Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

INDUSTRIAL OVERALL SERVICE CORP (Continued) **1016678149**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: The Industrial Overall Service Corporation site is located at 10 Bartels Place in the City of New Rochelle, Westchester County, NY. The site is located east of I-95 and west of US-1 (Huguenot Street) and it is bounded by Reylea Place, Bartels Place, Centre Avenue and the Metro North railroad property and tracks. Site Features: The site is 0.42 acres in size and resides on a slightly

INDUSTRIAL OVERALL SERVICE CORP. (Continued) **S110043643**

sloping irregularly shaped parcel. The main site feature includes a six-sided building which occupies the majority of the property and a small parking area located to the south and southwest of the building. The surrounding area is urban with a mix of commercial and residential establishments mixed in between the commercial businesses. Current Zoning/ Uses: This property is zoned for commercial use. The building is the location of two active businesses, Workingmans Closet and Apparel +Plus. The Workingmans Closet business uses the business address of 27 Centre Street. Historic Uses: Industrial Overall Services has been operating at the current location as a uniform and industrial clothing laundering facility, historically cleaning heavily soiled clothing from auto body and gasoline dispensing businesses since 1939. Based on a Sanborn Fire Insurance Map form 1931, the site previously operated as an automobile garage. In 1980, Workingmans Closet which sells new and reclaimed work clothes, was opened, and a dry cleaning facility operated there for a short time in the same decade. Today, Workingmans Closet launders linens and uniforms for restaurants and other businesses, and Apparel +Plus is a retail uniform business. Laundry operations on the site have used various cleaning products in the past. A remedial investigation conducted at the site has measured high concentrations of the dry cleaning chemical tetrachloroethylene (PCE) and its degradation products which is migrating from two sources: the subsurface lint trap located within the site building, and a debris and waste disposal area on the ground surface on site and on the adjacent Metro North Railroad property. Contamination migrating from these sources has impacted groundwater in the bedrock and overburden aquifers and has developed a plume extending downgradient (southwest) from the site over 1900 feet, as well as the bedrock itself.Site Geology and Hydrology: Groundwater is found in the overburden and in the bedrock. Groundwater is generally found 10 to 15 feet below ground surface and flows in a southwesterly direction. Overburden in the vicinity ranges in thickness from 2.2 feet to 32 feet, and consists of fill material (1-5 feet in thickness) and varied amounts of fine to coarse sand with varying amounts of silt. Deeper overburden is described as having till-like characteristics (higher density, well consolidated, and lower moisture content). Bedrock in the vicinity is a highly weathered gneissic/schistosic rock which is undulating in nature and is generally more transmissive than the till-like overburden material directly above.

Env Problem: Nature and Extent of Contamination: The primary contaminants of concern at the site include tetrachloroethylene (PCE) and its associated breakdown products. PCE was detected in groundwater at the site and downgradient off-site. On-site PCE in groundwater was noted at greater than 5,300 parts per billion (ppb) in site. The levels of PCE appear to diminish from the 1,000's of ppb of PCE to non detectable approximately 1000 feet to the southwest of the site. However, a high (PCE) concentration of 200 ppm was documented by within the adjoining Metro North railway property. Trichloroethylene (TCE) and TCA, were also detected in the groundwater both downgradient and on the site. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. No significant environmental resources have been identified near the site. Significant Threat: The site presents a significant threat to the environment and a potential threat to human health due to the ongoing release of contamination from the site and from adjoining

INDUSTRIAL OVERALL SERVICE CORP. (Continued) **S110043643**

Metro North property into groundwater and soil vapor.

Health Problem: Direct contact with contaminants in groundwater is unlikely because the area is served by an uncontaminated public water supply. While the majority of the site is covered with buildings and pavement, trespassers or employees may come in direct contact with some contaminated surficial soils on site and on the adjacent Metro North Railroad property. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion (SVI). Inhalation of site contaminants in indoor air due to soil vapor intrusion is unknown because the on-site building is an active laundry facility. However, an evaluation to determine the potential for soil vapor intrusion to occur, will be needed should the current site use of the building or chemical use change in the future. Sub-slab depressurization systems have been installed in two off-site buildings to prevent the inhalation of site-related contamination. In addition, air monitoring is on-going at four additional off-site buildings to verify further actions are not needed. Sampling indicates soil vapor intrusion may be a concern for additional off-site buildings.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

report submitted by WCC Tank Technology. Tank was tested by WCC on 1-9-09 for the property owner. The tank passed the test and documentation was submitted to the owner and the New Rochelle FD. Elite Environmental tested the tank for a prospective buyer on 2-6-09 and failed the tank, resulting in this spill report to the DEC. On 2-12-09 WCC again tested the tank with reps from New Rochelle FD and Royal Environmental. The tank passed this test. All three tests were preformed with the Horner Locator Plus system. Based upon the information received as of this date, DEC is requiring No Further Action at this time. jod"

Remarks: "550 gal tank failed test/ failure due to bad fitting"

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Town:	New Rochelle (c)
Record Added Date:	12/29/2005
Record Updated Date:	12/31/2015
Update By:	DACROSBY
Site Description:	Location: The Schmucklers Dry Cleaners site is located in an urban area located at 258-364 North Avenue in New Rochelle, Westchester County. The site is 0.21 acres, most of which is covered by a two-story row building with a full basement. Site Features: In addition to the former dry cleaners, historically located on the first floor, the site also includes an enclosed backyard area to the immediate west of the building. The backyard is mostly covered by lawn, but also includes elevated vegetable beds, and a paved walkway. Current Zoning/Use(s): The site is commercially zoned, and currently has five commercial tenants occupying both the first and second floors. Properties along North Avenue are predominantly zoned for commercial or mixed use, some maintaining residential apartments above. Commerical uses dominate areas within one block east and west of North Avenue with the exception of a multi-unit residential building immediately to the west of the site. Drinking water on-site

SCHMUCKLER'S DRY CLEANERS (Continued) **S107787044**

is provided from a municipal source.Past Uses of the Site: The building on-site was built in 1891, and operated by Schmucklers Cleaners from 1914 to 2006 on the first floor and basement of the building. Additions were added to the building in 1937, and two in 1987. The site was acquired by the Volunteer, HNJ Realty, LLC, in August 2005, and entered into a BCA in June 2006. An interim remedial measure (IRM) was conducted starting in late 2008 to install a combined soil vapor extraction system/sub-slab depressurization system (SVE/SSDS) in the former dry cleaner to mitigate PCE in indoor air. The IRM was deemed complete in December 2013, but the SVE/SSDS continues to operate. A second IRM work plan was approved in May 2015 to conduct a pilot study of an enhanced biological in situ treatment to remediate contaminants under the on-site building slab. Site Geology and Hydrogeology: The site is underlain by historic fill which is underlain by poorly sorted glacial material (silty-clay with sand and gravel). The highly weathered bedrock surface is between 9 and 13 feet below ground surface at site. Groundwater was encountered between 9 to 12 feet below site. Bedrock groundwater at the site flows in a southeasterly direction. Only two overburden wells onsite have produced water, therefore a groundwater flow direction in overburden cannot be determined. It is assumed that it flows in the same basic southeast direction as the bedrock groundwater.

Env Problem:

Based on the investigations conducted to date, the primary contaminants of concern at the site are chlorinated volatile organic compounds (VOCs), primarily tetrachloroethylene (PCE) and its breakdown compounds, in soils, groundwater, sub-slab vapor, and soil gas; petroleum-related VOCs in soils, groundwater, sub-slab vapor, and soil gas; and semi-volatile organic compounds (SVOCs) in groundwater. Soils: Tetrachloroethylene (PCE), trichloroethene (TCE), and multiple petroleum related VOCs were detected in onsite soils underneath the building slab. The highest concentration of PCE at 210 parts per million (ppm), exceeding restricted commercial soil cleanup objectives (SCOs), was located underneath the former dry cleaning equipment room. Other contaminants detected in soils only exceeded the Protection of Groundwater SCOs. These exceedences were largely in soils located downgradient of the dry cleaning equipment room and consisted of: TCE at 1.3 ppm, cis-1,2 dichloroethene (cis-1,2-DCE) at 3 ppm, n-propylbenzene at 16 ppm, m+p xylenes at 15 ppm, ethylbenzene at 6.6 ppm, 1,3,5-trimethylbenzene at 63 ppm, and 1,2,4-trimethylbenzene at 99 ppm. Groundwater: Petroleum-based floating product (LNAPL, or light non-aqueous phase liquid) was observed in groundwater under much of the on-site building slab, a maximum of 6 inches thick under the former dry cleaning equipment room. Also observed were very high concentrations of select VOCs also under the former drycleaning equipment room. The maximum detected PCE was 830,000 parts per billion (ppb), and TCE at 58,000 ppb, indicating the presence of these compounds as free product DNAPLs (dense non-aqueous phase liquid) in groundwater. 25 individual VOCs were also detected in site groundwater samples exceeding NYS Class GA groundwater standards. These include the above-mentioned PCE, TCE, as well as other maximum detected concentrations of PCE breakdown products: cis-1,2-DCE at 8,700 ppb, and vinyl chloride at 28 ppb. BTEX was detected, with benzene at 62 ppb, toluene at 130 ppb, ethylbenzene at 150 ppb, m+p xylene at 520 ppb, and o-xylene at 290 ppb. Other significant concentrations of VOCs detected in groundwater include 1,3,5-trimethylbenzene at 890 ppb, and 1,2,4-trimethylbenzene at 840 ppb. Eight SVOCs were detected over groundwater standards in

SCHMUCKLER'S DRY CLEANERS (Continued) **S107787044**

groundwater under the building slab, including napthalene at a concentration of 1300 ppb, phenanthrene at 2400 ppb, acenapthene at 710 ppb, and antracene at 280 ppb. Bedrock wells were installed off-site in the downgradient, sidegradient, and upgradient directions. Petroleum-based VOCs and SVOCs were detected in the bedrock aquifer at concentrations above groundwater standards. For VOCs, total maximum BTEX concentration of 722 ppb was detected in a downgradient bedrock well. 11 individual SVOC contaminants were detected over groundwater standards in the same downgradient off-site bedrock well, including naphthalene at 4100 ppb, phenanthrene at 2800 ppb, acenapthene at 710 ppb, and antracene at 300 ppb.The extent of groundwater contamination is concentrated underneath the on-site building slab, with petroleum-based VOC and SVOC contaminants and LNAPL extending off-site in the bedrock downgradient or southeast direction. Soil Gas/Soil Vapor: The high concentrations of PCE (787,000 ug/m3), TCE (15,200 ug/m3), cis-1,2-DCE (46,000 ug/m3), and Vinyl Chloride (34 ug/m3) in soil vapor under the slab of the on-site building required the installation and continuing operation of a combined soil vapor extraction and sub-slab mitigation system during a 2008-2013 Interim Remedial Measure (IRM) action. PCE (at 91 ug/m3) and TCE (13.4 ug/m3) were also detected in soil gas outside of the building near the location of a former drywell. Benzene (37 ug/m3), toluene (126 ug/m3), ethylbenzene (85 ug/m3), xylene (555 ug/m3), 1,3,5-trimethylbenzene (3 ug/m3), and 1,2,4-trimethylbenzene (14 ug/m3) were also detected in subslab vapor and soil gas. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. There are no special resources identified near the site.

Health Problem: While direct contact with contaminants in the soil is unlikely because most contaminated soils are found beneath the on-site building, persons who dig below the ground surface adjacent to the building may come into contact with contaminants in subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. A sub-slab depressurization system was installed in the on-site building to prevent vapors beneath the slab from entering the building. Sampling indicates soil vapor intrusion is not a concern in one adjacent off-site building. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for other nearby off-site buildings.

