BROWNFIELDS:

Name:	THE HUGUENOT
Address:	387 HUGUENOT STREET
City,State,Zip:	NEW ROCHELLE, NY 10801
Program:	BCP
Site Code:	544502
Acres:	0.393
HW Code:	C360157
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	03/29/2017
Record Updated Date:	12/29/2021
Update By:	DRLANNER
Site Description:	"Location: The 0.393-acre site is located in an urban area at 387 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential

THE HUGUENOT (Continued) **S127012987**

unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site is currently being redeveloped as a mixed-use 6-story apartment building with on-site parking. Site development will entail sixty (60) rental apartment units, and two commercial/retail units on the ground floor, with associated parking primarily on the first/ground floor within the footprint of the building and some below ground using a mechanical parking system. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The intended end use for this site is restricted-residential and commercial. Surrounding parcels are utilized for mixed commercial and residential uses. The nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site was utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. Potential sources of contamination in this area included the former dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site maintained a residential dwelling since 1931, and was later used for truck and trailer parking since the 1990s. The potential source of contamination in this area included a former fuel oil UST, which was removed prior to 1997. The southern portion of the site maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then utilized as a warehouse from the 1970s to 2010s. Potential sources of contamination in this area included former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996 at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation (NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology: The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction. "

Env Problem:

"Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern found in site soils were semi-volatile organic compounds (SVOCs) and metals. The primary contaminants of concern found in site groundwater include volatile organic compounds (VOCs), SVOCs, metals, and per- and polyfluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual

THE HUGUENOT (Continued) **S127012987**

contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Nature and Extent of Contamination: Based upon investigations conducted before remediation, the primary contaminants of concern found in site soils include SVOCs and metals. The primary contaminants of concern found in site groundwater include VOCs, SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water

THE HUGUENOT (Continued) **S127012987**

quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess of the maximum contaminant level of 10 ppt in 3 of the 4 on-site monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

Site Description:	"Location: The 0.393-acre site is located in an urban area at 387 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site is currently being redeveloped as a mixed-use 6-story apartment building with on-site parking. Site development will entail sixty (60) rental apartment units, and two commercial/retail units on the ground floor, with associated parking primarily on the first/ground floor within the footprint of the building and some below ground using a mechanical parking system. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The intended end use for this site is restricted-residential and commercial. Surrounding parcels are utilized for mixed commercial and residential uses. The nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site was utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. Potential sources of contamination in this area included the former dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site maintained a residential dwelling since 1931, and was later used for truck and trailer parking since the 1990s. The potential source of contamination in this area included a former fuel oil UST, which was removed prior to 1997. The southern portion of the site maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then utilized as a warehouse from the 1970s to 2010s. Potential

THE HUGUENOT (Continued) **S127013001**

sources of contamination in this area included former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996 at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation (NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology: The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern found in site soils were semi-volatile organic compounds (SVOCs) and metals. The primary contaminants of concern found in site groundwater include volatile organic compounds (VOCs), SVOCs, metals, and per- and polyfluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Nature and Extent of Contamination: Based upon investigations conducted before remediation, the primary contaminants of concern found in site soils include SVOCs and metals. The primary contaminants of concern found in site groundwater include VOCs, SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding

THE HUGUENOT (Continued) **S127013001**

the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess of the maximum contaminant level of 10 ppt in 3 of the 4 on-site monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene

THE HUGUENOT (Continued) **S127013001**

chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess

THE HUGUENOT (Continued) **S127013001**

of the maximum contaminant level of 10 ppt in 3 of the 4 on-site monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

Site Code: 544502
Site Description: "Location: The 0.393-acre site is located in an urban area at 387 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site is currently being redeveloped as a mixed-use 6-story apartment building with on-site parking. Site development will entail sixty (60) rental apartment units, and two commercial/retail units on the ground floor, with associated parking primarily on the first/ground floor within the footprint of the building and some below ground using a mechanical parking system. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The intended end use for this site is restricted-residential and commercial. Surrounding parcels are utilized for mixed commercial and residential uses. The nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site was utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. Potential sources of contamination in this area included the former dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site maintained a residential dwelling since 1931, and was later used for truck and trailer parking since the 1990s. The potential source of contamination in this area included a former fuel oil UST, which was removed prior to 1997. The southern portion of the site maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then utilized as a warehouse from the 1970s to 2010s. Potential sources of contamination in this area included former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996

THE HUGUENOT (Continued) **S127013008**

at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation (NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology: The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern found in site soils were semi-volatile organic compounds (SVOCs) and metals. The primary contaminants of concern found in site groundwater include volatile organic compounds (VOCs), SVOCs, metals, and per- and polyfluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Nature and Extent of Contamination: Based upon investigations conducted before remediation, the primary contaminants of concern found in site soils include SVOCs and metals. The primary contaminants of concern found in site groundwater include VOCs, SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water

THE HUGUENOT (Continued) **S127013008**

quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess of the maximum contaminant level of 10 ppt in 3 of the 4 on-site monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3

THE HUGUENOT (Continued) **S127013008**

(ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

Site Code: 544502
Site Description: "Location: The 0.393-acre site is located in an urban area at 387 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site is currently being redeveloped as a mixed-use 6-story apartment building with on-site parking. Site development will entail sixty (60) rental apartment units, and two commercial/retail units on the ground floor,

THE HUGUENOT (Continued) **S127013008**

with associated parking primarily on the first/ground floor within the footprint of the building and some below ground using a mechanical parking system. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The intended end use for this site is restricted-residential and commercial. Surrounding parcels are utilized for mixed commercial and residential uses. The nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site was utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. Potential sources of contamination in this area included the former dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site maintained a residential dwelling since 1931, and was later used for truck and trailer parking since the 1990s. The potential source of contamination in this area included a former fuel oil UST, which was removed prior to 1997. The southern portion of the site maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then utilized as a warehouse from the 1970s to 2010s. Potential sources of contamination in this area included former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996 at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation (NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology: The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern found in site soils were semi-volatile organic compounds (SVOCs) and metals. The primary contaminants of concern found in site groundwater include volatile organic compounds (VOCs), SVOCs, metals, and per- and polyfluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Nature and Extent of Contamination: Based upon investigations conducted before remediation, the primary contaminants of concern found in site soils include SVOCs and metals. The primary contaminants of concern found in site groundwater include VOCs, SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and

THE HUGUENOT (Continued) **S127013008**

metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess of the maximum contaminant level of 10 ppt in 3 of the 4 on-site

THE HUGUENOT (Continued) **S127013008**

monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

Site Code: 544502
Site Description: "Location: The 0.393-acre site is located in an urban area at 387 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site is currently being redeveloped as a mixed-use 6-story apartment building with on-site parking. Site development will entail sixty (60) rental apartment units, and two commercial/retail units on the ground floor, with associated parking primarily on the first/ground floor within the footprint of the building and some below ground using a mechanical parking system. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The intended end use for this site is restricted-residential and commercial. Surrounding parcels are utilized for mixed commercial and residential uses. The nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site was utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. Potential sources of contamination in this area included the former dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site maintained a residential dwelling since 1931, and was later used for truck and trailer parking since the 1990s. The potential source of contamination in this area included a former fuel oil UST, which was removed prior to 1997. The southern portion of the site maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then utilized as a warehouse from the 1970s to 2010s. Potential sources of contamination in this area included former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996 at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation (NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology:

THE HUGUENOT (Continued) **S127013008**

The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern found in site soils were semi-volatile organic compounds (SVOCs) and metals. The primary contaminants of concern found in site groundwater include volatile organic compounds (VOCs), SVOCs, metals, and per- and polyfluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Nature and Extent of Contamination: Based upon investigations conducted before remediation, the primary contaminants of concern found in site soils include SVOCs and metals. The primary contaminants of concern found in site groundwater include VOCs, SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these

THE HUGUENOT (Continued) **S127013008**

compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess of the maximum contaminant level of 10 ppt in 3 of the 4 on-site monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

THE HUGUENOT (Continued) **S127013008**

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

Site Code: 544502
Site Description: "Location: The 0.393-acre site is located in an urban area at 387 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site is currently being redeveloped as a mixed-use 6-story apartment building with on-site parking. Site development will entail sixty (60) rental apartment units, and two commercial/retail units on the ground floor, with associated parking primarily on the first/ground floor within the footprint of the building and some below ground using a mechanical parking system. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The intended end use for this site is restricted-residential and commercial. Surrounding parcels are utilized for mixed commercial and residential uses. The

THE HUGUENOT (Continued) **S127013008**

nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site was utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. Potential sources of contamination in this area included the former dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site maintained a residential dwelling since 1931, and was later used for truck and trailer parking since the 1990s. The potential source of contamination in this area included a former fuel oil UST, which was removed prior to 1997. The southern portion of the site maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then utilized as a warehouse from the 1970s to 2010s. Potential sources of contamination in this area included former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996 at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation (NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology: The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern found in site soils were semi-volatile organic compounds (SVOCs) and metals. The primary contaminants of concern found in site groundwater include volatile organic compounds (VOCs), SVOCs, metals, and per- and polyfluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Nature and Extent of Contamination: Based upon investigations conducted before remediation, the primary contaminants of concern found in site soils include SVOCs and metals. The primary contaminants of concern found in site groundwater include VOCs, SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4

THE HUGUENOT (Continued) **S127013008**

ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess of the maximum contaminant level of 10 ppt in 3 of the 4 on-site monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene,

THE HUGUENOT (Continued) **S127013008**

collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

Site Code: 544502
Site Description: "Location: The 0.393-acre site is located in an urban area at 387 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site is currently being redeveloped as a mixed-use 6-story apartment building with on-site parking. Site development will entail sixty (60) rental apartment units, and two commercial/retail units on the ground floor, with associated parking primarily on the first/ground floor within the footprint of the building and some below ground using a mechanical parking system. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The intended end use for this site is restricted-residential and commercial. Surrounding parcels are utilized for mixed commercial and residential uses. The nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site was utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. Potential sources of contamination in this area included the former dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site maintained a residential dwelling since 1931, and was later used for truck and trailer parking since the 1990s. The potential source of contamination in this area included a former fuel oil UST, which was removed prior to 1997. The southern portion of the site maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then utilized as a warehouse from the 1970s to 2010s. Potential sources of contamination in this area included former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996 at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation (NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology: The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below

