Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

BROWNFIELDS:

Name:	221 MAIN STREET
Address:	221 MAIN ST
City,State,Zip:	WHITE PLAINS, NY 10601
Program:	BCP
Site Code:	58997
Acres:	2.600
HW Code:	C360073
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	07/26/2004
Record Updated Date:	12/20/2007
Update By:	MJRYAN
Site Description:	Location Description: The site is located in an urban portion of Westchester County, occupying several city tax parcels, including 221 Main Street, in the City of White Plains. Current Use: The site is currently being redeveloped. The newly constructed complex will contain approximately 125 hotel rooms, 400 condominiums and approximately 10,000 square feet of street levels stores. Surrounding Uses: The site is surrounded by commercial properties with a mix of retail and office space. Historical Source(s)of contamination: The

221 MAIN STREET (Continued) **S106704121**

historical source of contamination at this site included multiple leaking underground storage tanks (USTs). Investigations revealed the presence of ten USTs. Investigations/Actions Performed to date: Previous environmental investigations include a Phase I Investigation in 2002 and a Petroleum Contamination Site Investigation completed in June of 1993. Under the Brownfield Cleanup Program, a Remedial Investigation was conducted in 2005-2006. Based on RI findings, an Interim Remedial Measure (IRM) was planned and implemented which included the removal of all USTs, and contaminated soil. Current Action: A Final Engineering Report which documents the remedial activities completed has been approved. On December 19, 2006 a Certificate of Completion was issued declaring remedial activities complete, and that a Track 1 cleanup (i.e., unrestricted use) has been achieved.

Env Problem:	Contaminant of concern: Petroleum-related compounds including volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons. Impacted Media: Soil and groundwater. Known SCGs exceedences: Investigation revealed benzene, toluene, ethyl-benzene and xylenes, however, as part of a site-wide remedial program (2005-2006) all contaminated media has been removed and properly disposed.
Health Problem:	The site is located in downtown White Plains, public water serves the area. Through the implementation of an IRM the site has been remediated and nearly all the soil has been removed to bedrock eliminating potential exposure to contaminated soil. Proposed redevelopment of the site will include a ventilated below-grade parking garage with foundation drainage which will effectively eliminate the potential for soil vapor intrusion to occur.

DEC Memo: 4/20/05 UST removal report rec'd from JM Associates. Based on the info contained in that report,
NFA required. TG

Remarks: after excavating found a 4000 gallon tank about 70 years old contact cell phone JOHN MANFREDI 9144475634 unknown if tank is intact or if any material has gotten out into soil it is possible caller states in process of removing cleaning and testing area now

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	PBS #3-074632 - WCHD & WP Building Dept. on scene. 5000. gal. vaulted AST. Filled on 12/29/07 3200 gal. left in tank. Uses 175 gal/day x 6 days=1050 gal. Loss of potentially 1800 -100= 800 gal. Elite on site with vac truck and smaller pump. Tank in very poor condition. Todd Ghiosay contaced and will follow up.
Remarks:	Caller says the tank failed releasing the material into the basement of the building. Caller is unsure if the cause was corrosion of the tank or physical damage. Elite Environmental will be doing the clean up and the Westchester Dept. of Health is on scene.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the

YOUNG COAL & LUMBER SITE (Continued) **1018159122**

Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

BROWNFIELDS:
Name: YOUNG COAL & LUMBER SITE
Address: 55 BANK STREET
City,State,Zip: WHITE PLAINS, NY 10601
Program: BCP
Site Code: 481411
Acres: 2.240
HW Code: C360131
SWIS: 6017
Town: White Plains (c)
Record Added Date: 05/01/2013
Record Updated Date: 07/17/2018
Update By: DACROSBY
Site Description: Location: The site is located at 55 Bank Street in White Plains, Westchester County. The site is located in the Central Business District of the City of White Plains on the west side of Bank Street, just south of the intersection of Main Street and Bank Street. To the west is the Metro-North railroad right of way. Bank Street is located along the eastern border, a car dealership is located adjacent to the southern border, and a parking lot for the Bank Street Commons Apartment building is located to the north. Site Features: The site is presently under construction as a commercial/residential building. The site was formerly a 2.24-acre parking lot for the nearby commuter railroad station. The site was used as a parking lot for over 40 years. Current Zoning/Use: The current zoning of the site is Core Business-4 (CB-4). Municipally-operated parking lots and multifamily dwellings, a restricted residential use, are permitted uses in CB-4 zones. Past Uses of the Site: The property was used as a coal and lumber yard starting in 1885. The lumber yard comprised of a mill, several small sheds, coal and lumber storage areas, and railroad spurs. By 1911, the property was being used for manufacturing sashes, blinds and trim, and for the storage of grain, fertilizer, and feed. During the late 1800s and early 1900s, portions of the eastern side were occupied by several residential homes. By 1953, the southeastern corner of the property was improved with a commercial building, while the remaining portions were public parking lots. The commercial building was razed by 1974, and the site has been operated as a parking lot since that time. Site Geology and Hydrogeology: The site is level ground and covered with asphalt. Surface water drains to a storm sewer system that runs to the Bronx River which is about 500 yards to the west. The shallow soil horizon consists of historic fill found at a depth from 1.5 -26 feet below grade. Below the fill, subsurface soils consist of predominantly sands with some silts and gravels. Bedrock was located at 80-120 feet below grade and is believed to by gneiss and schist. Overburden groundwater was encountered at a depth of 28 feet below grade and flows to the south. The Bronx River, which flows to the south, is located about 0.25 mile

YOUNG COAL & LUMBER SITE (Continued) **S113492634**

west of the site. However, the site is located above the current 100 year flood elevation. Site storm water is transported via storm drains to a storm water collection system and discharges to the Bronx River. The Bronx River Parkway is located adjacent to the Bronx River just west of the site.

Env Problem: Nature and Extent of Contamination: Remediation of the site to track 1 soil cleanup objectives was completed in November 2016. Soil: Remediation is complete. The entire site was excavated to a depth of approximately 26 feet. No surface soils remain. Based on the investigations conducted the primary contaminants of concern in subsurface soils were inorganics (metals) including mercury, copper lead and zinc. These metals were present above the unrestricted soil cleanup objectives. These compounds were present in the fill materials used to grade the site and surrounding areas, and contamination did not migrated from the site to adjacent parcels. These inorganics were not found in on-site groundwater above NYS Groundwater Standards in filtered samples. Aluminum, iron, and sodium were detected above standards in onsite groundwater but are considered to be naturally occurring. Groundwater: Chlorinated volatile organic compounds (CVOCs) were detected in on-site groundwater including tetracholoethylene (PCE) at a maximum level of 13 parts per billion (ppb), and trichloroethene (TCE) at a maximum level of 28 ppb. The groundwater quality standard for both of these compounds is 5 ppb. CVOCs were not detected in the subsurface soil samples collected from the site, the groundwater investigation suggests that the source originates from an off-groundwater source. The site remediation is complete. The site has a basement foundation that includes a vapor barrier and a subsurface parking garage which is ventilated. Because there is a vapor barrier and a ventilated subsurface parking garage a soil vapor intrusion investigation was not conducted.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. A vapor barrier has been installed beneath the building foundation to minimize the potential of vapors from entering the building. Additionally, a sub-grade parking garage ventilation system required by building codes will be installed prior to building occupancy to prevent vapors from accumulating in the structure.

Hazardous Waste Summary:
Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Program:	BCP
Site Code:	645014
Acres:	1.230
HW Code:	C360235
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	11/07/2022
Record Updated Date:	04/17/2023
Update By:	AMSERVIS
Site Description:	Site Location: The site is located at the follow addresses in an urban area in the City of White Plains, New York, 10601: p/o 1 Water Street (125.66-2-1) and p/o North Lexington Avenue (125.66-2-2). The surrounding area is occupied by commercial buildings. The site is wrapped in an arc to the north and east by a public parking lot. A car dealership and service facility are also located east of the site. Water Street is located south of the site, and Ferris Avenue is located west of the site. A New York Metropolitan Transit Authority Bus Terminal and a municipal parking garage are located southwest of the site beyond Water Street and Ferris Avenue. A municipal building and fire house are located beyond Ferris Avenue to the west. Site Features: The site was most recently developed with a four-story commercial office building. The building contained no basement. A hydraulic elevator was located within the former building. An asphalt-paved parking area and some landscaped areas were present on the site. but the site is now vacant. Two security gates are present at the parking lot entrance and exit in the southern portion of the site. In addition, a portion of the site was developed as a parking lot/roadway. An easement utilized by Consolidated Edison (Con Ed) is located north of the site in the east-west direction. The closest water body, the Bronx River, is located approximately 0.125 miles from site. The site is not located in a flood zone. The nearest surface water body is the Kensico Reservoir located approximately 2.65 miles northeast of the site. Current Zoning and Land Use: The site is currently located in the Core Business-4 (CB-4) District. The CB-4 designation allows for multi-family residential buildings and commercial uses and the site has already received all required land use approvals for the project including Site Plan approval. The site is also located in the City s Central Parking Area (CPA) overlay district. The CPA overlay was created with the purpose of

ONE WATER STREET BLACKSMITH & WHEELWRIGHT SITE (Continued) **S129982644**

setting special parking requirements for land uses within the Central Business districts. Parking requirements are lower for a given use to reflect the complementary mix of land uses in this dense downtown urban area. A New York Metropolitan Transit Authority bus terminal is located directly across Water Street from the site. The closest rail line is located approximately 290 feet from the site. The Metro North Station is located approximately 462 feet from the site. Past Use of the Site: The historical use of the site as blacksmith and wheelwright constituted a possible recognized environmental condition (REC) in the 2018 Phase I Report and further investigation of the site in 2021 and 2022 suggests this use caused SVOC and metals contamination in the soil and other contamination in groundwater and soil vapor since this use was present for many years. A wheelwright repairs wheels and this prior operation, which extended into the 1940s, may have used solvents. In addition, in 1911 Standard Oil and in 1930, The Texas Co., which operated an Oil Storage warehouse, fronted the site. In 1950, Westchester Asphalt Company fronted the site, and its operations including storage of asphalt and gasoline tanks were present. Contaminated historic fill material containing varying amount of brick, concrete, asphalt, and ash was also identified at the site during the SESI February 2018 geotechnical investigation and later 2021 and 2022 subsurface investigations. An earlier 1997 Phase I report revealed that underground storage tanks were historically present at the adjacent Fire House Station site, which may have leaked and lead to some on-site contamination. There were four historic spills at that site: April 14, 1988, Spill No. 8800487 closed January 11, 1989; April 21, 1988 Spill No. 8800670 closed January 11, 1989; and May 26, 1988 Spill No. 8801791 closed January 24, 1989; September 7, 1994 Spill No. 9408242 closed the same day. A total of four underground storage tanks (USTs) were removed from the Fire Station Site prior to April 1991. Two 10,000 galloon heating fuel oil USTs and one 2,000-gallon leaded gasoline UST were removed from that property at that same time. That property was registered under PBS No. 3-169439. An EDR Report contained within the 1997 Phase I Report also discussed the 1994 petroleum spill to the sewer on Ferris Avenue. Gasoline tanks were identified at the adjacent Surface Transportation Systems Garage, which may have leaked and lead to some groundwater or soil vapor contamination. Despite these spills in close proximity to the site, since these prior spills were closed to the satisfaction of the NYSDEC, and given that the consultant concluded that there was no evidence the tanks had leaked, the consultant that performed the initial Phase I for Cali Realty Corporation did not conclude that the spills on the adjacent parcel represented a recognized environmental condition and the Phase I report had a clean no environmental impact conclusion. Nevertheless, despite spill closure, these historic spills may have contributed to contamination under the site. The adjacent Fire House was only located 0.125 miles away. This Fire Station may have also led to some of the PFAS groundwater contamination. Trichlorofluoromethane (Freon-11) was also detected throughout the site, indicating a potential Freon-11 release. Site Geology and Hydrogeology: According to the United States Geological Survey (USGS) White Plains, NY, 2013, 7.5-minute Series topographic map, the site s average elevation is approximately 189 feet above mean sea level (amsl). The site gently slopes downward from north to south, ranging from approximately 197 feet amsl to 186 feet amsl. Groundwater is expected to flow to the south. Groundwater was observed at approximately 10-15 ft-bgs at the

ONE WATER STREET BLACKSMITH & WHEELWRIGHT SITE (Continued) **S129982644**

	site. The site is characterized by fill to depths ranging from five (5) to twelve (12) feet below grade surface (ft-bgs). The fill is characterized by gray-brown sands mixed with varying amounts of brick, concrete, asphalt, and ash. The fill may have been used to raise the site elevation to its current configuration. A brown sand layer is present beneath the fill layer. This layer contains varying amounts of clayey silt and gravel that extent to bedrock. The depth of bedrock at the site appears to vary significantly from 30 ft-bgs within the northeast portion of the site to greater than 55 ft-bgs in the southwest portion of the site.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	10/25/10 - Caller believes there is a loose connection between the tanks. Tanks to be uncover, repair and retest. Westchester County DOH will conduct follow up since tanks are PBS regulated. KAB 12/13/10

