-story residential building. As part of the 2017 Phase I, Trinity provided contact information for Mr. Pio of WPHA, who was not aware of any: environmental liens or activity use limitations on the Property; Property value reduction due to environmental issues; any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products; or any obvious indicators of contamination on the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report. Mr. Pio indicated that in preparation for construction of the north-adjacent Prelude building, two Phase I ESAs (one for the Prelude site, and one for the entire Winbrook complex) were prepared, and a Subsurface (Phase II) Investigation was conducted. A portion of the Prelude-specific Phase I ESA, which included a summary of the Phase II, was provided to AKRF and is summarized in Section 3.0.

A copy of a Phase I ESA User Questionnaire was provided to Ms. Sherraine Wingate of WPHA, but had not been returned to AKRF at the time of the report. Any pertinent results will be presented upon the receipt of this information as an addendum to this Phase I ESA report.

# 8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- Typical portions of the Property building were viewed, including: the basement; ground, third, fifth, sixth and ninth floors; and roof.
- Interviews and user-provided information were limited to those discussed in Sections 2.0, 6.0, and 7.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the site and surrounding area could be obtained from the available historical Sanborn maps and interviews, and this data gap is not likely to alter the conclusions of this report.
- Agency File Reviews for the Property and adjacent properties consisted of: a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2), and FOIL requests for pertinent records submitted to NYSDEC, NYSDOH, WCDOH, and the City of White Plains Building Department, Fire Marshal's Office, and Department of Public Works. AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

# 9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

Prior to the construction of the existing building and surrounding grounds, the Property was undeveloped and included a small stream flowing toward the north. In the early 20$^{th}$ century, the Property was developed with smaller structures (residential buildings with yards and parking garages). These structures were demolished in the late 1940s as part of the redevelopment of the Property (and land to the north, east and south) with the Winbrook complex. The existing building was constructed in approximately 1949 or 1950, and was residential until becoming vacant in 2016.

AKRF prepared a Phase I ESA of the Property in June 2017, a subsurface (Phase II) investigation in July 2017, and a soil waste characterization investigation in September 2018. The 2017 Phase I ESA revealed similar RECs to this assessment. The Phase II investigation found: low levels of metals in soil, with only lead in one sample above regulatory guideline levels; tetrachloroethene (PCE) and two of its breakdown products in groundwater at levels above Ambient Water Quality Standards (drinking water standards, though groundwater is not used a source of drinking water); and PCE in one soil vapor sample at a level exceeding indoor air guideline values, and detected additional VOCs for which there are no guidance values (the majority of which are typically associated with gasoline) in soil vapor samples. The waste

characterization investigation soil sampling found low levels of polychlorinated biphenyls (PCBs) in one sample; low concentrations of volatile organic compounds (VOCs), including the common laboratory contaminants acetone and methylene chloride, in some samples; and semivolatile organic compounds (SVOCs), metals, and pesticides at concentrations typical of historical fill material.

This assessment revealed the following:

***Recognized Environmental Conditions (RECs)***

- Historical land uses in the vicinity of the Property included the White Plains Hospital, auto sales, auto and bicycle repair shops, filling stations and stores with gasoline underground storage tanks (USTs), woodworking and painting shops, dry cleaners, a rug cleaner, undertakers, sheet metal works, electrical businesses, and a printer. A reconnaissance of the surrounding area also identified the hospital, active and former filling stations, auto repair shops, car dealerships, two laundries (including one identified on historical land use maps and in the regulatory database as a dry cleaner), and a hardware shop with a glass cutting service in close proximity to the Property.
- Numerous active- and closed-status spills, petroleum bulk storage facilities, hazardous waste generators (including generators of chlorinated solvents), and a State Brownfield Cleanup Program Site with some potential to affect the Property were reported in regulatory databases. The subsurface (Phase II) investigation findings of PCE in groundwater and soil vapor, and likely petroleum-related VOCs in soil vapor are consistent with releases from off-site sources.
- One of the spills reported in close proximity to the Property was active-status spill No. 9713110 at a former filling station at 26 East Post Road, approximately 330 feet south of the Property. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling station onto the Winbrook complex. Remedial activities included removal of contaminated soil and installation and sampling of numerous groundwater monitoring wells. The nearest of these wells were located approximately 60 to 240 feet south and east of the Property. Groundwater sampling of the wells nearest the Property in August 2016 and on-Property in July 2017 indicated no evidence of significant concentrations of petroleum-related volatile organic compounds (VOCs). However, these wells contained elevated concentrations of VOCs associated with chlorinated solvents, including PCE, trichloroethene (TCE), and cis-1,2-dichloroethene (cis-1,2-DCE). Since no potential source of chlorinated VOCs has been identified on the Property, these VOCs may have originated from an off-site source.

***Controlled RECs (CRECs)***

- The Winbrook complex, including the Property, was heated by steam generated at a heating plant located in a basement of an off-site building (33 Fisher Avenue) approximately 230 feet southeast of the Property. The plant's boilers were supplied by two, 20,000-gallon No. 4 fuel oil USTs located beneath a lawn west of the boiler room. Five closed-status spills were reported in connection with these USTs, including three tightness test failures in 1989-2010, a minor surface spill in 1993, and an approximately 700-gallon release due to overfill in 2000 which reportedly required cleanup of a nearby playground area. The playground is approximately 200 feet southeast of the Property. As noted above, no evidence of significant petroleum contamination was identified in groundwater in the vicinity of the Property in 2016 or at the Property during the Phase II Investigation; thus, the historical spills are considered to be Controlled RECs (CRECs) rather than RECs.

***De Minimis Condition***

- Stream filling and demolition debris from historical structures on the Property may be associated with fill materials of unknown origin. Soil encountered during the 2017 subsurface investigation borings

(which extended to approximately 15 feet below grade) was characterized generally as historical fill (approximately 5 to 10 feet thick), underlain by native materials.

- At the time of the reconnaissance, the Property building was equipped with a trash compactor. However, historical plans showed the compactor room in the basement as an incinerator room.
- Chemical storage at the Property included one 5-gallon bucket of hydraulic oil, paint and cleaning and maintenance chemicals in containers up to five gallons, and 55-gallon drums of cleaning chemicals, which were stored in the basement. The observed chemicals were generally neatly stored and labeled. A one gallon pail of paint was observed to be spilled in the basement, but the hardened paint appeared to be have been contained by the concrete floor and was not near the sump.

***Other on-site environmental concerns (items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris)***

- A hazardous materials survey of the Property building in 2016 included an asbestos survey, which identified asbestos-containing materials (ACM), including vinyl floor tile and mastic, linoleum and mastic, thermal pipe insulation, window caulking, and the roof of the elevator bulkhead based on laboratory analysis. Other building materials were identified as not containing asbestos. Building materials, including the identified ACM, were noted to be in good to damaged condition.
- The 2016 hazardous materials survey included sampling for lead-based paint. This survey did not identify lead-based paint on interior painted surfaces. However, lead-based paint may be used on exterior surfaces (painted brick walls). Painted surfaces were observed to be in fair to poor condition. During the reconnaissance, there was no observation of residential occupancy, child care facilities or other facilities where the extended presence of children would be expected.
- Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic compactor equipment may contain PCBs. In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury.

**Potential for Vapor Encroachment**

This Phase I assessment identified a potential for subsurface vapors, and thus a potential for vapor encroachment into current or future buildings at the Property, based on the RECs noted above. The Phase II Investigation found levels of PCE in soil vapor above the NYS New York State Department of Health indoor Air Guidance Value.

# RECOMMENDATIONS

- Based on the above findings, AKRF has the following recommendations relating to demolition of the existing structure, excavation for a new building, and design of the new building:
    - The waterproofing to be applied to the bottom slab and below-grade sidewalls of the new building should be designed such that it would also function as a vapor barrier.
    - New landscaped areas (i.e., not areas covered by buildings, paving or other impervious surfaces) should include uppermost at least 2 feet of soils (either imported or reused from excavation at the Property) that testing indicates meet the 6 NYCRR Part 375-6.4 RRSCOs.
    - If dewatering is required during future construction activities, water must be discharged in accordance with the City of White Plains, Westchester County, and NYSDEC requirements.
    - Based on the soil sample analytical results, it is possible that all excess excavated soil can be managed as non-hazardous fill material by a variety of off-site soil disposal facilities.

Notwithstanding, the contractor, soil broker, and proposed off-site disposal facilities must complete independent reviews of the complete soil sampling data to independently assess the analytical results and conduct such additional waste characterization testing as necessary to ensure proper disposal at licensed/permitted facilities.

- Soil intended for on-site reuse or off-site disposal should also be field screened and reassessed during excavation to confirm that it does not exhibit signs of contamination. Any soil exhibiting field evidence of contamination should be segregated, resampled, and managed as a new, discrete waste stream until representative analytical data has been reviewed. All on-site reuse and/or off-site disposal of soil should be conducted in accordance with the Soil Management Plan (SMP) and Construction Health and Safety Plan (CHASP).

- If any USTs are encountered during construction, they should be closed and removed, along with any contaminated soil, in accordance with applicable regulations, including NYSDEC registration and spill reporting requirements.
- Any known or suspect ACM needs to be maintained in good condition in accordance with applicable regulations. Prior to demolition with the potential to disturb known or suspect ACM, known ACM should be removed and, where suspect ACM are present, an asbestos survey of the areas to be disturbed should be conducted. Any ACM that would be disturbed should be removed and disposed of in accordance with local, state, and federal requirements.
- Any activities (such as demolition) with the potential to disturb lead-based paint must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - *Lead Exposure in Construction*).
- Unless there is labeling or test data indicating that electrical equipment, fluorescent lighting fixtures, and hydraulic equipment in the building do not contain PCBs, and that electrical equipment and fluorescent lamps are not mercury-containing, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- All excess chemicals or other wastes or surplus materials should be properly disposed of in accordance with applicable requirements.

