VOCs	Volatile Organic Compounds

1.0 INTRODUCTION

418 North Division Street LLC (the "Volunteer") is applying to enter the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) to investigate and remediate property located at 418 N Division Street and 407, 425, and 427 Highland Avenue, Peekskill, New York (the "Site"). A Site Location Map is presented as **Figure 1.1**.

This document comprises a Remedial Investigation Work Plan (RIWP) that describes the investigation activities proposed to be conducted at the Site, as part of the Site's planned remedial investigation to design a remedial action. This RIWP includes a description of the Site, summary of the Site history and previous environmental investigations, a description of the Site's physical, geologic, hydrogeologic setting and subsurface features and a plan of action for further investigation of the areas of concern identified previously.

This RIWP has been prepared to achieve the following objectives:

- To identify any potential source areas of contamination;
- To complete the horizontal and vertical delineation of the nature and extent of contamination on the Site;
- To collect sufficient data to evaluate remedial alternatives for the Site; and
- To determine the remedial action needed to protect human health and the environment.

This RIWP is developed in general accordance with the Department's Remediation Technical Guidance for Site Investigation and Remediation (DER-10) and DER Green Remediation (DER-31).

2.0 PROJECT BACKGROUND

2.1 SITE DESCRIPTION

The Site encompasses four (4) contiguous parcels, identified on Westchester County tax maps as 23.78-1-9, 23.78-1-10, 23.78-1-12, and 23.78-1-11, with a combined area of approximately 1.07 acre. The Site is currently unoccupied. A Site Plan is presented as **Figure 2.1**.

The Site is situated within a mixed-use residential and commercial area.

2.2 PROPOSED DEVELOPMENT

Based on recent discussions with the project team and the latest architectural plans prepared by Marin Architects, dated January 6, 2025, the proposed development will involve constructing a six-story mixed-use residential/ commercial building with one level below grade on the north side.

2.3 SITE HISTORY

During the Phase I Site Reconnaissance in July 2025, Lot 9, located at 418 N Division Street, was developed with a one-story commercial building and associated loading area. Lot 10, located at 407 Highland Avenue, contained of a two-story stone commercial building, a one-story concrete commercial building, a two-story concrete commercial building, a driveway, and parking/loading area. Lot 12, located at 425 Highland Avenue, contained a two-story concrete and stone commercial building. Lot 11, located at 427 Highland Avenue, contained a one-story concrete commercial building. The buildings at Lot 9 and Lot 10 were connected from inside.

Historic Site operations reflect a mix of commercial, industrial, and municipal activities. Lot 9 was developed around 1971 and operated as the St. Labor Unemployment Office from approximately 1971 to 1982. By about 1987, the lot was occupied by Wayne Printing & Lithography, and subsequently became part of the adjacent Highland Light Steam Laundry facility. Lot 10A consists of multiple buildings with varying construction dates and uses. Building I was developed prior to 1887 and expanded around 1905; it was used for carpentry-related activities until approximately 1942, after which it became part of the Highland Light Steam Laundry operations, which continued through roughly 2001. Building II, constructed around 1911, also housed carpentry operations until approximately 1942, then was incorporated into the Highland Light Steam Laundry through 2001. Building III was constructed around 1950 and later expanded between 1974 and 2006; it functioned as part of the steam laundry operations from its development through approximately 2001. Lot 10B, also constructed circa 1911, operated as a dairy factory until approximately 1964 and subsequently became integrated into the steam laundry operations until about 2001. Lot 11, developed around 1923, initially functioned as a garage through the early 1970s, later supporting various light industrial uses including Marin Heating & Air Conditioner (circa 1972) and Highland Industrial Supplies and United Machine & Metal (circa 1977). Lot 12, developed around 1923, served as a municipal fire department facility from approximately 1950 until around 2020.

These historical operations indicate the potential for various sources of environmental concern, including but not limited to petroleum products, solvents, per and polyfluoroalkyl substances

(PFAS), printing-related materials, and other contaminants commonly associated with historical industrial and commercial land uses.

2.4 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

The following environmental reports that have been previously completed for the Site are summarized below:

- PRELIMINARY GEOTECHNICAL INVESTIGATION REPORT, SESI, MARCH 2025
- PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT, SESI, JULY 2025
- PHASE II ENVIRONMENTAL SITE INVESTIGATION REPORT, SESI, PREPARED MARCH 2025, UPDATED MARCH 2026

Copies of the previous environmental reports are included in **Appendix A**.

2.4.1 PRELIMINARY GEOTECHNICAL INVESTIGATION REPORT, SESI, MARCH 2025

SESI prepared a Preliminary Geotechnical Investigation Report dated March 24, 2025. The report summarized SESI's geotechnical investigation, findings and preliminary foundation design recommendations for the proposed development at the Site. The report also presents recommendations regarding other construction-related aspects of the proposed development, such as site preparation, groundwater control, excavation support and utility support.

2.4.2 PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT, SESI, JULY 2025

SESI prepared a Phase I Environmental Site Assessment (ESA) Report dated July 2025. The report summarized findings related to the presence or likely presence, use or release on the Subject Property of hazardous substances or petroleum products.

SESI identified the following Recognized Environmental Conditions (RECs), Business Environmental Risks (BERs), Controlled Recognized Environmental Conditions (CRECs), and Historical Recognized Environmental Conditions (HRECs) at the Site:

- **REC-1 ASTs and USTs:** The Subject Property was identified as Highland Light Steam Laundry/White Plains Linen on the UST database with Site ID No. 3-800121. One (1) 1,000-gallon No. 2 Fuel Oil UST was identified to be closed-removed as of October 2014. Spill No. 1408577 was reported when soil contamination was identified during the closure of a 1,000-gallon UST. Additional information in the narrative indicated that the 1,000-gallon UST was removed from the sidewalk and that an additional tank was suspected to

be in the nearby area as a results of a “magnetic survey”. Four (4) ASTs were identified, including, two (2) closed 275-gallon No. 2 Fuel Oil ASTs, one (1) active 550-gallon No. 2 Fuel Oil AST, one active (1) 8,000-gallon No. 2 Fuel Oil AST and three (3) closed 500- to 800-gallon ASTs with unknown contents. A sign and vent pipes associated with the 8,000-gallon AST were identified in the courtyard during the reconnaissance; however, the 8,000-gallon AST appeared to have been removed. The Subject Property was also identified on the CBS AST database with CBS No. 3-000007 for a 550-gallon AST that contained sodium hypochlorite which is reported as in service. Further investigation was recommended to investigate the current and former tank systems, evaluate for potential additional USTs, and evaluate for potential discharges.

An AST was not observed on Site. Despite the in-service listing in the database, all the ASTs appeared to be removed prior to acquisition. Although the 1,000-gallon UST was documented to be removed, during Phase II ESA, a GPR survey was conducted at the Site to preliminarily screen the presence of additional USTs. No anomalies indicative of USTs were identified. The absence of USTs will be further confirmed during the Remedial Investigation phase through additional non-intrusive and/or intrusive investigations.

Therefore, all known ASTs and USTs were either closed or removed.

- **REC-2 Former On-site Laundry Operations (Lots 9, 10, and 11):** The majority of the Site was historically used for industrial laundry operations beginning in at least 1942, with operations starting in the southernmost structure and eventually occupying a majority of the interconnected buildings on Lots 9, 10, and 11. The on-site laundry operations utilized a variety of cleaning solvents and detergents and utilized floor drains, trench drains, and other large-scale drainage features below former laundry equipment. The on-site laundry operations were coal-powered, and a large coal storage area was previously located in the central portion of the Subject Property. This building was occupied by White Plains Linen, Highland Steam Landry, C&C Cleaners, and White Plains Coat & Apron Co. The Air Program Information indicates that tetrachloroethene (PCE) was used on-site. Soil vapor sample SV-2, collected in the northern portion of the southern building during the 2025 Phase II ESA, identified elevated concentrations of both PCE and trichloroethene (TCE), suggesting a potential source area. Therefore, further investigation was recommended.

- **REC-3 Former Coal Storage and Use (Lot 10):** Historic Sanborn Maps indicated the use of coal as a fuel source for onsite buildings in 1900 and 1911. A coal pile was indicated in the central portion of the Site from 1947 through 1950. In the 1958 Sanborn Map, a coal storage building is depicted north of the boiler room of the southern building with a coal pile still indicated within the courtyard. Coal storage and handling may have resulted in on-site contamination consisting of polynuclear aromatic hydrocarbons (PAHs), coal tar, and creosote. On-site data generated by the recent Phase II ESA identified PAH impacts throughout many areas of the Subject Property, which may be partially attributable to the former coal use and handling. During the 2025 Phase II ESA, soil analytical results in the general area of the former coal pile and coal storage building identified certain Volatile Organic Compounds (VOCs), polychlorinated biphenyls (PCBs), and metals (including mercury) above the most stringent NYSDEC Soil Cleanup Objective (SCO). Ground water was not encountered in this area of the Site. Therefore, further investigation was recommended.

- **REC-4 Former On-site Carpentry Shop, Metal Shop, Sash and Blind Factory, and Automobile Warehouse (Lot 10):** The southern structure formerly located on Lot 10 was occupied by a carpentry shop in the 1887 Sanborn map until 1911 when it is indicated as an automobile warehouse. The 1911 Sanborn map indicates the southern structures along Highland Avenue are occupied by the C.A. Lamos Son Sash and Blind Factory. These operations continued until approximately 1942 when the steam laundry operations were depicted on the 1942 Sanborn map. In addition, there appeared to have been metal fabrication occurring in this structure sometime between 1972-1977 based on City Directory listings. Further investigation was recommended.

- **REC-5 Former On-site Bus Garage and Trucking Operations (Lots 10, 11, and 12):** Historic Sanborn maps identified historic automotive uses on the former northwestern structure on Lot 11 from 1923 through 1972. Sanborn maps identified a trucking company on a former structure on Lots 10 and 12 in 1900. Soil analytical results from the 2025 Phase II ESA in the area of these former operations identified polynuclear aromatic hydrocarbons (PAHs), pesticides, and metals above the NYSDEC Unrestricted Use Soil Cleanup Objective (USCO). Groundwater analytical results identified PAHs and metals above the applicable NYSDEC Ambient Water Quality Standards (AWQS). No soil vapor exceedances were identified. Further investigation was recommended.

- **REC-6 Former On-site Printing and Lithography (Lot 9):** The 1987 City Directory identified Wayne Desalvo Inc./Wayne Printing & Lith at 418 North Division Street, located in the northeast corner of the Subject Property on Lot 9. Based on available information, it was unclear if operations consisted of printing operations, office space, or both. Printing operations may have used solvent, metals, and PFAS. Limited soil testing on Lot 9 during the Phase II ESA identified pesticides above the most NYSDEC's USCOs and polynuclear aromatic hydrocarbons (PAHs) above the NYSDEC's Residential Soil Cleanup Objectives (RSCOs) and/or Restricted Residential Soil Cleanup Objectives (RRSCOs). Further investigation was recommended.

- **REC-7 Former On-site Fire House (Lot 12):** Based on Sanborn maps and City Directory listings, the former structure on Lot 10 (425 Highland Avenue in the City Directories) was constructed between 1911 and 1923 and operated as a Fire Department building between at least 1952 and 2020. The former use of the building for fire department activities may have adversely impacted the subsurface, with potential contaminants of concern including petroleum and PFAS. The Phase II ESA soil analytical results in this area identified above the NYSDEC's USCO and/or RRSCO. One VOC, several PAHs, and several metals were detected in groundwater above their respective NYSDEC's AWQS. In addition, both Perfluorooctanoic Acid (PFOA) and Perfluorooctanesulfonic Acid (PFOS) were detected above the NYSDEC's AWQS; however, although the detections were an order of magnitude higher than the AWQS for both compounds, the concentrations were generally in the order of magnitude typical of urban areas and are not considered indicative of an on-site source. Soil vapor was not evaluated on Lot 10 as part of the Phase II ESA. Further investigation was recommended**.**

- **REC-8 Historic Fill:** Historic fill was identified on-site during the Phase II ESA. The granular fill extended to up to +-5 feet below existing grades. The granular fill generally consisted of coarse to fine sand, little to trace amounts of silt, clay and little to some amounts of coarse to fine gravel, with concrete debris. Based on soil analytical results, PAHs and metals were detected in on-site soils above the most stringent NYSDEC SCOs which appear to be in part due to contaminated historic fill. Further investigation was recommended.

- **REC-9 On-site Contamination:** Analytical results from the Phase II ESA identified on-site contamination in soil, groundwater, and soil vapor above the applicable clean up

objectives, quality standards, and criteria, respectively. On-site contamination appeared to be attributable to both historic on-site operations (**REC-1** through **REC-7**) and contaminated historic fill (**REC-8**). Further investigation and remediation of on-site contamination was recommended.

- **HREC-1 Former Spills:** A review of the database as provided by EDR identified five (5) historic spills at the Site:

    - White Plains Linen, Spill No. 0206243, Closed 9/16/2002, Release of 10-gallons of No. 2 Fuel Oil
    - Coat & Apron Co., Spill No. 0410072, Closed 12/10/2004, Release of 2-gallons of No. 2 Fuel Oil
    - White Plains Linen, Spill No. 0809615, Closed 1/9/2009, Release of 75-gallons of No. 2 Fuel Oil during a fuel delivery. The overfill of No. 2 fuel oil was not recoverable and dissipated with laundry detergents into the sanitary sewer.
    - White Plains Linen, Spill No. 1408577, Closed 2/2/2022, Release of unreported quantity of No. 2 Fuel Oil. Reported when soil contamination was identified during the closure of a 1,000-gallon UST. Additional information in the narrative indicates that a 1,000-gallon UST was removed from the sidewalk and that an additional tank was suspected to be in the nearby area due to a “magnetic survey”. Impacted soils were remediated.
    - Spill No. 0302563, reported 6/10/2003, Closed 6/11/2003, Release of unknown material from a ruptured sewer connection into catch basin during onsite excavation for a gas leak.

  No further investigation or remediation was recommended due to regulatory closures.

- **BER-1 Drums and Compressed Gas Cylinders:** SESI observed several 55-gallon drums with unknown contents throughout the Subject Property during the Phase I. SESI recommended the drum contents be evaluated, and the drums and compressed gas cylinders should be properly disposed of off-site. All observed drums and cylinders have been removed from the Site as of November 2025 by the former Site owner.

- **BER-2 PCB-Containing Material (Including Caulk - All Buildings):** A survey for PCB caulk was not completed. However, based on the age of the building, SESI recommended a PCB survey for caulk.

- **BER-3 Asbestos Containing Material (ACM):** ACM surveying was not included in SESI's scope of work. An asbestos survey was conducted by DVD Environmental Inc. (DVD) in November 2024. The ACM identified on-site consisted of 9"x9" vinyl floor tiles in 407 Highland Avenue and 418 North Division Street and façade transite panels, and roof flashing tar/felt under the EPDM roof at 425 and 427 Highland Avenue. SESI recommended all ACM should be abated prior to any demolition activity by a licensed Asbestos Abatement Contractor according to all applicable rules and regulations.

- **BER-4 Universal Waste:** There were several pieces of universal waste throughout the buildings. Therefore, SESI recommended this universal waste be properly disposed of prior to redevelopment. All observed waste has been removed from the Site as of November 2025 by the former Site owner.

- **BER-5 Concrete:** Concrete may be disturbed as part of the redevelopment of the property. Therefore, SESI recommended sampling of any stained concrete prior to disposal.

- **BER-6 Lead Based Paint (LBP):** LBP surveying was not included as part of this Phase I Environmental Site Assessment. However, based on the age of the structures located on the Subject Property, the possibility of presence of LBP cannot be ruled out. Therefore, SESI recommended an LBP survey.

2.4.3 PHASE II ENVIRONMENTAL SITE INVESTIGATION REPORT, SESI, MARCH 2025

SESI prepared a Phase II Environmental Site Investigation Report dated March 31, 2025. The report summarized the results of environmental soil, groundwater and soil vapor sampling.

Analytical results from the soil investigation identified pesticides, PCBs, PAHs, metals and VOCs (chloroform, benzene, toluene, total xylenes, acetone, 1,1,1-Trichloroethane and/or TCE) at concentrations exceeding POTGW and/or RRSCOs. While PAHs are commonly associated with historic fill, the elevated levels in these areas are likely due to releases occurring during transportation, staging, and handling of PAH-containing materials such as petroleum products and coals during past operations such as the steam laundry, carpenter, and mechanic shop operations. The elevated PCB and metals exceedances suggest contamination resulted from historic site operations. Benzene, xylenes, and toluene are commonly found in petroleum products. Acetone can occur naturally or be used as a solvent and degreaser. 1,1,1-

Trichloroethane is also used as a degreaser. TCE may have been used directly as a solvent in dry cleaning activities or formed as a degradation byproduct of PCE, which was likely used at the Site. Chloroform is a typical disinfection byproduct. These VOCs were likely used or generated during past operations and subsequently released into the subsurface.

Analytical results from the groundwater investigation identified Perfluorinated Compounds (PFOA & PFOS), PAHs, metals, and 1,2,4,5-Tetramethylbenzene, a VOC, at concentrations exceeding AWQSs. The PFAS levels at Site are typical of urban areas and are not indicative of an on-site source. The PAH and metals contaminations are likely attributable to releases from historic Site operations. However, the metals samples were unfiltered and collected from temporary wells using VAPS, which may have resulted in metal concentrations being skewed higher due to the presence of sediment. 2,4,5-tetramethylbenzene is likely associated with the use and storage of coals at the Site. Therefore, the contamination is likely attributable to releases from historic site operations.

No VOC exceedances were identified in SV-1 and SV-3. However, in SV-2, tetrachloroethene (PCE) and trichloroethene (TCE) were detected at concentrations exceeding the NYS Department of Health soil vapor screening levels. Notably, PCE was detected at a concentration slightly over 10x of these screening levels. The presence of elevated levels of PCE and TCE was attributed to past use and release of chlorinated solvents at the Site.

The investigation concluded that the exceedances in soil, groundwater, and soil vapor identified during the investigation are likely attributable to historic fill as well as historic on-site operations. Further investigation and remediation were recommended. SESI recommended the vapor intrusion pathway be further evaluated for the new development to determine whether a vapor mitigation system is necessary.

2.5 TOPOGRAPHY

Topographically, based on information provided in the November 18, 2024, Topographic Survey of Property prepared by Geologic Land Surveying, PLLC, the project area generally slopes downward from a high point in the northeastern portion of the site, with an approximate elevation of ±198 feet, to a low point in the northwestern portion of the project area, with an approximate elevation of ±174 feet. Additionally, the site slopes downward from a high point in the

southwestern portion of the site, with an approximate elevation of ±177.5 feet, to the low point in the northwestern portion of the site, with an approximate elevation of ±174 feet.

2.6 GEOLOGIC SETTING

Geologically, the Site soils are mapped as surficial materials, underlain by granular fill, underlain by till, and underlain further by Gneiss bedrock. Based on the United States Department of Agriculture (USDA) and Natural Resources Conservation Services (NRCS) Custom Soil Resource Report for Westchester County, New York, dated October 6, 2016, the Site is underlain by smoothed Udorthents (Map Unit Ub). This map unit typically consists of moderately well drained gravelly loam. Based on the USDA NRCS Web Soil Survey (WSS), the Site is underlain by Urban land-Charlton complex, 3 to 8 percent slopes (Map Unit UhB). This map unit typically consists of well drained fine sandy loam derived from coarse-loamy melt-out till derived from gneiss, granite and/or schist.

Based on soil borings conducted during the SESI Phase II investigation conducted between December 2024 and January 2025, the surface materials consisted of asphalt, concrete and sub-base granular materials measured up to six (6) inches. The granular fill extended to up to +-5 feet below existing grades. The granular fill generally consisted of coarse to fine sand, little to trace amounts of silt, clay and little to some amounts of coarse to fine gravel, with concrete debris. The natural till consisted predominantly of sand, with little to trace amounts of silts and clays with variable amounts of medium to fine gravel. The natural soils extended to the top of weathered rock and/or bedrock at depths ranging from approximately 1.5 feet to 12 feet corresponding to approximate elevations 159.5 through 186.5. Weathered/decomposed rock material was encountered in all boring locations in depths ranging from approximately 4 to15 feet below ground surface corresponding to approximate elevations 160.5 through 187.5. The decomposed bedrock extended to top of bedrock at depths ranging from approximately 1 foot to 7.5 feet corresponding to approximate elevations 159.5 through 188.5.

During the SESI geotechnical investigation conducted in January 2025 , the weathered rock was augured through using conventional mud rotary drilling techniques and was observed to consist of heavily weathered Gneiss gravel and cobble-sized fragments, little to some amounts of coarse to fine sand and trace amounts of silt and clay. Bedrock was encountered in all borings at depths ranging from approximately 5 to 16 feet below the existing ground surface. During the

geotechnical investigation, a total of six (6) 5-foot rock cores were collected at boring locations GT-1, GT-2, GT-4 and GT-6 upon encountering auger refusal. The bedrock generally consisted of Biotite Gneiss. Rock core recovery ranged from approximately 60 to 100 percent, with a Rock Quality Designation (RQD) ranging from approximately 17 to 78 percent. The upper portions of the bedrock are generally more weathered and RQD generally increases with depth.

2.7 HYDROGEOLOGIC SETTING

During the previous investigations, groundwater was encountered in the overburden zone at approximately 5 feet below ground surface (bgs) in the western portion of the Site. However, groundwater was not observed in the overburden zone in the eastern portion of the Site. The direction of groundwater flow has not been calculated at this time but is anticipated to follow the topography and flow in a southwesterly direction across the Site. The nearest surface water body is the Annsville Creek located approximately 3,400 feet (0.65-miles) northwest of the Site. The Annsville Creek discharges to the Hudson River located approximately 4,000 feet (0.75-miles) southwest of the Site.

2.8 SUMMARY OF ENVIRONMENTAL ASSESSMENT

Based on the investigations conducted to date, the primary contaminants of concern (COCs) are anticipated to be VOCs, PAHs, pesticides, PCBs, and metals in soil, VOCs, PAHs, PFAS and metals in groundwater, and VOCs in soil vapor. COCs will be refined based on the Remedial Investigation (RI) results.

Soil (maximum concentrations):

- **VOCs:** 1,1,1-trichloroethane (0.72 mg/kg), acetone (0.43 mg/kg), benzene (0.99 mg/kg), chloroform (0.88 mg/kg), toluene (2.5 mg/kg), trichloroethene (0.68 mg/kg) and xylenes (total) (2.4 mg/kg).
- **PAHs:** Benzo(a)anthracene (14 mg/kg), benzo(a)pyrene (9.4 mg/kg), benzo(b)fluoranthene (9.6 mg/kg), Benzo(k)fluoranthene (2.2 mg/kg), chrysene (13 mg/kg), dibenzo(a,h) anthracene (1.7 mg/kg) and indeno(1,2,3-cd)pyrene (4.3 mg/kg)
- **Pesticides**: 4,4'-DDE (2.36 mg/kg), 4,4'-DDD (2.89 mg/kg) and 4,4'-DDT (2.8 mg/kg).
- **PCBs**: Total PCBs (0.238 mg/kg)
- **Metals**: Arsenic (19.8 mg/kg), barium (564 mg/kg), copper (180 mg/kg), lead (420 mg/kg), manganese (2,540 mg/kg), mercury (3.9 mg/kg) and zinc (349 mg/kg).

Groundwater (maximum concentrations):

- **VOCs**: 1,2,4,5-Tetramethylbenzene (6.9 ug/L).
- **PAHs**: Benzo(a)anthracene (0.14 ug/L), benzo(a)pyrene (0.07 ug/L), benzo(b) fluoranthene (0.13 ug/L), benzo(k)fluoranthene (0.08 ug/L), chrysene (0.18 ug/L) and indeno(1,2,3-cd)pyrene (0.1 ug/L).
- **PFAS**: PFOS (94.1 ppt) and PFOA (36.9 ppt)
- **Metals**: Chromium (103.3 ug/L), copper (540.7 ug/L), iron (74,200 ug/L), lead (221.1 ug/L), magnesium (42,500 ug/L), manganese (2,188 ug/L), mercury (3.3 ug/L), selenium (39.8 ug/L), sodium (174,000 ug/L) and thallium (1.82 ug/L).

Soil Vapor (maximum concentrations):

- **VOCs**: Trichloroethene (9.67 ug/m^3) and tetrachloroethene (1,150 ug/m^3).

3.0 REMEDIAL INVESTIGATION

Soil borings, soil vapor borings, and groundwater monitoring wells are proposed below based on the following rationale to complete the nature and extent delineation of contaminated soil, groundwater, and soil vapor on the Site. The applicable standards criteria and guidance (SCGs) for the Site soil are the Soil Cleanup Objectives (SCOs) (December 2025). The applicable standards criteria and guidance (SCGs) for the Site groundwater are the applicable 6 NYCRR Part 703 AWQS and Technical and Operational Guidance Series (TOGS) 1.1.1. The applicable criteria for sub-slab vapor are the NYSDOH Decision Matrices (October 2006, amended February 2024) lower threshold values, which will be used for comparison purposes only and not for remedial decisions. New York State does not have applicable remediation criteria for constituents found in soil vapor gases.

This RIWP assumes a comprehensive Site survey will be completed prior to the start of RI activities to field locate the proposed sample locations. Prior to the start of intrusive activities, all sample locations will be cleared by Ground Penetrating Radar (GPR). In addition, the GPR survey will also be conducted at the entire Site to confirm the absence of any USTs.

Following the RI activities, all soil boring, monitoring well and soil vapor point locations will be surveyed for location and elevation. The survey data will be provided pursuant to the DER-10 requirements in an acceptable format (e.g., North America Datum 83 [NAD83]).

3.1 SOIL REMEDIAL INVESTIGATION

To further evaluate and delineate soil contamination, Thirteen (13) additional soil borings will be advanced on the Site. Borings are proposed at an approximate frequency of one per 3,600 ft^2 for site-wide coverage. The proposed soil boring locations are presented in **Figure 3.1** and the rationale for their locations are presented in **Table 3.1** below.

Table 3.1: Summary of Proposed Soil Borings and Sampling

Soil Boring ID	Boring Depth (ft)	Proposed Sampling Interval (ft)	Target Analyses	Sampling Rationale
RI-SB-1 through RI-SB-13	20	0-1	TAL/TCL+30 and 1,4-Dioxane (All borings), PFAS (50% of borings)	Nature of Surface Soil (In areas with exposed surface)
		1-5		Nature and Extent of Fill Layer
		5-10		Characterize Bottom Fill Layer
		10-15		Characterize Soil Vertically
		15-20		
DUP1-2026MMDD through DUP4-2026MMDD	TBD	TBD	TAL/TCL+30 and 1,4-Dioxane (All borings), PFAS (50% of borings)	QA/QC
MS1-2026MMDD through MS4-2026MMDD	TBD	TBD		
MSD1-2026MMDD through MSD4-2026MMDD	TBD	TBD		
FB1-2026MMDD through FB4-2026MMDD	N/A	N/A		
TB1-2026MMDD through TB4-2026MMDD	N/A	N/A	TCL VOCs	QA/QC

The borings will be advanced to a depth of 20 feet bgs or to refusal, whichever occurs first. If refusal is not encountered, the borings will extend at least 10 feet into native material to adequately characterize the fill and underlying soils. Based on the findings of the Phase II ESA, soil contamination is unlikely to extend beyond 10.0 ft bgs. Borings will be completed using direct-push or other drilling methods as needed. Up to 65 soil samples will be collected, assuming a maximum of five (5) samples per boring at a minimum of one sample per 5-foot depth interval based on field screening that includes visual observations, photoionization detector (PID) readings and olfactory observations. Boring logs documenting soil classifications, PID readings, and visual observations will be provided in the final report. It should be noted that refusal was encountered between 2.0 and 10.0 feet bgs across the Site during the 2024-2025 Phase II investigation. All investigative derived

waste (IDW) of soil cuttings and purged groundwater will be containerized, sampled, and properly disposed of pursuant to DER-10 3.3.e requirements, further discussed in Section 4.

Soil samples will be analyzed by a NYSDOH Environmental Laboratory Accreditation Program (ELAP) certified laboratory for TCL + 30/TAL including VOCs by EPA Method 8260C, SVOCs and 1,4-dioxane by EPA Method 8270D, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, TAL metals by EPA Methods 6010C, 7471B, and Cyanide by EPA Method 9012B. Samples will also be analyzed for the 41 PFAS compounds by EPA Modified Method 1633A. Category B deliverables will be requested on each sample chain of custody. SESI's field sampling procedures are described in the Quality Assurance Project Plan (QAPP) presented in **Appendix B.** The Sampling Plan for Emerging Contaminants is included as **Appendix C.**
A summary of the parameters to be tested, the analytical methods and the holding times for the samples is shown on **Table 3.2**.

Table 3.2 – Soil Analyses Summary

Parameter and Analytical Method	Holding Time
Volatile Organic Compounds (VOCs) – USEPA 8260C	14 days
SVOCs (BNAs) and 1,4-Dioxane – USEPA 8270D or E	14 days (until extraction, 40 days extracted)
Pesticides – USEPA 8081B	14 days (until extraction) 40 days (extracted)
PCBs – USEPA 8082A	None
Metals - Method 6010D, 7470A for mercury, and 9012B for cyanide	180 days Cyanide: 14 days
PFAS – USEPA 1633A	28 days

Quality Assurance/Quality Control (QA/QC) samples will be collected and analyzed as specified in the QAPP. The number of duplicate, spiked, and blank samples analyzed will be collected at a frequency of one (1) duplicate for every 20 samples. The inclusion and frequency of analysis of field blanks will be on the order of one per every 20 soil samples but not more than one (1) per day. For the soil matrix, field blanks will be collected at a frequency of one (1) per day. Samples to be

analyzed for volatile organic compounds will be accompanied by a trip blank for each shipment and field blanks (soil). An equipment blank for PFAS will be collected once per day, regardless of whether equipment being used is disposable, at a frequency of one (1) per 20 samples taken for soil.

3.2 GROUNDWATER REMEDIAL INVESTIGATION

The Groundwater RI will be conducted to achieve the following:

- delineate the nature and extent of specific contaminants in the Site groundwater;
- identify actual or potential impacts to sensitive receptors, e.g. surface water;
- determine whether a contaminant plume exists;
- gather sufficient data to determine groundwater flow direction and contour map and evaluate groundwater remedial alternatives, as appropriate, and
- provide information on the background quality of the groundwater flowing into the Site.

3.2.1 MONITORING WELL INSTALLATION

During the March 2025 Phase II ESA, groundwater was encountered in the overburden zone at approximately 5 feet below ground surface (bgs) in the western portion of the Site. However, groundwater was not observed in the overburden zone in the eastern portion of the Site.

To investigate the groundwater on a Site-wide basis, up to four (4) permanent overburden and up to two (2) permanent bedrock groundwater monitoring wells will be installed as shown on **Figure 3.2**. The proposed groundwater monitoring wells and sampling details are presented in the **Table 3.3** below.

Overburden monitoring wells will be advanced to practical refusal at the bedrock surface and have up to 10 feet of screens.

Bedrock wells will be installed 15 feet into the bedrock and have 10 feet of screens sealed in bedrock. Monitoring well installation details are discussed below.

Table 3.3: Summary of Proposed Groundwater Monitoring Wells

Well ID	Type	Estimated Depth (ft bgs)	Estimated Screen Interval (ft bgs)	Target Analyses
RI-MW-01	Overburden	Refusal (Approx. 5.0')	0.0 - 5.0	TAL/TCL+30, PFAS, 1,4-Dioxane
RI-MWBR-02	Bedrock	20’	10 - 20.0	TAL/TCL+30, PFAS, 1,4-Dioxane
RI-MW-03	Overburden	Refusal (Approx. 7.0')	0.0 - 7.0	TAL/TCL+30, PFAS, 1,4-Dioxane
RI-MWBR-04	Bedrock	20’	10 - 20.0	TAL/TCL+30, PFAS, 1,4-Dioxane
RI-MW-05	Overburden	Refusal (Approx. 5.0')	0.0 -5.0	TAL/TCL+30, PFAS, 1,4-Dioxane
RI-MW-06	Overburden	Refusal (Approx. 10.0')	0.0 - 10.0	TAL/TCL+30, PFAS, 1,4-Dioxane

Overburden Monitoring Well Installation

Each monitoring well will be constructed with 2-inch diameter 10 feet well screens. The well screening will intersect the water table and extend to the bottom of the well boring. The annular space of each well will be filled with well sand to at least 2 feet above the screening and will be sealed with hydrated bentonite or cement grout. The wells will be subsequently completed with flush mount casing. A typical boring and well construction log is provided in **Appendix D**.

Bedrock Monitoring Well Installation

Where bedrock wells are needed, sonic or air rotary drilling will be used to advance boreholes into the bedrock to the bottom depths as specified in **Table 3.3**. Monitoring wells will then be constructed with 10 feet of 2” PVC screen at the bottom of the borehole. Solid 2-inch schedule 40 PVC risers will be installed from the top of the screen to ground surface. #2 Sand will be placed in the annular space around the well screen from the bottom of screen to one (1) foot above the top of screen to protect the screen from intrusion of bentonite or grout. At least two (2) feet of bentonite seal will be placed in the annular space in the rock around the well from above the sand pack. After bentonite cures for at least eight (8) hours, the annulus around the well will be sealed with grout mixture. Therefore, the bedrock wells are sealed in the rock. The wells will be subsequently completed with flush mount casing. A typical boring and well construction log is provided in **Appendix D**.

Monitoring Well Development

Once the grout cures for at least 24 hours, the wells will be developed in accordance with ASTM D5521. All monitoring wells will be developed or cleared of all fine-grained materials and sediments that have settled in or around the well during installation so that the screen is transmitting representative portions of the groundwater. A decontaminated pump or bailer will be used and subsequently decontaminated after each use following procedures outlined in the

Decontamination Protocol. Pumping or bailing will cease when the turbidity falls below 50 NTUs or until specific conductivity, pH, and temperature are stable (i.e., consecutive readings are within 10 percent with no overall upward or downward trends in measurements). Water generated during well development will be containerized, staged securely, and disposed of at appropriate permitted facilities as discussed in Section 4.0.

