1.0 PROJECT SUMMARY

SESI Consulting Engineers (SESI), at the request of Midmain Partners LLC (User), has conducted a Phase I Environmental Site Assessment (ESA) for the property located at 70 Main Street, White Plains, New York (herein referred to as the Subject Property). The Site is a 1.1739-acre designated condominium lot with the tax designation Section 125.75 Block 4 Lot 2..1. The Subject Property is located in a commercial/residential/government building area and the Site's use was previously as a portion of the Galleria Mall. The Subject Property is currently vacant. A tax map is included on **Figure 1.1**. A Subject Property Location Map is included on **Figure 1.2**. A Subject Property Plan is included on **Figure 1.3**.

The Subject Property was developed prior to 1885 based on Sanborn Fire Insurance Maps and the historic operations circa 1885-1950 at the Site include a several blacksmiths, several tailors, a carriage house/factory, automobile washing and greasing facility, hand printing, sign painting, cobbler, steam fitter, shoe repair, plumbing shop, several tin shops, an iron working, and a hotel with a gas tank. The EDR HIST CLEANER database has identified that a dry cleaning establishment operated on the Site from 1971 to 1975 followed by the Galleria Mall (circa 1980-2023). The dry cleaner was located at 102 Main Street, which was within the Site prior to construction of the Galleria Mall based on historic Sanborn Maps. These historical land uses represent RECs and additional investigation is warranted.

The Subject Property is presently owned by Galleria City Holding Company, LLC based on publicly available information and the questionnaire provided by the User.

The objective of this ESA is to identify the presence or likely presence, use or release on the Subject Property of hazardous substances or petroleum products as defined in the American Standard of Testing and Materials (ASTM) E1527-21 as a Recognized Environmental Condition (REC). In addition, Business Environmental Risks (BERs), Controlled Recognized Environmental Conditions (CRECs), and Historical Recognized Environmental Conditions (HRECs) were identified, if present.

The following RECs have been identified:

- **REC 1 – Historical Usages on the Subject Property**: Historic operations circa 1885-1950 at the Subject Property that are considered of concern include: several blacksmiths,

several tailors, a carriage house/factory, automobile washing and greasing facility, hand printing, sign painting, cobbler, steam fitter, shoe repair, plumbing shop, several tin shops, and iron working, and a hotel with a gas tank. A dry cleaning establishment operated on the Subject Property from 1971 to 1975. The dry cleaner was located at 102 Main Street, which was within the Site prior to construction of the Galleria Mall based on historic Sanborn Maps. Soil, groundwater, and soil vapor sampling conducted during the Phase II ESA identified impacts that appear to be partially attributable to former on-site operations. Additional investigation is recommended.

- **REC 2 – Contamination on the Subject Property:** SESI conducted subsurface soil, groundwater, and soil vapor sampling to investigate for the Site historical usages. Analytical results of this investigation identified VOCs (acetone) in excess of the UUSCO and/or PGWSCO in several samples to depths of 9.5 ft-bgs. SVOCs (primarily PAHs) in soil to exceed the PGWSCOs, RRSCOs or USCOs on the eastern portion of the Site to depths of 6.5 ft-bgs. Metals were found above the PGWSCOs, RRSCOs and USCOs to depths of 13.5 ft-bgs throughout the Site. Pesticides were found above the USCOs in several samples to depths of 18.0 ft-bgs. The PFAS compounds PFOS and PFOA were found above the guidance PGWSCOs and USCO to depths of 1.5 ft-bgs at the northwestern portion of the Site (SB-7 [1-1.5] and SB-20 [1-1.5]). The lead, mercury, and PAHs were found above the PGWSCOs and RRSCOs in discrete areas, suggesting that they are attributable to historic releases. As described above, the lead and PAHs were also identified in groundwater exceeding the AWQSs and therefore the groundwater pathway for lead and PAHs requires further evaluation. These soil exceedances of the USCOs and RRSCOs are likely due to historic property uses, potential USTs, and contaminated historic fill.

  VOCs, PFAS, PAHs, and metals were found in groundwater to exceed the AWQS throughout the Site, likely associated with historical uses, potential USTs, and historic fill contamination. As described above the lead and PAHs were also identified in groundwater exceeding the AWQSs and therefore the groundwater pathway for lead and PAHs requires further evaluation.

  Chlorinated VOCs, including PCE and TCE, were also identified in soil vapor above the minimum concentration at which mitigation may be required depending on the results of collocated indoor air samples, which were not collected since the current buildings are

proposed to be demolished. The soil vapor contamination is likely related to the former dry cleaning operation identified in the Phase I ESA in the northern part of the Subject Property. A soil vapor intrusion evaluation is recommended during redevelopment of the Subject Property.

SESI recommends that additional investigation be conducted to delineate the nature and extent of contamination and to evaluate remedial options prior to redevelopment of the Subject Property. Specifically, the investigation should delineate VOCs, SVOCs (PAHs), metals, pesticides, and PFAS contamination in soil, VOC, SVOCs (PAHs), metals, and PFAS contamination in groundwater, and chlorinated VOCs in soil vapor.

REC 3 – Upgradient Concerns:

- *180 Main Street Oil Storage BCP Site (C360268)*:
  - The Site was developed prior to 1885 based on the Sanborn Fire Insurance Maps. Historical land uses included print shops, painting and oil shops, bottling works, plumbing and tin shops, a bowling alley, a fire department and a portion of the Westchester County Courthouse and commercial/residential spaces (circa 1885-1950), followed by the Galleria Mall. The Galleria Mall was constructed in approximately 1980. The Subject property was improved with the Galleria Mall anchor store Abraham and Straus (circa 1980-1995), and then Sterns (circa 1995-1996), and then Macys (circa 1996 to 2023). Subsurface testing has identified impacts to soil exceeding the NYSDEC soil cleanup objectives and impact to groundwater exceeding the NYSDEC AWQSs. Two (2) 10,000-gallon fuel oil underground storage tanks (USTs) were closed in place in January 1997 (PBS 3-173665). Two (2) spills had been reported to the NYSDEC in 1988 identified as Spill Nos. 8803673 and 8805571. Both of these spills appear to be related to tank test failures associated with a 10,000-gallon underground storage tank (UST). The site entered the BCP via the executed BCA dated March 23, 2026.

- *50 Court Street BCP Site (C360258)*:
  - The Site is in the BCP with SVOCs, metals, and pesticides identified in soil and SVOCs, metals, and PFAS identified in groundwater during a Phase II ESA completed by SESI in 2024.

The following BERs have been identified:

- **BER 1 – Polychlorinated Biphenyl (PCB) Caulk:** A PCB survey was not completed during SESI's walkthrough of the Subject Property. There are likely several areas present that contain caulking. Therefore, a PCB survey is recommended prior to any demolition or redevelopment of the Subject Property.
- **BER 2 – Asbestos-Containing Material (ACM):** An ACM survey was not completed during SESI's walkthrough of the Subject Property. Based on the age of the building, SESI recommends an ACM survey prior to any demolition or redevelopment of the Subject Property.
- **BER 3 – Universal Waste:** There were several pieces of universal waste identified during the walkthrough of the Subject Property; however, a complete survey of this universal waste was not completed. SESI recommends a universal waste survey prior to any demolition or redevelopment of the Subject Property.
- **BER 4 – Lead-Based Paint (LBP):** An LBP survey was not completed during SESI's walkthrough of the Subject Property. Based on the age of the building, SESI recommends an LBP survey prior to any demolition or redevelopment of the Subject Property.
- **BER 5 – Vapor Intrusion:** SESI conducted a soil vapor intrusion investigation in July 2026 to evaluate the soil vapor pathway. Four (4) soil vapor samples were collected and analyze for VOCs via TO-15. Analytical results identified chlorinated VOCs, including PCE and TCE above the minimum concentration at which mitigation may be required depending on the results of collocated indoor air samples, which were not collected since the current buildings are proposed to be demolished. The soil vapor contamination is likely related to the former dry cleaning operation in the northern part of the Subject Property. A soil vapor intrusion evaluation is recommended during redevelopment of the Subject Property.

A REC location map is provided as **Figure 10.1**. The RECs are discussed further in **Section 10.0** of this Report.

2.0 INTRODUCTION

2.1. PURPOSE

The purpose of this study is to determine the RECs at the Subject Property for due diligence purposes related to the potential acquisition of the Subject Property.

SESI has developed this Phase I ESA Report on behalf of the User. It has been developed in substantial conformance with the ASTM's International Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-21. According to ASTM E1527-21, the following conditions were identified during this assessment:

REC – "(1) the presence of hazardous substances or petroleum products in, on, or at the property due to release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the property due to a release or likely to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition."

CREC – "A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority."

HREC – "A past release that has been remediated to below residential standards and given regulatory closure with no use restrictions."

BER – "A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate and is not an issue required to be investigated under this practice."

2.2. SCOPE OF SERVICES

The scope of this assessment consisted of the following general tasks: a records review; a Site visit; interviews with present and past owners, operators, and occupants to the extent possible; and preparation of this ESA report. Specific tasks that were conducted included the following:

- A review of environmental databases maintained by the United States Environmental Protection Agency (USEPA) and state and local agencies within the minimum search distance. Environmental Data Resources, Inc. (EDR) prepares environmental databases used in these assessments.

- A Site reconnaissance to observe conditions and to assess the Subject Property location with respect to adjoining and surrounding property uses, types of development, topography, natural surface features, roadways, railroad lines and right-of-ways to identify obvious potential environmental conditions on neighboring properties.

Per ASTM E1527-21, questionnaires were provided to the User (Client) and Owner to obtain information related to the Subject Property.

2.3. SIGNIFICANT ASSUMPTIONS

Information obtained by SESI and by third parties is assumed to be accurate and/or true. SESI makes no warranty, either implied or expressed, regarding the accuracy or validity of information supplied by others.

2.4. LIMITATIONS/METHODOLOGY/RELIANCE

This ESA was prepared for the exclusive use of the User, its affiliates and lenders. During the assessment, methodologies were used that conform to generally accepted practices for this type of work. The scope and character of the environmental assessment were, in professional judgment, sufficient to justify the stated conclusions, after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the Subject Property as found in historical records, and visual observation of the Subject Property. No other investigation was performed other than that which is expressly noted in this Report.

This ESA was performed in accordance with ASTM E1527-21 and is subject to reasonable limits of time and cost and is intended to reduce but not eliminate uncertainty regarding the potential for RECs in connection with a property. Sampling and laboratory analysis are required to determine if soil, surface water, groundwater, air, and construction materials have been impacted by a contaminant.

The information presented in this ESA was obtained during the Site reconnaissance and from the User, representatives of the User, current/former property owner(s) or tenants, Federal, State, County and Local Officials, and available mapped information obtained by SESI. SESI does not certify the accuracy of the information received from outside sources.

This ESA should be used in its entirety. Use of portions of this ESA may nullify the information and/or conclusions of this ESA. Subject Property observations discussed herein apply to Subject Property conditions as observed during Site reconnaissance only. The conclusions of this ESA do not apply to conditions that were unavailable for inspection and could not be evaluated.

SESI does not certify that the Subject Property is contaminant free and this ESA does not serve as a warranty. SESI's investigation was performed within the time frame requested by the client.

The activities to conduct this ESA did not include sampling and analyses of soil, surface water, groundwater, air, or construction materials unless expressed otherwise and requested by the client. Formal wetland, asbestos, mold, and/or radon evaluations were not performed and are not within the scope of work for an ESA. If additional services including UST testing, construction materials testing, or environmental sampling (soil, surface water, groundwater, air) is recommended, the results and conclusions for these tests will be provided under separate cover.

2.5. DISCLAIMER

This ESA was prepared by SESI for the sole and exclusive use of User. Nothing under the Agreement between SESI and the User shall be construed to give any rights or benefits to anyone other than the User and SESI, and all duties and responsibilities undertaken pursuant to the Agreement will be for the sole and exclusive benefit of the User and SESI and not for the benefit of any other party. SESI does not intend, without its written consent, for this ESA to be disseminated to anyone other than the User, or to be used or relied upon by anyone other than the User. Use of the ESA by any other person is unauthorized and such use is at their sole risk.

3.0 SITE DESCRIPTION

3.1. LOCATION/STRUCTURES/LEGAL DESCRIPTION

The Subject Property consists of a 1.1739-acre parcel located at 70 Main Street, White Plains, Westchester County, New York. The Subject Property is a designated condominium lot identified on tax map records as Section 125.75 Block 4 Lot 2..1. A tax map is included on **Figure 1.1.** The Subject Property is located in a commercial/residential/government building area and the Site's use was previously as a portion of the former Galleria Mall. The Subject Property is currently vacant. **Figure 1.2** provides a Subject Property Location Map. A Subject Property Plan is shown on **Figure 1.3.**

The Subject Property is proposed to be redeveloped with apartment, retails stores, and associated parking.

The Subject Property is bound to the north by commercial/office/residential, to the south by government/office, to the east by commercial/office/residential/park, and to the west by office/apartments. Adjacent properties are noted on **Table 3.1** below.

Table 3.1—Adjacent Property Uses

Direction	Adjacent Property Use
North	Commercial/Office/Residential
South	Government/Office
East	Commercial/Office/Residential/Park
West	Office/Apartments

3.2. SUBJECT PROPERTY AND VICINITY CHARACTERISTICS

The Subject Property is located in a commercial, office, and residential area. The closest notable surface water body is the Bronx River located approximately 1,200 feet west of the Subject Property.

3.3. CURRENT USE OF THE PROPERTY

The Subject Property is currently a vacant mall. The Site is owned by WP Galleria Realty LP based on publicly available information and the questionnaire provided by the User.

