1.0 INTRODUCTION

SESI Consulting Engineers (SESI) has completed this Limited Phase II Environmental Site Assessment (Phase II ESA) on behalf of the Requestor, MADDD Equities, for an approximate 32.55-acre irregular shaped parcel at 3 North Castle Drive, North Castle (Armonk), Westchester County, New York. The Site is identified on tax map records as parcel IDs 108.3-1-62.1

The Site was undeveloped land until 1971, when the asphalt roadway that borders the Site to the west, and an access road on the central and southern portions of the Site were constructed. A review of historic aerial images identified that the Site was historically utilized for agricultural purposes. The former IBM North Castle facility and associated parking areas are situated south of the Site and was constructed between 1960 and 1964. Undeveloped land and the North Castle Community Park are located east of the Site. Undeveloped land is located immediately north and west of the Site, beyond which lies Armonk Bedford Road and commercial properties beyond.

SESI previously completed a Phase I ESA, dated May 2022 for the Site which identified the historic agricultural use as a Recognized Environmental Condition (REC), which is further described in section 1.1 this report. The Phase I ESA was completed as part of a due diligence evaluation for the Site, which is proposed to be developed. The proposed development is described in Section 1.3 of this report. A Limited Phase II ESA was recommended in order to investigate the REC. The results of the Limited Phase II ESA completed by SESI are presented in this report.

The objective of this Limited Phase II ESA was to attempt to identify, characterize, and delineate the extent of suspected contamination from the historic agricultural use. This Phase II ESA report complies with the 2015/2019 American Society for Testing and Materials Standard (ASTM E1903), New York State Department of Environmental Conservation (NYSDEC) 6 NYCRR Part 375 Environmental Remediation Programs (Subparts 375-1 to 375-4 & 375-6) dated December 14, 2006, and 6 NYCRR Part 360.12 was referenced as the basis for analytical review and development for potential remediation options.

1.1 RECOGNIZED ENVIRONMENTAL CONCERNS

SESI previously completed a Phase I ESA, dated May 2022 for the Site. The following REC was identified and warranted additional investigation:

REC 1 – Historic Agricultural Use: A review of historic aerial images between 1934 and 1989 identified the presence of apparent agricultural operations. Historically Applied Pesticides (HAPs) were widely used during the time period and their use could have adversely affected soil conditions at the Site. Residues of several pesticides can be found in soils at levels that may pose a human health risk when the land use changes from farms to other uses. Based on these observations, SESI recommended further investigation at the Site for pesticides.

The REC location plan is presented on **Figure 1.3**.

1.2 SITE SETTING

A Site Location Map is presented as **Figure 1.1**. A Site Plan is presented as **Figure 1.2**. The subject property is bound to the south by the former IBM North Castle facility and associated parking areas; to the east by undeveloped land and the North Castle Community Park; to the north and west by undeveloped land, beyond which lies Armonk Bedford Road and commercial properties beyond.

1.3 PROPOSED DEVELOPMENT

The proposed Site development is anticipated to consist of the subdivision of the parcel into two (2) separate lots. The northern lot will be developed by MADD Equities and will consist of an estimated 10.66 acres. The northern lot is proposed to be developed with a hotel and associated access roads, parking areas, landscaped areas and concrete walkways. The southern portion of the Site is proposed to be developed by Toll Brothers and will consist of approximately 21.89-acres. The southern lot is proposed to be developed with seventy (70) duplex units and two (2) single-family units. A portion of the units are anticipated to be designated as affordable.

1.4 SITE GEOLOGY

Geologically, the Site soils are mapped as glacial soils overlying bedrock, consisting of varying amounts of sand, silt, gravel, cobbles and boulders. Between April 21 and 27, 2022, SESI performed a geotechnical investigation to support the proposed Site development. This investigation consisted of twenty-one (21) test pits and twenty-two (22) rock probes. Topsoil was encountered across the Site ranging in thickness from 4" to 12" inches in thickness. Occasional cobbles, boulders, and rock outcrops were observed at the ground surface. Natural soils were encountered beneath the topsoil and were classified as granular soils consisting of primarily coarse to fine sand, with highly variable amounts of silt and gravel, with isolated layers of fine-

grained soils consisting of primarily silt with varying amounts of silt and gravel. Natural soils extended to bedrock which was encountered between 1.5 to 12 feet below ground surface (ft-bgs). The site topography consists of gentle to moderate slopes throughout the Site with elevations ranging between 534 feet (ft) in the southern portion of the Site to approximately 396 ft in the northeastern portion of the Site.