COMPLIANCE AND EMISSIONS REPORTING

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:	Location: The Flamingo Cleaners site is located in an urban area of New Rochelle, Westchester County, at the southeastern corner of the intersection of Clinton Place and North Avenue. Site Features: The site is a one-story commercial building with a full basement. The building is divided into four tenant spaces which include a bar/lounge, beauty salon, and two vacant spaces that previously housed a travel agency and a dry-cleaner.Current Zoning/use(s): The site consists of four retail spaces, two of which are currently occupied. The site is zoned for commercial use. The surrounding land uses include parking lots, commercial establishments, a residential apartment complex, a medical center, and a church. The dry cleaning operation is no longer active and the space is currently vacant.Historical Uses: The existing building was constructed in 1941 and used for retail. Flamingo Cleaners began dry cleaning operations in 1958, and ran until 2005 when all dry-cleaning equipment was removed. Site contamination is a result of the former dry cleaner operations from improper management, disposal, and leaks of tetrachloroethylene (PCE).Prior completed investigations include a Phase I Investigation in October of 2003 and a Phase II Investigation completed in March of 2004. The Volunteer entered into a Brownfield Cleanup Agreement in April 2005. A Decision Document was issued in March 2012 for a remedy involving source soil removal and in situ chemical oxidation treatment of groundwater. Based on the extent of the site contamination, a referral to State Superfund for an off-site investigation was completed in December 2007. The groundwater plume was found to be isolated to immediately behind the building and little to no off-site impacts were noted in groundwater, soils, nor in soil vapor.Site Geology/hydrogeology: The site is underlain by glacial till which sits atop highly weathered bedrock. Bedrock ranges from 5 - 22 feet below ground surface. The water table is between 5 - 11 feet below ground surface. Groundwater flow direction dominantly to the south-southeast toward Long Island Sound, however, site specific groundwater flow direction is radial, and seasonally affected.
Env Problem:	Nature and Extent of Contamination: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE or perc), a dry cleaning solvent. PCE has been detected in exceedance of SCGs in on-site soils, soil vapor, on-site indoor air, and on-site groundwater. The off-site investigation to date indicates that there are no off-site impacts.Source area soils contained as much as 1,300 parts per million (ppm) of PCE, which exceeds the 1.3 ppm protection of groundwater soil cleanup objective. Immediately outside of the source area, soil concentrations of PCE ranged from 0.06 ppm - 0.91 ppm and did not exceed the soil cleanup objective for commercial use. PCE in groundwater was found at concentrations ranging from 1,000 parts per billion (ppb) - 19,000 ppb, which greatly exceeds the 5 ppb groundwater standard. PCE concentrations in sub-slab soil gas ranged from 15,700 ug/m3 - 570,000 ug/m3, and PCE in indoor air ranged from 115 ug/m3 - 1,040 ug/m3, exceeding NYDOH ambient air guidance value

FLAMINGO CLEANERS (Continued) **1000299848**

of 100 ug/m3 PCE. Concentrations of other volatile organic compounds (VOCs) including trichloroethene (TCE), 1,2-dichloroethene (1,2-DCE) and 1,1,1 trichloroethane (1,1,1 TCA) also exceeded groundwater standards but to a lesser extent. A state-funded RI/FS of the off-site extent of soil vapor and groundwater contamination was conducted from 2009-2011. The results indicate that the groundwater and soil vapor plumes appear to be limited to immediately below the site.Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. There are no special resources identified near the site.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in groundwater and/or soil may move into the soil vapor (air space within the soil), which in turn may move into overlying building and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilate/remove the air beneath the building) has been installed in the on-site building to prevent the indoor air quality from being affected by the contamination in the soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	06/03/2009
Record Updated Date:	03/02/2015
Update By:	DACROSBY
Site Description:	Location: This site is the off-site component of the former Flamingo Dry Cleaners site (C360078). The site is located in an urban area of New Rochelle, Westchester County, at the southeastern corner of the intersection of Clinton Place and North Avenue. Site Features: The site itself is a one-story commercial building which includes four stores including the vacant dry cleaners. This off-site component is comprised of immediately-surrounding areas. Current Zoning/Uses: Surrounding land uses include parking lots, commercial establishments, a residential apartment complex, a college, a medical facility, and a church. Historical Uses: The on-site building was constructed in 1941 and used for retail. Flamingo Cleaners began operations in 1958 and ran until 2005 when all dry-cleaning equipment was removed. On-site contamination is a result of the former dry cleaner operations from improper management, disposal, and leaks of tetrachloroethylene (PCE). A referral for off-site work was completed in December 2007 and a SSF RI/FS Work assignment was approved in March 2009. The RI field work was conducted in the summer of 2009 and fall of 2009. Additional round of gw analyses occurred in spring 2010. The on-going off-site investigation thus far indicates that PCE is not present in environmental media above standards in the area surrounding the site.Site Geology/Hydrogeology: The area surrounding the site is underlain by glacial till which sit atop highly weathered bedrock. Area bedrock ranges from 5-25 feet below ground surface. The water table ranges from 5-11 feet below ground surface. Groundwater flow direction is dominantly to the south-southwest toward Long Island Sound, but site specific groundwater flow direction is radial and seasonally affected.(1/13)
Env Problem:	Nature and Extent of Contamination: Based on investigations to date, the primary contaminant of concern at the site is tetracholoroethylene (PCE), a dry cleaning solvent. On-site, PCE has been detected in soils, soil vapor, indoor air, and groundwater. The off-site investigation to date indicates that there are no off-site impacts. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. There are no special resources identified near the site.
Health Problem:	Not reported

DEC Memo:	"8-15-14 Spoke with Angela Pimento at CF. She will have John return call to dispatch desk. jm Recv'd callback from Chris Lalak - WCDOH. He has spoken with John. Double wall fiberglass piping from dispensers to tanks. Leak is contained in tanktop sump. System has has been shut down at this time until they figure out what they are going to do. They believe they will probably replace lines. Chris says no leak to environment and he will be taking lead. jm 5-15 new spill 15-01325; Phase 2report 10-15-15 email status request sent to WCHD & Cumby RDB 10-22-15, from Cumby In response to the line failure, CFI engaged Island Pump & Tank (IPT) to perform the repairs. In lieu of replacing the product piping, IPT installed a siphon bar on the regular tanks and removed the submersible pump from the regular tank that had the failed product piping. IPT then removed and capped the regular product piping that had failed. The secondary line was tested and the dispenser pans and STP sumps were hydrostatically tested and passed. RDB 2-16 new SPills 15-10746"

DEC Memo:	"This house is the estate of R Demellia's late mother. Tank failed with only hissing, maybe a line leak but cant be sure. House is being prep'ed for sale....mm 12/08/14: From Envirostar: We pulled a 550 UST at 95 Washington Ave New Rochelle that had previously failed a tank test (spill # 1406916). The tank did have holes and there was contamination in the soil. The home owner is contacting there insurance. Customer info: Chuck LiVecchi 95 Washington Ave New Rochelle NY jod 3/20/15: Update from Envirostar via email: We removed 6 containers of contaminated soil Between march 12th and yesterday we took samples and back filled the hole. We will Submit for closure. jod 4/13/15: Report with request for closure entered into DecDocs. Post-Ex soil samples show contamination in excess of CP-51 Guidance. Additional information being requested from Envirostar. jod 4/14/2015: Envirostar removed and disposed of the leaking UST and a total of 108.96 tons of petroleum contaminated soil. Some residual contamination over CP-51 Guidance could not be excavated from along the foundation and due to safety concerns with buried utility lines. No evidence of ground water impact noted. Based upon information provided, no further action required at this time. jod"

DEC Memo:	"5/7/09 At a construction site, contaminated soils were encountered, which was confirmed by soil tests done by Northeast. They will be doing the site remediation and will submit a cleanup report. dw 06/12/09 Northeast Environmental provided oversight activity when petroleum impacted soil was discovered and need to be removed. Remediation consisted of the removal of 425.66 tons of petroleum contaminated soil. Post excavation TAGM soil sample results were all below DEC guidance values. NFA required. TG"
Remarks:	"1231 The caller advised dispatch North East Environmental will conduct the clean up. The caller requested a call back. No water ways affected."

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

the second floor. Previous Spill number for this site is 1102214 which was reported on May 27th. Owner informed US Tank Tech of the prior Phase I site investigation, but apparently did not inform them of the Phase II which found high levels of contamination. US Tank Tech reports they were hired to test the in-service 550 gallon heating oil tank, and perform a site investigation to locate a second, out-of-service tank. The 550 failed the vaccuum test, petroleum odors evident in the well point. US Tank Tech also reports they believe the second out-of-service tank may be located under the office building. Owner states the second tank is a 275 gallon heating oil, but that can not be confirmed at this time. US Tank Tech also reports there are at least two additional sets of fill and vent pipes, for other out-of-service or abandoned USTs. Tester also noted petroleum odors from the basement sump pit. jod 6/21/11: US Tank Tech reported that the owner says he hired Northeast Environmental to address these two spills issues. Message sent to Northeast asking for confirmation. jod 9/29/11: Northeast reports the owner has hired them to begin investigation and remediation. jod 10/21/11: The UST has been removed by Northeast and contaminated soil is evident. Remediation work is being scheduled. jod 4/26/2012: Closure report from Northeast Environmental entered into eDocs. Based upon information provided, no further action required at this time. jod"

Record Upd: 07/21/2009
Updated By: RXKEATIN
Site Description: The Baker?s Pride site is located at 30 Pine Street in the City of New Rochelle, Westchester County, NY. The surrounding area is urban with commercial and residential establishments mixed in between the commercial businesses. The Baker?s Pride site is an approximately 3.75 acre flat to severely sloping irregularly shaped parcel. The Baker?s Pride building occupies approximately 111,450 sf of building space and occupies the majority of the property. Baker?s Pride owns the Bakers Pride Oven Company Inc and is engaged in the production of restaurant/commercial grade ovens and broilers.The site is bordered by Metro North railroad tracks to the west and northwest, a mix of commercial and residential properties to the northeast, east, and south. Interstate (I-95) is located to the west of the Metro North railroad tracks. In 2005, a Phase II Environmental Assessment report was completed by Enercon as part of closure proceedings for a 3,000 gallon fuel oil UST that was closed in place and a 10,000 gallon fuel oil UST that was removed. Monitoring wells installed as part of this assessment revealed the presence of PCE in groundwater at levels up to 1,430 ppb. (The State groundwater standard for PCE is 5 ppb.) Also, this report noted chemical storage for cutting oils, lubricants, solvents and paints. No products were indicated that contained PCE. In 2007 a follow up report was conducted which revealed PCE in groundwater at levels up to 1,700 ppb. The site was added as a potential inactive hazardous waste disposal site ("P site") in 2007. A State funded site characterization was initiated in 2008 to determine the source of the PCE groundwater plume. A total of 9 monitoring wells were installed in the fall of 2008. Groundwater contaminated with PCE showed higher levels of PCE in wells upgradient from the Baker?s Pride facility. The PCE

INDUSTRIAL OVERALL SERVICES FORMER (Continued) **1004571492**

concentrations were as high as 3,700 ppb in MW-13 which is located about 300 feet upgradient from the Baker?s Pride facility. This prompted the State to do a second round of groundwater sampling further upgradient of MW-13. Two additional wells (MW-24 and MW-25) were installed about 150 feet upgradient of MW-13 in the winter of 2009. MW-24 revealed PCE at 5,300 ppb. The second round of sampling further defined a groundwater plume with a source area upgradient from the Bakers Pride site.Since the site information for Baker?s Pride indicates that the plume of PCE is coming from an off-site source, the Baker?s Pride site (360087) will not be listed in the Registry of Inactive Hazardous Waste Disposal sites. A separate site was added to the Registry to address the source of the PCE plume (See site #360109.)