WHITE PLAINS HOUSING AUTHORITY (Continued) **S104509303**

Tanks were separated and retested. Tank 1 passed. Tank 2 (tank to the right when facing the bldg) failed with bubbling as per phone call from Kathy Morgan, US Tank Tech...mm 7/5/11 as per WCDOH White Plains- ttf 10/25/10. Tank passed isolation test. Lines replaced with no contamination observed. NFA JO'M 7/22/11: Received the retest results from US Tank Tech - will be entered into eDocs. NFA. jod

DEC Memo:	4/11/12: Former PBS Facility, Mitchell Place Garage. Barbara McDonald from WCDOH reports all USTs were reportedly removed when the site was deregulated. She will follow up with owner and caller, then update DEC. jod 07/31/12 Northeast Environmental submitted a soil remediation report. They reported that they unearthed a 1000 gallon fuel oil tank. More than 60% of the tank was under the building making removal impossible. The soil immediately beneath the tank was impacted but left in place. All surrounding soils were removed. A gw monitoring well was installed in the vicinity of the tank and no contaminants were detected. NE Environmental recommended removing any remaining impacted soil once the building is demolished. NFA TG
Remarks:	cleanup pending - tank under foundation of building

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	8/22/22 - Street level underground transformer vault is leaking dielectric fluid. The oil is entering an adjacent building into their storage room then into a Con Ed network protector room which is directly below. Unknown volume lost and leak rate. The 3 vaults nearby are being inspected. Samples have been taken and investigation of the source is ongoing. EMIS #287176. JMG 09/06/22 Latest EMIS 287176/5 loaded into DecDocs. Oil has 9ppm PCB. TG 9/13/2022 11:30 AM BW Environmental Ops Operating Supervisor Charles D'Alisera (48339) reported another area, 3rd level of the parking garage storage area was impacted with 1 gal of possible transformer oil. he will take a PCB and OIL ID sample, COC NT66547. Slote, Richard 9/13/2022 12:06 PM On 09/13/2022 at 10;30, Clean Harbors crew cleaned Network protect 9521 with simple green and absorbent. Clean Harbors vactor removed 250 pounds of waste to be disposed at Clean Earth of North Jersey under BOL 1200050. Khwalsingh, Taniki 9/15/2022 3:37 PM On 9/13/22 while

A T & T (Continued) **1000872181**

cleaning bus compartments at 360
Hamilton Ave under EMIS 287176 two maintenance workers from AT&T approached A. Olivet and stated
they found oil in there storage room on level B3. Mr. Olivet when with the two maintenance workers
to check on the spill while I continue cleaning the bus compartments. Mr. Olivet came back and
stated to me we will need to sample the spill. When we finish cleaning the bus compartments we went
with the two maintenance works to take samples. I took samples for oil ID & PCB s. We told the
maintenance crew to give us a day or two for the sample results to come back and if it is our oil
we will clean it. On 9/14/22 I received a call from Charlene Miraglia telling me she had an
environmental contractor come in and do the cleanup and asking me how AT&T can get reimburse .
Results came back under COC as Transformer oil and 7 PPM. Baxter, Brandon 9/23/2022 11:41 AM Clean
Harbors crews removed all oily debris from storage room and double washed floor and ceiling with
simple green. Generated one 20 yard dumpster .This is a update still need to remove transformer
from V9521 and clean it to close spill. TM replacement is schedule for 9/25/22 Blaich, Christopher
12/08/22 See EMIS report in decdocs for the cleanup details. NFA> TG

Remarks: Oil is on street level from a vault and leaked to a storage facility room inside a building and leaking to a network protector directly below the facility room cleanup pending

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	9/24/15 Spoke to Kathy Morgan at TT. Mr. Tirone is the buyer. Owner is unknown. dw 2/06/19: I spoke with Kathy Morgan at US Tank Tech, she pulled the file on this TTF. She states there is a note on the file indicating #6 and #8 Chester Ave were together on one parcel. She states #8 had an out of service 1K gallon underground fuel tank at the time they tested #6. She believes #6 was still in service at the time they tested it for a prospective buyer. Tank failed with hissing, may have been an ullage failure. US Tank Tech did not test #8 tank. They only other info provided is that this property was a Robison customer at the time of the test and Robison was notified of the failure. US Tank Tech forwarded a site diagram showing the location of the UST at #6. There was a direct fill in the center of the front yard and a remote curb fill that was capped. Diagram will be entered into DecDocs. jod I then spoke to Tony Magnotta of the White Plains Bldg Dept. He is checking his files and will forward any information on permits that may have been filed for UST removals at this property. jod 2/06/19: White Plains Bldg Dept issued a permit for removal of USTs at this property in October of 2018. Certificate of completion was issued by the Bldg Dept on Dec 20, 2018. Work was performed by Madison Environmental. Permit and Certificate scanned into DecDocs. jod 2/07/19: I sent a message to Joe Tomasulo of Madison Environmental. He states they removed both tanks. He will forward soil sample results. He states he was never informed about the tightness test failure or the open spill number. Sample results from Madison indicate some SVOC contamination below CP-51 Guidance values. Samples will be entered into DecDocs. I left a message with Joe Tomasulo stating I will need more information on the removal of these USTs. jod 2/08/19: I spoke to Joe at Madison. He has forwarded the sample results for the UST removal at 8 Chester as well. He states neither tank was leaking. The two buidings are currently part of a construction project and are being demo'ed. Joe states White Plains Buildning Dept was onsite to inspect the removals. I also spoke with Tony Magnotta at the Bldg Dept again. He confirms the USTs and the excavations were inspected by his Dept, no evidence of any

REAL ESTATE - TTF (Continued) **S118263506**

leak or release was noted. Photos and additional sample results in DecDocs. Based upon the information received, no further action is required at this time. jod

Record Updated Date:	06/11/2024
Update By:	SJMCCAGU
Site Description:	Location: The Project Site is located on South Lexington Avenue, south of Quarropas Street (see Figure 1) and is part of White Plains Tax Block 7, Section 125.83, part of Lot 1 in White Plains, Westchester County, New York. The Site is part of a multi-story apartment building complex identified as Brookfield Commons or Winbrook. The Winbrook property is bounded by Quarropas Street and Fisher Court to the north, East Post Road to the south, MLK Blvd to the east, and South Lexington Avenue to the west. The Project Site comprises approximately 1.284-acres of the Winbrook property, and includes the nine-story apartment building, south-adjacent parking lot, and landscaping. Site Features: The approximately 1.284-acre Site is developed with a vacant nine-story apartment building with a basement and a south-adjacent parking lot. The building is surrounded by lawns and asphalt-paved walkways. Current Zoning and Land Use: The Project Site is located within the B3 and RM-0.35 Zoning Districts, and the Central Parking Area (CPA) of the City of White Plains. The Phase 3 portion of the campus is located entirely within the B3 Zoning District. Land uses immediately to the north of the Project Site include residential uses, followed by institutional and government uses; to the south is retail and the White Plains Hospital, farther to the south; residential uses, followed by commercial and institutional uses to the east; and commercial and residential uses to the west. Overall, the surrounding area is generally built out with a mix of institutional/governmental,

BROOKFIELD COMMONS PHASE 3 (Continued) **S120700630**

residential, community, and commercial uses. The proposed project, a 174-unit multi-family building with a height of 11-stories, will be seeking a Special Permit from the Common Council for height. As a multi-family building, the Proposed Project is a Permitted Principal Use in the B-3 Zoning District requiring Site Plan approval from the Common Council. In addition, the proposed project requires City of White Plains Common Council site plan approval and a special permit under Section 5.3, Footnote (X) of the Zoning Ordinance to permit the building to be constructed to a height of 11 stories, or approximately 125 feet. Past Uses of the Site: Historic Sanborn fire insurance maps indicated the Property was vacant as early as 1900. Between 1900 and 1930, the Property was developed with small residential buildings and associated garages, multiple three to four-story apartment buildings, an upholsterer and an auto repair shop. These structures were demolished for construction of the existing apartment building and grounds, which were constructed in 1949-1950 as part of the Winbrook housing complex. The surrounding area was primarily residential in the early 1900 s, with commercial uses shown by 1911, and gasoline filling stations and auto-related uses shown by 1930. The White Plains Hospital was shown on the south-adjacent block by 1911, and subsequently expanded to cover a larger portion of this block. An undertaker was shown by 1950, and drycleaners were shown by 1987. Potential uses of concern on or in close proximity to the Property included: auto repair and an upholsterer on the Property, and nearby filling stations and stores with gasoline USTs, dry cleaners, the White Plains Hospital, auto sales, auto and bicycle repair shops, a vulcanizing (tire conditioning) facility, an undertaker, sheet metal works, and a printer. Site Geology and Hydrogeology: The Property is located at the southern end of a topographic depression, with surrounding land sloping slightly down toward it from the southeast and southwest. Based on reports compiled by the U.S. Geological Survey (White Plains, NY Quadrangle), the Property is approximately 200 feet above the North American Vertical Datum of 1988, an approximation of mean sea level. During a 2021 Subsurface (Phase II) Investigation, groundwater was typically observed at depths ranging from approximately 4 to 10 feet below grade and is presumed to flow in a northwesterly direction toward the Bronx River, located approximately 1,600 feet away. Actual groundwater flow at the Property can be affected by many factors, including past filling activities; underground utilities; other subsurface openings or obstructions such as basements; and other factors beyond the scope of this study. According to the 2014 Annual Water Quality Report prepared by the City of White Plains Department of Public Works, groundwater supply wells formerly providing potable water for White Plains were decommissioned in 2009. The City of White Plains was subsequently supplied with potable water from a reservoir in the NYC potable water supply system. Based on the previous subsurface investigation completed at the Site, the stratigraphy beneath the Site consisted of historic fill material (sand, gravel, silt, concrete, brick, glass, and asphalt) to approximately 6 feet below grade, underlain by apparent native soils (silt, peat, sand, clay and gravel) to the terminus of the borings (maximum of 15 feet bgs).

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the

DEC Memo:	11-25-09 Tank top is 103 in below grade. Test was done in relation to WCHD NOHC. NE Environmental is handling compliance issues. jc 12/10/09 -- According to WCDOH: They re in our hearing process right now. Major violations include no corrosion protection and no leak detection. They re claiming they don t have to come into compliance because White Plains issued them a certificate that everything was in compliance when the tank was installed in 1990. They re not accepting

COMMERCIAL (Continued) **S102153972**

	our explanation that the certificate only applies to White Plains building code. Because the tank is buried so deep, it will be a hardship for them to come into compliance. And The case was adjourned for them to prove compliance. If they can get proper documentation, excavation may not be necessary. They re not performing leak monitoring, at least they re not maintaining any documentation. We don t know if the tank is single- or double-walled because the interstitial port is probably not to grade. They have an ATG but there s no proof that it s performing interstitial monitoring. They need to get a contractor to determine what they ve got since we re not accepting the proof from White Plains Bldg Dept. Resolution to be determined in January, maybe. ELM 1/25/10: See eDocs for 12-31-09 letter from WCDOH/PBS - requiring additional action. jod 3/4/10: As per an e-mail recived from Chris Lalak of WCDOH dated 2-16-10, this tank was retested and passed. E-mail entered into eDocs. Based upon the information provided, DEC requires no further action at this time. jod
Remarks:	caller reporting tank test failure on a 10000 gallon ust. caller reports tank is deep, fill pipe is 103 ft long. clean up pending.

