REMEDIAL INVESTIGATION WORK PLAN

For

Former Printex Corporation Site
34 State Street
Block 2, Lot 17
Ossining, Westchester County, NY
BCP Site No. C360263

Initial Submission:
June 2025

Revised Submissions:
January 2026
March 2026

Prepared for:

WB 34 State LLC

April 29, 2026

SESI Contact:
Fuad Dahan
fd@sesi.org

SESI Project No:
13968

CERTIFICATIONS

I, Fuad Dahan, certify that I am currently a NYS registered professional engineer and that this Remedial Action Work Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10).

NYS Professional Engineer (#090531)	Date	Signature
	4/26/2026

1.0 INTRODUCTION

WB 34 State LLC has submitted an application as the Volunteer for the property located at 34 State Street, Block 2, Lot 17 ("Site") and has submitted this Remedial Investigation Work Plan with the Brownfield Cleanup Program (BCP) application. A Site Location Map is presented as **Figure 1.1**.

This document comprises a Remedial Investigation Work Plan (RIWP) to be conducted at the Site after NYSDEC approval, as part of the Site's planned remedial investigation. It includes a description of the Site, summary of the Site history and previous environmental investigations, a description of the Site's physical, geologic, hydrogeologic setting and subsurface features and a plan of action for further investigation of the areas of concern identified previously.

This RIWP has been prepared to establish a plan to achieve the following objectives:

- To complete the horizontal and vertical delineation of the nature and extent of contamination on the Site,
- To identify any potential source areas of contamination,
- To determine the remedial action needed to protect human health and the environment, and
- To collect sufficient data to advance the remediation of the Site.

This RIWP is developed in general accordance with the Department's Remediation Technical Guidance for Site Investigation and Remediation (DER-10).

2.0 PROJECT BACKGROUND

2.1 SITE DESCRIPTION

The Site consists of an approximately 4.53-acre area parcel and is located at 34 State Street, Ossining, Westchester County, New York (Site). The Site is identified as Block 2, Lot 17 as noted by the Town of Ossining and discussed in the BCP application. The Site is improved with an asphalt lot, former building footprints, demolition debris, one (1) large three (3) story residential historic house building, one (1) shed and wooded areas. These buildings are currently vacant and abandoned. The Site has been developed since prior to 1892 and historically has been residences, a community center (circa 1929), a printing company (Printex Corporation of America

circa 1940-1981) and a woodworking facility (1981-2006). The Site has been vacant since 2006 for approximately 19 years. **Figure 2.1** presents a Site Plan.

The Site is located in a residential and commercial area and is bounded by a day care center to the north, residential to the south, residential/commercial uses to the east, and residential to the west. **Figure 2.1** presents a Site Plan.

Adjacent properties are summarized on **Table 2.1** below:

Table 2.1: Summary of Surrounding Properties

Direction	Adjacent Property
North	Day Care Center
South	Residential Dwellings
East	Residential Dwellings, Garage, Parking Areas
West	Residential Dwellings

The proposed Site redevelopment is anticipated to consist of two (2) primarily residential buildings, one for 100 affordable housing units and the other for 50 market rate apartments with commercial components on the ground floor. There will also be a public park created on the property in roughly the same area as the first historically segregated African American park in Westchester County. Formal Site Plans are anticipated to be developed during the design phase of the project.

2.2 SITE HISTORY

The Site has historically been occupied by residences and a community center (circa 1929), a printing company (Printex Corporation of America circa 1940-1981) and Hudson River Inlay, Inc a/k/a Creative Designs circa 1981-2006. The Site has been vacant since 2006 for approximately 19 years.

2.3 PREVIOUS ENVIRONMENTAL INVESTIGATION

The following environmental reports are attached in **Appendix A** and summarized below:

- Phase I ESA, 34 State Street, Ossining, NY, prepared by Team Environmental Consultants, Inc, date unknown

- Phase II ESA, 34 State Street, Ossining, NY, prepared by DT Consulting Services, dated May 31, 2005
- Phase I ESA, 34 State Street, 17-25 James Street & Hunter Street (Lots 17, 18 and 68), Ossining, NY, prepared by EBI Consulting, dated January 18, 2016
- Phase I Environmental Site Assessment, 34 State Street, Ossining, NY, prepared by SESI Consulting Engineers. (SESI), dated June 2025
- Phase II Environmental Site Assessment, 34 State Street, Ossining, NY, prepared by SESI Consulting Engineers. (SESI), dated June 2025

2.3.1 PHASE I ESA, TEAM ENVIRONMENTAL CONSULTANTS, INC.

The following is a summary review of the reports referenced in this Phase I as well as the conclusions therein:

- Phase I ESA, January 21, 1994, prepared by Dames & More
    - Closed in place 10,000-gallon UST at the western portion of the property. Backfilled and covered with concrete.
        - Noted that a previous Phase II by SSI advanced soil samples and identified total petroleum hydrocarbons (TPH) concentrations or 30-114 parts per million (ppm).
    - Closed in place two (2) other USTs after a ground penetrating radar sweep (1,000 and 3,000-gallon USTs with oil/water mix)
        - Centerline samples noted to be collected and reportedly did not indicate TPH
    - Waste treatment lagoon at the southeast was noted not to adversely impact the quality of the property.
- Phase I ESA, May 7, 2003, prepared by EES
    - Recommended ACM survey
    - Recommended identifying tanks, concrete storage lagoons and garage area in a Phase II
- Phase II ESA, May 16, 2003, prepared by EES
    - Nine (9) soil borings within the western area of the 10,000-gallon UST and storage garage areas
    - No samples were collected for laboratory analysis. Just screened with a photoionization detector (PID) and did not identify observable contamination.

No further investigations are recommended.

The above RECs are presented on **Figure 2.2**. Note: The 1994 Dames & Moore report and the two 2003 EES reports referred to in this undated Teams Phase I were not attached and could not be obtained by the current owner from the prior recalcitrant owner.

2.3.2 PHASE II ESA, DT CONSULTING SERVICES, MAY 31, 2005

The following is a summary review of this Phase II ESA as well as the conclusions therein:

- History: Original building erected in 1840 as residential; 2 additions built in 1929 as a community center; 1940-1981 it was the Printex Corporation of America as a clothing printing and textile design facility. Another additional constructed in 1968.
- Site is identified in CERCLIS and Petroleum Bulk Storage (PBS)
    - Known PBS in the north; three (3) USTs identified on figure
    - Waste treatment lagoon in the southeast corner
    - General equipment and storage at the west
- Seven (7) soil borings
    - Advanced eight (8) to 12 ft feet below ground surface (bgs)
    - Characterization: light brown sandy loam (fill) with traces of gravel - approximately 0 to four (4) feet bgs, underlain by fine-medium sand with clay and schist fragments.
    - Bedrock encountered between eight (8) and nine (9) feet bgs
    - Groundwater not encountered
    - No visual or olfactory or PID observations/ readings
- Seven (7) borings were composited to form only three (3) sample sets
    - Volatile organic compounds, semi-volatile organic compounds, Metals; Detections of low levels
- Determined no further investigation based on the results

2.3.3 PHASE I ESA, EBI CONSULTING, JANUARY 18, 2016

The following is a summary review of this Phase I ESA as well as the conclusions therein:

- <u>REC - USTs:</u>
    - The USTs documented by Creative Design, a former Tenant are as follows:
        - 1x 10,000-gallon UST, closed in place on September 1, 1986.
        - 1x 1,000-gallon UST, removed on December 1, 2003.
        - 1x 3,000-gallon UST, removed on December 1, 2003.

  - No LUST releases were reported. However, no closure reports were identified.
  - Identifying closure documents in a record review or a Phase II were recommended.
- ACM:
  - EBI conducted a preliminary screening of ACM in the building and identified some suspect ACM. This is out of scope of the Phase I ASTM, and is not considered a REC; however, a full ACM survey was recommended.

2.3.4 PHASE I ESA, SESI, JUNE 2025

In June 2025, SESI conducted a Phase I ESA and identified the following RECs and BERS:

- **REC 1 – Subject Property Historic Operations:** The original historic house estate building was erected in 1840 as residential estate; two (2) additions were built in 1929 as a community center; and in 1940-1981 the footprints of the buildings were expanded to accommodate the Printex Corporation of America, which operated as a scarf printing and textile design facility. Another addition was constructed in 1968. The facility utilized a wastewater treatment lagoon at the southeast. The presence of the lagoon led to the listing of the property as a State Superfund program (Site ID No. 360002). However, the property was classified as a Class N No further action site based on comments from the Westchester County Department of Health (WC DOH) which indicated the lagoons were used for on-site wastewater treatment and not hazardous waste disposal associated with the former Printex operations. Furthermore, there were some laundry operations at the center of the Subject Property circa 1911. Finally, the Hudson River Inlay woodworking company utilized USTs and its woodworking operation from approximately the1980s to 2006 also could have resulted in contamination. **Based on this history observed from the Sanborn maps and previous reports, the historic operations from the textile, woodworking and laundry facilities may have adversely impacted the Subject Property and warrant further investigation.**

- **REC 2 – Underground Storage Tanks:** The following USTs were identified to be either closed in place or removed: 1x 10,000-gallon UST, closed in place on September 1, 1986; 1x 1,000-gallon UST, removed or closed in place on December 1, 2003; and 1x 3,000-gallon UST, removed or closed in place on December 1, 2003. No leaking underground

storage tank (LUST) releases were reported. **However, no closure reports were identified. Identifying closure documents in a record review or a Phase II is recommended.**

- **REC 3 – Historic Fill:** Historic fill has reportedly been identified at the Subject Property during geotechnical and environmental investigations. **Additional subsurface soil sampling is recommended to characterize fill material should special handling and/or disposal of disturbed soil be required during Subject Property redevelopment.**

- **BER 1 – Historic Land Use:** The historic 2006 aerial imagery identified clearing of vegetation on Lot 68; however, this vegetation returned in 2011 per the next available aerial. It was unclear if this area had been regraded or there were former operations on this lot that may have adversely impacted the Subject Property. **Further investigation is recommended into the use of Lot 68 and the reasoning for clearing. Additional soil investigation is recommended to determine if historic fill is present.**

- **BER 2 – Aboveground Storage Tank (AST):** SESI identified one (1) yellow steel aboveground storage tank adjacent to several unused items at the southwest of Lot 17. This tank appeared to not be in use and was intact, with no evidence of staining. **Therefore, no further investigation is warranted; however, proper disposal of this AST is recommended. No closure documentation is required.**

- **BER 3 – Drum:** There was one (1) plastic 55-gallon tote identified to the south of the northern shed. This tote appeared to contain soil and was unlabeled**. Therefore, SESI recommends proper removal/disposal of this tote.**

- **BER 4 – Stockpiles:** There were several stockpiles of building materials scattered throughout the Subject Property, around building footprints, and on the periphery of the vegetated area of Lot 68. These stockpiles were not observed to have exhibited petroleum impacts. **Therefore, SESI recommends the proper testing and disposal of these demolition debris prior to or during redevelopment.**

- **BER 5 – Hazardous Building Materials:** An asbestos containing material (ACM), lead-based paint (LBP), polychlorinated biphenyl (PCB) caulk and universal waste survey was not conducted as part of this Phase I Environmental Site Assessment. Based on the age of the structures located on the Subject Property, the presence of these materials cannot be ruled out. **Therefore, a comprehensive hazardous material survey is recommended prior to demolition or redevelopment.**

2.3.5 PHASE II ESA, SESI, JUNE 2025

The following is a summary review of this Phase II ESA as well as the conclusions therein:

Soil

The complete soil analytical results are presented as **Table 2.2A, 2.2B and 2.2C**. A summary table of the analytical results exceedances compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs) and (Protection of Groundwater Soil Cleanup Objectives) PoGSCOs is presented in **Table 2.3** below.

Notes:
1. Results measured in mg/kg (milligrams per kilogram)
- = Not Analyzed
RL = Laboratory Reporting Limit
ND = Compound Not Detected above RL
= Concentration Exceeds NY-UUSCO (12/2025)
= Concentration Exceeds NY-RRSCO (12/2025)
= Concentration Exceeds NY-PoGSCO (12/2025)

A total of ten (10) samples exhibited exceedances of the RRSCOs for polycyclic aromatic hydrocarbons (PAHs), metals and/or PCBs. Eight (8) samples exhibited exceedances of the PoGSCOs for PAHs, metals and/or VOCs from depths ranging from 0.5 to 14.0 ft bgs. Other samples exhibited exceedances of the UUSCOs for VOCs, SVOCs, Metals, PCBs and Pesticides

Groundwater

Groundwater boreholes were advanced to bedrock which was encountered between 5.0 and 10.0 ft-bgs within the former building's footprint adjacent to the existing building as well as farther to the east near the shed. No overburden groundwater was detected. SESI then further advanced the borehole near the building and identified weathered bedrock from 10-15 ft-bgs and competent bedrock from 15-25 ft-bgs. After purging the well and allowing for a couple days of recharge, no groundwater was encountered at this temporary well. Therefore, no groundwater sampling was completed as part of this investigation.

Soil Vapor

A summary table of the analytical results is presented in **Table 2.4.** A summary table of the analytical results detections is presented as **Table 2.5** below.

Table 2.5 Summary of Soil Vapor Detections

Notes
1. Soil vapor samples were collected from a severely dilapidated building. Therefore, the NYSDOH SVI Matrices are not usable for this environmental evaluation.
2. Results are presented in ug/m^3.
ND = Not Detected
J = Estimated
ug/m^3: Micrograms per cubic meter
Bold: Elevated Concentration

A total of 33 VOCs were detected in the vapor samples; however, as soil vapor samples were collected from a severely dilapidated building, the NYSDOH SVI Matrices are not usable for this environmental evaluation. An elevated concentration of carbon tetrachloride was detected in the indoor air and is likely due to an interior interferant. There was a relatively high level of tetrachloroethylene (PCE) in soil vapor as well. As a result, due to the former uses of the property, it is recommended that a more detailed investigation be completed prior to redevelopment to then determine the need for mitigation following redevelopment.

2.4 GEOLOGIC SETTING

Regional surface topography slopes to the west. Based on the U.S. Geological Survey – 2019 Ossining/Haverstraw, New York, 7.5-minute Quadrangle map, the Property is approximately 161.83 feet above the North American Datum. Based on the Phase II investigation conducted by SESI, the stratigraphy of the Site, from the surface down, consists of historic fill. Historic fill generally consisted of brown coarse to fine sand, coarse to fine gravel, with brick, concrete and organics. The historic fill materials were encountered to a maximum of 17 ft-bgs with many borings encountering refusal at bedrock.

2.5 HYDROGEOLOGIC SETTING

As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Subject Property are characterized as Uf (Urban Land) with the sloped area to the west containing CsD (Chatfield-Charlton complex), which is classified as containing 15 to 35 percent slopes and is noted as very rocky. Groundwater was not encountered at the Subject Property, despite installing wells 25 ft bgs. The 2025 Phase II investigation did not encounter groundwater to a depth of 25 ft bgs in the one groundwater well installed on the eastern, higher elevation, portion of the Subject Property. The groundwater flow direction is expected to be in the west direction following topography towards the Hudson River to the west.

2.6 SUBSURFACE FEATURES

The following USTs were identified to be either closed in place or removed: 1x 10,000-gallon UST, closed in place on September 1, 1986; 1x 1,000-gallon UST, removed or closed in place on December 1, 2003; and 1x 3,000-gallon UST, removed or closed in place on December 1, 2003. No leaking underground storage tank (LUST) releases were reported. However, no closure reports were identified. Therefore, this was considered REC 2.

2.7 SUMMARY OF ENVIRONMENTAL ASSESSMENT

Based on the investigations conducted between 2005 and 2025, the primary contaminants of concern (COCs) are (VOCs, PAHs, Pesticides, Metals and PCBs) in soil and chlorinated and petroleum vapors in soil vapor. COCs will be refined based on the RIR results.

Soil: (maximum concentrations).

- **VOCs:** Acetone (0.058 mg/kg), total xylenes (6.5 mg/kg), 2-butanone (0.26 mg/kg) and 1,2,4-trimethylbenzene (9.3 mg/kg)
- **PAHs:** Benzo(a)anthracene (6.0 mg/kg), benzo(a)pyrene (6.2 mg/kg), benzo(b)fluoranthene (8.2 mg/kg), benzo(k)fluoranthene (2.5 mg/kg), chrysene (5.8 mg/kg), dibenzo(a,h)anthracene (0.94 mg/kg), and indeno(1,2,3-cd)pyrene (4.2 mg/kg)
- **Pesticides:** Dieldrin (0.0119 mg/kg), 4,4'-DDE (0.0142 mg/kg) and 4,4'-DDT (0.0426 mg/kg)

- **PCBs:** Aroclor 1254 (2.32 mg/kg), aroclor 1260 (2.48 mg/kg) and total PCBs (2.565 mg/kg)
- **Metals:** Barium (1,160 mg/kg), cadmium (4.99 mg/kg), copper (3,840 mg/kg), lead (3,400 mg/kg), manganese (19,400 mg/kg), mercury (1.5 mg/kg), nickel (38.1 mg/kg), silver (18.7 mg/kg) and zinc (2,640 mg/kg)

Soil Vapor: (maximum concentrations).

A number of chlorinated solvents were detected, including but not limited to:

- **VOCs:** Tetrachloroethene (PCE) (88.8 ug/m^3), and petroleum hydrocarbon (PHC) compounds detected in soil vapor across the Site (Benzene [4.2 ug/m^3], Toluene [42.2 ug/m^3], Ethylbenzene [13 ug/m^3] and Total Xylenes [75.2 ug/m^3]).

Indoor Air: (maximum concentrations).

- **VOCs:** Cabon tetrachloride (maximum 0.5 ug/m^3) was detected in indoor air at elevated concentrations in one sample.

3.0 FIELD REMEDIAL INVESTIGATION

Soil borings, soil vapor borings, and groundwater monitoring wells are proposed below based on the following rationale to complete the nature and extent delineation of contaminated soil, groundwater and soil vapor on the Site. The applicable Standards Criteria And Guidance (SCGs) for the Site soil are the December 2025 Unrestricted Use Soil Cleanup Objectives (SCOs). The applicable criteria for sub-slab vapor are the NYSDOH Decision Matrices (May 2017 and February 2024). The applicable SCGs for the Site groundwater are the Groundwater Effluent Limitations Class GA standards (cf. Section 703.6) and the screening levels for PFOA and PFOS (NYSDEC Guidelines for Sampling and Analysis of PFAS, April 2023).

A ground-penetrating radar (GPR) and comprehensive utility survey will be completed prior to the initiation of any intrusive field activities. These surveys will be conducted to identify and verify the locations of subsurface utilities and potential obstructions, ensuring that all intrusive work is performed safely and in accordance with applicable regulations and site-specific health and safety protocols. No drilling, excavation, or other intrusive tasks will commence until the GPR and utility survey results have been reviewed and incorporated into the field planning process.

3.1 SOIL REMEDIAL INVESTIGATION

To further evaluate the soils, 45 soil borings will be performed on the Site in an approximate (100)-foot grid pattern to evaluate and delineate soil contamination from historical operations, and other potential sources. In addition, waste characterization samples will be collected from the borings for disposal approval. The proposed soil boring locations are shown on **Figure 3.1.**

The borings will be advanced using direct-push or other drilling methods as needed. The borings will extend to a depth of 20 ft-bgs or until competent bedrock is encountered. Surficial soil samples will be collected from each boring at a 6-inch interval within 0.0–2.0 feet bgs to evaluate the quality of the upper two feet of soil. In addition, soil samples will be at a minimum of one sample per 5-foot depth interval biased based on field screening that includes visual observations, PID readings and olfactory observations. Boring logs documenting soil classifications, PID readings, and visual observations will be provided in the final report.

Upon retrieval of the sampling barrel, the collected sample shall be placed in glass jars and labeled, stored onsite on ice in a cooler, and transmitted to the NYSDOH ELAP-certified testing laboratory. Chain-of-custody procedures will be practiced following Section 15, EPA-600/4-82-029, Handbook for Sampling and Sample Preservation of Water and Waste Waters. Soil samples for VOC analysis will be collected in Encore ® vials.

Up to an estimated 225 soil samples will be collected from the 45 boring locations and will be analyzed by a NYSDOH ELAP certified laboratory for SVOCs by EPA Method 8270D and TAL metals by EPA Methods 6010C, 7471B, and 9012. Approximately 25% of soil samples will be analyzed for TCL+30/TAL including VOCs by EPA Method 8260C, SVOCs by EPA Method 8270D, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, and TAL metals by EPA Methods 6010C, 7471B, and 9012, the 41 PFASs compounds by EPA Method 1633 and 1-4,dioxane by EPA Method 8270. Category B deliverables will be requested on each sample chain of custody.

The proposed soil sample locations and the rationale for their locations are presented in **Table 3.1A**.

Quality assurance/quality control (QA/QC) samples will be collected and analyzed as specified in the QAPP. The number of duplicate, spiked and blank samples analyzed will be collected at a frequency of one (1) duplicate for every 20 samples. The inclusion and frequency of analysis of field blanks will be collected once every 20 soil samples with no fewer than one (1) per day, or at a frequency outlined in the most recent Analytical Services Protocol. Samples to be analyzed for volatile organic compounds will be accompanied by a field blank for all matrix types and trip blank for water matrices. The proposed QA/QC soil samples and the rationale for their collection are presented in **Table 3.1B** below.

Table 3.1B – Proposed Soil QA/QC Samples

Sample Type	Collection Frequency	Target Analyses	Sampling Rationale
Duplicate	1 Per 20 Samples	Metals and SVOCs *(with 30% of samples analyzed for VOCs, Pesticides, PCBs, 1,4-Dioxane and PFAS)*	Laboratory quality control and data reliability
Matrix Spike / Matrix Spike Duplicate (MS/MSD)	1 Per 20 Samples	Metals and SVOCs *(with 30% of samples analyzed for VOCs, Pesticides, PCBs, 1,4-Dioxane and PFAS)*	Analytical accuracy and method performance.
Field Blank	1 Per 20 Samples (no fewer than 1 Per Day)	Metals and SVOCs *(with 30% of samples analyzed for VOCs, Pesticides, PCBs, 1,4-Dioxane and PFAS)*	Detect contamination from sampling or handling.

A geologist or engineer employed by SESI Consulting Engineers will be on site during the drilling operations to generate a continuous description of each soil boring and collect the soil samples from the borings, following the New York State Soil Description Procedure, and to retain representative portions of each sample.

A summary of the parameters to be tested, the analytical methods and the holding times for the samples is shown on **Table 3.1C** below.

Table 3.1C – Soil Analyses Summary

Parameter and Analytical Method	Holding Time
Volatile Organic Compounds (VOCs) – USEPA 8260C	14 days
SVOCs (BNAs) and 1,4-Dioxane – USEPA 8270D or E	14 days (until extraction, 40 days extracted)
Pesticides – USEPA 8081B	14 days (until extraction), 40 days (extracted)
PCBs – USEPA 8082A	None
Metals - Method 6010D, 7470A for mercury, and 9012B for cyanide	180 days Cyanide: 14 days Mercury: 28 days
PFAS – USEPA 1633	28 days

SESI's field sampling procedures are described in the quality assurance project plan (QAPP) presented in **Appendix B.** The Sampling Plan for Emerging Contaminants is included as **Appendix C.**

3.2 GROUNDWATER REMEDIAL INVESTIGATION

To investigate the Site groundwater, a total of five (5) permanent groundwater monitoring wells will be installed as shown on **Figure 3.2**. The wells will be installed to a depth of 10 feet below the groundwater table. The groundwater table is anticipated to be greater than 25 feet below ground surface based on the lack of groundwater encountered at this depth. Wells are anticipated to be installed in the bedrock. Well depths and screen placement will be evaluated based on observed groundwater table.

Each monitoring well will be constructed with two (2)-inch diameter well screens. The well screening will intersect the water table and extend to 2 feet above the bottom of the well boring. Every well will include 2 feet of casing below the screen bottom for accumulated sediment. The annular space of each well will be filled with well sand to at least two (2) feet above the screening and will be sealed with hydrated bentonite or cement grout. Finally, each monitoring well will be completed with a flush-mount road-box or stickup as necessary. A typical boring and well construction log is provided in **Appendix D**.