Env Problem:	Based upon investigations to date, the primary contaminants of concern at the site include tetrachloroetylene (PCE) and its associated breakdown products. PCE was detected in upgradient groundwater as well as on-site and also in indoor air in residences upgradient of the site. PCE was detected on-site in groundwater from non-detect up to 3,200 parts per billion (ppb) at MW-1) above the respective groundwater standard of 5 ppb. Upgradient off-site levels of PCE were as high as 5,300 ppb. Indoor air was impacted in two residences with the highest level being 530 micrograms per cubic meter (ug/m3) at a property on Bartels Place. Since the highest levels of PCE were identified in the groundwater upgradient of the site this suggests an off-site source that is impacting the Baker?s Pride site. The source of this contamination is the Industrial Overall Service Corp. Class 2 site (#360109)

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was WCHD - LALAK 12/16/02: WCDOH ON SITE. 140 TONS SOIL REMOVED. CLOSURE REPORT PENDING. 04/08/03: Letter to Lockwood Avenue, LLC, from Christopher Lalak, WCHD, dated 3/26/2003. Closure report from GFE has been reviewed. Groundwater samples must be collected. Result submitted to WCHD by May 12, 2003. PBS #3-601067 & 3-601068. 08/13/02: Letter to Lockwood Avenue, LLC, from Christopher Lalak, WCHD, dated 7/21/03. Further remediation and quarterly sampling is required. Results of sampling are to be submitted to WCDOH quarterly. First report due by 9/01/2003. 5/25/04: Letter to Lockwood Realty, LLC, from Christopher Lalak, WCDOH, dated 25May2004. Two rounds of sampling have been received, third is overdue. Third round must be received by 25Jun2004. 11/22/04: Letter to Lockwood Realty, LLC from C. Lalak, WCDOH dated 17Nov2004. Based on groundwater sampling results, closure report and inspections, sampling must continue for the next year on a quarterly basis. After sampling, site will be reviewed. Next results due 28Feb2005. 4/4/05: Letter to Lockwood Realty, LLC from C. Lalak, WCDOH dated 18Mar2005. Spill has been satisfactorily remediated. WCDOH requires NFA."

DEC Memo:	"4-4-12: V.Mc. call to Mr.Kumar: Phone # no longer is service. 4-4-12: V.Mc. call to SEBASTIAN/WCHD: Left Mess.: Req. callbk. to Dispt. Update from WCDOH: greater than greater than greater than Bimonte, Sebastian greater than spb4@westchestergov.com greater than 4/5/2012 9:46 AM greater than greater than greater than John, SSN Realty 210 Webster Ave New Rochelle NY Super Tank product in interstitial space. Manual check during PBS inspection yesterday. Product clear no water or dirt. Diesel Tank product in interstitial space. Manual check during PBS Inspection yesterday. Product clear no water of dirt. Tanks One was hired to test inner and outer tanks. Super, inner wall passed, outer wall failed. Diesel inner wall failed, outer wall passed. Both tanks should be pumped out by today. Sebastian Bimonte jod 5/23/2012 -- After a meeting in NPO among owner, tank maintenance contractor, Mr. Nesci (attorney), WC DOH, and CK last Friday (5/18), Ispoke to Rachel at Hydro Environmental about a site assessment. Work plan to be submitted shortly. ELM 6/05/12: Update received from Sebastian Bimonte of WCDOH PBS: 1200103: SNN Realty in Mount Vernon. This was product in the interstitial during PBS inspection. No release to environment. Tank repaired NOH issued and can be closed. jod 6/5/2012 -- Site assessment being conducted at my request: field work on 210 Webster Ave in New Rochelle on Tuesday, June 12, 2012 per email from Hydro Enviro. ELM 7/31/2012 -- RI report clearly shows groundwater contamination (BETX/MTBE) around the tank field and dispensers. Need further delineation and RAP. Nothing in unsaturated soils. ELM 8/22/2012 -- Contractor working on a Phase II RI work plan. ELM 9/19/2012 -- Approved an RI work plan. Except that they did include the schedule and failed to mention RAP possibilities. ELM 1/22/2013 -- HydroTech informed me that they have the permit needed from the muny to perform the remediation. ELM 2/21/2013 -- Still no word on mobilizing for remediation. ELM 11-6-13 email from county, There is a whole history here.The 1200103 was for product in the interstitial. Sebastian and Carlos worked with Ed Moore on it.Basically double walled tanks leaked into the interstitial. It appear to be the striker plate were missing and from sticking the tanks they wore out. Eastmond lined the tanks and had trouble removing the product from the IS (completely). We requested spill closure and Ed Moore kept the spill open and continued to work on the PBS issues. They are replacing all tanks now. American Petroleum (Ed- Thank You for making this happen)Wayne Schneider is

CITGO STATION (Continued) **S103568792**

	inspected the site this afternoon and will handle the spill. I suggest we close out spill 1200103 and keep 1307998.(Wayne please provide a brief update to all after your inspection today.) 11-6-13 tanks yanked, new spill 13-07998, close this one RDB "

DEC Memo:	"1/2/14 - WCDOH is oversight the ongoing tank tests. KAB 1/2/2014 -- APECCO hired by new operator (lease signed within past 6 weeks). Piping and dispensers and electronic leak monitoring equipment to be replaced. Based on lack of leak detection records for past 10 to 12 years, DEC requested TT and IS tests and system check of electronics. Tanks are probably suitable for service, but testing required for confirmation. It appears to be loose fittings. Electronics recently rewired at the computer console within past couple of weeks, but wiring ended near the top of the tanks. No probes in the interstitial space, just loose wiring near top of tank. Owner’s representative took electronic system wire ends from the site despite WCDOH’s

DEC Memo:	"Chris Lalak called duty desk. American Petro is pulling tanks today. WCDOH is handling this and will do follow up...mm 1/29/2014 -- Called Pat Dunn @ APECCO to get some details. Dispensers had no sumps; discovered soil contamination under a dispenser. Trench along side dispenser is clean to 2 1/2 feet below grade; they expect limited dig and haul. ELM 2-11-14 Iyt was not a tank pull as originally noted by WCHD only line and dispenser replacement. RDB 2-13-14, spill #13-09599 was closed and referred to this one, the line test failure led to thic contamination RDB 03-14 contamination deep in excavation under former dispenser. crews worried about garage and building under neath, met on site with Gary and owner, advised them additional soil needed removal. 03-10-14 Using a Hydro Vac to get the remaining contaminated soils from excavation. 03-18-14 status report in edocs 05-13-14 email from Gary, Work done, report done,plan on forwarding report to you today once we get payment. RDB 07-22-14 gary looking for closure, I am looking for closure report.sent email requesting RDB"

HW Code:	360016
Record Add:	11/18/1999
Record Upd:	04/07/2015
Updated By:	GWHEITZM

Site Description: LocationThe Site is located at 78 Echo Avenue in New Rochelle, Westchester County, New York. This 3 acre site is bordered to the north by Echo Bay, an estuary of the Long Island Sound. It is bordered to the east and south by residential properties, to the southwest by Echo Bay Avenue, and to the west by a landscaping company (formerly a fuel oil terminal).Site FeaturesAll the former structures and underground utility services have been removed, and the whole site has been levelled, top-soiled and grassed.Current UseThe site is currently vacantPast Use of the SiteCon Edison used the site as an electrical distribution substation until 1981. PCBs transformers were stored and used at the site. Leaks and spills of PCBs may have occurred in the handling or servicing of these transformers. The soil on site and the sediment in the Bay were

CONSOLIDATED EDISON - ECHO AVE. SITE (Continued) **S101008407**

	contaminated with PCBs.
Env Problem:	Prior to remediation the contaminant of concern was PCBs.Remediation of the site is complete. The cleanup of PCBs and other incidentally detected contaminants has mitigated the threat to the environment, and in particular to the natural habitat in the bay.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Region:	3
DER Facility ID:	402070
DEC Memo:	"4/4/11 - To retest tank. KAB 4/28/11 Morris called in for follow up. Tank failed again. He said tank top was exposed for most of length and one side and some samples taken. Morris said whoever did repairs, sounds like they only put a new vent riser on. Did not check piping, which is heavily crusted. jc 5-6-11 Failed 2nd retest today. Owner giving Kathy a hard time. Morris will retest again next week. Kathy said road name should be Bayview not Dayview, made change. jc 5/13/11 Tank failed for a 3rd time. Plan to pull, according to Tank Tech. dw 8-4-11 Homeowner called dispatch desk. He wants to remove the tank himself and do ALL of the work. He says he would cut open the tank and clean with speedi dri, dispose of tank at scrap yard, etc. I recommended that he hire an environmental consultant to AT LEAST oversee project because the DEC will need a TCR which would include soil samples, manifests, disposal receipts, etc. I told him that this spill will not be closed out until a proper and acceptable Tank Closure Report has been submitted to this office for review. I told him to contact J O'Dee in White Plains for further info. This guy seems bent on doing everything himself even though it was recommended that he hire a consultant to oversee the project. jm 8/4/11: Recieved call from Sandy Perratta 914-557-0142. He is the same individual who called the dispatch desk earlier today. He is not the property owner but a friend of the owner. States he is in the construction business and he can remove the tank himself. He states he has the OSHA 30-hour training and also states he knows that he doesn't need confined space entry training if the tank is less than 4 feet below ground . I again stated he should have a professional contractor do the work for safety reasons. jod 8/8/11: Received voice-mail message from Mr Perratta stating he had removed the tank and it was on the lawn awaiting a DEC drive-by inspection. I met New Rochelle Fire Captain Henry Senno on site. The tank was cut and cleaned and is on plastic. The excavation is open and is not fenced or secured. There is no evidence of any holes in the tank, and no evidence of any leak or contamination. Captain Senno states he will follow up with the owner, as no permits were filed for the removal as required in New Rochelle. DEC Spills requires no further action at this time. jod 9/8/11: I left this spill open after discussing the situation with Capt Senno on either August 9th or 10th. There was still a 55-gallon drum of

FIUMFREDO RESIDENCE (Continued) **S111012239**

heating oil and heating oil sludge that was removed from the tank remaining on the site. On either Aug 11th or 12th I spoke with Mr Perrotta and stated the spill would be left open until he submitted a disposal receipt to DEC for proper disposal of that waste drum. To date, Mr Perrotta has submitted a disposal recipt for the tank (entered in eDocs) but has not submitted a disposal receipt for the drum. jod 9/22/11: Letter from Linda Enes forwarded to DEC. She states she is in posesseion of the 55-gallon drum, and is using it to fuel a space heater. I called her this morning and she states her husband transported the drum in his pick-up truck from New Rochelle to their home in Dover Plains NY. Letter has been entered into eDocs. DEC requires no further action. jod"

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Data Release Frequency: Varies

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

LA ROCHELLE
255 HUGUENOT STREET
NEW ROCHELLE, NY 10801

TARGET PROPERTY COORDINATES

Latitude (North):	40.910808 - 40° 54' 38.91''
Longitude (West):	73.783536 - 73° 47' 0.73''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	602448.1
UTM Y (Meters):	4529356.5
Elevation:	84 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940557 MOUNT VERNON, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