3.4. DESCRIPTION OF STRUCTURES, ROADS AND SITE IMPROVEMENTS

The Subject Property is a rectangle shaped parcel that is 1.1739-acres in size and currently improved with a large structure that was formerly part of the Galleria Mall. The ground floor of the Subject Property was previously improved with a portion of the former Galleria Mall as well as storage rooms, mechanical spaces (e.g., gas room) and a loading dock. The second through fourth floors consisted of retail and common spaces associated with the Galleria Mall. The Subject Property is currently vacant.

4.0 SITE BACKGROUND INFORMATION

4.1. TITLE INFORMATION

A chain of title and deed search was not prepared as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

4.2. ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

A lien or activity use limitation search was not conducted as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

4.3. SPECIALIZED KNOWLEDGE/OTHER USER PROVIDED INFORMATION

SESI was not provided any historic reports related to this Site.

4.3.1. INTERVIEWS

The ESA questionnaire was provided to the User and the response received on March 6, 2025. After review of the document, no new or previously unknown information was identified. A representative directed a tour of the facility. Information obtained from this interview, questionnaire and Subject Property inspection is integrated in this Phase I ESA. A completed User Questionnaire is presented as **Appendix A**.

4.4. COMMONLY KNOWN OR REASONABLY ASCERTAINABLE RECORDS

SESI completed a review of publicly available New York State Department of Environmental Conservation mapping and database systems and the United States Environmental Protection Agency (USEPA) database system as part of this Report to determine the environmental conditions at the Subject Property and adjacent properties. Information requests are presented as **Appendix B**.

4.5. VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The Report User indicated no knowledge of any valuation reduction related to environmental concerns.

4.6. OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The Subject Property parcel is currently owned by WP Galleria Realty LP.

5.0 RECORDS REVIEW

5.1. STANDARD ENVIRONMENTAL RECORD SOURCES: FEDERAL, CITY, STATE

5.1.1. EDR SEARCH

A search of available environmental records was conducted by EDR and reported in the EDR Radius Map Report with GeoCheck. The Report meets the government records search requirements of ASTM Standard of Practice for Environmental Site Assessments, E-1527-21. Search distances are per ASTM standards. A Radius Map Check was performed by EDR and are provided in **Appendix C**. All properties in the search area with environmental records are listed below:

Table 5.1—Property Listings

Environmental Listing	Subject Property	0-1/8 Miles	1/8 - 1/4 Miles	1/4 - 1/2 Miles	1/2-1 Mile

EDR Hist Cleaner	0	5	NR	NR	NR

The EDR Radius Map Report identified operations at the Subject Property in numerous databases. However, the Subject Property address most often referred to the Galleria Mall as a whole and not the Subject Property being evaluated as part of this Phase I ESA. Therefore, SESI used professional judgement to determine whether the listings were actually on the Subject Property or associated with other areas of the mall as discussed below:

RCRA Small Quantity Generator (RCRA-SQG)

The RCRA-SQG includes a list of facilities that generate more than 100 but less than 1,000 kilograms of hazardous waste per month and accumulates less than 6,000 kilograms of hazardous waste at any time. According to the RCRA-SQG list provided by EDR, there was one (1) RCRA-SQG facility (Picture People The) located on the Subject Property. However, a review of the operation did not identify any environmental release(s) of hazardous materials. Therefore, this listing is not considered a REC.

LTANKS: Leaking Storage Tank Incident Reports

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. A review of the database as provided by EDR identified three (3) listings (one [1] for JC Penney Co Inc and two [2] for A&S Store) as follows:

- Historic Spill No. 8803673 (July 27, 1988), A&S Store, Galleria Plaza: Test of a 10,000-gallon No. 2 fuel oil tank failed. The noted impacts were to groundwater, and the case was reported as closed by the NYSDEC on June 13, 1991.
- Historic Spill No. 8805571 (September 9, 1988), A&S Store, Galleria Plaza: Test of a 10,000-gallon No. 2 fuel oil tank failed. The noted impacts were to groundwater, and the case was reported as closed by the NYSDEC on June 13, 1991.
- Historic Spill No. 9102767 (June 10, 1991), JC Penny Co Inc, Galleria: 20 gallons of No. 2 fuel oil spilled from a tank overfill. The noted impacts were to concrete/soil, and the case was reported as closed by the NYSDEC on June 13, 1991.

Based on available information, the listings for the A&S Store are associated with the eastern adjoining portion of the mall located at 180 Main Street and are not associated with the Subject Property. The listing for the JC Penney store is related to the western portion of the mall located at 60 Main Street. The former spills were closed by NYSDEC and were not on-site however they are considered RECs due to their proximity to the Subject Property.

UST: Underground Storage Tank Data

USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program. A review of the NY UST list provided by EDR identified four (4) listings (J.C. Penney, The Galleria at White Plains, JC Penney, Galleria West Garage 5) on the Subject Property. These listings are further described below:

- PBS No. 3-173665, JC Penny, 100 Main Street: 2x10,000-gallon USTs closed in place, 1x100-gallon UST converted to non-regulated use, and 1x1,000-gallon UST converted to non-regulated use.
- PBS No. 3-492205, The Galleria at White Plains, 100 Main Street: 2x10,000-gallon USTs closed in place (Macy's Store).
- PBS No. 3-600104, JC Penny, 100 Main St: 1x8,000-gallon UST closed in place.
- PBS No. 3-169579, Galleria West Garage 5, Martine Ave & So Lexington Ave: 1x1,000-gallon diesel UST. Installed December 1, 1980. Removed and closed November 1, 1994.

The Galleria at White Plains listing (3-492205) is associated with the eastern adjoining portion of the mall located at 180 Main Street. Regardless, it is a concern due to the lack of closure documentation and its upgradient location proximal to the Subject Property. Further, the UST listing of the Galleria West Garage 5 is likely associated with the southern Galleria Mall parking garage to the south. Both of these listings are a concern due to their lack of closure documentation and location proximal to the Subject Property. The JC Penney listings (3-173655 and 3-600104) are associated with western adjacent BCP site and are a concern due to their proximity to the Subject Property.

AST: Petroleum Bulk Storage

Registered Aboveground Storage Tanks. A review of the database as provided by EDR identified the Subject Property as containing one (1) listing (Galleria West Garage 5) in the AST database. This listing is further described below:

- PBS No. 3-169579, Galleria West Garage 5, Martine Ave & So Lexington Ave: 2x300-gallon diesel ASTs (Tank Nos. 32 and 33) administratively closed.

This listing is likely associated with the southern adjacent mall parking garage. Proper closure documentation and current AST status are unknown and is a concern due to its proximity to the Subject Property.

SPILLS: Spills Information Database

Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date. A review of the database as provided by EDR identified the Subject Property under the listings JC Penney Co Inc and White Plains Garage. The spill listings are as follows:

- Historic Spill No. 9102767 (June 10, 1991): 20 gallons of No. 2 fuel oil spilled from a tank overfill. The noted impacts were to concrete/soil, and the case was reported as closed by the NYSDEC on June 13, 1991.
- Historic Spill No. 9110939 (January 22, 1992), White Plains Garage, Main St & Grove St: 1 gallon of No. 2 fuel oil spilled from a vent tank overfill. Speedy Dry was applied. The noted impacts were to soil, and the case was reported as closed by the NYSDEC on January 24, 1992.
- Historic Spill No. 0703055 (June 13, 2007), Galleria Mall, 100 Main Street: An individual dumped out a gallon of gasoline into a storm drain when he could not return it. The spill was closed out by NYSDEC on June 14, 2007.

These off-site spills are a concern due to their proximity to the Subject Property.

Facility Index System/Facility Registry System (FINDS)

The FINDS database provides a list of facilities that maintain or previously maintained environmental permits or are listed under additional EDR report databases. A review of FINDS list provided by EDR identified seven (7) listings for the Subject Property (Picture People, The, Galleria of White Plains, Macy-White Plains Galleria at White Plains, J.C. Penney Co Inc, Macy's White Plains Cogeneration, Expressly Portraits, and CPI Photo Finish). These operations appear to include RCRA-SQG (EPA ID 110004561402), Air Program (EPA ID 110019206599 and 110054890347), RCRA (EPA ID 110016725748, 110009462553, 110004322849 and 110004531374). No violations were reported; therefore, these listings do not constitute a REC.

USEPA Enforcement and Compliance History Online (ECHO)

The ECHO database provides a list of compliance and enforcement information for regulated facilities. A review of the database provided by EDR identified six (6) listings for the Subject Property (The Picture People, Macy-White Plains Galleria at White Plains, J.C. Penney Co Inc, Macy's White Plains Cogeneration, Expressly Portraits, and CPI Photo Finish). No violations were identified with these operations at the Subject Property; therefore, these listings do not constitute a REC.

MANIFEST Sites

MANIFEST Facilities include a list of facilities that have generated hazardous waste or contaminants. A review of the NY MANIFEST list, as provided by EDR, identified four (4) NY MANIFEST facilities (Picture People, The, JC Penney Co Inc, Expressly Portraits and Macy's East #55, Galleria Mall Dental, Lens Crafters #0787, Sears) located on the Subject Property. The Subject Property is also listed as 100 Main Street on the MI MANIFEST database. Based on a review of the available database information, there are manifests that are not associated with documented releases, and therefore they do not constitute a REC.

EDR Hist Cleaner Sites

The EDR Hist Cleaner list provides an inventory of facilities that formerly/historically operated a dry-cleaning business. A review of the EDR Hist Cleaner database, as provided by EDR, has revealed that there are two (2) Hist Cleaner facilities listed on the Subject Property (Bayliss Morris [90 Main St] and Biscardi Frank [102 Main St]). The operations of the drycleaning operations were noted as circa 1969-1975, prior to the construction of the Galleria Mall. According to the 1950

Sanborn map, 90 Main Street is mapped off-site to the west. The dry cleaner located at 102 Main Street was within the Site prior to construction of the Galleria Mall based on historic Sanborn Maps and is considered a REC.

The EDR Radius Map Report identified operations at nearby properties in the following listings. For the purposes of this section, distances are measured from the Galleria Mall as a whole, and not from the specific condominium unit that is subject to this report. A discussion of these listing is provided below:

RCRA Large Quantity Generator (RCRA-LQG)

The RCRA-LQG includes a list of facilities that generate over 1,000 kilograms of hazardous waste, or over one (1) kilogram of acutely hazardous waste per month. According to the RCRA-LQG list provided by EDR, there are two (2) RCRA-LQG facilities (Con Edison Manhole 10087 and Con Edison Manhole 467) within approximately 0.25 miles of the Subject Property. However, a review of the facility listings did not identify any releases or violations. Therefore, these listings are not expected to adversely impact the Subject Property.

RCRA Small Quantity Generator (RCRA-SQG)

The RCRA-SQG includes a list of facilities that generate more than 100 but less than 1,000 kilograms of hazardous waste per month and accumulates less than 6,000 kilograms of hazardous waste at any time. According to the RCRA-SQG list provided by EDR, there are six (6) RCRA-SQG facilities within approximately 0.25 miles of the Subject Property. Of these facilities, only one (1) was identified with an associated spill. However, this spill case was closed by the NYSDEC and not associated with the waste generated. Therefore, these listings are not expected to adversely impact the Subject Property.

RCRA Very Small Quantity Generator (RCRA-VSQG)

The RCRA-VSQG includes a list of facilities that generate less than 100 kilograms of hazardous waste, or less than one (1) kilogram of acutely hazardous waste per month. According to the RCRA-VSQG list provided by EDR, there are nine (9) RCRA-VSQG facilities within approximately 0.25 miles of the Subject Property. The facilities had no reported violations, and any listed spills were reported as closed and not associated with the RCRA listing. Therefore, these listings are not expected to adversely impact the Subject Property.

NY State Hazardous Waste Sites (NY SHWS)

NY SHWS is a list of known contaminated sites except those associated with Bureau of Underground Storage Sites (BUST). According to the NY SHWS list provided by EDR, there are two (2) facilities (Automobile Club of New York and Mamaroneck Avenue Dry Cleaners) located within 0.5 miles of the Subject Property. Due to the distance of these facilities and the locations as hydraulically cross gradient or downgradient from the Subject Property, these listings are not expected to adversely impact the Subject Property.

LTANKS: Leaking Storage Tank Incident Reports

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. A review of the database as provided by EDR identified 175 listings within 0.5 miles of the Subject Property. However, a review of the listings within 0.125 miles from the Subject Property did not identify any open spills with the NYSDEC. Therefore, these facilities are not expected to adversely impact the Subject Property.

UST: Underground Storage Tank Data

USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program. A review of the NY UST list provided by EDR identified 57 facilities within 0.25 miles of the Subject Property. No documented releases were reported from the listed USTs within 0.125 miles from the Subject Property. Therefore, these facilities do not constitute a REC.

AST: Petroleum Bulk Storage

Registered Aboveground Storage Tanks. A review of the database as provided by EDR identified 26 facilities within 0.25 miles of the Subject Property. All facilities within 0.125 miles of the Subject Property that contained associated spills or LTANKS listings were reported as closed by the NYSDEC. Therefore, these facilities do not constitute a REC.

Eng Controls: Registry of Engineering Controls

Environmental Remediation sites that have engineering controls in place. A review of the database as provided by EDR identified two (2) facilities (CE-White Plains MGP and Automobile Club of New York) within 0.5 miles of the Subject Property. Both facilities appear to be located hydraulically downgradient from the Subject Property. Therefore, they do not constitute a REC.