The Groundwater RI will be conducted to achieve the following:

- delineate the nature and extent of AOC-specific contaminants in the Site groundwater;
- identify actual or potential impacts to sensitive receptors, e.g. surface water;
- determine whether a contaminant plume exists;

- gather sufficient data to determine groundwater flow direction and contour map and evaluate groundwater Remedial alternatives, including, as appropriate, monitored natural attenuation (MNA), and
- provide information on the background quality of the groundwater flowing into the Site.

All the wells will be surveyed for location and elevation. The survey data will be provided pursuant to the DER-10 requirements in an acceptable format (e.g., North America Datum 83 [NAD83]). The wells will be gauged for groundwater depth to determine the groundwater elevation. The Site-specific groundwater flow direction and gradient will be determined based on the latest elevation data and summarized in the Remedial Investigation Report (RIR). The proposed well locations are shown on **Figure 3.2**.

Two (2) rounds of sampling will be conducted from the newly installed wells during the Remedial Investigation phase of the project, with the second round of sampling completed within one (1) month of the start of remedial work. The data will be analyzed to determine whether groundwater contamination exists, the magnitude and the extent of the potential contaminant plume. In addition to the analytical data, field measurements and chemical analyses will be conducted to characterize the impacted groundwater.

All the wells will be sampled for TCL+30/TAL metals, PFAS, and 1-4 dioxane. The VOCs will be analyzed by EPA Method 8260C, SVOCs by EPA Method 8270D, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, TAL metals by EPA Methods 6010C, 7471B, and 9012, PFAS compounds by EPA Method 1633, and 1-4 dioxane by EPA Method 8270 SIM. The QAPP, which describes all field sampling procedures, is included as **Appendix B**, and the Sampling Plan for Emerging Contaminants is included as **Appendix C**. The proposed groundwater monitoring wells and the rationale for their locations are presented in **Table 3.2A** below.

Table 3.2A – Proposed Groundwater Monitoring Wells

Well Name	Proposed Sample Depths	Well Location Rationale	Analysis
RI-MW-01	Center of Water Column feet below groundwater table	Horizontal / Vertical Delineation	TCL+30/TAL, 1,4-Dioxane, PFAS
RI-MW-02	10 feet below groundwater table	Horizontal / Vertical Delineation	TCL+30/TAL, 1,4-Dioxane, PFAS
RI-MW-03	10 feet below groundwater table	Horizontal / Vertical Delineation	TCL+30/TAL, 1,4-Dioxane, PFAS
RI-MW-04	10 feet below groundwater table	Horizontal / Vertical Delineation	TCL+30/TAL, 1,4-Dioxane, PFAS
RI-MW-05	10 feet below groundwater table	Horizontal / Vertical Delineation	TCL+30/TAL, 1,4-Dioxane, PFAS

The wells will be sampled using the low flow technique, when possible. A flow rate of 100 ml to 250 ml per minute is used to purge the wells. Drawdown will not exceed 0.3 feet. At the initiation of low flow purging a water level is recorded as well as field parameters. Field parameters are then monitored every five minutes during low flow purging using a flow through cell. When three (3) consecutive measurements of pH differ by 0.1 units or less, with ORP within 10 mv or less, turbidity varies 10 percent or less, conductivity differs by 3 percent or less and dissolved oxygen by 10 percent or less, sampling may begin. Flow through cells are used so continuous real time readings are made. When the parameters stabilize the flow through cell is disconnected and sample bottles are filled directly from the tubing. If the parameters of a well do not stabilize in a timely manner, the groundwater sample will be collected after emptying three (3) well volumes from the well being sampled.

All groundwater samples will be analyzed by a NYSDOH ELAP certified laboratory and Category B deliverables will be requested on each sample chain of custody. In addition, QA/QC samples will be collected and analyzed as specified in the QAPP. Specifically, the number of duplicate, spiked and blank samples analyzed will be a minimum of one (1) duplicate for every 20 samples. For the aqueous matrix field blanks will be collected at a frequency of one (1) per day. Samples to be analyzed for volatile organic compounds will be accompanied by a trip blank for each shipment and field blanks water matrix. In addition to water samples collected from the monitoring wells, two types of "blanks" will be collected and submitted to the chemical laboratory for analyses. The blanks will consist of 40 ml VOA vials, as follows:

- A trip blank will be prepared before the sample bottles are sent by the laboratory. It consists of a sample of distilled, deionized water which accompanies the other sample

bottles into the field and back to the laboratory. A trip blank will be included with each shipment of samples where sampling and analysis for TCL volatiles is planned (water matrix only). The trip blank will be analyzed for TCL VOCs as a measure of potential contamination from background sources and their effect on the results.

- In order to check for contaminant carryover when non-dedicated sampling equipment is used, a rinsate blank will be submitted to the laboratory. This blank will also be analyzed for TCL VOCs.

The proposed QA/QC groundwater samples and the rationale for their collection are presented in **Table 3.2B** below.

Table 3.2B – Proposed Groundwater QA/QC Samples

Sample Type	Collection Frequency	Target Analyses	Sampling Rationale
Duplicate	1 Per 20 Samples	TCL/TAL+30 *(with 25% of samples analyzed for 1,4-Dioxane and PFAS)*	Laboratory quality control and data reliability
Matrix Spike / Matrix Spike Duplicate (MS/MSD)	1 Per 20 Samples	TCL/TAL+30 *(with 25% of samples analyzed for 1,4-Dioxane and PFAS)*	Analytical accuracy and method performance.
Field Blank	1 Per 20 Samples (Maximum 1 Per Day)	TCL/TAL+30 *(with 25% of samples analyzed for 1,4-Dioxane and PFAS)*	Detect contamination from sampling or handling.
Trip Blank	1 per shipment of samples analysis for TCL VOCs is planned	TCL VOCs	Detect contamination from shipping.

3.3 SOIL VAPOR INVESTIGATION

SESI will collect one (1) sub-slab soil vapor and five (5) soil vapor samples from soil vapor points in the footprint of the proposed buildings. The proposed sub-slab soil vapor point will be collected within the existing building slab. The proposed soil vapor point locations are shown on **Figure 3.3**. The purpose of the soil vapor points is to assess the potential for vapor intrusion into future buildings. All soil vapor points will be installed within two (2) feet below the proposed foundation elevation.

The soil vapor samples will be collected in accordance with the procedures of the NYS Department of Health October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of

New York as amended in May 2017 and February 2024. Specifically, the soil vapor probes will be advanced using direct push sampling equipment and samples will be collected by installing vapor implants. The soil vapor depth will be based on the final construction and development plan. A sacrificial vapor point connected to flexible tubing will be inserted into the borehole. The annular space of the borehole will be filled with sand and the surface will be sealed with bentonite to seal the surface. Prior to sampling the tubing system will be purged of ambient air with a low-flow pump.

Soil vapor samples will be collected using laboratory supplied individually certified stainless-steel 6-L Summa canisters over an approximate 2-hour period. The summa canisters will be equipped with a manometer to verify the canister is under vacuum, and a flow controller set to a flow rate of <200 ml/min. A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols. The vapor samples will be sent to a certified laboratory for analysis of VOCs in accordance with EPA Method TO-15. In addition to the soil vapor, one (1) ambient air sample will be collected with a 1-liter summa canister set to a flow rate of <200 ml/min outside the building. The field sampling procedures are described in the QAPP, which is included as **Appendix B**.

As part of the vapor sampling, a tracer gas will be used to serve as a QA/QC device to verify the integrity of the soil vapor probe seal. Helium will be used as the tracer gas and a box will serve to keep it in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer prior to sampling. If the tracer sample results show a significant presence of the tracer, the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seals.

One (1) ambient (outdoor) air sample will be collected in the breathing zone (3-6 feet above grade). A regulator will be attached to a 6-liter summa canister and be set to collect an ambient sample at a flow rate of less than 0.2 liters per minute.

The proposed sub-slab soil vapor, soil vapor and ambient air samples are presented in **Table 3.3** below.

Table 3.3 – Proposed Soil Vapor Sample Locations

Sample Name	Sample Type	Proposed Sample Depths	Analysis
RI-SV-01 through RI-SV-05	Soil Vapor	2 feet below grade	VOCs (TO-15)
RI-SSSV-01	Sub-Slab Soil Vapor		
SVDUP2026XXXX	Duplicate		
RI-AA-01	Ambient Air	3-6 feet above grade	

3.4 GREEN SUSTAINABLE REMEDIATION

During the course of the Remedial Investigation field activities, SESI will consider NYSDEC DER-31 "Green Remediation" implementation objectives. The NYSDEC DER's approach to remediating sites in the context of the larger environment is a concept known as "Green Remediation". Green Remediation is defined in NYSDEC DER-31 as "the practice of considering all environmental effects of remedy implementation and incorporating options to minimize the environmental footprint of cleanup actions." The approach is intended to improve the overall sustainability of the remediation by promoting the use of more sustainable practices and technologies. Green Remediation practices and technologies are less disruptive to the environment, generate less waste, increase reuse and recycling, and emit fewer pollutants, including greenhouse gases, to the atmosphere. Green Remediation concepts and techniques considered during the remedial investigation shall include:

- Eliminating idling vehicles and equipment when possible; reducing emission of CO_2, N_2O, CH_4, and other greenhouse gases contributing to climate change:
- Operation of particulate detectors to monitor and minimize dust export of contaminants:
- Operation of VOC detectors to monitor and minimize VOC exposures: and
- Conducting sampling events planned simultaneously to maximize level of efforts while traveling to/from the Site (economy of scale implementing multiple sampling events) and use of mass transit to travel to the Site.

4.0 DECONTAMINATION AND IDW

Reusable equipment utilized for ground intrusive activities (i.e. borings and wells) will be decontaminated between each boring. Equipment utilized for sample collection (i.e. spoons,

trowels) will be decontaminated between each sample unless disposable equipment is utilized. Appropriate decontamination areas will be established to support work being conducted in each area of the Site. PFAS free certified deionized water, supplied from the laboratory, will be used for the decontamination of the sampling tools if needed. Otherwise locally supplied water, if available, or water supplied by the driller in a tank will be used to decontaminate the equipment.

All investigative derived waste (IDW) of soil cuttings and purged groundwater will be containerized in 55-gallon drums, sampled, and properly disposed of pursuant to DER-10 requirements. The 55-gallon drums will be labeled as "non-hazardous" and placed onsite in a pre-designated location. Disposable sampling equipment, including macro core liners, spoons, gloves, bags, paper towels, and PPE that contacts environmental media, will be double bagged and disposed of as municipal trash in a facility trash dumpster as non-hazardous refuse.

5.0 WASTE CHARACTERIZATION

Waste characterization will be completed in conjunction with the remedial investigation to obtain data for facility approvals. It is anticipated that twenty waste characterization samples will be collected, each from a five-point composite, and analyzed for TCL+30/TAL, however, the exact quantity and parameters will be determined based on disposal facility requirements.

6.0 SURVEY

After the RI sampling scope is completed, a survey will be completed, which includes the locations and elevations of all the monitoring wells, soil borings, and soil vapor points.

7.0 HUMAN HEALTH EXPOSURE ASSESSMENT

A qualitative human health exposure assessment will be performed for the Site in accordance with the New York State Department of Health's Qualitative Human Health Exposure Assessment guidance document. Sampling data will be reviewed along with the physical conditions of the contaminant sources or physical hazards near the Site. Potential on-Site and off-Site exposures will be evaluated. The Exposure Assessment will describe the nature and size of the population exposed, or potentially exposed, to the contaminants that are present at, or migrating from the Site, and will characterize the exposure setting, identify exposure pathways and evaluate contaminant fate and transport.

Several objectives will be met by the exposure assessment. First, applicable Site information and characterization data for environmental media of concern will be evaluated. Applicable SCGs including Part 375 SCOs and CP-51 SCOs for soil, and AWQS for groundwater and surface water will be applied.

An assessment of current and future Site activities and Site use will be conducted in relation to potential human exposure. Next, potential exposure pathways will be identified, and each aspect of the potential exposure pathway will be evaluated. Soil and groundwater contamination will be addressed and the impact of remediation on future exposure scenarios will be analyzed.

8.0 FISH AND WILDLIFE IMPACT ANALYSIS

A Fish and Wildlife Impact Analysis (FWIA) Decision Key will be completed prior to the excavation work to determine if a FWIA is needed. Contaminant migration pathways and any fish and wildlife exposure pathways will be identified. As stated in the FWIA, “if no resources are associated with the site or if there is no potential for contaminant migration to the resources, then only the necessary information to support that conclusion should be provided.”

If resources are identified, or migration pathways exist, a FWIA will be completed and submitted as part of the RI Report. The FWIA would include qualitative estimates of the following: 1) the routes, intensity, frequency, and duration of actual or potential exposures to chemicals; 2) the nature and size of the population exposed to the contaminants that are present at or migrating from the Site; 3) the exposure setting and possible exposure pathways; and 4) contaminant fate and transport.

A Fish & Wildlife assessment is not required for this Site due to its urban location and distance from surface water bodies and wildlife areas. Even though the Site is located less than a ½ mile from the Hudson River, the distance of 760 feet and higher elevation is still too far given the non-migratory nature of the contamination on this Site. Therefore, the Site is unlikely to be impacting the Hudson River water body and will otherwise be remediated as part of the planned remediation and redevelopment project.

9.0 DUSR

Following the completion of the laboratory analysis program, a Data Usability Summary Report (DUSR) will be completed for the lab data and included as part of the RI Report. At minimum, 70% of samples collected during the RI will be included in the DUSR.

The DUSR will include available datasets from previous investigations, as well as data from this phase of Site characterization. The DUSR is carried out as specified in DER-10 to evaluate the quality control measures that were implemented during the field and laboratory analytical programs, with the objective of determining whether the reported analytical data are representative and usable for decision making. The DUSR will evaluate whether the data are technically defensible (i.e. were all analytical data requirements met and documented?). Data usability analysis reviews the Site data to determine whether they are adequate to draw conclusions regarding the nature and extent of contamination.

The items that will be reviewed as part of the DUSR will include the following:

- Completeness (number of samples collected and analyzed compared to plans)
- Chains of custody are complete and accurate
- Holding times
- Instrument calibration
- Relative percent difference between field duplicates
- Reasonableness of data (e.g. relationships between total and soluble analytes)
- Blank contamination

The DUSR will be conducted in accordance with guidelines provided under Appendix 2B of DER-10. The site-specific Quality Assurance Project Plan (QAPP) is included in **Appendix B**.

10.0 REMEDIAL INVESTIGATION REPORT (RIR)

Following the completion of the RI activities and the receipt of sample results, an RIR will be prepared. The RIR report will summarize the activities completed during the RIR including analytical results, well construction and sampling logs, waste characterization information for disposal purposes, conclusions from the FWIA if necessary, a Data Usability Summary Report (DUSR) and laboratory data packages. Scaled figures showing the sample locations and areas of contamination exceeding applicable standards will be prepared for soil, soil vapor, and groundwater. Sampling results will be summarized and discussed and the need for additional

investigation and remediation will be evaluated. In addition, analytical summary tables will be prepared for soil, soil vapor, and groundwater compared to applicable standards.

The RIR will also include: 1) a summary of the site history and previous investigations, 2) a description of current site conditions, 3) the identification of exposure pathways via a Qualitative Human Health Exposure Assessment; an analysis of the results, 4) a description of the nature and extent of the contamination; and 5) a detailed conclusion with recommendations.

Analytical data collected during the Remedial Investigation and previous data used for the selection of the remedy will be submitted in the NYSDEC approved Electronic Data Deliverable (EDD) format. EDDs will be prepared using the DEC's Environmental Information Management System (EIMS) database software application EQuIS™ for submission.

11.0 QUALITY ASSURANCE/QUALITY CONTROL

Quality Assurance and Quality Control (QA/QC) is addressed in the Quality Assurance Project Plan (QAPP) included as **Appendix B**. The QAPP outlines procedures to be followed for sampling and analysis to ensure quality of the results. A DUSR will be prepared with the final reports to document the reliability of the sample results.

12.0 HEALTH AND SAFETY PLAN

A Site-specific Health and Safety Plan (HASP) has been prepared and is included as **Appendix E**. All on-site personnel and visitors involved in the RI will be required to read and sign the HASP prior to entry of the Site.

13.0 COMMUNITY AIR MONITORING

A Community Air Monitoring Plan (CAMP) is provided as **Appendix F**, in accordance with DER-10 requirements for remedial investigation. The CAMP sets forth air monitoring procedures that will be utilized to measure airborne emissions during the RI, in order to ensure dust and volatile organic compounds are not leaving the work zone.

14.0 CITIZEN PARTICIPATION

Citizen participation activities will be performed throughout the RI process to involve and inform the public. The specific citizen participation activities to be performed will be outlined in the Citizen Participation Plan (CPP), included as **Appendix G**.

15.0 REMEDIAL INVESTIGATION SCHEDULE

The proposed remedial investigation schedule is presented on **Table 15.1** below.

Table 15.1: Proposed Remedial Investigation Schedule

Activity	Duration	Anticipated Start
Field mobilization	-	May/June 2026
Remedial Investigation with first round of RI groundwater samples	3 weeks	May/June 2026
Second Round of RI Groundwater Samples	1 day (within 1 month of first round)	June/July2026
Prepare and Submit RIR	2 months	July 2026
RIR Public Comment Period	45 Days	July//August 2026
RIR Acceptance	-	September 2026
Submission of RAWP	2 months	July 2026
RAWP Public Comment Period	45 Days	July//August 2026
Decision Document Issuance	-	September 2026

16.0 DAILY REPORTING

Daily reports will be submitted to NYSDEC and NYSDOH Project Managers within two (2) business days of the reporting period and will include:

- Weather and general site details;
- Wind direction;
- Actions taken during the reporting period;
- Summary of all samples collected during the reporting period;
- Anticipated actions for the following reporting period;
- Unresolved delays or issues encountered during the reporting period;
- Efforts taken to mitigate any unresolved delays or issues noted in the daily report;
- A summary of Community Air Monitoring activities, including a figure detailing monitoring station locations;
- Representative photos from the reporting period; and,
- Additional supporting materials to provide representative summary of the reporting period activities.

Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (accident, spill), requests for changes to the RIWP or other sensitive or time critical information. However, such conditions must also be included in the daily reports. Emergency conditions and changes to the RIWP will be addressed directly to NYSDEC Project Manager via personal communication.

Daily Reports will include a description of daily activities keyed to an alpha-numeric map for the Site that identifies work areas. These reports will include a summary of CAMP results, odor and dust excursions and corrective actions, and all complaints received from the public.

Notes:

mg/kg = milligrams per kilogram

- = Not Analyzed

RL = Laboratory Reporting Limit

U = Compound Not Detected above RL

J = Estimated value.

[a] = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

[b] = Associated CCV outside of control limits high, sample was ND.

[c] = Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.

[d] = More than 40 % RPD for detected concentrations between the two GC columns.

[e] = Elevated detection limit due to dilution required for high interfering element.

[f] = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40% RPD for detected concentrations between the two GC columns.

= Concentration Exceeds NY-UUSCO (New York NYCRR Part 375 Unrestricted Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

= Concentration Exceeds NY-RRSCO (New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

= Concentration Exceeds NY-PoGWSCO (New York NYCRR Part 375 Protection of Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

Notes:

mg/kg = milligrams per kilogram

- = Not Analyzed

RL = Laboratory Reporting Limit

U = Compound Not Detected above RL

J = Estimated value.

[a] = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

[b] = Associated CCV outside of control limits high, sample was ND.

[c] = Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.

[d] = More than 40 % RPD for detected concentrations between the two GC columns.

[e] = Elevated detection limit due to dilution required for high interfering element.

[f] = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40% RPD for detected concentrations between the two GC columns.

= Concentration Exceeds NY-UUSCO (New York NYCRR Part 375 Unrestricted Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

= Concentration Exceeds NY-RRSCO (New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

= Concentration Exceeds NY-PoGWSCO (New York NYCRR Part 375 Protection of Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

Notes:
mg/kg = milligrams per kilogram
- = Not Analyzed
RL = Laboratory Reporting Limit
U = Compound Not Detected above RL
J = Estimated value.
[a] = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
[b] = Associated CCV outside of control limits high, sample was ND.
[c] = Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.
[d] = More than 40 % RPD for detected concentrations between the two GC columns.
[e] = Elevated detection limit due to dilution required for high interfering element.
[f] = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40% RPD for detected concentrations between the two GC columns.
= Concentration Exceeds NY-UUSCO (New York NYCRR Part 375 Unrestricted Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-RRSCO (New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-PoGWSCO (New York NYCRR Part 375 Protection of Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

Notes:
mg/kg = milligrams per kilogram
- = Not Analyzed
RL = Laboratory Reporting Limit
U = Compound Not Detected above RL
E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
I = The lower value for the two columns has been reported due to obvious interference.
J = Estimated value.
P = The RPD between the results for the two columns exceeds the method-specified criteria.
= Concentration Exceeds NY-UUSCO (New York NYCRR Part 375 Unrestricted Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-RRSCO (New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-PoGWSCO (New York NYCRR Part 375 Protection of Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

Notes:
mg/kg = milligrams per kilogram
- = Not Analyzed
RL = Laboratory Reporting Limit
U = Compound Not Detected above RL
E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
I = The lower value for the two columns has been reported due to obvious interference.
J = Estimated value.
P = The RPD between the results for the two columns exceeds the method-specified criteria.

= Concentration Exceeds NY-UUSCO (New York NYCRR Part 375 Unrestricted Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-RRSCO (New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-PoGWSCO (New York NYCRR Part 375 Protection of Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

Notes:

mg/kg = milligrams per kilogram
- = Not Analyzed
RL = Laboratory Reporting Limit
U = Compound Not Detected above RL
E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
I = The lower value for the two columns has been reported due to obvious interference.
J = Estimated value.
P = The RPD between the results for the two columns exceeds the method-specified criteria.

= Concentration Exceeds NY-UUSCO (New York NYCRR Part 375 Unrestricted Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-RRSCO (New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-PoGWSCO (New York NYCRR Part 375 Protection of Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

Notes:
mg/kg = milligrams per kilogram
- = Not Analyzed
RL = Laboratory Reporting Limit
U = Compound Not Detected above RL
E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
I = The lower value for the two columns has been reported due to obvious interference.
J = Estimated value.
P = The RPD between the results for the two columns exceeds the method-specified criteria.
= Concentration Exceeds NY-UUSCO (New York NYCRR Part 375 Unrestricted Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-RRSCO (New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-PoGWSCO (New York NYCRR Part 375 Protection of Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

Notes:
mg/kg = milligrams per kilogram
- = Not Analyzed
RL = Laboratory Reporting Limit
U = Compound Not Detected above RL
E = Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
I = The lower value for the two columns has been reported due to obvious interference.
J = Estimated value.
P = The RPD between the results for the two columns exceeds the method-specified criteria.
= Concentration Exceeds NY-UUSCO (New York NYCRR Part 375 Unrestricted Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-RRSCO (New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).
= Concentration Exceeds NY-PoGWSCO (New York NYCRR Part 375 Protection of Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, amended December 2025).

Appendix A:

Previous Environmental Reports

1.0 EXECUTIVE SUMMARY

Team Environmental Consultants, Inc. (TEAM), was authorized by Union State Bank to conduct a Phase I Environmental Site Assessment (ESA) for a commercial property located at 34 State Street in Ossining, New York. The objective of this effort was to identify significant environmental impairments and liability issues associated with the subject properties. The requested scope of work included the following tasks: 1) Review of previously conducted Phase I and II ESA reports; 2) Performance of site interviews and a walk-through property inspection; 3) Review of a federal and state environmental database report; and 4) Documentation of findings in a Phase I ESA Report.

Based on the commercial site setting, availability of a municipal water supply, review of available information, performance of site interviews, and findings of the property walk-through inspection, no significant and immediate environmental liability issues associated with the subject property were identified.

2.0 PROPERTY DESCRIPTION

2.1 Site Description

The subject property is located along the western side of State Street, approximately one-quarter mile west of U.S. Route 9 (South Highland Avenue), in the Village and Town of Ossining, Westchester County, New York (Figures 1 and 2). The site is bordered to the north by a funeral home and private residences, to the east by State Street, residential properties, commercial businesses, and Broad Avenue, to the south by James Street and private residences, and to the west by an undeveloped wooded property (proposed location of a 46-unit condominium complex) and a residential apartment house structure located along James Street. The site topography rises gradually to moderately upwards from State Street and then slopes downwards towards the west/southwest. Photographs obtained during performance of the site inspection are presented within Attachment A.

