EXECUTIVE SUMMARY

On behalf City of Yonkers (CoY), Paulus, Sokolowski and Sartor Engineering, PC (PS&S) conducted a Phase II Environmental Site Assessment (Phase II) at the properties located along the west side of Fernbrook Street, between Ludlow Street and the Westchester County Wastewater Treatment Plant (generally known as 70 Fernbrook Street) in Yonkers, Westchester County, New York (herein referred to as the “Site”). The Site is comprised of eight separate tax lots, as detailed in Section 2.1. The Site is also comprised of the historic city street, Pier Street, and some of Yerks Place (Front Street), which are not covered by the 8 properties summarized above and presented in Table 1. The current tenant of the Site is All County Bus, a bus depot facility which is listed in the NY AST database (PBS No. 3-800816). A Site Location Map is included as **Figure 1**.

The purpose of the Phase II is to further investigate conditions identified in the Phase I Environmental Site Assessment (ESA) completed by PS&S on February 28, 2022, as part of the due diligence purposes prior to a potential real estate transaction. On March 7 and 8, 2022, PS&S collected a total of fourteen (14) soil samples, SB-1 through SB-14, in the area comprising the Site. PS&S also collected two (2) groundwater samples, TW-1 and TW-2, corresponding with soil borings SB-7 and SB-11.

The soil boring results identified Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), metals, and Per and Polyfluoroalkyl Substances (PFAS) which were detected at reported concentrations above the laboratory reporting limits (RLs). Soil results were compared to 6 NYCRR Part 375-6.8(b) Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Use Soil Cleanup Objectives (RRSCOs). VOCs, SVOCs, PCBs, and metals were detected at reported concentrations above the UUSCOs; and VOCs, SVOCs, and metals were detected above the RRSCOs.

The groundwater sample results identified VOCs, and SVOCs which were detected at reported concentrations above the laboratory RLs. Groundwater results were compared to Division of Water Technical and Operational Guidance Series No. 1.1.1 Groundwater Effluent Limitations (TOGS-GA). VOCs and SVOCs were detected at reported concentrations above the TOGS-GA standards.

1.0 INTRODUCTION

On behalf of CoY, PS&S prepared this report to document the results of a Phase II Environmental Site Assessment (ESA) completed at the Site in accordance with the PS&S proposal dated February 24, 2022.

The scope of this assessment was based on the findings of a Phase I ESA completed by PS&S in February 2022. The purpose of the Phase II ESA was to investigate recognized environmental conditions (RECs) identified in the Phase I. This report summarizes the Phase II ESA activities conducted by PS&S on March 7, 2022 and March 8, 2022, and includes analytical results summary tables, soil boring logs, and figures presenting soil and groundwater exceedances with respect to applicable standards and recommended values.

2.0 PHYSICAL SITE DESCRIPTION

2.1 Site Description and Surrounding Land Use

The Site is currently operated by All County Bus, a school bus depot, including parking, office space, and maintenance facilities for the buses. The site is paved throughout, except for the rear of the 102 Yerks Place building and the waterfront at Block 615, Lots 1 and 6. The Site is fenced on all sides, except along the Hudson River or where buildings are present. The site is accessible by two secured gates at the northeast corner (Block 622, Lot 8) and east side (Block 615, Lot 10) of the site, facing onto Fernbrook Street. The Site is bound to the north by the Domino Sugar Fleet Maintenance building (Foodliner Terminal), to the west by the Hudson River, to the east by Fernbrook Street, and to the south by the Westchester County Wastewater Treatment Plant.

Current layout includes six structures on the Site. The northernmost structure at 102 Yerks Place (Block 622, Lot 8) is a two-story brick building, also containing a basement. 101 Pier Street (Block 622, Lot 1) contains a small one-story concrete building and a storage shed. 102 Pier Street (Block 615, Lot 10) contains a two-story office building with no basement, and two one-story trailers. 78 Pier Street (Block 615, Lot 35.45) contains a split-level building which is used both as offices and as a garage/vehicle maintenance building.

The Site is being evaluated for redevelopment as a public park with a playground and recreational amenities to revitalize the community. The lots comprising the Site, lot acreage and current ownership are listed in **Table 1**.