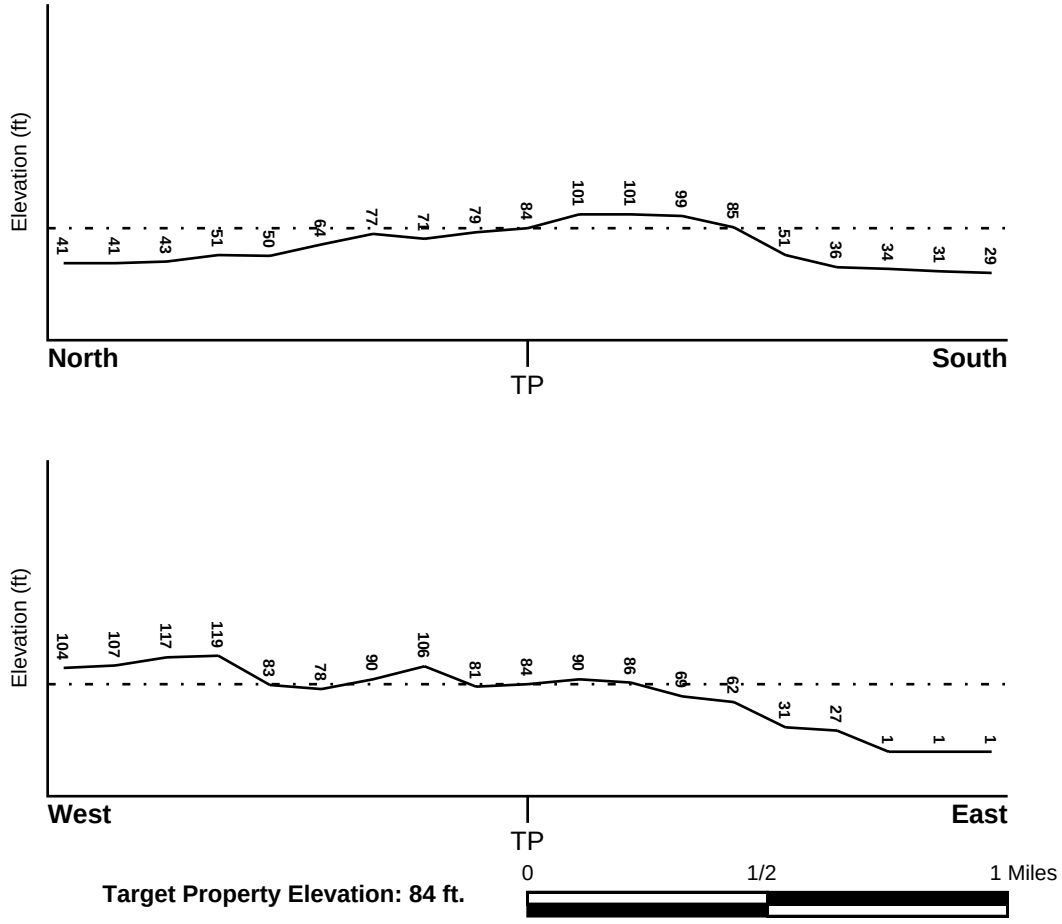
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 84 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
WESTCHESTER, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 36119C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNT VERNON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

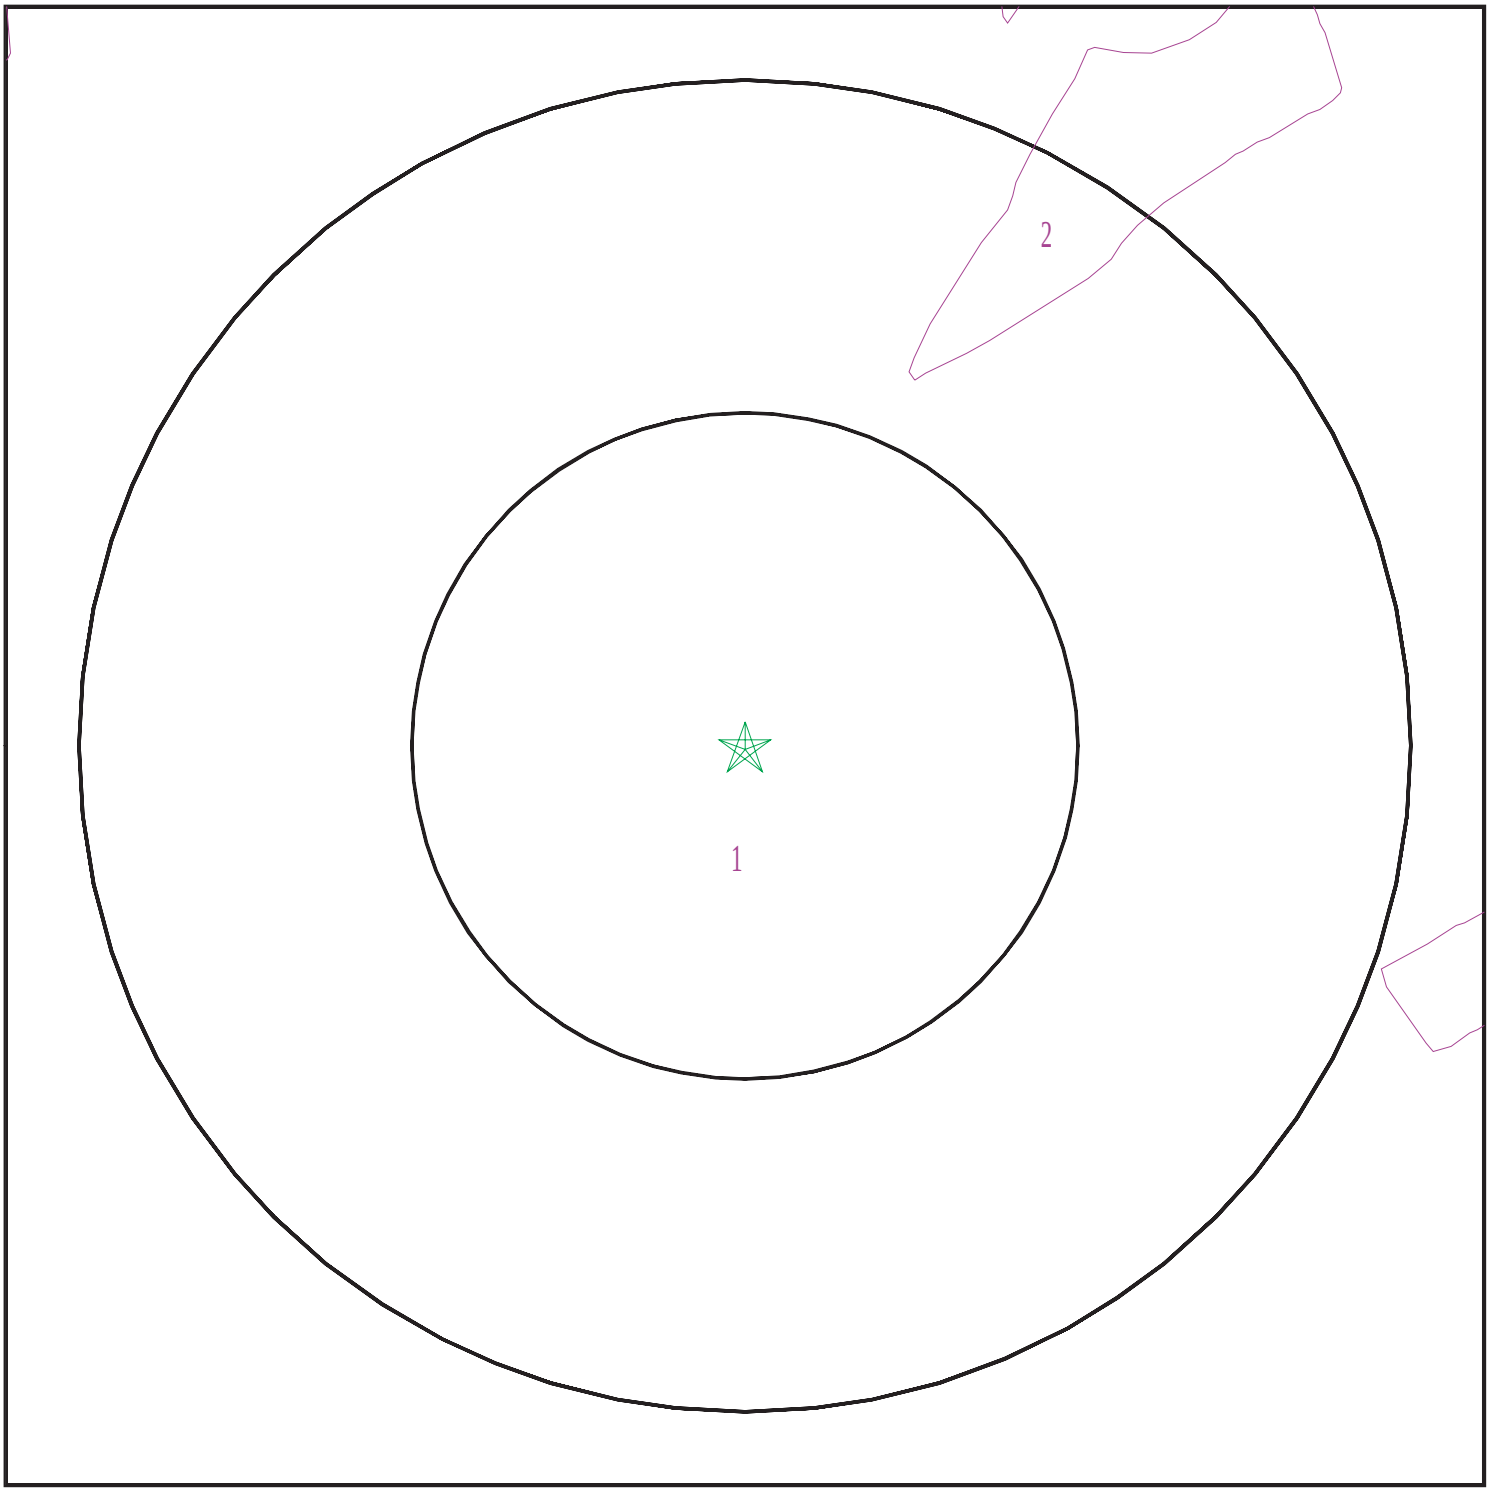
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Paleozoic
System:	Ordovician
Series:	Middle Ordovician (Mohawkian)
Code:	O2 *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: gravelly loam

Hydrologic Group: Not reported

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 127 inches

Depth to Watertable Min: > 38 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141 Min: 4	Max: 7.3 Min: 4.5
2	3 inches	72 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

BLACKSTONE CONSULTING LLC

JOHN O'CONNOR

Senior Project Manager

PROFESSIONAL SUMMARY:

Mr. O'Connor has extensive experience in environmental programs compliance and management. He has performed and managed environmental projects related to hazardous materials building inspections; hazardous materials abatement site monitoring and emergency response planning; indoor air quality investigations (IAQ); Phase I and II environmental site assessments (ESA); underground/aboveground storage tank (UST/AST) removal and replacement and systems management; and quality control audits. He has written a variety of environmental assessment reports and proposals. Mr. O'Connor has performed these services at a variety of private, commercial, industrial and governmental facilities.

PROJECT EXPERIENCE:

- Over eighteen years of experience in conducting environmental assessments in commercial facilities, industrial properties, single and multi-family housing developments, and schools.
- Extensive experience in conducting Phase I Environmental Site Assessments in accordance with ASTM, HUD MAP, Fannie Mae and Freddie Mac Guidelines, as well as numerous private lender guidelines.
- Extensive experience in project management of asbestos and lead abatement projects, soil remediation projects and UST removals.
- Experience in conducting Phase II Environmental Site Assessments including materials sampling and soil and ground-water borings.
- Experience in environmental personnel management, project cost estimating, and effective staff scheduling.
- Experience in conducting quality control audits of field personnel for a multi-million dollar federal lead hazard risk assessment project.
- Experience as a Project Manager for a $500,000.00 mold abatement project.
- Knowledgeable in regulatory requirements for, and identification of, environmental hazards associated with commercial and residential buildings. Advises clients in effective management and resolution of the identified concerns.
- Trained in the health effects of lead and asbestos, federal and state regulations, techniques of assessment and abatement, use of protective equipment, assessment record keeping and reporting.