Monitoring Well Survey

Following well construction, the wells will be surveyed for location and ground, inner casing and outer casing elevations. The survey data will be provided pursuant to the DER-10 requirements in an acceptable format (e.g., North America Datum 83 [NAD83]). The wells will be gauged for groundwater depth to determine the groundwater elevation. The Site-specific groundwater flow direction and gradient will be determined based on the latest elevation data and summarized in the Remedial Investigation Report (RIR).

3.2.2 MONITORING WELL SAMPLING

One (1) round of sampling will be conducted from each well at least seven (7) days after monitoring well development. The data will be analyzed to determine whether groundwater contamination exists, and the magnitude and the extent of any potential contaminant plume. In addition to the analytical data, field measurements and chemical analyses will be conducted to characterize the impacted groundwater.

The wells will be sampled using the low-flow technique, when possible. A flow rate of 100 ml to 250 ml per minute is used to purge the wells. Drawdown should not exceed 0.3 feet. At the initiation of low flow purging water levels and field parameters are recorded. Field parameters are then monitored every five minutes during low flow purging using a flow through cell. When three consecutive measurements of pH differ by 0.1 units or less, with ORP within 10 mv or less, turbidity varies 10 percent or less, conductivity differs by 3 percent or less and dissolved oxygen by 10 percent or less, sampling may begin. Flow through cells allow continuous real-time readings. When the parameters stabilize, the flow through cell is disconnected and sample bottles are filled directly from the tubing. If the parameters of a well do not stabilize in a timely manner, the groundwater sample will be collected after emptying three well volumes from the sample well.

Groundwater samples will be analyzed by a NYSDOH ELAP certified laboratory, and Category B deliverables will be requested on each sample chain of custody.

All the wells will be sampled for TCL + 30/TAL metals, PFAS, and 1-4 dioxane. The VOCs will be analyzed by EPA Method 8260C, SVOCs by EPA Method 8270D, pesticides by EPA Method 8081B, PCBs by EPA Method 8082A, TAL metals by EPA Methods 6010C, 7471B, and 9012, PFAS compounds by Modified EPA Modified Method 1633A, and 1-4,dioxane by EPA Method 8270 SIM. The QAPP, which describes all field sampling procedures, is included as **Appendix B,** and the Sampling Plan for Emerging Contaminants is included as **Appendix C**.

In addition, QA/QC samples will be collected and analyzed as specified in the QAPP. Specifically, the number of duplicate, spiked and blank samples analyzed will be a minimum of one (1) duplicate for every 20 samples. For the aqueous matrix, field blanks will be collected at a frequency of one (1) per day. A trip blank will be included with each shipment of samples where sampling and analysis for TCL volatiles is planned (water matrix only). A trip blank will consist of 40 ml VOA vials prepared before the sample bottles are sent by the laboratory. It consists of a sample of distilled, deionized water that accompanies the other sample bottles into the field and back to the laboratory. The trip blank will be analyzed for TCL VOCs as a measure of potential contamination from background sources and their effect on the results. To check for contaminant carryover when non-dedicated sampling equipment is used, a rinsate blank will be submitted to the laboratory. This blank will also be analyzed for TCL VOCs. An equipment blank for Per- and polyfluoroalkyl substances (PFAS) will be collected once per day, regardless of whether equipment being used is disposable, at a frequency of one (1) per 20 samples taken for groundwater.

3.3 SOIL VAPOR INVESTIGATION

3.3.1 SOIL VAPOR POINT INSTALLATION

SESI will collect seven (7) sub-slab soil vapor samples from seven (7) soil vapor probe locations. In addition, one (1) ambient air sample will be collected per day from the Site concurrently with soil vapor sampling. The proposed soil vapor point locations are shown on **Figure 3.3**. The purpose of the soil vapor investigation is to assess the potential for vapor intrusion into future buildings. The applicable criteria for sub-slab vapor are the NYSDOH Decision Matrices (Amended February 2024) lower threshold values, which will be used for comparison purposes

only and not for remedial decisions. New York State does not have applicable remediation criteria for constituents found in soil vapor gases.

The soil gas samples will be collected in accordance with the procedures of the NYS Department of Health October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York (Amended February 2024). Specifically, a core bit will be used to drill a 1" borehole through the building slab. A sacrificial vapor point connected to flexible tubing will be inserted into the borehole. The annular space of the borehole will be filled with sand and the surface will be sealed with bentonite to seal the surface. Prior to sampling the tubing system will be purged of ambient air with a low-flow pump.

Co-located indoor air samples will also be collected in the current buildings. These buildings will eventually be demolished as part of Site redevelopment.

3.3.2 SOIL VAPOR AND INDOOR AIR SAMPLING

The ambient air, indoor air and sub-slab soil vapor samples will be collected using laboratory supplied 6.0 L stainless-steel summa canisters. The summa canisters will be equipped with a manometer to verify the canister is under vacuum, and a flow controller will be set to a flow rate not to exceed 15 ml/min over a 24-hour collection period. A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth/height, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols. The vapor samples will be sent to a certified laboratory for analysis of VOCs in accordance with EPA Method TO-15. The field sampling procedures are described in the QAPP, which is included as **Appendix B**.

As part of the soil vapor sampling, a tracer gas will be used to serve as a QA/QC device to verify the integrity of the soil vapor probe seal. Helium will be used as the tracer gas, and a box will serve to keep it in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer prior to sampling. If the tracer sample results show a significant presence of the tracer (> 10%), the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seals. SESI's field sampling procedures are described in the

QAPP presented in **Appendix B.** The proposed soil vapor sample points are presented in **Table 3.4** below.

Table 3.4: Summary of Proposed Soil Vapor Sampling

Location Name	Sampling Depth/Height (ft)	Sample Media	Summa Type	Flow Rate (mL/min)	Collection Period	Analysis
RI-SV-1 through RI-SV-7	Beneath Current Building Slabs	Soil Vapor	6.0L Canister	4.17	24 Hours	TO-15
RI-AA-1	3 ft above grade	Ambient Air				
RI-IA-1 through RI-IA-7	3 ft above grade	Indoor Air				

*One (1) ambient air sample will be collected per day of soil vapor sampling

4.0 DECONTAMINATION AND IDW

Equipment utilized for ground intrusive activities (i.e. borings and wells) will be decontaminated between each boring. Equipment utilized for sample collection (i.e. spoons, trowels) will be decontaminated between each sample unless disposable equipment is utilized. Appropriate decontamination areas will be established to support work being conducted in each area of the Site. PFAS free certified deionized water, supplied from the laboratory, will be used for the decontamination of the sampling tools if needed. Otherwise locally supplied water, if available, or water supplied by the driller in a tank, will be used to decontaminate the equipment.

All investigative derived waste (IDW) of soil cuttings and purged groundwater will be containerized, sampled, and properly disposed of pursuant to DER-10 3.3.e requirements. Drill cuttings produced on-site are presumed contaminated and must be placed on protective sheeting, covered when left overnight, and will be used to backfill their originating borehole unless conditions such as free product, gross contamination, penetration of confining layers, or installation of monitoring wells prohibit reuse; in such cases, cuttings will be containerized and managed as waste to be disposed of at appropriate permitted facilities. Water generated during well development or purging will be containerized, staged securely, and disposed of at appropriate permitted facilities.

Disposable sampling equipment, including macro core liners, spoons, gloves, bags, paper towels, and PPE that contacts environmental media, will be double bagged and disposed of as municipal trash in a facility trash dumpster as non-hazardous refuse.

5.0 SURVEY

After the RI sampling scope is completed, a survey will be completed, which includes the locations and elevations of all the monitoring wells, soil borings, and soil vapor points. Survey datum will be provided relative to NAD83. Elevation datum will be provided relative to NAVD88.

6.0 HUMAN HEALTH EXPOSURE ASSESSMENT

A qualitative human health exposure assessment will be performed for the Site in accordance with the NYSDEC DER-10 Appendix 3B. Sampling data, along with the physical conditions of the contaminant sources or physical hazards near the Site, will be reviewed. Potential on-site and off-site exposures will be evaluated. The Exposure Assessment will describe the nature and size of the population exposed, or potentially exposed, to the contaminants that are present at, or migrating from the Site, and will characterize the exposure setting, identify exposure pathways, and evaluate contaminant fate and transport.

Several objectives will be met by the exposure assessment. First, applicable Site information and characterization data for environmental media of concern will be evaluated. Applicable SCGs, including Part 375 SCOs and CP-51 SCOs for soil, and AWQS for groundwater and surface water, will be applied. Second, a qualitative assessment will be made if there is a potential for off-Site migration of any contaminants.

An assessment of current and future Site activities and Site use will be conducted in relation to potential human exposure. Next, potential exposure pathways will be identified, and each aspect of the potential exposure pathway will be evaluated. Soil and groundwater contamination will be addressed and the impact of remediation on future exposure scenarios will be analyzed.

7.0 FISH AND WILDLIFE IMPACT ANALYSIS

A Fish and Wildlife Resources Impact Analysis (FWRIA) Decision Key will be completed prior to the excavation work to determine if a FWRIA is needed. Contaminant migration pathways and any fish and wildlife exposure pathways will be identified. As stated in the FWRIA, “if no resources

are associated with the site or if there is no potential for contaminant migration to the resources, then only the necessary information to support that conclusion should be provided."

If resources are identified, or migration pathways exist, a FWRIA will be completed and submitted as part of the RI Report. The FWRIA would include qualitative estimates of the following: 1) the routes, intensity, frequency, and duration of actual or potential exposures to chemicals; 2) the nature and size of the population exposed to the contaminants that are present at or migrating from the site; 3) the exposure setting and possible exposure pathways; and 4) contaminant fate and transport.

A Fish & Wildlife assessment is not anticipated for this Site due to its urban location and distance from surface water bodies and wildlife areas. The DEC Environmental Resource Mapper, located at the link below, does not identity any significant natural communities or rare plants or animals in the vicinity of the Site.
https://gisservices.dec.ny.gov/gis/erm/?_gl=1*faquhx*_ga*MTA0MDU5ODAxMi4xNjk2NTEwOTc0*_ga_QEDRGF4PYB*MTc0MTExNDEwMy4xNTkuMS4xNzQxMTE1MzUxLjAuMC4w

8.0 ENVIRONMENTAL FOOTPRINT ANALYSIS

An Environmental Footprint Analysis (EFA) will be completed prior to the remedial work as part of the feasibility study, remedial design and updated throughout remedial construction to ensure contributions to the remedial footprint are being identified, monitored and addressed. SESI will utilize the EPA's Spreadsheets for Environmental Footprint Analysis (SEFA) and SiteWise™ to analyze the environmental footprint of the Site cleanup project, determine which cleanup activities drive the footprint, and adjust project parameters to reduce the footprint.

9.0 DUSR

Following the completion of the laboratory analysis program, a Data Usability Summary Report (DUSR) will be completed for the lab data generated during the RI and included as part of the RI Report. The DUSR is carried out as specified in DER-10 to evaluate the quality control measures that were implemented during the field and laboratory analytical programs, with the objective of determining whether the reported analytical data are representative and usable for decision making. The DUSR will evaluate whether the data are technically defensible (i.e. were all analytical data requirements met and documented?). Data usability analysis reviews the Site

data to determine whether they are adequate to draw conclusions regarding the nature and extent of contamination.

The items that will be reviewed as part of the DUSR will include the following:

- Completeness (number of samples collected and analyzed compared to plans)
- Chains of custody are complete and accurate
- Holding times
- Instrument calibration
- Relative percent difference between field duplicates
- Reasonableness of data (e.g. relationships between total and soluble analytes)
- Blank contamination

The DUSR will be conducted in accordance with guidelines provided under Appendix 2B of DER-10. The site-specific Quality Assurance Project Plan (QAPP) is included in **Appendix B**.

10.0 REMEDIAL INVESTIGATION REPORT

Following the completion of the RI activities and the receipt of sample results, a RIR will be prepared. The RIR report will summarize the activities completed during the RI including analytical results, well construction and sampling logs, conclusions from the human health exposure assessment and from the FWRIA if necessary, a DUSR, and laboratory data packages. Scaled figures showing the sample locations and areas of contamination exceeding applicable standards will be prepared for soil, soil vapor, and groundwater. Sampling results will be summarized and discussed and the need for additional investigation and remediation will be evaluated (including the removal of hydraulic lifts, drains, subsurface pits, tanks, drains, etc. if applicable). In addition, analytical summary tables will be prepared for soil, soil vapor, and groundwater compared to applicable standards.

The RIR will also include: 1) a summary of the Site history and previous investigations, 2) a description of current site conditions, 3) the identification of exposure pathways via a Qualitative Human Health Exposure Assessment; an analysis of the results, 4) a description of the nature and extent of the contamination including post remediation soil data collected during prior investigations (i.e., UST, pit, oil/water separator, and lift removals) ; and 5) a detailed conclusions with recommendations.

Analytical data collected during the Remedial Investigation will be submitted in the NYSDEC approved Electronic Data Deliverable (EDD) format. EDDs will be prepared using the NYSDEC's Environmental Information Management System (EIMS) database software application EQuIS™ for submission.

11.0 QUALITY ASSURANCE/QUALITY CONTROL

QA/QC is addressed in the QAPP included as **Appendix B**. The QAPP outlines procedures to be followed for sampling and analysis to ensure quality of the results. A DUSR will be prepared for each laboratory report and will be provided with the final reports to document the reliability of the sample results.

12.0 HEALTH AND SAFETY PLAN

A Site-specific Health and Safety Plan (HASP) has been prepared and is included as **Appendix E**. All on-site personnel and visitors involved in the RI will be required to read and sign the HASP prior to entry of the Site.

13.0 COMMUNITY AIR MONITORING

A Community Air Monitoring Plan (CAMP) is provided as **Appendix F**, in accordance with DER-10 requirements for remedial investigation. The CAMP sets forth air monitoring procedures that will be utilized to measure airborne emissions during the RI, to minimize the release of contaminants to off-Site areas during any ground-intrusive and soil handling activities on the Site.

14.0 CITIZEN PARTICIPATION

Citizen participation activities will be performed throughout the RI process to involve and inform the public. The specific citizen participation activities to be performed are outlined in the Citizen Participation Plan (CPP), included as **Appendix G**.

15.0 REMEDIAL INVESTIGATION SCHEDULE

The proposed remedial investigation schedule is presented on **Table 15.1** below.

Table 15.1: Proposed Remedial Investigation Schedule

Activity	Scheduled Date
Remedial Investigation – Soil and Soil Vapor Sampling	Winter/Spring 2026
Remedial Investigation – Groundwater Sampling	Winter/Spring 2026

Activity	Scheduled Date
Submit Draft RIR	Spring/Summer 2026

16.0 PROJECT CONTACTS

The RIWP activities will be conducted by SESI and their qualified subcontractors, on behalf of 418 North Division Street LLC. The organization of SESI's key project management and field staff, and respective areas of responsibility, is presented in **Table 16.1** below along with the names of subcontractors.

Table 16.1: Project Contacts

Role	Name	Telephone No.
Project Principal	Fuad Dahan, P.E., PhD	973-808-9050 x249
Project Manager (PM)	Sheng Long	973-808-9050 x278
Engineer of Record	Fuad Dahan, P.E., PhD	973-808-9050 x249
Assistant Project Manager	MaryKate Chorazak	973-808-9050
Field Team Leader	TBD	
Quality Assurance Officer	Joe Scardino	973-808-9050

APPENDIX B SESI Laboratory Test Data

1.0 INTRODUCTION

SESI Consulting Engineers (SESI) recently completed a preliminary geotechnical investigation for the proposed mixed-used development at 418 N. Division Street, Peekskill, NY, herein reference as "the Site." This geotechnical investigation report summarizes SESI's geotechnical investigation, our findings, and our preliminary foundation design recommendations for the proposed development. The report also presents recommendations regarding other construction-related aspects of the proposed development, such as site preparation, groundwater control, excavation support and utility support.

All elevations given in this report are referenced to the 1988 North American Vertical datum (NAVD88), unless otherwise noted.

2.0 PROJECT DESCRIPTION

2.1 Site and Surrounding Conditions

Based on the November 18, 2024, *Topographic Survey of Property* prepared by Geologic Land Surveying, PLLC, the site is an approximately 1.068-acre parcel located on Tax Lots 23.78-1-9, 23.78-1-10A, 23.78-1-10B, 23.78-1-11 and 23.78-1-11 in Peekskill, New York. The site is bordered to the north by Constant Avenue, to the west by Highland Avenue, to the east by North Division Street, residential and commercial buildings, and lastly, to the south by residential and commercial buildings.

A 25-foot-wide ingress and egress easement traverses the northern portion of the site in a north-south orientation for a total approximate length of 93 feet. The easement is most likely to service the utility valve located on-site at the end of the easement. At the time of our visit, the utility valve was observed to be removed and the utility line was sealed with end caps. We recommend additional information is obtained from the easement owner prior to the start of the redevelopment design phase.

Topographically, based on information provided in the November 18, 2024, *Topographic Survey of Property* prepared by Geologic Land Surveying, PLLC, the project area generally slopes downward from a high point in the northeastern portion of the site, with an approximate elevation of ±198, to a low point in the northwestern portion of the project area, with an approximate elevation of ±174. Additionally, the site slopes downward from a high point in the southwestern portion of the site, with an approximate elevation of ±177.5, to the low point in the northwestern portion of the site, with an approximate elevation of ±174.

2.2 Proposed Development

Based on recent discussions with the project team and the latest architectural plans prepared by Marin Architects, dated January 6, 2025, we understand that the proposed development will involve demolishing the existing on-site buildings and constructing a six-story mixed-use building with multiple cellar levels. Based on the aforementioned architectural plans, we understand the cellars will be fully and partially below grade as follows:

- The cellars are up to three (3) stories beneath the existing ground at the northeastern portion of the site. The cellars are partially and gradually exposed, from three (3) stories to one (1) story beneath the ground, along the northern face of the building, running parallel to Constant Avenue from N. Division Street towards Highland Avenue.
- The cellar is one (1) story beneath the existing ground at the intersection of Constant Avenue and Highland Avenue.

- The cellars are up to two (2) stories beneath the existing ground at the southwestern portion of the site. The cellars are partially and gradually exposed, from two (2) stories to one (1) story beneath the ground, along the western face of the proposed building, running parallel to Highland Avenue towards Constant Avenue.

The proposed building will comprise of five (5) residential levels, two (2) commercial levels and garage levels. Additionally, the southeastern portion of the site will consist of landscape area. We understand the lowest finished floor slab elevation for the proposed structure will be at an approximate elevation of ±164.4. We understand the existing site grades need to be cut approximately 10 to 26 feet in order to meet the proposed finished floor elevations.

At this time, structural plans have not been provided, nor have we received any information regarding wall, floor, or column loads for the proposed construction. Once the structural plans are finalized, we recommend SESI reviews them to ensure that our recommendations remain applicable. For the purposes of this report, we have assumed typical residential wall, floor, and column loads for the proposed structures.

3.0 AVAILABLE INFORMATION REVIEW

We obtained and reviewed available historic aerial photographs, geologic maps, and FEMA flood map for the Site.

- FEMA Flood Insurance Rate Map - We researched and reviewed the FEMA Preliminary Flood Insurance Rate Map, Map Number 36119C0016F (effective as of 9/28/2007) which indicates that the Site is located within “Zone X” which is determined to be outside the 0.2% annual chance floodplain. This should be confirmed by the site civil engineer.
- Historic Aerial Photographs – Historic aerial photographs indicate that the existing buildings located on the site predate 1964. No further redevelopments seem to have occurred from 1964 to present time.
- Geological Mapping – We reviewed the Geologic Map of New York – Lower Hudson Sheet compiled and edited by Donald W. Fisher, Yngvar W. Isachsen and Lawrence V. Rickard in March 1970, and the Surficial Geologic Map of New York – Lower Hudson Sheet compiled and edited by Donald H. Cadwell in 1989. The surficial geology map indicates that the surficial geology of the site consists of till of variable texture, usually poorly sorted diamict and relatively impervious. The bedrock geology map indicates that the bedrock geology consists of biotite-hornblende granite and granitic gneiss.

4.0 PRELIMINARY SUBSURFACE INVESTIGATION AND LABORATORY PROGRAM

4.1 Field Investigation

Our geotechnical subsurface investigation consisted of six (6) drilled borings (GT-1 through GT-6). A location plan showing the approximate locations of the drilled borings is attached as ***Drawing 1***. Individual boring logs, which describe the materials encountered along with a key to SESI soil terminology, are presented in **Appendix A**.

Before drilling the borings, a private utility mark-out was performed at the site by PG Environmental Services, Inc. to identify areas free of detectable subsurface utilities. The geotechnical borings were drilled by PG Environmental Services, Inc. on January 29 through January 31, 2025, using a track-mounted drill rig to depths ranging from ±six (6) to ±24 feet below the existing grade elevation.

In each boring, conventional mud-rotary drilling techniques were used to advance the boring. Near continuous soil sampling was performed below the existing site grade to the approximate depth of the bedrock and/or weathered rock. The soil samples were typically obtained using Standard Penetration Test (SPT) procedures in general accordance with the provisions of ASTM D1586; a 140-pound automatic hammer was used to advance the SPT sampler in all borings. The drilled borings were backfilled with soil cuttings. Our field engineer identified soil classifications for each soil sample. The samples were transported to our Parsippany, New Jersey office, where soil classifications were confirmed by our office project personnel.

During our geotechnical investigation, SESI also observed twenty (20) supplemental environmental borings throughout the site ranging from approximately two (2) feet to ten (10) feet below ground surface on January 28 through January 31, 2025. These are indicated as SB-100 through SB-119. Additionally, SESI installed two (2) monitoring wells to depths of ten (10) feet and thirteen (13) feet below grade, TW-1 and TW-2, respectively. The environmental borings were performed using direct push methods to advance the sampling sleeve. Our field engineer identified and classified the soils for each sampled interval. Our field engineer screened for organic vapors using a photo-ionization detector (PID) and took soil samples at select locations. Additionally, we collected soil vapor samples under the existing concrete slabs located throughout the site. The location of these explorations and wells are shown on the *Exploration Location Plan*, which is included as **Drawing 1**. The environmental logs are attached in Appendix A of this report. A summary of our environmental investigation will be provided under a separate report.

The fieldwork was conducted under the direct technical observation of a geotechnical engineer from SESI Consulting Engineers. Our representative located the exploration points in the field, maintained continuous logs of the exploration activities as the work progressed, and coordinated the soil sampling operations to obtain the desired subsurface information. The boring locations were laid out in the field using Google Earth mapping software and an electronic device. Ground surface locations and elevation at each exploration point were obtained from the November 18, 2024, *Topographic Survey of Property* prepared by Geologic Land Surveying, PLLC, using nearby landmarks as reference points. The actual boring locations may vary by several feet and should be confirmed by a survey if required.

Previously, SESI observed twelve (12) environmental borings throughout the site on December 19 and 20, 2024 during an initial environmental Phase II investigation. The environmental borings were performed to depths ranging from two (2) feet to ten (10) feet below ground surface. During this investigation we performed soil sampling, soil vapor sampling and soil identification as previously stated. These are indicated as SB-1 through SB-15 on **Drawing 1.** Individual environmental logs are presented in **Appendix A**.

4.2 Geotechnical Laboratory Program

Soil samples suitable for identification purposes were extracted from the borings. The soil samples were brought to our soil mechanics laboratory for additional classification and appropriate geotechnical testing. The laboratory testing program consisted of one (1) mechanical grain size analysis and one (1) water content determination. The results of the percent passing sieve No. 200 tests and the water content determinations are presented on the individual boring logs. The results of the mechanical grain size analysis are presented on the individual boring logs and in graphical form in **Appendix B**.

4.3 Subsurface Conditions

The investigation data indicates the subsurface conditions at the site generally consist of surficial materials, underlain by granular fill, underlain by till, and underlain further by Gneiss bedrock. The

surface materials consisted of asphalt, concrete and sub-base granular materials. The granular fill consisted of sands and gravels with little to trace amount of fines. The natural till consisted predominantly of sands, with little to trace amounts of silts and clays with variable amounts of medium to fine gravel. The bedrock in this area consisted of Gneiss and/or Granitic Gneiss. The bedrock was found to be excessively weathered within the upper portions. The natural soils and bedrock encountered in our borings generally agreed with the published geological records. The following generalized strata are listed in order of increasing depth.

4.3.1 Surface Materials

Asphalt pavement was observed in borings GT-2, GT-4 and GT-5. The asphalt layer thickness was measured to be approximately six (6) inches. Concrete was observed in borings GT-1, GT-3 and GT-6. The concrete thickness was observed to be approximately six (6) inches.

4.3.2 Granular Fill

Below the surface materials in borings GT-1, GT-4, GT-5 and GT-6 granular fill was encountered. The granular fill extended to about 2 feet below existing grades. The granular fill generally consisted of coarse to fine sand, little to trace amounts of silt, clay and little to some amounts of coarse to fine gravel, with concrete debris. Based on the recorded SPT N-values, the granular fill was observed in a loose to very dense condition, which is typical of fill material.

4.3.3 Till

Natural soils were encountered beneath the granular fill or surface material in all boring locations at depths ranging from approximately six (6) inches to six (6) feet below existing surface grade. The natural soils extended to the top of weathered rock and/or bedrock in all borings with a layer thickness of approximately 1.5 feet to 12 feet. The natural soils generally consisted of coarse to fine sand with trace to little amounts of silt and clay, and little amounts of coarse to fine gravel. Based on the observed SPT N-values, the natural till was generally observed in a medium dense to very dense condition.

4.3.4 Decomposed/Weathered Bedrock:

Weathered/decomposed rock material was encountered in GT-3, GT-4 and GT-5 at depths ranging from approximately 4 to 6 feet below ground surface. The decomposed bedrock extended to top of competent bedrock with a layer thickness of approximately 2 to 7.5 feet. The weathered rock was augered through using conventional mud rotary drilling techniques and was observed to consist of heavily weathered Gneiss gravel and cobble-sized fragments, little to some amounts of coarse to fine sand and trace amounts of silt and clay.

4.3.5 Bedrock

Bedrock was encountered in GT-1, GT-2, GT-4 and GT-6 at depths ranging from approximately 5 to 16 feet below the existing ground surface. A total of six (6) 5-foot rock cores and one (1) 3-foot rock core were collected at boring locations GT-1, GT-2, GT-4 and GT-6 upon encountering auger refusal. The bedrock generally consisted of Granitic Gneiss. Rock core recovery ranged from approximately 60 to 100 percent, with a Rock Quality Designation (RQD) ranging from approximately 17 to 78 percent. The upper portions of the bedrock are generally more weathered and RQD generally increases with depth. See the table below for the relationship between RQD and Rock Quality.

RELATIONSHIP OF RQD AND ROCK QUALTIY:

ROCK QUALITY DESIGNATION (RQD)[1]	DESCRIPTION OF ROCK QUALITY
0 – 25	VERY POOR
25 – 50	POOR
50 – 75	FAIR
75 – 90	GOOD
90 – 100	EXCELLENT

Rock Quality Designation" is defined as a modified core recovery ratio that considers only pieces of the core that are at least 4 inches long. Obvious mechanical fractures caused by drilling are ignored in this system.

4.3.6 Groundwater

During our preliminary geotechnical investigation, groundwater was observed in boring GT-6 at an approximate depth of 10 feet below surface grade. Additionally, during our supplemental environmental and preliminary geotechnical investigation, we installed two (2) monitoring wells, TW-101 and TW-102, to an approximate depth of 10 and 13 feet below surface grades, respectively**.** The monitoring wells were pumped dry and allowed to recharge for a minimum of 24 hours. SESI returned to the site to observe monitoring wells, TW-101 and TW-102, on February 7, 2025, and noted the installed monitoring wells were dry. As such, the groundwater encountered in GT-6 is most likely a perched water condition. Fluctuations of a few feet in the perched water elevations should be anticipated based on the time of year and amount of recent precipitation.

We previously installed three (3) monitoring wells, TW-1 through TW-3, during our preliminary Phase II Site Assessment on December 19 and December 20, 2024. The monitoring wells were installed up to 10 feet below surface grades. The monitoring wells installed during the Phase II encountered groundwater in the overburden zone at approximately 5 feet below ground surface (bgs). However, groundwater was not observed in the overburden zone in the eastern portion of the Site during the preliminary Phase II investigation.

Based on the observations of our geotechnical investigation and review of the previous environmental Phase II information, it is likely that groundwater encountered is trapped water in the till soils over the less permeable bedrock. However, we recommend this is confirmed during the demolition and/or with additional monitoring wells once the final lowest level slab elevation is known.

The location of the monitoring wells can be observed in the attached **Drawing 1.**

During construction, groundwater may be observed, likely trapped water inside rock fractures or on top of the rock. It should also be noted that localized zones of perched water may be encountered within the fill, and above zones with high percentages of fine-grained soils.

5.0 EVALUATION AND RECOMMENDATIONS

5.1 Introduction

The recommended building area preparation procedures and support considerations discussed in this report are based primarily on geotechnical engineering considerations. Our geotechnical design considerations may require modifications to address environmental and/or legal considerations. This may include reuse of on-site materials, handling and disposal of soils, pumping/treating of groundwater, etc.

From a foundation support standpoint, this site can be considered good with respect to providing satisfactory support for the planned building. The bedrock will provide suitable support for conventional shallow foundations with moderate allowable bearing capacities. The primary negative aspects of the project site include the following:

- Rock Excavation: Rock removal will be required to reach the proposed bottom of excavation elevation. It is anticipated that rock will be encountered approximately five (5) feet from existing grades in the central portion of the site, approximately six (6) feet from existing grades in the northwestern and northern portion of the site and approximately sixteen (16) feet from existing grades in the northeastern portion of the site. This indicates the need to remove up to twenty-two (22) feet of rock in some areas. It is recommended that line drilling is performed along the property line or excavation limits prior to excavation of any bedrock to control the limits of rock removal and to prevent overbreak.
- Partial Over-excavation of Overburden: Depending on the proposed footing elevation relative to the top of bedrock, over-excavation may be necessary to reach a suitable bearing stratum (i.e., bedrock), specifically on the northwestern portion of the site. The proposed footing must extend to the top of bedrock to prevent differential settlement of the proposed structure. Perched groundwater may be encountered during over-excavation operations. The Contractor should implement proper dewatering techniques and consider any required environmental requirements for treating and disposing of the groundwater.

5.2 Site Preparation Procedures

5.2.1 Demolition

Site preparation should begin by demolishing the existing structures and removing all existing surface improvements within the site. All foundations, subsurface walls, concrete slabs, asphalt and all subsurface utilities that will be abandoned should be completely removed from within the limits of the proposed building areas. Following demolition and prior to the excavation for the proposed cellars, a support of excavation (SOE) system should be installed. The support of excavation system may be required prior to removing some existing site features, especially near the property line.

5.2.2 Specific Building Area Procedures

In general, the building area preparation procedures should consist of the installation of the temporary excavation support system, followed by mass excavating the existing building foundations within the proposed building limits. Following the existing building removal, the rock excavation for the proposed basement levels can be performed to the top of bedrock. A rock stabilization and/or rockfall prevention system may need to be installed on areas of the exposed

rock face showing inadequate rock competencies. The bedrock competency should be evaluated by a qualified geotechnical engineer.

5.2.3 Rock Excavation

The quality of rock to be removed is expected to be fair to good below the weathered / decomposed rock stratum and highly fractured upper portions of the bedrock. We expect rock excavation can be accomplished using hydraulic hoe rams, splitters, and excavators fitted with special ripping teeth. Rock excavation should be controlled to prevent excessive rock over-break and vibrations that may adversely affect the existing neighboring structures and roadways. If the Contractor elects to use blasting to expedite the rock excavation process, the Contractor should strictly comply with all applicable monitoring requirements. Rock excavation work will need to be performed very carefully to ensure vibration and movement threshold levels established for the adjacent structures and utilities are not exceeded, and neighboring structures and utilities are not adversely impacted or damaged. Vibration and rock over-break control methods should be used during excavation. These methods typically include line and channel drilling to control the over-break, and pre-splitting and smooth wall blasting to control vibrations. The purpose of these methods is to ensure an air cushion and to establish a crack plane between the peripheral holes to thereby minimize the propagation of primary vibrations and strain cracking in the rock mass beyond the excavation perimeter. The method and procedure selected will depend upon the relative location of the excavation work with respect to the neighboring structures. Line drilling should consist of 2-to-3-inch-diameter holes spaced center-to-center at no more than three times their diameter. Channel drilling should consist of 2-to-3-inch-diameter holes drilled intersecting one another. Excavation vibration control can also be achieved by limiting the equipment's impact energy, or in case of blasting, by reducing the charge per delay, to a value that would produce non-damaging levels of ground vibrations. The ground vibrations and adjacent building movements should be monitored and carefully reviewed during the work. The Contractor's soil and rock excavation, removal, and associated monitoring plan should be prepared by the Contractor's Professional Engineer licensed in the State of New York (with the necessary input from a licensed blaster) and experienced in similar controlled rock excavation and removal activities. This plan should be submitted to the Owner and the Geotechnical Engineer for review.

5.3 Fill Placement

In any areas, if any, that require soil compaction, a trench roller exerting a minimum of 5,000-pounds-force shall be used. A minimum of four passes per lift shall be observed by a qualified geotechnical engineer. Lifts should be placed in a maximum 12-inch loose lift. In-place field density tests should be performed to determine the adequacy of the compacted soil fill. Structural fill should be compacted to a minimum of 92% of the Modified Proctor (ASTM D1557), and an average of 95% of the Modified Proctor (ASTM D1557). Fills located within three (3) feet vertically of a bearing structural element (i.e. footing, pavement, etc.) should achieve a minimum of 95% of the Modified Proctor Density (ASTM D1557). Wetting or drying of the fill material should be accomplished as necessary to achieve adequate compaction.

Areas with no structural loads may be compacted to a minimum of 90% of the Modified Proctor Density (ASTM D1557).

Backfill in confined and load bearing areas should be placed in a maximum eight (8) inch loose lift and compacted to 95% of the Modified Proctor Density (ASTM D1557).