# 10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

AKRF, Inc.

Senior Vice President

Colleen L. Griffiths
Senior Technical Director

# 11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the Properties, and to identify existing and/or potential environmental issues associated with the Properties including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Properties at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the Properties and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the Properties and their surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Trinity New York Development, LLC and its successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

# APPENDIX A
# PHOTOGRAPHIC DOCUMENTATION

**Photograph 1.** The Property building, view west from the Winbrook housing complex.

**Photograph 2.** A typical vacant apartment with abandoned furniture on the building's fifth floor.

**Photograph 3.** A former laundry room on the building's ground floor. The concrete pad reportedly supported washing machines prior to their removal.

**Photograph 4.** A typical vacant apartment with household debris on the first floor.

**Photograph 5.** Elevator equipment in the elevator room on the building's roof.

**Photograph 6.** The trash compactor room in the building's basement.

**Photograph 7.** The electrical meter room in the basement.

**Photograph 8.** Storage of cleaning chemicals in the basement.

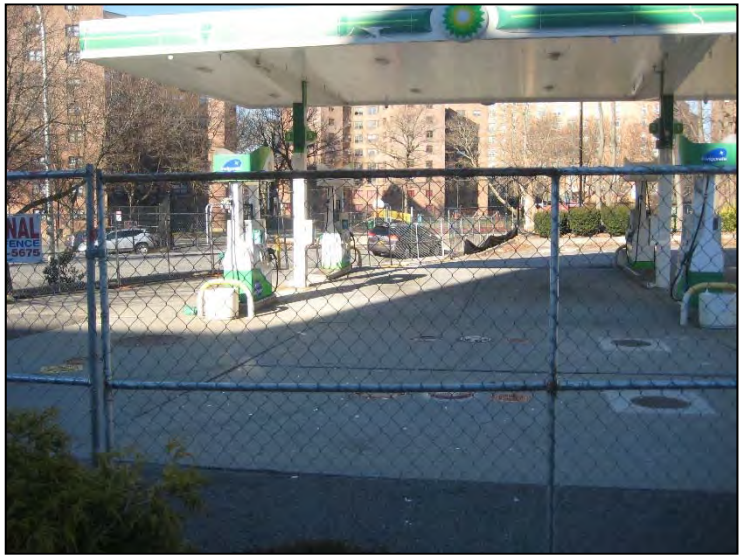
**Photograph 9.** Stored chemicals, tires and debris in the basement.

**Photograph 10.** The Winbrook boiler room off-site at 33 Fisher Avenue.

**Photograph 11.** Access ports for two 20,000-gallon No. 4 fuel oil underground storage tanks (USTs) off-site, adjacent to the boiler room.

**Photograph 12.** A groundwater monitoring well in a playground southeast of the Property (one of several wells observed in off-site Winbrook areas).

**Photograph 13.** The Prelude building and its backyard, north-adjacent to the Property. View southeast.



**Photograph 14.** A filling station at 34 East Post Road, southeast of the Property. View northwest.

**Photograph 15.** A laundromat at 168 South Lexington Avenue, southwest of the Property, view west.

**Photograph 16.** A vacant lot at the location of a former filling station at 26 East Post Road, southeast of the Property, view northwest.

# EDR Chain of Title

The EDR Chain of Title Report tracks a line of successive owners from the present back to 1940 of a particular parcel of property, linked together by recorded transactions which pass title. Available nationwide, this report provides a summary of a property's ownership history and is a valuable source for determining the prior uses of a property.

A network of professional abstractors following established procedures, uses client supplied address information to locate:

- Historical Chain of Title research
- Leases and Miscellaneous

**Thank you for your business.**

**WITNESSETH,** that the party of the first part, in consideration of ONE and 00/100 ($1.00)----------dollars, lawful money of the United States, paid by the party of the second part, does hereby remise, release and quitclaim unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

TAX STAMP JUN - 3 1982 ATTACHED

**ALL** that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the City of White Plains, county of Westchester and state of New York known as Parcel A, Parcel C and Parcel 11, on a map entitled, "Map showing lands to be acquired by The City of White Plains for the laying out and widening of Fisher Avenue and Quarropas Street from Bank Street to Grand Street situated in the City of White Plains, Westchester County, New York", made by James W. Delano, surveyor, White Plains, New York, dated October 5, 1981, and filed in the Westchester County Clerk's Office, Division of Land Records on December 7, 1981 as Map No. 20811.

Reserving, however, to The City of White Plains a permanent easement for water pipes, fire alarm conduit and appurtenances thereto, storm water drains, sanitary sewers and any other utilities to the extent that the same may now be located therein, including the right to repair, replace, maintain and install the same.

Reserving also, easements for gas mains and electrical conduits for public utilities, to the extent that the same are now located therein and including the right to repair the same and to maintain the same until directed by the Commissioner of Public Works to remove and relocate said gas mains and electrical conduits for city or school purposes.

The said easements herein reserved by the party of the first part shall be used solely for the purpose of repairing, replacing and maintaining the said utilities contained therein and for ingress and egress to and from the sites thereof and in the event that the repair or replacement of the said utilities requires the removal or disturbance of any of the improvements, structures of facilities erected and installed by the Party of the Second Part, the same shall be restored and replaced by the Party of the First Part at its sole cost and expense, to nearly the same condition in which they existed prior to the start and commencement of the work of such repair and replacement.

**TOGETHER** with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

**TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

**TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

**AND** the party of the first part, in compliance with Section 13 of the Lien Law, hereby covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

**IN WITNESS WHEREOF,** the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF:

THE CITY OF WHITE PLAINS

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

## RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

## 135 South Lexington Ave
## White Plains, NY 10601

December 13, 2018

Privileged and Confidential.

## LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

### Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

### What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

### What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

### What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

### Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

**PLEASE REFER TO PAGES ONE AND FIVE FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.**

© Toxics Targeting, Inc. 2018

# *Introduction*

*Toxics Targeting* has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report.* It checks for the presence of 21 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.

2. ***Estimates*** the distance and direction between the target address and each identified toxic site.

3. ***Reports*** air and water permit non-compliance and other regulatory violations.

4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.

5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

# *The Three Sections Of Your Report*

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information, some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

# *How to Use Your Report*

- Check Table One to see the number of identified sites by distance intervals.

- Check Table Two to see identified sites sorted by direction.

- Check Table Three to see identified sites sorted by site categories.

- Check Table Four to see identified sites ranked by proximity to the target address.

- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

# *Toxic Site Databases Analyzed In Your Report*

**Search Radius**

One-Mile 
1) ***National Priority List for Federal Superfund Cleanup****:* a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile 
2) ***Delisted National Priority List Sites****:* a listing of NPL sites that have been removed from the National Priority List.

One-Mile 
3) ***New York Inactive Hazardous Waste Disposal Site Registry****:* a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile 
4) ***New York Inactive Hazardous Waste Disposal Site Registry Qualifying****:* a state listing of sites that qualify for possible inclusion to the NYS DEC Inactive Haz. Waste Disposal Site Registry.

One-Mile

5) ***New York and Federal RCRA Corrective Action Activity (CORRACTS):*** waste facilities with RCRA corrective action activity reported by the USEPA and NYS DEC.

Half-Mile 
6) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile 
7) ***CERCLIS NFRAP:*** a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile

8) ***New York State Brownfield Cleanup Sites****:* a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile 
9) ***New York Solid Waste Facilities Registry****:* active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile

10) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act..

Half-Mile

11) ***Toxic Spills: active and inactive or closed*** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Quarter-Mile

12) ***New York State Major Oil Storage Facilities****:* sites with more than a 400,000-gallon capacity for storing petroleum products.

Quarter-Mile

13) ***New York and Local Petroleum Bulk Storage Facilities****:* sites with more than a 1,100-gallon capacity for storing petroleum products.

Quarter-Mile

14) ***New York and Federal Hazardous Waste Generators and Transporters****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Quarter-Mile

15) ***New York Chemical Bulk Storage Facilities****:* sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Half-Mile 
16) ***New York Hazardous Substance Disposal Site Draft Study****:* a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites are not eligible for state clean up funding programs.

Quarter-Mile

17) ***Federal Toxic Release Inventory Facilities****:* discharges of selected toxic chemicals to air, land, water or treatment facilities.

Quarter-Mile

18) ***Federal Air Discharges****:* Air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Quarter-Mile

19) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Quarter-Mile

20) ***Federal Civil and Administrative Enforcement Docket****:* judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

Property only

21) ***ERNS: Federal Emergency Response Notification System Spills****:* a listing of federally reported spills.

# *Limitations Of The Information In Your Report*

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the FIRST STEP in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

*Toxics Targeting* tries to ensure that the information in your report is presented accurately and with minimal alteration. The only systematic changes that are made correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Please be aware of some other limitations of the information in your report:

- The map used by *Toxics Targeting* is the same one used by the U. S. Census. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated on the Census map. FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;

- UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 21 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;

- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in zip code areas within one mile of the target address as well as toxic sites without zip codes reported in the same county. IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING AND REFER TO THE SITE ID NUMBER.*

- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.

- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.

# Section One:

# Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code.
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see ***How Sites are Located***, at the end of this section for more information).