Groundwater was not encountered during the investigation. However, water seepage was observed at separate locations as shallow as four (4) ft-bgs and seven (7) ft-bgs, correlating to approximate elevations of 506 and 475 ft. Although this water was not reported as groundwater, subsurface water may be encountered during future investigation, remediation, and/or redevelopment. Suspected groundwater was observed in rock probe borings at depths between 17 and 20 ft-bgs, which correlates to elevations of 460 and 472 ft., respectively.

2.0 SUBSURFACE INVESTIGATION

Based on the results of our Phase I ESA, SESI completed a subsurface investigation at the Site to evaluate the soil conditions for HAPs. The subsurface investigation activities at the Site consisted of two (2) events which were performed on May 24th and November 15th, 2022 at the Site. In total, thirty-three (33) soil borings were completed to a maximum depth of 1.5 feet below ground surface (ft-bgs). The soil sampling locations are shown on **Figure 2.1**. The soil investigation is further discussed in the following sections of this report.

2.1 UTILITY CLEARANCE AND GEOPHYSICAL SURVEY

Prior to conducting subsurface drilling for the investigation, SESI's drilling contractor, Coastal Drilling, contacted the New York One Call utility mark-out system.

2.2 FIELD ACTIVITIES AND SAMPLING SUMMARY

On May 24, 2022, SESI performed a subsurface investigation which included the advancement of five (5) soil borings to an approximate depth of six (6) inches. The borings were completed with hand tools including shovels and a hand auger. Five (5) samples were collected during the May 2022 investigation and the corresponding analytical results identified pesticide related contamination in three (3) of the borings, which warranted additional sampling. The results of the testing are discussed in section 3.0 of this report.

On November 15, 2022, SESI performed a supplemental investigation to delineate and further characterize the extent of pesticide related contamination. Samples were collected from 0 to 6" inches, 6" to 12" inches and 12" to 18" inches below grade. Samples from 0-6" inches were initially analyzed, while the deeper interval samples were held and subsequently activated following receipt of results in exceedance of their applicable NYSDEC Soil Cleanup Objectives.

The soil samples were delivered under chain of custody (COC) to Aqua Pro-Tech Laboratories, a NYSDEC-certified laboratory. The samples were analyzed for Target Compound List (TCL) pesticides, arsenic, and lead. Subsequent toxicity characteristic leaching procedure (TCLP) analysis was performed to assess whether hazardous levels of arsenic and lead are present.

3.0 SOIL INVESTIGATION ANALYTICAL RESULTS

Eighty-four (84) subsurface soil samples were collected during the supplemental investigation to characterize the pesticide contamination. The soil samples were sent to Aqua Pro-Tech Laboratories under a chain-of-custody (COC) and analyzed for TCL Pesticides, Arsenic and Lead. A total of fifty-five (55) soil samples were analyzed during the supplemental investigation.

A summary table of the analytical results compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (USCOs), Residential Use Soil Cleanup Objectives (RSCOs), Restricted Residential Use Soil Cleanup Objectives (RRSCOs), and Commercial Soil Cleanup Objectives (CSCOs) is presented in the attached **Table 3.1**. The laboratory analytical report is provided in **Appendix A**.

The following Table 3.2 presents a summary of pesticide exceedances.

Table 3.2 – Summary of Soil Exceedances

Notes:

Mg/kg – Milligrams per Kilogram

Q – Laboratory Qualifier

D – Sample Required Laboratory Dilution

U – Analyte Was Not Detected

Exceeds USCO
Exceeds RSCO
Exceeds RRSCO
Exceeds CSCO

Exceedances of the pesticides related contaminants were identified and include the following:

4,4-DDD (41 USCO exceedances), 4,4-DDE (37 USCO / 6 RSCO / 1 RRSCO exceedances),

4,4-DDT (25 USCO / 6 RSCO exceedances), dieldrin (1 USCO / 4 RSCO / 3 RRSCO

Exceedances), arsenic (5 USCO, 15 RSCO / 15 RRSCO / 15CSCO exceedances) and lead (11 USCO / 1 RRSCO exceedance).