Crushed stone/bedrock can be used as structural fill given a maximum particle size of six (6) inches. If offsite borrow material is required, it should consist of a granular material with the maximum particle size of 6 inches and a maximum amount of fines (percentage passing a No. 200 mesh sieve) of 15% to help facilitate construction during wet weather. The “fines” should be non-plastic.

5.4 Control of Groundwater

We anticipate groundwater seepage will be encountered during construction, trapped throughout the overburden soils, at the soil/rock interface, and from rock fractures, especially during periods of wet weather. During construction, gravel filled sumps with pumps should be installed below the subgrade elevation to allow for temporary dewatering of the excavation. Dewatering should be done in accordance with all applicable regulations.

5.5 Slopes and Excavations

OSHA requires that all excavation in excess of 4 feet be shored, braced, or adequately benched/sloped in order to provide protection from sidewall collapses, with all excavations conducted in accordance with 29 CFR Part 1926 “Safety and Health Regulations for Construction,” Subpart P “Excavations.”

All temporary excavations greater than 4 feet in depth should have the sides sloped back or be appropriately sheeted and braced in accordance with all applicable codes and be evaluated by a qualified geotechnical engineer. This is discussed further in the Temporary Support of Excavation section of this report.

5.6 Utility Lines

The site soils will provide suitable support for utility lines. Cobbles greater than 3 inches in diameter should be removed from the utility line subgrade or a minimum 4-inch thick sand layer placed beneath the utility lines. If utility lines fall within soft soils, the excavation should be extended an additional 12 inches and replaced with ¾-inch clean crushed stone or clean sand and gravel.

Backfill material placed around utility lines to 6 inches above the utility line should have a maximum particle size of 1.5 inches. Backfill of utility trenches that fall within load-bearing areas should be placed in maximum 6-inch-thick lifts and compacted to the same density requirements as in the building/parking areas. Trench backfill in non-load bearing areas should be compacted to 90 percent of the Modified Proctor density (ASTM D1557).

6.0 FOUNDATION DESIGN CRITERIA

6.1 Shallow Conventional Footings

After the site preparation procedures described above are completed, the building foundation can be conventional spread/strip footings bearing on bedrock. The rock surface should be relatively flat, or a leveling mat of concrete (mud-mat) placed to create a level working surface. If a leveled surface cannot be obtained, the footings may need to be pinned to the rock surface and should be designed on a case-by-case basis. For a sound rock, the surface is to be blown clean and free of any standing water, soil or loose rock. Any decomposed rock should be removed, and the bearing surface should be inspected by a qualified SESI engineer. The footings may be designed for a maximum net allowable bearing pressure of 10 tsf (20,000 psf) within sound bedrock or 6 tsf (12,000 psf) on weathered/fractured bedrock. The maximum allowable bearing capacities recommended herein are higher than the presumptive bearing capacities provided in Table

1806.2 *Presumptive Load-Bearing Values* of the 2020 New York State Building Code and may require approval of the local building department.

Regardless of the loads, the minimum plan dimension of isolated footings should be 36 inches, and the minimum width of continuous footings should be 24 inches. A base coefficient of sliding of 0.45 may be used for shallow foundation founded on bedrock.

6.2 Below-Grade Slab and Walls

The slab-on-grade floor system can be designed using a subgrade modulus of 175 pci, assuming that a 6-inch-thick layer of granular material with a maximum particle size of 1.5 inches and a maximum percent passing the No. 200 mesh sieve of 12 percent is placed beneath the floor slab.

SESI recommends that an exterior drainage system be installed to mitigate hydrostatic pressure along the below grade exterior walls. The exterior drains should extend to the bottom of the foundation and consist of 4-inch ADS piping wrapped in filter fabric, backfilled with 12-inches of ¾-inch diameter clean crushed stone. The use of drainage boards along the exterior walls could also facilitate the drainage of perched groundwater near the foundation walls. The exterior drains should be gravity fed to follow the natural bedrock surface slope, a sump pit within the basement or to the local sewer system. This should be coordinated with the project civil engineer and confirm what is permitted by the City of Peekskill. The installation of a one-way valve could mitigate the risk of storm sewer backup into the drainage piping if the drainage is fed to the sewer system.

SESI recommends that below grade walls be waterproofed, and water-stop should be placed at all below-grade joints. The waterproofing could include the use of a membrane such as Preprufe/Bituthene waterproofing system by W.R. Grace and Co. extending to the bottom of the below grade wall footings. We recommend that a sub slab drainage system be installed below the basement slabs to allow for any rise in the perched groundwater elevation during precipitation events. The sub-slab drainage system should be gravity fed to follow the natural bedrock surface slope, a sump pit within the basement or to the local sewer system. This should be coordinated with the project civil engineer and confirm what is permitted by the City of Peekskill. A vapor barrier should also be installed to protect the cellar floor slab from damage due to water vapor in areas that are finished or are moisture sensitive.

6.3 Seismic Design

Based on a structural occupancy/risk category of I/II/III and information provided by the ASCE Hazard Tool, the following seismic design criteria should be used for this project. Site Class D can be used for seismic design purposes in accordance with the 2020 New York State Building Code.

Mapped Spectral Response Acceleration for Short Periods	S_S = 0.28g
Mapped Spectral Response Acceleration for 1-Second Period	S_1 = 0.061g
Site Coefficient	F_a = 1.6
Site Coefficient	F_v = 2.4
Spectral Response for short periods	S_{MS} = 0.441g
Spectral Response for 1 second period	S_{M1} = 0.145g
Design Spectral Response Acceleration for Short Periods	S_{DS} = 0.294g
Design Spectral Response Accelerations for 1-Second Period	S_{D1} = 0.097g

7.0 TESTING AND INSPECTION REQUIREMENTS

7.1 Testing Requirements

During the placement of all fills, visual observations and in-place density tests shall be performed to determine the adequacy of the compacted fill. In-place density testing shall be conducted in accordance with appropriate ASTM testing standards. Density testing should be done in accordance with the following minimum frequency requirements; or as determined by the geotechnical engineer.

Building Pad Subgrade Areas: Minimum of 4 tests per 12-inch lift; spacing not to exceed 50 feet between test locations, or as determined by the geotechnical engineer.

Parking/Roadway Areas: Minimum of 3 tests per 12-inch lift; spacing not to exceed 100 feet between test locations, or as determined by the geotechnical engineer.

Utility Trenches: Minimum of 1 test per 6-inch lift; spacing not to exceed 50 feet between test locations, or as determined by the geotechnical engineer.

7.2 Inspection

The recommendations presented in the previous sections of this report are based on the assumption that the site preparation procedures will be done under engineering inspection by a representative of this office. SESI should inspect the excavation support systems, subgrades, deep foundation elements (if required) and fill placement. Visual observations and in-place density testing should be done throughout fill construction to determine that the work is done in accordance with our recommendations.

Additionally, we should inspect and approve the bottom of all footing excavations prior to placement of concrete to determine that the founding materials can support the anticipated foundation loads.

8.0 ADDITIONAL RECOMMENDATIONS

8.1 Temporary Support of Excavation

Stabilizing the upper portion of the foundation excavation would initially require stabilization of the soil overburden and likely a portion of the decomposed rock above the rock excavation. Soldier piles with timber lagging is one recommended support system to cut the areas adjacent to the roadways and adjacent structures. H-Pile sections or pipe piles would be installed by drilling though the overburden soils and decomposed rock and into the competent bedrock. The drilled piles would require casing up to the competent bedrock surface and then embedded into the competent bedrock as required. Timber lagging would then be installed off the back face of the soldier piles as excavation of the Site progresses in a top-down construction sequence. If groundwater seepage is observed during the SOE installation, gravel filled sump pumps can be utilized to allow proper construction. Dewatering should be performed in accordance with all pertaining environmental regulations.

Unless access agreements and easements are obtained to install the temporary SOE piles outside of the property, the SOE piles will be installed within the property. This will result in needing to embed the SOE piles within the foundation walls or offset the foundation wall from property line, reducing the total cellar floor area.

The soldier pile wall should be supported, as needed, using rakers and/or struts attached to the soldier piles by a Steel H-beam waler. In areas where the raker and waler system are not appropriate, the wall can be supported by installing tieback anchors, drilling into the soils behind

the wall and grouting the anchors in-place. Installation of tieback anchors beyond the property line will require access agreements with adjacent properties or the City of Peekskill. Design of the soldier pile retaining wall should limit the deflection at the top of the wall to less than 1-inch when in service adjacent to sidewalks. Depending on the proximity, depth, and condition of existing neighboring building foundations, the SOE system may need to be designed with more stringent lateral movement requirements.

Once the soldier pile and lagging sections attain the top of competent rock, an open cut within the rock would begin as required. Stabilization of the rock face would be accomplished using temporary rock bolts and/or shotcrete, as necessary. Alternatively, the lagging section could continue to the bottom of the excavation to provide stabilization of the rock face, if needed.

Some alternate support of excavation systems could be designed as a dual-purpose temporary SOE and permanent foundation element in coordination with the project structural engineer of record. These systems usually include a drilled concrete secant pile wall or steel sheeting wall. Although the steel sheeting wall may not be an effective solution due to the high elevation of rock and proposed rock excavation, a drilled secant pile wall may provide a more constructable alternative solution. Drilled secant piles consist of overlapping drilled concrete shafts typically 24 inches in diameter, with a steel core beam installed in every other secant pile. A secant system may be designed to serve as the temporary support of excavation system as well as the exterior perimeter foundation walls.

8.2 Underpinning

Excavation adjacent to neighboring buildings could require underpinning and should be further evaluated. The selection of the SOE and underpinning systems is contingent on the proximity of the buildings in relation to the proposed excavation, the elevation of the neighboring building's footings, and the condition of the footings. Pending further evaluation of the adjacent existing building foundations in relation to the proposed construction, SESI can provide additional underpinning recommendations such as push piles, jet grouting, compaction grouting, concrete piers, etc. to be performed under the neighboring buildings to allow for the construction of the proposed building foundations. These underpinning techniques will require access agreements be implemented with neighboring property owners.

8.3 Preconstruction Survey and Monitoring Program

A preconstruction survey (existing conditions survey) of all neighboring structures, sidewalks and utilities in nearby areas should be performed prior to demolition. The pre-construction survey would provide the Owner, the SOE designer, and the foundation contractor with documentation of the existing condition in the event of a future damage claim. The pre-construction survey should be made by a qualified Progressional Engineer experienced in such documentation work. The pre-construction survey should include photographs and notes on existing cracks, damage, and wear of existing building and infrastructure. The pre-construction survey would serve as a pictorial and quantitative reference document to assess conditions prior to construction. A construction monitoring program should be designed for monitoring the responses of adjacent structures and evaluating construction procedures based on the pre-construction survey. This program should consist of monitoring horizontal and vertical movements by optical surveying and vibration monitoring using threshold-type seismographs to measure construction-induced vibrations and crack gauges. Crack reference line and settlement reference points should be established on existing fractures for monitoring during construction. Ambient vibration level at the Site and at the neighboring structures should be measured as part of the documentation work.

8.4 Supplemental Investigation Recommendations

The scope of our investigation was to provide the preliminary recommendations presented within this report; therefore, we recommend that the Site be further investigation once the existing building have been demolished. The supplemental investigation should consist of performing test pit excavation within the footprint of the demolished buildings and adjacent to the existing neighboring building to further evaluate the SOE and underpinning requirements.

9.0 LIMITATIONS

The subsurface investigation performed identifies the subsurface conditions only at the locations of the explorations and at the depths where the samples were taken. SESI Consulting Engineers reviews the published geologic data and the field and laboratory data and uses their professional judgment and experience to render an opinion on the subsurface conditions throughout the Site. Because the actual subsurface conditions may differ, we recommend that SESI be retained to provide construction inspection to minimize the risks associated with unanticipated conditions.

This report should not be used:

1. When the nature of the proposed building is changed;
2. When the size or configuration of the proposed building is altered;
3. When the location or orientation of the proposed building is modified;
4. When there is a change in ownership; or
5. For application to an adjacent or any other site.

SESI shall not accept any responsibility for problems that may occur if SESI is not consulted when there are changes to the factors considered in this report's development. The soil logs should not be separated from the Engineering Report to minimize the possibility of soil log misinterpretation.

10.0 DISCLAIMER

This Report was prepared by SESI for the sole and exclusive use of STAGG Group. Nothing under the Professional Services Agreement between SESI and its client STAGG Group, LLC shall be construed to give any rights or benefits to anyone other than Client and SESI, and all duties and responsibilities undertaken pursuant to the Agreement will be for the sole and exclusive benefit of Client and SESI and not for the benefit of any other party. This Report has been prepared and issued subject to the express condition that same is not to be disseminated to anyone other than Client, without the advance written consent of SESI (which SESI, in its sole discretion, is free to grant or withhold). Use of the Report by any other person is unauthorized and such use is at the sole risk of the user.

SOILS CLASSIFICATION AND EXPLORATION LOG KEY

Our experience has shown that the following field identification system, which is pattered somewhat after the Burmister System, permits a more detailed breakdown of the components within a soil sample than other identification systems allow. It also compels the supervising technician to examine a sample quite closely in order to accurately describe the components within the sample.

Grain Size and Classifications

Gravel:
Coarse gravel ranges from 3-in to 1-in
Medium gravel ranges from 1-in to 3/8-in
Fine gravel ranges from 3/8-in to No. 10 sieve

Sand:
Coarse sand ranges from No. 10 to No. 30 sieve
Medium sand ranges from No. 30 to No. 60 sieve
Fine sand ranges from No. 60 to No. 200 sieve

Silt:
Material which passes the No. 200 sieve
Exhibits little to no plasticity

Clay:
Material which passes the No. 200 Sieve
Exhibits varying degrees of plasticity

Component Classification

CAPITALS	More than 50% of the sample by weight
Proper Case	Less than 50% of the sample by weight

Proportion Terms

and	Component ranges from 35% to 50% of the sample by weight
some	Component ranges from 20% to 35% of the sample by weight
little	Component ranges from 10% to 20% of the sample by weight
trace	Component ranges from 0% to 10% of the sample by weight

Gradation Designation

Coarse to fine (c-f)	All fractions greater than 10% of the component
Coarse to Medium (c-m)	Less than 10% of the component is fine
Medium to fine (m-f)	Less than 10% of the component is coarse
Coarse (c)	Less than 10% of the component is medium or fine
Medium (m)	Less than 10% of the component is coarse or fine
Fine (f)	Less than 10% of the component is coarse or medium

The subsurface information shown hereon was obtained for the design and estimating purposes for our client. It is made available to authorized users only that they may have access to the same information available to our client. It is presented in good faith, but it is not intended as a substitute for investigations, interpretations or judgement of such authorized users. Information on the logs should not be relied upon without the geotechnical engineer's recommendations contained in the report from which these logs were extracted.

UST	Underground Storage Tank

1.0 PROJECT SUMMARY

SESI Consulting Engineers (SESI), at the request of Stagg Group (User) has conducted a Phase I Environmental Site Assessment (ESA) for the Subject Property located at 418 N Division Street and 407, 425, and 427 Highland Avenue, Peekskill, Westchester County, New York (herein referred to as the "Subject Property"). The Site encompasses four (4) contiguous parcels, identified on local tax maps as 23.78-1-9, 23.78-1-10, 23.78-1-12, and 23.78-1-11, with a combined area of approximately 1.07 acres. A Subject Property Location Map is included on **Figure 1.1**. A Site Plan is included on **Figure 1.2.**

As noted above, the Subject Property consists of four (4) continuous parcels. Lot 9, located at 418 N Division Street, is currently developed with a one-story commercial building and associated loading area. Lot 10, located at 407 Highland Avenue, contains a two-story stone commercial building, a one-story concrete commercial building, a two-story concrete commercial building, a driveway, and parking/loading area. Lot 11, located at 427 Highland Avenue, contains a one-story concrete commercial building. Lot 12, located at 425 Highland Avenue, contains a two-story concrete and stone commercial building. The buildings at Lot 9 and Lot 10 are connected from inside. The Subject Property is located in a mixed-use residential and commercial area of Peekskill and is currently unoccupied.

The Subject Property was developed prior to 1887 based on a review of the Sanborn maps. The 1887 Sanborn Map indicates that the Subject Property is improved with a carpentry shop in the southern on-site building. The on-site structures were constructed at varying times until the Subject Property appeared mostly in its' current form by approximately 1974. City Directory listings and/or information in the Sanborn maps from the Subject Property identified several different former uses including a dairy and ice cream manufacturer, bus depot, fire department, commercial laundry, metal shop, and automobile warehouse. A Phase II ESA was conducted by SESI at the Subject Property from November 2024 through January 2025 with a Phase II ESA Report issued in March 2025.

The objective of this ESA is to identify the presence or likely presence, use or release on the Subject Property of hazardous substances or petroleum products as defined in the American Standard of Testing and Materials (ASTM) E1527-21 as a Recognized Environmental Condition (REC). In addition, Business Environmental Risks (BERs), Controlled Recognized Environmental

Conditions (CRECs), and Historical Recognized Environmental Conditions (HRECs) were identified, if present. The following RECs have been identified:

- **REC-1 ASTs and USTs:** The Subject Property is identified as Highland Light Steam Laundry/White Plains Linen on the UST database with Site ID No. 3-800121 with the following tank information:

Tank ID	Size	Contents	Status	Date
005	1,000	No. 2 Fuel Oil	Closed-Removed	10/20/2014

It appears that this UST is likely related to Spill No. 1408577, although the removal occurred on November 20, 2014 (see Section 5.1.3 for further discussion).

The Subject Property is identified as Highland Light Steam Laundry/White Plains Linen on the AST database with Site ID No. 3-800121 with the following tank information:

Tank ID	Size (gal)	Contents	Status	Date
002	275	No. 2 Fuel Oil	Administratively Closed	1/1/1900*
003	275	No. 2 Fuel Oil	Administratively Closed	1/1/1900*
004	550	No. 2 Fuel Oil	In-service	2/1/1978
006	8,000	No. 2 Fuel Oil	In-service	10/1/1968

* - The AST was not closed on 1/1/1900, this date is used as a placeholder when the actual date is not provided. Based on available information, the tanks were installed on August 1, 1989.

A sign and vent pipes associated with the 8,000-gallon AST were identified in the courtyard during the reconnaissance; however, the 8,000-gallon AST appears to have been removed. The Subject Property was also identified as Highland Light Steam Laundry Inc. on the AST database with Site ID No. 3-000007 with the following tank information:

Tank ID	Size (gal)	Contents	Status	Date
007	550	Not reported	Closed/Removed	10/17/2010
008	800	Not reported	Closed/Removed	1/5/2011
009	500	Not reported	Closed/Removed	9/1/2003

The Subject Property was also identified on the CBS AST database with CBS No. 3-000007 for a 550-gallon AST that contained sodium hypochlorite which is reported as in service.

Spill No. 1408577 was reported when soil contamination was identified during the closure of a 1,000-gallon UST. Additional information in the narrative indicates that the 1,000-gallon UST was removed from the sidewalk and that an additional tank was suspected to be in the nearby area as a results of a "magnetic survey". Based on available information, the impacted soils were remediated, and the spill was closed. Therefore, the potential remains for additional USTs present in the sidewalk.

Further investigation of REC-1 is recommended to investigate the current and former tank systems, evaluate for potential additional USTs, and evaluate for potential discharges.

- **REC-2 Former On-site Laundry Operations (Lots 9, 10, and 11):** The majority of the on-site structure was used for industrial laundry operations beginning in at least 1942, with operations starting in the southernmost structure and eventually occupying a majority of the interconnected on-site buildings on Lots 9, 10, and 11. The on-site laundry operations utilized a variety of cleaning solvents and detergents and utilized floor drains, trench drains, and other large-scale drainage features below former laundry equipment. The on-site laundry operations were coal-powered, and a large coal storage area was previously located in the central portion of the Subject Property.

  This building was occupied by White Plains Linen, Highland Steam Landry, C&C Cleaners, and White Plains Coat & Apron Co. The Subject Property was identified as White Plains Linen at 411 Highland Avenue on the USEPA's Envirofacts website. The Air Program Information indicates that tetrachloroethene (PCE) was used on-site. Soil vapor sample SV-2, collected in the northern portion of the southern building during the recent Phase II ESA, identified elevated concentrations of both PCE and trichloroethene (TCE), suggesting a potential source area. **Therefore, further investigation is recommended for REC-2.**

REC-3 Former Coal Storage and Use (Lot 10): The 1900 Sanborn Map indicates the southern on-site structure (427 Highland Avenue) was powered using coal. The 1911 Sanborn Map shows the former Van Cortland Dairy Co. structure (the northernmost structure on Lot 10) present with coal as a fuel source. Beginning in the 1950 Sanborn map, a coal pile is indicated in the central portion of the Subject Property; however, SESI notes that it is highly likely that coal was staged at this location pre-1950 as a feature consistent with a coal pile was observed in the 1947 aerial photograph in the courtyard. In the 1958 Sanborn Map a coal storage building is depicted north of the boiler room of the southern building with a coal pile still indicated within the courtyard. Coal storage and handling may have resulted in on-site contamination consisting of polynuclear aromatic hydrocarbons (PAHs), coal tar, and creosote. On-site data generated by the recent Phase II ESA identified PAH impacts throughout many areas of the Subject Property, which may be partially attributable to the former coal use and handling. Further, soil borings SB-9, SB-10, SB-102, SB-103, and SB-106 were advanced in the general area of the former coal pile and coal storage building. Analytical results identified certain Volatile Organic Compounds (VOCs), polychlorinated biphenyls (PCBs), and certain metals (including mercury) above the most stringent NYSDEC Soil Cleanup Objective (SCO). Ground water was not encountered in TW-4, advanced on the downgradient side of the courtyard, indicating that ground water is likely encountered within the shallow bedrock in this area of the Subject Property. **Therefore, further investigation is recommended for REC-3.**

- **REC-4 Former On-site Carpentry Shop, Metal Shop, Sash and Blind Factory, and Automobile Warehouse (Lot 10):** The southern on-site structure on Lot 10 was occupied by a carpentry shop in the 1887 Sanborn map until 1911 when it is indicated as an automobile warehouse. The 1911 Sanborn map indicates the southern structures along Highland Avenue are occupied by the C.A. Lamos Son Sash and Blind Factory. These operations continued until approximately 1942 when the steam laundry operations were depicted on the 1942 Sanborn map. In addition, there appears to have been metal fabrication occurring in this structure sometime between 1972-1977 based on City Directory listings. **Further investigation REC-4 is recommended.**

- **REC-5 Former On-site Bus Garage and Trucking Operations (Lots 10, 11, and 12):** The northwestern on-site structure on Lot 11 was indicated as a garage in the 1923

Sanborn map, as the Peekskill Motor Bus Corp. in the 1942 Sanborn map, and as a garage in the 1950, 1958, 1964, 1971, and 1972 Sanborn maps. A former on-site structure, located roughly where the Fire Department building and courtyard are (Lots 10 and 12),, was indicated as being occupied by a trucking company in the 1900 Sanborn map. This structure was no longer depicted on-site beginning in 1905. Soil samples collected in the area of these former operations identified polynuclear aromatic hydrocarbons (PAHs), pesticides, and metals above the NYSDEC Unrestricted Use Soil Cleanup Objective (USCO). Groundwater samples TW-1 and TW-2 were collected in this area of the Subject Property during the Phase II ESA and identified PAHs and metals above the applicable NYSDEC Ambient Water Quality Standards (AWQS). No soil vapor exceedances were identified. **Further investigation of REC-5 is recommended.**

- **REC-6 Former On-site Printing and Lithography (Lot 9):** The 1987 City Directory identified Wayne Desalvo Inc./Wayne Printing & Lith at 418 North Division Street, which is located in the northeast corner of the Subject Property on Lot 9. Based on available information, it is unclear if the on-site structure was used for printing operations, office space, or both. The previous listed tenant in the space is the NYS St. Labor Unemployment office. Printing operations may have used solvent, metals, and PFAS. Limited soil testing on Lot 9 during the Phase II ESA identified pesticides above the most NYSDEC's USCOs and polynuclear aromatic hydrocarbons (PAHs) above the NYSDEC's Residential Soil Cleanup Objectives (RSCOs) and/or Restricted Residential Soil Cleanup Objectives (RRSCOs). Groundwater was not encountered in the shallow overburden, indicating that groundwater is likely to be encountered within weathered and/or competent bedrock. No soil vapor samples were collected on Lot 9 during the Phase II ESA. **Further investigation of REC-6 is recommended.**

- **REC-7 Former On-site Fire House (Lot 12):** The structure located on Lot 10 (425 Highland Avenue in the City Directories) was constructed sometime between 1911 and 1923 based on the Sanborn maps. The clarity of the Sanborn map in 1923 is poor and the use could not be determined. The building use is not labelled in the 1942 Sanborn map. In the 1953 Sanborn map the building is indicated as being used as a Fire Department building. Based on City Directory listings, this use continued until at least 2020. The former use of the building for fire department activities may have adversely impacted the subsurface, with potential contaminants of concern including petroleum and PFAS. Two

(2) soil samples were collected within the structure near the address side during the recent Phase II ESA; metals were identified above the NYSDEC's USCO and/or RRSCO. Temporary well TW-2 was installed within the fire department building. One VOC, several PAHs, and several metals were detected above their respective NYSDEC's AWQS. In addition, both Perfluorooctanoic Acid (PFOA) and Perfluorooctanesulfonic Acid (PFOS) were detected above the NYSDEC's AWQS; however, although the detections were an order of magnitude higher than the AWQS for both compounds, the concentrations were generally in the order of magnitude typical of urban areas and are not considered indicative of an on-site source. Soil vapor was not evaluated on Lot 10 as part of the Phase II ESA. **Further investigation of REC-7 is recommended.**

- **REC-8 Historic Fill:** Historic fill was identified on-site during the Phase II ESA completed on-site by SESI. The granular fill extended to up to +-5 feet below existing grades. The granular fill generally consisted of coarse to fine sand, little to trace amounts of silt, clay and little to some amounts of coarse to fine gravel, with concrete debris. Based on soil analytical results from the Phase II ESA, PAHs and metals were detected in on-site soils above the most stringent NYSDEC SCOs which appear to be in part due to contaminated historic fill. **Further investigation of the historic fill on-site is recommended.**

- **REC-9 On-site Contamination:** Analytical results from the Phase II ESA identified on-site contamination in soil, groundwater, and soil vapor above the applicable clean up objectives, quality standards, and criteria, respectively. On-site contamination appears to be attributable to both historic on-site operations (**REC-1** through **REC-7**) and contaminated historic fill (**REC-8**). **Further investigation and remediation of on-site contamination is recommended.**

The following HREC has been identified:

- **HREC-1 Former Spills:** A review of the database as provided by EDR identified the Subject Property with the following information:

Name	Spill No.	Closed Date	Material	Volume (gal)
White Plains Linen	0206243	09/16/2002	No. 2 Fuel Oil	10
Coat & Apron Co.	0410072	12/10/2004	No. 2 Fuel Oil	2
White Plains Linen	0809615	1/9/2009	No. 2 Fuel Oil	75

Name	Spill No.	Closed Date	Material	Volume (gal)
White Plains Linen	1408577	2/2/2022	No. 2 Fuel Oil	Not reported

Limited information is available regarding the nature and response to Spill Nos. 0206243 and 0410072. Spill No. 0809615 was reported when an overfill occurred during a fuel delivery. The overfill of No. 2 fuel oil was not recoverable and dissipated with laundry detergents into the sanitary sewer. Based on this, the spill was closed.

Spill No. 1408577 was reported when soil contamination was identified during the closure of a 1,000-gallon UST . Additional information in the narrative indicates that a 1,000-gallon UST was removed from the sidewalk and that an additional tank was suspected to be in the nearby area due to a “magnetic survey”. Based on available information, the impacted soils were remediated, and the spill was closed.

Spill No. 0302563 was reported on June 10, 2003 when a backhoe was excavating for a gas leak and hit a sewer connection, causing spill of unknown material into a catch basin. The spill was closed the following day on June 11, 2003.

No further investigation or remediation is required for these former spills that received regulatory closure.

The following BERs have been identified:

- **BER-1 Drums and Compressed Gas Cylinders:** SESI observed several 55-gallon drums with unknown contents throughout the Subject Property. The drum contents should be evaluated, and the drums and compressed gas cylinders should be properly disposed of off-site.

- **BER-2 PCB-Containing Material (Including Caulk - All Buildings):** A survey for PCB caulk was not completed. However, based on the age of the building, a PCB survey is recommended for caulk.

- **BER-3 Asbestos Containing Material (ACM):** ACM surveying was not included in SESI’s scope of work. An asbestos survey was conducted by DVD Environmental Inc. (DVD) in

November 2024. The ACM identified on-site consisted of 9”x9” vinyl floor tiles in 407 Highland Avenue and 418 North Division Street and façade transite panels, and roof flashing tar/felt under the EPDM roof at 425 and 427 Highland Avenue. All ACM should be abated prior to any demolition activity by a licensed Asbestos Abatement Contractor according to all applicable rules and regulations.

- **BER-4 Universal Waste:** There were several pieces of universal waste throughout the buildings. Therefore, this universal waste should be properly disposed of prior to redevelopment.

- **BER-5 Concrete:** Concrete may be disturbed as part of the redevelopment of the property. Therefore, sampling of any stained concrete is recommended prior to disposal.

- **BER-6 Lead Based Paint (LBP):** LBP surveying was not included as part of this Phase I Environmental Site Assessment. However, based on the age of the structures located on the Subject Property, the possibility of presence of LBP cannot be ruled out. Therefore, an LBP survey is recommended.

The RECs are discussed further in **Section 10.0 CONCLUSIONS AND RECOMMENDATIONS** of this Report.

2.0 INTRODUCTION

2.1. PURPOSE

The purpose of this study is to determine the RECs at the Subject Property for due diligence purposes related to the potential acquisition of the Subject Property.

SESI has developed this Phase I ESA Report on behalf of the User. It has been developed in substantial conformance with the ASTM's International Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-21. According to ASTM E1527-21, the following conditions were identified during this assessment:

REC – "(1) the presence of hazardous substances or petroleum products in, on, or at the property due to release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the property due to a release or likely to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition."

CREC – "A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority."

HREC – "A past release that has been remediated to below residential standards and given regulatory closure with no use restrictions."

BER – "A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate and is not an issue required to be investigated under this practice."

2.2. SCOPE OF SERVICES

The scope of this assessment consisted of the following general tasks: a records review; a visit to the Subject Property; interviews with present and past owners, operators, and occupants to the extent possible; and preparation of this ESA report. Specific tasks that were conducted included the following:

- A review of environmental databases maintained by the United States Environmental Protection Agency (USEPA) and state and local agencies within the minimum search distance. Environmental Data Resources, Inc. (EDR) prepares environmental databases used in these assessments.
- An in-person visit to observe conditions and to assess the Subject Property location with respect to adjoining and surrounding property uses, types of development, topography, natural surface features, roadways, railroad lines and right-of-ways to identify obvious potential environmental conditions on neighboring properties.

Per ASTM E1527-21, questionnaires were provided to the User (Client), and Owner to obtain information related to the Subject Property.

2.3. SIGNIFICANT ASSUMPTIONS

Information obtained by SESI and by third parties is assumed to be accurate and/or true. SESI makes no warranty, either implied or expressed, regarding the accuracy or validity of information supplied by others.

2.4. LIMITATIONS/METHODOLOGY/RELIANCE

This ESA was prepared for the exclusive use of Stagg Group, their affiliates and lenders. During the assessment, methodologies were used that conform to generally accepted practices for this type of work. The scope and character of the environmental assessment were, in professional judgment, sufficient to justify the stated conclusions, after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the Subject Property as found in historical records, and visual observation of the Subject Property. No other investigation was performed other than that which is expressly noted in this Report.

This ESA was performed in accordance with ASTM E1527-21 and is subject to reasonable limits of time and cost and is intended to reduce but not eliminate uncertainty regarding the potential for RECs in connection with a property. Sampling and laboratory analysis are required to determine if soil, surface water, groundwater, air, and construction materials have been impacted by a contaminant.

The information presented in this ESA was obtained during the Subject Property visit and from the Client, representatives of the Client, current/former property owner(s) or tenants, Federal, State, County and Local Officials, and available mapped information obtained by SESI. SESI does not certify the accuracy of the information received from outside sources.

This ESA should be used in its entirety. Use of portions of this ESA may nullify the information and/or conclusions of this ESA. Subject Property observations discussed herein apply to Subject Property conditions as observed during the in-person visit only. The conclusions of this ESA do not apply to conditions that were unavailable for inspection and could not be evaluated.

SESI does not certify that the Subject Property is contaminant free and this ESA does not serve as a warranty. SESI's investigation was performed within the time frame requested by the client.

The activities to conduct this ESA did not include sampling and analyses of soil, surface water, groundwater, air, or construction materials unless expressed otherwise and requested by the client. Formal wetland, asbestos, mold, and/or radon evaluations were not performed and are not within the scope of work for an ESA. If additional services including underground storage tank (UST) testing, construction materials testing, or environmental sampling (soil, surface water, groundwater, air) is recommended, the results and conclusions for these tests will be provided under separate cover.

2.5. DISCLAIMER

This ESA was prepared by SESI for the sole and exclusive use of Stagg Group. Nothing under the Agreement between SESI and the User shall be construed to give any rights or benefits to anyone other than the User and SESI, and all duties and responsibilities undertaken pursuant to the Agreement will be for the sole and exclusive benefit of the User and SESI and not for the benefit of any other party. SESI does not intend, without its written consent, for this ESA to be disseminated to anyone other than the User, or to be used or relied upon by anyone other than the User. Use of the ESA by any other person is unauthorized and such use is at their sole risk.

