VOC	Volatile Organic Compound

1.0 PROJECT SUMMARY

SESI Consulting Engineers (SESI), at the request of prospective purchaser Main-Court Partners LLC (User) has conducted a Phase I Environmental Site Assessment (ESA) for the property located at 180 Main Street, White Plains, Westchester County, New York (herein referred to as the "Subject Property"). The Subject Property is known as a 1.8218 acre Condominium Section 125.75, Block 4, Lot 4-4..11. The Site is located in a commercial/residential/government building area in the downtown of the City of White Plains, New York. A tax map is included on **Figure 1.1**. A Subject Property Location Map is included on **Figure 1.2**. The Subject Property is improved with a portion of the former Macy's store and the adjacent City of White Plains parking garage at the closed Galleria Mall. A Subject Property Plan is included on **Figure 1.3**.

The Subject Property was developed prior to 1885 based on the Sanborn Fire Insurance Maps. Historical land uses included print shops, painting and oil shops, bottling works, plumbing and tin shops, a bowling alley, a fire department and a portion of the Westchester County Courthouse and commercial/residential spaces (circa 1885-1950), followed by the Galleria Mall. The Galleria Mall was constructed in approximately 1980. The Subject property was improved with a portion of the Galleria Mall anchor store Abraham and Straus (circa 1980-1995), and then Sterns (circa 1995-1996), and then Macys (circa 1996 to 2023). These facilities were all apparently heated with large oil tanks, which had a history of some spills.

The Subject Property is presently owned by Galleria City Holding Co LLC based on the provided questionnaire. The subject property is located in a commercial/residential/government area and the property is currently the northern portion of a former Macy's store and adjacent City of White Plains parking garage at the Galleria Mall. The subject property currently is being temporarily used for homeland security and police active shooter practice drills.

The objective of this ESA is to identify the presence or likely presence, use or release on the subject property of hazardous substances or petroleum products as defined in the American Standard of Testing and Materials (ASTM) E1527-21 as a Recognized Environmental Condition (REC). In addition, Business Environmental Risks (BERs), Controlled Recognized Environmental Conditions (CRECs), and Historical Recognized Environmental Conditions (HRECs) were identified, if present.

The following RECs have been identified:

- **REC 1 – Subject Property Underground Storage Tanks (USTs):** A total of two (2) underground storage tanks (USTs) were identified in the corresponding EDR Radius search. These tanks were registered with PBS number (3-492205) and the tanks were 2x10,000-gallon USTs closed in place, associated with "The Galleria at White Plains (100 Main Street)". A report has been provided that documents closure of the tanks in place. However, no subsurface testing was conducted. Proper closure documentation and current UST status are unknown. Therefore, a geophysical survey is recommended of the entire Subject Property to locate, investigate, and remove any remaining UST, and perform additional investigation, and possible remediation under the tanks once removed.

The following CRECs have been identified:

- **CREC 1 – Subject Property Historic Releases:** A total of two (2) releases (Spill Nos. 8803673 and 8805571) were identified in the EDR LTANKS and NY SPILLS databases and reported to the NYSDEC in 1988. These spills were associated with unknown gallons of No. 2 fuel oil due to tanks tests associated with at least one of the 10,000-gallon USTs. These spills are administratively closed with the NYSDEC. However, no closure documentation or testing data was available for review. And each spill report noted that "groundwater" was the impacted resource. Therefore, a geophysical survey is recommended for the entire Subject Property to locate, investigate, and remove any remaining USTs, and then perform investigation and possible remediation under any remaining tanks.

The following BERs have been identified:

- **BER 1 – Subject Property Aboveground Storage Tank (AST):** SESI personnel observed one (1) AST at the northeastern portion of the Subject Property during the walkthrough. There was no staining observed, and the concrete below the tank had no visible cracks. Therefore, no additional investigation is warranted.
- **BER 2 – Polychlorinated Biphenyl (PCB) Caulk:** A PCB survey was not completed during SESI's walkthrough of the Subject Property. There are likely several areas present that contain caulking. Therefore, a PCB survey is recommended prior to any demolition or redevelopment of the Subject Property.

- **BER 3 – Asbestos-Containing Material (ACM):** An ACM survey was not completed during SESI's walkthrough of the Subject Property. Based on the age of the building, SESI recommends an ACM survey prior to any demolition or redevelopment of the Subject Property.
- **BER 4 – Universal Waste:** There were several pieces of universal waste identified during the walkthrough of the Subject Property; however, a complete survey of this universal was not completed. SESI recommends a universal waste survey prior to any demolition or redevelopment of the Subject Property.
- **BER 5 – Lead-Based Paint (LBP):** An LBP survey was not completed during SESI's walkthrough of the Subject Property. Based on the age of the building, SESI recommends an LBP survey prior to any demolition or redevelopment of the Subject Property.
- **BER 6 – Vapor Intrusion:** A vapor intrusion evaluation has not been completed as part of this review. The historic operations contained potential petroleum and volatile organic compound (VOC) uses, which may have contributed to soil and groundwater vapor. Therefore, SESI recommends a vapor intrusion evaluation of the Subject Property as part of the redevelopment process.

The findings are discussed further in **Section 10.0 CONCLUSIONS AND RECOMMENDATIONS** of this Report.

2.0 INTRODUCTION

2.1. PURPOSE

The purpose of this study is to determine the RECs at the Subject Property for due diligence purposes related to the potential acquisition of the Subject Property.

SESI has developed this Phase I ESA Report on behalf of the User. It has been developed in substantial conformance with the ASTM's International Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-21. According to ASTM E1527-21, the following conditions were identified during this assessment:

REC – "(1) the presence of hazardous substances or petroleum products in, on, or at the property due to release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the property due to a release or likely to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition."

CREC – "A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority."

HREC – "A past release that has been remediated to below residential standards and given regulatory closure with no use restrictions."

BER – "A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate and is not an issue required to be investigated under this practice."

2.2. SCOPE OF SERVICES

The scope of this assessment consisted of the following general tasks: a records review; a Subject Property visit; interviews with present and past owners, operators, and occupants to the extent possible; and preparation of this ESA report. Specific tasks that were conducted included the following:

- A review of environmental databases maintained by the United States Environmental Protection Agency (USEPA) and state and local agencies within the minimum search

distance. Environmental Data Resources, Inc. (EDR) prepares environmental databases used in these assessments.

- A Subject Property reconnaissance to observe conditions and to assess the Subject Property location with respect to adjoining and surrounding property uses, types of development, topography, natural surface features, roadways, railroad lines and right-of-ways to identify obvious potential environmental conditions on neighboring properties.

Per ASTM E1527-21, questionnaires were provided to the User (Client) and Owner to obtain information related to the Subject Property.

2.3. SIGNIFICANT ASSUMPTIONS

Information obtained by SESI and by third parties is assumed to be accurate and/or true. SESI makes no warranty, either implied or expressed, regarding the accuracy or validity of information supplied by others.

2.4. LIMITATIONS/METHODOLOGY/RELIANCE

This ESA was prepared for the exclusive use of Main-Court Partners LLC, its affiliates and lenders. During the assessment, methodologies were used that conform to generally accepted practices for this type of work. The scope and character of the environmental assessment were, in professional judgment, sufficient to justify the stated conclusions, after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the Subject Property as found in historical records, and visual observation of the Subject Property. No other investigation was performed other than that which is expressly noted in this Report.

This ESA was performed in accordance with ASTM E1527-21 and is subject to reasonable limits of time and cost and is intended to reduce but not eliminate uncertainty regarding the potential for RECs in connection with a property. Sampling and laboratory analysis are required to determine if soil, surface water, groundwater, air, and construction materials have been impacted by a contaminant.

The information presented in this ESA was obtained during the Subject Property reconnaissance and from the Client, representatives of the Client, current/former property owner(s) or tenants,

Federal, State, County and Local Officials, and available mapped information obtained by SESI. SESI does not certify the accuracy of the information received from outside sources.

This ESA should be used in its entirety. Use of portions of this ESA may nullify the information and/or conclusions of this ESA. Subject Property observations discussed herein apply to Subject Property conditions as observed during Subject Property reconnaissance only. The conclusions of this ESA do not apply to conditions that were unavailable for inspection and could not be evaluated.

SESI does not certify that the Subject Property is contaminant free and this ESA does not serve as a warranty. SESI's investigation was performed within the time frame requested by the client.

The activities to conduct this ESA did not include sampling and analyses of soil, surface water, groundwater, air, or construction materials unless expressed otherwise and requested by the client. Formal wetland, asbestos, mold, and/or radon evaluations were not performed and are not within the scope of work for an ESA. If additional services, including UST testing, construction materials testing, or environmental sampling (soil, surface water, groundwater, air) is recommended, the results and conclusions for these tests will be provided under separate cover.

2.5. DISCLAIMER

This ESA was prepared by SESI for the sole and exclusive use of Main-Court Partners LLC. Nothing under the Agreement between SESI and the User shall be construed to give any rights or benefits to anyone other than the User and SESI, and all duties and responsibilities undertaken pursuant to the Agreement will be for the sole and exclusive benefit of the User and SESI and not for the benefit of any other party. SESI does not intend, without its written consent, for this ESA to be disseminated to anyone other than the User, or to be used or relied upon by anyone other than the User. Use of the ESA by any other person is unauthorized and such use is at their sole risk.

3.0 SUBJECT PROPERTY DESCRIPTION

3.1. LOCATION/STRUCTURES/LEGAL DESCRIPTION

The Subject Property consists of a 79,358-square feet (1.8218-acre) area of the former Macy's store at the closed Galleria Mall and is located at 180 Main Street, White Plains, Westchester County, New York. The Subject Property is identified on tax map records as Condominium Lot Section 125.75, Block 4 Lot 4-4..11. A condominium tax map is included in **Figure 1.1.** The Subject Property is also known as Condominium Unit 1 as identified on the Condominium Map dated last revised September 24, 2025. The Subject Property is currently improved with the northern portion of the former Macy's store and the adjacent City of White Plains parking garage at the closed Galleria Mall and is currently used by homeland security and the police department as an active shooter practice area. **Figure 1.2** provides a Subject Property Location Map. A Subject Property Plan is shown on **Figure 1.3.** The Subject Property is proposed to be redeveloped with condominiums and associated parking. A Proposed Subject Property Plan is included on **Figure 3.1**.

The Subject Property is bound to the north by commercial/office/residential, to the south by the 50 Court Street BCP Site No. C360258, to the east by commercial/office/residential/park, and to the west by parking and the remaining vacant Galleria Mall. Adjacent properties are noted on **Table 3.1** below.

Table 3.1—Adjacent Property Uses

Direction	Adjacent Property Use
North	Commercial/Office/Residential
South	Commercial
East	Commercial/Office/Residential/Park
West	Commercial

3.2. SUBJECT PROPERTY AND VICINITY CHARACTERISTICS

The Subject Property is located in a commercial, office and residential area. The closest notable surface water body is the Bronx River located approximately 0.35 miles west of the Subject Property.

3.3. CURRENT USE OF THE PROPERTY

The Subject Property is currently part of a vacant mall department store that is being temporarily used for homeland security and police active shooter practice. The Subject Property is owned by Galleria City Holding Co LLC based on the questionnaire.

3.4. DESCRIPTION OF STRUCTURES, ROADS AND SUBJECT PROPERTY IMPROVEMENTS

The Subject Property is a rectangle-shaped approximately 1.8218-acre property. The full area is covered by the mall.

4.0 SUBJECT PROPERTY BACKGROUND INFORMATION

4.1. TITLE INFORMATION

A chain of title and deed search was not prepared as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

4.2. ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

A lien or activity use limitation search was not conducted as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

4.3. SPECIALIZED KNOWLEDGE/OTHER USER PROVIDED INFORMATION

SESI was provided with the following documents:

- SESI was provided with a map titled *Condominium Map prepared for Galleria City Holdings Co LLC, in the City of White Plains, Westchester Couty, N.Y.* dated last revised September 24, 2025 (**Appendix A**). The Subject Property is identified as Unit 1 on the condominium map.

- SESI was provided with a *Full Oil Tank Upgrade Project Report", dated April 25, 1997* prepared by Clayton Environmental Consultants (No Figures, Photographs, or Appendices were provided).

  This report summarizes the abandonment and closure in place of two (2) 10,000-gallon No. 2 fuel oil USTs and the installation of one (1) 1,000-gallon No. 2 fuel oil UST. According to the report two (2) 10,000-gallon USTs located in the entrance to the loading and parking areas (along Mains Street) were closed-in-place in January 1997. Prior to closure, the USTs were pumped of residual oil, the tanks were entered, cleaned and inspected. One tank had previously been relined (likely when the spills were closed) but the other tank was not line and these tanks were not constructed in vaults or with secondary containment. However, no holes, cracks or pitting was noted. Then the USTs and vent lines were filled with a 50 psi concrete slurry. No environmental sampling was included in this report and the report erroneously concluded that there were no prior spills associated with these tanks. Following closure of the USTs, a 1,000-gallon carbon steel AST equipped with secondary containment was installed at the southeast corner of the loading and parking area of the Macy's Store. The report also noted a 100 gallon AST was previously installed in the penthouse generator / boiler room for a backup generator in the event the more recently installed natural gas boiler system failed.

- 2019 Phase I Environmental Site Assessment Report prepared by the ATC Group for WP Galleria Realty LP

  In April 2019, ATC Group Services LLC completed a Phase I Environmental Site Assessment (ESA) for the entire former Macy's tax lot 125.75-4-4, which included the Site. The 2019 Phase I revealed no evidence of recognized environmental conditions ("RECs") in connection with the property. However, several report findings were noted. This report acknowledged that two spills had been reported to the NYSDEC in 1988 identified as Spill Nos. 8803673 and 8805571. Both of these spills appear to be related to tank test failures associated with a 10,000-gallon UST. According to the 2019 Phase I ESA, the tank associated with the spill was reportedly "re-lined and put back in service". This report fails to note that this relining work likely occurred after the 1988 spills in order to close both spill numbers and before the 1997 UST tank closure work described in the 1997 UST Report, which is discussed in this Phase I ESA, and which also described the closure in place of these tanks.

  Four oil fill ports were observed on the Site during this ESA, two located on the sidewalk along Main Street, directly in front of the loading dock and two within the loading dock area. The ESA concludes that the four oil fill ports are likely associated with the two USTs. However, because they note "it appears that there was no actual release, and no further action such as remediation was recommended, these LTANKS cases are not considered to be a recognized environmental condition". It is unclear how the consultant reached this conclusion because the spill reports each noted that groundwater was impacted by the spills, and there was no sampling documentation that appears to have been taken in relation to either the 1988 spill closure work or during the 1997 UST closure in place work.

  The 1,000 gallon AST, which was reportedly installed in 1997, was also observed to still be present on the Site located within the eastern portion of the loading dock area as of 2019. The ESA explained the purpose of the 1,000-gallon diesel AST was to transfer fuel to a 100-gallon day AST and emergency generator. The emergency generator is located within the penthouse generator room of the property building and oil staining was observed on the concrete pad below the generator's engine. A passenger elevator located on the property had minor staining in the vicinity of the equipment and a slight petroleum like sheen on standing water within the loading dock area of the property was observed.

If other previous environmental documents are provided to SESI at a later date and are identified to have an impact on the findings and recommendations of this Report, a new Report will be issued to include these findings. However, to the best of our knowledge, these are all of the prior reports known to exist in relation to this Site.

4.3.1. INTERVIEWS

The ESA questionnaire was provided to the User and the response received on August 15, 2025. After review of the document, no new or previously unknown information was identified. A representative directed a tour of the facility. Information obtained from this interview, questionnaire and Subject Property inspection is integrated in this Phase I ESA. A completed User Questionnaire is presented as **Appendix B**.

4.4. COMMONLY KNOWN OR REASONABLY ASCERTAINABLE RECORDS

SESI completed a review of publicly available New York State Department of Environmental Conservation mapping and database systems and the United States Environmental Protection Agency (USEPA) database system as part of this Report to determine the environmental conditions at the Subject Property and adjacent properties.

4.5. VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The Report User indicated no knowledge of any valuation reduction related to environmental concerns.

4.6. OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The Subject Property parcels are currently owned by Galleria City Holding Co LLC and are currently occupied by temporary tenants Homeland Security and the local police department for active shooter drills.

5.0 RECORDS REVIEW

5.1. STANDARD ENVIRONMENTAL RECORD SOURCES: FEDERAL, CITY, STATE

5.1.1. EDR SEARCH

A search of available environmental records was conducted by EDR and reported in the EDR Radius Map Report with GeoCheck. The Report meets the government records search requirements of ASTM Standard of Practice for Environmental Subject Property Assessments, E-1527-21. Search distances are per ASTM standards. A Radius Map Check was performed by EDR and are provided in **Appendix D**. All properties in the search area with environmental records are listed below:

Table 5.1—Property Listings

Environmental Listing	Subject Property	0-1/8 Miles	1/8 - 1/4 Miles	1/4 - 1/2 Miles	1/2-1 Mile

NR—not requested at this search distance

The EDR Radius Map Report identified operations at the Subject Property in the following listings.

LTANKS: Leaking Storage Tank Incident Reports

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. A review of the database as provided by EDR identified two (2) listings (both for A&S Store) on the Subject Property, as follows:

- Historic Spill No. 8803673 (July 27, 1988), A&S Store, Galleria Plaza: Test of a 10,000-gallon No. 2 fuel oil tank failed. The noted impacts were to groundwater, and the case was reported as closed by the NYSDEC on June 13, 1991.
- Historic Spill No. 8805571 (September 9, 1988), A&S Store, Galleria Plaza: Test of a 10,000-gallon No. 2 fuel oil tank failed. The noted impacts were to groundwater, and the case was reported as closed by the NYSDEC on June 13, 1991.

These listings are considered **CREC 1** because there was no environmental investigation or remediation performed in relation to either spill closure.

UST: Underground Storage Tank Data

USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program. A review of the NY UST list provided by EDR identified one (1) listing (The Galleria at White Plains) on the Subject Property. This listing is further described below:

- PBS No. 3-492205, The Galleria at White Plains, 100 Main Street: 2x10,000-gallon USTs closed in place (Macy's Store).

A report for the two (2) 10,000-gallon USTs associated with PBS number 3-492205 has been provided that documents closure of the tanks in place. However, no subsurface testing was conducted.; Therefore, these USTs are considered **REC 1**.

Facility Index System/Facility Registry System (FINDS)

The FINDS database provides a list of facilities that maintain or previously maintained environmental permits or are listed under additional EDR report databases. A review of FINDS list provided by EDR identified two (2) listings for the Subject Property (Macy's White Plains Cogeneration and Macy's-White Plains Galleria at White Plains). These operations appear to include Air Program (EPA ID 110019206599 and 110054890347) and RCRA (EPA ID 110016725748). No violations were reported; therefore, these listings do not constitute a REC.

USEPA Enforcement and Compliance History Online (ECHO)

The ECHO database provides a list of compliance and enforcement information for regulated facilities. A review of the database provided by EDR identified two (2) listings for the Subject Property (Macy's White Plains Cogeneration, Macy's-White Plains Galleria at White Plains). No violations were identified with these operations at the Subject Property; therefore, these listings do not constitute a REC.

MANIFEST Sites

MANIFEST Facilities include a list of facilities that have generated hazardous waste or contaminants. A review of the NY MANIFEST list, as provided by EDR, identified one (1) NY MANIFEST facility (Macy's East #55) located on the Subject Property. The Subject Property is also listed as 100 Main Street on the MI MANIFEST database. Based on a review of the available database information, there are manifests are not associated with documented releases, and therefore they do not constitute a REC.

Cooling Towers: Registered Cooling Towers

This data includes the location of cooling towers registered with New York State. The data is self-reported by owners/property managers of cooling towers in service in New York State. In August 2015, the New York State Department of Health released emergency regulations requiring the owners of cooling towers to register them with New York State. A review of the database as provided by EDR identified four (4) listings for the Subject Property (two [2] for 100 Main Street and two [2] for 100 E Main St). The cooling tower listings do not have any reported associated releases, and therefore these listings do not constitute a REC.

The EDR Radius Map Report identified operations at nearby facilities in the following listings. A discussion of these listing is provided below:

RCRA Small Quantity Generator (RCRA-SQG)

The RCRA-SQG includes a list of facilities that generate more than 100 but less than 1,000 kilograms of hazardous waste per month and accumulates less than 6,000 kilograms of hazardous waste at any time. According to the RCRA-SQG list provided by EDR, there are eight (8) RCRA-SQG facilities within approximately 0.25 miles of the Subject Property. Of these facilities, only two (2) contained releases. However, these releases were closed by the NYSDEC and not associated with the waste generated. Therefore, these listings are not expected to adversely impact the Subject Property.

RCRA Very Small Quantity Generator (RCRA-VSQG)

The RCRA-VSQG includes a list of facilities that generate less than 100 kilograms of hazardous waste, or less than one (1) kilogram of acutely hazardous waste per month. According to the RCRA-VSQG list provided by EDR, there are eight (8) RCRA-VSQG facilities within approximately 0.25 miles of the Subject Property. The facilities had no reported violations and any listed spills were reported as closed and not associated with the RCRA listing. Therefore, these listings are not expected to adversely impact the Subject Property.

NY State Hazardous Waste Sites (NY SHWS)

NY SHWS is a list of known contaminated sites except those associated with Bureau of Underground Storage Sites (BUST). According to the NY SHWS list provided by EDR, there are two (2) facilities (Automobile Club of New York and Mamaroneck Avenue Dry Cleaners) located within 0.5 miles of the Subject Property. Due to the distance of these facilities and the locations as hydraulically cross gradient or downgradient from the Subject Property, these listings are not expected to adversely impact the Subject Property.

LTANKS: Leaking Storage Tank Incident Reports

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. A review of the database as provided

by EDR identified 160 listings within 0.5 miles of the Subject Property. However, a review of the listings within 0.125 miles from the Subject Property did not identify any open spills with the NYSDEC. Therefore, these facilities are not expected to adversely impact the Subject Property other than possibly to create soil vapor.

UST: Underground Storage Tank Data

USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program. A review of the NY UST list provided by EDR identified 70 facilities within 0.25 miles of the Subject Property. No documented releases were reported from the listed USTs within 0.125 miles from the Subject Property. Therefore, these facilities do not constitute a REC.

AST: Petroleum Bulk Storage

Registered Aboveground Storage Tanks. A review of the database as provided by EDR identified 31 facilities within 0.25 miles of the Subject Property. All facilities within 0.125 miles of the Subject Property that contained associated spills or LTANKS listings were reported as closed by the NYSDEC. Therefore, these facilities do not constitute a REC.

Eng Controls: Registry of Engineering Controls

Environmental Remediation sites that have engineering controls in place. A review of the database as provided by EDR identified three (3) facilities (Hamilton Green, CE-White Plains MGP and Automobile Club of New York) within 0.5 miles of the Subject Property. Both facilities appear to be located hydraulically downgradient from the Subject Property, and therefore they do not constitute a REC.

Inst Control: Registry of Institutional Controls

Environmental Remediation sites that have institutional controls in place. A review of the database as provided by EDR identified four (4) facilities (Hamilton Green, WP Mall Cleaners & Gas Station Site, CE-White Plains MGP and Automobile Club of New York) within 0.5 miles of the Subject Property. As previously discussed, both facilities appear to be located hydraulically downgradient from the Subject Property, and therefore they do not constitute a REC.

Voluntary Cleanup Program (VCP) Sites

The VCP listings included Completed Sites, Sites in Progress and Act 2 Non-Use Aquifer Determinations Sites. Formerly known as the Act 2, the Land Recycling Program encourages the voluntary cleanup and reuse of contaminated commercial and industrial sites. A review of NY VCP list provided by EDR identified one (1) facility (CE—White Plains MGP) within 0.125 miles of the Subject Property. As previously discussed, the facility appears to be located hydraulically downgradient from the Subject Property, and therefore does not constitute a REC.

Brownfields: Brownfields Site List

A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant. A review of the database as provided by EDR identified 11 listings within 0.5 miles of the Subject Property. Of the facilities within 0.125 miles and hydraulically upgradient of the Subject Property, two (2) brownfield cleanup program (BCP) facilities were identified as undergoing remediation for groundwater, soil and soil vapor. These facilities are being investigated and remediated under the NYSDEC BCP and therefore do not constitute and REC.