Pesticide related contamination appears to be centrally located in the southern portion of the Site and is consistent with the observation of historic agricultural use in this portion of the Site. The presence of soil exceedances to the RSCO, RRSCO, and CSCO will at a minimum require remediation within the residential portion of the Site, which is further discussed in our conclusions. Our conclusions and recommendations regarding soil remediation are provided in **Section 4.0.**

4.0 CONCLUSIONS AND RECOMMENDATIONS

The Phase II ESA investigation activities completed at the Site confirmed the presence of suspected pesticide use at the Site. It should be noted that the investigation focused on evaluating pesticide impacts to soil only. Additional soil contaminants, groundwater, and soil vapor were not evaluated as part of this investigation.

Generally, elevated pesticide detections appear to be centrally located in the southern portion of the Site, which is proposed for residential development. Many of the pesticide exceedances/detections were below the RSCOs; however, several areas were identified where pesticide related contamination exceeded the RSCOs, RRSCOs, and CSCOs. Supplemental investigation of the deeper intervals was completed to attempt to vertically delineate pesticide impacts. Vertical delineation was achieved at all the sample locations to below the RSCOs except for three (3) locations which included SB-13, SB-26 and SB-30. Therefore, additional vertical delineation is recommended at these locations to confirm final excavation depths. Additionally, horizontal delineation should be considered to reduce disposal volumes of pesticide impacts in exceedance of the RSCOs.

Based on the results and discussions with the development team, due to the future use on the southern portion of the Site, it has been determined that capping and development of an environmental easement would not be a feasible option on the residential portion of the Site. We estimate that up to approximately 486,200 square feet of the Site will require remediation in order to remove contamination exceeding the RSCOs. Based on an average thickness of 1.2 feet, we preliminarily estimate that approximately 21,000 cubic yards of in place soils (approximately 30,250 tons) will require remediation and off-Site disposal.

Based on the proposed end uses for the property, the following options are currently available to address the environmental conditions as part of the development:

- **Option #1 - Soil Excavation and Off-Site Disposal (Without NYSDEC Oversight):**
Where pesticide contamination was identified in soil exceeding the RSCOs, hot-spot excavation and offsite disposal of the contaminated soils can be performed to remediate pesticide impacted soil to levels that are compliant with the RSCOs. For this option, SESI recommends that a Remedial Action Work Plan (RAWP) be prepared to document the vertical and horizontal extents of the impacted soil requiring excavation, management of impacted soil disposal, management of groundwater/stormwater collected during excavation (if encountered), post-excavation sampling, and stormwater

management to prevent contaminant migration to prevent erosion. Post excavation sampling should be performed to document that adequate removal of contamination was completed. A Remedial Action Report (RAR) should be prepared to document the remediation activities, post excavation conditions, and whether additional remediation and/or long term monitoring is required. The RAR would be maintained for documentation for future transactions and regulatory review. It should be noted that additional remedial investigation could be further completed as part of the option to reduce the area requiring remediation, and thus the soil disposal volumes. Furthermore, it should be noted that this option does not provide regulatory liability release/protection, and may require review and approval by the local Department of Health (DOH). As such, this option should be further evaluated and discussed with your environmental legal counsel.

- **Option #2 - Soil Excavation and On-Site Consolidation (With NYSDEC and NYSDOH Approval):** Where pesticide contamination was identified in soil exceeding the CSCOs, similar to Option 1, hot spot removal could be performed to remediate and dispose of the soils only in the areas where pesticide concentrations exceeded the CSCOs. Soil remaining in exceedance of the RSCOs, but below the CSCOs could potentially be managed on-Site and consolidated in the northern portion of the Site proposed for hotel construction. Potential reuse of soil exceeding the RSCOs would require a Beneficial Use Determination (BUD) from the NYSDEC. It is recommended that a BUD application be prepared in conjunction with, and approved by the NYSDEC, NYSDOH, as well as county and local municipal health departments prior to implementation. SESI recommends that potential BUD operations be informally discussed with these agencies and your environmental legal counsel to confirm that this method of remediation/soil management is acceptable and conforms to the 6 NYCRR Parts 360-365 Solid Waste Management requirements and 6 NYCRR Part 360.12 BUD requirements. As with Option #1, additional remedial investigation could be further completed as part of the option to reduce the area requiring remediation and thus the soil disposal volumes. The same process for developing, implementing, and documenting the remediation through an RAWP and RAR should also be completed with this option for documentation for future transactions and regulatory review. Lastly, it should be noted that this option does not provide regulatory liability release/protection and may require review and approval by the local Department of Health (DOH). It is

likely that the BUD process would result in review by the DOH in addition to the NYSDEC. As such, this option should be further evaluated and discussed with your environmental legal counsel.