- A highly trained lead inspector, qualified in the use of Niton XL Spectrum Analyzer. Performs lead-based paint surveys in support of public and private multifamily developments and private residences.
- Experienced in conducting Energy Audits for single family residences, multi-family and commercial properties.
- Extensive training in environmental regulations, hazard identification, risk assessment and abatement methods.

EDUCATION AND PROFESSIONAL AFFILIATIONS:

B.S., Millersville University, Major: Occupational Safety and Hygiene Management

Manufacturer's Training Course for Niton XL Spectrum Analyzer

EPA/AHERA Annual Asbestos Refresher Course

EPA Model Lead Paint Risk Assessor

Radon Measurement Operators Training Course

Home Energy Rating System Training

CERTIFICATIONS/ACCREDITATIONS/CONTINUING EDUCATION:

HUD Sponsored Multifamily Accelerated Processing (MAP) Training, Baltimore, Maryland

Maryland Accredited Lead Paint Risk Assessor

Pennsylvania Accredited Lead Paint Risk Assessor

Virginia Accredited Lead Paint Risk Assessor

District of Columbia Accredited Lead Paint Risk Assessor

EPA/AHERA Certified Asbestos Building Inspector

EPA/AHERA Certified Asbestos Management Planner

EPA Radon Measurement Proficiency Program Listed Inspector

Florida Licensed Radon Measurement Technician

Certified to Collect Drinking Water: Maryland

BLACKSTONE CONSULTING LLC

ALLAN S. COFFEE

Associate

PROFESSIONAL SUMMARY:

Mr. Coffee has over 25 years of experience assisting clients in their relationship with the built environment. He has expertise in all aspects of environmental oversight, regulation, and liability associated with property acquisition, management, and disposition. He also specializes in team leadership and oversight of Due Diligence activities, Phase I ESAs, Building Surveys, Subsurface Soil and Groundwater Sampling, Soil and Groundwater Remediation and Monitoring, as well as Regulatory Closure.

SELECTED PROJECT EXPERIENCE:

- Managed and directed technical and financial aspects of all operations in the Western United States Division for a national full-service environmental consulting company, including environmental services (Phase I ESAs, soil and groundwater, etc.), construction services (asbestos, lead, and other regulated building materials), industrial hygiene services (occupational monitoring, negative exposure assessments), and indoor air quality (moisture, microbial growth).
- Directed all aspects of environmental geology services for an environmental consulting company, including the oversight and management of technical approach, project budgeting and accounting for Due Diligence, Phase I ESAs, and soil and groundwater remediation.
- Performed Phase I ESAs, Soil and Groundwater Assessments, and regulatory communication for a variety of property owners, environmental consulting companies, and government projects.

EDUCATION AND PROFESSIONAL AFFILIATIONS

University of California at Los Angeles, CA, Bachelor of Science

OSHA 40-Hour HAZWOPER (Hazardous Waste Operator and Emergency Response)

NIOSH 582 Analyst Equivalent Certification

Indoor Air Quality Specialist/Inspector

California Registered Environmental Assessor I (REA I)

BLACKSTONE CONSULTING LLC

STEPHEN E. MANELIS

Principal and Co-Founder

PROFESSIONAL SUMMARY:

Mr. Manelis is co-founder of Blackstone and has over 18 years of experience with Environmental Site Assessments (ESAs) and other Due Diligence consulting during Real Estate Transactions and Mergers/Acquisitions. Specific experience includes Phase I and II ESAs, Environmental Compliance/Audit, and Asbestos, Lead-based paint, Radon gas, and Mold/IAQ consulting, and Property Condition Assessments. Additional experience includes soil/groundwater contamination assessments and regulatory agency coordination, remedial-action planning and management, pre-construction soil and groundwater characterization for urban redevelopment site/Brownfields, NPDES permitting and storm water management; wetland delineation and permitting; and threatened and endangered species studies.

In addition to leading Blackstone's Real Estate and Due Diligence business unit, Mr. Manelis is responsible for developing and maintaining Blackstone's national client accounts program.

SELECTED PROJECT EXPERIENCE:

Managed over 3300 Phase I Environmental Site Assessments (ESAs) for corporate real estate departments, real estate investment trusts (REITs), Fannie Mae/Freddie Mac underwriters, large national and regional banks, private/public investment groups and equity sponsors, and industrial/commercial facilities throughout the United States. In addition to site visit experience on numerous types of real estate, experiences include organization of project staff for single projects and/or portfolios, management of field activities and accurate interpretation of data, and final report QA/QC.

Third party review coordinator and project manager during industrial facility mergers/acquisitions throughout the continental U.S. As consultant to equity partners, provided capital expenditure and annual operating budgets associated with environmental compliance, waste management and disposal, and permitting.

Provided technical support and project management for wetland delineation and habitat assessment studies in the Southeast. Work involved reviewed of wetland field survey activities, surveying and map preparation, and the research of Federal and State databases concerning known occurrences of threatened and endangered species followed by field verification.

Program Manager for due diligence team associated industrial park acquisition by a publicly-traded REIT. Environmental issues included past manufacturing operations,

underground storage tanks usage, various hazardous materials storage, and adjoining property with known groundwater contamination migrating onto the site. Past on-site use and contamination triggered New Jersey ISRA reporting and coordination with the NJDEP. Phase I ESA and Phase II subsurface investigation work completed within 21-days and evaluation of risk and potential remediation cost defined. Quick response and resolution allowed transaction to occur and assigned liability to the appropriate parties protecting the buyer.

Program Manager for redevelopment of industrial property formerly consisting of vehicle repair facility, furniture stripper, machine shop, and light manufacturer. Client was publicly-traded REIT and project included mid-rise 200-unit multi-family housing development with subterranean parking. Contamination identified during due diligence required notification to state regulatory agency with potential to stall acquisition and development approvals. Remediation risk and cost defined during due diligence allowing transaction to occur before regulatory closure achieved. Remediation activities of soil and groundwater performed in conjunction with construction providing savings and fast-tracking regulatory closure with state agency. Project was completed and remains in client portfolio.

Program Manager for environmental due diligence and redevelopment consulting services for privately-held nationwide student housing developer. Project included acquisition and redevelopment of a high profile student housing project in Philadelphia, PA. Work included initial environmental due diligence, identification and resolution of asbestos and underground storage tank risk via sampling, and proper permitting prior to demolition of over 200,000 square feet of building space. Project construction proceeded as planned.

EDUCATION AND PROFESSIONAL AFFILIATIONS:

University of Rhode Island - Bachelor of Science, Natural Resource Development

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL ---------- National Priority List Deletions

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

NY RGA HWS ---- Recovered Government Archive State Hazardous Waste Facilities List

EXECUTIVE SUMMARY

NY RGA LF..... Recovered Government Archive Solid Waste Facilities List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/12/2020 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 04/03/2020 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/12/2020 has revealed that there are 164 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 39 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there are 76 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 06/08/2020 has revealed that there are 8 NY DRYCLEANERS sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
GREEN HEAVEN CLEANER Facility Id: 3-5510-00298	62 CENTRE AVE	SSW 0 - 1/8 (0.109 mi.)	I94	141
SPEEDY CLEANERS Facility Id: 3-5510-00344	***217 NORTH AVENUE***	***E 0 - 1/8 (0.113 mi.)***	***J107***	***178***
HANGERS CLEANERS Facility Id: 3-5510-00358	562-564 MAIN STREET	S 1/8 - 1/4 (0.147 mi.)	R170	273
ROTH CLEANERS Facility Id: 3-5510-00292	***1 LEROY PL***	***SSE 1/8 - 1/4 (0.177 mi.)***	***Z196***	***323***
FLAMINGO/TYK CLEANER Facility Id: 3-5510-00335	149 NORTH AV.	SE 1/8 - 1/4 (0.246 mi.)	AH300	534

Lower Elevation	Address	Direction / Distance	Map ID	Page
SOUND CLEANER	63 MEMORIAL HWY	0 - 1/8 (0.000 mi.)	A1	8
STATION CLEANERS Facility Id: ---	1 DEPOT PLAZA #1	NNW 0 - 1/8 (0.105 mi.)	L88	130
SCHMUKLER'S CLEANERS Facility Id: 3-5510-00327	360 NORTH AVE.	N 1/8 - 1/4 (0.211 mi.)	AI231	397

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 100 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON-CEDAR ST	ONE RAMADA PLAZA	NE 1/4 - 1/2 (0.339 mi.)	348	643

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

CON EDISON (Continued) **1019909014**

corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

CON EDISON (Continued) **1018281020**

corrective action activities required under RCRA.

DEC Memo:	"9/5/19 Con Ed found 1/2 gallon oil in soil when excavating. They stopped work, covered site, and will take soil samples for analysis. Cleanup pending results. No waterways or drains impacted. ga 09/05/19 Excerpt from EMIS, Senior Specialist, Sean Egan (04430) with EHS Street Construction, reported .5 gallon of an unknown oil within an excavation. Work immediately stopped and crews will be covering the excavation with a road plate. Samples for PCB, Oil ID and Flashpoint will be taken, however, the CoC was not available at the time of the call. TG 10/22/19 Excerpt from EMIS 275035/3; 10/8/2019 1:00 PM Allstate Clean venture removed 35 cubic yards of soil to permit work to continue. Sent to Clean Earth on 9/12/2019. Reinhart, Kenneth NFA. TG"

CONCRETE FLOORING WITH CRACKS (Continued) **S116554293**

Frank in the morning. This morning I spoke to Frank. Location has a 1500 gallon vaulted tank with a remote fill at curb. There is currently some oil in the basement sump. Sump is unplugged and it doesn't appear any was pumped out. Frank doesn't know where oil came from, but vault sounds inaccessible. Frank is trying to contact management company to let them know tank needs to be tested. Management Company: Sterling Solutions, 914/437-6245, Aurora is Almeada contact Owner: Milka Iwanow, 914/409-6513 jc 4/09/14: Email received this morning from Chris Lalak: Sebastian went to this one and will follow up. It is a block away from my office. The tank in a vaulted AST (1500 gallon from 1931). There is a spill across the floor and in cracks in the floor getting to a sump pump. The sump goes to the sanitary. The spill may have been going on for so time, the super was very vague. The AST is visible except for a small area that sticks into the floor of the vault. The tank is not visibly leaking. Almeida replaced the underground lines with above ground lines recently. The between the tank, the former underground lines, and the sump is some distance and they will need to excavate the floor. The building has hired Dutchess. Pumping out the tank is not simple. The building has natural gas and oil. jod 04-09-14 followup email, After a second look at this one with a plumber,It looks like the old lines might be leaking. The plumber will uncover the old lines. The tank is not being pumped out at this time. The bottom of the tank is visible for the most part. (the plumber went in the vault, before we were there).Possibly, the remote fill is also an issue. They will replace the tank with an unregulated tank. Sebastian will continue to handle the spill. The floor will be opened up tomorrow to investigate. RDB 7/10/18: Email message received from Sebastian Bimonte of WCDoH: Can you NFA this one. The call from what I can remember was possible sheen in the sump pump located in the basement of an apartment building. As a precaution a section of the floor was excavated and a soil sample was retrieved. Soils below CP-51. *The sample results dated April 24 of 2014 show contamination levels below CP-51 except for the Xylenes which are slightly over the guidance. Municipal water and sewer in this area, WCDoH recommending NFA at this time. Sample results entered into D2 DecDocs. jod"

Remarks: "Caller advised unknown amount of oil spilled onto concrete floor with cracks. Clean up is pending."