Inst Control: Registry of Institutional Controls

Environmental Remediation sites that have institutional controls in place. A review of the database as provided by EDR identified three (3) facilities (CE-White Plains MGP, WP Mall Cleaners and Gas Station Site, and Automobile Club of New York) within 0.5 miles of the Subject Property. As previously discussed, teh CE-White Plains MGP and Automobile Club of New York appear to be located hydraulically downgradient from the Subject Property, and therefore they do not constitute a REC. The WP Mall Cleaners and Gas Station Site listing has been remediated under the NYSDEC BCP and is not considered a REC,

Voluntary Cleanup Program (VCP) Sites

The VCP listings included Completed Sites, Sites in Progress and Act 2 Non-Use Aquifer Determinations Sites. Formerly known as the Act 2, the Land Recycling Program encourages the voluntary cleanup and reuse of contaminated commercial and industrial sites. A review of NY VCP list provided by EDR identified one (1) facility (CE—White Plains MGP) within 0.125 miles of the Subject Property. As previously discussed, the facility appears to be located hydraulically downgradient from the Subject Property, and therefore does not constitute a REC.

Brownfields: Brownfields Site List

A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant. A review of the database as provided by EDR identified 10 listings within 0.5 miles of the Subject Property. Of the facilities within 0.125 miles and hydraulically upgradient of the Subject Property, two (2) brownfield cleanup program (BCP) facilities were identified as undergoing remediation for groundwater, soil and soil vapor. These facilities are being investigated and remediated under the NYSDEC BCP and therefore do not constitute a REC.

SPILLS: Spills Information Database

Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date. A review of the database as provided by EDR identified 37 facilities within 0.125 miles of the Subject Property. The spills associated with the facilities listed adjacent or hydraulically upgradient of the Subject Property have been closed with the NYSDEC. Therefore, these facilities do not constitute a REC.

RCRA Non-Generators / No Longer Regulated (RCRA NonGen / NLR)

Resource Conservation and Recovery Act Non-Generators (RCRA NonGen) database searches USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information about facilities that generate, transport, store, treat and/ or dispose of hazardous waste as described by RCRA. Non-generators do not presently generate hazardous waste. A review of RCRA NonGen/NLR list provided by EDR identified 93 facilities within 0.25 miles of the Subject Property. Since none of these facilities currently generate hazardous waste, they are not expected to adversely impact the Subject Property.

Formerly Utilized Sites Remedial Action Program (FUSRAP)

Established in 1974, the FUSRAP list includes facilities that required remediation due to radioactive contamination associated with the Manhattan Project and early U.S. Atomic Energy Commission operations. According to the FUSRAP list provided by EDR, there is one (1) FUSRAP facility (Nuclear Development Corp of America Site) located within approximately 0.125 miles of the Subject Property to the southeast. The facility is listed as Nuclear Development Corp. of America, identified as NY.32, and is located at 5 New Street. The facility was reportedly evaluated and eliminated from consideration under FUSRAP in 1987 due to the EPA's determination that it had no authority to perform remedial efforts under FUSRAP. EDR reported that the facility was licensed to handle nuclear materials. The facility is confirmed to have handled radioactive materials, specifically uranium. The listed operations included the performance of experiments involving uranium recovery from scrap material at the facility. No additional information was provided in the listing. Due to undocumented radioactive contamination at this facility, these conditions do not constitute a REC.

Fuels Program: EPA Fuels Program Registered Listing

This listing includes facilities that are registered under the Part 80 (Code of Federal Regulations) EPA Fuels Programs. All companies now are required to submit new and updated registrations. A review of the database as provided by EDR identified one (1) facility (RNG Padd 1) within 0.125 miles of the Subject Property. Since no releases or violations were documented, this facility is not expected to adversely impact the Subject Property.

MANIFEST Sites

MANIFEST Facilities include a list of facilities that have generated hazardous waste or contaminants. A review of the NY, PA, NJ and MI MANIFEST list, as provided by EDR, identified 121 NY MANIFEST, four (4) PA MANIFEST, one (1) MI MANIFEST, and 36 NJ MANIFEST facilities within approximately 0.25 miles of the Subject Property. All associated releases within 0.125 miles hydraulically upgradient of the Subject Property were evaluated and are not expected to adversely impact the Subject Property because it is downgradient.

MGP: Manufactured Gas Plants Listing

From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants. A review of the database as provided by EDR identified one (1) facility (CE-White Plains MGP) located at 9 New Street and 12 Water Street within 0.125 miles of the Subject Property. As previously discussed, this facility is not expected to adversely impact the Subject Property.

UST Finder Release: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials. A review of the database as provided by EDR identified 24 facilities within 0.5 miles of the Subject Property. Based on a review of the available database information, all but one (1) facility (New York Hospital) have documented release events have not occurred at these facilities. Additionally, this one (1) facility is located approximately 0.25

miles topographically downgradient from the Subject Property. Therefore, these facilities are not expected to adversely impact the Subject Property.

UST Finder: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of UST and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires. A review of the database as provided by EDR identified one (1) listing (New York Power Authority) within 0.125 miles of the Subject Property. Based on a review of the available database information, documented release events status is noted as “no further action”. Therefore, these facilities are not expected to have adversely impacted the Subject Property.

EDR Hist Auto Sites

The EDR Hist Auto list provides an inventory of facilities that formerly operated automotive repair or automotive gas stations. A review of the EDR Hist Auto database, as provided by EDR, has revealed that there are two (2) Hist Auto facilities within approximately 0.125 miles of the Subject Property. These facilities are situated either cross gradient or downgradient from the subject with no known releases. Therefore, these facilities are not expected to adversely impact the Subject Property.

5.1.2. PREVIOUS ENVIRONMENTAL REPORTS

SESI completed a Phase II ESA at the Subject Property between December 2022 and July 2026. The July 2026 Phase II ESA report was prepared for submission to NYSDEC with the BCP application for the Subject Property.

July 2026 *Phase II ESA* Report by SESI

The SESI Phase II ESA report identified exceedances in the soil, groundwater, and soil vapor reported during the investigation that are likely a result of the Subject Property’s historical land use, potential USTs, and the presence of contaminated historic fill (**Appendix D**).

- Analytical results of this investigation identified SVOCs (primarily PAHs) in soil to exceed the PGWSCOs, RRSCOs or USCOs on the eastern portion of the Site to depths of 6.5 ft-bgs. Metals were found above the PGWSCOs, RRSCOs and USCOs to depths of 13.5 ft-bgs throughout the Site. Pesticides were found above the USCOs to depths of 4 ft-bgs at the northeastern portion of the Site (SB-45G [3.5-4]). The PFAS compounds PFOS and PFOA were found above the guidance PGWSCOs and USCO to depths of 1.5 ft-bgs at the northwestern portion of the Site (SB-7 [1-1.5] and SB-20 [1-1.5]). The lead, mercury, and PAHs were found above the PGWSCOs and RRSCOs on the-Subject Property in discrete areas, suggesting that they are attributable to historic releases. As described above the lead and PAHs were also identified in groundwater exceeding the AWQSs and therefore the groundwater pathway for lead and PAHs requires further evaluation. These soil exceedances of the USCOs and RRSCOs are likely due to historic property uses, potential USTs, and contaminated historic fill.

  Chlorinated VOCs, including PCE and TCE, were also identified in soil vapor above the minimum concentration at which mitigation may be required depending on the results of collocated indoor air samples, which were not collected since the current buildings are proposed to be demolished. The soil vapor contamination is likely related to the former dry cleaning operation identified in the Phase I ESA in the northern part of the Subject Property. A soil vapor intrusion evaluation is recommended during redevelopment of the Subject Property.

  SESI recommends that additional investigation be conducted to delineate the nature and extent of contamination and to evaluate remedial options prior to redevelopment of the Subject Property. Specifically, the investigation should delineate VOCs, SVOCs (PAHs), metals, pesticides, and PFAS contamination in soil, VOC, SVOCs (PAHs), metals, and PFAS contamination in groundwater, and chlorinated VOCs in soil vapor.

5.1.3. LOCAL, COUNTY, AND STATE INFORMATION REQUESTS

On March 6, 2025, SESI filed information requests with the NYSDEC, Westchester County Departments of Health, Emergency Services and Environmental Facilities, and White Plains Buildings and Fire Departments for information regarding potential incidents, spills, hazardous

material storage/use and UST decommissioning records. Responses received have not provided any information that will change the findings provided in this report. SESI reserves the right to modify this report should additional information be provided from these requests that warrants a modification.

5.2. PHYSICAL SETTING SOURCES

Sources used to evaluate the physical setting of the property include:

- USGS Topographic Maps;
- Aerial Photographs; and
- Subject Property Reconnaissance.

5.2.1. TOPOGRAPHY

The Subject Property is relatively level with regional topography decreasing to the west. According to the United States Geological Survey (USGS) 2021 Glenville/2019 White Plains, New York 7.5-minute Series topographic map, the Subject Property's topographic elevation is approximately 200 feet above mean sea level (msl). The EDR Topographic Map Report is attached to this Report as **Appendix C**.

5.2.2. SURFACE WATERS AND WETLANDS

The closest open surface water to the Subject Property is the Bronx River located approximately 1,200 feet west of the Subject Property.

5.2.3. GEOLOGY AND GROUNDWATER

As per the USDA National Cooperative Soil Survey (NCSS) map for the area, the soils at the Subject Property are characterized as UoA (Urban Land outwash substratum) urban land which is surface covered by pavement, concrete, buildings, and other structures underlain by disturbed and natural soil material, till substratum, 0 to 3 percent slopes. Based on the results of the Phase II ESA conducted on the Subject Property, the elevation of groundwater at the Subject Property is approximately 180-200 feet above mean sea level (AMSL), and groundwater flow direction is expected to be in the western direction.

5.3. HISTORICAL USE INFORMATION FOR THE PROPERTY

Sources used to determine the historical use of the property include:

- Aerial Photographs;

- EDR City Directory Abstract;
- USGS Topographic Maps; and
- Sanborn Fire Insurance Maps.

EDR Reports are attached to this Report as **Appendix C.**

5.3.1. AERIAL PHOTOGRAPHS

Following is a summary of the EDR review of 15 aerial photographs dated 1941, 1949, 1953, 1958, 1962, 1964, 1971, 1974, 1985, 1991, 1994, 2006, 2011, 2015, and 2019.

Table 5.2—Aerial Photographic Review

Year	Quality of Photograph	Observations
1941	Fair	**Subject Property:** The Subject Property is developed with numerous small structures and a road oriented from north to south in the center. **Adjacent Parcels:** The adjoining properties are all developed. In general, the surrounding area is densely developed with numerous smaller structures.
1949, 1953	Good (1949, 1953)	**Subject Property:** No discernible changes. **Adjacent Parcels:** No discernible changes.
1958	Fair	**Subject Property:** No discernible changes. **Adjacent Parcels:** A building is no longer present east of the Subject Property and a parking lot is now present.
1962	Good	**Subject Property:** No discernible changes. **Adjacent Parcels:** No discernible changes in the surrounding properties. Numerous residential structures are now present in the northern portion of the photograph.
1964	Good	**Subject Property:** No discernible changes. **Adjacent Parcels:** No discernible changes.
1971	Good	**Subject Property:** Structures remain present in the northern portion of the Subject Property while structures in the southern portion are no longer present, and ground disturbance is visible. **Adjacent Parcels:** Numerous structures in the adjoining area are no longer present. A large structure appears under construction to the northeast and further south.
1974	Good	**Subject Property:** There are no structures depicted, and the entire Subject Property appears to be disturbed land. The road that was formerly located in the center of the Subject Property is no longer present.

Year	Quality of Photograph	Observations
		Adjacent Parcels: There are now no structures depicted on any adjoining property except to the northeast. The large structure to the south is completed.
1985, 1991, 1994	Good (1985), Poor (1991), and Fair (1994)	**Subject Property:** The Subject Property is near the northwest corner of a large, interconnected building. **Adjacent Parcels:** The properties to the north, east, south, and west are all developed with large structures.
2006, 2011, 2015, 2019	Good	**Subject Property:** No discernible changes. **Adjacent Parcels:** No discernible changes.

5.3.2. EDR CITY DIRECTORY ABSTRACT

SESI obtained historical city directory data from EDR for the Subject Property. SESI reviewed the City Directory listings for the years 1963, 1965, 1972, 1977, 1982, 1987, 1992, 1995, 2000, 2005, 2010, 2014, 2017 and 2020. A copy of the City Directory Abstract is included in **Appendix C**.

The Subject Property is part of a larger shopping mall and determining which leasehold spaces were within the Subject Property is not possible based on available information. However, historic operations at the shopping mall have included the following: retail, shoe repair, bank, jewelry, cinema, restaurant, gallery, travel agent, radio shack, video store, café, building management offices, leather retailer and department store. These specific historic operations identified in the City Directory do not constitute a REC.

NuWay Cleaners Inc. was identified west of the Subject Property at 90 Main Street in the 1963 and 1965 city directories and is considered an REC.

5.3.3. USGS TOPOGRAPHIC MAPS

Following is a summary of the EDR review of Topographic Map Reports:

Table 5.3—Topographic Map Review

Source	Year	Minute	Scale
Tarrytown, Stamford	1892, 1893, 1899, 1902	15	62500
White Plains	1932	7.5	24000
White Plains	1938	7.5	31680

Source	Year	Minute	Scale
Glenville, White Plains	1944, 1947, 1957, 1967, 1971,	7.5	24000
White Plains	1979, 1994	7.5	24000
Glenville, White Plains	2013, 2015, 2016, 2018, 2019, 2021	7.5	24000

Based on a review of the EDR Historical Topographic Map Report, the Subject Property is level with an approximate elevation of 200-feet above msl. Topography on the Subject Property gently slopes to the west. Regional topography slopes more significantly downward to the west. Similarly, the surrounding properties are relatively level with a general slope to the west with properties to the west across Lexington Avenue displaying greater topographic relief. No wetlands were noted on the maps within or adjacent to the Subject Property; however, a stream was noted running north-south to the west of the Subject Property circa 1892-1902. A review of these maps suggests the Subject Property was developed prior to 1892.