SPILLS: Spills Information Database

Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date. A review of the database as provided by EDR identified 52 facilities within 0.125 miles of the Subject Property. The spills associated with the facilities listed adjacent or hydraulically upgradient of the Subject Property have been closed with the NYSDEC. Therefore, these facilities do not constitute a REC.

RCRA Non-Generators / No Longer Regulated (RCRA NonGen / NLR)

Resource Conservation and Recovery Act Non-Generators (RCRA NonGen) database searches USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information about facilities that generate, transport, store, treat and/ or dispose of hazardous waste as described by RCRA. Non-generators do not presently generate hazardous waste. A review of RCRA NonGen/NLR list provided by EDR identified 107 facilities within 0.25

miles of the Subject Property. Since none of these facilities currently generate hazardous waste, they are not expected to adversely impact the Subject Property.

Formerly Utilized Sites Remedial Action Program (FUSRAP)

Established in 1974, the FUSRAP list includes facilities that required remediation due to radioactive contamination associated with the Manhattan Project and early U.S. Atomic Energy Commission operations. According to the FUSRAP list provided by EDR, there is one (1) FUSRAP facility (Nuclear Development Corp of America Site) located within approximately 0.125 miles of the Subject Property to the southeast. The facility is listed as Nuclear Development Corp. of America, identified as NY.32, and is located at 5 New Street. The facility was reportedly evaluated and eliminated from consideration under FUSRAP in 1987 due to the EPA's determination that it had no authority to perform remedial efforts under FUSRAP. EDR reported that the facility was licensed to handle nuclear materials. The facility is confirmed to have handled radioactive materials, specifically uranium. The listed operations included the performance of experiments involving uranium recovery from scrap material at the facility. No additional information was provided in the listing. Due to undocumented radioactive contamination at this facility, these conditions do not constitute a REC.

Facility Index System/Facility Registry System (FINDS)

The FINDS database provides a list of facilities that maintain or previously maintained environmental permits or are listed under additional EDR report databases. A review of FINDS list provided by EDR identified five (5) listings (J C Penney Co Inc, Galleria Mall Dental, C P I Photo Finish, Expressly Portraits, and Picture People, The) within 0.125 miles of the Subject Property. No violations were reported; therefore, these listings do not constitute a REC.

USEPA Enforcement and Compliance History Online (ECHO)

The ECHO database provides a list of compliance and enforcement information for regulated facilities. A review of the database provided by EDR identified four (4) listings (J C Penney Co Inc, C P I Photo Finish, Expressly Portraits, and Picture People, The) within 0.125 miles of the subject property. No violations were reported; therefore, these listings do not constitute a REC.

Fuels Program: EPA Fuels Program Registered Listing

This listing includes facilities that are registered under the Part 80 (Code of Federal Regulations) EPA Fuels Programs. All companies now are required to submit new and updated registrations. A review of the database as provided by EDR identified one (1) facility (RNG Padd 1) within 0.125 miles of the Subject Property. Since no releases or violations were documented , this facility is not expected to adversely impact the Subject Property.

UST Finder Release: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials. A review of the database as provided by EDR identified 24 facilities within 0.5 miles of the Subject Property. Based on a review of the available database information, all but one (1) facility (New York Hospital) have documented release events have not occurred at these facilities. Additionally, this one (1) facility is located approximately 0.25 miles topographically downgradient from the Subject Property. Therefore, these facilities are not expected to adversely impact the Subject Property.

UST Finder: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of UST and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires. A review of the database as provided by EDR identified one (1) listing (New York Power Authority) within 0.125 miles of the Subject Property. Based on a review of the available database information, documented release events status is noted as “no further action”. Therefore, these facilities are not expected to have adversely impacted the Subject Property.

E MANIFEST: Hazardous Waste Electronic Manifest System

EPA established a national system for tracking hazardous waste shipments electronically. This system, known as e-Manifest, will modernize the nation's cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states. A review of the database as provided by EDR identified 49 facilities within 0.25 miles of the subject property. Since none of these facilities currently generate hazardous waste, they are not expected to adversely impact the Subject Property.

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received. A review of the database as provided by EDR identified two (2) facilities (Hamilton Green and WP Cleaners & Gas Station Site) within 0.125 miles of the subject property. Since none of these facilities currently generate hazardous waste, they are not expected to adversely impact the Subject Property.

MANIFEST Sites

MANIFEST Facilities include a list of facilities that have generated hazardous waste or contaminants. A review of the NY, PA, NJ and MI MANIFEST list, as provided by EDR, identified 130 NY MANIFEST, three (3) PA MANIFEST and 41 NJ MANIFEST facilities within approximately 0.25 miles of the Subject Property. All associated releases within 0.125 miles hydraulically upgradient of the Subject Property were evaluated and are not expected to adversely impact the Subject Property.

MGP: Manufactured Gas Plants Listing

From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants. A review of the database as provided by EDR identified one (1) facility (CE-White Plains MGP) within 0.25 miles of the Subject Property. As previously discussed, this facility is not expected to adversely impact the Subject Property.

EDR Manufactured Gas Plant (MGP) Sites

The MGP list provides an inventory of facilities that formerly operated coal gas plants. A review of the EDR MGP database, as provided by EDR, has revealed that there is one (1) MGP facility (White Plains MGP Site) within approximately 0.125 miles of the Subject Property. As previously discussed, this facility is not expected to adversely impact the Subject Property.

EDR Hist Auto Sites

The EDR Hist Auto list provides an inventory of facilities that formerly operated automotive repair or automotive gas stations. A review of the EDR Hist Auto database, as provided by EDR, has revealed that there are three (3) Hist Auto facilities (9th Street H J LLC, Hamilton Texaco Service and Codi Bros Inc) within approximately 0.125 miles of the Subject Site. These facilities are situated either cross gradient or downgradient from the subject with no known releases. Therefore, these facilities are not expected to adversely impact the Subject Property.

EDR Hist Cleaner Sites

The EDR Hist Cleaner list provides an inventory of facilities that formerly/historically operated a dry-cleaning business. A review of the EDR Hist Cleaner database, as provided by EDR, has revealed that there are four (4) Hist Cleaner facilities (Sharp Image Cleaner, Biscardi Frank, Bayliss Morris, and White Plains Mall Cleaners) within approximately 0.125 miles of the Subject Property. These facilities are situated either downgradient or greater than 2,300 feet from the Subject Property and no associated releases were identified. Therefore, these facilities are not expected to have adversely impacted the Subject Property.

EDR City Directory

The EDR City Directory for properties in the area surrounding the Subject Property included mainly commercial listings including offices, stores, service businesses, and residences.

5.1.2. PREVIOUS ENVIRONMENTAL REPORTS

Previous environmental reports provided by the User and reviewed as part of this assessment are summarized in Section 4.3 of this report.

5.1.3. LOCAL, COUNTY, AND STATE INFORMATION REQUESTS

On August 5, 2025, SESI filed information requests with the NYSDEC, Westchester County Departments of Health, Emergency Services and Environmental Facilities, and White Plains Buildings and Clerk for information regarding potential incidents, spills, hazardous material storage/use and UST decommissioning records. The NYSDEC provided spill records and the Westchester DOH has yet to provide a response. Information request responses submitted to the Westchester County Department of Environmental Facilities did not identify responsive records. The City of White Plains provided several historical NYSDEC spill listings that have already been evaluated and determined not to constitute RECs. Westchester County EMS provided the records that are associated with other areas of the former Galleria Mall and JC Penny's; however, they were not associated with the Subject Property.

SESI reserves the right to modify this report should additional information be provided from these requests that warrants a modification.

5.2. PHYSICAL SETTING SOURCES

Sources used to evaluate the physical setting of the property include:

- USGS Topographic Maps;
- Aerial Photographs; and
- Subject Property Reconnaissance.

5.2.1. TOPOGRAPHY

The Subject Property is relatively level with regional topography decreasing to the west. According to the United States Geological Survey (USGS) 2021 Glenville/2019 White Plains, New York 7.5-minute Series topographic map, the Subject Property's topographic elevation is approximately 194 feet above mean sea level (AMSL) for the entire surrounding property; This specific Site is estimated between 200 and 220 feet AMSL with a slope from the east to west based on the contours. The EDR Topographic Map Report is attached to this Report as **Appendix D**.

5.2.2. SURFACE WATERS AND WETLANDS

The closest open surface water to the Subject Property is the Bronx River located approximately 984 feet west of the Subject Property.

5.2.3. GEOLOGY AND GROUNDWATER

As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Subject Property are characterized as UoA (Urban Land outwash substratum) urban land, which is surface covered by pavement, concrete, buildings, and other structures underlain by disturbed and natural soil material, till substratum, 0 to 3 percent slopes. Based on the Remedial Investigation Report (RIR) from an adjacent Brownfield Cleanup Program Site (C360073) to the northeast (221 Main Street), the elevation of groundwater at the Subject Property is approximately 180-200 feet AMSL (20 feet below ground surface), and groundwater flow direction is expected to follow the topography in the western direction.

5.3. HISTORICAL USE INFORMATION FOR THE PROPERTY

Sources used to determine the historical use of the property include:

- Aerial Photographs,
- EDR City Directory Abstract,
- USGS Topographic Maps, and
- Sanborn Fire Insurance Maps

EDR Reports are attached to this Report as **Appendix D.**

5.3.1. AERIAL PHOTOGRAPHS

Following is a summary of the EDR review of 15 aerial photographs dated 1941, 1949, 1953, 1958, 1962, 1964, 1971, 1974, 1985, 1991, 1994, 2006, 2011, 2015, and 2019.

Table 5.2—Aerial Photographic Review

Year	Quality of Photograph	Observations
1941	Fair	**Subject Property:** The Subject Property is developed. There is a north-south-oriented street separating the parcels. **Adjacent Parcels:** The property to the east is developed. Roads form the northern, southern and western boundaries.
1949, 1953, 1958, 1962, 1964	Good-Fair	**Subject Property:** No discernible changes. **Adjacent Parcels:** No discernible changes.

Year	Quality of Photograph	Observations
1971	Good	**Subject Property:** A structure is no longer present at the southwest corner of the property. **Adjacent Parcels:** Structures have been demolished to the west.
1974	Good	**Subject Property:** The western portion contains automotive parking and no structures. **Adjacent Parcels:** Properties to the west and north have been cleared.
1985, 1991, 1994, 2006, 2011, 2015, 2019	Good-Poor	**Subject Property:** A large, interconnected building is present, though the roofs suggest the building is separated at the western property boundary. **Adjacent Parcels:** The properties to the north, south, and west are developed.

No concerns were identified at the Subject Property. No concerns were identified at the properties surrounding the Subject Property.

5.3.2. EDR CITY DIRECTORY ABSTRACT

SESI obtained historical city directory data from EDR for the Subject Property. SESI reviewed the City Directory listings for the years 1982, 1987, 1992, 1995, 2000, 2005, 2010, 2014, 2017 and 2020.

Historic operations at the Subject Property have included the following: residential, Westchester County Courthouse, commercial and various department stores. These specific historic operations identified in the City Directory do not constitute a REC other than in association with their use and storage of heating oil.

5.3.3. HISTORICAL AND CURRENT SUBJECT PROPERTY OPERATIONS

SESI reviewed the City Directory Abstract, provided by EDR, for the Subject Property and conducted a limited municipal tenant search. The City Directory Abstract provides the name and operations of the property. A copy of the City Directory Abstract is included in **Appendix D**.

5.3.4. USGS TOPOGRAPHIC MAPS

Following is a summary of the EDR review of Topographic Map Reports:

Table 5.3—Topographic Map Review

Source	Year	Minute	Scale
Tarrytown, Stamford	1892, 1893, 1899, 1902	15	62500
White Plains	1932	7.5	24000
White Plains	1938	7.5	31680
Glenville, White Plains	1944, 1947, 1957, 1967, 1971,	7.5	24000
White Plains	1979, 1994	7.5	24000
Glenville, White Plains	2013, 2015, 2016, 2018, 2019, 2021	7.5	24000

The topographic maps depict the Subject Property level with an approximate elevation of 194-feet above msl. Regional topography slopes slightly downward to the west. No wetlands were noted on the maps within or adjacent to the Subject Property. A review of these maps suggests the Subject Property was developed prior to 1885.

Based on a review of the EDR Historical Topographic Map Report, the surrounding properties are relatively level with a general slope to the west. No wetlands were observed within the general vicinity of the surround properties on the topographic maps; however, a stream was noted running north-south to the west of the Subject Property circa 1892-1899.

5.3.5. SANBORN FIRE INSURANCE MAPS

The Subject Property was covered on 19 of the Sanborn maps from 1885, 1889, 1894, 1900, 1905, 1911, 1930, 1942, 1950, 1987, 1989, 1990, 1992, 1993, 1994, 1995, 2002, 2003, and 2004 described below:

Table 5.4—Sanborn Map Review

Year	Quality of Map	Observations
1885, 1889	Good	**Subject Property:** The Subject Property is bound by Railroad Avenue to the north, Court Street to the east, Grove Street to the west. Grand Avenue, which runs from north to south bisects the property. Eastern State Journal, Printing, Hardy Painting and Oils, tin shop, and Geo J Franz Bottling Works, a Union Hall, and dwellings are identified to on the western portion of the Subject property. A portion of the Westchester Courthouse is on the eastern portion of the Subject Property.

Year	Quality of Map	Observations
		Adjacent Parcels: Railroad Avenue forms the northern border of the Subject Property and Westchester Courthouse forms the eastern boundary. Grove Street forms the western boundary. A jail is located to the south and district school to the southeast, among other structures. A stream is noted approximately 250 feet to the west and an artesian well is located approximately 150 feet to the south. Dwellings are present to the south of the portion of the property to the west of Grand Street. A Chinese Laundry is located upgradient to the east across Court Street. A boots and shoes repair shop, plumbing office, waterworks, and printing shop are located to the north.
1894	Good	**Subject Property:** A hall of records has been added to the Westchester County Court House. A hotel and tin smith are present to the west of Grand Street. **Adjacent Parcels:** A marble works is present to the south of the western portion of the property.
1900	Good	**Subject Property:** A café, and plumbing and tin shop are noted at the west. **Adjacent Parcels:** A blacksmith and painting shop is located to the west of the subject property.
1905	Good	**Subject Property:** A bowling alley is present on the west. **Adjacent Parcels:** Police Headquarters are located to the west. A bake shop has been added to the jail to the south.
1911	Good	**Subject Property:** The fire department is noted at the west. **Adjacent Parcels:** The Westchester County Court House has expanded to the south. The Chinese laundry is no longer present and has been replaced by a bank.
1930	Good	**Subject Property:** The bowling alley is no longer present, and the building is identified as storage. The bottle works is no longer present and the building is identified as paints and shops. The plumbing shop is no longer present and is identified as shops. A bank is noted to the west of Grand Street. Multiple stores are present to the west of Grand Street. **Adjacent Parcels:** A battery and electric service station is present to the south of the western portion of the subject property. The stream to the west is no longer present. The district school to the southeast is now identified as the Bureau of Motor Vehicles. The Police headquarters is no longer present.
1942	Fair	**Subject Property:** No notable changes. **Adjacent Parcels:** No notable changes.

Year	Quality of Map	Observations
1950	Good	**Subject Property:** Restaurants and stores and a cabinet shop are noted at the west of the subject property. **Adjacent Parcels:** No notable changes.
1987, 1989, 1990, 1992, 1993, 1994, 1995, 2002, 2003, 2004	Good	**Subject Property:** The eastern portion of the Subject Property is noted as the Galleria Mall. **Adjacent Parcels:** Open deck parking is noted to the south and the remainder of the Galleria Mall complex is noted to the south and west.

Based on the review of Sanborn Maps, no potential recognized environmental concerns were identified.

5.4. ENVIRONMENTAL LIEN AND AUL SEARCH REPORT

A lien or activity use limitation search was not conducted as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

5.5. ENVIRONMENTAL PERMITS

Review of the EDR Radius Map Report for the Subject Property indicates no environmental permits attributed to the Subject Property. EDR Reports are provided in **Appendix D**.

6.0 SUBJECT PROPERTY RECONNAISSANCE

6.1. METHODOLOGY AND LIMITING CONDITIONS

An environmental professional from SESI, Sam Bauer, visited the Subject Property on August 14, 2025, to identify potential RECs. The Subject Property was observed to the extent that it was accessible and not obstructed. An inspection photolog is attached to this Report as **Appendix E.**

6.2. SUBJECT PROPERTY OBSERVATIONS

The Subject Property is improved by the northern portion of a former Macy's department store building and a portion of the City of White Plains parking garage .

6.3. CHEMICAL STORAGE AND USAGE

SESI observed multiple chemical usage or storage locations on the Subject Property that contained only typical cleaning supplies. There were also some mechanical closets observed, however, there were no hazardous chemicals observed. There were no associated releases observed during the walkthrough of these areas; therefore, this does not constitute a REC.

6.4. BULK STORAGE TANKS

SESI personnel observed one (1) AST at the northeastern portion of the Subject Property. There was no staining observed, and the concrete below the tank had no visible cracks. This AST is considered **BER 1**.

6.5. SUBJECT PROPERTY WASTE AND WASTEWATER

SESI did not observe waste beyond the typical waste from abandoned display cases, etc. This is not considered a REC.

6.6. STAINED SOIL, STAINED PAVEMENT, OR STRESSED VEGETATION

The concrete was observed to be stained near the waste compactor.. There were no areas of exposed vegetation or soil.

6.7. PITS, PONDS, OR LAGOONS

No pits, ponds or lagoons were identified at the Subject Property.

6.8. WELLS

SESI did not observe any on-site dry wells, irrigation wells, injection wells, observation wells, monitoring wells, potable water wells, recovery wells, or abandoned wells.

6.9. FLOOR DRAINS AND SUMPS

There were several floor drains that lead to a sanitary sewer throughout the Subject Property. There is also no evidence of septic use in the past. The interior floor drains were in the bathrooms primarily. There was no observable staining in and around these drains.

6.10. PCB-CONTAINING MATERIAL, INCLUDING CAULK

There were no observed transformers; however, there were electrical closets that power the greater mall complex. There are likely several areas in which caulking is also present; therefore a survey is recommended to determine if PCB-containing caulking. This is considered **BER 2**.

6.11. ASBESTOS-CONTAINING MATERIAL

ACM surveying was not included in SESI's scope of work; however, based on the age of the facility, an ACM survey is recommended. SESI recommends an ACM survey prior to demolition and redevelopment. This is considered **BER 3**.

6.12. RADON

Radon surveying was not included in SESI's scope of work; however, based on the age of the facility, a radon survey is recommended. The Subject Property is located in Westchester County which is in EPA Radon Zone 3. This zone contains counties with the "lowest potential; average indoor radon levels may be less than 2 pCi/L (picocuries per liter)." Therefore, radon is not considered a REC.

6.13. UNIVERSAL WASTE

There were several pieces of universal waste throughout the Site. Therefore, this universal waste should be properly disposed of prior to demolition or redevelopment. This is considered **BER 4**.

6.14. CONCRETE

The concrete foundation will likely be disturbed as part of the redevelopment of the property, particularly to remove the large 10,000 gallon USTs that were left in place. Some stained concrete was observed near the west compactor in the Macy's.

6.15. LEAD-BASED PAINT

LBP surveying was not included in SESI's scope of work; however, based on the age of the facility LBP survey is recommended. This is considered **BER 5**.

6.16. VAPOR INTRUSION

Based on a review of information related to the Subject Property and the historic operations (notably painting and oil storage), vapor intrusion is anticipated to be a concern on the Subject Property. Therefore, this is considered **BER 6**.

7.0 DATA GAPS

Based on a review of the available documentation, the following data gaps have been identified:

- During the walkthrough, field staff were unable to observe the locked utility rooms and upper-level floors. The Subject Property walkthrough was limited. However, this is not a significant data gap.
- The Westchester County DOH has yet to respond to the records request. SESI has the right to revise this document should additional pertinent information be provided from FOIL requests at a later date.

8.0 FINDINGS

Based on our investigation, we conclude that there is evidence to indicate areas of potential environmental concern on the Subject Property due to the presence of historical USTs and petroleum spills, which were not investigated and/ or remediated. See ***Section 10.0 CONCLUSIONS*** of this Report.

9.0 OPINIONS

In our professional judgment, the scope and character of our environmental assessment were sufficient to justify the stated conclusions, after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the Subject Property as found in historical records, and visual observation of the Subject Property.

10.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the investigation, it is concluded that there is evidence to indicate areas of recognized environmental concern on the Subject Property and that additional investigation of these areas is warranted to determine if remediation is required for the future planned residential use. The conclusions and recommendations in this regard are as follows:

The following RECs have been identified:

- **REC 1 – Subject Property Underground Storage Tanks (USTs):** A total of two (2) underground storage tanks (USTs) were identified in the corresponding EDR Radius search. This tanks were registered with PBS number (3-492205) and the tanks were 2x10,000-gallon USTs closed in place on this Site. A report has been provided that documents closure of the tanks in place. However, no subsurface testing was conducted. Proper closure documentation and current UST status are unknown. Therefore, a geophysical survey is recommended of the entire Subject Property to locate, investigate, and remove any remaining UST, after which a subsurface investigation should be conducted to determine if remediation is required under the tanks.

The following CRECs have been identified:

- **CREC 1 – Subject Property Historic Releases:** A total of two (2) releases (Spill Nos. 8803673 and 8805571) were identified in the EDR LTANKS and NY SPILLS databases and reported to the NYSDEC in 1988. These spills were associated with unknown gallons of No. 2 fuel oil due to tanks tests associated with a 10,000-gallon UST, each of which allegedly impacted “groundwater”. While these spills were administratively closed with the NYSDEC, no closure documentation or testing data was available for review. Therefore, a geophysical survey is recommended of the entire Subject Property to locate, investigate, and remove any remaining USTs, after which a subsurface investigation should be conducted to determine if remediation is required under the tanks.

The following BERs have been identified:

- **BER 1 – Subject Property Aboveground Storage Tank (AST):** SESI personnel observed one (1) AST at the northeastern portion of the Subject Property during the walkthrough. There was no staining observed, and the concrete below the tank had no visible cracks. Therefore, no additional investigation is warranted unless the AST will be removed and this area will be redeveloped.

- **BER 2 – Polychlorinated Biphenyl (PCB) Caulk:** A PCB survey was not completed during SESI's walkthrough of the Subject Property. There are likely several areas present that contain caulking. Therefore, a PCB survey is recommended prior to any demolition or redevelopment of the Subject Property.
- **BER 3 – Asbestos-Containing Material (ACM):** An ACM survey was not completed during SESI's walkthrough of the Subject Property. Based on the age of the building, SESI recommends an ACM survey prior to any demolition or redevelopment of the Subject Property.
- **BER 4 – Universal Waste:** There were several pieces of universal waste identified during the walkthrough of the Subject Property; however, a complete survey of this universal was not completed. SESI recommends a universal waste survey prior to any demolition or redevelopment of the Subject Property.
- **BER 5 – Lead-Based Paint (LBP):** An LBP survey was not completed during SESI's walkthrough of the Subject Property. Based on the age of the building, SESI recommends an LBP survey prior to any demolition or redevelopment of the Subject Property.
- **BER 6 – Vapor Intrusion:** A vapor intrusion evaluation has not been completed as part of this review. The historic operations contained potential petroleum and volatile organic compound (VOC) uses, which may have contributed to soil and groundwater vapor. Therefore, SESI recommends a vapor intrusion evaluation of the Subject Property as part of the redevelopment process.

A figure showing the locations of the RECs identified at this Subject Property is included as **Figure 10.1.**

11.0 DEVIATIONS

This Report was prepared with no significant deviation from ASTM Standard Practice E1527-21.

CONTACT INFORMATION

1. ENVIRONMENTAL CLEANUP LIENS/OTHER LIENS

a. Are there any environmental cleanup liens/and or other liens that are filed or recorded against the subject property in any applicable jurisdiction? Not to my knowledge

2. ACTIVITY OR USE LIMITATIONS AND WETLANDS Not to my knowledge

A) Are you aware of any environmental restrictions/limitations to the use of the subject property? (i.e. Engineering or Institutional Controls)

i) If yes, please explain.

ii) Can you provide any lien or deed restriction paperwork (ie. deed notice or environmental lien)?

B) Is any of the subject property to your knowledge used as a child-care facility or are plans in place to have a child-care facility on-site?

C) Are there any wetlands or marshlands at the site to your knowledge?

