Caller Remarks:

What Occurred: Gas Pump #7 does not shut off automatically when the fuel tank is full. As a result, the tank overflows and a significant amount of gas overflows and pools on the ground. This first occurred to me about 2 months ago. At that time, I thought there was a problem with my car and I had it checked out by the dealer. I used the same pump again this morning at 7:30am and the same problem occurred. I informed the gas station attendant and it appeared he knew this pump was a problem. I am concerned because it appears they have not corrected the issue in at least two months (based upon the two times it happened to me) and significant amounts of gas are routinely spilling on the ground.

DEC Investigator Remarks:

12/9/15 − WCDOH conduct an inspection and did not find active leak. WCDOH recommended spill to be closed. WCDOH email and report are in DecDocs. NFA. KAB

HISTORICAL SPILL − CALLER IS DOING SITE ASSESSMENT AND FOUND SOIL CONTAMINATION

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was HARDY 03/04/98 BARBARA MCDONALD (WCHD); CLOSED GAS STATION; SITE ASSESSMENT SHOWED SOIL & GROUNDWATER CONTAMINATION ABOVE STARS GUIDELINES; OWNER HAS NOT YET DECIDED ON REMEDIATION OPTION;

06/17/99 LETTER SENT BY T. GHIOSAY RE: WORK PLAN FOR SUBSURFACE INVESTIGATION AT THIS SITE.

04/20/00 TYREE CALCULATES SOIL REMOVAL TONNNAGE. EXCAVATION WOULD REQUIRE 5169 TONS. TYREE RECOMMENDS AGAINST REMOVAL.

12/07/00 LETTTER SENT TO TYREE BY J. HARDY;REMEDIAL ACTION PLAN IS REQUIRED FOR THIS SITE WITHIN 30 DAYS.

01/18/01 LETTER SENT TO TYREE BY J. HARDY; PROPOSAL TO DESIGN A DUAL PHASE HI−VAC SYSTEM FOR THIS SITE IS APPROVED AND REQUIRED.

03/01/01 LETTER SENT TO TYREE BY J. HARDY; PLAN TO SHOW OFF SITE WELLS IN RELATION TO OFF SITE CONTAMINATION IS REQUIRED.

06/07/01 LETTER SENT TO TYREE BY J. HARDY; REQUEST TO EXTEND THE START UP DEADLINE FROM 6/1/01 TO 6/21/01 IS APPROVED.

6/12/03: Letter sent to P.N. Holloway, Tyree Organization Ltd. from J. Hardy. Monitor well sampling and reporting may be recduced to semi−annually.

2/23/04: Letter sent to P. Holloway, Tyree by J. Hardy. Reduce reporting to annual.

A Dual Phase High Vacuum Extraction system operated here from roughly 2001 to 2007. VEFR events on targeted wells were continued bimonthly for all of 2008. An NFA request was submitted in Oct. 2008 and reiterated by e−mail Feb. 2009. This request was denied based upon coninued impacts to GW in MW−19. Latest QMR and denial e−mail have been added to eDocs. PJD Feb. 2009

A request for a reduciton in the # of MWs being sampled semi annually has been received and approved based upon contaminant concs. at or below GW standards. PJD Mar. 09

An e−mail request to conduct supplemental investigation in the area of MW−19 was approved and uploaded to eDocs. PJD Jan. 2010

5−27−15 project transferred to John O'mara− RDB 8−15 Tyree submitted Remedial Action Report to JOM 8−15 submittal by first environment on behalf of WPHA 9−15 JOM response to submittal? 04−16 submittal of indoor air sampling by 1st Environmental 04−16 response from NYSDOH to First Environmental 04−14−16 project transferred to DB; sent email to Antea looking for updated information − RDB 05−12−16 email from first envir; Tyree does not have acesss to install wells? RDB 06−16− meet with Getty and then meet on site; 07−01−16 sent email approving locations for Getty; copied WPHA 07−16− Access granted; wells installed; sampling to be conducted August 1−RDB 10−18−16 The replacement wells were installed in the excavated area in late July and a groundwater sampling event was performed on August 1. We are preparing the monitoring report to summarize those results and will be submitting it to you later this week. RDB 11−1−16 revised sample results submitted− RDB 11−10−16 next round of sampling collected; MW 14 found to have LNALP; new spill 16−07837 opened for 22 East Post Rd 12−9−16 comments from 1st Environment on August sampling. 12−16 new spill opened for 34 East Post Rd− 16−08924 12−16 letter from owners rep. RDB 01−17 responded to Owners rep looking for spill closure. 01−17 Owner removed canopy. email sent to Antea asking if below was ever sampled. 01−17 response from Antea, In response to White Plains, I´m reaching out to Ben Rieger to understood the aspects of the canopy with regards to the excavation and will replying to your e−mail. RDB 1−12−17 requested sampling under the footprint of the canopy based on excavation stopping at footings. RDB 1−23−17 As requested, antea and IPT will be on site tomorrow to conduct soil borings, 02−17 Report submitted doc canopy work, nothing found− RDB

during tank removal soil and gw were discovered. clean up penidng.

DEC Investigator Remarks:

2/10/11 Spoke to Stu Freeman at Advanced Environmental, who referred me to the person at the site , Declan MacAnnanie (Zack) at cell # 914−906−8878. 550 UST was pulled, and there is contaminated dirt and groundwater impact reported by Advanced. They will be continuing the remediation pending insurance coverage. dw

3/28/11: DEC site inspection, met with Advanced Environmental and rep from the Church Board. Contamination is extensive, ground water has been impacted. Approx 40 tons of contaminated soil has been removed to date. Remediation is being hampered by a sewer main pipe and a large tree. Main excavation is being backfilled, and overburden will be removed on the other side of the sewer pipe to access additional contamination. jod

4/18/2011: Clean up completed by Advanced Environmental. Report reviewed and entered into eDocs. Based upon the information provided, no further action is required at this time. jod

3/6/08 following sent to tyree:confirming our tel conversation you may shut down this system. continue vacuum removals and monitoring.(levels in recovery wells low, system not productive−−no off site problems and hi vac removals to continue) jh

Periodic VEFR to supplement the Dual Phase High Vacuum remedial system is continueing at 3 of the more impacted wells. QMRs in eDocs.

PJD Apr. 2009.

DPHV system continueing with minor but consistent removals. GP−4A was drilled in late 2009 and connected to the system in early 2010. GW quality conitnues to improve w/ 3 wells at moderate concentrations. PJD Sept. 2010

DPHV System down as of 2010. Review of additional monitoring data in the interim and the last few months of system data lead the DEC to accept that additional system operation is not warranted at this time. Targeted removal by VEFR with the addition of biosolve approved for use in June 2013. DOH found inventory discrepency in early 2013 and required subsurface investigation. DOH

requested DEC review. Most severe soil impacts found just downgradient of pump island. No significant new release indicated. Current remedial plan sufficient at this time. PJD July 2013

5−29−2014: RDB & SWC met with Getty Realty.

RAP approved by DEC awaiting UIC from EPA. 1−26−15 3q and 4th quarter 2014 data submitted; biosolve injection in June 2014; planned for Feb 2014 RDB 6−10−15 met with Antea and Getty to discuss;− going to check construction plans and await results of Lake Katrine and Shrub Oak injections RDB second quarter results submitted RDB 11−20−15 third quarter results 12−2− met with Antea and Getty need to address the contamination, need a workplan for the soil removal around gp4 and the dispenser island possibly removing MW4. RDB 1−12−16 sent email to Getty for update RDB 1−23−17 met with Antea and Getty; owner is planning to remove tanks in next 2 months and Getty will overexcavate the dispenser area and around canopy ; In addition consultant for WPH called looking for data. ; sent last report RDB 2−15−17 Consultant calling returned call LM RDB 2−15−17 reported that they found gw contamination on edge of property at levels that do not match Getty's numbers RDB 04−21−2017− first QMR submitted; emailed Antea looking for station updatel supposed to be razed, response, Yes it is.Note to John ˇ Have you received an update from the current owner on their schedule? Please see below note from Dan as reference. RDB 7−6−17 call from TFisher, the new owner Atlantis is planning to remove tanks this summer, Getty will remove contamination, building demo up in air− RDB 09−6−17 email from Antea, We have a schedule for the start date of the UST removal, canopy removal, and remedial soil excavation activities for Spill No. 97−10757 − 11 E. Post Road, White Plains Getty 58108.The work is currently scheduled to begin Monday Sept. 11. The work is being conducted by Metro Environmental Services (MES). MES will be removing the USTs on behalf of the White Plains Hospital and will be performing remedial activities on−behalf of Getty to include the excavation of impaced soil below the dispensers. Antea Group will be on−site on−behalf of Getty and I believe Woodward & Curran will be on−site on behalf of the White Plains Hospital. RDB 09−13−17, email from Antea, As an update to the below e−mail chain, MES removed the two USTs located on the southern side of the UST pit today. By 9am tomorrow (9/14) they expect to be ready to remove the two remaining UST located on the northern half of the UST pit. As reference attached is a site plan showing the approx. location, depth, and, PIDs of the endpoint soil samples that were collected today by Woodard & Curran as part of the UST closure. Four sidewall samples, and two bottom samples have been collected. PIDs have been low, with the exception of the sidewall toward the dispensers. On that sidewall a PID of 1,080ppm was observed. Not unexpected as we plan to over−excavate impacted soil below the dispenser. RDB new spill 17− 05804 called in RDB 9−14−17 Email from Antea, MES was able to remove the two additional USTs today, so all four USTs have now been removed.Attached is an updated map showing the UST removal endpoint soil samples collected by Woodard & Curran.You´ll see on the attachment that some higher PID readings were observed along the northwest, north, and northeast sidewalls today. Further excavation in the northwest and north directions is not safe due to the proximity to the adjacent property and the sidewalk. We have stockpiled impacted soil from these areas for transport off−site & disposal. We will be excavation the eastern side of the tank pit as part of the remedial excavation below the dispenser.Today MES observed a concrete slab below the former tanks. Soil above the concrete slab did not exhibit impacts, with the exception of endpoint soil sample S−11 at the northeastern corner of the tank pit. A PID reading of 480ppm was recorded at this location and that soil was removed down to the concrete slab that is present at approx. 10 feet below ground surface. − RDB

9−29−17, update from Antea, MES has completed the tank pit over−excavation. Please see attached map for details regarding sample locations, depths, and associated PID readings. MES was unable to remove any additional soil on the sidewall and bottom along East Post Road due to the close proximity of the sidewalk.

We began the over−excavation beneath the dispenser area today. A White Plains Department of Buildings inspector, Cris Dellaripa, implement a stop work. He cited non−conformance with permit requirements MES is addressing these items. We´re hoping to have the issues resolved and be excavating again towards the end of next week. Antea Group will be on site to screen soil and collect

samples when MES continues the excavation beneath the former dispenser island. Depending on the PID readings of the sidewall samples, we may request a spill closure at that point or recommend additional excavation when the site building is demolished. The building is likely not going to be demoed until next year due to the pending permit process. RDB

1−16−18, MES and Antea Group conducted additional excavation activities at this site last week since the building has been removed. We submitted sidewall and bottom samples on a quick turnaround to understand if we needed to excavate further. There were no exceedances in the endpoint soil samples collected last week. Please see attached updated map and soil analytical table. We´ll be on site tomorrow with MES to extend the northeastern−most portion of the excavation to a depth of 12 ft. The majority of the excavation in that area extends to around 10 ft. We collected a sample (B−8) at 11.5−12 ft, and we will be removing the soil in that area to a final depth of 12 ft. The northwestern−most portion of the excavation had a final depth of 9 ft, and the middle portion of the excavation had a depth of 11 ft. These details are included on the attached site map. RDB

02−07−18 Stopped by site to observe the open excavation. Photos on D2. BTR

4/27/18 email sent to Tim Fisher of Antea Group requesting site update. BW

Caller Remarks:

Caller advised found contaminated soil after removing tank.

DEC Investigator Remarks:

10−8−10: V.Mc. to DAVE PELLETIER/Jade Enviro.: Likely a pre existing active file for loc. PBS facility, WCHD records only show 3 275 AST's but Jde found 2 more 1K UST, #2 fuel oil & waste oil. Non−standard size tank. Name under PBS records: RCC Properties, maybe under Shults. Waiting on permit, prior to removal. TCR to be submitted to WCHD. 10−8−10: V.Mc.: Poss. cross ref. 090−1804 & 091−1783, but address for both spill #'s is given as 55 West Post. 11/18/10 Site meeting held to review current status. Two property developers were present and a representative for Dave Pelletier from Jade Environmental. Site owners: Bob Slingsby − cell 914 715−1974 Joshua Schwartz −VP All Med 161 West 61st St. Apt 9A NY NY 10023 Bob from Jade Environmental Pointed out two locations were a waste oil tank and a #2 FO tank were removed. Impacted soil around the tanks was excavated and stockpiled awaiting disposal. Dave Pelletier reported by phone that 14 lifts had been removed and that gray impacted soil was observed at the smear zone a 6'bg. He will be drafting a soil and groundwater sampling plan and will submit the plan for Dept review.

TG 09/26/11 Cleanup performed by Jade Environmental. See Final Cleanup report in Edocs. NFA. TG

DEC Investigator Remarks:

11/17/16 Spoke to Wayne at Barrier, who said he went 9' below grade, and is fairly sure there is a groundwater impact. Spoke to homeowner who confirmed these remarks, and is contacting insurance. dw

2/14/17: Email update received from Tim Bishop of Hydro Environmental:

We covered a claim here on behalf of MetLife and Barrier completed the cleanup of 120.03 tons of contaminated soil. We just completed our first round of post−remedial groundwater sampling and the results were favorable, no VOCs and a few SVOCs (usual PAHs). I´ll send you our Closure Report in the coming weeks jod

3/8/2017: Barrier Environmental disposed of the leaking UST and a total of 120.03 tons of petroleum contaminated soil. Post excavation soil sample results were submitted for review. Ground water was also impacted and sampled. Report from Hydro (HES) entered into DecDocs database. Based upon information provided, no further action required at this time. jod

Caller Remarks:

BOILER MALFUNCTION, AND CALLER ENROUTE TO CLEAN UP: SOME DID GO INTO DRAINAGE:

DEC Investigator Remarks:

11/22/06 Two valves feeding oil to the boiler failed, resulting in the constant pumping of oil into the boiler. The boiler failed and oil eventually drained out of the bottom of the boiler and flooded a large section of the boiler room floor. Oil entered a drainage pump pit but no evidence of a discharge of oil into the storm drain system was observed. YMCA hired Northeast Environmental for the spill cleanup. NE will vac up the oil and decon the floor and the pit. TG

leaking tank from filter to ground to drain to bronx river − FD on scene − cleanup pending −

---

DEC Investigator Remarks:

1−10−12 Chris, WCHD, responded to a call from White Plains DPW of sheen coming out of an outfall to the Bronx River. O'Dee responding. jc

1/10/12: I met on site with Chris Lalak and Joe Mancini of WCDOH. Also present, numerous members of the WP Fire Dept, WP DPW, and WP Highway Dept. Source of spill is a leaking 137 gallon AST for a generator at 146 Westmoreland Ave. Property owner is Home Street Holdings LLC. Property is leased by contractor Cum Laude Group − AST is owned by Cum Laude. Fire Dept deployed boom in the River and in impacted catch basins. Tri−State contacted by DEC and responded. After I arrived on site, owner of Cum Laude Chris Cacace arrived. He has accepted responsibility for the spill. Tri−State will maintain booms in River while remediation takes place. NES hired for clean up on site. jod

1/11/12: Chris Lalak of WCDOH inspected:

>>> Lalak, Chris 1/11/2012 11:56 AM >>>

John, The clean up is coming along. The river looks great. No sign of oil in the river. The absorbents are working properly.

The spill area on westmoreland looks good. It appears that all the contamination has been excavated. I am waiting on a call back from al NES, he was on site this morning and I missed him. >>>1/11/2012 12:27:10 PM: The excavation is good. There is a heavy sheen in the water in the exc. I required that they vac it out before backfilling. They will vac it and backfill today probably. jod

4/2/12: The clean up in the Bronx River has been completed by Tri−State. Booms have been removed for disposal. The clean up on the property has been completed by NES. No further action is required at this time. jod

EQUALIZING LINES CONNECTING 3 TANKS HAD FAILURE CAUSES LOSS. CLEAN UP EN RTE BY CT TANK. SUMP PUMP

DEC Investigator Remarks:

4/7/11 Conn. Tank (203−384−6020, 888−304−8265) enroute to vac out, and do spill cleanup. ETA was approx 4:30pm. Tanks were filled by Petro this morning. Possible 800 gal release due to 3 connected 330 AST's. Sump involved but this has been unplugged. Bldg. has offices, and the people have left due to possible fumes. WCHD is sending a rep, after speaking with Carlos Torres. Updated T. Ghiosay. J. O'Dee enroute. Vaulted area is not under the building, but in an adjacent area outside. Bill Christopher is building owner at 203−644−2002 cell . John O'Dee reports from the scene that approx 900 gal has been lost, and will be checking sewer lines. dw

4/7/11: I first inspected the Mamaroneck River just north of this location. Located the outfall from the storm drains in the area of the spill. No evidence of any sheen or petroleum noted. Met on site with WCDOH Denise Heinzinger and Sebastian Bimonte. Also on site, WP Fire Dept, City Building Dept, City Highway Dept and WP police. Contact for building ownership is Bill Christopher 914−949−7600 − part owner of Urban Living Association.

Office Bldg has 3 manifolded 330 gallon tanks in the basement. There is a cinder block containment vault around the three ASTs, approx 2 and 1/2 ft high. Petro had delivered approx 460 gallons at around 8:00 AM and noticed no problem. Owner of the restaurant next door states he began noticing petroleum odors around 9:30−10:00 AM. It appears the center tank had a leg break, tank collapsed unto piping. All three tanks now empty. Most of the petroleum was contained to the vault where it was recovered by CTR using a vac truck. But a significant amount leaked out thru a floor drain and into two large sumps in the sub−basement a half level below. The pump in one of the sump does not work and the other was reportedly off before and during the release. Both sumps discharge to the sanitary sewer. Manholes around the entire perimeter of the building were inspected, no petroleum was found in any.

CTR continuing with the remedaiation. ASTs were being cut, cleaned and removed when I left. CTR states they will forward a report when complete. WCDOH will inspect tomorrow. jod

4/19/11: WCDOH initial inspection report entered into eDocs. Denise states she re−inspected on 08Apr11 and clean up was proceeding. jod

>>> Heinzinger, Denise 4/21/2011 10:08 AM >>>

I was out there yesterday. Looks pretty clean ˇ tons of deodorizer The sumps were good, a very light sheen upon the water. Barrels of contamination still on site.

−CTR continuing with remediation. jod

12/08/11: Update received from WCDOH: >>> Heinzinger, Denise 12/8/2011 9:22 AM >>>

I believe we can close spill #1100238 ˇ 171 East Post Rd, White Plains. Exterior, diked AST legs gave out breaking tank. Containment held most of the oil but some seeped out into a nearby floor drain which ended up in their basement sump pits. Clean up performed. May have been some cracks in the basement floor. Apart from jack hammering up I believe the clean up was satisfactory. *DEC concurs − no further action required at this time. jod

## Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.

D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.

D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.

D003 Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.

D005 Barium

D006 Cadmium

D007 Chromium

D008 Lead

D009 Mercury

D011 Silver

D016 2,4−D, (2,4−Dichlorophenoxyacetic acid).

D018 BENZENE

D028 1,2−Dichloroethane

D039 Tetrachloroethylene

F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1−trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1−trichloroethane, chlorobenzene, 1,1,2−trichloro−1,2,2−trifluoroethane, ortho−dichlorobenzene, trichlorofluoromethane, and 1,1,2−trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F003 The following spent non−halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n−butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non−halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non−halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

F005 The following spent non−halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2−ethoxyethanol, and 2−nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non−halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

U036 Chlordane, alpha & gamma isomers

U188 Phenol

U328 o−Toluidine

X940

# How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12 Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/ operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

# Information Source Guide

*Toxics Targeting's Environmental Reports* contain government and other information compiled on 18 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated from: 9/09/2015. Data obtained by Toxics Targeting: 9/09/2015.
New Facilities updated through: 9/30/2016. Data obtained by Toxics Targeting: 9/30/2016.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 11/30/2018. Data obtained by Toxics Targeting: 11/30/2018.
New Facilities updated to: 11/30/2018. Data obtained by Toxics Targeting: 11/30/2018.

3) **Federal & State Corrective Action Activity (CORRACTS):** New York State and Federal databases of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.**

**Federal Data** Source: U. S. Environmental Protection Agency[1]
Data attributes updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.
New facilities updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.

**State Data** Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 11/30/2018. Data obtained by Toxics Targeting: 11/30/2018.
New facilities updated through: 11/30/2018. Data obtained by Toxics Targeting: 11/30/2018.

4) **CERCLIS:** Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. Includes Active and No Further Remedial Action Planned (NFRAP) sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated through: 10/25/2013. Data obtained by Toxics Targeting: 1/07/2014.
New Facilities updated through: 7/17/2017. Data obtained by Toxics Targeting: 8/22/2017.

5) **Brownfield Programs:** NYS programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.
ASTM required.* Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 11/30/2018. Data obtained by Toxics Targeting: 11/30/2018.
New Facilities updated to: 11/30/2018. Data obtained by Toxics Targeting: 11/30/2018.

(a) **Brownfield Cleanup Program (BCP)**
(b) **Voluntary Cleanup Program (VCP)**
(c) **Environmental Restoration Program (ERP)**

6) **Solid Waste Facilities: NYS Solid Waste Registry**, including, but not limited to, landfills, incinerators, transfer stations, recycling centers.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data updated to: 4/1/2013. Data obtained by Toxics Targeting: 4/1/2013.

7) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the DEC's Division of Environmental Remediation pursuant to NYS Law and the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 11/26/2018. New facilities obtained by Toxics Targeting: 12/01/2018.
Manifest transactions data updated to: 11/26/2018. Manifest transactions data obtained by Toxics Targeting:12/01/2018.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]
New facilities updated through: 3/01/2018. New facilities obtained by Toxics Targeting: 3/07/2018.
Data attributes updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). This database includes both *active* and *closed* spills.
ASTM required.* Fannie Mae.** Source: NYS Department of Environmental Conservation.[2]

New spills through: 11/29/2018 New spills data obtained by Toxics Targeting: 11/29/2018
Spill attribute data through: 11/29/2018 Spill attribute data obtained by Toxics Targeting: 11/29/2018

Active spills: paperwork not completed. Closed spills: paperwork completed.
Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Major Oil Storage Facilities:** NYS database of facilities licensed pursuant to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than 400,000 gallons. **Tank and other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

Data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

10) **Petroleum Bulk Storage Facilities:** County or State databases of aboveground and underground petroleum storage facilities.
ASTM required.* Fannie Mae required.**

All New York Counties except Cortland, Nassau, Rockland, Suffolk, and Westchester:
**NYS Petroleum Bulk Storage Database**. This includes all New York State counties except Cortland, Nassau, Rockland, Suffolk, and Westchester. ASTM required.* Fannie Mae required.**
Source: NYS Department of Environmental Conservation.[2]
New facilities updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.
Tank data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

Cortland County: **Cortland County Health Dept. Tank database**.
Source: Cortland County Health Department[7]
Data updated through: 7/15/2004 Data obtained by Toxics Targeting: 7/23/2004

Nassau County: a compilation of the following 2 databases:
**Heat producing products and other products**:
Source: Nassau County Department of Health.[3]
NOTE: This data is being withheld by the Nassau County DOH
Data updated through: 4/1/2001. Data obtained by Toxics Targeting: 1/2/2002

**Generally non-heat producing products**:
Source: Nassau County Fire Marshal.[4]
Data updated through: 8/6/2009. Data obtained by Toxics Targeting: 9/22/2009

Rockland County: **Rockland County Dept. of Health Tank database.**
Source: Rockland County Department of Health.[5]
Data updated through: 1/6/2017. Data obtained by Toxics Targeting: 1/11/2017.

Suffolk County: **Suffolk County Dept. of Health Article 12 database**
Source: Suffolk County Department of Health Services.[6]
Data updated through: 1/30/2014. Data obtained by Toxics Targeting: 7/22/2014.

Westchester County: **Westchester County Dept. of Health database**.
Source: Westchester County Department of Health [8]
Data updated through: 2/22/2016 Data obtained by Toxics Targeting: 2/22/2016

11) **RCRA Hazardous Waste Generators and/or Transporters Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the NYS Department of Environmental Conservation's Division of Environmental Remediation pursuant to New York State Law.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 11/26/2018. New facilities obtained by Toxics Targeting: 12/01/2018.
Manifest transactions data updated to: 11/26/2018. Manifest transactions data obtained by Toxics Targeting: 12/01/2018.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]

New facilities updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.
Data attributes updated through: 3/01/2018. Data obtained by Toxics Targeting: 3/07/2018.

12) **Chemical Bulk Storage Facilities:** New York State database of facilities compiled pursuant to 6NYCRR Part 596 that store regulated substances listed in 6NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size. **Tank and other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

# FOIL Request :: W045639-121318

1 message

**New York DEC Support** <newyorkdec@mycusthelp.net> Thu, Dec 13, 2018 at 11:15 AM
To: "cgriffiths@akrf.com" <cgriffiths@akrf.com>

Dear Colleen:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 12/13/2018 and given the reference number FOIL #W045639-121318 for tracking purposes. You may expect the Department's response to your request no later than **1/14/2019**.