THE HUGUENOT (Continued) **S127013008**

grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern found in site soils were semi-volatile organic compounds (SVOCs) and metals. The primary contaminants of concern found in site groundwater include volatile organic compounds (VOCs), SVOCs, metals, and per- and polyfluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Nature and Extent of Contamination: Based upon investigations conducted before remediation, the primary contaminants of concern found in site soils include SVOCs and metals. The primary contaminants of concern found in site groundwater include VOCs, SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for

THE HUGUENOT (Continued) **S127013008**

these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess of the maximum contaminant level of 10 ppt in 3 of the 4 on-site monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air

THE HUGUENOT (Continued) **S127013008**

quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

Site Code: 544502
Site Description: "Location: The 0.393-acre site is located in an urban area at 387 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site is currently being redeveloped as a mixed-use 6-story apartment building with on-site parking. Site development will entail sixty (60) rental apartment units, and two commercial/retail units on the ground floor, with associated parking primarily on the first/ground floor within the footprint of the building and some below ground using a mechanical parking system. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The intended end use for this site is restricted-residential and commercial. Surrounding parcels are utilized for mixed commercial and residential uses. The nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site was utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. Potential sources of contamination in this area included the former

THE HUGUENOT (Continued) **S127013008**

dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site maintained a residential dwelling since 1931, and was later used for truck and trailer parking since the 1990s. The potential source of contamination in this area included a former fuel oil UST, which was removed prior to 1997. The southern portion of the site maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then utilized as a warehouse from the 1970s to 2010s. Potential sources of contamination in this area included former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996 at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation (NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology: The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern found in site soils were semi-volatile organic compounds (SVOCs) and metals. The primary contaminants of concern found in site groundwater include volatile organic compounds (VOCs), SVOCs, metals, and per- and polyfluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Nature and Extent of Contamination: Based upon investigations conducted before remediation, the primary contaminants of concern found in site soils include SVOCs and metals. The primary contaminants of concern found in site groundwater include VOCs, SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in

THE HUGUENOT (Continued) **S127013008**

any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess of the maximum contaminant level of 10 ppt in 3 of the 4 on-site monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six

THE HUGUENOT (Continued) **S127013008**

owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

THE HUGUENOT (Continued) **S127013008**

Site Code: 544502

Site Description: "Location: The 0.393-acre site is located in an urban area at 387 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site is currently being redeveloped as a mixed-use 6-story apartment building with on-site parking. Site development will entail sixty (60) rental apartment units, and two commercial/retail units on the ground floor, with associated parking primarily on the first/ground floor within the footprint of the building and some below ground using a mechanical parking system. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The intended end use for this site is restricted-residential and commercial. Surrounding parcels are utilized for mixed commercial and residential uses. The nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site was utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. Potential sources of contamination in this area included the former dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site maintained a residential dwelling since 1931, and was later used for truck and trailer parking since the 1990s. The potential source of contamination in this area included a former fuel oil UST, which was removed prior to 1997. The southern portion of the site maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then utilized as a warehouse from the 1970s to 2010s. Potential sources of contamination in this area included former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996 at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation (NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology: The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction. "

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern found in site soils were semi-volatile organic compounds (SVOCs) and metals. The primary

THE HUGUENOT (Continued) **S127013008**

contaminants of concern found in site groundwater include volatile organic compounds (VOCs), SVOCs, metals, and per- and polyfluoroalkyl substances (PFAS). Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Nature and Extent of Contamination: Based upon investigations conducted before remediation, the primary contaminants of concern found in site soils include SVOCs and metals. The primary contaminants of concern found in site groundwater include VOCs, SVOCs, metals, and PFAS. Soil - Investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted-residential use soil cleanup objectives (RRSCOs). SVOCs detected in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - Groundwater investigations included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and PFAS. VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 1,3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb,

THE HUGUENOT (Continued) **S127013008**

10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in groundwater samples collected both on- and off-site. PFOA concentrations were found in excess of the maximum contaminant level of 10 parts per trillion (ppt) in all 4 on-site monitoring wells, ranging from 17 to 64 ppt, and 3 of the 4 off-site monitoring wells, ranging from 8.8 to 35 ppt. PFOS concentrations were found in excess of the maximum contaminant level of 10 ppt in 3 of the 4 on-site monitoring wells, ranging from 8.8 to 120 ppt, and 2 of the 4 off-site monitoring wells, ranging from 6.1 to 17 ppt. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during a Phase II Environmental Site Assessment and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site during the remedial investigation and only one of the six owners agreed to the sampling. Soil vapor intrusion samples were collected at an adjacent building located north of the site and analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air, maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining at the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil) which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential does not exist for inhalation of site contaminants due to soil vapor intrusion for any future onsite development. Soil vapor intrusion sampling at one offsite building indicates that soil vapor intrusion is not a concern for that building and no further action is recommended. However, soil

THE HUGUENOT (Continued) **S127013008**

vapor intrusion evaluations with actions taken as needed to address exposures are recommended for other offsite buildings, including those buildings where testing has previously been declined by owners."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

CON EDISON (Continued) **1018280916**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Program:	BCP
Site Code:	414661
Acres:	Not reported
HW Code:	C360078A
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	06/03/2009
Record Updated Date:	11/23/2020
Update By:	KJCARPEN
Site Description:	"Location: This site is the off-site component of the former Flamingo Dry Cleaners site (C360078). The site is located in an urban area of New Rochelle, Westchester County, at the southeastern corner of the intersection of Clinton Place and North Avenue. Site Features: The site itself is a one-story commercial building which includes four commercial spaces including the former dry cleaner space. This off-site component is comprised of immediately-surrounding areas. Current Zoning/Uses: Surrounding land uses include parking lots, commercial establishments, a residential apartment complex, a college, a medical facility, and a church. Historical Uses: The on-site building was constructed in 1941 and used for retail. Flamingo Cleaners began operations in 1958 and ran until 2005 when all dry-cleaning equipment was removed. On-site contamination is a result of the former dry cleaner operations from improper management, disposal, and leaks of tetrachloroethylene (PCE). A referral for off-site work was completed in December 2007 and a SSF RI/FS Work assignment was approved in March 2009. The RI field work was conducted in the summer of 2009 and fall of 2009. An additional round of gw analyses occurred in spring 2010. The on-going off-site investigation thus far indicates that PCE is not present in environmental media above standards in the area surrounding the site. A DEC contractor was called out in August 2020 for emerging contaminant sampling for the off-site wells Site Geology/Hydrogeology: The area surrounding the site is underlain by glacial till which sits atop highly weathered bedrock. Area bedrock ranges from 5-25 feet below ground surface. The water table ranges from 5-11 feet below ground surface. Groundwater flow direction is predominantly to the south-southwest toward Long Island Sound, but site specific groundwater flow direction is radial and seasonally affected. "
Env Problem:	"Nature and Extent of Contamination: Based on investigations to date, the primary contaminant of concern at the site is tetracholoroethylene (PCE), a dry cleaning solvent. On-site, PCE has been detected in soils, soil vapor, indoor air, and groundwater. The off-site investigation to date indicates that there are no off-site impacts. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. There are no special resources identified near the site. The off-site wells are to be sampled for PFOAs and PFCs through a DEC contractor callout which was approved in August 2020. Contractor and Lab were approved."

FLAMINGO CLEANERS (Continued) **1000299848**

Name:	FLAMINGO CLEANERS
Address:	149 NORTH AVENUE
City,State,Zip:	NEW ROCHELLE, NY 10801
Program:	BCP
Site Code:	335220
Acres:	0.122
HW Code:	C360078
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	12/16/2004
Record Updated Date:	03/08/2021
Update By:	KJCARPEN
Site Description:	"Location: The Flamingo Cleaners site is located in an urban area of New Rochelle, Westchester County, at the southeastern corner of the intersection of Clinton Place and North Avenue. Site Features: The site is a one-story commercial building with a full basement. The building is divided into four commercial tenant spaces which have been occupied at various times by a bar/lounge, beauty salon, delicatessen, a travel agency and a dry-cleaner. Current Zoning/use(s): The site consists of four retail spaces. The site is zoned for commercial use. The surrounding land uses include parking lots, commercial establishments, a residential apartment complex, a medical center, and a church. Past Uses of the Site: The existing building was constructed in 1941 and used for retail. Flamingo Cleaners began dry cleaning operations in 1958, and ran until 2005 when all dry-cleaning equipment was removed. Site contamination is a result of the former dry cleaner operations from improper management, disposal, and leaks of tetrachloroethylene (PCE). Prior completed investigations include a Phase I Investigation in October of 2003 and a Phase II Investigation completed in March of 2004. The Volunteer entered into a Brownfield Cleanup Agreement in April 2005. A Decision Document was issued in March 2012 for a remedy involving source soil removal and in situ chemical oxidation treatment of groundwater. Based on the extent of the site contamination, a referral to State Superfund for an off-site investigation was completed in December 2007. The groundwater plume was found to be isolated to immediately behind the building and little to no off-site impacts were noted in groundwater, soils, nor in soil vapor. Site Geology/hydrogeology: The site is underlain by glacial till which sits atop highly weathered bedrock. Bedrock ranges from 5 - 22 feet below ground surface. The water table is between 5 - 11 feet below ground surface. Groundwater flow direction is predominantly to the south-southeast toward Long Island Sound, however, site specific groundwater flow direction is radial, and seasonally affected."
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), primarily tetrachloroethylene (PCE or perc) which was present in soils, groundwater, and indoor air. PCE breakdown products Trichloroethene (TCE) and 1,2-dichloroethene (1,2-DCE), vinyl chloride, as well as 1,1,1 trichloroethane (1,1,1 TCA), were also present at the site. Remedial actions have removed source soils, treated groundwater, and have prevented contaminants from entering the indoor air. Residual contamination in the soil, groundwater, and indoor air is being managed under a Site Management Plan. "
Health Problem:	"Measures are in place to control the potential for coming in contact with subsurface soil and ground water contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or

FLAMINGO CLEANERS (Continued) **1000299848**

other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in groundwater and/or soil may move into the soil vapor (air space within the soil), which in turn may move into overlying building and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilate/remove the air beneath the building) has been installed in the on-site building to prevent the indoor air quality from being affected by the contamination in the soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings."

