Remedial Action Summary Report

NYSDEC Spill Number: 97-13110

1 INTRODUCTION

Tyree Environmental Corporation (Tyree) was retained by Getty Realty Corporation (Getty) to oversee the implementation of the Remedial Action Plan (Dated: May 20, 2015) and to document subsurface conditions at Former Getty Station 00369, located at 26 East Post Road, White Plains, New York 10601 (Subject Site) and the adjacent White Plains Housing Authority property. The remedial activities were conducted by American Environmental Assessment Corporation (AEAC) at the direction of Tyree on behalf of Getty.

Endpoint soil and excavation water samples were collected during remedial activities to document subsurface conditions at the subject site. Results of the sampling and remedial activities are summarized in this report.

2 SITE HISTORY

Historically, the Subject Site was an active retail gasoline filling station operated by Getty from 1973 to 1988, and by other companies dating back to 1933.

During site divestment activities conducted in 1988, four 10,000-gallon gasoline underground storage tanks (USTs), the gasoline dispensers and the associated gasoline product piping were removed from the Service Station. The subject property was occupied by a used car sales company through the early 1990s and is currently vacant.

At the request of the White Plains Urban Renewal Agency (WPURA), Roy F. Weston of New York, Inc. (Weston) conducted a Phase I Environmental Site Assessment (ESA) and a Phase II site investigation in late 1997 at the former Service Station. As part of the Phase II investigation, seven soil borings were advanced across the site and soil and groundwater samples were collected. Volatile organic compounds (VOCs) were detected above NYSDEC Guidelines in soil samples collected at two locations west of the former gasoline dispenser island. Groundwater samples collected from temporary PVC wells installed at three of the soil boring locations identified concentrations above New York State Department of Environmental Conservation (NYSDEC) Groundwater Quality Standards for one or more VOCs. As a result of these findings, NYSDEC spill number 97-13110 was initiated.

Between April 1998 and May 2001, a total of 24 groundwater monitoring wells were installed and seven additional soil borings were completed. VOC impacts were identified in several of the well/boring locations.

A Dual Phase High Vacuum Extraction System (DPHVES) was installed and activated in August 2001. The system was maintained and operated through April 2007. Following NYSDEC approval in April 2007, the DPHVES was shut down in favor of initiating an Enhanced Vapor / Fluid Recovery (EVFR) program to focus remedial efforts on monitoring wells MW-11, MW-12 and GP-19. Monthly EVFR events continued through the end of 2009.

During a meeting with the NYSDEC in March 2009, it was determined that the focus of remedial efforts would be limited to offsite impacts and that all on-site wells would no longer be sampled.

With NYSDEC approval, monitoring wells MW-1 through MW-10, MW-13, MW-14, GP-8, GP-16 through GP-20 and RW-1 were removed from the sampling schedule.

In order to further delineate down-gradient groundwater and soil petroleum hydrocarbon impacts, a limited Subsurface Investigation was conducted on January 14, 2010 that included the advancement of five soil borings (SB-1 and SB-3 through SB-6) and the collection of soil / groundwater samples in the vicinity of GP-19. Groundwater monitoring well MW-101 was installed at the location of soil boring SB-4 to be able to monitor groundwater quality down-gradient of GP-19. Analytical results identified soil and dissolved phase VOC impacts north and east of GP-19 (SB-4 and SB-5).

On January 4, 2011, liquid petroleum hydrocarbons (LPH) was detected in monitoring wells MW-8 and MW-14. Monitoring well MW-8 was located at the Former Getty Station property along the southwestern property boundary with 22-24 East Post Road. Monitoring well MW-14 is in a parking area behind a commercial building located at 22-24 East Post Road, southwest of the Subject Site. LPH has not historically been present in either of these monitoring wells.

On March 21, 2011, two LPH samples were collected from monitoring wells MW-8 and MW-14. The LPH samples were submitted to Accutest Laboratories of Marlborough, Massachusetts for fingerprint analysis by American Society for Testing and Materials (ASTM) Method D3328-78 and US EPA Method 3580A. Laboratory analytical results showed a match for Diesel / Fuel Oil #2 (C9-C22) from the sample collected from MW-14. Laboratory analytical results did not detect a match for any petroleum compound in the analytical method ranging from gasoline (C4-C12) to #6 fuel oil (C11-C26) from the sample collected from MW-8.

On November 23, 2011 wells GP-8, MW-1 through MW-10 and RW-1 were properly abandoned, as per NYSDEC approval.