Record Requested: **Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for: 135 South Lexington Avenue, White Plains, NY 10601. Tax lot# 125.83-7-1 Please indicate AKRF's project number (170131) on all correspondence.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

# STATE OF NEW YORK
# DEPARTMENT OF HEALTH

2364 Corning Tower  Governor Nelson A. Rockefeller Empire State Plaza  Albany, New York 12237

## 1. TO THE NEW YORK STATE DEPARTMENT OF HEALTH:

I hereby apply to **Inspect** ☐ or **Receive Copies** ☒ of the following records (use additional sheets as needed and attach)

Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for:

135 South Lexington Avenue, White Plains, NY 10601. Tax lot# 125.83-7-1

NAME: Colleen Griffiths PHONE: ( ) 914-922-2363 EMAIL: cgriffiths@akrf.com

FIRM: AKRF Inc.

ADDRESS: 34 South Broadway, White Plains, NY 10601

SIGNATURE: Colleen L. Griffiths DATE: 12/13/18

## 2. TO THE APPLICANT:

**-Records Provided**

☐ The reproduction costs for the records are $_____. Please forward a check payable to the New York State Department of Health to the address listed above. If we do not receive your payment within **60** days, we will assume that you no longer wish to receive the materials, and they will be sent back to the originating unit. Accordingly, any future requests for information will require an initial deposit before processing.

☐ Records have been (partially, fully) provided. (If not fully provided, date when records are expected to be fully provided:_____).

**-Records Not Available**

☐ Records cannot be found after a diligent search.

☐ The Department does not maintain records indicated, please contact:_____

**-Records Denied or Redacted**

I hereby certify that access to the records—or part of the records—have been denied to the applicant for the reason(s) checked below (You may appeal this denial of access in writing within 30 days to the Records Access Appeals Officer, Empire State Plaza, 1455 Corning Tower, Albany New York 12237):

☐ Specifically exempt by other statute(s).

☐ Unwarranted invasion of personal privacy.

☐ Would impair present or imminent contract awards or collective bargaining negotiations.

☐ Are examination questions or answers.
Are inter-agency or intra-agency materials that are not: -statistical or factual tabulations or data
-instructions to staff that affect the public
-final agency policy or determinations; or
-external audits, including but not limited to audits performed by the comptroller and the federal government.

☐ Are trade secrets.

☐ Could, if disclosed endanger the life of any person.

☐ Are compiled for law enforcement purposes and which, if disclosed would:
-interfere with law enforcement investigations or judicial proceedings
-deprive a person of the right to a fair trial or impartial adjudication
-identify a confidential source or disclose confidential information relating to a criminal investigation, or
-reveal criminal investigative techniques and procedures

☐ Would jeopardize an agency's capacity to guarantee the security of its information technology assets, such assets encompassing both electronic information systems and infrastructures.

FOIL # 18-12-263

Dear Ms. Griffiths:

This will acknowledge receipt of your request for records under the Freedom of Information Law, received by this office on December 13, 2018.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

Re: FOIL request

135 South Lexington Avenue, White Plains

Dear Ms. Griffiths:

This is to acknowledge receipt of your FOIL request seeking: Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for: 135 South Lexington Avenue, White Plains, NY 10601. Tax lot# 125.83-7-1

Please be advised the Department of Public Works does not handle the matters mentioned in your request relating to underground storage tanks, spills, dumping, hazardous materials, etc. Additionally, this department does not have jurisdiction over the location of 135 South Lexington Ave, White Plains. Therefore, records responsive to your request were not found. It is suggested that you submit a request to the Westchester County Health Dept.

Very truly yours,

Records Access Officer

Westchester County Public Works

Re: Phase I Environmental Site Assessment
*Brookfield Commons Phase 2 – White Plains, New York*
*AKRF Project Number: 170131*

Dear Musa:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 unless noted otherwise in Section 8.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

Marc S. Godick, LEP
Senior Vice President

Asya Bychkov, P.E.

# EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Trinity New York Development, LLC (Trinity) to perform a Phase I Environmental Site Assessment (ESA) of the Property located at 135 South Lexington Avenue (part of White Plains Tax Lot 125.83-7-1) in White Plains, Westchester County, New York. The Property was developed with a vacant nine-story apartment building with a basement and surrounding lawns and walkways, which were part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The remainder of the complex was located to the north, south and east of the Property. The surrounding area was mixed-use, including residential and commercial uses, filling stations, a hospital, churches, and municipal buildings.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

Prior to the construction of the existing building and surrounding grounds, the Property was undeveloped and included a small stream flowing toward the north. In the early 20$^{th}$ century, the Property was developed with smaller structures (residential buildings with yards and parking garages). These structures were demolished in the late 1940s as part of the redevelopment of the Property (and land to the north, east and south) with the Winbrook complex. The existing building was constructed in approximately 1949 or 1950, and was residential until becoming vacant in 2016.

This assessment revealed the following:

***Recognized Environmental Conditions (RECs)***

- Historical land uses in the vicinity of the Property included the White Plains Hospital, auto sales, auto and bicycle repair shops, filling stations and stores with gasoline underground storage tanks (USTs), woodworking and painting shops, dry cleaners, a rug cleaner, undertakers, sheet metal works, electrical businesses, and a printer. The reconnaissance also identified the hospital, active and former filling stations, auto repair shops, car dealerships, two laundries (including one identified on historical land use maps and in the regulatory database as a dry cleaner), and a hardware shop with a glass cutting service in close proximity to the Property. Numerous active- and closed-status spills, petroleum bulk storage facilities, hazardous waste generators (including generators of chlorinated solvents), and a State Brownfield Cleanup Program Site with some potential to affect the Property were reported in regulatory databases.
- One of the spills reported in close proximity to the Property was active-status spill No. 9713110 at a former filling station at 26 East Post Road, approximately 330 feet south of the Property. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling station onto the Winbrook complex. Remedial activities included removal of contaminated soil, groundwater and soil vapor, and installation and sampling of numerous groundwater monitoring wells. The nearest of these wells were located approximately 60 to 240 feet south and east of the Property. Groundwater sampling in August 2016 indicated no evidence of significant concentrations of petroleum-related volatile organic compounds (VOCs) in the wells

nearest the Property. However, these wells contained elevated concentrations of VOCs associated with chlorinated solvents, including tetrachloroethene (PCE) at up to 1,000 parts per billion (ppb) and tetrachloroethene (TCE) at up to 55 ppb. Since no potential source of chlorinated VOCs has been identified on the Property, these VOCs may have originated from an off-site source. Based on the groundwater concentrations, these VOCs may be present at elevated concentrations in soil vapor.

***Controlled RECs (CRECs)***

- The Winbrook complex, including the Property, was heated by steam generated at a heating plant located in a basement of an off-site building (33 Fisher Avenue) approximately 230 feet southeast of the Property. The plant's boilers were supplied by two, 20,000-gallon No. 4 fuel oil USTs located beneath a lawn west of the boiler room. Five closed-status spills were reported in connection with these USTs, including three tightness test failures in 1989-2010, a minor surface spill in 1993, and an approximately 700-gallon release due to overfill in 2000 which reportedly required cleanup of a nearby playground area. The playground is approximately 200 feet southeast of the Property. As noted above, no evidence of significant petroleum contamination was identified in groundwater in the vicinity of the Property in 2016; thus, the historical spills are considered to be Controlled RECs (CRECs) rather than RECs.

***De Minimis Condition***

- Stream filling and demolition of historical structures on the Property may be associated with fill materials of unknown origin. A 2012 subsurface investigation of the north-adjacent parcel indicated the presence of an approximately 0.5 to 1-foot topsoil layer, underlain by approximately 3 feet of fill materials (sand, gravel, brick and glass), which were underlain in turn by apparent native soil.
- At the time of the reconnaissance, the Property building was equipped with a trash compactor. However, historical plans showed the compactor room in the basement as an incinerator room.
- Chemical storage at the Property included one five-gallon bucket of hydraulic oil, paint and cleaning and maintenance chemicals in containers up to five gallons, and 55-gallon drums of cleaning chemicals, which were stored in various basement areas. The observed chemicals were neatly stored and labeled, with no evidence of a release.

***Other on-site environmental concerns (items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris)***

- A hazardous materials survey of the Property building in 2016 included an asbestos survey, which identified asbestos-containing materials (ACM), including vinyl floor tile and mastic, linoleum and mastic, thermal pipe insulation, window caulking, and the roof of the elevator bulkhead based on laboratory analysis. Other building materials were identified as not containing asbestos. Building materials, including the identified ACM, were noted to be in good to damaged condition.
- The 2016 hazardous materials survey included sampling for lead-based paint. This survey did not identify lead-based paint on interior painted surfaces. However, lead-based paint may be used on exterior surfaces (painted brick walls). Painted surfaces were observed to be in fair to poor condition. During the reconnaissance, there was no observation of residential occupancy, child care facilities or other facilities where the extended presence of children would be expected.
- Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic compactor equipment may contain polychlorinated biphenyls (PCBs). In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury.

**Potential for Vapor Encroachment**

This Phase I assessment identified a potential for subsurface vapors, and thus a potential for vapor encroachment into current or future buildings at the Property, based on the RECs noted above.

# RECOMMENDATIONS

- The potential for subsurface contamination, including fill materials of unknown origin associated with filling of a historical stream on the Property and demolition of historical on-site structures, potential USTs associated with historical on-site structures, historical on-site trash incineration, and elevated chlorinated VOC concentrations in groundwater and/or soil vapor, has been identified for the Property. Prior to undertaking subsurface disturbance, a subsurface investigation, including the collection of samples for laboratory analysis, should be performed. It is possible that this investigation may uncover evidence of a petroleum spill or other situation reportable to the New York State Department of Environmental Conservation (NYSDEC) and/or other regulatory agencies.
- If any USTs are encountered during construction, they should be closed and removed, along with any contaminated soil, in accordance with the applicable regulations, which may include NYSDEC registration and/or spill reporting requirements.
- Any known or suspect ACM at the Properties need to be maintained in good condition in accordance with applicable regulations. Prior to any renovation or demolition activities with the potential to disturb known or suspect ACM, known ACM should be removed and, where suspect ACM are present, an asbestos survey of the areas to be disturbed should be conducted. Any ACM that would be disturbed should be removed and disposed of in accordance with local, state, and federal requirements.
- Any activities (such as renovation or demolition) with the potential to disturb lead-based paint must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - *Lead Exposure in Construction*). If the Property building is re-occupied for residential or child care uses, additional requirements (e.g., tenant notification, inspections and abatement) may apply, even if no disturbance is planned.
- Unless there is labeling or test data indicating that electrical equipment, fluorescent lighting fixtures, and hydraulic equipment in the building do not contain PCBs, and that electrical equipment and fluorescent lamps are not mercury-containing, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- Any excess chemicals or other wastes or surplus materials requiring disposal should be properly disposed of in accordance with applicable requirements.

# 1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Trinity New York Development, LLC (Trinity) to perform a Phase I Environmental Site Assessment (ESA) of a Property located at 135 South Lexington Avenue (part of White Plains Tax Lot 125.83-7-1) in White Plains, Westchester County, New York. The Property was developed with a vacant nine-story apartment building with a basement and surrounding lawns and walkways, which were part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The remainder of the complex was located to the north, south and east of the Property. The surrounding area was mixed-use, including residential and commercial uses, filling stations, a hospital, churches, and municipal buildings.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I ESA Practice)*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor and/or groundwater) within, from and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACM) and potential lead-based paint. However, no samples were collected or analyzed and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical fire insurance maps for the Property and nearby sites were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and other properties within the ASTM-defined radii: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the Property and other properties within predetermined radii: petroleum and hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Disposal Site Draft Study; Hazardous Waste Treatment, Storage or Disposal Facilities; Major Oil Storage Facilities (MOSF); and Brownfield Cleanup Program (BCP).

- Local agency reviews, including White Plains Fire Department and Buildings Department records, were conducted for the Property only.

# 2.0 PHYSICAL SITE DESCRIPTION

On May 31, 2017, Ms. Asya Bychkov and Ms. Colleen Griffiths of AKRF conducted a reconnaissance of the Property, accompanied by Mr. Earl Greenridge of the White Plains Housing Authority (WPHA), who answered pertinent questions. Mr. Al Pio, Deputy Director of the WPHA, also met AKRF personnel and answered pertinent questions prior to the reconnaissance. Neighboring properties were also viewed, but only from public rights-of way. The weather was sunny and approximately 70 °F, the visibility good, and the premises adequately illuminated. Photographs from the reconnaissance are included in Appendix A.

## 2.1 General Site Conditions

The Property was developed with a nine-story vacant apartment building with a basement, which was surrounded by lawns and asphalt-paved walkways. The building was heated by steam provided by an off-site heating plant, illuminated by fluorescent and incandescent lights, and served by two cable-driven electrical elevators, which were out of service at the time of the reconnaissance. According to Mr. Pio, the building was residential throughout its history, and became vacant in approximately early 2016. The Property was part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook, with a collective address of 223 Dr. Martin Luther King Jr. Boulevard.

The building's ground floor was occupied by a lobby, a slop sink room, a mail room, a former laundry from which all washing machines had been removed, and vacant apartments. Windows on the lower two floors were boarded up. Some trash and abandoned furniture were noted in apartments and in hallways.

The basement contained a trash compactor room, a utility meter room, a steam equipment room, and a large open space used for storage. The steam equipment room contained two insulated hot water tanks, and pipes used to return condensate water to the off-site boiler. Water staining was noted on the concrete floor around the condensate return pipes. A concrete pad was noted outside the steam equipment room; according to Mr. Greenridge, a third hot water tank was historically located on this pad. Storage of abandoned furniture and maintenance supplies was noted in the basement. A sump was observed in the open space, but could not be opened for inspection. Dirt and apparent water staining, but no evidence of oil staining, were noted on the basement floor.

A five-gallon bucket of hydraulic oil was observed in the trash compactor room. Other chemical storage in the basement included paint and cleaning and maintenance chemicals in containers up to five gallons, and 55-gallon drums of cleaning chemicals. The containers were neatly stored and labeled, with no evidence of a release. Mr. Greenridge indicated that proper disposal of waste chemicals was arranged by the WPHA.

A two-level structure occupied by a stairwell bulkhead and the elevator motor room was located on the roof.

Interior finishing materials consisted of: concrete, ceramic tile, carpet, wood laminate tile, linoleum, and vinyl tile flooring; concrete, sheetrock, plaster, and ceramic tile walls; and concrete, smooth plaster, and popcorn plaster ceilings. These materials were observed to be in fair to poor condition. According to Mr. Pio, after the building became vacant, it was used for training by the White Plains Police and Fire Departments, which had caused some damage to finishing

materials. The roof was covered with gravel mixed with tar; the underlying roofing was not visible. Rubberized flashing was noted on the parapet around the edges of the roof. The visible roofing materials were in good condition.

The on-site lawns and walkways surrounding the building were noted to be in good condition, with no odors, staining, or evidence of petroleum storage tanks. Based on Winbrook plans provided by WPHA, floor drains and storm drains on the Property were connected to the municipal sewer system.

## 2.2 Topography and Hydrogeology

The surface topography at the Property slopes slightly down toward the north. The Property is located in a topographic depression, with surrounding land sloping slightly down toward it from the north and south. Based on reports compiled by the U.S. Geological Survey (White Plains, NY Quadrangle), the Property was approximately 200 feet above the North American Vertical Datum of 1988, an approximation of mean sea level. Previous studies summarized in Section 7.0 indicated that prior to redevelopment, the Prelude parcel north-adjacent to the Property was underlain by approximately 0.5 to 1 foot of topsoil, followed downward by approximately 3 feet of fill materials (sand, gravel, brick and glass), which was in turn underlain by apparent native sand and silt to approximately 10 to 18 feet below grade. Similar subsurface conditions may be present at the Property. The previous studies also indicated that remedial excavation for off-site Spill No. 9713110 in a Winbrook parking lot, approximately 240 feet south of the Property, may have encountered bedrock approximately 12 to 13 feet below grade.

Based on previous studies, groundwater in the vicinity of the Property is anticipated to be approximately 5 to 8 feet below grade, flowing in a northwesterly direction toward the Bronx River, located approximately 1,600 feet away. However, actual groundwater flow at the Property can be affected by many factors, including: past filling activities; underground utilities; other subsurface openings or obstructions such as basements; and other factors beyond the scope of this study. According to the 2014 Annual Water Quality Report prepared by the City of White Plains Department of Public Works, groundwater supply wells formerly providing potable water for White Plains were decommissioned in 2009. The City of White Plains was subsequently supplied with potable water from a reservoir in the NYC potable water supply system.

## 2.3 Storage Tanks

### 2.3.1 Underground Storage Tanks (USTs)

During the reconnaissance, no evidence, such as vent pipes, fill caps, or concrete patches, was observed that would indicate USTs are or were present on the Property. No records pertaining to USTs on the Property were identified in the regulatory database.

Off-site USTs are discussed in Section 5.2.2.

### 2.3.2 Aboveground Storage Tanks (ASTs)

During the reconnaissance, no evidence of ASTs, such as vent pipes, fill ports, tanks or vaults, was noted on the Property. No records pertaining to ASTs on the Property were identified in the regulatory database.

Off-site ASTs are discussed in Section 5.2.2.

## 2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic trash compactor equipment may contain PCBs. In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury. No leaks or stains from such equipment and fixtures was noted.

## 2.5 Lead-Based Paint

Lead-based paint was generally not used inside residential buildings after 1977 nationwide. Lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children, especially when it is in poor condition.

Painted surfaces in the accessible areas were observed to be in fair to poor condition, with some peeling paint. Based on the age of the building, lead-based paint may be present on interior painted and exterior painted surfaces (e.g., painted brick walls). However, a July 2016 survey of this building, provided by WPHA, did not identify lead-based paint on interior painted surfaces based on laboratory analysis. During the reconnaissance, the building was vacant and there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected.

Activities (such as renovation or demolition) with the potential to disturb lead-based paint are subject to a variety of requirements, including US Occupational Safety and Health Administration regulation 29 CFR 1926.62 (Lead Exposure in Construction). If the Property building is re-occupied for residential or child care uses, additional requirements (e.g., tenant notification, inspections and abatement) may apply, even if no disturbance is planned

## 2.6 Utilities

The Property was supplied with natural gas and electricity, and was connected to the municipal water and sewer systems. At the time of the reconnaissance, water supply to the Property building was shut off with the exception of fire sprinklers.

## 2.7 Waste Management and Chemical Handling

At the time of the reconnaissance, the Property building was vacant and did not generate trash. An inactive trash compactor was observed in the building's basement. Based on a five-gallon container of hydraulic oil observed in the compactor room, this compactor may have been hydraulic. Some trash and abandoned furniture were noted in apartments and in hallways.

Chemical storage at the Property included one five-gallon bucket of hydraulic oil, paint and cleaning and maintenance chemicals in containers up to five gallons, and 55-gallon drums of cleaning chemicals, which were stored in various basement areas. According to Mr. Greenridge, proper disposal of waste chemicals was arranged by the WPHA. The observed chemicals were neatly stored and labeled, with no evidence of a release.

## 2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. According to a New York State Department of Health database, the average radon

level in White Plains is 2.91 picocuries/liter in basements and 3.77 picocuries/liter on ground floors, both below the USEPA recommended action level of 4.0 picocuries/liter.

## 3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Suspect ACM observed during the reconnaissance included: window glazing and caulking; mastic for ceramic tile, carpet and wood laminate tile; linoleum and associated mastic; vinyl floor tile and associated mastic; sheetrock and plaster; thermal pipe insulation; and roofing materials, which were noted in fair to poor condition. ACM may also be present in other locations not readily accessible during the reconnaissance. AKRF's reconnaissance did not constitute and cannot substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing. However, the July 2016 survey of this building provided by WPHA, identified ACM, including vinyl floor tile and mastic, linoleum and mastic, thermal pipe insulation, window caulking, and the roof of the elevator bulkhead based on laboratory analysis. Other building materials were identified as not containing asbestos.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYS-certified asbestos inspector to determine if the project will disturb ACM. Any such ACM (and any other ACM subsequently identified) must be removed prior to the renovation or demolition.

## 4.0 ADJACENT LAND USE

The Property was surrounded to the north, east and south by residential buildings with paved and landscaped grounds. The nearest building, located approximately 70 feet north of the Property (referred to as Prelude or 301 Quarropas Street) was constructed in 2014 as part of Phase 1 of the redevelopment of Winbrook. According to Mr. Pio, this building is not managed by WPHA. The heating plant for the Winbrook complex was located in the basement of an apartment building at 33 Fisher Avenue, approximately 230 feet southeast of the Property. This plant was toured during the reconnaissance and contained two natural gas- and oil-fired boilers. Water staining was noted on the concrete floor of the heating plant, but no odors or oil staining were observed. According to WPHA staff, the boilers were supplied by two, 20,000-gallon No. 4 fuel oil USTs located beneath a lawn west of the boiler room. Access ports and fill ports for these USTs were observed during the reconnaissance. In addition to the above, Winbrook included: three additional apartment buildings, a playground, athletic courts, asphalt-paved walkways and parking areas, and lawns. Several monitoring well covers were observed within the Winbrook complex to the south and east of the Property. Based on previous reports summarized in Section 7.0, these covers were associated with monitoring wells and soil vapor monitoring points installed during investigation of off-site Spill No. 9713110 at 26 East Post Road.

The greater surrounding area was mixed-use, including residential and commercial uses, churches, municipal buildings (primarily north of the Property). The Property superblock included: a vacant lot approximately 330 feet south of the Property at 26 East Post Road (the source of Spill No. 9713110); an

auto repair shop and an apparent inactive filling station surrounded by chain-link fence approximately 350 feet southeast of the Property; a hardware store approximately 480 feet south of the Property, with a sign indicating glass cutting is performed in the store; and a laundromat approximately 520 feet south of the Property. A filling station and an auto repair shop were observed approximately 170 feet northwest of the Property. Three auto dealerships were observed approximately 290 and 500 feet southwest of the Property, and 700 feet south of the Property. A laundromat was observed approximately 250 feet southwest of the Property. The White Plains Hospital and a filling station were located on the south-adjacent block, approximately 550 feet south of the Property.

# 5.0 PROPERTY HISTORY AND RECORDS REVIEW

## 5.1 Prior Ownership and Usage

### 5.1.1 Historical Land Use maps

Historical maps were reviewed for indications of uses (or other evidence) suggesting hazardous material generation, usage or disposal on or near the Properties. Specifically, Sanborn Fire Insurance Maps from 1900, 1905, 1911, 1930, 1942, 1950, 1987, 1989, 1990, 1992-1995, and 2002-2004 were reviewed. Copies of the maps are provided in Appendix B.

*1900*

The Property was shown as vacant land on a block bounded by Fisher Avenue to the north, South Lexington Avenue to the west, Brookfield Avenue to the east, and New York Post Road to the south.

The surrounding area was moderately developed with small dwellings with yards.

*1905*

Two small, two and a half-story dwellings with yards were shown in the northwestern corner of the Property. A two-story dwelling was partially located in the southeastern corner of the Property.

Two small apartment buildings were shown in the southern portion of the Property block. A church and a small carpentry shop were shown on the east-adjacent block. No further significant changes from the 1900 map were noted in the surrounding area.

*1911*

In addition to the buildings shown on the 1905 map, two apartment buildings (three and four stories) were shown on the Property.

The surrounding area was more densely developed compared to the 1905 map. The southern portion of the Property block included small apartment buildings, a church, and stores. Additional dwellings, stores, stables, a church, and a synagogue were shown on surrounding blocks.

*1930*

In addition to the structures shown on the 1911 map, a three and a half-story apartment building and five small parking garages were shown on the Property.

Three small auto repair shops and one vulcanizing (tire conditioning) facility were shown to the north and south of the Property on the same block. A filling station with three gasoline USTs was shown at the southeastern corner of the Property block. A filling station with five gasoline USTs, and a store with one gasoline UST, were shown west of the Property across South Lexington Avenue. A warehouse with a gasoline UST was shown on the north-adjacent block. The northeast-adjacent block included a large construction company with woodworking and painting, a cabinet shop, and an auto painting shop. An auto repair shop and an auto painting shop were shown two blocks east of the Property. The White Plains Hospital was shown on the south-adjacent block.

*1942*

The Property and surrounding area were shown without land use information, but appeared to be similar in layout to the 1930 map.

*1950*

The Property had been redeveloped with the existing nine-story building, which was surrounded by Winbrook apartment complex grounds. The Winbrook buildings were noted to have been built in 1949-1950.

The Property block and the east-adjacent block had been merged into a superblock, most of which had been redeveloped with the Winbrook multi-story apartment building complex. A boiler house was shown in an off-site Winbrook building, approximately 230 feet southeast of the Property. The superblock also contained: a church on its northern side; and stores, an undertaker, two filling stations including the station first shown on the 1930 map (which appeared to have been reconfigured since 1930), and an auto repair shop on its southern side. The hospital to the south appeared to have expanded compared to the 1942 map. The south-adjacent block also included an auto sales facility and a car wash. The filling station shown west of the Property on the 1930 map had been replaced by a large auto repair and sales facility. In addition, a roofing and sheet metal works and a filling station with three gasoline USTs were shown west of the Property across South Lexington Avenue. The northeast-adjacent block included a sheet metal works, a rug cleaner, and an undertaker. Three auto repair shops and a vulcanizing facility were shown two blocks to the northeast.