2.2 Topography, Geology, Hydrogeology and Subsurface Characteristics

The Site is located on the USGS 7.5-minute series topographic maps of Yonkers, NY (refer to **Figure 1**). The Site grades towards the Hudson River to the west, staying generally flat with some sinkholes and settling closer to the River, particularly to the north. The site coordinates sit at an elevation of approximately 1 foot above mean sea level (msl).

The Site lies directly adjacent to the Hudson River at its closest points. Groundwater depth was observed during the Phase II investigations between 3.5 feet below ground surface (at SB-7/TW-1) and 11.8 feet below ground surface (at SB-11/TW-2).

3.0 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

3.1 Phase I ESA

A Phase I ESA was conducted in accordance with the ASTM International Standard Practice E1527-13 (Standard Practice for ESA: Phase I ESA Process) by PS&S. The findings were presented to CoY in a Phase I ESA report dated February 28, 2022.

The objective of the Phase I ESA was to identify the presence or likely presence on the Site of hazardous substances or petroleum products as defined in ASTM E1527-13 as a Recognized Environmental Condition (REC).

The environmental database search conducted during the Phase I assessment indicated that this property is listed in the NY AST database (PBS No. 3-800816). All County Bus operations include 7 aboveground storage tanks (ASTs), each consisting of steel tanks, 5 currently in service. No spills are recorded for this property. AST details can be found in the following Table 3.

Table 2 – Fernbrook Street Site ASTs Summary				
Tank Number	Tank Volume (Gallons)	Tank Contents	Tank Status	Installation Year
1	275	#4 Fuel Oil	In Service	1995
2	275	#4 Fuel Oil	In Service	1995
3	275	Waste Oil	In Service	2001
4	2,500	Diesel	In Service	1995
5	275	#4 Fuel Oil	Closed - Removed	2001
6	275	Lube Oil	In Service	2001
7	275	Used Heating Oil	Closed - Removed	2013

The Phase I ESA revealed evidence of six (6) RECs in connection with the Site:

- 1) An active 2,500-gallon AST and fueling station for buses which are staged at the Site. The AST and fueling station are located between 101 Pier Street and the historic city street “Pier Street”. The AST and fueling station are also located in proximity to the former boiler room associated with Yonkers City Ice Company. Historical activity in this area indicates the possible presence of Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs), and metals contamination.
- 2) A former foam storage building which was used for firefighting activities for the Site. This building is located at the southeast corner of 101 Pier Street. Firefighting foam is a known source of Per- and Polyfluoroalkyl Substances (PFAS). While

- PFAS is neither a petroleum nor a regulated hazardous material, it is a known contaminant which is a focus of NYSDEC and NYSDOH investigations.
- 3) A former AST and UST area in the back of the building at 12 Yerks Place. Records of installation of the UST date back to 1929, while records of UST removal/leaks are from 2006. The area also housed some of the ASTs associated with the ATI Major Oil Storage Facility (MOSF) facility that existed on Site. Additionally, some soil staining from current Site activity was observed in this area. Historical activity in this area indicates the possible presence of VOCs, and SVOCs.
 - 4) A former coal pocket/coal and fuel storage area which was in operation prior to 1917 until sometime between 1957 and 1971. Historical activity in this area indicates the possible presence of VOCs, SVOCs, PCBs, and metals.
 - 5) An active garage/vehicle maintenance building located at 78 Pier Street which includes the improper storage of some vehicle-related petroleum products and a floor drain with an undetermined path for material. This property is also the former location of several ASTs associated with Gulf Refining Company. Current and historical activity in this area indicates the possible presence of VOCs, and SVOCs.
 - 6) The former location of the ASTs associated with the ATI MOSF facility that were not at 12 Yerks Place. These tanks made up the majority of the MOSF and were located at 101 Pier Street. Historical activity in this area indicates the possible presence of VOCs, and SVOCs.

PS&S was not able to obtain, information regarding when each of the tanks associated with the ATI MOSF were installed or removed, and no records of spills were available in the available historical documents.

The Phase I ESA recommended the implementation of a Phase II ESA that include soil sampling of the RECs, as well as groundwater sampling downgradient of existing ASTs, to gather information that will aid to confirm the existence of contamination in the limited areas of investigation.