3. COMMONLY KNOW OR REASONABLE ASCERTAINABLE INFORMATION ABOUT THE PROPERTY

A) Do you have any knowledge of the past uses of the property? Shopping Mall

i) If so, please explain (dates or tenant contracts should be collected if available for any commercial or industrial uses).
N/A

ii) Has the property ever been used for industrial purposes?
Not in the past 40 +/- years

a. If yes can you provide the NAICS code for the industrial use?
No

B) Do you know of any Environmental Spills Incident Numbers or Notices of Violation? (i.e., tank removals/Unregulated Heating Oil Tank removals)? No

i) If yes, please provide information or available paperwork (ie. former reports or incident numbers)

C) Do you know if the site has been subject to an environmental cleanup or received a Closure Approval (No Further Action) or other Environmental Outcome in the past?
NOT TO MY KNOWLEDGE

D) Do you know of any underground storage tanks (USTs), aboveground storage tanks (ASTs) and/or septic tanks?
I DO NOT KNOW

E) Do any buildings on the site have a basement or crawlspace?
NO

F) Does the site use/have an incinerator, compactor, or dumpster? (This should include any cooking oil containers or other media.)
DUMPSTER

G) How is heating and cooling supplied to the site?

a. If by oil, name of usual supplier:

b. If by gas, name of utility company:
CON ED

c. If by electric, name of utility company:

H) How is water supplied to the site?

a. Local municipal hookup?
   i. If so, name of provider:
   CITY OF WHITE PLAINS

b. Potable Well?
   i. If so, well number/designation and location:

I) Is any portion of the site prone to flooding or has had a significant flood?
NO

4. ADJOINING PROPERTIES

A) Have any of the adjoining properties been used for Industrial purposes currently or in the past? I DO NOT KNOW ABOUT PAST. CURRENTLY, NO.

i) If yes, please provide compass direction and name (if known) of the property.

B) Have any of the adjoining properties been used as a gas station, dry cleaner or auto shop currently or in the past?
I DO NOT KNOW ABOUT PAST. CURRENTLY, NO

i) If yes, please provide compass direction and name (if known) of the property.

C) Have any of the adjoining properties been used for commercial purposes currently or in the past? YES

i) If yes, please provide compass direction and name/ industry (if known) of the property. COMMERCIAL USES. OFFICES, MUNICIPAL BUILDINGS

D) Have any adjoining properties been used as a school currently or in the past?
NOT CURRENTLY. I DO NOT KNOW ABOUT PAST

i) If yes, please provide compass direction and name (if known) of the property.

E) Are any of the adjoining properties currently or in the future (to your knowledge) a child-care facility? I DO NOT KNOW

i) If yes, please provide compass direction and name (if known) of the property.

5. ENVIRONMENTAL SITE CONDITIONS

A) Are there any present environmental conditions at the site that may prove an obvious threat to the environment or human health?
NOT TO MY KNOWLEDGE

B) Do you have any chemical storage areas?
NOT TO MY KNOWLEDGE

C) Do you have any drum storage areas?
NOT TO MY KNOWLEDGE

D) Do you have any USTs or ASTs not related to heating?
I DO NOT KNOW

E) Do you have any of the following at or on the site:

a. On-site dry cleaning or washing machine facilities? NO

b. Landfills or known fill areas?

c. Machinery or equipment that uses hazardous or petroleum compounds?
NOT TO MY KNOWLEDGE

d. Dust collectors? NO

e. Spray booths? NO

f. Floor drains or sumps? POSSIBLY

g. Other machinery or equipment? YES

7. ADDITIONAL PERTINENT INFORMATION

A) Please provide the reason why the Phase I is required (i.e., sale, purchase, transfer, due diligence, cessation of operation, off-site source of groundwater contamination).

B) Please provide the complete and correct address or addresses for the property (any previous surveys maps or any change in tax lot and blocks that are proposed or not yet recorded at the local/county municipality or re- zoning plans):
100 MAIN STREET WHITE PLAINS, NY.

C) Any additional services or out-of-scope services you wish to be provided in addition to the standard set of services (mold assessment/asbestos assessment/geotechnical/ lead-based paint/indoor or sub-slab air sampling):
N/A

D) Please identify all parties to your knowledge who will rely on this ESA? (excluding regulatory agencies)

E) Please provide any former Phase I or Phase II reports, incident reports, state records, reports, current or former permits for the operation of machinery, tank registration documents, AIRS permits, or other environmental permits.

W151210-080525 - Freedom of Information Law Request

Message History (4)

On 9/3/2025 1:53:06 PM, New York DEC FOIL Center wrote:

Subject: Freedom of Information Law Request :: W151210-080525
Body:
RE: PUBLIC RECORDS REQUEST of 8/5/2025, Reference # W151210-080525

Dear Annmarie Yannaco,

In regard to your Freedom of Information Law (FOIL) request of 8/5/2025, be advised that DEC is continuing to process your FOIL request and needs to extend the deadline for DEC's response. DEC receives a high volume of FOIL requests and DEC staff try their best to respond to requests as soon as possible and in the order in which they are received. With respect to your request, DEC needs additional time to process and respond to it because:

Ensuring that DEC has located all responsive records will take additional time.

We estimate that DEC will complete its work respond to your FOIL request by **10/3/2025.** We will notify you in writing when/if the responsive materials are available for release or if more time is required to complete your request.

If you have any questions in the interim, please refer to FOIL request #W151210-080525, and simply reply to this email. Thank you.

Sincerely,

Region 3 FOIL Coordinator

On 9/2/2025 10:02:54 AM, New York DEC FOIL Center wrote:

Subject: Freedom of Information Law Request :: W151210-080525
Body:
RE: PUBLIC RECORDS REQUEST of 8/5/2025, Reference # W151210-080525

Date: 09/02/2025

Dear Annmarie Yannaco,

In regard to your Freedom of Information Law (FOIL) request seeking:

> *Site Address: 100 Main Street*
> *Site Parcels: 551700 125.75-4-3 and 551700 125.75-4-4*
> *As part of a Phase I Environmental assessment, SESI requests the following: Documentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency responses, fires, and environmental reports associated with soil/groundwater investigative sampling.*

In order for DEC to accurately search for the records you seek, we need you to give us more specific information describing the records. Please provide as much of the following information as you can:

- **The name of the facility**
- **An accurate street address for the property or facility (Town/ Municipality)**

If we do not receive your reply within one week of the date of this message, your request will be denied. Without specific information or clarification, the records are not "reasonably described" within the meaning of Public Officers Law §89(3)(a), and we will close this request in our system.

If you have any questions, please refer to FOIL request #W151210-080525, and simply reply to this email. Thank you.

Sincerely,

Region 3 FOIL Coordinator

On 8/5/2025 3:12:55 PM, New York DEC FOIL Center wrote:

Dear Annmarie:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 8/5/2025 and given the reference number FOIL #W151210-080525 for tracking purposes. You may expect the Department's response to your request no later than **9/3/2025**.

Record Requested: **Site Address: 100 Main Street**
Site Parcels: 551700 125.75-4-3 and 551700 125.75-4-4
As part of a Phase I Environmental assessment, SESI requests the following: Documentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency responses, fires, and environmental reports associated with soil/groundwater investigative sampling.

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Address: 100 Martine Avenue
White Plains, NY, 10601

Site Description

Site Location:

This 1.164-acre Site is located at 50 Court Street, White Plains, New York 10601. The Site is located on new tax lot 125.75-4-4.2. The Site is in a B-6 (Enclosed Mall) zone within walking distance of the Metro North - White Plains train station. To the north of the Site is the balance of the subdivided former Macy's property designated Unit 1 on the condominium approval maps. To the east of the Site are retail stores. The Westchester County office building is to the south of the Site and to the west of the Site is the balance of the vacant Galleria Mall.

Site Features:

The Site is improved with the former Macy's portion of the Galleria Mall which has been

vacant since on or about March 2023. On occasion the vacant mall is used by Homeland Security and local police departments for training exercises. The Site is located approximately 0.35 miles from the Bronx River. The Site is not located in a flood zone or otherwise environmentally sensitive area.

Current Zoning and Land Use:

The Site is currently located in a B-6 (Enclosed Mall) zone but is part of an effort to rezone the Galleria Mall area to allow for dense residential and commercial use; inclusive of the current proposed condominium development at 50 Court Street. The zoning change would be consistent with the desired City of White Plains plan for dense residential development near the White Plains train station which is approximately 0.23 miles from the Site and within easy walking distance. Proximate properties already include commercial, business, retail and dense residential uses.

Past Use of the Site:

The past uses of the Site are somewhat vague; however, based on Sanborn Fire Insurance Maps the Site it is evident the Site was developed prior to 1885; and essentially contained residences, the Westchester County Courthouse (circa 1885-1950), followed by the Galleria Mall (circa 1980-present). Associated with the courthouse use was a jail, bake shop and boiler rooms; and presumably heating oil for the facilities as the residences. Adjacent property uses included a fire station, upholstery and battery services; and retail stores.

A total of two (2) releases (Spill Nos. 8803673 and 8805571) were identified in the EDR L TANKS and NY SPILLS databases and reported to the NYSDEC in 1988. These spills were associated with unknown gallons of No. 2 fuel oil due to tanks tests associated with a 10,000-gallon UST. These spills are administratively closed with the NYSDEC. However, no closure documentation or testing data was available for review.

Site Geology and Hydrogeology:

As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Site Property are characterized as UoA (Urban Land outwash substratum) urban land which is surface covered by pavement, concrete, buildings, and other structures underlain by disturbed and natural soil material, till substratum, 0 to 3 percent slopes. Based on the Remedial Investigation Report (RIR) from an adjacent Brownfield Cleanup Program Site (C360073) to the northeast (221 Main Street), the elevation of groundwater at the Site is approximately 180-200 feet AMSL, and groundwater flow direction is expected to follow the topography in the western direction.

Contaminants of Concern (Including Materials Disposed)

No materials information available.

Site Environmental Assessment

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Site Health Assessment

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DECinfo Locator

Your Source for Documents and Information

NEW YORK STATE | Department of Environmental Conservation

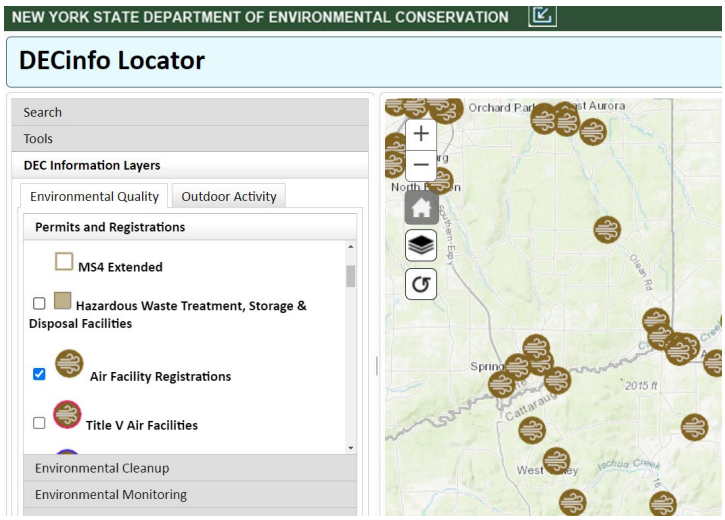

DECinfo Locator is an interactive map that lets you access DEC documents and public data about the environmental quality of specific sites in New York State, as well as outdoor recreation information.

Many Layers Available

With more than 90 interactive data layers, DECinfo Locator lets users select what types of information they would like to see for a given location.

Multiple information layers can be activated at the same time, allowing users to see the many ways DEC is working to protect and enhance the state's environment and recreational opportunities.

We have a short feedback survey (https://www.surveymonkey.com/r/DECinfo) for your comments and encourage you to suggest new data layers you would like to see added.

DECinfo Locator Layer Categories

Spill Incidents Database Search
https://appfactory.dec.ny.gov/DERExternalSearch/SpillsSearch
(Includes spill data from Jan 1, 1978, through May 6, 2025)

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills).

Each spill record includes:

- Administrative information (DECD E C region and unique seven-digit spill number).
- Spill date/time.
- Location.
- Spill description, including spill source and cause, material(s) spilled, and resources affected.
- Region close date (cleanup activity finished and all paperwork completed).

Environmental Site Remediation Database Search
https://appfactory.dec.ny.gov/DERExternalSearch/ERDSearch
(Jan 1, 1978, through present, updated nightly)

This database contains records of the sites which have been remediated or are being managed under one of DER's remedial programs (i.e., State Superfund, Brownfield Cleanup, etc.). All sites listed on the "Registry of Inactive Hazardous Waste Disposal Sites in New York State" are included in this database. The Database also includes the "Registry of Institutional and Engineering Controls in New York State"

Each site record includes:

- Administrative information, including site name, classification, and unique site code.
- Location.
- Site owner(s).
- Institutional and Engineering Controls.
- Description of each site.
- Wastes known or thought to be disposed at the site.
- Assessment of environmental and health problems.

Bulk Storage Database Search
https://appfactory.dec.ny.gov/DERExternalSearch/BulkStorageSearch
(Updated Nightly)

There are two ways to search the database: By Bulk Storage Program Site Number or by other search criteria. Entering a site number will provide the record for one facility. Entering other search criteria will provide a list of BSP Facilities that meet the criteria, with partial information about each and links to additional information for each facility.

Each site record includes:

- Location.
- Facility information, including site number, site type, site name, county, city, and site address.
- Owner and Mail contact information where allowable by FOIL.
- Tank Information, including tank number, tank location, tank status, tank capacity, material and equipment details where allowable by FOIL.

Brownfield Cleanup Program, Certificates of Completion

Energy & Environment

This dataset shows Brownfield Cleanup Program (BCP) Sites that have been completed and issued a Certificate of Completion (COC) in the State of New York. Included in the data is the program site identification number; site name; site locality; site acreage; year certificate issued; length of time from the date the New York State Department of Environmental Conservation (NYSDEC) approved the BCP application to the date the COC was issued; and, highest allowable future use for the site and its potential redevelopment (as determined by: remedial program soil cleanup objectives; see 6NYCRR Part 375-6: http://www.dec.ny.gov/regs/15507.html.)

Brownfield Redevelopment Credit: Beginning Calendar Year 2005

Government & Finance

The Department of Taxation and Finance annually produces a mandated report of taxpayers claiming Brownfield Credits to help analyze the effects of the program. Chapter 390 of the Laws of 2008 created Section 171-r of the Tax Law that requires the Tax Department to produce a Brownfield Credit Report by January 31st of each year. Additionally, Part BB of Chapter 56 of the Laws of 2015 amends Section 171-r to require the Tax Department to produce a supplemental Brownfield Credit Report by January 31, 2016 containing the credits claimed for the years 2005, 2006, and 2007. The mandates require the Department to include the name of each taxpayer claiming the brownfield redevelopment tax credit, the remediated brownfield credit for real property taxes, or the environmental remediation credit, the amount of credit earned, and information identifying the brownfield project generating the credit. The Tax Department is also authorized to include any other information that it deems useful in analyzing the effects of the program.

Final Disadvantaged Communities (DAC) 2023

Energy & Environment

The Climate Leadership and Community Protection Act (CLCPA) directs the Climate Justice Working Group (CJWG) to establish criteria for defining disadvantaged communities. This dataset identifies areas throughout the State that meet the final disadvantaged community definition as voted on by the Climate Justice Working Group. The New York State Energy Research and Development Authority (NYSERDA) offers objective information and analysis, innovative programs, technical expertise, and support to help New Yorkers increase energy efficiency, save money, use renewable energy, accelerate economic growth, and reduce reliance on fossil fuels. To learn more about NYSERDA's programs, visit nyserda.ny.gov or follow us on X, Facebook, YouTube, or Instagram. Last updated July 1, 2024.

RE: Request Pursuant to Freedom of Information Law

Dear Annmarie, ,

The City of White Plains, City Clerk's Office is in receipt of your request, addressed to the City Clerk,

dated August 5, 2025 and received on same, requesting the following records:

Environmental assessment information - 100 Main St., White Plains

I have conducted a search for the requested records and certify that the City Clerk's Office does not possess the requested records.

Please also be advised that the City Clerk's Office does not respond to requests for access to records of other City departments. Any requests to those departments would need to be addressed to them directly.

Sincerely,

Jill Iannetta

FREEDOM OF INFORMATION LAW (FOIL) REQUEST FORM

Date:

8/5/2025

This request pertains to records maintained by the (list city department on board):

Building Department

Records Access Officer for above-named city department or board:

Commissioner of Buildings

A link to the list of Records Access Officers may be found on the FOIL page of the city website.

Pursuant to New York Freedom of Information Law, I am requesting an opportunity to:

- ☐ Inspect copies of the following records
- ☑ Obtain copies of the following public records

Documents requested:

Site Address: 100 Main Street
Site Parcels: 551700 125.75-4-3 and 551700 125.75-4-4
As part of a Phase I Environmental assessment, SESI requests the following: previous assessment records/assessment cards, building department permits, tax and zoning maps, and

Be specific. Describe the record with sufficient detail for the public agency to respond.

Requestor's Name:

Annmarie Yannaco

Representing:

SESI Consulting Engineers

Street Address:

959 Route 46E, Floor 3, Suite 300

City, State & Zip Code:

Parsippany, NJ 07054

Phone Number:

973 808 9050

E-mail:

annmarie.yannaco@sesi.org

Requestor's Signature:

Annmarie Yannac

AGENCY USE ONLY:

Fees (if applicable):

Please note: There is a photocopying fee of .25 per standard size page, and a $5.00 per page fee for large format plans or maps. Postage fees in the exact amount as levied by the United States Post Office, if mailed.

Date Received:

- [ ] Request Approved
- [ ] Request Denied

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 7 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 04/30/2025 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Site Code: 374633

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 04/29/2025 has revealed that there are 159 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 68 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there is 1 NY VCP site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 04/29/2025 has revealed that there are 51 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 104 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FUSRAP: DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations.

A review of the FUSRAP list, as provided by EDR, and dated 03/03/2023 has revealed that there is 1 FUSRAP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
NUCLEAR DEVELOPMENT	5 NEW STREET	WNW 1/8 - 1/4 (0.197 mi.)	AC341	1056
Site Status: Eliminated from consideration under FUSRAP

EXECUTIVE SUMMARY

FUELS PROGRAM: This listing includes facilities that are registered under the Part 80 (Code of Federal Regulations) EPA Fuels Programs. All companies now are required to submit new and updated registrations.

A review of the FUELS PROGRAM list, as provided by EDR, and dated 05/07/2025 has revealed that there is 1 FUELS PROGRAM site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 24 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 02/17/2025 has revealed that there are 45 E MANIFEST sites within approximately 0.25 miles of the target property.

NY PFAS: DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

A review of the NY PFAS list, as provided by EDR, has revealed that there are 2 NY PFAS sites within approximately 0.25 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 02/28/2025 has revealed that there is 1 NY MGP site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

WHITE PLAINS MGP SIT	9 NEW STREET AND 12	WNW 1/8 - 1/4 (0.194 mi.)	AC331	1013

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	6/14/06 Pro Test on site to test the 1500 gallon tank as ordered by the DEC. Tester couldn't get vacuum on the tank. Andre from ProTest said the cement on top of the tank needs to be removed to expose all of the bungs and piping. Once that is performed, then the tank can be isolated and tested. Visual observation revealed that the steel on the top of the tank was very heavily corroded. TG 06/29/06 AM - ProTest back on site retesting the lines and the tank. Andre reported that the vent line and the remote fill line both failed the test. The tank failed to hold a vacuum therefore, it also failed. Andre recommending unearthing the manway and checking that for a definitive answer on the tank failure. However this can't be accomplished until a refrigeration compressor is moved which will require a refrigeration mechanic. TG 06/29/06 John Leddy from ProTest officially reported that the tank failed and that the tank has lost two inches of oil since the 14th and the tank is not being used. Recommending emptying the tank to their client. TG 07/05/06 Joe Ostrosky from Petroleum Tank Cleaners (PTC) reported that PTC was hired to remove the oil from the tank. The tank has been emptied, cut open and cleaned. TG 11/15/06 New England Tank Services has completed the removal of the tank, allowing for an inspection. Substantial corrosion and numerous holes were observed. A letter was sent to the management company requiring the installation of two monitoring wells. 03/12/07 Monitoring well installation report submitted by JM Associates who were subcontracted by Fleet Environmental. No free product was detected in the wells. TG 07/30/07 New England Tank Services reported that they removed the tank along with 2.64 tons of petroleum contaminated soil. TG

DEC Memo:	3-12-16 Spoke with Paul. He says that he witnessed a deliberate dumping down the storm sewer of several oversize buckets. These buckets contained what appeared to be some sort of grease. Location is behind the Galleria Mall on William Street which is off of Main St. This is a municipal lot. He sent 2 pictures which will be decdoc'd. jm 3/22/16: Photos taken by the Caller were sent to DEC and entered into DecDocs. jod 4/11/16: Forwarded to County Health department. No other action taken. jod

DEC Memo:	9/18/2023 NYPA is in process of cutting power to the building. During work they utilized a diesel generator. Workers overfilled the generator on Saturday, spilling 20 gallons to floor (work is happening on 17th floor of the building). Absorbent, pads, and boom were used to contain spill. Spent materials are drummed up and waiting a bill of ladding for off-site disposal. Nothing escaped to environment. -ARM 9/18/2023 Update: Cleanup is complete and no oil discharge to the environmental. NFA. -ARM
Remarks:	appx 20 gals released to an interior room with no drain. solono ed valve stuck clean up finished 55 gal drum with sand and product.