3.0 SITE DESCRIPTION

3.1. LOCATION/STRUCTURE/LEGAL DESCRIPTION

As noted above, the Subject Property consists of four (4) continuous parcels. Lot 9, located at 418 N Division Street, is currently developed with a one-story commercial building and associated loading area. Lot 10, located at 407 Highland Avenue, contains a two-story stone commercial building, a one-story concrete commercial building, a two-story concrete commercial building, a driveway, and parking/loading area. Lot 11, located at 427 Highland Avenue, contains a one-story concrete commercial building. Lot 12, located at 425 Highland Avenue, contains a two-story concrete and stone commercial building. The buildings at Lot 9 and Lot 10 are connected from inside. The Subject Property is located in a mixed-use residential and commercial area of Peekskill and is currently unoccupied. A Subject Property Location Map is included on **Figure 1.1**. A Site Plan is included on **Figure 1.2.**

3.2. PROPERTY AND VICINITY CHARACTERISTICS

The Subject Property is located in a mixed-use residential and commercial area of Peekskill. The closest notable surface water body is the Hudson River. A summary of the uses of the adjacent properties is shown on **Table 3.1** below:

Table 3.1—Adjacent Property Uses

Direction	Adjacent Property Use
North	Residential
South	Commercial (a grocery store) and residential
East	Residential
West	Commercial (an auto shop and a restaurant) and residential

3.3. CURRENT USE OF THE PROPERTY

The Subject Property is currently unoccupied.

3.4. DESCRIPTION OF STRUCTURES, ROADS AND SITE IMPROVEMENTS

The Subject Property is irregularly shaped and approximately 1.07-acres. According to the Topographic Survey Of Property Prepared By Geologic Land Surveying, PLLC (included in Appendix A), there are seven (7) separate on-site buildings; however, the structures on Lots 9 and 10 are interconnected. Lot 10 is improved in the north with a two-story stone structure. The

southern improvements consist of three interconnected structures ranging from 1 to 3 stories in height. Lot 12 is improved with a 2-story structure previously used as a fire house. Lot 11 is improved with a single-story structure previously used as a garage. Asphalt driveways are present off of Constant Avenue and Highland Avenue and a courtyard is present in roughly the central portion of the Subject Property.

4.0 SITE BACKGROUND INFORMATION

4.1. TITLE INFORMATION

A Title Report was prepared by Atlantic Title Agency II LLC (Atlantic) dated October 9, 2024. As of the date of the title report, it appears that all Subject Property parcels (Lots 9, 10, 11, and 12) are vested in Peekskill White Plains, LLC. Lots 9, 10, and 11 were conveyed to the owner from Bruce Botchman and Keith Botchman on April 16, 2018 and Lot 12 was conveyed to the owner from Fabjola Mezini-Gogo on January 10, 2022.

There are open taxes and penalties identified associated with all lots. It appears that there is an unpaid balance associated with the mortgage for Lots 9, 10, and 11. A foreclosure summons was identified as being filed with the Westchester County Clerk on June 21, 2023. Several building department violations were identified associated with each lot. No Fire Department violations were identified, and no fuel oil burner permits were identified.

The Atlantic Title Report is included in **Appendix C**.

4.2. ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

SESI did not find any information regarding environmental liens or activity and use limitations.

4.3. SPECIALIZED KNOWLEDGE/OTHER USER PROVIDED INFORMATION

SESI prepared previous environmental reports regarding the Subject Property as discussed in Section 5.1.2 below. No other specialized knowledge or User-provided information was identified.

4.3.1. INTERVIEWS

A User Questionnaire was completed by Ms. Kathleen Bradshaw (User representative) on March 26, 2025. Ms. Bradshaw indicated that there were no known environmental liens or activity use limitations related to the Subject Property. In addition, the former on-site use was as a “linen factory”, and it was indicated that the User has no knowledge of former environmental spills, cleanups, or bulk storage tanks. The User Questionnaire is included in **Appendix C**.

4.4. COMMONLY KNOWN OR REASONABLY ASCERTAINABLE RECORDS

SESI completed a review of publicly available NYSDEC mapping and database systems and the USEPA database system as part of this Report to determine the environmental conditions at the

Subject Property and adjacent properties. According to the NYSDEC database, no environmental concerns were identified at the Subject Property or within 1/8-mile of the Subject Property. The Subject Property was identified as White Plains Linen at 411 Highland Avenue on the USEPA's Envirofacts website. The Air Program Information indicates that PCE was used on-site. No other information was available. The former on-site laundry operations that used PCE is considered **REC-2**.

4.5. VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The Report User indicated no knowledge of any valuation reduction related to environmental concerns.

4.6. OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

Based on publicly available information on the Westchester County Geographic Information Systems Municipal Tax Parcel Viewer, Lots 9, 10, 11, and 12 are currently owned by Peekskill Whtie Plains LLC. The Subject Property is currently unoccupied.

5.0 RECORDS REVIEW

5.1. STANDARD ENVIRONMENTAL RECORD SOURCES: FEDERAL, CITY, STATE

5.1.1. EDR SEARCH

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR) and reported in the EDR Radius Map Report with GeoCheck. The Report meets the government records search requirements of ASTM Standard of Practice for Environmental Site Assessments, E-1527-21. Search distances are per ASTM standards. A Radius Map Check was performed by EDR and is provided in **Appendix B.** All properties in the search area with environmental records are listed below.

Table 5.1 - Database Listings

DATABASE	SP	< 1/8	1/8 - 1/4	1/4 - 1/2	1/2-1
EDR Hist Auto	0	5	NR	NR	NR
EDR Hist Cleaner	0	1	NR	NR	NR

The address used by EDR for the database search was 418 North Division Street. However, as noted throughout the report, the Subject Property includes several addresses along Highland Avenue. Therefore, these are considered findings at the Subject Property even though EDR does not report these findings as such. The information in the EDR Radius Map Report identified operations at the Subject Property in the following databases: FINDS, ECHO, UST, AST, CBS AST, EDR HIST CLEANER, US AIRS, CBS, NY SPILLS, AIRS, ERNS, DRYCLEANERS, and NY SPILLS.

Facility Index System/Facility Registry System (FINDS) and USEPA Enforcement and Compliance History Online (ECHO)

The FINDS database provides a list of facilities that maintain or previously maintained environmental permits or are listed under additional EDR report databases. The ECHO database provides a list of compliance and enforcement information for regulated facilities.

The Subject Property is identified as White Plains Linen on the FINDS and ECHO databases with Registry ID No. 110019083908. A review of the USEPA's FRS Facility Detail Report indicates that the Subject Property had air permits related to the industrial laundry operations. The former on-site laundry operations are identified as **REC-2**. The South Presbyterian Church is located approximately 1000 feet cross gradient to the east-southeast of the Subject Property at a higher relative elevation and is identified on the FINDS and ECHO databases with Registry ID No. 110004310521. No violations were identified related to this facility. Therefore, this facility is not considered a REC.

WESTCHESTER CO. UST

The Subject Property is identified as Highland Light Steam Laundry/White Plains Linen on the UST database with Site ID No. 3-800121 with the following tank information:

Tank ID	Size	Contents	Status	Date
005	1,000	No. 2 Fuel Oil	Closed-Removed	10/20/2014

The former on-site UST is identified as part of **REC-1**. Five (5) other facilities were identified on the UST database within ¼-mile of the Subject Property. One facility, 529 Highland Gas and Repair, Inc., is located approximately 155 feet cross gradient to the north-northwest of the Subject Property. This facility is identified on the UST database with Site ID No. 3-174688 with the following tank information:

Tank ID	Size (gal)	Contents	Status	Date
01	6,000	Gasoline	In-service	12/01/1998
02	8,000	Gasoline	In-service	12/01/1998
05	500	Not Reported	Closed in place	7/17/2008
06	500	Not Reported	Closed in place	7/17/2008
1	3,000	Not reported	Removed	12/01/1998
2	3,000	Not reported	Removed	12/01/1998
3	4,000	Not reported	Removed	12/01/1998

Although discharges have been reported at this facility, based on the distance and presumed ground water flow direction, this facility is not considered a REC. The other four (4) facilities located within ¼-mile of the Subject Property are not considered RECs based on the distance, ground water flow direction, and/or relative elevation.

WESTCHESTER CO. AST/ CBS AST

The Subject Property is identified as Highland Light Steam Laundry/White Plains Linen on the AST database with Site ID No. 3-800121 with the following tank information:

Tank ID	Size (gal)	Contents	Status	Date
002	275	No. 2 Fuel Oil	Administratively Closed	1/1/1900*
003	275	No. 2 Fuel Oil	Administratively Closed	1/1/1900*
004	550	No. 2 Fuel Oil	In-service	2/1/1978
006	8,000	No. 2 Fuel Oil	In-service	10/1/1968

* - The AST was not closed on 1/1/1900, this date is used as a placeholder when the actual date is not provided. Based on available information, the tanks were installed on August 1, 1989.

The Subject Property was also identified as Highland Light Steam Laundry Inc. on the AST database with Site ID No. 3-000007 with the following tank information:

Tank ID	Size (gal)	Contents	Status	Date
007	550	Not reported	Closed/Removed	10/17/2010
008	800	Not reported	Closed/Removed	1/5/2011
009	500	Not reported	Closed/Removed	9/1/2003

The Subject Property was also identified on the CBS AST database with CBS No. 3-000007 for a 550-gallon AST that contained sodium hypochlorite which is reported as in service. The former on-site ASTs are considered part of **REC-1**.

EDR Hist Cleaner Sites/DRYCLEANERS

The EDR Hist Cleaner list provides an inventory of facilities that formerly/historically operated a dry-cleaning business. A review of the EDR Hist Cleaner database, as provided by EDR, identified the Subject Property as A&N Cleaners & Launderers (1971-1976) and Croton Cleaners & Launderers (1974-1976). The Subject Property is also identified on the DRYCLEANERS database as Whiteplains Linen/Hiland Laundry with Facility ID No. 3-5512-00113 and an effective date of January 27, 2009. The former on-site laundry operations are identified as **REC-2**.

US AEROMATIC INFORMATION RETRIEVAL SYSTEM (AIRS)/ NY AIRS

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. It is used to track emissions and compliance data from industrial plants. The Subject Property is identified on the US AIRS database as White Plains Linen with Facility Registry ID No. 110019083908 and Programmatic ID No. AIR NY0000003551200113.

The Subject Property is also identified on the AIRS database as 407-419 Highland Avenue Facility with NYSDEC ID No. 3551200113. The former on-site laundry operations are identified as **REC-2**.

NY SPILLS

Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2

(from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date. A review of the database as provided by EDR identified the Subject Property with the following information:

Name	Spill No.	Closed Date	Material	Volume (gal)
White Plains Linen	0206243	09/16/2002	No. 2 Fuel Oil	10
Coat & Apron Co.	0410072	12/10/2004	No. 2 Fuel Oil	2
White Plains Linen	0809615	1/9/2009	No. 2 Fuel Oil	75
White Plains Linen	1408577	2/2/2022	No. 2 Fuel Oil	Not reported

Limited information is available regarding the nature and response to Spill Nos. 0206243 and 0410072. Spill No. 0809615 was reported when an overfill occurred during a fuel delivery. The overfill of No. 2 fuel oil was not recoverable and dissipated with laundry detergents into the sanitary sewer. Based on this, the spill was closed.

Spill No. 1408577 was reported when soil contamination was identified during the closure of a 1,000-gallon UST. Additional information in the narrative indicates that a 1,000-gallon UST was removed from the sidewalk and that an additional tank was suspected to be in the nearby area due to a “magnetic survey”. Based on available information discussed further in Section 5.1.3 below, the impacted soils were remediated, and the spill was closed.

Spill No. 0302563 was reported on June 10, 2003 when a backhoe was excavating for a gas leak and hit a sewer connection, causing spill of unknown material into a catch basin. The spill was closed the following day on June 11, 2003.

These spills that received regulatory closure are considered **HREC-1**. The former USTs are considered part of **REC-1**.

EMERGENCY RESPONSE NOTIFICATION SYSTEM (ERNS)

ERNS is a database used to store information on notifications of oil discharges and hazardous substances releases. The ERNS program is a cooperative data sharing effort encompassing the National Response Center (NRC), operated by the US Coast Guard, EPA HQ and EPA regional offices. ERNS data is used to analyze release notifications, track EPA responses and compliance

to environmental laws, support emergency planning efforts, and assist decision-makers in developing spill prevention programs.

The Subject Property is identified on the ERNS database as White Plains Coat & Apron with NRC Report No. 151471, reported on January 1, 1993 for “chimney/unknown black smoke coming from laundromat”. This listing is not indicative of a release of hazardous substances and is not considered a REC.

The Subject Property is also identified on the ERNS database with an address of 429 Highland Avenue and NRC Report No. 647488. This spill occurred on June 10, 2003 due to the release of 4-gallons of an unknown material from a pipeline due to an operator error. The company responsible is listed as Con Edison. Based on available information, this appears related to utility work in the nearby area and not from the Subject Property itself. This listing is identified and discussed on the SPILLS database above. Based on available information, this listing is not considered a REC.

EDR Hist Auto

The EDR Hist Auto list provides an inventory of facilities that formerly operated automotive repair or automotive gas stations. A review of the EDR Hist Auto database identified Van Cortlandt Garage on the Subject Property at 500 Highland Avenue from 1969-1993. The former bus garage operations are considered part of **REC-5**.

The EDR Radius Map Report identified operations at nearby sites in the following listings. A discussion of these listings is provided below.

SPILLS: Spills Information Database

Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes active spills as of April 1, 1986, as well as spills occurring since this date. A review of the database provided by EDR identified twenty-one (21) facilities within 1/8-miles of the Subject Property. Based on our review of listings within 200 feet of the Subject Property and 500 feet upgradient of the Subject Property, a single release was identified and was

closed by the NYSDEC. Therefore, these listings are not expected to have adversely impacted the Subject Property.

EDR Hist Auto

The EDR Hist Auto list provides an inventory of facilities that formerly operated automotive repair or automotive gas stations. A review of the EDR Hist Auto database identified four (4) Hist Auto facilities within approximately 0.125 miles of the subject Site. These facilities are situated either cross gradient or downgradient from the Subject Property with no known releases or with releases that have been issued a No Further Action. Therefore, these facilities are not expected to have adversely impacted the Subject Property.

RCRA NONGEN/NLR

Resource Conservation and Recovery Act Non-Generators (RCRA NonGen) database searches USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information about facilities that generate, transport, store, treat and/ or dispose of hazardous waste as described by RCRA. Non-generators do not presently generate hazardous waste. A review of RCRA NonGen/NLR list provided by EDR identified seven (7) facilities within 0.25 miles of the Subject Property. Since none of these facilities currently generate hazardous waste, they are not expected to adversely impact the property.

UST Finder Release: UST Finder Releases Database

The USEPA's UST Finder Releases Database is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials. A review of the database provided by EDR identified eight (8) facilities within 0.5 miles of the Subject Property. Based on a review of the available database information, all but one (1) facility (Exxon/Keith's Automotive/George Sampson, Inc.) have documented release events that have been closed. Additionally, this one (1) facility is located approximately 350 feet topographically downgradient from the Subject Property and, therefore, is not expected to adversely impact the Subject Property.

LTANKS: Leaking Storage Tank Incident Reports

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. A review of the database as provided by EDR identified seventy-five (75) listings within 0.5 miles of the Subject Property. However, a review of the listings within 0.125 miles from the Subject Property did not identify any open spills with the NYSDEC. Therefore, these facilities are not expected to adversely impact the Subject Property.

RCRA Very Small Quantity Generator (RCRA-VSQG)

The RCRA-VSQG includes a list of facilities that generate less than 100 kilograms of hazardous waste, or less than one (1) kilogram of acutely hazardous waste per month. According to the RCRA-VSQG list provided by EDR, there are two (2) RCRA-VSQG facilities within approximately 0.25 miles of the Subject Property. The facilities had no reported violations, and any listed spills were reported as closed and not associated with the RCRA listing. Therefore, these listings are not expected to adversely impact the Subject Property.

MANIFEST Sites

MANIFEST Facilities include a list of facilities that have generated hazardous waste or contaminants. A review of the NY MANIFEST and NJ MANIFEST lists identified thirteen (13) facilities within a half mile of the Subject Property. Based on a review of the available database information, there are manifests that are not associated with documented releases, and therefore they are not considered a REC.

RCRA Non-Generators / No Longer Regulated (RCRA NonGen / NLR)

Resource Conservation and Recovery Act Non-Generators (RCRA NonGen) database searches USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information about facilities that generate, transport, store, treat and/ or dispose of hazardous waste as described by RCRA. Non-generators do not presently generate hazardous waste. A review of RCRA NonGen/NLR list provided by EDR identified seven (7) facilities within a half mile of the Subject Property. Since none of these facilities currently generate hazardous

waste, and there are no discharges associated with other database listings, they are not expected to adversely impact the Subject Property.

AST: Petroleum Bulk Storage

This database includes registered Aboveground Storage Tanks (ASTs). A review of the database identified two (2) facilities within 0.25 miles of the subject property. Neither facility is identified as having a reportable discharge. Therefore, these facilities do not constitute a REC.

UST: Underground Storage Tank Data

USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program. A review of the NY UST list identified two (2) UST facilities within approximately 0.25 miles of the Subject Property. Neither facility is identified as having a reportable discharge. Therefore, these facilities do not constitute a REC.

5.1.2. PREVIOUS ENVIRONMENTAL REPORTS

SESI prepared a Phase II Environmental Site Assessment for the Site in March 2025. The report identified exceedances in the soil, groundwater, and soil vapor reported during the investigation that are likely a result of a combination of the Subject Property's historical operations. The following findings were identified:

- Analytical results from the soil investigation identified Volatile Organic Compounds (VOCs), polynuclear aromatic hydrocarbons (PAHs), pesticides, polychlorinated biphenyls (PCBs), and metals at concentrations exceeding the NYSDEC's Unrestricted Soil Cleanup Objectives (USCOs), Residential Soil Cleanup Objectives (RSCOs), and/or Restricted-Residential Soil Cleanup Objectives (RRSCOs) as follows:
    - VOC-impacted soil was identified at soil borings SB-9 and SB-118, where chloroform, benzene, toluene, total xylenes, acetone, 1,1,1-Trichloroethane and/or TCE were detected at concentrations exceeding the USCOs but below the RSCOs and RRSCOs. Benzene, xylenes, and toluene are commonly found in petroleum products. Acetone can occur naturally or be used as a solvent and degreaser. 1,1,1-Trichloroethane is also used as a degreaser. Trichloroethene (TCE) may have been used directly as a solvent in dry cleaning activities or formed

as a degradation byproduct of PCE, which was likely used at the Subject Property. Chloroform is a typical disinfection byproduct. Soil boring SB-9 was installed in a drainage trench, while soil boring SB-118 was placed near a floor drain. Both areas likely received wastewater from steam laundry and dry-cleaning operations. The VOCs mentioned above were likely used or generated during past operations and subsequently released into the subsurface.

- PAH-contaminated soil was identified at Lot 9 (SB-112), Lot 10A&B (SB-10, SB12, and SB-118), and Lot 12 (SB-111) at levels exceeding the USCOs, RSCOs, and/or RRSCOs. While PAHs are commonly associated with historic fill, the elevated levels in these areas are likely due to releases that occurred during transportation, staging, and handling of PAH-containing materials such as petroleum products and coals during past operations such as steam laundry, carpenter, and mechanic shop.
- Pesticides including 4,4'-DDE, 4,4'-DDD, and 4,4'-DDT were detected in numerous soil samples above the USCO. In addition, all three compounds were detected in soil sample SB-10 above the RSCO.
- PCB-impacted soil was identified at Lot 10B (SB-10) and Lot 12 (SB-111), where PCB concentrations exceed the USCO of 0.1 mg/kg but below the RSCO and RRSCO of 1 mg/kg. The elevated PCB exceedances suggest contamination resulted from historic Subject Property operations.
- Metal exceedances to USCO were widespread at Lot 10A, Lot 10B, Lot 11, and Lot 12. Exceedances to RRSCO were identified at Lot 10B (SB-12 and SB-118) and Lot-12 (SB-109). Arsenic, barium, manganese, and mercury were detected at levels exceeding RRSCOs. The elevated metal exceedances suggest contamination resulted from historic Subject Property operations.

- Groundwater analytical results identified one VOC, PAHs, metals, and Perfluorinated Compounds (PFOA & PFOS) at concentrations exceeding the NYSDEC's Ambient Water Quality Standards (AWQSs) as follows:
  - The VOC 1,2,4,5-Tetramethylbenzene (durene) was detected at TW-2 at a concentration exceeding the AWQS. 1,2,4,5-tetramethylbenzene is likely associated with the use and storage of coals at the Subject Property. Therefore, the contamination is likely attributable to releases from historic Subject Property operations.

  - PAH-contaminated groundwater was identified at all three temporary well locations. The contamination is likely attributable to releases from historic Subject Property operations.
  - Select metals, including chromium, copper, iron, lead, magnesium, manganese, mercury, selenium, sodium, and/or thallium, were detected at all three (3) temporary wells at concentrations exceeding the AWQS. The samples are unfiltered and collected from temporary wells using VAPS, which may have resulted in metal concentrations being skewed higher due to the presence of sediment. The concentrations in groundwater may also be indicative of historic releases during historic Subject Property operations.
  - PFOA and PFOS exceedances were identified in both groundwater samples activated for PFAS analysis. The PFAS levels at Subject Property are typical of urban areas and are not indicative of an on-site source.
- Soil vapor analytical results indicated that there were no VOC exceedances in SV-1 and SV-3. However, in SV-2, PCE and TCE were detected at concentrations exceeding the NY-SSC. Notably, PCE was detected at a concentration slightly over 10x of NY-SSC. The presence of elevated levels of PCE and TCE indicates past use and release of chlorinated solvents at the Subject Property.

SESI concluded that historic Subject Property operations likely contributed in part to the contamination identified in soil, ground water, and soil vapor and recommended that additional investigation and remediation be completed. The documented on-site contamination of soil, groundwater, and soil vapor is identified as **REC-9.**

5.1.3. LOCAL, COUNTY, AND STATE INFORMATION REQUESTS

On March 18, 2025, SESI filed information requests with the New York State Department of Environmental Conservation, Westchester County, and the City of Peekskill for information regarding potential incidents, spills, hazardous material storage/use and UST decommissioning records. An additional submittal to the City of Peekskill Fire Department was made on March 25, 2025.

The NYSDEC responded in April 2025 and provided several documents as follows:

- The *Facility Information Report* and *Petroleum Bulk Storage Registration Certificate* for Highland Light Steam Laundry/White Plains Linen (PBS No. 3-800121) identified the following tank information:

Tank ID	Type	Size (gal)	Contents	Status	Date
002	AST	275	No. 2 Fuel Oil	Administratively Closed	NP*
003	AST	275	No. 2 Fuel Oil	Administratively Closed	NP*
004	AST	550	No. 2 Fuel Oil	In-service	2/1/1978
005	UST	1,000	No. 2 Fuel Oil	In-service	4/1/1981
006	AST	8,000	No. 2 Fuel Oil	In-service	10/1/1968

* - NP = not provided

  These listings are consistent with those identified in the AST and UST databases above in Section 5.1.1.
- The *NYSDEC Spill Report Form* for Spill No. 1408577 was provided. As noted in Section 5.1.1 above, the spill narrative indicates that a 550-gallon tank was removed, and soil contamination was identified. In addition, a 1,000-gallon UST was removed from the sidewalk and the contractor was excavating looking for an additional tank. The form also indicates that a closure report was submitted (see next bullet).
- The January 5, 2015 *Closure Report* by Elite Environmental Services, Inc. for Spill No. 1408577 was reviewed. The copy of the report did not include any site diagrams. The report indicates that a 1,000-gallon UST was removed on November 20, 2014. Corrosion holes were identified and impacted soils were also observed below the UST. A total of 37.71-tons of petroleum-impacted soils and approximately 1,300 gallons of oily water mix were removed from the excavation during the UST closure. A total of five (5) post-excavation soil samples were collected, one from each sidewall and the center floor of the excavation. The post-excavation soil samples were submitted for VOCs via USEPA Method 8260 and SVOCs via USEPA Method 8270. Analytical results identified several SVOCs in the west sidewall sample including benzo[a]anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene above the NYSDEC TAGM values. Elite concluded that all accessible petroleum-impacted soils had been remediated since the west sidewall sample was located adjacent to the street and underground utilities.

No other responses have been received at the time of this report; however, should the response contain information that alters the opinions and conclusions of this Report, SESI reserves the right to revise this Report based on this information. Request documents are included in **Appendix D**.

5.2. PHYSICAL SETTING SOURCES

Sources used to evaluate the physical setting of the Subject Property include:

- USGS Topographic Maps
- Aerial Photographs
- Site Reconnaissance
- Subject Property Survey

5.2.1. TOPOGRAPHY

Regional topography slopes to the west towards the Hudson River, located approximately 0.6-miles to the northwest. Based on information provided in the November 18, 2024, Topographic Survey of Property prepared by Geologic Land Surveying, PLLC, the on-site topography generally slopes downward from a high point in the northeastern portion of the Subject Property, with an approximate elevation of ±198 feet above mean sea level (ft amsl), to a low point in the northwestern portion of the Subject Property, with an approximate elevation of ±174 ft amsl. Additionally, the Subject Property slopes downward from a high point in the southwestern portion of the Subject Property, with an approximate elevation of ±177.5 ft amsl, to the low point in the northwestern portion of the site, with an approximate elevation of ±174 ft amsl. The Topographic Survey of Property prepared by Geologic Land Surveying, PLLC is included in **Appendix A.**

5.2.2. SURFACE WATERS AND WETLANDS

The closest open surface water to the subject property is the Hudson River, located approximately 0.6-miles to the northwest of the Subject Property. No wetlands were mapped on the Subject Property according to the NYSDEC's Environmental Resource Mapper. According to the NYSDEC's DECinfo Locator, the Subject Property is not located within any environmentally sensitive area. The Subject Property is not located within a flood zone, according to the FEMA Flood Insurance Rate Map (FIRM) No. 36119C0016F.

5.2.3. GEOLOGY AND GROUNDWATER

As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Subject Property are characterized as UhB (Urban land – Charlton complex with 3 to 8 percent slopes). The findings of the Phase II ESA and geotechnical investigation conducted at the Subject

Property (see Section 5.1.2 above) indicated that the subsurface condition at the Subject Property generally consists of surficial materials, underlain by granular fill, underlain by till, and underlain further by Gneiss bedrock.

The surface materials consisted of asphalt, concrete and sub-base granular materials measured up to six (6) inches. The granular fill extended to up to +-5 feet below existing grades. The granular fill generally consisted of coarse to fine sand, little to trace amounts of silt, clay and little to some amounts of coarse to fine gravel, with concrete debris. The natural till consisted predominantly of sand, with little to trace amounts of silts and clays with variable amounts of medium to fine gravel. The natural soils extended to the top of weathered rock and/or bedrock at depths ranging from approximately 1.5 feet to 12 feet corresponding to approximate elevations 159.5 ft amsl through 186.5 ft amsl.

Weathered/decomposed rock material was encountered in all boring locations in depths ranging from approximately 4 to15 feet below ground surface corresponding to approximate elevations 160.5 ft amsl through 187.5 ft amsl. The decomposed bedrock extended to top of bedrock at depths ranging from approximately 1 foot to 7.5 feet corresponding to approximate elevations 159.5 ft amsl through 188.5 ft amsl. During the geotechnical investigation, the weathered rock was augered through using conventional mud rotary drilling techniques and was observed to consist of heavily weathered Gneiss gravel and cobble-sized fragments, little to some amounts of coarse to fine sand and trace amounts of silt and clay.

Bedrock was encountered in all borings at depths ranging from approximately 5 to 16 feet below the existing ground surface. During the geotechnical investigation, a total of six (6) 5-foot rock cores were collected at boring locations GT-1, GT-2, GT-4 and GT-6 upon encountering auger refusal. The bedrock generally consisted of Biotite Gneiss. Rock core recovery ranged from approximately 60 to 100 percent, with a Rock Quality Designation (RQD) ranging from approximately 17 to 78 percent. The upper portions of the bedrock are generally more weathered and RQD generally increases with depth.

Groundwater was encountered in the overburden zone at approximately 5 feet below ground surface (bgs) in the western portion of the Subject Property. However, groundwater was not observed in the overburden zone in the eastern portion of the Subject Property.

5.3. HISTORICAL USE INFORMATION FOR THE PROPERTY

Sources used to determine the historical use of the property include:

- Aerial Photographs;
- EDR City Directory Abstract;
- USGS Topographic Maps; and
- Sanborn Fire Insurance Maps.

EDR Reports are attached to this Report as **Appendix B.**

5.3.1. AERIAL PHOTOGRAPHS

Following is a summary of the EDR review of fourteen (14) aerial photographs dated 1940, 1947, 1954, 1958, 1960, 1964, 1974, 1984, 1989, 1994, 2006, 2011, 2015, and 2019:

Table 5.2—Aerial Photographic Review

Year	Quality of Photograph	Observations
1940	West side of photo is fair, east side is unmapped	**Subject Property:** The Subject Property is not visible in the aerial photograph. **Adjacent Parcels:** The Subject Property is bound to the west by small structures consistent with residential use.
1947	Fair	**Subject Property:** The Subject Property is improved with structures in the southern, west, and northwest corners. The central portion of the Subject Property appears to be open space. **Adjacent Parcels:** the surrounding area is improved predominantly with small structures consistent with residential use.
1954	Fair	**Subject Property:** The Subject Property appears to have a materials pile in the central portion which is consistent with the location of a coal pile identified in Sanborn maps (see Section 5.3.4 below). **Adjacent Parcels:** No significant changes.
1958	Fair	**Subject Property:** A structure or materials pile now appears to be present in the northeast corner of the Subject Property. **Adjacent Parcels:** No significant changes.
1960	Fair	**Subject Property:** No significant changes. **Adjacent Parcels:** No significant changes.
1964	Good	**Subject Property:** There is no structure or materials pile present in the northeast corner any longer. **Adjacent Parcels:** No discernible changes.

Year	Quality of Photograph	Observations
1974	Good	**Subject Property:** A large structure is now present in the northeast corner of the Subject Property. **Adjacent Parcels:** A large structure consistent with commercial use is now present adjoining to the south of the Subject Property.
1984	Good to fair	**Subject Property:** A small structure is now present in the central portion of the Subject Property in the general area of the former materials pile. **Adjacent Parcels:** No significant changes.
1989, 1994, 2006, 2011, 2015, and 2019	Good	**Subject Property:** No significant changes. **Adjacent Parcels:** No significant changes.

No concerns were identified at the Subject Property or surrounding properties based on a review of the aerial photographs.

5.3.2. HISTORICAL AND CURRENT SITE OPERATIONS

SESI reviewed the City Directory listings for the years 1972, 1977, 1982, 1987, 1992, 1995, 2000, 2005, 2010, 2014, 2017, and 2020. The City Directory Abstract provides the name and operations at the Subject Property. A summary of previous operators at the Subject Property is presented in **Table 5.3** below.

Table 5.3 - Historical Site Operations

Year	Subject Property Address and Operations			
	418 N Division St.	407 Highland Ave.	425 Highland Ave.	427 Highland Ave.
1972	St Emply Ofc No 80	No listing	No listing	Martin HTG & Air Cond
1977	St Labor Unemplymt	No listing	No listing	Hilnd Indstrl Sup United Mach & Metal
1982	St Labor Unemplymt	No listing	No listing	No listing
1987	Wayne Desalvo Inc. Wayne Printing & Lith	No listing	No listing	Bernand Zipprich
1992	No listing	No listing	Peekskill City Of - Fire Dept – Fire Patrol	No listing
1995	No listing	No listing	No listing	No listing
2000	No listing	No listing	Peekskill City of Contd Fire	Zipprich, Bernard

			Department Peekskill Fire Patrol	
2005	No listing	No listing	No listing	No listing
2010	No listing	No listing	Peekskill Fire Patrol	No listing
2014	No listing	No listing	City of Peekskill	No listing
2017	No listing	No listing	City of Peekskill	No listing
2020	No listing	No listing	Peekskill Fire Patrol	No listing

Property records from the City of Peekskill indicate that 407 Highland Avenue (Property Identifier 23.78-1-10) previously was addressed as 407-419 Highland Avenue. The City Directories identified the following operations at 411 Highland Avenue:

Year	Operations
1972	Light Steam Laundry
1977	C&C Cleaners
1982	Highlnd Stm Ldry
1987	Wht Pln Coat&Apron
1992	White Plains Coat & Apron Co White Plains Linen
1995	White Plains Coat & Apron Co White Plains Linen
2000	No listing
2005	
2010	
2014	
2017	
2020	

Listings at the Subject Property identified printing and lithography operations in 1987 (**REC-6**), industrial supply and machine/metal working in 1977 (**REC-4**), and fire department operations from 1992 through 2020 (**REC-7**). Based on available information it is unclear if the printing and lithography business included actual printing operations or was simply offices for a printing company.

SESI also reviewed City Directory listings for surrounding properties. The following former uses were identified:

- The H&S Machine Co (1972) and Choice Plbg & Heatg were identified at 421 North Division Street, located approximately 250 upgradient from the Subject Property. This facility was not identified on any databases discussed in Section 5.1.1. Therefore, based on the distance and lack of any reportable discharges, this facility is not of concern.
- United Cleaners and Dyr was identified in the 1972 City Directory at 320 Highland Ave, which is located approximately 180 feet downgradient to the southwest of the Subject Property. This facility was not identified on any databases discussed in Section 5.1.1. Temporary well TW-3, installed on-site during the Phase II ESA, did not contain chlorinated volatile organic compounds (CVOCs) above the applicable standard. Therefore, this facility is not of concern.

5.3.3. USGS TOPOGRAPHIC MAPS

Following is a summary of the EDR review of Topographic Map Reports:

Table 5.4—Topographic Map Review

Source	Year	Minute	Scale
West Point	1892, 1894, 1899, 1901	15	62500
West Point	1936	15	48000
West Point	1941	15	62500
West Point	1946	15	50000
Peekskill	1947	7.5	24000
Peekskill	1950	7.5	25000
Peekskill	1957, 1981, 2013, 2016, and 2019	7.5	24000

A review of these topographic maps suggests a portion of the Subject Property was developed prior to 1892 when small structures were identified at the northeast and southwest corners of the Subject Property. The topographic maps depict the Subject Property with an approximate elevation of 190 feet above msl. Regional topography slopes downward to the southwest. No wetlands were noted on the maps within or adjacent to the Subject Property.