*Toxic Site Profiles* summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers.
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites, or a complete description of the codes follows the profiles section.

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity**: Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity**: The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity**: The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive Toxicity**: May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced).

IRRIT TOX: **Primary Irritant**: The chemical can cause eye or skin irritation.

MCL: **Drinking Water Standard - Maximum Contaminant Level** (MCL) listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications:

1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
2 -- Significant threat to the public health or environment -- action required;
3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
4 -- Site properly closed --requires continued management;
5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law;
A -- Work underway and not yet complete;
P -- Potential Site;
$D_{1, 2, 3}$ -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed);
C -- Remediation Complete (formerly D2).

APPLICANT REQUESTOR(S):

NAME: Automobile Club of New York — Applicant Type: PRP - Class 2 HazSubs
Jack Byrnes
ADDRESS: 1415 Kellum Place
Garden City, NY 11530

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres
Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site.

Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto−repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on−site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on−site contamination. There also appears to be an off−site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow−brown, well sorted fine−medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north−northwest.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off−site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.

ASSESSMENT OF HEALTH PROBLEMS:
Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re−evaluated. There are no off−site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off−site buildings due to the presence of off−site contamination not related to this site.

SITE OWNER/OPERATOR/REPOSITORY INFORMATION:
None reported

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location Description: The site is located at 359−369 Mamaroneck Avenue in a mixed use commercial and residential area in the southern part of the City of White Plains, Westchester County NY. Site Features: The site is on approximately 0.25 acres of land which is flat and contains a 6,763 square foot building with a full basement.

Current Use: The building contains a drycleaner, a nail salon, an insurance agency, and two restaurants. The remainder of the site consists of a paved parking lot. Surrounding Use: The site is surrounded with businesses to the north and south of the site and residences to the east and west. Immediately to the east of the site is a municipal parking lot.

Historical Sources of Contamination: Dry cleaner operated at this location is a potential source of PCE contamination.

Site Hydrology: Groundwater flows though sand at only several feet below ground surface.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Based upon investigations to date, the primary contaminants of concern at the site included tetrachloroetylene (PCE) and its associated breakdown products.

After a thorough Site Characterization, as described in a final report dated July 2012, it was determined that this site did not qualify for the registry.

ASSESSMENT OF HEALTH PROBLEMS:
None provided

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The Post Road Corridor − White Plains site is located at 77 West Post Road in the City of White Plains, Westchester County. This site is made up of 10 tax parcels occupying 3.69 acres of the overall 5−acre redevelopment project. The site is bounded by West Post Road to the north, Maple Avenue to the south, Rathbun Avenue to the west, and South Lexington Avenue to the east, with a separate out−parcel lot on the northwest corner of West Post Road and South Lexington Avenue. Site Features: All 10 parcels are currently vacant. Abandoned former commercial buildings of varying size on the site have been demolished, leaving only grass, trees and former parking lots. Current Zoning and Land Use: Nine of the 10 parcels are zoned B−3, which is a general retail district allowing retail, office and service business uses and multi−family dwellings. The other parcel is zoned B−2, which is an intermediate business district. The site is part of a planned mixed−use (commercial and residential) development. Surrounding land use is mixed, consisting of residential and commercial properties including a church. Past Use of the Site: The

site's 10 parcels initially contained residential buildings as early as 1905 which later were used for commercial purposes beginning in the 1930s. Former commercial uses included dry cleaners; gas stations with underground storage tanks (USTs); automobile sales and service facilities with USTs, aboveground storage tanks (ASTs), hydraulic lifts, and associated parking lots; various commercial businesses and offices; and commercial parking lots.

In 2005 two in-ground hydraulic lifts were removed from the site. In 2010 two USTs, eleven in-ground hydraulic lifts, a floor drain and an oil water separator were also removed from the site. Approximately 408 tons of impacted soil and 1,180 gallons of contaminated groundwater were removed from the site during this work. In 2012 four USTs and approximately 360 tons of petroleum impacted soil were removed from the site. These removals were completed under the DEC spill program and associated spill numbers have been closed.

Site Geology and Hydrogeology: The site geology consists of historic fill material, native till, and highly weathered bedrock. The depth to bedrock ranges across the site from approximately 17 to 52 feet below grade. Groundwater at the site ranges from approximately 3 to 11 feet below ground surface and flows to the northeast.

CONFIRMED HAZARDOUS WASTE DISPOSED:

| TYPE | QUANTITY |

| arsenic | UNKNOWN |

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile

organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigation conducted to date, the primary contaminants of concern include chlorinated VOCs, petroleum related compounds and metals. No other VOCs, SVOCs, metals or PCBs/pesticides than those identified below were found in soil or groundwater at levels exceeding restricted residential soil cleanup objectives, protection of groundwater soil cleanup objectives or groundwater standards.

Soil − Soil samples collected from across the site indicate the presence of certain contaminants in varying degrees generally consistent with the former use of each parcel. VOCs, including acetone up to 0.51 parts per million (ppm)(protection of groundwater soil cleanup objective (PGWSCO)of 0.50 parts per million (ppm)), benzene up to 3.4 ppm (PGWSCO of 0.060 ppm), cis−1,2−dichloroethene (cis−1,2−DCE) up to 1.2 ppm (PGWSCO of 0.25 ppm), ethylbenzene up to 140 ppm (PGWSCO of 1 and restricted residential soil cleanup objective (RRSCO) of 41 ppm), tetrachloroethene (PCE) up to 2.32 ppm (PGWSCO of 1.3 ppm), toluene up to 37 ppm (PGWSCO of 0.7 ppm) and xylenes up to 430 ppm (PGWSCO of 1.6 ppm and RRSCO 100 ppm), SVOCs, including benzo(a)anthracene up to 8.9 ppm (PGWSCO and RRSCO of 1 ppm), benzo(b)fluoranthene up to 8.8 ppm (PGWSCO of 1.7 ppm and RRSCO of 1 ppm), benzo(k)fluoranthene up to 3.7 ppm (PGWSCO of 1.7 ppm), benzo(a)pyrene up to 7 ppm (RRSCO of 1 ppm), chrysene up to 7.6 ppm (PGWRSCO of 1 ppm and RRSCO of 3.9 ppm), naphthalene up to 26 ppm (PGWSCO of 12 ppm), indeno(1,2,3−cd)pyrene up to 4.6 ppm (RRSCO of 0.5 ppm) and dibenzo(a,h)anthracene up to 2 ppm (RRSCO of .33 ppm) and metals including arsenic up to 18 ppm (PGWSCO and RRSCO of 16 ppm), barium up to 490 ppm (RRSCO of 400 ppm), lead up to 1,100 ppm (PGWSCO of 450 ppm and RRSCO of 400 ppm), and mercury up to 2.9 ppm (PGWSCO of 0.73 ppm and RRSCO of 0.81 ppm) were detected in the soil above PGWSCOs and/or RRSCOs. There is no evidence of off−site contamination in soils.

Groundwater − Groundwater samples collected from across the site indicate the presence of certain contaminants in varying degrees generally consistent with the former use of each parcel. VOCs, including benzene up to 530 parts per billion (ppb) (SCG of 1 ppb), cis−1,2−DCE up to 340 ppb (SCG of 5 ppb), ethylbenzene up to 1,100 ppb (SCG of 5 ppb), isopropylbenzene up to 95 ppb (SCG of 5 ppb), xylene (total) up to 3,000 ppb (SCG of 5 ppb), methyl tert−butyl ether (MTBE) up to 120 ppb (SCG of 10 ppb), tetrachloroethene up to 3,300 ppb (SCG of 5 ppb), toluene up to 110 ppb (SCG of 5 ppb), trans−1,2−dichloroethene up to 18 ppb (SCG of 5 ppb), trichloroethene up to 420 ppb (SCG of 5 ppb) and vinyl chloride up to 49 ppb (SCG of 2 ppb), SVOCs, including naphthalene up to 180 ppb (SCG of 10 ppb) and pentachlorophenol up to 2 ppb (SCG of 1 ppb) and metals including antimony up to 5.03 ppb (SCG of 3 ppb), iron up to 35,500 ppb (SCG of 300 ppb), manganese up to 4,724 ppb (SCG of 300 ppb) and sodium up to 583,000 ppb (SCG of 20,000 ppb) were found in excess of ambient water quality standards and guidance. Groundwater contaminated with chlorinated VOCs appear to be migrating from the site to off−site locations. Soil Vapor − On−site soil vapor was not completed during the RI based on the lack of existing structures, but is presumed to be contaminated given the results in other environmental media.

Some petroleum related compounds, including 2−hexanone up to 75 ug/m3, ethanol up to 211 ug/m3, hexane up to 20.4 ug/m3, benzene up to 17.6 ug/m3, toluene up to 68.2 ug/m3, xylenes up to 92.1 ug/m3, heptane up to 23.7 ug/m3, and cyclohexane up to 164 ug/m3 were detected in off−site soil vapor samples along Maple Avenue. The potential exists for soil vapor intrusion impacts in off−site buildings.

ASSESSMENT OF HEALTH PROBLEMS:

People will not come into contact with soil and groundwater contamination unless they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for the inhalation of contaminants due to soil vapor intrusion for any future on−site development. An evaluation is

needed to determine whether soil vapor intrusion is a concern for any off−site buildings.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The site is located at 55 Bank Street in White Plains, Westchester County. The site is located in the Central Business District of the City of White Plains on the west side of Bank Street, just south of the intersection of Main Street and Bank Street. To the west is the Metro−North railroad right of way. Bank Street is located along the eastern border, a car dealership is located adjacent to the southern border, and a parking lot for the Bank Street Commons Apartment building is located to the north. Site Features: The site is presently under construction as a commercial/residential building. The site was formerly a 2.24−acre parking lot for the nearby commuter railroad station. The site was used as a parking lot for over 40 years.