DEC Memo:	"8-15-14 Spoke with Angela Pimento at CF. She will have John return call to dispatch desk. jm Recv'd callback from Chris Lalak - WCDOH. He has spoken with John. Double wall fiberglass piping from dispensers to tanks. Leak is contained in tanktop sump. System has has been shut down at this time until they figure out what they are going to do. They believe they will probably replace lines. Chris says no leak to environment and he will be taking lead. jm 5-15 new spill 15-01325; Phase 2report 10-15-15 email status request sent to WCHD & Cumby RDB 10-22-15, from Cumby In response to the line failure, CFI engaged Island Pump & Tank (IPT) to perform the repairs. In lieu of replacing the product piping, IPT installed a siphon bar on the regular tanks and removed the submersible pump from the regular tank that had the failed product piping. IPT then removed and capped the regular product piping that had failed. The secondary line was tested and the dispenser pans and STP sumps were hydrostatically tested and passed. RDB 2-16 new SPills 15-10746 3-8-16 during meeting with WCHD, Singh, his att, his consultant, Cumby, their consultant and att, taking place in New Rochelle. Closure was denied on spills 14-05322 & 15-01325and RPs agreed to a scope of work by March 16. RDB 5-4-17 Work completed, waiting for closure report. GHP 12-3-19 Call from HighPoint Engineering. Felix and Sons Contractor installed new tanks in September 2016 and tightness tested October 2016. What do we have to do to close the spill . Sunny Singh for 635 Main Street Realty LLC (516-777-4320) is the client. BTR"

Control Type:	INST
Dt record added:	09/21/2021
Dt rec updated:	12/24/2021
Updated By:	PBAMIN
Site Code:	591030
Site Description:	"Location: The 10 Commerce Drive Rail Yard site is an approximately one-acre site located at 10 Commerce Drive in a commercial area of New Rochelle in Westchester County. The site is bounded to the north by Renewal Place and to the east, south and west by commercial properties and associated asphalt parking areas. Echo Bay and its associated tributaries are approximately 0.5 miles east of the site. Site Features: The two-story vacant building, including the floor slab, which existed on the site was demolished in late 2019 and early 2020 and the debris was removed from the site. As of 2021, the site is being redeveloped as a multi-story residential building. The new building footprint covers the entire site, and there is no exposed soil on the site. Current Zoning and Land Use: The site is zoned as Downtown Overlay Zone (DOZ) which allows for mixed residential and commercial uses. The surrounding area is predominantly commercial. Past Use of Site: In 1896, the northern and western portions of the site were occupied by the New York, New Haven and Hartford (NYNH&H) Railroad Company. In 1931, Rosa Coal & Oil Company was operating in the central and southern portions of the site until 1951. It appears that sometime in the mid-1960s, the structures associated with NYNH&H Railroad Company and Rosa Coal & Oil Company were demolished. The site remained vacant until a two-story building was constructed on site in or about 1981-1982. Before the two-story building was demolished between 2019 and 2020, an electronic manufacturer occupied a portion of the building between 1992 and 2003. Site Geology and Hydrology: The subsurface underlying the site consists of a layer of fill material overlying dense native fine-grained sandy soil with some clay and trace amounts of fine gravel. The fill extended from ground surface to approximately 4 to 9 feet below ground surface (bgs) and is composed of brown, medium to fine sand with some silt, gravel, brick, concrete, wood and ash. Groundwater was encountered at

10 COMMERCE DRIVE RAIL YARD (Continued) **S125465243**

depths ranging from 2 to 9 feet bgs. Bedrock was encountered at about 18 feet bgs and consisted of granite. Groundwater flows south-southeast. "

Env Problem: "Nature and Extent of Contamination: The site contamination resulted from the use of waste generated from railroad operation (e.g. railroad ties) to fill the site. There is no indication that the contamination for any media extends off-site. Soil: Remedial Investigation of the site soil was performed in April 2020, prior to a soil removal Interim Remedial Measures(IRM). A total of 12 soil borings and 7 test pits were installed to a depth of 6 to 17 feet bgs and 49 samples were collected. Samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), inorganics (metals), polychlorinated biphenyls (PCBs), pesticides and polyfluroalkyl substances (PFAS). Confirmation soil samples collected following the soil removal IRM did not reveal exceedances of unrestricted soil cleanup objectives(SCOs) for VOCs, SVOCs, pesticides, PCBs and inorganics. PFOA and PFOS concentrations were also below the applicable screening values of 0.66 and 0.88 parts per million (ppm), respectively. Approximately 670 cubic yards of soil generated on-site, that met unrestricted use SCOs, was placed beneath the foundation. Additionally, 44,700 tons of virgin coarse aggregate were imported and placed beneath the foundation. Groundwater: A total of ten (10) groundwater samples were collected from depths of 5 to 19 feet bgs and analyzed for VOCs, SVOCs, inorganics, PCBs, pesticides and PFAS. Xylene was detected in one monitoring well at 5.9 parts per billion (ppb) which is slightly above the applicable groundwater standard of 5 ppb. Phenol was detected in the two wells in the range of 1.7 to 10.9 ppb which is above the ground water standard of 1 ppb. Benzo(a)pyrene was detected in three wells in the range of and 0.02 to 0.74 ppb. Benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were also detected in one sample slightly above their respective ground water standards. Arsenic was detected in two wells, ranging from 66-71.16 ppb compared to a standard of 25 ppb. Total (vs. dissolved) concentrations of chromium, lead, manganese, and nickel were detected in one well at 344, 213, 4,050 and 291 ppb, respectively, which are above the applicable standards of 50, 25, 300 and 100 ppb, respectively. Iron, sodium and copper were also detected in the groundwater samples. Metals in the groundwater are likely related to suspended solids present in the samples. Ethylbenzene, xylene, and naphthalene were detected below their respective ground water standards. Chloroform was detected in the eight out of ten wells in the range of 10 to 55 ppb which is above the ground water standard of 7 ppb. Chloroform is a by-product of drinking water chlorination and is often found in groundwater in urban areas served by (leaking) public water lines. Bromodichloromethane and bromomethane, also byproducts of drinking water chlorination, were also detected below their respective standards. Acetone and 2-butanone (or methyl ethyl ketone [MEK]), common laboratory contaminants, were detected below their respective groundwater standards. No other chlorinated VOCs were detected in any of the groundwater samples. Sub-slab Soil Vapor: The new building is currently under construction. The slab for the new building has been installed, following which a total of eight sub-slab soil vapor samples were collected from beneath the newly-constructed slab and analyzed for VOCs. However, since the building is under construction/incomplete, indoor air samples could not be collected. Benzene was detected in the range of 3.5 to 40.3

10 COMMERCE DRIVE RAIL YARD (Continued) **S125465243**

micrograms per cubic meter (ug/m3) in seven out of eight samples. Ethylbenzene was detected in the range of 3.0 to 76.0 ug/m3 in all samples. Toluene ranged from non-detect (ND) to 38.1 ug/m3 in seven out of eight samples. Total xylenes were detected in the range of 16 to 292 ug/m3 in all eight samples. Tetrachloroethene (PCE) was detected in the range of 0.61 to 585 ug/m3 in six out of eight samples. Trichloroethylene ranged from ND to 6.4 ug/m3 in two out of eight samples. Cis 1,2-dichloroethelyene and vinyl chloride were not detected in any samples. Carbon tetrachloride was detected in the range of 0.34 to 7.5 ug/m3 in two out of eight samples. 1,1,1 Trichloroethane was not detected in any samples. Methylene chloride ranged from ND to 1.1 ug/m3 in two out of eight samples. Ethanol was detected in the range of 19 to 18,800 ug/m3 in all the samples. Several other VOCs were also detected in a number of the samples. The source of the VOCs is unclear considering that the soil was excavated to unrestricted use SCOs and very low VOC concentrations were detected in groundwater. Since no VOCs (except a minor xylene exceedance) were detected above their respective ground water standards, it is unlikely that the VOCs detected in soil vapor have migrated off-site. However, based on the above, a post-construction soil vapor intrusion investigation will be required."

Health Problem: "Soil removal actions have been completed to remove contaminated soil at the site, eliminating this potential exposure pathway. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Code: 591030
Site Description: "Location: The 10 Commerce Drive Rail Yard site is an approximately one-acre site located at 10 Commerce Drive in a commercial area of New Rochelle in Westchester County. The site is bounded to the north by Renewal Place and to the east, south and west by commercial properties and associated asphalt parking areas. Echo Bay and its associated tributaries are approximately 0.5 miles east of the site. Site Features: The two-story vacant building, including the floor slab, which existed on the site was demolished in late 2019 and early 2020 and the debris was removed from the site. As of 2021, the site is being redeveloped as a multi-story residential building. The new building footprint covers the entire site, and there is no exposed soil on the site. Current Zoning and Land Use: The site is zoned as Downtown Overlay Zone (DOZ) which allows for mixed residential and commercial uses. The surrounding area is predominantly commercial. Past Use of Site: In 1896, the northern and western portions of the site were occupied by the New York, New Haven and Hartford (NYNH&H) Railroad Company. In 1931, Rosa Coal & Oil Company was operating in the central and southern portions of the site until 1951. It appears that sometime in the mid-1960s, the structures associated with NYNH&H Railroad Company and Rosa Coal & Oil Company were demolished. The site remained vacant until a two-story building was constructed on site in or about 1981-1982. Before the two-story building was demolished between 2019 and 2020, an electronic manufacturer occupied a portion of the building between 1992 and 2003. Site Geology and Hydrology: The subsurface underlying the site consists of a layer of fill material overlying dense native fine-grained sandy soil with some clay and trace amounts of fine gravel. The fill extended from ground surface to approximately 4 to 9 feet below ground surface (bgs) and is composed of brown, medium to fine sand with some silt, gravel, brick, concrete, wood and ash. Groundwater was encountered at depths ranging from 2 to 9 feet bgs. Bedrock was encountered at about 18 feet bgs and consisted of granite. Groundwater flows south-southeast. "
Env Problem: "Nature and Extent of Contamination: The site contamination resulted from the use of waste generated from railroad operation (e.g. railroad ties) to fill the site. There is no indication that the contamination for any media extends off-site. Soil: Remedial Investigation of the site soil was performed in April 2020, prior to a soil removal Interim Remedial Measures(IRM). A total of 12 soil borings and 7 test pits were installed to a depth of 6 to 17 feet bgs and 49 samples were collected. Samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), inorganics (metals), polychlorinated biphenyls (PCBs), pesticides and