Environmental Interest/Information System:

ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

NEW YORK POWER AUTHORITY-WHITE PLAINS OFFICE (Continued) **1004758118**

types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Registry ID: 110022533775

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	05/17/06 Met with Con ED rep Tim Riley who explained that the impacted manhole conatined about and inch of fuel oil floating on several hundred gallons of water. A sample was taken and results rec'd later indicate that material was similar to a light fuel oil. A curbside fill line for 189 Main Street is one possible source. Requested that when the manhole is safe for entry that Con Ed personnel attempt to determine where the furl is entering the structure. TG 07/21/06 JM Associates coordinated the testing of the remote fill and vent lines servicing 189 Main Street and both of those lines failed. The remote fill was excavated and petroleum impacted soil was present beneath the line. Local WP building Dept work permit prohibited complete removal of the line, so remediation will continue when the building is demolished. TG 06/10/08 Closure report submitted by

MANHOLE # 10236 (Continued) **S107416552**

JM Associates. 13.32 tons of PCS removed. No post excavation sample results were taken. TG

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	9-3-13: J.O'Dee call to V.Mc./Dspt.: John in contact with BILL MCMAHON/DPW. DPW responding and may be hairing Tri.St. J.O'Dee handling. 9/04/13: Bill McMahon from DPW called me directly when the spill occured yesterday. At first he stated fluid had entered a catch basin and they were calling Tri-State. He also stated that there was a multi-vehicle traffic accident as a result of this spill, a car reportedly slid through a traffic light. Bill called back later and stated that no material had entered the catch basin and DPW was completing the clean up themselves. I called back this morning and left a message asking him for an update. jod

DPW VEHICLE (Continued) **S113915643**

10/07/13: Tri-State was contacted but never hired to perform any work. White Plains DPW reports the clean up was completed and no drains were impacted. No disposal documentation was provided. jod

Remarks: spill to roadway and catch basin/clean up underway

Environmental Interest/Information System:
The Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Update By:	LSZINOMA
Site Description:	Site Location: This 1.164-acre Site is located at 50 Court Street, White Plains, New York 10601. The Site is located on new tax lot 125.75-4-4.2. The Site is in a B-6 (Enclosed Mall) zone within walking distance of the Metro North - White Plains train station. To the north of the Site is the balance of the subdivided former Macy's property designated Unit 1 on the condominium approval maps. To the east of the Site are retail stores. The Westchester County office building is to the south of the Site and to the west of the Site is the balance of the vacant Galleria Mall. Site Features: The Site is improved with the former Macy's portion of the Galleria Mall which has been vacant since on or about March 2023. On occasion the vacant mall is used by Homeland Security and local police departments for training exercises. The Site is located approximately 0.35 miles from the Bronx River. The Site is not located in a flood zone or otherwise environmentally sensitive area. Current Zoning and Land Use: The Site is currently located in a B-6 (Enclosed Mall) zone but is part of an effort to rezone the Galleria Mall area to allow for dense residential and commercial use; inclusive of the current proposed condominium development at 50 Court Street. The zoning change would be consistent with the desired City of White Plains plan for dense residential development near the White Plains train station which is approximately 0.23 miles from the Site and within easy walking distance. Proximate properties already include commercial, business, retail and dense residential uses. Past Use of the Site: The past uses of the Site are somewhat vague; however, based on Sanborn Fire Insurance Maps the Site it is evident the Site was developed prior to 1885; and essentially contained residences, the Westchester County Courthouse (circa 1885-1950), followed by the Galleria Mall (circa 1980-present). Associated with the courthouse use was a jail, bake shop and boiler rooms; and presumably heating oil for the facilities as the residences. Adjacent property uses included a fire station, upholstery and battery services; and retail stores. A total of two (2) releases (Spill Nos. 8803673 and 8805571) were identified in the EDR L TANKS and NY SPILLS databases and reported to the NYSDEC in 1988. These spills were associated with unknown gallons of No. 2 fuel oil due to tanks tests associated with a 10,000-gallon UST. These spills are administratively closed with the NYSDEC. However, no closure documentation or testing data was available for review. Site Geology and Hydrogeology: As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Site Property are characterized as UoA (Urban Land outwash substratum) urban land which is surface covered by pavement, concrete, buildings, and other structures underlain by disturbed and natural soil material, till substratum, 0 to 3 percent slopes. Based on the Remedial Investigation Report (RIR) from an adjacent Brownfield Cleanup Program Site (C360073) to the northeast (221 Main Street), the elevation of groundwater at the Site is approximately 180-200 feet AMSL, and groundwater flow direction is expected to follow the topography in the western direction.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Spiller Company:	ROY PROPERTIES LLC
Spiller Address:	14 MAMARONECK AVE
Spiller Company:	999
Contact Name:	HIME RRACI
Latitude:	Not reported
Longitude:	Not reported
DEC Memo:	3/8/2021 Called back and spoke with Hime who told me that the return line from the boiler to the tank failed a tank test. The tank is a 3,000 gallon UST, however the lines run mostly above ground. There is a small drip in the return line above ground in the maintenance room, it is currently being caught by a funnel and a bucket beneath. Property is on municipal water and sewer. TJP 3/08/21: From Chris Lalak of WCDOH PBS: PBS site 3-801152 14 Mamaroneck Ave, White Plains 3k UST from 1960 Facility is in the midst of a gas conversion. Gas line is not yet active, but expected shortly. New ownership of the building. Oil lines are running into a cast iron secondary containment pipe and oil slowly dripping back into the boiler room, and being collected. Facility told to immediately set up a temp. tank or switch to a temporary line and tested the rest of the system. The location is reportedly on a busy city sidewalk and any option will be challenging. Mr. Rraci was calling the city of WP building inspector, to work on the temp tank/Temp line and the gas line completion. Owner Rraci Realty, Hime Rraci jod 3-31-21 Discussions w/WCHD (Chris and Natasha) concerning situation. They report location is an busy intersection and busy sidewalk. Chris reports that return line has been disconnected and system converted to a one line system. Site continues to operate pending conversion. Based on conversation that this is violation of regs, Chris is going to inspect location with owner to see if there is a potential solution. jc 06-08-21 Update from WCHD: I met with the owner on site. Very challenging location for a temp tank (Busy city sidewalk in Downtown, White Plains). The facility agreed to pump out the tank I am awaiting confirmation BTR 12-7-21 The copper piping is snaked through an old steel pipe that s cutoff above the tank. Oil spilled out of the pipe and contaminated the soil around the tank. ABC Tank hand excavated 5 drums of soil and had clean endpoints at the building. Soil Borings did not encounter contamination and ranged 10 to 15 below sidewalk. Weathered bedrock at 15 feet bgs on the street side of the tank. The building will acquire basement ASTs in the interim, and a plan will be developed to address the contamination around the tank. BTR 1/11/22 Email from Chris/WC saying that owner appears for hearing today w/no contractor. Owner is waiting for direction from the State on how to proceed.

CELESTILA GROUP (Continued) **S106385494**

Hearing postponed. Chris also emailed Harry, who said report should be submitted by end of this
week. jc 3/21/22 Jan 18 report from ECMS. Discusses contamination found during Dec investigation,
temp system install and intent to close 3k UST. jc 10/21/22 Visited site. Tank cut at half-way
point and top and bottom of tank removed. Sides left intact to support soil from blowing in.
Contamination found beneath tank. Removed impacted soil up to elevation of base of footing. Does
not want to excavate deeper as it may compromise structural integrity of building. Gas and power
lines had to be cut off by Con-Ed the day prior in order to access tank. Impacted soil moved to one
side of trench. Awaiting k-crete to backfill excavation and then move impacted soil back to remove
other side. Photos uploaded to D2. BAG 12/30/22 Harry Sudwischer from Environmental Consulting and
Management Services (ECMS) submitted a UST Closure Report and Spill closure Request. Full Tank
removal was constrained by nearby gas and electric lines, so some contaminated soil was left in
place. See report in DecDocs. NFA. TG

Remarks: Tank test failure-leak in return line to boiler.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

CVS #04745 (Continued) **1014958239**

Waste Code: D007
Waste Description: Chromium

Waste Code: D009
Waste Description: Mercury

Waste Code: D010
Waste Description: Selenium

Waste Code: D011
Waste Description: Silver

Waste Code: D024
Waste Description: M-Cresol

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P042
Waste Description: 1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or) Epinephrine

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: P081
Waste Description: 1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)

Waste Code: P188
Waste Description: Benzoic Acid, 2-Hydroxy-, Compd. With (3as-Cis)-1,2,3,3a,8,8a-Hexahydro-1,3a,8-Trimethylpyrrolo[2,3-B]Indol-5-Yl Methylcarbamate Ester (1:1) (Or) Physostigmine Salicylate

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Program:	BCP
Site Code:	58997
Acres:	2.600
HW Code:	C360073
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	07/26/2004
Record Updated Date:	12/20/2007
Update By:	MJRYAN
Site Description:	Location Description: The site is located in an urban portion of Westchester County, occupying several city tax parcels, including 221 Main Street, in the City of White Plains. Current Use: The site is currently being redeveloped. The newly constructed complex will contain approximately 125 hotel rooms, 400 condominiums and approximately 10,000 square feet of street levels stores. Surrounding Uses: The site is surrounded by commercial properties with a mix of retail and office space. Historical Source(s)of contamination: The historical source of contamination at this site included multiple leaking underground storage tanks (USTs). Investigations revealed the presence of ten USTs. Investigations/Actions Performed to date: Previous environmental investigations include a Phase I Investigation in 2002 and a Petroleum Contamination Site Investigation completed in June of 1993. Under the Brownfield Cleanup Program, a Remedial Investigation was conducted in 2005-2006. Based on RI findings, an Interim Remedial Measure (IRM) was planned and implemented which included the removal of all USTs, and contaminated soil. Current Action: A Final Engineering Report which documents the remedial activities completed has been approved. On December 19, 2006 a Certificate of Completion was issued declaring remedial activities complete, and that a Track 1 cleanup (i.e., unrestricted use) has been achieved.
Env Problem:	Contaminant of concern: Petroleum-related compounds including volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons. Impacted Media: Soil and groundwater. Known SCGs exceedences: Investigation revealed benzene, toluene, ethyl-benzene and xylenes, however, as part of a site-wide remedial program (2005-2006) all contaminated media has been removed and properly disposed.
Health Problem:	The site is located in downtown White Plains, public water serves the area. Through the implementation of an IRM the site has been remediated and nearly all the soil has been removed to bedrock eliminating potential exposure to contaminated soil. Proposed redevelopment of the site will include a ventilated below-grade parking garage with foundation drainage which will effectively eliminate the potential for soil vapor intrusion to occur.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	PBS #3-074632 - WCHD & WP Building Dept. on scene. 5000. gal. vaulted AST. Filled on 12/29/07 3200 gal. left in tank. Uses 175 gal/day x 6 days=1050 gal. Loss of potentially 1800 -100= 800 gal. Elite on site with vac truck and smaller pump. Tank in very poor condition. Todd Ghiosay contaced and will follow up.
Remarks:	Caller says the tank failed releasing the material into the basement of the building. Caller is unsure if the cause was corrosion of the tank or physical damage. Elite Environmental will be doing the clean up and the Westchester Dept. of Health is on scene.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was GHIOSAY 07/08/97 SPOKE WITH JIM DERIVAN; 5K VAULTED TANK IN BASEMENT; TANK APPEARS TO BE OK BUT PIPING

UNOCCUPIED COMMERCIAL (Continued) **S102664436**

FROM REMOTE FILL APPEARS TO
BE LEAKING; CALLER WILL EXCAVATE ONCE ALL LOCAL PERMITS ARE OBTAINED; HE WILL SUBMIT REPORT TO
TARRYTOWN OFFICE; March 2004 Tank is in a vault surrounded with sand, so it needs to be tested.
WCHD (Vinny) has told the owner to remove the tank or test it. He thinks the tank is going to be
removed. 9/21/04: Letter to Westchester Arts Council dated 8Sep2004. Spill closed by Danielle
Jackson, WCDOH. NFA required at this time.

Remarks: A FUEL OIL LEAK WAS NOTED COMING THROUGH THE BASEMENT WALL OF THE ABOVE BUILDING - AN INVESTIGATION HAS FOUND THAT THE FILL PIPE WAS LEAKING AND FURTHER CONTAMINATION IS TILL BEING INVESTIGATED

DEC Memo:	12/19/20 spoke with Northeast Env and the spill is between 20-50 gallons. The Office building has a 10k #2 fuel oil AST with a remote fill on sidewalk. They received a

(Continued) **S125703987**

fuel delivery this morning and
the super noticed fuel coming from fill wall. Northeast has verbal ok for cleanup (signed contract
to follow) and is responding to complete remedial efforts. Northeast is going to be deploying
absorbent to cleanup oil on concrete and will be investigating where the break in the line is and
if there are any environmental impacts. PBS number unknown at this time but will be added to noted
when obtained. BW 12/31/20 Confirmed with Northeast that they completed the cleanup of the spill.
Another unknown contractor replaced the damaged fill line. NFA. TG 6-11-21 Added PBS to Regional
Use. jc

Remarks: indoor on concrete. remote fill line cracked above ground 10,000 gal UST tank. cleanup pending en route.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Control Type:	ENG
Date Record Added:	07/31/2024
Date Rec Updated:	12/31/2024
Updated By:	GLKOWALS
Site Description:	Site Location: The 1.94-acre site is located at 200 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..2. The site is a vacant parcel, formerly the location of the White Plains Mall, located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. A Brownfield Cleanup Program site (site no. C360221) abuts the east boundary of the site and has a multi-story mixed use building under construction. Hamilton Avenue and a New York Power Authority Building are located south of the site. Dr. Martin Luther King Jr. Boulevard and commercial properties, including a restaurant, are located west of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: The site is being developed for construction of a multi-story mixed commercial and residential use building. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1), which allows for residential use above the first floor of a building and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with several small buildings, including dwellings and garages, prior to 1894. Between 1892 and 1902, a tributary to the Bronx River was visible on maps of the site, suggesting the area may have been elevated from its original topographic level. By 1930 multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930 s through the 1970 s. By 1987, all on-site buildings were demolished and replaced by the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Site soils consist of urban fill to depths of 12 feet below ground surface. Beneath the fill lies of layer of clay and silt between 7 and 13 feet below ground surface. A sand layer exists between approximately 13 and 25 feet below ground surface and bedrock was encountered at depths ranging from 19 to 42 feet below ground surface. Groundwater is present at approximately 9 to 24 feet below ground surface and flows to the southwest.

HAMILTON GREEN (Continued) **S120958439**

Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, and per- and polyfluoroalkyl substances (PFAS) in site soils and groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Residual contamination in groundwater is being managed under a Site Management Plan.
Health Problem:	Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination.

Between 1892 and 1902, a tributary to the Bronx River was visible on maps of the site, suggesting the area may have been elevated from its original topographic level. By 1930 multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930 s through the 1970 s. By 1987, all on-site buildings were demolished and replaced by the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Site soils consist of urban fill to depths of 12 feet below ground surface. Beneath the fill lies of layer of clay and silt between 7 and 13 feet below ground surface. A sand layer exists between approximately 13 and 25 feet below ground surface and bedrock was encountered at depths ranging from 19 to 42 feet below ground surface. Groundwater is present at approximately 9 to 24 feet below ground surface and flows to the southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, and per- and polyfluoroalkyl substances (PFAS) in site soils and groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Residual contamination in groundwater is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination.

Site Description: Site Location: The 1.94-acre site is located at 200 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..2. The site is a vacant parcel, formerly the location of the White Plains Mall, located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. A Brownfield Cleanup Program site (site no. C360221) abuts the east boundary of the site and has a multi-story mixed use building under construction. Hamilton Avenue and a New York Power Authority Building are located south of the

HAMILTON GREEN (Continued) **S120958439**

site. Dr. Martin Luther King Jr. Boulevard and commercial properties, including a restaurant, are located west of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: The site is being developed for construction of a multi-story mixed commercial and residential use building. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1), which allows for residential use above the first floor of a building and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with several small buildings, including dwellings and garages, prior to 1894. Between 1892 and 1902, a tributary to the Bronx River was visible on maps of the site, suggesting the area may have been elevated from its original topographic level. By 1930 multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930 s through the 1970 s. By 1987, all on-site buildings were demolished and replaced by the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Site soils consist of urban fill to depths of 12 feet below ground surface. Beneath the fill lies of layer of clay and silt between 7 and 13 feet below ground surface. Site Code: 570663
Site Description: Site Location: The 1.94-acre site is located at 200 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..2. The site is a vacant parcel, formerly the location of the White Plains Mall, located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. A Brownfield Cleanup Program site (site no. C360221) abuts the east boundary of the site and has a multi-story mixed use building under construction. Hamilton Avenue and a New York Power Authority Building are located south of the site. Dr. Martin Luther King Jr. Boulevard and commercial properties, including a restaurant, are located west of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: The site is being developed for construction of a multi-story mixed commercial and residential use building. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1), which allows for residential use above the first floor of a building and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with several small buildings, including dwellings and garages, prior to 1894. Between 1892 and 1902, a tributary to the Bronx River was visible on maps of the site, suggesting the area may have been elevated from its original topographic level. By 1930 multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the

HAMILTON GREEN (Continued) **S120958439**

south-eastern portion of the site, are estimated to have been on-site from the 1930 s through the 1970 s. By 1987, all on-site buildings were demolished and replaced by the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Site soils consist of urban fill to depths of 12 feet below ground surface. Beneath the fill lies of layer of clay and silt between 7 and 13 feet below ground surface. A sand layer exists between approximately 13 and 25 feet below ground surface and bedrock was encountered at depths ranging from 19 to 42 feet below ground surface. Groundwater is present at approximately 9 to 24 feet below ground surface and flows to the southwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, and per- and polyfluoroalkyl substances (PFAS) in site soils and groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Residual contamination in groundwater is being managed under a Site Management Plan.

Health Problem: Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination.

DEC Memo:	9/28/17 AKRF was performing Phase II, noticed some sites where soil seemed odiferous and possibly contaminated. Took soil and gw samples, soil samples came back below CP-51. GW samples came back high in MTBE, benzene, and toluene in 3 areas. Site used to be old shopping mall. AKRF states that there was a gas station at site in 1970's, and there is currently a gas station across the road from the site. Will send in copy of soil and gw analysis. ga 10/05/17 Becky called and said the report will be completed soon and she expects to submit it in a week or two. TG 12/21/17 AKRF submitted a Phase II Investigation Report (See report in DecDocs.) TG 05/03/22 Greta White emailed the following, Good afternoon, Todd, This spill is to be administratively closed as it will be rolled into the BCP under site C360221 WP Mall Cleaners & Gas Station. The BCP Agreement was executed on April 22. I have added a cross reference in the spill file to this BCP site, as well as the adjoining site, C360177 Hamilton Green. At one time the Hamilton Green site (C360177) included the land that is now part of both the C360177 and C360221 sites (until the owner terminated the BCA, split the site and sold half). The owners of the Hamilton Green site (they submitted a new BCP application at the end of last year) and the WP Mall site both agree that the spill number can be assigned to the WP Mall side of the site C360221. Both sites intend on

HAMILTON GREEN (Continued) **S120958439**

excavating all material
above USCOs and applying a product like OCR to the excavation for groundwater remediation, and
testing for future soil vapor intrusion. Please let me know if you require any further information
from me in order to close this spill. Thank you, Greta Greta White, P.G. Assistant Geologist,
Division of Environmental Remediation New York State Department of Environmental Conservation 625

Site Description: Site Location: The 1.94-acre site is located at 200 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..2. The site is a vacant parcel, formerly the location of the White Plains Mall, located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. A Brownfield Cleanup Program site (site no. C360221) abuts the east boundary of the site and has a multi-story mixed use building under construction. Hamilton Avenue and a New York Power Authority Building are located south of the site. Dr. Martin Luther King Jr. Boulevard and commercial properties, including a restaurant, are located west of the site. The site is located approximately 0.35 miles from the Bronx River. It is not

HAMILTON GREEN (Continued) **S120958439**

located in a flood zone. Site Features: The site is being developed for construction of a multi-story mixed commercial and residential use building. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1), which allows for residential use above the first floor of a building and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with several small buildings, including dwellings and garages, prior to 1894. Between 1892 and 1902, a tributary to the Bronx River was visible on maps of the site, suggesting the area may have been elevated from its original topographic level. By 1930 multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930 s through the 1970 s. By 1987, all on-site buildings were demolished and replaced by the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Site soils consist of urban fill to depths of 12 feet below ground surface. Beneath the fill lies of layer of clay and silt between 7 and 13 feet below ground surface. A sand layer exists between approximately 13 and 25 feet below ground surface and bedrock was encountered at depths ranging from 19 to 42 feet below ground surface. Groundwater is present at approximately 9 to 24 feet below ground surface and flows to the southwest.

Summary: Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination.

Summary: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, and per- and polyfluoroalkyl substances (PFAS) in site soils and groundwater, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Residual contamination in groundwater is being managed under a Site Management Plan.

DEC Memo: 7/6/07 Tipple met with Kahabka and conducted a final inspection of all remaining work as indicated in the STIP. Stip obligations for the installation of engineering controls have been met, continued inspections of those engineering controls to be conducted regularly by the NYPA as per the STIP.
Remarks: Area is going to be cleaned up.

Dt record added:	12/18/2023
Dt rec updated:	12/29/2023
Updated By:	GLWHITE
Site Code:	628108
Site Description:	Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 628108
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site.
Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs.
Soil Vapor: Prior to remediation, soil vapor samples were collected.

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

	No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.
Health Problem:	Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

Name: WP MALL CLEANERS & GAS STATION SITE
Address: 250 HAMILTON AVENUE
City,State,Zip: WHITE PLAINS, NY 10601
Site Code: 628108
Control Name: Ground Water Use Restriction
HW Code: C360221
Control Code: 08
Control Type: INST
Dt record added: 12/18/2023
Dt rec updated: 12/29/2023
Updated By: GLWHITE
Site Code: 628108
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

(25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs.
Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

BROWNFIELDS:

Name:	WP MALL CLEANERS & GAS STATION SITE
Address:	250 HAMILTON AVENUE
City,State,Zip:	WHITE PLAINS, NY 10601
Program:	BCP
Site Code:	628108
Acres:	1.808
HW Code:	C360221
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	11/03/2021
Record Updated Date:	12/29/2023
Update By:	AMSERVIS
Site Description:	Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem:

Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm),

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site.
Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs.
Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

	required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.
Health Problem:	Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Date Record Updated: 12/29/2023
Water Quantity: UNKNOWN
Updated By: AMSERVIS
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

Summary: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Summary: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Water Type: perfluorooctanoic acid

PFAS 3:

EXXON, WHITE PLAINS (Continued) **S103571230**

Letter to Eric Harvey,
Groundwater & Env. Services, Inc from J. Hardy. Reduce monitor well sampling to semi-annually.
Report annually. 6/22/09 2008 annual report shows persistent contamination of approximately 5k btex
at mw1--sent email to lbg sirecting them to define extent of contamination in that vicinity within
45 days--email is in edocs jh 10/26/09 2009 annual report shows all wells stable (and low)except
mw-1 which has gone down to approx 3k btex. 11/10/09 as a result of decrease in mw1 above gave cf
option, by email, to start quarterly sampling and reporting instead of investigation at this t ime.
In that case we would consider future action based on whether downward trend continues or not.
email in edocs jh 4/21/10 jan 10 sampling shows levels approx same as last period jh 11/22/10
Project transferred to Mastro. 5/25/11 BTEX concentrations remain high in MW-1. Will continue to
monitor...mm 5/7/12 See quarterly monitoring reports in edocs...mm 02/12/13 A workplan has been
developed and approved to investigate the BTEX in MW-1. Four monitoring wells will be installed and
soil samples will be collected for lab analysis. 7/2013 Four monitoring wells were installed..mm
3/30/2017 The BTEX concentrations in MW-1 and MW-4 remain high and unchanged. Off site wells are
ND. The consultant, LBG, has been asked to develop a RAP...mm 8/01/17 The 2ndQMR report was
submitted by LBG. RAP will be proposed by m10/31/17...mm 1-26-21 Received 2Q20 report. Last ISCO
event was Nov 2020. Next event scheduled for March 2021. MW4 and MW1 are the most impacted with
total VOCs in the ppm range with general increased right after ISCO and a decline in dissolved
concentrations. ML 4-15-21 Received 1Q21 report. Last ISCO event was Nov 2020. The next even is
scheduled for April 2021. MW4 and MW1 are the most impacted with total VOCs in the ppm range. Total
VOCs increased from last quarter. ML 10-7-21 Report reviewed 2 well have BTEX in the 2000-3000ppm
range. All wells are upgradient from injection wells. ML 12-30-21 Updated file to add note for
report received on 1/26/21 and 4-15-21. ML 1-5-22 Reviewed 2Q21 QMR. Last ISCO event was March
2021. Next event scheduled for July 2021. MW4 and MW1 are the most impacted with total VOCs in the
ppm range with general increased right after ISCO and a decline in dissolved concentrations. ML
2-10-22 Reached out to WPS. Wells are downgradient of the source area and haven’t shown to be
effective. Propose an alternative remedial solution by end of 2Q22. ML 5-3-22 Received 1Q22
Monitoring report. No LNAPL detected. Concentrations in MW have increased. Total VOCS are greater
than the 1st round of sampling from 2018. Revised RAP to be sent by 5/31/22. DEC to require

EXXON, WHITE PLAINS (Continued) **S103571230**

ethanol. ML 6-16-22 Received Addendum to RAWP on 6/8. RAWP addendum reviewed-calls for the installation of 5 additional injections wells in the area of presumed residual contaminated soil located around the dispensers. The proposed locations are upgradient or cross gradient from the current wells. Soil samples will be obtained during the well installation and wells to be screened from the start of impacts to 5' below the water table. WPS proposed using field observations and PID readings over 100ppm to determine the location of contamination and proposed the same groundwater frequency and sampling. Conditional approval grated-conditions are the threshold for contamination is lowered to 50ppm and ethanol is included in the analysis. ML 9-8-22 RP questioned request for ethanol and DEC provided a response. Sampling needed for the 1st year only. ML 11-30-22 Received 3Q22 monitoring report. Wells from the June 2022 RAWP addendum were installed in Sept 2022 and the 1st injections to them will be in 4Q22. Last ISCO event was Feb 2022. Summary report of well installation to be submitted in Dec 2022. No LNAPL observed, MW1 and MW3 are most impacted. Monitoring to continue. ML 2-15-23 Received Injection well summary report. Five 2 injection wells were installed upgradient from the previous locations. IW4 borings show PCS is present in the area of that well. ISCO event conducted. ML 4-28-23 ISCO event conducted in Nov and Dec 2022. MW1 and MW4 show a slight decrease in total VOCs since the ISCO event. Other wells show an increase in concentration ;typical of Isco events. Continue per rawp. ML 12-20-2024 Re-assigned to CMO. CMO

Remarks: WHILE REMOVING ABANDONED UNDERGROUND 1000 GALLON TANK ELEVATED PID HEAD SPACE READINGS WERE ENCOUNTERED

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	4/11/12: Former PBS Facility, Mitchell Place Garage. Barbara McDonald from WCDOH reports all USTs were reportedly removed when the site was deregulated. She will follow up with owner and caller, then update DEC. jod 07/31/12 Northeast Environmental submitted a soil remediation report. They reported that they unearthed a 1000 gallon fuel oil tank. More than 60% of the tank was under the building making removal impossible. The soil immediately beneath the tank was impacted but left in place. All surrounding soils were removed. A gw monitoring well was installed in the vicinity of the tank and no contaminants were detected. NE Environmental recommended removing any remaining impacted soil once the building is demolished. NFA TG
Remarks:	cleanup pending - tank under foundation of building