Current Zoning/Use: The current zoning of the site is Core Business−4 (CB−4). Municipally−operated parking lots and multifamily dwellings, a restricted residential use, are permitted uses in CB−4 zones.

Past Uses of the Site: The property was used as a coal and lumber yard starting in 1885. The lumber yard comprised of a mill, several small sheds, coal and lumber storage areas, and railroad spurs. By 1911, the property was being used for manufacturing sashes, blinds and trim, and for the storage of grain, fertilizer, and feed. During the late 1800s and early 1900s, portions of the eastern side were occupied by several residential homes. By 1953, the southeastern corner of the property was improved with a commercial building, while the remaining portions were public parking lots. The commercial building was razed by 1974, and the site has been operated as a parking lot since that time. Site Geology and Hydrogeology: The site is level ground and covered with asphalt. Surface water drains to a storm sewer system that runs to the Bronx River which is about 500 yards to the west. The shallow soil horizon consists of historic fill found at a depth from 1.5 −26 feet below grade. Below the fill, subsurface soils consist of predominantly sands with some silts and gravels. Bedrock was located at 80−120 feet below grade and is believed to by gneiss and schist.

Overburden groundwater was encountered at a depth of 28 feet below grade and flows to the south. The Bronx River, which flows to the south, is located about 0.25 mile west of the site. However, the site is located above the current 100 year flood elevation. Site storm water is transported via storm drains to a storm water collection system and discharges to the Bronx River. The Bronx River Parkway is located adjacent to the Bronx River just west of the site.

CONFIRMED HAZARDOUS WASTE DISPOSED:

| TYPE | QUANTITY |
|---|---|
| tetrachloroethene (PCE) | UNKNOWN |
| TRICHLOROETHENE (TCE) | UNKNOWN |
| TETRACHLOROETHYLENE (PCE) | UNKNOWN |
| LEAD | UNKNOWN |
| ZINC | UNKNOWN |

| | |
|---|---|
| BENZO(A)PYRENE | UNKNOWN |
| MERCURY | UNKNOWN |
| COPPER | UNKNOWN |

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Nature and Extent of Contamination:

Remediation of the site to track 1 soil cleanup objectives was completed in November 2016.

Soil: Remediation is complete. The entire site was excavated to a depth of approximately 26 feet. No surface soils remain. Based on the investigations conducted the primary contaminants of concern in subsurface soils were inorganics (metals) including mercury, copper lead and zinc. These metals were present above the unrestricted soil cleanup objectives. These compounds were present in the fill materials used to grade the site and surrounding areas, and contamination did not migrated from the site to adjacent parcels. These inorganics were not found in on−site groundwater above NYS Groundwater Standards in filtered samples. Aluminum, iron, and sodium were detected above standards in onsite groundwater but are considered to be naturally occurring.

Groundwater: Chlorinated volatile organic compounds (CVOCs) were detected in on−site groundwater including tetracholoethylene (PCE) at a maximum level of 13 parts per billion (ppb), and trichloroethene (TCE) at a maximum level of 28 ppb. The groundwater quality standard for both of these compounds is 5 ppb. CVOCs were not detected in the subsurface soil samples collected from the site, the groundwater investigation suggests that the source originates from an off−groundwater source.

The site remediation is complete. The site has a basement foundation that includes a vapor barrier and a subsurface parking garage which is ventilated. Because there is a vapor barrier and a ventilated subsurface parking garage a soil vapor intrusion investigation was not conducted.

ASSESSMENT OF HEALTH PROBLEMS:
People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. A vapor barrier has been installed beneath the building foundation to minimize the potential of vapors from entering the building. Additionally, a sub−grade parking garage ventilation system required by building codes will be installed prior to building occupancy to prevent vapors from accumulating in the structure.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Site Location: The site is located in the City of White Plains, Westchester County. To the west of the site is Rathbun Avenue and commercial properties, to the north are residential properties, to the east is South Lexington Avenue, and to the south is Maple Avenue and residential properties. Site Features: The site consists of several tax parcels adjacent to the Post Road Corridor BCP site C360129. Several commercial buildings and parking lots make up the site. Current Zoning and Land Use: The site is zoned B−3, which is a general retail district allowing retail, office and service business uses and multi−family dwellings. Surrounding land use is mixed, consisting of residential and commercial properties. Past Use of the Site: Former commercial uses at the Post Road Corridor BCP site included dry cleaners; gas stations with underground storage tanks (USTs); automobile sales and service facilities with USTs, above ground storage tanks (ASTs), hydraulic lifts, and associated parking lots; various commercial businesses and offices; and commercial parking lots.

Site Geology and Hydrogeology: The site geology consists of historic fill material, native till, highly weathered bedrock. The depth to bedrock ranges from approximately 17 to 52 feet below grade. Groundwater at the site most likely ranges from 3 to 11 feet below ground surface and flows to the northeast.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
The on−site investigation results shows potential for off−site impact from the previous uses on−site as well as a potential upgradient source of contamination as groundwater impacted with both petroleum related hydrocarbons and chlorinated volatile organic compounds appears to be migrating on−site. An off−site investigation has not been conducted at this time. High concentrations of tetrachloroethene (PCE) in groundwater lead to an on−site significant threat determination. The potential exists for vapor intrusion impacts in off−site buildings.

ASSESSMENT OF HEALTH PROBLEMS:
Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

PROJECT COMPLETIONS:

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location Description: The site is located in an urban portion of Westchester County, occupying several city tax parcels, including 221 Main Street, in the City of White Plains. Current Use: The site is currently being redeveloped. The newly constructed complex will contain approximately 125 hotel rooms, 400 condominiums and approximately 10,000 square feet of street levels stores.

Surrounding Uses: The site is surrounded by commercial properties with a mix of retail and office space. Historical Source(s)of contamination: The historical source of contamination at this site included multiple leaking underground storage tanks (USTs). Investigations revealed the presence of ten USTs.

Investigations/Actions Performed to date: Previous environmental investigations include a Phase I Investigation in 2002 and a Petroleum Contamination Site Investigation completed in June of 1993. Under the Brownfield Cleanup Program, a Remedial Investigation was conducted in 2005−2006. Based on RI findings, an Interim Remedial Measure (IRM) was planned and implemented which included the removal of all USTs, and contaminated soil.

Current Action: A Final Engineering Report which documents the remedial activities completed has been approved. On December 19, 2006 a Certificate of Completion was issued declaring remedial activities complete, and that a Track 1 cleanup (i.e., unrestricted use) has been achieved.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Contaminant of concern: Petroleum−related compounds including volatile organic compounds (VOCs) and polycyclic aromatic

hydrocarbons.

Impacted Media: Soil and groundwater. Known SCGs exceedences: Investigation revealed benzene, toluene, ethyl−benzene and xylenes, however, as part of a site−wide remedial program (2005−2006) all contaminated media has been removed and properly disposed.

ASSESSMENT OF HEALTH PROBLEMS:
The site is located in downtown White Plains, public water serves the area. Through the implementation of an IRM the site has been remediated and nearly all the soil has been removed to bedrock eliminating potential exposure to contaminated soil. Proposed redevelopment of the site will include a ventilated below−grade parking garage with foundation drainage which will effectively eliminate the potential for soil vapor intrusion to occur.

Transition from Site #V00438 not completed. Project terminated.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
A site characterization was conducted in 2000−2003. The site is impacted by MGP operations, including DNAPL MGP tar at the site as well as off−site to the south. The off−site migration of tar was addressed during the 2004 IRM by installing a down−gradient NAPL cut−off wall. The southern gas holder was also removed during the IRM.

Additional remediation is necessary at the two northern holders, the purifier house, and the former tar handling areas.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is bounded by Water Street to the north, New Street to the South, and North Lexington Avenue to the west. It is bounded to the east by a parking lot which is located over the former road bed of Spring Street. OU1 includes the Southern Relief Holder on the MGP site and the off−site area to the south which includes Saint John's Catholic Church. The Holder was removed by a 2004−2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John's Property, but some MGP tar is present deep underground. A site management plan and monitoring plan is in place for the St. John's property. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. Nature of contamination: The Remedial Investigation identified the presence of coal tar in the subsurface soil. Contaminants of concerns in the tar include polycyclic aromatic hydrocarbons (PAHs) and the volatile compounds benzene, toluene, ethylbenzene and xylene (BTEX). Extent of contamination: Coal tar, a non−aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation IRM in 2004−5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Monthly monitoring of these wells did not show any significant accumulation of NAPL, and the monitoring frequency for these wells was reduced to quarterly in May 2006. A site management plan (SMP) is in place, but will be superseded by a site−wide SMP and environmental easement following the completion of the OU1 remedy. The November 8, 2005 Remedial Investigation report indicates a thin seam of MGP tar has migrated through the subsurface and is present beneath the St John's property at a depth of approximately 36 to 43 feet below the basement floor (which is in turn at least 10 feet below grade) and 52−60 feet below ground surface south of the building. Groundwater sampling indicates that the deep groundwater in close proximity to the tar seam is impacted; however, shallow groundwater is not. Furthermore, site−related contamination was not detected in sub−slab soil vapor samples from directly beneath the basement slab of the school or the indoor air samples collected inside the school. No active remediation is proposed as part of the remedy presented in the 2007 Remedial Action Work Plan (RAWP).