- **Option #3 - Brownfield Cleanup Program Remediation (With NYSDEC Oversight):** This option would involve submittal of a Brownfield Cleanup Program (BCP) application and potential approval and entry into the BCP. Under this program, soils would be remediated and exported off-Site under NYSDEC oversight, or consolidated on the norther lot, if approved. This option provides liability protection and tax credits associated with remediation costs, which are not available with the other options. This option would require the preparation of a Remedial Investigation Work Plan (RIWP), a more extensive remedial investigation, preparation of a Remedial Investigation Report (RIR), preparation of a Remedial Action Work Plan, and Final Engineering Report. All of the work would need to be reviewed and approved by a NYSDEC case manager.

If the Site is approved into the BCP, additional remedial investigation would likely consist of soil sampling to better define the extent of pesticide contamination, and analysis of additional analytes including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) polychlorinated biphenyls (PCBs) and metals. In addition, groundwater sampling and soil vapor sampling would likely be required. Following receipt and evaluation of the analytical data, a preferred remedy would be chosen. It is likely that a Track 2 Remedy would be selected based on current results (Soils from 0-15 feet meet RSCO), which would allow for soil exceeding the USCOs and at or below RSCOs to remain on-Site.

SESI recommends that these options be evaluated to determine the potential risk and cost implications, and to determine which option best meets your specific project development schedule requirements and needs. As we have recommended throughout these conclusions, your environmental legal counsel should be consulted during your evaluation. SESI can provide additional information and evaluation, as needed.

Notes:

U - Indicates compound analyzed for but not detected
 J - Indicates estimated value for TICs and all results when detected below the RL
 D - Indicates result is based on a dilution
 H - Indicates a Hold Time violation
 P - Indicates a Greater than 25% diff. between 2 GC columns.
 mg/kg - milligrams per kilogram
 NYSDEC - New York State Department of Environmental Conservation
 USCO - Unrestricted Use Soil Cleanup Objectives
 RSCO - Residential Use Soil Cleanup Objectives
 RRSCO - Restricted Residential Use Soil Cleanup Objectives
 CSCO - Commercial Use Soil Cleanup Objectives
 NA - Not Analyzed / Not Applicable

Concentration Exceeds USCO
Concentration Exceeds RSCO
Concentration Exceeds RRSCO
Concentration Exceeds CSCO

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.

Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.

Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.

Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.

Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.

Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.

Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the [Standards And Docs](#) page of the Results Retrieval System

Aqua Pro-Tech Laboratories
Data Reporting Abbreviations and Qualifiers

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- U:** Indicates the compound was analyzed for but was not detected.
- J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- B:** Indicates the analyte was found in the method blank as well as the sample.
- N:** Used when reporting a specific tentatively identified compound.
- E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

**DATA OF KNOWN QUALITY CONFORMANCE/NON-CONFORMANCE
SUMMARY QUESTIONNAIRE**

Laboratory Name: Aqua Pro-Tech Laboratories

Client: Sesi Consulting Engineers

Project Location: 3 North Castle Dr.

Project Number: 2051267

Laboratory Sample ID(s): 01-05

Sampling Date(s): May 24,2022

List DKQP Methods Used: SW 846 6010D;SW 846 8081B;Gravimetric

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
1A	Were the method specified handling, preservation, and holding time requirements met?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
1B	EPH Method: Was the EPH method conducted without significant modifications (see Section 11.3 of respective DKQ methods)	<input type="checkbox"/> Yes	<input type="checkbox"/> No
		<input checked="" type="checkbox"/> N/A	
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
3	Were samples received at an appropriate temperature (4±2° C)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
		<input type="checkbox"/> N/A	
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
5	Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
	Were these reporting limits met?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
		<input type="checkbox"/> N/A	
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

Notes: For all questions to which the response was "No" (with the exception of question #7), additional information should be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for Data of Known Quality.^o

QUALITY CONTROL

Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D]

COMMENTS:

All samples met QC criteria.

ANALYSIS: PESTICIDES [8081B]

COMMENTS:

The matrix spike recoveries for 4,4'-DDT and Dieldrin were outside QC limits (high).