4.0 PHASE II ENVIRONMENTAL SITE ASSESSMENT

The Phase II commenced on March 7, 2022 and was completed on March 8, 2022 to further assess the findings of the Phase I ESA. The sample locations and rationale for the sampling program are summarized below in **Table 3**.

Aquifer Drilling and Testing Inc. (ADT) was the selected driller for the investigation and conducted the geophysical survey. Alpha Analytical (Alpha) was the New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP) certified laboratory selected to analyze collected samples.

4.1 Site Reconnaissance and Geophysical Survey

Prior to commencing drilling activities, PS&S conducted a Site visit to confirm access to proposed sampling locations and discuss site restoration requirements associated with potential damages to the site on March 4, 2022.

A geophysical survey was performed on March 7, 2022, by ADT to locate potential underground utilities in the proposed boring locations, by ground-penetrating radar (GPR) geophysical survey. The geophysical survey area was first scanned using Radiodetection (RD) to determine any metallic piping or underground energized transmission lines within the footprint of the property. The second method of the survey was conducted using GPR imaging.

Underground utilities were identified at the Site but not in the vicinity of proposed sampling locations, so the drilling program was executed as planned.

4.2 Soil Boring Installation and Sampling

A total of fourteen (14) soil borings were advanced by ADT using a Geoprobe 7822DT Direct Push Drill Rig unit. Soil borings were advanced to 10 feet below ground surface (BGS) or until refusal was met in all the proposed locations SB-1 through SB-14. Borings SB-7 and SB-11 were advanced to 15 feet BGS for temporary well installation.

Soil samples were collected using 5-foot Macrocore® sample barrels with dedicated acetate liners. Recovered soil was characterized per the Unified Soil Classification System (USCS) and visually screened for the presence of groundwater and/or signs of contamination (i.e. staining, debris and odor). A photoionization detector (PID) meter was used to screen soils for the presence of total organic vapors (TOVs). Field collected information was logged as presented in the Soil Boring Logs included as **Appendix B**.

One grab soil sample and one composite soil sample were collected from each borehole (SB-1, through SB-14) from the soil interval exhibiting the highest PID reading. Retained samples were transported under standard chain of custody documentation to Alpha and analyzed for TCL VOCs (by USEPA Method 8260), TCL SVOCs (by USEPA Method 8270), TCL PCBs (by USEPA Method 8082A), TAL Metals (by Method 6020), and PFAS (by Isotope Dilution).

Investigation-derived waste (IDW), including soil cuttings, generated during the investigation was returned to bore holes following the completion of the sampling activities.

4.3 Temporary Well Installation and Sampling

Two (2) temporary wells, TW-1 and TW-2 were installed and sampled for groundwater at locations corresponding with SB-7 and SB-11. Temporary wells were advanced to a depth of 15 feet BGS and installed with a 1" slotted PVC riser. After installation was completed, PS&S measured the depth to water and depth to well bottom, and checked for the presence of free product using an oil-water interface probe. A PID meter was used to screen the wells for the presence of total organic vapors (TOVs).

Temporary wells were sampled via purge and sample methods. Each well was purged of approximately three well volumes of water, then sampled using a peristaltic pump. One grab sample was collected from each well (TW-1 and TW-2). Retained samples were transported under standard chain of custody documentation to Alpha and analyzed for TCL VOCs (by USEPA Method 8260), TCL SVOCs (by USEPA Method 8270).

5.0 PHASE II FINDINGS

5.1 Geophysical Survey

During the March 7, 2022 geophysical survey, the 14 proposed boring locations were surveyed to identify potential underground facilities (i.e. abandoned USTs). The geophysical survey area was first scanned using RD to determine any metallic piping or underground energized transmission lines within the footprint of the property followed by the GPR. Designated anomalies were marked on-site with spray paint. No evidence of USTs was observed around the soil boring locations.

5.2 Laboratory Analytical Results

Soil samples were field screened for TOVs using a PID meter. PID readings ranged from 0.2 ppm to 500.8 ppm. The highest PID reading was observed in the soil sample collected at the 6.5 ft. BGS interval in soil boring SB-4. Several soil samples displayed strong odors and discoloration. Free product was not observed in any of the soil boring locations.