DEC Memo:	8/10/11 - During a tank test of a 20K UST, No. 6 fuel oil was discovered in the sump. Caller is scheduling for 8/11/11: I responded to the location yesterday. I first checked outfall at Bronx River and no oil or sheen was noted. I spoke with Ray Hilyer, Elite was scheduled to test the tank last week and did not after finding an uncapped feed line. Ray states he notified WCDOH Wayne Schneider. Elite returned yesterday and found a large quantitiy of #6 Oil in a manway sump next to the UST. I met with Hospital Engineer Bob Biddiscombe and observed the oil in the sump. He states it is contained within the secondary containment and stated Elite was en route to vac it out. I again contacted Elite, they have not been hired. Bob Biddiscombe spoke with Elite via phone directly while I was there. Elite will be there first thing in the morning. No oil was observed in the basement sump where previous major spills have occurred. Mr Biddiscombe stated the sump has been re-piped, and now discharges to the sanitary sewer instead of the storm drain. WCDOH will follow up. Chris Lalak is enroute this morning to confirm the sump has been vacuumed out and investigation will continue. jod *Chris Lalak reports that the manway has still not been vacuumed out this morning. Email update from Chris: Lalak, Chris 8/11/2011 11:52 AM They still didn't pump it out Robert Biddiscombe was going to call Elite or Island pump and tank to get it pumped. He doesn't know if it is a contained sump. I gave him 1 week to TT tank and lines. 1 month for env. Investigation and. pump it out today and check daily. I also stated if it is visually found that the sump is leaking an immediate investigation is needed. jod 8/12/11: Chris Lalak reports Envirowaste completed pump out. Further investigation required. jod 10/16/12: See letter from Chris Lalak of WCDoH in EDocs. jod 5/30/13: Report from Elite dated Jan 14th 2013 entered into Edocs. Message sent to Chris Lalak requesting status report. jod 040417- Email, This spill started on 2009 with 6 oil entering a basement Sump. The sump apparently collects water the buildings footing drains. White Plains hospital is a huge urban hospital complex, occupying a full city block. The spill was determined to be from piping leaks associate with two old 6

WHITE PLAINS HOSPITAL CENTER (Continued) **S104284805**

oil tanks. Tank 1 (20K ust
was abandoned in place by Castlton). Removal of this tank was not possible. Free product was
encountered around this tank. Castlton installed a monitoring/recovery well thru the tank. The well
is identified as 15 . Free product was recovered from the well, into a holding tank. The well was
then sampled 4 times 2014/2015. Some minor volatile and semi-volatiles are still present. The
highest is 29 PPB pyrene. MW number 4 is located next to the abandoned tank and was sampled at the
same time and was essentially clean. Tank 2 was removed by Elite. (the other old 20K UST) Royal
remediated the sump for approximately 2 years.(2009-2010) Hydro Environmental Technologies (HETI)
performed a GW monitoring investigation in 2012. The Hospital has been cooperatively remediating a
very difficult spill. No oil has been found in the sump since 2013.
The monitoring/recovery well
installed thru the 20 K 6 oil UST, (and thru the concrete Pads) has been substantially remediated.
Pristine remediation is not possible in this case. Well sampling performed by Castlton in 2014 and
2015 is attached. The hospital is located in an urban city with no drinking water wells near by.
The abandoned UST has been filled in with slurry Concrete except for the recovery well. It could
not be removed. NFA- RDB

Remarks: sump is full of oil/investigation underway

DEC Memo:	8/6/20 White Plains Hospital, PBS #3-177148. A 20k-gal #6 Fuel Oil UST was previously closed-in-place in 2013 by Castlton. The hospital says it's Tank #1, but based on PBS record it looks like Tank #2. At the time of closure, a 18 dewatering well was installed and the tank was filled with K-Crete flowable fill. The Hospital is currently doing major construction and their engineering department opened the dewatering well manhole and observed product. There are two sumps within 20 ft and no impact observed in either sump. Bill Jacobson from Castlton is on-site now. They will mobilize a vac truck to remove product and water from the dewatering well, but the Hospital needs to move a lot of equipment first to make room for the vac truck and it might not be accessible until tomorrow. Tank could not be removed because it is beneath foundations of a 5-story and a 6-story building. JG 08-24-20 Rec'd closure report from Castlton. BTR 08-27-20 Closure report reviewed. Castlton removed approximately 2,200 gallons of petroleum and water mixture from the recovery well. The last round of sampling on 08/17 indicated there were no detections of VOCs in the recovery well. Oil absorbing snares were placed in the recovery well and were removed at the end of the project for disposal. A nearby monitoring well MW-4 was tested and at no point during the project were VOCs detected. NFA. BTR
Remarks:	Contained to put...cleanup pending

DEC Memo:	Spoke to Jeff at Envirotrac. Nearby MW has approx. one inch of product. WCHD was on site for removal. Cleanup is ongoing. Groundwater is shallow. DT 6/3/10 7/16/10 WCDOH Reviewed TCR. Site has groundwater contamination and will do quarterly monitoring. First report due 11/10. JO'M 1/19/11 as per WCDOH Sent letter 1/19/11 requiring quarterly groundwater monitoring. Results to be reviewed after one year. JO'M 3/18/11 First Quartly report received and reviewed continue monitoring. JO'M 1/5/12: Barbara McDonlad of WCDOH PBS requiring an additional one year of ground water monitoring. Letter dated 1-3-12 entered into eDocs. Email sent to Barbara McDonald, inquiring status of two additional open spill at the same location. jod 4/30/12: Barbara McDonald forwarded me the most recent set of ground water sampling data. We then discussed the sampling history. jod 5/3/12: Barbara McDonald recommending no further action. I had recommended the same to her. DEC requires no further action at this time. jod
Remarks:	5000gal ust/tank is currently being removed

AUTOMOBILE CLUB OF NEW YORK (Continued) **S105057848**

Record Add: 12/08/2006
Record Upd: 03/20/2023
Updated By: AMOMOROG
Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.
Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.
Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.
Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to

AUTOMOBILE CLUB OF NEW YORK (Continued) **S105057848**

prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east. Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Control Type: INST
Dt record added: 10/15/2015
Dt rec updated: 01/16/2024
Updated By: RWRICHAR
Site Code: 374633
Site Description: Location: The Automobile Club of New York site is located on the northwest side of Westmoreland Avenue, approximately 100 feet west of the intersection of Westmoreland Avenue and Home Place in the City of White Plains. The site is approximately 0.2 acres Site Features: The site is essentially flat and includes a one-story, concrete block, L-shaped occupied building that covers approximately 75 percent of the site. The northeastern portion of the property is covered with an asphalt parking area, while the western portion of the site contains a gravel parking area. The Bronx River is located approximately 700 feet to the northwest of the site. Current Zoning and Land Use: The site is zoned light industrial and is currently used as an AAA of NY auto-repair shop, which utilizes the building for auto repairs and exterior detailing. Past Use of the Site: A former on-site dry well and former fuel and waste oil underground storage tanks (USTs) appear to be the sources of on-site contamination. There also appears to be an off-site source of 1,1,1 TCA entering the property from the east.

AUTOMOBILE CLUB OF NEW YORK (Continued) **S105057848**

Site Geology and Hydrogeology: The site consists of approximately 2 feet of fill, represented by dark gray to black fine coarse sand and gravel with fragments of coal, underlined by light gray to yellow-brown, well sorted fine-medium sand to a depth of 40 feet below grade. Groundwater depth at the site ranges from approximately 25 to 29 feet below grade. Groundwater flows to the north-northwest.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. The primary contaminants of concern include Tetrachloroethene (PCE) and related daughter products and residual petroleum contamination in shallow site soils, groundwater and/or soil vapor. An unknown off-site source of 1,1,1 TCA is also impacting site groundwater. Residual contamination in the soil, groundwater and soil vapor are being managed under a Site Management Plan.

Health Problem: Since some contaminated soils remain at the site below the building foundation or pavement, people will not come in contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater in the area is not used for drinking or other purposes and the site is served by a public water supply. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. If the site is redeveloped, the need to take measures to prevent soil vapor intrusion will be re-evaluated. There are no off-site soil vapor concerns associated with this site. However, there is the potential for soil vapor intrusion concerns in off-site buildings due to the presence of off-site contamination not related to this site.

DEC Memo:	01/04/07 Met with David Visaggi and the homeowner. The homeowner observed that the 275 gallon tank began to leak after the last delivery. He called the oil company who responded and put a magnetic patch on the tank until temporary tank could be set up and the oil transferred into that tank. A minor amount of oil leaked onto the concrete floor beneath the tank. Almeida oil will remove the tank and clean the floor to get rid of the oil odor. TG 03/30/07 David Vissagi rpeorted that the tank was removed and the homeowner cleaned the concrete himself. NFA TG
Remarks:	ABOVE GROUND IN CRAWL SPACE: STILL INVESTIGATING WHERE LEAKING: LEAKED ON A CEMENT BASE: STOPPED LEAKING AND IS CONTAINED AND A TEMP TANK HAS BEEN SET UP:

DEC Memo:	4-1-09: V.Mc.^ DAVID DRASHOW/PATRIOT: UST is 5K, as per Mr.Drashow. To authorize Luzon to proceed with repair of line and retest of system. 5/14/09: During investigation the tank was found to be 7,500 gallons in size. Tank was out of service and partly filled with sand. Reps from Luzon, Lane Engineering and the White Plains Bldg Dept met on site 5-18-09. It was determined the tank cannot be removed without causing severe damage to the structure. Accessible contaminated soil will be remediated and the tank will be abandoned in place. jod 06/24/09 Luzon Environmental Services submitted a Underground Storage Tank Closure Report. Structural concerns prevented the removal of the tank, so the WCHD allowed the oil tank to be cleaned and abandoned in place. Recovery well was placed in an area where oil was seeping from beneath the tank and will be monitored for a year. TG 12/14/09: Well data including sample results from November 19 submitted by Luzon. Further vaccing of well and additional sampling necessary. Results to be entered into eDocs. jod 09/06/11 GW sampling report submitted by Luzon. Report in Edocs. TG 06/02/15 Monitoring Well Sampling Event Report submitted by Northeast Environmental. VOC and SVOC levels reduced to trace levels. No further action is required. TG
Remarks:	LINE TEST FAILURE ON 10,000 GALLON VAULTED TANK, WHICH IS IN THE BASEMENT. REMOTE FILL LINE IS LEAKING UNK AMOUNT.

BROWNFIELDS:
Name: YMCA - WHITE PLAINS
Address: 250 MAMARONECK AVENUE
City,State,Zip: WHITE PLAINS, NY 10605
Program: BCP
Site Code: 612426
Acres: 1.160
HW Code: C360206
SWIS: 6017
Town: White Plains (c)
Record Added Date: 10/19/2020
Record Updated Date: 07/29/2024
Update By: AMOMOROG
Site Description: Location: The 1.16-acre site is located in a suburban, mixed use (commercial/residential) area in White Plains, New York. The property is bounded by residential properties to the west, commercial properties (retail and offices) to the north, east, and south, a church to the east, and a health clinic to the southwest. The site is located 200 feet south of the intersection of Mamaroneck Avenue and Maple Avenue. Site Features: The site has a prominent slope with elevations that decrease towards Mamaroneck Avenue to the east. The site is currently vacant with no existing buildings. Current Zoning and Land Use: The site is zoned BR-2 (Business Residential-2). The zoning allows for both commercial and multi-family dwelling use. The surrounding parcels are currently zoned business residential or business. Past Use of the Site: The property has historically been used for residential purposes from at least 1905 and up until at least 1911. By 1930, the White Plains YMCA, a recreational facility, occupied the existing building on the northern portion of the site with a small annex and boarding house on the southern portion of the site. Around 1971, the annex and boarding house were replaced with a 6-story building that was razed in 2021. Past uses of the site that led to the site becoming contaminated included the storage of heating oil for the YMCA in at least one underground storage tank (UST). A 12,000-gallon UST was removed in 2015 which included the removal of petroleum impacted soils adjacent to the UST, but not adjacent to the fuel oil lines where a leak appeared to occur. In 2018 oil was observed coming into the basement and reported as spill number 1709377. The spill is being addressed as part of the brownfield remediation. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill from grade ranging down to approximately 3 to 10 feet below ground surface (bgs.) The unconsolidated material beneath the urban fill material is composed of dense, grey fine-grained sands, silty sands, and clayey sands with gravel. The depth to bedrock varies between 30 to 50 feet bgs with a slope that generally matches surface topography. The groundwater table was encountered at approximately 6 to 12 feet bgs. Groundwater flow direction follows the topography and generally flows to the east.

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

Env Problem:

Nature and extent of contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern are certain VOCs, SVOCs, metals, and per- and poly fluoroalkyl substances. Soil: To characterize surface and subsurface soil conditions, 60 samples for VOCs and SVOCs and 52 samples for metals, pesticides/PCBs and PFAS, were collected from 26 soil borings. N-Propylbenzene was detected in soil at concentrations up to 15 parts per million (ppm), exceeding the unrestricted use soil cleanup objective (UUSCO) of 3.9 ppm. Sec-Butylbenzene was detected in soil at concentrations up to 18 ppm, exceeding the UUSCO of 11 ppm. The highest concentrations of these VOCs were found in the central-eastern portion of the site at a depth of approximately five feet below ground surface (bgs). Benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene were detected in soil at concentrations up to 2.22 ppm, 3.09 ppm and 2.69 ppm respectively, exceeding the UUSCO of 1 ppm for each compound. Indeno(1,2,3-cd)pyrene was detected at concentrations up to 2.35 ppm, exceeding the UUSCO of 0.5 ppm. The highest concentration of these SVOCs was found in the central-western portion of the site at a depth of approximately two feet bgs. Lead was detected in soil at concentrations up to 483 ppm, exceeding the UUSCO of 63 ppm. Mercury was detected at concentrations up to 0.227 ppm, exceeding the UUSCO of 0.18 ppm. Copper was detected at concentrations up to 4,180 ppm, exceeding the UUSCO of 50 ppm. Trivalent chromium was detected at concentrations up to 153 ppm, exceeding the UUSCO of 30 ppm. The highest concentrations of metals were found in the sump pit located in the central-eastern portion of the site. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic (PFOS) were detected in soil at concentrations up to 1.43 and 9.43 parts per billion (ppb), respectively, exceeding the proposed UUSCO of 0.66 ppb and 0.88 ppb, respectively. Data do not indicate any off-site impacts in soil related to this site. Groundwater: From 16 monitoring wells, 27 groundwater samples were collected for VOC and SVOC analysis. 21 groundwater samples were collected for metals, pesticides/PCBs and PFAS. Benzene was detected in groundwater at concentrations up to 5.66 parts per billion (ppb), exceeding the Class GA standard (standard) of 1 ppb. N-Propylbenzene was detected in groundwater at concentrations up to 32.2 ppb (standard= 5 ppb). Sec-Butylbenzene was detected in groundwater at concentrations up to 18.7 ppb (standard= 5 ppb). N-Butylbenzene was detected in groundwater at concentrations up to 11 ppb (standard= 5 ppb). Isopropylbenzene was found in groundwater at concentrations up to 25.4 ppb (standard= 5 ppb). Naphthalene was found in groundwater at concentrations up to 25.4 ppb (guidance value = 10 ppb). Benzo(a)pyrene was detected up to 0.13 ppb (standard = not detected). Benzo(a)anthracene was detected up to 0.14 ppb, benzo(b)fluoranthene was detected up to 0.108 ppb, and chrysene was detected at 0.179; the guidance value for each of these compounds is 0.002 ppb. In general, these exceedances were in the vicinity of the former underground petroleum storage tank. Dissolved tri-valent chromium was detected in groundwater up to 10 ppb, below the standard of 50 ppb. Dissolved copper and lead were not detected in groundwater; mercury was not detected in groundwater. PFOA and PFOS were detected in groundwater samples at concentrations up to 48 and 86 parts per trillion (ppt), respectively, exceeding the 10 ppt drinking water maximum contaminant