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and

TARGET STORE T1358 (Continued) **1008404423**

Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	12/13/12 Assitant Chief Engineer Joseph Rocuzzo reported that a contractor, DP Wolff (143 Bedford Rd, Katonah) was performing mechanical work and had 50 gallon of oil that needed to be pumped back into the diesel storage tank. They set the house pump on manual and turned on the pump. It was explained that the oil first gets pumped up to the 20th floor day tank and the excess then flows out the daytank return line back to the storage tank. However the

GATEWAY BLDG (Continued) **S100140904**

daytank emergency vent relief
valve is lower than the return line, so the oil released from that vent before it could be sent
back to the tank via the return line. The oil drained down the glass curtain wall from the 19th
floor to the 16th floor. Elite Environmental was on site removing oily insulation and cleaning
oiled surfaces. A minor amount of oil escaped the interior of the building thru the glass curtain
and landed on the sidewalk below. Some oil also entered a floor drain next to the day tank. WP
sewer dept personnel reported that oil was observed in the sanitary sewer in the street but not in
the storm drains. WCHD is requiring indoor air sampling before the 4 impacted floors can be
reoccupied. TG

Remarks: interior and exterior to sidewalk - cleanup in progress - spilled 14 thru 17 floor elite environmental on site

GATEWAY II (Continued) **S127990271**

Record Updated Date: 01/03/2023
Update By: AMSERVIS
Site Description: Site Location: The site is located at 25 North Lexington Avenue (formerly 50 Hamilton Avenue and a portion of (p/o) 85 North Lexington Avenue), in the City of White Plains, Westchester County, New York, in an area of urban development. The site comprises 1.463 acres located on the west side of North Lexington Avenue, north of Hamilton Avenue and east of Ferris Avenue, and is identified on the Westchester County tax maps as a p/o new Tax Parcel Identification No. 125.66 5 2.1 (formerly 125.66 5 2 [lot 2], and p/o 125.66 5 1 [lot 1]). Site Features: The site is currently undergoing construction of a multi use residential/commercial building. The closest water body is the Bronx River, located 0.118 miles west of the site. The site is not located in a flood zone, and no designated wetlands were identified. Current Zoning and Land Use: The site is currently located in the CB 4 District, which allows commercial and some residential uses. The CB 4 designation also permits hotels. The New Street right of way and Terrace Parking Garage are located north of the site. North Lexington Avenue and St. John the Evangelist Roman Catholic Church are located east of the site, across North Lexington Avenue. Hamilton Avenue and multiple commercial buildings border the southern portion of the Site. Ferris Avenue, a Greyhound Bus Station, and the White Plains Metro North Railroad Station are located west of the site. The rail line is located 0.082 miles west of the site. The closest residential area is an apartment building located approximately 0.10 miles from the site to the south southwest. Past Use of the Site: Prior to 1885, the site was utilized as farmland and a freight yard. Between 1885 and 1888, the site was improved with dwellings, a rail line, and several retail establishments. Between 1889 and 1911 the site was further developed as a lumber and coal storage yard, a railroad round house, and a fire station, known as the Hope Fire Engine Co. of White Plains. In 1930, former lot 1 contained an underground storage tank (UST) associated with the fire station. The former lot 2 portion of the site was occupied by two service stations from 1937 through 1961. Railroad operations continued on lot 1 until the mid 1960 s when the site was taken over by urban renewal agencies and the structures on the railroad portion of the lot were razed and a parking lot was constructed. The fire station remained on-site until 1987. All on site buildings were demolished by 1994 and the site was fully developed into a parking lot in 2006. The parking lot was demolished in 2022, in preparation for construction of a multi use residential/commercial building. The long history of fire station use, and the presence of service stations may have contributed to contamination on the site. The presence of the railroad storage yard and lumber yard may have also contributed to contamination at the site. Contaminants associated with railroad operations include residual ash and cinders, chemically treated railroad ties, and petroleum related compounds. Polyaromatic hydrocarbon (PAH) contaminated soils detected on the site may be attributed to the previous railroad storage and lumber yard. Site Geology and Hydrogeology: According to the United States Geological Survey s White Plains, New York 7.5 minute topographic quadrangle (1967), the site is located at an elevation of 200 210 feet above mean sea level (ft amsl). The site is located in a river valley and slopes in the south southwest direction towards the Bronx River. A steep decline is present along the eastern and northern site boundaries. During investigations of the site, groundwater was

GATEWAY II (Continued) **S127990271**

encountered at depths ranging from approximately five (5) to 30 feet below grade (ft bg). Groundwater flow direction is to the southwest. Based on environmental investigations conducted to date, the subsurface geology generally consists of fill material to 12 ft bg, underlain by native sand deposits consisting of loose to dense sand with varying amounts of silt to depths of 55 to 88 ft bg, followed by gneissic bedrock.

Env Problem: Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Nature and Extent of Contamination: Based on investigations conducted to date, prior to the IRM, the primary contaminants of concern included SVOCs and metals in soil and groundwater, pesticides and PCBs in soil, and volatile organic compounds (VOCs) in soil vapor. Impacts were identified in soil across the site to depths up to 23.5 feet below grade (ft bg). Soil: Following completion of the on-site IRM, all soil above USCOs have been removed and disposed of off-site. Data do not indicate site-related soil impacts have migrated off-site. Groundwater: Post-IRM groundwater sampling has indicated very low concentrations of chloroform (maximum concentration of 8.98 ppb compared to the AWQS of 7 ppb) and secondary naturally occurring metals (iron, magnesium and manganese), as well as low levels of PFOS (maximum concentration of 14.2 ppt) and PFOA (maximum concentration of 35.4 ppt). While the PFOS and PFOA concentrations exceed the 10 ppt Maximum Contaminant Level (MCL) for each compound, they are not indicative of a source area and are expected to be consistent with the concentrations coming onto the site, similar to other sites in the area that also contain no potential source. Additionally, the area is served by municipal water. The IRM is complete and has removed all soil above USCOs, and thus any possible site-related source material that may contribute to groundwater contamination. Data do not indicate site-related groundwater impacts have migrated off-site. Soil Vapor: The complete excavation of soil exceeding USCOs across the entire site as part of the IRM removed any potentially impacted soil in the unsaturated zone and has addressed potential soil vapor intrusion concerns for any future buildings constructed on-site, as well as the potential migration of soil vapor off-site.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	8/22/22 - Street level underground transformer vault is leaking dielectric fluid. The oil is entering an adjacent building into their storage room then into a Con Ed network protector room which is directly below. Unknown volume lost and leak rate. The 3 vaults nearby are being inspected. Samples have been taken and investigation of the source is ongoing. EMIS #287176. JMG 09/06/22 Latest EMIS 287176/5 loaded into DecDocs. Oil has 9ppm PCB. TG 9/13/2022 11:30 AM BW Environmental Ops Operating Supervisor Charles D'Alisera (48339) reported another area, 3rd level of the parking garage storage area was impacted with 1 gal of possible transformer oil. he will take a PCB and OIL ID sample, COC NT66547. Slote, Richard 9/13/2022 12:06 PM On 09/13/2022 at 10;30, Clean Harbors crew cleaned Network protect 9521 with simple green and absorbent. Clean Harbors vactor removed 250 pounds of waste to be disposed at Clean Earth of North Jersey under BOL 1200050. Khwalsingh, Taniki 9/15/2022 3:37 PM On 9/13/22 while cleaning bus compartments at 360 Hamilton Ave under EMIS 287176 two maintenance workers from AT&T approached A. Olivet and stated they found oil in there storage room on level B3. Mr. Olivet when with the two maintenance workers to check on the spill while I continue cleaning the bus compartments. Mr. Olivet came back and stated to me we will need to sample the spill. When we finish cleaning the bus compartments we went

A T & T (Continued) **1000872181**

with the two maintenance works to take samples. I took samples for oil ID & PCB s. We told the
maintenance crew to give us a day or two for the sample results to come back and if it is our oil
we will clean it. On 9/14/22 I received a call from Charlene Miraglia telling me she had an
environmental contractor come in and do the cleanup and asking me how AT&T can get reimburse .
Results came back under COC as Transformer oil and 7 PPM. Baxter, Brandon 9/23/2022 11:41 AM Clean
Harbors crews removed all oily debris from storage room and double washed floor and ceiling with
simple green. Generated one 20 yard dumpster .This is a update still need to remove transformer
from V9521 and clean it to close spill. TM replacement is schedule for 9/25/22 Blaich, Christopher
12/08/22 See EMIS report in decdocs for the cleanup details. NFA> TG

Remarks: Oil is on street level from a vault and leaked to a storage facility room inside a building and leaking to a network protector directly below the facility room cleanup pending

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site Description:	Site Location and Features: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is split into two operable units, OU1 and OU2; OU2, with the 12 Water Street address, is situated north of OU1. The main site feature of OU1 includes a Consolidated Edison Company of New York, Inc (Con Edison) electric distribution substation, as well as off-site areas to the south, which currently include the YMCA of Central and Northern Westchester and Saint John the Evangelist Roman Catholic Church (St. John s Property). OU2 site features include a commercial office building, which currently houses a banking institution, a security guard company and an attorney s office, and tenant parking

CE - WHITE PLAINS MGP (Continued) **S106906513**

area. The site and the St. John s Property are dissected by New Street (a dead end); together, they are bounded to the north by Water Street, Hamilton Avenue to the South, North Lexington Avenue to the west, and to the east by a parking area and office building located over the former road-bed of a de-mapped public thoroughfare formerly known as Spring Street. Current Zoning: The site is currently zoned CB-4, for commercial use. Historical Uses: Beginning in the mid-1800s, a former manufactured gas plant (MGP) operated by Con Edison predecessor companies spanned both OU1 and OU2. MGP operations reportedly ceased in 1930. OU1 includes the Southern Relief Holder of the MGP site and the St. John s Property. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John s Property, but some MGP tar is present deep underground. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. A Site Management Plan and monitoring plan are in place for the site, including the St. John's Property. Site Geology and Hydrogeology: The stratigraphy of the site can be divided into four geologic units: fill, fine to medium sand, glacial till, and bedrock. Fill ranges in thickness from 3.5 to 9 feet and is underlain by up to 77 feet of sand. Glacial till, while discontinuous across the site, ranges up to 15 feet thick. Bedrock, consisting of Manhattan Schist, was observed at highly variable depths, ranging from 8 to 84 feet below grade (ft bg). Depth to groundwater ranges from 7 to 12 ft bg in the northern portion of the site to 22 to 29 ft bg in the southern portion, apparently corresponding with the increasing depth to bedrock, with flow to the south and west.

Env Problem: Nature and Extent of contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures, impacting deep (e.g. 36 to 60 feet below ground surface) groundwater south of the building on the St. John s property. Site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the building or the indoor air samples. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation interim remedial measure (IRM) in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Coal tar is present under much of the parking area at 12 Water Street (OU2). The remediation in this area was completed in June 2010 via in-situ solidification and a low-permeability cap, as described in the 2012 Final Engineering Report. Operation and monitoring of the coal tar recovery well networks is ongoing. Residual contamination in the soil and groundwater is being managed under a Declaration of Covenants and Restrictions and a Site Management Plan.

Env Problem: Nature and Extent of contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures, impacting deep (e.g. 36 to 60 feet below ground surface) groundwater south of the building

CE - WHITE PLAINS MGP (Continued) **S106906513**

on the St. John s property. Site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the building or the indoor air samples. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation interim remedial measure (IRM) in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Coal tar is present under much of the parking area at 12 Water Street (OU2). The remediation in this area was completed in June 2010 via in-situ solidification and a low-permeability cap, as described in the 2012 Final Engineering Report. Operation and monitoring of the coal tar recovery well networks is ongoing. Residual contamination in the soil and groundwater is being managed under a Declaration of Covenants and Restrictions and a Site Management Plan.

Site Code: 58617
Site Description: Site Location and Features: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is split into two operable units, OU1 and OU2; OU2, with the 12 Water Street address, is situated north of OU1. The main site feature of OU1 includes a Consolidated Edison Company of New York, Inc (Con Edison) electric distribution substation, as well as off-site areas to the south, which currently include the YMCA of Central and Northern Westchester and Saint John the Evangelist Roman Catholic Church (St. John s Property). OU2 site features include a commercial office building, which currently houses a banking institution, a security guard company and an attorney s office, and tenant parking area. The site and the St. John s Property are dissected by New Street (a dead end); together, they are bounded to the north by Water Street, Hamilton Avenue to the South, North Lexington Avenue to the west, and to the east by a parking area and office building located over the former road-bed of a de-mapped public thoroughfare formerly known as Spring Street. Current Zoning: The site is currently zoned CB-4, for commercial use. Historical Uses: Beginning in the mid-1800s, a former manufactured gas plant (MGP) operated by Con Edison predecessor companies spanned both OU1 and OU2. MGP operations reportedly ceased in 1930. OU1 includes the Southern Relief Holder of the MGP site and the St. John s Property. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John s Property, but some MGP tar is present deep underground. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. A Site Management Plan and monitoring plan are in place for the site, including the St. John’s Property. Site Geology and Hydrogeology: The stratigraphy of the site can be divided into four geologic units: fill, fine to medium sand, glacial till, and bedrock. Fill ranges in thickness from 3.5 to 9 feet and is underlain by up to 77 feet of

CE - WHITE PLAINS MGP (Continued) **S106906513**

sand. Glacial till, while discontinuous across the site, ranges up to 15 feet thick. Bedrock, consisting of Manhattan Schist, was observed at highly variable depths, ranging from 8 to 84 feet below grade (ft bg). Depth to groundwater ranges from 7 to 12 ft bg in the northern portion of the site to 22 to 29 ft bg in the southern portion, apparently corresponding with the increasing depth to bedrock, with flow to the south and west.

Env Problem: Nature and Extent of contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures, impacting deep (e.g. 36 to 60 feet below ground surface) groundwater south of the building on the St. John s property. Site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the building or the indoor air samples. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation interim remedial measure (IRM) in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Coal tar is present under much of the parking area at 12 Water Street (OU2). Class:	Completed: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Description:	Site Location and Features: The site is located near the edge of

CE - WHITE PLAINS MGP (Continued) **S106906513**

downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is split into two operable units, OU1 and OU2; OU2, with the 12 Water Street address, is situated north of OU1. The main site feature of OU1 includes a Consolidated Edison Company of New York, Inc (Con Edison) electric distribution substation, as well as off-site areas to the south, which currently include the YMCA of Central and Northern Westchester and Saint John the Evangelist Roman Catholic Church (St. John?s Property). OU2 site features include a commercial office building, which currently houses a banking institution, a security guard company and an attorney?s office, and tenant parking area. The site and the St. John?s Property are dissected by New Street (a dead end); together, they are bounded to the north by Water Street, Hamilton Avenue to the South, North Lexington Avenue to the west, and to the east by a parking area and office building located over the former road-bed of a de-mapped public thoroughfare formerly known as Spring Street. Current Zoning: The site is currently zoned CB-4, for commercial use. Historical Uses: Beginning in the mid-1800s, a former manufactured gas plant (MGP) operated by Con Edison predecessor companies spanned both OU1 and OU2. MGP operations reportedly ceased in 1930. OU1 includes the Southern Relief Holder of the MGP site and the St. John?s Property. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John?s Property, but some MGP tar is present deep underground. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. A Site Management Plan and monitoring plan are in place for the site, including the St. John’s Property. Site Geology and Hydrogeology: The stratigraphy of the site can be divided into four geologic units: fill, fine to medium sand, glacial till, and bedrock. Fill ranges in thickness from 3.5 to 9 feet and is underlain by up to 77 feet of sand. Glacial till, while discontinuous across the site, ranges up to 15 feet thick. Bedrock, consisting of Manhattan Schist, was observed at highly variable depths, ranging from 8 to 84 feet below grade (ft bg). Depth to groundwater ranges from 7 to 12 ft bg in the northern portion of the site to 22 to 29 ft bg in the southern portion, apparently corresponding with the increasing depth to bedrock, with flow to the south and west.

Assess Env: Nature and Extent of contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures, impacting deep (e.g. 36 to 60 feet below ground surface) groundwater south of the building on the St. John?s property. Site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the building or the indoor air samples. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation interim remedial measure (IRM) in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Coal tar is present under much of the parking area at 12 Water Street (OU2). The

CE - WHITE PLAINS MGP (Continued) **S106906513**

remediation in this area was completed in June 2010 via in-situ solidification and a low-permeability cap, as described in the 2012 Final Engineering Report. Operation and monitoring of the coal tar recovery well networks is ongoing. Residual contamination in the soil and groundwater is being managed under a Declaration of Covenants and Restrictions and a Site Management Plan.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Waste Description: 1,4-Dichlorobenzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D043
Waste Description: Vinyl Chloride

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends

WALMART STORE #3441 (Continued) **1008892122**

Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P046
Waste Description: Alpha,Alpha-Dimethylphenethylamine (Or) Benzeneethanamine, Alpha, Alpha-Dimethyl-

Waste Code: P075
Waste Description: Nicotine, & Salts (Or) Pyridine, 3-(1-Methyl-2-Pyrrolidinyl)-,(S)-, & Salts

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U034
Waste Description: Acetaldehyde, Trichloro- (Or) Chloral

Waste Code: U035
Waste Description: Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U072
Waste Description: Benzene, 1,4-Dichloro- (Or) P-Dichlorobenzene

Waste Code: U080
Waste Description: Methane, Dichloro- (Or) Methylene Chloride

Waste Code: U089
Waste Description: Diethylstilbesterol (Or) Phenol, 4,4'-(1,2-Diethyl-1,2-Ethenediyl)Bis, (E)-

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U132
Waste Description: Hexachlorophene (Or) Phenol, 2,2'-Methylenebis[3,4,6-Trichloro-

Waste Code: U134
Waste Description: Hydrofluoric Acid (C,T) (Or) Hydrogen Fluoride (C,T)

WALMART STORE #3441 (Continued) **1008892122**

Waste Code: U150
Waste Description: L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U165
Waste Description: Naphthalene

Waste Code: U182
Waste Description: 1,3,5-Trioxane, 2,4,6-Trimethyl- (Or) Paraldehyde

Waste Code: U188
Waste Description: Phenol

Waste Code: U200
Waste Description: Reserpine (Or) Yohimban-16-Carboxylic Acid, 11,17-Dimethoxy-18-[(3,4,5-Trimethoxybenzoyl)Oxy]-, Methyl Ester, (3beta, 16beta, 17alpha, 18beta, 20alpha)-

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Waste Code: U210
Waste Description: Ethene, Tetrachloro- (Or) Tetrachloroethylene

Waste Code: U223
Waste Description: Benzene, 1,3-Diisocyanatomethyl- (R,T) (Or) Toluene Diisocyanate (R,T)

Waste Code: U249
Waste Description: Zinc Phosphide Zn3p2, When Present At Concentrations Of 10% Or Less

Waste Code: U279
Waste Description: U279

Waste Code: U409
Waste Description: Carbamic Acid, [1,2-Phenylenebis (Iminocarbonothioyl)]Bis-, Dimethyl Ester (Or) Thiophanate-Methyl

Waste Code: U411
Waste Description: U411

DEC Memo:	11-28-12 Tank to be repaired and retested. 2010 WC database listes owner as MGH Co., LLC jc 04-04-14 WCHD request closure, DEC request TCR RDB 4/13/17 DEC requests retest documentation, not TCR. mt

APT BUILDING (Continued) **S112810131**

05-11-17; no test results yet - RDB 01-23-20 Spoke to Ruby at Hayco and she will track down the tank test report and forward it. BTR 1-24-20 Yesterday (1/23) the office manager at Hayco Management emailed the tank testing reports for 2019 and 2018. I am still waiting for the 2012 and 2017 test reports. BTR 02-05-20 Requested the 2017 report again. January submittals are on D2. The tank was isolated and retested according to the white plains building inspector certificate. The tank has passed tightness testing the last two years. NFA. BTR

Remarks: repair/retest pending - possible vent line issue

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	4/25/11: This is a 10K heating oil UST, estimated to be at least 60 years old. Thank was re-lined in 1980. WCDOH has required yearly testing of this tank - Kathy Morgan from US Tank Tech reports their company tested the tank every December from 2002 up until 2008. She does not know if anyone else tested it from Dec 08 until now. jod >>>

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Longitude:	Not reported
DEC Memo:	8/10/21: Yesterday I spoke with Gary Giglio at Performer Compliance about this tank removal at 440 Hamilton Ave in White Plains. Tank was badly corroded but they found no obvious holes and no evidence of contaminated soil. But one of the samples came back with a few hits and at least one is over CP-51. Gary will dispose of the stockpiled soil as contaminated and then submit sample results to DEC. jod 10/4/2021: VM Transport removed and disposed of 59.96 tons of petroleum contaminated soil. Post excavation soil sample results were below CP-51 Guidance values. Report from Performer Compliance has been reviewed and entered in DecDocs. Based upon the information provided, no further action is required at this time. jod
Remarks:	parking lot excavation, SVOC discovered in soil samples taken. Historic spill

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	11-25-09 Tank top is 103 in below grade. Test was done in relation to WCHD NOHC. NE Environmental is handling compliance issues. jc 12/10/09 -- According to WCDOH: They re in our hearing process right now. Major violations include no corrosion protection and no leak detection. They re claiming they don t have to come into compliance because White Plains issued them a certificate that everything was in compliance when the tank was installed in 1990. They re not accepting our explanation that the certificate only applies to White Plains building code. Because the tank is buried so deep, it will be a hardship for them to come into compliance. And The case was adjourned for them to prove compliance. If they can get proper documentation, excavation may not be necessary. They re not performing leak monitoring, at least they re not maintaining any documentation. We don t know if the tank is single- or double-walled because the interstitial port is probably not to grade. They have an ATG but there s no proof that it s performing interstitial monitoring. They need to get a contractor to determine what they ve got since we re not accepting the proof from White Plains Bldg Dept. Resolution to be determined in January, maybe. ELM 1/25/10: See eDocs for 12-31-09 letter from WCDOH/PBS - requiring additional action. jod 3/4/10: As per an e-mail recived from Chris Lalak of WCDOH dated 2-16-10, this tank was retested and passed. E-mail entered into eDocs. Based upon the information provided, DEC requires no further action at this time. jod
Remarks:	caller reporting tank test failure on a 10000 gallon ust. caller reports tank is deep, fill pipe is 103 ft long. clean up pending.