5.3.4. SANBORN FIRE INSURANCE MAPS

The Subject Property is covered on twelve (12) Sanborn maps 1887, 1895, 1900, 1905, 1911, 1923, 1941, 1950, 1958, 1964, 1971, and 1972 described below:

Table 5.5—Sanborn Map Review

Year	Quality of Map	Observations
1887	Fair	**Subject Property:** The Subject Property is improved with a carpentry shop in the southern on-site building. The northern portion of the Subject Property appears to be in an unmapped area. **Adjacent Parcels:** Several dwellings are depicted in the surrounding area.
1895	Good	**Subject Property:** The Subject Property is bound to the north by Constant (type of road not indicated), Highland Avenue to the west, and Hillside Ave to the east. The Subject Property is improved with a two-story dwelling along Hillside Avenue. The carpentry shop in the southern portion of the Subject Property is indicated as having steam power. No USTs are depicted. **Adjacent Parcels:** A blacksmith is located west across Highland Street from the southwest corner of the Subject Property. The remaining structures in the surrounding area are all residential dwellings.
1900	Good	**Subject Property:** The on-site dwelling has been expanded and is now indicated for commercial use (H H Muxlow Truckman). The fuel source for the carpentry shop in the southern portion of the Subject Property is indicated as coal. **Adjacent Parcels:** The blacksmith is no longer depicted to the west of the southwest corner of the Subject Property. A two story structure is now present adjoining to the south of the Subject Property and several additional dwellings are depicted further south along Orchard (the type of road is not indicated).
1905	Fair	**Subject Property:** The northern structure on-site formerly occupied by H H Muxlow Truckman is no longer depicted. **Adjacent Parcels:** A larger structure for apparent commercial use is present south of the Subject Property; however, due to the copy of the map, the use cannot be discerned. Several additional residential structures are now present in the surrounding area.
1911		**Subject Property:** The Subject Property has been improved. Two additional structures are now present adjoining to the north of the carpentry shop along Highland Street and are indicated as furniture storage and mill storage. These are associated with the C.A. Lamos Son Sash and Blind Factory. Another structure is now depicted on the northern portion of the Subject Property at 961 Constant Ave and is indicated as the Van Cortland Dairy

Year	Quality of Map	Observations
		Co. which manufactures milk and ice cream products. The fuel source for the building is indicated as coal and the southern portion of the structure is indicated as an automobile shed. **Adjacent Parcels:** No significant changes.
1923	Fair	**Subject Property:** The Subject Property has been improved. A structure in the northwest corner is indicated as a garage (959 Constant Ave). An additional structure is now present along Highland Avenue; three are used for offices and storage while the former carpentry shop is indicated as an automobile warehouse. **Adjacent Parcels:** A large commercial structure is now located diagonally opposite from the northwest corner of the Subject Property; however, due to the clarity of the map, its' use cannot be discerned. The commercial structure south of the Subject Property is no longer depicted.
1942	Fair	**Subject Property:** The northwest structure (959 Constant Ave) is indicated as the Peekskill Motor Bus Corporation and the southern structure (previously indicated as an automobile warehouse) is now the Highland Laundry Service. **Adjacent Parcels:** No significant changes.
1950	Fair	**Subject Property:** The structure to the south of the garage at the northwest corner is now indicated as a Fire Department (421 Highland) and a gasoline UST is depicted to the south of this structure. A coal pile is indicated in roughly the center of the Subject Property. The southern structure occupied by the Highland Laundry Service has been expanded (411-419 Highland), appears to be interconnected, and is indicated as being a steam laundry. **Adjacent Parcels:** Two gasoline USTs are depicted in Highland Street near the northwest corner of the Subject Property. A gasoline tank is depicted to the west of the Subject Property associated with a 20-car capacity garage. A filling station with four gasoline USTs depicted is located southwest of the Subject Property at the northwest corner of the intersection of Highland Street and Orchard. An additional filling station with three gasoline USTs is depicted south of the Subject Property located at the northeast corner of the intersection of Highland Street and Orchard. A large commercial structure is present directly opposite to the northwest of the Subject Property that is used for welding (other uses cannot be discerned

Year	Quality of Map	Observations
		based on the quality of the map). A gasoline UST is depicted east of this facility within Highland Street.
1958	Good	**Subject Property:** The Highland Laundry Service has been expanded at the northeast corner of the building for additional coal storage. **Adjacent Parcels:** The gasoline UST to the west associated with the 20-car garage is no longer depicted. The gasoline USTs at both service stations to the southwest and south of the Subject Property, respectively, are no longer depicted. The structure directly opposite of the northwest of the Subject Property is indicated as a garage.
1964		**Subject Property:** No significant changes. **Adjacent Parcels:** The dwelling directly opposite of the northeast of the northeast corner of the Subject Property is now indicated as being used for stone cutting.
1971		**Subject Property:** The Subject Property has been improved with a large commercial structure in the northeast corner. **Adjacent Parcels:** The parcel adjoining to the south of the Subject Property is now improved with a large commercial structure. The filling station to the south along Orchard is now indicated as parking.
1972		**Subject Property:** No significant changes. **Adjacent Parcels:** No significant changes.

Based on the review of Sanborn Maps, the following RECs were identified:

- Several gasoline USTs were identified, with one on-site and two adjoining to the west of the northwest corner of the Subject Property (**REC-1**).
- The Subject Property was previously utilized for laundry operations (**REC-2**).
- Numerous on-site structures were heated using coal since at least 1900 and a coal pile and coal storage building were present at the central courtyard from at least 1950-1972 based on the Sanborn maps (**REC-3**).
- The southern structure on-site was also previously used as a carpentry shop and automobile warehouse (**REC-4**).
- The northwestern structure was previously utilized as a bus garage (**REC-5**).
- The Subject Property also previously contained a fire house (**REC-7**).

5.4. ENVIRONMENTAL LIEN AND AUL SEARCH REPORT

A title report prepared by Atlantic title Agency II LLC dated November 5, 2024 was reviewed. Based on the report, an environmental lien or AUL was not identified. The title report is attached as **Appendix A**.

5.5. ENVIRONMENTAL PERMITS

Review of the EDR Radius Map Report for the Subject Property indicates no environmental permits attributed to the Subject Property. EDR Reports are provided in **Appendix B**.

6.0 SITE RECONNAISSANCE

6.1. METHODOLOGY AND LIMITING CONDITIONS

During the Phase II field activities, environmental professionals from SESI conducted reconnaissance of the Subject Property to identify potential RECs. The Subject Property was observed from exterior and interior locations at the time of the reconnaissance. An inspection photolog is attached to this Report as **Appendix E.**

6.2. SUBJECT PROPERTY OBSERVATIONS

The property features seven abandoned buildings, including interconnected structures on Lots 9 and 10. Lot 10 contains a two-story stone building to the north, with three interconnected buildings (ranging from 1 to 3 stories) to the south. The site also includes a courtyard, an asphalt-paved parking area, and driveways along Highland and Constant Avenues. The property slopes downward toward the west.

Uncontained waste and debris were found throughout the site, including in the courtyard and the hallways connecting the interconnected buildings. Minor oil and vehicle fluid stains were observed in the Constant Avenue parking area, but no significant concerns or findings were noted.

The two-story building west of the parking area contained several mostly empty 55-gallon plastic drums of unknown contents. SESI did not observe staining around the areas these were staged. Several drainage-like trenches, approximately 2 feet wide, 8 feet long, and 2 feet deep, were observed in the southern section of the building, along with a sump in the southwestern corner near the connection to the adjacent three-story structure. The first floor contained general garbage and debris, but no notable concerns.

The three-story building, interconnected with the two-story structure, was abandoned with no significant staining or environmental issues. Its basement held debris, asbestos floor tiles, and signs of old boreholes, but no additional concerns were identified. The one-story warehouse-style building at the corner of Constant Avenue and Highland Avenue contained several cylindrical steel gas containers of unknown type and volume, as well as stockpiles of steel, tiles, wood, and demolition debris in wheeled totes. No significant staining or environmental concerns were observed around the building. No evidence of additional environmental concerns such as active

or abandoned tanks, notable staining areas, or hazardous materials were identified in other areas of the site during the reconnaissance.

6.3. CHEMICAL STORAGE AND USAGE

SESI observed several 55-gallon drums and compressed gas cylinders with unknown contents throughout the Subject Property (**BER-1**).

6.4. BULK STORAGE TANKS

SESI personnel did not observe evidence of bulk storage tanks at the Subject Property during the site reconnaissance. However, several suspected or historic USTs and ASTs were identified at the Subject property, as discussed throughout this report.

6.5. SUBJECT PROPERTY WASTE AND WASTEWATER

SESI did not observe any waste or wastewater present at the time of the Subject Property reconnaissance.

6.6. STAINED SOIL, STAINED PAVEMENT, OR STRESSED VEGETATION

SESI did not observe any indications of stained soil, or stressed vegetation. Minor isolated oil or mechanical fluid stains, likely from vehicles previously parked or staged, were observed in the asphalt paved parking area along Constant Avenue.

6.7. PITS, PONDS, OR LAGOONS

No pits, ponds, or lagoons were identified during the inspection.

6.8. WELLS

SESI did not observe any monitoring wells, dry wells, irrigation wells, injection wells, potable water wells, recovery wells, or abandoned wells on the Subject Property.

6.9. FLOOR DRAINS AND SUMPS

SESI observed several floor linear drains in the central and southern portions of the two-story stone building(s) west of the asphalt paved parking area along Constant Ave. A sump was also

identified in the southwestern portion, near Sb-101, of the two-story building; Interiors were not inspected during the Subject Property reconnaissance.

6.10. PCB-CONTAINING MATERIAL, INCLUDING CAULK

There was one pad-mounted transformer identified on-site. Soil boring SB-105 was advanced in the general area of the transformer and PCBs were not detected. Although the PCB contents could not be verified for any transformer based on existing labeling; however, no discharges were identified. There are several pole-mounted transformers along the northern property boundary; however, no evidence of a discharge was identified. There are likely several areas in which caulking is also present; therefore, a PCB survey is recommended for caulking. This is considered **BER-2**.

6.11. ASBESTOS-CONTAINING MATERIAL

ACM surveying was not included in SESI's scope of work. An asbestos survey was conducted by DVD Environmental Inc. (DVD) in November 2024. The ACM identified on-site consisted of 9"x9" vinyl floor tiles in 407 Highland Avenue and 418 North Division Street and façade transite panels, and roof flashing tar/felt under the EPDM roof at 425 and 427 Highland Avenue. The presence of ACM is considered **BER-3**.

6.12. RADON

Radon surveying was not included in SESI's scope of work; however, based on the age of the facility, a radon survey may be considered. However, the Subject Property is located in the Peekskill, which is in EPA Radon Zone 3. This zone contains counties with the "lowest potential; average indoor radon levels may be less than 2 pCi/L (picocuries per liter)." Therefore, radon is not expected to adversely impact the Subject Property.

6.13. UNIVERSAL WASTE

There were several pieces of universal waste throughout the buildings. Therefore, this universal waste should be properly disposed of prior to redevelopment. This is considered **BER-4**.

6.14. CONCRETE

Concrete may be disturbed as part of the redevelopment of the property. Therefore, sampling of any stained concrete is recommended prior to disposal. This is considered **BER-5**.

6.15. LEAD-BASED PAINT

LBP surveying was not included in SESI's scope of work; however, based on the age of the facility, and LBP survey is recommended. This is considered **BER-6**.

6.16. VAPOR INTRUSION

Vapor intrusion is a concern at the Subject Property based on the analytical results from the Phase II ESA. In SV-2, PCE and TCE were detected at concentrations exceeding the NY-SSC. Notably, PCE was detected at a concentration slightly over 10x of NY-SSC.

7.0 DATA GAPS

Based on a review of the available documentation, the following data gaps have been identified:

- FOIL request responses from the town and county have not been received as of the date of this report.

8.0 FINDINGS

Based on our investigation, we conclude that there is evidence to indicate areas of potential environmental concern on the Subject Property. See ***Section 10.0 CONCLUSIONS*** of this Report.

9.0 OPINIONS

In our professional judgment, the scope and character of our environmental assessment were sufficient to justify the stated conclusions, after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the Subject Property as found in historical records, and visual observation of the Subject Property.

10.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the investigation, it is concluded that there is evidence to indicate areas of recognized environmental concern on the Subject Property and that additional investigation of these areas is warranted. The conclusions and recommendations in this regard are as follows:

- **REC-1 ASTs and USTs (On-site and Off-site):** The Subject Property is identified as Highland Light Steam Laundry/White Plains Linen on the UST database with Site ID No. 3-800121 with the following tank information:

Tank ID	Size	Contents	Status	Date
005	1,000	No. 2 Fuel Oil	Closed-Removed	10/20/2014

The Subject Property is identified as Highland Light Steam Laundry/White Plains Linen on the AST database with Site ID No. 3-800121 with the following tank information:

Tank ID	Size (gal)	Contents	Status	Date
002	275	No. 2 Fuel Oil	Administratively Closed	1/1/1900*
003	275	No. 2 Fuel Oil	Administratively Closed	1/1/1900*
004	550	No. 2 Fuel Oil	In-service	2/1/1978
006	8,000	No. 2 Fuel Oil	In-service	10/1/1968

* - The AST was not closed on 1/1/1900, this date is used as a placeholder when the actual date is not provided. Based on available information, the tanks were installed on August 1, 1989.

The Subject Property was also identified as Highland Light Steam Laundry Inc. on the AST database with Site ID No. 3-000007 with the following tank information:

Tank ID	Size (gal)	Contents	Status	Date
007	550	Not reported	Closed/Removed	10/17/2010
008	800	Not reported	Closed/Removed	1/5/2011
009	500	Not reported	Closed/Removed	9/1/2003

The Subject Property was also identified on the CBS AST database with CBS No. 3-000007 for a 550-gallon AST that contained sodium hypochlorite which is reported as in service.

Spill No. 1408577 was reported when soil contamination was identified during the closure of a 550-gallon UST (this does not correlate with the UST database data above). Additional information in the narrative indicates that a 1,000-gallon UST was removed from the sidewalk and that an additional tank was suspected to be in the nearby area due to a "magnetic survey". Based on available information, the impacted soils were remediated, and the spill was closed. Therefore, the potential remains for additional USTs to be present in the sidewalk.

A gasoline UST was identified south of the on-site structure at 421 Highland Avenue (most recently utilized as a Fire House) in the 1950 Sanborn map. In addition, two gasoline USTs are depicted in Highland Street near the northwest corner of the Subject Property. **Further investigation of REC-1 is recommended to investigate the current and former tank systems, evaluate for potential additional USTs, and evaluate for potential discharges.**

- **REC-2 Former On-site Laundry Operations:** The majority of the on-site structure was used for industrial laundry operations beginning in at least 1942, with operations starting in the southernmost structure and eventually occupying a majority of the interconnected on-site buildings. These on-site laundry operations utilized a variety of cleaning solvents and detergents and utilized floor drains, trench drains, and other large-scale drainage features below former laundry equipment. The on-site laundry operations were coal-powered, and a large coal storage area was previously located in the central portion of the Subject Property.

  This building was occupied by White Plains Linen, Highland Steam Landry, C&C Cleaners, and White Plains Coat & Apron Co. The Subject Property was identified as White Plains Linen at 411 Highland Avenue on the USEPA's Envirofacts website. The Air Program Information indicates that tetrachloroethene (PCE) was used on-site. Soil vapor sample SV-2, collected in the northern portion of the southern building during the recent Phase II ESA, identified elevated concentrations of both PCE and trichloroethene (TCE), suggesting a potential source area. **Therefore, further investigation of the soil, groundwater, and soil vapor is recommended for REC-2.**

REC-3 Former Coal Storage and Use: The 1900 Sanborn Map indicates the southern on-site structure (427 Highland Avenue) was powered using coal. The 1911 Sanborn Map shows the former Van Cortland Dairy Co. structure (the northernmost structure on Lot 10) present with coal as a fuel source. Beginning in the 1950 Sanborn map, a coal pile is indicated in the central portion of the Subject Property; however, SESI notes that it is highly likely that coal was staged at this location pre-1950 as a feature consistent with a coal pile was observed in the 1947 aerial photograph in the courtyard. In the 1958 Sanborn Map a coal storage building is depicted north of the boiler room of the southern building with a coal pile still indicated within the courtyard. Coal storage and handling may have resulted in on-site contamination consisting of polynuclear aromatic hydrocarbons (PAHs), coal tar, and creosote. On-site data generated by the recent Phase II ESA identified PAH impacts throughout many areas of the Subject Property, which may be partially attributable to the former coal use and handling. Further, soil borings SB-9, SB-10, SB-102, SB-103, and SB-106 were advanced in the general area of the former coal pile and coal storage building. Analytical results identified certain Volatile Organic Compounds (VOCs), polychlorinated biphenyls (PCBs), and certain metals (including mercury) above the most stringent NYSDEC Soil Cleanup Objective (SCO). Ground water was not encountered in TW-4, advanced on the downgradient side of the courtyard, indicating that ground water is likely encountered within the shallow bedrock in this area of the Subject Property. As noted above, soil vapor sample SV-2, collected in the general area of the former coal storage building during the recent Phase II ESA, identified elevated concentrations of both PCE and trichloroethene (TCE), suggesting a potential source area. **Therefore, further investigation of the soil, groundwater, and soil vapor is recommended for REC-3.**

- **REC-4 Former On-site Carpentry Shop, Metal Shop, Sash and Blind Factory, and Automobile Warehouse:** The southern on-site structure was occupied by a carpentry shop in the 1887 Sanborn map until 1911 when it is indicated as an automobile warehouse. The 1911 Sanborn map indicates the southern structures along Highland Avenue are occupied by the C.A. Lamos Son Sash and Blind Factory. These operations continued until approximately 1942 when the steam laundry operations were depicted on the 1942 Sanborn map. In addition, there appears to have been metal fabrication occurring in this structure sometime between 1972-1977 based on City Directory listings.

Further investigation of the soil, groundwater, and soil vapor related to REC-4 is recommended.

- **REC-5 Former On-site Bus Garage and Trucking Operations:** The northwestern on-site structure was indicated as a garage in the 1923 Sanborn map, as the Peekskill Motor Bus Corp. in the 1942 Sanborn map, and as a garage in the 1950, 1958, 1964, 1971, and 1972 Sanborn maps. A former on-site structure, located roughly where the Fire Department building is located on-site, was indicated as being occupied by a trucking company in the 1900 Sanborn map. This structure was no longer depicted on-site beginning in 1905. Soil samples collected in the area of these former operations identified polynuclear aromatic hydrocarbons (PAHs), pesticides, and metals above the NYSDEC Unrestricted Use Soil Cleanup Objective (USCO). Groundwater samples TW-1 and TW-2 were collected in this area of the Subject Property during the Phase II ESA and identified PAHs and metals above the applicable NYSDEC Ambient Water Quality Standards (AWQS). No soil vapor exceedances were identified. **Further investigation of the soil and groundwater related to REC-5 is recommended.**

- **REC-6 Former On-site Printing and Lithography:** The 1987 City Directory identified Wayne Desalvo Inc./Wayne Printing & Lith at 418 North Division Street, which is located in the northeast corner of the Subject Property on Lot 9. Based on available information, it is unclear if the on-site structure was used for printing operations, office space, or both. The previous listed tenant in the space is the NYS St. Labor Unemployment office. Printing operations may have used solvent, metals, and PFAS. Limited soil testing on Lot 9 during the Phase II ESA identified pesticides above the most NYSDEC's USCOs and polynuclear aromatic hydrocarbons (PAHs) above the NYSDEC's Residential Soil Cleanup Objectives (RSCOs) and/or Restricted Residential Soil Cleanup Objectives (RRSCOs). Groundwater was not encountered in the shallow overburden, indicating that groundwater is likely to be encountered within weathered and/or competent bedrock. No soil vapor samples were collected on Lot 9 during the Phase II ESA. **Further investigation of the soil, groundwater, and soil vapor related to REC-6 is recommended.**

- **REC-7 Former On-site Fire House:** The structure located on Lot 10 (425 Highland Avenue in the City Directories) was constructed sometime between 1911 and 1923 based on the Sanborn maps. The clarity of the Sanborn map in 1923 is poor and the use could

not be determined. The building use is not labelled in the 1942 Sanborn map. In the 1953 Sanborn map the building is indicated as being used as a Fire Department building. Based on City Directory listings, this use continued until at least 2020. The former use of the building for fire department activities may have adversely impacted the subsurface, with potential contaminants of concern including petroleum and PFAS. Two (2) soil samples were collected within the structure near the address side during the recent Phase II ESA; metals were identified above the NYSDEC's USCO and/or RRSCO. Temporary well TW-2 was installed within the fire department building. One VOC, several PAHs, and several metals were detected above their respective NYSDEC's AWQS. In addition, both Perfluorooctanoic Acid (PFOA) and Perfluorooctanesulfonic Acid (PFOS) were detected above the NYSDEC's AWQS; however, although the detections were an order of magnitude higher than the AWQS for both compounds, the concentrations were generally in the order of magnitude typical of urban areas and are not considered indicative of an on-site source. Soil vapor was not evaluated on Lot 10 as part of the Phase II ESA. **Further investigation of the soil, groundwater, and soil vapor related to REC-7 is recommended.**

- **REC-8 Historic Fill:** Historic fill was identified on-site during the Phase II ESA completed on-site by SESI. The granular fill extended to up to +-5 feet below existing grades. The granular fill generally consisted of coarse to fine sand, little to trace amounts of silt, clay and little to some amounts of coarse to fine gravel, with concrete debris. Based on soil analytical results from the Phase II ESA, PAHs and metals were detected in on-site soils above the most stringent NYSDEC SCOs which appear to be in part due to contaminated historic fill. **Further investigation of the historic fill on-site is recommended.**

- **REC-9 On-site Contamination:** Analytical results from the Phase II ESA identified on-site contamination in soil, groundwater, and soil vapor above the applicable clean up objectives, quality standards, and criteria, respectively. On-site contamination appears to be attributable to both historic on-site operations (**REC-1** through **REC-7**) and contaminated historic fill (**REC-8**). **Further investigation and remediation of on-site contamination is recommended.**

The following HREC has been identified:

- **HREC-1 Former Spills:** A review of the database as provided by EDR identified the Subject Property with the following information:

Name	Spill No.	Closed Date	Material	Volume (gal)
White Plains Linen	0206243	09/16/2002	No. 2 Fuel Oil	10
Coat & Apron Co.	0410072	12/10/2004	No. 2 Fuel Oil	2
White Plains Linen	0809615	1/9/2009	No. 2 Fuel Oil	75
White Plains Linen	1408577	2/2/2022	No. 2 Fuel Oil	Not reported

Limited information is available regarding the nature and response to Spill Nos. 0206243 and 0410072. Spill No. 0809615 was reported when an overfill occurred during a fuel delivery. The overfill of No. 2 fuel oil was not recoverable and dissipated with laundry detergents into the sanitary sewer. Based on this, the spill was closed.

Spill No. 1408577 was reported when soil contamination was identified during the closure of a 550-gallon UST (this does not correlate with the UST database data above). Additional information in the narrative indicates that a 1,000-gallon UST was removed from the sidewalk and that an additional tank was suspected to be in the nearby area due to a “magnetic survey”. Based on available information, the impacted soils were remediated, and the spill was closed.

Spill No. 0302563 was reported on June 10, 2003 when a backhoe was excavating for a gas leak and hit a sewer connection, causing spill of unknown material into a catch basin. The spill was closed the following day on June 11, 2003.

No further investigation or remediation is required for these former spills that received regulatory closure.

The following BERs have been identified:

- **BER-1 Drums and Compressed Gas Cylinders:** SESI observed several 55-gallon drums with unknown contents throughout the Subject Property. <u>The drum contents should be evaluated, and the drums and compressed gas cylinders should be properly disposed of off-site.</u>

- **BER-2 PCB-Containing Material (Including Caulk - All Buildings):** A survey for PCB caulk was not completed. However, based on the age of the building, a PCB survey is recommended for caulk.
- **BER-3 Asbestos Containing Material (ACM):** ACM surveying was not included in SESI's scope of work. An asbestos survey was conducted by DVD Environmental Inc. (DVD) in November 2024. The ACM identified on-site consisted of 9"x9" vinyl floor tiles in 407 Highland Avenue and 418 North Division Street and façade transite panels, and roof flashing tar/felt under the EPDM roof at 425 and 427 Highland Avenue. All ACM should be abated prior to any demolition activity by a licensed Asbestos Abatement Contractor according to all applicable rules and regulations.
- **BER-4 Universal Waste:** There were several pieces of universal waste throughout the buildings. Therefore, this universal waste should be properly disposed of prior to redevelopment.
- **BER-5 Concrete:** Concrete may be disturbed as part of the redevelopment of the property. Therefore, sampling of any stained concrete is recommended prior to disposal.
- **BER-6 Lead Based Paint (LBP):** LBP surveying was not included as part of this Phase I Environmental Site Assessment. However, based on the age of the structures located on the Subject Property, the possibility of presence of LBP cannot be ruled out. Therefore, an LBP survey is recommended.

A figure showing the locations of the RECs identified at this Subject Property is included as **Figure 10.1.**

11.0 DEVIATIONS

This Report was prepared with no significant deviation from ASTM Standard Practice E1527-21.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

As required in 40 CFR 312.21(d), this section includes statements made by the environmental professional conducting this assessment.

“I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.”

“I declare that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property.”

“I have developed and performed the ‘all appropriate inquiry’ in conformance with the standards, limitations, and practices set forth in 40 CFR Part 312.”

This Report incorporates the consultant's best professional judgment in conductance of this Phase One Environmental Site Assessment.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

Lists of Federal RCRA generators

RCRA-SQG ---------- RCRA - Small Quantity Generators

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF ---------- Facility Register

Lists of state and tribal leaking storage tanks

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land
NY HIST LTANKS ---------- Listing of Leaking Storage Tanks

Lists of state and tribal registered storage tanks

FEMA UST ---------- Underground Storage Tank Listing

NY CBS UST ---- Chemical Bulk Storage Database
NY MOSF UST ---- Major Oil Storage Facilities Database
NY MOSF ---- Major Oil Storage Facility Site Listing
NY MOSF AST ---- Major Oil Storage Facilities Database
INDIAN UST ---- Underground Storage Tanks on Indian Land
NY TANKS ---- Storage Tank Faciliy Listing

State and tribal institutional control / engineering control registries

NY RES DECL ---- Restrictive Declarations Listing
NY ENG CONTROLS ---- Registry of Engineering Controls
NY INST CONTROL ---- Registry of Institutional Controls

Lists of state and tribal voluntary cleanup sites

INDIAN VCP ---- Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

NY ERP ---- Environmental Restoration Program Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

NY SWTIRE ---- Registered Waste Tire Storage & Facility List
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands
ODI ---- Open Dump Inventory
DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations
IHS OPEN DUMPS ---- Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL ---- Delisted National Clandestine Laboratory Register
NY DEL SHWS ---- Delisted Registry Sites
US CDL ---- National Clandestine Laboratory Register

Local Lists of Registered Storage Tanks

NY HIST UST ---- Historical Petroleum Bulk Storage Database
NY HIST AST ---- Historical Petroleum Bulk Storage Database

Local Land Records

NY LIENS ---- Spill Liens Information
LIENS 2 ---- CERCLA Lien Information

Records of Emergency Release Reports

HMIRS ---- Hazardous Materials Information Reporting System

NY Hist Spills ---- SPILLS Database
NY SPILLS 90 ---- SPILLS 90 data from FirstSearch
NY SPILLS 80 ---- SPILLS 80 data from FirstSearch

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/16/2024 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 06/11/2024 has revealed that there are 2 ERNS sites within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/01/2024 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/03/2024 has revealed that there are 75 NY LTANKS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/16/2024 has revealed that there are 7 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there is 1 US AIRS site within approximately 0.001 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 08/28/2024 has revealed that there are 2 NY MGP sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

HUDSON RIVER PCBS (Continued) **1000384273**

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated l.l million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when thelevel of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabili e the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authori e a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action atthe remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for partiespotentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.

DEC Memo:	11/20/14 - A 550 gal. UST has been removed. Additional soil removal is needed. PBS No. 3-800121. KAB 11-20, email from WCHD, 1408577 White Plains Linen, 427 highland Ave, Peekskill PBS- 3-800121.Elite removed a 1K from the sidewalk. The excavation is backfilled, however they intend to return to excavate the soil,They are also digging looking for an additional tank. (identified on a magnetic survey),Elite didn t realize it was a PBS site and back file for permits. (They also have an 8K AST).Chris- WC will follow up RDB 5-4-17 Meeting with WCDOH, Permit on file with WC for removal of tank #5 (1K). Need followup on cleanup following removal. GHP 1/20/22: I was contacted by Ray Hilyer from Elite. Current owner of this property contacted Elite asking why the spill is still open. Elite states a closure report was submitted to the WCDOH in January of 2015. Message sent to PBS for confirmation. Closure report will be scanned to DecDocs. jod 2/1/22 Email to County requesting FIR and any other pertinent information. jc 2/02/22: Chris Lalak from WCDOH confirms closure request was forwarded to DEC in 2017. Closure report from Elite and current FIR scanned to DecDocs. NFA required. jod
Remarks:	20 tons - possibly soil recovery - cleanup pending - digging up tank

RENTAL PROPERTY - UST/AST (Continued) **S129994692**

tank at a multi-family
residence. Tank is weeping and concrete is stained below. No remedial action taken so far. Tank
level is 3/4 full. JG Spoke to Property Manager Jane. They have hired Elite Environmental to remove
the tank. Work is scheduled for Monday 3/20. JG 3/16/2023: Spoke with Greg at Castlton: Jane is the
property manager of a multi family home. The AST is a backup tank that has a slow leak. Can t see
the exact hole, but concrete underneath is stained, and bottom half of the tank is sweating. 275
AST - backup tank - leaking. 3/4 full 550 UST (mostly above ground under the porch but about 10% is
underground so labeling as a UST). Unknown if leaking. 3/4 full - in service. Her oil company is
Economy who is directly across the street. She is getting bids, but I told her she needs to do this
asap. Tenants are old. But no odors in the home at the moment. However I explained the risk of the
tank bottoming out. Municipal water and sewer. jod 2/09/2024: Messages sent to Castlton and Elite
requesting information whether or not they were hired to complete the cleanup. Castlton reports
back they were never hired. jod 2/13/2024: Elite Environmental removed the AST and completed
cleanup of the surface spill. PID field screening of soil below the basement floor did not detect
any contamination. Report reviewed and uploaded to DecDocs. NFA at this time. jod

Remarks: cleanup pending

Latitude:	41.2946316
Longitude:	-73.9200886
DEC Memo:	6/10/14: I spoke with Deputy Chief Jim Howard who went out to the site. He states: It looks like the lawn took the brunt of it. Approx 6 x 8 grass strip in the yard and another little piece between the sidewalk and the street. Nothing on the driveway. The wet spots are water. -Photos were forwarded showing the impacted areas. I spoke with the owner/caller Ruth Cardenas. She states this happened last Tuesday. Oil Company is Economy Fuel. She states she spoke with the owner Henry who told her he would come out and do the clean up himself tomorrow. This is not acceptable to her, she wants them to use an environmental company. I called Economy Fuel and left a message requesting an immediate call back. jod 6/11/14: I spoke with Henry Segar of Economy Fuel. He states he was under the impression - from speaking with his driver - the spill was minimal (less than a few ounces), was contained to the driveway, and was completely cleaned up within a half hour. He accepts responsibility for any cleanup or restoration the DEC requires. jod 6/12/14: DEC site inspection. Spill is primarily to vegetation, little or no soil impact. I later spoke with Henry Segar. He will have the impacted vegetation removed and disposed of, scrape off the top layer of soil, and replace the area with sod. Work to be done early next week. jod
Remarks:	From NRC Report 1085273. Oil delivery company spilled heating oil on a residential property. No clean up after a week.