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

	level for each compound. PFOA and PFOS were present in on-site monitoring wells as well as in upgradient monitoring wells, suggesting an off-site contribution. Groundwater analyzed from monitoring wells along the downgradient edge of the site did not exceed the groundwater standards or guidance values for the contaminants of concern with the exception of PFOA and PFOS. The finding of these compounds in groundwater upgradient, as well as in site soil, suggest both on-site and off-site contributions. Soil Vapor: Soil vapor samples were collected from 10 locations throughout the site at a depth of two feet above the groundwater table. Petroleum related compounds, such as benzene (maximum 55.2 micrograms per cubic meter (mcg/m3), toluene (maximum 222 mcg/m3), ethylbenzene (maximum 24.2 mcg/m3), and xylenes (maximum 140.9 mcg/m3), were detected in each soil vapor sample. Carbon tetrachloride was detected up to 0.605 mcg/m3, cis-1,2-dichloroethene was detected up to 1.33 mcg/m3, trichloroethene was detected up to 6 mcg/m3 and tetrachloroethene was detected up to 47 mcg/m3. Data do not indicate any off-site impacts in soil vapor related to this site.
Health Problem:	Since the site is completely fenced and covered by asphalt or concrete, people will not come in contact with site related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant , the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

DEC Memo:	1/12/18 US Tank was called to try to find leaking UST at YMCA Oil was coming into the basement through the back wall. No evidence of buried tank found. A tank was removed at the front of the property years ago. Sheen was noticed at the back of the property coming up from cracks in the asphalt, believed to be coming from a retaining wall. Other side of wall is condos / townhouses. US Tank told YMCA to call Northeast, their usual cleanup contractor, to put booms in place in storm drain at parking lot, sump pump, and cubby of basement to prevent further oil impact. Rain is causing oil to sheen on parking lot, making it easy to trace path from property behind them. Spoke to Tom @ YMCA - confirmed that Northeast Env. was called, did boom the sump in the basement, the storm drain at back of parking lot, and the pipe cubby in basement were evidence of residual oil was found. Northeast would like to speak to DEC for advice on how to proceed. ga 01/17/18 Received a report prepared by US Tank Tech describing their effort to locate a tank on the property. No tank was located. Report in DecDocs. TG 02/07/18 Inspected the site on a rainy day. No sign of oil observed at the time of the inspection. TG 04/16/18 YMCA hired HydroEnvironmental Solutions to conduct an investigation both outside in the rear parking lot and inside the basement to try to determine where the oil is originating. All outside soil boring locations were clean, eliminating the idea that there is an offsite source. Report concludes that the oil is from the numerous past spills that have occurred in their basement. See report in DecDocs. TG 09/25/18 Spoke to Tom Hay. He stated that the building may be sold in the near future. GW in the basement is being pumped through an oil water separator before being discharged. Little if any oil is accumulating in the separator according to Tom. TG 07/01/20 The YMCA had no funds to do any type of cleanup and was sold to a developer. It is anticipated that the cleanup will be performed once the building is razed. TG 3/25/21: BCP site YMCA - White Plains (C360206) submitted for this spill (PM John

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

Spellman. Site will be tracked under that code and this spill closed upon receipt of COC. MDK
6/12/2024: The building has been demolished. The remediation is being handled through the
Brownfield Program. See BCP C360206 for further information. This spill file closed at this time.
jod

Remarks: leaking at base of wall - in basement of YMCA unknown were it is coming from - off site clean up pending crew.

DEC Memo:	1/12/18 US Tank was called to try to find leaking UST at YMCA Oil was coming into the basement through the back wall. No evidence of buried tank found. A tank was removed at the front of the property years ago. Sheen was noticed at the back of the property coming up from cracks in the

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

asphalt, believed to be coming from a retaining wall. Other side of wall is condos / townhouses. US Tank told YMCA to call Northeast, their usual cleanup contractor, to put booms in place in storm drain at parking lot, sump pump, and cubby of basement to prevent further oil impact. Rain is causing oil to sheen on parking lot, making it easy to trace path from property behind them. Spoke to Tom @ YMCA - confirmed that Northeast Env. was called, did boom the sump in the basement, the storm drain at back of parking lot, and the pipe cubby in basement were evidence of residual oil was found. Northeast would like to speak to DEC for advice on how to proceed. ga 01/17/18 Received a report prepared by US Tank Tech describing their effort to locate a tank on the property. No tank was located. Report in DecDocs. TG 02/07/18 Inspected the site on a rainy day. No sign of oil observed at the time of the inspection. TG 04/16/18 YMCA hired HydroEnvironmental Solutions to conduct an investigation both outside in the rear parking lot and inside the basement to try to determine where the oil is originating. All outside soil boring locations were clean, eliminating the idea that there is an offsite source. Report concludes that the oil is from the numerous past spills that have occurred in their basement. See report in DecDocs. TG 09/25/18 Spoke to Tom Hay. He stated that the building may be sold in the near future. GW in the basement is being pumped through an oil water separator before being discharged. Little if any oil is accumulating in the separator according to Tom. TG 07/01/20 The YMCA had no funds to do any type of cleanup and was sold to a developer. It is anticipated that the cleanup will be performed once the building is razed. TG 3/25/21: BCP site YMCA - White Plains (C360206) submitted for this spill (PM John Spellman. PFAS 3:

Name:	YMCA - WHITE PLAINS
Address:	250 MAMARONECK AVENUE
City,State,Zip:	WHITE PLAINS, NY 10605
Site Code:	612426
HW Code:	C360206
Program:	BCP
Class Code:	A
Region:	3
Acres:	1.160
Date Record Added:	10/19/2020
Date Record Updated:	07/29/2024
Water Quantity:	UNKNOWN
Updated By:	AMOMOROG
Site Description:	Location: The 1.16-acre site is located in a suburban, mixed use (commercial/residential) area in White Plains, New York. The property is bounded by residential properties to the west, commercial properties (retail and offices) to the north, east, and south, a church to the east, and a health clinic to the southwest. The site is located 200 feet south of the intersection of Mamaroneck Avenue and Maple Avenue. Site Features: The site has a prominent slope with elevations that decrease towards Mamaroneck Avenue to the east. The site is currently vacant with no existing buildings. Current Zoning and Land Use: The site is zoned BR-2 (Business Residential-2). The zoning allows for both commercial and multi-family dwelling use. The surrounding parcels are currently zoned business residential or business. Past Use of the Site: The property has historically been used for residential purposes from at least 1905 and up until at least 1911. By 1930, the White Plains YMCA, a recreational facility,

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

occupied the existing building on the northern portion of the site with a small annex and boarding house on the southern portion of the site. Around 1971, the annex and boarding house were replaced with a 6-story building that was razed in 2021. Past uses of the site that led to the site becoming contaminated included the storage of heating oil for the YMCA in at least one underground storage tank (UST). A 12,000-gallon UST was removed in 2015 which included the removal of petroleum impacted soils adjacent to the UST, but not adjacent to the fuel oil lines where a leak appeared to occur. In 2018 oil was observed coming into the basement and reported as spill number 1709377. The spill is being addressed as part of the brownfield remediation. Site Geology and Hydrogeology: The stratigraphy of the site, from the surface down, consists primarily of urban fill from grade ranging down to approximately 3 to 10 feet below ground surface (bgs.) The unconsolidated material beneath the urban fill material is composed of dense, grey fine-grained sands, silty sands, and clayey sands with gravel. The depth to bedrock varies between 30 to 50 feet bgs with a slope that generally matches surface topography. The groundwater table was encountered at approximately 6 to 12 feet bgs. Groundwater flow direction follows the topography and generally flows to the east.

Summary:

Since the site is completely fenced and covered by asphalt or concrete, people will not come in contact with site related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant , the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Summary:

Nature and extent of contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern are certain VOCs, SVOCs, metals, and per- and poly fluoroalkyl substances. Soil: To characterize surface and subsurface soil conditions, 60 samples for VOCs and SVOCs and 52 samples for metals, pesticides/PCBs and PFAS, were collected from 26 soil borings. N-Propylbenzene was detected in soil at concentrations up to 15 parts per million (ppm), exceeding the unrestricted use soil cleanup objective (UUSCO) of 3.9 ppm. Sec-Butylbenzene was detected in soil at concentrations up to 18 ppm, exceeding the UUSCO of 11 ppm. The highest concentrations of these VOCs were found in the central-eastern portion of the site at a depth of approximately five feet below ground surface (bgs). Benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene were detected in soil at concentrations up to 2.22 ppm, 3.09 ppm and 2.69 ppm respectively, exceeding the UUSCO of 1 ppm for each compound. Indeno(1,2,3-cd)pyrene was detected at

YMCA OF CENTRAL & NORTHERN WESTCHESTER (Continued) **S105058672**

concentrations up to 2.35 ppm, exceeding the UUSCO of 0.5 ppm. The highest concentration of these SVOCs was found in the central-western portion of the site at a depth of approximately two feet bgs. Lead was detected in soil at concentrations up to 483 ppm, exceeding the UUSCO of 63 ppm. Mercury was detected at concentrations up to 0.227 ppm, exceeding the UUSCO of 0.18 ppm. Copper was detected at concentrations up to 4,180 ppm, exceeding the UUSCO of 50 ppm. Trivalent chromium was detected at concentrations up to 153 ppm, exceeding the UUSCO of 30 ppm. The highest concentrations of metals were found in the sump pit located in the central-eastern portion of the site. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic (PFOS) were detected in soil at concentrations up to 1.43 and 9.43 parts per billion (ppb), respectively, exceeding the proposed UUSCO of 0.66 ppb and 0.88 ppb, respectively. Data do not indicate any off-site impacts in soil related to this site. Groundwater: From 16 monitoring wells, 27 groundwater samples were collected for VOC and SVOC analysis. 21 groundwater samples were collected for metals, pesticides/PCBs and PFAS. Benzene was detected in groundwater at concentrations up to 5.66 parts per billion (ppb), exceeding the Class GA standard (standard) of 1 ppb. N-Propylbenzene was detected in groundwater at concentrations up to 32.2 ppb (standard= 5 ppb). Sec-Butylbenzene was detected in groundwater at concentrations up to 18.7 ppb (standard= 5 ppb). N-Butylbenzene was detected in groundwater at concentrations up to 11 ppb (standard= 5 ppb). Isopropylbenzene was found in groundwater at concentrations up to 25.4 ppb (standard= 5 ppb). Naphthalene was found in groundwater at concentrations up to 25.4 ppb (guidance value = 10 ppb). Benzo(a)pyrene was detected up to 0.13 ppb (standard = not detected). Benzo(a)anthracene was detected up to 0.14 ppb, benzo(b)fluoranthene was detected up to 0.108 ppb, and chrysene was detected at 0.179; the guidance value for each of these compounds is 0.002 ppb. In general, these exceedances were in the vicinity of the former underground petroleum storage tank. Dissolved tri-valent chromium was detected in groundwater up to 10 ppb, below the standard of 50 ppb. Dissolved copper and lead were not detected in groundwater; mercury was not detected in groundwater. PFOA and PFOS were detected in groundwater samples at concentrations up to 48 and 86 parts per trillion (ppt), respectively, exceeding the 10 ppt drinking water maximum contaminant level for each compound. PFOA and PFOS were present in on-site monitoring wells as well as in upgradient monitoring wells, suggesting an off-site contribution. Groundwater analyzed from monitoring wells along the downgradient edge of the site did not exceed the groundwater standards or guidance values for the contaminants of concern with the exception of PFOA and PFOS. The finding of these compounds in groundwater upgradient, as well as in site soil, suggest both on-site and off-site contributions. Soil Vapor: Soil vapor samples were collected from 10 locations throughout the site at a depth of two feet above the groundwater table. Petroleum related compounds, such as benzene (maximum 55.2 micrograms per cubic meter (mcg/m3), toluene (maximum 222 mcg/m3), ethylbenzene (maximum 24.2 mcg/m3), and xylenes (maximum 140.9 mcg/m3), were detected in each soil vapor sample. Carbon tetrachloride was detected up to 0.605 mcg/m3, cis-1,2-dichloroethene was detected up to 1.33 mcg/m3, trichloroethene was detected up to 6 mcg/m3 and tetrachloroethene was detected up to 47 mcg/m3. Data do not indicate any off-site impacts in soil vapor related to this site.

