VOC	Volatile Organic Compound

1.0 PROJECT SUMMARY

SESI Consulting Engineers (SESI), at the request of Lexington Avenue Developers LLC (User), has conducted a Phase I Environmental Site Assessment (ESA) for the property located at 60 Main Street, White Plains, New York on a lot that used to be occupied by the Former Sears Department Store which includes an Auto Service Center (herein referred to as the subject property). The Site is a 1.5082-acre designated with the tax designation Section 125.75 Block 4 Lot 1..1. The Site is located in a commercial/residential/government building area in the downtown of the City of White Plains. The Site has been vacant since 2023. A tax map is included on **Figure 1.1**. A Subject Property Location Map is included on **Figure 1.2**. A Subject Property Plan is included on **Figure 1.3**.

The subject property was developed prior to 1885 based on the Sanborn Fire Insurance Maps and contained the following historic uses (circa 1885-1950) that were noted to be of concern: carriage house/factory, laundry/drycleaning, automobile station/garage, plumbing shop, furniture and upholstery, paints/oils storage, hardware store, tin shop, sheet metal fabrication, and naphtha and oil storage. The Galleria Mall was constructed in approximately 1980. The subject property was improved with the Galleria Mall anchor stores J.C. Penney's (circa 1980-2001), and then Sears automotive center (circa 2003 to 2023) in this portion of the Mall. The stores used large petroleum storage tanks for heating oil. These historical land uses represent RECs and additional investigation is warranted.

The subject property is presently owned by Galleria City Holding Company LLC based on publicly available information and the questionnaire provided by the User. The subject property is located in a commercial/residential/government area and the subject property is part of a vacant mall that is being temporarily used for homeland security and police active shooter practice drills.

The objective of this ESA is to identify the presence or likely presence, use or release on the subject property of hazardous substances or petroleum products as defined in the American Standard of Testing and Materials (ASTM) E1527-21 as a Recognized Environmental Condition (REC). In addition, Business Environmental Risks (BERs), Controlled Recognized Environmental Conditions (CRECs), and Historical Recognized Environmental Conditions (HRECs) were identified, if present.

The following RECs have been identified:

- **REC 1 – Subject Property Underground Storage Tanks (USTs):** A total of five (5) underground storage tanks (USTs) were identified in the corresponding EDR Radius search. These tanks were registered with PBS numbers (3-173665, and 3-600104) and the tanks contained 2x10,000-gallon USTs closed in place, 1x100-gallon UST converted to non-regulated use, 1x1,000-gallon UST converted to non-regulated use, and 1x8,000-gallon UST closed in place. Closure documentation of these tanks has not been provided. Therefore, further subsurface investigation is recommended of the entire property to locate and close out any remaining USTs and once removed to perform further investigation under the USTs once removed.

- **REC 2 – Historical Site Uses**: Historic operations circa 1885-2023 at the subject property that are considered of concern include: carriage house/factory, laundry/drycleaning, automobile station/garage, plumbing shop, furniture and upholstery, paints/oils storage, hardware store, tin shop, sheet metal fabrication, and naphtha and oil storage, and a former Sear automotive center. Soil, groundwater and soil vapor sampling conducted during the Phase II ESA identified impacts that appear to be partially attributable to these former on-site operations. Additional investigation is required.

- **REC 3 – On-site Contamination:** SESI reviewed analytical results of soil, soil vapor and groundwater data collected from the Subject Property. The soil data identified semi-volatile organic compound (SVOC) impacts (specifically polycyclic aromatic hydrocarbons [PAHs]) above the Restricted Residential Use Soil Cleanup Objectives (RRSCOs) or Unrestricted Use Soil Cleanup Objectives (USCOs) throughout the subject property from a foot to 8.5 feet below ground surface (ft-bgs). Higher concentrations were specifically found at the east side of the Subject property, which may indicate a historic release. Additionally, metals were found above the USCOs to 19.5 ft-bgs throughout the subject property. Lead, cadmium, and mercury were found above the RRSCOs on-subject property in discrete areas, suggesting that they are attributable to historic releases. Chromium (total) was found on the northeastern portion of the Site exceeding its USCO. As described below, chromium and lead were also identified in groundwater exceeding

the AWQS and therefore, the groundwater pathway for chromium and lead requires further evaluation.

- Pesticides were found above the USCOs in the north central portion of the subject property. The per and poly fluoroalkyl substances (PFAS) compound perfluorooctanesulfonic acid (PFOS) was found above the guidance USCO in the northern portion of the subject property. In addition, PFOA and PFOS were found above the guidance USCOs on the northwestern portion of the subject property. These soil exceedances of the USCOs and RRSCOs are likely due to historic property uses, potential USTs, and contaminated historic fill.
- Volatile organic compounds (VOCs), PFAS, PAHs, and metals (including barium, beryllium, chromium, and copper) were found in groundwater to exceed the Ambient Water Quality Standards (AWQS) throughout the subject property which are likely associated with historical uses, potential USTs, and historic fill contamination. As described above elevated concentrations of PAHs, chromium, and lead were detected in soil exceeding the USCOs and therefore the protection of groundwater pathway must be further evaluated. These elevated concentration PAHs and metals detected in soil that are attributed to the historic auto repairs are impacting the Site's groundwater.
- Several petroleum hydrocarbons (PHCs) and chlorinated VOCs were detected in the soil vapor and indoor air samples which may indicate contamination is present throughout the subject property.

- **REC 4 – Historic Upgradient Operations**: Historic operations identified upgradient from the subject property based on the Sanborn maps include hand printing, tin shop, gas-powered printing station, black smiths, plumbing shop, an auto repair shop with gas UST, and known USTs.

The following HREC was identified:

- **HREC 1 – Historic Spills and LTanks:** A review of the database as provided by EDR identified three (3) listings, one [1] for JC Penney Co Inc (9102767) and two [2] for A&S Store (8803673 and 8805571) in the mall. Based on available information, the listings for the A&S Store are associated with the eastern side of the mall and are not associated with the subject property. The listing for the JC Penney store, which occupied the subject

property prior to the Sears store, is part of the subject property. Since this former spill was closed by NYSDEC, they are considered a HREC to the subject property.

The following BERs have been identified:

- **BER 1 – Subject Property Aboveground Storage Tanks (ASTs):** A total of two (2) aboveground storage tanks were identified in the corresponding EDR Radius search. These tanks were registered with PBS number 3-169579 and contained 2x300 gallon diesel fuel oil (Tank Nos. 32 and 33), which were administratively closed. In addition, SESI personnel observed two (2) ASTs on the Subject Property during the walkthrough. It is unknown if these tanks are the same tanks associated with PBS No. 3-169579 however it is likely that these are the same ASTs. There was no staining observed, and the concrete below the tanks had no visible cracks. Therefore, no additional investigation is warranted.
- **BER 2 – Polychlorinated Biphenyl (PCB) Caulk:** A PCB survey was not completed during SESI's walkthrough of the subject property. There are likely several areas present that contain caulking. Therefore, a PCB survey is recommended prior to any demolition or redevelopment of the subject property.
- **BER 3 – Asbestos-Containing Material (ACM):** An ACM survey was not completed during SESI's walkthrough of the subject property. Based on the age of the building, SESI recommends an ACM survey prior to any demolition or redevelopment of the subject property.
- **BER 4 – Universal Waste:** There were several pieces of universal waste identified during the walkthrough of the subject property; however, a complete survey of this universal was not completed. SESI recommends a universal waste survey prior to any demolition or redevelopment of the subject property.
- **BER 5 – Concrete:** SESI observed several locations of stained concrete in the parking areas and loading bays. Staining was also observed from the elevator door. Concrete will be removed as part of the proposed redevelopment and therefore no further investigation is warranted.
- **BER 6 – Lead-Based Paint (LBP):** An LBP survey was not completed during SESI's walkthrough of the subject property. Based on the age of the building, SESI recommends an LBP survey prior to any demolition or redevelopment of the subject property.

- **BER 7 – Vapor Intrusion:** A vapor intrusion evaluation has not been completed as part of this review. The historic operations contained potential petroleum and chlorinated volatile organic compound (VOC) uses, which may have contributed to soil and groundwater vapor. In addition, data from the Phase II ESA suggests vapor intrusion may be a concern. Therefore, SESI recommends further evaluation of the vapor intrusion pathway at the subject property as part of the redevelopment process.

The RECs are discussed further in **Section 10.0 CONCLUSIONS AND RECOMMENDATIONS** of this Report.

2.0 INTRODUCTION

2.1. PURPOSE

The purpose of this study is to determine the RECs at the subject property for due diligence purposes related to the potential acquisition of the subject property.

SESI has developed this Phase I ESA Report on behalf of the User. It has been developed in substantial conformance with the ASTM's International Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-21. According to ASTM E1527-21, the following conditions were identified during this assessment:

REC – "(1) the presence of hazardous substances or petroleum products in, on, or at the property due to release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the property due to a release or likely to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition."

CREC – "A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority."

HREC – "A past release that has been remediated to below residential standards and given regulatory closure with no use restrictions."

BER – "A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate and is not an issue required to be investigated under this practice."

2.2. SCOPE OF SERVICES

The scope of this assessment consisted of the following general tasks: a records review; a Site visit; interviews with present and past owners, operators, and occupants to the extent possible; and preparation of this ESA report. Specific tasks that were conducted included the following:

- A review of environmental databases maintained by the United States Environmental Protection Agency (USEPA) and state and local agencies within the minimum search

distance. Environmental Data Resources, Inc. (EDR) prepares environmental databases used in these assessments.

- A Site reconnaissance to observe conditions and to assess the subject property location with respect to adjoining and surrounding property uses, types of development, topography, natural surface features, roadways, railroad lines and right-of-ways to identify obvious potential environmental conditions on neighboring properties.

Per ASTM E1527-21, questionnaires were provided to the User (Client) and Owner to obtain information related to the subject property.

2.3. SIGNIFICANT ASSUMPTIONS

Information obtained by SESI and by third parties is assumed to be accurate and/or true. SESI makes no warranty, either implied or expressed, regarding the accuracy or validity of information supplied by others.

2.4. LIMITATIONS/METHODOLOGY/RELIANCE

This ESA was prepared for the exclusive use of Lexington Avenue Developers LLC, its affiliates and lenders. During the assessment, methodologies were used that conform to generally accepted practices for this type of work. The scope and character of the environmental assessment were, in professional judgment, sufficient to justify the stated conclusions, after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the subject property as found in historical records, and visual observation of the subject property. No other investigation was performed other than that which is expressly noted in this Report.

This ESA was performed in accordance with ASTM E1527-21 and is subject to reasonable limits of time and cost and is intended to reduce but not eliminate uncertainty regarding the potential for RECs in connection with a property. Sampling and laboratory analysis are required to determine if soil, surface water, groundwater, air, and construction materials have been impacted by a contaminant.

The information presented in this ESA was obtained during the Site reconnaissance and from the Client, representatives of the Client, current/former property owner(s) or tenants, Federal, State, County and Local Officials, and available mapped information obtained by SESI. SESI does not certify the accuracy of the information received from outside sources.

This ESA should be used in its entirety. Use of portions of this ESA may nullify the information and/or conclusions of this ESA. Subject property observations discussed herein apply to subject property conditions as observed during Site reconnaissance only. The conclusions of this ESA do not apply to conditions that were unavailable for inspection and could not be evaluated.

SESI does not certify that the subject property is contaminant free and this ESA does not serve as a warranty. SESI's investigation was performed within the time frame requested by the client.

The activities to conduct this ESA did not include sampling and analyses of soil, surface water, groundwater, air, or construction materials unless expressed otherwise and requested by the client. Formal wetland, asbestos, mold, and/or radon evaluations were not performed and are not within the scope of work for an ESA. If additional services including UST testing, construction materials testing, or environmental sampling (soil, surface water, groundwater, air) is recommended, the results and conclusions for these tests will be provided under separate cover.

2.5. DISCLAIMER

This ESA was prepared by SESI for the sole and exclusive use of Lexington Avenue Developers LLC. Nothing under the Agreement between SESI and the User shall be construed to give any rights or benefits to anyone other than the User and SESI, and all duties and responsibilities undertaken pursuant to the Agreement will be for the sole and exclusive benefit of the User and SESI and not for the benefit of any other party. SESI does not intend, without its written consent, for this ESA to be disseminated to anyone other than the User, or to be used or relied upon by anyone other than the User. Use of the ESA by any other person is unauthorized and such use is at their sole risk.

3.0 SITE DESCRIPTION

3.1. LOCATION/STRUCTURES/LEGAL DESCRIPTION

The subject property consists of a 1.5082-acre parcel located at 60 Main Street, White Plains, Westchester County, New York. The subject property is tax lot Section 125.75 Block 4 Lot 1..1. A tax map is included in **Figure 1.1.** The subject property is improved by a former Sears Department Store and auto services centers on a portion of a vacant mall site that is currently used by homeland security and the police department as an active shooter practice area. The subject property no longer contains mall operations. **Figure 1.2** provides a Subject Property Location Map. A Subject Property Plan is shown on **Figure 1.3.**

The subject property is proposed to be redeveloped with apartment, retails stores, and associated parking after building demolition.

The subject property is bound to the north by commercial/office/residential, to the south by government/office, to the east by commercial/office/residential/park, and to the west by office/apartments. Adjacent properties are noted on **Table 3.1** below.

Table 3.1—Adjacent Property Uses

Direction	Adjacent Property Use
North	Commercial/Office/Residential
South	Government/Office
East	Commercial/Office/Residential/Park
West	Office/Apartments

3.2. SUBJECT PROPERTY AND VICINITY CHARACTERISTICS

The subject property is located in a commercial, office and residential area. The closest notable surface water body is the Bronx River located approximately 984 feet west of the subject property.

3.3. CURRENT USE OF THE PROPERTY

The subject property is currently a vacant mall that is being temporarily used for homeland security and police active shooter practice. The Site is owned by WP Galleria Realty LP based on publicly available information and the questionnaire provided by the User.

3.4. DESCRIPTION OF STRUCTURES, ROADS AND SITE IMPROVEMENTS

The subject property is a rectangle shaped parcel that is 1.5082-acres in size and currently improved with a large structure that was formerly the Sears leasehold space ,including a former automotive center and repair shop. The ground floor consists of mechanical and loading spaces while the upper floors were improved with the department store. The subject property has been vacant since 2023.

4.0 SITE BACKGROUND INFORMATION

4.1. TITLE INFORMATION

A chain of title and deed search was not prepared as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

4.2. ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

A lien or activity use limitation search was not conducted as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

4.3. SPECIALIZED KNOWLEDGE/OTHER USER PROVIDED INFORMATION

SESI was not provided any historic reports related this Site.

4.3.1. INTERVIEWS

The ESA questionnaire was provided to the User and the response received on March 5, 2025. After review of the document, no new or previously unknown information was identified. A representative directed a tour of the facility. Information obtained from this interview, questionnaire and subject property inspection is integrated in this Phase I ESA. A completed User Questionnaire is presented as **Appendix A**.

4.4. COMMONLY KNOWN OR REASONABLY ASCERTAINABLE RECORDS

SESI completed a review of publicly available New York State Department of Environmental Conservation mapping and database systems and the United States Environmental Protection Agency (USEPA) database system as part of this Report to determine the environmental conditions at the subject property and adjacent properties. Information requests are presented as **Appendix B**.

4.5. VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The Report User indicated no knowledge of any valuation reduction related to environmental concerns.

4.6. OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The subject property parcels are currently owned by WP Galleria Realty LP and are occupied periodically by Homeland Security and the local police department for active shooter drills.

5.0 RECORDS REVIEW

5.1. STANDARD ENVIRONMENTAL RECORD SOURCES: FEDERAL, CITY, STATE

5.1.1. EDR SEARCH

A search of available environmental records was conducted by EDR and reported in the EDR Radius Map Report with GeoCheck. The Report meets the government records search requirements of ASTM Standard of Practice for Environmental Site Assessments, E-1527-21. Search distances are per ASTM standards. A Radius Map Check was performed by EDR and are provided in **Appendix C**. All properties in the search area with environmental records are listed below:

Table 5.1—Property Listings

Environmental Listing	Subject Property	0-1/8 Miles	1/8 - 1/4 Miles	1/4 - 1/2 Miles	1/2-1 Mile

EDR Hist Auto	0	2	NR	NR	NR
EDR Hist Cleaner	0	5	NR	NR	NR

The EDR Radius Map Report identified operations at the subject property in numerous databases. However, the subject property address most often referred to the Galleria Mall as a whole and not the particular condominium space being evaluated as part of this Phase I ESA. Therefore, SESI used professional judgement to determine whether the listings were actually on the subject property or associated with other areas of the mall as discussed below:

RCRA Small Quantity Generator (RCRA-SQG)

The RCRA-SQG includes a list of facilities that generate more than 100 but less than 1,000 kilograms of hazardous waste per month and accumulates less than 6,000 kilograms of hazardous waste at any time. According to the RCRA-SQG list provided by EDR, there was one (1) RCRA-SQG facility (Picture People The) located on the adjacent mall property. However, a review of the operation did not identify any environmental release(s) of hazardous materials. Therefore, this listing is not considered a REC.

LTANKS: Leaking Storage Tank Incident Reports

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. The inventory includes both leaking underground storage tanks and leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. A review of the database as provided by EDR identified one [1] listing for the Site for J.C. Penney Co. Inc. and two [2] for the A&S Store on the other end of the mall, as follows:

- Historic Spill No. 9102767 (June 10, 1991), J.C. Penny Co. Inc., Galleria: 20 gallons of No. 2 fuel oil spilled from a tank overfill. The noted impacts were to concrete/soil, and the case was reported as closed by the NYSDEC on June 13, 1991.

- Historic Spill No. 8803673 (July 27, 1988), A&S Store, Galleria Plaza: Test of a 10,000-gallon No. 2 fuel oil tank failed. The noted impacts were to groundwater, and the case was reported as closed by the NYSDEC on June 13, 1991.

- Historic Spill No. 8805571 (September 9, 1988), A&S Store, Galleria Plaza: Test of a 10,000-gallon No. 2 fuel oil tank failed. The noted impacts were to groundwater, and the case was reported as closed by the NYSDEC on June 13, 1991.

Based on available information, the listings for the A&S Store are associated with the eastern adjoining BCP site and are not associated with the subject property. The listing for the JC Penney store is related to the subject property which occupied the subject property prior to the Sears automotive center. Since the former spills were closed by NYSDEC and were not on-site, they are considered HRECs to the subject property.

UST: Underground Storage Tank Data

USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program. A review of the NY UST list provided by EDR identified four (4) listings associated with the Galleria mall, two of which are associated with the subject property. These listings are further described below:

- PBS No. 3-173665, JC Penny, 100 Main Street: 2x10,000-gallon USTs closed in place, 1x100-gallon UST converted to non-regulated use, and 1x1,000-gallon UST converted to non-regulated use.
  PBS No. 3-600104, JC Penny, 100 Main St: 1x8,000-gallon UST closed in place.
- PBS No. 3-492205, The Galleria at White Plains, 100 Main Street: 2x10,000-gallon USTs closed in place (Macy's Store).
- PBS No. 3-169579, Galleria West Garage 5, Martine Ave & So Lexington Ave: 1x1,000-gallon diesel UST. Installed December 1, 1980. Removed and closed November 1, 1994.

Closure documentation was not available for any of these tanks.

AST: Petroleum Bulk Storage

Registered Aboveground Storage Tanks. A review of the database as provided by EDR identified the subject property as containing one (1) listing (Galleria West Garage 5) in the AST database. This listing is further described below:

- PBS No. 3-169579, Galleria West Garage 5, Martine Ave & So Lexington Ave: 2x300-gallon diesel ASTs (Tank Nos. 32 and 33) administratively closed.

Proper closure documentation and current AST status are unknown and there is potential that they are within the subject property because there are two ASTs located on the subject property; therefore, these ASTs are considered BERs.

SPILLS: Spills Information Database

Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date. A review of the database as provided by EDR identified the subject property under the listings JC Penney Co. Inc. and White Plains Garage. The spill listings are as follows:

- Historic Spill No. 9102767 (June 10, 1991): 20 gallons of No. 2 fuel oil spilled from a tank overfill. The noted impacts were to concrete/soil, and the case was reported as closed by the NYSDEC on June 13, 1991.
- Historic Spill No. 9110939 (January 22, 1992), White Plains Garage, Main St & Grove St: 1 gallon of No. 2 fuel oil spilled from a vent tank overfill. Speedy Dry was applied. The noted impacts were to soil, and the case was reported as closed by the NYSDEC on January 24, 1992.
- Historic Spill No. 0703055 (June 13, 2007), Galleria Mall, 100 Main Street: An individual dumped out a gallon of gasoline into a storm drain when he could not return it. The spill was closed out by NYSDEC on June 14, 2007.

There is the potential that these spills impacted the subject property. Since these spills were remediated to the satisfaction of the regulator they are considered HRECs.

Facility Index System/Facility Registry System (FINDS)

The FINDS database provides a list of facilities that maintain or previously maintained environmental permits or are listed under additional EDR report databases. A review of FINDS list provided by EDR identified seven (7) listings for the Mall (Picture People, The, Galleria of

White Plains, Macy-White Plains Galleria at White Plains, J.C. Penney Co Inc, Macy's White Plains Cogeneration, Expressly Portraits, and CPI Photo Finish). These operations appear to include RCRA-SQG (EPA ID 110004561402), Air Program (EPA ID 110019206599 and 110054890347), RCRA (EPA ID 110016725748, 110009462553, 110004322849 and 110004531374). However, these former uses are not believed to have been on the subject property but at other locations on the Mall property. No violations were reported; therefore, these listings do not constitute a REC.