5.3.4. SANBORN FIRE INSURANCE MAPS

The Subject Property was covered on 19 of the Sanborn maps from 1885, 1889, 1894, 1900, 1905, 1911, 1930, 1942, 1950, 1987, 1989, 1990, 1992, 1993, 1994, 1995, 2002, 2003, and 2004 described below:

Table 5.4—Sanborn Map Review

Year	Quality of Map	Observations
1885	Good	**Subject property:** The Subject Property is improved a blacksmith, a tailor, a hatchery and with several dwellings including a boarding house. Rabbitt Street is oriented in a north to south manner running through roughly the center of the Subject Property. **Adjacent Parcels:** Railroad Avenue forms the northern border of the Subject Property. Historic uses of surrounding properties include stores, the Cottage Hotel (east and upgradient) with two USTs depicted, a livery services building, and a Chinese laundry. Carriage shops (with wood working, black smith, and painting services) are depicted adjoining to the west of the northwest corner of the Subject Property. There are several dwellings south of the Subject property. A stream is depicted to the east.
1889	Good	**Subject property:** No significant changes. **Adjacent Parcels:** The USTs are no longer depicted at the Cottage Hotel east of the Subject Property. Several

Year	Quality of Map	Observations
		structures adjoining to the north have a larger footprint. No other significant changes.
1894	Good	**Subject property:** The boarding house is now indicated as a carriage factory. A second blacksmith shop is noted south of the cartridge factory. Wagon painting is noted north of the carriage factory **Adjacent Parcels:** A structure to the south along Rabbitt Street is indicated as a bottling works.
1900	Good	**Subject property:** The store adjacent to the west of the Railroad Ave Hotel is expanded and now houses a hand printing, cobbler, tin shop, barber, and tailor. The blacksmith south of the carriage factory is now vacant. **Adjacent Parcels:** The bottling works is no longer indicated associated with the structure.
1905	Good	**Subject property:** The Railroad Ave Hotel is no longer indicated, and several storefronts are now present in its' place. The carriage repair structure in the southern portion of the Subject Property is now indicated as an automobile works and a large structure adjacent to the north of this building is under construction. **Adjacent Parcels:** The livery structure west of the Subject Property has expanded to the south and several structures indicated as carriage houses are now present. The Chinese laundry is no longer depicted to the north. No other significant changes.
1911	Good	**Subject property:** The automobile works in the southern portion of the Subject Property is now indicated as Hessel's Garage with a gasoline tank depicted. Two different plumbers, and a tailor are depicted north of the garage. A tailor and shoe repair store are indicated in the northwest corner of the Subject Property. **Adjacent Parcels:** The carriage works is no longer depicted to the west of the northwest corner of the Subject Property and the building is now indicated as a theater. A printing facility with a potential tank is indicated adjoining to the northwest corner of the Subject Property. A print and painting shop is depicted to the north across East Railroad Ave. The area to the southwest is more densely developed.
1930	Good	**Subject property:** Hessel's Garage in the southern portion of the Subject Property is now indicated as an auto washing and greasing facility and the UST is no longer depicted. A tin shop is now indicated in the building north of the auto washing and greasing facility and an iron worker is depicted near the northeast corner. A plumber

Year	Quality of Map	Observations
		shop and separate building simply indicated as “shop” are now present in the southwest corner. **Adjacent Parcels:** Several storefronts in the northwest corner of the Subject Property are no longer present and a large structure indicated as Genung’s Department Store is now present. The stream is no longer depicted off the Subject Property to the east.
1942	Good	**Subject property:** No significant changes. **Adjacent Parcels:** No significant changes.
1950	Good	**Subject property:** The auto washing and greasing building in the southern portion of the Subject Property is now indicated as a furniture warehouse. The plumber shop in the southwest corner is no longer depicted. **Adjacent Parcels:** A dry cleaner is depicted to the west along Railroad Avenue. A dress manufacturer is depicted adjacent to the northeast.
1987	Good	**Subject property:** All previous on Subject Property structures are no longer depicted and the Subject Property is now improved with the Galleria Mall. **Adjacent Parcels:** Significant changes have occurred to the surrounding area. The area to the east, south, and west is now also part of the Galleria Mall. Each of the surrounding properties have been redeveloped. The smaller former structures are no longer depicted and the surrounding parcels are improved with large structures for both commercial and governmental use.
1989, 1990, 1992, 1993, 1994, 1995, 2002, 2003, 2004	Good	**Subject property:** No discernible changes. **Adjacent Parcels:** No discernible changes.

Based on the review of Sanborn Maps, historic Subject Property operations and historic upgradient operations were identified.

5.4. ENVIRONMENTAL LIEN AND AUL SEARCH REPORT

A lien or activity use limitation search was not conducted as part of this Phase I ESA. Should this information be provided, SESI reserves the right to include this information at a later date.

5.5. ENVIRONMENTAL PERMITS

Review of the EDR Radius Map Report for the Subject Property indicates no environmental permits attributed to the Subject Property. EDR Reports are provided in **Appendix C**.

6.0 SUBJECT PROPERTY RECONNAISSANCE

6.1. METHODOLOGY AND LIMITING CONDITIONS

An environmental professional from SESI, Dafina Djombalic, visited the Subject Property on February 20, 2025, to identify potential RECs. The Subject Property was observed to the extent that it was accessible and not obstructed. An inspection photolog is attached to this Report as **Appendix E.**

6.2. SUBJECT PROPERTY OBSERVATIONS

The Subject Property is improved by a portion of a three-story building encompassing two (2) blocks that extend from South Lexington Avenue to Court Street and Main Street to Martine Avenue. The ground floor contains mechanical and loading spaces while the upper floors are vacant and previously housed a portion of the Forever 21 store.

6.3. CHEMICAL STORAGE AND USAGE

SESI did not observe any chemical storage or usage.

6.4. BULK STORAGE TANKS

SESI personnel did not observe any bulk storage tanks at the Subject Property.

6.5. SUBJECT PROPERTY WASTE AND WASTEWATER

SESI observed some property waste on the Subject Property. This is not considered a REC.

6.6. STAINED SOIL, STAINED PAVEMENT, OR STRESSED VEGETATION

No stained soil, pavement, or stressed vegetation were identified at the Subject Property.

6.7. PITS, PONDS, OR LAGOONS

No pits, ponds, or lagoons were observed on the Subject Property.

6.8. WELLS

SESI did not observe any dry wells, irrigation wells, injection wells, observation wells, monitoring wells, potable water wells, recovery wells, or abandoned wells on the Subject Property.

6.9. FLOOR DRAINS AND SUMPS

There were several floor drains that lead to sanitary sewer throughout the Subject Property. There is also no evidence of septic use in the past. There were storm drains in the parking area. The interior floor drains were in the cooking areas and bathrooms primarily. There was no observable staining in and around these drains.

6.10. PCB-CONTAINING MATERIAL, INCLUDING CAULK

A dry-type transformer was observed in an electrical closet; however, no oil-filled transformers were observed on the Subject Property. In addition, there are likely several areas in which caulking is also present; therefore, a survey is recommended for caulking.

6.11. ASBESTOS-CONTAINING MATERIAL

ACM surveying was not included in SESI's scope of work; however, based on the age of the facility, an ACM survey is recommended. SESI recommends an ACM survey prior to redevelopment.

6.12. RADON

Radon surveying was not included in SESI's scope of work; however, based on the age of the facility, a radon survey is recommended. The Subject Property is located in Westchester County which is in EPA Radon Zone 3. This zone contains counties with the "lowest potential; average indoor radon levels may be less than 2 pCi/L (picocuries per liter)." Therefore, radon is not considered a REC.

6.13. UNIVERSAL WASTE

There were several pieces of universal waste throughout the mall in the cleaning areas of each portion of the mall. Therefore, this universal waste should be properly disposed of prior to demolition or redevelopment.

6.14. LEAD-BASED PAINT

LBP surveying was not included in SESI's scope of work; however, based on the age of the facility, and LBP survey is recommended.

6.15. VAPOR INTRUSION

SESI conducted a soil vapor intrusion investigation in July 2026 to evaluate the soil vapor pathway. Four (4) soil vapor samples were collected and analyze for VOCs via TO-15. Analytical results identified chlorinated VOCs, including PCE and TCE above the minimum concentration at which mitigation may be required depending on the results of collocated indoor air samples, which were not collected since the current buildings are proposed to be demolished. The soil vapor contamination is likely related to the former dry cleaning operation in the northern part of the Subject Property. A soil vapor intrusion evaluation is recommended during redevelopment of the Subject Property.

7.0 DATA GAPS

Based on a review of the available documentation no significant data gaps have been identified.

8.0 FINDINGS

Based on our investigation, we conclude that there is evidence to indicate areas of potential environmental concern on the Subject Property due to historical operations on the Subject Property, historical off-site uses, and current data impacts to soil, soil vapor, and groundwater, demonstrating impacts at the Subject Property. See ***Section 10.0 CONCLUSIONS*** of this Report.

9.0 OPINIONS

In our professional judgment, the scope and character of our environmental assessment were sufficient to justify the stated conclusions, after giving due consideration to the purpose of the investigation, the data reviewed, the background history of the Subject Property as found in historical records, and visual observation of the Subject Property.

10.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the investigation, it is concluded that there is evidence to indicate areas of recognized environmental concern on the Subject Property and that additional investigation of these areas is warranted. The conclusions and recommendations in this regard are as follows:

The following RECs have been identified:

- **REC 1 – Historical Usages on the Subject Property**: Historic operations circa 1885-1950 at the Subject Property that are considered of concern include: several blacksmiths, several tailors, a carriage house/factory, automobile washing and greasing facility, hand printing, sign painting, cobbler, steam fitter, shoe repair, plumbing shop, several tin shops, and iron working, and a hotel with a gas tank. A dry cleaning establishment operated on the Subject Property from 1971 to 1975. The dry cleaner was located at 102 Main Street, which was within the Site prior to construction of the Galleria Mall based on historic Sanborn Maps. Soil, groundwater, and soil vapor sampling conducted during the Phase II ESA identified impacts that appear to be partially attributable to former on-site operations. Additional investigation is recommended.
- **REC 2 – Contamination on the Subject Property:** SESI conducted subsurface soil, groundwater, and soil vapor sampling to investigate for the Site historical usages. Analytical results of this investigation identified VOCs (acetone) in excess of the UUSCO and/or PGWSCO in several samples to depths of 9.5 ft-bgs. SVOCs (primarily PAHs) in soil to exceed the PGWSCOs, RRSCOs or USCOs on the eastern portion of the Site to depths of 6.5 ft-bgs. Metals were found above the PGWSCOs, RRSCOs and USCOs to depths of 13.5 ft-bgs throughout the Site. Pesticides were found above the USCOs in several samples to depths of 18.0 ft-bgs. The PFAS compounds PFOS and PFOA were found above the guidance PGWSCOs and USCO to depths of 1.5 ft-bgs at the northwestern portion of the Site (SB-7 [1-1.5] and SB-20 [1-1.5]). The lead, mercury, and PAHs were found above the PGWSCOs and RRSCOs in discrete areas, suggesting that they are attributable to historic releases. As described above, the lead and PAHs were also identified in groundwater exceeding the AWQSs and therefore the groundwater pathway for lead and PAHs requires further evaluation. These soil exceedances of the USCOs and RRSCOs are likely due to historic property uses, potential USTs, and contaminated historic fill.

VOCs, PFAS, PAHs, and metals were found in groundwater to exceed the AWQS throughout the Site, likely associated with historical uses, potential USTs, and historic fill contamination. As described above the lead and PAHs were also identified in groundwater exceeding the AWQSs and therefore the groundwater pathway for lead and PAHs requires further evaluation.

Chlorinated VOCs, including PCE and TCE, were also identified in soil vapor above the minimum concentration at which mitigation may be required depending on the results of collocated indoor air samples, which were not collected since the current buildings are proposed to be demolished. The soil vapor contamination is likely related to the former dry cleaning operation identified. A soil vapor intrusion evaluation is recommended during redevelopment of the Subject Property.

SESI recommends that additional investigation be conducted to delineate the nature and extent of contamination and to evaluate remedial options prior to redevelopment of the Subject Property. Specifically, the investigation should delineate VOCs, SVOCs (PAHs), metals, pesticides, and PFAS contamination in soil, VOC, SVOCs (PAHs), metals, and PFAS contamination in groundwater, and chlorinated VOCs in soil vapor.

REC 3 – Upgradient Concerns:

- *180 Main Street Oil Storage BCP Site (C360268)*:
  - The Site was developed prior to 1885 based on the Sanborn Fire Insurance Maps. Historical land uses included print shops, painting and oil shops, bottling works, plumbing and tin shops, a bowling alley, a fire department and a portion of the Westchester County Courthouse and commercial/residential spaces (circa 1885-1950), followed by the Galleria Mall. The Galleria Mall was constructed in approximately 1980. The Subject property was improved with the Galleria Mall anchor store Abraham and Straus (circa 1980-1995), and then Sterns (circa 1995-1996), and then Macys (circa 1996 to 2023). Subsurface testing has identified impacts to soil exceeding the NYSDEC soil cleanup objectives and impact to groundwater exceeding the NYSDEC AWQSs. Two (2) 10,000-gallon fuel oil underground storage tanks (USTs) were closed in place in January 1997 (PBS 3-173665). Two (2) spills had been reported to the NYSDEC in 1988 identified as Spill Nos. 8803673 and 8805571. Both of these spills appear to be related to tank test failures associated with a 10,000-

gallon underground storage tank (UST). The site entered the BCP via the executed BCA dated March 23, 2026.

- *50 Court Street BCP Site (C360258)*:
  - The Site is in the BCP with SVOCs, metals, and pesticides identified in soil and SVOCs, metals, and PFAS identified in groundwater during a Phase II ESA completed by SESI in 2024.