DEC Memo:	5/14/10: Core soil samples were taken around the UST showing f/o contamination. Left message with resident and explained they had to address the mattter (remove tank) ASAP. Told them to call the spill

SUBODH DESHMUKH RESIDENCE (Continued) **S110309446**

desk for more information...ra > Call back from owner. Tank was tested by his employer (Prudential?) for a pending real estate transaction. He is being relocated by his employer and they are assisting in the sale of his house. He states he already has a prospective buyer who wants to close on the house in early June. Owner has contacted his insurance carrier Travlers and was told he has no coverage for an oil leak. He is contacting ATS to try and get copies of the sample results, and states he will contact a contractor - most likely Northeast Environmental - to address the spill issue. jod 6/17/10: NES has removed the tank. Contamination extends unto the neighboring property at 37 Parkview Court. The owner does not feel he showed be responsible for the clean up over the rpoperty line. Left owner a messge requesting he call me back. jod 6/29/10: Letter from NES entered into eDocs. jod 6/30/10: I spoke with the neighbor Mrs Adele Reus at 37 Parkview 914-948-5279. She has received a copy of the access agreement from NES and will be reviewing it soon. I left my name and number in case she has any questions. jod 8/3/10: NES reports has been entered into eDocs. I confirmed with Al Cianflone of NES that all contaminated soil has been removed from the property. No further action is required at this time. jod

Remarks: Caller reporting tank test failure.

Advised him to submit documentation to close spill. jc 4/11/12 Tank was repaired by Northeast and retested. It failed again. The tank's owner is contacting Northeast to have the tank removed...mm 4/29/20: Message sent to Northeast requesting status update. jod *Northeast reports this UST was located under the city sidewalk on Paulding Street and was being used for the hotel generator. Dwayne Monaco also states the UST was replaced by Barrier Fuel. jod 4/30/20: I spoke with Wayne Jeffers of Barrier. He confirms his company removed and replaced this UST sometime in 2012 and replacing it with a double wall Stip3. He states the tank was corroded but sound, there was no contamination evident. He was unaware of the open TTF spill number so no report was submitted. Wayne forwarded a photo of the UST taken in 2012, photo will be scanned to DecDocs system at a later date. NFA required at this time. jod 10/22/2021: Photo uploaded to D2/DecDocs. jod

DEC Memo:	3-22-11 Building was demolished in Feb. There was suspected contamination in area of boiler room. While digging in that area, found contamination and unregistered 5000 gal tank. Denise H from WCHD was at site already. Contaminated soil being removed and taken to New Windsor. jc Update from WCDOH PBS: Heinzinger, Denise dmh3@westchestergov.com 11/21/2012 1:30 PM Hi John, This spill resulted from an unknown underground storage tank at an empty lot at 170 Westmoreland Avenue, White Plains. They were removing a registered 10,000 gallon ust then found this second unregistered 5,000 gallon tank. Grave samples came back high for the 5,000 so 2,237.85 tons of contaminated soil was then removed. End samples look good. -Denise Heinzinger *Based open the information received, no further action is required at this time. jod
Remarks:	an unknown tank was discovered during construction, believed to be 2000 gallons w/ either #2 or # 4 fuel, clean up and removal pending

DEC Memo: 7/26/21 called back the number for the spill caller and it continues to ring without going to voicemail. BW 07-26-21 Same as spill 2102648 for a previous line failure. Information from WCHD: TTF at PBS site 16 Lake St owners ins 16 Lake st ,WP PBS 3-123293 7500 UST from 1966 US Tank Tech failed tank. US TT reports they are hiring NEE to investigate. BTR 07-27-21 Update from NEE: Tank will be pumped dry either today or tomorrow. Tank removal pending a new contract. BTR 7/28/21: Update from Chris Lalak at WCDOH via email: 2nd TTF NEE is pumping out the tank today. 2102548 6-21-21 TTF 2103947 7-26-21 2nd TTF 16 Lake St Owners 16 Lake Street White Plains NY 10607 PBS 3-123293 7500 UST from 1966 The building is on Gas interruptible service and is running on gas. NEE is working on it Bob Lindenbaum 914-963-7400x214 Prime locations is the property mng. jod 09-21-21 Spoke to NEE. Tank has been pumped out and removal is pending new contract. BTR 4/19/2023: DEC Lead changed during spill file review. Tank is still listed as in service on current WCDOH PBS database. Will followup with County on status. jod 5/17/2023: All Boro Environmental contacted DEC Div of Water requesting approval to perform an in-place abandonment of this 7,500 gallon UST. Christopher Quintana from All Boro states he has been working with Daniel Bucci from WCDOH PBS who requested soil samples from below the UST. All Boro was referred back to the County Health Dept. Message sent to WCDOH Chris Lalak requesting an update. jod 05/25/23 Chris Lalak emailed to Chris Quintana at All Boro, The WCDOH permit to close the tank in place has been issued. That date is acceptable. What will you be filling the tank with? No inspection is required please complete the work and then submit a report of the activities. TG 10/18/24 Emailed Natasha Court asking if the spill should be closed. Natasha Court emailed the tank closure documents. Based on that information, NFA. See report in DecDocs. TG

BROWNFIELDS:

Name:	POST ROAD CORRIDOR - WHITE PLAINS - OFF-SITE
Address:	77 WEST POST ROAD
City,State,Zip:	WHITE PLAINS, NY 10606
Program:	BCP
Site Code:	544843
Acres:	Not reported
HW Code:	C360129A
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	04/07/2017
Record Updated Date:	03/28/2024
Update By:	AMOMOROG
Site Description:	Site Location: The site is located in the City of White Plains, Westchester County. To the west of the site is Rathbun Avenue and commercial properties, to the north are residential properties, to the east is South Lexington Avenue, and to the south is Maple Avenue and residential properties. Site Features: The site consists of several tax parcels adjacent to the Post Road Corridor BCP site C360129. Several commercial buildings and parking lots make up the site. Current Zoning and Land Use: The site is zoned B-3, which is a general retail district allowing retail, office and service business uses and multi-family dwellings. Surrounding land use is mixed, consisting of residential and commercial properties. Past Use of the Site: Former commercial uses at the Post Road Corridor BCP site included dry cleaners; gas stations with underground storage tanks (USTs); automobile sales and service facilities with USTs, above ground storage tanks (ASTs), hydraulic lifts, and associated parking lots; various commercial businesses and offices; and commercial parking lots. Site Geology and Hydrogeology: The site geology consists of historic fill material, native till, highly weathered bedrock. The depth to bedrock ranges from approximately 17 to 52 feet below grade. Groundwater at the site most likely ranges from 3 to 11 feet below ground surface and flows to the northeast.
Env Problem:	The on-site investigation results shows potential for off-site impact from the previous uses on-site as well as a potential upgradient source of contamination as groundwater impacted with both petroleum related hydrocarbons and chlorinated volatile organic compounds appears to be migrating on-site. Due to high concentrations of tetrachloroethene (PCE) in groundwater, the potential exists for vapor intrusion impacts in off-site buildings. An off-site investigation focused on soil vapor intrusion is on-going at this time.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Program:	BCP
Site Code:	613124
Acres:	1.826
HW Code:	C360209
SWIS:	6017
Town:	White Plains (c)
Record Added Date:	11/11/2020
Record Updated Date:	12/26/2023
Update By:	KAMALONE
Site Description:	Location: The White Plains Chrysler Car Dealership site is a 1.826-acre site located at 70 Westchester Avenue, White Plains, New York. The site is in a commercial and residential downtown neighborhood. The site is bounded by Franklin Avenue, a dense residential neighborhood, a school, a ball field, and retail businesses to the north, the White Coach Diner to the west, Westchester Avenue and the Westchester Mall to the south, and a closed car dealership to the east. Site Features: The southeastern portion of the site is currently occupied by a car dealership building which consists of a small show room and car service bays. The northern and western portion of the site consists of an asphalt parking lot for the dealership. There is a small lawn area in the front of the building along Westchester Avenue. The eastern portion of the building, which was constructed in 1925, consists of a single-story and two-story structure with small partial basement under the southeastern corner of the building. The western portion of the building, which was constructed in 1990, consists of a single-story structure with a half basement. Current Zoning and Land Use: The site is currently active and is used as a car dealership. The northern portion of site is located in a Residential Multi-Family District and southern portion is located in an Intermediate Business District zone. Therefore, half the property is zoned residential. Past Use of the Site: The site has been an active car dealership with auto repair since at least 1967. However, the on-site commercial building has been present on the site since 1925, suggesting this was an auto dealership dating back to potentially 1925. Some of the historical owner names suggest a dealership or auto related use has been on the site since at least the early 1940s. Site Geology and Hydrogeology: The site slopes from west to east. Soil consists of gray-brown fine to coarse sand with brick fragments (historic fill) with depth ranging from 0-6 feet to 0-13 feet below ground surface (bgs). The fill is underlain by brown coarse sand with trace silt and gravel to 35 feet bgs. The depth of the bedrock varies from 16 to 50 feet bgs. Groundwater is present at approximately 11 to 21 feet bgs and flows to the east-southeast.
Env Problem:	Nature and Extent of Contamination: Soil and groundwater samples were

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor, indoor air and ambient air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for site include SVOCs and metals. Soil: A total of 95 soil samples were collected from 20 soil borings installed at a maximum depth of 20 feet bgs during the remedial investigation. Several SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected sitewide. Most of the PAH contamination is present in the top 6 feet of subsurface soil. Specifically, indeno(1,2,3-cd)pyrene was detected in 12 samples out of 95 above the unrestricted soil cleanup objective (USCO) of 1 ppm (parts per million) with the maximum concentration of 220 ppm. Benzo(b)fluoranthene was detected in 11 samples out of 95 above the USCO of 1 ppm with the maximum concentration of 390 ppm. Benzo(a)anthracene, benzo(a)pyrene and chrysene were detected in 10 samples out of 95 above their respective USCO of 1 ppm with the maximum concentration of 350 ppm, 330 ppm and 320 ppm respectively. Lead exceeded the USCO of 63 ppm in 17 out of 95 samples, with a maximum concentration of 524 ppm. Chromium (maximum 65.9 ppm, USCO of 30 ppm), copper (maximum 179 ppm, USCO of 50 ppm), mercury (maximum 0.394 ppm, USCO of 0.18 ppm), nickel (maximum 61.9 ppm, USCO of 30 ppm) and zinc (maximum 360 ppm, USCO 0f 109 ppm) were also detected in a small number of samples. Perfluorooctane sulfonic acid (PFOS) was detected above its USCO of 0.88 parts per billion (ppb) in two samples with the maximum concentration of 1.39 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: A total of 20 groundwater samples were collected from 14 monitoring wells during the remedial investigation. The depth of the monitoring wells varied between 19 feet to 24 feet. Perfluorooctanoic acid (PFOA) was detected above the ambient groundwater quality guidance value of 2.7 parts per trillion (ppt) with a maximum concentration of 36.9 ppt. PFOS was detected at a maximum of 117 ppt compared to the ambient groundwater quality guidance value of 6.7 ppt. The maximum concentration of both PFOA and PFOS was detected in the southeastern corner of the site, underneath the building. PFOA and PFOS were also detected in similar concentrations in upgradient wells, thus suggesting it is likely from an off-site source. Benzo(a)anthracene (0.11 ppb maximum), benzo(b)fluoranthene (0.2 ppb maximum), and chrysene (0.12 ppb maximum), were detected above their respective ground water standard of 0.002 ppb in a small fraction of samples. Lead (259 ppb, groundwater standard of 25 ppb), chromium (283 ppb, groundwater standard of 50 ppb), and nickel (228 ppb, groundwater standard of 100 ppb) were detected in the well located upgradient along the western site boundary. Volatile organic compounds (VOCs) were not detected in any groundwater samples. Data does not indicate any off-site migration of contaminated groundwater.
Soil Vapor: A wide range of VOCs were detected in soil vapor samples collected across the site. The chlorinated VOCs carbon tetrachloride (34.9 micrograms per cubic meter [g/m3]), cis 1,2-DCE (85.2 g/m3), TCE (216 g/m3), and PCE (834 g/m3) were detected in the sample collected beneath the slab from the northeastern portion of the on-site building. Cis 1,2-DCE, TCE and PCE were not detected in the indoor air sample. Carbon tetrachloride was detected at 0.41 g/m3 in indoor air. As per the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, mitigation of the human health exposure resulting from the soil vapor intrusion for cis 1,2-DCE and