DEC Memo:	9/24/15 Spoke to Kathy Morgan at TT. Mr. Tirone is the buyer. Owner is unknown. dw 2/06/19: I spoke with Kathy Morgan at US Tank Tech, she pulled the file on this TTF. She states there is a note on the file indicating #6 and #8 Chester Ave were together on one parcel. She states #8 had an out of service 1K gallon underground fuel tank at the time they tested #6. She believes #6 was still in service at the time they tested it for a prospective buyer. Tank failed with hissing, may have been an ullage failure. US Tank Tech did not test #8 tank. They only other info provided is that this property was a Robison customer at the time of the test and Robison was notified of the failure. US Tank Tech forwarded a site diagram showing the location of the UST at #6. There was a direct fill in the center of the front yard and a remote curb fill that was capped. Diagram will be entered into DecDocs. jod I then spoke to Tony Magnotta of the White Plains Bldg Dept. He is checking his files and will forward any information on permits that may have been filed for UST removals at this property. jod 2/06/19: White Plains Bldg Dept issued a permit for removal of USTs at this property in October of 2018. Certificate of completion was issued by the Bldg Dept on Dec 20, 2018. Work was performed by Madison Environmental. Permit and Certificate scanned into DecDocs. jod 2/07/19: I sent a message to Joe Tomasulo of Madison Environmental. He states they removed both tanks. He will forward soil sample results. He states he was never informed about the tightness test failure or the open spill number. Sample results from Madison indicate some SVOC contamination below CP-51 Guidance values. Samples will be entered into DecDocs. I left a message with Joe Tomasulo stating I will need more information on the removal of these USTs. jod 2/08/19: I spoke to Joe at Madison. He has forwarded the sample results for the UST removal at 8 Chester as well. He states neither tank was leaking. The two buidings are currently part of a construction project and are being demo'ed. Joe states White Plains Buildning Dept was onsite to inspect the removals. I also spoke with Tony Magnotta at the Bldg Dept again. He confirms the USTs and the excavations were inspected by his Dept, no evidence of any leak or release was noted. Photos and additional sample results in DecDocs. Based upon the information received, no further action is

ONE WATER STREET BLACKSMITH & WHEELWRIGHT SITE (Continued) **S129982644**

Town: White Plains (c)
Record Added Date: 11/07/2022
Record Updated Date: 04/17/2023
Update By: AMSERVIS
Site Description: Site Location: The site is located at the follow addresses in an urban area in the City of White Plains, New York, 10601: p/o 1 Water Street (125.66-2-1) and p/o North Lexington Avenue (125.66-2-2). The surrounding area is occupied by commercial buildings. The site is wrapped in an arc to the north and east by a public parking lot. A car dealership and service facility are also located east of the site. Water Street is located south of the site, and Ferris Avenue is located west of the site. A New York Metropolitan Transit Authority Bus Terminal and a municipal parking garage are located southwest of the site beyond Water Street and Ferris Avenue. A municipal building and fire house are located beyond Ferris Avenue to the west. Site Features: The site was most recently developed with a four-story commercial office building. The building contained no basement. A hydraulic elevator was located within the former building. An asphalt-paved parking area and some landscaped areas were present on the site. but the site is now vacant. Two security gates are present at the parking lot entrance and exit in the southern portion of the site. In addition, a portion of the site was developed as a parking lot/roadway. An easement utilized by Consolidated Edison (Con Ed) is located north of the site in the east-west direction. The closest water body, the Bronx River, is located approximately 0.125 miles from site. The site is not located in a flood zone. The nearest surface water body is the Kensico Reservoir located approximately 2.65 miles northeast of the site. Current Zoning and Land Use: The site is currently located in the Core Business-4 (CB-4) District. The CB-4 designation allows for multi-family residential buildings and commercial uses and the site has already received all required land use approvals for the project including Site Plan approval. The site is also located in the City s Central Parking Area (CPA) overlay district. The CPA overlay was created with the purpose of setting special parking requirements for land uses within the Central Business districts. Parking requirements are lower for a given use to reflect the complementary mix of land uses in this dense downtown urban area. A New York Metropolitan Transit Authority bus terminal is located directly across Water Street from the site. The closest rail line is located approximately 290 feet from the site. The Metro North Station is located approximately 462 feet from the site. Past Use of the Site: The historical use of the site as blacksmith and wheelwright constituted a possible recognized environmental condition (REC) in the 2018 Phase I Report and further investigation of the site in 2021 and 2022 suggests this use caused SVOC and metals contamination in the soil and other contamination in groundwater and soil vapor since this use was present for many years. A wheelwright repairs wheels and this prior operation, which extended into the 1940s, may have used solvents. In addition, in 1911 Standard Oil and in 1930, The Texas Co., which operated an Oil Storage warehouse, fronted the site. In 1950, Westchester Asphalt Company fronted the site, and its operations including storage of asphalt and gasoline tanks were present. Contaminated historic fill material containing varying amount of brick, concrete, asphalt, and ash was also identified at the site during the SESI February 2018 geotechnical investigation and later 2021 and 2022 subsurface investigations. An earlier 1997 Phase I report revealed that underground storage tanks

ONE WATER STREET BLACKSMITH & WHEELWRIGHT SITE (Continued) **S129982644**

were historically present at the adjacent Fire House Station site, which may have leaked and lead to some on-site contamination. There were four historic spills at that site: April 14, 1988, Spill No. 8800487 closed January 11, 1989; April 21, 1988 Spill No. 8800670 closed January 11, 1989; and May 26, 1988 Spill No. 8801791 closed January 24, 1989; September 7, 1994 Spill No. 9408242 closed the same day. A total of four underground storage tanks (USTs) were removed from the Fire Station Site prior to April 1991. Two 10,000 galloon heating fuel oil USTs and one 2,000-gallon leaded gasoline UST were removed from that property at that same time. That property was registered under PBS No. 3-169439. An EDR Report contained within the 1997 Phase I Report also discussed the 1994 petroleum spill to the sewer on Ferris Avenue. Gasoline tanks were identified at the adjacent Surface Transportation Systems Garage, which may have leaked and lead to some groundwater or soil vapor contamination. Despite these spills in close proximity to the site, since these prior spills were closed to the satisfaction of the NYSDEC, and given that the consultant concluded that there was no evidence the tanks had leaked, the consultant that performed the initial Phase I for Cali Realty Corporation did not conclude that the spills on the adjacent parcel represented a recognized environmental condition and the Phase I report had a clean no environmental impact conclusion. Nevertheless, despite spill closure, these historic spills may have contributed to contamination under the site. The adjacent Fire House was only located 0.125 miles away. This Fire Station may have also led to some of the PFAS groundwater contamination. Trichlorofluoromethane (Freon-11) was also detected throughout the site, indicating a potential Freon-11 release. Site Geology and Hydrogeology: According to the United States Geological Survey (USGS) White Plains, NY, 2013, 7.5-minute Series topographic map, the site s average elevation is approximately 189 feet above mean sea level (amsl). The site gently slopes downward from north to south, ranging from approximately 197 feet amsl to 186 feet amsl. Groundwater is expected to flow to the south. Groundwater was observed at approximately 10-15 ft-bgs at the site. The site is characterized by fill to depths ranging from five (5) to twelve (12) feet below grade surface (ft-bgs). The fill is characterized by gray-brown sands mixed with varying amounts of brick, concrete, asphalt, and ash. The fill may have been used to raise the site elevation to its current configuration. A brown sand layer is present beneath the fill layer. This layer contains varying amounts of clayey silt and gravel that extent to bedrock. The depth of bedrock at the site appears to vary significantly from 30 ft-bgs within the northeast portion of the site to greater than 55 ft-bgs in the southwest portion of the site.

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	4-1-09: V.Mc.^ DAVID DRASHOW/PATRIOT: UST is 5K, as per Mr.Drashow. To authorize Luzon to proceed with repair of line and retest of system. 5/14/09: During investigation the tank was found to be 7,500 gallons in size. Tank was out of service and partly filled with sand. Reps from Luzon, Lane Engineering and the White Plains Bldg Dept met on site 5-18-09. It was determined the tank cannot be removed without causing severe damage to the structure. Accessible contaminated soil will be remediated and the tank will be abandoned in place. jod 06/24/09 Luzon Environmental Services submitted a Underground Storage Tank Closure Report. Structural concerns prevented the removal of the tank, so the WCHD allowed the oil tank to be cleaned and abandoned in place. Recovery well was placed in an area where oil was seeping from beneath the tank and will be monitored for a year. TG 12/14/09: Well data including sample results from November 19 submitted by Luzon. Further vaccing of well and additional sampling necessary. Results to be entered into eDocs. jod 09/06/11 GW sampling report submitted by Luzon. Report in Edocs. TG 06/02/15 Monitoring Well Sampling Event Report submitted by Northeast Environmental. VOC and SVOC levels reduced to trace levels. No further action is required. TG
Remarks:	LINE TEST FAILURE ON 10,000 GALLON VAULTED TANK, WHICH IS IN THE BASEMENT. REMOTE FILL LINE IS LEAKING UNK AMOUNT.

BROWNFIELDS:
Name: YOUNG COAL & LUMBER SITE
Address: 55 BANK STREET
City,State,Zip: WHITE PLAINS, NY 10601
Program: BCP
Site Code: 481411
Acres: 2.240
HW Code: C360131
SWIS: 6017
Town: White Plains (c)
Record Added Date: 05/01/2013
Record Updated Date: 07/17/2018
Update By: DACROSBY
Site Description: Location: The site is located at 55 Bank Street in White Plains, Westchester County. The site is located in the Central Business District of the City of White Plains on the west side of Bank Street, just south of the intersection of Main Street and Bank Street. To the west is the Metro-North railroad right of way. Bank Street is located along the eastern border, a car dealership is located adjacent to the southern border, and a parking lot for the Bank Street Commons Apartment building is located to the north. Site Features: The site is presently under construction as a commercial/residential building. The site was formerly a 2.24-acre parking lot for the nearby commuter railroad station. The site was used as a parking lot for over 40 years. Current Zoning/Use: The current zoning of the site is Core Business-4 (CB-4). Municipally-operated parking lots and multifamily dwellings, a restricted residential use, are permitted uses in CB-4 zones. Past Uses of the Site: The property was used as a coal and lumber yard starting in 1885. The lumber yard comprised of a mill, several small sheds, coal and lumber storage areas, and railroad spurs. By 1911, the property was being used for manufacturing sashes, blinds and trim, and for the storage of grain, fertilizer, and feed. During the late 1800s and early 1900s, portions of the eastern side were occupied by several residential homes. By 1953, the southeastern corner of the property was improved with a commercial building, while the remaining portions were public parking lots. The commercial building was razed by 1974, and the site has been operated as a parking lot since that time. Site Geology and Hydrogeology: The site is level ground and covered with asphalt. Surface water drains to a storm sewer system that runs to the Bronx River which is about 500 yards to the west. The shallow soil horizon consists of historic fill found at a depth from 1.5 -26 feet below grade. Below the fill, subsurface soils consist of predominantly sands with some silts and gravels. Bedrock was located at 80-120 feet below grade and is believed to by gneiss and schist. Overburden groundwater was encountered at a depth of 28 feet below grade and flows to the south. The Bronx River, which flows to the south, is located about 0.25 mile

YOUNG COAL & LUMBER SITE (Continued) **S113492634**

west of the site. However, the site is located above the current 100 year flood elevation. Site storm water is transported via storm drains to a storm water collection system and discharges to the Bronx River. The Bronx River Parkway is located adjacent to the Bronx River just west of the site.

Env Problem: Nature and Extent of Contamination: Remediation of the site to track 1 soil cleanup objectives was completed in November 2016. Soil: Remediation is complete. The entire site was excavated to a depth of approximately 26 feet. No surface soils remain. Based on the investigations conducted the primary contaminants of concern in subsurface soils were inorganics (metals) including mercury, copper lead and zinc. These metals were present above the unrestricted soil cleanup objectives. These compounds were present in the fill materials used to grade the site and surrounding areas, and contamination did not migrated from the site to adjacent parcels. These inorganics were not found in on-site groundwater above NYS Groundwater Standards in filtered samples. Aluminum, iron, and sodium were detected above standards in onsite groundwater but are considered to be naturally occurring. Groundwater: Chlorinated volatile organic compounds (CVOCs) were detected in on-site groundwater including tetracholoethylene (PCE) at a maximum level of 13 parts per billion (ppb), and trichloroethene (TCE) at a maximum level of 28 ppb. The groundwater quality standard for both of these compounds is 5 ppb. CVOCs were not detected in the subsurface soil samples collected from the site, the groundwater investigation suggests that the source originates from an off-groundwater source. The site remediation is complete. The site has a basement foundation that includes a vapor barrier and a subsurface parking garage which is ventilated. Because there is a vapor barrier and a ventilated subsurface parking garage a soil vapor intrusion investigation was not conducted.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. A vapor barrier has been installed beneath the building foundation to minimize the potential of vapors from entering the building. Additionally, a sub-grade parking garage ventilation system required by building codes will be installed prior to building occupancy to prevent vapors from accumulating in the structure.

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	3/6/2020 - Talked to Cathy Morgan of US Tank: they had tested 3-5000 gal tanks on 2/25 and all failed. They then removed all fittings and replaced with plugs and then retested but 2 have failed. PBS # 3-039128. No leakage has been observed. Tanks are in vaults. Westchester Co (Chris Lalak) was called. No product to the environment. fjk 03/30/20 Emailed Chris Lalak for a status. TG 05/14/21 See Northeast Environmental PBS Closure Report in DecDocs. WCHD authorized that the Tank could be abandoned in place. Soil sample taken through the bottom of the tank was below DEC soil guidance values. NFA. TG
Remarks:	Retest failure. Already spill # in place for the location, but R3 Spills wants a new spill number for a retest on the same tank.

BROOKFIELD COMMONS PHASE 3 (Continued) **S120700630**

Update By: SJMCCAGU

Site Description: Location: The Project Site is located on South Lexington Avenue, south of Quarropas Street (see Figure 1) and is part of White Plains Tax Block 7, Section 125.83, part of Lot 1 in White Plains, Westchester County, New York. The Site is part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The Winbrook property is bounded by Quarropas Street and Fisher Court to the north, East Post Road to the south, MLK Blvd to the east, and South Lexington Avenue to the west. The Project Site comprises approximately 1.284-acres of the Winbrook property, and includes the nine-story apartment building, south-adjacent parking lot, and landscaping. Site Features: The approximately 1.284-acre Site is developed with a vacant nine-story apartment building with a basement and a south-adjacent parking lot. The building is surrounded by lawns and asphalt-paved walkways. Current Zoning and Land Use: The Project Site is located within the B3 and RM-0.35 Zoning Districts, and the Central Parking Area (CPA) of the City of White Plains. The Phase 3 portion of the campus is located entirely within the B3 Zoning District. Land uses immediately to the north of the Project Site include residential uses, followed by institutional and government uses; to the south is retail and the White Plains Hospital, farther to the south; residential uses, followed by commercial and institutional uses to the east; and commercial and residential uses to the west. Overall, the surrounding area is generally built out with a mix of institutional/governmental, residential, community, and commercial uses. The proposed project, a 174-unit multi-family building with a height of 11-stories, will be seeking a Special Permit from the Common Council for height. As a multi-family building, the Proposed Project is a Permitted Principal Use in the B-3 Zoning District requiring Site Plan approval from the Common Council. In addition, the proposed project requires City of White Plains Common Council site plan approval and a special permit under Section 5.3, Footnote (X) of the Zoning Ordinance to permit the building to be constructed to a height of 11 stories, or approximately 125 feet. Past Uses of the Site: Historic Sanborn fire insurance maps indicated the Property was vacant as early as 1900. Between 1900 and 1930, the Property was developed with small residential buildings and associated garages, multiple three to four-story apartment buildings, an upholsterer and an auto repair shop. These structures were demolished for construction of the existing apartment building and grounds, which were constructed in 1949-1950 as part of the Winbrook housing complex. The surrounding area was primarily residential in the early 1900 s, with commercial uses shown by 1911, and gasoline filling stations and auto-related uses shown by 1930. The White Plains Hospital was shown on the south-adjacent block by 1911, and subsequently expanded to cover a larger portion of this block. An undertaker was shown by 1950, and drycleaners were shown by 1987. Potential uses of concern on or in close proximity to the Property included: auto repair and an upholsterer on the Property, and nearby filling stations and stores with gasoline USTs, dry cleaners, the White Plains Hospital, auto sales, auto and bicycle repair shops, a vulcanizing (tire conditioning) facility, an undertaker, sheet metal works, and a printer. Site Geology and Hydrogeology: The Property is located at the southern end of a topographic depression, with surrounding land sloping slightly down toward it from the southeast and southwest. Based on reports compiled by the U.S. Geological Survey (White

BROOKFIELD COMMONS PHASE 3 (Continued) **S120700630**

Plains, NY Quadrangle), the Property is approximately 200 feet above the North American Vertical Datum of 1988, an approximation of mean sea level. During a 2021 Subsurface (Phase II) Investigation, groundwater was typically observed at depths ranging from approximately 4 to 10 feet below grade and is presumed to flow in a northwesterly direction toward the Bronx River, located approximately 1,600 feet away. Actual groundwater flow at the Property can be affected by many factors, including past filling activities; underground utilities; other subsurface openings or obstructions such as basements; and other factors beyond the scope of this study. According to the 2014 Annual Water Quality Report prepared by the City of White Plains Department of Public Works, groundwater supply wells formerly providing potable water for White Plains were decommissioned in 2009. The City of White Plains was subsequently supplied with potable water from a reservoir in the NYC potable water supply system. Based on the previous subsurface investigation completed at the Site, the stratigraphy beneath the Site consisted of historic fill material (sand, gravel, silt, concrete, brick, glass, and asphalt) to approximately 6 feet below grade, underlain by apparent native soils (silt, peat, sand, clay and gravel) to the terminus of the borings (maximum of 15 feet bgs).

Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	8/6/20 White Plains Hospital, PBS #3-177148. A 20k-gal #6 Fuel Oil UST was previously closed-in-place in 2013 by Castlton. The hospital says it's Tank #1, but based on PBS record it looks like Tank #2. At the time of closure, a 18 dewatering well was installed and the tank was filled with K-Crete flowable fill. The Hospital is currently doing major construction and their engineering department opened the dewatering well manhole and observed product. There are two sumps within 20 ft and no impact observed in either sump. Bill Jacobson from Castlton is on-site now. They will mobilize a vac truck to remove product and water from the dewatering well, but the Hospital needs to move a lot of equipment first to make room for the vac truck and it might not be accessible until tomorrow. Tank could not be removed because it is beneath foundations of a 5-story and a 6-story building. JG 08-24-20 Rec'd closure report from Castlton. BTR 08-27-20 Closure report reviewed. Castlton removed approximately 2,200 gallons of petroleum and water mixture from the recovery well. The last round of sampling on 08/17 indicated there were no detections of VOCs in the recovery well. Oil absorbing snares were placed in the recovery well and were removed at the end of the project for disposal. A nearby monitoring well MW-4 was tested and at no point during the project were VOCs detected. NFA. BTR

DEC Memo:	8/10/11 - During a tank test of a 20K UST, No. 6 fuel oil was discovered in the sump. Caller is scheduling for 8/11/11: I responded to the location yesterday. I first checked outfall at Bronx River and no oil or sheen was noted. I spoke with Ray Hilyer, Elite was scheduled to test the tank last week and did not after finding an uncapped feed line. Ray states he notified WCDOH Wayne Schneider. Elite returned yesterday and found a large quantitiy of #6 Oil in a manway sump next to the UST. I met with Hospital Engineer Bob Biddiscombe and observed the oil in the sump. He states it is contained within the secondary containment and stated Elite was en route to vac it out. I again contacted Elite, they have not been hired. Bob Biddiscombe spoke

WHITE PLAINS HOSPITAL CENTER (Continued) **S104284805**

with Elite via phone
directly while I was there. Elite will be there first thing in the morning. No oil was observed in
the basement sump where previous major spills have occurred. Mr Biddiscombe stated the sump has
been re-piped, and now discharges to the sanitary sewer instead of the storm drain. WCDOH will
follow up. Chris Lalak is enroute this morning to confirm the sump has been vacuumed out and
investigation will continue. jod *Chris Lalak reports that the manway has still not been vacuumed
out this morning. Email update from Chris: Lalak, Chris 8/11/2011 11:52 AM They still didn't pump
it out Robert Biddiscombe was going to call Elite or Island pump and tank to get it pumped. He
doesn't know if it is a contained sump. I gave him 1 week to TT tank and lines. 1 month for env.
Investigation and. pump it out today and check daily. I also stated if it is visually found that
the sump is leaking an immediate investigation is needed. jod 8/12/11: Chris Lalak reports
Envirowaste completed pump out. Further investigation required. jod 10/16/12: See letter from Chris
Lalak of WCDoH in EDocs. jod 5/30/13: Report from Elite dated Jan 14th 2013 entered into Edocs.
Message sent to Chris Lalak requesting status report. jod 040417- Email, This spill started on 2009
with 6 oil entering a basement Sump. The sump apparently collects water the buildings footing
drains. White Plains hospital is a huge urban hospital complex, occupying a full city block. The
spill was determined to be from piping leaks associate with two old 6 oil tanks. Tank 1 (20K ust
was abandoned in place by Castlton). Removal of this tank was not possible. Free product was
encountered around this tank. Castlton installed a monitoring/recovery well thru the tank. The well
is identified as 15 . Free product was recovered from the well, into a holding tank. The well was
then sampled 4 times 2014/2015. Some minor volatile and semi-volatiles are still present. The
highest is 29 PPB pyrene. MW number 4 is located next to the abandoned tank and was sampled at the
same time and was essentially clean. Tank 2 was removed by Elite. (the other old 20K UST) Royal
remediated the sump for approximately 2 years.(2009-2010) Hydro Environmental Technologies (HETI)
performed a GW monitoring investigation in 2012. The Hospital has been cooperatively remediating a
very difficult spill. No oil has been found in the sump since 2013. The monitoring/recovery well
installed thru the 20 K 6 oil UST, (and thru the concrete Pads) has been substantially remediated.
Pristine remediation is not possible in this case. Well sampling performed by Castlton in 2014 and
2015 is attached. The hospital is located in an urban city with no drinking water wells near by.

WHITE PLAINS HOSPITAL CENTER (Continued) **S104284805**

The abandoned UST has been filled in with slurry Concrete except for the recovery well. It could
not be removed. NFA- RDB
Remarks: sump is full of oil/investigation underway

DEC Memo:	8-24-11: V.Mc. call to H.Smith: Left Mess.:Req. Call to Dispt. 8-25-11 Mr Smith called. Will be meeting with NE Env to discuss repair and retest. Advised him to submit documentation to close spill. jc 4/11/12 Tank was repaired by Northeast and retested. It failed again. The tank's owner is contacting Northeast to have the tank removed...mm 4/29/20: Message sent to Northeast requesting status update. jod *Northeast reports this UST was located under the city sidewalk on Paulding Street and was being used for the hotel generator. Dwayne Monaco also states the UST was replaced by Barrier Fuel. jod 4/30/20: I spoke with Wayne Jeffers of Barrier. He confirms his company removed and replaced this UST sometime in 2012 and replacing it with a double wall Stip3. He states the tank was corroded but sound, there was no contamination evident. He was unaware of the open TTF spill number so no report was submitted. Wayne forwarded a photo of the UST taken in 2012, photo will be scanned to DecDocs system at a later date. NFA required at this time. jod 10/22/2021: Photo uploaded to D2/DecDocs. jod

DEC Memo:	10-6-10 Spoke with Kathy. This is a 4k UST. Loud bubbling during tank test. PBS #3-104469 RP was told by US Tank Tech that they need to empty tank. Undecided about next step. Will notify WCHD. jm 10/14/10 Hospital wanted tank uncover, repaired and retested. There was nothing to repair so a well point sample was collected. Sample is contaminated with petroleum. Tank will not be retested....mm 12/12/17: This 4k UST failed a tightness test on Oct 6, 2010 reported as this Spill 1007255 Callback notes on this case number indicate UST would not be retested as well point was contaminated. The UST was retested on Oct 20, 2010 and failed. Retest was reported as Spill 1007877 That second Spill number was closed on July 5, 2011 with the following notation: 7/5/11 ttf, tank removed, contamination removed, endpoint samples below CP-51 standards NFA JO'M *WCDoH PBS data 3-104469 indicates this 4k UST was closed/removed January 2011 and a new 2k UST was installed. Based upon this information, this Spill case number closed and referred to Spill 1007877. jod

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

HW Code:	C360209
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	11/11/2020
Record Updated Date:	12/26/2023
Update By:	KAMALONE
Site Description:	Location: The White Plains Chrysler Car Dealership site is a 1.826-acre site located at 70 Westchester Avenue, White Plains, New York. The site is in a commercial and residential downtown neighborhood. The site is bounded by Franklin Avenue, a dense residential neighborhood, a school, a ball field, and retail businesses to the north, the White Coach Diner to the west, Westchester Avenue and the Westchester Mall to the south, and a closed car dealership to the east. Site Features: The southeastern portion of the site is currently occupied by a car dealership building which consists of a small show room and car service bays. The northern and western portion of the site consists of an asphalt parking lot for the dealership. There is a small lawn area in the front of the building along Westchester Avenue. The eastern portion of the building, which was constructed in 1925, consists of a single-story and two-story structure with small partial basement under the southeastern corner of the building. The western portion of the building, which was constructed in 1990, consists of a single-story structure with a half basement. Current Zoning and Land Use: The site is currently active and is used as a car dealership. The northern portion of site is located in a Residential Multi-Family District and southern portion is located in an Intermediate Business District zone. Therefore, half the property is zoned residential. Past Use of the Site: The site has been an active car dealership with auto repair since at least 1967. However, the on-site commercial building has been present on the site since 1925, suggesting this was an auto dealership dating back to potentially 1925. Some of the historical owner names suggest a dealership or auto related use has been on the site since at least the early 1940s. Site Geology and Hydrogeology: The site slopes from west to east. Soil consists of gray-brown fine to coarse sand with brick fragments (historic fill) with depth ranging from 0-6 feet to 0-13 feet below ground surface (bgs). The fill is underlain by brown coarse sand with trace silt and gravel to 35 feet bgs. The depth of the bedrock varies from 16 to 50 feet bgs. Groundwater is present at approximately 11 to 21 feet bgs and flows to the east-southeast.
Env Problem:	Nature and Extent of Contamination: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor, indoor air and ambient air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for site include SVOCs and metals. Soil: A total of 95 soil samples were collected from 20 soil borings installed at a maximum depth of 20 feet bgs during the remedial investigation. Several SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected sitewide. Most of the PAH contamination is present in the top 6 feet of subsurface soil. Specifically, indeno(1,2,3-cd)pyrene was detected in 12 samples out of 95 above the unrestricted soil cleanup objective (USCO) of 1 ppm (parts per million) with the maximum concentration of 220 ppm. Benzo(b)fluoranthene was detected in 11 samples out of 95 above the USCO of 1 ppm with the maximum concentration of 390 ppm.