10 COMMERCE DRIVE RAIL YARD (Continued) **S125465243**

polyfluroalkyl substances (PFAS). Confirmation soil samples collected following the soil removal IRM did not reveal exceedances of unrestricted soil cleanup objectives(SCOs) for VOCs, SVOCs, pesticides, PCBs and inorganics. PFOA and PFOS concentrations were also below the applicable screening values of 0.66 and 0.88 parts per million (ppm), respectively. Approximately 670 cubic yards of soil generated on-site, that met unrestricted use SCOs, was placed beneath the foundation. Additionally, 44,700 tons of virgin coarse aggregate were imported and placed beneath the foundation. Groundwater: A total of ten (10) groundwater samples were collected from depths of 5 to 19 feet bgs and analyzed for VOCs, SVOCs, inorganics, PCBs, pesticides and PFAS. Xylene was detected in one monitoring well at 5.9 parts per billion (ppb) which is slightly above the applicable groundwater standard of 5 ppb. Phenol was detected in the two wells in the range of 1.7 to 10.9 ppb which is above the ground water standard of 1 ppb. Benzo(a)pyrene was detected in three wells in the range of and 0.02 to 0.74 ppb. Benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were also detected in one sample slightly above their respective ground water standards. Arsenic was detected in two wells, ranging from 66-71.16 ppb compared to a standard of 25 ppb. Total (vs. dissolved) concentrations of chromium, lead, manganese, and nickel were detected in one well at 344, 213, 4,050 and 291 ppb, respectively, which are above the applicable standards of 50, 25, 300 and 100 ppb, respectively. Iron, sodium and copper were also detected in the groundwater samples. Metals in the groundwater are likely related to suspended solids present in the samples. Ethylbenzene, xylene, and naphthalene were detected below their respective ground water standards. Chloroform was detected in the eight out of ten wells in the range of 10 to 55 ppb which is above the ground water standard of 7 ppb. Chloroform is a by-product of drinking water chlorination and is often found in groundwater in urban areas served by (leaking) public water lines. Bromodichloromethane and bromomethane, also byproducts of drinking water chlorination, were also detected below their respective standards. Acetone and 2-butanone (or methyl ethyl ketone [MEK]), common laboratory contaminants, were detected below their respective groundwater standards. No other chlorinated VOCs were detected in any of the groundwater samples. Sub-slab Soil Vapor: The new building is currently under construction. The slab for the new building has been installed, following which a total of eight sub-slab soil vapor samples were collected from beneath the newly-constructed slab and analyzed for VOCs. However, since the building is under construction/incomplete, indoor air samples could not be collected. Benzene was detected in the range of 3.5 to 40.3 micrograms per cubic meter (ug/m3) in seven out of eight samples. Ethylbenzene was detected in the range of 3.0 to 76.0 ug/m3 in all samples. Toluene ranged from non-detect (ND) to 38.1 ug/m3 in seven out of eight samples. Total xylenes were detected in the range of 16 to 292 ug/m3 in all eight samples. Tetrachloroethene (PCE) was detected in the range of 0.61 to 585 ug/m3 in six out of eight samples. Trichloroethylene ranged from ND to 6.4 ug/m3 in two out of eight samples. Cis 1,2-dichloroethelyene and vinyl chloride were not detected in any samples. Carbon tetrachloride was detected in the range of 0.34 to 7.5 ug/m3 in two out of eight samples. 1,1,1 Trichloroethane was not detected in any samples. Methylene chloride ranged from ND to 1.1 ug/m3 in two out of eight samples. Ethanol was detected in the range of 19 to 18,800 ug/m3 in all the samples.

10 COMMERCE DRIVE RAIL YARD (Continued) **S125465243**

Several other VOCs were also detected in a number of the samples. The source of the VOCs is unclear considering that the soil was excavated to unrestricted use SCOs and very low VOC concentrations were detected in groundwater. Since no VOCs (except a minor xylene exceedance) were detected above their respective ground water standards, it is unlikely that the VOCs detected in soil vapor have migrated off-site. However, based on the above, a post-construction soil vapor intrusion investigation will be required."

Health Problem: "Soil removal actions have been completed to remove contaminated soil at the site, eliminating this potential exposure pathway. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Site Code: 591030
Site Description: "Location: The 10 Commerce Drive Rail Yard site is an approximately one-acre site located at 10 Commerce Drive in a commercial area of New Rochelle in Westchester County. The site is bounded to the north by Renewal Place and to the east, south and west by commercial properties and associated asphalt parking areas. Echo Bay and its associated tributaries are approximately 0.5 miles east of the site. Site Features: The two-story vacant building, including the floor slab, which existed on the site was demolished in late 2019 and early 2020 and the debris was removed from the site. As of 2021, the site is being redeveloped as a multi-story residential building. The new building footprint covers the entire site, and there is no exposed soil on the site. Current Zoning and Land Use: The site is zoned as

10 COMMERCE DRIVE RAIL YARD (Continued) **S125465243**

Downtown Overlay Zone (DOZ) which allows for mixed residential and commercial uses. The surrounding area is predominantly commercial. Past Use of Site: In 1896, the northern and western portions of the site were occupied by the New York, New Haven and Hartford (NYNH&H) Railroad Company. In 1931, Rosa Coal & Oil Company was operating in the central and southern portions of the site until 1951. It appears that sometime in the mid-1960s, the structures associated with NYNH&H Railroad Company and Rosa Coal & Oil Company were demolished. The site remained vacant until a two-story building was constructed on site in or about 1981-1982. Before the two-story building was demolished between 2019 and 2020, an electronic manufacturer occupied a portion of the building between 1992 and 2003. Site Geology and Hydrology: The subsurface underlying the site consists of a layer of fill material overlying dense native fine-grained sandy soil with some clay and trace amounts of fine gravel. The fill extended from ground surface to approximately 4 to 9 feet below ground surface (bgs) and is composed of brown, medium to fine sand with some silt, gravel, brick, concrete, wood and ash. Groundwater was encountered at depths ranging from 2 to 9 feet bgs. Bedrock was encountered at about 18 feet bgs and consisted of granite. Groundwater flows south-southeast. "

Env Problem: "Nature and Extent of Contamination: The site contamination resulted from the use of waste generated from railroad operation (e.g. railroad ties) to fill the site. There is no indication that the contamination for any media extends off-site. Soil: Remedial Investigation of the site soil was performed in April 2020, prior to a soil removal Interim Remedial Measures(IRM). A total of 12 soil borings and 7 test pits were installed to a depth of 6 to 17 feet bgs and 49 samples were collected. Samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), inorganics (metals), polychlorinated biphenyls (PCBs), pesticides and polyfluroalkyl substances (PFAS). Confirmation soil samples collected following the soil removal IRM did not reveal exceedances of unrestricted soil cleanup objectives(SCOs) for VOCs, SVOCs, pesticides, PCBs and inorganics. PFOA and PFOS concentrations were also below the applicable screening values of 0.66 and 0.88 parts per million (ppm), respectively. Approximately 670 cubic yards of soil generated on-site, that met unrestricted use SCOs, was placed beneath the foundation. Additionally, 44,700 tons of virgin coarse aggregate were imported and placed beneath the foundation. Groundwater: A total of ten (10) groundwater samples were collected from depths of 5 to 19 feet bgs and analyzed for VOCs, SVOCs, inorganics, PCBs, pesticides and PFAS. Xylene was detected in one monitoring well at 5.9 parts per billion (ppb) which is slightly above the applicable groundwater standard of 5 ppb. Phenol was detected in the two wells in the range of 1.7 to 10.9 ppb which is above the ground water standard of 1 ppb. Benzo(a)pyrene was detected in three wells in the range of and 0.02 to 0.74 ppb. Benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were also detected in one sample slightly above their respective ground water standards. Arsenic was detected in two wells, ranging from 66-71.16 ppb compared to a standard of 25 ppb. Total (vs. dissolved) concentrations of chromium, lead, manganese, and nickel were detected in one well at 344, 213, 4,050 and 291 ppb, respectively, which are above the applicable standards of 50, 25, 300 and 100 ppb, respectively. Iron, sodium and copper were also detected in the groundwater samples. Metals in the groundwater are likely related to

10 COMMERCE DRIVE RAIL YARD (Continued) **S125465243**

suspended solids present in the samples. Ethylbenzene, xylene, and naphthalene were detected below their respective ground water standards. Chloroform was detected in the eight out of ten wells in the range of 10 to 55 ppb which is above the ground water standard of 7 ppb. Chloroform is a by-product of drinking water chlorination and is often found in groundwater in urban areas served by (leaking) public water lines. Bromodichloromethane and bromomethane, also byproducts of drinking water chlorination, were also detected below their respective standards. Acetone and 2-butanone (or methyl ethyl ketone [MEK]), common laboratory contaminants, were detected below their respective groundwater standards. No other chlorinated VOCs were detected in any of the groundwater samples. Sub-slab Soil Vapor: The new building is currently under construction. The slab for the new building has been installed, following which a total of eight sub-slab soil vapor samples were collected from beneath the newly-constructed slab and analyzed for VOCs. However, since the building is under construction/incomplete, indoor air samples could not be collected. Benzene was detected in the range of 3.5 to 40.3 micrograms per cubic meter (ug/m3) in seven out of eight samples. Ethylbenzene was detected in the range of 3.0 to 76.0 ug/m3 in all samples. Toluene ranged from non-detect (ND) to 38.1 ug/m3 in seven out of eight samples. Total xylenes were detected in the range of 16 to 292 ug/m3 in all eight samples. Tetrachloroethene (PCE) was detected in the range of 0.61 to 585 ug/m3 in six out of eight samples. Trichloroethylene ranged from ND to 6.4 ug/m3 in two out of eight samples. Cis 1,2-dichloroethelyene and vinyl chloride were not detected in any samples. Carbon tetrachloride was detected in the range of 0.34 to 7.5 ug/m3 in two out of eight samples. 1,1,1 Trichloroethane was not detected in any samples. Methylene chloride ranged from ND to 1.1 ug/m3 in two out of eight samples. Ethanol was detected in the range of 19 to 18,800 ug/m3 in all the samples. Several other VOCs were also detected in a number of the samples. The source of the VOCs is unclear considering that the soil was excavated to unrestricted use SCOs and very low VOC concentrations were detected in groundwater. Since no VOCs (except a minor xylene exceedance) were detected above their respective ground water standards, it is unlikely that the VOCs detected in soil vapor have migrated off-site. However, based on the above, a post-construction soil vapor intrusion investigation will be required."