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

	TCE is required. The data does not indicate any off-site impacts in soil vapor related to this site.
Health Problem:	Direct contact with contaminants in soil is unlikely because the majority of the site is covered with a building and asphalt pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) can move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion for the current building and any future on-site development. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Site Description:	Location: The White Plains Chrysler Car Dealership site is a 1.826-acre site located at 70 Westchester Avenue, White Plains, New York. The site is in a commercial and residential downtown neighborhood. The site is bounded by Franklin Avenue, a dense residential neighborhood, a school, a ball field, and retail businesses to the north, the White Coach Diner to the west, Westchester Avenue and the Westchester Mall to the south, and a closed car dealership to the east. Site Features: The southeastern portion of the site is currently occupied by a car dealership building which consists of a small show room and car service bays. The northern and western portion of the site consists of an asphalt parking lot for the dealership. There is a small lawn area in the front of the building along Westchester Avenue. The eastern portion of the building, which was constructed in 1925, consists of a single-story and two-story structure with small partial basement under the southeastern corner of the building. The western portion of the building, which was constructed in 1990, consists of a single-story structure with a half basement. Current Zoning and Land Use: The site is currently active and is used as a car dealership. The northern portion of site is located in a Residential Multi-Family District and southern portion is located in an Intermediate Business District zone. Therefore, half the property is zoned residential. Past Use of the Site: The site has been an active car dealership with auto repair since at least 1967. However, the on-site commercial building has been present on the site since 1925, suggesting this was an auto dealership dating back to potentially 1925. Some of the historical owner names suggest a dealership or auto related use has been on the site since at least the early 1940s. Site Geology and Hydrogeology: The site slopes from west to east. Soil consists of gray-brown fine to coarse sand with brick fragments (historic fill) with depth ranging from 0-6 feet to 0-13 feet below ground surface (bgs). The fill is underlain by brown coarse sand with trace silt and gravel to 35 feet bgs. The depth of the bedrock varies from 16 to 50 feet bgs. Groundwater is present at approximately 11 to 21 feet bgs and flows to the east-southeast.
Summary:	Direct contact with contaminants in soil is unlikely because the majority of the site is covered with a building and asphalt pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil vapor (air spaces within the soil) can move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

site contaminants in indoor air due to soil vapor intrusion for the current building and any future on-site development. Environmental sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Summary:

Nature and Extent of Contamination: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), and pesticides. Soil vapor, indoor air and ambient air samples were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for site include SVOCs and metals. Soil: A total of 95 soil samples were collected from 20 soil borings installed at a maximum depth of 20 feet bgs during the remedial investigation. Several SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected sitewide. Most of the PAH contamination is present in the top 6 feet of subsurface soil. Specifically, indeno(1,2,3-cd)pyrene was detected in 12 samples out of 95 above the unrestricted soil cleanup objective (USCO) of 1 ppm (parts per million) with the maximum concentration of 220 ppm. Benzo(b)fluoranthene was detected in 11 samples out of 95 above the USCO of 1 ppm with the maximum concentration of 390 ppm. Benzo(a)anthracene, benzo(a)pyrene and chrysene were detected in 10 samples out of 95 above their respective USCO of 1 ppm with the maximum concentration of 350 ppm, 330 ppm and 320 ppm respectively. Lead exceeded the USCO of 63 ppm in 17 out of 95 samples, with a maximum concentration of 524 ppm. Chromium (maximum 65.9 ppm, USCO of 30 ppm), copper (maximum 179 ppm, USCO of 50 ppm), mercury (maximum 0.394 ppm, USCO of 0.18 ppm), nickel (maximum 61.9 ppm, USCO of 30 ppm) and zinc (maximum 360 ppm, USCO 0f 109 ppm) were also detected in a small number of samples. Perfluorooctane sulfonic acid (PFOS) was detected above its USCO of 0.88 parts per billion (ppb) in two samples with the maximum concentration of 1.39 ppb. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: A total of 20 groundwater samples were collected from 14 monitoring wells during the remedial investigation. The depth of the monitoring wells varied between 19 feet to 24 feet. Perfluorooctanoic acid (PFOA) was detected above the ambient groundwater quality guidance value of 2.7 parts per trillion (ppt) with a maximum concentration of 36.9 ppt. PFOS was detected at a maximum of 117 ppt compared to the ambient groundwater quality guidance value of 6.7 ppt. The maximum concentration of both PFOA and PFOS was detected in the southeastern corner of the site, underneath the building. PFOA and PFOS were also detected in similar concentrations in upgradient wells, thus suggesting it is likely from an off-site source. Benzo(a)anthracene (0.11 ppb maximum), benzo(b)fluoranthene (0.2 ppb maximum), and chrysene (0.12 ppb maximum), were detected above their respective ground water standard of 0.002 ppb in a small fraction of samples. Lead (259 ppb, groundwater standard of 25 ppb), chromium (283 ppb, groundwater standard of 50 ppb), and nickel (228 ppb, groundwater standard of 100 ppb) were detected in the well located upgradient along the western site boundary. Volatile organic compounds (VOCs) were not detected in any groundwater samples. Data does not indicate any off-site migration of contaminated groundwater.
Soil Vapor: A wide range of VOCs were detected in soil vapor samples collected across the site. The chlorinated VOCs carbon tetrachloride (34.9 micrograms per cubic meter [g/m3]), cis 1,2-DCE (85.2 g/m3), TCE (216 g/m3), and PCE (834 g/m3) were detected in the sample

WHITE PLAINS CHRYSLER CAR DEALERSHIP (Continued) **S104501016**

collected beneath the slab from the northeastern portion of the on-site building. Cis 1,2-DCE, TCE and PCE were not detected in the indoor air sample. Carbon tetrachloride was detected at 0.41 g/m3 in indoor air. As per the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, mitigation of the human health exposure resulting from the soil vapor intrusion for cis 1,2-DCE and TCE is required. The data does not indicate any off-site impacts in soil vapor related to this site.

Water Type: perfluorooctanoic acid

Site Description:	Location Description: The site is located at 359-369 Mamaroneck Avenue in a mixed use commercial and residential area in the southern part of the City of White Plains, Westchester County NY. Site Features: The site is on approximately 0.25 acres of land which is flat and contains a 6,763 square foot building with a full basement. Current Use: The building contains a drycleaner, a nail salon, an insurance agency, and two restaurants. The remainder of the site consists of a paved parking lot. Surrounding Use: The site is surrounded with businesses to the north and south of the site and residences to the east and west. Immediately to the east of the site is a municipal parking lot. Historical Sources of Contamination: Dry cleaner operated at this location is a potential source of PCE contamination. Site Hydrology: Groundwater flows though sand at only several feet below ground surface.
Env Problem:	Based upon investigations to date, the primary contaminants of concern at the site included tetrachloroetylene (PCE) and its associated breakdown products. After a thorough Site Characterization, as described in a final report dated July 2012, it was determined that this site did not qualify for the registry.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

ENV RES DECL: Environmental Restrictive Declarations
The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/04/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Northeast Map:	20023960 GLENVILLE, CT
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

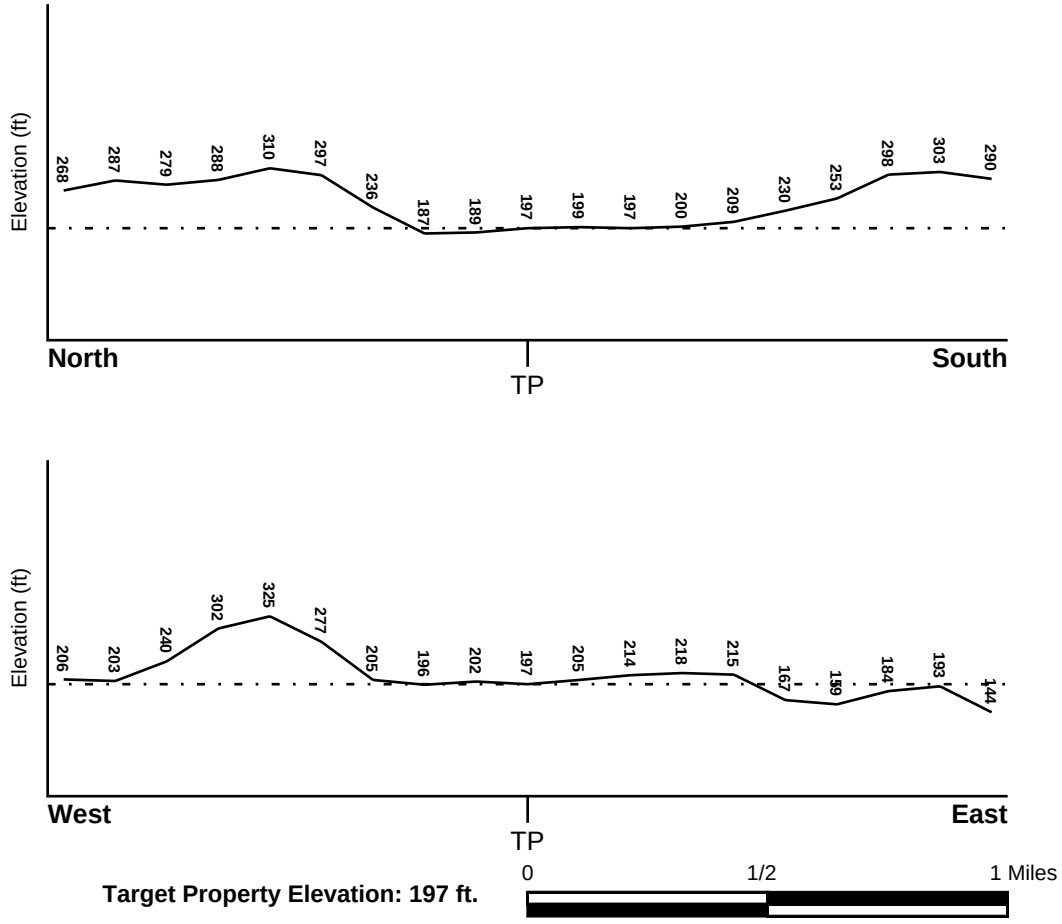
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36119C0267F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
36119C0266F	FEMA FIRM Flood data

36119C0269F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITE PLAINS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: gravelly loam

Hydrologic Group: Not reported

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 127 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5
2	3 inches	70 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5

Soil Map ID: 3

Soil Component Name: Udifluvents

Soil Surface Texture: gravelly silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 141 Min: 0.42	Max: 8.4 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	3 inches	70 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 141 Min: 0.42	Max: 8.4 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Contact: Annmarie Yannaco

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SESI Consulting Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

LIST OF ACRONYMS

Acronym	Definition
AWQS	Class GA Ambient Water Quality Standards and Guidance Values
ft-bgs	feet below ground surface
NYSDEC	New York State Department of Environmental Conservation
NYSDOH	New York State Department of Health
PAH	Polycyclic Aromatic Hydrocarbons
PCB	Polychlorinated Biphenyls
PFAS	Per- and Polyfluoroalkyl Substances
PFOA	Perfluorooctanic Acid
PFOS	Perfluorooctanesulfonic Acid
Phase II ESA	Phase II Environmental Site Assessment
PGWSCO	Protection of Groundwater Soil Cleanup Objectives
RRSCO	Restricted Residential Soil Cleanup Objective
SCO	Soil Cleanup Objective
SESI	SESI Consulting Engineers, DPC
SVOC	Semi-Volatile Organic Compound
TAL	Target Analyte List
TCL	Target Compound List
USCO	Unrestricted Use Soil Cleanup Objective
UST	Underground Storage Tank
VOC	Volatile Organic Compound

1.0 INTRODUCTION

SESI Consulting Engineers (SESI) has conducted this Phase II Environmental Site Assessment (Phase II ESA) on behalf of Midmain Partners LLC, for the property located at 70 Main Street, White Plains, New York ("Site"). The Site is a 1.1739-acre designated with the tax designation Section 125.75 Block 4 lot 2..1. The Site is located in a commercial/residential/government building area and the Site's use was previously a portion of the Galleria Mall. The Site is currently vacant. A Subject Property Location Map is presented as **Figure 1.1**.

This Phase II ESA report complies with the American Society for Testing and Materials Standards (ASTM E1903) and the New York State Department of Environmental Conservation (NYSDEC) Guidance Document for Site Investigations DER-10.

1.1 SUBJECT PROPERTY SETTING

The Site is composed of a 1.1739-acre parcel that has been developed with a now closed Galleria Mall. The Site is bound to the north by Main Street, to the east by a portion of the Galleria Mall, to the west by a portion of the Galleria mall, and to the south by the former Galleria Mall associated parking. The closest notable surface water body is the Bronx River located approximately 0.35 miles west of the Site.

1.2 SUBJECT PROPERTY HISTORY

The Subject Property was developed prior to 1885 based on the Sanborn Fire Insurance Maps and EDR City Directories contained several blacksmiths, several tailors, a carriage house/factory, automobile washing and greasing facility, hand printing, sign painting, cobbler, steam fitter, shoe repair, plumbing shop, several tin shops, an iron working, and a hotel with a gas tank. The EDR HIST CLEANER database has identified that a dry cleaning establishment operated on the Subject Property from 1971 to 1975. The Galleria Mall was constructed in approximately 1980. These historical land uses represent RECs and additional investigation is warranted.