The following BERs have been identified:

- **BER 1 – Polychlorinated Biphenyl (PCB) Caulk:** A PCB survey was not completed during SESI's walkthrough of the Subject Property. There are likely several areas present that contain caulking. Therefore, a PCB survey is recommended prior to any demolition or redevelopment of the Subject Property.
- **BER 2 – Asbestos-Containing Material (ACM):** An ACM survey was not completed during SESI's walkthrough of the Subject Property. Based on the age of the building, SESI recommends an ACM survey prior to any demolition or redevelopment of the Subject Property.
- **BER 3 – Universal Waste:** There were several pieces of universal waste identified during the walkthrough of the Subject Property; however, a complete survey of this universal waste was not completed. SESI recommends a universal waste survey prior to any demolition or redevelopment of the Subject Property.
- **BER 4 – Lead-Based Paint (LBP):** An LBP survey was not completed during SESI's walkthrough of the Subject Property. Based on the age of the building, SESI recommends an LBP survey prior to any demolition or redevelopment of the Subject Property.
- **BER 5 – Vapor Intrusion:** SESI conducted a soil vapor intrusion investigation in July 2026 to evaluate the soil vapor pathway. Four (4) soil vapor samples were collected and analyze for VOCs via TO-15. Analytical results identified chlorinated VOCs, including PCE and TCE above the minimum concentration at which mitigation may be required depending on the results of collocated indoor air samples, which were not collected since the current buildings are proposed to be demolished. The soil vapor contamination is likely related to the former dry cleaning operation in the northern part of the Subject Property. A soil vapor intrusion evaluation is recommended during redevelopment of the Subject Property.

A figure showing the locations of the RECs identified at this Subject Property is included as **Figure 10.1.**

11.0 DEVIATIONS

This Report was prepared with no significant deviation from ASTM Standard Practice E1527-21.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

As required in 40 CFR 312.21(d), this section includes statements made by the environmental professional conducting this assessment.

"I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312."

"I declare that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property."

"I have developed and performed the 'all appropriate inquiry' in conformance with the standards, limitations, and practices set forth in 40 CFR Part 312."

This Report incorporates the consultant's best professional judgment in conductance of this Phase One Environmental Site Assessment.

Phase I Environmental Site Assessment Questionnaire
For ASTM E 1527-21

According to the American Society for Testing and Materials (ASTM) standard practice for environmental site assessments (Designation: E 1527-21) "All Appropriate Inquiry" (AAI) (40 CRF 312.20) standard, the client must provide the following information (if available) to the environmental consultant during a Phase I Environmental Site Assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

SESI Project Name: 100 Main Street, Condominium Unit B
SESI Project Number: 12859

Client/Responsible Party Information (person completing this questionnaire) :

Name: _____
Title: _____
Interest to Property: _____
Street Address: _____
City: _____
State: _____
Phone: _____

Property Owner/Tenant Site Information:

Company Name: _____
Description of Operations: _____
Street Address: _____
Township: _____
City: _____
County/State: _____
Size of Property: _____
Block/Lot: _____
Phone: _____
Contact: _____

I, _____, to the best of my knowledge, have truthfully provided the information herein.
(FULL NAME)

_____ _____
SIGNATURE DATE

Identification of the site contact and how the contact can be reached (person who will conduct or conducted the site walk and/or will provide or provided access):

1. ENVIRONMENTAL CLEANUP LIENS/OTHER LIENS

a. Are there any environmental cleanup liens/and or other liens that are filed or recorded against the site in any applicable jurisdiction?

2. ACTIVITY OR USE LIMITATIONS AND WETLANDS

A) Are you aware of any environmental restrictions/limitations to the use of the property? (i.e. Engineering or Institutional Controls)

i) If yes, please explain.

ii) Can you provide any lien or deed restriction paperwork (ie. deed notice or environmental lien)?

B) Is any of the site to your knowledge used as a child-care facility or are plans in place to have a child-care facility on-site?

C) Are there any wetlands or marshlands at the site to your knowledge?

3. COMMONLY KNOW OR REASONABLE ASCERTAINABLE INFORMATION ABOUT THE PROPERTY

A) Do you have any knowledge of the past uses of the property?

i) If so, please explain (dates or tenant contracts should be collected if available for any commercial or industrial uses).

ii) Has the property ever been used for industrial purposes? (ECRA/ISRA applicability).

a. If yes can you provide the NAICS code for the industrial use?

B) Do you know of any Environmental Spills Incident Numbers or Notices of Violation? (i.e., tank removals/Unregulated Heating Oil Tank removals)?

i) If yes, please provide information or available paperwork (ie. former reports or incident numbers)

C) Do you know if the site has been subject to an environmental cleanup or received a NYSDEC No Further Action (NFA) in the past?

D) Do you know of any underground storage tanks (USTs), aboveground storage tanks (ASTs) and/or septic tanks?

E) Do any buildings on the site have a basement or crawlspace?

F) Does the site use/have an incinerator, compactor, or dumpster? (This should include any cooking oil containers or other media.)

G) How is heating and cooling supplied to the site?

a. If by oil, name of usual supplier:

b. If by gas, name of utility company:

c. If by electric, name of utility company:

H) How is water supplied to the site?

a. Local municipal hookup?
    i. If so, name of provider:

b. Potable Well?
    i. If so, well number/designation and location:

I) Is any portion of the site prone to flooding or has had a significant flood?

4. ADJOINING PROPERTIES

A) Have any of the adjoining properties been used for Industrial purposes currently or in the past?

i) If yes, please provide compass direction and name (if known) of the property.

B) Have any of the adjoining properties been used as a gas station, dry cleaner or auto shop currently or in the past?

i) If yes, please provide compass direction and name (if known) of the property.

C) Have any of the adjoining properties been used for commercial purposes currently or in the past?

i) If yes, please provide compass direction and name/ industry (if known) of the property.

D) Have any adjoining properties been used as a high school in currently or in the past?

i) If yes, please provide compass direction and name (if known) of the property.

E) Are any of the adjoining properties currently or in the future (to your knowledge) a child-care facility?

i) If yes, please provide compass direction and name (if known) of the property.

5. ENVIRONMENTAL SITE CONDITIONS

A) Are there any present environmental conditions at the site that may prove an obvious threat to the environment or human health?

B) Do you have any chemical storage areas?

C) Do you have any drum storage areas?

D) Do you have any USTs or ASTs not related to heating?

E) Do you have any of the following at or on the site:

a. On-site dry cleaning or washing machine facilities?

b. Landfills or known fill areas?

c. Machinery or equipment that uses hazardous or petroleum compounds?

d. Dust collectors?

e. Spray booths?

f. Floor drains or sumps?

g. Other machinery or equipment?

7. ADDITIONAL PERTINENT INFORMATION

A) Please provide the reason why the Phase I is required (i.e., sale, purchase, transfer, due diligence, cessation of operation, off-site source of groundwater contamination).

B) Please provide the complete and correct address for the property (any previous surveys maps or any change in tax lot and blocks that are proposed or not yet recorded at the local/county municipality or re- zoning plans):

C) Any additional services or out-of-scope services you wish to be provided in addition to the standard set of services (mold assessment/asbestos assessment/geotechnical/ lead-based paint/indoor or sub-slab air sampling):

D) Please identify all parties to your knowledge who will rely on this ESA? (excluding regulatory agencies)

E) Please provide any former Phase I or Phase II reports, incident reports, NYSDEC Reports, current or former permits for the operation of machinery, tank registration documents, AIRS permits, or other environmental permits.

Environmental Record Search Results and Information Requests

From: New York DEC FOIL Center
To: Annmarie Yannaco
Subject: FOIL Request :: W143828-030525
Date: Wednesday, March 5, 2025 12:13:40 PM

CAUTION !! This E-Mail originated from outside the organization. Confirm it is from a legitimate E-Mail address. If uncertain - do not click links or open attachments unless you contact the sender and know the content is safe.

Dear Annmarie:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 3/5/2025 and given the reference number FOIL #W143828-030525 for tracking purposes. You may expect the Department's response to your request no later than **4/2/2025**.

Record Requested: **Site Address: 100 Main Street, White Plains, NY As part of a Phase I Environmental assessment, SESI requests the following: Documentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency responses, fires, and environmental reports associated with soil/groundwater investigative sampling.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Click here to login to the FOIL Center.

RE: Request Pursuant to Freedom of Information Law

Dear Annmarie, ,

The City of White Plains, City Clerk's Office is in receipt of your request, addressed to the City Clerk, dated March 5, 2025 and received on same, requesting the following records:

100 Main St., White Plains, NY

I have conducted a search for the requested records and certify that the City Clerk's Office does not possess the requested records.

Please also be advised that the City Clerk's Office does not respond to requests for access to records of other City departments. Any requests to those departments would need to be addressed to them directly.

Sincerely,

Jill Iannetta

Jill Iannetta
City Clerk
Records Access Officer –City Clerk's Office

FREEDOM OF INFORMATION LAW (FOIL) REQUEST FORM

Date:

3/5/2025

This request pertains to records maintained by the (list city department on board):

Office of the City Clerk

Records Access Officer for above-named city department or board:

City Clerk

A link to the list of Records Access Officers may be found on the FOIL page of the city website.

Pursuant to New York Freedom of Information Law, I am requesting an opportunity to:

- ☐ Inspect copies of the following records
- ☑ Obtain copies of the following public records

Documents requested:

Site Address: 100 Main Street, White Plains, NY
As part of a Phase I Environmental assessment, SESI requests the following: ocumentation of storage tank operation, illegal dumping; hazardous material storage or use; documented release(s), spills or discharges of hazardous chemicals; site inspections, code violations; emergency

Be specific. Describe the record with sufficient detail for the public agency to respond.

Requestor's Name:

Annmarie Yannaco

Representing:

SESI Consulting Engineers

Street Address:

959 Route 46E Floor 3, Suite 300

City, State & Zip Code:

Parsippany, NJ 07054

Phone Number:

973 808 9050 ext 280

E-mail:

Hi Annmarie,

There are 8 boxes of files in our records room for the old Galleria site. What is not contained in those boxes will be on our lobby computer. Your FOIL request will involve an exhaustive search of the records.

Please let me know the date and time you would like to visit the Building Department at 70 Church Street to go through everything since I can't pull the files until you arrive due to space constraints in the lobby.

Thanks,
Alison

Alison Walsh

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

EPA ID:: NYP004308268

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 8 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/04/2024 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/03/2024 has revealed that there are 174 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 53 NY UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/03/2024 has revealed that there are 36 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/16/2024 has revealed that

there are 89 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUSRAP: DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations.

A review of the FUSRAP list, as provided by EDR, and dated 03/03/2023 has revealed that there is 1 FUSRAP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NUCLEAR DEVELOPMENT	5 NEW STREET	NW 0 - 1/8 (0.119 mi.)	N177	543
Site Status: Eliminated from consideration under FUSRAP				
Site ID: NY 32				

FUELS PROGRAM: This listing includes facilities that are registered under the Part 80 (Code of Federal Regulations) EPA Fuels Programs. All companies now are required to submit new and updated registrations.

A review of the FUELS PROGRAM list, as provided by EDR, and dated 11/08/2024 has revealed that there is 1 FUELS PROGRAM site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 24 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 09/16/2024 has revealed that there are 10 E MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY PFAS: DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

A review of the NY PFAS list, as provided by EDR, has revealed that there is 1 NY PFAS site within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there are 117 NY MANIFEST sites within approximately 0.25 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 08/28/2024 has revealed that there is 1 NY MGP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
WHITE PLAINS MGP SIT	9 NEW STREET AND 12	NW 0 - 1/8 (0.118 mi.)	N169	485

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

WHITE PLAINS GENERAL	76 HAMILTON AVE	NW 0 - 1/8 (0.069 mi.)	F87	307

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	12/13/12 Assitant Chief Engineer Joseph Rocuzzo reported that a contractor, DP Wolff (143 Bedford Rd, Katonah) was performing mechanical work and had 50 gallon of oil that needed to be pumped back into the diesel storage tank. They set the house pump on manual and turned on the pump. It was explained that the oil first gets pumped up to the 20th floor day tank and the excess then flows out the daytank return line back to the storage tank. However the daytank emergency vent relief

1 NORTH LEXINGTON AVE (Continued) **S100140904**

valve is lower than the return line, so the oil released from that vent before it could be sent
back to the tank via the return line. The oil drained down the glass curtain wall from the 19th
floor to the 16th floor. Elite Environmental was on site removing oily insulation and cleaning
oiled surfaces. A minor amount of oil escaped the interior of the building thru the glass curtain
and landed on the sidewalk below. Some oil also entered a floor drain next to the day tank. WP
sewer dept personnel reported that oil was observed in the sanitary sewer in the street but not in
the storm drains. WCHD is requiring indoor air sampling before the 4 impacted floors can be
reoccupied. TG

Remarks: interior and exterior to sidewalk - cleanup in progress - spilled 14 thru 17 floor elite environmental on site

Environmental Interest/Information System:
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

WESTCHESTER CO. AST:

Name:	GATEWAY CENTER ONE
Address:	1 NORTH LEXINGTON AVENUE
City,State,Zip:	WHITE PLAINS, NY 10601
PBS Number:	3-496871
Site Status:	Active
GDS Number:	Not reported
Operator Name:	Cushman & Wakefield
Owner Name:	Gateway I Group, Inc.
Owner Street:	1 North Lexington Avenue
Owner Address2:	Not reported
Owner City/State/Zip:	White Plains, NY 10601
Tank Number:	No. 3
Status:	1. In-Service
Date Installation:	12/01/2008
Capacity:	275
Product Stored:	0001. #2 Fuel Oil
Product Stored Percent:	Not reported
Date Perm Closure:	01/01/1900
Tank Location:	2. Aboveground (contact w/ impervious barrier)
Tank Type:	1. Steel/Carbon steel/Iron
Tank Internal Protection:	0. None
Tank External Protection:	1. Painted/Asphalt Coating
Tank Leak Detection:	1. Electronic Interstitial Monitoring
Tank Secondary Containment:	1. Diking (aboveground only),9. Modified double-walled (aboveground only)
Piping Location:	1. Aboveground
Piping Type:	1. Steel/Carbon/ Steel/Iron
Piping External Protection:	1. Painted/Asphalt Coating
Piping Leak Detection:	0. None
Piping Secondary Containment:	0. None
Overfill Prevention:	3. Automatic Shut-off,4. Product Level Gauge (Aboveground Only)
Spill Prevention:	1. Catch Basin
Dispenser:	2. Suction
Tank Number:	SMBC Tank 1
Status:	1. In-Service
Date Installation:	08/01/2018
Capacity:	150
Product Stored:	0001. #2 Fuel Oil
Product Stored Percent:	Not reported
Date Perm Closure:	01/01/1900
Tank Location:	3. Aboveground on saddles,legs,stilts,racks or cradle
Tank Type:	1. Steel/Carbon steel/Iron
Tank Internal Protection:	0. None
Tank External Protection:	1. Painted/Asphalt Coating

BROWNFIELDS:

Name:	HOPE FIRE ENGINE CO. SITE
Address:	25 NORTH LEXINGTON AVENUE
City,State,Zip:	WHITE PLAINS, NY 10601
Program:	BCP
Site Code:	622605
Acres:	1.463
HW Code:	C360219
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	07/21/2021
Record Updated Date:	01/03/2023
Update By:	AMSERVIS
Site Description:	Site Location: The site is located at 25 North Lexington Avenue (formerly 50 Hamilton Avenue and a portion of (p/o) 85 North Lexington Avenue), in the City of White Plains, Westchester County, New York, in an area of urban development. The site comprises 1.463 acres located on the west side of North Lexington Avenue, north of Hamilton Avenue and east of Ferris Avenue, and is identified on the

HOPE FIRE ENGINE CO. SITE (Continued) **S127990271**

Westchester County tax maps as a p/o new Tax Parcel Identification No. 125.66 5 2.1 (formerly 125.66 5 2 [lot 2], and p/o 125.66 5 1 [lot 1]). Site Features: The site is currently undergoing construction of a multi use residential/commercial building. The closest water body is the Bronx River, located 0.118 miles west of the site. The site is not located in a flood zone, and no designated wetlands were identified. Current Zoning and Land Use: The site is currently located in the CB 4 District, which allows commercial and some residential uses. The CB 4 designation also permits hotels. The New Street right of way and Terrace Parking Garage are located north of the site. North Lexington Avenue and St. John the Evangelist Roman Catholic Church are located east of the site, across North Lexington Avenue. Hamilton Avenue and multiple commercial buildings border the southern portion of the Site. Ferris Avenue, a Greyhound Bus Station, and the White Plains Metro North Railroad Station are located west of the site. The rail line is located 0.082 miles west of the site. The closest residential area is an apartment building located approximately 0.10 miles from the site to the south southwest. Past Use of the Site: Prior to 1885, the site was utilized as farmland and a freight yard. Between 1885 and 1888, the site was improved with dwellings, a rail line, and several retail establishments. Between 1889 and 1911 the site was further developed as a lumber and coal storage yard, a railroad round house, and a fire station, known as the Hope Fire Engine Co. of White Plains. In 1930, former lot 1 contained an underground storage tank (UST) associated with the fire station. The former lot 2 portion of the site was occupied by two service stations from 1937 through 1961. Railroad operations continued on lot 1 until the mid 1960 s when the site was taken over by urban renewal agencies and the structures on the railroad portion of the lot were razed and a parking lot was constructed. The fire station remained on-site until 1987. All on site buildings were demolished by 1994 and the site was fully developed into a parking lot in 2006. The parking lot was demolished in 2022, in preparation for construction of a multi use residential/commercial building. The long history of fire station use, and the presence of service stations may have contributed to contamination on the site. The presence of the railroad storage yard and lumber yard may have also contributed to contamination at the site. Contaminants associated with railroad operations include residual ash and cinders, chemically treated railroad ties, and petroleum related compounds. Polyaromatic hydrocarbon (PAH) contaminated soils detected on the site may be attributed to the previous railroad storage and lumber yard. Site Geology and Hydrogeology: According to the United States Geological Survey s White Plains, New York 7.5 minute topographic quadrangle (1967), the site is located at an elevation of 200 210 feet above mean sea level (ft amsl). The site is located in a river valley and slopes in the south southwest direction towards the Bronx River. A steep decline is present along the eastern and northern site boundaries. During investigations of the site, groundwater was encountered at depths ranging from approximately five (5) to 30 feet below grade (ft bg). Groundwater flow direction is to the southwest. Based on environmental investigations conducted to date, the subsurface geology generally consists of fill material to 12 ft bg, underlain by native sand deposits consisting of loose to dense sand with varying amounts of silt to depths of 55 to 88 ft bg, followed by gneissic bedrock.

Env Problem: Remediation at the site is complete. Remedial actions have

HOPE FIRE ENGINE CO. SITE (Continued) **S127990271**

	successfully achieved soil cleanup objectives for unrestricted use. Nature and Extent of Contamination: Based on investigations conducted to date, prior to the IRM, the primary contaminants of concern included SVOCs and metals in soil and groundwater, pesticides and PCBs in soil, and volatile organic compounds (VOCs) in soil vapor. Impacts were identified in soil across the site to depths up to 23.5 feet below grade (ft bg). Soil: Following completion of the on-site IRM, all soil above USCOs have been removed and disposed of off-site. Data do not indicate site-related soil impacts have migrated off-site. Groundwater: Post-IRM groundwater sampling has indicated very low concentrations of chloroform (maximum concentration of 8.98 ppb compared to the AWQS of 7 ppb) and secondary naturally occurring metals (iron, magnesium and manganese), as well as low levels of PFOS (maximum concentration of 14.2 ppt) and PFOA (maximum concentration of 35.4 ppt). While the PFOS and PFOA concentrations exceed the 10 ppt Maximum Contaminant Level (MCL) for each compound, they are not indicative of a source area and are expected to be consistent with the concentrations coming onto the site, similar to other sites in the area that also contain no potential source. Additionally, the area is served by municipal water. The IRM is complete and has removed all soil above USCOs, and thus any possible site-related source material that may contribute to groundwater contamination. Data do not indicate site-related groundwater impacts have migrated off-site. Soil Vapor: The complete excavation of soil exceeding USCOs across the entire site as part of the IRM removed any potentially impacted soil in the unsaturated zone and has addressed potential soil vapor intrusion concerns for any future buildings constructed on-site, as well as the potential migration of soil vapor off-site.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

DEC Memo:	9/18/2023 NYPA is in process of cutting power to the building. During work they utilized a diesel

NEW YORK POWER AUTHORITY-WHITE PLAINS OFFICE (Continued) **1004758118**

generator. Workers overfilled the generator on Saturday, spilling 20 gallons to floor (work is
happening on 17th floor of the building). Absorbent, pads, and boom were used to contain spill.
Spent materials are drummed up and waiting a bill of ladding for off-site disposal. Nothing escaped
to environment. -ARM 9/18/2023 Update: Cleanup is complete and no oil discharge to the
environmental. NFA. -ARM

Remarks: appx 20 gals released to an interior room with no drain. solono ed valve stuck clean up finished 55 gal drum with sand and product.

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Registry ID: 110022533775

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

The National Compliance Database (NCDB) supports implementation of the

NEW YORK POWER AUTHORITY-WHITE PLAINS OFFICE (Continued) **1004758118**

Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	6/14/06 Pro Test on site to test the 1500 gallon tank as ordered by the DEC. Tester couldn't get vacuum on the tank. Andre from ProTest said the cement on top of the tank needs to be removed to expose all of the bungs and piping. Once that is performed, then the tank can be isolated and tested. Visual observation revealed that the steel on the top of the tank was very heavily corroded. TG 06/29/06 AM -

VINTAGE RESTAURANT (Continued) **S108059295**

ProTest back on site retesting the lines and the tank. Andre reported that the vent line and the remote fill line both failed the test. The tank failed to hold a vacuum therefore, it also failed. Andre recommending unearthing the manway and checking that for a definitive answer on the tank failure. However this can't be accomplished until a refrigeration compressor is moved which will require a refrigeration mechanic. TG 06/29/06 John Leddy from ProTest officially reported that the tank failed and that the tank has lost two inches of oil since the 14th and the tank is not being used. Recommending emptying the tank to their client. TG 07/05/06 Joe Ostrosky from Petroleum Tank Cleaners (PTC) reported that PTC was hired to remove the oil from the tank. The tank has been emptied, cut open and cleaned. TG 11/15/06 New England Tank Services has completed the removal of the tank, allowing for an inspection. Substantial corrosion and numerous holes were observed. A letter was sent to the management company requiring the installation of two monitoring wells. 03/12/07 Monitoring well installation report submitted by JM Associates who were subcontracted by Fleet Environmental. No free product was detected in the wells. TG 07/30/07 New England Tank Services reported that they removed the tank along with 2.64 tons of petroleum contaminated soil. TG

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	05/17/06 Met with Con ED rep Tim Riley who explained that the impacted manhole conatined about and inch of fuel oil floating on several hundred gallons of water. A sample was taken and results rec’d later indicate that material was similar to a light fuel oil. A curbside fill line for 189 Main

CAPPELLI ASSOC. (Continued) **S107416552**

Street is one possible source. Requested that when the manhole is safe for entry that Con Ed
personnel attempt to determine where the furl is entering the structure. TG 07/21/06 JM Associates
coordinated the testing of the remote fill and vent lines servicing 189 Main Street and both of
those lines failed. The remote fill was excavated and petroleum impacted soil was present beneath
the line. Local WP building Dept work permit prohibited complete removal of the line, so
remediation will continue when the building is demolished. TG 06/10/08 Closure report submitted by
JM Associates. 13.32 tons of PCS removed. No post excavation sample results were taken. TG

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	3/6/19 Spoke to the caller, who confirmed that this was related to an earlier report of petroleum in a stream. O'Dee had spoken with them earlier, and said he would try to meet DEP on site to investigate and determine a possible source. dw 3/07/19: DEC inspected

DIESEL IN STREAM (Continued) **S123661649**

the location with DEP
HazMat. Strong diesel odors noted in a catch basin at the southeast corner of the parking lot for
office building at 10 New King Street. There is a petroleum stain on the grate over the catch
basin. Upgradient catch basins are clean. Some sheen noted in the impacted catch basin. Impacted
basin discharges to a nearby stream. Diesel odors, sheen, and some emulsified product noted at the
outfall. DEP has deployed boom which is picking up very little petroleum. It appears this spill is
the result of a diesel fuel leak - most likely from a delivery truck - and the spill occurred some
time ago. The diesel is weathered and breaking apart. DEP will continue to monitor and replace
booms if necessary. No recoverable product. jod

Remarks: SOIL SAMPLES DISCOVERED CONTAMINATION 3/07/19: Update from Regional Office: Actual report to Central Office Hotline was for petroleum odors noted while DEP was taking water samples. The caller did not report soil samples. jod

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Spiller Company:	999
Contact Name:	BILL MCMAHON
Latitude:	41.0311499
Longitude:	-73.7674469
DEC Memo:	9-3-13: J.O'Dee call to V.Mc./Dspt.: John in contact with BILL MCMAHON/DPW. DPW responding and may be hairing Tri.St. J.O'Dee handling. 9/04/13: Bill McMahon from DPW called me directly when the spill occured yesterday. At first he stated fluid had entered a catch basin and they were calling Tri-State. He also stated that there was a multi-vehicle traffic accident as a result of this spill, a car reportedly slid through a traffic light. Bill called back later and stated that no material had entered the catch basin and DPW was completing the clean up themselves. I called back this morning and left a message asking him for an update. jod 10/07/13: Tri-State was contacted but never hired to perform any work. White Plains DPW reports the clean up was completed and no drains were impacted. No disposal documentation was provided. jod
Remarks:	spill to roadway and catch basin/clean up underway

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Insp P. Luzzi 64900 reported while inspecting the station discovered 1 quart of hydraulic fluid leaked on soil and bluestone from a piston of a Rental Manlift in the station. No smoke or fire is/was involved. No sewers, waterways, or private property affected. The spill is contained, cleanup is in progress, and the rental company is being contacted for repair of the equipment. D. Rohrer 12788 ==========

WHITE PLAINS SUBSTATION (Continued) **S102240780**

09-May-2005 10:26 Chief Const. Insp P. Luzzi 64900 reported that Snr Substa Oper R. Detz 19835 and
himself completed cleanup of the spill removing the affected area of soil and bluestone generating
3/4 of a 55 gallon drum of non-hazardous waste. The waste is being stored in the proper temporary
storage area and the manlift has engineering controls in place and the repair is pending the rental
company. D. Rohrer 12788

Control Type:	ENG
Date Record Added:	06/19/2008
Date Rec Updated:	07/30/2024
Updated By:	GLWHITE
Site Description:	Site Location and Features: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is split into two operable units, OU1 and OU2; OU2, with the 12 Water Street address, is situated north of OU1. The main site feature of OU1 includes a Consolidated Edison Company of New York, Inc (Con Edison) electric distribution substation, as well as off-site areas to the south, which currently include the YMCA of Central and Northern Westchester and Saint John the Evangelist Roman Catholic Church (St. John s Property). OU2 site features include a commercial office building, which currently houses a banking institution, a security guard company and an attorney s office, and tenant parking area. The site and the St. John s Property are dissected by New Street (a dead end); together, they are bounded to the north by Water Street, Hamilton Avenue to the South, North Lexington Avenue to the west, and to the east by a parking area and office building located over the former road-bed of a de-mapped public thoroughfare formerly known as Spring Street. Current Zoning: The site is currently zoned CB-4, for commercial use. Historical Uses: Beginning in the mid-1800s, a former manufactured gas plant (MGP) operated by Con Edison predecessor companies spanned both OU1 and OU2. MGP operations reportedly ceased in 1930. OU1 includes the Southern Relief Holder of the MGP site and the St. John s Property. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John s Property, but some MGP tar is present deep underground. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. A Site Management Plan and monitoring plan are in place for the site, including the St. John’s Property. Site Geology and Hydrogeology: The stratigraphy of the site can be divided into four geologic units: fill, fine to medium sand, glacial till, and bedrock. Fill ranges in thickness from 3.5 to 9 feet and is underlain by up to 77 feet of sand. Glacial till, while discontinuous across the site, ranges up to 15 feet thick. Bedrock, consisting of Manhattan Schist, was observed at highly variable depths, ranging from 8 to 84 feet below grade (ft bg). Depth to groundwater ranges from 7 to 12 ft bg in the northern portion of the site to 22 to 29 ft bg in the southern portion, apparently corresponding with the increasing depth to bedrock, with flow to the south and west.
Env Problem:	Nature and Extent of contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds

CE - WHITE PLAINS MGP (Continued) **S106906513**

(VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures, impacting deep (e.g. 36 to 60 feet below ground surface) groundwater south of the building on the St. John s property. Site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the building or the indoor air samples. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation interim remedial measure (IRM) in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Coal tar is present under much of the parking area at 12 Water Street (OU2). The remediation in this area was completed in June 2010 via in-situ solidification and a low-permeability cap, as described in the 2012 Final Engineering Report. Operation and monitoring of the coal tar recovery well networks is ongoing. Residual contamination in the soil and groundwater is being managed under a Declaration of Covenants and Restrictions and a Site Management Plan.