Health Problem: "Soil removal actions have been completed to remove contaminated soil at the site, eliminating this potential exposure pathway. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

Confirmation soil samples collected following the soil removal IRM did not reveal exceedances of unrestricted soil cleanup objectives(SCOs) for VOCs, SVOCs, pesticides, PCBs and inorganics. PFOA and PFOS concentrations were also below the applicable screening values of 0.66 and 0.88 parts per million (ppm), respectively. Approximately 670 cubic yards of soil generated on-site, that met unrestricted use SCOs, was placed beneath the foundation. Additionally, 44,700 tons of virgin coarse aggregate were imported and placed beneath the foundation. Groundwater: A total of ten (10) groundwater samples were collected from depths of 5 to 19 feet bgs and analyzed for VOCs, SVOCs, inorganics, PCBs, pesticides and PFAS. Xylene was detected in one monitoring well at 5.9 parts per billion (ppb) which is slightly above the applicable groundwater standard of 5 ppb. Phenol was detected in the two wells in the range of 1.7 to 10.9 ppb which is above the ground water standard of 1 ppb. Benzo(a)pyrene was detected in three wells in the range of and 0.02 to 0.74 ppb. Benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were also detected in one sample slightly above their respective ground water standards. Arsenic was detected in two wells, ranging from 66-71.16 ppb compared to a standard of 25 ppb. Total (vs. dissolved) concentrations of chromium, lead, manganese, and nickel were detected in one well at 344, 213, 4,050 and 291 ppb, respectively, which are above the applicable standards of 50, 25, 300 and 100 ppb, respectively. Iron, sodium and copper were also detected in the groundwater samples. Metals in the groundwater are likely related to suspended solids present in the samples. Ethylbenzene, xylene, and naphthalene were detected below their respective ground water standards. Chloroform was detected in the eight out of ten wells in the range of 10 to 55 ppb which is above the ground water standard of 7 ppb. Chloroform is a by-product of drinking water chlorination and is often found in groundwater in urban areas served by (leaking) public water lines. Bromodichloromethane and bromomethane, also byproducts of drinking water chlorination, were also detected below their respective standards. Acetone and 2-butanone (or methyl ethyl ketone [MEK]), common laboratory contaminants, were detected below their respective groundwater standards. No other chlorinated VOCs were detected in any of the groundwater samples. Sub-slab Soil Vapor: The new building is currently under construction. The slab for the new building has been installed, following which a total of eight sub-slab soil vapor samples were collected from beneath the newly-constructed slab and analyzed for VOCs. However, since the building is under construction/incomplete, indoor air samples could not be collected. Benzene was detected in the range of 3.5 to 40.3 micrograms per cubic meter (ug/m3) in seven out of eight samples. Ethylbenzene was detected in the range of 3.0 to 76.0 ug/m3 in all samples. Toluene ranged from non-detect (ND) to 38.1 ug/m3 in seven out of eight samples. Total xylenes were detected in the range of 16 to 292 ug/m3 in all eight samples. Tetrachloroethene (PCE) was detected in the range of 0.61 to 585 ug/m3 in six out of eight samples. Trichloroethylene ranged from ND to 6.4 ug/m3 in two out of

10 COMMERCE DRIVE RAIL YARD (Continued) **S125465243**

	eight samples. Cis 1,2-dichloroethelyene and vinyl chloride were not detected in any samples. Carbon tetrachloride was detected in the range of 0.34 to 7.5 ug/m3 in two out of eight samples. 1,1,1 Trichloroethane was not detected in any samples. Methylene chloride ranged from ND to 1.1 ug/m3 in two out of eight samples. Ethanol was detected in the range of 19 to 18,800 ug/m3 in all the samples. Several other VOCs were also detected in a number of the samples. The source of the VOCs is unclear considering that the soil was excavated to unrestricted use SCOs and very low VOC concentrations were detected in groundwater. Since no VOCs (except a minor xylene exceedance) were detected above their respective ground water standards, it is unlikely that the VOCs detected in soil vapor have migrated off-site. However, based on the above, a post-construction soil vapor intrusion investigation will be required."
Health Problem:	"Soil removal actions have been completed to remove contaminated soil at the site, eliminating this potential exposure pathway. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Sampling indicates soil vapor intrusion is not a concern for off-site buildings. "

DEC Memo:	"10/27/20 During excavation activities at this BCP site, a previously unknown single-wall steel UST was discovered. The tank top has been uncovered and the tank measures approximately 11ft long by 4 ft diameter, estimated at 1000-gal capacity. There is some liquid present in the tank (mostly water) and holes are visible. The product and use of the tank are unknown but suspected to be a heating fuel oil. The plan is to pump out, cut, clean and remove the tank, and follow-up with excavation and stockpiling of all impacted soil encountered for eventual disposal. Most of the site is being excavated to a depth between 5 to 13 ft below existing grade for a Track 1 remediation under BCP. The site is not believed to have a PBS registration. DER PM Parag Amin is on-site today. New Rochelle fire inspector has been contacted. JG 11/02/20: Call to dispatch desk from Jesse Maussener from SESI Consultants. He states that during further excavation work they have now located three additional USTs. These tanks appear to be smaller than the 1K UST discovered last week. Tanks will be cleaned and removed and the project will continue. jod 11/9/20- call from Jesse, another 1000 gal UST. Staining and holes in the top of the tank found. The tanks will be registered with Westchester County DOH. Rainwater is believed to be in this tank. - KJ 01-06-21 Update from SESI, the tanks have been removed and clean endpoints achieved. The closure report will be included with the BCP report to be submitted in 6 weeks. The WCHD determined the tanks were not required to be registered. BTR 12-28-21 Sent email requesting an update from Jesse to jam@sesi.org. Received UST closure report from Fuad at SESI. 5 underground storage tanks were removed in November 2020 and this closure report was prepared in March 2021. The liquid in the USTs were removed by Luzon Environmental. Approximately 148

10 COMMERCE DRIVE RAIL YARD (Continued) **S125465243**

cubic yards of petroleum contaminated soil were taken to Former New Jersey Zinc - West Plant in Pennsylvania. Soil analytical results were non-detect for BTEX analytes. Tanks were recycled at Pascap Metal in Bronx NY. WCHD determined that these tanks do not need to be registered. NFA. BTR"

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"11/12/13: Residential tank test failure. No indication of a release at this time. Message sent to Elite requesting additional information on the owner, or their realtor. jod 11/12/13: Update received from Chris Lalak. This is not a residential tank. This is a 10K #4 Oil tank, PBS 3-600412. Wayne Schneider will follow up on retest. jod 11-13-18 new management co looking for closure; submitted test from 2013- RDB 11-13-18 I asked WCHD for information. RDB 11-15-18 I requested annual tightness tests, they are not able to provide; RDB 11-19-18 I asked when tank will be removed. RDB 11-19-18 email from WCHD- No work permit application has come in. RDB 1/23/19: I spoke to

FAILED TANK TEST (Continued) **S114561821**

Ray Hilyer at Elite Environmental. Timeline of events: *Nov 2013 tank fails tightness test performed by Elite, Spill 1308221 reported. *2016 Elite is called back to the site to retest. The parking lot or the tank had been patched, another company had excavated and repiped the UST. Tank is retested and passes. Test results sent to WCDOH. *2017 Tank is retested and passes. *Nov 2018 a new owner (management company) Librett Real Estate Group becomes involved with refinancing the property. In order to refinance the open Spill 1308221 needs to be addressed. Elite Environmental is contacted to remove the 10k gallon UST. *Dec2018 the UST is removed, soil contamination is extensive. Spill 180 Elite reports the contamination appears to be older and weathered #4 oil. To date they have excavated approximately 300 tons. jod 8/14/19: The cleanup has been completed by Elite. Closure report for the site was submitted to the Westchester Health Dept. See Spill 1809754 for further information and a scanned copy of the TCR. NFA this spill case number. jod"

DEC Region:	3
DER Facility ID:	404310
DEC Memo:	"6/20/11: This spill initially reported as a residential TTF. Property is actually a commercial office building with apartments on the second floor. Previous Spill number for this site is 1102214 which was reported on May 27th. Owner informed US Tank Tech of the prior Phase I site investigation, but apparently did not inform them of the Phase II which found high levels of contamination. US Tank Tech reports they were hired to test the in-service 550 gallon heating oil tank, and perform a site investigation to locate a second, out-of-service tank. The 550 failed the vaccuum test, petroleum odors evident in the well point. US Tank Tech also reports they believe the second out-of-service tank may be located under the office building. Owner states the second tank is a 275 gallon heating oil, but that can not be confirmed at this time. US Tank Tech also reports there are at least two additional sets of fill and vent pipes, for other out-of-service or abandoned USTs. Tester also noted petroleum odors from the basement sump pit. jod 6/21/11: US Tank Tech reported that the owner says he hired Northeast Environmental to address these two spills issues. Message sent to Northeast asking for

DIPASQUALE PROPERTY (Continued) **S111063882**

confirmation. jod 9/29/11: Northeast reports the owner has hired them to begin investigation and remediation. jod 10/21/11: The UST has been removed by Northeast and contaminated soil is evident. Remediation work is being scheduled. jod 4/26/2012: Closure report from Northeast Environmental entered into eDocs. Based upon information provided, no further action required at this time. jod"

DEC Memo:	"5/29/18 Property has 2 8000 gallon UST, not in use. Both tanks had been for #6 fuel oil, were cleaned out, Tank 1 (in building #70) was filled with #2 oil, Tank 2 was left empty (in building #60). Tank 2 now has 28 inches of water in it. Northeast Environmental has been called and will be on site tomorrow. Property has converted to gas. It's an apartment building. ga 6/12/18 received call from Nanette, indicating that she was waiting for board approval to remove one of the tanks. Tank #1 is being repaired and retested, Tank #2 is being removed. BW 7/17/18 - G C Engineering will be submitted tank removal notification to the WCDOH and DEC. A TCR will be submitted to both the WCDOH and DEC. KAB 7-23-18 G C sent email to Carlos and cc'd me. It talks about their plans with remediation. Forwarded to KB. jc 08-09-18 Site visit during soil remediation. Approx. 120 cu. yards removed from the site. There is fuel oil contamination about 12 feet down. G.C. Environmental claimed they excavated to bed rock but the recent heavy rain washed soil back in. They were dewatering at the time to continue excavating. BTR 10/17/18 - G.C. Environmental, Inc. conduct conducted removal liquid and sludge, two 8K USTs, contaminated soils and collected soil samples. A vac truck used to remove 8,772 gal. liquid waste and sludge from the tanks and was disposed at Clean Water Of New York, Inc., NY. 884.7 tons of contaminated soils was removed and disposed at Clean Earth of Carteret, NJ. One excavation was generated to remove the two 8K USTs. 23 sidewalls and bottom soil samples were collected and laboratory analyzed. 13 soil sample results showed VOCs and SVOCs in the low ppb range, well below the NYS soil guidelines. There are no significant impacts from the tank. NFA. KAB"
Remarks:	"tank test failure"