Coal tar is present under much of the parking area at 12 Water Street (OU−2). This area was remediated from December 2008 through June 2010 using in−situ solidification as described in the 2007 RAWP.

CONFIRMED HAZARDOUS WASTE DISPOSED:

| TYPE | QUANTITY |
|---|---|
| COAL TAR | UNKNOWN |

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
The site is impacted by MGP operations, including DNAPL MGP tar at the site as well as off−site to the south. The off−site migration of tar was addressed during the 2004 IRM by installing a down−gradient NAPL cut−off wall. The southern gas holder was also removed during the IRM. NAPL south of the cut−off wall is sufficiently deep, and is located below clean groundwater, so exposure to environmental receptors is not likely. A Decision Document was finalized in Feb 08, selecting in situ stabilization for the remaining portion of OU2. Field work was completed in 2010 and the FER was approved in May 2012.

ASSESSMENT OF HEALTH PROBLEMS:
None provided

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location The Site is located at 200 Hamilton Avenue in the City of White Plains, Westchester County, New York and is legally defined as Tax Map ID Section 125.67, Block 5, Lot 1 on the City of White Plains tax map. The 3.74-acre Site is bounded by Barker Avenue to the north followed by offices, a hotel, and commercial development; Cottage Place to the east followed by a gasoline station and commercial buildings; Hamilton Avenue to the south followed by commercial and government buildings; and Dr. Martin Luther King Jr. Boulevard to the west followed by commercial development. The surrounding area consists primarily of commercial and governmental uses, with residences further north of the Site. Site Features The Site is developed with a rectangular-shaped two-story shopping mall and an east-adjacent asphalt-paved parking lot, with additional parking on the building roof, accessed by a ramp on the northern side of the building. The topography surrounding the Site slopes downward to the west from approximately 200 feet along Cottage Place to approximately 190 feet along Martin Luther King Jr. Boulevard. Current Zoning and Land Use The Site is currently zoned as a Neighborhood Business (B-2) District, and was established and mapped to this location as a specific land use component of the City of White Plains Central Renewal Project (No. NY R-13), which was approved in 1964 and involved the redevelopment of 120 acres of downtown White Plains. The B-2 District, and resulting White Plains Mall construction in 1972, was intended to provide a relocation opportunity for retail and service businesses displaced by the Central Renewal Project. However, since that time the character of downtown White Plains has shifted. A component of the proposed Site development includes a change in the current zoning to a new Transit Development 1 (TD-1) District. This proposed new zoning district would allow for the construction of the mixed-use transit oriented community development consistent with the City of White Plains Strategic Plan to enable innovative development adjacent to the City of White Plains' transit hub, thus encouraging a more walkable and less vehicle dependent community. The current land use is commercial and the surrounding area consists primarily of commercial and governmental uses, with residences further north of the Site. Past Use of the Site A review of historic Sanborn fire insurance maps indicated that the Site was historically bisected by a public street (William Street) and contained several private residential dwellings, a candy manufacturer, and two gasoline stations. The gasoline stations included a facility with three gasoline tanks at 230 Hamilton Avenue (southeastern portion of the Site) on the 1930 through 1950 maps, and a facility with greasing operations and four gasoline tanks at 250 Hamilton Avenue (southern portion of the Site) on the 1950 map. The former on-site structures were likely present until construction of the current two-story shopping mall and east-adjacent asphalt-paved parking lot. Based on historic records and interviews, the shopping mall was constructed in 1972 and has operated as the White Plains Mall with a variety of tenants since its construction, including potential dry cleaners listed in historic City Directories. Surrounding uses included a brush factory west-adjacent to the Site that later became a carpet cleaning business and a laundry facility, a manufactured gas plant northwest of the Site that later became a substation, and a gasoline station east-adjacent of the Site. Site Geology and Hydrogeology The topography surrounding the Site slopes downward to the west from approximately 200 feet along Cottage Place to approximately 190 feet along Martin Luther King Jr. Boulevard. Subsurface soils encountered at the Site during previous environmental and geotechnical investigations indicated that the Site is underlain by a layer of fill extending from ground surface to depths ranging from 5 to 12 feet bgs. This fill layer included sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. Apparent native soils composed of varying amounts of sand, silt, and gravel were identified underlying the fill layer. During a recent geotechnical investigation of the Site, bedrock was reported at depths ranging from approximately 13 feet below existing grade in the northeastern portion of the parking lot to approximately 37 feet below existing grade in the central portion of the parking lot, corresponding to approximate elevations of 183 and 165 feet, respectively. The water table was measured in the nine on-site groundwater monitoring wells at depths ranging from 9.58 to 23.90 feet bgs, at elevations ranging from 178.70 to 181.89 feet. The deeper groundwater depths were noted at higher elevations in the eastern portion of the Site (along Cottage Place) and at shallower depths in lower elevations in the southern and western portions of the Site (along Hamilton Avenue and Martin Luther King Boulevard). Contour maps indicate that groundwater generally

flows in a southwesterly direction across the Site.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

ASSESSMENT OF HEALTH PROBLEMS:
Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

PROJECT COMPLETIONS:
None reported

## *HAZARDOUS MATERIAL SPILLS INTRODUCTION*

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

1) Tank Failures
2) Tank Test Failures
3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
4) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

5) Tank Failures
6) Tank Test Failures
7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
8) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

All spills within each spill cause category are presented in order of proximity to the subject site address.

**Please note that spills reported within 0.25 mile (or one−eighth mile in New York City) are mapped and profiled.**

**Between 0.25 mile (or one−eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:**

* Tank Failures;

* Tank Test Failures;

* Unknown Spill Cause or Other Spill Cause;

* Spills greater than 100 units of quantity; and

* Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellanous Spills with less than 100 units located between 0.25 mile (or one−eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

***NO ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS***

## *ACTIVE TANK TEST FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS*

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

Significant soil and groundwater identified off− site

DEC Investigator Remarks:

Samples collected in September 2014, December 2015, and August 2016 reveal soil and groundwater contamination down gradient of this facility. RDB

12−22−*16 Marianina Oil Corp Owner RP letter sent to both owner and operator− RDB 01−4−17 call from Papito 01−6−17 email from TBishop, I met with the property owner, their counsel and Vince Papitto this morning at the site regarding your December 21,

2016 letter addressed to Marianina Oil Corp. I will be proposing a day of borings to determine soil and groundwater quality as well as calculate groundwater flow direction. I expect to begin drilling next week.

RDB 1−9−17 followed up with 3 emails to Bishop; 2014 tyree report, 2016 Antea report, & 2016 Tetratech report. RDB

2−15−17 check on status? report should be submitted this week? RDB 3−7−17 report submitted− RDB 06−13−17 drove by site; on going demo work? June 2017− Citizen NOI filed?− RDB 07−17 email sent to Carlos looking for status− RDB 07−17− phone call from Jeff Papitto 914 447−1279 and Phil Decaro esq 914−835−6200

07−18−17 spoke to Jeff, he has spoken to Frank, he is on board would like some additional time, they will be using Tim Bishop of Ct. Expressed concern to OGC regarding possible Citizen's suit brought by WPHA. RDB

7−21−17 email from Jeff, So sorry Tim Bishop has gotten in touch with you as of yet. I know he is vactioning with his family and will be back Monday, July 24, 2017. We have forwarded him all site analyticals last week and he has acknolwedged receiving all the information.We have submitted a budget estimate to Mr. Frank Codella as well and have sent all information to Soil Safe for clearance for disposal. Papitto Construction Co., Inc. plans on mobilizing the first week of August as discussed previously with you.Tim's cell is 914−224−6268 if you need him he will be back on Monday.Any questions please feel frre to contact me at 914 447 1279. RDB

7−24−17 email from TIm Bishop, I spoke with Jeff last week while I was away and he filled me in about 34 East Post Road in White Plains. I´ll be putting together a RAWP for the station in White Plains that Papitto is proposing soil excavation at. I understand the station is currently closed and they´re expecting to remove at least 800 tons of contaminated soil... (plus groundwater monitoring).I´ll be working on this today, submit it to the client for review and expect to have it to you for review by Wednesday. RDB 8−14−17 status email to Tim Bishop, response, I spoke to Jeff today and neither him nor me have the gotten the green light for anything yet. RDB 8−*22−17 spoke to Phil Decarlo, asked him to contact Ben− RDB 8−28−17, So this is your two week follow−up.Any progress? / response, I took a call from Phil Decaro last week and he said Frank was going to be securing the funds late last week, but I haven´t heard anything since nor do I have a signed contract. RDB 09−28−17 RP letter with settlement letter sent− RDB 10−6−17 Owner and attorney came in; asked to have tanks pumped by 10−10−17− RDB 10−11−17 draft OC sent to owner's att; WCHD reports tanks are not pumped out− RDB 10−13−17 email from att; tanks empty 10−13−17 NOV sent to Northville Industries Corp. BTR 10−16−17 email to WCHD to check tanks− RDB 11−6−17, email sent, Frank and Phil,We met with both of you on October 6, 2017 and forwarded you an Order on Consent on October 11, 2017. To date, we have not received neither an executed Order on Consent nor documentation that the tanks have been pumped out. The Department would like to meet with both of you on Friday November 17th at 11:00 am to discuss the investigation and remediation of this site.Please confirm your attendance. rdb 11−10−17 email from Phil Decaro received I have been in depositions all week and traveling today so I do not have access to all my files, but I have attached a copy of the receipt for the pump−out of the tanks at 34 East Post Rd. I will be able to send you an executed copy of the Consent Order on Monday, but in the meantime please accept this email as a representation that my client agrees with and accepts the terms of the Consent Order. Tank pump out record is on DECDOCs. BTR

12−1−17, Upon arrival at the site at approximately 11am, the manhole was opened, PID reading was 0. Began to evacuate with vacuum truck. Significant recharge. Highest PID reading during evacuation process was 125 ppm. Evacuated 2 existing drums of purge water staged on site. Total evacuated 1360 gallons. RDB

02−08−18 Consent Order executed by DEC. GZA has not been contracted for any of the work proposed in November. BTR

08−07−18 Asked Frank & Phil to meet in the New Paltz Office on Friday, August 10. Counsel responded that they are not available until first week of September. BTR

08−14−18 Scheduled meeting for Friday Sept. 7, at 11AM. No response received from Frank & Phil. BTR

08−30−18 B. Conlon asked to confirm meeting attendance. Still no response. BTR

10−9−18 deposed by WPHA counsel− RDB

leaking at base of wall − in basement of YMCA unknown were it is coming from − off site clean up pending crew.