*1987*

No significant changes from the 1950 map were noted on the Property.

The filling stations on the southern side of the Property superblock appeared to have been reconfigured since 1950. A bicycle repair shop was also shown in the southern portion of this superblock. The hospital on the south-adjacent block was shown to have expanded compared to the 1950 map, replacing the adjacent auto sales facility. A used auto sales facility (25 West Post Road) was shown on the southwest-adjacent block. Two dry cleaners (168 and 182 South Lexington Avenue) and an auto repair shop were shown on the west-adjacent block. The former sheet metal works west of the Property had been replaced by a printer. Most structures shown north and northwest of the Property on the 1950 map had been demolished and replaced by a community center, a playground, and parking lots.

*1989*

No significant changes from the 1987 map were noted on the Property or in the surrounding area.

*1990*

The filling stations on the southern portion of the Property superblock were shown as being used for parking; the filling station canopies shown on the 1989 map were present, but not labeled. No further significant changes from the 1989 map were noted on the Property or in the surrounding area.

*1992*

A bicycle repair shop was no longer shown in the southern portion of the Property superblock. No further significant changes from the 1990 map were noted on the Property or in the surrounding area.

*1993*

No significant changes from the 1992 map were noted on the Property or in the surrounding area.

*1994*

The former auto repair shop west of the Property across South Lexington Avenue, and one of the dry cleaners on the west-adjacent block, were shown as unspecified commercial uses. A courthouse had been constructed on the north-adjacent block. No further significant changes from the 1993 map were noted on the Property or in the surrounding area.

*1995*

The hospital on the south-adjacent block had expanded compared to the 1994 map, replacing the adjacent car wash. No further significant changes from the 1994 map were noted on the Property or in the surrounding area.

*2002-2004*

No significant changes from the 1995 map were noted on the Property or in the surrounding area.

To summarize, historical Sanborn maps indicated that the Property was vacant in 1900. Between 1900 and 1942, the Property was developed with small residential buildings and associated parking garages. These structures were demolished for construction of the existing apartment building and grounds, which were constructed in 1949 or 1950 as part of the Winbrook housing complex.

The surrounding area was primarily residential in the early 20$^{th}$ century, with commercial and auto-related uses shown by 1911, and auto-related uses shown by 1930. A hospital was shown on the south-adjacent block in 1930, and subsequently expanded to cover a larger portion of this block. Potential concerns in close proximity to the Property included: the hospital, auto sales, auto and bicycle repair shops, filling stations and stores with gasoline USTs, woodworking and painting shops, dry cleaners, a rug cleaner, undertakers, sheet metal works, and a printer.

### 5.1.2 Historical Aerial Photographs

Since historical fire insurance maps were available for the Property (and surrounding area) and these maps included information relating to land use, aerial photographs would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs were not reviewed.

### 5.1.3 Property Tax Files and Zoning Records

Based on the online White Plains tax and zoning map available on the Westchester County Geographic Information Systems (GIS) website, the Property was zoned as B-3 (business, office and commercial) and classified as 411 (apartments).

### 5.1.4 Recorded Land Title Records

A Chain of Title report was prepared by Environmental Data Resources, Inc. (EDR) as part of this Phase I ESA. Public records of Westchester County, New York were searched from January 1, 1940 to June 7, 2017. One Quit Claim Deed, dated May 19, 1982, was on file, listing the City of White Plains as the Grantor and the White Plains Housing Authority as the Grantee. The Chain of Tile report also indicated that the City of White Plains has owned the Property since the early 1930s. The Chain of Title report is included in Appendix C.

### 5.1.5 Local Street Directories

A City Directory prepared by EDR was reviewed as part of this Phase I ESA. The City Directory, provided in Appendix D, consisted of the names of businesses located on-site and in adjacent properties, compiled from city and reverse telephone directories at approximately five-year intervals starting in 1974. The City Directory identified residential uses on the Property in 1979-2013.

The City Directory also identified potential uses of concern off-site along South Lexington Avenue, to the west and south of the Property, in 1979-2013. These included a printer, a laundry (potential dry cleaner), dry cleaners, electrical businesses, a towing company, a tire shop, an auto service station, auto sales, and a painter.

## 5.2 Regulatory Review

The regulatory database listings, shown in Appendix E, were obtained from Toxics Targeting, Inc. of Ithaca, New York. It includes summaries of the databases searched, their radii around the Property and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

### 5.2.1 Federal

Databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF); and the USEPA Civil Enforcement Docket. Facilities subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) are discussed with State RCRA listings.

*National Priority List (NPL)*

The NPL is the USEPA's list of sites that probably require remedial action under the Superfund Program. Nearby NPL sites can sometimes pose a risk of stigmatizing surrounding properties and thus impacting property values.

No NPL facilities were reported within a one-mile radius of the Property.

*Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)*

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived concern).

No CERCLIS facilities were reported within a ½-mile radius of the Property.

*Emergency Response Notification System (ERNS)*

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

The Property was not identified as an ERNS site.

*Toxic Chemical Release Inventory System (TRIS)*

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

No TRIS facilities were reported within a ⅛-mile radius of the Property.

*Permit Compliance System of Toxic Wastewater Discharge (WWD)*

This database includes certain sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a ⅛-mile radius of the Property.

*United States Environmental Protection Agency Civil Enforcement Docket*

This database tracks civil judiciary cases filed on behalf of the USEPA by the Department of Justice.

Two facilities were listed in the USEPA Civil Enforcement Docket within a ⅛-mile radius of the Property. Based on their location more than 1,200 feet to the northwest and north-northwest (in an anticipated downgradient groundwater flow direction), these facilities are not anticipated to have affected the Property.

*Air Discharge Facilities Index (ADF)*

This federal database includes information on certain air emission sources.

Two Air Discharge Facilities were identified within a ⅛-mile radius of the Property. The listings were as follows:

- WP Hospital Association, located at 41 East Post Road, approximately 550 feet south of the Property, was listed with potential discharges of a "default

pollutant" (possibly associated with boiler operation), and was reportedly in regulatory compliance.

- Christy Cleaners and Tailors, located at 25 West Post Road, approximately 700 feet south of the Property, was listed with potential emissions of tetrachloroethylene (PCE), with no applicable regulations noted.

Based on the anticipated groundwater flow direction, the dry cleaning facility may have affected subsurface conditions beneath the Property. Based on listing details and distance, the WP Hospital Association facility is not likely to have affected subsurface conditions beneath the Property.

### 5.2.2 State

State databases included the listings of petroleum/hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP) Sites; and Historic Utility Sites.

*New York SPILLS Database*

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

Five hundred sixty-three spills were reported within a ½-mile radius of the Property, including 16 active-status spills and 547 closed-status spills. The nearest spill listings with some potential to affect the subsurface conditions beneath the Property are summarized below:

- Four closed-status spills, including an approximately 450-gallon gasoline spill in 2007, were reported at a filling station at 134 South Lexington Avenue, approximately 170 feet northwest of the Property.
- In October 2010, a tank tightness test failure for two 20,000-gallon USTs was reported for a WPHA facility at 33 Fisher Avenue (i.e., the Winbrook heating plant located approximately 230 feet southeast of the Property). According to the listing, tank piping was repaired, and the tanks subsequently passed retests in 2010 and 2011. No contamination was reportedly observed, and the spill listing was closed in July 2011.

  In January 2000, a No. 4 fuel oil release due to overfill was reported at this address. This spill was initially reported to be approximately 30 gallons, but was subsequently indicated to be up to 700 gallons. The playground area to the southwest of the boiler room was noted to require cleanup. The spill listing was closed in May 2000.

  Three additional closed-status spills were reported, including two tank test failures in 1989 and 2002, and a minor surface spill in 1993.
- In November 2005, a spill was reported at Allen Ame Church, located at 65 Fisher Avenue, approximately 240 feet west-northwest of the Property. The listing indicated that a damaged 1,000-gallon No. 2 fuel oil UST and contaminated soil were removed. Apparent gasoline-contaminated soil, believed to be associated with the filling station at 134 South Lexington

Avenue, was also reportedly encountered in the excavation and removed. The spill listing was closed in December 2003.

- In February 1998, active-status Spill No. 9713110 was reported at a closed Getty filling station at 26 East Post Road, approximately 330 feet south of the Property. According to the listing, soil and groundwater contamination was found during a subsurface investigation. Remedial activities included groundwater monitoring and extraction. The spill listing also noted that in 2016, the groundwater monitoring for Spill No. 9713110 identified oil floating on groundwater at 22-24 East Post Road, and new spill No. 1607837 was reported, as noted below. Additional information regarding Spill No. 9713110 is summarized in Section 7.0.
- In September 2014, active-status Spill No. 1608924 was reported at a BP Station at 34 East Post Road, approximately 350 feet southeast of the Property. According to the listing, soil and groundwater contamination was reported downgradient of this facility, and additional investigation was conducted in 2014-2016. No further information was provided. Three additional closed-status spills were reported at this address.
- In May 2011, active-status Spill No. 1101872 was reported at 22-24 East Post Road, approximately 400 feet south of the Property, reportedly due to detection of low concentrations of diesel or No. 2 fuel oil during groundwater monitoring for Spill No. 9713110 at east-adjacent 26 East Post Road. In addition, in November 2016, active-status spill No. 1607837 was reported at the same address. According to the listing, suspected No. 2 fuel oil was discovered floating on groundwater in a monitoring well at this site. The well was installed for investigation of Spill No. 9713110; however, the fuel oil was determined to be unrelated to Spill No. 9713110. The listing noted that a 1,000-gallon No. 2 fuel oil UST was located at 22-24 East Post Road. The UST was reportedly removed in February 2017, at which time holes were noted in the tank. The listing indicated that subsequent remedial soil excavation uncovered contamination. Spill No. 1700425 was reported based on these observations, but was closed for consolidation with Spill No. 1607837. One additional closed-status spill was reported at this address.
- Nineteen spills were reported at various White Plains Hospital locations. The nearest portion of the hospital is approximately 550 feet south of the Property. The reported spills included active-status Spill No. 1007255, located at 8 Longview Avenue, approximately 700 feet southeast of the Property, which was reported in October 2010 and reportedly entailed a No. 2 fuel oil UST failing a tightness test. This spill was reportedly associated with subsurface petroleum contamination. Eighteen additional closed-status spills were reported for the hospital campus, including three large releases of fuel oil (ranging from approximately 100 to 2,000 gallons) in 2000, 2009, and 2011.
- In December 1997, active-status Spill No. 9710575 was reported at Getty 58108, located at 11 East Post Road, approximately 550 feet south of the Property. According to the listing, a leaking fuel line caused the release of petroleum into a storm drain. Remedial activities included groundwater

monitoring, extraction, and chemical remediation. Removal of USTs and contaminated soil was planned in 2016; however, the listing did not indicate whether it took place. Fourteen additional closed-status spills were reported at this address.

- In September 1994, active-status Spill No. 9408341 was reported at White Plains Lincoln Mercury, located at 25 West Post Road, approximately 700 feet south of the Property. According to the listing, discolored soil was noted during a subsurface investigation, and was to be tested. No further information was provided. One additional closed-status spill was reported at this address in August 2000. This listing indicated that contaminated soil was excavated during removal of a 1,000-gallon fuel oil UST, and no significant residual contamination was noted.
- In April 2001, a spill was reported at Biscardi Cleaners, located at 201 South Lexington Avenue, approximately 670 feet south of the Property. The listing indicated that a storage tank failure caused the release of approximately 150 gallons of wood alcohol (methanol) in a basement. The spill was reportedly cleaned up, and the listing was closed in May 2006.

Based on listing details, distance, and/or anticipated groundwater flow direction, the above spill listings and other nearby spills may have affected subsurface conditions beneath the Property. Details from all spills are included in Appendix E.

*Resource Conservation and Recovery Act (RCRA) Notifiers Listings*

This database lists sites which have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

No TSD facilities were identified within a ½-mile radius of the Property. No CORRACTS facility was reported within a one-mile radius of the Property.

Ninety-three RCRA generators/transporters were reported within a ¼-mile radius of the Property. The nearest facilities with some potential to affect subsurface conditions beneath the Property, based on proximity and/or the nature of the listings, are as follows:

- Swank Cleaners, located at 168 South Lexington Avenue, approximately 250 feet southwest of the Property, was listed as a generator of spent halogenated solvents in 1991.
- Bridgestone/Firestone, located at 60 East Post Road, approximately 350 feet southeast of the Property, was listed as a generator of tetrachloroethene (PCE) in 1998.
- Bright Side Cleaners, located at 182 South Lexington Avenue, approximately 480 feet south of the Property, was listed as a generator of spent halogenated solvents in 2002.
- Getty Petroleum Co., located at 11 East Post Road, approximately 550 feet south of the Property, was listed twice as a generator of ignitable solid waste in 1986 and 1998, and spent halogenated solvents in 1994.

- The White Plains Hospital Center, located at 41 East Post Road, approximately 550 feet south of the Property, was listed three times as a generator of: ignitable and corrosive solid waste; heavy metal waste; phenol; chloroform; spent non-halogenated solvents; 1,2-dichloroethane (DCA); benzene; and various laboratory waste between 2005 and 2017. Three RCRA violations associated with universal waste were reported in 2012, with a return to compliance on the same day.
- Biscardi, located at 201 South Lexington Avenue, approximately 670 feet south of the Property, was listed as a generator of spent halogenated solvents in 1986 and 1999.
- White Plains Lincoln Mercury, located at 25 West Post Road, approximately 700 feet south of the Property, was listed as a Conditonally Exempt SQG of spent halogenated solvents, ignitable solid waste, PCE, trichloroethylene (TCE), and benzene in 1986-2010.

Based on listing details, distance and/or the anticipated groundwater flow direction, other RCRA listings are not anticipated to have significantly affected the Property. Details of all RCRA listings are included in Appendix E.

*Chemical Bulk Storage (CBS) Database*

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

No CBS facilities were listed within a ¼-mile radius of the Property.

*Solid Waste Facilities (SWF)*

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

No SWFs were identified within ½-mile of the Property.

*Petroleum Bulk Storage (PBS) Database*

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

Forty-five PBS facilities were identified within a ¼-mile radius of the Property. Details of the nearest facilities with the potential to affect the Property, based on listing details and/or location, are given in Table 1.

**Table 1**
**Area Petroleum Bulk Storage Facility Data**

| Location | Capacity (gallons) | Product Stored | Status | Distance/Direction from Property |
|---|---|---|---|---|
| 124 South Lexington Avenue | 3 x 4,000 UST<br>10,000 UST<br>5,000 UST<br>2 x 2,000 UST<br>500 UST<br>275 UST | Gasoline<br>Gasoline<br>Gasoline<br>Gasoline<br>Waste Oil<br>Unspecified | Closed-Removed<br>In Service<br>In Service<br>Closed-Removed<br>Closed-Removed<br>Closed-Removed | 170 feet northwest |

**Notes**: AST - aboveground storage tank
UST - underground storage tank

Known and/or undocumented releases from the above facilities may have affected subsurface conditions beneath the Property. Based on listing details, distance and/or anticipated groundwater flow direction, other PBS facilities are unlikely to have affected the Property. Details of all PBS facilities located within ⅛-mile of the Property are included in Appendix E.

*State Inactive Hazardous Waste Disposal Site Registry (SHWS)*

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

Two inactive hazardous waste disposal sites were located within a one-mile radius of the Property. Based on their distance (more than 1,600 feet away) and/or the anticipated groundwater flow direction, these facilities are unlikely to have significantly affected the Property.

*State Hazardous Substance Waste Disposal Site Study (SHSWDS)*

This database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

No SHSWDSs were identified within a ½-mile radius of the Property.

*Major Oil Storage Facilities (MOSF) Database*

These facilities have petroleum storage of 400,000 gallons or more.

No MOSFs were reported within a ¼-mile radius of the Property.

*Environmental Restoration Program*

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No ERP sites were identified within a ½-mile radius of the Property.

*Voluntary Cleanup Program*

The Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

One VCP site was identified within a ½-mile radius of the Property. Based on its location approximately 2,400 feet north of the Property (in an anticipated cross-gradient groundwater flow direction), this facility is not anticipated to have affected the Property.

*Brownfield Cleanup Program*

This NYSDEC program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Four BCP sites were identified within a ½-mile radius of the Property. The nearest facility with some potential to affect the Property, based on listing details, was as follows:

- Post Road Corridor – White Plains, located at 77 West Post Road, approximately 1,300 feet south-southwest of the Property, was listed as a set of vacant lots historically occupied by commercial and auto-related uses, including dry cleaning, auto repair, and filling stations. Identified contamination reportedly included volatile organic compounds (VOCs) associated with petroleum and chlorinated solvents in soil, groundwater and soil vapor, and evidence of a chlorinated VOC plume migrating from the site. Groundwater contaminants reportedly included PCE at concentrations up to 3,300 parts per billion (ppb), and TCE at concentrations up to 420

ppb. Initial remedial activities (removal of USTs and contaminated soil and groundwater) were reportedly conducted in 2010-2012. Groundwater was reported to flow toward the northeast.

Although the above facility was located in an anticipated upgradient groundwater flow direction, the potential for impact to the Property is limited based on its distance. Based on distance (more than 1,300 feet away), anticipated groundwater flow direction, and/or listing details, other identified BCP sites are unlikely to have affected the Property.

### 5.2.3 Local Agency File Review

A review of available records maintained by The City of White Plains Tax Assessor's, Building Department, Fire Marshal's Office, and Department of Public Works, and the Westchester County Department of Health was conducted to obtain any information pertinent to the assessment of the environmental condition of the Property. Specifically, records regarding past and present on-site fuel oil tanks and historical uses were requested. Local records are included in Appendix F.

*Tax Assessor*

According to a representative of the Tax Assessor's Office, records for the Property are maintained by WPHA; however, a print-out of the Tax Assessor's computer screen was available. The computer screen print-out indicated the following: the Property was identified as a part of the Winbrook housing complex, with a legal address of 223-225 Dr. Martin Luther King Jr. Boulevard; the legal definition of the Property was part of Section 125.83, Block 7, Lot 1; the Property was situated in an RM-0.35 designated residential zone; the Property building was constructed in 1954; and public utilities (i.e., natural gas, electricity, and potable water) were supplied to the building.

However, based on historical Sanborn maps, the Property building was constructed in approximately 1949 or 1950 (earlier than indicated by Tax Assessor records). Online White Plains tax maps summarized in Section 5.1.3 indicated that only the eastern half of the Winbrook complex was zoned as RM-0.35, while the western half including the Property was zoned as B-3 (business, office and commercial).

*Building Department*

Records maintained by the White Plains Building Department typically include fuel oil, gasoline and waste oil tank installation applications and permits, and records of prior uses. A Freedom of Information Letter (FOIL) was submitted to the White Plains Building Department. To date, no response has been provided to AKRF. Any pertinent information obtained from the FOIL request will be presented as an addendum to this Phase I ESA report.

*Fire Marshal*

Numerous attempts were made to contact the White Plains Fire Marshal. To date, no response has been provided to AKRF. Any pertinent results will be presented as an addendum to this Phase I ESA report.

*Department of Public Works*

A FOIL request was submitted to the White Plains Department of Public Works. To date, no response has been provided to AKRF. Any pertinent information obtained from the FOIL request will be presented as an addendum to this Phase I ESA report.

*Westchester County Department of Health*

A FOIL request letter was sent to the Westchester County Department of Health (WCDOH) to gain access to information regarding area complaints, spills, discharges, or other health-related issues. To date, no response has been provided to AKRF. Any pertinent results will be presented as an addendum to this Phase I ESA report.

*New York State Department of Environmental Conservation*

A FOIL request letter was sent to NYSDEC to gain access to information regarding petroleum storage tanks, spills, discharges, or other environmental issues. In an email dated May 30, 2017, NYSDEC indicated that no records were identified for the Property.

*New York State Department of Health*

A FOIL request letter was sent to the New York State Department of Health (NYSDOH) to gain access to information regarding area complaints, spills, discharges, or other health-related issues. To date, no response has been provided to AKRF. Any pertinent results will be presented as an addendum to this Phase I ESA report.

### 5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; and useful, accurate and complete in light of the objective of the records review. These records include:

- Local brownfields lists
- Local lists of landfill/solid waste disposal sites
- Local lists of hazardous waste/contaminated Sites
- Local lists of registered tanks
- Local land records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Fire Department
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

State and local record searches conducted by AKRF are detailed in Section 5.2.3. In AKRF's judgment, no additional local records meeting the ASTM criteria are pertinent for the Property.

# 6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that Trinity provide any pertinent information regarding the Property, specifically:

- Whether any *environmental liens* or *activity and land use limitations (AULs)* are in place or filed or recorded against the Property?
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of any chemicals used on-site)?
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated?
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property?
- Whether they were aware of any obvious indicators of contamination at the Property?
- Whether they were aware of any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products?

According to Trinity representatives, this Phase I ESA was performed to evaluate the Property as part of due diligence related to a proposed redevelopment that would entail demolition of the existing building, followed by the construction of a new multistory residential building. Trinity provided contact information for Mr. Pio of WPHA, who was not aware of any: environmental liens or activity use limitations on the Property; Property value reduction due to environmental issues; any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products; or any obvious indicators of contamination on the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report. Mr. Pio indicated that in preparation for construction of the north-adjacent Prelude building, two Phase I ESAs (one for the Prelude site, and one for the entire Winbrook complex) were prepared, and a Subsurface (Phase II) Investigation was conducted. A portion of the Prelude-specific Phase I ESA, which included a summary of the Phase II, was provided to AKRF and is summarized in Section 7.0.

A copy of a Phase I ESA User Questionnaire was provided to Mr. Pio, but had not been returned to AKRF at the time of the report. Any pertinent results will be presented upon the receipt of this information as an addendum to this Phase I ESA report.

# 7.0 PREVIOUS STUDIES

*Winbrook Apartments – White Plains, NY Building Plans, Alfred Fellheimer, Steward Wagner, Carl A. Vollmer Architects & Engineers, September 20, 1948*

Pre-construction Winbrook plans were provided to AKRF. The plans indicated that in 1948, the Property was developed with apartment buildings, dwellings, and small parking garages. The plans also showed that the Property building (labeled as Building 5) would be heated by steam from the Winbrook heating plant, shown at its current location approximately 230 feet southeast of the Property. A "tank room" containing a hot water tank was shown on the northeastern side of the basement. No fuel oil storage tanks were shown on the Property. The trash compactor room observed during the reconnaissance was identified as an incinerator room.

*Brookfield Commons Phase 1 State Environmental Quality Review (SEQR) Documents*

SEQR was conducted for the north-adjacent parcel in 2009-2012 in preparation for Prelude construction, which was the first phase (Phase 1) of the Brookfield Commons redevelopment. SEQR documents were provided to AKRF, with copies of relevant documents included in Appendix G. These documents indicated that in 2009, a portion of Winbrook including the Property was rezoned from zoning RM-0.35 (residential) to zoning B-3 (business, office and commercial). The documents also included an Environmental Assessment Form (EAF) prepared by WHPA in April 2012, which included summaries of SEQR studies. Findings relevant to the Property were as follows:

- A Phase I and Limited Phase II ESA Report was prepared by GZA GeoEnvironmental (GZA) in April 2012. A portion of this report (without appendices, tables or laboratory data) was included in the EAF. The report indicated that historical land uses included an auto repair shop on the Prelude site, and a filling station on the west-adjacent block. A filling station was also observed on the west-adjacent block during GZA's reconnaissance. Nearby PBS facilities and reported spills were also identified as potential concerns.

  The Phase II entailed installation of four borings to depths of approximately 5 to 18 feet below grade, and collection of four soil samples and two groundwater samples for laboratory analysis. The borings reportedly encountered, from the top down: approximately 0.5 to 1 foot of topsoil; approximately 3 feet of fill materials (sand, gravel, brick and glass); apparent native sand and silt between the bottom of the fill layer and approximately 10 feet below grade; and apparent native silt and fine sand approximately 10 to 18 feet below grade. The soil samples were collected within the fill layer and analyzed for metals, PCBs and semi-volatile organic compounds (SVOCs). These samples reportedly contained elevated metal concentrations, which is typical of fill materials.

  Groundwater was encountered approximately 7 to 8 feet below grade. Groundwater samples were analyzed for VOCs. One of the two samples reportedly contained the chlorinated VOCs PCE and cis-1,2-dichloroethene (DCE) at "low concentrations," but above State drinking water standards. These VOCs were attributed to an off-site source. Based on the Phase II findings, the EAF indicated that a vapor barrier "may be" recommended beneath the Prelude building, and that further assessment was advised to confirm that the VOCs were from an off-site source.
- The EAF included a Phase 1A archaeological sensitivity analysis prepared by CITY/SCAPE Cultural Resource Consultants in April 2012. The Phase 1A report included a review of historical land use maps which generally pre-dated available Sanborn land use maps. These maps indicated that in 1776, the Property appeared to be vacant and was part of a sparsely developed area which was the location of the Battle of White Plains between American and British troops. In 1851-1899, the Property appeared to be vacant, with the larger surrounding area sparsely developed with small dwellings. An 1868 map showed a stream traversing the Property, flowing toward the north. This stream appeared to have been filled with materials of unknown origin. By 1914, the Property was shown as partially developed with apparent residential buildings. The Phase 1A report indicated that all historical structures on the Winbrook campus were demolished in the late 1940s, and construction of the Winbrook campus began in 1949.