SHWS:
Name: BAKER'S PRIDE OVEN
Address: 30 PINE STREET
City,State,Zip: NEW ROCHELLE, NY 10801
Program: HW
Site Code: 355304
Classification: N
Region: 3
Acres: 3.750
HW Code: 360087
Record Add: 11/08/2005
Record Upd: 07/21/2009
Updated By: RXKEATIN
Site Description: "The Baker?s Pride site is located at 30 Pine Street in the City of New Rochelle, Westchester County, NY. The surrounding area is urban with commercial and residential establishments mixed in between the commercial businesses. The Baker?s Pride site is an approximately 3.75 acre flat to severely sloping irregularly shaped parcel. The Baker?s Pride building occupies approximately 111,450 sf of building space and occupies the majority of the property. Baker?s Pride owns the Bakers Pride Oven Company Inc and is engaged in the production of restaurant/commercial grade ovens and broilers. The site is bordered by Metro North railroad tracks to the west and northwest, a mix of commercial and residential properties to the northeast, east, and south. Interstate (I-95) is located to the west of the Metro North railroad tracks. In 2005, a Phase II Environmental Assessment report was completed by Enercon as part of closure proceedings for a 3,000 gallon fuel oil UST that was closed in place and a 10,000 gallon fuel oil UST that was removed. Monitoring wells installed as part of this assessment revealed the presence of PCE in groundwater at levels up to 1,430 ppb. (The State groundwater standard for PCE is 5 ppb.) Also, this report noted chemical storage for cutting oils, lubricants, solvents and paints. No products were indicated that contained PCE. In 2007 a follow up report was conducted which revealed PCE in groundwater at levels up to 1,700 ppb. The site was added as a potential inactive hazardous waste disposal site ("P site") in 2007. A State funded site characterization was initiated in 2008 to determine the source of the PCE groundwater plume. A total of 9 monitoring wells were installed in the fall of 2008. Groundwater contaminated with PCE showed higher levels of PCE in wells upgradient from the Baker?s Pride facility. The PCE concentrations were as high as 3,700 ppb in MW-13 which is located about 300 feet upgradient from the Baker?s Pride facility. This prompted the State to do a second round of groundwater sampling further upgradient of MW-13. Two additional wells (MW-24 and MW-25) were installed about 150 feet upgradient of MW-13 in the winter of 2009. MW-24 revealed PCE at 5,300 ppb. The second round of sampling further defined a groundwater plume with a source area upgradient from the Bakers Pride site. Since the site information for Baker?s Pride indicates that the plume of PCE is coming from an off-site source, the Baker?s Pride site (360087) will not be listed in the Registry of Inactive Hazardous Waste Disposal sites. A separate site

INDUSTRIAL OVERALL SERVICES FORMERLY (Continued) **1004571492**

	was added to the Registry to address the source of the PCE plume (See site #360109.)"
Env Problem:	"Based upon investigations to date, the primary contaminants of concern at the site include tetrachloroetylene (PCE) and its associated breakdown products. PCE was detected in upgradient groundwater as well as on-site and also in indoor air in residences upgradient of the site. PCE was detected on-site in groundwater from non-detect up to 3,200 parts per billion (ppb) at MW-1) above the respective groundwater standard of 5 ppb. Upgradient off-site levels of PCE were as high as 5,300 ppb. Indoor air was impacted in two residences with the highest level being 530 micrograms per cubic meter (ug/m3) at a property on Bartels Place. Since the highest levels of PCE were identified in the groundwater upgradient of the site this suggests an off-site source that is impacting the Baker?s Pride site. The source of this contamination is the Industrial Overall Service Corp. Class 2 site (#360109)"

Click Here:

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that

INDUSTRIAL OVERALL SERVICES FORMERLY (Continued) **1004571492**

these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"11-21-21 A private vehicle hit the utility pole and took the pole down causing catastrophic failure of the OHT. About 50gal spilled to asphalt with approximately 1 gallon making it s way into a catch basin. Crews investigated and found no running water in the basin and the outfall is filled with leaves. Most of the product was caught on the leaves. Crews will open downstream manholes to confirm where the product went. New Rochelle FD put speedy dry on all free product. Cleanup pending removal of the pole and restoration of power. PCB status unknown. ML 11/22/21 Tim Tegan from Con Ed emailed the following, Crews just reported that the transformer at 115 Cedar Street in New Rochelle states Non PCB mineral oil on the spec plate. They will clean the spill as non haz. TG 11/26/21 Excerpt from EMIS, 11/23/2021 7:22 AM Clean harbors double washed asphalt and concrete with simple green. Removed all debris from catch basins and cleaned and washed with simple green. No environmental tag. Overhead crews replaced pole and installed new transformer. Baxter, Brandon TG"
Remarks:	"one gallon reached storm sewer, one quart to outfall pipe, already full of leaves. cleanup pending. fd on scene placed speedi dri."

DEC Region: 3
DER Facility ID: 310476
DEC Memo: "3/26/10 Tyree to go there on Mon. 3/29 to do repairs. dw 4/29/10 Getty 340 Main St New Rochelle line test failed do to faulty check valve. Tyree replaced check valve. Passed retest on 4/12/10 NFA JO'M 10-23-17 SEND OUT 30 day tank letter- RDB 10-25-17 call from Raul Naube @ 5168027171; retuned call; explained the current situation. offered to remove tanks for him. he is waiting for a court case, I advised him that he is in violation of the NYS CRRR pertaining to tanks, he has other sites on Long Island. Never in Westchester, I welcomed him to region; he will move forward with the permits and intends to remove the tanks- RDB 12-12-17 Rahul@lotusmgmt.com 340 Main Street Realty Inc. 25 Newbridge Road, Suite 312, Hicksville, NY 11801 _RDB 12-12-17 called and left another message RDB 12-18-17 email sent, I called your office last week and left a message. The tanks at your facility need to be removed. Please contact me today and discuss the schedule for the tank s removal or this case will be referred to Region 3, Regional Attorney for enforcement. RDB 1-3-18 email from Cider, The owner of the above referenced property has received the permit for removal of the USTs (NR BD/NR FM).We are only waiting on the contractors schedule.In the meantime, we wanted to confirm that there is nothing else required by your department?As soon as the schedule is confirmed, we will let you know. RDB 1-4-18 response, Thanks for the email and call. Who is the contractor for the tank removal? Do you have a guesstimate for the removal date? As I have explained to Rahul, this site is progressing towards enforcement and penalties. RDB 1-4-18, The contractor for the tank removals will be Felik s and Sons. Rahul is pushing them to get out there as soon as possible. My guestimate would be about two/three weeks to begin. As soon as we get the schedule from the contractor/Rahul, I will let you know. RDB Tank removal began. New Spill called in 17-09698 This spill closed- RDB 02-12-18 Spoke with Tim Fisher of Antea Group. Excavation under the northern dispenser island to commence on Thursday. Endpoint samples from both the registered tank removal and ghost tank removal show no exceedances. Sand from inside the ghost tanks is stock piled on site. All soil to be removed upon completion of excavation activities. BTR 4/9/18 pre-work notification from 12/27/17 in D2. BW "

Manual check during PBS inspection yesterday. Product clear no water or dirt. Diesel Tank product in interstitial space. Manual check during PBS Inspection yesterday. Product clear no water of dirt. Tanks One was hired to test inner and outer tanks. Super, inner wall passed, outer wall failed. Diesel inner wall failed, outer wall passed. Both tanks should be pumped out by today. Sebastian Bimonte jod 5/23/2012 -- After a meeting in NPO among owner, tank maintenance contractor, Mr. Nesci (attorney), WC DOH, and CK last Friday (5/18), Ispoke to Rachel at Hydro Environmental about a site assessment. Work plan to be submitted shortly. ELM 6/05/12: Update received from Sebastian Bimonte of WCDOH PBS: 1200103: SNN Realty in Mount Vernon. This was product in the interstitial during PBS inspection. No release to environment. Tank repaired NOH issued and can be closed. jod 6/5/2012 -- Site assessment being conducted at my request: field work on 210 Webster Ave in New Rochelle on Tuesday, June 12, 2012 per email from Hydro Enviro. ELM 7/31/2012 -- RI report clearly shows groundwater contamination (BETX/MTBE) around the tank field and dispensers. Need further delineation and RAP. Nothing in unsaturated soils. ELM 8/22/2012 -- Contractor working on a Phase II RI work plan. ELM 9/19/2012 -- Approved an RI work plan. Except that they did include the schedule and failed to mention RAP possibilities. ELM 1/22/2013 -- HydroTech informed me that they have the permit needed from the muny to perform the remediation. ELM 2/21/2013 -- Still no word on mobilizing for remediation. ELM 11-6-13 email from county, There is a whole history here.The 1200103 was for product in the interstitial. Sebastian and Carlos worked with Ed Moore on it.Basically double walled tanks leaked into the interstitial. It appear to be the striker plate were missing and from sticking the tanks they wore out. Eastmond lined the tanks and had trouble removing the product from the IS (completely). We requested spill closure and Ed Moore kept the spill open and continued to work on the PBS issues. They are replacing all tanks now. American

MAR-LAP SVC CNTR (Continued) **S103568792**

Remarks:	Petroleum (Ed- Thank You for making this happen)Wayne Schneider is inspected the site this afternoon and will handle the spill. I suggest we close out spill 1200103 and keep 1307998.(Wayne please provide a brief update to all after your inspection today.) 11-6-13 tanks yanked, new spill 13-07998, close this one RDB " "12 oz per product found during investigation on inter.cont., on the super tank and diesel tank."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was HARDY ALSO SEE SPILL 91-11342. 02/07/97 AS PART OF AN ONGOING REMEDIATION THEY FOUND NEWER PRODUCT INFLUENCING THEIR CLEAN UP. 04/24/97 LETTER & STIPULATION AGREEMENT SENT TO BE SIGNED. 12/10/97 COPY OF SIGNED STIPULATION SENT BACK 08/11/98 LETTER SENT; IMMEDIATE ACTION TOWARD AUTOMATED PRODUCT REMOVAL AND GROUNDWATER CONTROL AT SITE IS REQUIRED. 12/07/00 LETTER SENT TO DELTA ENVIRONMENTAL BY J. HARDY; PROPOSE A REMEDIAL ACTION PLAN WHICH IS SUBSTANTIALLY MORE AGRESSIVE THAN THE ONE EXISTING AT THIS TIME. 01/11/01 LETTER SENT TO DELTA ENV. BY J. HARDY; CONCEPTUAL REMEDIAL ACTION PLAN OF 12/13/00 IS APPROVED & REQUIRED. 4/23/04: Letter to Aaron Lapine, Delta Env. Consultants by J. Hardy. Submit one report per year. Include operating data and GW monitoring data in same report. 8/9/04: Letter to A. Lapine, Delta Env. from J Hardy. Reduce monitor well sampling to semi-annual. Report annually. 6/15/09 annual submitted 6/9/09 shows relatively stable groundwater levels but no info as to system operation--sent email to envirotrac to submit operation info jh 4/20/10 site in remediation as system has been operating for many years. Original impacts to adjoining restaurant have also been resolved for years so it seems spill is contained; spill cannot be closed however as there is still significant contamination jh 07/02/12 Contaminated soils on the station have been excavated down to bedrock. 4 gw wells remain, 1 on-site upgradient, 2 off-site downgradient , 1 in the tank field. After review of the documentation and a phone conversation, consultant will submit a quarterly groundwater monitoring plan for the next year, after which time the monitoring frequency may be adjusted based on results. It appears the source has been removed. mt 4/26/13 Spill Closed, asymptptic conditions approaching gw standards in final well. no further action required. mt "