Soils:

A total of fourteen (14) soil samples, SB-1 through SB-14, were retained for laboratory analysis for TCL VOCs, and TCL SVOCs per EPA methods 8260 and 8270 respectively. Sample SB-6 was also analyzed for Per and Poly-Fluoroalkyl Substances (PFAS) and 1,4-Dioxane. Samples SB-5 and SB-9 were also analyzed for TCL PCBs per EPA method 8082A and TAL Metals per EPA method 6010. Soil sample results were tabulated and compared to the NYSDEC Unrestricted Soil Cleanup Objectives (UUSCOs) and Restricted-Residential Soil Cleanup Objectives (RRSCOs), **Tables 4-6.** Exceedances to the UUSCOs and RRSCOs are displayed in **Figure 3.** The Alpha Laboratory Analytical Report is provided in **Appendix C.**

6.0 CONCLUSIONS

PS&S has performed a Phase II ESA in the Fernbrook Park Site, which is currently in use as All County Bus, located in Yonkers, New York

The Phase II investigated six RECs identified in the February 2022 Phase I ESA, related to current Site use as a bus maintenance, repair, and staging facility, and to past use of the Site as an MOSF and other coal and oil storage facilities. Soil sample results were compared to the current NYSDEC criteria for Unrestricted Use and Restricted Residential Use. Groundwater sample results were compared to the current NYSDEC criteria for groundwater effluent limitations.

Based on analytical results, only a few VOCs (typically associated with petroleum bulk storage facilities) were detected in the soil at reported concentrations above the NYSDEC UUSCO; these reported concentrations were below the NYSDEC RRSCOs. The soil samples did not present odors or staining, the magnitude of the VOC concentrations in the soil samples collected are not indicative of recent releases, and these chemicals of concern are typical for the former and current storage of petroleum products at the Site. The public record does not identify that any petroleum spills were recorded for this property under the All County Bus PBS Registration (PBS No. 3-800816).

SVOCs consisting of polycyclic aromatic hydrocarbons (PAHs) were detected at reported concentrations above the current NYSDEC RRSCOs. PAHs are a group of over 100 different chemicals that are formed during the incomplete burning of coal, oil and gas, garbage, or other organic substances like tobacco or charbroiled meat. PAH findings in the soil indicate chemicals of concern typically observed at the former storage of coal pocket/coal and fuel facilities, similar to the facilities that were operation at the Site. Mercury was detected in one of the two samples collected at reported concentrations above the NYSDEC RRSCOs.

Two groundwater samples, TW-1 (situated in the middle of the Site) and TW-2 (situated in the southern portion of the site), were collected during the Phase II Investigation. VOCs and SVOCs exceeding TOGS-GA standards were detected in both locations. VOCs were predominant in TW-2 while PAHs were predominant in TW-1. On-site groundwater concentrations may be attributed to both former and current on-site operations and an off-site source.

Based on the current available information, PS&S understands that the Site is not subject to a NYSDEC remediation program, in accordance with the NYSDEC Part 375 (i.e., Inactive Hazardous Waste Disposal Sites, Brownfield Cleanup Program, Environmental Restoration Sites) regulatory requirements. The management of existing on-site soils during Site redevelopment must be completed in adherence to applicable regulations such as NYSDEC Part 360 Solid Waste Management Facilities General Requirements which states in NYSDEC Part 360.13 Special requirements for pre-determined beneficial use of fill material, that:

- (c) Exemption for on-site reuse of fill material.

Fill material used as backfill for the excavation from which the fill material was taken, or as fill in areas of similar physical characteristics on the project property is exempt from regulation under this Part. If fill material exhibits historical or visual evidence of contamination (including odors), and will be used in an area with public access, the relocated fill material must be covered with a minimum of 12 inches of soil or fill material that meets the criteria for general fill, as defined in this Part. This provision does not apply to sites which are subject to a department-approved or undertaken program pursuant to Part 375 of this Title.

In regard to groundwater, if dewatering is necessary during construction, dewatering activities must be conducted in accordance with applicable county and/or NYSDEC sewer discharge requirements and no discharge will be permitted to the Hudson River. Additional groundwater testing, and possibly pre-treatment, may be necessary to comply with these sewer discharge requirements. Particular attention should be given to any potential dewatering activities, which are anticipated in areas to the south and west of the Site.