DEC Memo:	"9/17/19 Church had tank removed last week (PBS site), temp tank installed. Temp tank expanded from heat, spilling 7 gallons oil to secondary containment (metal dike with metal floor around tank) and 3

ST GABRIEL'S CHURCH (Continued) **S125360094**

gallons to asphalt. No waterways, drains, soil, or grass impacted. New Rochelle Fire Dept. put down speedy dry, Metro Env. drummed used absorbents & debris for disposal, reports to follow. ga 1/28/20: Tank removal was reported as Spill 1903323. Report submitted under that case number. This was a 10 gallons spill from a temp AST. Cleanup was completed the same day. jod"

Remarks: "Over explansion of above ground storage tank caused spill into containment and some on blacktop outside of containment. Cleanup is underway."

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

BROWNFIELDS:

Name:	CENTRE AVENUE DEVELOPMENT - SOUTH
Address:	33 CENTRE AVENUE
City,State,Zip:	NEW ROCHELLE, NY 10801
Program:	BCP
Site Code:	580085
Acres:	0.46
HW Code:	C360182
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	12/03/2018
Record Updated Date:	06/12/2019
Update By:	RDBENDEL
Site Description:	Location The 0.46-acre rectangular-shaped site is located in an urban area in the Downtown District of the City of New Rochelle, New York and is identified as Section 2, Block 437, Lots 1, 3 and 42 on the Westchester County Tax Map. Lots 1 and 3 are identified by address 339 Huguenot Street and Lot 42 is identified by 33-35 Centre Avenue. The property is undergoing a lot merger in conjunction with

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S123658091**

development. The site is located on the northern part of the city block bordered by Centre Avenue to the north, Huguenot Street to the east, Columbus Avenue to the south, and Relyea Place to the west. The site is bordered to the south by multi-story residential and commercial buildings. Site Features The site encompasses an area of about 20,000 square feet (0.46 acres). Sidewalk elevations (el) generally increase from southwest to northeast and range from about el 87.3 to 97.2 feet referenced to the North American Vertical Datum of 1988 (NAVD88). The site is occupied by a one-story industrial building with a partial cellar occupied by an electroplating and metal-finishing business, and an open-air parking lot. Current Zoning and Land Use The site is located within the Downtown Business (DB) (eastern portion) and Light Industry (LI) (western portion) zoning districts. Permitted principal uses of DB districts include stores, retail, offices, and residential units located on the second floor and above only. Permitted principal uses of LI districts include manufacturers, offices, medical facilities and parking garages. The current zoning designation is consistent with the proposed development. The surrounding area includes commercial, industrial, residential and institutional buildings. Past Use of the Site Based on review of Sanborn fire insurance maps, Lots 1 and 3 were developed with dwellings between 1887 and 1951 and with a parking lot between 1990 and 2003. Lot 42 is shown as undeveloped land prior to 1931, as a garage in 1931, and subsequently developed with residential, commercial and industrial buildings. Lot 42 has been occupied by an electroplating and metal-finishing business since 1971. The site is registered as a Conditionally Exempt Small Quantity Generator (CESQG) (Facility ID No.NYD002015402 [Eric S. Turner & Company, Inc.]). The site was historically listed as a Large Quantity Generator (LQG) and as a Small Quantity Generator (SGQ) for the generation of characteristic hazardous waste D001 (ignitable waste), D002 (corrosive waste), D005 (barium), D007 (chromium), D008 (lead), D039 (tetrachloroethene [PCE]), and U226 (1,1,1-trichloroethane [1,1,1-TCA]) between 1984 and 2004. The site is also identified as a New York State Department of Environmental Conservation (NYSDEC) Air Discharge Facility (Facility ID No. 3611900260 [Eric S. Turner & Company, Inc.]) for potential uncontrolled emissions less than 100 tons of total hazardous air pollutants per year. Site Geology and Hydrogeology According to the 1970 Geologic Map of New York Lower Hudson Sheet published by the University of the State of New York, the bedrock underlying the site is of the Hartland Formation, and is comprised primarily of basal amphibolite overlain by politic schists. Soil borings were advanced to explore the subsurface conditions during the 24 January 2018 Phase II Environmental Site Assessment by WCD Ground, LLC (WCD) and the 25 January 2018 Summary Report of Environmental Investigation by WCD. During the previous subsurface investigations at the site, historic fill was identified across the site from grade surface to depths ranging from 1 to 7.5 feet below grade surface (bgs). Historic fill was generally deeper on the eastern portion of the site. Historic fill predominately consisted of brown and black sand with varying amounts of gravel, brick, organic material, asphalt, metal and clay. Sand with varying amounts of silt, clay and gravel was observed beneath the historic fill. Regional groundwater flow direction for the area is estimated to the south-southwest. Groundwater underlying the site is reported to range from about 5 to 15 feet bgs across the site footprint.

Env Problem: The primary contaminants of concern include volatile organic

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S123658091**

	compounds (VOC), semivolatile organic compounds (SVOC) and metals in soil, and chlorinated VOCs (CVOC) in groundwater and soil vapor. Contaminant concentrations detected above applicable regulatory standards for each media (soil, groundwater, soil vapor) are summarized below. Soil - A total of 20 soil samples were collected during previous investigations. Soil sample analytical results were compared to UU and RURR SCOs. Analytes detected with concentrations above the restricted residential soil cleanup objectives are listed below. SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and ideno(1,2,3-cd)pyrene *Metals barium, chromium, and nickel. Groundwater - A total of 15 groundwater samples were collected during previous investigations. Groundwater sample analytical results were compared to the NYSDEC SGVs. Analytes detected with concentrations above NYSDEC SGVs are listed below. VOCs 1,1,1-TCA, 1,1-dichoethane, 1,1-DCE, PCE, and TCE Soil Vapor - A total of four soil vapor samples and one outdoor ambient air sample were collected during previous investigations. Soil vapor sample analytical results were compared to the minimum soil vapor concentrations recommending mitigation as set forth in the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in New York State Decision Matrices for Sub-slab Vapor and Indoor Air and subsequent updates (2017). Relevant findings are listed below. Total VOC concentrations ranged from 6,279 to 278,781 ?g/m3
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was GHIOSAY 11-18-03 P&D Transport trailer carrying 5000 gallons of a hot tar product developed several leaks from seams and holes beneath the trailer. The driver, John Culbreath, pulled the vehicle to the shoulder of I-95 NB at mm 5.4 in New Rochelle. The trailer drained hot tar to the road shoulder where it flowed downhill until it cooled

P&D TRANSPORT - HOT TAR (Continued) **S106126552**

	and solidified. Approximatley 200 feet of shoulder where affected before the trailer could be offloaded. DEC called out Castlton Environmental contractors when a company Rep stated that he/she would not sent a second truck to offload the damaged trailer. Castlton contacted Mystic Bulk Carriers and requested their assistance. Mystic provided a heated truck, suitable to offload the cargo and return it to Ownes Corning in Kearny where the load was originally picked up. The P&D damaged trailer was towed off the road to a spot near the I-95 toll plaza. Castlton performed the removal of the solidified tar several days later as they were delayed by heavy rain which created hazardous working conditions on busily traveled I-95. As of 11-18-03, Portland Asphalt indicated that they would pay Caslton directly for the cost of the cleanup. "
Remarks:	"material goes into a manhole which leads to a water way. poss hutchinson river. spill not controlled yet. caller req call back from rep"

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 2006-01-01 00:00:00.0
Site name: MR CHIMNEY CLEAN
Classification: Not a generator, verified

Date form received by agency: 1994-06-01 00:00:00.0
Site name: MR CHIMNEY CLEAN
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

. Waste code: D003
. Waste name: REACTIVE WASTE

. Waste code: X002
. Waste name: POLYCHLORINATED BIPHENOLS (PCBs)

Violation Status: No violations found

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:

Name:	14 LE COUNT STANDARD PRINTING
Address:	14 LE COUNT PL, 455 MAIN ST
City,State,Zip:	NEW ROCHELLE, NY 10801
Program:	BCP
Site Code:	568962
Acres:	0.927
HW Code:	C360176
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	04/13/2018
Record Updated Date:	12/31/2019
Update By:	JEBROWN
Site Description:	Location: The site is located mixed-use area of New Rochelle, southwest of Le Count Place, northwest of Main Street, and northeast of North Avenue. Land uses within a quarter-mile of the site are predominantly commercial/residential. Site Features: The site used to contain seven buildings, three of which were vacant. Of the non-vacant buildings, one (455 Main Street) was occupied by a beauty salon and a sportswear store on the first floor and professional offices on the second and third floors; another (459 Main Street) was occupied by a travel agency, hair salon, and medical offices on the first floor and offices on the second floor; and the parking lot on 14 Le Count Place was being utilized by Monroe College for parking, pursuant to a Parking Space License Agreement. There were parking lots on site associated with the existing uses. All buildings on-site have since been demolished, and a new building is under construction. Current Uses and Zoning: As noted above, the site is used for a mixture of retail, residential, and commercial uses. It is zoned for Downtown Business Overlay Zone (DB), which allows for a mix of uses including residential, office, retail, commercial, cultural/entertainment, civic/religious, light industrial, and parking/utilities. Past Use of the Site: Historically, the site has been dedicated to commercial/residential uses. Notable commercial uses include a former printing shop operated by the Evening Standard Newspaper (209 North Avenue), a photo-engraving shop (207 North Avenue) and an undertaker/funeral home (14 Le Count Place). The existing on-site buildings were reportedly constructed between 1903 and 1931. Several Recognized Environmental Concerns (RECs) were identified during Phase I site assessments. The RECs are identified as out of service or previously abandoned USTs and soil contamination as a result of the historic printing operations. Site Geology and Hydrogeology: Beneath an asphalt/concrete surface, surficial historic fill of up to 5 feet deep, consisting of soils similar to the underlying natural residuals, blanket the site. The site is underlain by soils formed by the decomposition of the underlying gneiss bedrock. These soils generally consist of silty/clayey sand containing varying percentages of gravel. Weathered gneissic bedrock