In September 2011 an Ozone Injection Pilot Test Work Plan was submitted to the NYSDEC. The NYSDEC approved this approach in May of 2011. A revised Pilot Test Work Plan was submitted and subsequently approved by the NYSDEC in July 2012. As part of this work plan, ozone injection wells were to be installed, and existing wells GP-14 and GP-19 were to be overdrilled as two-inch wells to monitor the progress of the pilot test. Tyree sought but was not granted access to the work area by the WPHA. Tyree submitted a revised work plan that included the installation of six additional monitoring wells and advancement of one additional soil boring. This work was requested by the adjoining property owner, WPHA, through the NYSDEC. Tyree was granted access to WPHA's property in June 2013 for the purpose of conducting additional assessment.

In October 2013, a site assessment was conducted on the WPHA property to the north of the former Getty Station. A total of eight additional soil borings were advanced; seven of which were finished as two-inch groundwater monitoring wells (MW-102 – MW-108). Soil and groundwater samples were collected, and laboratory analytical results indicated that VOCs were detected above NYSDEC standards/cleanup objectives in the soil northeast of well GP-19 at MW-107 and at MW-108, which is located on the former Getty property. Groundwater VOC impacts were detected at levels exceeding the respective NYSDEC standards in wells MW-107 and MW-108. The analytical data for the groundwater samples collected from MW-102 and MW-105 indicated that there were no contaminants present above NYSDEC standards. The data for the samples from MW-103, MW-104, MW-106 and B-1 indicated that only one VOC was detected at concentrations that slightly exceeded the respective NYSDEC groundwater standards.

3 SITE DESCRIPTION

3.1 Site and Local Land Uses

The subject property, located at 26 East Post Road, White Plains, New York 10601, is currently vacant. The subject site consists of partially paved lot with a former gas station canopy. All other structures on-site were previously removed. The area to the north of the subject property is occupied by landscaped areas, curbing and a paved parking lot, which are owned and occupied by the WPHA. An Aerial image including the site and surrounding areas is provided as **Figure 1**. Locations of relevant site features are identified on **Figure 2**.

3.2 Regional Geology

According to the Surficial Geologic Map of New York (1989) surficial soils consist of variable texture, poorly sorted till. It contains relatively impermeable, variable clast content – ranging from abundant well-rounded diverse lithologies in valley tills to relatively angular, more limited lithologies in upland tills. The unit tends to be sandy in areas underlain by gneiss or sandstone.

The subject property lies primarily on a flat area located approximately 0.5 miles east of the Bronx River Parkway. The subject property water service is supplied by the City of White Plains municipal system. The depth to groundwater beneath the subject property is approximately five feet below ground surface (bgs).

Subsurface soils on the subject site, as observed during Remedial Activities, consist of a brown medium sands with some clay and pebbles to depths ranging from grade to 13 feet bgs. Bedrock was encountered at depths ranging from from four to 18 feet bgs.

4 IMPLEMENTATION OF REMEDIAL ACTION PLAN

4.1 Remedial Activities

On October 16, 2014, remedial excavations began on the WPHA property in the area between GP-16 and MW-12. Tyree directed AEAC to conduct excavations to the furthest point south without undermining the chain link fence or retaining wall. Soils were stockpiled on poly sheeting and surrounded with hay bales. The western extent of the excavation progressed to the north roughly along the proposed excavation extent as presented in the May 2014 RAP approved by NYSDEC. As the project continued endpoint samples were collected along the sides and bottom of the excavation to confirm the extents of the excavation were below NYSDEC CP-51 Soil Cleanup Objectives (CP-51 SCOs). After excavations were completed on the WPHA property it was determined that excavations would continue onto the former Getty station property. To complete further excavations to the south, additional permits were secured, and the area cleared of trees, fencing, and a retaining wall. The final extent of the excavation was

determined by field observations and soil screening using a photo-ionization detector (PID). The excavation extents and sample locations are depicted in **Figure 2**.

During excavation activities groundwater was encountered. Analysis of groundwater identified compound concentrations above NYSDEC Technical and Operational Guidance Series 1.1.1 Ambient Water Quality Standards and Guidance Values (TOGS WQS). On November 11 and 12, 2014, dewatering was conducted by vacuum trucks as an interim response to remove water from the excavation. A total of 6,100 gallons of liquid was initially recovered, however, based on the size of the excavation and groundwater recharge a supplemental water treatment plan was developed to address the anticipated large volume of dewatering required. The water treatment plan included two pumps and six frac tanks (approximately 120,000 gallon on-site storage) to dewater the excavation and stage the liquid prior to discharge into the White Plains sewer system at a connection point on the former Getty Station.