2.0 FIELD INVESTIGATION

SESI collected Soil samples and groundwater samples for the investigation of REC's identified in the Phase I ESA from December 2022 to April 2024. Prior to conducting subsurface drilling, SESI's drilling contractors contacted New York's utility mark-out system. The borings were advanced to depths ranging from 5 to 20 feet below ground surface (ft-bgs). **Table 2.1** presents a summary of the borings conducted and samples collected.

Based on the subsurface investigations conducted to date, the stratigraphy of the Subject Property, from the surface down, consists of fill material below surface cover to depths of approximately up to 13 ft-bgs. Fill material is underlain by brown coarse to fine sand, some gravel and trace silt to boring completion. Based on review of the Remedial Investigation Report from an adjacent Brownfield Cleanup Program Site (C360073) to the northeast (221 Main Street), the elevation of groundwater at the subject property is approximately 180-200 feet above mean sea level, and groundwater flow direction is expected to be in the western direction. Photoionization detector readings and detailed soil descriptions are provided in the boring logs presented in **Appendix A**.

3.0 ANALYTICAL RESULTS

3.1 SOIL INVESTIGATION RESULTS

The soil samples were sent to SGS and Pace Analytical Laboratories under a Chain of Custody for the analysis of the TCL+30/TAL suite of parameters, which includes VOCs by EPA Method 8260C, SVOCs by EPA Method 8270D, TAL metals by EPA Method 6010C/7471, PCBs by EPA Method 8082A, pesticides by EPA Method 8081B, and cyanide by EPA Method 9082. In addition, certain samples were analyzed for PFAS by EPA Method 1633 and 1,4 dioxane by EPA Method 8270D SIM. **Table 2.1** presents a summary of the borings conducted and samples collected.

A summary table of the analytical results for samples collected compared to the NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs), Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) and Restricted Residential Cleanup Objectives (RRSCOs) (December 2025), and the latest NYSDEC Soil Screening Levels for emerging contaminants (NYSDEC Guidelines for Sampling and Analysis of PFAS Under NYSDEC's Part 375 Remedial Programs) is presented in **Tables 3.1A-B**, which are divided up by laboratory. A summary of the samples exceeding the soil cleanup objectives (SCOs) is presented on **Tables 3.2A-B** below and on **Figure 3.1**. The laboratory analytical data is provided in **Appendix B**.

Based on the data shown on **Tables 3.2A-B** below and **Figure 3.1**, the following soil sampling observations were made:

- VOC acetone was identified above the UUSCO and/or PGWSCO in several samples up to depths of 9.5 ft-bgs.
- SVOCs (primarily polycyclic aromatic hydrocarbons [PAHs]) were identified above the PGWSCOs, RRSCOs or UUSCOs throughout the Site from grade to 6.5 ft-bgs.
- Metals were identified above the PGWSCOs, RRSCOs and UUSCOs to depths ranging from grade to 13.5 ft-bgs throughout the Site. Lead and mercury were found above the PGWSCOs and RRSCOs on the Site in discrete areas suggesting that they are attributable to historic releases. Lead was also found in groundwater exceeding the AWQS and therefore, the groundwater pathway for lead requires further evaluation.
- Pesticide 4,4'-DDT was found above the UUSCO in several samples ranging up to 18.0 ft-bgs.
- The PFAS compounds perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were found above the guidance PGWSCOs and UUSCO to 1.5 ft-bgs at the northwestern portion of the Site (SB-7 [1-1.5] and SB-20 [1-1.5]).

3.2 GROUNDWATER INVESTIGATION RESULTS

Two (2) groundwater temporary wellpoints were installed and sampled by SESI in March 2023 and June 2023. A total of two (2) groundwater samples were collected and analyzed for various parameters including VOCs by EPA Method 8260C, SVOCs by EPA Method 8270D, TAL metals by EPA Method 6010C/7471, PCBs by EPA Method 8082A, pesticides by EPA Method 8081B, cyanide by EPA Method 9082, PFAS by EPA Method 1633 and 1.4-dioxane by EPA Method 8270D SIM. Metals compounds were analyzed for total metals (unfiltered). A summary table of the analytical results compared to NYSDEC Technical and Operational Guidance Series 1.1.1 Class GA Ambient Water Quality Standards and Guidance Values (AWQS) is presented on **Table 3.3**. A summary of compounds exceeding the AWQS is presented on **Table 3.4** below and on **Figure 3.2**. The laboratory analytical reports are provided in **Appendix B**.

As presented on **Table 3.4** and **Figure 3.2**, the groundwater analytical results indicate consistent concentrations of VOCs, SVOCs, metals, and PFAS were found to exceed the AWQS throughout the Site. As described above elevated concentrations of PAHs, lead, and mercury were identified in soil exceeding the PGWSCOs and RRSCOs and therefore the protection of groundwater pathway must be further evaluated. SESI conducted a Phase I Environmental Site Assessment (Phase I ESA) to investigate the subject property historical land uses and to determine the potential for subsurface impact that may represent Recognized Environmental Conditions (RECs).

4.0 CONCLUSIONS AND RECOMMENDATIONS

The exceedances in the soil and groundwater reported during the investigation are likely a result of the Site's historical land use, potential presence of underground storage tanks (USTs) and the presence of contaminated historic fill.

Analytical results of this investigation identified VOCs (acetone) in excess of the UUSCO and/or PGWSCO in several samples at depths up to 9.5 ft-bgs. SVOCs (primarily PAHs) in soil to exceed the PGWSCOs, RRSCOs or USCOs on the eastern portion of the Site from grade to 6.5 ft-bgs. Metals were found above the PGWSCOs, RRSCOs and USCOs to depths ranging from grade to 13.5 ft-bgs throughout the Site. Pesticides were found above the USCOs in several samples up to 18.0 ft-bgs. The PFAS compounds PFOS and PFOA were found above the guidance PGWSCOs and USCO to 1.5 ft-bgs at the northwestern portion of the Site (SB-7 [1-1.5] and SB-20 [1-1.5]). The lead, mercury, and PAHs were found above the PGWSCOs and RRSCOs on-subject property in discrete areas, suggesting that they are attributable to historic releases. As described above the lead and PAHs were also identified in groundwater exceeding the AWQSs and therefore the groundwater pathway for lead and PAHs requires further evaluation. These soil exceedances of the USCOs and RRSCOs are likely due to historic property uses, potential USTs, and contaminated historic fill.

VOCs, PFAS, PAHs, and metals were found in groundwater to exceed the AWQS throughout the Site, likely associated with historical uses, potential USTs, and historic fill contamination. As described above the lead and PAHs were also identified in groundwater exceeding the AWQSs and therefore the groundwater pathway for lead and PAHs requires further evaluation.

SESI recommends that prior to any development on the Subject Property additional investigation be conducted to delineate the extent of the VOCs, SVOCs (PAHs), metals, pesticides, and PFAS contamination in soil and to evaluate soil remedial options. The investigation should also delineate the VOC, SVOCs (PAHs), metals, and PFAS contamination in groundwater and evaluate remedial options available to comply with the AWQS. Finally, a soil vapor intrusion evaluation is recommended to address the potential for soil vapor contamination.

Concentration Exceeds NYSDEC UUSCO
Concentration Exceeds NYSDEC RRSCO
Concentration Exceeds NYSDEC PGWSCO

NS = No Standard
~ = Not Analyzed / Not Applicable
NYSDEC UUSCO = New York Department of Environmental Conservation Unrestricted Use Soil Cleanup Objective, revised December 31, 2025
NYSDEC RRSCO = New York Department of Environmental Conservation Restricted Residential Soil Cleanup Objective, revised December 31, 2025
NYSDEC PGWSCO = New York Department of Environmental Conservation Protection of Groundwater Soil Cleanup Objective, revised December 31, 2025
U = Not Detected
J = Estimated Concentration
B = Concentration Detected in Blank Sample
* Chromium was evaluated based on the higher of the values for the SCOs between Trivalent and Hexavalent Chromium. If there is no applicable standard, the other value was utilized.

Footnote	Comments
a	Associated CCV outside of control limits high, sample was ND.
b	Outside of in house control limits.
c	LIMITS: 20-150%
d	Elevated detection limit due to dilution required for high interfering element.
e	Outside control limits due to matrix interference.
f	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
g	More than 40 % RPD for detected concentrations between the two GC columns.
h	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte.
i	Associated CCV outside of control limits high.
j	LIMITS: 50-133%
k	LIMITS: 50-122%
l	Associated CCV outside of control limits low. Low-level verification was analyzed to demonstrate system suitability to detect affected analytes. Sample was ND.
m	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-133%
n	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-122%
o	Recovery corrected for suspected double spike.
p	Associated confirmation CCV outside control limits.
q	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND. Associated CCV
r	Surrogate recoveries corrected for double spike. LIMITS: 50-133%
s	Surrogate recoveries corrected for double spike. LIMITS: 50-122%
t	Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.
u	Associated CCV outside of control limits high,sample was ND.
v	Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
w	Outside control limits due to dilution. LIMITS: 50-133%
x	Outside control limits due to dilution. LIMITS: 50-122%
y	Primary and confirmation results differ by more than 40%. Lower value reported due to possible coelution.
z	Associated confirmation CCV outside control limits. Primary and confirmation results differ by more than 40%. Lower value reported.
a0	Outside control limits due to possible matrix interference.

Concentration Exceeds NYSDEC UUSCO
Concentration Exceeds NYSDEC RRSCO
Concentration Exceeds NYSDEC PGWSCO

NS = No Standard

~ = Not Analyzed / Not Applicable

NYSDEC UUSCO = New York Department of Environmental Conservation Unrestricted Use Soil Cleanup Objective, revised December 31, 2025

NYSDEC RRSCO = New York Department of Environmental Conservation Restricted Residential Soil Cleanup Objective, revised December 31, 2025

NYSDEC PGWSCO = New York Department of Environmental Conservation Protection of Groundwater Soil Cleanup Objective, revised December 31, 2025

U = Not Detected

J = Estimated Concentration

B = Concentration Detected in Blank Sample

* Chromium was evaluated based on the higher of the values for the SCOs between Trivalent and Hexavalent Chromium. If there is no applicable standard, the other value was utilized.

Footnote	Comments
a	Associated CCV outside of control limits high, sample was ND.
b	Outside of in house control limits.
c	LIMITS: 20-150%
d	Elevated detection limit due to dilution required for high interfering element.
e	Outside control limits due to matrix interference.
f	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
g	More than 40 % RPD for detected concentrations between the two GC columns.
h	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte.
i	Associated CCV outside of control limits high.
j	LIMITS: 50-133%
k	LIMITS: 50-122%
l	Associated CCV outside of control limits low. Low-level verification was analyzed to demonstrate system suitability to detect affected analytes. Sample was ND.
m	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-133%
n	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-122%
o	Recovery corrected for suspected double spike.
p	Associated confirmation CCV outside control limits.
q	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND. Associated CCV
r	Surrogate recoveries corrected for double spike. LIMITS: 50-133%
s	Surrogate recoveries corrected for double spike. LIMITS: 50-122%
t	Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.
u	Associated CCV outside of control limits high,sample was ND.
v	Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
w	Outside control limits due to dilution. LIMITS: 50-133%
x	Outside control limits due to dilution. LIMITS: 50-122%
y	Primary and confirmation results differ by more than 40%. Lower value reported due to possible coelution.
z	Associated confirmation CCV outside control limits. Primary and confirmation results differ by more than 40%. Lower value reported.
a0	Outside control limits due to possible matrix interference.

Concentration Exceeds NYSDEC UUSCO
Concentration Exceeds NYSDEC RRSCO
Concentration Exceeds NYSDEC PGWSCO

NS = No Standard
~ = Not Analyzed / Not Applicable
NYSDEC UUSCO = New York Department of Environmental Conservation Unrestricted Use Soil Cleanup Objective, revised December 31, 2025
NYSDEC RRSCO = New York Department of Environmental Conservation Restricted Residential Soil Cleanup Objective, revised December 31, 2025
NYSDEC PGWSCO = New York Department of Environmental Conservation Protection of Groundwater Soil Cleanup Objective, revised December 31, 2025
U = Not Detected
J = Estimated Concentration
B = Concentration Detected in Blank Sample
* Chromium was evaluated based on the higher of the values for the SCOs between Trivalent and Hexavalent Chromium. If there is no applicable standard, the other value was utilized.