The irregularly shaped 2.90-acre (~126,000-ft^2) property is currently operated as Creative Design, Inc. (CDI), a specialty woodworking (inlaid wood pictures) manufacturing business. The property is improved with a one, two, and part three-story approximately 60,000-ft^2 building which was reportedly constructed in three stages. The original three-story structure (~10,000-ft^2) was built circa 1840 as a private residence (current administrative office area). In 1929, an approximate

29,000-ft^2 three-story addition was completed and operated as a community club. The third building addition (~20,000-ft^2 two-story office/manufacturing area) was constructed in 1968. No documentation detailing historic site development or the performance of building renovation efforts was available for TEAM review. Proposed site development plans call for the demolition of portions of the current building and construction of a 54-unit residential townhouse complex. No site development plans were available for review.

CDI woodworking manufacturing operations are conducted on the first floor level. Also located within the ground floor building sections are assorted warehouse areas and utility rooms. The upper two-stories contain product storage/shipping facilities and office space. Two one-story garage structures are found within the western portion of the site. Paved parking areas are located within the southern and western sections of the property.

The site is located within a Town of Ossining Zoning Class WD-2 (Waterfront Development) district. The property is provided with a municipal water supply and sanitary waste treatment service (Village of Ossining and Westchester County Sewer District, respectively). Electrical service and natural gas are supplied by Consolidated Edison Utilities (ConEd). No site or regulatory information concerning the current onsite presence of any underground petroleum storage tanks was available. Non-hazardous solid waste is removed for offsite disposal by a private hauler. Utility connections are located both aboveground and underground.

2.2 Property Ownership

Information obtained from the Town of Ossining Tax Assessor's Office indicates the subject parcel (Tax Map Section 3.12, Block 27, Lot 20) to be owned by Creative Designs International. The property was reportedly formerly owned by Hudson River Inlay. No previously conducted title searches or documentation detailing historic property ownership was available for TEAM review.

2.3 Previously Conducted Environmental Site Assessments

TEAM was provided with the following three environmental reports associated with the 34 State Street property.

- January 21, 1994 - Dames & Moore Phase I Environmental Assessment
- May 7, 2003 - Elite Environmental Services Phase I Environmental Assessment
- May 16, 2003 - Elite Environmental Services Phase II Investigative Report

Summarized below for each document are the various findings, conclusions, and recommendations TEAM determined to be of a significant nature. Copies of these reviewed reports (text portions only) are provided within Attachment B.

January 21, 1994 - Phase I Environmental Site Assessment

This report was prepared by Dames & Moore (D&M), of Pearl River, New York, on behalf of Creative Design, Inc. (CDI). The Phase I ESA scope of work included a site description, review of property history and previously conducted 1992 Subsurface Investigations, Inc., Phase I and II environmental reports, performance of a site walkthrough inspection, and review of Sanborn Fire Insurance Maps and a federal/state environmental database report. The following findings and conclusions were presented in the D&M report:

- An asbestos survey was noted to have been conducted by Asbestos Research & Environmental Associates, Inc. (AREA) on September 24, 1992. The D&M report states that, "Based on the findings of this survey, an asbestos removal effort was undertaken by AREA to remove friable asbestos at the site. AREA, a licensed NYS asbestos abatement company, has determined that areas of known friable asbestos have been remediated." The D&M building inspection noted the presence of two areas of suspected asbestos containing materials (ACM), specifically the exterior wall tiles (observed to be in good condition) and sheetrock wallboard (indicated to be deteriorated due to moisture intrusion). D&M recommended that these materials be "managed" during future renovations or demolition;

- A closed in-place 10,000-gallon capacity underground fuel oil storage tank (UST) is situated within the western section of the property. The D&M report indicated that, "Subsequent to the purchase of the property, CDI uncovered and emptied the tank and abandoned it by filling with sand. The area was then back filled and covered with concrete. A subsurface investigation of the UST and other areas of concern was undertaken by Subsurface Investigations Inc. (SII) in a previous Phase II Environmental Assessment prepared for CitiBank. During the investigation of the UST, two borings were advanced to obtain soil samples. These samples were screened for volatile organic chemicals (VOC's) on site and were analyzed for Total Petroleum Hydrocarbons (TPH) by a NYS licensed laboratory. SII stated that the results of this analysis indicated that TPH concentrations were present in the range from 30 ppm to 114 ppm. Subsequently, Dames & Moore was retained by CDI to register this UST with the NYSDEC and apply for formal closure of the tank;"

• In an attempt to locate additional USTs, D&M conducted a ground penetrating radar (GPR) survey in October of 1993. Based on the findings of this investigation, "...two USTs (one 1,000 gallon and one 3,000 gallon) which contained a fuel oil/water mix were identified. In December of 1993, CDI retained Elmendorf Environmental Inc. of Elmsford, New York to perform an in-place closure of these tanks. In addition, CDI retained Dames & Moore to register the tanks with the NYSDEC, conduct the necessary soil sampling for tank closure and apply for tank closure with the NYSDEC. Results of soil sample analyses collected beneath the centerline of these tanks did not indicate the presence of petroleum hydrocarbon constituents in excess of NYSDEC soil cleanup criteria. Both of these USTs are found within the western section of the main manufacturing building;

• A waste treatment lagoon which was utilized by Printex Corp., was reportedly located within the southeastern section of the property. To identify issues of potential environmental concern associated with former use of this lagoon, SII performed a subsurface sampling investigation within this area. D&M indicated that based on review of an SII December 1992 Phase II report that, "SII concluded that the treatment lagoon had not adversely impacted the environmental quality of the property." TEAM was unable to obtain a copy of the SII report;

• The subject property is noted to have been placed on the CERCLIS (Comprehensive Environmental Response, Compensation, and Liability System - Potential hazardous waste sites that U.S. EPA is investigating for an existing or threatened release of hazardous substances) list for potential inclusion on the NPL (National Priority List - National listing of abandoned or uncontrolled hazardous waste sites). A site screening investigation and preliminary assessment of the site were reportedly conducted. The D&M report stated that, "At this time, the regulatory agency data base search lists that no further action has been taken by Federal or State agencies regarding this site. However, based upon information provided by CDI personnel, this site was delisted in 1983 after NYSDEC and EPA investigations failed to identify any potential hazards; and

• During the D&M building inspection, floor drains were identified at various locations. CDI personnel indicated that these drains and all generated wastewater streams discharge to the municipal sewer system. A paint/lacquer spray booth (vented to the outside of the building) and several dust collection devices were also observed. CDI manufacturing operations utilize paint thinners, wood stains, sealants, and glue products. No indications of improper storage or product leakage/spillage were referenced in the D&M report.

May 7, 2003 - Phase I Environmental Site Assessment

This report was prepared by Elite Environmental Services, Inc. (EES), of Thornwood, New York, on behalf of proposed property purchaser, Daniel Beaton. The Phase I ESA scope of work included a site description, review of property history and historic Sanborn Fire Insurance Maps (1886-1971), performance of a property walkthrough inspection, and review of a federal/state environmental database report. The following findings and conclusions were presented in the EES report:

- During performance of the EES property inspection, no water supply wells, aboveground petroleum/chemical storage tanks, active underground petroleum storage tanks, septic systems, PCB-containing equipment, hazardous substance use, or suspected onsite wetland areas were identified. A visual asbestos survey noted the presence of suspected asbestos containing floor tiles within the "work areas in the site building." These tiles were reported to be in "good condition at the time of inspection." EES recommended performance of an asbestos survey prior to the performance of any renovation or demolition activities;

- The EES report stated that, "According to the environmental database, concrete storage lagoons for the treatment of process water were located on-site. During the inspection, storage lagoons were not located;" and

- Based on historic site use and the presence of three closed in-place underground petroleum storage tanks, EES recommended performance of a Phase II subsurface investigation. Identified "target areas" included: 1) location of underground storage tanks, 2) areas of concrete storage lagoons, and 3) garage area where automobile and truck repair work is performed.

May 16, 2003 - Phase II Environmental Site Assessment

Based on the findings of the Elite Environmental Services, Inc. (EES) Phase I ESA, property purchaser, Daniel Beaton authorized EES to perform a Phase II site investigation. The scope of work included the installation of nine soil borings within the western (vicinity of closed in-place 10,000-gallon UST and storage garages) section of the property utilizing a van mounted Geoprobe system.

Field activities were conducted on May 14, 2003. Collected soil samples were field screened utilizing a portable Mini Rae Photo Ionization Detector (PID) to provide a "direct reading of the

concentration of volatile organic vapors in the sample, reported in ppm" (parts per million). The EES report stated that, "Field screening results indicate no volatile organic vapor compounds were found in the soil samples collected during the soil boring program" No samples are indicated to have been collected for laboratory analysis.

3.0 SITE INSPECTION

On April 28, 2005, TEAM together with proposed property purchaser, Dan Beaton (34 State Street, LLC), conducted an inspection of accessible portions of the site building and surrounding property. The requested scope of work did not include performance of any field sampling activities (e.g., asbestos, soil, radon, or groundwater) or completion of a formal regulatory compliance audit, as it would relate to the use, handling, storage, permitting, or disposal of regulated materials and waste products.

3.1 Property Inspection

Inspection of accessible property surrounding the building (extremely difficult due to the property terrain and presence of parked vehicles, stored equipment, leaf litter, and vegetation) revealed no unusual odors or visual evidence of significant surface staining that could be indicative of leaking petroleum storage tanks, chemical spills, or industrial waste disposal. No PCB-labeled electrical equipment, aboveground petroleum storage tanks, suspected underground petroleum storage tank fill ports or vent pipes, water supply or groundwater monitoring wells, or industrial waste storage or disposal facilities within the exterior property confines were observed.

No surface water bodies or significant freshwater wetland habitat areas were observed within or proximate to the subject property. The Hudson River is situated approximately one-quarter mile to the west. The requested Phase I ESA scope of work did not include performance of formal wetland or flood plain delineation surveys.

During the April 28, 2005 site inspection, TEAM observed performance of a test pit investigation in the vicinity of the closed in-place 10,000-gallon UST by Elite Environmental Services, Inc. (EES). As part of this investigation, EES uncovered the top portion of the tank and excavated sand/gravel located within the UST. In addition, test pits were advanced on two sides of the tank (below the bottom of the UST). No petroleum odors or visual evidence of soil staining were noted by either TEAM or EES field personnel. At the completion of this effort, the tank and excavated test pits were subsequently backfilled to grade.

3.2 Building Inspection

Inspection of accessible interior building sections (extremely difficult due to the size of the structure and the presence of woodworking equipment and supplies) revealed no unusual odors or visual evidence of underground or aboveground petroleum/chemical storage tanks, PCB-labeled electrical equipment, significant chemical spillage/surface stains, or industrial waste storage facilities. According to CDI representatives no commercial vehicle servicing or maintenance operations are conducted onsite. Generally good housekeeping practices were observed throughout the facility.

No exposed suspected friable asbestos containing materials (e.g., pipe wrap, electrical or boiler insulation) were observed during performance of the facility walkthrough inspection. Due to the age of the building, asbestos containing materials (ACM) may be associated within the site structure. The requested scope of work did not include performance of a formal asbestos or lead-based paint sampling survey.

3.3 DTCS Phase II Environmental Site Assessment

Based on historic site use and proposed property development plans, TEAM recommended performance of a property-wide Phase II ESA site investigation. Property purchaser, Dan Beaton (34 State Street, LLC) subsequently retained DT Consulting Services (DTCS) to perform a subsurface investigation of the 34 State Street property. DTCS concentrated its investigation in the following areas:

- Known PBS locations found in the northern quadrant of the site;
- Reported location of waste treatment lagoon (utilized by Printex Corp.) situated within the southeastern corner of the property; and
- General equipment maintenance and storage area located within the western portion of the site.

As part of this May 10, 2005 site investigation, a track mounted Geoprobe drill rig installed soil borings at seven property locations to depths ranging from approximately eight to twelve feet below grade. A DTCS geologist performed soil screening and classification immediately following collection of subsurface soil samples. Samples were screened for volatile organic compounds

(VOCs) utilizing an HNu photoionization detector (PID). Three composite soil samples were also collected for laboratory analysis of volatile/semi-volatile organic compounds (VOC's/SVOC's) and priority pollutant metals. Groundwater was not encountered during performance of the Phase II field investigation. A May 31, 2005 DTCS Phase II ESA report (copy found in Attachment C) presented the following field observations and conclusions.

- "While performing this investigation, headspace screening yield the non-detect total petroleum hydrocarbons in parts-per-million within each soil profile analyzed. In addition, no visual or olfactory signs of subsurface contamination were encountered while field testing soils from each borehole location;

- Based upon field observations and testing, DTCS can conclude that noticeable signs of subsurface contamination were not detected while collecting samples from each borehole location. Although laboratory analysis revealed the presence of some targeted VOC's/SVOC's and priority metals, all were within New York State Department of Environmental Conservation (NYSDEC) Soil Quality Guidance Values (TAGM #4046, January 1994); and

- Currently, the need to perform additional investigative and/or remedial measures does not appear warranted based upon the findings of this Phase II ESA. Therefore, it is DTCS's opinion that no further action is required at this time within the area of study."

4.0 RECORDS REVIEW AND DOCUMENTATION

4.1 Federal and State Database Report

TEAM has obtained an Environmental FirstSearch Network (EFSN) Site Assessment Report which provides information concerning the target property and those sites located within an ASTM established radius and listed in any of the following Federal and State databases:

- National Priority List (NPL);
- Resource Conservation and Recovery Information System (RCRIS),
  Large Quantity Generators and TSD Facilities,
  Small Quantity Generators and Transporters;
- State Spills Database (SPILLS);

- Comprehensive Environmental Response, Compensation, and Liability System (CERCLIS);
- Emergency Response Notification System (ERNS);
- Leaking Storage Tanks (LUST);
- Active Solid Waste Facility Register (SWL); and
- Registered Bulk Storage Tanks (UST/AST).

The EFSN Database Report presented in Attachment D, identifies no NPL, CERCLIS, or SWL sites within the ASTM established survey radius. Two LUST, fourteen SPILLS, one NFRAP, and one STATE site are located within a one-eighth to one-quarter mile distance. The subject 34 State Street property (Printex Corp./Hudson River Inlay) is identified in the NFRAP, RCRIS, and STATE Databases. The NFRAP listing notes performance of a Preliminary Assessment and Site Inspection on November 1, 1980. The STATE Database site description states that, "Westchester County Department of Health investigation has determined that this site has not used lagoons to dispose of hazardous waste, but rather concrete storage lagoons for treatment of process water...No known disposal of hazardous wastes at this time." The RCRIS Database notes the Hudson River Inlay facility to be a small quantity hazardous waste generator. No violations are noted for this business.

The nearest SPILLS site (private residence) is situated approximately 200-feet to the northeast at 6 Broad Avenue. The Spill Date for this property is listed as April 24, 1997 (5-gallon No. 2 fuel oil tank overfill). The remedial status is indicated to be "closed." The closest LUST site Descon Woodworking) is found approximately 600-feet to the northeast at 100 Spring Street. The Spill Date is identified as October 11, 2002 (gasoline tank failure). The remedial status is noted to be "closed." The proximity of EFSN identified sites would not appear to impact or pose significant environmental liabilities with respect to current property use or water quality issues.

4.2 Regulatory Review - NYSDEC/Westchester County Health Department

The requested Phase I ESA Update scope of work did not included submittal of Freedom of Information Legislation (FOIL) requests to Region 3 of the New York State Department of Environmental Conservation (NYSDEC) or Westchester County Health Department Office of Environmental Health Risk Control, which administers the NYSDEC Petroleum Bulk Storage Program in Westchester County.

5.0 CONCLUSIONS

Based on the commercial site setting, availability of a municipal water supply, review of available information, performance of site interviews, and findings of the property walk-through inspection, no significant and immediate environmental liability issues associated with the subject property were identified. No additional environmental site investigations are recommended at this time.

6.0 LIMITATIONS

The conclusions stated are based on the limits of the investigation described herein. TEAM can offer no assurances and assumes no responsibility for site conditions or activities which were outside the scope of the inquiry requested. In performing its investigations, TEAM has used reasonable care and has performed its work in keeping with industry standards and standard engineering practice, as appropriate. It should be understood that TEAM has relied on the accuracy of documents, oral information, and other material and information provided by sources documented in this report. There can be no assurance, and TEAM offers no assurance, that site conditions do not exist or could not exist in the future which were undetected and which could lead to liability in connection with the site. Similarly, past and present activities on the site indicating potential environmental concerns may not have been discovered by TEAM's inquiries.

The Phase I Environmental Site Assessment Update was prepared for Union State Bank in accordance with all regulatory and good management standards, and to the best of our knowledge, is complete and accurate.

RE: PHASE II ENVIRONMENTAL SITE ASSESSMENT
34 State Street
Ossining, Westchester County, New York

Dear Mr. MacIntosh:

Pursuant to your request for a Phase II Environmental Site Assessment (ESA) to be performed at the above referenced facility, DT Consulting Services (DTCS) is pleased to submit the following report for your review.

If you should have any questions regarding the enclosed, please feel free to contact me at (845) 658-3484. DTCS thanks you for the opportunity to work with you on this project.

Sincerely,
DT CONSULTING SERVICES

Deborah J. Thompson
Senior Geologist / Project Manager

ANALYTICAL PACKAGE ..... A

1.0 INTRODUCTION/ SITE INFORMATION

DT Consulting Services (DTCS) has been contracted by Union State Bank to perform a Phase II Environmental Site Assessment (ESA) or Subsurface Investigation on the property located at 34 State Street, Ossining, Westchester County, New York. A site location map and a site (base) plan (**Figures 1 and 2**, respectively) are included for your reference. At present, said property is being utilized as a specialty woodworking shop/warehouse and houses associated office facilities. At the time of this report, businesses including Creative Designs, Inc. and Original World Products share the site to perform business activities.

The ±3 acre property is improved with a ±60,000 square foot structure historically constructed in three separate phases. The original building was erected in 1840 as a residential unit. In 1929 two additions were built (approximately 7,000 and 22,000 square feet respectively) onto the structure, then utilized as a community center. Afterward, from the mid 1940's until 1981 the property was employed by Printex Corporation of America as a cloth printing and textile design facility. A final addition, which encompasses the site structure as seen today, was constructed in 1968.

At present, potable water and wastewater disposal are provided by the City of Ossining Water and Sewer Districts, respectively. A majority of adjacent land-use includes various residential complexes (both single and multi-family) in each cardinal direction.

The purpose of this Phase II Environmental Site Assessment is to determine if historical – present day operations have impacted subsurface materials on the property located at 34 State Street, Ossining, New York. Phase I ESA (due diligence) activities as performed by Team Environmental Consultants, Inc. (TEAM) and others (Dames & Moore, 1994) have identified historic industrial site use including petroleum bulk storage (PBS) operations on the subject property. In addition, the site had been placed on the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list for potential inclusion on the National Priority List in April of 1980. Upon completion of investigative activities, the site was de-listed in 1983 after potential environmental hazardous were not identified. Thus, based upon knowledge of site activities and the potential future development of the subject property for residential use, a Phase II ESA was deemed appropriate for the site to characterize and quantify any contaminants present within subsurface materials.

2.0 SUBSURFACE INVESTIGATION

Based upon operations throughout the active history of the subject property, DTCS concentrated its investigative efforts surrounding:

1. The known PBS locations located in the northern quadrant of the property.

2. The waste treatment lagoon historically documented in the southeast corner of the property, as utilized by Printex Corporation of America.

3. The general equipment maintenance and storage area along the western portion of the site.

The Phase II ESA was concentrated in these areas due to their potential for environmental liability issues. To provide background conditions of the subsurface, a select up gradient location was also chosen as a sample collection point. Thus, DTCS focused field activities to provide the following data:

- Collect and classify subsurface materials encountered surrounding the aforementioned area(s) in question.

- Provide quantitative data on targeted volatile/semi-volatile organic compounds (VOC/SVOC) and priority pollutant metals (if detected) within subsurface materials on-site.

- Offer recommendations as necessary, to address subsurface contamination if encountered during the course of this investigation.

The location of each borehole (SB-1 – SB-7) may be reviewed in **Figure 2**, attached.

2.1 *Soil Sampling Procedures*

DTCS mobilized to the site on May 10, 2005 to perform the subsurface investigation. Employing a Geoprobe track mounted 4x4 drill rig, soil samples were collected at each borehole location continuously from grade to an approximate depth of eight (8) - twelve (12) feet below grade surface (bgs) or until resistance was encountered. The samples were obtained by advancing a twenty-four (24) inch long, two (2) inch outer diameter, split spoon sampler into undisturbed soils. To prevent cross-contamination, all sampling equipment was

decontaminated between each soil boring location. A total of seven (7) soil borings were performed during this investigation.

An on-site DTCS Geologist performed screening and classification immediately following collection of subsurface materials. The screening was conducted using a HNu Photoionization Detector or PID. As most petroleum products contain volatile organic compounds, PID screening can indicate the presence of volatile organics in a soil sample.

2.2 *Soil Characterization*

As detected during this investigation, the lithology of overburden materials encountered at the facility can be characterized as light brown sandy loam (fill) with traces of gravel - approximately 0-4 feet bgs, underlain by fine-medium sand with clay and schist fragments. Based upon localized outcrops as observed on-site, resistance on account of detection of the bedrock surface was encountered between eight (8) and nine (9) feet below grade within soil borings SB-1 – SB-3 and SB-5 & SB-6. Overburden materials as encountered adjacent to the site structure were found to thin, when bedrock was detected between three (3) and four (4) feet below grade surface. Groundwater was not encountered during the Phase II ESA performed on site.

Upon removal from the subsurface, headspace screening was subsequently performed on each soil sample interval (i.e. 0-4'/4-8'). This screening was performed by placing the selected soil sample in a Ziploc® style freezer bag, sealing the bag, and after a short pause, yielding stabilized readings with a PID calibrated to 100 parts-per-million (ppm) isobutylene standard. While performing this investigation, headspace screening yielded the non-detect total petroleum hydrocarbons in parts-per-million within each soil profile analyzed. In addition, no visual or olfactory signs of subsurface contamination were encountered while field testing soils from each borehole location.

2.3 *Laboratory Analysis*

During investigative procedures, soil samples were collected from the bottom two (2) feet of each borehole, pending detection of the bedrock surface. Samples submitted for laboratory analysis were composited as follows:

Sample No. 001 = SB-1 – SB-3
Sample No. 002 = SB-4 & SB-5
Sample No. 003 = SB-6 & SB-7

Soils collected during the investigation were analyzed for volatile and semi-volatile organic compounds and priority pollutant metals via EPA Test Methods 8260w/MTBE, 8270 B/N and 7471 respectively. The complete laboratory package may be found in **Attachment A** for your review.

3.0 FINDINGS/CONCLUSIONS

The property located at 34 State Street, Ossining, Westchester County, New York has historically been utilized to operate commercial/industrial businesses. Upon review of documented environmental issues previously identified in available due diligence reports, a Phase II ESA was deemed necessary for the site prior to its alternate development as residential property.