USEPA Enforcement and Compliance History Online (ECHO)

The ECHO database provides a list of compliance and enforcement information for regulated facilities. A review of the database provided by EDR identified six (6) listings for the Mall (The Picture People, Macy-White Plains Galleria at White Plains, J.C. Penney Co Inc., Macy's White Plains Cogeneration, Expressly Portraits, and CPI Photo Finish). However, these former uses are not believed to have been on the subject property but at other locations at the Mall other than J.C. Penney. No violations were identified with these operations at the subject property; therefore, these listings do not constitute a REC.

MANIFEST Sites

MANIFEST Facilities include a list of facilities that have generated hazardous waste or contaminants. A review of the NY MANIFEST list, as provided by EDR, identified four (4) NY MANIFEST facilities (Picture People, The, JC Penney Co Inc, Expressly Portraits and Macy's East #55, Galleria Mall Dental, Lens Crafters #0787, Sears) located on the Mall. However, these former uses are not believed to have been on the subject property but at other locations at the Mall . The Mall is listed as 100 Main Street in the MI MANIFEST database. Based on a review of the available database information, there are manifests that are not associated with documented releases, and therefore they do not constitute a REC.

EDR Hist Cleaner Sites

The EDR Hist Cleaner list provides an inventory of facilities that formerly/historically operated a dry-cleaning business. A review of the EDR Hist Cleaner database, as provided by EDR, has revealed that there are two (2) Hist Cleaner facilities listed on the subject property (Bayliss Morris [90 Main St] and Biscardi Frank [102 Main St]). The operations of the drycleaning operations were

noted as circa 1969-1975, prior to the construction of the Galleria Mall. Based on review of the Sanborn maps 90 Main Street was part of the subject property prior to construction of the mall. Therefore, this is a REC. While 102 Main Street is historically located east of the subject property along Main Street, it is identified as a REC due to its close upgradient location relative to the subject property.

The EDR Radius Map Report identified operations at nearby sites in the following listings. For the purposes of this section, distances are measured from the Galleria Mall as a whole, and not from the specific condominium unit that is subject to this report. A discussion of these listing is provided below:

RCRA Large Quantity Generator (RCRA-LQG)

The RCRA-LQG includes a list of facilities that generate over 1,000 kilograms of hazardous waste, or over one (1) kilogram of acutely hazardous waste per month. According to the RCRA-LQG list provided by EDR, there are two (2) RCRA-LQG facilities (Con Edison Manhole 10087 and Con Edison Manhole 467) within approximately 0.25 miles of the subject property. However, a review of the facility listings did not identify any releases or violations. Therefore, these listings are not expected to adversely impact the subject property.

RCRA Small Quantity Generator (RCRA-SQG)

The RCRA-SQG includes a list of facilities that generate more than 100 but less than 1,000 kilograms of hazardous waste per month and accumulates less than 6,000 kilograms of hazardous waste at any time. According to the RCRA-SQG list provided by EDR, there are six (6) RCRA-SQG facilities within approximately 0.25 miles of the subject property. Of these facilities, only one (1) was identified with an associated spill. However, this spill case was closed by the NYSDEC and not associated with the waste generated. Therefore, these listings are not expected to adversely impact the subject property.

RCRA Very Small Quantity Generator (RCRA-VSQG)

The RCRA-VSQG includes a list of facilities that generate less than 100 kilograms of hazardous waste, or less than one (1) kilogram of acutely hazardous waste per month. According to the RCRA-VSQG list provided by EDR, there are nine (9) RCRA-VSQG facilities within approximately

0.25 miles of the subject property. The facilities had no reported violations, and any listed spills were reported as closed and not associated with the RCRA listing. Therefore, these listings are not expected to adversely impact the subject property.

NY State Hazardous Waste Sites (NY SHWS)

NY SHWS is a list of known contaminated sites except those associated with Bureau of Underground Storage Sites (BUST). According to the NY SHWS list provided by EDR, there are two (2) facilities (Automobile Club of New York and Mamaroneck Avenue Dry Cleaners) located within 0.5 miles of the subject property. Due to the distance of these facilities and the locations as hydraulically cross gradient or downgradient from the subject property, these listings are not expected to adversely impact the subject property.

LTANKS: Leaking Storage Tank Incident Reports

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. These reports can be associated with either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. A review of the database as provided by EDR identified 175 listings within 0.5 miles of the subject property. However, a review of the listings within 0.125 miles from the subject property did not identify any open spills with the NYSDEC. Therefore, these facilities are not expected to adversely impact the subject property.

UST: Underground Storage Tank Data

USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program. A review of the NY UST list provided by EDR identified 57 facilities within 0.25 miles of the subject property. No documented releases were reported from the listed USTs within 0.125 miles from the subject property. Therefore, these facilities do not constitute a REC.

AST: Petroleum Bulk Storage

Registered Aboveground Storage Tanks. A review of the database as provided by EDR identified 26 facilities within 0.25 miles of the subject property. All facilities within 0.125 miles of the subject property that contained associated spills or LTANKS listings were reported as closed by the NYSDEC. Therefore, these facilities do not constitute a REC.

Eng Controls: Registry of Engineering Controls

Environmental Remediation sites that have engineering controls in place. A review of the database as provided by EDR identified two (2) facilities (CE-White Plains MGP and Automobile Club of New York) within 0.5 miles of the subject property. Both facilities appear to be located hydraulically downgradient from the subject property. Therefore, they do not constitute a REC.

Inst Control: Registry of Institutional Controls

Environmental Remediation sites that have institutional controls in place. A review of the database as provided by EDR identified three (3) facilities (CE-White Plains MGP, WP Mall Cleaners and Gas Station Site, and Automobile Club of New York) within 0.5 miles of the subject property. Two (2) of these facilities (CE-White Plains MGP and Automobile Club of New York) are located hydraulically downgradient from the subject property, and therefore they do not constitute a REC. The WP Mall Cleaners & Gas Station Site is located hydraulically upgradient from the subject property however, it is quite far from this Site and the only remaining ground water contaminant is MTBE, which has not been identified on this subject property.

Voluntary Cleanup Program (VCP) Sites

The VCP listings included Completed Sites, Sites in Progress and Act 2 Non-Use Aquifer Determinations Sites. Formerly known as the Act 2, the Land Recycling Program encourages the voluntary cleanup and reuse of contaminated commercial and industrial sites. A review of NY VCP list provided by EDR identified one (1) facility (CE—White Plains MGP) within 0.125 miles of the subject Site. As previously discussed, the facility appears to be located hydraulically downgradient from the subject property, and therefore does not constitute a REC.

Brownfields: Brownfields Site List

A Brownfield is any real property where there are exceedances of applicable remedial standards in exceedance of a proposed use. A review of the database as provided by EDR identified 10 listings within 0.5 miles of the subject property. Of the facilities within 0.125 miles and hydraulically upgradient of the subject property, two (2) brownfield cleanup program (BCP) facilities were identified as undergoing remediation for groundwater, soil and soil vapor. The upgradient facility (WP Mall Cleaners & Gas Station Site) identified contamination in ground water from a suspected off-site source but is not considered a REC because the remaining contaminant is not present on this subject property.

SPILLS: Spills Information Database

Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes active spills as of April 1, 1986, as well as spills occurring since this date. A review of the database as provided by EDR identified 37 facilities within 0.125 miles of the subject property. The spills associated with the facilities listed adjacent or hydraulically upgradient of the subject property have been closed with the NYSDEC. Therefore, these facilities do not constitute RECs.

RCRA Non-Generators / No Longer Regulated (RCRA NonGen / NLR)

Resource Conservation and Recovery Act Non-Generators (RCRA NonGen) database searches USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information about facilities that generate, transport, store, treat and/ or dispose of hazardous waste as described by RCRA. Non-generators do not presently generate hazardous waste. A review of RCRA NonGen/NLR list provided by EDR identified 93 facilities within 0.25 miles of the subject property. Since none of these facilities currently generate hazardous waste, they are not expected to adversely impact the subject property.

Formerly Utilized Sites Remedial Action Program (FUSRAP)

Established in 1974, the FUSRAP list includes facilities that required remediation due to radioactive contamination associated with the Manhattan Project and early U.S. Atomic Energy

Commission operations. According to the FUSRAP list provided by EDR, there is one (1) FUSRAP facility (Nuclear Development Corp of America Site) located within approximately 0.125 miles of the subject property to the southeast. The facility is listed as Nuclear Development Corp. of America, identified as NY.32, and is located at 5 New Street. The facility was reportedly evaluated and eliminated from consideration under FUSRAP in 1987 due to the EPA's determination that it had no authority to perform remedial efforts under FUSRAP. EDR reported that the facility was licensed to handle nuclear materials. The facility is confirmed to have handled radioactive materials, specifically uranium. The listed operations included the performance of experiments involving uranium recovery from scrap material at the facility. No additional information was provided in the listing. Due to the elimination of this site from the FUSRAP list, this site does not constitute a REC.

Fuels Program: EPA Fuels Program Registered Listing

This listing includes facilities that are registered under the Part 80 (Code of Federal Regulations) EPA Fuels Programs. All companies now are required to submit new and updated registrations. A review of the database as provided by EDR identified one (1) facility (RNG Padd 1) within 0.125 miles of the subject property. Since no releases or violations were documented, this facility is not expected to adversely impact the subject property.

MANIFEST Sites

MANIFEST Facilities include a list of facilities that have generated hazardous waste or contaminants. A review of the NY, PA, NJ and MI MANIFEST list, as provided by EDR, identified 121 NY MANIFEST, four (4) PA MANIFEST, one (1) MI MANIFEST, and 36 NJ MANIFEST facilities within approximately 0.25 miles of the subject property. All associated releases within 0.125 miles hydraulically upgradient of the subject property were evaluated and are not expected to adversely impact the subject property.

MGP: Manufactured Gas Plants Listing

From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants. A review of the database as provided by EDR identified one (1) facility (CE-White

Plains MGP) within 0.125 miles of the subject property. As previously discussed, this facility is not expected to adversely impact the subject property because it is downgradient.

UST Finder Release: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials. A review of the database as provided by EDR identified 24 facilities within 0.5 miles of the subject property. Based on a review of the available database information, all but one (1) facility (New York Hospital) have documented release events have not occurred at these facilities. Additionally, this one (1) facility is located approximately 0.25 miles topographically downgradient from the subject property. Therefore, this facilities is not expected to adversely impact the subject property.

UST Finder: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of UST and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires. A review of the database as provided by EDR identified one (1) listing (New York Power Authority) within 0.125 miles of the subject property. Based on a review of the available database information, documented release events status is noted as “no further action”. Therefore, this facilities is not expected to have adversely impacted the subject property.

EDR Hist Auto Sites

The EDR Hist Auto list provides an inventory of facilities that formerly operated automotive repair or automotive gas stations. A review of the EDR Hist Auto database, as provided by EDR, has revealed that there are two (2) Hist Auto facilities within approximately 0.125 miles of the subject Site. These facilities are situated either cross gradient or downgradient from the subject with no

known releases. Therefore, these facilities are not expected to adversely impact the subject property.

EDR Hist Cleaner Sites

The EDR Hist Cleaner list provides an inventory of facilities that formerly/historically operated a dry-cleaning business. A review of the EDR Hist Cleaner database, as provided by EDR, has revealed that there are four (4) Hist Cleaner facilities within approximately 0.125 miles of the subject property. Several of these facilities are situated either downgradient from the subject property and no associated releases were identified. The WP Mall Cleaners site is discussed in the INST CONTROLS database listing above.

5.1.2. PREVIOUS ENVIRONMENTAL REPORTS

Review of soil, soil vapor, and Groundwater Data - June 2025 *Phase II ESA* by SESI

SESI reviewed analytical results of soil, soil vapor and groundwater data collected from the Subject Property. The soil data identified semi-volatile organic compound (SVOC) impacts (specifically polycyclic aromatic hydrocarbons [PAHs]) above the Restricted Residential Use Soil Cleanup Objectives (RRSCOs) or Unrestricted Use Soil Cleanup Objectives (USCOs) throughout the Subject Property from grade to 8.5 feet below ground surface (ft-bgs). Higher concentrations were specifically found at the east of the Site, which may indicate a historic release. Additionally, metals were found above the USCOs to 19.5 ft-bgs throughout the Site. Lead was found above the RRSCOs in one (1) sample (SB-8 [2-2.5']) from 2 to 2.5 ft-bgs at the northeastern portion of the Site, and cadmium was found from 4.5-5 ft-bgs above the RRSCO in one (1) sample (SB-3 [4.5-5]) at the northcentral portion of the Site, and mercury was found above the RRSCOs in one (1) sample (SB-20 [13-13.5']) from 13 to 13.5 ft-bgs at the northeastern portion of the Site. Chromium (total) was found on the northeastern portion of the Site exceeding its USCO. As described below, chromium and lead were also identified in groundwater exceeding the AWQS and therefore, the groundwater pathway for chromium and lead requires further evaluation.

- Pesticides were found above the USCOs to 2.5 ft-bgs at the north central portion of the Site (SB-28S [2-2.5] and SB-29S [1-1.5]). The per and poly fluoroalkyl substances (PFAS) compound perfluorooctanesulfonic acid (PFOS) was found above the USCO to 2.5 ft-bgs at the northern portion of the Site (SB-25 [0.5-1] and SB-13 [2-2.5]). In addition, PFOA and PFOS were found above the USCO on the northwestern portion of the Site (SB-20

[1-1.5]). These soil exceedances of the USCOs and RRSCOs are likely due to historic Sears Auto Service Center property uses, potential USTs, and contaminated historic fill. Chromium likely resulted from the auto repair and refinishing operations.

- Volatile organic compounds (VOCs), PFAS, PAHs, and metals (including barium, beryllium, chromium, and copper) were found in groundwater to exceed the Ambient Water Quality Standards (AWQS) throughout the Site, likely associated with historical uses, potential USTs, and historic fill contamination. As described above elevated concentrations of PAHs, chromium, and lead were detected in soil exceeding the USCOs and therefore the protection of groundwater pathway must be further evaluated.

- Several petroleum hydrocarbons (PHCs) and chlorinated VOCs were detected in the soil vapor and indoor air samples which may indicate contamination is present throughout the Site.

SESI recommended that prior to any development on the Subject Property additional investigation be conducted to delineate the extent of the SVOCs (PAHs), metals, pesticides, and PFAS contamination in soil and to evaluate soil remedial options. The investigation should also delineate the VOC, SVOCs (PAHs), metals, and PFAS contamination in groundwater and evaluate remedial options available to comply with the AWQS. Finally, a soil vapor intrusion evaluation was recommended to address the potential for soil vapor contamination in the proposed development..

5.1.3. LOCAL, COUNTY, AND STATE INFORMATION REQUESTS

On March 6, 2025, SESI filed information requests with the NYSDEC, Westchester County Departments of Health, Emergency Services and Environmental Facilities, and White Plains Buildings and Fire Departments for information regarding potential incidents, spills, hazardous material storage/use and UST decommissioning records. Responses received have not provided any information that will change the findings provided in this reports. SESI reserves the right to modify this report should additional information be provided from these requests that warrants a modification.

5.2. PHYSICAL SETTING SOURCES

Sources used to evaluate the physical setting of the property include:

- USGS Topographic Maps;
- Aerial Photographs; and
- Site Reconnaissance.

5.2.1. TOPOGRAPHY

The subject property is relatively level with regional topography decreasing to the west. According to the United States Geological Survey (USGS) 2021 Glenville/2019 White Plains, New York 7.5-minute Series topographic map, the subject property's topographic elevation is approximately 200 feet above mean sea level (msl). The EDR Topographic Map Report is attached to this Report as **Appendix C**.

5.2.2. SURFACE WATERS AND WETLANDS

The closest open surface water to the subject property is the Bronx River located approximately 984 feet west (0.22 miles) from the subject property.

5.2.3. GEOLOGY AND GROUNDWATER

As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Site are characterized as UoA (Urban Land outwash substratum) urban land which is surface covered by pavement, concrete, buildings, and other structures underlain by disturbed and natural soil material, till substratum, 0 to 3 percent slopes. Based on the results of the Phase II ESA conducted on-site, the elevation of groundwater at the subject property is approximately 180-200 feet above mean sea level (AMSL), and groundwater flow direction is expected to be in the western direction.

5.3. HISTORICAL USE INFORMATION FOR THE PROPERTY

Sources used to determine the historical use of the property include:

- Aerial Photographs;
- EDR City Directory Abstract;
- USGS Topographic Maps; and
- Sanborn Fire Insurance Maps.

EDR Reports are attached to this Report as **Appendix C.**

5.3.1. AERIAL PHOTOGRAPHS

Following is a summary of the EDR review of 15 aerial photographs dated 1941, 1949, 1953, 1958, 1962, 1964, 1971, 1974, 1985, 1991, 1994, 2006, 2011, 2015, and 2019.

Table 5.2—Aerial Photographic Review

Year	Quality of Photograph	Observations
1941	Fair	**Site:** The subject property is developed with numerous small structures. **Adjacent Parcels:** The adjoining properties are all developed. In general, the surrounding area is densely developed with numerous smaller structures.
1949, 1953	Good (1949, 1953)	**Site:** No discernible changes. **Adjacent Parcels:** No discernible changes.
1958	Fair	**Site:** No discernible changes. **Adjacent Parcels:** A building is no longer present east of the subject property and a parking lot is now present.
1962	Good	**Site:** A parking area is present in the eastern portion of the subject property. **Adjacent Parcels:** No discernible changes in the surrounding properties. Numerous residential structures are now present in the northern portion of the photograph.
1964	Good	**Site:** No discernible changes. **Adjacent Parcels:** No discernible changes.
1971	Good	**Site:** Structures remain present. Ground disturbance appears present adjacent to the parking lot in between the structures. **Adjacent Parcels:** Numerous structures in the adjoining area are no longer present, notably to the north, east, and south. A large structure appears under construction to the southeast.
1974	Good	**Site:** There are no structures depicted, and the entire subject property appears to be disturbed land. **Adjacent Parcels:** There are now no structures depicted on any adjoining property. Right-of-ways formerly present to the east of the subject property similarly are no longer depicted. The large structure to the southeast is completed.
1985, 1991, 1994	Good (1985), Poor (1991), and Fair (1994)	**Site:** The subject property is the northwest corner of a large interconnected building. **Adjacent Parcels:** The properties to the north, east, south, and west are all developed with large structures.
2006, 2011,	Good	**Site:** No discernible changes. **Adjacent Parcels:** No discernible changes.

Year	Quality of Photograph	Observations
2015, 2019		

No concerns were identified at the subject property or on surrounding properties based on a review of the aerial photographs.

5.3.2. EDR CITY DIRECTORY ABSTRACT

SESI obtained historical city directory data from EDR for the subject property. SESI reviewed the City Directory listings for the years 1963, 1965, 1972, 1977, 1982, 1987, 1992, 1995, 2000, 2005, 2010, 2014, 2017 and 2020. A copy of the City Directory Abstract is included in **Appendix C**.

The subject property is part of a larger shopping mall and determining the exact history of leasehold spaces were within the boundaries of the Site was not possible based on available information with specific accuracy. However, historic operations at the shopping mall included the following: retail, shoe repair, bank, jewelry, cinema, restaurant, gallery, travel agent, radio shack, video store, café, building management offices, leather retailer and department store. These specific historic operations identified in the City Directory do not constitute RECs. The subject property, however, was occupied by an auto service center, which is a REC. In addition, NuWay Cleaners Inc. was identified on the subject property when it had an address of 90 Main Street in the 1963 and 1965 city directories.

5.3.3. USGS TOPOGRAPHIC MAPS

Following is a summary of the EDR review of Topographic Map Reports:

Table 5.3—Topographic Map Review

Source	Year	Minute	Scale
Tarrytown, Stamford	1892, 1893, 1899, 1902	15	62500
White Plains	1932	7.5	24000
White Plains	1938	7.5	31680
Glenville, White Plains	1944, 1947, 1957, 1967, 1971,	7.5	24000
White Plains	1979, 1994	7.5	24000

Source	Year	Minute	Scale
Glenville, White Plains	2013, 2015, 2016, 2018, 2019, 2021	7.5	24000

Based on a review of the EDR Historical Topographic Map Report, the subject property is level with an approximate elevation of 200-feet above msl. Topography on-site gently slopes to the west. Regional topography slopes more significantly downward to the west. Similarly, the surrounding properties are relatively level with a general slope to the west with properties to the west across Lexington Avenue displaying greater topographic relief. No wetlands were noted on the maps within or adjacent to the subject property; however, a stream was noted running north-south to the west of the subject property circa 1892-1902, which is no longer present. A review of these maps suggests the subject property was developed prior to 1892. No environmental concerns were identified based on a review of the topographic maps.

5.3.4. SANBORN FIRE INSURANCE MAPS

The subject property was covered on 19 of the Sanborn maps from 1885, 1889, 1894, 1900, 1905, 1911, 1930, 1942, 1950, 1987, 1989, 1990, 1992, 1993, 1994, 1995, 2002, 2003, and 2004 described below:

Table 5.4—Sanborn Map Review

Year	Quality of Map	Observations
1885	Good	**Subject Property:** Historic uses identified include a carriage factory (including painting, metal melting, and woodworking), two hotels, a bakery (with underground ovens), several stores, a cigar factory, several dwellings, and other structures are identified on the subject property. **Adjacent Parcels:** Historic uses included a blacksmith, a tailor, boarding stables, a livery, a motel, and several dwellings subject property on the eastern upgradient property. Railroad Avenue forms the northern border of the subject property and Lexington Avenue forms the western border of the Subject property. There are numerous dwellings south of the Subject property.
1889, 1894	Good	**Subject Property:** No significant changes. **Adjacent Parcels:** No significant changes.
1900	Good	**Subject Property:** The bakery has been replaced by a salvation army store.