DEC Investigator Remarks:

1/12/18 US Tank was called to try to find leaking UST at YMCA Oil was coming into the basement through the back wall. No evidence of buried tank found. A tank was removed at the front of the property years ago. Sheen was noticed at the back of the property coming up from cracks in the asphalt, believed to be coming from a retaining wall. Other side of wall is condos / townhouses. US Tank told YMCA to call Northeast, their usual cleanup contractor, to put booms in place in storm drain at parking lot, sump pump, and cubby of basement to prevent further oil impact. Rain is causing oil to sheen on parking lot, making it easy to trace path from property behind them. Spoke to Tom @ YMCA − confirmed that Northeast Env. was called, did boom the sump in the basement, the storm drain at back of parking lot, and the pipe cubby in basement were evidence of residual oil was found. Northeast would like to speak to DEC for advice on how to proceed. ga

01/17/18 Received a report prepared by US Tank Tech describing their effort to locate a tank on the property. No tank was located. Report in DecDocs.

TG 02/07/18 Inspected the site on a rainy day. No sign of oil observed at the time of the inspection. TG

04/16/18 YMCA hired HydroEnvironmental Solutions to conduct an investigation both outside in the rear parking lot and inside the basement to try to determine where the oil is originating. All outside soil boring locations were clean, eliminating the idea that there is an offsite source. Report concludes that the oil is from the numerous past spills that have occurred in their basement. See report in DecDocs.

TG

09/25/18 Spoke to Tom Hay. He stated that the building may be sold in the near future. GW in the basement is being pumped through an oil water separator before being discharged. Little if any oil is accumulating in the separator according to Tom. TG

historic spill, found last week after samples were taken, just ground water impacted, clean up is pending

DEC Investigator Remarks:

9/28/17 AKRF was performing Phase II, noticed some sites where soil seemed odiferous and possibly contaminated. Took soil and gw samples, soil samples came back below CP−51. GW samples came back high in MTBE, benzene, and toluene in 3 areas. Site used to be old shopping mall. AKRF states that there was a gas station at site in 1970's, and there is currently a gas station across the road from the site. Will send in copy of soil and gw analysis. ga 10/05/17 Becky called and said the report will be completed soon and she expects to submit it in a week or two. TG

12/21/17 AKRF submitted a Phase II Investigation Report (See report in DecDocs.) TG

Caller Remarks:

pending repair and retest

DEC Investigator Remarks:

Spoke to Elite and received correct # for owner. Elite was retained by Oil Co. to conduct test because Oil Co. believed tank was leaking. Elite is recommending to owner that tank be removed and is providing estimate. Contacted owner, Ali, who reports that tank received delivery on 12/24 of some 150 gals. and is now empty. Advised him to contact his insurance company and that tank needs to be removed. Oil Co. is Tarry Oil at 914−631−2580. Spoke to Robert Corveddu. He confirmed 150 gals. delivered on 12/24 and now tank is empty. He called Elite Env. to test tank. DT

12/29/15: DEC drive by inspection. No answer at the front door. Appears to be a two unit apartment and not a signal family home. Sign taped to the front door (photo in DecDocs) indicates landlord's phone number is 914−948−7475. There is significant contamination in the side yard around the fill port. Call to Ray Hilyer at Elite, cell number, left message requesting callback. jod

12/30/15: Called and spoke with Lisa at Elite. States Mr Ash hired them for the tank test. I then spoke with Mr Ash. He states he is the owner/landlord. States they have a temp drum set up in the basement for heat. He states he is contacting DSS for assistance. I notified WCDoH and White Plains Bldg Dept of the situation. jod

12/30/15: Email from Tony Magnotta of WP Bldg Dept:

John, Mr. Ash is not the owner but a tenant. Mr. Demitrios Leontitsis is the owner and lives at 1 Sterling Avenue White Plains NY 10606. He is currently employed by the White Plains Coach Diner on Westchester Avenue in White Plains as a night shift floor manager (Tel# 914−428−5700) and is in the process of evicting Mr. Ash. I will send a violation notice to Mr Leontitsis of a compliant for a leaking fuel tank. I will also reach out to Mr. Leontitsis. His home on Sterling Avenue is in it's final stages of foreclosure to another bank and he plans to move into 188 Fisher Ave. as soon as Mr.Ash moves out. TM jod

1/04/16: Robert Corveddu of Tarry Fuel states they are delivering to the temp drum in the basement almost everyday. Usage for the home looks to be approx 20 gallons per day. jod

1/06/16: Spoke with Ray Hilyer, WP Bldg Dept is requiring a permit on the temp drum. Ray has attempted to contact the actual owner Demitrios Leontitsis as his place of business as provided by the Bldg Dept. Ray states he called the White Plains Coach Diner and they state no one by that name is employed there. jod

6/28/17: Elite was never hired to perform any additional work. jod

7/20/17: Pete Russo of White Plains Bldg Dept reports permit for tank work filed on 7/17/17. The new owner hired C2G Environmental to remove the UST. jod

3/20/18: Received a call from Richie Coombs at MH Tank. He states a prospective buyer has contacted their company about the open spill number. I returned his call and left a message. jod 3/23/18: Received a voicemail from Jason Epstein C:914−441−1090 Mr Epstein states he recently purchased this foreclosure property at auction. I returned his call, could not leave a voicemail message. jod

5/09/18: Call to dispatch desk from an attorney Jonathon Klein. He represents another prospective buyer of this property. He states there have now been three sales of this house at auction, and each time the buyer has cancelled the deal after finding out about the open spill number. jod

tank test failure. restest likely

DEC Investigator Remarks:

10−6−10 Spoke with Kathy. This is a 4k UST. Loud bubbling during tank test. PBS #3−104469 RP was told by US Tank Tech that they need to empty tank. Undecided about next step. Will notify WCHD. jm

10/14/10 Hospital wanted tank uncover, repaired and retested. There was nothing to repair so a well point sample was collected. Sample is contaminated with petroleum. Tank will not be retested....mm

12/12/17: This 4k UST failed a tightness test on Oct 6, 2010 reported as this Spill 1007255 Callback notes on this case number indicate UST would not be retested as well point was contaminated. The UST was retested on Oct 20, 2010 and failed. Retest was reported as Spill 1007877

That second Spill number was closed on July 5, 2011 with the following notation: 7/5/11 ttf, tank removed, contamination removed, endpoint samples below CP−51 standards NFA JO'M

*WCDoH PBS data 3−104469 indicates this 4k UST was closed/removed January 2011 and a new 2k UST was installed. Based upon this information, this Spill case number closed and referred to Spill 1007877. jod

Re: PBS #3−030910 ˇ 151 East Post Road, White Plains, NY

NYSDEC Spill # 06−01015 TTF

Dear Facility;

The Westchester County Department of Health has received the retest results from July 28, 2006.

The results are acceptable to the Department. A request for closure is being sent to NYSDEC for the above spill # and no further action is required regarding the work at this time.

If you have any questions, please call me at (914) 813−5971.

Sincerely,

Danielle Jackson Sanitarian Office of Environmental Health Risk Control

Caller Remarks: NO REMARKS GIVEN FOR THIS SPILL

DEC Investigator Remarks:

6/14/06 Pro Test on site to test the 1500 gallon tank as ordered by the DEC.

Tester couldn't get vacuum on the tank. Andre from ProTest said the cement on top of the tank needs to be removed to expose all of the bungs and piping. Once that is performed, then the tank can be isolated and tested. Visual observation revealed that

the steel on the top of the tank was very heavily corroded.

TG 06/29/06 AM − ProTest back on site retesting the lines and the tank. Andre reported that the vent line and the remote fill line both failed the test. The tank failed to hold a vacuum therefore, it also failed. Andre recommending unearthing the manway and checking that for a definitive answer on the tank failure. However this can't be accomplished until a refrigeration compressor is moved which will require a refrigeration mechanic. TG 06/29/06 John Leddy from ProTest officially reported that the tank failed and that the tank has lost two inches of oil since the 14th and the tank is not being used. Recommending emptying the tank to their client. TG 07/05/06 Joe Ostrosky from Petroleum Tank Cleaners (PTC) reported that PTC was hired to remove the oil from the tank. The tank has been emptied, cut open and cleaned. TG 11/15/06 New England Tank Services has completed the removal of the tank, allowing for an inspection. Substantial corrosion and numerous holes were observed. A letter was sent to the management company requiring the installation of two monitoring wells. 03/12/07 Monitoring well installation report submitted by JM Associates who were subcontracted by Fleet Environmental. No free product was detected in the wells. TG 07/30/07 New England Tank Services reported that they removed the tank along with 2.64 tons of petroleum contaminated soil.