Based upon field observations and testing, DTCS can conclude that noticeable signs of subsurface contamination were not detected while collecting samples from each borehole location. Although laboratory analysis revealed the presence of some targeted VOC's/SVOC's and priority metals, all were within New York State Department of Environmental Conservation (NYSDEC) Soil Quality Guidance Values (TAGMS #4046, January 1994) as follows:

VOLATILES/SEMI-VOLATILES (8260/8270 B/N)

Parameter	*Guidance Value (ug/kg)*	*Soil Boring #1 - #3*	*Soil Boring #4 & #5*	*Soil Boring #6 & #7*
Naphthalene	13,000	15	U	U
n-Butyl benzene	10,000	6	U	U
Benzo[a]anthracene	224 or MDL	61	U	U
Fluoranthene	50,000	90	U	U
Pyrene	50,000	78	U	U

PRIORITY POLLUTANT METALS (7471)

Parameter	Guidance Value (mg/kg)	Eastern USA Soil Background (mg/kg)	Soil Boring #1 - #3	Soil Boring #4 & #5	Soil Boring #6 & #7
Antimony	*SB*	N/A	5.85	8.55	5.54
Arsenic	*7.5 or SB*	3 – 12	5.84	4.79	8.44
Beryllium	*0.16 or SB*	0 – 1.75	U	U	U
Cadmium	*1 or SB*	0.1 – 1	0.53	0.60	0.51
Chromium	*10 or SB*	1.5 – 40	15.5	20.8	21.7
Copper	*25 or SB*	1 – 50	22.3	27.1	18.7
Lead	*SB*	*	18.6	17.2	32.3
Nickel	*13 or SB*	0.5 – 25	11.6	16.7	14.5
Selenium	*2.0 or SB*	0.1 – 3.9	1.83	2.81	2.39
Silver	*SB*	N/A	U	U	U
Thallium	*SB*	N/A	U	U	U
Zinc	*20 or SB*	9 – 50	44.5	52.2	45.1
Mercury	*0.1*	0.001 – 0.2	U	U	U

NOTES:

- The presented guidance values were adopted by NYSDEC in Appendix A of TAGM #4046, Soil Cleanup Objectives.
- Guidance and sample concentrations are reported in ug/kg or parts-per-billion for VOC/SVOC parameters and mg/kg or parts-per-million on the Priority Metals.
- U = Not detected.
- SB indicates average Eastern USA background soil levels.
- *Background levels for lead vary widely. Average levels in undeveloped, rural areas may range from 4-61 ppm. Average background levels in metropolitan or suburban areas or near highways are much higher and typically range from 200-500 ppm.

Currently, the need to perform additional investigative and/or remedial measures does not appear warranted based upon the findings of this Phase II ESA. Therefore, it is DTCS's opinion that no further action is required at this time within the area of study.

4.0 LIMITATIONS

DTCS has prepared this site assessment using reasonable efforts in each phase of its work to determine the extent of subsurface petroleum contamination (if any) within the locations of potential environmental concern. This report is not definitive, and should not be assumed to be a complete or specific definition of all conditions above or below grade. The conclusions/recommendations set forth herein are applicable only to the facts and conditions described at the time of this report.

Ossining, New York
EBI Project No. 1117000093

Dear Mr. Stefan Malter:

Attached please find our *Phase I Environmental Site Assessment* (the report) for the above-mentioned asset (the Subject Property). During the survey and research, our surveyor met with agents representing the Subject Property, or agents of the owner, and reviewed the Subject Property and its history. The report was completed according to the terms and conditions authorized by you. This report has been completed in general conformance with the ASTM Standard E 1527-13.

The purpose of this report is to assist *Ossining Land Holdings LLC* in its underwriting of a proposed mortgage loan on the Subject Property described herein.

This report is addressed to *Ossining Land Holdings LLC* and their respective successors and assigns.

Reliance on the report and the information contained herein shall mean (i) the report may be relied upon by *Ossining Land Holdings LLC*, in determining whether to make a loan evidenced by a note secured by the Subject Property ("the Mortgage Loan"); (ii) the report may be relied upon by any loan purchaser in determining whether to purchase the Mortgage Loan from *Ossining Land Holdings LLC*, or an interest in the Mortgage Loan or securities backed or secured by the Mortgage Loan, and any rating agency rating securities representing an interest in the Mortgage Loan or backed or secured by the Mortgage Loan; (iii) the report may be referred to in and included, in whole or in part, with materials offering for sale the Mortgage Loan or an interest in the Mortgage Loan or securities backed or secured by the Mortgage Loan; and (iv) the report speaks only as of its date in the absence of a specific written update of the report signed and delivered by EBI Consulting.

There are no intended or unintended third party beneficiaries to this report, except as expressly stated herein.

EBI is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the report or on the closing of any business transaction.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you very much for the opportunity to provide environmental consulting services to *Ossining Land Holdings LLC*. Should you have any questions or require additional information, please do not hesitate to contact the undersigned.

Respectfully submitted,
EBI CONSULTING

EXECUTIVE SUMMARY

At the request of Ossining Land Holdings LLC, EBI has performed a Phase I Environmental Site Assessment (ESA) of the property located at 34 State Street, 17-25 James Street, & 27 Hunter Street - (Sec. 97.07;Lots 17, 18, 68) in Ossining, New York, herein referred to as the Subject Property. The main objective of this ESA was to identify *recognized environmental conditions* in connection with the Subject Property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment, 2) under conditions indicative of a release to the environment, or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13.

The Subject Property includes three contiguous irregular-shaped parcels cumulatively totaling approximately 5.9 acres. The Subject Property is currently improved with two, three-story, former manufacturing buildings. There is a basement beneath the northern building and a crawl space beneath the southern building. The original part of the northern building was constructed in the 1830s and expanded in the 1920s. The southern building was constructed in the 1950s. Three small single-story outbuildings are located west of the northern building, and a single-car garage building is located to southwest.

At the time of assessment, the buildings at the Subject Property were vacant. The western part of the site, west of the developed portion, is undeveloped wooded land. There are currently no manufacturing or industrial operations conducted at the Subject Property.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. EBI's Findings and Opinions are presented in Section 8.0, and recommendations for further action or investigation are presented in Section 9.0.

ASSESSMENT SUMMARY TABLE
34 STATE STREET, 17-25 JAMES STREET, & 27 HUNTER STREET - (SEC. 97.07;LOTS 17, 18, 68)
OSSINING, NEW YORK

ASSESSMENT COMPONENT	SECTION	NO FURTHER ACTION	REC	HREC	CREC	OTHER	RECOMMENDED ACTION	ESTIMATED COST

Vapor Migration	**4.1.4**	☒	☐	☐	☐	☐	No Further Action	

(1) All available documentation regarding the USTs removed from the Property or closed in-place at the Property should be provided to EBI for review to further determine if environmental concerns remain. If this additional information is inconclusive or if no additional information is available, then a review of the State files for these tanks is recommended to gather additional information. Cost to review any additional information provided and to review any regulatory files will be $100 per hour, not to exceed $1,000 without prior client approval. If information from the State is inconclusive or if no additional pertinent information is available, then a Phase II subsurface investigation is recommended to determine if these tanks have adversely impacted the environmental integrity of the Property. The scope of work for a subsurface investigation could be influenced by the findings of the document review, therefore a cost for subsurface investigation activities is not available at this time.

(2) It is recommended that an asbestos inspection be performed in accordance with all applicable federal, state, and local regulatory requirements prior to renovation, demolition, or other activities that could cause a material disturbance. Any removal or disturbance of ACM or suspect ACM should be performed by properly trained personnel and in compliance with federal, state, and local regulations.

1.0 INTRODUCTION

This report documents the findings, opinions, and conclusions of a Phase I Environmental Site Assessment (ESA) of the property located at 34 State Street, 17-25 James Street, & 27 Hunter Street - (Sec. 97.07;Lots 17, 18, 68) in Ossining, New York.

1.1 PURPOSE

The purpose of this ESA was to identify *recognized environmental conditions* and certain environmental conditions outside the scope of ASTM Practice E 1527-13 in connection with the property at the time of the property reconnaissance.

1.2 SCOPE-OF-SERVICES

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review.

The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, and radon.

1.3 ASSUMPTIONS, LIMITATIONS AND EXCEPTIONS

This Phase I Environmental Site Assessment (the report) has been prepared for the use of Ossining Land Holdings LLC, in accordance with our Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services approved and signed by Ossining Land Holdings LLC (the Agreement), and with the limitations described below, all of which are integral parts of this report. A copy of the signed Standard Conditions For Engagement and Authorization Letter and Agreement for Environmental Services is maintained at the EBI Consulting office in Burlington, Massachusetts. To the

extent any provisions of this report conflict with the terms of the Agreement, the Agreement will control.

EBI has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of *ASTM Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. This report was prepared with no exceptions or deletions from ASTM Standard E 1527-13.

This Phase I Environmental Site Assessment has been prepared to assess a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is intended to permit Ossining Land Holdings LLC to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice" as defined in 42 U.S.C. § 9601(35)(B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify *recognized environmental conditions*. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property (1) due to a release to the environment, (2) under conditions that indicate an existing release or a past release, or (3) under conditions that pose a material threat of a future release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term does not include *de minimis conditions* that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Subject Property. Findings, conclusions, and recommendations included in the report are based on our visual observations in the field, the standard environmental record sources and municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. EBI relies completely on the information, whether written, graphic, or verbal, provided by the Subject Property contact or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct unless the information is known to be inaccurate or if it is obvious, based on other information obtained as part of the assessment, that the information is not accurate. Although there may have been some degree of overlap in the information provided by these various sources, EBI did not attempt to verify independently the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The information reported, as well as EBI's findings, conclusions, and recommendations are based upon sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject

Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with authorities having jurisdiction over the Subject Property. Ossining Land Holdings LLC agrees that EBI has no obligation to independently verify the accuracy or completeness of the information reviewed or received during the course of these environmental services.

EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under un-surveyed and/or inaccessible portions of the Subject Property. Unsurveyed and inaccessible portions of the Subject Property are described below. In addition, EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under the Subject Property where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

EBI Services and opinions are based on the scientific or technical tests or procedures specifically set forth in the scope of the Services described in this report. The ASTM Standard E 1527-13 does not encompass analytical testing to evaluate asbestos containing materials, radon, lead-based paint, drinking water quality, indoor air quality, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement are not guaranteed to be a representation of actual conditions on the Subject Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, EBI used that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality at the same time and under similar circumstances. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The report speaks only as of its date, in the absence of a specific written update of the report, signed and delivered by EBI. Additional information that becomes available after our survey and draft submission concerning the Subject Property should be provided to EBI so that our conclusions may be revised and modified if necessary, at additional cost.

Client and EBI agree that to the fullest extent permitted by law, EBI shall not be liable to Client for any special, indirect, consequential, punitive, exemplary, incidental or indirect damages or losses whatsoever, whether caused by EBI's negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause or causes whatsoever.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions.

1.4 SPECIAL TERMS AND CONDITIONS

This Phase I Environmental Site Assessment (the report) has been prepared to assist Ossining Land Holdings LLC in its underwriting of a proposed mortgage loan on the Subject Property. This report can be relied upon by only the parties stated in the transmittal letter at the front of this report. In the event that EBI provides a purchaser written permission to use this report, EBI's liability to such purchaser is limited to the cost of the report. Amendments to EBI's limitations as stated herein that may occur after issuance of the report are considered to be included in this report. Payment for the report is made by, and EBI's contract and report extends to Ossining Land Holdings LLC only, in accordance with our Standard Conditions For Engagement and, Authorization Letter and Agreement for Environmental Services.

1.5 DATA GAPS

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report. It should be noted that at the time this report was issued EBI had not received responses to requests for information from the Village of Ossining Building Department and Fire Department, and the Westchester County Department of Health. However, based on the historical information obtained through other sources, this historical data gap is not considered to have significantly impacted the ability to identify recognized environmental conditions and does not alter the conclusions of this report.

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 OWNERSHIP AND LOCATION

According to the Westchester County Assessor's Office, the Subject Property is currently owned by Ossining Land LLC and Hunter James Associates LLC.

The Subject Property is located at 34 State Street, 17-25 James Street, & 27 Hunter Street - (Sec. 97.07;Lots 17, 18, 68) in Ossining, Westchester County, New York. The Subject Property includes three contiguous irregular-shaped parcels, identified by the Westchester County Assessor's Office as Tax ID 97.07-2-17, -18 and -68, cumulatively totaling approximately 5.9 acres. The Subject Property is located in the northwest quadrant of the intersection of State Street and James Street. Figure 1 - Location Map depicts the location of the Subject Property on a street map of Ossining, New York. Figure 2 - Locus Map depicts the location of the Subject Property on the Ossining, New York United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle. Figure 3 - Site Plan depicts the configuration of the Subject Property and adjoining properties.

2.2 SUBJECT PROPERTY IMPROVEMENTS

The Subject Property is currently improved with two, three-story, former manufacturing buildings. There is a basement beneath the northern building and a crawl space beneath the southern building. The original part of the northern building was constructed in the 1830s and expanded in the 1920s. The southern building was constructed in the 1950s. Three small single-story outbuildings are located west of the northern building, and a single-car garage building is located to southwest.

The existing buildings are located on the northeastern and eastern portion of the property. An asphalt-paved surface parking area is located to south. The western portion of the Subject Property is undeveloped land. Land and building areas are as follows:

SUBJECT PROPERTY IMPROVEMENTS				
Address	**Floors**	**Basement**	**DOC**	**Lot Size (Acres)**
North building	3	Yes	1830-1920s	5.9
South building	3	No (crawl space)	1950s	Inclusive

SF: Gross Square Feet (estimated)
DOC: Date of Construction

2.3 CURRENT USE OF THE SUBJECT PROPERTY

At the time of assessment, the buildings at the Subject Property were unoccupied. The western part of the site, west of the developed portion, is undeveloped wooded land. There are currently no manufacturing or industrial operations conducted at the Subject Property.

Please refer to Section 5.2 for discussion regarding hazardous substances and petroleum products at the Subject Property.

2.4 MUNICIPAL SERVICES & UTILITIES

The Subject Property is serviced by the following municipal services and utilities:

MUNICIPAL SERVICES AND UTILITIES	
Utility	**Provider/Source**
Potable Water Supply	Town of Ossining
Sewage Disposal System	Town of Ossining
Electrical Service	Consolidated Edison
Natural Gas Service	Not applicable
Oil Service	Not applicable
Heating/Cooling Systems	None observed
Emergency Power	Not applicable

2.5 ADJOINING PROPERTIES

Property use in the vicinity of the Subject Property is primarily characterized by residential and retail/commercial development, as well as undeveloped, wooded land.

ADJOINING PROPERTIES	
North	The eastern part of the Subject Property is bound to the north by the Leech & Thomas Funeral Home (32 State Street) while the western part of the Subject Property is bound to the north by undeveloped land.
South	The central and eastern part of the Subject Property is bound to the south by James Street, beyond which are single-family homes. The western part of the Subject Property is bound to the south by an apartment complex, Oxford House Apartments (15 and 16 James Street) and by single-family homes that front on Hunter Street to west.
East	The Subject Property is bound to the east by State Street, beyond which are single-family homes, apartments and a convenience store (Nunez Mini Mart, (9 Broad Avenue).
West	The Subject Property is bound to the west by Hunter Street, with single-family homes beyond. One single-family home is present on the east side of Hunter Street but is not a part of the site.

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties.

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by Ossining Land Holdings LLC with regard to this Phase I Environmental Site Assessment. Additionally, a User Questionnaire was forwarded to the designated Client contact. The User Questionnaire has been completed and returned to our offices. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The User Questionnaire and any additional documentation referenced below is presented in Appendix C.

3.1 TITLE RECORDS

Title record information associated with the Subject Property has not been provided to EBI by Ossining Land Holdings LLC. A detailed discussion regarding review of information obtained from other sources is presented in Section 4.3.5 of this report.

3.2 ENVIRONMENTAL LIENS AND ACTIVITY AND USE LIMITATIONS

Ossining Land Holdings LLC provided no information regarding environmental liens or activity and use limitations in connection with the Subject Property. A discussion regarding environmental liens is presented in Section 4.3.7 of this report. A detailed discussion regarding activity and use limitations is presented in Sections 4.1.1 and 4.1.2 of this report.

3.3 SPECIALIZED KNOWLEDGE

Ossining Land Holdings LLC provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. EBI was not provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Subject Property, except as presented in Section 4.3.8 of this report.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Ossining Land Holdings LLC provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Ossining Land Holdings LLC provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

3.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

Ossining Land Holdings LLC provided contact information for the Subject Property owner, manager and/or occupants.

3.7 REASON FOR PERFORMING PHASE I ESA

Ossining Land Holdings LLC retained EBI to complete this Phase I Environmental Site Assessment in connection with a real estate transaction.

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORDS

A review of standard environmental databases maintained by Federal, state, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM Standard E 1527-13, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded "orphan" properties within the same zip code. The database report is presented in Appendix E.

The database report identified three "orphan" sites. Orphan sites are those sites that could not be accurately mapped or geocoded due to inadequate location information. EBI attempted to locate these sites via vehicular reconnaissance and interviews with personnel familiar with the area. Based on this research, EBI did not identify listed orphan sites within the approximate minimum search distances that may be considered likely to have impacted conditions at the Subject Property.

It should be noted that plotted locations of listed sites are not always accurate. With regard to listings that are determined or suspected to be inaccurate, based on information from other sources such as direct observation or consultation with individuals familiar with the property, EBI uses the best available data when evaluating the location of listed sites discussed below.

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	**Approximate Minimum Search Distance**	**Subject Property Listed**	**Off-site Listings Within Search Distance**
Federal NPL Sites	1.0 mile	No	**1**
Federal Delisted NPL Sites	0.5 mile	No	0
Federal SEMS Sites	0.5 mile	No	**1**
Federal SEMS-ARCHIVE Sites	0.5 mile	**Yes**	**1**
Federal RCRA CORRACTS Sites	1.0 mile	No	0
Federal RCRA non-CORRACTS TSD Sites	0.5 mile	No	0
Federal RCRA Generators Sites	Property & Adjoining	**Yes**	0
Federal Engineering / Institutional Control Sites	0.5 mile	No	**1**
Federal ERNS Sites	Property	No	NA
Federal FINDS Sites	Property	**Yes**	NA
State and Tribal equivalent NPL / CERCLIS Sites	1.0 / 0.5 mile	**Yes**	0
State and Tribal Spills Sites	Property	No	NA
State and Tribal Landfill or Solid Waste Disposal Sites	0.5 mile	No	**2**
State and Tribal Leaking Storage Tank Sites	0.5 mile	No	**70**
State and Tribal Registered Storage Tank Sites	Property & Adjoining	**Yes**	**1**
State and Tribal Engineering / Institutional Control Sites	0.5 mile	No	**1**
State and Tribal Voluntary Cleanup Sites	0.5 mile	No	**2**
State and Tribal Brownfield Sites	0.5 mile	No	**1**

4.1.1 Federal Agency Database Records

National Priority List (NPL)

The NPL database, also known as the Superfund List, is a subset of CERCLIS and identifies sites that are ranked as high priority for remedial action under the Federal Superfund Act. The Subject Property was not identified on the NPL database. However, one site located within 1.0 mile of the Subject Property was identified on the NPL database. Information regarding the listed site is presented in the following table:

NPL			
Site	**Distance / Direction / Gradient***	**EPA ID No.**	**Regulatory Status**
Hudson River PCBs No Street Applicable Hudson River, New York	700 feet / West / Downgradient	NYD980763841	Discovery: 07/01/1983 Proposed: 09/08/1983 Status: Final 09/21/1984 Contaminants: PCBs Media Impacted: Surface water, sediments

* Presumed hydrogeologic gradient based upon regional topography

The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River, which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River, which is the length of river between Federal Dam at Troy and the Battery. EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fennimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie.

The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYDEC) issued a ROD in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non- cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas.

Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring and erosion and other mechanisms have mobilized PCB contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Based upon the nature of the contamination, the ongoing remediation activities and distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified NPL facility represent an environmental concern to the Subject Property.

Delisted National Priority List (NPL)

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the Delisted NPL database.

Superfund Enterprise Management System (SEMS)

SEMS tracks federal hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of the USEPA's Superfund Program. The list was formerly known as CERCLIS and was renamed at the end of 2015. The list contains data regarding potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). SEMS also contains sites that are either proposed to or on the National Priority List (NPL), as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Subject Property was not identified on the SEMS database. However, one site located within 0.5 mile of the Subject Property was identified on the SEMS database. Information regarding the listed site is presented in the following table:

SEMS			
Site	**Distance / Direction / Gradient***	**EPA ID No.**	**Regulatory Status**
Hudson River PCBs No Street Applicable Hudson River, New York	700 feet / West / Downgradient	NYD980763841	Discovery: 07/01/1983 Proposed: 09/08/1983 NPL Status: Final NPL Listing 09/21/1984 Contaminants: PCBs Media Impacted: Surface water, sediments

* Presumed hydrogeologic gradient based upon regional topography

The Hudson River PCBs Site was discussed previously as an NPL site.

SEMS – ARCHIVE

SEMS-ARCHIVE tracks sites that have been removed from the SEMS list. This list was formerly known as the CERCLIS- NFRAP list and was renamed SEMS-Archive at the end of 2015. SEMS-ARCHIVE sites may be sites where, following an initial investigation, no contamination was found, contamination was removed without the need for the site to be placed on the NPL, or the contamination was not considered sufficient to warrant Federal Superfund action or NPL consideration. The Subject Property and one site located within 0.5 mile of the Subject Property were identified on the SEMS-ARCHIVE database. Information regarding the listed sites is presented in the following table:

SEMS-ARCHIVE			
Site	**Distance / Direction / Gradient***	**EPA ID No.**	**Regulatory Status**
Printex Corp 34 State St Ossining, New York	Subject Property	NYD013008446	Discovery: 04/01/1980 Preliminary Assessment: 11/01/1980 Status: SEMS-ARCHIVE
Ossining Historical Society 36 South Highland Ave Ossining, New York	0.26 mile / East-Northeast / Crossgradient	NYD987001450	Discovery: 05/05/1992 Preliminary Assessment: 12/26/1992 Status: SEMS-ARCHIVE

* Presumed hydrogeologic gradient based upon regional topography

According to our review of historical records Printex Corp was a tenant at the Subject Property from the 1940s through the 1990s and was a silk screening operation. Based upon the current regulatory status, it was determined that this facility didn't qualify for the NPL.

Based upon the distance and presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified SEMS-ARCHIVE facility represent an environmental concern to the Subject Property.

Resource Conservation and Recovery Act (RCRA) – Corrective Action Tracking System (CORRACTS)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the RCRA CORRACTS database.

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) Facilities

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) facilities are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the RCRA non-CORRACTS TSD database.

RCRA Hazardous Waste Generators

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQG). A RCRA-LQG is defined as a facility that generates over 1,000 kilograms (Kg) of hazardous waste, or over 1 Kg of acutely hazardous waste per month. A RCRA-SQG is defined as a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month. A RCRA-CESQG is defined as a facility that generates less than 100 Kg of hazardous waste, or less than 1 Kg of acutely hazardous waste per month. The Subject Property was identified on the RCRA Generator database. Information regarding the listing is presented in the following table:

RCRA GENERATORS			
Site	**Distance / Direction / Gradient***	**EPA ID No.**	**Regulatory Status**
Hudson Steppe 34 State St Ossining, New York	Subject Property	NYR000119529	RCRA SQG as of 07/27/2016 No violations found

* Presumed hydrogeologic gradient based upon regional topography

The Subject Property (Hudson Steppe) is listed as a RCRA Small Quantity generator. Based upon information presented in the environmental database report, Hudson Steppe generated hazardous waste (lead), presumably during abatement of lead-based paint that was reportedly performed at the existing buildings in 2016. No violations were reported for Hudson Steppe. The regulatory database shows that a former tenant of the Subject Property, Hudson River Inlay, was listed as a RCRA Small Quantity Generator from 1979 through 2006 and generated ignitable waste. No violations are listed. Another former tenant, Con Edison, is listed as a RCRA Non-Generator as of 2008. No violations are listed. Based upon the absence of reported violations and the site conditions observed at the time of EBI's reconnaissance, the RCRA-SQG database listings for Hudson Steppe and Hudson River Inlay are not considered to represent an existing release, past release, or material threat of release of hazardous substances or petroleum products on the Subject Property.

Federal Engineering Control / Institutional Control Registries

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property was not identified on Federal Engineering Control or Institutional Control Registries. However, two sites located within 0.5 mile of the Subject Property were identified on Federal Engineering Control or Institutional Control Registries. Information regarding the listed sites is presented in the following table:

FEDERAL ENGINEERING CONTROL AND INSTITUTIONAL CONTROL REGISTRIES			
Site	**Distance / Direction / Gradient***	**EPA ID No.**	**Regulatory Status**
Hudson River PCBs No Street Applicable Hudson River, New York	700 feet / West / Downgradient	NYD980763841	Agency: USEPA Engineering Control: Sediment/SW dewatering, excavation, disposal, & treatment Institutional Control: NA Status: Final 09/21/1984 Contaminants: PCBs Media Impacted: Surface water, sediments

* Presumed hydrogeologic gradient based upon regional topography

The Hudson River PCBs Site was discussed previously as an NPL site.

Emergency Response Notification System (ERNS)
ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not identified on the ERNS database.