On December 17, 2014, a vacuum truck skimmed off any observed free phase product prior to pumping water from the excavation. During December 2014, staged water was pumped from the frac tanks through a bag filter and two liquid phase granular activated carbon vessels before discharge into the White Plains sewer connection. An approximate total of 57,000 gallons of liquid was treated and discharged. After the water from the excavation was pumped down all parties approved the backfilling of the excavation. Photographs of the remedial excavation activities are included in **Appendix A**. Vacuum truck manifests for the November 2014 events are attached in **Appendix B**.

4.2 Soil Disposal

Petroleum impacted soil was directly loaded from the excavation for transport off-site or stockpiled on-site to await off-site disposal. The stockpiles were placed on and covered with plastic sheeting. The stockpiles were covered with poly sheeting to limit nuisance odor and to keep soils dry. Hay bales were placed around the soil stockpile and at the perimeter of the property to prevent runoff of sediment. In addition to the hay bales, the city required silt fence to be installed around the perimeter of the work area. On October 16, 2014, the silt fence was inspected and approved by the City of White Plains. Between October 2014 and June 2015, petroleum impacted soil was removed from the site and transported to Clean Earth of Carteret for disposal. A total of 5,409.39 tons of soil was transported to the Clean Earth Carteret, New Jersey facility. Soil disposal manifests and tonnages are included in **Appendix C**.

4.3 Excavation Endpoint Sampling

During excavation and dewatering activities a Tyree environmental scientist was on-site to document conditions, on behalf of Getty. First Environment (FE) was on-site on behalf of WPHA. The FE representative split samples with Tyree throughout the project.

A total of 53 soil samples and two water samples were collected to document soil and excavation water conditions. The soil and water samples were submitted to Con-Test Analytical Laboratory in East Longmeadow, Massachusetts, for analysis via EPA Method 8260 for CP-51 compounds. All sample locations are depicted on **Figure 2**. The soil and groundwater analytical data is

summarized in **Table 1** and **Table 2**, respectively. The laboratory analytical reports for soil and groundwater samples collected are located in **Appendix D**.

5 SOIL AND GROUNDWATER ANALYTICAL RESULTS

5.1 Excavation Endpoint Analytical

As summarized in **Table 1**, laboratory analysis identified 19 of the 25 sidewall endpoint samples with concentrations below CP-51 SCOs and/or below the laboratory method detection limits. Laboratory analysis identified six sidewall endpoint samples (Ex G3 Side 9', G4 Side 9', G-11 Side 7-8', G15 Side 8', G17-SW-9', G22-SW-6') with VOC concentrations in excess of CP-51 SCOs. Due to structural integrity and safety concerns additional material could not be removed from these six locations without risking harm to the structures and safety of the construction workers. The relatively thin impacted soil material identified in these locations is not indicative of a large quantity of impacted material.

Laboratory analysis identified 23 of the 28 bottom samples collected had VOC concentrations below CP-51 SCOs and/or were below the laboratory method detection limits. The five bottom samples which laboratory analysis identified concentrations in excess of CP-51 SCOs are representative of soil collected on bedrock that was entirely removed. Therefore, no residual impacts to soil remain in the bottom after the remedial excavation activities. Only Ex-11 (10') and Ex-22 (8') represent bottom samples where the soil was left in place above the bedrock. Those samples were below laboratory method detection limits and/or below CP-51 SCOs. Depth to bedrock varies significantly across this area, and was observed at depths ranging from 4 feet bgs to 18 feet bgs.

The two excavation water samples were collected during the initial remedial excavation activities. They were analyzed for CP-51 list compounds by EPA Method 8260 and the results were compared to TOGS WQS. As summarized in **Table 2**, laboratory analytical results identified VOC concentrations in excess of NYSDEC TOGS WQS. Upon discovery, the supplemental water treatment plan was initiated to address excavation water impacts during remedial excavation activities. During December 2014, all water was removed from the excavations, staged in frac tanks, treated, and ultimately discharged into the White Plains sewer connection point located on the Former Getty property. A summary of soil and excavation water analytical data is attached and presented on **Table 1 and Table 2**. The complete laboratory reports for soil and groundwater analysis are located in **Appendix D**.

6 CONCLUSIONS AND RECOMMENDATIONS

During remedial activities, petroleum impacts were observed, excavated, and transported off site for disposal. A total of 5,490.39 tons was disposed at Clean Earth of Carteret in Carteret, New Jersey. Petroleum impacted water was encountered during excavations, treated on-site, and subsequently discharged into the local sewer. The total treated water or water removed via vac truck was 81,541 gallons. Laboratory analysis identified six of the 53 soil sample locations have

VOC concentrations in excess of CP-51 SCOs. The residual impact is limited to shallow depths at these locations on the Former Getty Station.