Year	Quality of Map	Observations
		Adjacent Parcels: A hand printing, tin shop, and a second tailor are now present on the adjoining property east of the subject property.
1905	Good	**Subject Property:** The salvation army store has been replaced by a blacksmith. Two small structures are now present in the southwest corner of the lot. **Adjacent Parcels:** No significant changes.
1911	Good	**Subject Property:** The blacksmith has been replaced by a store. Both historic hotels have been replaced by a hardware store and tin shop. The blacksmith has been replaced by Daily Records. The carriage works in the northeast corner of the subject property is no longer present and a moving picture theater, printing, shoe repair, and tailor are now present. A pipe and sheet metal fabricator is present in the southern portion of the subject property and naphtha and oil storage is indicated in the central yard. **Adjacent Parcels:** A garage is now present adjoining to the east of the southeast corner of the subject property and a gasoline UST is indicated .
1930	Good	**Subject property:** The subject property has been improved with a department store and tin shop. Several hardware stores, hardware storage, and other stores are present. In the southern portion of the subject property a private garage is present with a gasoline tank illustrated). **Adjacent Parcels:** The structure to the east of the southeast corner of the subject property is now indicated as an auto washing and greasing facility. An iron worker, and sign printing are depicted as well.
1942	Good	**Subject Property:** No significant changes. **Adjacent Parcels:** No discernable changes.
1950	Good	**Subject property:** A drycleaning operation is noted in the northeast corner along Main Street. **Adjacent Parcels:** No significant changes depicted.
1987	Good	**Subject Property:** All previous on-site structures are no longer depicted and the subject property is now improved with the Galleria Mall. **Adjacent Parcels:** Significant changes have occurred to the surrounding area. The area to the east and south is now also part of the Galleria Mall. Each of the surrounding properties have been redeveloped. The smaller former structures are no longer depicted and the surrounding parcels are improved with large structures for both commercial and governmental use.

Year	Quality of Map	Observations
1989, 1990, 1992, 1993, 1994, 1995, 2002, 2003, 2004	Good	**Subject Property:** No discernible changes. **Adjacent Parcels:** No discernible changes.

Based on the review of Sanborn Maps, historic subject property operations and historic upgradient operations were identified.

5.4. ENVIRONMENTAL LIEN AND AUL SEARCH REPORT

A lien or activity use limitation search was not conducted as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

5.5. ENVIRONMENTAL PERMITS

Review of the EDR Radius Map Report for the subject property indicates no environmental permits attributed to the Site. EDR Reports are provided in **Appendix C**.

6.0 SITE RECONNAISSANCE

6.1. METHODOLOGY AND LIMITING CONDITIONS

An environmental professional from SESI, Dafina Djombalic, visited the subject property on February 20, 2025, to identify potential RECs. The subject property was observed to the extent that it was accessible and not obstructed. An inspection photolog is attached to this Report as **Appendix D.**

6.2. SUBJECT PROPERTY OBSERVATIONS

The subject property is improved by a former Sears Department Store and auto service center which is attached to a three-story mall building encompassing two (2) blocks that extends from North Lexington Avenue to Court Street and Main Street to Martine Avenue. The ground floor contains mechanical and loading spaces while the upper floors are vacant and previously housed the Sears department store and automotive center.

6.3. CHEMICAL STORAGE AND USAGE

SESI observed multiple chemical usage or storage locations on the subject property beyond typical cleaning supplies. There were several mechanical closets that used oils and fluids as well as some chemical closets as shown in the photolog. There were no associated releases observed during the walkthrough of these areas. Therefore, this does not constitute a REC.

6.4. BULK STORAGE TANKS

SESI personnel observed two (2) aboveground tanks and at least two (2) suspect underground storage tanks were identified by the property manager. There was no staining observed, and the concrete below the aboveground tanks had no visible cracks.

6.5. SUBJECT PROPERTY WASTE AND WASTEWATER

SESI observed some property waste on the subject property. This is not considered a REC.

6.6. STAINED SOIL, STAINED PAVEMENT, OR STRESSED VEGETATION

SESI observed several locations of stained concrete in the parking areas and loading bays. Concrete will be removed as part of the proposed redevelopment and therefore no further investigation is warranted.

6.7. PITS, PONDS, OR LAGOONS

No pits, ponds or lagoons were identified at the subject property.

6.8. WELLS

SESI did not observe any on-site dry wells, irrigation wells, injection wells, observation wells, monitoring wells, potable water wells, recovery wells, or abandoned wells.

6.9. FLOOR DRAINS AND SUMPS

There were several floor drains that lead to sanitary sewer throughout the subject property. There is also no evidence of septic use in the past. There were storm drains in the parking area. The interior floor drains were in the cooking areas and bathrooms primarily. Two pits were identified in the northwest mechanical space. There was no observable staining in and around these drains or pits.

6.10. PCB-CONTAINING MATERIAL, INCLUDING CAULK

There were no observed transformers; however, there were electrical closets that power the mall. There are likely several areas in which caulking is also present; therefore, a survey is recommended for caulking. This is considered **BER 2**.

6.11. ASBESTOS-CONTAINING MATERIAL

ACM surveying was not included in SESI's scope of work; however, based on the age of the facility, an ACM survey is recommended. SESI recommends an ACM survey prior to redevelopment. This is considered **BER 3**.

6.12. RADON

Radon surveying was not included in SESI's scope of work; however, based on the age of the facility, a radon survey is recommended. The subject property is located in Westchester County which is in EPA Radon Zone 3. This zone contains counties with the "lowest potential; average indoor radon levels may be less than 2 pCi/L (picocuries per liter)." Therefore, radon is not considered a REC.

6.13. UNIVERSAL WASTE

There were several pieces of universal waste throughout the subject property in the cleaning areas. Therefore, this universal waste should be properly disposed of prior to demolition or redevelopment. This is considered **BER 4**.

6.14. CONCRETE

SESI observed several locations of stained concrete in the parking areas and loading bays. Staining was also observed from the elevator door. There was also observed staining near the elevator on the ground floor. Concrete will be removed as part of the proposed redevelopment and therefore no further investigation is warranted. This is considered **BER 5**.

6.15. LEAD-BASED PAINT

LBP surveying was not included in SESI's scope of work; however, based on the age of the facility, a LBP survey is recommended. This is considered **BER 6**.

6.16. VAPOR INTRUSION

Based on a review of information from the Phase II ESA, vapor intrusion is anticipated to be a potential concern on the subject property. Therefore, this is considered **BER 7**.

7.0 DATA GAPS

Based on a review of the available documentation, the following data gaps have been identified:

- Responses to FOIL requests have not been received at the time of this report. SESI has the right to revise this document should additional pertinent information be provided from FOIL requests at a later date.

8.0 FINDINGS

Based on our investigation, we conclude that there is evidence to indicate areas of potential environmental concern on the subject property due to former on-site uses of USTs, former on-site auto repair and refinishing operations, historical cleaners on the subject property and upgradient to the subject property, upgradient historical uses, and current data demonstrating impacts at the subject property documented in the Phase II report. See ***Section 10.0 CONCLUSIONS*** of this Report.

9.0 OPINIONS

In our professional judgment, the scope and character of our environmental assessment were sufficient to justify the stated conclusions, after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the subject property as found in historical records, and visual observation of the subject property.

10.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the investigation, it is concluded that there is evidence to indicate areas of recognized environmental concern on the subject property and that additional investigation of these areas is warranted. The conclusions and recommendations in this regard are as follows:

The following RECs have been identified:

- **REC 1 – Subject Property Underground Storage Tanks (USTs):** A total of five (5) underground storage tanks (USTs) were identified in the corresponding EDR Radius search. These tanks were registered with PBS numbers (3-173665, and 3-600104) and the tanks contained 2x10,000-gallon USTs closed in place, 1x100-gallon UST converted to non-regulated use, 1x1,000-gallon UST converted to non-regulated use, and 1x8,000-gallon UST closed in place. Closure documentation of these tanks has not been provided. Therefore, further subsurface investigation is recommended of the entire property to locate and close out any remaining UST and perform further investigation once the tanks are removed.

- **REC 2 – Historical Site Uses**:
  Historic operations circa 1885-2023 at the subject property that are considered of concern include: carriage house/factory, laundry/drycleaning, automobile station/garage, plumbing shop, furniture and upholstery, paints/oils storage, hardware store, tin shop, sheet metal fabrication, and naphtha and oil storage, and a Sear automotive center and repair shop. Soil, groundwater and soil vapor sampling conducted during the Phase II ESA identified impacts that appear to be partially attributable to former on-site operations, particularly the auto repair center. Additional investigation is required.

- **REC 3 – On-site Contamination:** SESI reviewed analytical results of soil, soil vapor and groundwater data collected from the Subject Property. The soil data identified semi-volatile organic compound (SVOC) impacts (specifically polycyclic aromatic hydrocarbons [PAHs]) above the Restricted Residential Use Soil Cleanup Objectives (RRSCOs) or Unrestricted Use Soil Cleanup Objectives (USCOs) throughout the subject property from grade to 8.5 feet below ground surface (ft-bgs). Higher concentrations were specifically found at the east of the Subject property, which may indicate a historic release.

Additionally, metals were found above the USCOs to 19.5 ft-bgs throughout the subject property. Lead, cadmium, and mercury were found above the RRSCOs on-subject property in discrete areas, suggesting that they are attributable to historic releases. Chromium (total) was found on the northeastern portion of the Site exceeding its USCO. As described below, chromium and lead were also identified in groundwater exceeding the AWQS and therefore, the groundwater pathway for chromium and lead requires further evaluation.

- Pesticides were found above the USCOs in the north central portion of the subject property. The per and poly fluoroalkyl substances (PFAS) compound perfluorooctanesulfonic acid (PFOS) was found above the guidance USCO in the northern portion of the subject property. In addition, PFOA and PFOS were found above the guidance USCOs on the northwestern portion of the subject property. These soil exceedances of the USCOs and RRSCOs are likely due to historic property uses, potential USTs, and contaminated historic fill.
- Volatile organic compounds (VOCs), PFAS, PAHs, and metals were found in groundwater to exceed the Ambient Water Quality Standards (AWQS) throughout the subject property which are likely associated with historical uses, potential USTs, and historic fill contamination. As described above elevated concentrations of PAHs, chromium, and lead were detected in soil exceeding the USCOs and therefore the protection of groundwater pathway must be further evaluated. These elevated concentration PAHs and metals detected in soil that are attributed to the historic auto repairs are impacting the Sites groundwater. Several petroleum hydrocarbons (PHCs) and chlorinated VOCs were detected in the soil vapor and indoor air samples which may indicate contamination is present throughout the subject property.

- **REC 4 – Historic Upgradient Operations**: Historic operations identified upgradient from the subject property based on the Sanborn maps include hand printing, tin shop, gas-powered printing station, plumbing shop (1900 Sanborn map), an auto repair shop with gas UST (1911 Sanborn map),

The following HREC was identified:

- **HREC 1 – Historic Spills and LTanks:** A review of the database as provided by EDR identified three (3) listings, one [1] for the subject property identified as JC Penney Co Inc (9102767) and two [2] for A&S Store (8803673 and 8805571) on the other end of the mall. Based on available information, the listings for the A&S Store are associated with the eastern side of the mall and are not associated with the subject property.. Since the former JC Penney spill was closed by NYSDEC, this is considered a HREC to the subject property.

The following BERs have been identified:

- **BER 1 – Subject Property Aboveground Storage Tanks (ASTs):** A total of two (2) aboveground storage tanks were identified in the corresponding EDR Radius search and were observed during the site visit. These tanks were registered with PBS number 3-169579 and contained 2x300 gallon diesel fuel oil (Tank Nos. 32 and 33), which were administratively closed. In addition, SESI personnel observed two (2) ASTs on the Subject Property during the walkthrough. It is unknown if these tanks are the same tanks associated with PBS No. 3-169579 however it is likely these are the same tanks. There was no staining observed, and the concrete below the tanks had no visible cracks. Therefore, no additional investigation is warranted.
- **BER 2 – Polychlorinated Biphenyl (PCB) Caulk:** A PCB survey was not completed during SESI's walkthrough of the subject property. There are likely several areas present that contain caulking. Therefore, a PCB survey is recommended prior to any demolition or redevelopment of the subject property.
- **BER 3 – Asbestos-Containing Material (ACM):** An ACM survey was not completed during SESI's walkthrough of the subject property. Based on the age of the building, SESI recommends an ACM survey prior to any demolition or redevelopment of the subject property.
- **BER 4 – Universal Waste:** There were several pieces of universal waste identified during the walkthrough of the subject property; however, a complete survey of this universal was not completed. SESI recommends a universal waste survey prior to any demolition or redevelopment of the subject property.
- **BER 5 – Concrete:** SESI observed several locations of stained concrete in the parking areas and loading bays. Staining was also observed from the elevator door. Concrete will

be removed as part of the proposed redevelopment and therefore no further investigation is warranted.

- **BER 6 – Lead-Based Paint (LBP):** An LBP survey was not completed during SESI's walkthrough of the subject property. Based on the age of the building, SESI recommends an LBP survey prior to any demolition or redevelopment of the subject property.
- **BER 7 – Vapor Intrusion:** A vapor intrusion evaluation has not been completed as part of this review. The historic operations contained potential petroleum and chlorinated volatile organic compound (VOC) uses, which may have contributed to soil and groundwater vapor. In addition, data from the Phase II ESA suggests vapor intrusion may be a concern. Therefore, SESI recommends further evaluation of the vapor intrusion pathway at the subject property as part of the redevelopment process.

11.0 DEVIATIONS

This Report was prepared with no significant deviation from ASTM Standard Practice E1527-21.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

As required in 40 CFR 312.21(d), this section includes statements made by the environmental professional conducting this assessment.

“I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.”

“I declare that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property.”

“I have developed and performed the ‘all appropriate inquiry’ in conformance with the standards, limitations, and practices set forth in 40 CFR Part 312.”

This Report incorporates the consultant's best professional judgment in conductance of this Phase One Environmental Site Assessment.

User Questionnaire

Phase I Environmental Site Assessment Questionnaire
For ASTM E 1527-21

According to the American Society for Testing and Materials (ASTM) standard practice for environmental site assessments (Designation: E 1527-21) "All Appropriate Inquiry" (AAI) (40 CRF 312.20) standard, the client must provide the following information (if available) to the environmental consultant during a Phase I Environmental Site Assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Client/Responsible Party Information (person completing this questionnaire) :
Name: KEVIN McMANUS PE.
Title: PROJECT MANAGER
Interest to Property: POTENTIAL PURCHASER
Ownership/Operational Duration: 1.5 YEARS
Street Address: 7 RENAISSANCE SQUARE 4TH FLOOR
City: WHITE PLAINS
State: N.Y.
Phone:

Property Owner/Tenant Site Information:
Company Name: CAMERON CITY HOLDING CO LLC
Description of Operations: VACANT SHOPPING MALL & PARKING
Ownership/Operational Duration:
Street Address: 100 MAIN ST
Township:
City: WHITE PLAINS
County/State: NEW YORK
Size of Property: SURVEY MAP SEEN PROVIDED
Block/Lot: " " " "
Phone: " " " "
Contact: KEVIN McMANUS

I, KEVIN McMANUS, to the best of my knowledge, have truthfully provided the information herein.

CONTACT INFORMATION

1. ENVIRONMENTAL CLEANUP LIENS/OTHER LIENS

a. Are there any environmental cleanup liens/and or other liens that are filed or recorded against the subject property in any applicable jurisdiction? Not to my knowledge

2. ACTIVITY OR USE LIMITATIONS AND WETLANDS Not to my knowledge

A) Are you aware of any environmental restrictions/limitations to the use of the subject property? (i.e. Engineering or Institutional Controls)

i) If yes, please explain.

ii) Can you provide any lien or deed restriction paperwork (ie. deed notice or environmental lien)?

B) Is any of the subject property to your knowledge used as a child-care facility or are plans in place to have a child-care facility on-site?

C) Are there any wetlands or marshlands at the site to your knowledge?

3. COMMONLY KNOW OR REASONABLE ASCERTAINABLE INFORMATION ABOUT THE PROPERTY

A) Do you have any knowledge of the past uses of the property? Shopping Mall

i) If so, please explain (dates or tenant contracts should be collected if available for any commercial or industrial uses).
N/A

ii) Has the property ever been used for industrial purposes?
Not in the past 40 +/- years

a. If yes can you provide the NAICS code for the industrial use?
No

B) Do you know of any Environmental Spills Incident Numbers or Notices of Violation? (i.e., tank removals/Unregulated Heating Oil Tank removals)? No

i) If yes, please provide information or available paperwork (ie. former reports or incident numbers)

C) Do you know if the site has been subject to an environmental cleanup or received a Closure Approval (No Further Action) or other Environmental Outcome in the past?
NOT TO MY KNOWLEDGE

D) Do you know of any underground storage tanks (USTs), aboveground storage tanks (ASTs) and/or septic tanks?
I DO NOT KNOW

E) Do any buildings on the site have a basement or crawlspace?
NO

F) Does the site use/have an incinerator, compactor, or dumpster? (This should include any cooking oil containers or other media.)
DUMPSTER

G) How is heating and cooling supplied to the site?

a. If by oil, name of usual supplier:

b. If by gas, name of utility company:
CON ED

c. If by electric, name of utility company:

H) How is water supplied to the site?

a. Local municipal hookup?
   i. If so, name of provider:
   CITY OF WHITE PLAINS

b. Potable Well?
   i. If so, well number/designation and location:

I) Is any portion of the site prone to flooding or has had a significant flood?
NO

4. ADJOINING PROPERTIES

A) Have any of the adjoining properties been used for Industrial purposes currently or in the past? I DO NOT KNOW ABOUT PAST. CURRENTLY, NO.

i) If yes, please provide compass direction and name (if known) of the property.

B) Have any of the adjoining properties been used as a gas station, dry cleaner or auto shop currently or in the past?
I DO NOT KNOW ABOUT PAST. CURRENTLY, NO

i) If yes, please provide compass direction and name (if known) of the property.

C) Have any of the adjoining properties been used for commercial purposes currently or in the past? YES

i) If yes, please provide compass direction and name/ industry (if known) of the property. COMMERCIAL USES. OFFICES, MUNICIPAL BUILDINGS

D) Have any adjoining properties been used as a school currently or in the past?
NOT CURRENTLY. I DO NOT KNOW ABOUT PAST

i) If yes, please provide compass direction and name (if known) of the property.

E) Are any of the adjoining properties currently or in the future (to your knowledge) a child-care facility? I DO NOT KNOW

i) If yes, please provide compass direction and name (if known) of the property.

5. ENVIRONMENTAL SITE CONDITIONS

A) Are there any present environmental conditions at the site that may prove an obvious threat to the environment or human health?
NOT TO MY KNOWLEDGE

B) Do you have any chemical storage areas?
NOT TO MY KNOWLEDGE

C) Do you have any drum storage areas?
NOT TO MY KNOWLEDGE

D) Do you have any USTs or ASTs not related to heating?
I DO NOT KNOW

E) Do you have any of the following at or on the site:

a. On-site dry cleaning or washing machine facilities? NO

b. Landfills or known fill areas?

c. Machinery or equipment that uses hazardous or petroleum compounds?
NOT TO MY KNOWLEDGE

d. Dust collectors? NO

e. Spray booths? NO

f. Floor drains or sumps? POSSIBLY

g. Other machinery or equipment? YES

7. ADDITIONAL PERTINENT INFORMATION

A) Please provide the reason why the Phase I is required (i.e., sale, purchase, transfer, due diligence, cessation of operation, off-site source of groundwater contamination).

B) Please provide the complete and correct address or addresses for the property (any previous surveys maps or any change in tax lot and blocks that are proposed or not yet recorded at the local/county municipality or re- zoning plans):
100 MAIN STREET WHITE PLAINS, NY.

C) Any additional services or out-of-scope services you wish to be provided in addition to the standard set of services (mold assessment/asbestos assessment/geotechnical/ lead-based paint/indoor or sub-slab air sampling):
N/A

D) Please identify all parties to your knowledge who will rely on this ESA? (excluding regulatory agencies)

E) Please provide any former Phase I or Phase II reports, incident reports, state records, reports, current or former permits for the operation of machinery, tank registration documents, AIRS permits, or other environmental permits.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 8 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/04/2024 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/03/2024 has revealed that there are 174 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 53 NY UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/03/2024 has revealed that there are 36 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/16/2024 has revealed that

there are 89 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUSRAP: DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations.

A review of the FUSRAP list, as provided by EDR, and dated 03/03/2023 has revealed that there is 1 FUSRAP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NUCLEAR DEVELOPMENT	5 NEW STREET	NW 0 - 1/8 (0.119 mi.)	N177	543
Site Status: Eliminated from consideration under FUSRAP				
Site ID: NY 32				

FUELS PROGRAM: This listing includes facilities that are registered under the Part 80 (Code of Federal Regulations) EPA Fuels Programs. All companies now are required to submit new and updated registrations.