550 gal ust

DEC Investigator Remarks:

6/29/15− Spoke to seller, Mrs. Dattorre. She will likely being retesting tank. Will call back after retest with results. Test being done for property transaction. DT

7−13−15 Owner called. She says she is trying to negotiate assistance from the potential buyer in regards to resolving this spill. She says her choice of remove or retest will be based on the outcome of that negotiation. She asked that anything we mail be sent to her home address, which she gives as 71 Bolton Avenue, White Plains, NY 10605. Input this address under potential spiller. Also input phone number that showed up on caller id. jc

10/9/15: NES disposed of the leaking UST and 121.37 tons of petroleum contaminated soil. Soil sample results submitted for review. Tank Closure Report entered into DecDocs system. Based upon the information provided, no further action is required at this time. jod

DEC Investigator Remarks:

6/24/13 − Being handled by the Westchester County DOH, according to email:

From: Lalak, Chris

To: Schneider, Wayne

CC: Daniel Bendell , kabrowne@gw.dec.state.ny.... Date: 6/24/2013 12:35 PM Subject: FW: Spill : 1303150 WC PBS Wayne TTF

Wayne, Please handle this TTF. It is an unregistered PBS site.

It is the Residence Inn, No Tix's if they register promptly. The tank is a 550 UST Diesel tank for a generator. The tested thinks it is just an air leak. It is unknown if other tanks are present. Thank You Chris Christopher J. Lalak MS

FIRE DEPT ON SCENE AND WOULD LIKE DEC TO RESPOND

DEC Investigator Remarks:

01/25/07 Contacts: Trucking company: All Aboard Transport − owner David Board 2 Kit Court Monroe, NY

845−782−4727

Station owner: JKSG Inc. 124 South Lexington Ave White Plains, NY

Dharminder Singh 46 Beaumaont Circle Yonkers, NY 914−482−2560

All Aboard Transport driver Joseph Graff reported that he arrived at the station at approximately 6:30 am to deliver 8500 gallons of gas, 7500 gallons of regular and 1000 gallons of premium. The regular load was dropped into three tanks, 1800 gallons into a 2k reserve tank , 2500 gallons into a 4k tank which is connected to the reserve tank, and the remaining 3200 was dropped into another 4k tank. A pump in the 2k is used to tranfer gas from the 2k tank to the 4k tank when the level in the 4k tank is low. Driver Joseph Graff stated that the delivery was made with without incident. Paperwork was completed and he was about to leave the station when gasoline unexpectedly began gushing out of the dispensers and then out a vent pipe located next to Efficiency Printing. Gasoline ran across the station asphalt into a storm drain and also puddled on the rooftop of the print shop. Station owner Dharminder Singh attempted to shut the power to the dispensers, but this failed to stem the discharge of gas. He then called 911 to the FD who responded and foamed the gasoline. The USTs were later gauged and the 2k tank only contained 7 of product, indicating that the pump in the 2k tank was activated, transferring product into the 4K tank. Once the ullage space in the 4k tank was filled, the product discharged out of the tank at the points outlined above. The station owner hired Castlton Environmental Contractors (CEC). CEC crew deployed booms in the Bronx river and vacuumed gas from the rooftop, the station property, and a gw monitoring well that had been impacted.

WCHD a delegated PBS county followed up with the PBS issues.

Re 124 South Lexington Avenue, White Plains NY

PBS 3−497231

Spill number 06−11782 Dear Sirs

This Department has received an interim closure report from American Petroleum regarding the tank removal and spill clean up at your facility. Staff from this office inspected the tank removals.

Significant contamination was removed. However, significant accessible and inaccessible contamination remains. Further remediation is required. This Department understands the site limitation and the need to perform the remediation in stages. Your contractor has requested that the tanks be installed before further excavation is performed in the southern edge of the property near the printing company. This is acceptable only if a remediation plan has been submitted and approved prior to the tank installation. This accessible area of contamination must be remediated.

At least three monitoring wells are required to be installed. The wells must be positioned across the property. The wells must be sampled quarterly for one year, and then the need for continued sampling will be reviewed. The well must be sampled for volatiles (EPA method 624).

A remediation plan must be submitted by July 1, 2007. The submittal from interim closure report from American Petroleum may be

modified into the remediation plan.

This letter was prepared in conjunction with the New York State Department of Environmental Conservation. Please continue to address all submittals to both agencies.

Sincerely,

Christopher J. Lalak

Radiological and Chemical Analyst

11/10/16 Getty Realty and White Plains Housing Authority working on nearby site. There is what appears to be #2fo in MW−14 from Spill # 9713110 at 26 East Post Road. There is a #2 UST approximately 40' from MW−14 on 22−24 East Post Rd. mt

12−15−16 This spill is not associated with 97−13110; just so happens that during that investigation, this was detected. RDB

12−22−16 Adeogun owonikoko company LLC owner− RP letter sent − RDB 1−10−17 met on site with property owner, Oladipo Olatunde 914−262−2583. explained the situation and the need to remove his tank that is still in the ground, provided him pieces from both First environment and Antea . still need to send him names, figures, PBS FIR and tetra's report− RDB

1−13−17, Attached is a letter from TetraTech. Tetratech is an environmental consultant representing Singer Properties, the property owner of 26 East Post Road. Also attached is a copy of the Westchester County Dept. of Health records for the tanks previously registered at 26 East Post Road. The records indicate that the site only stored gasoline at the station and not diesel. RDB

2/3/17 Spoke to Lina from Envirostar. Tank was pulled today − was 1000 gal. UST. Multiple holes found in tank. Samples to be pulled for CP−51. ga.

2−7−17, response to Envirostar, I am disappointed that you did not contact me prior to the removal of this tank. If you had, I would have been able to provide you with the background and explained what I needed accomplished at the site. For now, I need a summary of the work completed and the plan forward. I do not need several unlabeled photos spread out over multiple emails. Please assemble the photos and resubmit in a letter format. Please do not send emails without the Spill number referenced in the subject line. RDB

3−24−17, email We are planning to start the initial soil remediation work at the site starting on Monday April 3, 2017. The initial plan is to excavate an area approximately 12 by 12 by 8 feet (estimating about 25−50 tons of soil) immediately

surrounding the tank grave. I will be on site with the contractor (Envirostar) to record conditions (PID readings, observations) and to collect site assessment soil samples.Please email me back to let me know that you have received this email and if want to meet us on site during the excavation work.

My direct cell is 914−382−8673. RDB

4/13/17 Contamination discovered in tank grave. New spill reported, #17−00425, closed and referred back to this one..mm 4−19−17

Caller Remarks:

sump is full of oil/investigation underway

DEC Investigator Remarks:

8/10/11 − During a tank test of a 20K UST, No. 6 fuel oil was discovered in the sump. Caller is scheduling for

8/11/11: I responded to the location yesterday. I first checked outfall at Bronx River and no oil or sheen was noted. I spoke with Ray Hilyer, Elite was scheduled to test the tank last week and did not after finding an uncapped feed line. Ray states he notified WCDOH Wayne Schneider. Elite returned yesterday and found a large quantitiy of #6 Oil in a manway sump next to the UST. I met with Hospital Engineer Bob Biddiscombe and observed the oil in the sump. He states it is contained within the secondary containment and stated Elite was en route to vac it out. I again contacted Elite, they have not been hired. Bob Biddiscombe spoke with Elite via phone directly while I was there. Elite will be there first thing in the morning.

No oil was observed in the basement sump where previous major spills have occurred. Mr Biddiscombe stated the sump has been re−piped, and now discharges to the sanitary sewer instead of the storm drain. WCDOH will follow up. Chris Lalak is enroute this morning to confirm the sump has been vacuumed out and investigation will continue. jod *Chris Lalak reports that the manway has still not been vacuumed out this morning. Email update from Chris:

Lalak, Chris 8/11/2011 11:52 AM

They still didn't pump it out Robert Biddiscombe was going to call Elite or Island pump and tank to get it pumped. He doesn't know if it is a contained sump. I gave him 1 week to TT tank and lines. 1 month for env. Investigation and. pump it out today and check daily. I also stated if it is visually found that the sump is leaking an immediate investigation is needed. jod

8/12/11: Chris Lalak reports Envirowaste completed pump out. Further investigation required. jod

10/16/12: See letter from Chris Lalak of WCDoH in EDocs. jod

5/30/13: Report from Elite dated Jan 14th 2013 entered into Edocs. Message sent to Chris Lalak requesting status report. jod

040417− Email, This spill started on 2009 with 6 oil entering a basement Sump. The sump apparently collects water the buildings footing drains. White Plains hospital is a huge urban hospital complex, occupying a full city block.

The spill was determined to be from piping leaks associate with two old 6 oil tanks. Tank 1 (20K ˇ ust was abandoned in place by Castlton). Removal of this tank was not possible. Free product was encountered around this tank. Castlton installed a monitoring/recovery well thru the tank. The well is identified as 15ˆ. Free product was recovered from the well, into a holding tank. The well was then sampled 4 times 2014/2015. Some minor volatile and semi−volatiles are still present. The highest is 29 PPB pyrene. MW number 4 is located next to the abandoned tank and was sampled at the same time and was essentially clean. Tank 2 was removed by Elite. (the other old 20K UST) Royal remediated the sump for approximately 2 years.(2009−2010) Hydro Environmental Technologies (HETI) performed a GW monitoring investigation in 2012. The Hospital has been cooperatively remediating a very difficult spill. No oil has been found in the sump since 2013. The monitoring/recovery well installed thru the 20 K 6 oil UST, (and thru the concrete Pads) has been substantially remediated. Pristine remediation is not possible in this case. Well sampling performed by Castlton in 2014 and 2015 is attached. The hospital is located in an urban city with no drinking water wells near by. The abandoned UST has been filled in with slurry Concrete except for the recovery well. It could not be removed. NFA− RDB

Caller Remarks:

3RD PARTY CALL: CALLER STATES THAT THEY FOUND ABOUT 200 GALLONS OF PRODUCT IN THE SUMP PIT UNK IF ANY RESOURCES ARE AFFECTED UNK SOURCE. CLEAN UP IS PENDING.