14 LE COUNT STANDARD PRINTING (Continued) **S122449231**

	is typically present at depths on the order of 20 to 25 feet below grade. The regional groundwater flow direction around the site was confirmed during the Remedial Investigation to follow the general topography of the region, which slopes gently downwards towards Echo Bay to the east and southeast of the site. The groundwater depth was measured during the 2017 water sampling event and found to be approximately 18 feet below ground surface. There are two operable units for this site. Operable Unit(OU) 01 is the brownfield-related remedial work and is the subject of this document. OU 02 encompasses the response to a petroleum spill reported on this property. Work on OU 02 is governed by a separate Order on Consent (Index no: CO 3-20190404-74) and is not part of the BCP cleanup.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals and PAHs in soil, benzene and cis-1,2-DCE in groundwater and trichloroethene in sub-slab soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Groundwater has not met standards for cis-1,2-dichloroethene and benzene. Residual contamination in the groundwater is being managed with monitored natural attenuation under a Site Management Plan.
Health Problem:	The site has been remediated; therefore, the potential for exposure to contaminated soil or groundwater has been eliminated. In addition, the area is served by a public water supply that is not affected by this contamination. Because the site is vacant, inhalation of site contaminants due to soil vapor intrusion does not represent a current concern. However, a soil vapor intrusion evaluation will be completed and appropriate actions to address exposures will be implemented for any new buildings constructed on the site. Additional investigations are recommended to determine if soil vapor intrusion is a potential concern for offsite buildings.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Address: 10 BARTELS PLACE
City,State,Zip: NEW ROCHELLE, NY
Program: HW
Site Code: 413917
Classification: 2
Region: 3
Acres: 0.41999999999999998
HW Code: 360109
Record Add: 05/15/2009
Record Upd: 04/04/2018
Updated By: DACROSBY
Site Description: Location: The Industrial Overall Service Corporation site is located at 10 Bartels Place in the City of New Rochelle, Westchester County. The site is located east of I-95 and west of US-1 (Huguenot Street) and it is bounded by Relyea Place, Bartels Place, Centre Avenue and the Metro North railroad property and tracks. Site Features: The site is 0.42 acres in size and resides on a slightly sloping irregularly shaped parcel consisting of two tax parcels. The main site feature includes a six-sided building which occupies the majority of the property and a small parking area located to the south and southwest of the building. Current Zoning/ Uses: This property is zoned for commercial use. The building is currently vacant and for sale. The surrounding area is a mix of commercial and residential establishments situated in an urban setting. Past Uses of the Site: Industrial Overall Service Corporation operated at the current location as a uniform and industrial clothing dry cleaning/laundering facility, historically cleaning heavily soiled clothing from industrial, auto body and gasoline dispensing businesses from 1956 until 2010. Dry cleaning equipment was reportedly decommissioned in 1978, but water washing continued. From 1980-1998 Workingman s Closet, an embroidery and uniform retail outfit, operated on the second floor of the building. From 2010 until 2016, Apparel Plus Textile Rental LLC ran a rental linen service company on both floors of the building, which involved water laundering. Historically, a precision scale company also operated out of the second floor of the building from sometime between 1932 and 1956 until sometime before 1973 when Industrial Overall purchased the building to occupy it entirely. Based on a Sanborn Fire Insurance Map from 1931, the site previously operated an automobile sales and service business. This site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is the on-site and adjacent Metro-north property. OU1 consists of the entire site property with the addition of an off-site source area

INDUSTRIAL OVERALL (Continued) **S110043643**

which lies to the northeast of the site on the adjacent Metro-north property. Operable unit 2 (OU2) is the off-site groundwater plume. Site Geology and Hydrology: Groundwater is found in the overburden and in the bedrock. Groundwater is generally found 10 to 15 feet below ground surface and flows in a southwesterly direction. Overburden in the vicinity ranges in thickness from 2.2 feet to 32 feet, and consists of fill material (1-5 feet in thickness) and varied amounts of fine to coarse sand with varying amounts of silt. Below the sandy silt is a till like material. Depth to bedrock is variable across the site from a depth of a few feet to over 35 feet below grade. Bedrock in the vicinity is a highly weathered rock which is undulating in nature and is generally more transmissive than the till-like overburden material directly above.

Env Problem: This section summarizes the assessment of existing and potential future environmental impacts presented by the site. Environmental impacts may include existing and potential future exposure pathways to fish and wildlife receptors, wetlands, groundwater resources, and surface water. Based upon the resources and pathways identified and the toxicity of the contaminants of ecological concern at this site, a Fish and Wildlife Resources Impact Analysis (FWRIA) was deemed not necessary for OU 01. Nature and Extent of Contamination: The primary contaminants of concern at the site include the dry cleaning chemicals tetrachloroethene (PCE), trichloroethene (TCE) and their associated breakdown products. PCE and TCE are found in on-site and off-site soil and groundwater. Two primary source areas remain at and adjacent to the site. These include a lint trap within on-site building and an off-site debris and waste disposal area located to the northwest outside the building on the adjacent Metro North Railroad property. Soil: Maximum concentrations of PCE and TCE in on-site soils/wastes located in the remaining lint trap source area exceed 21,000 parts per million (ppm) and 1,200 ppm, respectively. In addition to volatile organic compounds (VOCs), soils on- and off-site were also sampled for semi-volatile organic compounds (SVOCs) and metals. No SVOCs exceeded SCOs, but several metals (barium, cadmium, chromium, lead, and silver) exceeded their respective unrestricted use SCOs directly underneath the lint trap. Also under the lint trap, barium, cadmium, and lead exceeded commercial SCOs, while only barium out of these metals did not exceed protection of groundwater SCOs. Also chromium exceeds the protection of groundwater SCO in one off-site location. On-site and off-site soil contains VOCs mainly in the two source areas, but some soil located under the site parking lot also contained VOCs above protection of groundwater SCOs of 0.47 ppm for TCE and 1.3 ppm for PCE. Generally, however, concentrations of PCE and TCE in on-site soils decrease to below the soil cleanup objectives (SCOs) for the protection of groundwater not far from the actual lint trap. The debris and waste disposal source area on the off-site Metro North property contains a maximum PCE concentration of 500 ppm and a maximum TCE concentration of 11 ppm. Groundwater: Contamination migrating from the two source areas has impacted groundwater in the bedrock and overburden, and created a plume extending downgradient (southwest) more than 1,900 feet from the site. The highest level of PCE in on-site groundwater was 140,000 parts per billion (ppb) near the lint trap, compared to the groundwater standard of 5 ppb. On the adjacent off-site Metro North Railroad property, PCE concentrations in groundwater reached 3,600 ppb. The maximum level of TCE in on-site groundwater was 13,000 ppb near the lint trap, and 1,800 ppb beneath the adjacent off-site Metro

INDUSTRIAL OVERALL (Continued) **S110043643**

North Railroad property, compared to the groundwater standard of 5 ppb. TCE was also detected upgradient of the site at 5300 ppb indicating a second potential off-site upgradient source. Several breakdown products of PCE and TCE were also noted in the groundwater. The maximum on-site cis-1,2 dichloroethene (cis-1,2 DCE) concentration was 27,000 ppb near the lint trap, and 130 ppb beneath the off-site adjacent Metro North Railroad property. The maximum on-site vinyl chloride (VC) concentration was 1,600 ppb near the lint trap compared to the groundwater standard of 2 ppb.1-1-1 trichloroethane (1,1,1-TCA) was detected on-site at a maximum concentration of 730 ppb beneath the on-site building, compared to the groundwater standard of 5 ppb. However, 1,1,1-TCA was also detected upgradient of the site at 910 ppb indicating an off-site, upgradient source. Soil Vapor, Sub-slab Vapor and Indoor Air: Samples were not collected on-site because the site is vacant. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. No significant environmental resources have been identified near the site.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Most of the site is covered with pavement and buildings; however, trespassers or employees walking, digging, or otherwise disturbing the soil on the adjacent Metro North property could come in contact with site-related contaminants. Volatile organic compounds in the soil or groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment. Sub-slab depressurization systems have been installed in two off-site residential buildings to prevent the inhalation of site-related contamination. In addition, air monitoring is on-going at five additional off-site residential buildings to verify further actions are not needed. Sampling indicates soil vapor intrusion may be a concern for additional off-site buildings and sampling is recommended.

BROWNFIELDS:

Name:	CHURCH-DIVISION STREET, TOWER A
Address:	26 SOUTH DIVISION STREET
City,State,Zip:	NEW ROCHELLE, NY 10805
Program:	BCP
Site Code:	582599
Acres:	0.992
HW Code:	C360187
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	02/22/2019
Record Updated Date:	03/05/2020
Update By:	RDBENDEL
Site Description:	Site Location: The site is located in the City of New Rochelle, Westchester County, New York, at 26 South Division Street on a 0.992-acre lot. The property is located in a mixed use commercial and residential neighborhood and is bounded on the west by South Division Street and on the east by Church Street. The site is a portion of block 414, lot 8. Site Features: The site is currently vacant and formerly housed part of a 62,500 square foot municipal parking garage. The parking garage was demolished in 2018. Current Zoning and Land Use: The Site is zoned DO-2 (Downtown Overlay Zone District) which allows for mixed-use residential and commercial applications. Past Use of the Site: The site was historically occupied from 1891 until 1952 by an auto garage which included a tire repair center as well as several upholsterers. The site was developed as a municipal parking garage from 1972 until 2018. Site Geology and Hydrogeology: Site soils consist of a fill layer which ranges from 6 to 10 feet in depth underlain by a sandy silt layer which extends to weathered bedrock. Fill material consists of sand and silt with varying amounts of gravel, concrete, brick and asphalt. Bedrock was encountered at depths ranging between 8 and 14 feet below grade. Groundwater flows in a southeasterly direction towards the New Rochelle Harbor, approximately 2,000 feet away. Groundwater depth ranges from 9.6 to 12.2 feet below grade.
Env Problem:	Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals, Total Petroleum Hydrocarbons (TPH), cyanide, hexavalent chromium, and the emerging contaminants PFAS and 1,4-dioxane. Soil vapor samples were analyzed

CHURCH-DIVISION STREET, TOWER A (Continued) **S123658107**

for VOCs. Based on investigations conducted to date, the primary contaminants of concern include metals and polycyclic aromatic hydrocarbons (PAHs) in soil. Soil: The following PAHs were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs): benzo[a]anthracene (2.3 parts per million (ppm) vs USCO of 1 ppm), benzo[a]pyrene (2.2 ppm vs USCO of 1 ppm), benzo[b]fluoranthene (2.7 parts per million (ppm) vs USCO of 1 ppm), benzo[k]fluoranthene (0.93 ppm vs USCO of 0.8 ppm), Chrysene (2.2 ppm vs USCO of 1 ppm), and indeno(1,2,3-c,d)pyrene (1.4 ppm vs USCO of 0.5 ppm). The following metals were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs): barium (2,590 vs USCO of 350 ppm), cadmium (7.0 ppm vs USCO of 2.5 ppm), copper (52 ppm - 1,300 ppm vs USCO of 50 ppm), lead (89 - 7,550 ppm vs USCO of 63 ppm), mercury (0.245 - 22.7 ppm vs USCO of 0.18 ppm), nickel (30.8 - 41.5 ppm vs USCO of 30 ppm), and zinc (118 - 4,230 ppm vs USCO of 109 ppm) The following pesticides were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs): P,P'-DDD (0.00353 - 0.0038 ppm vs USCO of 0.0033 ppm), P,P'-DDE (0.00626 - 0.0109 ppm vs USCO of 0.0033 ppm), and P,P'-DDT (0.00388 - 0.114 ppm vs USCO of 0.0033 ppm). PCBs were also identified in one sample exceeding the Unrestricted Soil Cleanup Objectives of 0.1 ppm at 0.13 ppm. Based on the on-site soil investigation, it does not appear that soil contamination is migrating off-site. Groundwater - No contaminants of concern were identified from the remedial investigation that exceeded the Ambient Water Quality Standards for groundwater (AWQS) including the contaminant classes VOCs, SVOCs, metals, pesticides, and PCBs. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 41.6 and 51.2 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Based on the on-site groundwater investigation, there is a potential for contamination to migrate off-site towards residential and commercial areas, but the down-gradient area is served by municipal water. Soil Vapor - Elevated levels of chlorinated volatile organic compounds (CVOCs) were detected in on-site soil vapor samples for tetrachloroethylene (PCE) and trichloroethene (TCE) at 437 and 80.6 micrograms per cubic meter (ug/m3) respectively near the center of the site. Soil vapor sampling of the perimeter of the site found PCE detections ranging from 3.53 to 27 ug/m3 and no detections for TCE. These compounds were used in dry cleaners and one was historically located across South Division Street from the site with recorded waste disposal manifests of chlorinated solvents. No detections of CVOCs were found in on-site soils or groundwater, thus the source of the vapors is likely not on-site. The complete excavation of soils across the site, as part of the IRM, may result in the dissipation of vapors remaining on-site.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by site related contamination. Access to the site is restricted by a fence. However, people who enter the site may come into contact with soil and groundwater contamination if they dig below the ground surface. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site