A review of the FUELS PROGRAM list, as provided by EDR, and dated 11/08/2024 has revealed that there is 1 FUELS PROGRAM site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 24 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 09/16/2024 has revealed that there are 10 E MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY PFAS: DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

A review of the NY PFAS list, as provided by EDR, has revealed that there is 1 NY PFAS site within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there are 117 NY MANIFEST sites within approximately 0.25 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 08/28/2024 has revealed that there is 1 NY MGP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
WHITE PLAINS MGP SIT	9 NEW STREET AND 12	NW 0 - 1/8 (0.118 mi.)	N169	485

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	12/13/12 Assitant Chief Engineer Joseph Rocuzzo reported that a contractor, DP Wolff (143 Bedford Rd, Katonah) was performing mechanical work and had 50 gallon of oil that needed to be pumped back into the diesel storage tank. They set the house pump on manual and turned on the pump. It was explained that the oil first gets pumped up to the 20th floor day tank and the excess then flows out the daytank return line back to the storage tank. However the daytank emergency vent relief

1 NORTH LEXINGTON AVE (Continued) **S100140904**

valve is lower than the return line, so the oil released from that vent before it could be sent
back to the tank via the return line. The oil drained down the glass curtain wall from the 19th
floor to the 16th floor. Elite Environmental was on site removing oily insulation and cleaning
oiled surfaces. A minor amount of oil escaped the interior of the building thru the glass curtain
and landed on the sidewalk below. Some oil also entered a floor drain next to the day tank. WP
sewer dept personnel reported that oil was observed in the sanitary sewer in the street but not in
the storm drains. WCHD is requiring indoor air sampling before the 4 impacted floors can be
reoccupied. TG

Remarks: interior and exterior to sidewalk - cleanup in progress - spilled 14 thru 17 floor elite environmental on site

Environmental Interest/Information System:
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site Description:	Site Location: The site is located at 25 North Lexington Avenue (formerly 50 Hamilton Avenue and a portion of (p/o) 85 North Lexington Avenue), in the City of White Plains, Westchester County, New York, in an area of urban development. The site comprises 1.463 acres located on the west side of North Lexington Avenue, north of Hamilton Avenue and east of Ferris Avenue, and is identified on the

HOPE FIRE ENGINE CO. SITE (Continued) **S127990271**

Westchester County tax maps as a p/o new Tax Parcel Identification No. 125.66 5 2.1 (formerly 125.66 5 2 [lot 2], and p/o 125.66 5 1 [lot 1]). Site Features: The site is currently undergoing construction of a multi use residential/commercial building. The closest water body is the Bronx River, located 0.118 miles west of the site. The site is not located in a flood zone, and no designated wetlands were identified. Current Zoning and Land Use: The site is currently located in the CB 4 District, which allows commercial and some residential uses. The CB 4 designation also permits hotels. The New Street right of way and Terrace Parking Garage are located north of the site. North Lexington Avenue and St. John the Evangelist Roman Catholic Church are located east of the site, across North Lexington Avenue. Hamilton Avenue and multiple commercial buildings border the southern portion of the Site. Ferris Avenue, a Greyhound Bus Station, and the White Plains Metro North Railroad Station are located west of the site. The rail line is located 0.082 miles west of the site. The closest residential area is an apartment building located approximately 0.10 miles from the site to the south southwest. Past Use of the Site: Prior to 1885, the site was utilized as farmland and a freight yard. Between 1885 and 1888, the site was improved with dwellings, a rail line, and several retail establishments. Between 1889 and 1911 the site was further developed as a lumber and coal storage yard, a railroad round house, and a fire station, known as the Hope Fire Engine Co. of White Plains. In 1930, former lot 1 contained an underground storage tank (UST) associated with the fire station. The former lot 2 portion of the site was occupied by two service stations from 1937 through 1961. Railroad operations continued on lot 1 until the mid 1960 s when the site was taken over by urban renewal agencies and the structures on the railroad portion of the lot were razed and a parking lot was constructed. The fire station remained on-site until 1987. All on site buildings were demolished by 1994 and the site was fully developed into a parking lot in 2006. The parking lot was demolished in 2022, in preparation for construction of a multi use residential/commercial building. The long history of fire station use, and the presence of service stations may have contributed to contamination on the site. The presence of the railroad storage yard and lumber yard may have also contributed to contamination at the site. Contaminants associated with railroad operations include residual ash and cinders, chemically treated railroad ties, and petroleum related compounds. Polyaromatic hydrocarbon (PAH) contaminated soils detected on the site may be attributed to the previous railroad storage and lumber yard. Site Geology and Hydrogeology: According to the United States Geological Survey s White Plains, New York 7.5 minute topographic quadrangle (1967), the site is located at an elevation of 200 210 feet above mean sea level (ft amsl). The site is located in a river valley and slopes in the south southwest direction towards the Bronx River. A steep decline is present along the eastern and northern site boundaries. During investigations of the site, groundwater was encountered at depths ranging from approximately five (5) to 30 feet below grade (ft bg). Groundwater flow direction is to the southwest. Based on environmental investigations conducted to date, the subsurface geology generally consists of fill material to 12 ft bg, underlain by native sand deposits consisting of loose to dense sand with varying amounts of silt to depths of 55 to 88 ft bg, followed by gneissic bedrock.

Env Problem: Remediation at the site is complete. Remedial actions have

HOPE FIRE ENGINE CO. SITE (Continued) **S127990271**

	successfully achieved soil cleanup objectives for unrestricted use. Nature and Extent of Contamination: Based on investigations conducted to date, prior to the IRM, the primary contaminants of concern included SVOCs and metals in soil and groundwater, pesticides and PCBs in soil, and volatile organic compounds (VOCs) in soil vapor. Impacts were identified in soil across the site to depths up to 23.5 feet below grade (ft bg). Soil: Following completion of the on-site IRM, all soil above USCOs have been removed and disposed of off-site. Data do not indicate site-related soil impacts have migrated off-site. Groundwater: Post-IRM groundwater sampling has indicated very low concentrations of chloroform (maximum concentration of 8.98 ppb compared to the AWQS of 7 ppb) and secondary naturally occurring metals (iron, magnesium and manganese), as well as low levels of PFOS (maximum concentration of 14.2 ppt) and PFOA (maximum concentration of 35.4 ppt). While the PFOS and PFOA concentrations exceed the 10 ppt Maximum Contaminant Level (MCL) for each compound, they are not indicative of a source area and are expected to be consistent with the concentrations coming onto the site, similar to other sites in the area that also contain no potential source. Additionally, the area is served by municipal water. The IRM is complete and has removed all soil above USCOs, and thus any possible site-related source material that may contribute to groundwater contamination. Data do not indicate site-related groundwater impacts have migrated off-site. Soil Vapor: The complete excavation of soil exceeding USCOs across the entire site as part of the IRM removed any potentially impacted soil in the unsaturated zone and has addressed potential soil vapor intrusion concerns for any future buildings constructed on-site, as well as the potential migration of soil vapor off-site.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

DEC Memo:	9/18/2023 NYPA is in process of cutting power to the building. During work they utilized a diesel

NEW YORK POWER AUTHORITY-WHITE PLAINS OFFICE (Continued) **1004758118**

generator. Workers overfilled the generator on Saturday, spilling 20 gallons to floor (work is
happening on 17th floor of the building). Absorbent, pads, and boom were used to contain spill.
Spent materials are drummed up and waiting a bill of ladding for off-site disposal. Nothing escaped
to environment. -ARM 9/18/2023 Update: Cleanup is complete and no oil discharge to the
environmental. NFA. -ARM

Remarks: appx 20 gals released to an interior room with no drain. solono ed valve stuck clean up finished 55 gal drum with sand and product.

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Registry ID: 110022533775

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

The National Compliance Database (NCDB) supports implementation of the

NEW YORK POWER AUTHORITY-WHITE PLAINS OFFICE (Continued) **1004758118**

Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Longitude:	-73.7683627
DEC Memo:	6/14/06 Pro Test on site to test the 1500 gallon tank as ordered by the DEC. Tester couldn't get vacuum on the tank. Andre from ProTest said the cement on top of the tank needs to be removed to expose all of the bungs and piping. Once that is performed, then the tank can be isolated and tested. Visual observation revealed that the steel on the top of the tank was very heavily corroded. TG 06/29/06 AM -

VINTAGE RESTAURANT (Continued) **S108059295**

ProTest back on site retesting the lines and the tank. Andre reported that the vent line and the remote fill line both failed the test. The tank failed to hold a vacuum therefore, it also failed. Andre recommending unearthing the manway and checking that for a definitive answer on the tank failure. However this can't be accomplished until a refrigeration compressor is moved which will require a refrigeration mechanic. TG 06/29/06 John Leddy from ProTest officially reported that the tank failed and that the tank has lost two inches of oil since the 14th and the tank is not being used. Recommending emptying the tank to their client. TG 07/05/06 Joe Ostrosky from Petroleum Tank Cleaners (PTC) reported that PTC was hired to remove the oil from the tank. The tank has been emptied, cut open and cleaned. TG 11/15/06 New England Tank Services has completed the removal of the tank, allowing for an inspection. Substantial corrosion and numerous holes were observed. A letter was sent to the management company requiring the installation of two monitoring wells. 03/12/07 Monitoring well installation report submitted by JM Associates who were subcontracted by Fleet Environmental. No free product was detected in the wells. TG 07/30/07 New England Tank Services reported that they removed the tank along with 2.64 tons of petroleum contaminated soil. TG

DEC Memo:	6/14/06 Pro Test on site to test the 1500 gallon tank as ordered by the DEC. Tester couldn't get vacuum on the tank. Andre from ProTest said the cement on top of the tank needs to be removed to expose all of the bungs and piping. Once that is performed, then the tank can be isolated and tested. Visual observation revealed that the steel on the top of the tank was very heavily corroded. TG 06/29/06 AM - ProTest back on site retesting the lines and the tank. Andre reported that the vent line and the remote fill line both failed the test. The tank failed to hold a vacuum therefore, it also failed. Andre recommending unearthing the manway and checking that for a definitive answer on the tank failure. However this can't be accomplished until a refrigeration compressor is moved which will require a refrigeration mechanic. TG 06/29/06 John Leddy from ProTest officially reported that the tank failed and that the tank has lost two inches of oil since the 14th and the tank is not being used. Recommending emptying the tank to their client. TG 07/05/06 Joe Ostrosky from Petroleum Tank Cleaners (PTC) reported that PTC was hired to remove the oil from the tank. The tank has been emptied, cut open and cleaned. TG 11/15/06 New England Tank Services has completed the removal of the tank, allowing for an inspection. Substantial corrosion and numerous holes were observed. A letter was sent to the

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

WESTCHESTER CO. UST:

Name:	WESTCHESTER COUNTY OFFICE BUILDING
Address:	148 MARTINE AVENUE
City,State,Zip:	WHITE PLAINS, NY 10601
Id/Status:	3-168777 / Active
Operator Name:	Westchester County DPW Operations
Owner Name:	Westchester County DPW
Owner Street:	148 Martine Avenue
Owner Address2:	Not reported
Owner City:	White Plains
Owner State:	NY
Owner Zipcode:	10601
GDS Number:	3550000034
Tank Number:	008
Status:	4. Closed - in place
Capacity:	1500
Product Stored:	9999. Other
Product Stored Percent:	Not reported
Tank Leak Detection:	0. None
Date Installation:	01/01/1972
Date Perm Closure:	12/10/2002
Tank Location:	5. Underground including vaulted with no access for inspection
Tank Type:	Not reported
Tank Internal Protection:	1. Epoxy liner
Tank External Protection:	1. Painted/Asphalt Coating
Tank Secondary Containment:	0. None
Piping Location:	0. No Pipiing
Piping Type:	0. No Pippping
Piping External Protection:	0. None
Overfill Prevention:	0. None
Piping Secondary Containment:	Not reported
Spill Prevention:	0. None
Dispenser:	0. None
Tank Number:	009
Status:	0. Administratively closed
Capacity:	30000
Product Stored:	Not reported
Product Stored Percent:	Not reported
Tank Leak Detection:	Not reported
Date Installation:	10/01/2003
Date Perm Closure:	11/01/2004
Tank Location:	5. Underground including vaulted with no access for inspection
Tank Type:	6. Fiberglass reinforced plastic (FRP)
Tank Internal Protection:	3. Fiberglass liner (FRP)
Tank External Protection:	Not reported
Tank Secondary Containment:	4. Double-Walled (underground only)
Piping Location:	3. Aboveground/underground combination
Piping Type:	1. Steel/Carbon/ steel/iron
Piping External Protection:	1. Painted/Asphalt Coating
Overfill Prevention:	2. High Level Alarm

DEC Memo:	05/17/06 Met with Con ED rep Tim Riley who explained that the impacted manhole conatined about and inch of fuel oil floating on several hundred gallons of water. A sample was taken and results rec’d later indicate that material was similar to a light fuel oil. A curbside fill line for 189 Main

CAPPELLI ASSOC. (Continued) **S107416552**

Street is one possible source. Requested that when the manhole is safe for entry that Con Ed
personnel attempt to determine where the furl is entering the structure. TG 07/21/06 JM Associates
coordinated the testing of the remote fill and vent lines servicing 189 Main Street and both of
those lines failed. The remote fill was excavated and petroleum impacted soil was present beneath
the line. Local WP building Dept work permit prohibited complete removal of the line, so
remediation will continue when the building is demolished. TG 06/10/08 Closure report submitted by
JM Associates. 13.32 tons of PCS removed. No post excavation sample results were taken. TG

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	3/6/19 Spoke to the caller, who confirmed that this was related to an earlier report of petroleum in a stream. O'Dee had spoken with them earlier, and said he would try to meet DEP on site to investigate and determine a possible source. dw 3/07/19: DEC inspected

DIESEL IN STREAM (Continued) **S123661649**

the location with DEP
HazMat. Strong diesel odors noted in a catch basin at the southeast corner of the parking lot for
office building at 10 New King Street. There is a petroleum stain on the grate over the catch
basin. Upgradient catch basins are clean. Some sheen noted in the impacted catch basin. Impacted
basin discharges to a nearby stream. Diesel odors, sheen, and some emulsified product noted at the
outfall. DEP has deployed boom which is picking up very little petroleum. It appears this spill is
the result of a diesel fuel leak - most likely from a delivery truck - and the spill occurred some
time ago. The diesel is weathered and breaking apart. DEP will continue to monitor and replace
booms if necessary. No recoverable product. jod

Remarks: SOIL SAMPLES DISCOVERED CONTAMINATION 3/07/19: Update from Regional Office: Actual report to Central Office Hotline was for petroleum odors noted while DEP was taking water samples. The caller did not report soil samples. jod

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	9-3-13: J.O'Dee call to V.Mc./Dspt.: John in contact with BILL MCMAHON/DPW. DPW responding and may be hairing Tri.St. J.O'Dee handling. 9/04/13: Bill McMahon from DPW called me directly when the spill occured yesterday. At first he stated fluid had entered a catch basin and they were calling Tri-State. He also stated that there was a multi-vehicle traffic accident as a result of this spill, a car reportedly slid through a traffic light. Bill called back later and stated that no material had entered the catch basin and DPW was completing the clean up themselves. I called back this morning and left a message asking him for an update. jod 10/07/13: Tri-State was contacted but never hired to perform any work. White Plains DPW reports the clean up was completed and no drains were impacted. No disposal documentation was provided. jod

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Insp P. Luzzi 64900 reported while inspecting the station discovered 1 quart of hydraulic fluid leaked on soil and bluestone from a piston of a Rental Manlift in the station. No smoke or fire is/was involved. No sewers, waterways, or private property affected. The spill is contained, cleanup is in progress, and the rental company is being contacted for repair of the equipment. D. Rohrer 12788 ==========

WHITE PLAINS SUBSTATION (Continued) **S102240780**

09-May-2005 10:26 Chief Const. Insp P. Luzzi 64900 reported that Snr Substa Oper R. Detz 19835 and
himself completed cleanup of the spill removing the affected area of soil and bluestone generating
3/4 of a 55 gallon drum of non-hazardous waste. The waste is being stored in the proper temporary
storage area and the manlift has engineering controls in place and the repair is pending the rental
company. D. Rohrer 12788

Name:	CE - WHITE PLAINS MGP
Address:	9 NEW STREET AND 12 WATER STREET
City,State,Zip:	WHITE PLAINS, NY 10601-
Site Code:	58617
HW Code:	V00438
Control Code:	15
Control Type:	ENG
Date Record Added:	06/19/2008
Date Rec Updated:	07/30/2024
Updated By:	GLWHITE
Site Description:	Site Location and Features: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is split into two operable units, OU1 and OU2; OU2, with the 12 Water Street address, is situated north of OU1. The main site feature of OU1 includes a Consolidated Edison Company of New York, Inc (Con Edison) electric distribution substation, as well as off-site areas to the south, which currently include the YMCA of Central and Northern Westchester and Saint John the Evangelist Roman Catholic Church (St. John s Property). OU2 site features include a commercial office building, which currently houses a banking institution, a security guard company and an attorney s office, and tenant parking area. The site and the St. John s Property are dissected by New Street (a dead end); together, they are bounded to the north by Water Street, Hamilton Avenue to the South, North Lexington Avenue to the west, and to the east by a parking area and office building located over the former road-bed of a de-mapped public thoroughfare formerly known as Spring Street. Current Zoning: The site is currently zoned CB-4, for commercial use. Historical Uses: Beginning in the mid-1800s, a former manufactured gas plant (MGP) operated by Con Edison predecessor companies spanned both OU1 and OU2. MGP operations reportedly ceased in 1930. OU1 includes the Southern Relief Holder of the MGP site and the St. John s Property. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John s Property, but some MGP tar is present deep underground. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. A Site Management Plan and monitoring plan are in place for the site, including the St. John’s Property. Site Geology and Hydrogeology: The stratigraphy of the site can be divided into four geologic units: fill, fine to medium sand, glacial till, and bedrock. Fill ranges in thickness from 3.5 to 9 feet and is underlain by up to 77 feet of sand. Glacial till, while discontinuous across the site, ranges up to 15 feet thick. Bedrock, consisting of Manhattan Schist, was observed at highly variable depths, ranging from 8 to 84 feet below grade (ft bg). Depth to groundwater ranges from 7 to 12 ft bg in the northern portion of the site to 22 to 29 ft bg in the southern portion, apparently corresponding with the increasing depth to bedrock, with flow to the south and west.
Env Problem:	Nature and Extent of contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds

CE - WHITE PLAINS MGP (Continued) **S106906513**

(VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures, impacting deep (e.g. 36 to 60 feet below ground surface) groundwater south of the building on the St. John s property. Site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the building or the indoor air samples. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation interim remedial measure (IRM) in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Coal tar is present under much of the parking area at 12 Water Street (OU2). The remediation in this area was completed in June 2010 via in-situ solidification and a low-permeability cap, as described in the 2012 Final Engineering Report. Operation and monitoring of the coal tar recovery well networks is ongoing. Residual contamination in the soil and groundwater is being managed under a Declaration of Covenants and Restrictions and a Site Management Plan.

Site Description: Site Location and Features: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is split into two operable units, OU1 and OU2; OU2, with the 12 Water Street address, is situated north of OU1. The main site feature of OU1 includes a Consolidated Edison Company of New York, Inc (Con Edison) electric distribution substation, as well as off-site areas to the south, which currently include the YMCA of Central and Northern Westchester and Saint John the Evangelist Roman Catholic Church (St. John s Property). OU2 site features include a commercial office building, which currently houses a banking institution, a security guard company and an attorney s office, and tenant parking area. The site and the St. John s Property are dissected by New Street (a dead end); together, they are bounded to the north by Water Street, Hamilton Avenue to the South, North Lexington Avenue to the west, and to the east by a parking area and office building located over the former road-bed of a de-mapped public thoroughfare formerly known as Spring Street. Current Zoning: The site is currently zoned CB-4, for commercial use. Historical Uses: Beginning in the mid-1800s, a former manufactured gas plant (MGP) operated by Con Edison predecessor companies spanned both OU1 and OU2. MGP operations reportedly ceased in 1930. OU1 includes the Southern Relief Holder of the MGP site and the St. John s Property. The Holder was removed by a

Site Description: Site Location and Features: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is split into two operable units, OU1 and OU2; OU2, with the 12 Water Street address, is situated north of OU1. The main site feature of OU1 includes a Consolidated Edison Company of New York, Inc (Con

CE - WHITE PLAINS MGP (Continued) **S106906513**

Edison) electric distribution substation, as well as off-site areas to the south, which currently include the YMCA of Central and Northern Westchester and Saint John the Evangelist Roman Catholic Church (St. John s Property). OU2 site features include a commercial office building, which currently houses a banking institution, a security guard company and an attorney s office, and tenant parking area. The site and the St. John s Property are dissected by New Street (a dead end); together, they are bounded to the north by Water Street, Hamilton Avenue to the South, North Lexington Avenue to the west, and to the east by a parking area and office building located over the former road-bed of a de-mapped public thoroughfare formerly known as Spring Street. Current Zoning: The site is currently zoned CB-4, for commercial use. Historical Uses: Beginning in the mid-1800s, a former manufactured gas plant (MGP) operated by Con Edison predecessor companies spanned both OU1 and OU2. MGP operations reportedly ceased in 1930. OU1 includes the Southern Relief Holder of the MGP site and the St. John s Property. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John s Property, but some MGP tar is present deep underground. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. A Site Management Plan and monitoring plan are in place for the site, including the St. John's Property. Site Geology and Hydrogeology: The stratigraphy of the site can be divided into four geologic units: fill, fine to medium sand, glacial till, and bedrock. Fill ranges in thickness from 3.5 to 9 feet and is underlain by up to 77 feet of sand. Glacial till, while discontinuous across the site, ranges up to 15 feet thick. Bedrock, consisting of Manhattan Schist, was observed at highly variable depths, ranging from 8 to 84 feet below grade (ft bg). Depth to groundwater ranges from 7 to 12 ft bg in the northern portion of the site to 22 to 29 ft bg in the southern portion, apparently corresponding with the increasing depth to bedrock, with flow to the south and west.