DEC Investigator Remarks:

4−3−09: Chris/WCHD ^ V.Mc./Dispt.: Brain/WCHD responding to inspect site.

5/27/09: PBS Facility 3−177148. See eDocs. jod

10/7/09 WCHD is getting Monthly reports JO'M

9/21/10: Updates received from Royal Environmental. Royal was hired to remove free product from the sump pit and change out pads as needed. Royal was NOT hired to remove the leaking USTs which are the suspected source of the leak. Between April thru August

of 2009, Royal Environmental removed and disposed of a total of 74 drums of contaminted sorbants from the sump, and removed a total of 6,805 gallons of #6 Oil and contaminated water using a vacuum truck. Royal provided a letter from Robert Biddiscombe, Director of Engineering for the White Plains Hospital, dated August 12th 2009 and addressed to Chris Lalak of WCDOH which states AKF Engineers will now handle the remediation. Royal has had no further involvement. jod

10/16/12: See letter from Chris Lalak of WCDoH in EDocs. jod

11/16/12: Update from Chris Lalak of WCDoH PBS:

greater than greater than greater than Lalak, Chris cjl1@westchestergov.com greater than 10/26/2012 4:01 PM greater than greater than greater than

Spill 0900120 Todd Know about this one. Three years ago 6 oil started getting into the basement of the White Plains Hospital. They went to abandon tank 1 in place a 20 k UST. It cant possibly be removed and hit free product seeping back into the tank. Castlton Broke thru the bottom of the tank and thru a 2 foot thick concrete pad and set up a sump to recover the oil. They are building a second sump and putting the oily water into a holding tank. The spill is a nightmare and the hospital has been slow to act. And they have their own hospital issues about being self sufficient in case of emergencies. The put in a new Large AST and have a temp tank. They also have another 20k that is being removed any day now. −Chris jod

12/19/12: Update from Chris Lalak. The 20K UST is scheduled to be removed tomorrow. Elite Environmental will be doing the work. Several tons of contaminated soil has already been removed. This is the #6 Oil tank. WCDoH will be on site to inspect. jod
10−16−13 another tank at facility being removed, Need and update on this spill. RDB 0402−14 letter from WCHD in edocs RDB
2−27−15 Attached are the samples collected from White Plains Hospital this month. 06−15− june data submitted; checking with WCHD

FOUND CONTAMINATION WHILE REMOVING LIFTS:

DEC Investigator Remarks:

02/02/06 Consultant Mark Pascow worked for Mazda who is a tenant at the facility. Mazda hired Royal Environmental to remove the lifts, but once contamination was found, Mazda took the position that it was the building owner's reponsiblity to do the cleanup. Owner was unknown to Pascow. TG 11/18/10 Site meeting held to review current status. Two property developers were present and a representative for Dave Pelletier from Jade Environmental. Site owners: Bob Slingsby − cell 914 715−1974 Joshua Schwartz −VP All Med 161 West 61st St. Apt 9A NY NY 10023 Bob from Jade Environmental Pointed out two locations were a waste oil tank and a #2 FO tank were removed. Impacted soil around the tanks was excavated and stockpiled awaiting disposal. Dave Pelletier reported by phone that 14 lifts had been removed and that gray impacted soil was observed at the smear zone a 6'bg. He will be drafting a soil and groundwater sampling plan and will submit the plan for Dept review.

stong odor found during excavation/investigation underway

DEC Investigator Remarks:

10/30/14 − Excavation work is taken place near an old closed gas station. At this point there is only a petroluem odor from the excavation. Con Ed will collect soils samples for laboratory analysis and will back fill the excavation with sand. KAB 01/15/15
See Emis for cleanup details. NFA. TG

Caller Remarks:

Looking for response.

DEC Investigator Remarks:

3/1/12: I met on site with White Plains Police Dept, Fire Dept and Highway Dept. Storm drain outfall immediately south of Main St (Rt 119) overpass reportedly had a sheen entering the River. When I arrived on site, there was no material visible, no sheen presnt, and no odors were noted. Fire Dept had placed boom at outfall − no accumulation. FD stated the material was brown and appeared to be cooking oil. They state it stopped very soon after their arrival. Nothing noted at this time. No material recoverable. FD pulled the boom and left site. NFA jod

3/2/12: Chris Lalak reports the WCDoH received a second report of petroleum sheen from this location this morning. jod

>>> Lalak, Chris 3/2/2012 11:23 AM >>>

John, County PD on site. Oil caught behind a boom at the out fall. (I´m guessing you put out a boom yesterday) They report a bit of product and a strong oil smell. Wayne Schneider is in Route. Chris *I replied and informed Chris no boom was left at the outfall yesterday. jod 3/2/12: Second Spill number 1113542 reported by WCDoH. Wayne Schneider confirms this second report is a separate incident, unrelated to this spill number. jod

3/6/12: Chris Lalak will reinspect the River and update DEC. He confirms that Spill 1113542 is petroleum and it is coming from the next drain outfall down river from this incident. Chris states County Police still investigating both incidents. jod

4/16/12: I received a follow−up phone call from Det Brian Hembury of WC Police at 914−422−6277 I returned his call and left a message. jod

Caller Remarks:

Caller reporting a spill of an unknown amount of an unknown petroleum in the bronx river. Unknown source or start point.

DEC Investigator Remarks:

6−2−10: V.Mc./Dispt., J.O'M. & T.Gh.: T.Gh. to site inspect.and determin if contractor needs to be called out, if so they are to be put on standby for call out, pending authorization to spend money by Cent.Office.

6/3/10 − Joe McCarthy and Keith Browne, DEC, went to the scene to assist the White Plains staff in checking the Bronx River. DEC has hired TriState Environmental to conduct cleanup. Booms and pads were placed in several locations in the river. The river is impacted in areas at least 3 miles which is in the City of White Plains and the Village of Scarsdale. A vac truck was used to capture the oil that was entering the river from the outlet pipe of the storm drian system. Two areas of free product oil were observe in river in Scardale. TriState was told about the areas and was mobilizing for cleanup. KAB

Spill was traced through the city storm drain system to an apartment building located at 235 South Lexington Ave. The building was entered and the boiler room inspected. Superintendant John Szabo stated that Star Industrial Services worked on the boiler the day before the spill was found in the river. Once Star left the building, John Szabo went into the boiler room and found oil on the floor. He and other maintainance men cleaned the spill by washing the oil into the building sump pit. Once in the sump pit, it was pumped out into the city drains and discharged into the river impacting the river from White Plains to Scarsdale. The River cleanup effort was completed by TriState Environmental over several weeks.

Caller Remarks:

a lot of dead fish in area − unknown material − cleanup status unknown

DEC Investigator Remarks:

7/9/10: I spoke with Stefan Goreau earlier. The WCDOH had received a call earlier this morning, report of dead fish and a benzene odor from a section of the Bronx River where a petroleum spill had occurred approximately 5 weeks earlier. Stefan stated he was on his way to the site to inspect. He then reported this spill after arriving at the location.

From the storm drain outfall just south Exit 21 (Main Street) of the Bronx River Parkway going south for approx 1/4 mile, he observed approximately 100+ dead fish floating in the water. He stated that further downstream he observed live fish and turtles. There was no petroleum sheen observed and no petroleum odors. But there was a strong burnt smell in the area. On 7−7−10 there was a massive fire on East Post Road in White Plains. Five stores including a dry cleaners and a restaurant were destroyed, at least two dozen Fire Fighters were hospitalized. Runoff from the fire fighting operations would have entered the strom drains and discharged to the Bronx River at this location.

No clean up is possble. DEC Fisheries notified of the fish kill. NFA jod

5000 GALLON TANK, FOUYND WHILE EXCAVATING: HOLES IN TANK ALSO:

DEC Investigator Remarks:

3/20/05 John Manfredi reported that this spill was reported based on the results of a test pit dug in the vicinity of this tank which has already been removed. Gross contamination was found at the water table. Site is under active construction, so remediation will occur as the project progresses. Estimated time frame is a few months. TG

Caller Remarks:

Caller states that they have noticed material spewing on the curbsied. When he lifted the sod at his father's place and an unknown rainbow sheen with a heavy sewage odor is apparent. Town has been notified and told him to contact DEC. He would like to speak with someone to figure out where and what this material is.

DEC Investigator Remarks:

6−10−10: V.Mc. to Mr.GENE CALOLE: To ref.to WCHD for site inspection. 6−10−10: V.Mc. to WCHD/C.Tor.: Left Mess.: Req.Callbk. 06/10/10 Inspected the site and met with the homeowner. The sheen referred to in the complaint is a small biosheen coming from compost which the homeowner stated he placedin the area to improve the soil conditions. He said he converted to gas 30 years ago. He asi the tank was emptied but has little memory of what happened with the tank in the front lawn. It was suggested that

he dig up the area to see if a remote fill may be conveying low levels of impacted water to the area. However it should be noted that the soil didn't exhibit any fuel oil odor.