DEC Memo:	5/18/23- Update from LaBella: Closed auto body repair property. Owner is deceased. LaBella is working w/attorney who is trying to figure out who is next to take ownership of the property. Soil borings prompted by open spill from '01 that looked unresolved. LaBella contracted to conduct Phase II. 2 borings completed so far. 200+ ppm on PID and petroleum odor. 2 more borings to be completed. GW encountered at 5-7 fbg but no sheen. LaBella PM is Aaron Yecies. -MS 06/02/23 Spoke to Arron Yecies who said the report is complete and he has provided it to the client which is a Trust. He is

KEITHS AUTOMOTIVE (Continued) **S121490342**

going to speak to the Trust's attorney about sending the report to DEC. TG 06/02/23 Arron Yecies
emailed a copy of the Phase II Env Site Assessment report. See report in DecDocs. TG 01/24/24 Call
received from Bransom Feilds from Labella. He reported that additional borings and wells are being
installed this week including location inside the building. He will call again once the soil and
groundwater sample results are received. TG 04/05/24 Branson Fields emailed the Focused Phase II
Environemtal Site Assessment dated March 14, 2024. See report in DecDocs. TG

Remarks: no cleanup soil borings

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was GHIOSAY 04/19/23 Requested any available information for this site from the WCDoH PBS files. William Eilbacher sent a UST removal report dated February 7, 1991 and submitted by Exxon to the DEC using this spill number. The report prepared by EA Engineering documents the removal of 4 gasoline tanks, (2) 1,000g tanks and (2) 3,000g tanks. Ira Conklin & Sons reported that 182.65 tons of contaminated soil was shipped offsite to the Town of Catskill Landfill. See the report in DecDocs. TG
Remarks:	1 GAL/HR. TESTED W/WATER.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'MARA 11/16/2001 550 GALLON TANK PULLED ON 11/14/01. WCDOH INSPECTED ON 11/15/2001. 03/08/2002 UST CLOSURE REPORT PREPARED BY IDC SUBMITTED TO DEC & WCDOH. 12/09/03 STEFAN GOREAU OF WCHD REFERRED SITE TO DEC. 11/05/09 John O'Mara will follow up JO'M 11/26/19 Emailed Stefan Goreau for any information that he can provide. TG A remark in the WCHD PBS digital file include a 05/08/2002 note, Rec. and reviewed closure report Refer to DEC. Tank had been closed in Date base since 2001. TG 01/24/20 Requested a copy of the report mentioned above from Stefan Goreau. TG 04/17/23 An email was received from a Real Estate

EXXON (Continued) **S100165979**

agent assisting Trustees for the Happiene Sampson Living Trust inquiring about the closure of the
spill. Included with the email was an Ira D Conklin UST closure report from March 6, 2002. The
report included soil and groundwater results, both of which are above DEC guidance or standards.
04/26/23 An email reply was sent advising the Trustees that the spill cannot be closed based on the
information in the Conklin report. Advised the trustees to call me to discuss future remedial work.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

THE LOFTS ON MAIN (Continued) **S118256195**

Town:	Peekskill (c)
Record Added Date:	08/14/2015
Record Updated Date:	01/02/2018
Update By:	BRHUMPHR
Site Description:	"Location: The Lofts on Main consists of two tax lots located at 922 Main Street and 921 Diven Street, in the City of Peekskill, Westchester County, New York (identified as City of Peekskill tax parcels: Section 33.29, Block 2, Lots 4 and 5, respectively). The site is a rectangular-shaped, vacant 0.575-acre parcel, which has 120 feet of frontage on the northern side of Main Street and 117.3 feet of frontage on the southern side of Diven Street. Site Features: The property is currently a vacant lot. The eastern and western property lines are bounded by institutional and residential properties while the northern and southern property borders are defined by Diven Street and Main Street, respectively. Current Zoning and Land Use: The current zoning is C-2, Central Commercial. The site is currently vacant land that was previously utilized for light industrial and commercial purposes. The surrounding properties are a mixture of commercial and residential properties. Past Use of the Site: The site is known to have been used for residential, commercial, and possibly manufacturing purposes since at least 1887. The site contained a furniture and upholstery store from sometime prior to 1895 until circa 1942 when a furniture warehouse replaced the upholstery shop. Other occupants of the subject property have included a furniture company in 1971, a shade company between 1971 and 1976, and the Paraco Fuel Corporation between 1971 and 1992. Some of these activities have the potential to have handled/used solvents, paints, and other chemicals. The source of the documented soil contamination may be from historical manufacturing operations or other commercial uses, or may be related to debris materials from the demolition of former on-site structures or other sources. Site Geology and Hydrogeology: Soils encountered during the extension of test pits at the southern portions of the site generally consisted of brown to dark brown, variable texture sand with cobbles and boulders. soils encountered at the northern portions of the site generally consisted of light brown to brown, fine sand with gravel, cobbles, and boulders. The upper 4 to 9 feet of soils across the site appear to be fill. Bedrock was encountered at depths ranging from 5.5 to 13.5 feet below grade Groundwater was not encountered in the overburden soils of the property. Groundwater is present in the bedrock at depths ranging from 11 to 13 feet below the ground surface and is flowing to the south/southwest."
Env Problem:	" Nature and Extent of contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were lead and pesticides in the soil. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. "
Health Problem:	"This Health Assessment is presently being updated and will be posted upon receipt from the NYSDOH."

DEC Memo:	11/15/06 Meeting Contacts: Property manager - Bill Lui Trustee - Kevin O'Shea Vincent Pizzella - Building inspector Fire chief - Jim Howard Envirostar - Frank DiBartolo WCHD - Carlos Torres & Chris Lalak Burke Heat Custard Ins. Adjusters (for Burke) - Michael Cariello Frank Dibartolo summarized work performed to date which included the disposal of oil impacted items being stored in the basement, absorption of the oil with speedi dry, removal of the concrete floor in the front of the basement, excavation and stockpiling of impacted soil and installation of an exhaust fan. Odors were still an issue in the travel agency which operates above the basement, so the following items were discussed and to be implented by EnvrioStar. - Remove the impacted soil which is covered but still stockpiled in the basement. - Extend the ventilation piping so that it discharges out of the back of the building instead of below the door to the travel agency. - Continue to excavate impacted soil in front of the basement. - bore through the concrete in the rear of the basement to determine if subsurface soil has been impacted in that area. - Additional work may be required pending the discovery of new information Building Dept and FD to followup on building code violations involving structural defects and electrical wiring issues. TG 04/17/07 Envirostar reported that the cleanup has been completed. 15.21 tons of contaminated soil was excavated and disposed. NFA TG

was heard entering tank. City will be uncovering tank so that US Tank Tech can investigate further to determine cause. Tank is only 10-12 years old so they believe it is a piping problem. Told Joe to make sure they contact WCHD with status once they have determined what the problem is. jm 11/14/2012: Tank passed a retest after piping was repaired. Report entered into eDocs. Based upon the information provided, no further action is required at this time. jod

DEC Memo: 9-9-22 PBS 3-410578. Steven Shelewet with Westchester Co. was doing an inspection and directed a spill be called in. Water was observed in the interstitial of the 2K tank, which is the only one associated with the facility. only tank at location. USA Tank Tech has been contracted to conduct a tightness test for the inner and outer tank. Test anticipated to be completed 9-12-22. ML 9/12/22 Spoke with US Tank Tech. Technician Came in this morning. Interstitial port was previously pumped dry by outside contractor. No water found in internal tank and interstitial space was confirmed dry. Internal tank tightness tested and failed. Following test, interstitial port contained ~4 of oil water mixture. Interstitial pumped dry again and held tight. City of Peekskill will uncover top of tank and see what repairs can be performed. BAG Update: Tightness Test Performed @ 8:10 AM Interstitial Space Port Test preformed @ 8:45AM Test reports out tomorrow. BAG 9/27/22- Update from UST Tank Tech who performed another test of the tank at this site today: Today the top of the tank had been uncovered and repairs were attempted. The interstitial port had 3 of mixed product - 1 water and 2 oil. Inside of the tank there was 3 of product and some water. The tank was isolated from the lines, retested and failed the test. After the test the interstitial space had more oil in it. This and test results indicate that the internal wall of the tank is compromised. Carlos Castillo from City of Peekskill indicated that they intend to have the tank removed, likely this week. -MS 10/28/22 Gallinger Environmental Management submitted a Tank Closure report to the William Eilbacher from the WCHD. It was an interstitial leak with no contamination detected in the six soil samples taken from the tank grave. Based on the information in the report, NFA. TG

DEC Memo:	4/15/21 Ullage failure. Will retest. Tank is vaulted and partially buried, according to caller. dw 4/20/21: Update received from Chris Lalak at WCDOH PBS: TTF at PBS site 3-600566 2K ust from 1977 tank #7 Hillcrest Park Condos 5 rolling way Peekskill, It is registered as an Underground tank and tested annually. This appears to be an inaccessible vault of some kind? The tank is located outside and made of concrete blocks. I don t have a clear understanding yet. They are setting up a temp tank, but I am still trying to reach the Mnging agent for the complete information. Absolute tank testing did the test and I spoke with them. I spoke with the super on site as well. jod 06-10-21 Spoke with ferrara management group. The manager for Rolling Way is Lee Schmidt (lschmidt@ferraramgmt.com). Lee to provide tank test update. BTR 06-14-21 Update from WCHD Elite has a permit to remove this tank (#7) (5-24-21). No removal date scheduled yet BTR 06-16-21 2102501 opened today. Elite is removing the tank. BTR 06-17-21 Site inspection by BR. Tank has been replaced. Elite has excavated down to bed rock. No groundwater encountered. Closure report is forthcoming. BTR 06-22-21 Closing spill and referring to spill 2102501. NFA. BTR

PBS (Continued) **S105997602**

tank 5, located at building
5. Facility is registered 3-600566. Tank 5 is 2000 gallon UST installed 8/1977. Tank reportedly
currently has 18 gallons of product, which is not consistent with other tanks filled at the same
day. Last delivery date is unknown, but other tanks filled same day apparently display enough of a
discrepancy to cause report. When asked if facility has begun any investigative steps yet, David
offers he will be going to site Monday. Tank will be pumped out and then he says tank test will be
performed to determine tank integrity. He says he suspects Elite Env will likely be used as
facility used them for a past incident of similar nature that involved UST being removed and
remedial action. David says facility did not report any confirmation of a release when they
reported to him. David to report to County spill number today. He also says he will be primarily
contact for incident. Email is best method of contact - dwright@davidwrightlaw.us jc 11/14/22
Emailed Chris and Natasha on Saturday with some details. Also requested a FIR. jc 11/14/22 Update:
FIR received from Chris/WCHD. Chris spoke with David and said that tank has been emptied and a temp
set-up. Tank to be tested ASAP. They are also looking into the possibility that a spill has not
occurred and that delivery may have been missed. jc 11/21/22 Coverpage of a Mesa 2D Tank Test
received from David. Forwarded to TG and Chris/WCHD. Provided opinion for their consideration. jc
02/13/23 Full ScanPro report entered in DecDocs. Test passed. NFA> TG

DEC Memo: 3/4/14 Spoke to caller. The tank is double wall and was tested because the operator discovered water in it. American did test, tank failed, uncovered the top of the tank and discovered a gasket needs to be replaced. Spoke to owner, Jamal. He is aware gasket needs to be replaced. Tank is out of service. He claims American is being hired to replace gasket and retest tank on 3/5. Anerican has not been asked to do the repairs as of 4:30pm, 3/4/14. 3/5/14 W Schnieder, WCDOH, is following up...mm 03-07-14 Three different spill reports, 3 different testers.(13-11419, 13-11291, 13-11413) spoke to owners son, O'mar I advised him to carefully look at the other 3 tanks, to determine if this was a wear item or a faulty product, instead of digging up site every year.He said he was waiting for prices from TSP and others RDB 06-10-14 update request sent to WCHD RDB 06-18-14, email from WCHD The facility originally thought it isolated the cause of the ttf to one of the two manway gaskets on the tank. They removed one sump and sealed the suspicious manway. It failed to maintain a complete vacuum with another dry leak as per the contractor, Tank Specialists Plus. They were onsite today to isolate the second manway and retest. It is a double walled tank with no liquid in the interstitial. They will update me/us with what they discover today. wayne, RDB 02-05-20 Sent NOV Letter to Shell and Maher El Jamal. BTR 02-19-20 Rec'd WCHD office conference document w passing tank test results. BTR 05-05-20 Repairs were made in 2015 and passing tank test is acceptable. NFA. BTR
Remarks: doublewall tank all contained clean up pending retest

Updated By: AMOMOROG
Site Description: "Location: The CE-Central Avenue Peekskill Manufactured Gas Plant (MGP) site is located on Central Avenue in the City of Peekskill, Westchester County. Along the eastern border is a continuous row of buildings containing small shops along North Division Street. To the north of the property is a parking garage and to the west is a parking garage with apartments located above the garage. Site Features: This irregularly shaped site comprises approximately 0.4 acres in a mixed commercial and residential area. On the site are a paved municipal parking lot, a parking garage, and an apartment building. Current Zoning and Land Use: The site is zoned commercial (Central Commercial District). The current use is commercial and residential. Past Uses of the Site: Until approximately 1900, it was an MGP site. Following the operations of the MGP, the site was used for storage from 1900 to around 1920, and then for mixed government (police station and jail) and commercial use (garage, parking) until the mid-1970s. Since that time, the site has been used for parking, with a small portion of the site used for an apartment building since 1990. MGP operations (from the mid 1800s until approximately 1900) led to site contamination. Some of the benzene, toluene, ethylbenzene, and xylenes (BTEX) contamination may be linked to one or more petroleum spills. Site Geology and Hydrology: The soils at the site contain four units above the bedrock. The top layer across the entire site is a fill unit 3 to 11 feet thick. Beneath the fill in the center of the site and along the southern site boundary is a non-continuous sand unit. Beneath the fill or sand unit along the eastern and southern site boundaries is a silt and peat unit. Across much of the site, underneath the fill, sand, and/or the silt and peat units is saprolite, a weathered bedrock unit. The borings did not encounter a saprolite unit beneath the parking garage or the eastern site boundary. Bedrock is at depths of 3 to 16.7 feet below the ground surface. There are no surface water bodies at or near the site. McGregory s Brook may be present in a culvert buried beneath the site but was not encountered in any subsurface activities.

CE - CENTRAL AVE-PEEKSKILL MGP (Continued) **S109059130**

	Precipitation at the site drains into the storm water system except when it infiltrates to the subsurface in the limited landscaped areas. The water table ranges from 4.25 to 11.42 feet below the ground surface. Groundwater flows in the overburden soils from north to south - southwest. This site had been tracked through March 31, 2018 under the defunct voluntary program with Site No. V00567."
Env Problem:	"Nature and Extent of Contamination: A Site Characterization was completed in 2003 which revealed localized MGP contamination. In 2004, Con Ed completed an interim remedial measure (IRM) that removed approximately 161 cubic yards of contaminated soil. IRM documentation sampling detected residual contamination in soil that ranged from 2 to 532 parts per million (ppm) for PAHs and non-detect to 22 ppm for BTEX compounds. A Supplemental RI investigation showed lead in soil at 1,100 ppm (5-7ft) and 1,680 ppm (9-10ft) at one of the well locations up gradient from the IRM. Groundwater contamination is localized. Since the IRM, the groundwater contamination decreased from 7,107 to 212 parts per billion (ppb) for PAHs and from 3,936 to 2,262 ppb for BTEX compounds. "
Health Problem:	"This former MGP site is almost entirely covered by asphalt, buildings and/or a parking garage. The area is served by public water. An interim remedial measure was implemented to remove coal tar and petroleum-impacted soil from under the parking lot. A soil vapor investigation on the site found no evidence of a potential indoor air exposure pathway."

The borings did not encounter a saprolite unit beneath the parking garage or the eastern site boundary. Bedrock is at depths of 3 to 16.7 feet below the ground surface. There are no surface water bodies at or near the site. McGregory s Brook may be present in a culvert buried beneath the site but was not encountered in any subsurface activities. Precipitation at the site drains into the storm water system except when it infiltrates to the subsurface in the limited landscaped areas. The water table ranges from 4.25 to

CE - CENTRAL AVE-PEEKSKILL MGP (Continued) **S109059130**

	11.42 feet below the ground surface. Groundwater flows in the overburden soils from north to south - southwest. This site is being managed under Site #: 360157."
Env Problem:	"Nature and Extent of Contamination: A Site Characterization was completed in 2003 which revealed localized MGP contamination. In 2004, Con Ed completed an interim remedial measure (IRM) that removed approximately 161 cubic yards of contaminated soil. IRM documentation sampling detected residual contamination in soil that ranged from 2 to 532 parts per million (ppm) for PAHs and non-detect to 22 ppm for BTEX compounds. A Supplemental RI investigation showed lead in soil at 1,100 ppm (5-7ft) and 1,680 ppm (9-10ft) at one of the well locations up gradient from the IRM. Groundwater contamination is localized. Since the IRM, the groundwater contamination decreased from 7,107 to 212 parts per billion (ppb) for PAHs and from 3,936 to 2,262 ppb for BTEX compounds. "
Health Problem:	"This former MGP site is almost entirely covered by asphalt, buildings and/or a parking garage. The area is served by public water. An interim remedial measure was implemented to remove coal tar and petroleum-impacted soil from under the parking lot. A soil vapor investigation on the site found no evidence of a potential indoor air exposure pathway."

Class:	No Further Action at this Time: Sites are given a classification of "N" when: the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced; a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.
Swis Code:	6012
Town:	Peekskill (c)
Disp Start:	Not reported
Disp Term:	Not reported
Acres:	0.4
Fuse:	Industrial
Description:	This site is now being tracked under Site No. 360167. Location: The CE-Central Avenue Peekskill Manufactured Gas Plant (MGP) site is located on Central Avenue in the City of Peekskill, Westchester County. Along the eastern border is a continuous row of buildings containing small shops along North Division Street. To the north of the property is a parking garage and to the west is a parking garage with apartments located above the garage. Site Features: This irregularly shaped site comprises approximately 0.4 acres in a mixed commercial and residential area. On the site are a paved municipal parking lot, a parking garage, and an apartment building. Current Zoning and Land Use: The site is zoned commercial (Central Commercial District). The current use is commercial and residential. Past Uses of the Site: Until approximately 1900, it was an MGP site. Following the operations of the MGP, the site was used for storage from 1900 to

CE - CENTRAL AVE-PEEKSKILL MGP (Continued) **S109059130**

around 1920, and then for mixed government (police station and jail) and commercial use (garage, parking) until the mid-1970s. Since that time, the site has been used for parking, with a small portion of the site used for an apartment building since 1990. MGP operations (from the mid 1800s until approximately 1900) led to site contamination. Some of the benzene, toluene, ethylbenzene, and xylenes (BTEX) contamination may be linked to one or more petroleum spills. Site Geology and Hydrology: The soils at the site contain four units above the bedrock. The top layer across the entire site is a fill unit 3 to 11 feet thick. Beneath the fill in the center of the site and along the southern site boundary is a non-continuous sand unit. Beneath the fill or sand unit along the eastern and southern site boundaries is a silt and peat unit. Across much of the site, underneath the fill, sand, and/or the silt and peat units is saprolite, a weathered bedrock unit. The borings did not encounter a saprolite unit beneath the parking garage or the eastern site boundary. Bedrock is at depths of 3 to 16.7 feet below the ground surface. There are no surface water bodies at or near the site. McGregory?s Brook may be present in a culvert buried beneath the site but was not encountered in any subsurface activities. Precipitation at the site drains into the storm water system except when it infiltrates to the subsurface in the limited landscaped areas. The water table ranges from 4.25 to 11.42 feet below the ground surface. Groundwater flows in the overburden soils from north to south - southwest. This site is being managed under Site #: 360157.

Assess Env: Nature and Extent of Contamination: A Site Characterization was completed in 2003 which revealed localized MGP contamination. In 2004, Con Ed completed an interim remedial measure (IRM) that removed approximately 161 cubic yards of contaminated soil. IRM documentation sampling detected residual contamination in soil that ranged from 2 to 532 parts per million (ppm) for PAHs and non-detect to 22 ppm for BTEX compounds. A Supplemental RI investigation showed lead in soil at 1,100 ppm (5-7ft) and 1,680 ppm (9-10ft) at one of the well locations up gradient from the IRM. Groundwater contamination is localized. Since the IRM, the groundwater contamination decreased from 7,107 to 212 parts per billion (ppb) for PAHs and from 3,936 to 2,262 ppb for BTEX compounds.

Assess Doh: This former MGP site is almost entirely covered by asphalt, buildings and/or a parking garage. The area is served by public water. An interim remedial measure was implemented to remove coal tar and petroleum-impacted soil from under the parking lot. A soil vapor investigation on the site found no evidence of a potential indoor air exposure pathway.

DEC Memo:	10/30/11 Same as 1109500. Initially reported by PD and Westchester County. County had said transformer was down in roadway in commercial area. They also reported that there was no issues of concern, just needed clean up. I called ERT, who sent someone investigate. Con Ed then reported this spill number and an NRC report. Catch basin affected. Contractor route. jc 11/4/11: DEC site inspection. Con Ed crew is on site, drilling to install a new utility pole. Several of the poles on this street were knocked down during the storm last weekend. The catch basins are clean. Some large areas of staining still apparent on the black top. A few small areas remain where speddi-dry still needs to be swept up and drummed for disposal. Con Ed still working on this clean up. jod
Remarks:	Caller advised transformer spilled entire contents due to weather unknown if all 75 gallons went into the catch basin. Clean up is pending.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Description: "Transitioning from VCP site V00566 CE - Pemart Ave-Peekskill MGP Site Description Location: The site is a former Manufactured Gas Plant (MGP) located on Pemart Avenue in Peekskill, Westchester

CE - PEMART AVE-PEEKSKILL MGP (Continued) **S121933892**

County. The site is bounded on the west by the Hudson River and Metro North railroad tracks. Vacant land and US Highway 6 border the site to the north and east. A city park and the Peekskill Landing Environmental Restoration Program (ERP) site are located to the south. Site Features: Several buildings occupy the site including the former electric generating plant building. Remnants of one of the former MGP gas holders are still present on the hillside along the eastern part of the site. The Metro North railroad runs through the site. Current Zoning and Land Use: The Site is located on inland property that is zoned WF-2. This zoning generally allows commercial uses, parks and playgrounds, and restaurants of limited size. A homeless shelter had occupied one of the on-site buildings. Also a taxi service operates out of a garage. The remainder of the building space is vacant. Past Use of the Site: The MGP operated from 1899 through 1931, when it was placed into stand-by status for several years prior to closure. The electric generating plant operated from 1905 to 1950. After closure of the MGP, the site operated as a gas storage station until 1966. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU-1 is the contaminated area on-site. It consists of the upland area including the railroad tracks and the former MGP and electric generating plant structures. OU-2 is the area of off-site contamination located west of the railroad tracks. It consists of a contaminated portion of land along the railroad tracks and contamination in the sediments of Peekskill Bay of the Hudson River. Site Geology and Hydrogeology: The geology consists of fill underlain by sands, silt, clay and sediment. The fill unit varies across the site but is generally ten to fifteen feet thick. Below the fill is the silt and clay layer, which is located at various depths ranging from ten to twenty feet deep. There are interbedded layers of sand present in the silt/clay material. Groundwater is located at approximately 3 to 8 feet below ground surface. Groundwater flow is to the west towards the Hudson River. "

Env Problem: "Current Status: Remedial activities were completed on OU1 in 2022. MGP impacted soil was excavated and sent off-site for disposal. Afterwards, the site was restored with clean material to the site’s original grade. Mobilization to begin remediation of OU2 began in March 2024. Nature and Extent of Contamination: For OU 1: On Site Areas Based upon investigations conducted to date, the primary contaminants are derived from coal tar in the form of a non-aqueous phase liquid (NAPL), the constituents of concern include benzene, toluene, ethylbenzene, xylene (BTEX), and polyaromatic hydrocarbons (PAHs). Soil Soil exceeds cleanup goals for MGP related coal tar and PAHs. Areas of subsurface soil in the vicinity of the gas holders are grossly contaminated with coal tar. Significant non-aqueous phase liquid (NAPL) is present in the former holder areas at depths of approximately three to eight feet below ground surface (bgs). Grossly contaminated soil is evident to the west along the top of the silt and clay layer. In addition, PAH exceedances are found in the surface/subsurface soil across the site. The highest concentrations of total PAHs for surface soil samples were detected at 110 parts per million (ppm) of benzo(a)anthracene, 100 ppm of benzo(a)pyrene, 83 ppm of benzo(b)fluoranthene, 110 ppm of chrysene, 16 ppm of dibenzo(a,h)anthracene and 43 ppm of indeno(1,2,3-cd). In addition,

CE - PEMART AVE-PEEKSKILL MGP (Continued) **S121933892**

total PAHs were detected in subsurface soil above 500 ppm at numerous locations. The highest detection of total PAHs was in the two to three foot interval of a soil boring at 52,630 ppm. Groundwater - Overburden groundwater quality is impacted with coal tar. Several groundwater monitoring wells were observed to contain MGP related NAPL. The most highly contaminated wells are located downgradient (to the west) of the former gas holders. NAPL has been observed in wells screened at depths ranging from five to twenty feet. The contamination is generally observed in wells screened along the top of the confining silt and clay layer. BTEX compounds were detected in overburden groundwater above their respective groundwater standards. The highest detections of BTEX compounds were in a well located downgradient of the former gas holders screened from 4 - 14 feet below grade. In this well benzene was detected at 51 ppb, ethylbenzene at 560 ppb, toluene at 6.4 ppb and xylene (total) at 100 ppb. The standards are 5 parts per billion (ppb) for each compound except benzene which has a standard of 1 ppb. In general, BTEX was detected in areas where coal tar was observed. Wells which contained NAPL or sheen were not sampled. Soil Vapor - Sub-slab and indoor air samples were collected from both on-site and off-site buildings during the heating season. In addition, five soil vapor samples were collected on-site. Some volatile organic compounds were detected in indoor air at both the on- and off-site sample locations, but at or below typical background concentrations. Upon comparison to corresponding sub-slab soil vapor concentrations and products used and stored within the buildings, it appears the indoor air detections are related to current or past operations within the buildings. Several chlorinated volatile organic compounds, not related to historic MGP operations, were detected at elevated concentrations in both on- and off-site sub-slab soil vapor samples. 1,1,1-trichloroethane (1,1,1-TCA), tetrachloroethene (PCE), and trichloroethene (TCE) were detected in on-site sub-slab soil vapor at concentrations as high as 50, 110, and 4,400 micrograms per cubic meter (mcg/m3), respectively. PCE was detected as high as 130 mcg/m3 in sub-slab soil vapor at the off-site location. PCE and TCE were also detected in the on-site soil vapor samples as high as 1,000 mcg/m3 and 170,000 mcg/m3, respectively. Sampling indicates that exposure to site-related MGP contamination from soil vapor intrusion is not a concern for the site. However, exposure to for volatile organic compounds unrelated to the former MGP facility) exposure through the soil vapor intrusion pathway represents a concern for one on-site building and exposure to non-MGP related volatile organic compounds represents a potential concern for one off-site building. The Volunteer, in accordance with the Voluntary Cleanup Agreement, is not responsible for remediation of non-MGP related contamination. The owners of affected properties have been notified where mitigation or monitoring of impacts to indoor air is required. For OU 2: Off Site Areas Based upon investigations conducted to date, the primary contaminants are derived from coal tar in the form of a non-aqueous phase liquid (NAPL), the constituents of concern include benzene, toluene, ethylbenzene, xylene (collectively known as BTEX), and polyaromatic hydrocarbons (PAHs). Soil - Off-site soil exceeds cleanup goals for MGP related coal tar and PAHs. Off-site areas of subsurface soil downgradient of the former gas holder are grossly contaminated with coal tar. The grossly contaminated soil is the result of coal tar migration to the west from the site along the top of the silt and clay layer and is generally present at depths of

CE - PEMART AVE-PEEKSKILL MGP (Continued) **S121933892**

approximately 20 to 25 feet in this area. In addition, PAH exceedances were found in the subsurface soil at concentrations above 500 ppm. The highest detection of PAHs was in the 17 to 19 foot interval of a soil boring at 2,034 ppm. Groundwater - Several off-site groundwater monitoring wells were observed to contain MGP related NAPL. The most highly contaminated wells are located downgradient of the former gas holders. NAPL was observed in these wells at depths of approximately 20 to 25 feet below ground surface (bgs). NAPL is generally observed in wells screened along the top of the confining silt and clay layer. BTEX compounds were only detected in wells located in OU-2, which contained NAPL or sheens. Sediment - Coal tar was observed in several sediment borings at depths ranging from five to ten feet below the riverbed in the impacted portion of the Hudson River. The contamination has migrated beneath the river along the top of the confining silt/clay layer and surface sediments. PAHs were also detected in sediment. The highest detection of PAHs was 117,362 ppm in a sediment sample from the 0.5 to 2 foot interval. The sediment investigation indicated that PAH contamination is coincident with visual contamination. Soil Vapor - There are no structures on OU-2 and thus no sampling was performed. Special resources impacted/threatened: During the RI, a Fish and Wildlife Impact Assessment (FWIA) was completed. The FWIA documented that contamination has migrated into the nearby Hudson River sediments and is likely impacting the habitat in the river. "

Health Problem: "Contact with contaminated soil or groundwater is unlikely unless an individual digs below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the surrounding community is served by a public water supply that obtains water from a distant source. People may come in contact with contaminants present in sediments while entering and exiting the river during recreational activities. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts beneath one on-site building but none in the indoor air. Therefore, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a current concern. The potential, however, exists for the inhalation of non-MGP related contaminants due to soil vapor intrusion for any future on-site redevelopment. Sampling indicates a similar soil vapor intrusion concern for one off-site building."

MGP:

Site ID:	360166
Name:	CE - PEMART AVE-PEEKSKILL MGP
Address:	189-199 NORTH WATER STS.
City,State,Zip:	PEEKSKILL, NY 11111
Region:	3
Class:	Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Swis Code:	6012
Town:	Peekskill (c)
Disp Start:	Not reported
Disp Term:	Not reported
Acres:	2.75
Fuse:	Not Identified
Description:	Transitioning from VCP site V00566 CE - Pemart Ave-Peekskill MGP Site Description Location: The site is a former Manufactured Gas Plant (MGP) located on Pemart Avenue in Peekskill, Westchester County. The site is bounded on the west by the Hudson River and Metro North railroad tracks. Vacant land and US Highway 6 border the site to the north and east. A city park and the Peekskill Landing Environmental Restoration Program (ERP) site are located to the south. Site Features: Several buildings occupy the site including the former electric generating plant building. Remnants of one of the former MGP gas holders are still present on the hillside along the eastern part of the site. The Metro North railroad runs through the site. Current

CE - PEMART AVE-PEEKSKILL MGP (Continued) **S121933892**

Zoning and Land Use: The Site is located on inland property that is zoned WF-2. This zoning generally allows commercial uses, parks and playgrounds, and restaurants of limited size. A homeless shelter had occupied one of the on-site buildings. Also a taxi service operates out of a garage. The remainder of the building space is vacant. Past Use of the Site: The MGP operated from 1899 through 1931, when it was placed into stand-by status for several years prior to closure. The electric generating plant operated from 1905 to 1950. After closure of the MGP, the site operated as a gas storage station until 1966. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU-1 is the contaminated area on-site. It consists of the upland area including the railroad tracks and the former MGP and electric generating plant structures. OU-2 is the area of off-site contamination located west of the railroad tracks. It consists of a contaminated portion of land along the railroad tracks and contamination in the sediments of Peekskill Bay of the Hudson River. Site Geology and Hydrogeology: The geology consists of fill underlain by sands, silt, clay and sediment. The fill unit varies across the site but is generally ten to fifteen feet thick. Below the fill is the silt and clay layer, which is located at various depths ranging from ten to twenty feet deep. There are interbedded layers of sand present in the silt/clay material. Groundwater is located at approximately 3 to 8 feet below ground surface. Groundwater flow is to the west towards the Hudson River.

Assess Env: Current Status: Remedial activities were completed on OU1 in 2022. MGP impacted soil was excavated and sent off-site for disposal. Afterwards, the site was restored with clean material to the site's original grade. Mobilization to begin remediation of OU2 began in March 2024. Nature and Extent of Contamination: For OU 1: On Site Areas Based upon investigations conducted to date, the primary contaminants are derived from coal tar in the form of a non-aqueous phase liquid (NAPL), the constituents of concern include benzene, toluene, ethylbenzene, xylene (BTEX), and polyaromatic hydrocarbons (PAHs). Soil ? Soil exceeds cleanup goals for MGP related coal tar and PAHs. Areas of subsurface soil in the vicinity of the gas holders are grossly contaminated with coal tar. Significant non-aqueous phase liquid (NAPL) is present in the former holder areas at depths of approximately three to eight feet below ground surface (bgs). Grossly contaminated soil is evident to the west along the top of the silt and clay layer. In addition, PAH exceedances are found in the surface/subsurface soil across the site. The highest concentrations of total PAHs for surface soil samples were detected at 110 parts per million (ppm) of benzo(a)anthracene, 100 ppm of benzo(a)pyrene, 83 ppm of benzo(b)fluoranthene, 110 ppm of chrysene, 16 ppm of dibenzo(a,h)anthracene and 43 ppm of indeno(1,2,3-cd). In addition, total PAHs were detected in subsurface soil above 500 ppm at numerous locations. The highest detection of total PAHs was in the two to three foot interval of a soil boring at 52,630 ppm. Groundwater - Overburden groundwater quality is impacted with coal tar. Several groundwater monitoring wells were observed to contain MGP related NAPL. The most highly contaminated wells are located downgradient (to the west) of the former gas holders. NAPL has been observed in wells screened at depths ranging from five to twenty feet. The

CE - PEMART AVE-PEEKSKILL MGP (Continued) **S121933892**

contamination is generally observed in wells screened along the top of the confining silt and clay layer. BTEX compounds were detected in overburden groundwater above their respective groundwater standards. The highest detections of BTEX compounds were in a well located downgradient of the former gas holders screened from 4 - 14 feet below grade. In this well benzene was detected at 51 ppb, ethylbenzene at 560 ppb, toluene at 6.4 ppb and xylene (total) at 100 ppb. The standards are 5 parts per billion (ppb) for each compound except benzene which has a standard of 1 ppb. In general, BTEX was detected in areas where coal tar was observed. Wells which contained NAPL or sheen were not sampled. Soil Vapor - Sub-slab and indoor air samples were collected from both on-site and off-site buildings during the heating season. In addition, five soil vapor samples were collected on-site. Some volatile organic compounds were detected in indoor air at both the on- and off-site sample locations, but at or below typical background concentrations. Upon comparison to corresponding sub-slab soil vapor concentrations and products used and stored within the buildings, it appears the indoor air detections are related to current or past operations within the buildings. Several chlorinated volatile organic compounds, not related to historic MGP operations, were detected at elevated concentrations in both on- and off-site sub-slab soil vapor samples. 1,1,1-trichloroethane (1,1,1-TCA), tetrachloroethene (PCE), and trichloroethene (TCE) were detected in on-site sub-slab soil vapor at concentrations as high as 50, 110, and 4,400 micrograms per cubic meter (mcg/m3), respectively. PCE was detected as high as 130 mcg/m3 in sub-slab soil vapor at the off-site location. PCE and TCE were also detected in the on-site soil vapor samples as high as 1,000 mcg/m3 and 170,000 mcg/m3, respectively. Sampling indicates that exposure to site-related MGP contamination from soil vapor intrusion is not a concern for the site. However, exposure to for volatile organic compounds unrelated to the former MGP facility) exposure through the soil vapor intrusion pathway represents a concern for one on-site building and exposure to non-MGP related volatile organic compounds represents a potential concern for one off-site building. The Volunteer, in accordance with the Voluntary Cleanup Agreement, is not responsible for remediation of non-MGP related contamination. The owners of affected properties have been notified where mitigation or monitoring of impacts to indoor air is required. For OU 2: Off Site Areas Based upon investigations conducted to date, the primary contaminants are derived from coal tar in the form of a non-aqueous phase liquid (NAPL), the constituents of concern include benzene, toluene, ethylbenzene, xylene (collectively known as BTEX), and polyaromatic hydrocarbons (PAHs). Soil - Off-site soil exceeds cleanup goals for MGP related coal tar and PAHs. Off-site areas of subsurface soil downgradient of the former gas holder are grossly contaminated with coal tar. The grossly contaminated soil is the result of coal tar migration to the west from the site along the top of the silt and clay layer and is generally present at depths of approximately 20 to 25 feet in this area. In addition, PAH exceedances were found in the subsurface soil at concentrations above 500 ppm. The highest detection of PAHs was in the 17 to 19 foot interval of a soil boring at 2,034 ppm. Groundwater - Several off-site groundwater monitoring wells were observed to contain MGP related NAPL. The most highly contaminated wells are located downgradient of the former gas holders. NAPL was observed in these wells at depths of approximately 20 to 25 feet below ground surface

CE - PEMART AVE-PEEKSKILL MGP (Continued) **S121933892**

(bgs). NAPL is generally observed in wells screened along the top of the confining silt and clay layer. BTEX compounds were only detected in wells located in OU-2, which contained NAPL or sheens. Sediment - Coal tar was observed in several sediment borings at depths ranging from five to ten feet below the riverbed in the impacted portion of the Hudson River. The contamination has migrated beneath the river along the top of the confining silt/clay layer and surface sediments. PAHs were also detected in sediment. The highest detection of PAHs was 117,362 ppm in a sediment sample from the 0.5 to 2 foot interval. The sediment investigation indicated that PAH contamination is coincident with visual contamination. Soil Vapor - There are no structures on OU-2 and thus no sampling was performed. Special resources impacted/threatened: During the RI, a Fish and Wildlife Impact Assessment (FWIA) was completed. The FWIA documented that contamination has migrated into the nearby Hudson River sediments and is likely impacting the habitat in the river.