Env Problem: Nature and Extent of contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures, impacting deep (e.g. 36 to 60 feet below ground surface) groundwater south of the building on the St. John s property. Site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the building or the indoor air samples. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation interim remedial measure (IRM) in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Coal tar is present under much of the parking area at 12 Water Street (OU2). The remediation in this area was completed in June 2010 via in-situ solidification and a low-permeability cap, as described in the 2012 Final Engineering Report. Operation and monitoring of the coal tar recovery well networks is ongoing. Residual contamination in the soil and groundwater is being managed under a Declaration of Covenants and

Class:	Completed: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

SWIS: 6017
Town: White Plains (c)
Record Added Date: 05/22/2018
Record Updated Date: 06/20/2023
Update By: KATHOMPS
Site Description: Site Location: The 1.94-acre site is located at 200 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1.2. The site is a portion of the two-story White Plains Mall, located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. The remaining portion of the White Plains Mall and mall parking lot are located east of the site. Site Features: The majority of the site is improved with the White Plains Mall, which is vacant. The remainder of the White Plains Mall and associated parking area is present on the eastern adjacent BCP Site C360221 on tax lot 125.67-5-1.1. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1). The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with several small buildings, including dwellings and garages, prior to 1894. Between 1892 and 1902, a tributary to the Bronx River was visible on maps of the site, suggesting the area may have been elevated from its original topographic level. By 1930 multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930 s through the 1970 s. By 1987, all on-site buildings were demolished and replaced by the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Geophysical investigations conducted to date have not indicated any underground storage tanks exist on-site. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. In addition, contaminants of concern have been identified in soil vapor. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwaters flows in the southwesterly direction. Groundwater depths range from approximately 9.58 to 23. feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soils at the site are characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was

HAMILTON GREEN PHASE 1 (Continued) **S120958439**

encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 37 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Environmental investigations have identified metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs), in site soils; VOCs, including methyl-tert-butyl-ether (MTBE) in site groundwater; and VOCs in soil gas at the site. Soil: Soil borings have been advanced to a maximum depth of 11 ft bg. The maximum photoionization detector reading to date as been as high as 1,370 parts per million (ppm). Soil impacts include VOCs (chlorinated and petroleum-related compounds), SVOCs (polyaromatic hydrocarbons [PAHs]), and metals (chromium, lead, mercury, and zinc). Investigation into the nature and extent of soil contamination is on-going. Groundwater: Petroleum-related VOCs, including benzene, toluene, ethylbenzene and xylenes, collectively referred to as BTEX, were detected at concentrations above New York State Ambient Water Quality Standards. MTBE, which was added to gasoline in New York from 1979 until 2004, was also detected, which suggests an off-site source has contributed to the groundwater plume, since the on-site gas station closed prior to 1970. Investigation into the nature and extent of groundwater contamination is on-going. Soil Vapor: Sampling of sub-slab soil vapor points has indicated elevated concentrations of VOCs, including trichloroethylene and methylene chloride, within the footprint of the proposed redevelopment area. Investigation into the nature and extent of soil vapor impacts is on-going.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	9/28/17 AKRF was performing Phase II, noticed some sites where soil seemed odiferous and possibly contaminated. Took soil and gw samples, soil samples came back below CP-51. GW samples came back high in MTBE, benzene, and toluene in 3 areas. Site used to be old shopping mall. AKRF states that there was a gas station at site in 1970's, and there is currently a gas station across the road from the site. Will send in copy of soil and gw analysis. ga 10/05/17 Becky called and said the report will be completed soon and she expects to submit it in a week or two. TG 12/21/17 AKRF submitted a Phase II Investigation Report (See report in DecDocs.) TG 05/03/22 Greta White emailed the following, Good afternoon, Todd, This spill is to be administratively closed as it will be rolled into the BCP under site C360221 WP Mall Cleaners & Gas Station. The BCP Agreement was executed on April 22. I have added a cross reference in the spill file to this BCP site, as well as the adjoining site, C360177 Hamilton Green. At one time the Hamilton Green site (C360177) included the land that is now part of both the C360177 and C360221 sites (until the owner terminated the BCA, split the site and sold half). The owners of the Hamilton Green site (they submitted a new BCP application at the end of last year) and the WP Mall site both agree that the spill number can be assigned to the WP Mall side of the site C360221. Both sites intend on excavating all material above USCOs and applying a product like OCR to the excavation for groundwater remediation, and testing for future soil vapor intrusion. Please let me know if you require any further information from me in order to close this spill. Thank you, Greta Greta White, P.G. Assistant Geologist, Division of Environmental Remediation New York State Department of Environmental Conservation 625 Broadway, Albany, New York 12233-7014 P: (518) 402-2029 - F: (518) 402-9679 - greta.white@dec.ny.gov

FINDS:
Registry ID: 110004500610

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain

MARUBENI SPECIALTY CHEMICALS INC (Continued) **1000911942**

enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site Code: 628108
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs.
Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm),

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site.
Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs.
Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

	intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.
Health Problem:	Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 628108
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.
Env Problem: Nature and extent of contamination: Prior to remediation, the primary

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 628108
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 628108
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

BROWNFIELDS:

Name:	WP MALL CLEANERS & GAS STATION SITE
Address:	250 HAMILTON AVENUE
City,State,Zip:	WHITE PLAINS, NY 10601
Program:	BCP
Site Code:	628108
Acres:	1.808
HW Code:	C360221
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	11/03/2021
Record Updated Date:	12/29/2023
Update By:	AMSERVIS
Site Description:	Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem:

Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI)

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site.
Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs.

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

	Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.
Health Problem:	Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description:	Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Summary: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Summary: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was HARDY 06/08/98 LETTER SENT DEC REQUIRES SOIL AND INVESTIGATION OF SITE IN 6 MONTHS 02/09/01 LETTER SENT TO EXXONMOBIL BY J. HARDY; ADVISE AS TO THE SIGNIFICANCE OF THE WHITE PLAINS MALL DENIAL OF ACCESS. 03/15/01 LETTER SENT TO EXXONMOBIL BY J. HARDY; SCHEDULE FOR SUBMISSION OF AN INVESTIGATION REPORT BY 4/30/01 IS APPROVED & REQUIRED. Letter to K. Bourque, Groundwater & Env. Svcs. from J. Hardy, dated 6/27/2003. Reduce monitor well sampling to semi-annually, report annually. 09/04/03: Letter to Eric Harvey, Groundwater & Env. Services, Inc from J. Hardy. Reduce monitor well sampling to semi-annually. Report annually. 6/22/09 2008 annual report shows persistent contamination of approximately 5k btex at mw1--sent email to lbg sirecting them to define extent of contamination in that vicinity within 45 days--email is in edocs jh 10/26/09 2009 annual report shows all wells stable (and low)except mw-1 which has gone down to approx 3k btex. 11/10/09 as a result of decrease in mw1 above gave cf option, by email, to start quarterly sampling and reporting instead of investigation at this t ime. In that case we would consider future action based on whether downward trend continues or not. email in edocs jh 4/21/10 jan 10 sampling shows levels approx same as last period jh 11/22/10 Project transferred to Mastro. 5/25/11 BTEX concentrations remain high in MW-1. Will continue to monitor...mm 5/7/12 See quarterly monitoring reports in edocs...mm 02/12/13 A workplan has been developed and approved to investigate the BTEX in MW-1. Four monitoring wells will be installed and soil samples will be collected for lab analysis. 7/2013 Four monitoring wells were installed..mm 3/30/2017 The BTEX concentrations in MW-1 and MW-4 remain high and unchanged. Off site wells are ND. The consultant, LBG, has been asked to develop a RAP...mm 8/01/17 The 2ndQMR report was submitted by LBG. RAP will be proposed by m10/31/17...mm 1-26-21 Received 2Q20 report. Last ISCO event was Nov 2020. Next event scheduled for March 2021. MW4 and MW1 are the most impacted with total VOCs in the ppm range with general increased right after ISCO and a decline in dissolved concentrations. ML 4-15-21 Received 1Q21 report. Last ISCO event was Nov 2020. The next even is scheduled for April 2021. MW4 and MW1 are the most impacted with total VOCs in the ppm range. Total VOCs increased from last quarter. ML 10-7-21 Report reviewed 2 well have BTEX in the 2000-3000ppm range. All wells are upgradient from injection wells. ML 12-30-21 Updated file to add note for report received on 1/26/21 and 4-15-21. ML 1-5-22 Reviewed 2Q21 QMR.

EXXON, WHITE PLAINS (Continued) **S103571230**

Last ISCO event was March
2021. Next event scheduled for July 2021. MW4 and MW1 are the most impacted with total VOCs in the
ppm range with general increased right after ISCO and a decline in dissolved concentrations. ML
2-10-22 Reached out to WPS. Wells are downgradient of the source area and haven't shown to be
effective. Propose an alternative remedial solution by end of 2Q22. ML
5-3-22 Received 1Q22
Monitoring report. No LNAPL detected. Concentrations in MW have increased. Total VOCS are greater
than the 1st round of sampling from 2018. Revised RAP to be sent by 5/31/22. DEC to require
ethanol. ML 6-16-22 Received Addendum to RAWP on 6/8. RAWP addendum reviewed-calls for the
installation of 5 additional injections wells in the area of presumed residual contaminated soil
located around the dispensers. The proposed locations are upgradient or cross gradient from the
current wells. Soil samples will be obtained during the well installation and wells to be screened
from the start of impacts to 5' below the water table. WPS proposed using field observations and
PID readings over 100ppm to determine the location of contamination and proposed the same
groundwater frequency and sampling. Conditional approval grated-conditions are the threshold for
contamination is lowered to 50ppm and ethanol is included in the analysis. ML 9-8-22 RP questioned
request for ethanol and DEC provided a response. Sampling needed for the 1st year only. ML 11-30-22
Received 3Q22 monitoring report. Wells from the June 2022 RAWP addendum were installed in Sept 2022
and the 1st injections to them will be in 4Q22. Last ISCO event was Feb 2022. Summary report of
well installation to be submitted in Dec 2022. No LNAPL observed, MW1 and MW3 are most impacted.
Monitoring to continue. ML 2-15-23 Received Injection well summary report. Five 2 injection wells
were installed upgradient from the previous locations. IW4 borings show PCS is present in the area
of that well. ISCO event conducted. ML 4-28-23 ISCO event conducted in Nov and Dec 2022. MW1 and
MW4 show a slight decrease in total VOCs since the ISCO event. Other wells show an increase in
concentration ;typical of Isco events. Continue per rawp. ML

Remarks: WHILE REMOVING ABANDONED UNDERGROUND 1000 GALLON TANK ELEVATED PID HEAD SPACE READINGS WERE ENCOUNTERED

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	3/8/2021 Called back and spoke with Hime who told me that the return line from the boiler to the tank failed a tank test. The tank is a 3,000 gallon UST, however the lines run mostly above ground. There is a small drip in the return line above ground in the maintenance room, it is currently being caught by a funnel and a bucket beneath. Property is on municipal water and sewer. TJP 3/08/21: From Chris Lalak of WCDOH PBS: PBS site 3-801152 14 Mamaroneck Ave, White Plains 3k UST from 1960 Facility is in the midst of a gas conversion. Gas line is not yet active, but expected shortly. New ownership of the building. Oil lines are running into a cast iron secondary containment pipe and oil slowly dripping back into the boiler room, and being collected. Facility told to immediately set up a temp. tank or switch to a temporary line

CELESTILA GROUP (Continued) **S106385494**

and tested the rest of the
system. The location is reportedly on a busy city sidewalk and any
option will be challenging. Mr.
Rraci was calling the city of WP building inspector, to work on the
temp tank/Temp line and the gas
line completion. Owner Rraci Realty, Hime Rraci jod 3-31-21
Discussions w/WCHD (Chris and Natasha)
concerning situation. They report location is an busy intersection and
busy sidewalk. Chris reports
that return line has been disconnected and system converted to a one
line system. Site continues to
operate pending conversion. Based on conversation that this is
violation of regs, Chris is going to
inspect location with owner to see if there is a potential solution.
jc 06-08-21 Update from WCHD:
I met with the owner on site. Very challenging location for a temp
tank (Busy city sidewalk in
Downtown, White Plains). The facility agreed to pump out the tank I am
awaiting confirmation BTR
12-7-21 The copper piping is snaked through an old steel pipe that s
cutoff above the tank. Oil
spilled out of the pipe and contaminated the soil around the tank. ABC
Tank hand excavated 5 drums
of soil and had clean endpoints at the building. Soil Borings did not
encounter contamination and
ranged 10 to 15 below sidewalk. Weathered bedrock at 15 feet bgs on
the street side of the tank.
The building will acquire basement ASTs in the interim, and a plan
will be developed to address the
contamination around the tank. BTR 1/11/22 Email from Chris/WC saying
that owner appears for
hearing today w/no contractor. Owner is waiting for direction from the
State on how to proceed.
Hearing postponed. Chris also emailed Harry, who said report should be
submitted by end of this
week. jc 3/21/22 Jan 18 report from ECMS. Discusses contamination
found during Dec investigation,
temp system install and intent to close 3k UST. jc 10/21/22 Visited
site. Tank cut at half-way
point and top and bottom of tank removed. Sides left intact to support
soil from blowing in.
Contamination found beneath tank. Removed impacted soil up to
elevation of base of footing. Does
not want to excavate deeper as it may compromise structural integrity
of building. Gas and power
lines had to be cut off by Con-Ed the day prior in order to access
tank. Impacted soil moved to one
side of trench. Awaiting k-crete to backfill excavation and then move
impacted soil back to remove
other side. Photos uploaded to D2. BAG 12/30/22 Harry Sudwischer from
Environmental Consulting and
Management Services (ECMS) submitted a UST Closure Report and Spill
closure Request. Full Tank
removal was constrained by nearby gas and electric lines, so some
contaminated soil was left in
place. See report in DecDocs. NFA. TG

Remarks: Tank test failure-leak in return line to boiler.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Update By:	MJRYAN
Site Description:	Location Description: The site is located in an urban portion of Westchester County, occupying several city tax parcels, including 221 Main Street, in the City of White Plains. Current Use: The site is currently being redeveloped. The newly constructed complex will contain approximately 125 hotel rooms, 400 condominiums and approximately 10,000 square feet of street levels stores. Surrounding Uses: The site is surrounded by commercial properties with a mix of retail and office space. Historical Source(s)of contamination: The

221 MAIN STREET (Continued) **S106704121**

historical source of contamination at this site included multiple leaking underground storage tanks (USTs). Investigations revealed the presence of ten USTs. Investigations/Actions Performed to date: Previous environmental investigations include a Phase I Investigation in 2002 and a Petroleum Contamination Site Investigation completed in June of 1993. Under the Brownfield Cleanup Program, a Remedial Investigation was conducted in 2005-2006. Based on RI findings, an Interim Remedial Measure (IRM) was planned and implemented which included the removal of all USTs, and contaminated soil. Current Action: A Final Engineering Report which documents the remedial activities completed has been approved. On December 19, 2006 a Certificate of Completion was issued declaring remedial activities complete, and that a Track 1 cleanup (i.e., unrestricted use) has been achieved.

Env Problem:	Contaminant of concern: Petroleum-related compounds including volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons. Impacted Media: Soil and groundwater. Known SCGs exceedences: Investigation revealed benzene, toluene, ethyl-benzene and xylenes, however, as part of a site-wide remedial program (2005-2006) all contaminated media has been removed and properly disposed.
Health Problem:	The site is located in downtown White Plains, public water serves the area. Through the implementation of an IRM the site has been remediated and nearly all the soil has been removed to bedrock eliminating potential exposure to contaminated soil. Proposed redevelopment of the site will include a ventilated below-grade parking garage with foundation drainage which will effectively eliminate the potential for soil vapor intrusion to occur.

DEC Memo:	PBS #3-074632 - WCHD & WP Building Dept. on scene. 5000. gal. vaulted AST. Filled on 12/29/07 3200 gal. left in tank. Uses 175 gal/day x 6 days=1050 gal. Loss of potentially 1800 -100= 800 gal. Elite on site with vac truck and smaller pump. Tank in very poor condition. Todd Ghiosay contaced and will follow up.
Remarks:	Caller says the tank failed releasing the material into the basement of the building. Caller is unsure if the cause was corrosion of the tank or physical damage. Elite Environmental will be doing the clean up and the Westchester Dept. of Health is on scene.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the

YOUNG COAL & LUMBER SITE (Continued) **1018159122**

Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:
Name: YOUNG COAL & LUMBER SITE
Address: 55 BANK STREET
City,State,Zip: WHITE PLAINS, NY 10601
Program: BCP
Site Code: 481411
Acres: 2.240
HW Code: C360131
SWIS: 6017
Town: White Plains (c)
Record Added Date: 05/01/2013
Record Updated Date: 07/17/2018
Update By: DACROSBY
Site Description: Location: The site is located at 55 Bank Street in White Plains, Westchester County. The site is located in the Central Business District of the City of White Plains on the west side of Bank Street, just south of the intersection of Main Street and Bank Street. To the west is the Metro-North railroad right of way. Bank Street is located along the eastern border, a car dealership is located adjacent to the southern border, and a parking lot for the Bank Street Commons Apartment building is located to the north. Site Features: The site is presently under construction as a commercial/residential building. The site was formerly a 2.24-acre parking lot for the nearby commuter railroad station. The site was used as a parking lot for over 40 years. Current Zoning/Use: The current zoning of the site is Core Business-4 (CB-4). Municipally-operated parking lots and multifamily dwellings, a restricted residential use, are permitted uses in CB-4 zones. Past Uses of the Site: The property was used as a coal and lumber yard starting in 1885. The lumber yard comprised of a mill, several small sheds, coal and lumber storage areas, and railroad spurs. By 1911, the property was being used for manufacturing sashes, blinds and trim, and for the storage of grain, fertilizer, and feed. During the late 1800s and early 1900s, portions of the eastern side were occupied by several residential homes. By 1953, the southeastern corner of the property was improved with a commercial building, while the remaining portions were public parking lots. The commercial building was razed by 1974, and the site has been operated as a parking lot since that time. Site Geology and Hydrogeology: The site is level ground and covered with asphalt. Surface water drains to a storm sewer system that runs to the Bronx River which is about 500 yards to the west. The shallow soil horizon consists of historic fill found at a depth from 1.5 -26 feet below grade. Below the fill, subsurface soils consist of predominantly sands with some silts and gravels. Bedrock was located at 80-120 feet below grade and is believed to by gneiss and schist. Overburden groundwater was encountered at a depth of 28 feet below grade and flows to the south. The Bronx River, which flows to the south, is located about 0.25 mile

YOUNG COAL & LUMBER SITE (Continued) **S113492634**

west of the site. However, the site is located above the current 100 year flood elevation. Site storm water is transported via storm drains to a storm water collection system and discharges to the Bronx River. The Bronx River Parkway is located adjacent to the Bronx River just west of the site.

Env Problem: Nature and Extent of Contamination: Remediation of the site to track 1 soil cleanup objectives was completed in November 2016. Soil: Remediation is complete. The entire site was excavated to a depth of approximately 26 feet. No surface soils remain. Based on the investigations conducted the primary contaminants of concern in subsurface soils were inorganics (metals) including mercury, copper lead and zinc. These metals were present above the unrestricted soil cleanup objectives. These compounds were present in the fill materials used to grade the site and surrounding areas, and contamination did not migrated from the site to adjacent parcels. These inorganics were not found in on-site groundwater above NYS Groundwater Standards in filtered samples. Aluminum, iron, and sodium were detected above standards in onsite groundwater but are considered to be naturally occurring. Groundwater: Chlorinated volatile organic compounds (CVOCs) were detected in on-site groundwater including tetracholoethylene (PCE) at a maximum level of 13 parts per billion (ppb), and trichloroethene (TCE) at a maximum level of 28 ppb. The groundwater quality standard for both of these compounds is 5 ppb. CVOCs were not detected in the subsurface soil samples collected from the site, the groundwater investigation suggests that the source originates from an off-groundwater source. The site remediation is complete. The site has a basement foundation that includes a vapor barrier and a subsurface parking garage which is ventilated. Because there is a vapor barrier and a ventilated subsurface parking garage a soil vapor intrusion investigation was not conducted.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. A vapor barrier has been installed beneath the building foundation to minimize the potential of vapors from entering the building. Additionally, a sub-grade parking garage ventilation system required by building codes will be installed prior to building occupancy to prevent vapors from accumulating in the structure.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

MERCEDES- BENZ OF WHITE PLAINS (Continued) **U003857474**

Tank Number:	8
Status:	1. In-Service
Date Installation:	03/02/2009
Capacity:	500
Product Stored:	0013. Lube Oil
Product Stored Percent:	0
Date Perm Closure:	01/01/1900
Tank Location:	3. Aboveground on saddles,legs,stilts,racks or cradle
Tank Type:	1. Steel/Carbon steel/Iron
Tank Internal Protection:	0. None
Tank External Protection:	1. Painted/Asphalt Coating
Tank Leak Detection:	2. Manual Interstitial Monitoring
Tank Secondary Containment:	9. Modified double-walled (aboveground only)
Piping Location:	1. Aboveground
Piping Type:	1. Steel/Carbon/ Steel/Iron
Piping External Protection:	1. Painted/Asphalt Coating
Piping Leak Detection:	2. Manual Interstitial Monitoring
Piping Secondary Containment:	0. None
Overfill Prevention:	3. Automatic Shut-off,4. Product Level Gauge (Aboveground Only)
Spill Prevention:	1. Catch Basin
Dispenser:	2. Suction

Hazardous Waste Summary:
Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:

Name:	ONE WATER STREET BLACKSMITH & WHEELWRIGHT SITE
Address:	P/O 1 WATER ST. AND P/O FORMER NORTH LEXINGTON AVE
City,State,Zip:	WHITE PLAINS, NY 10601
Program:	BCP
Site Code:	645014
Acres:	1.230
HW Code:	C360235
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	11/07/2022
Record Updated Date:	04/17/2023
Update By:	AMSERVIS
Site Description:	Site Location: The site is located at the follow addresses in an urban area in the City of White Plains, New York, 10601: p/o 1 Water Street (125.66-2-1) and p/o North Lexington Avenue (125.66-2-2). The surrounding area is occupied by commercial buildings. The site is wrapped in an arc to the north and east by a public parking lot. A car dealership and service facility are also located east of the site. Water Street is located south of the site, and Ferris Avenue is located west of the site. A New York Metropolitan Transit Authority Bus Terminal and a municipal parking garage are located southwest of the site beyond Water Street and Ferris Avenue. A municipal building and fire house are located beyond Ferris Avenue to the west. Site Features: The site was most recently developed with a four-story commercial office building. The building contained no basement. A hydraulic elevator was located within the former building. An asphalt-paved parking area and some landscaped areas were present on the site. but the site is now vacant. Two security gates are present at the parking lot entrance and exit in the southern portion of the site. In addition, a portion of the site was developed as a parking lot/roadway. An easement utilized by Consolidated Edison (Con Ed) is located north of the site in the east-west direction. The closest water body, the Bronx River, is located approximately 0.125 miles from site. The site is not located in a flood zone. The nearest surface water body is the Kensico Reservoir located approximately 2.65 miles northeast of the site. Current Zoning and Land Use: The site is currently located in the Core Business-4 (CB-4) District. The CB-4 designation allows for multi-family residential buildings and commercial uses and the site has already received all required land use approvals for the project including Site Plan approval. The site is also located in the City s Central Parking Area (CPA) overlay district. The CPA overlay was created with the purpose of