Facility Index System/Facility Registry System (FINDS)
FINDS is a centrally managed database by the EPA that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The database provides information regarding environmental activities that may affect air, water, and land in the United States. It is usually a cross-reference to other sources/databases that contain more detail. Two former tenants of the Subject Property (Hudson River Inlay and Con Edison) are listed on the FINDS database on the Environmental Interest/Information System. No violations are reported. Based on our observations during the site reconnaissance, it is considered unlikely that conditions associated with the FINDS listing represent an environmental concern to the Subject Property.

4.1.2 State and Tribal Agency Database Records

State and Tribal equivalent NPL Sites and CERCLIS Sites
State and tribal equivalent NPL and CERCLIS databases were searched for sites located within 1.0 mile and 0.5 mile of the Subject Property, respectively. The Subject Property was identified on state and/or tribal equivalent NPL and CERCLIS databases. Information regarding the listing is presented in the following table:

STATE AND TRIBAL EQUIVALENT NPL SITES AND CERCLIS SITES			
Site	**Distance / Direction / Gradient**	**ID No.**	**Regulatory Status**
Printer Corp 34 State St Ossining, New York	Subject Property	NYD013008446	Notification Date: Not reported Contaminants: Not reported Media Impacted: NA Status Date: 12/16/2003 Date of Closure: NA

According to the database report, a former tenant of the Subject Property, Printer Corp, is listed on the New York SHWS database. The database indicates the Subject Property was investigation by the Westchester Department of Health (DOH) which determined the tenant did not use lagoons to dispose of hazardous waste, but used concrete storage lagoons for the treatment of process water. The listing also indicates "no known disposal of hazardous wastes at this site." Based upon the current regulatory status and EBI's observations during our site reconnaissance, there do not appear to be any releases reported and it is considered unlikely that conditions associated with the identified listing represent an environmental concern to the Subject Property.

State and Tribal Spills Sites (Spills)

A review of available Spills databases was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not identified on the Spills database.

State and Tribal Landfill Sites and Solid Waste Disposal Sites

The state and tribal landfill and solid waste disposal site databases identify active or inactive landfill and transfer station facilities, as well as open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. The Subject Property was not identified on state or tribal landfill and solid waste disposal site databases. However, two sites located within 0.5 mile of the Subject Property were identified on state or tribal landfill and solid waste disposal site databases. Information regarding the listed sites is presented in the following table:

STATE AND TRIBAL LANDFILL SITES AND SOLID WASTE DISPOSAL SITES			
Site	**Distance / Direction / Gradient***	**ID No.**	**Facility Status**
North Water Street Organic Transfer Station 30 Water St Ossining, New York	0.114 mile / North-northwest / Crossgradient to Downgradient	60R24	Facility Type: Transfer Station Facility Status: Active No Reported Violations
Paradise Heating Oil 1 Quimby St Ossining, New York	0.135 mile / Northwest / Crossgradient to Downgradient	60O01	Facility Type: Waste Oil Storage, reprocessing or re-refining facility Facility Status: Active No Reported Violations

* Presumed hydrogeologic gradient based upon regional topography

Based upon the absence of reported violations and distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified sites represent an environmental concern to the Subject Property.

State and Tribal Leaking Storage Tank Sites

Leaking Storage Tank Sites are properties where releases of hazardous substances or petroleum products from underground storage tanks (USTs) and/or aboveground storage tanks (ASTs) have been identified and reported to state, tribal, or local agencies. The Subject Property was not identified on state or tribal Leaking Storage Tank databases. However, 70 sites located within 0.5 mile of the Subject Property were identified on state or tribal Leaking Storage Tank databases. The 70 listed sites are all listed with a regulatory status of "closed," and because the Subject Property is located on a hilltop none of the listed sites are upgradient of the Subject Property. Based upon the regulatory status and hydrogeologic position relative to the Subject Property, these sites are considered unlikely to represent

an existing release, past release, or material threat of release of hazardous substances or petroleum products on the Subject Property.

State and Tribal Registered Storage Tanks

The Subject Property and one adjoining property were identified on state or tribal Registered Storage Tank databases. Information regarding the listed sites is presented in the following table:

STATE AND TRIBAL REGISTERED STORAGE TANKS				
Location	**Distance / Direction / Gradient***	**Capacity / Contents**	**Year Installed**	**Status**
Creative Design Inc 34 State St Ossining, New York	Subject Property	(1) 3,000-gallon UST / Contents not reported	Not reported	Removed (1993)
		(1) 1,000-gallon UST / Contents not reported	Not reported	Removed (1993)
		(1) 10,000-gallon UST / Contents not reported	Not reported	Closed in place (1988)
15-16 James Street 15-16 James Street Ossining, New York	Adjacent / South / Crossgradient	(2) 2,000- gallon UST / Contents not reported	Not reported	Removed (1999)
		(2) 2,000- gallon UST / Fuel Oil	2008	Removed (2015)

* Presumed hydrogeologic gradient based upon regional topography

Creative Design is a former tenant of the Subject Property and is listed as having three USTS. According to the database, a 10,000-gallon UST was closed in place at the Subject Property on September 1, 1986. Two more USTs, a 1,000-gallon capacity tank and a 3,000-gallon tank, were removed on December 1, 2003. No releases (LUSTs) were reported. EBI was not provided with any prior reports or closure documents regarding the UST removals/abandonment, or any plans or other documents indicating the location of the former USTs. Because it isn't known if they adversely impacted the Subject Property, these former USTs are considered a *recognized environmental condition (REC)*.

15-16 James Street are the two apartment buildings (Oxford House Apartments) that bound the western part of the Subject Property to south. The apartments are listed as having two 2,000-gallon UST removed in 1999, with two additional USTs removed in 2015. No releases (LUST cases) were reported. Based upon the absence of reported releases and presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with this identified state or tribal Registered Storage Tank site represent an environmental concern to the Subject Property.

State and Tribal Engineering Control / Institutional Control Registries

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. The Subject Property was not identified on state or tribal Engineering Control or Institutional Control Registries. However, one site located within 0.5 mile of the Subject Property was identified on state or tribal Engineering Control or Institutional Control Registries. Information regarding the listed site is presented in the following table:

STATE AND TRIBAL ENGINEERING CONTROL / INSTITUTIONAL CONTROL REGISTRIES			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Hudson Intl Conductors 62 Water St Ossining, New York	0.202 mile / North-northwest / Crossgradient to Downgradient	57382	Notification Date: Not reported Contaminants: Cadmium, chromium, zinc, cyanide, chlorinated solvents Media Impacted: Soil & GW Status: Closed, with ongoing monitoring Date of Closure: 12/2010

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status and presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified site represent an environmental concern to the Subject Property.

State and Tribal Voluntary Cleanup Sites

The Subject Property was not identified on state or tribal Voluntary Cleanup Site databases. However, two sites located within 0.5 mile of the Subject Property were identified on state or tribal Voluntary Cleanup Site databases. Information regarding the listed sites is presented in the following table:

STATE AND TRIBAL VOLUNTARY CLEANUP SITES			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
CE-Ossining MGP 39 Central Ave and 30 Water St Ossining, New York	0.150 mile / North-northwest / Crossgradient to Downgradient	57904	Site Type: Former manufactured gas plant Responsible Party: Con Edison Notification Date: Not reported Contaminants: Coal tar, VOCs, SVOCs, BTEX Media Impacted: Soil & GW Status: Active Date of Closure: NA
Hudson Intl Conductors 62 Water St Ossining, New York	0.202 mile / North-northwest / Crossgradient to Downgradient	57382	Site Type: Former wire manufacturing Responsible Party: The Wire Mill, LLC Notification Date: Not reported Contaminants: Cadmium, chromium, zinc, cyanide, chlorinated solvents Media Impacted: Soil & GW Status: Closed, with ongoing monitoring Date of Closure: 12/2010

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status and/or presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified Voluntary Cleanup Sites represent an environmental concern to the Subject Property.

State and Tribal Brownfield Sites

The Subject Property was not identified on state or tribal Brownfield Sites databases. However, one site located within 0.5 mile of the Subject Property was identified on state or tribal Brownfield Sites databases. Information regarding the listed site is presented in the following table:

STATE AND TRIBAL BROWNFIELD SITES			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Hudson Intl Conductors 62 Water St Ossining, New York	0.202 mile / North-northwest / Crossgradient to Downgradient	57382	Notification Date: Not reported Contaminants: Cadmium, chromium, zinc, cyanide, chlorinated solvents Media Impacted: Soil & GW Status: Closed, with ongoing monitoring Date of Closure: 12/2010

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status and presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified Brownfield Site represent an environmental concern to the Subject Property.

4.1.3 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the following:

Village/Town of Ossining Building Department
EBI submitted a written request to Village of Ossining Building Department for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, in accordance with the Freedom of Information Act (FOIA). As of the date of this report, EBI had not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material effect on the findings of this report, EBI will forward this information as an addendum to this report. If no response is received, or no material information is identified, our report will not be modified.

Westchester County Department of Health
EBI submitted a written request to the Westchester County Department of Health for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, in accordance with the Freedom of Information Act (FOIA). As of the date of this report, EBI had not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material effect on the findings of this report, EBI will forward this information as an addendum to this report. If no response is received, or no material information is identified, our report will not be modified.

Village/Town of Ossining Fire Department
EBI submitted a written request to the Village/Town of Ossining Fire Department for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, in accordance with the Freedom of Information Act (FOIA). As of the date of this report, EBI had not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material effect on the findings of this report, EBI will forward this information as an addendum to this report. If no response is received, or no material information is identified, our report will not be modified.

4.1.4 Vapor Migration

EBI conducted a vapor migration screening survey of the Subject Property. EBI's site observations and review of the environmental database report (cited in Section 4.1) did not identify any conditions on the

Subject Property or on adjoining properties that would indicate a REC relative to vapor migration at the Subject Property.

This vapor migration screening was conducted in accordance with ASTM E1527-13 and is not intended to satisfy the requirements of ASTM E2600-15. The scope of this screening was limited to visual observations and review of the environmental database report and did not include the collection and laboratory analysis of air samples to confirm or refute the presence of airborne contaminants by vapor intrusion.

4.2 PHYSICAL SETTING

4.2.1 Topography

The Subject Property elevation varies from a high of approximately 180 feet above mean sea level (msl) on the northeast part of the site to a low of approximately 80 feet at the western end of the site. The Subject Property is located on a ridge that overlooks the Hudson River to west. The eastern developed part of the site slopes generally gently downward to the south and east. The western undeveloped part of the site slopes moderately to steeply downward to the west. The Subject Property is located east of the Hudson River, and the general slope of the surrounding region is to the west towards the river (see Figure 2 - Locus Map, which depicts the location of the Subject Property on the Ossining, New York USGS 7.5 Minute Topographic Quadrangle).

4.2.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Information concerning the geology of the Subject Property was obtained from the USGS Ground Water Atlas of the United States, New York region (1995). The Subject Property is located within the New England Upland Section physiographic province, which consists of Precambrian metamorphic and igneous rocks, primarily gneiss, mica schist, and granite. Cambrian and Ordovician sedimentary rocks, primarily carbonate rocks, sandstone, and shale, underlie parts of western New England.

According to the Natural Resources Conservation Service (NRCS) Web Soil Survey (WSS) website (http://websoilsurvey.nrcs.usda.gov/app/), the dominant soil composition in the vicinity of the Subject Property is classified as Urban land-Charlton-Chatfield complex, rolling, very rocky, 2 to 15 percent slopes (UIC). This soil consists of well-drained soils consisting of loam, sandy loam and flaggy silt loam overlying unweathered bedrock. The soil extends to a depth of 24 to 60 inches. Permeability is low to high, and the available water capacity is moderate to low. The depth to bedrock ranges from 20 to over 60 inches.

4.2.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest downgradient surface water body is the Hudson River, located approximately 700 feet east of the Subject Property.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow overall to the west. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

4.3 HISTORICAL USE OF THE SUBJECT PROPERTY AND ADJOINING PROPERTIES

EBI attempted to determine the history of the Subject Property dating back to the earlier of 1940 or first developed use. It should be noted that data failure occurred per Section 8.3.2.3 of ASTM Standard E 1527-13. Specifically, EBI could only identify records back to 1886, at which time the Subject Property was developed as a single-family residential property. The prior use of the property is unknown. However, it is anticipated that the Subject Property would have been undeveloped prior to this use, or that any prior uses would not have been involved in any activities that at this point would be considered an environmental concern. Therefore, this data failure is not considered to be significant. The following table summarizes the historical use of the Subject Property and surrounding area.

HISTORICAL USE SUMMARY			
Period	**Historical Uses**		**Source(s)**
	Subject Property	**Surrounding Area**	
At least 1830s-1910	Single-family home (mansion) on the northeastern part of the site, with a few outbuildings to southwest. A few single-family homes at the west end of the site from the 1890s.	Limited single-family residential development. A school (Mount Pleasant Military Academy) is present to northeast from the 1880s.	Fire Insurance Maps Topographic Maps Other Historical Records
1920s-1940s	The home has been expanded with an addition on the north side and is now a Knights of Columbus Club. A few single-family homes are present on the southern end of the site.	Single-family residential development. A school (Mount Pleasant Military Academy) is present through the 1920s and is then gone.	Fire Insurance Maps Topographic Maps Other Historical Records
Late 1940s – 1990s	Existing buildings now occupied by Printex Corporation, a silk screening company, and are expanded in the 1960s and 1970s. A few single-family homes are present on the southern end of the site.	Single-family residential and limited retail development.	Aerial Photographs Fire Insurance Maps Topographic Maps City Directories
1990s – 2013s	Existing buildings occupied by offices and by Hudson Inlay, a woodworking company.	Single-family residential and limited retail development.	Aerial Photographs Fire Insurance Maps Topographic Maps City Directories Personal Interviews
2014 to Present	Vacant	Single-family residential and limited retail development.	Aerial Photographs Fire Insurance Maps Topographic Maps City Directories Personal Interviews

According to our review of historical records Printex Corp was a tenant at the Subject Property from the 1940s through the 1990s and was a silk screening operation. Another tenant of the Subject Property, Creative Design, is listed as having had three USTS. These tanks were discussed previously in Section 4.1.2 and are considered a recognized environmental condition (REC).

4.3.1 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). It should be noted that the scale of the available aerial photographs precludes the distinct identification of structures and/or land uses on or in the vicinity of the Subject Property. Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table. Copies of selected aerial photographs are presented in Appendix F.

AERIAL PHOTOGRAPH SUMMARY		
Year	**Issues Noted**	**Observations**
1941	No	**Subject Property:** The resolution of the photograph is poor, no details about the occupancy of the site can be discerned.
		Surrounding Area: The resolution of the photograph is poor, no details about the occupancy of the surrounding properties can be discerned.
1953	No	**Subject Property:** The Subject Property is occupied by an L-shaped building (the existing structure) located in the northeastern corner of the site. Three single-family homes are located on the southern part of the site.
		Surrounding Area: The surrounding properties are primarily single-family residential, with apparent retail/commercial buildings located to northeast.
1957 1961 1964	No	**Subject Property:** Conditions on the Subject Property appear to be similar to those depicted on the 1953 photograph, with the exception that the building to south of the northern building is present.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1953 photograph.
1974 1985 1989 1994	No	**Subject Property:** Conditions on the Subject Property appear to be similar to those depicted on the 1964 photograph, except additional small buildings are located west of the building on the northern part of the site.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1964 photograph, except the existing apartment buildings that adjoin the western part of the site to south are present.
2006 2009 2011	No	**Subject Property:** Conditions on the Subject Property appear to be similar to those depicted on the 1994 photograph, except the single-family residences on the southern part of the site are no longer present.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1994 photograph.

4.3.2 Fire Insurance Maps

A search for historical fire insurance maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of selected fire insurance maps are presented in Appendix F.

FIRE INSURANCE MAP SUMMARY		
Year	**Issues Noted**	**Observations**
1886	No	**Subject Property:** The Subject Property is occupied by a single residential building located on the northeastern part of the site.
		Surrounding Properties: Features depicted on surrounding properties included single

FIRE INSURANCE MAP SUMMARY		
Year	**Issues Noted**	**Observations**
		family homes to east and south and a school (military academy) to northeast.
1891 1897 1903	No	**Subject Property:** The Subject Property is occupied by a single residential building located on the northeastern part of the site. Two barns/outbuildings are located southwest of the residence.
		Surrounding Properties: Features depicted on surrounding properties included single family homes to northeast, east, south and southwest and a school (military academy) to northeast.
1911	No	**Subject Property:** Conditions on the Subject Property are similar to those as depicted on the 1903 map, with the addition of an additional outbuilding (a hen house) southwest of the outbuildings and a single-family residence on the southern part of the site.
		Surrounding Properties: Features depicted on surrounding properties included single family homes to northeast, east, south and southwest and a school (military academy) to northeast.
1924 1931 1942	No	**Subject Property:** The residential building has been expanded, is now L-shaped, and is shown to be a Knights of Columbus hall. Three single-family homes are now on the southern part of the site.
		Surrounding Properties: Features depicted on surrounding properties included single family homes to northeast, east, south and southwest. The school (military academy) to northeast is gone in the 1931 map.
1949	No	**Subject Property:** The building on the Subject Property is shown to be occupied by Printex Corp of America, cloth printing. The three residences on the southern part remain.
		Surrounding Properties: Features depicted on surrounding properties included single family homes to northeast, east, south and southwest.
1971	No	**Subject Property:** The Subject Property is developed with the existing two large buildings and outbuildings, and is shown to be Printex Corp of America, screen cloth printing.
		Surrounding Properties: Features depicted on surrounding properties included single family homes to northeast, east, south and southwest. The existing apartment buildings to south are present.

4.3.3 Topographic Maps

Historical topographic maps provide information related to physical land configuration such as elevation, ground slope, surface water and other features. While most buildings in densely developed urban centers are not depicted, topographic maps typically show structures equal to or larger than the size of a single-family residence in rural areas. Other notable features such as woods, pipelines, municipal boundaries, and areas of filled land are often marked on topographic maps.

A search for historical topographic maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical topographic maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of selected topographic maps are presented in Appendix F.

TOPOGRAPHIC MAP SUMMARY		
Year	**Issues Noted**	**Observations**
1892 1893	No	**Subject Property:** One structure is shown on the northeastern part of the site.
		Surrounding Properties: The surrounding street grid is shown, with small buildings

TOPOGRAPHIC MAP SUMMARY		
Year	**Issues Noted**	**Observations**
1902		(apparently residences) located along the streets.
1936	No	**Subject Property:** One structure which appears to be L-shaped is shown on the northeastern part of the site.
		Surrounding Properties: The surrounding street grid is shown, with small buildings (apparently residences) located along the streets.
1955	No	**Subject Property:** One structure which appears to be L-shaped is shown on the northeastern part of the site.
		Surrounding Properties: The surrounding properties are shaded to represent urban development; no distinct structures or other notable features are depicted.
1967 1979	No	**Subject Property:** The Subject Property is shaded to represent urban development; no distinct structures or other notable features are depicted.
		Surrounding Properties: The surrounding properties are shaded to represent urban development; no distinct structures or other notable features are depicted.
2013	No	**Subject Property:** No structures or other notable features are shown on the site.
		Surrounding Properties: No structures or other notable features are shown on the surrounding properties.

4.3.4 Street Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by Environmental Data Resources, Inc. (EDR). Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix F.

STREET DIRECTORY SUMMARY		
Year	**Issues Noted**	**Occupants**
1972 1977 1982	No	Subject Property is occupied by Printex Corp and Vera Neumann.
1987	No	Subject Property is occupied by Printex Corp, Levine Graphics, The Cortlandt Group, Vera Neumann and Seville Associates.
1992	No	Subject Property is occupied by Printex Corp, Art Business Consulting, The Cortlandt Group and Creative Designs.
1995	No	Subject Property is occupied by Cortlandt Group, Creative Designs Han Corp and Hudson River Inlay.
1999	No	Subject Property is occupied by PG Arbor & Co, Hudson River Inlay, and United Vision Sales.
2003	No	Subject Property is occupied by D Rotindo, Gregory Tavano, and Hudson River Valley Inlay.
2008	No	Subject Property is occupied by PG Arbor & Co, River Hudson, and United Vision Sales.
2013	No	Subject Property is occupied by Hudson River Inlay, River Hudson, and United Vision Sales.

4.3.5 Recorded Land Title Records

Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3.6 Property Tax Records

Property tax records for the Subject Property were obtained from the Westchester County Assessor's Office. The property records identify the current owners as Ossining Land LLC and Hunter James Associates LLC. A listing of the former Subject Property owners was not available for review.

4.3.7 Environmental Liens and Activity and Use Limitations

A search for Environmental Liens and Activity and Use Limitations was not included in the scope of this assessment.

4.3.8 Previous Environmental Reports

EBI was provided with the following previous environmental document regarding the Subject Property:

New York Department of Labor, Division of Safety and Health, Letter dated September 30, 2015

- The letter is addressed to Adelaide Environmental Health Associates (Adelaide) and indicates the agency granted a variance for interior friable debris cleanup and various ACM removal at the Vacant 3-Story building located at 34 State Street in Ossining New York. The variance refers to a proposed interior cleanup of friable debris in the attic and boiler room and the removal of ACM joint compound in the attic. Attachments to the letter indicate the abatement will address the following materials: 14,600 square feet (sf) of roofing materials, 2,500 sf of joint compound, 600 sf of pin mastic, 600 sf of duct cover, 1,200 sf of floor tile, 25 sf of debris, 26 mudded fittings, 16,000 sf of transite, and approximately 1,700 linear feet of caulk.

- One of the attachments to the letter is a portion of an asbestos and lead-based paint survey report by Adelaide that indicates a survey was conducted on August 12, 13 and 27th and September 2, 2015. The survey included 273 asbestos samples, 385 XRF readings and 3 PCB samples. Nineteen samples/homogeneous areas tested positive for asbestos, 53 XRF readings tested positive for lead, and zero PCB samples tested positive. Note that EBI was not provided with a copy of the inspection report.

Relevant information from the document is discussed in the appropriate sections of this report, and the provided document is presented in Appendix G.

4.3.9 Other Historical Records and Interviews

Mr. Chris Dos Anjos, Day Porter, was interviewed to obtain information regarding the history of the Subject Property. According to Mr. Dos Anjos, he has been familiar with the Subject Property for approximately 10 years and the original part of the northern building constructed in the 1830s. Mr. Dos

Anjos stated that asbestos and lead-based paint abatement was performed at the site in 2016 and is complete. However, he did not provide any related documentation to EBI to verify this statement.

5.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Herb Spitz, EBI Senior Scientist, on January 13, 2017. Mr. Spitz was accompanied by and interviewed Mr. Chris Dos Anjos, the Subject Property Day Porter.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Unimproved portions of the Subject Property were observed along the perimeter and in a general grid pattern in safely accessible areas. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

At the time of the survey, the weather was sunny and approximately 45° Fahrenheit. During the survey, representative tenant spaces, mechanical spaces, and/or equipment components were observed. There were no significant portions of the Subject Property that were inaccessible or excluded from this survey.

5.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

No notable hazardous substances or petroleum products were observed at the Subject Property.

EBI did not identify evidence of significant leaks, spills, or the improper handling of petroleum or hazardous substances that might impact the environmental condition of the Subject Property.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

EBI did not observe evidence of hazardous substance or petroleum products containers at the Subject Property that were not in connection with identified uses.

5.2.3 Unidentified Substances Containers

EBI did not observe evidence of unidentified substances containers at the Subject Property.

5.3 WASTE GENERATION, STORAGE, AND DISPOSAL

EBI identified the following waste streams generated at the Subject Property:

WASTE GENERATION, STORAGE, AND DISPOSAL			
Classification	**Type of Waste / Generation Process**	**Type of Storage / Location**	**Disposal Method / Contractor**
Non-regulated Solid Waste	Municipal Solid Waste / Routine Site Operations	None observed	NA
Non-regulated Liquid Waste	Sanitary Sewage / Routine Site Operations	NA (Municipal Sanitary Sewer)	Town/Village of Ossining
Regulated Solid or Liquid Waste	None identified	NA	NA
Biomedical Waste	None identified	NA	NA

No evidence of improper solid waste management or the improper disposal of hazardous substances or petroleum products was observed at the time of reconnaissance.