Site Code: 58617
Site Description: Site Location and Features: The site is located near the edge of downtown in the City of White Plains, Westchester County. The address of the central portion of the site is 12 Water Street. The site is split into two operable units, OU1 and OU2; OU2, with the 12 Water Street address, is situated north of OU1. The main site feature of OU1 includes a Consolidated Edison Company of New York, Inc (Con Edison) electric distribution substation, as well as off-site areas to the south, which currently include the YMCA of Central and Northern Westchester and Saint John the Evangelist Roman Catholic Church (St. John s Property). OU2 site features include a commercial office building, which currently houses a banking institution, a security guard company and an attorney s office, and tenant parking area. The site and the St. John s Property are dissected by New Street (a dead end); together, they are bounded to the north by Water Street, Hamilton Avenue to the South, North Lexington Avenue to the west, and to the east by a parking area and office building located over the former road-bed of a de-mapped public thoroughfare formerly known as Spring Street. Current Zoning: The site is currently zoned CB-4, for commercial use. Historical Uses: Beginning in the mid-1800s, a former manufactured gas plant (MGP) operated by Con Edison predecessor companies spanned both OU1 and OU2. MGP operations reportedly ceased in 1930. OU1 includes the Southern Relief Holder of the MGP site and the St. John s Property. The Holder was removed by a 2004-2005 Interim Remedial Measure (IRM). There is no record of any MGP activity on the St. John s Property, but some MGP tar is present deep underground. Operable Unit 2 addresses the remainder of the MGP site, located on the Water Street portion of the site. A Site

CE - WHITE PLAINS MGP (Continued) **S106906513**

Management Plan and monitoring plan are in place for the site, including the St. John's Property. Site Geology and Hydrogeology: The stratigraphy of the site can be divided into four geologic units: fill, fine to medium sand, glacial till, and bedrock. Fill ranges in thickness from 3.5 to 9 feet and is underlain by up to 77 feet of sand. Glacial till, while discontinuous across the site, ranges up to 15 feet thick. Bedrock, consisting of Manhattan Schist, was observed at highly variable depths, ranging from 8 to 84 feet below grade (ft bg). Depth to groundwater ranges from 7 to 12 ft bg in the northern portion of the site to 22 to 29 ft bg in the southern portion, apparently corresponding with the increasing depth to bedrock, with flow to the south and west.

Env Problem: Nature and Extent of contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Coal tar, a non-aqueous phase liquid (NAPL), is present in the subsurface of the plant site (OU2) in the proximity of historic MGP structures. This contamination appears to have migrated south, west and vertically down from these structures, impacting deep (e.g. 36 to 60 feet below ground surface) groundwater south of the building on the St. John s property. Site-related contamination was not detected in sub-slab soil vapor samples from directly beneath the basement slab of the building or the indoor air samples. The relief gas holder foundation, which is part of OU1, was heavily contaminated with MGP tar, and was removed through an excavation interim remedial measure (IRM) in 2004-5. In addition to the excavation, a NAPL cutoff wall and NAPL recovery wells were installed. Coal tar is present under much of the parking area at 12 Water Street (OU2). The remediation in this area was completed in June 2010 via in-situ solidification and a low-permeability cap, as described in the 2012 Final Engineering Report. Operation and monitoring of the coal tar recovery well networks is ongoing. Residual contamination in the soil and groundwater is being managed under a Declaration of Covenants and Restrictions and a Site Management Plan.

Class:	Completed: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Town: White Plains (c)
Record Added Date: 05/22/2018
Record Updated Date: 06/20/2023
Update By: KATHOMPS
Site Description: Site Location: The 1.94-acre site is located at 200 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1.2. The site is a portion of the two-story White Plains Mall, located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. The remaining portion of the White Plains Mall and mall parking lot are located east of the site. Site Features: The majority of the site is improved with the White Plains Mall, which is vacant. The remainder of the White Plains Mall and associated parking area is present on the eastern adjacent BCP Site C360221 on tax lot 125.67-5-1.1. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1). The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with several small buildings, including dwellings and garages, prior to 1894. Between 1892 and 1902, a tributary to the Bronx River was visible on maps of the site, suggesting the area may have been elevated from its original topographic level. By 1930 multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930 s through the 1970 s. By 1987, all on-site buildings were demolished and replaced by the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Geophysical investigations conducted to date have not indicated any underground storage tanks exist on-site. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. In addition, contaminants of concern have been identified in soil vapor. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwaters flows in the southwesterly direction. Groundwater depths range from approximately 9.58 to 23. feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soils at the site are characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was

HAMILTON GREEN PHASE 1 (Continued) **S120958439**

encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 37 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Environmental investigations have identified metals, semi-volatile organic compounds (SVOCs), and volatile organic compounds (VOCs), in site soils; VOCs, including methyl-tert-butyl-ether (MTBE) in site groundwater; and VOCs in soil gas at the site. Soil: Soil borings have been advanced to a maximum depth of 11 ft bg. The maximum photoionization detector reading to date as been as high as 1,370 parts per million (ppm). Soil impacts include VOCs (chlorinated and petroleum-related compounds), SVOCs (polyaromatic hydrocarbons [PAHs]), and metals (chromium, lead, mercury, and zinc). Investigation into the nature and extent of soil contamination is on-going. Groundwater: Petroleum-related VOCs, including benzene, toluene, ethylbenzene and xylenes, collectively referred to as BTEX, were detected at concentrations above New York State Ambient Water Quality Standards. MTBE, which was added to gasoline in New York from 1979 until 2004, was also detected, which suggests an off-site source has contributed to the groundwater plume, since the on-site gas station closed prior to 1970. Investigation into the nature and extent of groundwater contamination is on-going. Soil Vapor: Sampling of sub-slab soil vapor points has indicated elevated concentrations of VOCs, including trichloroethylene and methylene chloride, within the footprint of the proposed redevelopment area. Investigation into the nature and extent of soil vapor impacts is on-going.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	9/28/17 AKRF was performing Phase II, noticed some sites where soil seemed odiferous and possibly contaminated. Took soil and gw samples, soil samples came back below CP-51. GW samples came back high in MTBE, benzene, and toluene in 3 areas. Site used to be old shopping mall. AKRF states that there was a gas station at site in 1970's, and there is currently a gas station across the road from the site. Will send in copy of soil and gw analysis. ga 10/05/17 Becky called and said the report will be completed soon and she expects to submit it in a week or two. TG 12/21/17 AKRF submitted a Phase II Investigation Report (See report in DecDocs.) TG 05/03/22 Greta White emailed the following, Good afternoon, Todd, This spill is to be administratively closed as it will be rolled into the BCP under site C360221 WP Mall Cleaners & Gas Station. The BCP Agreement was executed on April 22. I have added a cross reference in the spill file to this BCP site, as well as the adjoining site, C360177 Hamilton Green. At one time the Hamilton Green site (C360177) included the land that is now part of both the C360177 and C360221 sites (until the owner terminated the BCA, split the site and sold half). The owners of the Hamilton Green site (they submitted a new BCP application at the end of last year) and the WP Mall site both agree that the spill number can be assigned to the WP Mall side of the site C360221. Both sites intend on excavating all material above USCOs and applying a product like OCR to the excavation for groundwater remediation, and testing for future soil vapor intrusion. Please let me know if you require any further information from me in order to close this spill. Thank you, Greta Greta White, P.G. Assistant Geologist, Division of Environmental Remediation New York State Department of Environmental Conservation 625 Broadway, Albany, New York 12233-7014 P: (518) 402-2029 - F: (518) 402-9679 - greta.white@dec.ny.gov

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain

MARUBENI SPECIALTY CHEMICALS INC (Continued) **1000911942**

enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Registry ID: 110070864473

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The database that supports the Toxic Substances Control Act (TSCA) of 1976, which provides EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides. TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon and lead-based paint.

Site Code: 628108
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs.
Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm),

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site.
Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs.
Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

	intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.
Health Problem:	Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 628108
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.
Env Problem: Nature and extent of contamination: Prior to remediation, the primary

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 628108
Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Description: Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Health Problem: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

BROWNFIELDS:

Name:	WP MALL CLEANERS & GAS STATION SITE
Address:	250 HAMILTON AVENUE
City,State,Zip:	WHITE PLAINS, NY 10601
Program:	BCP
Site Code:	628108
Acres:	1.808
HW Code:	C360221
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	11/03/2021
Record Updated Date:	12/29/2023
Update By:	AMSERVIS
Site Description:	Site Location: The 1.808-acre site is located at 250 Hamilton Avenue, White Plains, Westchester County. The site is located on tax lot 125.67-5-1..1. The site was most recently a portion of the White

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

Plains Mall and associated parking lot. The site is located in a mixed-use commercial and residential neighborhood. Barker Avenue, a restaurant, and a hotel are located north of the site. Cottage Place, a parking lot, a condominium building, and Berkeley College student dormitories are located east of the site. Hamilton Avenue and a New York Power Authority Building are located south of the site. A Brownfield Cleanup Program site (site no. C360177) abuts the west boundary of the site. The site is located approximately 0.35 miles from the Bronx River. It is not located in a flood zone. Site Features: Currently, a multi-story mixed use building is under construction on the site. Current Zoning and Land Use: The site is located in a Transit Development District (TD-1) and is currently being redeveloped as noted above. The surrounding properties include residential and commercial use. Past Use and Investigation of the Site: The site was developed with dwellings and garages prior to 1911. By 1930, multiple businesses operated on-site, including a gypsum partitions business, an electric motors building, a paint store, a plumbing shop, and a candy manufacturer. The candy manufacturer, along with a gasoline station located in the south-eastern portion of the site, are estimated to have been on-site from the 1930s through the 1970s. By 1987, all on-site buildings were demolished and replaced by a parking lot and eventually a portion of the White Plains Mall. A dry-cleaning facility is listed as a White Plains Mall occupant in 2010 and 2011. Use of the site as a candy manufacturer, gasoline station and dry-cleaning operations may have contributed to site contamination. Spill Number 17-06297 was reported September 28, 2017, based on evidence of petroleum contamination in soil and groundwater. Site Geology and Hydrogeology: Based on the United States Geological Survey and Westchester County Geographic Information System, the site lies at elevations ranging from 185 to 200 feet above the National Geodetic Vertical Datum of 1983. Regional topography slopes downward to the west. Groundwater flows in the southwesterly direction. Groundwater depths range from approximately 9 to 24 feet below grade (ft bg). Deeper groundwater depths were found in the eastern portion of the site. The soil at the site is characterized as Uf (Urban Land) which is covered by pavement, concrete, buildings, and other structures. A fill stratum is encountered from grade to depths of 12 ft bg. The fill layer consists of sand, silt, gravel, organics (wood/grass), brick, asphalt, and rubber. A layer of clay and silt were encountered beneath the fill between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Env Problem:

Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI)

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site.
Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs.

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

	Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.
Health Problem:	Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

between 7 and 13 ft bg. Sand is present in the layer of clay and silt, but content varied across the site. Between approximately 13 and 25.5 ft bg, a sand layer was encountered. The sand stratum consisted of brown, medium to coarse sand, little to some silt, and trace amounts of gravel. During geophysical investigations of the site, bedrock was encountered from approximately 13 to 40 ft bg. The depth of bedrock corresponded to the approximate elevations of the site.