DEC Memo:	"1/2/14 - WCDOH is oversight the ongoing tank tests. KAB 1/2/2014 -- APECCO hired by new operator (lease signed within past 6 weeks). Piping and dispensers and electronic leak monitoring equipment to be replaced. Based on lack of leak detection records for past 10 to 12 years, DEC requested TT and IS tests and system check of electronics. Tanks are probably suitable for service, but testing required for confirmation. It appears to be loose fittings. Electronics recently rewired at the computer console within past couple of weeks, but wiring ended near the top of the tanks. No probes in the interstitial space, just loose wiring near top of tank. Owner's representative took electronic system wire ends from the site despite WCDOH's request to take custody. ELM 2-13-14 closed and referred to spill 13-10365 which revealed contaminated soils when the failed lines were removed. RDB"

Updated By:	AMOMOROG
Site Description:	"Location The Site is located at 78 Echo Avenue in New Rochelle, Westchester County, New York. The 2.6 acre site is bordered to the north by Echo Bay, an estuary of the Long Island Sound. It is bordered to the east and south by residential properties, to the southwest by Echo Bay Avenue, and to the west by a landscaping company (formerly a fuel oil terminal). Site Features All the former structures and underground utility services have been removed. There are no buildings on the site. The site is flat with a vegetative cover. The site is adjacent to Echo Bay on Long Island Sound. Current Use The site is currently vacant. The surrounding parcels consist of a combination of commercial and residential uses. The nearest residence is adjacent to the site. Past Use of the Site Con Edison used the site as an electrical distribution substation until 1981. Transformers containing PCBs were stored and used at the site. Leaks and spills of PCBs may have occurred in the handling or servicing of these transformers. Site Geology and Hydrogeology The overburden at the site varies from four to 18 feet in thickness and is composed chiefly of well-sorted sand and silt with lesser amounts of clay and gravel. The overburden is underlain by an biotite garnet schist. The groundwater table, at an approximate ten-foot depth, is tidally influenced and generally flows from the southwest to the northeast."
Env Problem:	"Prior to Completion of Remediation Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compolounds (SVOCs), metals, polychlorinated biphenyls (PCBs) and pesticides. Off-site sediments in the adjacent Echo bay were analyzed for PCBs. Based upon investigations conducted to date, the primary contaminant of concern was PCBs. PCBs were detected in on-site soil and in substation structures at concentrations up to 47 ppm. PCBs were also found off site in the surface soil of four residential

CONSOLIDATED EDISON - ECHO AVE. SITE (Continued) **S101008407**

	yards at concentrations above 1 ppm. PCBs were not detected in groundwater. However, arsenic, cadmium and chromium were present at concentrations exceeding class GA groundwater standards. PCBs were found in a limited area of Echo Bay shallow sediments, ranging to 232 ppm. Post-Remediation Remediation at the site is complete. Prior to remediation the primary contaminant of concern was PCBs in soil and sediment. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions have been completed and measures are place to control the potential for exposures to residual contamination remaining in soil and groundwater. "

Site Description: "Location The Site is located at 78 Echo Avenue in New Rochelle,

CONSOLIDATED EDISON - ECHO AVE. SITE (Continued) **S101008407**

Westchester County, New York. The 2.6 acre site is bordered to the north by Echo Bay, an estuary of the Long Island Sound. It is bordered to the east and south by residential properties, to the southwest by Echo Bay Avenue, and to the west by a landscaping company (formerly a fuel oil terminal). Site Features All the former structures and underground utility services have been removed. There are no buildings on the site. The site is flat with a vegetative cover. The site is adjacent to Echo Bay on Long Island Sound. Current Use The site is currently vacant. The surrounding parcels consist of a combination of commercial and residential uses. The nearest residence is adjacent to the site. Past Use of the Site Con Edison used the site as an electrical distribution substation until 1981. Transformers containing PCBs were stored and used at the site. Leaks and spills of PCBs may have occurred in the handling or servicing of these transformers. Site Geology and Hydrogeology The overburden at the site varies from four to 18 feet in thickness and is composed chiefly of well-sorted sand and silt with lesser amounts of clay and gravel. The overburden is underlain by an biotite garnet schist. The groundwater table, at an approximate ten-foot depth, is tidally influenced and generally flows from the southwest to the northeast."

Env Problem: "Prior to Completion of Remediation Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compolounds (SVOCs), metals, polychlorinated biphenyls (PCBs) and pesticides. Off-site sediments in the adjacent Echo bay were analyzed for PCBs. Based upon investigations conducted to date, the primary contaminant of concern was PCBs. PCBs were detected in on-site soil and in substation structures at concentrations up to 47 ppm. PCBs were also found off site in the surface soil of four residential yards at concentrations above 1 ppm. PCBs were not detected in groundwater. However, arsenic, cadmium and chromium were present at concentrations exceeding class GA groundwater standards. PCBs were found in a limited area of Echo Bay shallow sediments, ranging to 232 ppm. Post-Remediation Remediation at the site is complete. Prior to remediation the primary contaminant of concern was PCBs in soil and sediment. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Remedial actions have been completed and measures are place to control the potential for exposures to residual contamination remaining in soil and groundwater. "

Spiller Address:	150 LOCKWOOD AVE
Spiller Company:	999
Contact Name:	DONALD
DEC Memo:	"2/1/21 Spoke to Donald, the superintendent of the medical facility bldg on 1/31. He claimed that the spill was only 1 pint into the sump, and that he cleaned it out. I then contacted Robison Oil, who reported the spill as 8 gal fuel oil. They said that the superintendent thought the day tank pump (20 gal) wasn't working and did something which released fuel oil from the day tank which went into the sump. They report that the sump was disconnected, and that it appeared to be full of fuel oil. They also said there did not appear to be any water in the sump. Spill was contained in the sump. I called Donald back and left a message telling him to keep the sump unplugged, and call an environmental cleanup contractor. I gave him several names of contractors. Robison sent a photo which shows a sump full of fuel oil. They did not do any cleanup as they said they had no responsibility in this incident. dw Update- I called Donald, who said that Robison was there on site fixing the day tank. Tech said

TROY RESIDENCE (Continued) **S105997625**

that the bldg had a service contract with Robison. He also said that the sump was dry and had been cleaned out. He said the sump had been pumped out by the superintendent, and the fuel was pumped back into the day tank. He said that the sump was also cleaned out with sorbents. Sump will remain unplugged. Based on onsite statements, spill seems to be closeable. NFA dw"

Remarks: "super Donald opened a valve on the day tank, oil drained and is now contained to sump pump"

DER Facility ID:	402070
DEC Memo:	"4/4/11 - To retest tank. KAB 4/28/11 Morris called in for follow up. Tank failed again. He said tank top was exposed for most of length and one side and some samples taken. Morris said whoever did repairs, sounds like they only put a new vent riser on. Did not check piping, which is heavily crusted. jc 5-6-11 Failed 2nd retest today. Owner giving Kathy a hard time. Morris will retest again next week. Kathy said road name should be Bayview not Dayview, made change. jc 5/13/11 Tank failed for a 3rd time. Plan to pull, according to Tank Tech. dw 8-4-11 Homeowner called dispatch desk. He wants to remove the tank himself and do ALL of the work. He says he would cut open the tank and clean with speedi dri, dispose of tank at scrap yard, etc. I recommended that he hire an environmental consultant to AT LEAST oversee project because the DEC will need a TCR which would include soil samples, manifests, disposal receipts, etc. I told him that this spill will not be closed out until a proper and acceptable Tank Closure Report has been submitted to this office for review. I told him to contact J O'Dee in White Plains for further info. This guy seems bent on doing everything himself even though it was recommended that he hire a consultant to oversee the project. jm 8/4/11: Recieved call from Sandy Perratta 914-557-0142. He is the same individual who called the dispatch desk earlier today. He is not the property owner but a friend of the owner. States he is in the construction business and he can remove the tank himself. He states he has the OSHA 30-hour training and also states he knows that he doesn't need confined space entry training if the tank is less than 4 feet below ground . I again stated he should have a professional contractor do the work for safety reasons. jod 8/8/11: Received voice-mail message from Mr Perratta stating he had removed the tank and it was on the lawn awaiting a DEC drive-by inspection. I met New Rochelle Fire Captain Henry Senno on site. The tank was cut and cleaned and is on plastic. The excavation is open and is not fenced or secured. There is no evidence of any holes in the tank, and no evidence of any leak or contamination. Captain Senno states he will follow up with the owner, as no permits were filed for the removal as required in New Rochelle. DEC Spills requires no further action at this time. jod 9/8/11: I left this spill open after discussing the situation with Capt Senno on either August 9th or 10th. There was still a 55-gallon drum of heating oil and heating oil sludge that was removed from the tank remaining on the site. On either Aug 11th or 12th I spoke with Mr Perrotta and stated the spill would be left open until he submitted a disposal receipt to DEC for proper disposal of that waste drum. To date, Mr Perrotta has submitted a disposal recipt for the tank (entered in eDocs) but has not submitted a disposal receipt for the drum. jod 9/22/11: Letter from Linda Enes forwarded to DEC. She

FIUMFREDO RESIDENCE (Continued) **S111012239**

states she is in posesseion of the 55-gallon drum, and is using it to fuel a space heater. I called her this morning and she states her husband transported the drum in his pick-up truck from New Rochelle to their home in Dover Plains NY. Letter has been entered into eDocs. DEC requires no further action. jod"

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/25/2022
Date Data Arrived at EDR: 02/03/2022
Date Made Active in Reports: 02/22/2022

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/25/2022

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NYC LEAD 2: Recent Lead Paint Violations
Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

HALSTEAD STATION
255 HUGUENOT STREET
NEW ROCHELLE, NY 10801

TARGET PROPERTY COORDINATES

Latitude (North):	40.91054 - 40ˆ 54’ 37.94’’
Longitude (West):	73.783836 - 73ˆ 47’ 1.81’’
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	602423.3
UTM Y (Meters):	4529326.5
Elevation:	90 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14105990 MOUNT VERNON, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