ONE WATER STREET BLACKSMITH & WHEELWRIGHT SITE (Continued) **S129982644**

setting special parking requirements for land uses within the Central Business districts. Parking requirements are lower for a given use to reflect the complementary mix of land uses in this dense downtown urban area. A New York Metropolitan Transit Authority bus terminal is located directly across Water Street from the site. The closest rail line is located approximately 290 feet from the site. The Metro North Station is located approximately 462 feet from the site. Past Use of the Site: The historical use of the site as blacksmith and wheelwright constituted a possible recognized environmental condition (REC) in the 2018 Phase I Report and further investigation of the site in 2021 and 2022 suggests this use caused SVOC and metals contamination in the soil and other contamination in groundwater and soil vapor since this use was present for many years. A wheelwright repairs wheels and this prior operation, which extended into the 1940s, may have used solvents. In addition, in 1911 Standard Oil and in 1930, The Texas Co., which operated an Oil Storage warehouse, fronted the site. In 1950, Westchester Asphalt Company fronted the site, and its operations including storage of asphalt and gasoline tanks were present. Contaminated historic fill material containing varying amount of brick, concrete, asphalt, and ash was also identified at the site during the SESI February 2018 geotechnical investigation and later 2021 and 2022 subsurface investigations. An earlier 1997 Phase I report revealed that underground storage tanks were historically present at the adjacent Fire House Station site, which may have leaked and lead to some on-site contamination. There were four historic spills at that site: April 14, 1988, Spill No. 8800487 closed January 11, 1989; April 21, 1988 Spill No. 8800670 closed January 11, 1989; and May 26, 1988 Spill No. 8801791 closed January 24, 1989; September 7, 1994 Spill No. 9408242 closed the same day. A total of four underground storage tanks (USTs) were removed from the Fire Station Site prior to April 1991. Two 10,000 galloon heating fuel oil USTs and one 2,000-gallon leaded gasoline UST were removed from that property at that same time. That property was registered under PBS No. 3-169439. An EDR Report contained within the 1997 Phase I Report also discussed the 1994 petroleum spill to the sewer on Ferris Avenue. Gasoline tanks were identified at the adjacent Surface Transportation Systems Garage, which may have leaked and lead to some groundwater or soil vapor contamination. Despite these spills in close proximity to the site, since these prior spills were closed to the satisfaction of the NYSDEC, and given that the consultant concluded that there was no evidence the tanks had leaked, the consultant that performed the initial Phase I for Cali Realty Corporation did not conclude that the spills on the adjacent parcel represented a recognized environmental condition and the Phase I report had a clean no environmental impact conclusion. Nevertheless, despite spill closure, these historic spills may have contributed to contamination under the site. The adjacent Fire House was only located 0.125 miles away. This Fire Station may have also led to some of the PFAS groundwater contamination. Trichlorofluoromethane (Freon-11) was also detected throughout the site, indicating a potential Freon-11 release. Site Geology and Hydrogeology: According to the United States Geological Survey (USGS) White Plains, NY, 2013, 7.5-minute Series topographic map, the site s average elevation is approximately 189 feet above mean sea level (amsl). The site gently slopes downward from north to south, ranging from approximately 197 feet amsl to 186 feet amsl. Groundwater is expected to flow to the south. Groundwater was observed at approximately 10-15 ft-bgs at the

ONE WATER STREET BLACKSMITH & WHEELWRIGHT SITE (Continued) **S129982644**

	site. The site is characterized by fill to depths ranging from five (5) to twelve (12) feet below grade surface (ft-bgs). The fill is characterized by gray-brown sands mixed with varying amounts of brick, concrete, asphalt, and ash. The fill may have been used to raise the site elevation to its current configuration. A brown sand layer is present beneath the fill layer. This layer contains varying amounts of clayey silt and gravel that extent to bedrock. The depth of bedrock at the site appears to vary significantly from 30 ft-bgs within the northeast portion of the site to greater than 55 ft-bgs in the southwest portion of the site.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	4/11/12: Former PBS Facility, Mitchell Place Garage. Barbara McDonald from WCDOH reports all USTs were reportedly removed when the site was deregulated. She will follow up with owner and caller, then update DEC. jod 07/31/12 Northeast Environmental submitted a soil remediation report. They reported that they unearthed a 1000 gallon fuel oil tank. More than 60% of the tank was under the building making removal impossible. The soil immediately beneath the tank was impacted but left in place. All surrounding soils were removed. A gw monitoring well was installed in the vicinity of the tank and no contaminants were detected. NE Environmental recommended removing any remaining impacted soil once the building is demolished. NFA TG
Remarks:	cleanup pending - tank under foundation of building

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	8/22/22 - Street level underground transformer vault is leaking dielectric fluid. The oil is entering an adjacent building into their storage room then into a Con Ed network protector room which is directly below. Unknown volume lost and leak rate. The 3 vaults nearby are being inspected. Samples have been taken and investigation of the source is ongoing. EMIS #287176. JMG 09/06/22 Latest EMIS 287176/5 loaded into DecDocs. Oil has 9ppm PCB. TG 9/13/2022 11:30 AM BW Environmental Ops Operating Supervisor Charles D'Alisera (48339) reported another area, 3rd level of the parking garage storage area was impacted with 1 gal of possible transformer oil. he will take a PCB and OIL ID sample, COC NT66547. Slote, Richard 9/13/2022 12:06 PM On 09/13/2022 at 10;30, Clean Harbors crew cleaned Network protect 9521 with simple green and absorbent. Clean Harbors vactor removed 250 pounds of waste to be disposed at Clean Earth of North Jersey under BOL 1200050. Khwalsingh, Taniki 9/15/2022 3:37 PM On 9/13/22 while

A T & T (Continued) **1000872181**

cleaning bus compartments at 360
Hamilton Ave under EMIS 287176 two maintenance workers from AT&T approached A. Olivet and stated
they found oil in there storage room on level B3. Mr. Olivet when with the two maintenance workers
to check on the spill while I continue cleaning the bus compartments. Mr. Olivet came back and
stated to me we will need to sample the spill. When we finish cleaning the bus compartments we went
with the two maintenance works to take samples. I took samples for oil ID & PCB s. We told the
maintenance crew to give us a day or two for the sample results to come back and if it is our oil
we will clean it. On 9/14/22 I received a call from Charlene Miraglia telling me she had an
environmental contractor come in and do the cleanup and asking me how AT&T can get reimburse .
Results came back under COC as Transformer oil and 7 PPM. Baxter, Brandon 9/23/2022 11:41 AM Clean
Harbors crews removed all oily debris from storage room and double washed floor and ceiling with
simple green. Generated one 20 yard dumpster .This is a update still need to remove transformer
from V9521 and clean it to close spill. TM replacement is schedule for 9/25/22 Blaich, Christopher
12/08/22 See EMIS report in decdocs for the cleanup details. NFA> TG

Remarks: Oil is on street level from a vault and leaked to a storage facility room inside a building and leaking to a network protector directly below the facility room cleanup pending

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	9/24/15 Spoke to Kathy Morgan at TT. Mr. Tirone is the buyer. Owner is unknown. dw 2/06/19: I spoke with Kathy Morgan at US Tank Tech, she pulled the file on this TTF. She states there is a note on the file indicating #6 and #8 Chester Ave were together on one parcel. She states #8 had an out of service 1K gallon underground fuel tank at the time they tested #6. She believes #6 was still in service at the time they tested it for a prospective buyer. Tank failed with hissing, may have been an ullage failure. US Tank Tech did not test #8 tank. They only other info provided is that this property was a Robison customer at the time of the test and Robison was notified of the failure. US Tank Tech forwarded a site diagram showing the location of the UST at #6. There was a direct fill in the center of the front yard and a remote curb fill that was capped. Diagram will be entered into DecDocs. jod I then spoke to Tony Magnotta of the White Plains Bldg Dept. He is checking his files and will forward any information on permits that may have been filed for UST removals at this property. jod 2/06/19: White Plains Bldg Dept issued a permit for removal of USTs at this property in October of 2018. Certificate of completion was issued by the Bldg Dept on Dec 20, 2018. Work was performed by Madison Environmental. Permit and Certificate scanned into DecDocs. jod 2/07/19: I sent a message to Joe Tomasulo of Madison Environmental. He states they removed both tanks. He will forward soil sample results. He states he was never informed about the tightness test failure or the open spill number. Sample results from Madison indicate some SVOC contamination below CP-51 Guidance values. Samples will be entered into DecDocs. I left a message with Joe Tomasulo stating I will need more information on the removal of these USTs. jod 2/08/19: I spoke to Joe at Madison. He has forwarded the sample results for the UST removal at 8 Chester as well. He states neither tank was leaking. The two buidings are currently part of a construction project and are being demo'ed. Joe states White Plains Buildning Dept was onsite to inspect the removals. I also spoke with Tony Magnotta at the Bldg Dept again. He confirms the USTs and the excavations were inspected by his Dept, no evidence of any

REAL ESTATE - TTF (Continued) **S118263506**

leak or release was noted. Photos and additional sample results in DecDocs. Based upon the information received, no further action is required at this time. jod

SWIS:	6017
Town:	White Plains (c)
Record Added Date:	09/05/2023
Record Updated Date:	06/11/2024
Update By:	SJMCCAGU
Site Description:	Location: The Project Site is located on South Lexington Avenue, south of Quarropas Street (see Figure 1) and is part of White Plains Tax Block 7, Section 125.83, part of Lot 1 in White Plains, Westchester County, New York. The Site is part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The Winbrook property is bounded by Quarropas Street and Fisher Court to the north, East Post Road to the south, MLK Blvd to the east, and South Lexington Avenue to the west. The Project Site comprises approximately 1.284-acres of the Winbrook property, and includes the nine-story apartment building, south-adjacent parking lot, and landscaping. Site Features: The approximately 1.284-acre Site is developed with a vacant nine-story apartment building with a basement and a south-adjacent parking lot. The building is surrounded by lawns and asphalt-paved walkways. Current Zoning and Land Use: The Project Site is located within the B3 and RM-0.35 Zoning Districts, and the Central Parking Area (CPA) of the City of White Plains. The Phase 3 portion of the campus is located entirely within the B3 Zoning District. Land uses immediately to the north of the Project Site include residential uses, followed by institutional and government uses; to the south is retail and the White Plains Hospital, farther to the south; residential uses, followed by commercial and institutional uses to the east; and commercial and residential uses to the west. Overall, the surrounding area is generally built out with a mix of institutional/governmental,

BROOKFIELD COMMONS PHASE 3 (Continued) **S120700630**

residential, community, and commercial uses. The proposed project, a 174-unit multi-family building with a height of 11-stories, will be seeking a Special Permit from the Common Council for height. As a multi-family building, the Proposed Project is a Permitted Principal Use in the B-3 Zoning District requiring Site Plan approval from the Common Council. In addition, the proposed project requires City of White Plains Common Council site plan approval and a special permit under Section 5.3, Footnote (X) of the Zoning Ordinance to permit the building to be constructed to a height of 11 stories, or approximately 125 feet. Past Uses of the Site: Historic Sanborn fire insurance maps indicated the Property was vacant as early as 1900. Between 1900 and 1930, the Property was developed with small residential buildings and associated garages, multiple three to four-story apartment buildings, an upholsterer and an auto repair shop. These structures were demolished for construction of the existing apartment building and grounds, which were constructed in 1949-1950 as part of the Winbrook housing complex. The surrounding area was primarily residential in the early 1900 s, with commercial uses shown by 1911, and gasoline filling stations and auto-related uses shown by 1930. The White Plains Hospital was shown on the south-adjacent block by 1911, and subsequently expanded to cover a larger portion of this block. An undertaker was shown by 1950, and drycleaners were shown by 1987. Potential uses of concern on or in close proximity to the Property included: auto repair and an upholsterer on the Property, and nearby filling stations and stores with gasoline USTs, dry cleaners, the White Plains Hospital, auto sales, auto and bicycle repair shops, a vulcanizing (tire conditioning) facility, an undertaker, sheet metal works, and a printer. Site Geology and Hydrogeology: The Property is located at the southern end of a topographic depression, with surrounding land sloping slightly down toward it from the southeast and southwest. Based on reports compiled by the U.S. Geological Survey (White Plains, NY Quadrangle), the Property is approximately 200 feet above the North American Vertical Datum of 1988, an approximation of mean sea level. During a 2021 Subsurface (Phase II) Investigation, groundwater was typically observed at depths ranging from approximately 4 to 10 feet below grade and is presumed to flow in a northwesterly direction toward the Bronx River, located approximately 1,600 feet away. Actual groundwater flow at the Property can be affected by many factors, including past filling activities; underground utilities; other subsurface openings or obstructions such as basements; and other factors beyond the scope of this study. According to the 2014 Annual Water Quality Report prepared by the City of White Plains Department of Public Works, groundwater supply wells formerly providing potable water for White Plains were decommissioned in 2009. The City of White Plains was subsequently supplied with potable water from a reservoir in the NYC potable water supply system. Based on the previous subsurface investigation completed at the Site, the stratigraphy beneath the Site consisted of historic fill material (sand, gravel, silt, concrete, brick, glass, and asphalt) to approximately 6 feet below grade, underlain by apparent native soils (silt, peat, sand, clay and gravel) to the terminus of the borings (maximum of 15 feet bgs).

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the

DEC Memo:	11-25-09 Tank top is 103 in below grade. Test was done in relation to WCHD NOHC. NE Environmental is handling compliance issues. jc 12/10/09 -- According to WCDOH: They re in our hearing process right now. Major violations include no corrosion protection and no leak detection. They re claiming they don t have to come into compliance because White Plains issued them a certificate that everything was in compliance when the tank was installed in 1990. They re not accepting

COMMERCIAL (Continued) **S102153972**

	our explanation that the certificate only applies to White Plains building code. Because the tank is buried so deep, it will be a hardship for them to come into compliance. And The case was adjourned for them to prove compliance. If they can get proper documentation, excavation may not be necessary. They re not performing leak monitoring, at least they re not maintaining any documentation. We don t know if the tank is single- or double-walled because the interstitial port is probably not to grade. They have an ATG but there s no proof that it s performing interstitial monitoring. They need to get a contractor to determine what they ve got since we re not accepting the proof from White Plains Bldg Dept. Resolution to be determined in January, maybe. ELM 1/25/10: See eDocs for 12-31-09 letter from WCDOH/PBS - requiring additional action. jod 3/4/10: As per an e-mail recived from Chris Lalak of WCDOH dated 2-16-10, this tank was retested and passed. E-mail entered into eDocs. Based upon the information provided, DEC requires no further action at this time. jod
Remarks:	caller reporting tank test failure on a 10000 gallon ust. caller reports tank is deep, fill pipe is 103 ft long. clean up pending.

DEC Memo:	8/10/11 - During a tank test of a 20K UST, No. 6 fuel oil was discovered in the sump. Caller is scheduling for 8/11/11: I responded to the location yesterday. I first checked outfall at Bronx River and no oil or sheen was noted. I spoke with Ray Hilyer, Elite was scheduled to test the tank last week and did not after finding an uncapped feed line. Ray states he notified WCDOH Wayne Schneider. Elite returned yesterday and found a large quantitiy of #6 Oil in a manway sump next to the UST. I met with Hospital Engineer Bob Biddiscombe and observed the oil in the sump. He states it is contained within the secondary containment and stated Elite was en route to vac it out. I again contacted Elite, they have not been hired. Bob Biddiscombe spoke with Elite via phone directly while I was there. Elite will be there first thing in the morning. No oil was observed in the basement sump where previous major spills have occurred. Mr Biddiscombe stated the sump has been re-piped, and now discharges to the sanitary sewer instead of the storm drain. WCDOH will follow up. Chris Lalak is enroute this morning to confirm the sump has been vacuumed out and investigation will continue. jod *Chris Lalak reports that the manway has still not been vacuumed out this morning. Email update from Chris: Lalak, Chris 8/11/2011 11:52 AM They still didn't pump it out Robert Biddiscombe was going to call Elite or Island pump and tank to get it pumped. He doesn't know if it is a contained sump. I gave him 1 week to TT tank and lines. 1 month for env. Investigation and. pump it out today and check daily. I also stated if it is visually found that the sump is leaking an immediate investigation is needed. jod 8/12/11: Chris Lalak reports Envirowaste completed pump out. Further investigation required. jod 10/16/12: See letter from Chris Lalak of WCDoH in EDocs. jod 5/30/13: Report from Elite dated Jan 14th 2013 entered into Edocs. Message sent to Chris Lalak requesting status report. jod 040417- Email, This spill started on 2009 with 6 oil entering a basement Sump. The sump apparently collects water the buildings footing drains. White Plains hospital is a huge urban hospital complex, occupying a full city block. The spill was determined to be from piping leaks associate with two old 6

WHITE PLAINS HOSPITAL CENTER (Continued) **S104284805**

oil tanks. Tank 1 (20K ust
was abandoned in place by Castlton). Removal of this tank was not possible. Free product was
encountered around this tank. Castlton installed a monitoring/recovery well thru the tank. The well
is identified as 15 . Free product was recovered from the well, into a holding tank. The well was
then sampled 4 times 2014/2015. Some minor volatile and semi-volatiles are still present. The
highest is 29 PPB pyrene. MW number 4 is located next to the abandoned tank and was sampled at the
same time and was essentially clean. Tank 2 was removed by Elite. (the other old 20K UST) Royal
remediated the sump for approximately 2 years.(2009-2010) Hydro Environmental Technologies (HETI)
performed a GW monitoring investigation in 2012. The Hospital has been cooperatively remediating a
very difficult spill. No oil has been found in the sump since 2013.
The monitoring/recovery well
installed thru the 20 K 6 oil UST, (and thru the concrete Pads) has been substantially remediated.
Pristine remediation is not possible in this case. Well sampling performed by Castlton in 2014 and
2015 is attached. The hospital is located in an urban city with no drinking water wells near by.
The abandoned UST has been filled in with slurry Concrete except for the recovery well. It could
not be removed. NFA- RDB

Remarks: sump is full of oil/investigation underway

DEC Memo:	8/6/20 White Plains Hospital, PBS #3-177148. A 20k-gal #6 Fuel Oil UST was previously closed-in-place in 2013 by Castlton. The hospital says it's Tank #1, but based on PBS record it looks like Tank #2. At the time of closure, a 18 dewatering well was installed and the tank was filled with K-Crete flowable fill. The Hospital is currently doing major construction and their engineering department opened the dewatering well manhole and observed product. There are two sumps within 20 ft and no impact observed in either sump. Bill Jacobson from Castlton is on-site now. They will mobilize a vac truck to remove product and water from the dewatering well, but the Hospital needs to move a lot of equipment first to make room for the vac truck and it might not be accessible until tomorrow. Tank could not be removed because it is beneath foundations of a 5-story and a 6-story building. JG 08-24-20 Rec'd closure report from Castlton. BTR 08-27-20 Closure report reviewed. Castlton removed approximately 2,200 gallons of petroleum and water mixture from the recovery well. The last round of sampling on 08/17 indicated there were no detections of VOCs in the recovery well. Oil absorbing snares were placed in the recovery well and were removed at the end of the project for disposal. A nearby monitoring well MW-4 was tested and at no point during the project were VOCs detected. NFA. BTR
Remarks:	Contained to put...cleanup pending

AUTOMOBILE CLUB OF NEW YORK (Continued) **S105057848**

Record Add: 12/08/2006
Record Upd: 03/20/2023
Updated By: AMOMOROG
Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.
Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

Control Type:	ENG
Date Record Added:	10/15/2015
Date Rec Updated:	01/16/2024
Updated By:	RWRICHAR
Site Description:	Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.
Env Problem:	Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.
Health Problem:	Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

Site Code: 374633
Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.
Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials.

AUTOMOBILE CLUB OF NEW YORK (Continued) **S105057848**

Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

DEC Memo:	01/04/07 Met with David Visaggi and the homeowner. The homeowner observed that the 275 gallon tank began to leak after the last delivery. He called the oil company who responded and put a magnetic patch on the tank until temporary tank could be set up and the oil transferred into that tank. A minor amount of oil leaked onto the concrete floor beneath the tank. Almeida oil will remove the tank and clean the floor to get rid of the oil odor. TG 03/30/07 David Vissagi rpeorted that the tank was removed and the homeowner cleaned the concrete himself. NFA TG

DEC Memo:	4-1-09: V.Mc.^ DAVID DRASHOW/PATRIOT: UST is 5K, as per Mr.Drashow. To authorize Luzon to proceed with repair of line and retest of system. 5/14/09: During investigation the tank was found to be 7,500 gallons in size. Tank was out of service and partly filled with sand. Reps from Luzon, Lane Engineering and the White Plains Bldg Dept met on site 5-18-09. It was determined the tank cannot be removed without causing severe damage to the structure. Accessible contaminated soil will be remediated and the tank will be abandoned in place. jod 06/24/09 Luzon Environmental Services submitted a Underground Storage Tank Closure Report. Structural concerns prevented the removal of the tank, so the WCHD allowed the oil tank to be cleaned and abandoned in place. Recovery well was placed in an area where oil was seeping from beneath the tank and will be monitored for a year. TG 12/14/09: Well data including sample results from November 19 submitted by Luzon. Further vaccing of well and additional sampling necessary. Results to be entered into eDocs. jod 09/06/11 GW sampling report submitted by Luzon. Report in Edocs. TG 06/02/15 Monitoring Well Sampling Event Report submitted by Northeast Environmental. VOC and SVOC levels reduced to trace levels. No further action is required. TG
Remarks:	LINE TEST FAILURE ON 10,000 GALLON VAULTED TANK, WHICH IS IN THE BASEMENT. REMOTE FILL LINE IS LEAKING UNK AMOUNT.