5.4 UNDERGROUND STORAGE TANKS (USTS) & ABOVEGROUND STORAGE TANKS (ASTS)

5.4.1 Existing Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI identified no evidence of existing USTs or ASTs located at the Subject Property.

5.4.2 Former Storage Tanks

According to the regulatory database, a former tenant of the Subject Property (Creative Designs) is listed as having three USTS. According to the database, a 10,000-gallon UST was closed in place at the Subject Property on September 1, 1986. Two more USTs, a 1,000-gallon capacity tank and a 3,000-gallon tank, were removed on December 1, 2003. No releases (LUSTs) were reported. EBI was not provided with any prior reports or closure documents regarding the UST removals/abandonment, or any plans or other documents indicating the location of the former USTs. Because it isn't known if they adversely impacted the Subject Property, these former USTs are considered a *recognized environmental condition (REC)*.

5.5 OIL-CONTAINING EQUIPMENT AND POLYCHLORINATED BIPHENYLS (PCBS)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which enacted the Toxic Substance and Control Act (TSCA). In accordance with *US Code of Federal Regulations Title 40 - Protection of Environment, Chapter I - Environmental Protection Agency, Subchapter R - Toxic Substance Control Act (TSCA), Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions*, the owner of a transformer or other PCB-containing equipment is responsible for equipment maintenance and remediation in the event of a leak or release.

No potential PCB-containing equipment was identified at the Subject Property.

One overhead traction freight elevator services the southern building. The elevator is electrically powered and cable operated and does not contain hydraulic equipment.

5.6 ADDITIONAL SITE CONDITIONS

The following is a summary of visual and/or physical observations of the Subject Property on the day of the site visit. Photographs of pertinent Subject Property features are presented in Appendix A.

ADDITIONAL SITE CONDITIONS	
Condition	**Identified**
Interior Drains, Trenches, or Sumps	No
Interior Stains or Corrosion	No
Unusual Odors	No
Interior Pools of Liquid	**Yes**

ADDITIONAL SITE CONDITIONS	
Condition	**Identified**
Stained Soil or Pavement	No
Stressed Vegetation	No
Indications of Solid Waste Disposal	**Yes**
Exterior Pits, Ponds, or Lagoons	No
Wastewater or Stormwater Discharge/Disposal	No
Oil-Water Separators or Clarifiers	No
Septic Systems or Cesspools	No
Wells (Drinking Water Wells, Monitoring Wells, Agricultural/Irrigation Wells, or Process Water Wells)	No
Petroleum or Natural Gas Pipelines/Easements	No

At the time of our site visit part of the basement of the northern building was flooded, apparently from a leaking water line.

Piles of fill soils and construction debris (asphalt, concrete, wood, etc.) were observed at the western edge of the developed part of the site. No evidence of hazardous materials or contamination was observed in these materials, therefore they are not considered a recognized environmental condition.

6.0 INTERVIEWS

The site contact or Key Site Manager was contacted to be interviewed to obtain information regarding recognized environmental conditions in connection with the property. Additionally, a Pre-Survey Questionnaire was forwarded to the designated Subject Property contact. The Pre-Survey Questionnaire has not been completed and returned to our offices. The information requested in the Pre-Survey Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property.

KEY SITE MANAGER INTERVIEW			
Contact / Affiliation	**Date of Communication**	**Years Associated with Subject Property**	**Telephone No.**
Mr. Chris Dos Anjos Day Porter	01/13/2017	10	(914) 906-1011

The following additional persons were interviewed to obtain information regarding recognized environmental conditions in connection with the property.

ADDITIONAL INTERVIEWS			
Contact / Affiliation	**Date of Communication**	**Years Associated with Subject Property**	**Telephone No.**
Counter Staff Clerk's Office Town/Village of Ossining	01/13/2017	NA	(914) 762-8428

Pertinent information from the interviews is presented in applicable sections of this report.

7.0 CONSIDERATIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13

The following sections address environmental issues or considerations at the Subject Property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM Practice E 1527-13 (non-scope considerations).

7.1 ASBESTOS-CONTAINING MATERIAL (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those that can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

A previous letter from the New York Department of Labor, dated September 30, 2015 and referenced in Section 4.3.8 of this report, included an attachment which was a portion of an asbestos and lead-based paint survey report by Adelaide Environmental Health Associates (Adelaide) that indicates a survey was conducted on August 12, 13 and 27th and September 2, 2015. The survey included 273 asbestos samples. Nineteen samples/homogeneous areas tested positive for asbestos. Attachments to the letter indicate the abatement will address the following materials: 14,600 square feet (sf) of roofing materials, 2,500 sf of joint compound, 600 sf of pin mastic, 600 sf of duct cover, 1,200 sf of floor tile, 25 sf of debris, 26 mudded fittings, 16,000 sf of transite, and approximately 1,700 linear feet of caulk. Mr. Dos Anjos stated that asbestos abatement was performed at the site in 2016 and is complete. However, he did not provide any related documentation to EBI to verify this statement. EBI was not provided with a copy of the inspection report.

EBI conducted a limited visual screening survey for the presence of ACM at the Subject Property. EBI identified friable suspect ACM in the form of textured ceiling and wall surfacing materials, sheetrock/joint compound composite material, lath and plaster systems, and 2'x4' white perforated acoustical ceiling tile and non-friable suspect ACM in the form of vinyl floor tile and associated mastic, various construction mastics and caulking, and roofing materials. Because EBI wasn't provided with a copy of the previous inspection report, it is not known if these materials were sampled as part of the previously-discussed asbestos inspection and abatement activity.

Please note that this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interior of machinery or equipment, or water and sewer systems.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the buildings would have been thoroughly surveyed and sampled. The possibility exists for ACM to be present in areas of the buildings not accessed or sampled by EBI personnel. Based on the limited scope of this assessment, additional suspect ACM may also present in areas of the buildings that were accessed as part of this assessment. EBI's limited visual screening should not be considered a pre-demolition survey.

Due to the continued distribution of a wide variety of asbestos-containing building materials, asbestos may be present in some of the roofing, flooring, wall and ceiling materials, caulking/putties, adhesives, spackling compounds, and insulation materials, as well as other building materials that may be used at the Subject Property. Sampling many of these materials requires techniques that may be destructive to subject facilities, and in the case of roofing material, may void warranties. It is recommended that an asbestos inspection be performed in accordance with all applicable federal, state, and local regulatory requirements prior to renovation, demolition, or other activities that could cause a material disturbance. Any removal or disturbance of ACM or suspect ACM should be performed by properly trained personnel and in compliance with federal, state, and local regulations.

7.2 RADON

Radon is a naturally-occurring, colorless and odorless radioactive gas that is generated primarily in granitic rocks. The United States Surgeon General has published information that radon is a cause of lung cancer. Radon usually enters a building through openings in the foundation, and therefore is a potential health concern to residents of the lowest level of a building with inadequate ventilation.

The EPA Map of Radon Zones indicates that Westchester County is located within a Zone 3 radon area. Zone 3 is defined as an area that has a low potential for radon gas, with a predicted average indoor radon screening level less than 2.0 picoCuries per liter (pCi/L). The EPA recommended Action Level for radon is 4.0 pCi/L.

Based upon the location in a Zone 3 area and in accordance with the scope of work for this assessment, EBI did not conduct a limited short-term radon screening at the Subject Property.

7.3 LEAD-BASED PAINT (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm^2) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

Based on the non-residential use of the existing buildings and in accordance with the scope of work of this assessment, a lead-based paint (LBP) survey was not conducted at the Subject Property.

7.4 LEAD IN DRINKING WATER

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing systems such as lead solder, brass, bronze, and other lead containing alloys. The EPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg /L).

Municipal water service is provided to the Subject Property by the Village of Ossining. Potable water is reportedly obtained from the Croton reservoir. Based upon review of the Annual Drinking Water Quality Report for 2015, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead.

Based upon the existing municipal water service and in accordance with the scope of work for this assessment, EBI did not conduct lead-in-drinking water sampling at the Subject Property.

8.0 FINDINGS AND OPINIONS

EBI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-13. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has identified no evidence of *recognized environmental conditions (RECs)* in connection with the Subject Property, except for the following:

- Creative Design is a former tenant of the Subject Property and is listed as having three USTS. According to the database, a 10,000-gallon UST was closed in place at the Subject Property on September 1, 1986. Two more USTs, a 1,000-gallon capacity tank and a 3,000-gallon tank, were removed on December 1, 2003. No releases (LUSTs) were reported. EBI was not provided with any prior reports or closure documents regarding the UST removals/abandonment, or any plans or other documents indicating the location of the former USTs. Because it isn't known if they adversely impacted the Subject Property, these former USTs are considered a *recognized environmental condition (REC)*.

In addition, the following *consideration outside the scope of ASTM Practice E 1527-13* was identified in connection with the Subject Property:

- EBI conducted a limited visual screening survey for the presence of ACM at the Subject Property. EBI's limited visual screening should not be considered a pre-demolition survey. EBI identified friable suspect ACM in the form of textured ceiling and wall surfacing materials, sheetrock/joint compound composite material, lath and plaster systems, and 2'x4' white perforated acoustical ceiling tile and non-friable suspect ACM in the form of vinyl floor tile and associated mastic, various construction mastics and caulking, and roofing materials. Because EBI wasn't provided with a copy of the previous inspection report, it is not known if these materials were sampled as part of the previously-discussed asbestos inspection and abatement activity. Please note that this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interior of machinery or equipment, or water and sewer systems. Asbestos is a condition outside the scope of ASTM E 1527-13 and is not considered a recognized environmental condition (REC).

9.0 RECOMMENDATIONS

Based upon the findings of this investigation, EBI offers the following recommendations:

- EBI recommends that all available documentation regarding the USTs removed from the Property or closed in-place at the Property be provided to EBI for review to further determine if environmental concerns remain. If this additional information is inconclusive or if no additional information is available, then a review of the State files for these tanks is recommended to gather additional information. Cost to review any additional information provided and to review any regulatory files will be $100 per hour, not to exceed $1,000 without prior client approval. If information from the State is inconclusive or if no additional pertinent information is available, then a Phase II subsurface investigation is recommended to determine if these tanks have adversely impacted the environmental integrity of the Property. The scope of work for a subsurface investigation could be influenced by the findings of the document review, therefore a cost for subsurface investigation activities is not available at this time.

- It is recommended that an asbestos inspection be performed in accordance with all applicable federal, state, and local regulatory requirements prior to renovation, demolition, or other activities that could cause a material disturbance. Any removal or disturbance of ACM or suspect ACM should be performed by properly trained personnel and in compliance with federal, state, and local regulations.

Please fill out and sign this questionnaire to the best of your knowledge for the Scientist's site visit. Email to Kim Holland at REResearchGroup@ebiconsulting.com or fax to781-425-3623, for our report files, and keep the original to provide to the Scientist.

6.

Subject Property Name: 34 State Street, 17-25 James Street, & 27 Hunter Street
EBI Project #: 1117000093

Address: 34 State Street, 17-25 James Street, & 27 Hunter Street - (Sec. 97.07; Lots 17, 18, 68) Ossining NY

Subject Property Owner: _____ **Purchase Date:** _____

On-Site Property Contact: _____ **Telephone:** _____

Fax: _____ **Email:** _____

Your Name and title **Signature** **Date**

Additional plans and documentation (see page 4) must be forwarded to the site for the Scientist during the survey. For questions not applicable please respond "N/A." Attach additional pages if necessary. This questionnaire and your responses will be included as an exhibit in the Environmental report. Accurate and full completion is critical to a timely completion of our reports, and timely loan closing.

LOCAL JURISDICTIONAL INFORMATION

1. What is the property ID #, Lot and Block, or Township/Range ID #? _____
2. What is the legal Municipality or County that has jurisdiction over the property? _____
3. What is the assessors file ID number and tax file ID number if available? _____

PROPERTY INFORMATION

4. What is the size of the subject property lot or lots, in acres? _____
5. How many buildings comprise the subject property? _____
   a. If the property is a mall or large retail center, please confirm and list ownership of each building. _____
6. What is the gross and net rentable square footage of the building(s)? _____
7. What is the date of construction of the building(s)? When was the building(s) first occupied? _____
8. How many tenant spaces or apartments are at the Subject Property? _____
9. Please list, to the best of your knowledge, any structural, water infiltration, mold, roof, plumbing, HVAC, Fire Alarm or electrical deficiencies or problems. _____
10. Please list any deficiencies noted during any Building, Fire or Health Department inspections in the last three years. _____
11. Please list the following utility providers:
    Water: _____ Electricity: _____
    Sanitary Sewer: _____ Storm Drainage: _____
    Trash Hauler: _____ and, Frequency of Pick-ups: _____ Natural Gas or Oil: _____
12. Please attach a brief history of the property.

ENVIRONMENTAL SITE ASSESSMENT PRE- SURVEY QUESTIONNAIRE

1. Describe the current uses of the property noting tenant names and oil/chemical usage. _____

2. Describe the past uses of the property noting tenant names and oil/chemical usage.

3. (Y) (N) Has a previous environmental site assessment report been prepared for the property? If yes, for what reason? Can EBI have a copy?

4. (Y) (N) Has a subsurface investigation (Phase II) ever been conducted on the property, including soil sampling, groundwater sampling, or installation of groundwater monitoring wells? If yes, for what reason? What were the results? Can EBI have a copy of the report? Are there any groundwater monitoring wells currently located on the property?

5. (Y) (N) Has contamination been identified at the Subject Property? Describe the nature of the contamination (i.e., source, media impacted, location, sampling, cleanup activities, regulatory status, etc.). Can EBI have copies of related documentation?

6. (Y) (N) Has a spill or surficial release occurred at the Subject Property? Describe the nature of the spill/surficial release (i.e., source, location, response/cleanup actions, regulatory status, etc.). Can EBI have copies of related documentation?

7. (Y) (N) Is the Subject Property listed with the USEPA and/or the state environmental regulatory agency as a contaminated site? If yes, please describe. Can EBI have copies of related documentation?

8. (Y) (N) Has there ever been previous sampling for Asbestos, Lead-Based Paint, Lead in Water, or Radon? If yes, please describe. Can EBI have copies of related documentation?

9. (Y) (N) Has there been any Asbestos or Lead-Based Paint abatement or Radon mitigation conducted at the Subject Property? Are there Asbestos and/or Lead-Based Paint Operations and Maintenance Plans for the Subject Property? If yes, please describe. Can EBI have copies of related documentation?

10. (Y) (N) Any known environmental liens, deed restrictions, or use limitations for the Property? If yes, please describe. Can EBI have copies of related documentation?

11. (Y) (N) Any permitted or regulated activities (Hazardous waste generator, air) on the Property? If yes, please describe.

12. (Y) (N) Are there any transformers or other electrical equipment, which may contain PCBs? If yes, please describe. Where are they? Who owns the transformer(s)? Who services them?

13. (Y) (N) Has an industrial or manufacturing operation, gas station, motor repair facility, commercial printing facility, dry cleaners, photo-developing laboratory, junk yard, landfill or waste, treatment, storage, disposal processing or recycling facility ever been located at **or** adjacent to the property? If yes, please describe.

14. (Y) (N) Are there any discarded drums, barrels or containers, construction debris, damaged or discarded automobile or industrial batteries, or pesticides, paints or other chemicals in individual containers or drums of greater than five gallons or fifty gallons in aggregate located on the property? If yes, please describe.

15. (Y) (N) Have there ever been any waste storage or treatment lagoons, pits, ponds, or surface impoundments on the property? If yes, please describe.

16. (Y) (N) Does the property have floor drains not discharging to a sewer? Septic System? If yes, please describe.

17. (Y) (N) Are there currently aboveground or underground storage tanks at the property? If yes, complete table.

Type of Tank	Size	Content	Installation Date	Spill/Leak Detection? Y or N
Above or Underground	gal			
Above or Underground	gal			
Above or Underground	gal			
Above or Underground	gal			

18. Are you aware of any information to indicate that the Subject Property was sold for substantially below its fair market value? If so, please provide an explanation:

19. Additional comments and/or pertinent information relevant to this Phase I ESA:_____

DOCUMENT AND INFORMATION CHECKLIST

Please provide the following information (as much as possible in electronic format) so the Scientist can proceed with the survey of the property.

A. Plans	B. Municipal Documents	C. Additional Information
▪ ALTA Survey or Site Plan ▪ Reduced scale Site and Building Plans	▪ Certificate of Occupancy ▪ Building Permit ▪ Copy of tax cards ▪ UST/AST Registrations	▪ Tenant Rent Roll ▪ Historical Uses ▪ Previous Due Diligence Reports ▪ Copy of most Recent Appraisal

EBI ACCESS REQUIREMENTS

At the time of the site visit the Consultant is required to gain access to all areas of the property. This includes:

- All building interiors, including as applicable, common areas, lobbies, a representative sampling of offices, retail spaces, manufacturing or assembly areas, or apartments, community rooms, exercise rooms, pool areas, storage rooms, attics and basements, garages.
- All building perimeters
- All site amenities
- All building roofs, unless pitched asphalt shingles. This may require you to obtain and provide a ladder.
- All mechanical, electric, sprinkler, HVAC, utility, service, elevator, storage and equipment rooms

Re: Phase I Environmental Site Assessment Public Records Request
34 State Street, 17-25 James Street, & 27 Hunter Street
Ossining, New York 10562
EBI Project No. 1117000093

To Whom It May Concern:

EBI Consulting (EBI) is conducting a Phase I Environmental Site Assessment (ESA) at the above-referenced Subject Property. As part of the ESA process, we would like to request access to records regarding the following, as applicable:

- Current and historical environmental health code violations
- Current and historical environmental health permits
- Asbestos or lead-based paint abatement

We understand that these records may not be available. Please complete the applicable area below regarding record availability and return to our attention either via email at REResearchGroup@ebiconsulting.com or via fax at (781) 425-3623. If these records are available, EBI field personnel will be stopping by to review these records in the next several days. If there are any questions or concerns, please do not hesitate to contact us.

Sincerely,

Herb Spitz
21 B Street
Burlington, MA 01803
(602) 909-1112
reresearchgroup@ebiconsulting.com

I hereby certify that requested records ☐ are ☐ are not available in this Department. If records are available, an appointment to review ☐ is not ☐ is required.

ESA AAI USER QUESTIONNAIRE (ASTM E1527)

Subject Property Name: 34 State Street, 17-25 James Street, & 27 Hunter Street - (Sec. 97.07; Lots 17, 18, 68)
EBI Project #: TBD
Address: 34 State Street, 17-25 James Street, & 27 Hunter Street, Ossining, New York

1. Are you aware of any environmental cleanup liens against the Subject Property that are filed or recorded under federal, tribal, state or local law?

   No

   If yes, please provide a copy.

2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   There is an approved site plan for redevelopment of the entire property

   If yes, please provide a copy.

3. As the user of this ESA do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? Or, do you have documentation (i.e., Phase I ESAs, Phase II subsurface investigations, Tank Removal reports, remedial reports, asbestos sampling and/or abatement reports, lead-based paint sampling and/or abatement reports, etc.) for the Subject Property that may be relevant to the Phase I ESA?

   We recently completed an asbestos remediation program on the existing improvements

   Comments:

4. Does the purchase price being paid for this Subject Property reasonably reflect the fair market value of the Subject Property?

   N/a

   If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?

Comments:

5. Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional to identify conditions indicative of release or threatened releases? For example, as user,
   a. Do you know the past uses of the Subject Property? Some - Silkscreen, woodwork
   b. Do you know the specific chemicals that are present or once were present at the Subject Property? No
   c. Do you know of spills or other chemical releases that have taken place at the Subject Property? No
   d. Do you know of any environmental cleanups that have taken place at the Subject Property? only the asbestos remediation prog

   Comments:

6. As the user of this ESA, based on your knowledge and experience related to the Subject Property are there any obvious indicators that point to the presence or likely presence of contamination at the Subject Property? No

   Comments:

Herb Spitz, PG, LEED AP
Senior Scientist
Farmington, CT 06032
Mobile: 602.909.1112

SUMMARY OF EXPERIENCE

Mr. Herb Spitz, PG, is a Senior Scientist with over twenty-five years of project management and supervisory experience in environmental consulting and property condition assessments. He has experience in all phases of Environmental Assessments and Remedial action including soil and groundwater characterization, remedial action plans, remediation oversight, brownfields assessments, and UST investigations and removals. He also has extensive experience in facilities-related services including property condition assessments, asbestos and lead-based paint surveys, radon testing, and indoor air quality/mold assessments.

Mr. Spitz has significant experience throughout the U.S. He has completed projects for commercial, financial, industrial, telecommunications and real estate management firms as well as for local and state governmental clients. Administrative aspects of his experience include technical report review, personnel training, project management, client relations, quality control, regulatory compliance, contract administration and department management.

Relevant Project Experience

Environmental Site Assessments: Mr. Spitz has performed and managed over 1,400 phase I environmental site assessment projects on industrial, commercial, residential, agricultural and undeveloped properties in connection with real estate transactions and telecommunications facilities. Duties included performing site and area reconnaissance, reviewing regulatory searches and researching site history, interviewing site managers/owner and identifying and evaluating potential environmental concerns. Duties also included proposal writing, oversight and training of junior staff, report review and quality control, and client liaison.

Property Condition Assessments: Mr. Spitz has performed over 300 engineering assessments of apartment complexes, healthcare facilities, retail shopping centers and commercial office buildings in accordance with ASTM protocols as well as numerous equity investment scope requirements.

Phase II Environmental Site Assessments: Mr. Spitz has conducted and managed over 350 phase II site assessment projects to evaluate potential soil and groundwater contamination. Duties included proposal and budget development, oversight of drillers, logging soil borings, and collecting and field screening soil and groundwater samples and installation of groundwater monitoring wells. Additional duties have included data evaluation, report writing, client liaison, developing recommendations for further work and/or remedial action, and training of junior staff.

UST Investigations/Remedial Action: Mr. Spitz has developed workplans for UST assessments, designed and implemented subsurface investigations, developed removal specifications, managed contractor bidding and assisted clients with contractor selection, and managed UST removal projects. Conducted site characterizations and coordinated regulatory closures.

EBI Consulting
environmental | engineering | due diligence

Herb Spitz, PG, LEED AP
Senior Scientist
Farmington, CT 06032
Mobile: 602.909.1112

Indoor Air Quality Investigations: Mr. Spitz has conducted onsite investigations in response to tenant complaints, conducted air sampling for various constituents (temperature, humidity, carbon monoxide, carbon dioxide, VOCS and microbial contaminants including mold spores). Evaluated data and wrote reports.

Microbial Surveys: Mr. Spitz has conducted building inspections and sample collection on single-family homes as well as multi-tenant residential and commercial facilities with tenant complaints or "sick building" syndrome. Visual investigation and air sample collection was utilized to determine the possible presence of microbial (fungal) contamination in various indoor spaces. Evaluated data, compared indoor microbial levels to background (outdoor) levels, and wrote reports.

Asbestos/Lead Surveys: Mr. Spitz has conducted building inspections and sample collection on approximately 250 industrial, commercial, and residential properties. Sampling included collection of bulk samples/chip samples and XRF usage as well as quantifying and mapping of all materials sampled. Prepared proposals and reports.

David V. Maglietta
Program Manager
6876 Susquehanna Trail South
York, PA 17403
Office/Mobile: 410.499.8833

Summary of Experience

Mr. Maglietta is an environmental scientist with over 31 years of experience in performing and managing environmental investigations and site assessments in the U.S., Canada, and Mexico. Mr. Maglietta also has extensive experience conducting regulatory file reviews and performing asbestos, radon, lead paint, lead in water, and indoor air quality surveys.

Mr. Maglietta has performed or managed over 12,000 Phase I and II Environmental Site Assessments, Transaction Screens, Desk Reviews, Database Reviews, and regulatory file reviews for a wide range of properties for the purpose of evaluating site conditions, potential off-site liabilities, and site remediation costs. These services have been performed in order to advise property owners, operators and prospective purchasers of potential and existing environmental concerns. Mr. Maglietta has worked with corporate environmental officers, numerous Wall Street lending institutions, legal counsel, governmental agencies including HUD, SBA, FDIC and state governments, rating agencies, investment companies and real estate brokers to develop strategies for managing properties with environmental concerns.