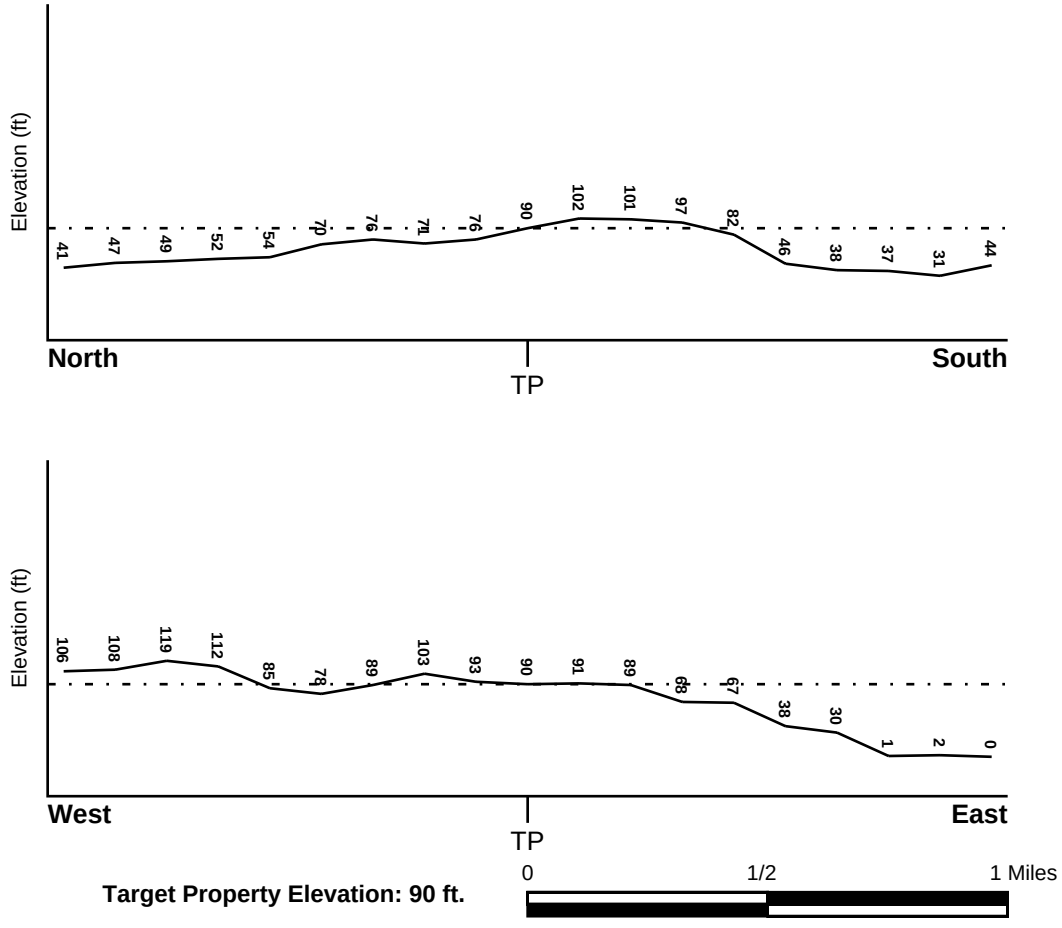
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 90 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

MOUNT VERNON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: gravelly loam

Hydrologic Group: Not reported

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 127 inches

Depth to Watertable Min: > 38 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5
2	3 inches	72 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
ASTM E 1527-21 USER QUESTIONNAIRE

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the user shall conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that *"all appropriate inquiries"* (AAI) is not complete.

	Yes (Y), No (N), Unknown (U)	Y	N	U
(1.) Environmental liens that are filed or recorded against the *subject property* (40 CFR 312.25). Did a search of *land title records* (or judicial records where appropriate, see *Note 1* below) identify any *environmental liens* filed or recorded against the *subject property* under federal, tribal, state or local law?		☐	☑	☐
(2.) *Activity and use limitations* that are in place on the *subject property* or that have been filed or recorded against the *subject property*. Did a search of *land title records* (or judicial records where appropriate, see Note 1 above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *subject property* and/or have been filed or recorded against the *subject property* under federal, tribal, state or local law?		☐	☑	☐
(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the *subject property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *subject property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?		☑	☐	☐
(4.) Relationship of the purchase price to the fair market value of the *subject property* if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this *subject property* reasonably reflect the fair market value of the *subject property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *subject property*?		☑	☐	☐
(5.) Commonly known or *reasonably ascertainable* information about the *subject property* (40 CFR 312.30). Are you aware of commonly known or *reasonably ascertainable* information about the *subject property* that would help the *environmental professional* to identify conditions indicative of *releases* or threatened *releases*? For example:		☐	☑	☐
(a.) Do you know the past uses of the *subject property*?		☑	☐	☐
(b.) Do you know of specific chemicals that are present or once were present at the *subject property*?		☐	☑	☐
(c.) Do you know of spills or other chemical *releases* that have taken place at the *subject property*?		☐	☑	☐
(d.) Do you know of any environmental cleanups that have taken place at the *subject property*?		☐	☑	☐

Describe (if known): Past Uses - see attached seller provided ESA dated Sept 28, 2020

Yes (Y), No (N), Unknown (U)	Y	N	U
(6.) The degree of obviousness of the presence or likely presence of contamination at the *subject property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the *subject property* are there any *obvious* indicators that point to the presence or likely presence of *releases* at the *subject property*?	☐	☑	☐
(7.) Do you know if any of the documents within the attached list of *Helpful Documents* exist? If so, can you provide these documents?	☑	☐	☐

LAUREN BEYRENT

Senior Project Manager

PROFESSIONAL SUMMARY:

Ms. Beyrent has over 9 years of experience in the environmental due diligence sector with an emphasis on completing Phase I Environmental Site Assessments (ESAs) and Property Condition Assessments (PCAs) at commercial, industrial, manufacturing/warehouse, and multi-family residential properties. In addition, Ms. Beyrent specializes in Phase I ESAs for Fannie Mae and Freddie Mac loan requirements, radon testing, and asbestos sampling. Other responsibilities include project staffing and management of large portfolio budgets, communicating findings with clients, and ensuring timely completion of her projects.

SELECTED PROJECT EXPERIENCE:

- Project manager for various environmental and property condition assessments throughout the U.S., Canada, and Mexico. Specific job functions include: communication with clients and property contacts, historic and local/state/federal research, government records/environmental regulatory database reviews, and technical report writing. PCA assessments also include the evaluation of typical building systems such as the building site and envelope, interior systems, roofing systems, mechanical equipment, plumbing, electrical/lighting systems, building structure, life safety/fire protection systems, and ADA compliance. Technical writing skills are utilized to prepare PCA reports, which include cost estimations, capital reserve planning, and engineering data analysis.
- Assessments were conducted for real estate owners, investors, and lending institutions in accordance with applicable American Society for Testing and Materials (ASTM) Standards and Guidelines, U.S. EPA All Appropriate Inquiry rules, Fannie Mae and Freddie Mac loan requirements, and additional project-specific guidelines. Routinely conducts radon and asbestos sampling and mold evaluations during the diligence assessments.
- Assisted in several remediation projects for various contaminated properties, which included soil and groundwater sampling, surveying, well-monitoring, and soil removal activities.

EDUCATION AND PROFESSIONAL AFFILIATIONS:

Clemson University – Clemson, South Carolina B.S.- Environmental and Natural Resources, Minor in Biological Sciences
OSHA 10 Hour Occupational Safety & Health Training for Construction
OSHA 40 Hour HAZWOPER
Certified Asbestos Building Inspector (Pennsylvania and Virginia)

ALLAN S. COFFEE

Senior Associate & Environmental Group Leader
714-343-7014 / acoffee@blackstoneconsulting.com / Santa Ana, California

PROFESSIONAL SUMMARY:

Mr. Coffee has over 25 years of experience with commercial real estate due diligence including environmental consulting and other related technical advisory related to real estate transactions, mergers/acquisitions, and property development. Specific experience includes Phase I Environmental Site Assessment (ESA); Asbestos, Lead-based Paint and Mold/IAQ consulting; Subsurface Soil and Groundwater Sampling; and Soil and Groundwater Remediation and Monitoring. Additional experience includes property condition assessment (PCA), vapor intrusion/risk management, environmental compliance/audit and regulatory agency coordination.

As Environmental Group Leader, Mr. Coffee is responsible for managing and directing Blackstone's services associated with environmental due diligence and Phase I ESAs, as well as consulting services and technical compliance associated with the built environment (asbestos, lead and mold, etc.), operational environment (regulatory permitting, compliance testing, etc.) and planned development or redevelopment (regulatory closure, construction worker safety, etc.). Mr. Coffee also provides technical review and concurrence for Phase I ESAs and environmental reviews.

As Senior Associate, Mr. Coffee assists in maintaining the communication and congruence between Blackstone service groups to continue a sustainable growth, which includes efficiency and diversity.

SELECTED PROJECT EXPERIENCE:

Has participated in the execution and delivery of over 2,000 Phase I ESA reports for clients including Private Equity Real Estate (PERE), Fannie Mae/Freddie Mac underwriters, REITs, large national and regional banks, private/public investment groups and numerous fiduciaries throughout the United States.

Managed the due diligence associated with the acquisition of a 75-property, national portfolio of warehouse and industrial properties for a private-equity investor. Environmental issues included past manufacturing operations, underground storage tanks usage, various hazardous materials storage, and adjoining property with known groundwater contamination migrating onto the site. Past on-site use and contamination triggered State reporting and coordination with the multiple regulatory agencies. Phase I ESA and Phase II subsurface investigation work completed within 30-days and evaluation of risk and potential remediation cost defined. Quick response and resolution allowed transaction to occur and assigned liability to the appropriate parties protecting the buyer.

Management and technical lead for the redevelopment of former industrial landfill property into low-income multi-family housing. Contamination identified during due diligence required notification to state regulatory agency with potential to stall acquisition and development approvals. Remediation risk

and cost defined during due diligence allowed transaction to occur before regulatory closure achieved. Remediation, including the removal of over 7,500 tons of lead contaminated soil, was performed in conjunction with construction providing savings and fast-tracking regulatory closure with state agency. Project was completed and remains in publicly traded portfolio.

EDUCATION AND PROFESSIONAL AFFILIATIONS

University of California at Los Angeles, CA, Bachelor of Science

OSHA 40-Hour HAZWOPER (Hazardous Waste Operator and Emergency Response)

NIOSH 582 Analyst Equivalent Certification

Indoor Air Quality Specialist/Inspector