*Semi-Annual Monitoring Report – Former Getty Service Station No. 00369, 26 East Post Road, White Plains, NY – NYSDEC Spill No. 9713110, Tyree Environmental Corp., November 2012; Endpoint Sampling Data, Tyree Environmental Corp., December 2014; and Amended Groundwater Monitoring Report – Third Quarter 2016, NYSDEC Spill No. 9713110, Former Getty Service Station No. 00369, 26 East Post Road, White Plains, Westchester County, NY, Antea USA, Inc., October 31, 2016*

Documents associated with remediation of off-site Spill No. 9713110 were provided by WPHA. These included: a semi-annual groundwater monitoring report for the period of February through November

2012; soil and groundwater sampling data for October and December 2014; and a groundwater monitoring report dated October 2016. The following findings were relevant to the Property:

- 26 East Post Road, located approximately 330 feet south of the Property, was historically a filling station. In 1988, four 10,000-gallon gasoline USTs and associated piping were removed from this facility, which was subsequently occupied by used auto sales. The 26 East Post Road site reportedly became vacant in the 1990s. Soil and groundwater contamination was identified during a subsurface investigation in 1997. As a result, Spill No. 9713110 was reported to NYSDEC.
- Multiple sampling rounds were conducted on and near 26 East Post Road starting in 1998. These included installation of monitoring wells and soil vapor monitoring points in off-site areas of the Winbrook complex. The nearest wells to the Property were MW-204-33 approximately 120 feet to the east, PW-105 approximately 60 feet to the south, MW-104 approximately 160 feet to the south, MW-103 approximately 215 feet to the south, and MW-102 approximately 240 feet to the south (see Figure 2 for location). Groundwater in the wells nearest to the Property was delineated as flowing in a northwesterly direction, and was approximately 4.8 to 7.8 feet below grade. The 2016 report (but not the 2011 report) noted groundwater mounding (i.e., an area of localized higher elevation) at the boundary between Winbrook and 26 East Post Road, with flow toward the southeast at 26 East Post Road. The reason for the mounding was not specified.
- Remedial activities included groundwater and soil vapor extraction in 2001-2009. In 2014, approximately 5,400 tons of petroleum-contaminated soil were excavated from 26 East Post Road and the southern portion of Winbrook (a parking lot approximately 240 feet south of the Property) for off-site disposal. Although endpoint sampling indicated areas of residual contamination, further removal was reportedly not feasible due to safety considerations. The endpoint sampling data appeared to indicate that portions of the excavation encountered bedrock approximately 12 to 13 feet below grade.
- Sampling indicated that petroleum contamination was migrating northwest from the 26 East Post Road site and affecting groundwater beneath the Winbrook complex. The most recent sampling data provided, from August 2016, indicated that a gasoline additive (MTBE) at 41 parts per billion (ppb), and chlorinated VOCs including PCE at 1,000 ppb, TCE at 55 ppb, and DCE at 19 ppb were detected in MW-204-33. The sample from PW-105 contained chlorinated VOCs DCE at 20 ppb, and vinyl chloride at 6.8 ppb. The samples from MW-104 contained benzene at 1.3 ppb, DCE at 39 ppb, PCE at 44 ppb, TCE at 14 ppb, and vinyl chloride at 17 ppb. No elevated VOC concentrations were detected in MW-103. The sample from MW-102 contained PCE at 38 ppb and DCE at 6.6 ppb. The sampling results indicated that the petroleum-contaminated groundwater plume did not appear to be significantly affecting areas near the Property, but elevated levels of chlorinated solvents were present in groundwater (and thus, potentially, in soil vapor). Soil vapor sampling was not conducted in August 2016, and any previous soil vapor sampling data was not provided to AKRF.
- In January 2011, petroleum floating on groundwater was reported in monitoring wells MW-8 and MW-14. The petroleum in MW-14 was identified as diesel or No. 2 fuel oil, while the petroleum in MW-8 could not be identified. Both affected wells were located at or in close proximity to 22-24 East Post Road, which was subsequently determined to be the source of the spill, reported to NYSDEC as Spill No. 1101872 (see Section 5.2.2).

*Asbestos Pre-Demolition and Hazardous Materials Survey Report of Vacant Apartment Building – 135 South Lexington Avenue, White Plains, NY, Viking Environmental Corp., July 29, 2016*

A survey of the Property building for ACM and hazardous materials was conducted for WPHA in preparation for building demolition. The survey indicated that laboratory analysis identified certain vinyl floor tile and mastic, linoleum and mastic, thermal pipe insulation, window caulking, and the roof of the

elevator bulkhead as ACM. Other building materials were identified as not containing asbestos. Laboratory analysis of paint chips identified no lead-based paint on interior building surfaces. Exterior building surfaces (painted brick walls) were not analyzed. In addition, the report noted the potential for mercury-containing fluorescent lamps, and refrigerators and air conditioners containing Freon. However, no sampling for mercury or Freon was conducted.

Copies of the previous reports are included in Appendix G.

# 8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- Typical portions of the Property building were viewed, including: the basement; ground, second, third, fifth and ninth floors; and roof.
- Interviews and user-provided information were limited to those discussed in Sections 2.0, 6.0, and 7.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the site and surrounding area could be obtained from the available historical Sanborn maps and interviews, and this data gap is not likely to alter the conclusions of this report.
- Agency File Reviews for the Property and adjacent properties consisted of: a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2), and FOIL requests for pertinent records submitted to NYSDEC, NYSDOH, WCDOH, and the City of White Plains Building Department, Fire Marshal's Office, and Department of Public Works. AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

# 9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

Prior to the construction of the existing building and surrounding grounds, the Property was undeveloped and included a small stream flowing toward the north. In the early 20th century, the Property was developed with smaller structures (residential buildings with yards and parking garages). These structures were demolished in the late 1940s as part of the redevelopment of the Property (and land to the north, east and south) with the Winbrook complex. The existing building was constructed in approximately 1949 or 1950, and was residential until becoming vacant in 2016.

This assessment revealed the following:

***Recognized Environmental Conditions (RECs)***

- Historical land uses in the vicinity of the Property included the White Plains Hospital, auto sales, auto and bicycle repair shops, filling stations and stores with gasoline underground storage tanks (USTs), woodworking and painting shops, dry cleaners, a rug cleaner, undertakers, sheet metal works, electrical businesses, and a printer. The reconnaissance also identified the hospital, active and former filling stations, auto repair shops, car dealerships, two laundries (including one identified on historical land use maps and in the regulatory database as a dry cleaner), and a hardware shop with a glass cutting service in close proximity to the Property. Numerous active- and closed-status spills, petroleum bulk storage facilities, hazardous waste generators (including generators of chlorinated solvents), and a State Brownfield Cleanup Program Site with some potential to affect the Property were reported in regulatory databases.
- One of the spills reported in close proximity to the Property was active-status spill No. 9713110 at a former filling station at 26 East Post Road, approximately 330 feet south of the Property. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling station onto the Winbrook complex. Remedial activities included removal of contaminated soil, groundwater and soil vapor, and installation and sampling of numerous groundwater monitoring wells. The nearest of these wells were located approximately 60 to 240 feet south and east of the Property. Groundwater sampling in August 2016 indicated no evidence of significant concentrations of petroleum-related volatile organic compounds (VOCs) in the wells nearest the Property. However, these wells contained elevated concentrations of VOCs associated with chlorinated solvents, including tetrachloroethene (PCE) at up to 1,000 parts per billion (ppb) and tetrachloroethene (TCE) at up to 55 ppb. Since no potential source of chlorinated VOCs has been identified on the Property, these VOCs may have originated from an off-site source. Based on the groundwater concentrations, these VOCs may be present at elevated concentrations in soil vapor.

***Controlled RECs (CRECs)***

- The Winbrook complex, including the Property, was heated by steam generated at a heating plant located in a basement of an off-site building (33 Fisher Avenue) approximately 230 feet southeast of the Property. The plant's boilers were supplied by two, 20,000-gallon No. 4 fuel oil USTs located beneath a lawn west of the boiler room. Five closed-status spills were reported in connection with these USTs, including three tightness test failures in 1989-2010, a minor surface spill in 1993, and an approximately 700-gallon release due to overfill in 2000 which reportedly required cleanup of a nearby playground area. The playground is approximately 200 feet southeast of the Property. As noted above, no evidence of significant petroleum contamination was identified in groundwater in the vicinity of the Property in 2016; thus, the historical spills are considered to be Controlled RECs (CRECs) rather than RECs.

***De Minimis Condition***

- Stream filling and demolition of historical structures on the Property may be associated with fill materials of unknown origin. A 2012 subsurface investigation of the north-adjacent parcel indicated the presence of an approximately 0.5 to 1-foot topsoil layer, underlain by approximately 3 feet of fill materials (sand, gravel, brick and glass), which were underlain in turn by apparent native soil.
- At the time of the reconnaissance, the Property building was equipped with a trash compactor. However, historical plans showed the compactor room in the basement as an incinerator room.
- Chemical storage at the Property included one five-gallon bucket of hydraulic oil, paint and cleaning and maintenance chemicals in containers up to five gallons, and 55-gallon drums of cleaning chemicals, which were stored in various basement areas. The observed chemicals were neatly stored and labeled, with no evidence of a release.

***Other on-site environmental concerns (items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris)***

- A hazardous materials survey of the Property building in 2016 included an asbestos survey, which identified asbestos-containing materials (ACM), including vinyl floor tile and mastic, linoleum and mastic, thermal pipe insulation, window caulking, and the roof of the elevator bulkhead based on laboratory analysis. Other building materials were identified as not containing asbestos. Building materials, including the identified ACM, were noted to be in good to damaged condition.
- The 2016 hazardous materials survey included sampling for lead-based paint. This survey did not identify lead-based paint on interior painted surfaces. However, lead-based paint may be used on exterior surfaces (painted brick walls). Painted surfaces were observed to be in fair to poor condition. During the reconnaissance, there was no observation of residential occupancy, child care facilities or other facilities where the extended presence of children would be expected.
- Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic compactor equipment may contain polychlorinated biphenyls (PCBs). In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury.

**Potential for Vapor Encroachment**

This Phase I assessment identified a potential for subsurface vapors, and thus a potential for vapor encroachment into current or future buildings at the Property, based on the RECs noted above.

# RECOMMENDATIONS

- The potential for subsurface contamination, including fill materials of unknown origin associated with filling of a historical stream on the Property and demolition of historical on-site structures, potential USTs associated with historical on-site structures, historical on-site trash incineration, and elevated chlorinated VOC concentrations in groundwater and/or soil vapor, has been identified for the Property. Prior to undertaking subsurface disturbance, a subsurface investigation, including the collection of samples for laboratory analysis, should be performed. It is possible that this investigation may uncover evidence of a petroleum spill or other situation reportable to the New York State Department of Environmental Conservation (NYSDEC) and/or other regulatory agencies.
- If any USTs are encountered during construction, they should be closed and removed, along with any contaminated soil, in accordance with the applicable regulations, which may include NYSDEC registration and/or spill reporting requirements.
- Any known or suspect ACM at the Properties need to be maintained in good condition in accordance with applicable regulations. Prior to any renovation or demolition activities with the potential to disturb known or suspect ACM, known ACM should be removed and, where suspect ACM are present, an asbestos survey of the areas to be disturbed should be conducted. Any ACM that would be disturbed should be removed and disposed of in accordance with local, state, and federal requirements.
- Any activities (such as renovation or demolition) with the potential to disturb lead-based paint must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - *Lead Exposure in Construction*). If the Property building is re-occupied for residential or child care uses, additional requirements (e.g., tenant notification, inspections and abatement) may apply, even if no disturbance is planned.
- Unless there is labeling or test data indicating that electrical equipment, fluorescent lighting fixtures, and hydraulic equipment in the building do not contain PCBs, and that electrical equipment and fluorescent lamps are not mercury-containing, if disposal is required, it should be performed in accordance with applicable federal, state, and local regulations and guidelines.
- Any excess chemicals or other wastes or surplus materials requiring disposal should be properly disposed of in accordance with applicable requirements.

# 10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Marc S. Godick, LEP
Senior Vice President

Asya Bychkov, P.E.
Environmental Engineer

# 11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the Properties, and to identify existing and/or potential environmental issues associated with the Properties including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Properties at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the Properties and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the Properties and their surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Trinity New York Development, LLC and its successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

# APPENDIX A

## PHOTOGRAPHIC DOCUMENTATION

**Photograph 1.** The Property building, view west from the Winbrook housing complex.

**Photograph 2.** A typical vacant apartment on the building's ground floor.

**Photograph 3.** A former laundry room on the building's ground floor. The concrete pad reportedly supported washing machines prior to their removal.

**Photograph 4.** Damaged wall and abandoned furniture in an apartment on the ninth floor.

**Photograph 5.** Elevator equipment in the elevator room on the building's roof.

**Photograph 6.** The trash compactor room in the building's basement.

**Photograph 7.** The steam equipment room and a hot water tank in the basement.

**Photograph 8.** Storage of cleaning chemicals in the basement.

**Photograph 9.** Open space occupying most of the basement.

**Photograph 10.** The Winbrook boiler room off-site at 33 Fisher Avenue.

**Photograph 11.** Access ports for two 20,000-gallon No. 4 fuel oil underground storage tanks (USTs) off-site, adjacent to the boiler room.

**Photograph 12.** A groundwater monitoring well in a playground southeast of the Property (one of several wells observed in off-site Winbrook areas).

**Photograph 13.** The Prelude building and its backyard, north-adjacent to the Property. View northwest.

**Photograph 14.** A filling station at 134 South Lexington Avenue, northwest of the Property. View northwest.

**Photograph 15.** A laundromat at 168 South Lexington Avenue, southwest of the Property, view west.

**Photograph 16.** A vacant lot at the location of a former filling station at 26 East Post Road, south of the Property, view northwest.

# EDR Chain of Title

The EDR Chain of Title Report tracks a line of successive owners from the present back to 1940 of a particular parcel of property, linked together by recorded transactions which pass title. Available nationwide, this report provides a summary of a property's ownership history and is a valuable source for determining the prior uses of a property.

A network of professional abstractors following established procedures, uses client supplied address information to locate:

- Historical Chain of Title research
- Leases and Miscellaneous

**Thank you for your business.**

LIBER 7768 PAGE 70

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT—THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

**THIS INDENTURE,** made the 19th day of May , nineteen hundred and eighty-two

**BETWEEN** THE CITY OF WHITE PLAINS, a municipal corporation located in the County of Westchester, State of New York,

party of the first part, and WHITE PLAINS HOUSING AUTHORITY, a public corporation with offices at 223 Grove Street, White Plains, New York,

party of the second part,

**WITNESSETH,** that the party of the first part, in consideration of ONE and 00/100 ($1.00)----------

----------dollars,

lawful money of the United States, paid

by the party of the second part, does hereby remise, release and quitclaim unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

TAX STAMPS JUN - 3 1982 ATTACHED

**ALL** that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the City of White Plains, county of Westchester and state of New York known as Parcel A, Parcel C and Parcel 11, on a map entitled, "Map showing lands to be acquired by The City of White Plains for the laying out and widening of Fisher Avenue and Quarropas Street from Bank Street to Grand Street situated in the City of White Plains, Westchester County, New York", made by James W. Delano, surveyor, White Plains, New York, dated October 5, 1981, and filed in the Westchester County Clerk's Office, Division of Land Records on December 7, 1981 as Map No. 20811.

Reserving, however, to The City of White Plains a permanent easement for water pipes, fire alarm conduit and appurtenances thereto, storm water drains, sanitary sewers and any other utilities to the extent that the same may now be located therein, including the right to repair, replace, maintain and install the same.

Reserving also, easements for gas mains and electrical conduits for public utilities, to the extent that the same are now located therein and including the right to repair the same and to maintain the same until directed by the Commissioner of Public Works to remove and relocate said gas mains and electrical conduits for city or school purposes.

The said easements herein reserved by the party of the first part shall be used solely for the purpose of repairing, replacing and maintaining the said utilities contained therein and for ingress and egress to and from the sites thereof and in the event that the repair or replacement of the said utilities requires the removal or disturbance of any of the improvements, structures of facilities erected and installed by the Party of the Second Part, the same shall be restored and replaced by the Party of the First Part at its sole cost and expense, to nearly the same condition in which they existed prior to the start and commencement of the work of such repair and replacement.

**TOGETHER** with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

**TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

**TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

**AND** the party of the first part, in compliance with Section 13 of the Lien Law, hereby covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

**IN WITNESS WHEREOF,** the party of the first part has duly executed this deed the day and year first above written.

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

## RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

## 135 South Lexington Ave
## White Plains, NY 10601

May 29, 2017

Privileged and Confidential.

## LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

### Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

### What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

### What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

### What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

### Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

**PLEASE REFER TO PAGES ONE AND FIVE FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.**

# *Introduction*

*Toxics Targeting* has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report.* It checks for the presence of 21 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.

2. ***Estimates*** the distance and direction between the target address and each identified toxic site.

3. ***Reports*** air and water permit non-compliance and other regulatory violations.

4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.

5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

# *The Three Sections Of Your Report*

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information, some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

# *How to Use Your Report*

- Check Table One to see the number of identified sites by distance intervals.

- Check Table Two to see identified sites sorted by direction.

- Check Table Three to see identified sites sorted by site categories.

- Check Table Four to see identified sites ranked by proximity to the target address.

- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

# *Toxic Site Databases Analyzed In Your Report*

**Search Radius**

One-Mile 
1) ***National Priority List for Federal Superfund Cleanup****:* a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile 
2) ***Delisted National Priority List Sites****:* a listing of NPL sites that have been removed from the National Priority List.

One-Mile 
3) ***New York Inactive Hazardous Waste Disposal Site Registry****:* a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile 
4) ***New York Inactive Hazardous Waste Disposal Site Registry Qualifying****:* a state listing of sites that qualify for possible inclusion to the NYS DEC Inactive Haz. Waste Disposal Site Registry.

One-Mile

5) ***New York and Federal RCRA Corrective Action Activity (CORRACTS):*** waste facilities with RCRA corrective action activity reported by the USEPA and NYS DEC.

Half-Mile 
6) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile 
7) ***CERCLIS NFRAP:*** a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile

8) ***New York State Brownfield Cleanup Sites****:* a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile 
9) ***New York Solid Waste Facilities Registry****:* active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile

10) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act..

Half-Mile

11) ***Toxic Spills: active and inactive or closed*** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Quarter-Mile

12) ***New York State Major Oil Storage Facilities****:* sites with more than a 400,000-gallon capacity for storing petroleum products.

Quarter-Mile

13) ***New York and Local Petroleum Bulk Storage Facilities****:* sites with more than a 1,100-gallon capacity for storing petroleum products.

Quarter-Mile

14) ***New York and Federal Hazardous Waste Generators and Transporters****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Quarter-Mile

15) ***New York Chemical Bulk Storage Facilities****:* sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Half-Mile 
16) ***New York Hazardous Substance Disposal Site Draft Study****:* a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites are not eligible for state clean up funding programs.

Quarter-Mile

17) ***Federal Toxic Release Inventory Facilities****:* discharges of selected toxic chemicals to air, land, water or treatment facilities.

Quarter-Mile

18) ***Federal Air Discharges****:* Air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Quarter-Mile

19) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Quarter-Mile

20) ***Federal Civil and Administrative Enforcement Docket****:* judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

Property only

21) ***ERNS: Federal Emergency Response Notification System Spills****:* a listing of federally reported spills.

# *Limitations Of The Information In Your Report*

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the FIRST STEP in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

*Toxics Targeting* tries to ensure that the information in your report is presented accurately and with minimal alteration. The only systematic changes that are made correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Please be aware of some other limitations of the information in your report:

- The map used by *Toxics Targeting* is the same one used by the U. S. Census. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated on the Census map. FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;

- UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 21 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;

- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in zip code areas within one mile of the target address as well as toxic sites without zip codes reported in the same county. IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING AND REFER TO THE SITE ID NUMBER.*

- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.

- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.

# Section One:

# Report Summary

# Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code.
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see ***How Sites are Located***, at the end of this section for more information).

*Toxic Site Profiles* summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers.
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites, or a complete description of the codes follows the profiles section.

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity**: Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity**: The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity**: The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive Toxicity**: May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced).

IRRIT TOX: **Primary Irritant**: The chemical can cause eye or skin irritation.

MCL: **Drinking Water Standard - Maximum Contaminant Level** (MCL) listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications:

1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
2 -- Significant threat to the public health or environment -- action required;
3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
4 -- Site properly closed --requires continued management;
5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law;
A -- Work underway and not yet complete;
P -- Potential Site;
$D_{1, 2, 3}$ -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed);
C -- Remediation Complete (formerly D2).

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The approximately 0.2 acre site is located on the NW side of Westmorelenad Ave, approximately 100 feet west of the intersection of Westmoreland Ave and Home Place in the City of White Plains. The site is essentially flat. The topography in the vicinity of the site slopes gently to the NW towards the Bronx River located approximately 700 feet to the NW of the site. Site Features: The site contains a one−story, concrete block, L−shaped building that covers approximately 75% of the site. The NE portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. Current Zoning and Land Use: RJT Motors, an AAA of NY auto−repair shop, utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on−site dry well and fuel and waste oil USTs appear to be the sources of on−site contamination as well as a likely source area in the southern portion of the building (PCE and daughter products and petroleum). There also appears to be an off−site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow−brown, well sorted fine−medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north−northwest.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Nature and Extent of Contamination: Based upon investigation conducted to date, the primary contaminant of concern is tetrachloroethene (PCE). Soil − Shallow site soils have been impacted by PCE and related daughter products in the vicinity of the former dry well and residual petroleum contamination from former USTs. Groundwater − An unknown off−site source of 1,1,1 TCA is impacting site groundwater.

ASSESSMENT OF HEALTH PROBLEMS:
As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

SITE OWNER/OPERATOR/REPOSITORY INFORMATION:
None reported

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location Description: The site is located at 359−369 Mamaroneck Avenue in a mixed use commercial and residential area in the southern part of the City of White Plains, Westchester County NY. Site Features: The site is on approximately 0.25 acres of land which is flat and contains a 6,763 square foot building with a full basement.

Current Use: The building contains a drycleaner, a nail salon, an insurance agency, and two restaurants. The remainder of the site consists of a paved parking lot. Surrounding Use: The site is surrounded with businesses to the north and south of the site and residences to the east and west. Immediately to the east of the site is a municipal parking lot.

Historical Sources of Contamination: Dry cleaner operated at this location is a potential source of PCE contamination.

Site Hydrology: Groundwater flows though sand at only several feet below ground surface.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Based upon investigations to date, the primary contaminants of concern at the site included tetrachloroetylene (PCE) and its associated breakdown products.

After a thorough Site Characterization, as described in a final report dated July 2012, it was determined that this site did not qualify for the registry.

ASSESSMENT OF HEALTH PROBLEMS:
None provided

PROJECT COMPLETIONS:

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The site is located at 55 Bank Street in White Plains, Westchester County. The site is located in the Central Business District of the City of White Plains on the west side of Bank Street, just south of the intersection of Main Street and Bank Street. To the west is the Metro−North railroad right of way. Bank Street is located along the eastern border, a car dealership is located adjacent to the southern border, and a parking lot for the Bank Street Commons Apartment building is located to the north. Site Features: The site is presently under construction as a commercial/residential building. The site was formerly a 2.24−acre parking lot for the nearby commuter railroad station. The site was used as a parking lot for over 40 years.

Current Zoning/Use: The current zoning of the site is Core Business−4 (CB−4). Municipally−operated parking lots and multifamily dwellings, a restricted residential use, are permitted uses in CB−4 zones.

Past Uses of the Site: The property was used as a coal and lumber yard starting in 1885. The lumber yard comprised of a mill, several small sheds, coal and lumber storage areas, and railroad spurs. By 1911, the property was being used for manufacturing sashes, blinds and trim, and for the storage of grain, fertilizer, and feed. During the late 1800s and early 1900s, portions of the eastern side were occupied by several residential homes. By 1953, the southeastern corner of the property was improved with a commercial building, while the remaining portions were public parking lots. The commercial building was razed by 1974, and the site has been operated as a parking lot since that time. Site Geology and Hydrogeology: The site is level ground and covered with asphalt. Surface water drains to a storm sewer system that runs to the Bronx River which is about 500 yards to the west. The shallow soil horizon consists of historic fill found at a depth from 1.5 −26 feet below grade. Below the fill, subsurface soils consist of predominantly sands with some silts and gravels. Bedrock was located at 80−120 feet below grade and is believed to by gneiss and schist.

Overburden groundwater was encountered at a depth of 28 feet below grade and flows to the south. The Bronx River, which flows to the south, is located about 0.25 mile west of the site. However, the site is located above the current 100 year flood elevation. Site storm water is transported via storm drains to a storm water collection system and discharges to the Bronx River. The Bronx River Parkway is located adjacent to the Bronx River just west of the site.

CONFIRMED HAZARDOUS WASTE DISPOSED:

| TYPE | QUANTITY |
|---|---|
| tetrachloroethene (PCE) | UNKNOWN |
| TRICHLOROETHENE (TCE) | UNKNOWN |

|---|---|
| MERCURY | UNKNOWN |
| COPPER | UNKNOWN |

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Nature and Extent of Contamination:

Remediation of the site to track 1 soil cleanup objectives was completed in November 2016.