Relevant Project Experience

Environmental Site Assessments: Mr. Maglietta has conducted ASTM Phase I Environmental Site Assessments, Environmental Site Screenings, and soil and groundwater sampling for various clients and has prepared Phase I and Phase II reports for a variety of properties located in the United States, Canada, and Mexico. These properties have included industrial, commercial, retail, healthcare, raw land, and multi-family residential properties. Mr. Maglietta has provided project management for underground storage tank removals and site characterizations, and has performed sampling for radon, asbestos-containing materials, lead-based paint and lead in water.

Subsurface Investigations: Mr. Maglietta has completed subsurface investigations at retail, commercial and industrial properties. Subsurface investigations have included direct-push sampling methodology, hollow-stem auger methodology, the installation of soil borings and shallow and deep groundwater monitoring wells, and subsequent sampling of soil and groundwater.

RE: File No. 15-1247

Dear Sir/Madam:

STATE OF NEW YORK
DEPARTMENT OF LABOR
DIVISION OF SAFETY AND HEALTH

The attached is a copy of Decision, dated, 9/30/2015, which I have compared with the original filed in this office and which I DO HEREBY CERTIFY to be a correct transcript of the text of the said original.

If you are aggrieved by this decision you may appeal within 60 days from its issuance to the Industrial Board of Appeals as provided by Section 101 of the Labor Law. Your appeal should be addressed to the Industrial Board of Appeals, State Office Building Campus, Building 12, Room 116, Albany, New York, 12240 as prescribed by its Rules and Procedure, a copy of which may be obtained upon request.

WITNESS my hand and the seal of the
NYS Department of Labor, at the City of
Albany, on this day of 9/30/2015.

Edward A. Smith, P.E.
Associate Safety and Health Engineer

Variance Petition

Of

Adelaide Environmental Health Associates, Inc
Petitioner's Agent on Behalf of

Ossining Land, LLC
Petitioner

in re

Premises: Vacant 3-Story Building
34 State Street
Ossining, NY 10562

Interior Friable Debris Cleanup & Various ACM Removal

File No. 15-1247

DECISION

Case(s) 1 - 3

ICR 56

The Petitioner, pursuant to Section 30 of the Labor Law, having filed Petition No. 15-1247 on September 29, 2015 with the Commissioner of Labor for a variance from the provisions of Industrial Code Rule 56 as hereinafter cited on the grounds that there are practical difficulties or unnecessary hardship in carrying out the provisions of said Rule; and the Commissioner of Labor having reviewed the submission of the petitioner dated September 29, 2015; and

Upon considering the merits of the alleged practical difficulties or unnecessary hardship and upon the record herein, the Commissioner of Labor does hereby take the following actions:

Case No. 1	ICR 56-7.10(c)
Case No. 2	ICR 56-7.11(e)

Case No. 3 ICR 56-9.1(b,c)

VARIANCE GRANTED. The Petitioner's proposal for interior cleanup of friable debris in the attic & boiler room and removal of ACM joint compound in the attic, quantities as stated in the attached proposal, at the subject premises in accordance with the attached 12-page stamped copy of the Petitioner's submittal, is accepted; subject to the Conditions noted below:

THE CONDITIONS

1. Full time project monitor shall be on site and responsible for oversight of the abatement contractor during all abatement activities to ensure compliance with ICR 56 as modified by the variance conditions and that no visible emissions are generated.

2. All contaminated non-porous floors, walls, ceilings, fixtures, and movable and fixed objects contaminated with asbestos debris shall be cleaned as part of this cleanup and abatement project. All porous materials and generated waste shall be disposed of as RACM.

3. One layer of 6-mil fire retardant plastic sheeting shall be used as a dropcloth below ACM removal locations. The dropcloth may be limited to beneath the immediate removal locations and the surrounding ten (10) feet.

4. After removal and cleanings are complete and a minimum drying period has elapsed, an authorized and qualified Project Monitor shall determine if the area is dry, the scope of work complete, and the work area free of visible asbestos debris/residue. If the area is determined to be acceptable and the aggressive clearance air sample results meet 56-4.11 clearance criteria, the final dismantling of the site may begin.

5. Usage of this variance is limited to those asbestos removals identified in this variance or as outlined in the Petitioner's proposal.

In addition to the conditions required by the above specific variances, the Petitioner shall also comply with the following general conditions:

GENERAL CONDITIONS

1. A copy of this DECISION and the Petitioner's proposals shall be conspicuously displayed at the entrance to the personal decontamination enclosure.

2. This DECISION shall apply only to the removal of asbestos-containing materials from the aforementioned areas of the subject premises.

3. The Petitioner shall comply with all other applicable provisions of Industrial Code Rule 56-1 through 56-12.

4. The NYS Department of Labor Engineering Service Unit retains full authority to interpret this variance for compliance herewith and for compliance with Labor Law Article 30. Any deviation to the conditions leading to this variance shall render this variance Null and Void pursuant to 12NYCRR 56-12.2. Any questions regarding the conditions supporting the need for this variance and/or regarding compliance hereto must be directed to the Engineering Services Unit for clarification.

5. This DECISION shall terminate on December 30, 2015.

Date: September 30, 2015

Subject: 34 State Street, Ossining, NY SSV

Importance: High

Ravi

Per our phone conversation:

- The buildings are all sharing one footing and are all connected.
- The only two areas to be decontaminated are the attic with the joint compound and the boiler room with the debris.
- The boiler room will be decontaminated in its entirety instead of using a two layer tent.

Re: Petition for Variance, 34 State Street, Ossining, New York – Building Demolition

Question 9 - Reason for Request

Nature of Work: The asbestos work is to be performed at 34 State Street in Ossining, New York. All of the buildings are to be demolished except for the main building that will be renovated. There is significantly damaged, friable asbestos on the interior of two of the buildings that will need to be decontaminated prior to demolition. The spaces are currently vacant and locked out to the public.

Based on the above information and reasoning, we are requesting relief from standard full containment requirements during the removal of the referenced materials. We feel the requested relief is justified and the proposed abatement means and methods outlined in Question 11 (attached) are sufficient to contain any asbestos fibers that may be released during abatement activities and will sufficiently protect the Abatement Workers, Facility Employees/Occupants and the General Public. Specific Relief is requested from the following sections:

Section - Title	Reason / Proposed Plan for Protection w/o literal compliance
56-7.10	Based on the fact that all of the surfaces will need to be decontaminated throughout the work areas we are proposing critical/isolation barriers only.
56-7.11(e)	There will not be a full containment as containments shall be critical/isolation barriers only.
56-9.1(b)&(c)	In as much as there will be only isolation/critical barriers constructed we are requesting relief from 1st and 2nd cleaning and propose only one final cleaning and visual inspection. Wait times will be per 56-9.1(f).

Proposed means and methods for abatement operations are present in Question 11.

Re: Petition for Variance, 34 State Street, Ossining, New York – Building Demolition

Question 10 – Hardship Description

Nature of Work: The asbestos work is to be performed at 34 State Street in Ossining, New York. All of the buildings are to be demolished except for the main building that will be renovated. There is significantly damaged, friable asbestos on the interior of two of the buildings that will need to be decontaminated prior to demolition. The spaces are currently vacant and locked out to the public.

In addition, the facility needs to clean up the debris to prevent further spread of the asbestos.

Albany, NY 12240

September 29, 2015

Re: Petition for Variance, 34 State Street, Ossining, New York – Building Demolition

Question 11 - Proposed Methods

As stated in Question 9, the asbestos containing materials to be affected as a part of the building demolition and renovation project at 34 State Street in Ossining, New York are roofing materials, pin mastic, duct cover, floor tile, debris, joint compound, mudded fittings, transite siding and caulk. We propose the following work methods be utilized during removal operations in the specified areas:

The following materials and associated quantities are to be included in the abatement:

- Roofing Materials: Approximately 14,600 square feet.
- Joint Compound: Approximately 2,500 square feet
- Pin Mastic: Approximately 600 square feet
- Duct Cover: Approximately 600 square feet
- Floor Tile: Approximately 1,200 square feet
- Debris: Approximately 25 square feet
- Mudded Fittings: Approximately 26 fittings
- Transite: Approximately 16,000 square feet
- Caulk: Approximately 1,700 linear feet

- The building is currently vacant and will remain so during all abatement operations.

- Signage shall be in accordance with 12NYCRR Part 56 utilizing asbestos barrier tape and signs.

- A personal and waste decontamination unit setup which complies with ICR 56-7 shall be constructed and be attached or remote to the work area depending on the removal taking place and the size of the removal. The unit(s) will be fully sheathed and lockable and shall remain operational until satisfactory final clearance air sample results are achieved.

- The roofing materials, pin mastic, duct cover, floor tile, mudded fittings, transite and caulk will all be removed using the standard procedures in NYS Code Rule 56. One debris area is less than ten square feet and will be decontaminated as per NYS Code Rule 56.

- There are two debris locations with the specifics described below:
  - The asbestos joint compound is located in the attic of one of the buildings to be demolished and has been damaged over the years with debris now on the floor. This area will have an attached large personal and waste decontamination unit. Critical barriers will be installed on all openings with the work area.
  - The small project debris located in a boiler room will have a ~~tent constructed~~ and an attached small project decontamination unit. ~~A two layer tent will be constructed around the work area~~.

- With the containment constructed, negative air will be established within the work area creating at a minimum, eight (8) air changes per hour and -.02" W.C. minimum. Once the containment is constructed and negative air established, a 4-hour pre-abatement settling period will be observed.

- Following the 4-hour pre-abatement settling period and a pre-abatement inspection by the Project Monitor to verify work area integrity, removal operations will commence.

- All debris and contaminated movable objects within the area will be decontaminated and/or removed as asbestos. The asbestos joint compound will be removed using wet methods and a drop cloth underneath. All cleanable surfaces will be wet wiped and/or HEPA vacuumed. Any non cleanable surfaces will be disposed of as asbestos containing material.

- Upon completion of removal and cleaning operations an eight hour waiting/drying period shall be observed. After the waiting/drying period a final visual inspection will be performed by the project monitor. Following this visual clearance, if it passes, the aggressive clearance final air sampling will begin. If the final visual clearance does not pass, another cleaning will commence along with another eight hour waiting/drying period.

- All containments and/or critical/isolation barriers shall remain in place until satisfactory clearance air sample results are achieved.

- All waste will be double-bagged, labeled, and moved from the work area to the waste decontamination unit and finally to a lined dumpster.

We request that this variance expire on ~~9/30/15 or upon the projects completion, whichever comes first.~~ 12/30/15. 9/30/15

Utilizing the proposed methods would in no way compromise the security or safety of the General Public, Facility Employees/Occupants, or any workers involved with the project, and would also allow the timely completion of the abatement operations.

If you have any questions or require any additional information, please feel free to contact Jason Fullum of Adelaide Environmental Health Associates at (845) 278-7710.

1.0 BACKGROUND/PURPOSE

Adelaide Environmental Health Associates, Inc. (Adelaide) was retained by Ossining Land, LLC to perform a demolition asbestos, lead based paint and PCB survey at 34 State Street in Ossining, New York. This survey was based on the scope to renovate the original building and demolish the surrounding buildings in preparation for the upcoming project. The inspection was performed on August 12th, 13th, 27th and September 2nd, 2015 by Adelaide representatives Jason Fullum, David Seddon, Robert See and Jimmie Downes (NYS Asbestos Inspector/ EPA Risk Assessor/Inspectors).

2.0 EXECUTIVE SUMMARY OF INSPECTION RESULTS

Following the scope of work that was given to us, Adelaide inspected all of the buildings on the interior and exterior. Adelaide collected two hundred and seventy three (273) asbestos samples, three hundred eighty five (385) XRF readings and three (3) PCB samples from the above mentioned areas. Nineteen (19) samples/homogenous areas tested positive for asbestos, fifty three (53) XRF readings tested positive for lead based paint and zero (0) PCB samples tested positive..

All painted surfaces in the main building are considered to be positive for lead based paint.

2.1 SUMMARY OF ASBESTOS CONTAINING MATERIALS

Sample #	Material Sampled	Approximate Quantity	Condition	Areas Affected
7	Vent Pipe Tar	40 SF	Damaged	Roof B, M, N and R Vent Pipes and Exhaust Units
11	Exhaust Unit Pin Mastic	600SF	Damaged	Roof B
13	HVAC Curb Roof Material	300 SF	Damaged	Roof B
15	Flashing Tar	700 SF	Damaged	Roof B
17	Pitch Pocket Tar	6SF	Damaged	Roof B
19	HVAC Duct Cover	600SF	Damaged	Roof B
24	Bottom Layer on Wood	2,000SF	Damaged	Roof G,H,L,K,P,Q and R
26	Flashing Tar	20SF	Damaged	Roof G
28	Tar at Gutter	800SF	Sig. Damaged	Roof A and C Gutters Roof A Chimneys, Raised Roof Sections and Interior of Building C

36	Vapor Barrier on Metal	4,500SF	Sig. Damaged	Roof A and C
44	9x9 Gray Floor Tile	1,200SF	Damaged	Building A – 4th Floor Building B and C Stairwells
113	Rope Gasket Debris	20 SF	Sig. Damaged	Building A – Basement Boiler Room
131	Bottom Layer of Roofing	6,000SF	Damaged	Roofs E,F,I,M,N and J
178	Joint Compound	2,500SF	Sig. Damaged	Building C Attic (Joint Compound Debris on Floor – Decontamination required for this area see Appendix F)
193	Mudded Fittings	26 Fittings	Damaged	Building B Storage Room and Stairwell Closet
196	Debris on Floor	4SF	Sig. Damaged	Building C – Boiler Room
231	Transite Barrier	16,000 SF	Damaged	Building B
233	Old White Caulk at Transite and Windows	1,700 LF	Sig. Damaged	Building A and B Exterior Windows
239	Tar at Parapet Wall	250SF	Sig. Damaged	Roof M and N

2.2 SUMMARY OF LEAD BASED PAINT

Sample #	Sample Location	Material Sampled	Reading (mg/cm2)
28	Building A 1st floor right of foyer	Colum – White - Brick	19.50
29	Building A 1st floor right of foyer	Colum – White - Brick	2.70

2.3 SUMMARY OF PCB'S

Sample #	*Sample Location*	*Material Sampled*	*Reading (mg/Kg)*
No Positive Samples			

2.4 NEGATIVE MATERIALS LIST:

Building A

- 9x9 Floor Mastic
- Linoleum and Vapor Barrier
- Brown Wall Mastic
- Electrical Wire Insulation
- 12x12 Brown Mottled Floor Tile and Mastic
- 12x12 White Floor Tile and Mastic
- 12x12 Gray Floor Tile and Mastic
- White Insulation Debris
- 4 Inch Covebase and Mastic
- Plaster Wall – Top and Base Coats
- Plaster Ceiling – Textured Coat, Top and Base Coats
- White Firebrick and Mortar
- Red Firebrick
- 4x4 Ceramic Tile Adhesive and Grout
- Millboard Wall
- Epoxy Floor Yellow and Gray Coating
- 2x2 Ceiling Tile
- Popcorn Texture on Drywall Ceiling
- Drywall and Joint Compound

Building B

- Roof Vapor Barrier at Wood
- Exhaust Unit Vibration Cloth
- Red Ceramic Vinyl Tile
- 12x12 Stick On Tile with Flowers

- 12x12 Stick On Tile – Gray
- Yellow Carpet Mastic
- Gray Linoleum Floor and Adhesive
- Window Glazing Compound
- Green Caulk at Transite
- Asphalt Siding
- Fiberglass Pipe Insulation Wrap
- Wallpaper
- Ceramic Tile Grout and Mudset
- 1x1 Spline Ceiling Tile
- 2x2 Ceiling Tile
- 2x4 Ceiling Tile
- Millboard Wall and Adhesive
- Newer Caulk at Transite
- Stone Ballast Roof Layers
- Joint Compound

Building C

- Green Roofing under Metal Roof
- Window Glazing Compound
- Insulation at Door Header
- Exterior Caulk at Louver
- Surface Coat on Brick
- Popcorn Texture on Drywall
- Popcorn Texture on Plaster
- Popcorn Ceiling Coat
- Carpet Mastic
- Blown In Insulation
- Paper From Batt Insulation
- Ceramic Tile Grout and Adhesive
- Drywall Brown
- Drywall White
- Boiler Section Sealant
- Exterior Plaster
- Parge Coat on Exterior
- Tar on Fiberglass
- Joint Compound on the First thru Second Floors and Basement

Building E

- CMU and Mortar
- Stone Mortar
- Concrete

Roof D

- Roof Shingles and Vapor Barrier
- Tar Paper at Exhaust Vents

Roof J

- Top Layer Rolled Roof
- Asphalt Layer Rolled Roof

Roof E

- Top Layer Rolled Roof
- Brown Board Layer
- Asphalt Layer Rolled Roof

Roof N

- Tar at Edge of Roof

Roof M

- Coping Stone Mortar

Roof O

- All Roofing Layers

3.0 ASBESTOS FIELD PROCEDURES AND ANALYSIS METHODOLOGY

3.1 INSPECTION

Guidelines used for the inspection were established by the U.S. Environmental Protection Agency (EPA) in the Guidance for Controlling Asbestos Containing Materials in Buildings, Office of Pesticides and Toxic Substances, DOC# 560/5-85-024 and 40 CFR Part 763, Asbestos Hazard Emergency Response Act (AHERA). Field information was organized as per the AHERA concept of a homogeneous area (HA); that is, suspect Asbestos Containing Materials (ACM) with similar age, appearance, and texture were grouped together, sampled and assessed for condition.

For the purposes of this inspection, suspect ACM has been placed in three material categories: thermal, surfacing, and miscellaneous.

Surfacing materials are those that are sprayed on, troweled on or otherwise applied to surfaces for fireproofing, acoustical, or decorative purposes (e.g., wall and ceiling plaster).

Thermal materials are those applied to heat pipes or other structural components to prevent heat loss or gain or prevent water condensation (e.g., pipe and fitting insulation, duct insulation, boiler flue).

APPENDIX H

TERMINOLOGY

TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E 1527-13. The Standard Practice should be referenced for further detail related definitions or additional explanation regarding the meaning of terms.

Recognized environmental condition (REC): The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment, 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

De minimis conditions: Conditions that generally do not present threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions or controlled recognized conditions.

Historical recognized environmental condition(s) (HREC): A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time of the Phase I ESA, the condition shall be included in the conclusions section of the report as a recognized environmental condition,

Controlled recognized environmental condition(s) (CREC): A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report. NOTE: A condition identified as a controlled recognized environmental condition does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

Material threat: A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Material impact to public health or environment: A substantial risk of harm to public health or the environment resulting from the presence or likely presence of an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. An example might include a release of a hazardous substance in concentrations exceeding applicable governmental agency standards under conditions that could reasonably and foreseeably result in substantial exposure to humans or

substantial damage to natural resources. The risk of that exposure or damage would represent a material impact to public health or environment.

General risk of enforcement action: The likelihood that an environmental condition would be subject to enforcement action if brought to the attention of appropriate governmental agencies. If the circumstances suggest an enforcement action would be more likely than not, then the condition is considered a general risk of enforcement action.

Data failure: A failure to achieve the historical research objectives, even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

Data gap: A lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

1.0 INTRODUCTION

SESI Consulting Engineers (SESI), on behalf of the Requestor WB State Street, LLC, has completed our Phase II Investigation for the referenced Subject Property located at 34 State Street, Ossining, Westchester County, New York. It should be noted that this Phase II Environmental Site Assessment (ESA) Report has been developed to support your due diligence and a future brownfield cleanup application for entry into the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP). The results of our investigation are provided herein.

1.1 SUBJECT PROPERTY SETTING

The Subject Property consists of an approximately 5.858 -acre parcel located at 34 State Street in Ossining, Westchester County, New York (Subject Property). The Subject Property was identified on local tax map records as Block 2, Lots 17,18 and 68. The property is currently developed with an asphalt lot, former building footprints, demolition debris, one (1) large three (3) story residential historic house building, one (1) shed and wooded areas. The Subject Property is bound to the north by a day care center, to the south by James Street and residences beyond, to the west by Hunter Street and residences beyond, and to the east by State Street and residential/commercial uses. The nearest surface water body is the Hudson River located approximately 760 feet west and significantly downgradient of the Subject Property. A Subject Property Location Map is provided as **Figure 1.1**. A Subject Property Plan is included as **Figure 1.2**.

The historic residential house building was erected in approximately 1840 as residential estate known as the Smith Robinson estate; two (2) additions were built in 1929 to add on a community center use; and from 1940 to 1981 the Subject Property operated as the Printex Corporation of America as a clothing printing and textile design facility. Another additional building was constructed in 1968 for the company. A wastewater lagoon was also identified associated with the historic property operations of the Printex Corporation of America at the southeast. This lagoon was reported used for wastewater treatment/management by Printex, according to the Westchester County DOH and per SESI's June 2025 Phase I ESA further discussed. From the 1980's to 2006 the facility was utilized by Hudson River Inlay, Inc. a woodworking company. This company utilized underground storage tanks that they closed in place or removed over time.

1.2 PROPOSED DEVELOPMENT

The proposed Subject Property redevelopment is anticipated to consist of two (2) primarily residential buildings one for 100 affordable housing units and the other for 50 market rate apartments

with commercial components on the ground floor. There will also be a public park created on the property in roughly the same area as the first historic segregated African American park. Formal Site Plans are anticipated to be developed during the design phase of the project.

1.3 SUBJECT PROPERTY GEOLOGY

As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Subject Property are characterized as Uf (Urban Land) with the sloped area to the west containing CsD (Chatfield-Charlton complex), which is classified as containing 15 to 35 percent slopes and is noted as very rocky. Groundwater was not encountered at the Subject Property. The 2025 Phase II investigation did not encounter groundwater to a depth of 25 ft bgs on the eastern, higher elevation, portion of the Subject Property. The groundwater flow direction is expected to be in the west direction following topography towards the Hudson River.

1.4 PREVIOUS INVESTIGATIONS

The following environmental reports were prepared for the Subject Property and are summarized in the following sections:

- Phase I ESA, 34 State Street, Ossining, NY, prepared by Team Environmental Consultants, Inc, date unknown
- Phase II ESA, 34 State Street, Ossining, NY, prepared by DT Consulting Services, dated May 31, 2005
- Phase I ESA, 34 State Street, 17-25 James Street & Hunter Street (Lots 17, 18 and 68), Ossining, NY, prepared by EBI Consulting, dated January 18, 2016
- Phase I Environmental Site Assessment, 34 State Street, Ossining, NY, prepared by SESI Consulting Engineers (SESI), dated June 2025

The reports are further summarized below:

1.4.1 PHASE I ESA, TEAM ENVIRONMENTAL CONSULTANTS, INC

The following is a summary review of the reports referenced in this Phase I as well as the conclusions therein:

- Phase I ESA, January 21, 1994, prepared by Dames & More
    - Closed in place 10,000-gallon underground storage tank (UST) at the western portion of the property. Backfilled and covered with concrete.

        - Noted that a previous Phase II by SSI advanced soil samples and identified total petroleum hydrocarbon (TPH) concentrations at 30-114 parts per million (ppm).
    - Closed in place two (2) other USTs after a GPR sweep (1,000 and 3,000-gallon USTs with oil/water mix).
        - Centerline samples noted to be collected and reportedly did not indicate TPH.
    - Waste treatment lagoon at the southeast was noted not to adversely impact the quality of the property.
- Phase I ESA, May 7, 2003, prepared by EES
    - Recommended asbestos containing material (ACM) survey
    - Recommended identifying tanks, concrete storage lagoons and garage area in a Phase II
- Phase II ESA, May 16, 2003, prepared by EES
    - Nine (9) soil borings within the western area of the 10,000-gallon UST and storage garage areas
    - No samples were collected for laboratory analysis. Just screened with a photoionization detector (PID) and did not identify observable contamination.

No further investigations were recommended.