Assess Doh: Contact with contaminated soil or groundwater is unlikely unless an individual digs below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the surrounding community is served by a public water supply that obtains water from a distant source. People may come in contact with contaminants present in sediments while entering and exiting the river during recreational activities. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts beneath one on-site building but none in the indoor air. Therefore, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a current concern. The potential, however, exists for the inhalation of non-MGP related contaminants due to soil vapor intrusion for any future on-site redevelopment. Sampling indicates a similar soil vapor intrusion concern for one off-site building.

Address: 189-199 NORTH WATER STS.
City,State,Zip: PEEKSKILL, NY 11111
Region: 3
Class: No Further Action at this Time: Sites are given a classification of "N" when: the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced; a site was identified simply as

CE - PEMART AVE-PEEKSKILL MGP (Continued) **S121933892**

the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

ILI: New York State Inactive Landfill Initiative
A solid waste site priority list of mitigation and remedial activities to address sites causing, or substantially contributing to, impairments of drinking water quality. Inactive solid waste disposal sites, primarily landfills, and their potential impact on New York?s drinking water resources from site-related contaminants, with a focus on emerging contaminants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

418 NORTH DIVISION STREET
418 NORTH DIVISION STREET
PEEKSKILL, NY 10566

TARGET PROPERTY COORDINATES

Latitude (North):	41.29577 - 41° 17' 44.77''
Longitude (West):	73.919349 - 73° 55' 9.66''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	590480.1
UTM Y (Meters):	4571942.0
Elevation:	180 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14122350 PEEKSKILL, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

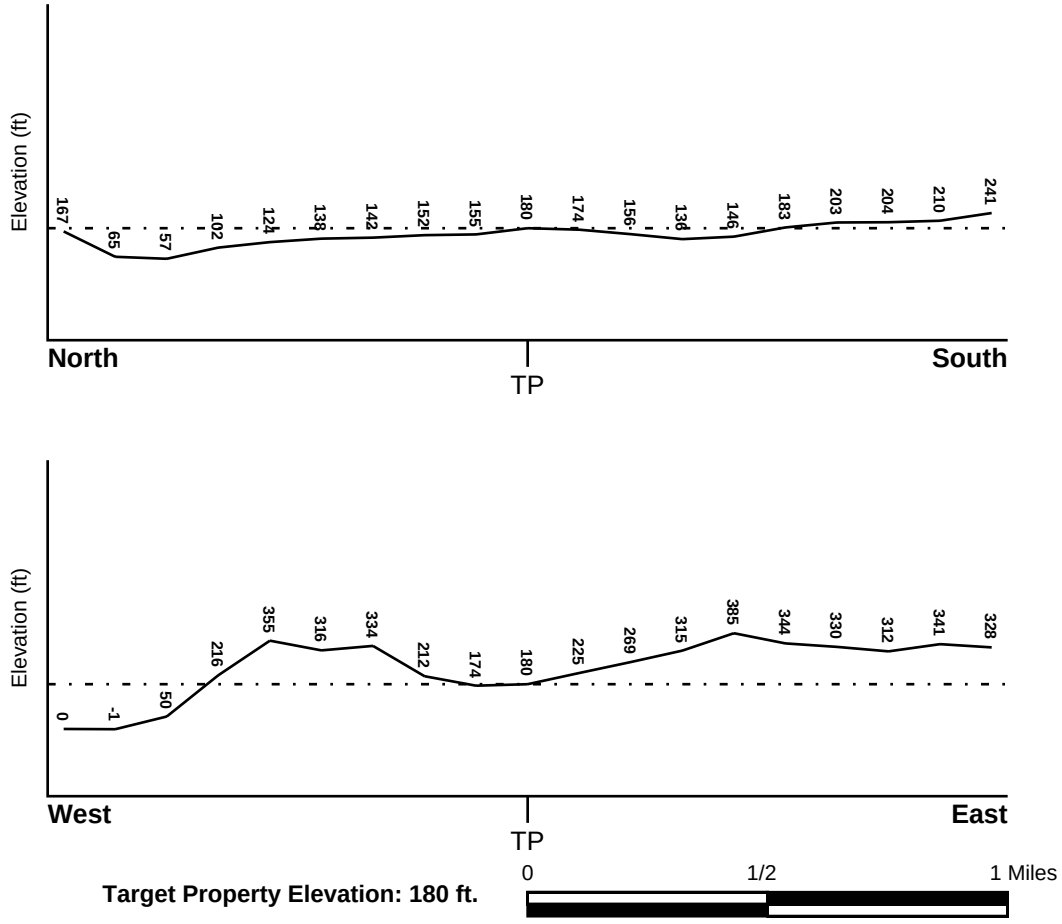
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 180 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36119C0016F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
36087C0037G	FEMA FIRM Flood data
36119C0017F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PEEKSKILL	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 4

Soil Component Name: Chatfield

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 77 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 141 Min: 0.07	Max: Min:
2	7 inches	24 inches	flaggy silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 141 Min: 0.07	Max: Min:
3	24 inches	27 inches	unweathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 141 Min: 0.07	Max: Min:

Soil Map ID: 5

Soil Component Name: Urban land

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

No Layer Information available.

Soil Map ID: 6

Soil Component Name: Charlton

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 77 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 4	Max: 6 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	7 inches	24 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 4	Max: 6 Min: 4.5
3	24 inches	59 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 4	Max: 6 Min: 4.5

Soil Map ID: 7

Soil Component Name: Urban land

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 77 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 8

Soil Component Name: Hollis

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C/D - Drained/undrained hydrology class of soils that can be drained and classified.

Soil Drainage Class: Somewhat excessively drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

2	1 inches	16 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.01 Min: 0	Max: Min:
3	16 inches	20 inches	unweathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 0.01 Min: 0	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA

User Questionnaire and Documents

Phase I Environmental Site Assessment Questionnaire
For ASTM E 1527-21

According to the American Society for Testing and Materials (ASTM) standard practice for environmental site assessments (Designation: E 1527-21) "All Appropriate Inquiry" (AAI) (40 CRF 312.20) standard, the client must provide the following information (if available) to the environmental consultant during a Phase I Environmental Site Assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Client/Responsible Party Information (person completing this questionnaire) :

Name: 418 North Division Street LLC Kathleen Bradshaw
Title: Attorney
Interest to Property: Owner
Ownership/Operational Duration: 4 months
Street Address: 418 N. Division St
City: Peekskill
State: NY
Phone: 914 879-5750

Property Owner/Tenant Site Information:

Company Name: 418 North Division Street LLC
Description of Operations: Real Estate Development
Ownership/Operational Duration: Ownership - 4 months
Street Address: 418 N. Division St
Township: West. County City of Peekskill
City: Peekskill
County/State: West.
Size of Property:
Block/Lot: 23.78-1-9, 23.78-1-10, 23.78-1-11, 23.78-1-12
Phone: 914 879-5750
Contact: Kathleen Bradshaw

I, Kathleen Bradshaw (FULL NAME), to the best of my knowledge, have truthfully provided the information herein.

SIGNATURE

3/26/2025
DATE

Identification of the site contact and how the contact can be reached (person who will conduct or conducted the site walk and/or will provide or provided access):

1. ENVIRONMENTAL CLEANUP LIENS/OTHER LIENS

a. Are there any environmental cleanup liens/and or other liens that are filed or recorded against the site in any applicable jurisdiction?

None - Known

2. ACTIVITY OR USE LIMITATIONS AND WETLANDS

A) Are you aware of any environmental restrictions/limitations to the use of the property? (i.e. Engineering or Institutional Controls)

NO

i) If yes, please explain.

ii) Can you provide any lien or deed restriction paperwork (ie. deed notice or environmental lien)?

Title report attached

B) Is any of the site to your knowledge used as a child-care facility or are plans in place to have a child-care facility on-site?

NO

C) Are there any wetlands or marshlands at the site to your knowledge?

NO

3. COMMONLY KNOW OR REASONABLE ASCERTAINABLE INFORMATION ABOUT THE PROPERTY

A) Do you have any knowledge of the past uses of the property?

yes

i) If so, please explain (dates or tenant contracts should be collected if available for any commercial or industrial uses).

White Plains Linen Factory - last owner

ii) Has the property ever been used for industrial purposes?

unknown other than above

4. ADJOINING PROPERTIES

A) Have any of the adjoining properties been used for Industrial purposes currently or in the past?

unknown

i) If yes, please provide compass direction and name (if known) of the property.

B) Have any of the adjoining properties been used as a gas station, dry cleaner or auto shop currently or in the past?

unknown

i) If yes, please provide compass direction and name (if known) of the property.

C) Have any of the adjoining properties been used for commercial purposes currently or in the past?

yes

i) If yes, please provide compass direction and name/ industry (if known) of the property.

Commercial use along Highland Avenue

D) Have any adjoining properties been used as a school currently or in the past?

unknown

i) If yes, please provide compass direction and name (if known) of the property.

E) Are any of the adjoining properties currently or in the future (to your knowledge) a child-care facility?

unknown

i) If yes, please provide compass direction and name (if known) of the property.

5. ENVIRONMENTAL SITE CONDITIONS

A) Are there any present environmental conditions at the site that may prove an obvious threat to the environment or human health?

NO

a. If yes can you provide the NAICS code for the industrial use?

B) Do you know of any Environmental Spills Incident Numbers or Notices of Violation? (i.e., tank removals/Unregulated Heating Oil Tank removals)?

None Known

i) If yes, please provide information or available paperwork (ie. former reports or incident numbers)

C) Do you know if the site has been subject to an environmental cleanup or received a Closure Approval (No Further Action) or other Environmental Outcome in the past?

None Known

D) Do you know of any underground storage tanks (USTs), aboveground storage tanks (ASTs) and/or septic tanks?

None Known

E) Do any buildings on the site have a basement or crawlspace?

Yes to Basement

F) Does the site use/have an incinerator, compactor, or dumpster? (This should include any cooking oil containers or other media.)

unknown

G) How is heating and cooling supplied to the site? Heat was supplied

a. If by oil, name of usual supplier: unknown

b. If by gas, name of utility company: unknown

c. If by electric, name of utility company: unknown

H) How is water supplied to the site?

a. Local municipal hookup? yes
   i. If so, name of provider:

b. Potable Well? No
   i. If so, well number/designation and location:

I) Is any portion of the site prone to flooding or has had a significant flood?

Not Known

B) Do you have any chemical storage areas?

unknown

C) Do you have any drum storage areas?

unknown

D) Do you have any USTs or ASTs not related to heating?

unknown

E) Do you have any of the following at or on the site:

a. On-site dry cleaning or washing machine facilities?

unknown — use prior to our ownership was a linen factory

b. Landfills or known fill areas?

unknown

c. Machinery or equipment that uses hazardous or petroleum compounds?

unknown

d. Dust collectors?

unknown

e. Spray booths?

unknown

f. Floor drains or sumps?

unknown

g. Other machinery or equipment?

unknown

7. ADDITIONAL PERTINENT INFORMATION

A) Please provide the reason why the Phase I is required (i.e., sale, purchase, transfer, due diligence, cessation of operation, off-site source of groundwater contamination).

Purchase of property

B) Please provide the complete and correct address or addresses for the property (any previous surveys maps or any change in tax lot and blocks that are proposed or not yet recorded at the local/county municipality or re- zoning plans):

survey attached

C) Any additional services or out-of-scope services you wish to be provided in addition to the standard set of services (mold assessment/asbestos assessment/geotechnical/ lead-based paint/indoor or sub-slab air sampling):

N/A

D) Please identify all parties to your knowledge who will rely on this ESA? (excluding regulatory agencies)

Owner

E) Please provide any former Phase I or Phase II reports, incident reports, state records, reports, current or former permits for the operation of machinery, tank registration documents, AIRS permits, or other environmental permits.

Appendix D:

Environmental Record Search Results and Information Requests

From: New York DEC FOIL Center
To: Annmarie Yannaco
Subject: FOIL Request :: W144414-031825
Date: Tuesday, March 18, 2025 9:57:41 AM

CAUTION !! This E-Mail originated from outside the organization. Confirm it is from a legitimate E-Mail address. If uncertain - do not click links or open attachments unless you contact the sender and know the content is safe.

Dear Annmarie:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 3/18/2025 and given the reference number FOIL #W144414-031825 for tracking purposes. You may expect the Department's response to your request no later than **4/15/2025**.

Record Requested: **Site Address: 418 N Division Street and 407, 425, and 427 Highland Avenue, Peekskill, New York Site Parcels: 23.78-1-9, 23.78-1-10 (subdivided as 23.78-1-10A and 23.78-1-10B), 23.78-1-12, and 23.781-11 As part of a Phase I Environmental assessment, SESI requests the following: Documentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency responses, fires, and environmental reports associated with soil/groundwater investigative sampling.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Click here to login to the FOIL Center.

Executive Summary

On behalf of Mr. Bruce Botchman, Elite Environmental Services, Inc. ("Elite") directed the tank removal activities at 427 Highland Avenue in Peekskill, New York ("site property"). See Appendix A for General Location Map. This work was performed to investigate and remediate New York State Department of Environmental Conservation ("NYSDEC") Spill # 1408577 that was reported at the site property on November 20, 2014, during an underground oil storage tank removal.

OBJECTIVE:

Elite's objective was to i.) properly remove and dispose of the underground storage tank; ii.) determine the extent, if any, of petroleum impacted soils, resultant from the underground storage tank; iii.) once defined, remove and dispose of contaminated soils in excess of *New York* State Department of Conservation ("NYSDEC") *Spill Technology and Remediation Series (STARS) Memo # 1: Petroleum-Contaminated Soil Guidance Policy and/or Division Technical and Administrative Guidance Memorandum (TAGM): Determination of Soil Cleanup Objective and Cleanup Levels,* and; iv.) provide project management to ensure that investigative remediation is performed consistent with NYSDEC requirements.

FINDINGS:

Based on our field screening observations and post-excavation laboratory analytical results, Elite concludes that all accessible petroleum-contaminated soils were removed and properly disposed of at a soil recycling facility.

RECOMMENDATIONS:

Elite recommends spill # 1408577 be closed and removed from the NYSDEC list of active petroleum spills, as the site conditions present no threat to human health or the environment. This report presents a summary of all field activities conducted as part of the investigation and includes laboratory analytical.

1.0 INTRODUCTION

Elite performed a tank removal and limited site assessment activities at 427 Highland Avenue in Peekskill, New York. The objective was to i.) determine the extent, if any, of petroleum impacted soils, resultant from the underground storage tank; ii.) once defined, remove and dispose of contaminated soils in excess of New York State Department of Conservation ("NYSDEC") Spill Technology and Remediation Series (STARS) Memo # 1: Petroleum-Contaminated Soil Guidance Policy and/or Division Technical and Administrative Memorandum (TAGM): Determination of Soil Cleanup Objective and Cleanup Levels, and: iii.) provide project management to ensure that investigative remediation is performed consistent with NYSDEC requirements.

2.0 BACKGROUND

A spill was reported to the NYSDEC on November 20, 2014, when Elite was at the above-mentioned property to remove a 1000 gallon Underground Storage Tank ("UST"). Upon inspection of the UST, pitting and one large hole approximately ¾" in diameter were observed. Contaminated soil below the tank was also observed.

3.0 SUMMARY OF ACTIVITIES

3.1 Underground Storage Tank Excavation

On November 20, 2014, Elite Environmental Services, Inc. ("Elite") representatives were on-site to perform and direct the removal of a 1000 gallon underground storage tank on the site property. Elite was on-site to perform the excavation and remove the tank for transportation and proper disposal. The tank was uncovered, and an opening was cut in the tank in order to remove all remaining liquids in the tank. Enviro Waste Oil Recovery, LLC was on-site to remove the liquids via environmental vacuum truck. The tank was found empty. **See Appendix B** for Liquid Disposal Manifest. An excavator was used to remove the soil surrounding the tank and the tank was removed from the ground and placed on the floor adjacent to the excavation for inspection. The tank was properly removed from the site property by Elite and brought to Brookfield Scrap Metals, Inc. for recycling. **See Appendix C** for Tank Recycling Receipt. The property was surveyed for additional underground storage tanks and none were found.

3.2 Post-Excavation Soil Sampling

Elite field personnel collected post-excavation soil samples to determine the extent, if any, of contamination in the site excavation. Samples were collected with disposable trowels to preclude any cross-contamination. Field personnel collected samples with sterile gloves, which were discarded following each collection. The samples were field screened using a Mini Rae Photo Ionization Detector to provide a direct reading of the concentration of volatile organic vapors in the sample reported in ppm.

Trace gas analysis of soil in the field were performed as a gross assessment of potential contamination with a portable Mini Rae 2000 Photoionization Detector ("PID"). The PID provides a direct reading of the concentration of volatile organic gases in the sample in ppm. Immediately following collection, each sample was transferred to a glass container. The open container was sealed with clear plastic wrap and agitated to break apart the soil and distribute gases. The probe of PID was inserted through the plastic into the confined headspace of the jar and readings were recorded and compared to ambient background levels. This field screening method provides a relative concentration of VOCs that is useful for a quick comparison of samples. A higher needle deflection or ppm reading on the instrument indicates a higher concentration of VOCs.

A total of five soil samples were collected, one from each wall and the center floor of the excavation, (N, S, E, W, and CF) on November 20, 2014. **See Appendix D** for Site Diagram. These samples were field screened and contamination was observed in the excavation.

A sample was properly extracted from the excavation, labeled and submitted to a New York State Department of Health certified laboratory (#10854) for analysis by the following method: i.) USEPA Method 8015B for the detection of Diesel range Organics, as requested by the soil recycling facility. The sample analytical results were 667 ppm. **See Appendix E** for a complete listing of the Tank Bottom Soil sample Analytical Results.

Due to precipitation accumulation in the open excavation and visible oil sheen, Groundwater was properly removed and transported to a recycling facility for disposal. On December 17, 2014, Enviro Waste Oil Recovery, LLC was on-site to remove 1300 gallons of oily water via environmental vacuum truck. **See Appendix B** for Liquid Disposal Manifests. Contaminated soil was properly transported off the site property on December 16 and December 17, 2014. Approximately 37.71 tons of contaminated soil were properly transported and disposed at Deep Green of New York, Inc. **See Appendix F** for Hazardous Waste Manifest. Following the removal of contaminated soil from underneath and surrounding the removed UST, the excavation was backfilled and raked to grade.

3.3 Post-Excavation Soil Sample Laboratory Analytical Results

Five soil samples, one from each wall of the excavation and one from the bottom of the excavation were properly collected, labeled and submitted to a New York State Department of Health certified laboratory (#10854) for analysis by the following method: i.) USEPA Method 8260 for the detection of volatile organic compounds (VOCs); and ii.) USEPA Method 8270 for the detection of semi-volatile organic compounds (SVOSs). **See Appendix G** for a complete listing of Post-Excavation Soil Sample Laboratory Analytical Results. The following table lists the analytical results and compares them to the TAGM Recommended Cleanup Objectives. Please note that only those compounds detected are listed below.

EPA Method	Sample Location	Sample Label	Sample Depth	Analyte	Results (ppb)	NYSDEC Tagm Value (ppb)
8260	Excavation Bottom	Excavation wall	12 - 13 feet	All	ND	60 – 13,000

				Phenanthrene	9100	100,000
				Pyrene	8800	100,000

ND-Non Detect **Bold**-indicates levels above NYSDEC standards NA – Not Available

No volatile organic compounds exceeding the NYSDEC TAGM values were detected in any of the post-excavation soil samples collected from the excavation. Semi-volatile compounds were found exceeding the NYSDEC TAGM values from the west wall. All accessible contaminated soil was removed, due to the location of the excavation, adjacent to the street and underground utilities,

4.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the post-excavation laboratory analytical results, and our field screening observations, Elite concludes that all accessible petroleum-contaminated soils due to the leaking tank system were removed from the site property and properly transported and disposed. Elite recommends that spill # 1408577 be closed and removed from the NYSDEC list of active petroleum spills, as site conditions present no threat to human health or the environment.

5.0 DISCLAIMER

The environmental consultant that reviewed and/or performed the investigation located at 427 Highland Avenue in Peekskill, New York, is a professional with education and training in the environmental field. This report, compiled by Elite Environmental, Inc. conforms to commonly recognized protocols within the environmental consulting field. Our reports are limited to availability of observations and soil samples collected on the date of the tank excavation. Elite cannot guarantee that the entire site or parts thereof are completely free of contaminants.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on November 21, 2014 and listed below. The project was identified as your project: **427 Highland Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
14K0768-01	Tank Bottom	Soil	11/20/2014	11/21/2014

General Notes for York Project (SDG) No.: 14K0768

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted meet method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

VOA-CONTNON-COMPLIANT- the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements

Rep-04 The sample was diluted due to the presence of high levels of non-target analytes resulting in elevated reporting limits

M-LSRD Original sample conc <50 X reporting limit

---

* Analyte is not certified or the state of the samples origination does not offer certification for the Analyte

ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ RL or LOD/MDL)

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve

LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses

LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.

MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.

Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on December 19, 2014 and listed below. The project was identified as your project: **427 Highland Ave.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received

General Notes for York Project (SDG) No.: 14L0817

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

120 RESEARCH DRIVE STRATFORD, CT 06615

Notes and Definitions

VOA-CONT NON-COMPLIANT- the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements

S-08 The recovery of this surrogate was outside of QC limits.

QM-07 The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery

QL-03 This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.

J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

CCV-E The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average RF or >20% Drift for quadratic fit).

---

* Analyte is not certified or the state of the samples origination does not offer certification for the Analyte

ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve

LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.

LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846

MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods

Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet d cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two a this reason, York reports the combined result for n- nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as phenylamine

Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 d 1268 which are non-target aroclors for some regulatory lists.

fluoroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user uld take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

CONTAMINATED SOIL			

GENERATOR'S AND/OR CONSULTANT'S CERTIFICATION: I CERTIFY THAT THE SOIL REFERENCED HEREIN IS TAKEN ENTIRELY FROM THOSE SOILS DESCRIBED IN THE GENERATOR WASTI PROFILE SHEET COMPLETED AND CERTIFIED BY ME FOR THE GENERATION SITE SHOWN ABOVE AND NOTHING HAS BEEN ADDED OR DONE TO SUCH SOIL THAT WOULD ALTER IT IN AN WAY. I HEREBY AFFIRM UNDER PENALTY OF PERJURY THAT INFORMATION PROVIDED ON THIS DOCUMENT IS TRUE TO THE BEST OF MY KNOWLEDGE AND BELIEF, AND THAT I HAVE THI AUTHORITY AS _____ (TITLE) OF _____ (ENTITY) TO SIGN THIS TRACKING DOCUMENT PURSUAN TO 6 NYCRR PART 360. I AM AWARE THAT ANY FALSE STATEMENT MADE HEREIN IS PUNISHABLE AS A CLASS A MISDEMEANOR PURSUANT TO SECTION 210.45 OF THE PENAL LAW.

PRINT OR TYPE NAME ☐ GENERATOR ☐ CONSULTANT	SIGNATURE	MONTH	DATE	YEAR

TRANSPORTER'S CERTIFICATION: I ACKNOWLEDGE RECEIPT OF THE SOIL DESCRIBED ABOVE AND CERTIFY THAT SUCH SOIL IS BEING DELIVERED IN EXACTLY THE SAME CONDITIOI AS WHEN RECEIVED. I FURTHER CERTIFY THAT THIS SOIL IS BEING DIRECTLY TRANSPORTED FROM THE GENERATION SITE TO THE PCS PROCESSING FACILITY WITHOUT OFF-LOADING ADDING TO, SUBTRACTING FROM OR IN ANY WAY DELAYING DELIVERY TO SUCH SITE.

PRINT OR TYPE NAME	SIGNATURE	MONTH	DATE	YEAR
Michael		9	12	17

TRANSPORTER DISCREPANCY BOX *(ANY DISCREPANCIES IN THE TRANSPORTER NAME OR LOCATION, PCS PROCESSING NAME OR LOCATION, OR MATERIAL TESTING OR QUANTIT SHOULD BE NOTED HERE.)*

PCS PROCESSING FACILITY CERTIFIES THE RECEIPT OF THE SOIL COVERED BY THIS SOIL TRACKING FORM EXCEPT AS NOTED BELOW.

PRINT OR TYPE NAME	SIGNATURE	MONTH	DATE	YEAR
		9	12	17

PROCESSING FACILITY DISCREPANCY BOX *(ANY DISCREPANCIES IN ABOVE INFORMATION SHOULD BE NOTED HERE.)*

INSTRUCTIONS

1. **GENERATOR** COMPLETES ALL ITEMS IN GENERATOR AND/OR CONSULTANT BOXES, RETAINS COPY #4, AND GIVES REMAINING COPIES TO TRANSPORTER.
2. **TRANSPORTER** COMPLETES ALL ITEMS IN TRANSPORTER BOXES, RETAINS COPY #3, AND GIVES REMAINING COPIES TO THE PROCESSING FACILITY.
3. **PROCESSING FACILITY** COMPLETES ALL ITEMS IN PROCESSING FACILITY BOXES, RETAINS COPY #2, AND RETURNS COPY #1 TO THE GENERATOR WITHIN TWO (2) WEEKS.

Attention: Willie Silsdorf

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on December 19, 2014 and listed below. The project was identified as your project: **427 Highland Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

Notes and Definitions

VOA-CONT	NON-COMPLIANT- the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements
S-08	The recovery of this surrogate was outside of QC limits.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

---

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

Executive Summary

On behalf of Mr. Bruce Botchman, Elite Environmental Services, Inc. ("Elite") directed the tank removal activities at 427 Highland Avenue in Peekskill, New York ("site property"). See **Appendix A** for General Location Map. This work was performed to investigate and remediate New York State Department of Environmental Conservation ("NYSDEC") Spill # 1408577 that was reported at the site property on November 20, 2014, during an underground oil storage tank removal.

OBJECTIVE:

Elite's objective was to i.) properly remove and dispose of the underground storage tank; ii.) determine the extent, if any, of petroleum impacted soils, resultant from the underground storage tank; iii.) once defined, remove and dispose of contaminated soils in excess of *New York* State Department of Conservation ("NYSDEC") *Spill Technology and Remediation Series (STARS) Memo # 1: Petroleum-Contaminated Soil Guidance Policy and/or Division Technical and Administrative Guidance Memorandum (TAGM): Determination of Soil Cleanup Objective and Cleanup Levels,* and; iv.) provide project management to ensure that investigative remediation is performed consistent with NYSDEC requirements.

FINDINGS:

Based on our field screening observations and post-excavation laboratory analytical results, Elite concludes that all accessible petroleum-contaminated soils were removed and properly disposed of at a soil recycling facility.

RECOMMENDATIONS:

Elite recommends spill # 1408577 be closed and removed from the NYSDEC list of active petroleum spills, as the site conditions present no threat to human health or the environment. This report presents a summary of all field activities conducted as part of the investigation and includes laboratory analytical.

1.0 INTRODUCTION

Elite performed a tank removal and limited site assessment activities at 427 Highland Avenue in Peekskill, New York. The objective was to i.) determine the extent, if any, of petroleum impacted soils, resultant from the underground storage tank; ii.) once defined, remove and dispose of contaminated soils in excess of New York State Department of Conservation ("NYSDEC") Spill Technology and Remediation Series (STARS) Memo # 1: Petroleum-Contaminated Soil Guidance Policy and/or Division Technical and Administrative Memorandum (TAGM): Determination of Soil Cleanup Objective and Cleanup Levels, and: iii.) provide project management to ensure that investigative remediation is performed consistent with NYSDEC requirements.

2.0 BACKGROUND

A spill was reported to the NYSDEC on November 20, 2014, when Elite was at the above-mentioned property to remove a 1000 gallon Underground Storage Tank ("UST"). Upon inspection of the UST, pitting and one large hole approximately ¼" in diameter were observed. Contaminated soil below the tank was also observed.

3.0 SUMMARY OF ACTIVITIES

3.1 Underground Storage Tank Excavation

On November 20, 2014, Elite Environmental Services, Inc. ("Elite") representatives were on-site to perform and direct the removal of a 1000 gallon underground storage tank on the site property. Elite was on-site to perform the excavation and remove the tank for transportation and proper disposal. The tank was uncovered, and an opening was cut in the tank in order to remove all remaining liquids in the tank. Enviro Waste Oil Recovery, LLC was on-site to remove the liquids via environmental vacuum truck. The tank was found empty. **See Appendix B** for Liquid Disposal Manifest. An excavator was used to remove the soil surrounding the tank and the tank was removed from the ground and placed on the floor adjacent to the excavation for inspection. The tank was properly removed from the site property by Elite and brought to Brookfield Scrap Metals, Inc. for recycling. **See Appendix C** for Tank Recycling Receipt. The property was surveyed for additional underground storage tanks and none were found.

3.2 Post-Excavation Soil Sampling

Elite field personnel collected post-excavation soil samples to determine the extent, if any, of contamination in the site excavation. Samples were collected with disposable trowels to preclude any cross-contamination. Field personnel collected samples with sterile gloves, which were discarded following each collection. The samples were field screened using a Mini Rae Photo Ionization Detector to provide a direct reading of the concentration of volatile organic vapors in the sample reported in ppm.

Trace gas analysis of soil in the field were performed as a gross assessment of potential contamination with a portable Mini Rae 2000 Photoionization Detector ("PID"). The PID provides a direct reading of the concentration of volatile organic gases in the sample in ppm. Immediately following collection, each sample was transferred to a glass container. The open container was sealed with clear plastic wrap and agitated to break apart the soil and distribute gases. The probe of PID was inserted through the plastic into the confined headspace of the jar and readings were recorded and compared to ambient background levels. This field screening method provides a relative concentration of VOCs that is useful for a quick comparison of samples. A higher needle deflection or ppm reading on the instrument indicates a higher concentration of VOCs.

A total of five soil samples were collected, one from each wall and the center floor of the excavation, (N, S, E, W, and CF) on November 20, 2014. **See Appendix D** for Site Diagram. These samples were field screened and contamination was observed in the excavation.

A sample was properly extracted from the excavation, labeled and submitted to a New York State Department of Health certified laboratory (#10854) for analysis by the following method: i.) USEPA Method 8015B for the detection of Diesel range Organics, as requested by the soil recycling facility. The sample analytical results were 667 ppm. **See Appendix E** for a complete listing of the Tank Bottom Soil sample Analytical Results.

Due to precipitation accumulation in the open excavation and visible oil sheen, Groundwater was properly removed and transported to a recycling facility for disposal. On December 17, 2014, Enviro Waste Oil Recovery, LLC was on-site to remove 1300 gallons of oily water via environmental vacuum truck. **See Appendix B** for Liquid Disposal Manifests. Contaminated soil was properly transported off the site property on December 16 and December 17, 2014. Approximately 37.71 tons of contaminated soil were properly transported and disposed at Deep Green of New York, Inc. **See Appendix F** for Hazardous Waste Manifest. Following the removal of contaminated soil from underneath and surrounding the removed UST, the excavation was backfilled and raked to grade.

EPA Method	Sample Location	Sample Label	Sample Depth	Analyte	Results (ppb)	NYSDEC Tagm Value (ppb)

				Phenanthrene	9100	100,000
				Pyrene	8800	100,000

ND-Non Detect **Bold**-indicates levels above NYSDEC standards NA – Not Available

No volatile organic compounds exceeding the NYSDEC TAGM values were detected in any of the post-excavation soil samples collected from the excavation. Semi-volatile compounds were found exceeding the NYSDEC TAGM values from the west wall. All accessible contaminated soil was removed, due to the location of the excavation, adjacent to the street and underground utilities,

4.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the post-excavation laboratory analytical results, and our field screening observations, Elite concludes that all accessible petroleum-contaminated soils due to the leaking tank system were removed from the site property and properly transported and disposed. Elite recommends that spill # 1408577 be closed and removed from the NYSDEC list of active petroleum spills, as site conditions present no threat to human health or the environment.

5.0 DISCLAIMER

The environmental consultant that reviewed and/or performed the investigation located at 427 Highland Avenue in Peekskill, New York, is a professional with education and training in the environmental field. This report, compiled by Elite Environmental, Inc. conforms to commonly recognized protocols within the environmental consulting field. Our reports are limited to availability of observations and soil samples collected on the date of the tank excavation. Elite cannot guarantee that the entire site or parts thereof are completely free of contaminants.

Special Conditions Permit Issued As Per Notes On Plan By Bldg. Dept

Date of issue Nov 5 20 14 Expiration date Nov 5 20 15

PLEASE CALL 734-4143 FOR INSPECTION APPOINTMENT.

Director of Public Works

This permit is granted upon the express condition that every person acting under same shall conform to the representations of the application thereof as well as all Building, Zoning and other Ordinances of the City of Peekskill and Statutes of this State. This permit must be kept on the work to which it applies at all times during working hours, and may be revoked at any time for a breach of its conditions.