Program: BCP
Site Code: 612426
Acres: 1.160
HW Code: C360206
SWIS: 6017
Town: White Plains (c)
Record Added Date: 10/19/2020
Record Updated Date: 07/29/2024
Update By: AMOMOROG
Site Description: Location: The 1.16-acre site is located in a suburban, mixed use (commercial/residential) area in White Plains, New York. The property is bounded by residential properties to the west, commercial properties (retail and offices) to the north, east, and south, a church to the east, and a health clinic to the southwest. The site is located 200 feet south of the intersection of Mamaroneck Avenue and Maple Avenue. Site Features: The site has a prominent slope with elevations that decrease towards Mamaroneck Avenue to the east. The site is currently vacant with no existing buildings. Current Zoning and Land Use: The site is zoned BR-2 (Business Residential-2). The zoning allows for both commercial and multi-family dwelling use. The surrounding parcels are currently zoned business residential or business. Past Use of the Site: The property has historically been used for residential purposes from at least 1905 and up until at least 1911. By 1930, the White Plains YMCA, a recreational facility, occupied the existing building on the northern portion of the site with a small annex and boarding house on the southern portion of the site. Around 1971, the annex and boarding house were replaced with a 6-story building that was razed in 2021. Past uses of the site that led to the site becoming contaminated included the storage of heating oil for the YMCA in at least one underground storage tank (UST). A 12,000-gallon UST was removed in 2015 which included the removal of petroleum impacted soils adjacent to the UST, but not adjacent to the fuel oil lines where a leak appeared to occur. In 2018 oil was observed coming into the basement and reported as spill number 1709377. The spill is being addressed as part of the brownfield remediation. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill from grade ranging down to approximately 3 to 10 feet below ground surface (bgs.) The unconsolidated material beneath the urban fill material is composed of dense, grey fine-grained sands, silty sands, and clayey sands with gravel. The depth to bedrock varies between 30 to 50 feet bgs with a slope that generally matches surface topography. The groundwater table was encountered at approximately 6 to 12 feet bgs. Groundwater flow direction follows the topography and generally flows to the east.

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

Env Problem:

Nature and extent of contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern are certain VOCs, SVOCs, metals, and per- and poly fluoroalkyl substances. Soil: To characterize surface and subsurface soil conditions, 60 samples for VOCs and SVOCs and 52 samples for metals, pesticides/PCBs and PFAS, were collected from 26 soil borings. N-Propylbenzene was detected in soil at concentrations up to 15 parts per million (ppm), exceeding the unrestricted use soil cleanup objective (UUSCO) of 3.9 ppm. Sec-Butylbenzene was detected in soil at concentrations up to 18 ppm, exceeding the UUSCO of 11 ppm. The highest concentrations of these VOCs were found in the central-eastern portion of the site at a depth of approximately five feet below ground surface (bgs). Benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene were detected in soil at concentrations up to 2.22 ppm, 3.09 ppm and 2.69 ppm respectively, exceeding the UUSCO of 1 ppm for each compound. Indeno(1,2,3-cd)pyrene was detected at concentrations up to 2.35 ppm, exceeding the UUSCO of 0.5 ppm. The highest concentration of these SVOCs was found in the central-western portion of the site at a depth of approximately two feet bgs. Lead was detected in soil at concentrations up to 483 ppm, exceeding the UUSCO of 63 ppm. Mercury was detected at concentrations up to 0.227 ppm, exceeding the UUSCO of 0.18 ppm. Copper was detected at concentrations up to 4,180 ppm, exceeding the UUSCO of 50 ppm. Trivalent chromium was detected at concentrations up to 153 ppm, exceeding the UUSCO of 30 ppm. The highest concentrations of metals were found in the sump pit located in the central-eastern portion of the site. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic (PFOS) were detected in soil at concentrations up to 1.43 and 9.43 parts per billion (ppb), respectively, exceeding the proposed UUSCO of 0.66 ppb and 0.88 ppb, respectively. Data do not indicate any off-site impacts in soil related to this site. Groundwater: From 16 monitoring wells, 27 groundwater samples were collected for VOC and SVOC analysis. 21 groundwater samples were collected for metals, pesticides/PCBs and PFAS. Benzene was detected in groundwater at concentrations up to 5.66 parts per billion (ppb), exceeding the Class GA standard (standard) of 1 ppb. N-Propylbenzene was detected in groundwater at concentrations up to 32.2 ppb (standard= 5 ppb). Sec-Butylbenzene was detected in groundwater at concentrations up to 18.7 ppb (standard= 5 ppb). N-Butylbenzene was detected in groundwater at concentrations up to 11 ppb (standard= 5 ppb). Isopropylbenzene was found in groundwater at concentrations up to 25.4 ppb (standard= 5 ppb). Naphthalene was found in groundwater at concentrations up to 25.4 ppb (guidance value = 10 ppb). Benzo(a)pyrene was detected up to 0.13 ppb (standard = not detected). Benzo(a)anthracene was detected up to 0.14 ppb, benzo(b)fluoranthene was detected up to 0.108 ppb, and chrysene was detected at 0.179; the guidance value for each of these compounds is 0.002 ppb. In general, these exceedances were in the vicinity of the former underground petroleum storage tank. Dissolved tri-valent chromium was detected in groundwater up to 10 ppb, below the standard of 50 ppb. Dissolved copper and lead were not detected in groundwater; mercury was not detected in groundwater. PFOA and PFOS were detected in groundwater samples at concentrations up to 48 and 86 parts per trillion (ppt), respectively, exceeding the 10 ppt drinking water maximum contaminant

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

	level for each compound. PFOA and PFOS were present in on-site monitoring wells as well as in upgradient monitoring wells, suggesting an off-site contribution. Groundwater analyzed from monitoring wells along the downgradient edge of the site did not exceed the groundwater standards or guidance values for the contaminants of concern with the exception of PFOA and PFOS. The finding of these compounds in groundwater upgradient, as well as in site soil, suggest both on-site and off-site contributions. Soil Vapor: Soil vapor samples were collected from 10 locations throughout the site at a depth of two feet above the groundwater table. Petroleum related compounds, such as benzene (maximum 55.2 micrograms per cubic meter (mcg/m3), toluene (maximum 222 mcg/m3), ethylbenzene (maximum 24.2 mcg/m3), and xylenes (maximum 140.9 mcg/m3), were detected in each soil vapor sample. Carbon tetrachloride was detected up to 0.605 mcg/m3, cis-1,2-dichloroethene was detected up to 1.33 mcg/m3, trichloroethene was detected up to 6 mcg/m3 and tetrachloroethene was detected up to 47 mcg/m3. Data do not indicate any off-site impacts in soil vapor related to this site.
Health Problem:	Since the site is completely fenced and covered by asphalt or concrete, people will not come in contact with site related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant , the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

DEC Memo:	1/12/18 US Tank was called to try to find leaking UST at YMCA Oil was coming into the basement through the back wall. No evidence of buried tank found. A tank was removed at the front of the property years ago. Sheen was noticed at the back of the property coming up from cracks in the asphalt, believed to be coming from a retaining wall. Other side of wall is condos / townhouses. US Tank told YMCA to call Northeast, their usual cleanup contractor, to put booms in place in storm drain at parking lot, sump pump, and cubby of basement to prevent further oil impact. Rain is causing oil to sheen on parking lot, making it easy to trace path from property behind them. Spoke to Tom @ YMCA - confirmed that Northeast Env. was called, did boom the sump in the basement, the storm drain at back of parking lot, and the pipe cubby in basement were evidence of residual oil was found. Northeast would like to speak to DEC for advice on how to proceed. ga 01/17/18 Received a report prepared by US Tank Tech describing their effort to locate a tank on the property. No tank was located. Report in DecDocs. TG 02/07/18 Inspected the site on a rainy day. No sign of oil observed at the time of the inspection. TG 04/16/18 YMCA hired HydroEnvironmental Solutions to conduct an investigation both outside in the rear parking lot and inside the basement to try to determine where the oil is originating. All outside soil boring locations were clean, eliminating the idea that there is an offsite source. Report concludes that the oil is from the numerous past spills that have occurred in their basement. See report in DecDocs. TG 09/25/18 Spoke to Tom Hay. He stated that the building may be sold in the near future. GW in the basement is being pumped through an oil water separator before being discharged. Little if any oil is accumulating in the separator according to Tom. TG 07/01/20 The YMCA had no funds to do any type of cleanup and was sold to a developer. It is anticipated that the cleanup will be performed once the building is razed. TG 3/25/21: BCP site YMCA - White Plains (C360206) submitted for this spill (PM John

DEC Memo:	11/22/06 Two valves feeding oil to the boiler failed, resulting in the constant pumping of oil into the boiler. The boiler failed and oil eventually drained out of the bottom of the boiler and flooded a large section of the boiler room floor. Oil entered a drainage pump pit but no evidence

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

of a discharge of oil into the storm drain system was observed. YMCA hired Northeast Environmental
for the spill cleanup. NE will vac up the oil and decon the floor and the pit. TG

Remarks: BOILER MALFUNCTION, AND CALLER ENROUTE TO CLEAN UP: SOME DID GO INTO DRAINAGE:

PFAS 3:

Name:	YMCA - WHITE PLAINS
Address:	250 MAMARONECK AVENUE
City,State,Zip:	WHITE PLAINS, NY 10605
Site Code:	612426
HW Code:	C360206
Program:	BCP
Class Code:	A
Region:	3
Acres:	1.160
Date Record Added:	10/19/2020
Date Record Updated:	07/29/2024
Water Quantity:	UNKNOWN
Updated By:	AMOMOROG
Site Description:	Location: The 1.16-acre site is located in a suburban, mixed use (commercial/residential) area in White Plains, New York. The property is bounded by residential properties to the west, commercial properties (retail and offices) to the north, east, and south, a church to the east, and a health clinic to the southwest. The site is located 200 feet south of the intersection of Mamaroneck Avenue and Maple Avenue. Site Features: The site has a prominent slope with elevations that decrease towards Mamaroneck Avenue to the east. The site is currently vacant with no existing buildings. Current Zoning and Land Use: The site is zoned BR-2 (Business Residential-2). The zoning allows for both commercial and multi-family dwelling use. The surrounding parcels are currently zoned business residential or business. Past Use of the Site: The property has historically been used for residential purposes from at least 1905 and up until at least 1911. By 1930, the White Plains YMCA, a recreational facility,

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

occupied the existing building on the northern portion of the site with a small annex and boarding house on the southern portion of the site. Around 1971, the annex and boarding house were replaced with a 6-story building that was razed in 2021. Past uses of the site that led to the site becoming contaminated included the storage of heating oil for the YMCA in at least one underground storage tank (UST). A 12,000-gallon UST was removed in 2015 which included the removal of petroleum impacted soils adjacent to the UST, but not adjacent to the fuel oil lines where a leak appeared to occur. In 2018 oil was observed coming into the basement and reported as spill number 1709377. The spill is being addressed as part of the brownfield remediation. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill from grade ranging down to approximately 3 to 10 feet below ground surface (bgs.) The unconsolidated material beneath the urban fill material is composed of dense, grey fine-grained sands, silty sands, and clayey sands with gravel. The depth to bedrock varies between 30 to 50 feet bgs with a slope that generally matches surface topography. The groundwater table was encountered at approximately 6 to 12 feet bgs. Groundwater flow direction follows the topography and generally flows to the east.

Summary:

Since the site is completely fenced and covered by asphalt or concrete, people will not come in contact with site related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant , the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Summary:

Nature and extent of contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern are certain VOCs, SVOCs, metals, and per- and poly fluoroalkyl substances. Soil: To characterize surface and subsurface soil conditions, 60 samples for VOCs and SVOCs and 52 samples for metals, pesticides/PCBs and PFAS, were collected from 26 soil borings. N-Propylbenzene was detected in soil at concentrations up to 15 parts per million (ppm), exceeding the unrestricted use soil cleanup objective (UUSCO) of 3.9 ppm. Sec-Butylbenzene was detected in soil at concentrations up to 18 ppm, exceeding the UUSCO of 11 ppm. The highest concentrations of these VOCs were found in the central-eastern portion of the site at a depth of approximately five feet below ground surface (bgs). Benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene were detected in soil at concentrations up to 2.22 ppm, 3.09 ppm and 2.69 ppm respectively, exceeding the UUSCO of 1 ppm for each compound. Indeno(1,2,3-cd)pyrene was detected at

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

concentrations up to 2.35 ppm, exceeding the UUSCO of 0.5 ppm. The highest concentration of these SVOCs was found in the central-western portion of the site at a depth of approximately two feet bgs. Lead was detected in soil at concentrations up to 483 ppm, exceeding the UUSCO of 63 ppm. Mercury was detected at concentrations up to 0.227 ppm, exceeding the UUSCO of 0.18 ppm. Copper was detected at concentrations up to 4,180 ppm, exceeding the UUSCO of 50 ppm. Trivalent chromium was detected at concentrations up to 153 ppm, exceeding the UUSCO of 30 ppm. The highest concentrations of metals were found in the sump pit located in the central-eastern portion of the site. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic (PFOS) were detected in soil at concentrations up to 1.43 and 9.43 parts per billion (ppb), respectively, exceeding the proposed UUSCO of 0.66 ppb and 0.88 ppb, respectively. Data do not indicate any off-site impacts in soil related to this site. Groundwater: From 16 monitoring wells, 27 groundwater samples were collected for VOC and SVOC analysis. 21 groundwater samples were collected for metals, pesticides/PCBs and PFAS. Benzene was detected in groundwater at concentrations up to 5.66 parts per billion (ppb), exceeding the Class GA standard (standard) of 1 ppb. N-Propylbenzene was detected in groundwater at concentrations up to 32.2 ppb (standard= 5 ppb). Sec-Butylbenzene was detected in groundwater at concentrations up to 18.7 ppb (standard= 5 ppb). N-Butylbenzene was detected in groundwater at concentrations up to 11 ppb (standard= 5 ppb). Isopropylbenzene was found in groundwater at concentrations up to 25.4 ppb (standard= 5 ppb). Naphthalene was found in groundwater at concentrations up to 25.4 ppb (guidance value = 10 ppb). Benzo(a)pyrene was detected up to 0.13 ppb (standard = not detected). Benzo(a)anthracene was detected up to 0.14 ppb, benzo(b)fluoranthene was detected up to 0.108 ppb, and chrysene was detected at 0.179; the guidance value for each of these compounds is 0.002 ppb. In general, these exceedances were in the vicinity of the former underground petroleum storage tank. Dissolved tri-valent chromium was detected in groundwater up to 10 ppb, below the standard of 50 ppb. Dissolved copper and lead were not detected in groundwater; mercury was not detected in groundwater. PFOA and PFOS were detected in groundwater samples at concentrations up to 48 and 86 parts per trillion (ppt), respectively, exceeding the 10 ppt drinking water maximum contaminant level for each compound. PFOA and PFOS were present in on-site monitoring wells as well as in upgradient monitoring wells, suggesting an off-site contribution. Groundwater analyzed from monitoring wells along the downgradient edge of the site did not exceed the groundwater standards or guidance values for the contaminants of concern with the exception of PFOA and PFOS. The finding of these compounds in groundwater upgradient, as well as in site soil, suggest both on-site and off-site contributions. Soil Vapor: Soil vapor samples were collected from 10 locations throughout the site at a depth of two feet above the groundwater table. Petroleum related compounds, such as benzene (maximum 55.2 micrograms per cubic meter (mcg/m3), toluene (maximum 222 mcg/m3), ethylbenzene (maximum 24.2 mcg/m3), and xylenes (maximum 140.9 mcg/m3), were detected in each soil vapor sample. Carbon tetrachloride was detected up to 0.605 mcg/m3, cis-1,2-dichloroethene was detected up to 1.33 mcg/m3, trichloroethene was detected up to 6 mcg/m3 and tetrachloroethene was detected up to 47 mcg/m3. Data do not indicate any off-site impacts in soil vapor related to this site.

SUBODH DESHMUKH RESIDENCE (Continued) **S110309446**

desk for more information...ra > Call back from owner. Tank was tested by his employer (Prudential?) for a pending real estate transaction. He is being relocated by his employer and they are assisting in the sale of his house. He states he already has a prospective buyer who wants to close on the house in early June. Owner has contacted his insurance carrier Travlers and was told he has no coverage for an oil leak. He is contacting ATS to try and get copies of the sample results, and states he will contact a contractor - most likely Northeast Environmental - to address the spill issue. jod 6/17/10: NES has removed the tank. Contamination extends unto the neighboring property at 37 Parkview Court. The owner does not feel he showed be responsible for the clean up over the rpoperty line. Left owner a messge requesting he call me back. jod 6/29/10: Letter from NES entered into eDocs. jod 6/30/10: I spoke with the neighbor Mrs Adele Reus at 37 Parkview 914-948-5279. She has received a copy of the access agreement from NES and will be reviewing it soon. I left my name and number in case she has any questions. jod 8/3/10: NES reports has been entered into eDocs. I confirmed with Al Cianflone of NES that all contaminated soil has been removed from the property. No further action is required at this time. jod

Remarks: Caller reporting tank test failure.

DEC Memo:	3-22-11 Building was demolished in Feb. There was suspected contamination in area of boiler room. While digging in that area, found contamination and unregistered 5000 gal tank. Denise H from WCHD was at site already. Contaminated soil being removed and taken to New Windsor. jc Update from WCDOH PBS: Heinzinger, Denise dmh3@westchestergov.com 11/21/2012 1:30 PM Hi John, This spill resulted from an unknown underground storage tank at an empty lot at 170 Westmoreland Avenue, White Plains. They were removing a registered 10,000 gallon ust then found this second unregistered 5,000 gallon tank. Grave samples came back high for the 5,000 so 2,237.85 tons of contaminated soil was then removed. End samples look good. -Denise Heinzinger *Based open the information received, no further action is required at this time. jod
Remarks:	an unknown tank was discovered during construction, believed to be 2000 gallons w/ either #2 or # 4 fuel, clean up and removal pending

DEC Memo: 7/26/21 called back the number for the spill caller and it continues to ring without going to voicemail. BW 07-26-21 Same as spill 2102648 for a previous line failure. Information from WCHD: TTF at PBS site 16 Lake St owners ins 16 Lake st ,WP PBS 3-123293 7500 UST from 1966 US Tank Tech failed tank. US TT reports they are hiring NEE to investigate. BTR 07-27-21 Update from NEE: Tank will be pumped dry either today or tomorrow. Tank removal pending a new contract. BTR 7/28/21: Update from Chris Lalak at WCDOH via email: 2nd TTF NEE is pumping out the tank today. 2102548 6-21-21 TTF 2103947 7-26-21 2nd TTF 16 Lake St Owners 16 Lake Street White Plains NY 10607 PBS 3-123293 7500 UST from 1966 The building is on Gas interruptible service and is running on gas. NEE is working on it Bob Lindenbaum 914-963-7400x214 Prime locations is the property mng. jod 09-21-21 Spoke to NEE. Tank has been pumped out and removal is pending new contract. BTR 4/19/2023: DEC Lead changed during spill file review. Tank is still listed as in service on current WCDOH PBS database. Will followup with County on status. jod 5/17/2023: All Boro Environmental contacted DEC Div of Water requesting approval to perform an in-place abandonment of this 7,500 gallon UST. Christopher Quintana from All Boro states he has been working with Daniel Bucci from WCDOH PBS who requested soil samples from below the UST. All Boro was referred back to the County Health Dept. Message sent to WCDOH Chris Lalak requesting an update. jod 05/25/23 Chris Lalak emailed to Chris Quintana at All Boro, The WCDOH permit to close the tank in place has been issued. That date is acceptable. What will you be filling the tank with? No inspection is required please complete the work and then submit a report of the activities. TG 10/18/24 Emailed Natasha Court asking if the spill should be closed. Natasha Court emailed the tank closure documents. Based on that information, NFA. See report in DecDocs. TG
Remarks: 7500 gal ust tank. no release to environment just tank test failure.