1.4.2 PHASE II ESA, DT CONSULTING SERVICES, MAY 31, 2005

The following is a summary review of this Phase II ESA as well as the conclusions therein:

- History: Original building erected in 1840 as residential; 2 additions built in 1929 as a community center; 1940-1981 it was the Printex Corporation of America as a clothing printing and textile design facility. Another additional building constructed in 1968.
- Site is identified in CERCLIS and PBS
    - Known PBS in the north; three (3) USTs identified on figure
    - Waste treatment lagoon in the southeast corner
    - General equipment and storage at the west
- 7 soil borings
    - Advanced eight (8) to 12 ft feet below ground surface (bgs)
    - Characterization: light brown sandy loam (fill) with traces of gravel - approximately 0 to four (4) feet bgs, underlain by fine-medium sand with clay and schist fragments.
    - Bedrock encountered between eight (8) and nine (9) feet bgs
    - Groundwater not encountered

- No visual or olfactory or PID observations/ readings

- Seven (7) borings were composited to form only three (3) sample sets
    - Volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), Metals; Detections of low levels
- Determined no further investigation based on the results

1.4.3 PHASE I ESA, EBI CONSULTING, JANUARY 18, 2016

The following is a summary review of this Phase I ESA as well as the conclusions therein:

- REC - USTs:
    - The USTs documented by Creative Design [a/k/a/ Hudson River Inlay Inc.], a former Tenant are as follows:
        - 1x 10,000-gallon UST, closed in place on September 1, 1986.
        - 1x 1,000-gallon UST, removed on December 1, 2003.
        - 1x 3,000-gallon UST, removed on December 1, 2003.
        - No leaking underground storage tank (LUST) releases were reported. However, no closure reports were identified.
        - Identifying closure documents in a record review or a Phase II were recommended.
- ACM:
    - EBI conducted a preliminary screening of ACM in the building and identified some suspect ACM. This is out of scope of the Phase I ASTM, and is not considered a REC; however, a full ACM survey was recommended.

1.4.4 PHASE I ESA, SESI CONSULTING ENGINEERS, JUNE 2025

The Phase I ESAs prepared by SESI identified the following Recognized Environmental Conditions (RECs) and Business Environmental Risks (BERs) for the subject property:

- **REC 1 – Subject Property Historic Operations:** The original historic house estate building was erected in 1840 as residential estate; two (2) additions were built in 1929 as a community center; and in 1940-1981 the footprints of the buildings were expanded to accommodate the Printex Corporation of America, which operated as a scarf printing and textile design facility. Another addition was constructed in 1968. The facility utilized a wastewater treatment lagoon at the southeast. The presence of the lagoon led to the listing of the property as a State Superfund program (Site ID No. 360002). However, the property was classified as a Class N

No further action site based on comments from the Westchester County Department of Health (WC DOH) which indicated the lagoons were used for on-site wastewater treatment and not hazardous waste disposal associated with the former Printex operations. Furthermore, there were some laundry operations at the center of the Subject Property circa 1911. Finaly the Hudson River Inlay woodworking company utilized USTs, and its woodworking operation from approximately 1980s to 2006 also could have resulted in contamination. **Based on this history observed from the Sanborn maps and previous reports, the historic operations from the textile, woodworking and laundry facilities may have adversely impacted the Subject Property and warrant further investigation.**

- **REC 2 – Underground Storage Tanks:** The following USTs were identified to be either closed in place or removed: 1x 10,000-gallon UST, closed in place on September 1, 1986; 1x 1,000-gallon UST, removed or closed in place on December 1, 2003; and 1x 3,000-gallon UST, removed or closed in place on December 1, 2003. No leaking underground storage tank (LUST) releases were reported. **However, no closure reports were identified. Identifying closure documents in a record review or a Phase II is recommended.**

- **REC 3 – Historic Fill:** Historic fill has reportedly been identified at the Subject Property during geotechnical and environmental investigations. **Additional subsurface soil sampling is recommended to characterize fill material should special handling and/or disposal of disturbed soil be required during Subject Property redevelopment.**

The following BERs have been identified:

- **BER 1 – Historic Land Use:** The historic 2006 aerial imagery identified clearing of vegetation on Lot 68; however, this vegetation returned in 2011 per the next available aerial. It was unclear if this area had been regraded or there were former operations on this lot that may have adversely impacted the Subject Property. **Further investigation is recommended into the use of Lot 68 and the reasoning for clearing. Additional soil investigation is recommended to determine if historic fill is present.**

- **BER 2 – Aboveground Storage Tank (AST):** SESI identified one (1) yellow steel aboveground storage tank adjacent to several unused items at the southwest of Lot 17. This tank appeared to not be in use and was intact, with no evidence of staining. **Therefore, no further investigation is warranted; however, proper disposal of this AST is recommended. No closure documentation is required.**

- **BER 3 – Drum:** There was one (1) plastic 55-gallon tote identified to the south of the northern shed. This tote appeared to contain soil and was unlabeled. No staining was visible around the tote and it appeared to be in good condition. **Therefore, SESI recommends proper removal/disposal of this tote.**

- **BER 4 – Stockpiles:** There were several stockpiles of building materials scattered throughout the Subject Property, around building footprints, and on the periphery of the vegetated area of Lot 68. These stockpiles were not observed to have exhibited petroleum impacts. **Therefore, SESI recommends the proper testing and disposal of these demolition debris prior to or during redevelopment.**

- **BER 5 – Hazardous Building Materials:** An asbestos containing material (ACM), lead-based paint (LBP), polychlorinated biphenyl (PCB) caulk and universal waste survey was not conducted as part of this Phase I Environmental Site Assessment. Based on the age of the structures located on the Subject Property, the presence of these materials cannot be ruled out. **Therefore, a comprehensive hazardous material survey is recommended prior to demolition or redevelopment.**

2.0 SUBSURFACE INVESTIGATION

SESI conducted a Phase II ESA to evaluate subsurface conditions. The investigation included ground penetrating radar (GPR) surveys, advancement of soil borings and collection of soil samples, installation of a temporary wellpoint, and installation and sampling of soil vapor points. The investigation was conducted between January and March 2025.

In total, 51 soil samples were collected from 51 soil borings advanced to a maximum depth of 17 ft bgs; one (1) temporary well was installed to 25 ft bgs but no (0) groundwater samples were collected because groundwater was not encountered at this depth; two (2) sub-slab and two (2) soil vapor points with a total of four (4) soil vapor samples and one (1) indoor air sample collected. The sampling locations are depicted on **Figure 2.1**. The subsurface investigation is further discussed in the following sections.

2.1 UTILITY CLEARANCE AND GEOPHYSICAL SURVEY

Prior to conducting subsurface drilling for the investigation, SESI's drilling contractor, PG Environmental, contacted the New York One Call utility mark-out system. In addition, SESI retained PG Environmental to perform a geophysical survey using GPR and electromagnetic detection equipment to clear proposed sample locations and identify and subsurface anomalies representative of USTs. The GPR survey identified one (1) subsurface anomaly near a known historic tank field, however, was inhibited in this area due to the amount of building debris interfering with the equipment.

2.2 SOIL INVESTIGATION

A total of 51 soil borings were advanced throughout the Subject Property using direct push drilling techniques to a maximum depth of 17 ft-bgs. The recovered soil cores from the borings were field screened with a PID and observed for visual and olfactory indications of contamination. PID readings were generally below 1.0 parts per million (ppm); however, strong chemical odors were found at SB-206 and contained elevated PID readings at from 0-8 ft-bgs and 16-381 ppm. Historic fill generally consisted of brown coarse to fine sand, coarse to fine gravel, with brick, concrete and organics. The historic fill materials were encountered to a maximum of 17 ft-bgs with many borings encountering refusal at bedrock.

Table 2.1 below presents a list of the borings, sample IDs, boring depth, sample date and analysis completed. The soil boring logs are presented in **Appendix A**. A total of 51 soil samples were collected from the borings and submitted under proper chain of custody (COC) to Pace Analytical

Laboratories and SGS Galson, New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratories. All soil samples were collected as discrete grab samples.

Table 2.1 – Soil Boring Summary Table

Boring ID	Sample ID	Sample Date	Sample Depth (ft bgs)	Analysis
EB-01	EB-01 (2-2.5)	4/23/2025	2.0-2.5	TCL+30/TAL
EB-02	EB-02 (3-3.5)	4/23/2025	3.0-3.5	TCL+30/TAL

2.2.1 SOIL ANALYTICAL RESULTS

A total of 51 subsurface soil samples were collected during the investigation to evaluate the potential impacts from former Subject Property uses. The soil samples were submitted to Pace Analytical Laboratory and SGS Galson for analysis of the Target Compound List (TCL) plus thirty (30) tentatively identified compounds (TICs)/Target Analyte List (TAL) suite, which includes VOCs, SVOCs, PCBs, TAL metals, pesticides, and cyanide.

A summary table of the analytical results compared to NYSDEC Unrestricted Soil Cleanup Objectives (USCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs), is presented in the attached **Table 2.2**. The laboratory analytical reports are provided in **Appendix B**. The following **Table 2.3** presents a summary of NYSDEC SCO exceedances. The soil sampling results are shown on **Figure 2.2**.

Notes

Exceedance of NY SCO - Unrestricted Use (6 NYCRR 375-6 12/06) >=

Exceedance of NY SCO - Restricted Residential w/CP-51 (10/10) (6 NYCRR 375-6 12/06) >=

a = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

b = Associated CCV outside of control limits high, sample was ND.

c = Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.

d = More than 40 % RPD for detected concentrations between the two GC columns.

e = Elevated detection limit due to dilution required for high interfering element.

f = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40% RPD for detected concentrations between the two GC columns.

g = This compound in blank spike is outside in house QC limits bias high.

J = Estimated

ND = Not Detected

A total of nine (9) borings exhibited exceedances of the RRSCOs for polycyclic aromatic hydrocarbons (PAHs), metals and/or PCBs. Other borings exhibited exceedances of the USCOs for VOCs, SVOCs, Metals, PCBs and Pesticides.

2.3 GROUNDWATER INVESTIGATION

Groundwater boreholes were advanced to bedrock which was encountered at 10 ft-bgs or shallower within the former building's footprint adjacent to the existing building as well as farther to the east near the shed. No overburden groundwater was detected. SESI then further advanced the borehole near the building and identified weathered bedrock from 10-15 ft-bgs and competent bedrock from 15-25 ft-bgs. After purging the well and allowing for a couple days of recharge, no groundwater was encountered at this temporary well. Therefore, no groundwater sampling was completed as part of this investigation.

2.4 SOIL VAPOR INVESTIGATION

2.4.1 SOIL VAPOR ANALYTICAL RESULTS

A total of two (2) soil vapor, two (2) sub-slab soil vapor and one (1) indoor air sample were collected from the exterior during the investigation and submitted to Pace Analytical Laboratories and SGS Galson for analysis of VOCs in accordance with United States Environmental Protection Agency (USEPA) Method TO-15.

A summary table of the analytical results is presented in the attached **Table 2.4**. The laboratory analytical reports are provided in **Appendix B**. The following **Table 2.5** presents a summary of NYSDOH Decision Matrices. The soil vapor sampling locations and results are shown on **Figure 2.3**.

A total of 33 VOCs were detected in the vapor samples. Based on a comparison of the soil vapor results to the NYSDOH Soil Vapor/Indoor Air Matrices, the elevated concentration of Carbon tetrachloride in the indoor air is not raised to a level of action and is likely due to an interior interferant. However, due to the former uses of the property, it is recommended that a more detailed investigation be completed prior to redevelopment to then determine the need for mitigation following redevelopment.

3.0 CONCLUSIONS AND RECOMMENDATIONS

Between January and April 2025, SESI performed sampling of soil and soil vapor at the subject property. The investigation activities completed by SESI confirmed the presence of PAHs, metals and PCBs above the RRSCOS and VOCs, SVOCs, metals, PCBs and pesticides were found to exceed the USCOs in soil/historic fill. The levels of PAHs in soils are the result of the historic site uses and the possible UST discharges. The PCB exceedances are likely the results of the historic industrial uses at the Subject Property. The Subject Property also has several abandoned-in-place USTs that must be addressed. Additionally, elevated VOC concentrations in soil vapor may require mitigation following redevelopment.

Based on the results and due to the future residential use on the subject property, remediation will be required at the subject property. The Subject Property will require further delineation to quantify the volume of soil and soil vapor that will require remediation to address the exceedances in soil and soil vapor. Groundwater investigation is needed with deeper vertical delineation into bedrock to determine any impacts to the groundwater from the Site historic uses.

Notes

Exceedance of NY SCO - Unrestricted Use (6 NYCRR 375-6 12/06) >=

Exceedance of NY SCO - Restricted Residential w/CP-51 (10/10) (6 NYCRR 375-6 12/06) >=

a = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

b = Associated CCV outside of control limits high, sample was ND.

c = Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.

d = More than 40 % RPD for detected concentrations between the two GC columns.

e = Elevated detection limit due to dilution required for high interfering element.

f = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40% RPD for detected concentrations between the two GC columns.

g = This compound in blank spike is outside in house QC limits bias high.

J = Estimated

ND = Not Detected

Notes

NY-RESRR: New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 14, 2006.

NY-UNRES: New York NYCRR Part 375 New York Unrestricted use Criteria Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 14, 2006.

Exceedance of NY SCO - Unrestricted Use (6 NYCRR 375-6 12/06) >=

Exceedance of NY SCO - Restricted Residential w/CP-51 (10/10) (6 NYCRR 375-6 12/06) >=

a = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

d = More than 40 % RPD for detected concentrations between the two GC columns.

e = Elevated detection limit due to dilution required for high interfering element.

J = Etimated

I = The lower value for the two columns has been reported due to obvious interference.

P = The RPD between the results for the two columns exceeds the method-specified criteria.

NY-UNRES: New York NYCRR Part 375 New York Unrestricted use Criteria Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 14, 2006.

Exceedance of NY SCO - Unrestricted Use (6 NYCRR 375-6 12/06) >=

Exceedance of NY SCO - Restricted Residential w/CP-51 (10/10) (6 NYCRR 375-6.12/06) >=

a = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
d = More than 40 % RPD for detected concentrations between the two GC columns.
e = Elevated detection limit due to dilution required for high interfering element.
J = Estimated
l = The lower value for the two columns has been reported due to obvious interference.
P = The RPD between the results for the two columns exceeds the method-specified criteria.

a = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.

b = Associated CCV outside of control limits high, sample was ND.

c = Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.

d = More than 40 % RPD for detected concentrations between the two GC columns.

e = Elevated detection limit due to dilution required for high interfering element.

f = Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only. More than 40% RPD for detected concentrations between the two GC columns.

g = This compound in blank spike is outside in house QC limits bias high.

PROJECT NAME Proposed Development Due Diligence
PROJECT NO. 13968
DATE STARTED 01-30-2025 **COMPLETED** 01-30-2025
DRILLING CONTRACTOR PG Environmental
SAMPLER Direct Push
EQUIPMENT
DRILLING FOREMAN Oscar **HELPER**
LOGGED BY R. Reynoso **CHECKED BY** C. Malvicini
LATITUDE **LONGITUDE**

PROJECT LOCATION 34 State Street, Ossining, NY
ELEVATION DATUM **GROUND ELEVATION** 182.0±
DRILLING METHOD Direct Push
SAMPLE HAMMER
AUGER INNER DIAMETER **OUTER DIAMETER**
ROTARY BIT DIAMETER **DEPTH TO GROUNDWATER:**
CASING DIAMETER ▽ **AT TIME OF DRILLING**
CASING DEPTH ▼ **AT END OF DRILLING**
FINAL DEPTH 12.0± ft ▼ **AFTER DRILLING**

Material Symbol	EL (ft)	Sample Description	Depth (ft)	Sleeve Number	Sample Data: Type	Rec. (in)	Moisture	Environmental Soil Sample Name	Blows/6-in Core time/ft	PID (ppm)	Remarks
		Dark brown to brown medium to fine SAND, little Silt, trace fine Gravel, with Organics		1		16	Moist			0.0 0.0 0.0 0.0	No visual impacts. No odor.

Automated Report

Technical Report for

SESI Consulting Engineers

Ossining Investigation, 34 State Street, Ossining, NY 13968

SGS Job Number: JE4905

Sampling Date: 01/30/25

Report to:

FD@sesi.org
james.vandervliet@sesi.org
chris.malvicini@sesi.org

ATTN: Distribution4

Total number of pages in report: **112**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable unless noted in the narrative, comments or footnotes.

Olga Azarian
Technical Director

(a) Associated CCV outside of control limits high, sample was ND.
(b) Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.

ND = Not detected MDL = Method Detection Limit
RL = Reporting Limit
E = Indicates value exceeds calibration range
J = Indicates an estimated value
B = Indicates analyte found in associated method blank
N = Indicates presumptive evidence of a compound

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	SESI Consulting Engineers	**Job No:**	JE5018
Site:	Ossining Investigation, 34 State Street, Ossining, NY	**Report Date**	2/6/2025 12:04:05 PM

On 01/31/2025, 4 sample(s), 0 Trip Blank(s), 0 Equip. Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. An SGS Job Number of JE5018 was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method TO-15

Matrix: AIR **Batch ID:** V5W2168

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE4785-5DUP were used as the QC samples indicated.
- JE5018-4 for Naphthalene: This compound in blank spike is outside in house QC limits bias high.
- V5W2168-BS for Naphthalene: High percent recovery and no associated positive reported in the QC batch.

Matrix: AIR **Batch ID:** V7W440

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE5018-1DUP were used as the QC samples indicated.
- The duplicate RPD(s) for Styrene are outside control limits for sample JE5018-1DUP. RPD acceptable due to low DUP and sample concentrations.
- JE5018-1DUP for Isopropyl Alcohol: Outside in house control limits.

SGS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting SGS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by SGS indicated via signature on the report cover.

QC Data Summaries

Includes the following where applicable:

- Method Blank Summaries
- Blank Spike Summaries
- Matrix Spike and Duplicate Summaries
- Instrument Performance Checks (BFB)
- Internal Standard Area Summaries
- Initial Calibration RT/ISTD Area Summaries
- Surrogate Recovery Summaries
- Initial and Continuing Calibration Summaries
- Run Sequence Reports

Manual Integration Approval Summary

Sample Number: V7W405-IC405
Lab FileID: 7W11235.D
Injection Time: 12/28/24 10:32
Method: TO-15
Analyst approved: 12/30/24 00:11 Kanya Veerawat
Supervisor approved: 12/30/24 00:15 Kanya Veerawat

Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethanol	64-17-5		1.98	Poor instrument integration
Acetonitrile	75-05-8		2.03	Poor instrument integration
Acetone (2-Propanone)	67-64-1		2.12	Poor instrument integration
TVHC As Equiv Pentane			2.27	Missed peak
Tertiary Butyl Alcohol	75-65-0		2.43	Missed peak
1,4-Dioxane	123-91-1		5.23	Poor instrument integration

Batch ID: **V5W2144**
Date: **1/8/2025**
Laboratory Analyst: **Thomas Hilbig**
Columns: Rtx-1 (60m x 0.32mm x 1.0um)
GCMS Method: 5WTO15.M
Sequence File: 5W20250108.S
Initial Calibration Method: M5W2144.M
Concentrator Method: 5WTO15C.CTD3
Data Validator(s): **Thomas Hilbig**

Manually integrated chromatographic peaks in the following reportable files have been reviewed and verified to comply with the criteria of SGS SOP EQA044.

ALS	Sample ID	Data File ID	MS Code	TEST CODE		Canister SN	Injection Volume (cc)	Dilution	TICS	Areas IS	Areas SS	STATUS		COMMENTS	

Definition: Final Canister Dilution Factor (DF) = (Original Canister DF) x (Secondary Canister DF)
Dilution Factor at Instrument = Final Canister Dilution Factor x [Nominal Sampling Volume (cc) / Sample Volume Injected (cc)]

Example: Original Canister is diluted 2x for manual sample draw. 75cc from this canister is added to a 375cc minican and brought to 14.7 psig (750cc equivalent volume). This results in an additional dilution of 750/75 or 10. The final canister dilution factor is 2 x 10 = 20. From the dilution canister, 20cc is injected at the instrument where normal volume is 400cc. This is an additional instrument dilution factor of 20. The final dilution multiplier is 20 (from canister dilution) and 20 (from instrument dilution) = 400.

CANISTER SECONDARY DILUTION LOG

Pressure Gauge ID: TG -		5	Original Canister Dilution				Secondary Canister Dilution						
Date	**Initial**	**Sample ID**	**Canister SN**	**Vacuum at Time of Dilution (inHg)**	**Final Pressure (psig)**	**Dilution Factor**	**Canister SN**	**Canister Volume (cc)**	**Sample Volume Added (cc)**	**Final Pressure (psig)**	**Equivalent Total Volume (cc)**	**Dilution Factor**	**Final Canister Dilution Factor**

Definition: Final Canister Dilution Factor (DF) = (Original Canister DF) x (Secondary Canister DF)
Dilution Factor at Instrument = Final Canister Dilution Factor x [Nominal Sampling Volume (cc) / Sample Volume Injected (cc)]

Example: Original Canister is diluted 2x for manual sample draw. 75cc from this canister is added to a 375cc minican and brought to 14.7 psig (750cc equivalent volume). This results in an additional dilution of 750/75 or 10. The final canister dilution factor is 2 x 10 = 20. From the dilution canister, 20cc is injected at the instrument where normal volume is 400cc. This is an additional instrument dilution factor of 20. The final dilution multiplier is 20 (from canister dilution) and 20 (from instrument dilution) = 400.

Data Validator(s): **Michaella Balido**

Manually integrated chromatographic peaks in the following reportable files have been reviewed and verified to comply with the criteria of SGS SOP EQA044.

ALS	Sample ID	Data File ID	MS Code	TEST CODE		Canister SN	Injection Volume (cc)	Dilution	TICS	Areas IS	Areas SS	STATUS	COMMENTS	

Definition: Final Canister Dilution Factor (DF) = (Original Canister DF) x (Secondary Canister DF)
Dilution Factor at Instrument = Final Canister Dilution Factor x [Nominal Sampling Volume (cc) / Sample Volume Injected (cc)]

Example: Original Canister is diluted 2x for manual sample draw. 75cc from this canister is added to a 375cc minican and brought to 14.7 psig (750cc equivalent volume). This results in an additional dilution of 750/75 or 10. The final canister dilution factor is 2 x 10 = 20. From the dilution canister, 20cc is injected at the instrument where normal volume is 400cc. This is an additional instrument dilution factor of 20. The final dilution multiplier is 20 (from canister dilution) and 20 (from instrument dilution) = 400.

Notes:

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on March 20, 2025. The canister certification data is provided as an addendum.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Project Name:	34 STATE ST	**Lab Number:**	L2516429
Project Number:	13968	**Report Date:**	04/01/25

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

Report Format: Data Usability Report

Project Name:	34 STATE ST	**Lab Number:**	L2516429
Project Number:	13968	**Report Date:**	04/01/25

Data Qualifiers

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Pace Analytical Services performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Pace Analytical Services shall be to re-perform the work at it's own expense. In no event shall Pace Analytical Services be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Pace Analytical Services.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility – 8 Walkup Dr. Westborough, MA 01581
EPA 624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625.1: alpha-Terpineol
EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol, Azobenzene; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility – 320 Forbes Blvd. Mansfield, MA 02048
SM 2540D: TSS.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
MADEP-APH.
Nonpotable Water: EPA RSK-175 Dissolved Gases
Biological Tissue Matrix: EPA 3050B

Mansfield Facility – 120 Forbes Blvd. Mansfield, MA 02048
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Nonpotable Water: EPA RSK-175 Dissolved Gases

The following test method is not included in our New Jersey Secondary NELAP Scope of Accreditation:

Mansfield Facility – 320 Forbes Blvd. Mansfield, MA 02048
Determination of Selected Perfluorinated Alkyl Substances by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry Isotope Dilution (via Alpha SOP 23528)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: 13968 **Lab Number:** L2525183
Project Number: 13968 **Report Date:** 05/06/25

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2525183-08: The internal standard (IS) response(s) for 1,4-dichlorobenzene-d4 (41%) was below the acceptance criteria; however, re-analysis achieved the following results: 1,4-dichlorobenzene-d4 (43%). The results of both analyses are reported.

Semivolatile Organics

L2525183-08D and -09D: The sample has elevated detection limits due to the dilution required by the matrix interferences encountered during the concentration of the sample and the analytical dilution required by the sample matrix.

L2525183-08D and -09D: The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

Total Metals

L2525183-01 through -09: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG2060766-3 MS recoveries performed on L2525183-01 do not apply for aluminum (415%), calcium (0%), iron (1500%), magnesium (288%) and manganese (62%) because the sample concentrations are greater than four times the spike amounts added.

The WG2060766-3 MS recovery performed on L2525183-01 is outside the acceptance criteria for antimony (32%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.