Gravimetric - General Chemistry

Analyte	Result	Qual	MDL	RL	Units	Dilution	Analyzed
Percent Solids	79.4				%	1	5/25/22 11:11

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, RL - Reporting limit

All Results Summary

10

10.2

ND, **U** - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard

F-I

D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit

2051267-03 (Soil) - SS-3

Analyte	Units	Conc.	MDL	DF	Qual	Analyzed	Method
Percent Solids	%	81.4		1		05/25/22 11:11	Gravimetric

2051267-04 (Soil) - SS-4

Analyte	Units	Conc.	MDL	DF	Qual	Analyzed	Method
Percent Solids	%	79.4		1		05/25/22 11:11	Gravimetric

2051267-05 (Soil) - SS-5

Analyte	Units	Conc.	MDL	DF	Qual	Analyzed	Method
Percent Solids	%	77.4		1		05/25/22 11:11	Gravimetric

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, RL - Reporting limit

FootNotes

RL - Reporting limit

MDL - Minimum detection limit

ND, U - Indicates compound analyzed for but not detected

J - Indicates estimated value

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns

H - Indicates a Hold Time violation

D1 - Sample was Decanted (Dissolved)

FootNotes

RL - Reporting limit

MDL - Minimum detection limit

ND, U - Indicates compound analyzed for but not detected

J - Indicates estimated value

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns

H - Indicates a Hold Time violation

D1 - Sample was Decanted (Dissolved)

FootNotes

RL - Reporting limit
 MDL - Minimum detection limit
 ND, U - Indicates compound analyzed for but not detected
 J - Indicates estimated value

B - Indicates compound found in associated blank
 E - Concentration exceeds highest calibration standard
 D - Indicates result is based on a dilution
 P - Greater than 25% diff. between 2 GC columns
 H - Indicates a Hold Time violation
 D1 - Sample was Decanted (Dissolved)

FootNotes

RL - Reporting limit
 MDL - Minimum detection limit
 ND, U - Indicates compound analyzed for but not detected
 J - Indicates estimated value

B - Indicates compound found in associated blank
 E - Concentration exceeds highest calibration standard
 D - Indicates result is based on a dilution
 P - Greater than 25% diff. between 2 GC columns
 H - Indicates a Hold Time violation
 D1 - Sample was Decanted (Dissolved)

 J - Indicates estimated value

B - Indicates compound found in associated blank
 E - Concentration exceeds highest calibration standard
 D - Indicates result is based on a dilution
 P - Greater than 25% diff. between 2 GC columns
 H - Indicates a Hold Time violation
 D1 - Sample was Decanted (Dissolved)

FootNotes

RL - Reporting limit

MDL - Minimum detection limit

ND, U - Indicates compound analyzed for but not detected

J - Indicates estimated value

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns

H - Indicates a Hold Time violation

D1 - Sample was Decanted (Dissolved)

FootNotes

RL - Reporting limit
 MDL - Minimum detection limit
 ND, U - Indicates compound analyzed for but not detected
 J - Indicates estimated value

B - Indicates compound found in associated blank
 E - Concentration exceeds highest calibration standard
 D - Indicates result is based on a dilution
 P - Greater than 25% diff. between 2 GC columns
 H - Indicates a Hold Time violation
 D1 - Sample was Decanted (Dissolved)

FootNotes

RL - Reporting limit

MDL - Minimum detection limit

ND, U - Indicates compound analyzed for but not detected

J - Indicates estimated value

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns

H - Indicates a Hold Time violation

D1 - Sample was Decanted (Dissolved)

Analytical Results Summary

FootNotes

RL - Reporting limit

MDL - Minimum detection limit

ND, U - Indicates compound analyzed for but not detected

J - Indicates estimated value

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns

H - Indicates a Hold Time violation

D1 - Sample was Decanted (Dissolved)

FootNotes

RL - Reporting limit

MDL - Minimum detection limit

ND, U - Indicates compound analyzed for but not detected

J - Indicates estimated value

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns

H - Indicates a Hold Time violation

D1 - Sample was Decanted (Dissolved)

FootNotes

RL - Reporting limit

MDL - Minimum detection limit

ND, U - Indicates compound analyzed for but not detected

J - Indicates estimated value

B - Indicates compound found in associated blank

E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution

P - Greater than 25% diff. between 2 GC columns

H - Indicates a Hold Time violation

D1 - Sample was Decanted (Dissolved)