Soil: Remediation is complete. The entire site was excavated to a depth of approximately 26 feet. No surface soils remain. Based on the investigations conducted the primary contaminants of concern in subsurface soils were inorganics (metals) including mercury, copper lead and zinc. These metals were present above the unrestricted soil cleanup objectives. These compounds were present in the fill materials used to grade the site and surrounding areas, and contamination did not migrated from the site to adjacent parcels. These inorganics were not found in on−site groundwater above NYS Groundwater Standards in filtered samples. Aluminum, iron, and sodium were detected above standards in onsite groundwater but are considered to be naturally occurring.

Groundwater: Chlorinated volatile organic compounds (CVOCs) were detected in on−site groundwater including tetracholoethylene (PCE) at a maximum level of 13 parts per billion (ppb), and trichloroethene (TCE) at a maximum level of 28 ppb. The groundwater quality standard for both of these compounds is 5 ppb. CVOCs were not detected in the subsurface soil samples collected from the site, the groundwater investigation suggests that the source originates from an off−groundwater source.

The site remediation is complete. The site has a basement foundation that includes a vapor barrier and a subsurface parking garage which is ventilated. Because there is a vapor barrier and a ventilated subsurface parking garage a soil vapor intrusion investigation was not conducted.

ASSESSMENT OF HEALTH PROBLEMS:
People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. A vapor barrier has been installed beneath the building foundation to minimize the potential of vapors from entering the building. Additionally, a sub−grade parking garage ventilation system required by building codes will be installed prior to building occupancy to prevent vapors from accumulating in the structure.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The Post Road Corridor − White Plains site is located at 77 West Post Road in the City of White Plains, Westchester County. This site is made up of 10 tax parcels occupying 3.69 acres of the overall 5−acre redevelopment project. The site is bounded by West Post Road to the north, Maple Avenue to the south, Rathbun Avenue to the west, and South Lexington Avenue to the east, with a separate out−parcel lot on the northwest corner of West Post Road and South Lexington Avenue. Site Features: All 10 parcels are currently vacant. Abandoned former commercial buildings of varying size on the site have been demolished, leaving only grass, trees and former parking lots. Current Zoning and Land Use: Nine of the 10 parcels are zoned B−3, which is a general retail district allowing retail, office and service business uses and multi−family dwellings. The other parcel is zoned B−2, which is an intermediate business district. The site is part of a planned mixed−use (commercial and residential) development. Surrounding land use is mixed, consisting of residential and commercial properties including a church. Past Use of the Site: The site’s 10 parcels initially contained residential buildings as early as 1905 which later were used for commercial purposes beginning in the 1930s. Former commercial uses included dry cleaners; gas stations with underground storage tanks (USTs); automobile sales and service facilities with USTs, aboveground storage tanks (ASTs), hydraulic lifts, and associated parking lots; various commercial businesses and offices; and commercial parking lots.

In 2005 two in−ground hydraulic lifts were removed from the site. In 2010 two USTs, eleven in−ground hydraulic lifts, a floor drain and an oil water separator were also removed from the site. Approximately 408 tons of impacted soil and 1,180 gallons of

contaminated groundwater were removed from the site during this work. In 2012 four USTs and approximately 360 tons of petroleum impacted soil were removed from the site. These removals were completed under the DEC spill program. All end point samples were analyzed for volatile organic compounds (VOCs) and semi−volatile organic compounds (SVOCs) as listed in the Department's Spills Technology and Remediation Series (STARS). Analytical results indicated that VOCs or SVOCs were below regulatory limits.

Site Geology and Hydrogeology: The site geology consists of historic fill material, native till, and highly weathered bedrock. The depth to bedrock ranges across the site from approximately 17 to 52 feet below grade. Groundwater at the site ranges from approximately 3 to 11 feet below ground surface and flows to the northeast.

CONFIRMED HAZARDOUS WASTE DISPOSED:

| TYPE | QUANTITY |
|---|---|
| vinyl chloride | UNKNOWN |
| trichloroethene (TCE) | UNKNOWN |
| n−propylbenzene | UNKNOWN |
| benzene | UNKNOWN |
| naphthalene | UNKNOWN |
| cis−1,2−dichloroethene | UNKNOWN |
| 1,3,5−trimethylbenzene | UNKNOWN |
| tetrachloroethene (PCE) | UNKNOWN |
| xylene (mixed) | UNKNOWN |
| ethylbenzene | UNKNOWN |
| 1,2,4−trimethylbenzene | UNKNOWN |
| toluene | UNKNOWN |

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi−volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigation conducted to date, the primary contaminants of concern include chlorinated VOCs, petroleum related compounds and metals. No other VOCs, SVOCs, metals or PCBs/pesticides than those identified below were found in soil or groundwater at levels exceeding restricted residential soil cleanup objectives, protection of groundwater soil cleanup objectives or groundwater standards.

Soil − Soil samples collected from across the site indicate the presence of certain contaminants in varying degrees generally consistent with the former use of each parcel. VOCs, including acetone up to 0.51 parts per million (ppm)(protection of groundwater soil cleanup objective (PGWSCO)of 0.50 parts per million (ppm)), benzene up to 3.4 ppm (PGWSCO of 0.060 ppm), cis−1,2−dichloroethene (cis−1,2−DCE) up to 1.2 ppm (PGWSCO of 0.25 ppm), ethylbenzene up to 140 ppm (PGWSCO of 1 and restricted residential soil cleanup objective (RRSCO) of 41 ppm), tetrachloroethene (PCE) up to 2.32 ppm (PGWSCO of 1.3 ppm), toluene up to 37 ppm (PGWSCO of 0.7 ppm) and xylenes up to 430 ppm (PGWSCO of 1.6 ppm and RRSCO 100 ppm), SVOCs, including benzo(a)anthracene up to 8.9 ppm (PGWSCO and RRSCO of 1 ppm), benzo(b)fluoranthene up to 8.8 ppm (PGWSCO of 1.7 ppm and RRSCO of 1 ppm), benzo(k)fluoranthene up to 3.7 ppm (PGWSCO of 1.7 ppm), benzo(a)pyrene up to 7 ppm (RRSCO of 1 ppm), chrysene up to 7.6 ppm (PGWRSCO of 1 ppm and RRSCO of 3.9 ppm), naphthalene up to 26 ppm (PGWSCO of 12 ppm), indeno(1,2,3−cd)pyrene up to 4.6 ppm (RRSCO of 0.5 ppm) and dibenzo(a,h)anthracene up to 2 ppm (RRSCO of .33 ppm) and metals including arsenic up to 18 ppm (PGWSCO and RRSCO of 16 ppm), barium up to 490 ppm (RRSCO of 400 ppm), lead up to 1,100 ppm (PGWSCO of 450 ppm and RRSCO of 400 ppm), and mercury up to 2.9 ppm (PGWSCO of 0.73 ppm and RRSCO of 0.81 ppm) were detected in the soil above PGWSCOs and/or RRSCOs. There is no evidence of off−site contamination in soils.

Groundwater − Groundwater samples collected from across the site indicate the presence of certain contaminants in varying degrees generally consistent with the former use of each parcel. VOCs, including benzene up to 530 parts per billion (ppb) (SCG of 1 ppb), cis−1,2−DCE up to 340 ppb (SCG of 5 ppb), ethylbenzene up to 1,100 ppb (SCG of 5 ppb), isopropylbenzene up to 95 ppb (SCG of 5 ppb), xylene (total) up to 3,000 ppb (SCG of 5 ppb), methyl tert−butyl ether (MTBE) up to 120 ppb (SCG of 10 ppb), tetrachloroethene up to 3,300 ppb (SCG of 5 ppb), toluene up to 110 ppb (SCG of 5 ppb), trans−1,2−dichloroethene up to 18 ppb (SCG of 5 ppb), trichloroethene up to 420 ppb (SCG of 5 ppb) and vinyl chloride up to 49 ppb (SCG of 2 ppb), SVOCs, including naphthalene up to 180 ppb (SCG of 10 ppb) and pentachlorophenol up to 2 ppb (SCG of 1 ppb) and metals including antimony up to 5.03 ppb (SCG of 3 ppb), iron up to 35,500 ppb (SCG of 300 ppb), manganese up to 4,724 ppb (SCG of 300 ppb) and sodium up to 583,000 ppb (SCG of 20,000 ppb) were found in excess of ambient water quality standards and guidance. Groundwater contaminated with chlorinated VOCs appear to be migrating from the site to off−site locations. Soil Vapor − On−site soil vapor was not completed during the RI based on the lack of existing structures and the expectation that future structures would include underground parking garages or unoccupied spaces, or ventilation/mitigation systems to address potential exposures related to soil vapor intrusion. Limited off−site soil vapor sampling along Maple Avenue, did not detect chlorinated solvents. Some petroleum related compounds, including 2−hexanone up to 75 ug/m3, ethanol up to 211 ug/m3, hexane up to 20.4 ug/m3, benzene up to 17.6 ug/m3, toluene up to 68.2 ug/m3, xylenes up to 92.1 ug/m3, heptane up to 23.7 ug/m3, and cyclohexane up to 164 ug/m3 were detected. The potential exists for soil vapor intrusion impacts in off−site buildings.

ASSESSMENT OF HEALTH PROBLEMS:
People will not come into contact with site−related soil and groundwater contamination unless they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant so inhalation of site contaminants in indoor air via vapor intrusion is not a current concern. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on−site development. An evaluation is needed to determine whether soil vapor intrusion is a concern for any off−site buildings.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location Description: The site is located in an urban portion of Westchester County, occupying several city tax parcels, including 221 Main Street, in the City of White Plains. Current Use: The site is currently being redeveloped. The newly constructed complex will contain approximately 125 hotel rooms, 400 condominiums and approximately 10,000 square feet of street levels stores.

Surrounding Uses: The site is surrounded by commercial properties with a mix of retail and office space. Historical Source(s)of contamination: The historical source of contamination at this site included multiple leaking underground storage tanks (USTs). Investigations revealed the presence of ten USTs.

Investigations/Actions Performed to date: Previous environmental investigations include a Phase I Investigation in 2002 and a Petroleum Contamination Site Investigation completed in June of 1993. Under the Brownfield Cleanup Program, a Remedial Investigation was conducted in 2005−2006. Based on RI findings, an Interim Remedial Measure (IRM) was planned and implemented which included the removal of all USTs, and contaminated soil.

Current Action: A Final Engineering Report which documents the remedial activities completed has been approved. On December 19, 2006 a Certificate of Completion was issued declaring remedial activities complete, and that a Track 1 cleanup (i.e., unrestricted use) has been achieved.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Contaminant of concern: Petroleum−related compounds including volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons.

Impacted Media: Soil and groundwater. Known SCGs exceedences: Investigation revealed benzene, toluene, ethyl−benzene and xylenes, however, as part of a site−wide remedial program (2005−2006) all contaminated media has been removed and properly disposed.

ASSESSMENT OF HEALTH PROBLEMS:
The site is located in downtown White Plains, public water serves the area. Through the implementation of an IRM the site has been remediated and nearly all the soil has been removed to bedrock eliminating potential exposure to contaminated soil. Proposed redevelopment of the site will include a ventilated below−grade parking garage with foundation drainage which will effectively eliminate the potential for soil vapor intrusion to occur.

Transition from Site #V00438 not completed. Project terminated.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
A site characterization was conducted in 2000−2003. The site is impacted by MGP operations, including DNAPL MGP tar at the site as well as off−site to the south. The off−site migration of tar was addressed during the 2004 IRM by installing a down−gradient NAPL cut−off wall. The southern gas holder was also removed during the IRM.

Additional remediation is necessary at the two northern holders, the purifier house, and the former tar handling areas.

ASSESSMENT OF HEALTH PROBLEMS:

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is bounded by Water Street to the north, New Street to the South, and North Lexington Avenue to the west. It is bounded to the east by a parking lot which is located over the former road bed of Spring Street. OU1 includes the Southern Relief Holder on the MGP site and the off−site area to the south which includes Saint John’s Catholic Church. The Holder was removed by a 2004−2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John’s Property, but some MGP tar is present deep underground. A site management plan and monitoring plan is in place for the St. John’s property. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. Nature of contamination: The Remedial Investigation identified the presence of coal tar in the subsurface soil. Contaminants of concerns in the tar include polycyclic aromatic hydrocarbons (PAHs) and the volatile compounds benzene, toluene, ethylbenzene and xylene (BTEX). Extent of contamination: Coal tar, a non−aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation IRM in 2004−5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Monthly monitoring of these wells did not show any significant accumulation of NAPL, and the monitoring frequency for these wells was reduced to quarterly in May 2006. A site management plan (SMP) is in place, but will be superseded by a site−wide SMP and environmental easement following the completion of the OU1 remedy. The November 8, 2005 Remedial Investigation report indicates a thin seam of MGP tar has migrated through the subsurface and is present beneath the St John’s property at a depth of approximately 36 to 43 feet below the basement floor (which is in turn at least 10 feet below grade) and 52−60 feet below ground surface south of the building. Groundwater sampling indicates that the deep groundwater

in close proximity to the tar seam is impacted; however, shallow groundwater is not. Furthermore, site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the school or the indoor air samples collected inside the school. No active remediation is proposed as part of the remedy presented in the 2007 Remedial Action Work Plan (RAWP).

Coal tar is present under much of the parking area at 12 Water Street (OU-2). This area was remediated from December 2008 through June 2010 using in-situ solidification as described in the 2007 RAWP.

CONFIRMED HAZARDOUS WASTE DISPOSED:

| TYPE | QUANTITY |
|---|---|
| COAL TAR | UNKNOWN |

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

The site is impacted by MGP operations, including DNAPL MGP tar at the site as well as off-site to the south. The off-site migration of tar was addressed during the 2004 IRM by installing a down-gradient NAPL cut-off wall. The southern gas holder was also removed during the IRM. NAPL south of the cut-off wall is sufficiently deep, and is located below clean groundwater, so exposure to environmental receptors is not likely. A Decision Document was finalized in Feb 08, selecting in situ stabilization for the remaining portion of OU2. Field work was completed in 2010 and the FER was approved in May 2012.

ASSESSMENT OF HEALTH PROBLEMS:

None provided

***NO HAZARDOUS WASTE TREATMENT/STORAGE/DISPOSERS IDENTIFIED WITHIN THE 1/2 MILE SEARCH RADIUS***

## *HAZARDOUS MATERIAL SPILLS INTRODUCTION*

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

1) Tank Failures
2) Tank Test Failures
3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
4) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

5) Tank Failures
6) Tank Test Failures
7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
8) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

All spills within each spill cause category are presented in order of proximity to the subject site address.

**Please note that spills reported within 0.25 mile (or one−eighth mile in New York City) are mapped and profiled.**

**Between 0.25 mile (or one−eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:**

* Tank Failures;

* Tank Test Failures;

* Unknown Spill Cause or Other Spill Cause;

* Spills greater than 100 units of quantity; and

* Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellanous Spills with less than 100 units located between 0.25 mile (or one−eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

***NO ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS***

## *ACTIVE TANK TEST FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS*

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

tank test failure. restest likely

DEC Investigator Remarks:

10−6−10 Spoke with Kathy. This is a 4k UST. Loud bubbling during tank test. PBS #3−104469 RP was told by US Tank Tech that they need to empty tank. Undecided about next step. Will notify WCHD. jm

10/14/10 Hospital wanted tank uncover, repaired and retested. There was nothing to repair so a well point sample was collected.
Sample is contaminated with petroleum. Tank will not be retested....mm

pending repair and retest

DEC Investigator Remarks:

Spoke to Elite and received correct # for owner. Elite was retained by Oil Co. to conduct test because Oil Co. believed tank was leaking. Elite is recommending to owner that tank be removed and is providing estimate. Contacted owner, Ali, who reports that tank received delivery on 12/24 of some 150 gals. and is now empty. Advised him to contact his insurance company and that tank needs to be removed. Oil Co. is Tarry Oil at 914−631−2580. Spoke to Robert Corveddu. He confirmed 150 gals. delivered on 12/24 and now tank is empty. He called Elite Env. to test tank. DT

12/29/15: DEC drive by inspection. No answer at the front door. Appears to be a two unit apartment and not a signal family home.

Sign taped to the front door (photo in DecDocs) indicates landlord's phone number is 914−948−7475. There is significant contamination in the side yard around the fill port. Call to Ray Hilyer at Elite, cell number, left message requesting callback. jod

12/30/15: Called and spoke with Lisa at Elite. States Mr Ash hired them for the tank test. I then spoke with Mr Ash. He states he is the owner/landlord. States they have a temp drum set up in the basement for heat. He states he is contacting DSS for assistance. I notified WCDoH and White Plains Bldg Dept of the situation. jod

12/30/15: Email from Tony Magnotta of WP Bldg Dept:

John, Mr. Ash is not the owner but a tenant. Mr. Demitrios Leontitsis is the owner and lives at 1 Sterling Avenue White Plains NY 10606. He is currently employed by the White Plains Coach Diner on Westchester Avenue in White Plains as a night shift floor manager (Tel# 914−428−5700) and is in the process of evicting Mr. Ash. I will send a violation notice to Mr Leontitsis of a compliant for a leaking fuel tank. I will also reach out to Mr. Leontitsis. His home on Sterling Avenue is in it's final stages of foreclosure to another bank and he plans to move into 188 Fisher Ave. as soon as Mr.Ash moves out. TM jod

1/04/16: Robert Corveddu of Tarry Fuel states they are delivering to the temp drum in the basement almost everyday. Usage for the home looks to be approx 20 gallons per day. jod

1/06/16: Spoke with Ray Hilyer, WP Bldg Dept is requiring a permit on the temp drum. Ray has attempted to contact the actual owner Demitrios Leontitsis as his place of business as provided by the Bldg Dept. Ray states he called the White Plains Coach Diner and they state no one by that name is employed there. jod

free product discovered in a monitoring well. Suspected to be fuel oil at this time. clean up is undetermined at this time.

DEC Investigator Remarks:

11/10/16 Getty Realty and White Plains Housing Authority working on nearby site. There is what appears to be #2fo in MW−14 from Spill # 9713110 at 26 East Post Road. There is a #2 UST approximately 40’ from MW−14 on 22−24 East Post Rd. mt

12−15−16 This spill is not associated with 97−13110; just so happens that during that investigation, this was detected. RDB

12−22−16 Adeogun owonikoko company LLC owner− RP letter sent − RDB 1−10−17 met on site with property owner, Oladipo Olatunde 914−262−2583. explained the situation and the need to remove his tank that is still in the ground, provided him pieces from both First environment and Antea . still need to send him names, figures, PBS FIR and tetra's report− RDB

1−13−17, Attached is a letter from TetraTech. Tetratech is an environmental consultant representing Singer Properties, the property owner of 26 East Post Road. Also attached is a copy of the Westchester County Dept. of Health records for the tanks previously registered at 26 East Post Road. The records indicate that the site only stored gasoline at the station and not diesel. RDB

2/3/17 Spoke to Lina from Envirostar. Tank was pulled today − was 1000 gal. UST. Multiple holes found in tank. Samples to be pulled for CP−51. ga.

2−7−17, response to Envirostar, I am disappointed that you did not contact me prior to the removal of this tank. If you had, I would have been able to provide you with the background and explained what I needed accomplished at the site. For now, I need a summary of the work completed and the plan forward. I do not need several unlabeled photos spread out over multiple emails. Please assemble the photos and resubmit in a letter format. Please do not send emails without the Spill number referenced in the subject line. RDB

3−24−17, email We are planning to start the initial soil remediation work at the site starting on Monday April 3, 2017. The initial plan is to excavate an area approximately 12 by 12 by 8 feet (estimating about 25−50 tons of soil) immediately surrounding the tank grave. I will be on site with the contractor (Envirostar) to record conditions (PID readings, observations) and to collect site assessment soil samples.Please email me back to let me know that you have received this email and if want to meet us on site during the excavation work.

My direct cell is 914−382−8673. RDB

4/13/17 Contamination discovered in tank grave. New spill reported, #17−00425, closed and referred back to this one..mm 4−19−17 stopped by site, email from Gallinger on 4−20− RDB

HISTORICAL SPILL − CALLER IS DOING SITE ASSESSMENT AND FOUND SOIL CONTAMINATION

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was HARDY 03/04/98 BARBARA MCDONALD (WCHD); CLOSED GAS

STATION; SITE ASSESSMENT SHOWED SOIL & GROUNDWATER CONTAMINATION ABOVE STARS GUIDELINES; OWNER HAS NOT YET DECIDED ON REMEDIATION OPTION;

06/17/99 LETTER SENT BY T. GHIOSAY RE: WORK PLAN FOR SUBSURFACE INVESTIGATION AT THIS SITE.

04/20/00 TYREE CALCULATES SOIL REMOVAL TONNNAGE. EXCAVATION WOULD REQUIRE 5169 TONS. TYREE RECOMMENDS AGAINST REMOVAL.

12/07/00 LETTTER SENT TO TYREE BY J. HARDY;REMEDIAL ACTION PLAN IS REQUIRED FOR THIS SITE WITHIN 30 DAYS.

01/18/01 LETTER SENT TO TYREE BY J. HARDY; PROPOSAL TO DESIGN A DUAL PHASE HI−VAC SYSTEM FOR THIS SITE IS APPROVED AND REQUIRED.

03/01/01 LETTER SENT TO TYREE BY J. HARDY; PLAN TO SHOW OFF SITE WELLS IN RELATION TO OFF SITE CONTAMINATION IS REQUIRED.

06/07/01 LETTER SENT TO TYREE BY J. HARDY; REQUEST TO EXTEND THE START UP DEADLINE FROM 6/1/01 TO 6/21/01 IS APPROVED.

6/12/03: Letter sent to P.N. Holloway, Tyree Organization Ltd. from J. Hardy. Monitor well sampling and reporting may be recduced to semi−annually.

2/23/04: Letter sent to P. Holloway, Tyree by J. Hardy. Reduce reporting to annual.

A Dual Phase High Vacuum Extraction system operated here from roughly 2001 to 2007. VEFR events on targeted wells were continued bimonthly for all of 2008. An NFA request was submitted in Oct. 2008 and reiterated by e−mail Feb. 2009. This request was denied based upon coninued impacts to GW in MW−19. Latest QMR and denial e−mail have been added to eDocs. PJD Feb. 2009

A request for a reduciton in the # of MWs being sampled semi annually has been received and approved based upon contaminant concs. at or below GW standards. PJD Mar. 09

An e−mail request to conduct supplemental investigation in the area of MW−19 was approved and uploaded to eDocs. PJD Jan. 2010

5−27−15 project transferred to John O'mara− RDB 8−15 Tyree submitted Remedial Action Report to JOM 8−15 submittal by first environment on behalf of WPHA 9−15 JOM response to submittal? 04−16 submittal of indoor air sampling by 1st Environmental 04−16 response from NYSDOH to First Environmental 04−14−16 project transferred to DB; sent email to Antea looking for updated information − RDB 05−12−16 email from first envir; Tyree does not have acesss to install wells? RDB 06−16− meet with Getty and then meet on site; 07−01−16 sent email approving locations for Getty; copied WPHA 07−16− Access granted; wells installed; sampling to be conducted August 1−RDB 10−18−16 The replacement wells were installed in the excavated area in late July and a groundwater sampling event was performed on August 1. We are preparing the monitoring report to summarize those results and will be submitting it to you later this week. RDB 11−1−16 revised sample results submitted− RDB 11−10−16 next round of sampling collected; MW 14 found to have LNALP; new spill 16−07837 opened for 22 East Post Rd 12−9−16 comments from 1st Environment on August sampling. 12−16 new spill opened for 34 East Post Rd− 16−08924 12−16 letter from owners rep. RDB 01−17 responded to Owners rep looking for spill closure. 01−17 Owner removed canopy. email sent to Antea asking if below was ever sampled. 01−17 response from Antea, In response to White Plains, I´m reaching out to Ben Rieger to understood the aspects of the canopy with regards to the excavation and will replying to your e−mail. RDB 1−12−17 requested sampling under the footprint of the canopy based on excavation stopping at footings. RDB 1−23−17 As requested, antea and IPT will be on site tomorrow to conduct soil borings, 02−17 Report submitted doc canopy work, nothing found− RDB

shut down this system. continue vacuum removals and monitoring.(levels in recovery wells low, system not productive−−no off site problems and hi vac removals to continue) jh

Periodic VEFR to supplement the Dual Phase High Vacuum remedial system is continueing at 3 of the more impacted wells. QMRs in eDocs.

PJD Apr. 2009.

DPHV system continueing with minor but consistent removals. GP−4A was drilled in late 2009 and connected to the system in early 2010. GW quality conitnues to improve w/ 3 wells at moderate concentrations. PJD Sept. 2010

DPHV System down as of 2010. Review of additional monitoring data in the interim and the last few months of system data lead the DEC to accept that additional system operation is not warranted at this time. Targeted removal by VEFR with the addition of biosolve approved for use in June 2013. DOH found inventory discrepency in early 2013 and required subsurface investigation. DOH requested DEC review. Most severe soil impacts found just downgradient of pump island. No significant new release indicated. Current remedial plan sufficient at this time. PJD July 2013

5−29−2014: RDB & SWC met with Getty Realty.