Sample reporting limit exceeds NY-RESRR and NY-UNRES standards

Sample concentration exceeds NY-UNRES standards

Sample concentration exceeds NY-UNRES and NY-RESRR standards

NY-RESRR: New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 14, 2006.

NY-UNRES: New York NYCRR Part 375 New York Unrestricted use Criteria Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 14, 2006.

ND - Analyte not detected above the laboratory reporting limit

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit(MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentativelyidentified Compounds (TICs).

Sample reporting limit exceeds NY-TOGS-GA standards

Sample concentration exceeds NY-TOGS-GA standards

NY-TOGS-GA: New York TOGS 111 Groundwater Effluent Limitations criteria reflects all addendum to criteria through June 2004.

ND - Analyte not detected above the laboratory reporting limit

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit(MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

Photographic Log

70 Fernbrook Site
Phase II ESA. Appendix A – Photolog

Photo 1 – Close up view of soil core at SB-9. PS&S field screened the soil cores using a PID meter and collected a grab (VOC) sample at the depth corresponding with the highest reading. Composite samples were collected across the entire soil core.

Photo 2 – Close up view of soil core at SB-11. Strong odor/PID reading, and discoloration were present at this location, among others.

Photo 3 – Monitoring well TW-1, installed at soil boring location SB-7. Wells were 1" slotted PVC, which was purged of 3 well volumes and sampled.

Photo 4 – View of completed boring. Borings were labeled with chalk, backfilled, and sealed with cold-patch asphalt.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2211829-01D: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (175%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2211829-02D: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (179%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2211829-03: The sample was analyzed as a High Level Methanol based upon screen results. The sample was then analyzed as a Low Level in order to achieve lower reporting limits. The results of both analyses are reported. Differences were noted between the results of the analyses which have been attributed to vial discrepancies.

L2211829-03: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (141%) due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2211829-04: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (225%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2211829-05: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (190%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2211829-06D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L2211829-06D: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (138%);

however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

Semivolatile Organics

L2211829-01D: The sample has elevated detection limits due to the dilution required by the sample matrix.

Total Metals

L2211829-03: The sample has elevated detection limits for all elements due to the dilution required by matrix interferences encountered during analysis.

L2211829-05: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

Hexavalent Chromium

The WG1616044-5 Soluble MS recovery for chromium, hexavalent (59%), performed on L2211829-03, was outside the acceptance criteria. This has been attributed to matrix interference. A post-spike was performed with a recovery of 107%.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2212074-01: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (196%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2212074-02: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (265%) due to obvious interferences. A copy of the chromatogram is included as an attachment to this report. The sample was analyzed as a High Level Methanol in order to quantitate result(s) within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial Low Level analysis. The results of both analyses are reported. Differences were noted between the results of the Volatile Organics by EPA Method 5035/8260 High and Low Level analyses which have been attributed to sample non-homogeneity.

L2212074-04: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (233%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2212074-05D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L2212074-05D: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (220%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2212074-08D: The sample has elevated detection limits due to the dilution required by the sample matrix (sheen).

L2212074-08D: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (136%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the

chromatogram is included as an attachment to this report.

L2212074-09D: The sample has elevated detection limits due to the dilution required by the sample matrix (foam).

Semivolatile Organics

L2212074-04: The surrogate recovery was outside the acceptance criteria for 2,4,6-tribromophenol (8%); however, the criteria were achieved upon re-extraction outside of holding time. The results of both extractions are reported; however, all associated compounds are considered to have a potential bias.

L2212074-05RE\D, -06RE\D, and -07RE\D: The sample has elevated detection limits due to the dilution required by the sample matrix.

L2212074-06: The sample has elevated detection limits due to the limited sample volume utilized during extraction, as required by the sample matrix.

The WG1615107-3 LCSD recovery, associated with L2212074-08, -09, and -09D, is below the acceptance criteria for benzoic acid (6%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

The WG1617733-2 LCS recovery, associated with L2212074-01 through -07, was below the acceptance criteria for 3,3'-dichlorobenzidine (7%); however, the criteria were achieved upon re-extraction outside of holding time. The results of both extractions are reported. All original results for these compounds are considered to have a potentially low bias.

Semivolatile Organics by SIM

L2212074-09D: The sample has elevated detection limits due to the dilution required by the sample matrix.