Footnote	Comments
a	Associated CCV outside of control limits high, sample was ND.
b	Outside of in house control limits.
c	LIMITS: 20-150%
d	Elevated detection limit due to dilution required for high interfering element.
e	Outside control limits due to matrix interference.
f	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
g	More than 40 % RPD for detected concentrations between the two GC columns.
h	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte.
i	Associated CCV outside of control limits high.
j	LIMITS: 50-133%
k	LIMITS: 50-122%
l	Associated CCV outside of control limits low. Low-level verification was analyzed to demonstrate system suitability to detect affected analytes. Sample was ND.
m	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-133%
n	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-122%
o	Recovery corrected for suspected double spike.
p	Associated confirmation CCV outside control limits.
q	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND. Associated CCV
r	Surrogate recoveries corrected for double spike. LIMITS: 50-133%
s	Surrogate recoveries corrected for double spike. LIMITS: 50-122%
t	Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.
u	Associated CCV outside of control limits high,sample was ND.
v	Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
w	Outside control limits due to dilution. LIMITS: 50-133%
x	Outside control limits due to dilution. LIMITS: 50-122%
y	Primary and confirmation results differ by more than 40%. Lower value reported due to possible coelution.
z	Associated confirmation CCV outside control limits. Primary and confirmation results differ by more than 40%. Lower value reported.
a0	Outside control limits due to possible matrix interference.

Concentration Exceeds NYSDEC UUSCO
Concentration Exceeds NYSDEC RRSCO
Concentration Exceeds NYSDEC PGWSCO

NS = No Standard

~ = Not Analyzed / Not Applicable

NYSDEC UUSCO = New York Department of Environmental Conservation Unrestricted Use Soil Cleanup Objective, revised December 31, 2025

NYSDEC RRSCO = New York Department of Environmental Conservation Restricted Residential Soil Cleanup Objective, revised December 31, 2025

NYSDEC PGWSCO = New York Department of Environmental Conservation Protection of Groundwater Soil Cleanup Objective, revised December 31, 2025

U = Not Detected

J = Estimated Concentration

B = Concentration Detected in Blank Sample

* Chromium was evaluated based on the higher of the values for the SCOs between Trivalent and Hexavalent Chromium. If there is no applicable standard, the other value was utilized.

Footnote	Comments
a	Associated CCV outside of control limits high, sample was ND.
b	Outside of in house control limits.
c	LIMITS: 20-150%
d	Elevated detection limit due to dilution required for high interfering element.
e	Outside control limits due to matrix interference.
f	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
g	More than 40 % RPD for detected concentrations between the two GC columns.
h	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte.
i	Associated CCV outside of control limits high.
j	LIMITS: 50-133%
k	LIMITS: 50-122%
l	Associated CCV outside of control limits low. Low-level verification was analyzed to demonstrate system suitability to detect affected analytes. Sample was ND.
m	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-133%
n	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-122%
o	Recovery corrected for suspected double spike.
p	Associated confirmation CCV outside control limits.
q	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND. Associated CCV
r	Surrogate recoveries corrected for double spike. LIMITS: 50-133%
s	Surrogate recoveries corrected for double spike. LIMITS: 50-122%
t	Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.
u	Associated CCV outside of control limits high,sample was ND.
v	Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
w	Outside control limits due to dilution. LIMITS: 50-133%
x	Outside control limits due to dilution. LIMITS: 50-122%
y	Primary and confirmation results differ by more than 40%. Lower value reported due to possible coelution.
z	Associated confirmation CCV outside control limits. Primary and confirmation results differ by more than 40%. Lower value reported.
a0	Outside control limits due to possible matrix interference.

Concentration Exceeds NYSDEC UUSCO
Concentration Exceeds NYSDEC RRSCO
Concentration Exceeds NYSDEC PGWSCO

NS = No Standard
~ = Not Analyzed / Not Applicable
NYSDEC UUSCO = New York Department of Environmental Conservation Unrestricted Use Soil Cleanup Objective, revised December 31, 2025
NYSDEC RRSCO = New York Department of Environmental Conservation Restricted Residential Soil Cleanup Objective, revised December 31, 2025
NYSDEC PGWSCO = New York Department of Environmental Conservation Protection of Groundwater Soil Cleanup Objective, revised December 31, 2025
U = Not Detected
J = Estimated Concentration
B = Concentration Detected in Blank Sample
* Chromium was evaluated based on the higher of the values for the SCOs between Trivalent and Hexavalent Chromium. If there is no applicable standard, the other value was utilized.

Footnote	Comments
a	Associated CCV outside of control limits high, sample was ND.
b	Outside of in house control limits.
c	LIMITS: 20-150%
d	Elevated detection limit due to dilution required for high interfering element.
e	Outside control limits due to matrix interference.
f	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
g	More than 40 % RPD for detected concentrations between the two GC columns.
h	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte.
i	Associated CCV outside of control limits high.
j	LIMITS: 50-133%
k	LIMITS: 50-122%
l	Associated CCV outside of control limits low. Low-level verification was analyzed to demonstrate system suitability to detect affected analytes. Sample was ND.
m	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-133%
n	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-122%
o	Recovery corrected for suspected double spike.
p	Associated confirmation CCV outside control limits.
q	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND. Associated CCV
r	Surrogate recoveries corrected for double spike. LIMITS: 50-133%
s	Surrogate recoveries corrected for double spike. LIMITS: 50-122%
t	Associated CCV outside of control limits high. Estimated value, due to corresponding failure in the batch associated CCV.
u	Associated CCV outside of control limits high,sample was ND.
v	Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
w	Outside control limits due to dilution. LIMITS: 50-133%
x	Outside control limits due to dilution. LIMITS: 50-122%
y	Primary and confirmation results differ by more than 40%. Lower value reported due to possible coelution.
z	Associated confirmation CCV outside control limits. Primary and confirmation results differ by more than 40%. Lower value reported.
a0	Outside control limits due to possible matrix interference.

Concentration Exceeds NYSDEC UUSCO
Concentration Exceeds NYSDEC RRSCO
Concentration Exceeds NYSDEC PGWSCO

NS = No Standard
~ = Not Analyzed / Not Applicable
NYSDEC UUSCO = New York Department of Environmental Conservation Unrestricted Use Soil Cleanup Objective, revised December 31, 2025
NYSDEC RRSCO = New York Department of Environmental Conservation Restricted Residential Soil Cleanup Objective, revised December 31, 2025
NYSDEC PGWSCO = New York Department of Environmental Conservation Protection of Groundwater Soil Cleanup Objective, revised December 31, 2025
U = Not Detected
J = Estimated Concentration
B = Concentration Detected in Blank Sample
* Chromium was evaluated based on the higher of the values for the SCOs between Trivalent and Hexavalent Chromium. If there is no applicable standard, the other value was utilized.

Footnote	Comments
a	Associated CCV outside of control limits high, sample was ND.
b	Outside of in house control limits.
c	LIMITS: 20-150%
d	Elevated detection limit due to dilution required for high interfering element.
e	Outside control limits due to matrix interference.
f	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND.
g	More than 40 % RPD for detected concentrations between the two GC columns.
h	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte.
i	Associated CCV outside of control limits high.
j	LIMITS: 50-133%
k	LIMITS: 50-122%
l	Associated CCV outside of control limits low. Low-level verification was analyzed to demonstrate system suitability to detect affected analytes. Sample was ND.
m	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-133%
n	Surrogate recoveries outside of control limits, however sample results ND. LIMITS: 50-122%
o	Recovery corrected for suspected double spike.
p	Associated confirmation CCV outside control limits.
q	Associated CCV outside of control limits low. A sensitivity check was analyzed to demonstrate system suitability to detect affected analyte. Sample was ND. Associated CCV
r	Surrogate recoveries corrected for double spike. LIMITS: 50-133%
s	Surrogate recoveries corrected for double spike. LIMITS: 50-122%
t	Associated CCV outside of control limits high. Estimated value; due to corresponding failure in the batch associated CCV.
u	Associated CCV outside of control limits high,sample was ND.
v	Reported from the 1st signal. The %D of the CCV on the 2nd signal exceeds the method criteria of 20%, so it being used for confirmation only.
w	Outside control limits due to dilution. LIMITS: 50-133%
x	Outside control limits due to dilution. LIMITS: 50-122%
y	Primary and confirmation results differ by more than 40%. Lower value reported due to possible coelution.
z	Associated confirmation CCV outside control limits. Primary and confirmation results differ by more than 40%. Lower value reported.
a0	Outside control limits due to possible matrix interference.

Concentration Exceeds NYSDEC PGWSCO

NS = No Standard

~ = Not Analyzed / Not Applicable

NYSDEC UUSCO = New York Department of Environmental Conservation Unrestricted Use Soil Cleanup Objective, revised December 31, 2025

NYSDEC RRSCO = New York Department of Environmental Conservation Restricted Residential Soil Cleanup Objective, revised December 31, 2025

NYSDEC PGWSCO = New York Department of Environmental Conservation Protection of Groundwater Soil Cleanup Objective, revised December 31, 2025

U = Not detected

J = Estimated concentration

B = Concentration detected in blank sample

I = The lower value for the two columns is reported

E = Concentration of analyte exceeds instrument range

P = The RPD between the results for the two columns exceeds the method criteria

* Chromium was evaluated based on the higher of the values for the SCOs between Trivalent and Hexavalent Chromium. If there is no applicable standard, the other value was utilized.

NS = No Standard
~ = Not Analyzed / Not Applicable
NYSDEC UUSCO = New York Department of Environmental Conservation Unrestricted Use Soil Cleanup Objective, revised December 31, 2025
NYSDEC RRSCO = New York Department of Environmental Conservation Restricted Residential Soil Cleanup Objective, revised December 31, 2025
NYSDEC PGWSCO = New York Department of Environmental Conservation Protection of Groundwater Soil Cleanup Objective, revised December 31, 2025
U = Not detected
J = Estimated concentration
B = Concentration detected in blank sample
I = The lower value for the two columns is reported
E = Concentration of analyte exceeds instrument range
P = The RPD between the results for the two columns exceeds the method criteria
* Chromium was evaluated based on the higher of the values for the SCOs between Trivalent and Hexavalent Chromium. If there is no applicable standard, the other value was utilized.

Concentration Exceeds the UUSCO
Concentration Exceeds the RRSCO
Concentration Exceeds the GWSCO

PGWSCOs: New York 2025 NYCRR Part 375 Groundwater Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective 12/2006 amended 12/2025.
RRSCOs: New York 2025 NYCRR Part 375 Restricted-Residential Criteria, New York Restricted use Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective 12/2006 amended 12/2025.
UUSCOs: New York 2025 NYCRR Part 375 New York Unrestricted use Criteria Criteria per 6 NYCRR Part 375 Environmental Remediation Programs, effective 12/2006 amended 12/2025.
mg/kg = Milligrams per Kilogram
J = Estimated concentration
E = Concentration Exceeds the calibrated analysis range
B = Blank contamination. The analyte was found in the associated blank as well as in the sample.
VOCs = Volitile Organic Compounds
SVOCs = Semi-Volatile Organic Compounds
P=Use for pesticide/Aroclor target analytes with greater than 25% difference for detected concentrations between the two GC columns. Report the lower of the two values and flag with this code.
PFAS compounds are displayed in ug/Kg; all other compounds are displayed in mg/kg.
Total chromium standards were determined based on the higher of the NYSDEC standards betw een hexavalent chromium and trivalent chromium for each standard.

NOTE:
THIS PLAN IS FOR LOCATING SOIL SAMPLES ONLY.
OTHER SITE WORK SHOWN HERE IS NOT INTENDED FOR CONSTRUCTION.

This report contains results reported as ND = Not detected. The following applies:
Organics ND = Not detected above the MDL

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SGS Sample Receipt Summary

Job Number: JD57603 **Client:** SESI **Project:** 100 MAIN ST

Date / Time Received: 12/20/2022 5:30:00 PM **Delivery Method:** **Airbill #'s:**

Cooler Temps (Raw Measured) °C: Cooler 1: (1.5); Cooler 2: (1.3);

Cooler Temps (Corrected) °C: Cooler 1: (1.5); Cooler 2: (1.3);

Cooler Security	Y	or	N		Y	or	N
1. Custody Seals Present:	☑		☐	3. COC Present:	☑		☐
2. Custody Seals Intact:	☑		☐	4. Smpl Dates/Time OK	☑		☐

Cooler Temperature	Y	or	N
1. Temp criteria achieved:	☑		☐
2. Cooler temp verification:			
3. Cooler media:	Ice (Bag)		
4. No. Coolers:	2		

Quality Control Preservation	Y	or	N	N/A
1. Trip Blank present / cooler:	☐		☐	☑
2. Trip Blank listed on COC:	☐		☐	☑
3. Samples preserved properly:	☑		☐	
4. VOCs headspace free:	☐		☐	☑

Sample Integrity - Documentation	Y	or	N
1. Sample labels present on bottles:	☑		☐
2. Container labeling complete:	☑		☐
3. Sample container label / COC agree:	☑		☐

Sample Integrity - Condition	Y	or	N
1. Sample recvd within HT:	☑		☐
2. All containers accounted for:	☑		☐
3. Condition of sample:	Intact		

Sample Integrity - Instructions	Y	or	N	N/A
1. Analysis requested is clear:	☑		☐	
2. Bottles received for unspecified tests	☐		☑	
3. Sufficient volume recvd for analysis:	☑		☐	
4. Compositing instructions clear:	☐		☐	☑
5. Filtering instructions clear:	☐		☐	☑