RAP approved by DEC awaiting UIC from EPA. 1−26−15 3q and 4th quarter 2014 data submitted; biosolve injection in June 2014; planned for Feb 2014 RDB 6−10−15 met with Antea and Getty to discuss;− going to check construction plans and await results of Lake Katrine and Shrub Oak injections RDB second quarter results submitted RDB 11−20−15 third quarter results 12−2− met with Antea and Getty need to address the contamination, need a workplan for the soil removal around gp4 and the dispenser island possibly removing MW4. RDB 1−12−16 sent email to Getty for update RDB 1−23−17 met with Antea and Getty; owner is planning to remove tanks in next 2 months and Getty will overexcavate the dispenser area and around canopy ; In addition consultant for WPH called looking for data. ; sent last report RDB 2−15−17 Consultant calling returned call LM RDB 2−15−17 reported that they found gw contamination on edge of property at levels that do not match Getty's numbers RDB 04−21−2017− first QMR submitted; emailed Antea looking for station updatel supposed to be razed, response, Yes it is.Note to John ˇ Have you received an update from the current owner on their schedule? Please see below note from Dan as reference. RDB

Re: PBS #3−030910 ˇ 151 East Post Road, White Plains, NY

NYSDEC Spill # 06−01015 TTF

Dear Facility;

The Westchester County Department of Health has received the retest results from July 28, 2006.

The results are acceptable to the Department. A request for closure is being sent to NYSDEC for the above spill # and no further action is required regarding the work at this time.

If you have any questions, please call me at (914) 813−5971.

Sincerely,

Danielle Jackson Sanitarian Office of Environmental Health Risk Control

Caller Remarks: NO REMARKS GIVEN FOR THIS SPILL

DEC Investigator Remarks:

6/14/06 Pro Test on site to test the 1500 gallon tank as ordered by the DEC.

Tester couldn't get vacuum on the tank. Andre from ProTest said the cement on top of the tank needs to be removed to expose all of the bungs and piping. Once that is performed, then the tank can be isolated and tested. Visual observation revealed that the steel on the top of the tank was very heavily corroded.

TG 06/29/06 AM − ProTest back on site retesting the lines and the tank. Andre reported that the vent line and the remote fill line both failed the test. The tank failed to hold a vacuum therefore, it also failed. Andre recommending unearthing the manway and checking that for a definitive answer on the tank failure. However this can't be accomplished until a refrigeration compressor is moved which will require a refrigeration mechanic. TG 06/29/06 John Leddy from ProTest officially reported that the tank failed and that the tank has lost two inches of oil since the 14th and the tank is not being used. Recommending emptying the tank to their client. TG 07/05/06 Joe Ostrosky from Petroleum Tank Cleaners (PTC) reported that PTC was hired to remove the oil from the tank. The tank has been emptied, cut open and cleaned. TG 11/15/06 New England Tank Services has completed the removal of the tank, allowing for an inspection. Substantial corrosion and numerous holes were observed. A letter was sent to the management company requiring the installation of two monitoring wells. 03/12/07 Monitoring well installation report submitted by JM Associates who were subcontracted by Fleet Environmental. No free product was detected in the wells. TG 07/30/07 New England Tank Services reported that they removed the tank along with 2.64 tons of petroleum contaminated soil.

Caller Remarks:

FIRE DEPT ON SCENE AND WOULD LIKE DEC TO RESPOND

DEC Investigator Remarks:

01/25/07 Contacts: Trucking company: All Aboard Transport − owner David Board 2 Kit Court Monroe, NY

845−782−4727

Station owner: JKSG Inc. 124 South Lexington Ave White Plains, NY

Dharminder Singh 46 Beaumaont Circle Yonkers, NY 914−482−2560

All Aboard Transport driver Joseph Graff reported that he arrived at the station at approximately 6:30 am to deliver 8500 gallons of gas, 7500 gallons of regular and 1000 gallons of premium. The regular load was dropped into three tanks, 1800 gallons into a 2k reserve tank , 2500 gallons into a 4k tank which is connected to the reserve tank, and the remaining 3200 was dropped into another 4k tank. A pump in the 2k is used to tranfer gas from the 2k tank to the 4k tank when the level in the 4k tank is low. Driver Joseph Graff stated that the delivery was made with without incident. Paperwork was completed and he was about to leave the station when gasoline unexpectedly began gushing out of the dispensers and then out a vent pipe located next to Efficiency Printing. Gasoline ran across the station asphalt into a storm drain and also puddled on the rooftop of the print shop. Station owner Dharminder Singh attempted to shut the power to the dispensers, but this failed to stem the discharge of gas. He then called 911 to the FD who responded and foamed the gasoline. The USTs were later gauged and the 2k tank only contained 7 of product, indicating that the pump in the 2k tank was activated, transferring product into the 4K tank. Once the ullage space in the 4k tank was filled, the product discharged out of the tank at the points outlined above. The station owner hired Castlton Environmental Contractors (CEC). CEC crew deployed booms in the Bronx river and vacuumed gas from the rooftop, the station property, and a gw monitoring well that had been impacted.

WCHD a delegated PBS county followed up with the PBS issues.

TG

June 11, 2007 JKSG 124 South Lexington Avenue White Plains, NY 10601

Re 124 South Lexington Avenue, White Plains NY

PBS 3−497231

Spill number 06−11782 Dear Sirs

This Department has received an interim closure report from American Petroleum regarding the tank removal and spill clean up at your facility. Staff from this office inspected the tank removals.

Significant contamination was removed. However, significant accessible and inaccessible contamination remains. Further remediation is required. This Department understands the site limitation and the need to perform the remediation in stages. Your contractor has requested that the tanks be installed before further excavation is performed in the southern edge of the property near the printing company. This is acceptable only if a remediation plan has been submitted and approved prior to the tank installation. This accessible area of contamination must be remediated.

At least three monitoring wells are required to be installed. The wells must be positioned across the property. The wells must be sampled quarterly for one year, and then the need for continued sampling will be reviewed. The well must be sampled for volatiles (EPA method 624).

A remediation plan must be submitted by July 1, 2007. The submittal from interim closure report from American Petroleum may be

modified into the remediation plan.

This letter was prepared in conjunction with the New York State Department of Environmental Conservation. Please continue to address all submittals to both agencies.

Sincerely,

Christopher J. Lalak

Radiological and Chemical Analyst

Caller Remarks:

sump is full of oil/investigation underway

DEC Investigator Remarks:

8/10/11 − During a tank test of a 20K UST, No. 6 fuel oil was discovered in the sump. Caller is scheduling for

8/11/11: I responded to the location yesterday. I first checked outfall at Bronx River and no oil or sheen was noted. I spoke with Ray Hilyer, Elite was scheduled to test the tank last week and did not after finding an uncapped feed line. Ray states he notified WCDOH Wayne Schneider. Elite returned yesterday and found a large quantitiy of #6 Oil in a manway sump next to the UST. I met with Hospital Engineer Bob Biddiscombe and observed the oil in the sump. He states it is contained within the secondary containment and stated Elite was en route to vac it out. I again contacted Elite, they have not been hired. Bob Biddiscombe spoke with Elite via phone directly while I was there. Elite will be there first thing in the morning.

No oil was observed in the basement sump where previous major spills have occurred. Mr Biddiscombe stated the sump has been re−piped, and now discharges to the sanitary sewer instead of the storm drain. WCDOH will follow up. Chris Lalak is enroute this morning to confirm the sump has been vacuumed out and investigation will continue. jod *Chris Lalak reports that the manway has still not been vacuumed out this morning. Email update from Chris:

Lalak, Chris 8/11/2011 11:52 AM

They still didn't pump it out Robert Biddiscombe was going to call Elite or Island pump and tank to get it pumped. He doesn't know if it is a contained sump. I gave him 1 week to TT tank and lines. 1 month for env. Investigation and. pump it out today and check daily. I also stated if it is visually found that the sump is leaking an immediate investigation is needed. jod

8/12/11: Chris Lalak reports Envirowaste completed pump out. Further investigation required. jod

10/16/12: See letter from Chris Lalak of WCDoH in EDocs. jod

5/30/13: Report from Elite dated Jan 14th 2013 entered into Edocs. Message sent to Chris Lalak requesting status report. jod

040417− Email, This spill started on 2009 with 6 oil entering a basement Sump. The sump apparently collects water the buildings footing drains. White Plains hospital is a huge urban hospital complex, occupying a full city block.

The spill was determined to be from piping leaks associate with two old 6 oil tanks. Tank 1 (20K ˇ ust was abandoned in place by Castlton). Removal of this tank was not possible. Free product was encountered around this tank. Castlton installed a monitoring/recovery well thru the tank. The well is identified as 15ˆ. Free product was recovered from the well, into a holding tank. The well was then sampled 4 times 2014/2015. Some minor volatile and semi−volatiles are still present. The highest is 29 PPB pyrene. MW number 4 is located next to the abandoned tank and was sampled at the same time and was essentially clean. Tank 2 was removed by Elite. (the other old 20K UST) Royal remediated the sump for approximately 2 years.(2009−2010) Hydro Environmental Technologies (HETI) performed a GW monitoring investigation in 2012. The Hospital has been cooperatively remediating a very difficult spill. No oil has been found in the sump since 2013. The monitoring/recovery well installed thru the 20 K 6 oil UST, (and thru the concrete Pads) has been substantially remediated. Pristine remediation is not possible in this case. Well sampling performed by Castlton in 2014 and 2015 is attached. The hospital is located in an urban city with no drinking water wells near by. The abandoned UST has been filled in with slurry Concrete except for the recovery well. It could not be removed. NFA− RDB

Caller Remarks:

3RD PARTY CALL: CALLER STATES THAT THEY FOUND ABOUT 200 GALLONS OF PRODUCT IN THE SUMP PIT UNK IF ANY RESOURCES ARE AFFECTED UNK SOURCE. CLEAN UP IS PENDING.

DEC Investigator Remarks:

4−3−09: Chris/WCHD ^ V.Mc./Dispt.: Brain/WCHD responding to inspect site.

5/27/09: PBS Facility 3−177148. See eDocs. jod

10/7/09 WCHD is getting Monthly reports JO'M

9/21/10: Updates received from Royal Environmental. Royal was hired to remove free product from the sump pit and change out pads as needed. Royal was NOT hired to remove the leaking USTs which are the suspected source of the leak. Between April thru August of 2009, Royal Environmental removed and disposed of a total of 74 drums of contaminted sorbants from the sump, and removed a total of 6,805 gallons of #6 Oil and contaminated water using a vacuum truck. Royal provided a letter from Robert Biddiscombe, Director of Engineering for the White Plains Hospital, dated August 12th 2009 and addressed to Chris Lalak of WCDOH which states AKF Engineers will now handle the remediation. Royal has had no further involvement. jod

10/16/12: See letter from Chris Lalak of WCDoH in EDocs. jod

11/16/12: Update from Chris Lalak of WCDoH PBS:

greater than greater than greater than Lalak, Chris cjl1@westchestergov.com greater than 10/26/2012 4:01 PM greater than greater than greater than

Spill 0900120 Todd Know about this one. Three years ago 6 oil started getting into the basement of the White Plains Hospital. They went to abandon tank 1 in place a 20 k UST. It cant possibly be removed and hit free product seeping back into the tank. Castlton Broke thru the bottom of the tank and thru a 2 foot thick concrete pad and set up a sump to recover the oil. They are building a second sump and putting the oily water into a holding tank. The spill is a nightmare and the hospital has been slow to act. And they have their own hospital issues about being self sufficient in case of emergencies. The put in a new Large AST and have a temp tank. They also have another 20k that is being removed any day now. −Chris jod

12/19/12: Update from Chris Lalak. The 20K UST is scheduled to be removed tomorrow. Elite Environmental will be doing the work. Several tons of contaminated soil has already been removed. This is the #6 Oil tank. WCDoH will be on site to inspect. jod 10−16−13 another tank at facility being removed, Need and update on this spill. RDB 0402−14 letter from WCHD in edocs RDB 2−27−15 Attached are the samples collected from White Plains Hospital this month. 06−15− june data submitted; checking with WCHD

FOUND CONTAMINATION WHILE REMOVING LIFTS:

DEC Investigator Remarks:

02/02/06 Consultant Mark Pascow worked for Mazda who is a tenant at the facility. Mazda hired Royal Environmental to remove the lifts, but once contamination was found, Mazda took the position that it was the building owner's reponsiblity to do the cleanup. Owner was unknown to Pascow. TG 11/18/10 Site meeting held to review current status. Two property developers were present and a representative for Dave Pelletier from Jade Environmental. Site owners: Bob Slingsby − cell 914 715−1974 Joshua Schwartz −VP All Med 161 West 61st St. Apt 9A NY NY 10023 Bob from Jade Environmental Pointed out two locations were a waste oil tank and a #2 FO tank were removed. Impacted soil around the tanks was excavated and stockpiled awaiting disposal. Dave Pelletier reported by phone that 14 lifts had been removed and that gray impacted soil was observed at the smear zone a 6'bg. He will be drafting a soil and groundwater sampling plan and will submit the plan for Dept review.

Caller Remarks:

Looking for response.

DEC Investigator Remarks:

3/1/12: I met on site with White Plains Police Dept, Fire Dept and Highway Dept. Storm drain outfall immediately south of Main St (Rt 119) overpass reportedly had a sheen entering the River. When I arrived on site, there was no material visible, no sheen presnt, and no odors were noted. Fire Dept had placed boom at outfall − no accumulation. FD stated the material was brown and appeared to be cooking oil. They state it stopped very soon after their arrival. Nothing noted at this time. No material recoverable. FD pulled the boom and left site. NFA jod

3/2/12: Chris Lalak reports the WCDoH received a second report of petroleum sheen from this location this morning. jod

>>> Lalak, Chris 3/2/2012 11:23 AM >>>

John, County PD on site. Oil caught behind a boom at the out fall. (I´m guessing you put out a boom yesterday) They report a bit of product and a strong oil smell. Wayne Schneider is in Route. Chris *I replied and informed Chris no boom was left at the outfall yesterday. jod 3/2/12: Second Spill number 1113542 reported by WCDoH. Wayne Schneider confirms this second report is a separate incident, unrelated to this spill number. jod

3/6/12: Chris Lalak will reinspect the River and update DEC. He confirms that Spill 1113542 is petroleum and it is coming from the next drain outfall down river from this incident. Chris states County Police still investigating both incidents. jod

4/16/12: I received a follow−up phone call from Det Brian Hembury of WC Police at 914−422−6277 I returned his call and left a message. jod

Caller Remarks:

Caller reporting a spill of an unknown amount of an unknown petroleum in the bronx river. Unknown source or start point.

DEC Investigator Remarks:

6−2−10: V.Mc./Dispt., J.O'M. & T.Gh.: T.Gh. to site inspect.and determin if contractor needs to be called out, if so they are to be put on standby for call out, pending authorization to spend money by Cent.Office.

6/3/10 − Joe McCarthy and Keith Browne, DEC, went to the scene to assist the White Plains staff in checking the Bronx River. DEC has hired TriState Environmental to conduct cleanup. Booms and pads were placed in several locations in the river. The river is impacted in areas at least 3 miles which is in the City of White Plains and the Village of Scarsdale. A vac truck was used to capture the oil that was entering the river from the outlet pipe of the storm drian system. Two areas of free product oil were observe in river in Scardale. TriState was told about the areas and was mobilizing for cleanup. KAB

Spill was traced through the city storm drain system to an apartment building located at 235 South Lexington Ave. The building was entered and the boiler room inspected. Superintendant John Szabo stated that Star Industrial Services worked on the boiler the day before the spill was found in the river. Once Star left the building, John Szabo went into the boiler room and found oil on the floor. He and other maintainance men cleaned the spill by washing the oil into the building sump pit. Once in the sump pit, it was pumped out into the city drains and discharged into the river impacting the river from White Plains to Scarsdale. The River cleanup effort was completed by TriState Environmental over several weeks.

Caller Remarks:

a lot of dead fish in area − unknown material − cleanup status unknown

DEC Investigator Remarks:

7/9/10: I spoke with Stefan Goreau earlier. The WCDOH had received a call earlier this morning, report of dead fish and a benzene odor from a section of the Bronx River where a petroleum spill had occurred approximately 5 weeks earlier. Stefan stated he was on his way to the site to inspect. He then reported this spill after arriving at the location.

From the storm drain outfall just south Exit 21 (Main Street) of the Bronx River Parkway going south for approx 1/4 mile, he observed approximately 100+ dead fish floating in the water. He stated that further downstream he observed live fish and turtles. There was no petroleum sheen observed and no petroleum odors. But there was a strong burnt smell in the area. On 7−7−10 there was a massive fire on East Post Road in White Plains. Five stores including a dry cleaners and a restaurant were destroyed, at least two dozen Fire Fighters were hospitalized. Runoff from the fire fighting operations would have entered the strom drains and discharged to the Bronx River at this location.

No clean up is possble. DEC Fisheries notified of the fish kill. NFA jod

Caller Remarks:

Caller states that they have noticed material spewing on the curbsied. When he lifted the sod at his father’s place and an unknown rainbow sheen with a heavy sewage odor is apparent. Town has been notified and told him to contact DEC. He would like to speak with someone to figure out where and what this material is.

DEC Investigator Remarks:

6−10−10: V.Mc. to Mr.GENE CALOLE: To ref.to WCHD for site inspection. 6−10−10: V.Mc. to WCHD/C.Tor.: Left Mess.: Req.Callbk. 06/10/10 Inspected the site and met with the homeowner. The sheen referred to in the complaint is a small biosheen coming from compost which the homeowner stated he placedin the area to improve the soil conditions. He said he converted to gas 30 years ago. He asi the tank was emptied but has little memory of what happened with the tank in the front lawn. It was suggested that he dig up the area to see if a remote fill may be conveying low levels of impacted water to the area. However it should be noted that the soil didn’t exhibit any fuel oil odor.

Caller Remarks:

during tank removal soil and gw were discovered. clean up penidng.

DEC Investigator Remarks:

2/10/11 Spoke to Stu Freeman at Advanced Environmental, who referred me to the person at the site , Declan MacAnnanie (Zack) at cell # 914−906−8878. 550 UST was pulled, and there is contaminated dirt and groundwater impact reported by Advanced. They will be continuing the remediation pending insurance coverage. dw

3/28/11: DEC site inspection, met with Advanced Environmental and rep from the Church Board. Contamination is extensive, ground water has been impacted. Approx 40 tons of contaminated soil has been removed to date. Remediation is being hampered by a sewer main pipe and a large tree. Main excavation is being backfilled, and overburden will be removed on the other side of the sewer pipe to access additional contamination. jod

4/18/2011: Clean up completed by Advanced Environmental. Report reviewed and entered into eDocs. Based upon the information provided, no further action is required at this time. jod

Caller Remarks:

What Occurred: Gas Pump #7 does not shut off automatically when the fuel tank is full. As a result, the tank overflows and a significant amount of gas overflows and pools on the ground. This first occurred to me about 2 months ago. At that time, I

thought there was a problem with my car and I had it checked out by the dealer. I used the same pump again this morning at 7:30am and the same problem occurred. I informed the gas station attendant and it appeared he knew this pump was a problem. I am concerned because it appears they have not corrected the issue in at least two months (based upon the two times it happened to me) and significant amounts of gas are routinely spilling on the ground.

---

DEC Investigator Remarks:

12/9/15 − WCDOH conduct an inspection and did not find active leak. WCDOH recommended spill to be closed. WCDOH email and report are in DecDocs. NFA. KAB

Caller Remarks:

Caller advised found contaminated soil after removing tank.

DEC Investigator Remarks:

10−8−10: V.Mc. to DAVE PELLETIER/Jade Enviro.: Likely a pre existing active file for loc. PBS facility, WCHD records only show 3 275 AST’s but Jde found 2 more 1K UST, #2 fuel oil & waste oil. Non−standard size tank. Name under PBS records: RCC Properties,

maybe under Shults. Waiting on permit, prior to removal. TCR to be submitted to WCHD. 10−8−10: V.Mc.: Poss. cross ref. 090−1804 & 091−1783, but address for both spill #'s is given as 55 West Post. 11/18/10 Site meeting held to review current status. Two property developers were present and a representative for Dave Pelletier from Jade Environmental. Site owners: Bob Slingsby − cell 914 715−1974 Joshua Schwartz −VP All Med 161 West 61st St. Apt 9A NY NY 10023 Bob from Jade Environmental Pointed out two locations were a waste oil tank and a #2 FO tank were removed. Impacted soil around the tanks was excavated and stockpiled awaiting disposal. Dave Pelletier reported by phone that 14 lifts had been removed and that gray impacted soil was observed at the smear zone a 6'bg. He will be drafting a soil and groundwater sampling plan and will submit the plan for Dept review.

TG 09/26/11 Cleanup performed by Jade Environmental. See Final Cleanup report in Edocs. NFA. TG

550 gal ust removed/loss of oil to soil/clean up pending sample results and contract

DEC Investigator Remarks:

11/17/16 Spoke to Wayne at Barrier, who said he went 9' below grade, and is fairly sure there is a groundwater impact. Spoke to homeowner who confirmed these remarks, and is contacting insurance. dw

2/14/17: Email update received from Tim Bishop of Hydro Environmental:

We covered a claim here on behalf of MetLife and Barrier completed the cleanup of 120.03 tons of contaminated soil. We just completed our first round of post−remedial groundwater sampling and the results were favorable, no VOCs and a few SVOCs (usual PAHs). I´ll send you our Closure Report in the coming weeks jod

3/8/2017: Barrier Environmental disposed of the leaking UST and a total of 120.03 tons of petroleum contaminated soil. Post excavation soil sample results were submitted for review. Ground water was also impacted and sampled. Report from Hydro (HES) entered into DecDocs database. Based upon information provided, no further action required at this time. jod

BOILER MALFUNCTION, AND CALLER ENROUTE TO CLEAN UP: SOME DID GO INTO DRAINAGE:

DEC Investigator Remarks:

11/22/06 Two valves feeding oil to the boiler failed, resulting in the constant pumping of oil into the boiler. The boiler failed and oil eventually drained out of the bottom of the boiler and flooded a large section of the boiler room floor. Oil entered a drainage pump pit but no evidence of a discharge of oil into the storm drain system was observed. YMCA hired Northeast Environmental for the spill cleanup. NE will vac up the oil and decon the floor and the pit. TG

EQUALIZING LINES CONNECTING 3 TANKS HAD FAILURE CAUSES LOSS. CLEAN UP EN RTE BY CT TANK. SUMP PUMP

---

DEC Investigator Remarks:

4/7/11 Conn. Tank (203−384−6020, 888−304−8265) enroute to vac out, and do spill cleanup. ETA was approx 4:30pm. Tanks were filled by Petro this morning. Possible 800 gal release due to 3 connected 330 AST's. Sump involved but this has been unplugged. Bldg. has offices, and the people have left due to possible fumes. WCHD is sending a rep, after speaking with Carlos Torres. Updated T. Ghiosay. J. O'Dee enroute. Vaulted area is not under the building, but in an adjacent area outside. Bill Christopher is building owner at 203−644−2002 cell . John O'Dee reports from the scene that approx 900 gal has been lost, and will be checking sewer lines. dw

4/7/11: I first inspected the Mamaroneck River just north of this location. Located the outfall from the storm drains in the area of the spill. No evidence of any sheen or petroleum noted. Met on site with WCDOH Denise Heinzinger and Sebastian Bimonte. Also on site, WP Fire Dept, City Building Dept, City Highway Dept and WP police. Contact for building ownership is Bill Christopher 914−949−7600 − part owner of Urban Living Association.

Office Bldg has 3 manifolded 330 gallon tanks in the basement. There is a cinder block containment vault around the three ASTs, approx 2 and 1/2 ft high. Petro had delivered approx 460 gallons at around 8:00 AM and noticed no problem. Owner of the restaurant next door states he began noticing petroleum odors around 9:30−10:00 AM. It appears the center tank had a leg break, tank collapsed unto piping. All three tanks now empty. Most of the petroleum was contained to the vault where it was recovered by CTR using a vac truck. But a significant amount leaked out thru a floor drain and into two large sumps in the sub−basement a half level below. The pump in one of the sump does not work and the other was reportedly off before and during the release. Both sumps discharge to the sanitary sewer. Manholes around the entire perimeter of the building were inspected, no petroleum was found in any.

CTR continuing with the remedaiation. ASTs were being cut, cleaned and removed when I left. CTR states they will forward a report when complete. WCDOH will inspect tomorrow. jod

4/19/11: WCDOH initial inspection report entered into eDocs. Denise states she re−inspected on 08Apr11 and clean up was proceeding. jod

>>> Heinzinger, Denise 4/21/2011 10:08 AM >>>

I was out there yesterday. Looks pretty clean ˘ tons of deodorizer The sumps were good, a very light sheen upon the water. Barrels of contamination still on site.