BROWNFIELDS:

Name:	POST ROAD CORRIDOR - WHITE PLAINS - OFF-SITE
Address:	77 WEST POST ROAD
City,State,Zip:	WHITE PLAINS, NY 10606
Program:	BCP
Site Code:	544843
Acres:	Not reported
HW Code:	C360129A
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	04/07/2017
Record Updated Date:	03/28/2024
Update By:	AMOMOROG
Site Description:	Site Location: The site is located in the City of White Plains, Westchester County. To the west of the site is Rathbun Avenue and commercial properties, to the north are residential properties, to the east is South Lexington Avenue, and to the south is Maple Avenue and residential properties. Site Features: The site consists of several tax parcels adjacent to the Post Road Corridor BCP site C360129. Several commercial buildings and parking lots make up the site. Current Zoning and Land Use: The site is zoned B-3, which is a general retail district allowing retail, office and service business uses and multi-family dwellings. Surrounding land use is mixed, consisting of residential and commercial properties. Past Use of the Site: Former commercial uses at the Post Road Corridor BCP site included dry cleaners; gas stations with underground storage tanks (USTs); automobile sales and service facilities with USTs, above ground storage tanks (ASTs), hydraulic lifts, and associated parking lots; various commercial businesses and offices; and commercial parking lots. Site Geology and Hydrogeology: The site geology consists of historic fill material, native till, highly weathered bedrock. The depth to bedrock ranges from approximately 17 to 52 feet below grade. Groundwater at the site most likely ranges from 3 to 11 feet below ground surface and flows to the northeast.
Env Problem:	The on-site investigation results shows potential for off-site impact from the previous uses on-site as well as a potential upgradient source of contamination as groundwater impacted with both petroleum related hydrocarbons and chlorinated volatile organic compounds appears to be migrating on-site. Due to high concentrations of tetrachloroethene (PCE) in groundwater, the potential exists for vapor intrusion impacts in off-site buildings. An off-site investigation focused on soil vapor intrusion is on-going at this time.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

City,State,Zip:	WHITE PLAINS, NY 10601
Program:	BCP
Site Code:	613124
Acres:	1.826
HW Code:	C360209
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	11/11/2020
Record Updated Date:	12/26/2023
Update By:	KAMALONE
Site Description:	Location: The White Plains Chrysler Car Dealership site is a 1.826-acre site located at 70 Westchester Avenue, White Plains, New York. The site is in a commercial and residential downtown neighborhood. The site is bounded by Franklin Avenue, a dense residential neighborhood, a school, a ball field, and retail businesses to the north, the White Coach Diner to the west, Westchester Avenue and the Westchester Mall to the south, and a closed car dealership to the east. Site Features: The southeastern portion of the site is currently occupied by a car dealership building which consists of a small show room and car service bays. The northern and western portion of the site consists of an asphalt parking lot for the dealership. There is a small lawn area in the front of the building along Westchester Avenue. The eastern portion of the building, which was constructed in 1925, consists of a single-story and two-story structure with small partial basement under the southeastern corner of the building. The western portion of the building, which was constructed in 1990, consists of a single-story structure with a half basement. Current Zoning and Land Use: The site is currently active and is used as a car dealership. The northern portion of site is located in a Residential Multi-Family District and southern portion is located in an Intermediate Business District zone. Therefore, half the property is zoned residential. Past Use of the Site: The site has been an active car dealership with auto repair since at least 1967. However, the on-site commercial building has been present on the site since 1925, suggesting this was an auto dealership dating back to potentially 1925. Some of the historical owner names suggest a dealership or auto related use has been on the site since at least the early 1940s. Site Geology and Hydrogeology: The site slopes from west to east. Soil consists of gray-brown fine to coarse sand with brick fragments (historic fill) with depth ranging from 0-6 feet to 0-13 feet below ground surface (bgs). The fill is underlain by brown coarse sand with trace silt and gravel to 35 feet bgs. The depth of the bedrock varies from 16 to 50 feet bgs. Groundwater is present at approximately 11 to 21 feet bgs and flows to the east-southeast.
Env Problem:	Nature and Extent of Contamination: Soil and groundwater samples were

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor, indoor air and ambient air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for site include SVOCs and metals. Soil: A total of 95 soil samples were collected from 20 soil borings installed at a maximum depth of 20 feet bgs during the remedial investigation. Several SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected sitewide. Most of the PAH contamination is present in the top 6 feet of subsurface soil. Specifically, indeno(1,2,3-cd)pyrene was detected in 12 samples out of 95 above the unrestricted soil cleanup objective (USCO) of 1 ppm (parts per million) with the maximum concentration of 220 ppm. Benzo(b)fluoranthene was detected in 11 samples out of 95 above the USCO of 1 ppm with the maximum concentration of 390 ppm. Benzo(a)anthracene, benzo(a)pyrene and chrysene were detected in 10 samples out of 95 above their respective USCO of 1 ppm with the maximum concentration of 350 ppm, 330 ppm and 320 ppm respectively. Lead exceeded the USCO of 63 ppm in 17 out of 95 samples, with a maximum concentration of 524 ppm. Chromium (maximum 65.9 ppm, USCO of 30 ppm), copper (maximum 179 ppm, USCO of 50 ppm), mercury (maximum 0.394 ppm, USCO of 0.18 ppm), nickel (maximum 61.9 ppm, USCO of 30 ppm) and zinc (maximum 360 ppm, USCO 0f 109 ppm) were also detected in a small number of samples. Perfluorooctane sulfonic acid (PFOS) was detected above its USCO of 0.88 parts per billion (ppb) in two samples with the maximum concentration of 1.39 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: A total of 20 groundwater samples were collected from 14 monitoring wells during the remedial investigation. The depth of the monitoring wells varied between 19 feet to 24 feet. Perfluorooctanoic acid (PFOA) was detected above the ambient groundwater quality guidance value of 2.7 parts per trillion (ppt) with a maximum concentration of 36.9 ppt. PFOS was detected at a maximum of 117 ppt compared to the ambient groundwater quality guidance value of 6.7 ppt. The maximum concentration of both PFOA and PFOS was detected in the southeastern corner of the site, underneath the building. PFOA and PFOS were also detected in similar concentrations in upgradient wells, thus suggesting it is likely from an off-site source. Benzo(a)anthracene (0.11 ppb maximum), benzo(b)fluoranthene (0.2 ppb maximum), and chrysene (0.12 ppb maximum), were detected above their respective ground water standard of 0.002 ppb in a small fraction of samples. Lead (259 ppb, groundwater standard of 25 ppb), chromium (283 ppb, groundwater standard of 50 ppb), and nickel (228 ppb, groundwater standard of 100 ppb) were detected in the well located upgradient along the western site boundary. Volatile organic compounds (VOCs) were not detected in any groundwater samples. Data does not indicate any off-site migration of contaminated groundwater.
Soil Vapor: A wide range of VOCs were detected in soil vapor samples collected across the site. The chlorinated VOCs carbon tetrachloride (34.9 micrograms per cubic meter [g/m3]), cis 1,2-DCE (85.2 g/m3), TCE (216 g/m3), and PCE (834 g/m3) were detected in the sample collected beneath the slab from the northeastern portion of the on-site building. Cis 1,2-DCE, TCE and PCE were not detected in the indoor air sample. Carbon tetrachloride was detected at 0.41 g/m3 in indoor air. As per the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, mitigation of the human health exposure resulting from the soil vapor intrusion for cis 1,2-DCE and

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

	TCE is required. The data does not indicate any off-site impacts in soil vapor related to this site.
Health Problem:	Direct contact with contaminants in soil is unlikely because the majority of the site is covered with a building and asphalt pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) can move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for the current building and any future on-site development. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Site Description:	Location: The White Plains Chrysler Car Dealership site is a 1.826-acre site located at 70 Westchester Avenue, White Plains, New York. The site is in a commercial and residential downtown neighborhood. The site is bounded by Franklin Avenue, a dense residential neighborhood, a school, a ball field, and retail businesses to the north, the White Coach Diner to the west, Westchester Avenue and the Westchester Mall to the south, and a closed car dealership to the east. Site Features: The southeastern portion of the site is currently occupied by a car dealership building which consists of a small show room and car service bays. The northern and western portion of the site consists of an asphalt parking lot for the dealership. There is a small lawn area in the front of the building along Westchester Avenue. The eastern portion of the building, which was constructed in 1925, consists of a single-story and two-story structure with small partial basement under the southeastern corner of the building. The western portion of the building, which was constructed in 1990, consists of a single-story structure with a half basement. Current Zoning and Land Use: The site is currently active and is used as a car dealership. The northern portion of site is located in a Residential Multi-Family District and southern portion is located in an Intermediate Business District zone. Therefore, half the property is zoned residential. Past Use of the Site: The site has been an active car dealership with auto repair since at least 1967. However, the on-site commercial building has been present on the site since 1925, suggesting this was an auto dealership dating back to potentially 1925. Some of the historical owner names suggest a dealership or auto related use has been on the site since at least the early 1940s. Site Geology and Hydrogeology: The site slopes from west to east. Soil consists of gray-brown fine to coarse sand with brick fragments (historic fill) with depth ranging from 0-6 feet to 0-13 feet below ground surface (bgs). The fill is underlain by brown coarse sand with trace silt and gravel to 35 feet bgs. The depth of the bedrock varies from 16 to 50 feet bgs. Groundwater is present at approximately 11 to 21 feet bgs and flows to the east-southeast.
Summary:	Direct contact with contaminants in soil is unlikely because the majority of the site is covered with a building and asphalt pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) can move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

site contaminants in indoor air due to soil vapor intrusion for the current building and any future on-site development. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Summary:

Nature and Extent of Contamination: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor, indoor air and ambient air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for site include SVOCs and metals. Soil: A total of 95 soil samples were collected from 20 soil borings installed at a maximum depth of 20 feet bgs during the remedial investigation. Several SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected sitewide. Most of the PAH contamination is present in the top 6 feet of subsurface soil. Specifically, indeno(1,2,3-cd)pyrene was detected in 12 samples out of 95 above the unrestricted soil cleanup objective (USCO) of 1 ppm (parts per million) with the maximum concentration of 220 ppm. Benzo(b)fluoranthene was detected in 11 samples out of 95 above the USCO of 1 ppm with the maximum concentration of 390 ppm. Benzo(a)anthracene, benzo(a)pyrene and chrysene were detected in 10 samples out of 95 above their respective USCO of 1 ppm with the maximum concentration of 350 ppm, 330 ppm and 320 ppm respectively. Lead exceeded the USCO of 63 ppm in 17 out of 95 samples, with a maximum concentration of 524 ppm. Chromium (maximum 65.9 ppm, USCO of 30 ppm), copper (maximum 179 ppm, USCO of 50 ppm), mercury (maximum 0.394 ppm, USCO of 0.18 ppm), nickel (maximum 61.9 ppm, USCO of 30 ppm) and zinc (maximum 360 ppm, USCO 0f 109 ppm) were also detected in a small number of samples. Perfluorooctane sulfonic acid (PFOS) was detected above its USCO of 0.88 parts per billion (ppb) in two samples with the maximum concentration of 1.39 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: A total of 20 groundwater samples were collected from 14 monitoring wells during the remedial investigation. The depth of the monitoring wells varied between 19 feet to 24 feet. Perfluorooctanoic acid (PFOA) was detected above the ambient groundwater quality guidance value of 2.7 parts per trillion (ppt) with a maximum concentration of 36.9 ppt. PFOS was detected at a maximum of 117 ppt compared to the ambient groundwater quality guidance value of 6.7 ppt. The maximum concentration of both PFOA and PFOS was detected in the southeastern corner of the site, underneath the building. PFOA and PFOS were also detected in similar concentrations in upgradient wells, thus suggesting it is likely from an off-site source. Benzo(a)anthracene (0.11 ppb maximum), benzo(b)fluoranthene (0.2 ppb maximum), and chrysene (0.12 ppb maximum), were detected above their respective ground water standard of 0.002 ppb in a small fraction of samples. Lead (259 ppb, groundwater standard of 25 ppb), chromium (283 ppb, groundwater standard of 50 ppb), and nickel (228 ppb, groundwater standard of 100 ppb) were detected in the well located upgradient along the western site boundary. Volatile organic compounds (VOCs) were not detected in any groundwater samples. Data does not indicate any off-site migration of contaminated groundwater.
Soil Vapor: A wide range of VOCs were detected in soil vapor samples collected across the site. The chlorinated VOCs carbon tetrachloride (34.9 micrograms per cubic meter [g/m3]), cis 1,2-DCE (85.2 g/m3), TCE (216 g/m3), and PCE (834 g/m3) were detected in the sample

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

collected beneath the slab from the northeastern portion of the on-site building. Cis 1,2-DCE, TCE and PCE were not detected in the indoor air sample. Carbon tetrachloride was detected at 0.41 g/m3 in indoor air. As per the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, mitigation of the human health exposure resulting from the soil vapor intrusion for cis 1,2-DCE and TCE is required. The data does not indicate any off-site impacts in soil vapor related to this site.

Updated By:	RXKEATIN
Site Description:	Location Description: The site is located at 359-369 Mamaroneck Avenue in a mixed use commercial and residential area in the southern part of the City of White Plains, Westchester County NY. Site Features: The site is on approximately 0.25 acres of land which is flat and contains a 6,763 square foot building with a full basement. Current Use: The building contains a drycleaner, a nail salon, an insurance agency, and two restaurants. The remainder of the site consists of a paved parking lot. Surrounding Use: The site is surrounded with businesses to the north and south of the site and residences to the east and west. Immediately to the east of the site is a municipal parking lot. Historical Sources of Contamination: Dry cleaner operated at this location is a potential source of PCE contamination. Site Hydrology: Groundwater flows though sand at only several feet below ground surface.
Env Problem:	Based upon investigations to date, the primary contaminants of concern at the site included tetrachloroetylene (PCE) and its associated breakdown products. After a thorough Site Characterization, as described in a final report dated July 2012, it was determined that this site did not qualify for the registry.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Data Release Frequency: Quarterly

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/20/2024

Last EDR Contact: 02/04/2025
Next Scheduled EDR Contact: 05/19/2025
Data Release Frequency: Varies

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002
Date Data Arrived at EDR: 07/08/2005

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Northeast Map:	20023960 GLENVILLE, CT
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

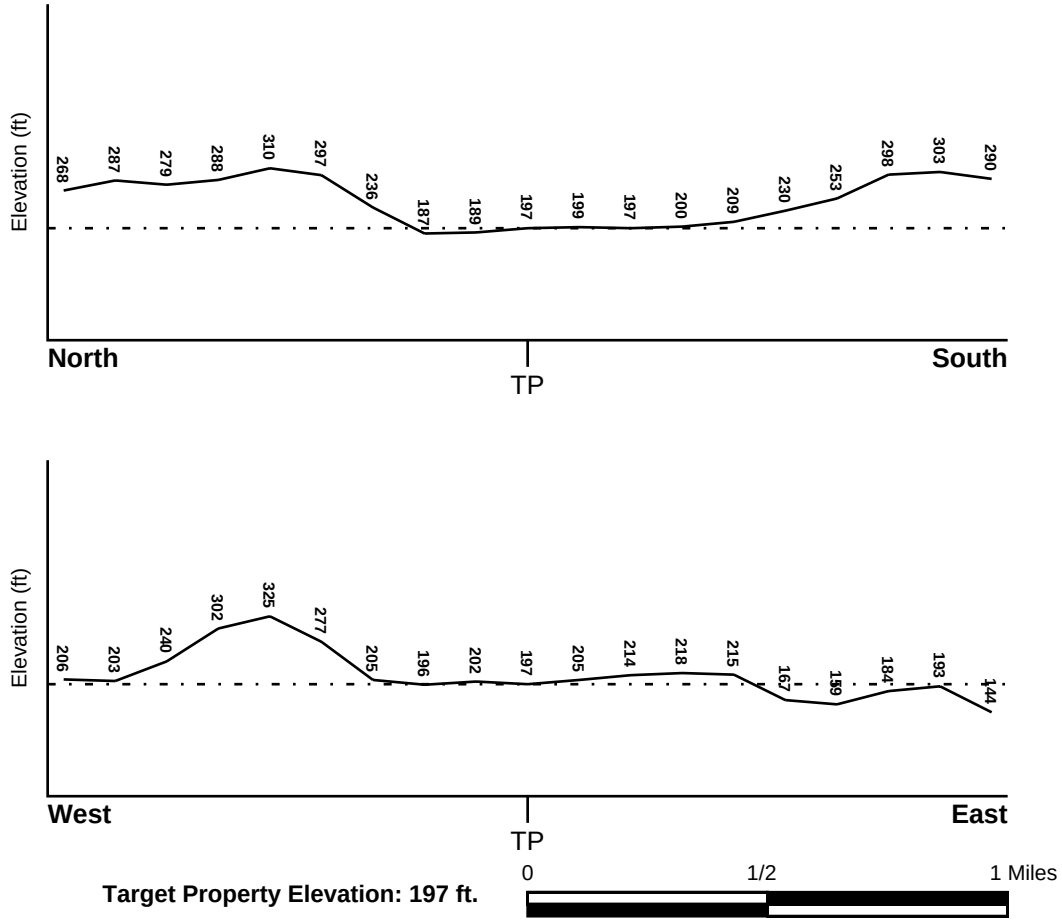

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36119C0267F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
36119C0266F	FEMA FIRM Flood data

36119C0269F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITE PLAINS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: gravelly loam

Hydrologic Group: Not reported

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 127 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5
2	3 inches	70 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5

Soil Map ID: 3

Soil Component Name: Udifluvents

Soil Surface Texture: gravelly silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 141 Min: 0.42	Max: 8.4 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	3 inches	70 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 141 Min: 0.42	Max: 8.4 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA
Project: 12859

Coordinates:

Latitude:	41.03164 41° 1' 54" North
Longitude:	-73.770797 -73° 46' 15" West

Environmental Record Search Results and Information Requests

From: New York DEC FOIL Center
To: Annmarie Yannaco
Subject: FOIL Request :: W143828-030525
Date: Wednesday, March 5, 2025 12:13:40 PM

CAUTION !! This E-Mail originated from outside the organization. Confirm it is from a legitimate E-Mail address. If uncertain - do not click links or open attachments unless you contact the sender and know the content is safe.

Dear Annmarie:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 3/5/2025 and given the reference number FOIL #W143828-030525 for tracking purposes. You may expect the Department's response to your request no later than **4/2/2025**.

Record Requested: **Site Address: 100 Main Street, White Plains, NY As part of a Phase I Environmental assessment, SESI requests the following: Documentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency responses, fires, and environmental reports associated with soil/groundwater investigative sampling.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Click here to login to the FOIL Center.

Site Document Repository

Name: White Plains Public Library
Address: 100 Martine Avenue
White Plains,NY 10601

Site Description

Site Location: This 1.164-acre Site is located at 50 Court Street, White Plains, New York 10601. The Site is located on new tax lot 125.75-4-4.2. The Site is in a B-6 (Enclosed Mall) zone within walking

distance of the Metro North - White Plains train station. To the north of the Site is the balance of the subdivided former Macy's property designated Unit 1 on the condominium approval maps. To the east of the Site are retail stores. The Westchester County office building is to the south of the Site and to the west of the Site is the balance of the vacant Galleria Mall. Site Features: The Site is improved with the former Macy's portion of the Galleria Mall which has been vacant since on or about March 2023. On occasion the vacant mall is used by Homeland Security and local police departments for training exercises. The Site is located approximately 0.35 miles from the Bronx River. The Site is not located in a flood zone or otherwise environmentally sensitive area. Current Zoning and Land Use: The Site is currently located in a B-6 (Enclosed Mall) zone but is part of an effort to rezone the Galleria Mall area to allow for dense residential and commercial use; inclusive of the current proposed condominium development at 50 Court Street. The zoning change would be consistent with the desired City of White Plains plan for dense residential development near the White Plains train station which is approximately 0.23 miles from the Site and within easy walking distance. Proximate properties already include commercial, business, retail and dense residential uses. Past Use of the Site: The past uses of the Site are somewhat vague; however, based on Sanborn Fire Insurance Maps the Site it is evident the Site was developed prior to 1885; and essentially contained residences, the Westchester County Courthouse (circa 1885-1950), followed by the Galleria Mall (circa 1980-present). Associated with the courthouse use was a jail, bake shop and boiler rooms; and presumably heating oil for the facilities as the residences. Adjacent property uses included a fire station, upholstery and battery services; and retail stores. A total of two (2) releases (Spill Nos. 8803673 and 8805571) were identified in the EDR L TANKS and NY SPILLS databases and reported to the NYSDEC in 1988. These spills were associated with unknown gallons of No. 2 fuel oil due to tanks tests associated with a 10,000-gallon UST. These spills are administratively closed with the NYSDEC. However, no closure documentation or testing data was available for review. Site Geology and Hydrogeology: As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Site Property are characterized as UoA (Urban Land outwash substratum) urban land which is surface covered by pavement, concrete, buildings, and other structures underlain by disturbed and natural soil material, till substratum, 0 to 3 percent slopes. Based on the Remedial Investigation Report (RIR) from an adjacent Brownfield Cleanup Program Site (C360073) to the northeast (221 Main Street), the elevation of groundwater at the Site is approximately 180-200 feet AMSL, and groundwater flow direction is expected to follow the topography in the western direction.

Site Environmental Assessment

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Site Health Assessment

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

RE: Request Pursuant to Freedom of Information Law

Dear Annmarie, ,

The City of White Plains, City Clerk's Office is in receipt of your request, addressed to the City Clerk, dated March 5, 2025 and received on same, requesting the following records:

100 Main St., White Plains, NY

I have conducted a search for the requested records and certify that the City Clerk's Office does not possess the requested records.

Please also be advised that the City Clerk's Office does not respond to requests for access to records of other City departments. Any requests to those departments would need to be addressed to them directly.

Sincerely,

Jill Iannetta

FREEDOM OF INFORMATION LAW (FOIL) REQUEST FORM

Date:

3/5/2025

This request pertains to records maintained by the (list city department on board):

Fire Bureau

Records Access Officer for above-named city department or board:

Fire Chief

A link to the list of Records Access Officers may be found on the FOIL page of the city website.

Pursuant to New York Freedom of Information Law, I am requesting an opportunity to:

- ☐ Inspect copies of the following records
- ☑ Obtain copies of the following public records

Documents requested:

Site Address: 100 Main Street, White Plains, NY
As part of a Phase I Environmental assessment, SESI requests the following: Documentation of emergency responses and fires.

Be specific. Describe the record with sufficient detail for the public agency to respond.

Requestor's Name:

Annmarie Yannaco

Representing:

SESI Consulting Engineers

Street Address:

959 Route 46E Floor 3, Suite 300

City, State & Zip Code:

Parsippany, NJ 07054

Phone Number:

973 808 9050 ext 280

E-mail:

annmarie.yannaco@sesi.org

Requestor's Signature:

Annmarie Yannaco

AGENCY USE ONLY:

Fees (if applicable):

Please note: There is a photocopying fee of .25 per standard size page, and a $5.00 per page fee for large format plans or maps. Postage fees in the exact amount as levied by the United States Post Office, if mailed.

Date Received:

- [ ] Request Approved

Hi Annmarie,

There are 8 boxes of files in our records room for the old Galleria site. What is not contained in those boxes will be on our lobby computer. Your FOIL request will involve an exhaustive search of the records.

Please let me know the date and time you would like to visit the Building Department at 70 Church Street to go through everything since I can't pull the files until you arrive due to space constraints in the lobby.

Thanks,
Alison