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

Benzo(a)anthracene, benzo(a)pyrene and chrysene were detected in 10 samples out of 95 above their respective USCO of 1 ppm with the maximum concentration of 350 ppm, 330 ppm and 320 ppm respectively. Lead exceeded the USCO of 63 ppm in 17 out of 95 samples, with a maximum concentration of 524 ppm. Chromium (maximum 65.9 ppm, USCO of 30 ppm), copper (maximum 179 ppm, USCO of 50 ppm), mercury (maximum 0.394 ppm, USCO of 0.18 ppm), nickel (maximum 61.9 ppm, USCO of 30 ppm) and zinc (maximum 360 ppm, USCO 0f 109 ppm) were also detected in a small number of samples. Perfluorooctane sulfonic acid (PFOS) was detected above its USCO of 0.88 parts per billion (ppb) in two samples with the maximum concentration of 1.39 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: A total of 20 groundwater samples were collected from 14 monitoring wells during the remedial investigation. The depth of the monitoring wells varied between 19 feet to 24 feet. Perfluorooctanoic acid (PFOA) was detected above the ambient groundwater quality guidance value of 2.7 parts per trillion (ppt) with a maximum concentration of 36.9 ppt. PFOS was detected at a maximum of 117 ppt compared to the ambient groundwater quality guidance value of 6.7 ppt. The maximum concentration of both PFOA and PFOS was detected in the southeastern corner of the site, underneath the building. PFOA and PFOS were also detected in similar concentrations in upgradient wells, thus suggesting it is likely from an off-site source.
Benzo(a)anthracene (0.11 ppb maximum), benzo(b)fluoranthene (0.2 ppb maximum), and chrysene (0.12 ppb maximum), were detected above their respective ground water standard of 0.002 ppb in a small fraction of samples. Lead (259 ppb, groundwater standard of 25 ppb), chromium (283 ppb, groundwater standard of 50 ppb), and nickel (228 ppb, groundwater standard of 100 ppb) were detected in the well located upgradient along the western site boundary. Volatile organic compounds (VOCs) were not detected in any groundwater samples. Data does not indicate any off-site migration of contaminated groundwater.
Soil Vapor: A wide range of VOCs were detected in soil vapor samples collected across the site. The chlorinated VOCs carbon tetrachloride (34.9 micrograms per cubic meter [g/m3]), cis 1,2-DCE (85.2 g/m3), TCE (216 g/m3), and PCE (834 g/m3) were detected in the sample collected beneath the slab from the northeastern portion of the on-site building. Cis 1,2-DCE, TCE and PCE were not detected in the indoor air sample. Carbon tetrachloride was detected at 0.41 g/m3 in indoor air. As per the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, mitigation of the human health exposure resulting from the soil vapor intrusion for cis 1,2-DCE and TCE is required. The data does not indicate any off-site impacts in soil vapor related to this site.

Health Problem: Direct contact with contaminants in soil is unlikely because the majority of the site is covered with a building and asphalt pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) can move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for the current building and any future on-site development. Environmental sampling indicates that soil vapor intrusion is not a concern for

Site Description:	Location: The White Plains Chrysler Car Dealership site is a 1.826-acre site located at 70 Westchester Avenue, White Plains, New York. The site is in a commercial and residential downtown neighborhood. The site is bounded by Franklin Avenue, a dense residential neighborhood, a school, a ball field, and retail businesses to the north, the White Coach Diner to the west, Westchester Avenue and the Westchester Mall to the south, and a closed car dealership to the east. Site Features: The southeastern portion of the site is currently occupied by a car dealership

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

building which consists of a small show room and car service bays. The northern and western portion of the site consists of an asphalt parking lot for the dealership. There is a small lawn area in the front of the building along Westchester Avenue. The eastern portion of the building, which was constructed in 1925, consists of a single-story and two-story structure with small partial basement under the southeastern corner of the building. The western portion of the building, which was constructed in 1990, consists of a single-story structure with a half basement. Current Zoning and Land Use: The site is currently active and is used as a car dealership. The northern portion of site is located in a Residential Multi-Family District and southern portion is located in an Intermediate Business District zone. Therefore, half the property is zoned residential. Past Use of the Site: The site has been an active car dealership with auto repair since at least 1967. However, the on-site commercial building has been present on the site since 1925, suggesting this was an auto dealership dating back to potentially 1925. Some of the historical owner names suggest a dealership or auto related use has been on the site since at least the early 1940s. Site Geology and Hydrogeology: The site slopes from west to east. Soil consists of gray-brown fine to coarse sand with brick fragments (historic fill) with depth ranging from 0-6 feet to 0-13 feet below ground surface (bgs). The fill is underlain by brown coarse sand with trace silt and gravel to 35 feet bgs. The depth of the bedrock varies from 16 to 50 feet bgs. Groundwater is present at approximately 11 to 21 feet bgs and flows to the east-southeast.

Summary:

Direct contact with contaminants in soil is unlikely because the majority of the site is covered with a building and asphalt pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) can move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for the current building and any future on-site development. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Summary:

Nature and Extent of Contamination: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor, indoor air and ambient air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for site include SVOCs and metals. Soil: A total of 95 soil samples were collected from 20 soil borings installed at a maximum depth of 20 feet bgs during the remedial investigation. Several SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected sitewide. Most of the PAH contamination is present in the top 6 feet of subsurface soil. Specifically, indeno(1,2,3-cd)pyrene was detected in 12 samples out of 95 above the unrestricted soil cleanup objective (USCO) of 1 ppm (parts per million) with the maximum concentration of 220 ppm. Benzo(b)fluoranthene was detected in 11 samples out of 95

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

above the USCO of 1 ppm with the maximum concentration of 390 ppm. Benzo(a)anthracene, benzo(a)pyrene and chrysene were detected in 10 samples out of 95 above their respective USCO of 1 ppm with the maximum concentration of 350 ppm, 330 ppm and 320 ppm respectively. Lead exceeded the USCO of 63 ppm in 17 out of 95 samples, with a maximum concentration of 524 ppm. Chromium (maximum 65.9 ppm, USCO of 30 ppm), copper (maximum 179 ppm, USCO of 50 ppm), mercury (maximum 0.394 ppm, USCO of 0.18 ppm), nickel (maximum 61.9 ppm, USCO of 30 ppm) and zinc (maximum 360 ppm, USCO 0f 109 ppm) were also detected in a small number of samples. Perfluorooctane sulfonic acid (PFOS) was detected above its USCO of 0.88 parts per billion (ppb) in two samples with the maximum concentration of 1.39 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: A total of 20 groundwater samples were collected from 14 monitoring wells during the remedial investigation. The depth of the monitoring wells varied between 19 feet to 24 feet. Perfluorooctanoic acid (PFOA) was detected above the ambient groundwater quality guidance value of 2.7 parts per trillion (ppt) with a maximum concentration of 36.9 ppt. PFOS was detected at a maximum of 117 ppt compared to the ambient groundwater quality guidance value of 6.7 ppt. The maximum concentration of both PFOA and PFOS was detected in the southeastern corner of the site, underneath the building. PFOA and PFOS were also detected in similar concentrations in upgradient wells, thus suggesting it is likely from an off-site source. Benzo(a)anthracene (0.11 ppb maximum), benzo(b)fluoranthene (0.2 ppb maximum), and chrysene (0.12 ppb maximum), were detected above their respective ground water standard of 0.002 ppb in a small fraction of samples. Lead (259 ppb, groundwater standard of 25 ppb), chromium (283 ppb, groundwater standard of 50 ppb), and nickel (228 ppb, groundwater standard of 100 ppb) were detected in the well located upgradient along the western site boundary. Volatile organic compounds (VOCs) were not detected in any groundwater samples. Data does not indicate any off-site migration of contaminated groundwater.
Soil Vapor: A wide range of VOCs were detected in soil vapor samples collected across the site. The chlorinated VOCs carbon tetrachloride (34.9 micrograms per cubic meter [g/m3]), cis 1,2-DCE (85.2 g/m3), TCE (216 g/m3), and PCE (834 g/m3) were detected in the sample collected beneath the slab from the northeastern portion of the on-site building. Cis 1,2-DCE, TCE and PCE were not detected in the indoor air sample. Carbon tetrachloride was detected at 0.41 g/m3 in indoor air. As per the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, mitigation of the human health exposure resulting from the soil vapor intrusion for cis 1,2-DCE and TCE is required. The data does not indicate any off-site impacts in soil vapor related to this site.

SWIS: 6017
Town: White Plains (c)
Record Added Date: 10/19/2020
Record Updated Date: 12/19/2024
Update By: AMSERVIS
Site Description: Location: The 1.16-acre site is located in a suburban, mixed use (commercial/residential) area in White Plains, New York. The property is bounded by residential properties to the west, commercial properties (retail and offices) to the north, east, and south, a church to the east, and a health clinic to the southwest. The site is located 200 feet south of the intersection of Mamaroneck Avenue and Maple Avenue. Site Features: The site has a prominent slope with elevations that decrease towards Mamaroneck Avenue to the east. The site is currently under construction. Current Zoning and Land Use: The site is zoned BR-2 (Business Residential-2). The zoning allows for both commercial and multi-family dwelling use. The surrounding parcels are currently zoned business residential or business. Past Use of the Site: The property has historically been used for residential purposes from at least 1905 and up until at least 1911. By 1930, the White Plains YMCA, a recreational facility, occupied the existing building on the northern portion of the site with a small annex and boarding house on the southern portion of the site. Around 1971, the annex and boarding house were replaced with a 6-story building that was razed in 2021. Past uses of the site that led to the site becoming contaminated included the storage of heating oil for the YMCA in at least one underground storage tank (UST). A 12,000-gallon UST was removed in 2015 which included the removal of petroleum impacted soils adjacent to the UST, but not adjacent to the fuel oil lines where a leak appeared to occur. In 2018 oil was observed coming into the basement and reported as spill number 1709377. The spill has been addressed as part of the brownfield remediation. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill from grade ranging down to approximately 3 to 10 feet below ground surface (bgs.) The unconsolidated material beneath the urban fill material is composed of dense, grey fine-grained sands, silty sands, and clayey sands with gravel. The depth to bedrock varies between 30 to 50 feet bgs with a slope that generally matches surface topography. The groundwater table was encountered at approximately 6 to 12 feet bgs. Groundwater flow direction follows the topography and generally flows to the east.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, and per- and poly fluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Completion of Remediation: Nature and extent of contamination: Soil: N-Propylbenzene was detected in soil at concentrations up to 15 parts per million (ppm), exceeding the unrestricted use soil cleanup objective (UUSCO) of 3.9 ppm. Sec-Butylbenzene was detected in soil at concentrations up to 18 ppm, exceeding the UUSCO of 11 ppm. The highest concentrations of these VOCs were found in the central-eastern portion of the site at a depth of approximately five feet below ground surface (bgs). Benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene were detected in soil at concentrations up to 2.22 ppm, 3.09 ppm and 2.69 ppm respectively, exceeding the UUSCO of 1 ppm for each compound.

YMCA - WHITE PLAINS (Continued) **S105058672**

Indeno(1,2,3-cd)pyrene was detected at concentrations up to 2.35 ppm, exceeding the UUSCO of 0.5 ppm. The highest concentration of these SVOCs was found in the central-western portion of the site at a depth of approximately two feet bgs. Lead was detected in soil at concentrations up to 483 ppm, exceeding the UUSCO of 63 ppm. Mercury was detected at concentrations up to 0.227 ppm, exceeding the UUSCO of 0.18 ppm. Copper was detected at concentrations up to 4,180 ppm, exceeding the UUSCO of 50 ppm. Trivalent chromium was detected at concentrations up to 153 ppm, exceeding the UUSCO of 30 ppm. The highest concentrations of metals were found in the sump pit located in the central-eastern portion of the site. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic (PFOS) were detected in soil at concentrations up to 1.43 and 9.43 parts per billion (ppb), respectively, exceeding the proposed UUSCO of 0.66 ppb and 0.88 ppb, respectively. Data did not indicate any off-site impacts in soil related to this site. Groundwater: From 16 monitoring wells, 27 groundwater samples were collected for VOC and SVOC analysis. 21 groundwater samples were collected for metals, pesticides/PCBs and PFAS. Benzene was detected in groundwater at concentrations up to 5.66 parts per billion (ppb), exceeding the Class GA standard (standard) of 1 ppb. N-Propylbenzene was detected in groundwater at concentrations up to 32.2 ppb, exceeding its standard of 5 ppb. Sec-Butylbenzene was detected in groundwater at concentrations up to 18.7 ppb, exceeding its standard of 5 ppb. N-Butylbenzene was detected in groundwater at concentrations up to 11 ppb, exceeding its standard of 5 ppb. Isopropylbenzene was found in groundwater at concentrations up to 25.4 ppb, exceeding its standard of 5 ppb. Naphthalene was found in groundwater at concentrations up to 25.4 ppb, exceeding its guidance value of 10 ppb. Benzo(a)pyrene was detected up to 0.13 ppb, exceeding its standard of Non-Detect. Benzo(a)anthracene was detected up to 0.14 ppb, benzo(b)fluoranthene was detected up to 0.108 ppb, and chrysene was detected at 0.179; the guidance value for each of these compounds is 0.002 ppb. In general, these exceedances were in the vicinity of the former underground petroleum storage tank. Dissolved tri-valent chromium was detected in groundwater up to 10 ppb, below the standard of 50 ppb. Dissolved copper and lead were not detected in groundwater; mercury was not detected in groundwater. PFOA and PFOS were detected in groundwater samples at concentrations up to 48 and 86 parts per trillion (ppt), respectively, exceeding the 10 ppt drinking water maximum contaminant level for each compound. PFOA and PFOS were present in on-site monitoring wells as well as in upgradient monitoring wells, suggesting an off-site contribution. Groundwater analyzed from monitoring wells along the downgradient edge of the site did not exceed the groundwater standards or guidance values for the contaminants of concern except for PFOA and PFOS. The finding of these compounds in groundwater upgradient, as well as in site soil, suggest both on-site and off-site contributions. Soil Vapor: Soil vapor samples were collected from 10 locations throughout the site at a depth of two feet above the groundwater table. Petroleum related compounds, such as benzene (maximum 55.2 micrograms per cubic meter (mcg/m3), toluene (maximum 222 mcg/m3), ethylbenzene (maximum 24.2 mcg/m3), and xylenes (maximum 140.9 mcg/m3), were detected in each soil vapor sample. Carbon tetrachloride was detected up to 0.605 mcg/m3, cis-1,2-dichloroethene was detected up to 1.33 mcg/m3, trichloroethene was detected up to 6 mcg/m3 and tetrachloroethene was detected up to 47 mcg/m3. Data did not indicate any off-site impacts

YMCA - WHITE PLAINS (Continued) **S105058672**

	in soil vapor related to this site.
Health Problem:	Remedial actions are complete, the site was cleaned up to meet unrestricted use, and all known exposure pathways were addressed by the remedy for the site.

DEC Memo:	1/12/18 US Tank was called to try to find leaking UST at YMCA Oil was coming into the basement through the back wall. No evidence of buried tank found. A tank was removed at the front of the property years ago. Sheen was noticed at the back of the property coming up from cracks in the

YMCA - WHITE PLAINS (Continued) **S105058672**

asphalt, believed to be coming from a retaining wall. Other side of wall is condos / townhouses. US Tank told YMCA to call Northeast, their usual cleanup contractor, to put booms in place in storm drain at parking lot, sump pump, and cubby of basement to prevent further oil impact. Rain is causing oil to sheen on parking lot, making it easy to trace path from property behind them. Spoke to Tom @ YMCA - confirmed that Northeast Env. was called, did boom the sump in the basement, the storm drain at back of parking lot, and the pipe cubby in basement were evidence of residual oil was found. Northeast would like to speak to DEC for advice on how to proceed. ga 01/17/18 Received a report prepared by US Tank Tech describing their effort to locate a tank on the property. No tank was located. Report in DecDocs. TG 02/07/18 Inspected the site on a rainy day. No sign of oil observed at the time of the inspection. TG 04/16/18 YMCA hired HydroEnvironmental Solutions to conduct an investigation both outside in the rear parking lot and inside the basement to try to determine where the oil is originating. All outside soil boring locations were clean, eliminating the idea that there is an offsite source. Report concludes that the oil is from the numerous past spills that have occurred in their basement. See report in DecDocs. TG 09/25/18 Spoke to Tom Hay. He stated that the building may be sold in the near future. GW in the basement is being pumped through an oil water separator before being discharged. Little if any oil is accumulating in the separator according to Tom. TG 07/01/20 The YMCA had no funds to do any type of cleanup and was sold to a developer. It is anticipated that the cleanup will be performed once the building is razed. TG 3/25/21: BCP site YMCA - White Plains (C360206) submitted for this spill (PM John Spellman. Site will be tracked under that code and this spill closed upon receipt of COC. MDK 6/12/2024: The building has been demolished. The remediation is being handled through the Brownfield Program. See BCP C360206 for further information. This spill file closed at this time. jod

Remarks: leaking at base of wall - in basement of YMCA unknown were it is coming from - off site clean up pending crew.

DEC Memo:	1/12/18 US Tank was called to try to find leaking UST at YMCA Oil was coming into the basement through the back wall. No evidence of buried tank found. A tank was removed at the front of the property years ago. Sheen was noticed at the back of the property coming up from cracks in the asphalt, believed to be coming from a retaining wall. Other side of wall is condos / townhouses. US Tank told YMCA to call Northeast, their usual cleanup contractor, to put booms in place in storm drain at parking lot, sump pump, and cubby of basement to prevent further oil impact. Rain is causing oil to sheen on parking lot, making it easy to trace path from property behind them. Spoke to Tom @ YMCA - confirmed that Northeast Env. was called, did boom the sump in the basement, the storm drain at back of parking lot, and the pipe cubby in basement were evidence of residual oil was found. Northeast would like to speak to DEC for advice on how to proceed. ga 01/17/18 Received a report prepared by US Tank Tech describing their effort to locate a tank on the property. No tank was located. Report in DecDocs. TG 02/07/18 Inspected the site on a rainy day. No sign of oil observed at the time of the inspection. TG 04/16/18 YMCA hired HydroEnvironmental Solutions to

YMCA - WHITE PLAINS (Continued) **S105058672**

conduct an investigation both outside in the rear parking lot and inside the basement to try to
determine where the oil is originating. All outside soil boring locations were clean, eliminating
the idea that there is an offsite source. Report concludes that the oil is from the numerous past
spills that have occurred in their basement. See report in DecDocs. TG 09/25/18 Spoke to Tom Hay.
He stated that the building may be sold in the near future. GW in the basement is being pumped
through an oil water separator before being discharged. Little if any oil is accumulating in the
separator according to Tom. TG 07/01/20 The YMCA had no funds to do any type of cleanup and was
sold to a developer. It is anticipated that the cleanup will be performed once the building is
razed. TG 3/25/21: BCP site YMCA - White Plains (C360206) submitted for this spill (PM John
Spellman. Site will be tracked under that code and this spill closed upon receipt of COC. MDK
6/12/2024: The building has been demolished. The remediation is being handled through the
Brownfield Program. See BCP C360206 for further information. This spill file closed at this time.
jod

Remarks: leaking at base of wall - in basement of YMCA unknown were it is coming from - off site clean up pending crew.

DEC Memo:	11/22/06 Two valves feeding oil to the boiler failed, resulting in the constant pumping of oil into the boiler. The boiler failed and oil eventually drained out of the bottom of the boiler and flooded a large section of the boiler room floor. Oil entered a drainage pump pit but no evidence of a discharge of oil into the storm drain system was observed. YMCA hired Northeast Environmental for the spill cleanup. NE will vac up the oil and decon the floor and the pit. TG

YMCA - WHITE PLAINS (Continued) **S105058672**

PFAS 3:

Name:	YMCA - WHITE PLAINS
Address:	250 MAMARONECK AVENUE
City,State,Zip:	WHITE PLAINS, NY 10605
Site Code:	612426
HW Code:	C360206
Program:	BCP
Class Code:	C
Region:	3
Acres:	1.319
Date Record Added:	10/19/2020
Date Record Updated:	12/19/2024
Water Quantity:	UNKNOWN
Updated By:	AMSERVIS
Site Description:	Location: The 1.16-acre site is located in a suburban, mixed use (commercial/residential) area in White Plains, New York. The property is bounded by residential properties to the west, commercial properties (retail and offices) to the north, east, and south, a church to the east, and a health clinic to the southwest. The site is located 200 feet south of the intersection of Mamaroneck Avenue and Maple Avenue. Site Features: The site has a prominent slope with elevations that decrease towards Mamaroneck Avenue to the east. The site is currently under construction. Current Zoning and Land Use: The site is zoned BR-2 (Business Residential-2). The zoning allows for both commercial and multi-family dwelling use. The surrounding parcels are currently zoned business residential or business. Past Use of the Site: The property has historically been used for residential purposes from at least 1905 and up until at least 1911. By 1930, the White Plains YMCA, a recreational facility, occupied the existing building on the northern portion of the site with a small annex and boarding house on the southern portion of the site. Around 1971, the annex and boarding house were replaced with a 6-story building that was razed in 2021. Past uses of the site that led to the site becoming contaminated included the storage of heating oil for the YMCA in at least one underground storage tank (UST). A 12,000-gallon UST was removed in 2015 which included the removal of petroleum impacted soils adjacent to the UST, but not adjacent to the fuel oil lines where a leak appeared to occur. In 2018 oil was observed coming into the basement and reported as spill number 1709377. The spill has been addressed as part of the brownfield remediation. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill from grade ranging down to approximately 3 to 10 feet below ground surface (bgs.) The unconsolidated material beneath the urban fill material is composed of dense, grey fine-grained sands, silty sands, and clayey sands with gravel. The depth to bedrock varies between 30 to 50 feet bgs with a slope that generally matches surface topography. The groundwater table was encountered at approximately 6 to 12 feet bgs. Groundwater flow direction follows the topography and generally flows to the east.
Summary:	Remedial actions are complete, the site was cleaned up to meet unrestricted use, and all known exposure pathways were addressed by the remedy for the site.
Summary:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds

YMCA - WHITE PLAINS (Continued) **S105058672**

(VOCs), semi-volatile organic compounds (SVOCs), metals, and per- and poly fluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Completion of Remediation: Nature and extent of contamination: Soil: N-Propylbenzene was detected in soil at concentrations up to 15 parts per million (ppm), exceeding the unrestricted use soil cleanup objective (UUSCO) of 3.9 ppm. Sec-Butylbenzene was detected in soil at concentrations up to 18 ppm, exceeding the UUSCO of 11 ppm. The highest concentrations of these VOCs were found in the central-eastern portion of the site at a depth of approximately five feet below ground surface (bgs). Benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene were detected in soil at concentrations up to 2.22 ppm, 3.09 ppm and 2.69 ppm respectively, exceeding the UUSCO of 1 ppm for each compound. Indeno(1,2,3-cd)pyrene was detected at concentrations up to 2.35 ppm, exceeding the UUSCO of 0.5 ppm. The highest concentration of these SVOCs was found in the central-western portion of the site at a depth of approximately two feet bgs. Lead was detected in soil at concentrations up to 483 ppm, exceeding the UUSCO of 63 ppm. Mercury was detected at concentrations up to 0.227 ppm, exceeding the UUSCO of 0.18 ppm. Copper was detected at concentrations up to 4,180 ppm, exceeding the UUSCO of 50 ppm. Trivalent chromium was detected at concentrations up to 153 ppm, exceeding the UUSCO of 30 ppm. The highest concentrations of metals were found in the sump pit located in the central-eastern portion of the site. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic (PFOS) were detected in soil at concentrations up to 1.43 and 9.43 parts per billion (ppb), respectively, exceeding the proposed UUSCO of 0.66 ppb and 0.88 ppb, respectively. Data did not indicate any off-site impacts in soil related to this site. Groundwater: From 16 monitoring wells, 27 groundwater samples were collected for VOC and SVOC analysis. 21 groundwater samples were collected for metals, pesticides/PCBs and PFAS. Benzene was detected in groundwater at concentrations up to 5.66 parts per billion (ppb), exceeding the Class GA standard (standard) of 1 ppb. N-Propylbenzene was detected in groundwater at concentrations up to 32.2 ppb, exceeding its standard of 5 ppb. Sec-Butylbenzene was detected in groundwater at concentrations up to 18.7 ppb, exceeding its standard of 5 ppb. N-Butylbenzene was detected in groundwater at concentrations up to 11 ppb, exceeding its standard of 5 ppb. Isopropylbenzene was found in groundwater at concentrations up to 25.4 ppb, exceeding its standard of 5 ppb. Naphthalene was found in groundwater at concentrations up to 25.4 ppb, exceeding its guidance value of 10 ppb. Benzo(a)pyrene was detected up to 0.13 ppb, exceeding its standard of Non-Detect. Benzo(a)anthracene was detected up to 0.14 ppb, benzo(b)fluoranthene was detected up to 0.108 ppb, and chrysene was detected at 0.179; the guidance value for each of these compounds is 0.002 ppb. In general, these exceedances were in the vicinity of the former underground petroleum storage tank. Dissolved tri-valent chromium was detected in groundwater up to 10 ppb, below the standard of 50 ppb. Dissolved copper and lead were not detected in groundwater; mercury was not detected in groundwater. PFOA and PFOS were detected in groundwater samples at concentrations up to 48 and 86 parts per trillion (ppt), respectively, exceeding the 10 ppt drinking water maximum contaminant level for each compound. PFOA and PFOS were present in on-site monitoring wells as well as in upgradient monitoring wells, suggesting an off-site contribution. Groundwater analyzed from

YMCA - WHITE PLAINS (Continued) **S105058672**

monitoring wells along the downgradient edge of the site did not exceed the groundwater standards or guidance values for the contaminants of concern except for PFOA and PFOS. The finding of these compounds in groundwater upgradient, as well as in site soil, suggest both on-site and off-site contributions. Soil Vapor: Soil vapor samples were collected from 10 locations throughout the site at a depth of two feet above the groundwater table. Petroleum related compounds, such as benzene (maximum 55.2 micrograms per cubic meter (mcg/m3), toluene (maximum 222 mcg/m3), ethylbenzene (maximum 24.2 mcg/m3), and xylenes (maximum 140.9 mcg/m3), were detected in each soil vapor sample. Carbon tetrachloride was detected up to 0.605 mcg/m3, cis-1,2-dichloroethene was detected up to 1.33 mcg/m3, trichloroethene was detected up to 6 mcg/m3 and tetrachloroethene was detected up to 47 mcg/m3. Data did not indicate any off-site impacts in soil vapor related to this site.