−CTR continuing with remediation. jod

12/08/11: Update received from WCDOH: >>> Heinzinger, Denise 12/8/2011 9:22 AM >>>

I believe we can close spill #1100238 ˘ 171 East Post Rd, White Plains. Exterior, diked AST legs gave out breaking tank. Containment held most of the oil but some seeped out into a nearby floor drain which ended up in their basement sump pits. Clean

up performed. May have been some cracks in the basement floor. Apart from jack hammering up I believe the clean up was satisfactory. *DEC concurs − no further action required at this time. jod

Caller Remarks:

leaking tank from filter to ground to drain to bronx river − FD on scene − cleanup pending −

DEC Investigator Remarks:

1−10−12 Chris, WCHD, responded to a call from White Plains DPW of sheen coming out of an outfall to the Bronx River. O'Dee responding. jc

1/10/12: I met on site with Chris Lalak and Joe Mancini of WCDOH. Also present, numerous members of the WP Fire Dept, WP DPW, and WP Highway Dept. Source of spill is a leaking 137 gallon AST for a generator at 146 Westmoreland Ave. Property owner is Home Street Holdings LLC. Property is leased by contractor Cum Laude Group − AST is owned by Cum Laude. Fire Dept deployed boom in the River and in impacted catch basins. Tri−State contacted by DEC and responded. After I arrived on site, owner of Cum Laude Chris Cacace arrived. He has accepted responsibility for the spill. Tri−State will maintain booms in River while remediation takes place. NES hired for clean up on site. jod

1/11/12: Chris Lalak of WCDOH inspected:

>>> Lalak, Chris 1/11/2012 11:56 AM >>>

John, The clean up is coming along. The river looks great. No sign of oil in the river. The absorbents are working properly.

The spill area on westmoreland looks good. It appears that all the contamination has been excavated. I am waiting on a call back from al NES, he was on site this morning and I missed him. >>>1/11/2012 12:27:10 PM: The excavation is good. There is a heavy sheen in the water in the exc. I required that they vac it out before backfilling. They will vac it and backfill today probably. jod

4/2/12: The clean up in the Bronx River has been completed by Tri−State. Booms have been removed for disposal. The clean up on the property has been completed by NES. No further action is required at this time. jod

## Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.

D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.

D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.

D003 Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.

D005 Barium

D006 Cadmium

D007 Chromium

D008 Lead

D009 Mercury

D011 Silver

D016 2,4−D, (2,4−Dichlorophenoxyacetic acid).

D018 BENZENE

D028 1,2−Dichloroethane

D039 Tetrachloroethylene

F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1−trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1−trichloroethane, chlorobenzene, 1,1,2−trichloro−1,2,2−trifluoroethane, ortho−dichlorobenzene, trichlorofluoromethane, and 1,1,2−trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F003 The following spent non−halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n−butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non−halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non−halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

F005 The following spent non−halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2−ethoxyethanol, and 2−nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non−halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

U036 Chlordane, alpha & gamma isomers

U188 Phenol

# How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12 Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/ operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

# Information Source Guide

*Toxics Targeting's Environmental Reports* contain government and other information compiled on 18 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated from: 9/09/2015. Data obtained by Toxics Targeting: 9/09/2015.
New Facilities updated through: 9/30/2016. Data obtained by Toxics Targeting: 9/30/2016.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 3/8/2017. Data obtained by Toxics Targeting: 3/8/2017.
New Facilities updated to: 3/8/2017. Data obtained by Toxics Targeting: 3/8/2017.

3) **Federal & State Corrective Action Activity (CORRACTS):** New York State and Federal databases of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.**

**Federal Data** Source: U. S. Environmental Protection Agency[1]
Data attributes updated through: 12/12/2016. Data obtained by Toxics Targeting: 12/21/2016.
New facilities updated through: 12/12/2016. Data obtained by Toxics Targeting: 12/21/2016.

**State Data** Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 3/8/2017. Data obtained by Toxics Targeting: 3/8/2017.
New facilities updated through: 3/8/2017. Data obtained by Toxics Targeting: 3/8/2017.

4) **CERCLIS:** Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. Includes Active and No Further Remedial Action Planned (NFRAP) sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated through: 10/25/2013. Data obtained by Toxics Targeting: 1/07/2014.
New Facilities updated through: 1/11/2016. Data obtained by Toxics Targeting: 1/23/2016.

5) **Brownfield Programs:** NYS programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.
ASTM required.* Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 3/8/2017. Data obtained by Toxics Targeting: 3/8/2017.
New Facilities updated to: 3/8/2017. Data obtained by Toxics Targeting: 3/8/2017.

(a) **Brownfield Cleanup Program (BCP)**
(b) **Voluntary Cleanup Program (VCP)**
(c) **Environmental Restoration Program (ERP)**

6) **Solid Waste Facilities: NYS Solid Waste Registry**, including, but not limited to, landfills, incinerators, transfer stations, recycling centers.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data updated to: 4/1/2013. Data obtained by Toxics Targeting: 4/1/2013.

7) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the DEC's Division of Environmental Remediation pursuant to NYS Law and the Resource Conservation and Recovery Act (RCRA).

Project No.: 170131
**135 South Lexington Avenue**
**Tax Lot# 125.83-7-1**
**White Plains, NY 10601**

Dear Mr. Shaw:

Please forward information regarding underground storage tanks (UST's), spill records, remediation sites, dump sites, storage of hazardous materials, hazardous materials activities pertaining to the above referenced site, to us as soon as possible. Please notify me if there are any costs associated with processing this request. Your response can either be faxed to 914-949-7559, emailed to sgrens@akrf.com, or mailed to us at the location identified above. In addition, please indicate AKRF's project number (170131) on all correspondence. If you have any questions, please call me at (914) 922-2371.

Thank you in advance for your assistance and cooperation

Sincerely,
AKRF, Inc.

Re: FOIL Request – 135 South Lexington, 125.83-7-1
Any records pertaining to R.O.W and end property maintenance

Dear Mr. Grens,

This Department is in receipt of your request pertaining to possible Department of Public Works information, which you requested under the Freedom of Information (FOIL) Act.

You will be notified within the next fifteen business days as to those records which you have requested that may be in the possession of this Department and which are not exempt from disclosure under FOIL and may be made available to you.

Sincerely,

Margaret Cardarelli
Bookkeeper

ADDRESS: 440 Park Avenue South, 7th Floor, New York, NY 10016

SIGNATURE: Ashanti Callender DATE: 5/26/2017

**2. TO THE APPLICANT:**

**-Records Provided**

☐ The reproduction costs for the records are $_____. Please forward a check payable to the New York State Department of Health to the address listed above. If we do not receive your payment within **60** days, we will assume that you no longer wish to receive the materials, and they will be sent back to the originating unit. Accordingly, any future requests for information will require an initial deposit before processing.

☐ Records have been (partially, fully) provided. (If not fully provided, date when records are expected to be fully provided:_____).

**-Records Not Available**

☐ Records cannot be found after a diligent search.

☐ The Department does not maintain records indicated, please contact:_____

**-Records Denied or Redacted**

I hereby certify that access to the records—or part of the records—have been denied to the applicant for the reason(s) checked below (You may appeal this denial of access in writing within 30 days to the Records Access Appeals Officer, Empire State Plaza, 1455 Corning Tower, Albany New York 12237):

☐ Specifically exempt by other statute(s).

☐ Unwarranted invasion of personal privacy.

☐ Would impair present or imminent contract awards or collective bargaining negotiations.

☐ Are examination questions or answers.
Are inter-agency or intra-agency materials that are not: -statistical or factual tabulations or data
-instructions to staff that affect the public
-final agency policy or determinations; or
-external audits, including but not limited to audits performed by the comptroller and the federal government.

☐ Are trade secrets.

☐ Could, if disclosed endanger the life of any person.

☐ Are compiled for law enforcement purposes and which, if disclosed would:
-interfere with law enforcement investigations or judicial proceedings
-deprive a person of the right to a fair trial or impartial adjudication
-identify a confidential source or disclose confidential information relating to a criminal investigation, or
-reveal criminal investigative techniques and procedures

☐ Would jeopardize an agency's capacity to guarantee the security of its information technology assets, such assets encompassing both electronic information systems and infrastructures.

# 1.0 INTRODUCTION

On July 20, 2017, AKRF, Inc. (AKRF) conducted a Subsurface (Phase II) Investigation at 135 South Lexington Avenue (the Property) in White Plains, New York (see Figure 1). The Property was developed with a vacant nine-story apartment building with a basement and surrounding lawns and walkways, which were part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The remainder of the complex was located to the north, south and east of the Property. Winbrook is bounded by South Lexington Avenue, Post Road, Quarropas Street, and Dr. Marin Luther King Jr. Boulevard. The Property is maintained by the White Plains Housing Authority and is identified as Section 125.83, Block 7, Lot 1. The proposed development includes demolition of the existing building and development of a new building and parking lot. The Phase II investigation was conducted to evaluate subsurface conditions to determine if any remediation is required prior to or during redevelopment, and ensure proper handling of soil and/or groundwater during future subsurface disturbance. The scope of this investigation was based on AKRF's June 2017 *Phase I Environmental Site Assessment* (ESA) and consisted of a geophysical survey followed by collection of soil, soil vapor and groundwater samples for field screening and laboratory analysis. This report describes methods and results of the investigation. Sampling locations are depicted on Figure 2. A photographic log depicting the field activities is included as Appendix A.

# 2.0 PREVIOUS INVESTIGATIONS

*Phase I Environmental Site Assessment (ESA), 135 South Lexington Avenue, AKRF, Inc. – June 2017*

AKRF's June 2017 Phase I ESA revealed the following:

***Recognized Environmental Conditions (RECs):***

- Historical land uses in the vicinity of the Property included the White Plains Hospital, auto sales, auto and bicycle repair shops, filling stations and stores with petroleum underground storage tanks (USTs), woodworking and painting shops, dry cleaners, a rug cleaner, undertakers, sheet metal works, electrical businesses, and a printer. The reconnaissance also identified the hospital, active and former filling stations, auto repair shops, car dealerships, two laundries (including one identified on historical land use maps and in the regulatory database as a dry cleaner), and a hardware shop with a glass cutting service in close proximity to the Property.
- Numerous nearby active- and closed-status petroleum spills, petroleum bulk storage facilities, hazardous waste generators (including generators of chlorinated solvents), and a State Brownfield Cleanup Program Site were reported in regulatory databases.
- One of the spills reported in close proximity to the Property was active-status NYSDEC Spill No. 9713110 at a former filling station at 26 East Post Road, approximately 330 feet south of the Property. Based on information provided to AKRF, this spill resulted in a plume of petroleum-contaminated groundwater extending from the former filling station onto the Winbrook complex (south of the Property). Remedial activities included removal of contaminated soil, groundwater, and soil vapor, and installation and sampling of numerous groundwater monitoring wells. The nearest of these wells were located approximately 60 to 240 feet south and east, respectively, of the Property. Groundwater sampling of these wells in August 2016 indicated no evidence of significant concentrations with petroleum-related volatile organic compounds (VOCs) in the well nearest the Property. However, these wells contained elevated concentrations of VOCs associated with chlorinated solvents, including tetrachloroethene (PCE) at up to 1,000 parts per billion (ppb) and

tetrachloroethene (TCE) at up to 55 ppb. The source of these chlorinated VOCs has not been identified.

***Controlled RECs (CRECs)***

- The Winbrook complex, including the Property, was heated by steam generated at a heating plant located in a basement of an off-site building (33 Fisher Avenue) approximately 230 feet southeast of the Property. The plant's boilers were supplied by two, 20,000-gallon No. 4 fuel oil USTs located beneath a lawn west of the boiler room. Five closed-status spills were reported in connection with these USTs, including three tightness test failures in 1989-2010, a minor surface spill in 1993, and an approximately 700-gallon release due to overfill in 2000 which reportedly required cleanup of a nearby playground area. The playground is approximately 200 feet southeast of the Property. As noted above, no evidence of significant petroleum contamination was identified in groundwater in the vicinity of the Property in 2016; thus, the historical spills are considered to be Controlled RECs (CRECs) rather than RECs.

***De Minimis Conditions***

- Stream filling and demolition of historical structures on the Property may be associated with fill materials of unknown origin. A 2012 subsurface investigation of the north-adjacent parcel indicated the presence of an approximately 0.5 to 1-foot topsoil layer, underlain by approximately 3 feet of fill materials (including sand, gravel, brick and glass), which were underlain in turn by apparent native soil.
- At the time of the reconnaissance, the Property building was equipped with a trash compactor. However, historical plans showed the compactor room in the basement was an incinerator room.
- Chemical storage at the Property included one five-gallon bucket of hydraulic oil, paint and cleaning and maintenance chemicals in containers up to five gallons, and 55-gallon drums of cleaning chemicals, which were stored in various basement areas. The observed chemicals were neatly stored and labeled, with no evidence of a release.

***Other on-site environmental concerns (items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris)***

- A hazardous materials survey of the Property building in 2016 included an asbestos survey, which identified asbestos-containing materials (ACM), including vinyl floor tile and mastic, linoleum and mastic, thermal pipe insulation, window caulking, and the roof of the elevator bulkhead based on laboratory analysis. Other building materials were identified as not containing asbestos. Building materials, including the identified ACM, were noted to be in good to damaged condition.
- The 2016 hazardous materials survey also included sampling for lead-based paint. This survey did not identify lead-based paint on interior painted surfaces. However, lead-based paint may be used on exterior surfaces (painted brick walls). Painted surfaces were observed to be in fair to poor condition. During the reconnaissance, there was no observation of residential occupancy, child care facilities or other uses where the extended presence of children would be expected.
- Based on the age of the building, window caulking, electrical equipment, fluorescent lighting fixtures, and hydraulic compactor equipment may contain polychlorinated biphenyls (PCBs). In addition, electrical equipment (e.g., switches and thermostats) and fluorescent lamps may contain mercury.

***Potential for Vapor Encroachment***

This Phase I assessment identified a potential for subsurface vapors, and thus a potential for vapor encroachment into current or future buildings at the Property.

# 3.0 FIELD ACTIVITIES

## 3.1 Geophysical Survey and Utility Mark-Outs

On July 20, 2017, a geophysical survey was conducted across accessible portions of the Property by Enviroprobe Service, Inc. of Mount Laurel, New Jersey to clear the proposed boring locations for subsurface utilities and to locate other potential buried structures. The geophysical survey included both electromagnetic (EM) and ground penetrating radar (GPR) methods. All utility locations were marked out with spray paint prior to drilling. Linear anomalies consistent with utilities were designated with spray paint using the following colors: red – electric and pink – storm sewer. In addition natural gas lines were located near areas of proposed borings. The Geophysical Investigation Report is attached as Appendix B.

Cascade Drilling LP (Cascade), the drilling contractor, called Dig Safely New York at least three days prior to the start of intrusive work.

## 3.2 Soil Sampling

On July 20, 2017, Cascade advanced six soil borings at the locations shown on Figure 2. The borings were installed with a Geoprobe® direct push probe (DPP) unit to approximately 15 feet below grade. The locations were as follows:

- SB-1: west adjacent to the walkway off of South Lexington Avenue between 135 and 159
- SB-2 and SB-3: on the southern boundary of the Property
- SB-4, SB-5, and SB-6: along the northern boundary of the Property

Soil cores were collected from each boring using 5-foot long, 2-inch diameter, macrocore piston rod samplers fitted with acetate liners. Each core was split lengthwise and logged by AKRF field personnel. Logging consisted of: describing the soil according to the modified Burmister Classification System; describing any evidence of contamination (e.g., staining, sheens, odors); and screening the soil for organic vapors using a photoionization detector (PID) in one-foot intervals. The PID was calibrated at the start of the work day using isobutylene gas in accordance with the manufacturer's instructions. Two samples from soil borings SB-1 and SB-2 along with one sample from SB-3, SB-4, SB-5, and SB-6 were selected for laboratory analysis, based on any PID response or visual indications of contamination and the site setting. Where no evidence of contamination was observed the sample was collected from 8-10 feet below grade, based on anticipated depth of excavation.

Samples designated for analysis were placed into laboratory-supplied containers and a chilled cooler, and submitted via courier to Test America Inc. in Edison, New Jersey, a New York State-certified laboratory. Samples were analyzed for volatile organic compounds (VOCs) by EPA Method 8260 and semi-volatile organic compounds (SVOCs) by EPA Method 8270. Select soil samples were also analyzed for polychlorinated biphenyls (PCBs) by EPA Method 8082, and total metals by EPA Method 6010. Soil boring logs are provided in Appendix C.

### 3.3 Groundwater Sampling

Groundwater was sampled via temporary wells (TWs) retrofitted in the soil borings at SB-1, SB-2, SB-3, and SB-5. TW-1 through TW-3 were collected within the footprint of the proposed new building. TW-5 was installed on the northern portion of the property to provide site coverage.

No free phase product was detected in any of the wells. After purging three well volumes using a peristaltic pump, groundwater samples were collected in laboratory supplied glassware and were sealed and placed in a chilled cooler with an appropriate chain of custody (COC) for transport. The samples were analyzed for VOCs by EPA Method 8260 and SVOCs by EPA Method 8270. Groundwater sampling logs are provided in Appendix C.

### 3.4 Soil Vapor Sampling

Four soil vapor probes (SV-1, SV-2, SV-3, and SV-5) were installed adjacent to soil borings SB-1, SB-2, SB-3, and SB-5 to collect soil vapor samples. SV-1 through SV-3 were collected within the footprint of the proposed new building. SV-5 was installed on the northern portion of the property to provide site coverage. One ambient air sample was collected in the vicinity of SV-3 to record outdoor air conditions. The probes were installed using the DPP to advance a 0.75-inch diameter hollow probe rod fitted with an expendable 6-inch long stainless steel screened drive point to 5 feet below grade. Dedicated Teflon tubing with threaded fittings was connected to each probe. The hollow probe rod was then removed and the boring backfilled with clean silica sand to one foot above the screen. Hydrated bentonite was used to fill the remaining void to grade.

Prior to sampling, approximately 3 system volumes (2.1 L) was purged from each probe using a Gilair Plus low flow sampling pump. During purging, an inverted one-gallon bucket was placed over the sampling point and helium gas was introduced through a small hole in the bucket to saturate the atmosphere around the sample port with helium. The purged vapors were collected in 1-liter Tedlar bags and were monitored with a portable helium detector to check for short-circuiting by ambient air into the sampling point, i.e., to verify the adequacy of the bentonite seal. Helium was not detected at any of the points indicating integrity. Purged vapors were also field-screened for organic vapors using the PID; detected values ranged from 12.1 to 21 ppm. After purging, each probe was connected via Teflon tubing to a laboratory-supplied 6-liter SUMMA canister equipped with a 0.05 liter per minute (L/min) flow regulator. Soil vapor samples were collected for approximately two hours.

Methodologies used for soil vapor assessment were consistent with the New York State Department of Health (NYSDOH) *Final Guidance on Soil Vapor Intrusion*, October 2006 and ASTM E 2600-08 *Standard Practice for Assessment of Vapor Intrusion into Structures on Property Involved in Real Estate Transactions*. Soil vapor and ambient air sampling locations are shown on Figure 2 and associated sampling logs are included in Appendix C.

## 4.0 INVESTIGATION RESULTS

### 4.1 Geophysical Survey and Utility Mark Outs

On July 20, 2017, a geophysical survey was conducted across accessible exterior portions of the Site by Enviroprobe Service, Inc. of Moorestown, New Jersey to clear the proposed boring locations for subsurface utilities and to locate other potential buried structures such as USTs. The geophysical survey included both electromagnetic and ground penetrating radar (GPR) methods. Utility locations were marked out with spray paint prior to the commencement of drilling

activities. No anomalies consistent with USTs or buried aboveground storage tank (ASTs) were identified. The geophysical investigation report is attached as Appendix B.

### 4.2 Field Observations

Soil encountered during the borings (which extended to approximately 15 feet below grade) was seemingly historical fill (approximately 5 to 10 feet thick), (including asphalt, brick and gravel) underlain by native materials including varying amounts of silt, clay, sand and gravel. PID readings were only found in two of the borings: from 0.2 to 0.3 parts per million (ppm) in SB-1 (2-3') and from 0.1 to 1.1 ppm in SB-2 (2-13'). No odors or staining were observed in any boring.

Groundwater was first encountered at between 7.34 and 7.89 feet below grade. No free phase product was detected in any of the wells.

Soil descriptions, observations, and PID readings were recorded on the soil boring logs provided in Appendix D.

### 4.3 Soil Analytical Results

Soil analytical results from the eight samples were compared to the 6 NYCRR Part 375-6.4 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs). The full laboratory analytical report is included in Appendix E. A summary of the soil analytical results follows:

*Volatile Organic Compounds (VOCs)*

No VOCs were detected above UUSCOs or RRSCOs. Soil analytical results for VOCs are summarized in Table 1.

*Semivolatile Organic Compounds (SVOCs)*

No SVOCs were detected above UUSCOs or RRSCOs. Soil analytical results for SVOCs are summarized in Table 2.

*Metals*

Nineteen metals were detected in at least one sample. Barium was detected in soil sample SB-6 (8'-10') at a concentration of 358 milligrams per kilogram (mg/kg), above its UUSCO of 350 mg/kg, but below its RRSCO of 400 mg/kg. Chromium was detected at 30.9 and 33.6 mg/kg in SB-4 (8'-10') and SB-5 (8'-10'), respectively, above its UUSCO of 30 mg/kg, but below its RRSCO of 180 mg/kg. Lead was detected in SB-6 (8'-10') at 472 mg/kg, above its UUSCO of 63 mg/kg and RRSCO of 400 mg/kg. Zinc was detected at 281 mg/kg in SB-6 (8'-10'), above its UUSCO of 109 mg/kg, but below its RRSCO of 10,000 mg/kg. Soil analytical results for metals are summarized in Table 3.

*Polychlorinated Biphenyls (PCBs)*

No PCBs were detected above their UUSCOs or RRSCOs. Soil analytical results for PCBs are presented in Table 4.

### 4.4 Groundwater Analytical Results

Groundwater analytical results from the four samples (and the trip blank) were compared to the NYSDEC Class GA Ambient Water Quality Standards (AWQS), listed in NYSDEC Division of Water *Technical Operational and Guidance Series (TOGS) 1.1.1*. The full laboratory analytical report is included in Appendix D.

*VOCs*

Seven VOCs were detected in at least one sample, three of which were above AWQS. Cis-1,2-Dichloroethene (cis-1,2-DCE) was detected at between 9.8 and 27 micrograms per liter (µg/l) in TW-1, TW-2, and TW-5, above its AWQS of 5 µg/l. Tetrachloroethene (PCE) was detected at 65 and 100 µg/l in TW-1 and TW-5, respectively, above its AWQS of 5 µg/l. Trichloroethene (TCE) was detected at 16 µg/l in TW-5, above its AWQS of 0.4 µg/l. Groundwater analytical results for VOCs are summarized in Table 5.

*SVOCs*

No SVOCs were detected above AWQS. Groundwater analytical results for SVOCs are presented in Table 6.

### 4.5 Soil Vapor and Ambient Air Analytical Results

Analytical results for the four soil vapor samples SV-1, SV-2, SV-3, and SV-5 were compared to the NYSDOH indoor Air Guideline Values (AGVs) in the *Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, dated October 2006, incorporating subsequent 2013, 2015 and 2017 Updates. There are AGVs for two of the VOCs detected (methylene chloride and PCE).

- Methylene chloride was only detected in SV-2, and its concentration 6.5 micrograms per cubic meter (µg/$m^3$) was approximately one tenth of the 60 µg/$m^3$ indoor AGV
- PCE was detected in all four samples, but only SV-1 (80 µg/$m^3$) exceeded the indoor AGV of 30 µg/$m^3$.

Twenty two other VOCs were detected in one or more samples, mostly compounds typically associated with gasoline, specifically 1,2,4-trimethylbenzene (maximum concentration of 65 µg/$m^3$), 1,3,5-trimethylbenzene (maximum 18 µg/$m^3$), 4-ethyltoluene (18 µg/$m^3$), carbon disulfide (9.7 µg/$m^3$), ethylbenzene (16 µg/$m^3$), m,p-xylene (85 µg/$m^3$), methyl ethyl ketone (230 µg/$m^3$), o-xylene (34 µg/$m^3$), methyl isobutyl ketone (8.4 µg/$m^3$), naphthalene (84 µg/$m^3$), n-butylbenzene (6.9 µg/$m^3$), n-hexane (20 µg/$m^3$), n-propylbenzene (6 µg/$m^3$), o-xylene (34 µg/m3), sec-butylbenzene (2.5 µg/$m^3$), styrene (2.5 µg/$m^3$), and toluene (180 µg/$m^3$).

Analytical results for soil vapor samples and the ambient air sample are summarized in Table 7.

## 5.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF, Inc. (AKRF) conducted a Subsurface (Phase II) Investigation at 135 South Lexington Avenue (the Property) in White Plains, New York, as shown on Figure 1. It was conducted on July 20, 2017 and included the following:

- A geophysical survey conducted across accessible portions of the Property identified subsurface utilities and to locate other potential buried structures. No anomalies consistent with USTs or buried ASTs were identified;
- The advancement of six soil borings, four of which were retrofitted as temporary groundwater monitoring wells and four soil vapor sampling points; and
- The collection of eight soil, four groundwater, and four soil vapor samples for laboratory analyses.

Soil encountered during the borings (which extended to approximately 15 feet below grade) was seemingly historical fill (approximately 5 to 10 feet thick) including asphalt, brick and gravel, underlain by native materials consisting of varying amounts of silt, clay, sand and gravel. PID readings ranged from 0.2 to 0.3 parts per million (ppm) in soil boring SB-1 (0-5') and from of 0.1 to 1.1 ppm in SB-2 (0-15'). No PID detections were encountered in the remaining soil borings. No odors or staining were observed in any of the soil borings.

Groundwater was first encountered at depths ranging from 7.34 to 7.89 feet below grade. No free phase product was detected in any of the wells (using a multi-parameter interface probe).

Purged soil vapors were field-screened for organic vapors using a PID. VOCs were detected at all four of the soil vapor points at concentrations ranging from 12.1 to 21 ppm.