Post remedial action monitoring will be conducted in accordance with the RAP, including installation of replacement monitoring wells to assess post remedial groundwater trends. Additionally, two quarters of soil vapor sampling will be conducted. The post remedial monitoring will be presented under a different cover.

Upon completion and review of the post excavation monitoring, field observations, and analytical results, Tyree will submit for spill closure of Spill 97-13110, conditions permitting.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

SW-846 8260C

Qualifications:**L-02**

Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.

Analyte & Samples(s) Qualified:**Acetone**

B104994-BS1, B104994-BSD1

Bromofom

B104994-BS1, B104994-BSD1

PR-15

According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.

Analyte & Samples(s) Qualified:

14I0501-01[WC-1], 14I0501-02[WC-2]

RL-11

Elevated reporting limit due to high concentration of target compounds.

Analyte & Samples(s) Qualified:

14I0501-01[WC-1], 14I0501-02[WC-2]

V-16

Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.

Analyte & Samples(s) Qualified:**1,4-Dioxane**

14I0501-01[WC-1], 14I0501-02[WC-2], B104994-BLK1, B104994-BS1, B104994-BSD1

V-20

Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**Bromochloromethane**

B104994-BS1, B104994-BSD1

Bromoform

B104994-BS1, B104994-BSD1

B104994-BS1, B104994-BSD1

SW-846 8270D

Qualifications:**S-07**

One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.

Analyte & Samples(s) Qualified:**p-Terphenyl-d14**

B104797-BLK1

SW-846 9045C

Qualifications:**H-01**

Recommended sample holding time was exceeded, but analysis was performed before 2X the allowable holding time.

Gasoline Range Organics (2-Methylpentane through 1,2,4-Trimethylbenzene) is quantitated against a calibration made with an unleaded gasoline composite standard.

Diesel Range Organics (C10-C28) is quantitated against a calibration made with a #2 fuel oil standard.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
H-01	Recommended sample holding time was exceeded, but analysis was performed before 2X the allowable holding time.
L-02	Laboratory fortified blank/laboratory control sample recovery and duplicate recoveries outside of control limits. Data validation is not affected since all results are "not detected" for associated samples in this batch and bias is on the high side.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
RL-11	Elevated reporting limit due to high concentration of target compounds.
S-07	One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.
V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy may be associated with reported result.
V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
E	Reported result is estimated. Value reported over verified calibration range.
L-03	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the low side.
L-05	Laboratory fortified blank/laboratory control sample recovery is outside of control limits. Reported value for this compound is likely to be biased on the high side.
R-03	Duplicate RPD outside of control limits. Reduced precision is expected for values near the reporting limit.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
RL-11	Elevated reporting limit due to high concentration of target compounds.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C

Qualifications:

L-07

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Methyl tert-Butyl Ether (MTBE)

B108567-BSD1

PR-03

Sample preserved in the laboratory, not in the field as required by the method.

Analyte & Samples(s) Qualified:

14J1489-01[Ex-16 10'], 14J1489-02[Ex-17 8'], 14J1489-03[Ex-18 10']

PR-15

According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.

Analyte & Samples(s) Qualified:

14J1489-01[Ex-16 10'], 14J1489-02[Ex-17 8'], 14J1489-03[Ex-18 10']

V-05

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Naphthalene

14J1489-01[Ex-16 10'], 14J1489-02[Ex-17 8'], 14J1489-03[Ex-18 10'], B108567-BLK1, B108567-BS1, B108567-BSD1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C**Qualifications:****L-07**

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:**Methyl tert-Butyl Ether (MTBE)**

B109952-BSD1

PR-03

Sample preserved in the laboratory, not in the field as required by the method.

Analyte & Samples(s) Qualified:

14K0761-01[Ex-23 (3-4ft)], 14K0761-02[Ex-24 (8ft)], 14K0761-03[Ex-25 (8ft)]

PR-15

According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.

Analyte & Samples(s) Qualified:

14K0761-01[Ex-23 (3-4ft)], 14K0761-02[Ex-24 (8ft)], 14K0761-03[Ex-25 (8ft)]

V-05

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:**Naphthalene**

14K0761-01[Ex-23 (3-4ft)], B109952-BLK1, B109952-BS1, B109952-BSD1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260C

Qualifications:**L-06**

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.

Analyte & Samples(s) Qualified:**Naphthalene**

B112031-BS1, B112031-BSD1

PR-03

Sample preserved in the laboratory, not in the field as required by the method.

Analyte & Samples(s) Qualified:

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
L-06	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the high side.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
RL-11	Elevated reporting limit due to high concentration of target compounds.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