PETROLEUM BULK STORAGE
WORK PERMIT

In accordance with Articles XXV and XXVI of the Westchester County Sanitary Code, this work permit grants permission to modify the referenced Petroleum Bulk Storage facility in the manner listed below

FACILITY	CONTRACTOR (responsible for PBS compliance and environmental assessment)
PBS No. 3-800121 HIGHLAND LIGHT STEAM LAUNDRY/WHITE PLAINS LINEN 411-427 Highland Avenue Peekskill, NY 10566 Contact: Leon Labonia Telephone: (914) 804-4753	Elite Environmental Services 14 Morrissey Drive PUTNAM VALLEY, NY 10579 Contact: Lisa Telephone: (845) 528-0370

WORK TO BE PERFORMED

Type of Work	Tank ID	Capacity	Product
Remove tank	005	1000	1. No. 2 fuel oil

1. THAT this permit is valid for 90 days from issue date
2. THAT the petroleum bulk storage tank(s) and/or piping shall be installed in accordance with Chapter 873, Articles XXV and XXVI respectively of the Laws of Westchester County NY
3. THAT the facility owner and contractor shall be responsible for the proper installation of the petroleum bulk storage tank(s) and/or piping in accordance with Chapter 873, Articles XXV and XXVI respectively, of the Laws of Westchester County NY.
4. THAT any changes or modifications to the Petroleum Bulk Storage Work Permit require filing an application and obtaining a revised work permit prior to such changes.
5. THAT upon installation of the petroleum bulk storage tank(s) and/or piping, the tank(s) shall remain out of service until such time as a Bulk Storage Operating Certificate is issued by the department or its agent, and an "as built" plan prepared by professional engineer or registered architect in the State of New York is filed with the department in accordance with Chapter 873, Articles XXV and XXVI, respectively, of the Laws of Westchester County NY

Issued by:	Westchester County Department of Health Sherlita Amler, M.D. Commissioner of Health	Issue Date 12/02/2014	Expiration Date 02/02/2015

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on November 21, 2014 and listed below. The project was identified as your project: **427 Highland Ave**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
14K0768-01	Tank Bottom	Soil	11/20/2014	11/21/2014

General Notes for York Project (SDG) No.: 14K0768

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
14K0768-01	Tank Bottom	40mL 01 Clear Vial Cool to 4° C

Notes and Definitions

VOA-CONTNON-COMPLIANT- the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A
Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846-5035A requirements

Rep-04 The sample was diluted due to the presence of high levels of non-target analytes resulting in elevated reporting limits

M-I SRD Original sample conc <50 X reporting limit

---

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias
Non-Dir	Non-dir flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatography inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on December 19, 2014 and listed below. The project was identified as your project: **427 Highland Ave.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
14L0817-01	South Well	Soil	12/18/2014	12/19/2014
14L0817-02	East Well Foundation	Soil	12/18/2014	12/19/2014

14L0817-05	Excavation Well	Soil	12/18/2014	12/19/2014

General Notes for York Project (SDG) No.: 14L0817

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

14L0817-05	Excavation Well	40mL 01_Clear Vial Cool to 4° C

Notes and Definitions

VOA-CONT NON-COMPLIANT- the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements

S-08 The recovery of this surrogate was outside of QC limits

QM-07 The spike recovery was outside acceptance limits for the MS and/or MSD The batch was accepted based on acceptable LCS recovery

QL-03 This LCS analyte recovered outside of acceptance limits The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows

J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration

CCV-E The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average RF or >20% Drift for quadratic fit).

---

* Analyte is not certified or the state of the samples origination does not offer certification for the Analyte

ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve

LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria This is based upon NELAC 2009 Standards and applies to all analyses

LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846

MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods

Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL , or the LOQ/RL In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly This applies to volatile and semi-volatile target compounds only

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias

Non-Dir Non-dir flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA) These results could actually represent 100% DPA, 100% NDPA or some combination of the two For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists

2-chloroethylvinyl ether readily breaks down under acidic conditions Samples that are acid preserved including standards will exhibit breakdown The data user should take note

Certification for pH is no longer offered by NYDOH ELAP

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results

I HEREBY APPEAL:_____ DATE:_____

OFFICE OF THE CITY CLERK

Cassandra Redd
City Clerk

Jeanette Moore
Deputy City Clerk

Date: 3.25.25

Request No.: 131

Dear Applicant:

This letter acknowledges receipt of your submitted Freedom of Information Law (FOIL) request dated 3.18.25 and received in this office on 3.18.25 for records maintained by the City of Peekskill under Public Officers Law, Article 6.

Your request will be forwarded to the appropriate department within the City and will be either granted or denied within twenty (20) business days of this acknowledgement. If your request is granted, all documents will be made available to you at a standard cost of $.25 per page except for records exceeding 9 x 14 inches, where the actual cost of production will be charged. Records will be emailed at no charge when possible.

The fee charged for a copy of any other record is based on the actual cost of reproduction and may include only the following: 1. an amount equal to the hourly salary attributed to the lowest paid employee who has the necessary skill required to prepare a copy of the requested record, but only when more than two hours of the employee's time is necessary to do so; and 2. the actual cost of the storage devices or media provided to the person making the request in complying with such request; or 3. the actual cost to the agency of engaging an outside professional service to prepare a copy of a record, but only when an agency's information technology equipment is inadequate to prepare a copy, and if such service is used to prepare the copy.

We will process your request as soon as possible. After the records are forwarded to us from the appropriate department, you will be notified by this office.

If you have any questions regarding your FOIL request, please direct them to the Office of the City Clerk at (914) 737-3400.

1.0 INTRODUCTION

SESI Consulting Engineers (SESI) conducted this Phase II Environmental Site Assessment (Phase II ESA) on behalf of STAGG Group for the property located at 418 N Division Street and 407, 425, and 427 Highland Avenue, Peekskill, New York. The assessed parcels include Parcel ID 23.78-1-9, 23.78-1-10 (subdivided as 23.78-1-10A and 23.78-1-10B), 23.78-1-12, and 23.78-1-11 (collectively referred to as the "Site"). A Site Location Map is presented as **Figure 1.1**.

A Site Plan / Tax Map is presented as **Figure 1.2**.

This Phase II Site investigation report complies with the 2019 American Society for Testing and Materials Standard (ASTM E1903-19) and the New York State Department of Environmental Conservation ("NYSDEC") Guidance Document for Site Investigations DER-10.

1.1. SITE SETTING

The Site encompasses four (4) contiguous parcels, identified on local tax maps as 23.78-1-9, 23.78-1-10, 23.78-1-12, and 23.78-1-11, with a combined area of approximately 1.07 acre. Lot 9, located at 418 N Division Street, is currently developed with a one-story commercial building and associated loading area. Lot 10, located at 407 Highland Avenue, contains a two-story stone commercial building, a one-story concrete commercial building, a two-story concrete commercial building, a driveway, and parking/loading area. Lot 12, located at 425 Highland Avenue, contains a two-story concrete and stone commercial building. Lot 11, located at 427 Highland Avenue, contains a one-story concrete commercial building. The buildings at Lot 9 and Lot 10 are connected from inside. The Site is currently unoccupied.

Topographically, based on information provided in the November 18, 2024, Topographic Survey of Property prepared by Geologic Land Surveying, PLLC, the project area generally slopes downward from a high point in the northeastern portion of the site, with an approximate elevation of ±198 feet, to a low point in the northwestern portion of the project area, with an approximate elevation of ±174 feet. Additionally, the site slopes downward from a high point in the southwestern portion of the site, with an approximate elevation of ±177.5 feet, to the low point in the northwestern portion of the site, with an approximate elevation of ±174 feet.

The Site is situated within a mixed-use residential and commercial area. **Figure 1.2** presents a Site Plan, and adjacent properties are summarized in **Table 1.1** below.

Table 1.1: Summary of Surrounding Properties

Direction	Adjacent Property
North	Residential
South	Commercial (a grocery store) and residential
East	Commercial (an auto shop and a restaurant) and residential
West	Residential

Based on recent discussions with the project team and the latest architectural plans prepared by Marin Architects, dated January 6, 2025, the proposed development will involve demolishing the existing on-site buildings and constructing a six-story mixed-use building with multiple cellar levels.

1.2. SITE HISTORY

A summary of Site history is provided in **Table 1.2** below:

Table 1.2: Summary of Site history

	Year developed	Operation
Lot 9	Appx. 1971	~1971 to ~1982: St Labor Unemployment Office ~1987: Wayne Printing & Lith Sometime after 1987: Part of the steam laundry
Lot 10A (Building I)	Developed prior to 1887 and expanded around 1905	Sometime before 1887 to ~1942: Carpenter ~1942 to ~ 2001: Steam Laundry
Lot 10A (Building II)	Appx. 1911	~1911 to ~1942: Carpenter ~1942 to 2001: Steam Laundry
Lot 10A (Building III)	Appx. 1950 and expanded between 1974 and 2006	~1950 to ~2001: Steam Laundry
Lot 10B	Appx. 1911	~1911 to ~1964: Dairy Factory ~1964 to ~2001: Part of Steam Laundry
Lot 11	Appx. 1923	~1923 to sometime after 1972: Garage ~1972: Marin Heating & Air Conditioner ~1977: Highland Industrial Supplies, United Machine & Metal
Lot 12	Appx. 1923	~1950 to ~2020: Fire Department

Based on the information above, various operations at the Site have likely involved the use of hazardous materials and petroleum products, including steam laundry, carpentry, and mechanical activities.

Notably, A & N Cleaners & Launderers and Croton Cleaners & Launderers, which operated at the Site between 1971 and 1976, were listed as dry-cleaning plants in the EDR Hist Cleaner database. Additionally, White Plains Linen/Highland Laundry, which operated at the Site from 1978 to 2001, was listed in the NY Drycleaner database. These dry-cleaning operations likely used chlorinated solvents.

1.3. CONTAMINANTS OF CONCERN

Based on the historical operations at the Site, a list of contaminants of concern is summarized below:

Table 1.3: Summary of Contaminants of Concern

Contaminants	Associated Activities
PAHs	Coal storage and handling (coal was used to generate steam), carpenter, mechanic shop, and historic fill
Metals	Coal storage and handling, carpenter, mechanic shop, and historic fill
Chlorinated Solvents	Drycleaning, carpenter, and mechanic shop
Non-halogen Solvents	Carpenter and mechanic shop
Coal Tar and Creosote	Coal storage and handling
Fuel Oil	USTs and ASTs are/were currently/historically present at Site. Fuel oil was used for heating and generating steam
Waste Oil	Carpenter and metal processing
PFAS	Firefighting foam stored in the fire dept.
Pesticides	Historic fill

1.4. PREVIOUS ENVIRONMENTAL INVESTIGATIONS AND REMEDIATIONS

No environmental investigation is known to have been conducted at the site. Based on NY Spills database, three (3) spills were reported. The release materials include fuel oil and MTBE. All three (3) spills were reportedly closed. In addition, based on the NY UST database, a 1000-gal #2 fuel oil tank was removed on October 20, 2014. Details were not made available.

In addition, based on the operation history of the site, various operations at the Site have likely involved the use of hazardous materials and petroleum products, including steam laundry, carpentry, and scrap metal activities.

Therefore, further investigation of the Site was warranted.

2.0 SUBSURFACE INVESTIGATION

SESI conducted a Phase II ESA to investigate potential environmental impacts at the Site. The project included the installation of soil borings and soil sampling, installation of temporary groundwater monitoring wells and collection of groundwater samples, and installation and sampling of soil vapor points. The fieldwork was conducted on December 19 and 20, 2024 and from January 28 to 31, 2025.

In addition, a geotechnical investigation was conducted concurrently with the environmental investigation. A total of six (6) geotechnical borings were installed, which provided supplemental information regarding the lithology of the Site.

2.1. UTILITY CLEARANCE AND GEOPHYSICAL SURVEY

Prior to subsurface drilling, SESI's drilling contractor, PG Environmental Services, Inc., contacted New York's utility mark-out system. Additionally, SESI retained PG Environmental Services, Inc. to locate underground utilities not covered by the one-call system and to conduct a geophysical survey at the Site using ground-penetrating radar (GPR) and electromagnetic (EM) detection. The GPR/EM survey was performed to clear soil boring locations.

2.2. PHASE II ESA FIELD ACTIVITIES

Thirty-five (35) direct push borings were advanced using a Geoprobe on the Site. Boring locations were distributed throughout the footprint of the Site and targeted to areas of suspected impacts.

A total of 35 soil samples and three (3) groundwater samples were collected and analyzed at Alpha Analytical, a laboratory certified under the New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP). Additionally, three (3) sub-slab soil vapor samples were collected and analyzed at Phoenix Laboratories, another ELAP-certified laboratory. The boring and sampling locations are shown in **Figure 2.1** and a sample summary table is provided as **Table 2.1**.

The soil cores were screened using a photoionization detector (PID), and visual and olfactory evidence of contamination. The soil samples were collected from each boring from the interval that exhibited the greatest evidence of impacts based on field screening or based upon professional judgment if no impacts were observed. All soil samples were named based on their

respective soil boring number and specified depth. PID readings and detailed soil descriptions are provided in the boring logs presented in **Appendix A**.

Groundwater samples were collected from borings SB-1 (TW-1), SB-3 (TW-2), and SB-6 (TW-3). Each temporary well was constructed with a 1-inch casing and a screen up to 10 ft installed to the bottom of the borings. All temporary wells were sampled using the volume-averaged purging and sampling (VAPS) method. Temporary well point TW-4, which was installed at GT-2, was dry and did not collect any water; therefore, no groundwater sample was collected from this TW.

Three (3) sub-slab soil vapor samples were collected from beneath the corresponding building slabs. Helium tests were conducted prior to sampling to confirm the integrity of the enclosure and ensure there were no leaks. Soil vapor samples were collected using 6-liter Summa canisters with a 2-hour collection period. All sampling was performed in accordance with the *NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York* (October 2006).

Soil and groundwater samples were analyzed for Target Compound List (TCL)/Target Analyte List (TAL) +30 list including volatile organic compounds (VOCs) by EPA Method 8260, semi-VOCs (SVOCs) by EPA Method 8270, TAL metals, PCBs by EPA Method 8082A, pesticides by EPA Method 8081, in addition to cyanide. Additionally, groundwater samples collected at TW-2 and TW-3 were analyzed for per and polyfluoroalkyl substances (PFAS) by EPA Method 1633. Soil vapor samples were analyzed for VOCs in accordance with EPA Method TO-15.

Table 2.1: Summary of Sample Collection

3.0 PHASE II ESA FINDINGS

3.1. GEOLOGY AND HYDROGEOLOGY

The investigation data indicates the subsurface conditions at the site generally consist of surficial materials, underlain by granular fill, underlain by till, and underlain further by Gneiss bedrock.

The surface materials consisted of asphalt, concrete and sub-base granular materials measured up to six (6) inches.

The granular fill extended to up to +-5 feet below existing grades. The granular fill generally consisted of coarse to fine sand, little to trace amounts of silt, clay and little to some amounts of coarse to fine gravel, with concrete debris.

The natural till consisted predominantly of sand, with little to trace amounts of silts and clays with variable amounts of medium to fine gravel. The natural soils extended to the top of weathered rock and/or bedrock at depths ranging from approximately 1.5 feet to 12 feet corresponding to approximate elevations 159.5 through 186.5.

Weathered/decomposed rock material was encountered in all boring locations in depths ranging from approximately 4 to15 feet below ground surface corresponding to approximate elevations 160.5 through 187.5. The decomposed bedrock extended to top of bedrock at depths ranging from approximately 1 foot to 7.5 feet corresponding to approximate elevations 159.5 through 188.5. During the geotechnical investigation, the weathered rock was augered through using conventional mud rotary drilling techniques and was observed to consist of heavily weathered Gneiss gravel and cobble-sized fragments, little to some amounts of coarse to fine sand and trace amounts of silt and clay.

Bedrock was encountered in all borings at depths ranging from approximately 5 to 16 feet below the existing ground surface. During the geotechnical investigation, a total of six (6) 5-foot rock cores were collected at boring locations GT-1, GT-2, GT-4 and GT-6 upon encountering auger refusal. The bedrock generally consisted of Biotite Gneiss. Rock core recovery ranged from approximately 60 to 100 percent, with a Rock Quality Designation (RQD) ranging from approximately 17 to 78 percent. The upper portions of the bedrock are generally more weathered and RQD generally increases with depth.

Groundwater was encountered in the overburden zone at approximately 5 feet below ground surface (bgs) in the western portion of the Site. However, groundwater was not observed in the overburden zone in the eastern portion of the Site.

3.2. SOIL INVESTIGATION RESULTS

A table of the analytical results compared to NYSDEC Protection of Groundwater Soil Cleanup Objectives (POTGWSCOs), Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and the NYSDEC Soil Screening Levels for emerging contaminants (NYSDEC Guidelines for Sampling and Analysis of PFAS Under NYSDEC's Part 375 Remedial Programs) is presented on **Table 3.1**. A summary of the samples exceeding the RRSCOs and POTSCOs is presented on **Table 3.2** below and on **Figure 3.1**. The laboratory analytical data is provided in **Appendix B.** As presented on **Table 3.2** below, pesticides, PCBs, SVOCs, metals and VOCs were detected at the site at concentrations exceeding POTGWSCOs and/or RRSCOs.

3.2.1. Volatile Organic Compounds

1,1,1-trichloroethane, acetone, benzene, chloroform, toluene, trichloroethene and xylenes (total) were detected at concentrations exceeding their respective UUSCOs and/or POTGWSCOs in one or more samples.

3.2.2. Semi Volatile Organic Compounds

Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(g,h,i)perylene, chrysene, dibenzo(a,h)anthracene and indeno(1,2,3-cd)pyrene were detected at concentrations exceeding their respective RRSCOs and/or POTGWSCOs in one or more samples. Benzo(k)fluoranthene, benzo(g,h,i)perylene, and indeno(1,2,3-cd)pyrene were detected at a concentration exceeding their respective UUSCOs in one or more samples.

3.2.3. Pesticides

4,4'-DDD, 4,4'-DDE, 4,4'-DDT and cis-Chlordane were detected at concentrations exceeding their respective UUSCOs in one or more samples from 0.5 to 4.0 feet bgs.

3.2.4. PCBs

Total PCBs were detected at concentrations exceeding their respective UUSCOs in one or more samples from 0.5 to 1.0 feet bgs.

3.2.5. Metals

Total arsenic, barium, chromium, lead, manganese and mercury were detected at concentrations exceeding their respective RRSCOs in one or more samples from 0.5 to 4.0 feet bgs. Total arsenic, copper, chromium, lead, mercury and zinc were detected at concentrations exceeding their respective UUSCOs in one or more samples from 0.5 to 8.5 feet bgs. Arsenic, chromium manganese and mercury were additionally detected at concentrations exceeding their respective POTGWSCOs in one or more samples from 0.5 to 1.0 feet bgs.

3.2.6. Summary of Soil Analytical Results

In summary, while soil contamination from historic fill is widespread, elevated PAH and metal concentrations were observed at Lot 9, Lot 10A, Lot 10B, and Lot 12 at levels exceeding the RRSCOs, likely attributable to past Site operations. Additionally, VOC-impacted soil was identified at SB-9 and SB-118 where 1,1,1-trichloroethane, benzene, toluene, trichloroethene, xylenes, and/or acetone were detected at concentrations exceeding UUSCOs.

Interpretation of the data and recommendations are discussed in **Section 4.0**.

3.3. GROUNDWATER INVESTIGATION RESULTS

A table of the analytical results compared to NYSDEC Technical and Operational Guidance Series 1.1.1 (TOGS) Class GA Ambient Water Quality Standards and Guidance Values (AWQS) is presented on **Table 3.3**. A summary of compounds exceeding the AWQS is presented on **Table 3.4** below and on **Figure 3.2**. The laboratory analytical report is provided in **Appendix B**.

As presented on **Table 3.4** below, Perfluorinated Compounds (PFOA & PFOS), Polycyclic Aromatic Hydrocarbons (PAHs), 1,2,4,5-Tetramethylbenzene, and select metals were detected at concentrations exceeding AWQS.

Notes:
AWQS = Ambient Water Quality Standards.
B = This compound in blank spike is outside in house QC limits bias high. Associated CCV outside of control limits high, sample was ND.
d = Elevated detection limit due to dilution required for high interfering element.
e = Detection limit above AWQS or associated guidance.
E = Exceeds calibration range.
ft btoc = Feet below top of casing.
J = Concentration shown as an estimate above the minimum detection limit but below the reporting limit.
ND - Analyte Not Detected
ng/l = Nanograms per liter.
NS - No Standard
NYSDEC = New York State Department of Environmental Conservation.
PFOA = Perfluorooctanoic acid
PFOS = Perfluorooctanesulfonic acid
RL - Reporting Limit
ug/l = Micrograms per liter.
Concentration/RL Exceeds AWQS

3.3.1. Volatile Organic Compounds

1,2,4,5-Tetramethylbenzene was detected at a concentration exceeding its AWQS in TW-2 on Lot 12.

3.3.2. Semi Volatile Organic Compounds

Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(ghi)perylene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were detected at concentrations exceeding their respective AWQS in one or more samples.

3.3.3. Perfluorinated Alkyl Acids

PFOS and PFOA were detected at concentrations exceeding their respective AWQS in TW-2 and TW-3.

3.3.4. Metals

Total Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Selenium, Sodium and Thallium were detected at concentrations exceeding their respective AWQS in one or more samples

3.3.5. Summary of Groundwater Analytical Results

In summary, PAH and metals groundwater impacts onsite are typical of historic fill impacted groundwater. In addition, Perfluorinated Alkyl Acids were identified at concentrations exceeding applicable AWQS in TW-2 and TW-3 on Lots 12 and 10A, respectively. 1,2,4,5-Tetramethylbenzene was also detected at a concentration exceeding its AWQS in TW-2 on Lot 12. Elevated PFAS and VOC concentrations are likely attributable to past Site operations.

Please note that these samples were unfiltered and collected from temporary wells, and, additionally, samples were collected using VAPS, which may have resulted in metal concentrations being skewed higher due to the presence of sediment.

Interpretations of the data and recommendations are discussed in **Section 4.0**.

3.4. SUB-SLAB/SOIL VAPOR INVESTIGATION RESULTS

Three (3) sub-slab soil vapor samples were collected and analyzed for VOCs in accordance with EPA Method TO-15. A summary of the analytical results is presented on **Table 3.5**. A summary of the soil vapor exceedances is presented on **Table 3.6** below and **Figure 3.3**. The laboratory analytical report is provided in **Appendix B**.

The concentrations were compared against the NYSDEC Matrices A-F Sub-slab Vapor Concentrations Criteria (NY-SSC). No VOC exceedances were identified in SV-1 and SV-3. However, in SV-2, tetrachloroethene (PCE) and trichloroethene (TCE) were detected at concentrations exceeding the NY-SSC. Notably, PCE was detected at a concentration slightly over 10x of NY-SSC, which indicates the past use and release of chlorinated solvents at the Site.

Conclusions and recommendations are discussed in **Section 4.0**.

Table 3.6: Summary of Soil Vapor Exceedances

= concentration exceeds matrix value

= concentration exceeds 10X of matrix value

4.0 CONCLUSIONS AND RECOMMENDATIONS

The exceedances in soil, groundwater, and soil vapor identified during the investigation are likely attributable to historic fill as well as historic on-site operations.

4.1. SOIL

Analytical results from the soil investigation identified pesticides, PCBs, PAHs, metals and VOCs at concentrations exceeding POTGW SCOs, and/or RRSCOs.

PAHs

PAH-contaminated soil was identified at Lot 9 (SB-112), Lot 10A&B (SB-10, SB12, and SB-118), and Lot 12 (SB-111) at levels exceeding the POTGW and/or RRSCOs.

While PAHs are commonly associated with historic fill, the elevated levels in these areas are likely due to releases occurring during transportation, staging, and handling of PAH-containing materials such as petroleum products and coals during past operations such as steam laundry, carpenter, and mechanic shop.

PCBs

PCB-impacted soil was identified at Lot 10B (SB-10) and Lot 12 (SB-111), where PCB concentrations exceed the UUSCO of 0.1 mg/kg but below the RRSCO of 1 mg/kg. The elevated PCB exceedances suggest contamination resulted from historic site operations.

Metals

Metal exceedances to UUSCO were widespread at Lot 10A, Lot 10B, Lot 11, and Lot 12. Exceedances to RRSCO were identified at Lot 10B (SB-12 and SB-118) and Lot-12 (SB-109). Arsenic, barium, chromium, manganese, and mercury were detected at levels exceeding RRSCOs. Manganese and mercury were detected at levels exceeding POTGW SCOs.

The elevated metal exceedances suggest contamination resulted from historic site operations.

VOCs

VOC-impacted soil was identified at SB-9 and SB-118, where chloroform, benzene, toluene, total xylenes, acetone, 1,1,1-Trichloroethane and/or TCE were detected at concentrations exceeding the UUSCOs and POTGW SCOs but below the RRSCOs.

Benzene, xylenes, and toluene are commonly found in petroleum products. Acetone can occur naturally or be used as a solvent and degreaser. 1,1,1-Trichloroethane is also used as a degreaser. TCE may have been used directly as a solvent in dry cleaning activities or formed as a degradation byproduct of PCE, which was likely used at the Site. Chloroform is a typical disinfection byproduct.

SB-9 was installed in a drainage trench, while SB-118 was placed near a floor drain. Both areas likely received wastewater from steam laundry and dry-cleaning operations. The VOCs mentioned above were likely used or generated during past operations and subsequently released into the subsurface.

In conclusion, further investigation and remediation is recommended for soil prior to Site development.

4.2. GROUNDWATER

Analytical results from the groundwater investigation identified Perfluorinated Compounds (PFOA & PFOS), PAHs, metals, and 1,2,4,5-Tetramethylbenzene, a VOC, at concentrations exceeding AWQSs.

PFAS

PFOA and PFOS exceedances were identified in both groundwater samples activated for PFAS analysis. The PFAS levels at Site are typical of urban areas and are not indicative of an on-site source.

PAHs

PAH-contaminated groundwater was identified at all three temporary well locations. The contamination is likely attributable to releases from historic Site operations.

Metals

Select metals—including chromium, copper, iron, lead, magnesium, manganese, mercury, selenium, sodium, and/or thallium—were detected at all three (3) temporary wells at concentrations exceeding the AWQS. The samples are unfiltered and collected from temporary wells using VAPS, which may have resulted in metal concentrations being skewed higher due to the presence of sediment. The concentrations in groundwater may also be indicative of historic releases during historic Site operations.

VOCs

1,2,4,5-Tetramethylbenzene (durene) was detected at TW-2 at a concentration exceeding the AWQS. 1,2,4,5-tetramethylbenzene is likely associated with the use and storage of coals at the Site. Therefore, the contamination is likely attributable to releases from historic site operations.

In conclusion, further investigation and remediation is recommended for groundwater.

4.3. SOIL VAPOR

No VOC exceedances were identified in SV-1 and SV-3. However, in SV-2, tetrachloroethene (PCE) and trichloroethene (TCE) were detected at concentrations exceeding the NY-SSC. Notably, PCE was detected at a concentration slightly over 10x of NY-SSC.

The presence of elevated levels of PCE and TCE indicates past use and release of chlorinated solvents at the Site, which requires further investigation.

In conclusion, the vapor intrusion pathway should be further evaluated for the new development to determine whether a vapor mitigation system is necessary.

4.4. SUMMARY

Impacts to soil, groundwater, and soil vapor have been identified on the Site, with exceedances most likely resulting from a combination of historic site operations.

Further investigation and remediation are warranted.

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Notes:

J - Indicates estimated value for TICs and all results when detected below the RL

mg/kg - milligrams per kilogram

U - Analyte Not Detected

NS - No Standard

~ - Not Analyzed

NY-UUSCO: NY - New York NYCRR Part 375 Unrestricted Use Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-POTGWSCO: NY - New York NYCRR Part 375 Protection to Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

NY-RRSCO: NY - New York NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective December 31, 2025

* The SCOs for 'Total Chromium' were dervied from the higher of the SCO values for Trivalent Chromium and Hexavalent Chromium for each scenario under the NYCRR Part 375 SCOs.

RL - Reporting Limit

Concentration/RL Exceeds NY-UUSCO

Concentration/RL Exceeds NY-RRSCO

Concentration/RL Exceeds NY-POTGWSCO

Qualifiers

U	The compound was anlayzed for but not detected at or above the MDL.
	The number immediately preceding the "U" represents the PQL reporting level

corrected for percent solids, weight and/or volume calculations, and dilution factors.

J	The value is estimated. This flag is used a) on form 1 when the compound is reported above the MDL, but below the PQL, and b) on the Tentatively Identified Compounds (TIC) form for all compounds identified.
N	The concentration is based on the response fo the nearest internal. This flag is used on the TIC form for all compounds identified.
S	This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.
D	The reported concentration is the result of a diluted analysis.
Q	For TICS, this compound was quantitated using a calibration curve.
(*)	See report for comment.

NOTES:
1. Results are measured in mg/kg.
2. Results are compared to NYSDECUSCOs, NY Pb GWSCO, and NYSDEC RRSC

ABBREVIATIONS:
NYSDEC = New York State Department of Environmental Conservation.
USCO = NYSDEC Unrestricted Use Soil Cleanup Objectives (6 NYCRR 375-6 12/25).
Pb GWSCO = Protection of Groundwater Soil Cleanup Objectives (6 NYCRR Part 375 12/2025)
RRSCO = NYSDEC Restricted Use Soil Cleanup Objectives w/ CP-51 (1/10) (6 NYCRR 375-6 12/25).
mg/kg = Milligrams per kilogram.
Sample Depth is reported in feet below ground surface.

NOTE:

SDG Comments

February 16, 2025

SDG I.D.: GCS34475

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sample Criteria Exceedances Report

GCS34475 - SESI-NYSAMPLES

Criteria: NY: AIRSV

State: NY

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units
CS34477	$AIR_NYTO15	Trichloroethene	NY / Air Guideline Values / Sub-Slab Vapor	1.80	0.185	1.12	1.12	ppbv
CS34477	$AIR_NYTO15	Tetrachloroethene	NY / Air Guideline Values / Sub-Slab Vapor	170	0.184	14.8	14.8	ppbv

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

PEEKSKILL NY

Laboratory Project: GCS34475

Volatile TO15
Ver 1

Organic Data Flags

LOD(MDL): Limit of Detection or Method Detection Limit
The minimum reportable concentration that can be measured with confidence.

PQL(RL): Practical Quantitation Level or Reporting Level
This value is at or above the MDL and is supported by the lowest calibration standard.

· · Q Qualifiers:

U - The compound was analyzed for but not detected at or above the MDL. The number immediately preceding the “U” represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.

J - Indicates an estimated value, may indicate one of the following, depending on the situation:
a) The reported value is estimated and below the RL.
Compounds that are detected above MDL but below RL are qualified with a J flag.
b) Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the indentification criteria, but the results is less than the quantitation limit, but greater than zero.
c) QC associated with this analyte is within warning limits.

X - The concentration is not reported. This quantitation file was not evaluated for this compound at this dilution; a volatile purging or related issue may be the cause.

L - Biased Low

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified.

S - This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.

B - This compound was also present in the method blank

D - The reported concentration is the result of a diluted analysis. Samples that require dilution may result in elevated reporting limits that exceed requested criteria for one or more analytes.

E - The reported value is estimated because the concentration exceeded the calibration range.

A - Indicates that the tentatively identified compound is a suspected aldol condensation product. Aldol condensation products are produced during the extraction process.

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

P- Percent difference is greater than 25% between the two GC columns and the lower result is reported.

SDG: GCS34475

Volatile Air Conformance / Non-Conformance Summary

Project ID / Client ID: PEEKSKILL NY, SESI Consulting Engineers

Form 1 (Analysis):

Sample SV-2 canister was received under no vacuum, therefore sample results may not be representative.

Detailed reference spectra will print 'Below Cal' for the full scan compounds that are reported from the SIM and are below the lowest calibration point in the full scan analysis. If analytes required manual integration. Manual integrations are flagged with an 'm' to indicate the analyte that required this process.

Form 2 (Surrogates):

All surrogates met criteria with the following exceptions: None.

Form 3 (Laboratory Control/Matrix Spike):

Sample: CS34443 LCS
All LCS recoveries met criteria with the following exceptions: None.

Form 4 (Method Blank):

File: CHEM20 1223_05.D
All compounds were non-detect with the following exceptions: None.

Form 5 (Tune):

File: CHEM20 1213_03.D
All Tune criteria was met with the following exceptions: None.

File: CHEM20 1223_02.D
All Tune criteria was met with the following exceptions: None.

Form 6 (Initial Calibration):

Calibration: CHEM20 12/13/24 - 12/13/24
100% of method compounds met criteria.
The following compounds did not meet maximum % deviations: None.
All ICV recoveries met criteria (70-130) with the following exceptions: Ethanol 54%

Form 7 (Continuing Calibration):

File: CHEM20 1223_02.D (Opening)
100% of method compounds met criteria.
The following compounds did not meet maximum % deviations: None.

File: CHEM20 1224_01.D (Closing)
The following compounds did not meet maximum % deviations: None.

Form 8 (Internal Standard and Retention Time):

File: CHEM20 - 20_AIR_1213.M / 1223_02.D Full
All samples met internal standard area and retention time critieria with the following exceptions: None.

Environmental Laboratories, Inc.
587 East Middle Turnpike, P.O.Box 370, Manchester, CT 06040
Tel. (860) 645-1102 Fax (860) 645-0823

SDG: GCS34475

Volatile Air Conformance / Non-Conformance Summary

Project ID / Client ID: PEEKSKILL NY, SESI Consulting Engineers

File: CHEM20 - 20_AIR_1213.M / 1223_02.D Sim
All samples met internal standard area and retention time critieria with the following exceptions: None.

File: CHEM20 - 20_AIR_1213.M / Average Full
All samples met internal standard area and retention time critieria with the following exceptions: None.

File: CHEM20 - 20_AIR_1213.M / Average Sim
All samples met internal standard area and retention time critieria with the following exceptions: None.

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Sample data is not affected by detections in the canister cleaning blank associated with this SDG.