Soil descriptions, observations, and PID readings were recorded on the soil boring logs provided in Appendix C.

### 5.1 Conclusions

Results from the soil samples were compared to the 6 NYCRR Part 375-6.4 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs). These SCOs were developed by NYSDEC assuming long-term human exposure to the soils (in a single-family/agricultural or multi-family setting), neither scenario is currently occurring or would occur with the proposed redevelopment. Notwithstanding this, no VOCs, SVOCs or PCBs exceeded any of the SCOs and the exceedances for metals were only for the UUSCOS, with the exception of lead which, in one sample (with 472 mg/kg) slightly exceeded the RRSCOs. However, lead is ubiquitous in the urban environment and such a level is neither unusual nor likely to suggest the requirement for special handling (i.e., as a hazardous waste) should that area require excavation.

Results from the groundwater samples were compared to NYSDEC Class GA Ambient Water Quality Standards (AWQS), which were developed using the scenario that the groundwater would be a source of drinking water; again a scenario that does not currently and would not in the future occur. Three individual VOCs exceeded AWQS, by factors up to 40. However, VOCs are ubiquitous in urban groundwater and such concentrations are not unusual and higher concentrations were found in wells that were apparently hydraulically upgradient of the property, indicating both the source is likely not at the Property and that the conditions are not limited to the Property.

Results from the soil vapor samples were compared to the NYSDOH indoor AGVs. These values are for inside buildings, but they were used for comparison in the absence of soil vapor standards or guidelines. In reality, at most a very small proportion of soil vapor would be expected to migrate into an overlying building, especially a newly constructed building with no cracks in the slab. One of the four samples exceeded the AGV for PCE by a factor of 2.7. It should be noted that the US Environmental Protection Agency recommends a generic attenuation factor from soil vapor to indoor air of 33.3, even with an existing old slab. Additional VOCs, for which there are no AGVs, were also detected, the majority of which are typically associated with gasoline. As with the soil and groundwater results, these findings were typical of urban environments.

## 5.2 Recommendations

AKRF understands that the proposed development requires demolition of the existing vacant building and development of a new building (without a basement) and parking areas.

Based on the above Conclusions, AKRF recommends the following relating to the subsurface work:

- Prior to beginning excavation of the property, waste characterization soil/fill samples should be collected and analyzed in accordance with disposal facility requirements for all surplus soil/fill to be removed from the Property during redevelopment. This material should be handled and managed in accordance with applicable regulations, as discussed in Section 7.0. Transportation of material leaving the Property for must be in accordance with federal, state and local regulatory requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- No evidence of underground storage tanks (USTs) was encountered by the geophysical survey or the sampling program. However, if any USTs or contaminated soil are encountered during redevelopment, such tanks should be registered with NYSDEC and/or the WCDOH, if required, and closed and removed along with any contaminated soil in accordance with applicable regulations.
- A vapor barrier should be installed as part of the waterproofing for the new construction. The barrier should be installed outside of the below-grade foundation walls and below the horizontal slab. The barrier will serve to mitigate potential vapors from entering the new construction.
- New landscaped areas (i.e., not areas covered by buildings, paving or other impervious surfaces) should include uppermost at least two feet of soils (either imported or reused from excavation at the Property) that testing indicates meet the 6 NYCRR Part 375-6.4 RRSCOs.
- If dewatering is required during future construction activities, water must be discharged in accordance with the City of White Plains, Westchester County and NYSDEC requirements.

# 6.0 LIMITATIONS

The findings set forth in this report are strictly limited in scope and time to the date of the evaluation described herein. The conclusions and recommendations presented in the report are based solely on the services and any limitations described in this report.

This report may contain conclusions that are based on the analysis of data collected at the time and locations noted in the report through intrusive or non-intrusive sampling. However, further investigation might reveal additional data or variations of the current data, which may differ from our understanding of the conditions presented in this report and require the enclosed recommendations to be reevaluated or modified.

Chemical analyses may have been performed for specific parameters during the course of this investigation, as summarized in the text and tables. It should be noted that additional chemical constituents, not searched for during this investigation, may be present at the site. Due to the nature of the investigation and the limited data available, no warranty, expressed or implied, shall be construed with respect to undiscovered liabilities. The presence of biological hazards, radioactive materials, lead-based paint and asbestos-containing materials was not investigated, unless specified in the report.

Interpretations of the data, including comparison to regulatory standards, guidelines or background values, are not opinions that these comparisons are legally applicable. Furthermore, any conclusions or recommendations should not be construed as legal advice. For such advice, the client is recommended to seek appropriate legal counsel. Disturbance, handling, transportation, storage and disposal of known or potentially contaminated materials is subject to all applicable laws, which may or may not be fully described as part of this report.

The analytical data, conclusions, and/or recommendations provided in this report should not be construed in any way as a classification of waste that may be generated during future disturbance of the project site. Waste(s) generated at the site including excess fill may be considered regulated solid waste and potentially hazardous waste. Requirements for intended disposal facilities should be determined beforehand as the data provided in this report may be insufficient and could vary following additional sampling.

This report may be based solely or partially on data collected, conducted, and provided by, AKRF and/or others. No warranty is expressed or implied by usage of such data. Such data may be included in other investigation reports or documentation. In addition, these reports may have been based upon available previous reports, historical records, documentation from federal, state and local government agencies, personal interviews, and geological mapping. This report is subject, at a minimum, to the limitations of the previous reports, historical documents, availability and accuracy of collected documentation, and personal recollection of those persons interviewed. In certain instances, AKRF has been required to assume that the information provided is accurate with limited or no corroboratory evidence.

This report is intended for the use solely by Trinity New York Development, LLC. Reliance by third parties on the information and opinions contained herein is strictly prohibited and requires the written consent of AKRF. AKRF accepts no responsibility for damages incurred by third parties for any decisions or actions taken based on this report. This report must be used, interpreted, and presented in its entirety.

# 7.0 SOIL DISPOSAL ISSUES

In addition to the discussions in the Conclusions, Recommendations, and Limitations Sections (Sections 5.0 and 6.0), the issue of appropriate management of off-site disposal of soil warrants careful consideration. Any material being disposed of off-site is a regulated waste, and disposal must be in accordance with:

Requirements of the specific receiving facility;

Requirements of any agencies overseeing the cleanup/excavation; and

Federal and state requirements (sometimes in both the state where the soil is generated and where disposal will occur).

For hazardous wastes and petroleum-contaminated soil (and other 'clearly contaminated' materials), the requirements are usually fairly well defined. It is in the situation where contamination is not readily apparent (e.g., so called "historic or urban fill" or "construction and demolition debris" or material that may have been formerly identified as "clean fill") that present the greatest potential for problems and cost overruns. Even on sites where no contamination requiring remediation is identified, it is common that most of the excavated material is considered "contaminated" for purposes of waste disposal. Concentrations of the various contaminants in historic fill can be highly variable, and upon further testing, the material could contain higher contaminant concentrations than outlined in this investigation. Portions of this material could be classified as hazardous waste.

It is important that the intended disposal facility (or facilities) be identified in advance of off-site disposal. Agency approval is sometimes required for disposal, and the facility will frequently require additional testing prior to (and sometimes at the time of) accepting material. Material must conform to a lengthy list of requirements based on both chemical composition and sometimes numerous other parameters (related to size, percentage of liquids, presence of odors, etc.) for acceptance at the facility. Assuming (or allowing a contractor to assume) that all, or even most, of the soil from a site can be disposed of at minimal cost may result in unanticipated and expensive change orders.

For these reasons, we recommend that professional advice be sought prior to preparing bid documents and contracts incorporating soil disposal.

*Notes*

**GENERAL**

**NS :** No standard.

**U :** The analyte was not detected at the indicated concentration.

**J :** The concentration given is an estimated value.

**TS :** Value represents a sum total standard.

**G :** This standard reflects the Supplemental Soil Clean-up Objectives listed in Table 1 of NYSDEC "CP-51/Soil Cleanup Guidance."

**B :** The analyte was found in an associated blank, as well as in the sample.

*** :** LCS or LCSD is outside acceptance limits.

**SOIL**

**Part 375 Soil Cleanup Objectives :** Soil Cleanup Objectives listed in NYSDEC (New York State Department of Environmental Conservation) "Part 375" Regulations (6 NYCRR Part 375).

**mg/kg :** milligrams per kilogram = parts per million (ppm)

**Metals**

***** :** Standard reflects trivalent, not total, Chromium.

**Exceedances of Part 375 Unrestricted Soil Cleanup Objectives (UUSCO) are highlighted in bold font.**
**Exceedances of Part 375 Restricted Residential Soil Cleanup Objectives (RRSCO) are highlighted in gray.**

**GROUNDWATER**

**NYSDEC Class GA Ambient Standard :** New York State Department of Environmental Conservation Technical and Operational Guidance Series (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values.

**µg/L :** micrograms per Liter = parts per billion (ppb)

**ND :** The standard is No Detect.

**Exceedances of NYSDEC Class GA Ambient Standards are highlighted in bold font.**

**SOIL VAPOR**

**EPA 2001 BASE 90th Percentile :** 90th Percentile indoor air values from “Table C-2. EPA 2001: Building Assessment and Survey Evaluation (BASE) Database, SUMMA canister method”, published in the NYSDOH Soil Vapor Intrusion Guidance Document, Appendix C” (October 2006).

**NYSDOH 2003 Soil Vapor Indoor Upper Fence :** Upper fence indoor air values from "Table C1. NYSDOH 2003: Study of Volatile Organic Chemicals in Air of Fuel Oil Heated Homes", published in the NYSDOH Soil Vapor Intrusion Guidance Document, Appendix C” (October 2006).

**NYSDOH Soil Vapor Intrusion Air Guidance Value :** NYSDOH Air Guidance Values (AGVs) presented in the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, dated October 2006 (“NYSDOH Vapor Intrusion Guidance Document”), updated September 2013 for change of AGV for PCE and August 2015 for TCE.

**µg/m$^3$ :** micrograms per cubic meter of air

**Exceedances of EPA 2001 Base 90th Percentile Indoor Air Values are highlighted in bold font.**
**Exceedances of NYSDOH 2003 Upper Fence Indoor Air Values are highlighted in gray.**
**Exceedances of NYSDOH 2006 Soil Vapor Intrusion Air Guidance Values are highlighted with a border.**

# 1.0 INTRODUCTION

Enviroprobe Service, Inc. (Enviroprobe) is an environmental investigation services firm which provides monitoring well installation (HSA), Geoprobe (DPT) drilling services and Environmental & Engineering Geophysics (EEG) services to the environmental consulting and engineering community.

Enviroprobe conducted a subsurface geophysical investigation at the subject property within client-specified areas of concern. Due to conditions and objectives, the investigation utilized a GSSI SIR-3000 cart-mounted ground penetrating radar (GPR) unit with a 400 MHz antenna, a Fisher TW-6 metallic locator, a Radiodetection multi-frequency transmitter, and a Radiodetection receiver.

Ground penetrating radar (commonly called GPR) is a geophysical method that has been developed over the past thirty years for shallow, high-resolution, subsurface investigations of the earth. GPR uses high frequency pulsed electromagnetic waves (generally 10 MHz to 2,000 MHz) to acquire subsurface information. An EM wave is propagated downward into the ground by a transmitting antenna. Where abrupt changes in electrical properties occur in the subsurface, a portion of the energy is reflected back to the surface. This reflected wave is detected by a receiver antenna and transmitted to a control unit for real time processing and display. The penetration depth of the GPR unit varies from several inches to tens of feet according to site-specific conditions. The penetration depth decreases with increased soil conductivity. The penetration depth is the greatest in ice, dry sands, and fine gravels. Clayey, highly saline or saturated soils, areas covered by concrete, foundry slag, or other highly conductive materials greatly reduce GPR penetration. GPR is a method that is commonly used for environmental, engineering, archaeological, and other shallow investigations.

The Fisher TW-6 metallic locator is designed to find pipes, cables and other metallic objects such as underground storage tanks (USTs). The TW-6 transmitter generates an electromagnetic field that induces electrical currents in the subsurface. These currents produce a secondary electromagnetic field that is measured by the TW-6 receiver. One surveyor can carry both the transmitter and receiver together to search for underground metallic objects, although the TW-6 response can also be affected by the electrical properties of non-metallic materials in the subsurface.

The Radiodetection (RD) transmitter and receiver are commonly used for pipe and cable locating. The multi-frequency transmitter can be directly connected, clamped, or used to induce a signal in a target line while the multi-frequency receiver is used to measure the signal from energized lines.

# 2.0 SCOPE OF WORK

On July 20, 2017, a geophysical technician from Enviroprobe Service Inc. was mobilized to the subject property to perform a geophysical investigation. The purpose of

the investigation was to designate underground conduits/utilities and clear proposed boring locations in the natural soil/landscaped area surrounding multi-dwelling facilities. The ground surface of the survey area consisted of concrete, asphalt, and natural soil surfaces.

## 3.0 SURVEY RESULTS

The utility survey was conducted using a cart-mounted GPR unit and a RD unit. The RD unit was used to trace common utilities from sources in and around the survey area. The RD receiver was also used in the passive mode to search for live underground electrical power cables and other utilities emitting 60Hz electromagnetic signals. When possible, the location of utilities was confirmed with the GPR. The GPR survey was also performed in a grid pattern in at least two orthogonal directions to search for evident and non-evident underground utilities. Linear anomalies consistent with underground utilities were designated on site with spray paint using the following colors: red – electric and pink – storm sewer. In addition multiple natural gas lines were verified in areas of proposed boring locations. [See Figure 1)

Approximately six proposed boring locations were investigated with the GPR, TW-6, and RD receiver. When possible, an area of approximately 10 ft by 10 ft surrounding each location was scanned. In some cases, obstructions prevented an investigation of the entire 10 ft by 10 ft area.

## 4.0 LIMITATIONS

Due to surface conditions and subsurface content, the GPR penetration depth was estimated as about 3 feet in the majority of the survey area.

Due to the dielectric properties of the subsurface, plastic polymer and fiberglass utilities may not have been detected.

The underground utility survey was conducted in compliance with the industry standard of care guidelines found in ASCE 38-02 (Level B).

## 5.0 WARRANTIES

The field observations and measurements reported herein are considered sufficient in detail and scope for this project. Enviroprobe Service, Inc. warrants that the findings and conclusions contained herein have been promulgated in accordance with generally accepted environmental engineering methods. There is a possibility that conditions may

exist which could not be identified within the scope of this project and were not apparent during the site activities performed for this project.

Enviroprobe represents that the services were performed in a manner consistent with that level of care and skill ordinarily exercised by environmental consultants under similar circumstances. No other representations to Client, express or implied, and no warranty or guarantee is included or intended in this agreement, or in any report, document, or otherwise.

Enviroprobe Service, Inc. believes that the information provided in this report is reliable. However, Enviroprobe cannot warrant or guarantee that the information provided by others is complete or accurate. No other warranties or guarantees are implied or expressed.

GPR data is subject to signal anomalies and operator interpretation. The GPR data is intended to provide the locations of areas of concern requiring additional investigation or the approximate location of underground structures and utilities. Great care must be utilized when excavating and/or drilling around underground structures and utilities since GPR data can only be used for estimation purposes and GPR data is subject to misinterpretation. Enviroprobe can not guarantee that utilities, post-tension cables, and/or rebar will not be incurred during drilling, cutting, coring, or excavating activities.

This report was prepared pursuant to the contract Enviroprobe has with the Client. That contractual relationship included an exchange of information about the property that was unique and between Enviroprobe and its client and serves as the basis upon which this report was prepared. Because of the importance of the communication between Enviroprobe and its client, reliance or any use of this report by anyone other than the Client, for whom it was prepared, is prohibited and therefore not foreseeable to Enviroprobe.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to Enviroprobe contract with the Client. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

THE LEADER IN ENVIRONMENTAL TESTING

# ANALYTICAL REPORT

Job Number: 460-137545-2

Job Description: Brookfield

For:
AKRF Inc
34 South Broadway
Suite 314
White Plains, NY 10601

Attention: Stephen Grens

Approved for release.
Allison L Bennett
Project Manager I
8/4/2017 1:05 PM

Designee for
Melissa Haas, Project Manager I
777 New Durham Road, Edison, NJ, 08817
(203)944-1310
melissa.haas@testamericainc.com
08/04/2017

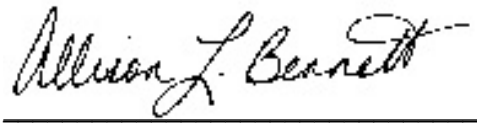
The test results in this report meet all NELAP requirements unless specified within the case narrative. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Edison Project Manager.

TestAmerica Edison Certifications and Approvals: Connecticut: CTDOH #PH-0200, New Jersey: NJDEP (NELAP) #12028, New York: NYDOH (NELAP) #11452, NYDOH (ELAP) #11452, Pennsylvania: PADEP (NELAP) 68-00522 and Rhode Island: RIDOH LAO00132

Job Number: 460-137545-2

Job Description: Brookfield

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.



Approved for release.
Allison L Bennett

# CASE NARRATIVE

## Client: AKRF Inc

## Project: Brookfield

## Report Number: 460-137545-2

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

**RECEIPT**

The samples were received on 7/20/2017 8:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.6º C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

**POLYCHLORINATED BIPHENYLS**

Samples SB-1(8-10) (460-137545-6) and SB-1(1-3) (460-137545-8) were analyzed for polychlorinated biphenyls in accordance with EPA SW-846 Method 8082A. The samples were prepared on 08/02/2017 and analyzed on 08/02/2017 and 08/03/2017.

No difficulties were encountered during the PCBs analysis.

All quality control parameters were within the acceptance limits.

# CASE NARRATIVE

## Client: AKRF Inc

## Project: Brookfield

## Report Number: 460-137545-1

## Revision 1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

**Revision 1** excludes PCB data from sample SB-1(8-10) (460-137545-6). The lab re-extracted and re-analyzed the sample and is reported under job 460-137545-2.

**RECEIPT**

The samples were received on 7/20/2017 8:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.6º C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

**VOLATILE ORGANIC COMPOUNDS (GC-MS)**

Samples SB-4(8-10) (460-137545-1), SB-5(8-10) (460-137545-2), SB-6(8-10) (460-137545-3), SB-2(2-4) (460-137545-4), SB-2(8-10) (460-137545-5), SB-1(8-10) (460-137545-6), SB-3(8-10) (460-137545-7) and SB-1(1-3) (460-137545-8) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260C. The samples were prepared on 07/21/2017 and analyzed on 07/22/2017.

The continuing calibration verification (CCV) associated with batch 451216 recovered above the upper control limit for Acetonitrile. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

Methylene Chloride was detected in method blank LB3 460-450930/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Refer to the QC report for details.

No other difficulties were encountered during the volatiles analysis.

All other quality control parameters were within the acceptance limits.

**VOLATILE ORGANIC COMPOUNDS (GC-MS)**

Samples TW-2 (460-137545-9), TW-3 (460-137545-10), TW-5 (460-137545-11), TW-1 (460-137545-12) and TB (460-137545-13) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 8260C. The samples were analyzed on 07/24/2017 and 07/25/2017.

The continuing calibration verification (CCV) associated with batch 451328 recovered above the upper control limit for Vinyl chloride, Chloromethane, 1,2-Dichloropropane and Methyl acetate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The continuing calibration verification (CCV) analyzed in batch 460-451562 was outside the method criteria for the following analyte(s):

Trichlorofluoromethane (biased low), Chloromethane, 1,2-Dichloropropane and Methyl acetate (biased high). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 460-451328 recovered outside control limits for the following analytes: Chloromethane and 1,2-Dichloropropane. These analytes were biased high in the LCS/LCSD and were not detected in the associated samples; therefore, the data have been reported.

The laboratory control sample (LCS) for analytical batch 460-451562 recovered outside control limits for the following analytes: Chloromethane and 1,2-Dichloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

1,2-Dichloropropane failed the recovery criteria high for the MS of sample 460-137623-4 in batch 460-451562.

1,2-Dichloropropane and Chloromethane failed the recovery criteria high for the MSD of sample 460-137623-4 in batch 460-451562.

Refer to the QC report for details.

No other difficulties were encountered during the volatiles analysis.

All other quality control parameters were within the acceptance limits.

**SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)**

Samples SB-4(8-10) (460-137545-1), SB-5(8-10) (460-137545-2), SB-6(8-10) (460-137545-3), SB-2(2-4) (460-137545-4), SB-2(8-10) (460-137545-5), SB-1(8-10) (460-137545-6), SB-3(8-10) (460-137545-7) and SB-1(1-3) (460-137545-8) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 07/21/2017 and analyzed on 07/23/2017.

The continuing calibration verification (CCV) analyzed in batch 460-451178 was outside the method criteria for the following analyte(s): Indeno[1,2,3-cd]pyrene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for five analytes to recover outside criteria for this method when a full list spike is utilized. The LCS associated with batch preparation batch 460-451150 and analytical batch 460-451178 had one analyte ( Indeno[1,2,3-cd]pyrene) outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

2-Fluorobiphenyl failed the surrogate recovery criteria high for LCS 460-451150/2-A.

Several analytes failed the recovery criteria low for the MS of sample SB-4(8-10)MS (460-137545-1) in batch 460-451178.

Refer to the QC report for details.

No other difficulties were encountered during the semivolatiles analysis.

All other quality control parameters were within the acceptance limits.

**SEMIVOLATILE ORGANIC COMPOUNDS (GC/MS)**

Samples TW-2 (460-137545-9), TW-3 (460-137545-10), TW-5 (460-137545-11) and TW-1 (460-137545-12) were analyzed for semivolatile organic compounds (GC/MS) in accordance with EPA SW-846 Method 8270D. The samples were prepared on 07/21/2017 and analyzed on 07/23/2017.

Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: TW-5 (460-137545-11). These results have been reported and qualified.

Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: TW-1 (460-137545-12). These results have been reported and qualified.

Refer to the QC report for details.

No other difficulties were encountered during the semivolatiles analysis.

All other quality control parameters were within the acceptance limits.

**POLYCHLORINATED BIPHENYLS**

Samples SB-4(8-10) (460-137545-1), SB-5(8-10) (460-137545-2), SB-6(8-10) (460-137545-3), SB-2(8-10) (460-137545-5), and SB-3(8-10) (460-137545-7) were analyzed for polychlorinated biphenyls in accordance with EPA SW-846 Method 8082A. The samples were prepared on 07/24/2017 and analyzed on 07/25/2017.

The Decachlorobiphenyl surrogate recovery for the following samples was outside acceptance limits (high biased) on the confirmation column due to matrix interference: SB-4(8-10) (460-137545-1). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

The following sample required a dilution due to the nature of the sample matrix: SB-1(8-10) (460-137545-6). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

DCB Decachlorobiphenyl failed the surrogate recovery criteria high for SB-4(8-10) (460-137545-1). DCB Decachlorobiphenyl failed the surrogate recovery criteria low for SB-1(8-10) (460-137545-6). Refer to the QC report for details.

Aroclor 1260 failed the recovery criteria low for the MSD of sample 460-137672-15 in batch 460-451664. Aroclor 1016 and Aroclor 1260 exceeded the RPD limit.

Refer to the QC report for details.

Sample SB-1(8-10) (460-137545-6)[5000X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the PCBs analysis.

All other quality control parameters were within the acceptance limits.

**METALS**

Samples SB-4(8-10) (460-137545-1), SB-5(8-10) (460-137545-2), SB-6(8-10) (460-137545-3), SB-2(8-10) (460-137545-5), SB-1(8-10) (460-137545-6) and SB-3(8-10) (460-137545-7) were analyzed for metals in accordance with EPA SW-846 Methods 6010C. The samples were prepared and analyzed on 07/21/2017.

Antimony failed the recovery criteria low for the MS of sample 460-137542-8 in batch 460-451147. Several analytes failed the recovery criteria high.

Arsenic exceeded the RPD limit for the duplicate of sample 460-137542-8.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Refer to the QC report for details.

Samples SB-4(8-10) (460-137545-1)[4X], SB-5(8-10) (460-137545-2)[4X], SB-6(8-10) (460-137545-3)[4X], SB-2(8-10) (460-137545-5)[4X], SB-1(8-10) (460-137545-6)[4X] and SB-3(8-10) (460-137545-7)[4X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

**MERCURY**

Samples SB-4(8-10) (460-137545-1), SB-5(8-10) (460-137545-2), SB-6(8-10) (460-137545-3), SB-2(8-10) (460-137545-5), SB-1(8-10) (460-137545-6) and SB-3(8-10) (460-137545-7) were analyzed for mercury in accordance with EPA SW-846 Method 7471B. The samples were prepared and analyzed on 07/26/2017.

No difficulties were encountered during the Hg analysis.

All quality control parameters were within the acceptance limits.

**PERCENT SOLIDS/PERCENT MOISTURE**

Samples SB-4(8-10) (460-137545-1), SB-5(8-10) (460-137545-2), SB-6(8-10) (460-137545-3), SB-2(2-4) (460-137545-4), SB-2(8-10) (460-137545-5), SB-1(8-10) (460-137545-6), SB-3(8-10) (460-137545-7) and SB-1(1-3) (460-137545-8) were analyzed for percent solids/percent moisture in accordance with EPA Method CLPISM01.2 (Exhibit D) Modified. The samples were analyzed on 07/25/2017.

No difficulties were encountered during the %solids/moisture analysis.

All quality control parameters were within the acceptance limits.