Summary: Remedial actions are complete, and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Summary: Nature and extent of contamination: Prior to remediation, the primary contaminants of concern included volatile organic compounds (VOCs), metals, and pesticides in soil, VOCs, semi-VOCs (SVOCs), metals and per- and polyfluoroalkyl substances (PFAS) in groundwater, and VOCs in soil vapor. Impacts were identified in soil across the site to depths up to 40 ft bg. Soil: Upon acceptance into the BCP, the primary contaminants of concern in soil were VOCs, SVOCs, metals, and pesticides. Compounds that exceeded their unrestricted use soil cleanup objectives (USCOs) during the remedial investigation (RI) included (maximum concentrations given): ethylbenzene (37.3 part per million [ppm] compared to the USCO of 1 ppm), xylenes (110 ppm compared to the USCO of 0.26 ppm), benzo(a)anthracene (1.5 ppm compared to the USCO of 1 ppm), benzo(a)pyrene (1.63 ppm compared to the USCO of 1 ppm), benzo(b)fluoranthene (2.67 ppm compared to the USCO of 1 ppm), benzo(k)fluoranthene (0.972 ppm compared to the USCO of 0.8 ppm), chrysene (1.68 ppm compared to the USCO of 1 ppm), dibenzo(a,h)anthracene (0.399 ppm compared to the USCO of 0.33 ppm), indeno(1,2,3 c,d)pyrene (1.57 ppm compared to the USCO of 0.5 ppm), arsenic (26.4 ppm compared to the USCO of 13 ppm), barium (1,100 ppm compared to the USCO of 350 ppm), chromium (120 ppm compared to the USCO of 30 ppm), copper (83.9 ppm compared to the USCO of 50 ppm), lead (3,120 ppm compared to the USCO of 63 ppm), manganese (3,320 ppm compared to the USCO of 1,600 ppm), mercury (0.97 ppm compared to the USCO of 0.18 ppm), nickel (75.5 ppm compared to the USCO of 30 ppm), selenium (6.5 ppm compared to the USCO of 3.9 ppm), silver (4.3 ppm compared to the USCO of 2 ppm), zinc (693 ppm compared to the USCO of 109 ppm), dieldrin (0.007 ppm compared to the USCO of 0.005 ppm), 4,4 DDD (0.103 ppm compared to the USCO of 0.0033 ppm), 4,4 DDE (0.0512 ppm compared to 0.0033 ppm), and 4,4 DDT (0.06 ppm compared to the USCO of 0.0033 ppm). Following remediation, all soil above USCOs have been removed and disposed of off-site. A total of 146,398 tons of contaminated soil was excavated and removed from the site. Groundwater: Remedial investigation groundwater sampling, conducted in November 2022, indicated impacts of VOCs, SVOCs, metals (filtered), and PFAS in exceedance of New York Codes, Rules and Regulations Title 6 (6 NYCRR) and guidance documents found in the Division of Water Technical and Operational Guidance Series (TOGs) Standards, Criteria and Guidance Values (SCGs), including, but not limited to: benzene (3.2 parts per billion [ppb] compared to the SCG of 1 ppb), toluene (18.1 ppb compared to the SCG of 5 ppb), ethylbenzene (632 ppb compared to the SCG of 5 ppb), isopropylbenzene (80.3 ppb compared to the SCG of 5 ppb), xylenes (1,670 ppb compared to the SCG of 5 ppb), benzo(a)anthracene (4.1 ppb compared to the SCG of 0.002 ppb), benzo(a)pyrene (4.4 ppb compared to the SCG of non

WP MALL CLEANERS & GAS STATION SITE (Continued) **S128529085**

detect), benzo(b)fluoranthene (5.8 ppb compared to the SCG of 0.002 ppb), benzo (k)fluoranthene (2.3 ppb compared to the SCG of 0.002 ppb), chrysene (3.8 ppb compared to the SCG of 0.002 ppb), ideno(1,2,3 cd)pyrene (0.18 ppb compared to the SCG of 0.002 ppb), indeno(1,2,3 c,d)pyrene (6.2 ppb compared to the SCG of 0.002 ppb), 2,4 dimethylphenol (11.5 ppb compared to the SCG of 1 ppb), pentachlorophenol (5.3 ppb compared to the SCG of 1 ppb), naphthalene (25.1 ppb compared to the SCG of 10 ppb), antimony (41.3 ppb compared to the SCG of 3 ppb), arsenic (44.5 ppb compared to the SCG of 25 ppb), cadmium (45.4 ppb compared to the SCG of 5 ppb), chromium (483 ppb compared to the SCG of 50 ppb), iron (50,700 ppb compared to the SCG of 300 ppb), lead (307 ppb compared to the SCG of 50 ppb), manganese (20,400 ppb compared to the SCG of 300 ppb), selenium (45.3 ppb compared to the SCG of 10 ppb), sodium (1,670,000 ppb compared to the SCG of 20,000 ppb), PFOS (152 parts per trillion [ppt] compared to the SCG of 2.7 ppt) and PFOA (71.2 ppt compared to the SCG of 6.7 ppt). Groundwater samples were collected from three (3) monitoring wells in the southern portion of the site for VOC analysis in April 2023. Those results indicated methyl tert butyl ether (MTBE) concentrations above its SCG (10 ppb), at a maximum concentration of 220 ppb. No other VOCs were detected above SCGs during that sampling event. Groundwater concentrations of VOCs and PFAS remain above SCGs. Soil Vapor: Prior to remediation, soil vapor samples were collected. No indoor air samples were collected since the on-site building was being demolished. During the Phase II site investigation, trichloroethylene (TCE) was detected in soil vapor at a maximum concentration of 13 micrograms per cubic meter (g/m3). During the remedial investigation, TCE was detected at a maximum concentration of 0.97 g/m3. This compound was not detected in soil or groundwater above its USCO or SCG. Based on the soil vapor results and the intended use, a post remediation soil vapor intrusion evaluation is required. There are no current exposure concerns since there are no buildings on site. The complete excavation of soil in exceedance of USCOs have removed any potentially impacted soil addressing the potential migration of soil vapor off site.

Water Type: perfluorooctanoic acid

PFAS 3:
Water Type: perfluorooctane sulfonic acid

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was HARDY 06/08/98 LETTER SENT DEC REQUIRES SOIL AND INVESTIGATION OF SITE IN 6 MONTHS 02/09/01 LETTER SENT TO EXXONMOBIL BY J. HARDY; ADVISE AS TO THE SIGNIFICANCE OF THE WHITE PLAINS MALL DENIAL OF ACCESS. 03/15/01 LETTER SENT TO EXXONMOBIL BY J. HARDY; SCHEDULE FOR SUBMISSION OF AN INVESTIGATION REPORT BY 4/30/01 IS APPROVED & REQUIRED. Letter to K. Bourque, Groundwater & Env. Svcs. from J. Hardy, dated 6/27/2003. Reduce monitor well sampling to semi-annually, report annually. 09/04/03: Letter to Eric Harvey, Groundwater & Env. Services, Inc from J. Hardy. Reduce monitor well sampling to semi-annually. Report annually. 6/22/09 2008 annual report shows persistent contamination of approximately 5k btex at mw1--sent email to lbg sirecting them to define extent of contamination in that vicinity within 45 days--email is in edocs jh 10/26/09 2009 annual report shows all wells stable (and low)except mw-1 which has gone down to approx 3k btex. 11/10/09 as a result of decrease in mw1 above gave cf option, by email, to start quarterly sampling and reporting instead of investigation at this t ime. In that case we would consider future action based on whether downward trend continues or not. email in edocs jh 4/21/10 jan 10 sampling shows levels approx same as last period jh 11/22/10 Project transferred to Mastro. 5/25/11 BTEX concentrations remain high in MW-1. Will continue to monitor...mm 5/7/12 See quarterly monitoring reports in edocs...mm 02/12/13 A workplan has been developed and approved to investigate the BTEX in MW-1. Four monitoring wells will be installed and soil samples will be collected for lab analysis. 7/2013 Four monitoring wells were installed..mm 3/30/2017 The BTEX concentrations in MW-1 and MW-4 remain high and unchanged. Off site wells are ND. The consultant, LBG, has been asked to develop a RAP...mm 8/01/17 The 2ndQMR report was submitted by LBG. RAP will be proposed by m10/31/17...mm 1-26-21 Received 2Q20 report. Last ISCO event was Nov 2020. Next event scheduled for March 2021. MW4 and MW1 are the most impacted with total VOCs in the ppm range with general increased right after ISCO and a decline in dissolved concentrations. ML 4-15-21 Received 1Q21 report. Last ISCO event was Nov 2020. The next even is scheduled for April 2021. MW4 and MW1 are the most impacted with total VOCs in the ppm range. Total VOCs increased from last quarter. ML 10-7-21 Report reviewed 2 well have BTEX in the 2000-3000ppm range. All wells are upgradient from injection wells. ML 12-30-21 Updated file to add note for report received on 1/26/21 and 4-15-21. ML 1-5-22 Reviewed 2Q21 QMR.

EXXON, WHITE PLAINS (Continued) **S103571230**

Last ISCO event was March
2021. Next event scheduled for July 2021. MW4 and MW1 are the most impacted with total VOCs in the
ppm range with general increased right after ISCO and a decline in dissolved concentrations. ML
2-10-22 Reached out to WPS. Wells are downgradient of the source area and haven't shown to be
effective. Propose an alternative remedial solution by end of 2Q22. ML
5-3-22 Received 1Q22
Monitoring report. No LNAPL detected. Concentrations in MW have increased. Total VOCS are greater
than the 1st round of sampling from 2018. Revised RAP to be sent by 5/31/22. DEC to require
ethanol. ML 6-16-22 Received Addendum to RAWP on 6/8. RAWP addendum reviewed-calls for the
installation of 5 additional injections wells in the area of presumed residual contaminated soil
located around the dispensers. The proposed locations are upgradient or cross gradient from the
current wells. Soil samples will be obtained during the well installation and wells to be screened
from the start of impacts to 5' below the water table. WPS proposed using field observations and
PID readings over 100ppm to determine the location of contamination and proposed the same
groundwater frequency and sampling. Conditional approval grated-conditions are the threshold for
contamination is lowered to 50ppm and ethanol is included in the analysis. ML 9-8-22 RP questioned
request for ethanol and DEC provided a response. Sampling needed for the 1st year only. ML 11-30-22
Received 3Q22 monitoring report. Wells from the June 2022 RAWP addendum were installed in Sept 2022
and the 1st injections to them will be in 4Q22. Last ISCO event was Feb 2022. Summary report of
well installation to be submitted in Dec 2022. No LNAPL observed, MW1 and MW3 are most impacted.
Monitoring to continue. ML 2-15-23 Received Injection well summary report. Five 2 injection wells
were installed upgradient from the previous locations. IW4 borings show PCS is present in the area
of that well. ISCO event conducted. ML 4-28-23 ISCO event conducted in Nov and Dec 2022. MW1 and
MW4 show a slight decrease in total VOCs since the ISCO event. Other wells show an increase in
concentration ;typical of Isco events. Continue per rawp. ML

Remarks: WHILE REMOVING ABANDONED UNDERGROUND 1000 GALLON TANK ELEVATED PID HEAD SPACE READINGS WERE ENCOUNTERED

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	3/8/2021 Called back and spoke with Hime who told me that the return line from the boiler to the tank failed a tank test. The tank is a 3,000 gallon UST, however the lines run mostly above ground. There is a small drip in the return line above ground in the maintenance room, it is currently being caught by a funnel and a bucket beneath. Property is on municipal water and sewer. TJP 3/08/21: From Chris Lalak of WCDOH PBS: PBS site 3-801152 14 Mamaroneck Ave, White Plains 3k UST from 1960 Facility is in the midst of a gas conversion. Gas line is not yet active, but expected shortly. New ownership of the building. Oil lines are running into a cast iron secondary containment pipe and oil slowly dripping back into the boiler room, and being collected. Facility told to immediately set up a temp. tank or switch to a temporary line

CELESTILA GROUP (Continued) **S106385494**

and tested the rest of the
system. The location is reportedly on a busy city sidewalk and any
option will be challenging. Mr.
Rraci was calling the city of WP building inspector, to work on the
temp tank/Temp line and the gas
line completion. Owner Rraci Realty, Hime Rraci jod 3-31-21
Discussions w/WCHD (Chris and Natasha)
concerning situation. They report location is an busy intersection and
busy sidewalk. Chris reports
that return line has been disconnected and system converted to a one
line system. Site continues to
operate pending conversion. Based on conversation that this is
violation of regs, Chris is going to
inspect location with owner to see if there is a potential solution.
jc 06-08-21 Update from WCHD:
I met with the owner on site. Very challenging location for a temp
tank (Busy city sidewalk in
Downtown, White Plains). The facility agreed to pump out the tank I am
awaiting confirmation BTR
12-7-21 The copper piping is snaked through an old steel pipe that s
cutoff above the tank. Oil
spilled out of the pipe and contaminated the soil around the tank. ABC
Tank hand excavated 5 drums
of soil and had clean endpoints at the building. Soil Borings did not
encounter contamination and
ranged 10 to 15 below sidewalk. Weathered bedrock at 15 feet bgs on
the street side of the tank.
The building will acquire basement ASTs in the interim, and a plan
will be developed to address the
contamination around the tank. BTR 1/11/22 Email from Chris/WC saying
that owner appears for
hearing today w/no contractor. Owner is waiting for direction from the
State on how to proceed.
Hearing postponed. Chris also emailed Harry, who said report should be
submitted by end of this
week. jc 3/21/22 Jan 18 report from ECMS. Discusses contamination
found during Dec investigation,
temp system install and intent to close 3k UST. jc 10/21/22 Visited
site. Tank cut at half-way
point and top and bottom of tank removed. Sides left intact to support
soil from blowing in.
Contamination found beneath tank. Removed impacted soil up to
elevation of base of footing. Does
not want to excavate deeper as it may compromise structural integrity
of building. Gas and power
lines had to be cut off by Con-Ed the day prior in order to access
tank. Impacted soil moved to one
side of trench. Awaiting k-crete to backfill excavation and then move
impacted soil back to remove
other side. Photos uploaded to D2. BAG 12/30/22 Harry Sudwischer from
Environmental Consulting and
Management Services (ECMS) submitted a UST Closure Report and Spill
closure Request. Full Tank
removal was constrained by nearby gas and electric lines, so some
contaminated soil was left in
place. See report in DecDocs. NFA. TG

Remarks: Tank test failure-leak in return line to boiler.