DEC Memo: 7/26/21 called back the number for the spill caller and it continues to ring without going to voicemail. BW 07-26-21 Same as spill 2102648 for a previous line failure. Information from WCHD: TTF at PBS site 16 Lake St owners ins 16 Lake st ,WP PBS 3-123293 7500 UST from 1966 US Tank Tech failed tank. US TT reports they are hiring NEE to investigate. BTR 07-27-21 Update from NEE: Tank will be pumped dry either today or tomorrow. Tank removal pending a new contract. BTR 7/28/21: Update from Chris Lalak at WCDOH via email: 2nd TTF NEE is pumping out the tank today. 2102548 6-21-21 TTF 2103947 7-26-21 2nd TTF 16 Lake St Owners 16 Lake Street White Plains NY 10607 PBS 3-123293 7500 UST from 1966 The building is on Gas interruptible service and is running on gas. NEE is working on it Bob Lindenbaum 914-963-7400x214 Prime locations is the property mng. jod 09-21-21 Spoke to NEE. Tank has been pumped out and removal is pending new contract. BTR 4/19/2023: DEC Lead changed during spill file review. Tank is still listed as in service on current WCDOH PBS database. Will followup with County on status. jod 5/17/2023: All Boro Environmental contacted DEC Div of Water requesting approval to perform an in-place abandonment of this 7,500 gallon UST. Christopher Quintana from All Boro states he has been working with Daniel Bucci from WCDOH PBS who requested soil samples from below the UST. All Boro was referred back to the County Health Dept. Message sent to WCDOH Chris Lalak requesting an update. jod 05/25/23 Chris Lalak emailed to Chris Quintana at All Boro, The WCDOH permit to close the tank in place has been issued. That date is acceptable. What will you be filling the tank with? No inspection is required please complete the work and then submit a report of the activities. TG 10/18/24 Emailed Natasha Court asking if the spill should be closed. Natasha Court emailed the tank closure documents. Based on that information, NFA. See report in DecDocs. TG
Remarks: 7500 gal ust tank. no release to environment just tank test failure.

BROWNFIELDS:

Name:	FORD AND FLORENCE HOWE AUTO DEALERSHIPS SITE
Address:	80 WESTCHESTER AVE
City,State,Zip:	WHITE PLAINS, NY 10601
Program:	BCP
Site Code:	635777
Acres:	2.559
HW Code:	C360228
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	04/26/2022
Record Updated Date:	07/10/2024
Update By:	SJMCCAGU
Site Description:	Site Location The Site is located on a portion of a new consolidated condominium block at 80 Westchester Avenue, White Plains, New York on Section 126.61 Block 3 Lot N/A (The lot number has not yet been assigned by the City of White Plains). The Site is located in a mixed-use neighborhood, which became an EnZone based on the latest Census data. Franklin Avenue is located north of the Site. Amherst Place runs perpendicular to Franklin Avenue. A baseball field, parking garage, used car dealership, and a retail building are located east of the Site on another BCP Site located at 70 Westchester Avenue. Westchester Avenue and the Westchester Mall are located south of the Site. Several car dealerships, restaurants, retail stores, and residential buildings are located near the Site. Site Features The northeastern portion of the Site consists of asphalt covered parking and is leased and utilized for off-site parking related to the adjacent residential apartment buildings. There is a building located at 106 Westchester Avenue, which was occupied by a tenant called 100 Westchester Ave. Corp. for food preparation until 2022, but this building is also now vacant. The remaining portions of the Site are vacant with only concrete slab remnants of previous structures with the exception of one remaining building located at former 100 Westchester Avenue where a restaurant called Westchester Burger was located. Several waterbodies are located near the Site. The Mamaroneck River is located 0.316 miles east of the Site the Site. The Bronx River is located 0.843 miles west of the Site. Bloomingdale Pond is located 0.365 miles from the Site. The Site is not located in a flood zone. Current Zoning and

KEY FORD OF WHITE PLAINS (Continued) **1000114327**

Land Use The Site is currently located in the RM-0.35 Multifamily Residential District and R1-12.5 Residential One Family District. The properties located along Franklin Avenue are located in the RM-0.35 District. The RM-0.35 district allows for residential and accessory uses. The properties located along Westchester Avenue are located in the R1-12.5 District. The R1-12.5 District allows for residential and accessory uses. The Site is vacant with the exception of a City operated parking lot. One remaining restaurant building remains. The surrounding properties include car dealerships, restaurants, retail stores, and residential buildings. The White Plains Metro North Station and closest rail line are located 0.812 miles from the Site. Past Use of the Site Most recently, the Site was used as a car dealership, retail units, and parking lots. The Site has a long history of use as car dealerships including auto repair. By 1930, lot 13 was developed with 3 buildings utilized as a car dealership. In 1941, the operator of the dealership was White Plains Auto Sales, then starting in 1961, the operator was Larsen Ford. In 1976 a permit was filed for a finishing shop and in 1984 another permit was filed for an existing spray paint booth. In 1988, the lot was operated by Key Ford of White Plains, and then 80 Westchester Avenue Associates Limited Partnership in 1992. The lot was operated by Smith Cairns Ford until 2011. Lot 14 has a history as a used car lot from 1987 to at least 2004 and lot 26 was owned and operated by Florence Howe Automotive Garage in 1942 and was eventually converted into a parking lot. These site operations reportedly involved the use of bulk petroleum storage, inground hydraulic lifts and two waste oil pits. Historic site plans also depicted floor drains and trenches throughout the former structures. The structures have since been demolished. Soil staining was observed on the property and is believed to have been caused by the demolition of site structures, specifically, the equipment used. A fill port was observed in the paved driveway on lot 11, and a GPR survey of the area revealed the presence of a metallic anomaly indicative of a 1,000-gallon UST. This UST is believed to have been utilized to store heating oil for a prep kitchen. Site Geology and Hydrogeology According to the July 2012 Composite Survey of Property, the Site is ranges from 176 feet above mean sea level (ft-amsl) at the northwestern corner of the Site to a low elevationof 153 ft-amsl. Surface topography is generally flat with slope increasing in elevation from east to west. Based on topographic maps reviewed during Site investigations, the Site appears to be in a valley between two rolling hills. Groundwater is presumed to flow locally to the southeast and was encountered at depths ranging from 6 to 16 ft-bgs. Overburden ground water beneath the Site ranges from 12 to 16 ft-bgs. Surficial materials at the Site consist of a 1- to 4-inch-thick layer of asphalt. Fill is found beneath the asphalt. The fill consists of consisting of varying percentages of sand, silt, gravel, and brick, asphalt, fragments, wood, concrete, plastic, etc. ranging in depth from approximately 3 to 16 ftbgs. Natural sands are encountered beneath the fill. The natural soils are composed of sand with varying amounts of silt, and gravel with boulders and fractured/weathered rock. This stratum extends to depths ranging from 13 to 56 ft-bgs. This layer is loose to dense in condition. Bedrock at the Site was encountered between 15 and 66 ft-bgs. The upper portion of bedrock is weather. According to the Lower Hudson Sheet of Geologic Map of New York and USGS data, bedrock underlying the subject property is late Cambrian-early Ordovician Inwood Marble, consisting of dolomite marble, calc-schist,

KEY FORD OF WHITE PLAINS (Continued) **1000114327**

	granulite, and quartzite which is overlain by calcite marble and grades into the underlying patchy Lowerre Quartzite.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	5/14/10: Core soil samples were taken around the UST showing f/o contamination. Left message with resident and explained they had to address the mattter (remove tank) ASAP. Told them to call the spill desk for more information...ra > Call back from owner. Tank was tested by his employer (Prudential?) for a pending real estate transaction. He is being relocated by his employer and they are assisting in the sale of his house. He states he already has a prospective buyer who wants to close on the house in early June. Owner has contacted his insurance carrier Travlers and was told he has no coverage for an oil leak. He is contacting ATS to try and get copies of the sample results, and states he will contact a contractor - most likely Northeast Environmental - to address the spill issue. jod 6/17/10: NES has removed the tank. Contamination extends unto the neighboring property at 37 Parkview Court. The owner does not feel he showed be responsible for the clean up over the rpoperty line. Left owner a messge requesting he call me back. jod 6/29/10: Letter from NES entered into eDocs. jod 6/30/10: I spoke with the neighbor Mrs Adele Reus at 37 Parkview 914-948-5279. She has received a copy of the access agreement from NES and will be reviewing it soon. I left my name and number in case she has any questions. jod 8/3/10: NES reports has been entered into eDocs. I confirmed with Al Cianflone of NES that all contaminated soil has been removed from the property. No further action is required at this time. jod
Remarks:	Caller reporting tank test failure.

Program:	HW
Site Code:	374633
Classification:	C
Region:	3
Acres:	0.200
HW Code:	360095
Record Add:	12/08/2006
Record Upd:	03/20/2023
Updated By:	AMOMOROG

Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.

Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to

AUTOMOBILE CLUB OF NEW YORK (Continued) **S105057848**

prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.
Health Problem: Since some contaminated soils remain at the site below the building

AUTOMOBILE CLUB OF NEW YORK (Continued) **S105057848**

foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Code: 374633
Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of

AUTOMOBILE CLUB OF NEW YORK (Continued) **S105057848**

the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.

Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

Updated By:	RXKEATIN
Site Description:	Location Description: The site is located at 359-369 Mamaroneck Avenue in a mixed use commercial and residential area in the southern part of the City of White Plains, Westchester County NY. Site Features: The site is on approximately 0.25 acres of land which is flat and contains a 6,763 square foot building with a full basement. Current Use: The building contains a drycleaner, a nail salon, an insurance agency, and two restaurants. The remainder of the site consists of a paved parking lot. Surrounding Use: The site is surrounded with businesses to the north and south of the site and residences to the east and west. Immediately to the east of the site

MAMARONECK AVENUE DRY CLEANERS (Continued) **S106970795**

	is a municipal parking lot. Historical Sources of Contamination: Dry cleaner operated at this location is a potential source of PCE contamination. Site Hydrology: Groundwater flows though sand at only several feet below ground surface.
Env Problem:	Based upon investigations to date, the primary contaminants of concern at the site included tetrachloroetylene (PCE) and its associated breakdown products. After a thorough Site Characterization, as described in a final report dated July 2012, it was determined that this site did not qualify for the registry.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/26/2025

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

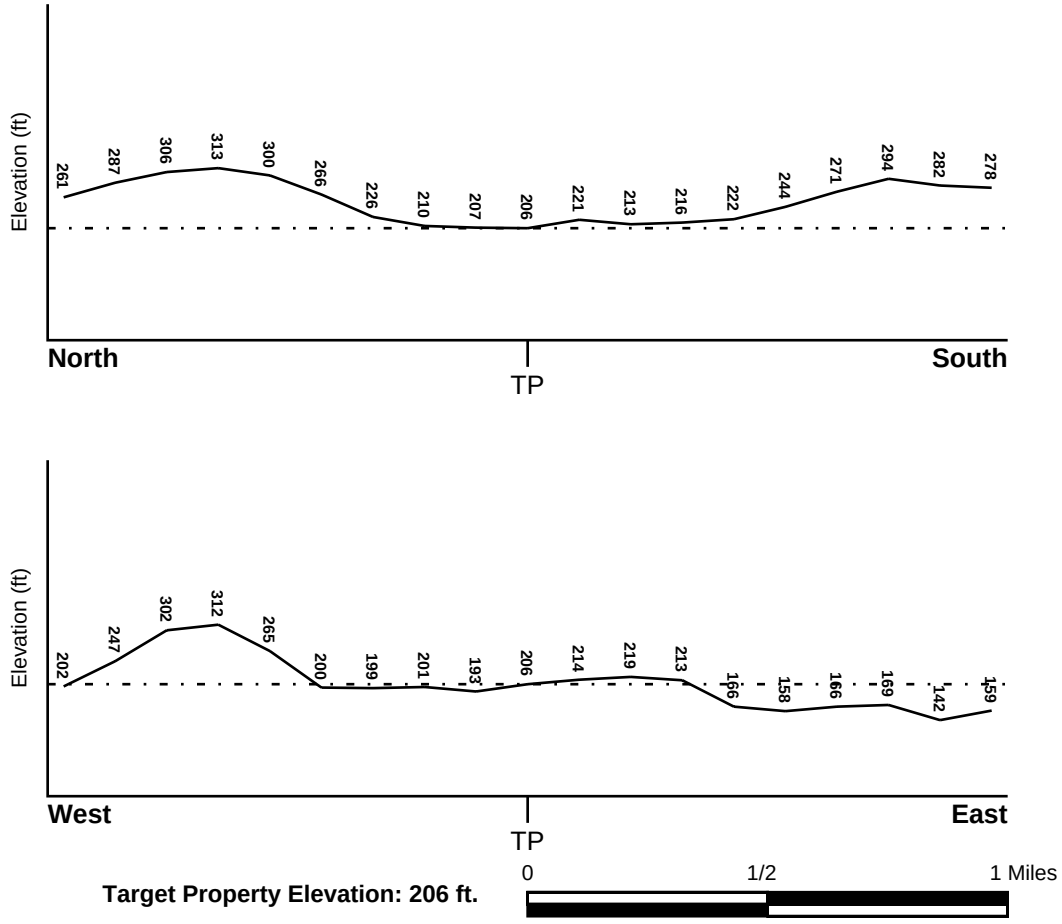

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

36119C0288F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITE PLAINS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

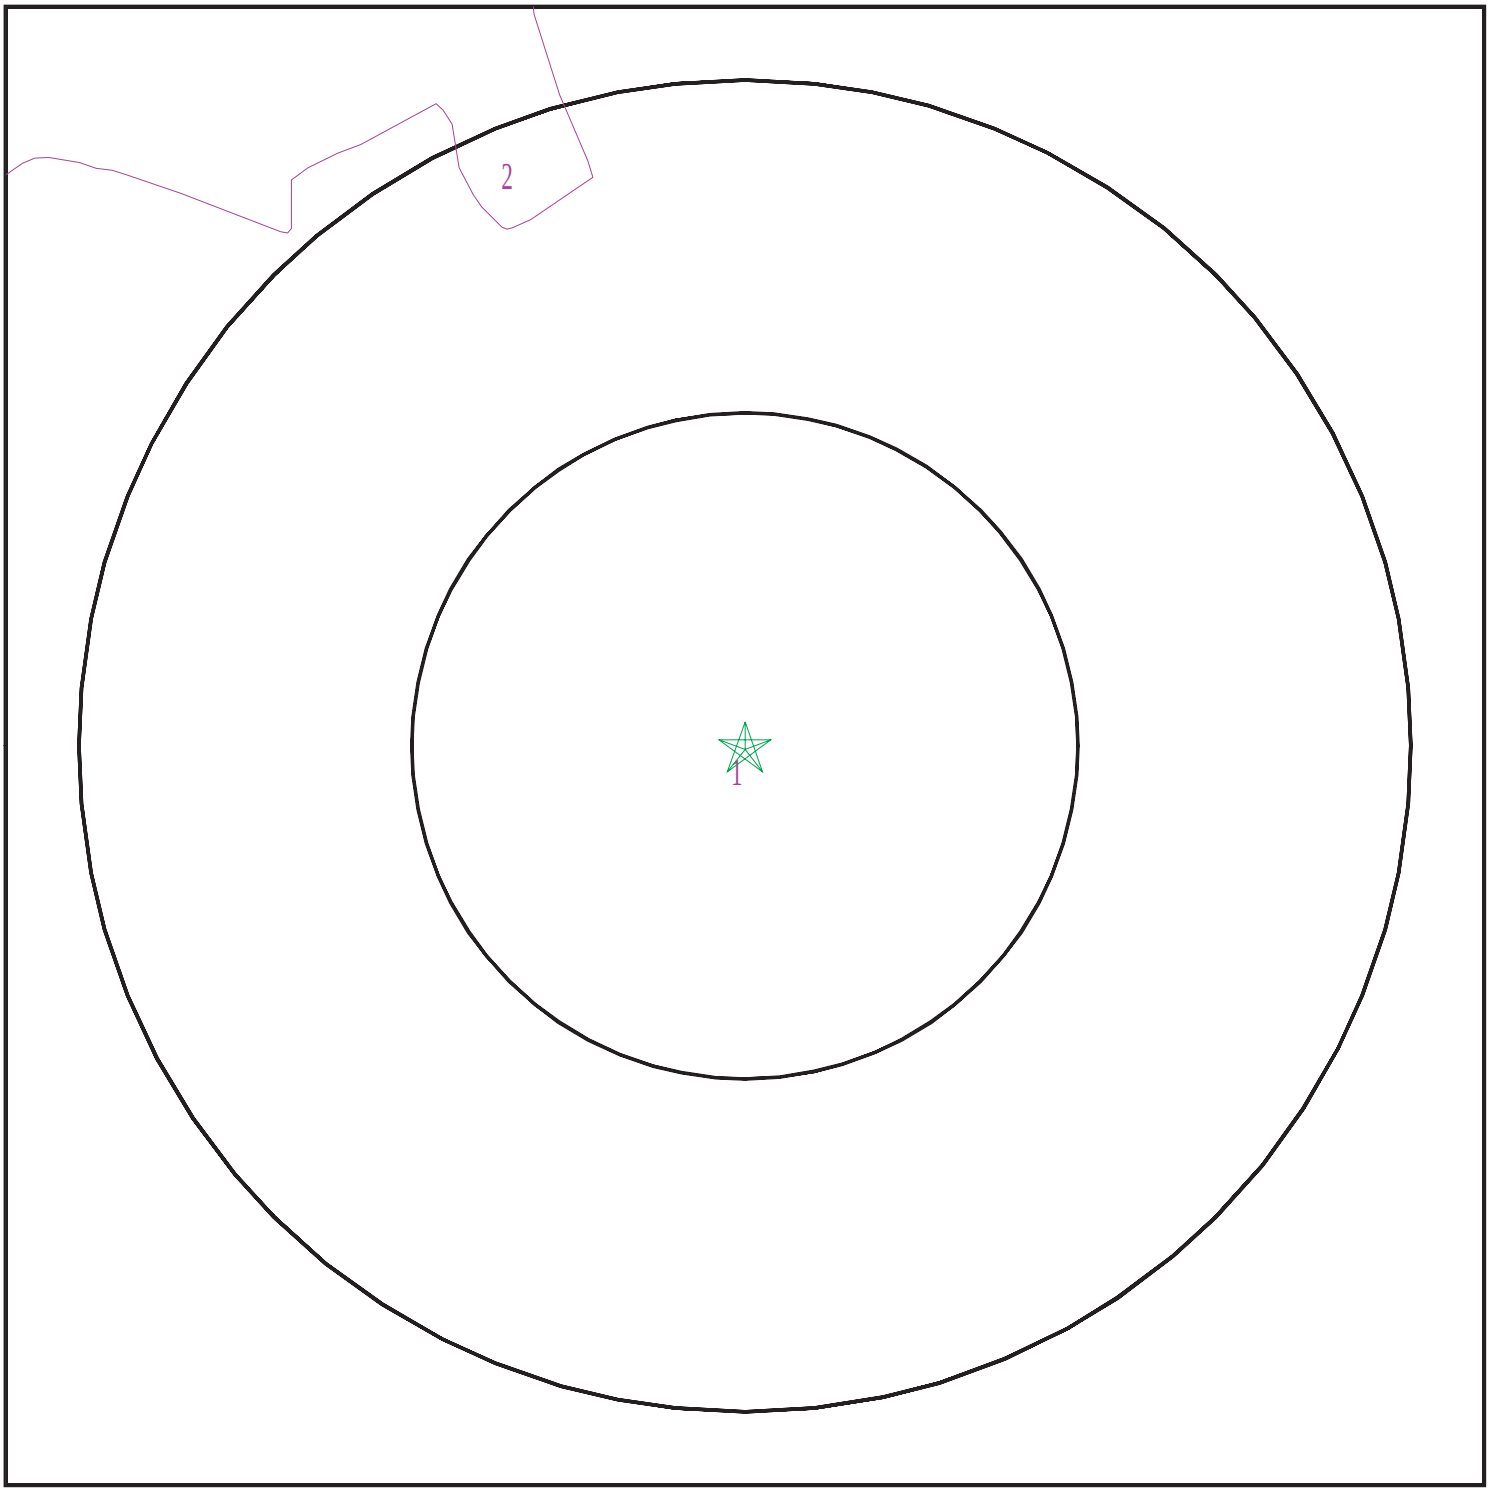

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: gravelly loam

Hydrologic Group: Not reported

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 127 inches

Depth to Watertable Min: > 84 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5
2	3 inches	70 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Historical Topo Map Report

03/27/24

Site Name:

100 Main Street
100 Main Street
White Plains, NY 10601
EDR Inquiry # 7607586.4

Client Name:

SESI Consulting Engineers
959 Route 46E 3rd Floor
Parsippany, NJ 07054
Contact: Annmarie Yannaco

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA
Project: 12859

Coordinates:

Latitude:	41.031567 41° 1' 54" North
Longitude:	-73.769939 -73° 46' 12" West
UTM Zone:	Zone 18 North
UTM X Meters:	603401.76
UTM Y Meters:	4542990.02
Elevation:	194.00' above sea level

Maps Provided:

2021, 2019	1938
2018, 2016	1932
2015, 2013	1899, 1902
1994	1893
1979	1892
1967, 1971	
1957, 1960	
1944, 1947