CHURCH-DIVISION STREET, TOWER A (Continued) **S123658107**

	related contaminants due to soil vapor intrusion does not represent a current concern. Additional evaluations are needed to determine if there is a potential soil vapor intrusion concern for off site buildings.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Piping failure, need to repair and retest - mm 02/20/2009 Passed retest results that came into PBS to J. O'Dee---BHY 3/3/09: Review of report submitted by WCC Tank Technology. Tank was tested by WCC on 1-9-09 for the property owner. The tank passed the test and documentation was submitted to the owner and the New Rochelle FD. Elite Environmental tested the tank for a prospective buyer on 2-6-09 and failed the tank, resulting in this spill report to the DEC. On 2-12-09 WCC again tested the tank with reps from New Rochelle FD and Royal Environmental. The tank passed this test. All three tests were preformed with the Horner Locator Plus system. Based upon the information received as of this date, DEC is requiring No Further Action at this time. jod"
Remarks:	"550 gal tank failed test/ failure due to bad fitting"

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Name:	THE HUGUENOT
Address:	381-393 HUGUENOT STREET
City,State,Zip:	NEW ROCHELLE, NY 10801
Program:	BCP
Site Code:	544502
Acres:	0.39
HW Code:	C360157
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	03/29/2017
Record Updated Date:	03/02/2020
Update By:	AMOMOROG
Site Description:	Location: The 0.39-acre site is located in an urban area at 381-393 Huguenot Street, in New Rochelle, Westchester County. The site is bound to the north by a vacant store (first floor) with a residential unit above; to the south by a three-story residential apartment building and a one-story residential building; to the east by Huguenot Street and beyond by a gasoline filling station; and to the west by an office building/warehouse. Site Features: The site consists of four irregular-shaped parcels and currently maintains two structures. A 3,400-square foot one-story building with a partial basement sits on the south end of the site which, until August of 2018, was used for office and storage space associated with a U-Haul business, a real-estate firm, and a janitorial supply business. The second structure is a two-story building located on the north end of the site that until June of 2018 housed a church ministry on the first floor, two apartments on the second floor, and a hydraulic repair business in the basement. Both buildings are now vacant pending demolition. Current Zoning and Land Use: The site is located within the City of New Rochelle's recently designated (2015) Downtown Overlay Zone in a mixed-use setting. The site and surrounding parcels are utilized for mixed commercial and residential uses. The nearest residential dwellings include two apartment buildings on the adjacent property south of the site, with mixed-use commercial/residential properties located immediately north of the site and to the east across Huguenot Street. Past Use of the Site: The northern portion of the site has been utilized for dry cleaning services since 1931, and for manufacturing since the 1970s to 2010s. The potential source of contamination in this area includes the former dry cleaning operations and former fuel oil underground storage tanks (USTs) located on-site. The central portion of the site has maintained a residential dwelling since 1931, and has been used for truck and trailer parking since the 1990s. The potential source of contamination in this area includes a former fuel oil UST, which was removed prior to 1997. The southern portion of the site has maintained a gasoline filling station and car wash from the 1930s to the 1950s, and then a warehouse from the 1970s to 2010s. The potential source of contamination in this area includes former gasoline USTs and a car wash operation. In addition, urban fill material was encountered throughout the site. A spill was reported on June 6, 1996 at 381 Huguenot Street due to soil and groundwater contamination encountered during a previous site investigation

THE HUGUENOT (Continued) **S120706214**

(NYSDEC Spill #9604099). Phase I and II Environmental Site Assessments (ESAs) were performed in March 2016 at the site to evaluate potential environmental impacts. In February 2017 a Supplemental Subsurface Investigation (SSI) was conducted at the site to further define the environmental impacts present on-site. Site Geology and Hydrogeology: The site is overlain by a layer of urban fill material consisting of a heterogeneous mixture of medium to fine sand and silt, coarse to fine gravel and occasional asphalt, concrete and brick fragments, which varies in thickness between 1 and 6 feet. Below the fill is a native soil layer made up of medium to fine sand with silt, coarse to fine gravel, and occasional cobbles. Weathered bedrock was encountered at depths between approximately 5 and 20 feet below grade, while more competent bedrock was found at depths between approximately 10 and 24 feet below grade. Groundwater was encountered at depths between approximately 6 and 9 feet below grade and flows in a west-northwest direction.

Env Problem:

Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern found in site soils include semi-volatile organic compounds (SVOCs) and metals. The primary contaminants of concern found in site groundwater include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals. Soil - Numerous soil borings were completed between 2016 and 2018 to delineate the nature and extent of contamination on the site. Soil samples were analyzed for VOCs, SVOCs, metals, pesticides and PCBs. The investigations identified SVOCs and metals contamination in shallow soils at numerous locations across the site at concentrations exceeding restricted residential use soil cleanup objectives (RRSCOs). SVOCs identified in the on-site soils exceeding applicable RRSCOs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-c,d)pyrene at maximum concentrations of 5.8 parts per million (ppm), 5.8 ppm, 5.6 ppm, 5.4 ppm, 5.8 ppm, 0.72 ppm and 4.0 ppm, respectively. The RRSCOs for these compounds are 1.0 ppm, 1.0 ppm, 1.0 ppm, 3.9 ppm, 3.9 ppm, 0.33 ppm, and 0.5 ppm, respectively. Metals detected in the on-site soil exceeding applicable RRSCOs include cadmium, lead, and mercury at maximum concentrations of 4.79 ppm, 4,330 ppm, and 1.26 ppm, respectively. The RRSCOs for these metals are 4.3 ppm, 400 ppm, and 0.81 ppm, respectively. While no VOCs were detected above RRSCOs in any of the soil samples, VOCs were found in shallow soils at levels exceeding unrestricted use soil cleanup objectives (UUSCOs). VOCs identified in the shallow on-site soils exceeding applicable UUSCOs include trichloroethene (TCE) and xylenes at maximum concentrations of 3.1 ppm and 3.49 ppm, respectively. The UUSCOs for these compounds are 0.47 ppm and 0.26 ppm, respectively. No pesticides were detected above RRSCOs in any of the soil samples. PCBs were identified in deeper soils at one location at a concentration of 3.0 ppm, exceeding the RRSCO of 1.0 ppm. Groundwater - On-site groundwater was investigated through the installation of monitoring wells located on and around the site. Groundwater investigations were conducted between 2016 and 2018 and included analyses for VOCs, SVOCs, metals, pesticides, PCBs, and per- and polyfluoroalkyl substances (PFAS). VOCs identified in site groundwater in excess of ambient water quality standards include ethylbenzene, isopropylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, sec-butylbenzene, trichloroethene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and 1,3-dichlorobenzene at maximum

THE HUGUENOT (Continued) **S120706214**

concentrations of 22 parts per billion (ppb), 190 ppb, 240 ppb, 400 ppb, 48 ppb, 220 ppb, 6.3 ppb, 20 ppb, 6 ppb, and 6.8 ppb, respectively. The ambient water quality standard for each of these compounds is 5 ppb, except for 3-dichlorobenzene at 3 ppb. SVOCs identified in on-site groundwater in excess of standards include benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and phenol at maximum concentrations of 0.55 ppb, 0.35 ppb, 0.29 ppb, 0.57 ppb, 1,700 ppb, 0.05 ppb, 2,900 ppb, 2,900 ppb, and 1.4 ppb, respectively. The ambient water quality standards for these compounds are 0.002 ppb, 0.002 ppb, 0.002 ppb, 0.002 ppb, 50 ppb, 0.002 ppb, 10 ppb, 50 ppb, and 1 ppb, respectively. Metals identified in site groundwater in excess of standards include aluminum, iron, magnesium, manganese, selenium, and sodium at maximum concentrations of 791 ppb, 52,500 ppb, 45,000 ppb, 16,000 ppb, 12 ppb, and 358,000 ppb, respectively. The ambient water quality standards for these metals are 100 ppb, 300 ppb, 35,000 ppb, 300 ppb, 10 ppb, and 20,000 ppb, respectively. No pesticides were detected above standards in any of the groundwater samples collected in 2018. PCBs were detected in site groundwater at one upgradient well location at a concentration of 0.094 ppb, slightly exceeding the ambient water quality standard of 0.09 ppb. Several PFAS compounds were detected in all the groundwater samples collected both on and off-site in 2018. Total PFOA+PFOS levels ranged from 25.8 to 184 parts per trillion (ppt) in the five on-site monitoring wells, and 16.7 to 32 ppt in the three off-site monitoring wells. Three of the five on-site monitoring wells were found with total PFOA+PFOS levels exceeding the Environmental Protection Agency s (EPA's) health advisory level of 70 ppt, with the highest levels found in the two monitoring wells located on the south side of the site adjacent to the former car wash and gas station. The third on-site monitoring well with total PFOA+PFOS levels exceeding the EPA health advisory level of 70 ppt is located on the west side of the site downgradient of the former dry-cleaning operation. Soil Vapor - Soil vapor samples were collected at two locations in the northern portion of the site (former dry cleaner location and beneath existing building) during the Phase II Environmental Site Assessment in 2016 and analyzed for VOCs. Primary contaminants identified in the on-site soil vapor included benzene, toluene, ethylbenzene, and xylene, collectively known as BTEX, and chlorinated VOCs (tetrachloroethene, trichloroethene, cis-1,2-dichloroethene, and vinyl chloride) at maximum concentrations of 23.8 micrograms per cubic meter (g/m3), 35.7 g/m3, 133 g/m3, 397 g/m3, 4.37 g/m3, 14.3 g/m3, 18.4 g/m3, and 74.6 g/m3, respectively. Indoor Air and Sub-Slab Vapor Soil vapor intrusion sampling was offered to owners of six buildings surrounding the site and only one of the six owners agreed to the sampling. Soil vapor intrusion sampling was conducted during the Remedial Investigation in March 2018 at this adjacent building located north of the site that houses a church ministry on the first floor with apartments located above. Air samples collected were analyzed for VOCs. Carbon tetrachloride, methylene chloride and tetrachloroethene (PCE) were detected in the sub-slab soil vapor and indoor air (basement and 1st floor), with carbon tetrachloride and PCE also detected in the ambient (outdoor) air locations. Carbon tetrachloride levels ranged from 0.53 g/m3 (sub-slab) to 0.61 g/m3 (indoor air, maximum), to 0.54 g/m3 (ambient air, maximum). Methylene chloride levels ranged from 6.21 g/m3 (sub-slab) to 6.53 g/m3 (indoor air,

THE HUGUENOT (Continued) **S120706214**

maximum), to non-detect (ambient air). PCE levels ranged from 0.83 g/m3 (sub-slab) to 0.89 g/m3 (indoor air, maximum), to 0.57 g/m3 (ambient air, maximum). A comparison of the soil vapor intrusion sampling results with the NYSDOH Soil Vapor/Indoor Air Decision Matrices indicates no further actions are recommended to address human exposures. However, since only one of the six off-site buildings was allowed access and sampled, further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings.

Health Problem: People will not come into contact with contaminated soil or groundwater unless they dig below ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, an evaluation of the potential for soil vapor intrusion to occur is recommended for any site redevelopment. Soil vapor intrusion sampling was conducted at one off-site building and no soil vapor intrusion concerns were identified. Further evaluations are needed to determine if soil vapor intrusion is a potential concern for other off-site buildings.

Update By:	KJCARPEN
Site Description:	Location: This is the off-site component to Schmuckler s Dry Cleaners site is located in an urban area located at 258-364 North Avenue in New Rochelle, Westchester County. Site Features: This off-site investigation covers an approximately one city block area encompassing surrounding buildings and downgradient direction of groundwater flow. Current Zoning/Use(s): Properties along North Avenue are predominantly zoned for commercial or mixed use, some maintaining residential apartments above. Commerical uses dominate areas within one block east and west of North Avenue with the exception of a multi-unit residential building immediately to the west of the site. Drinking water on-site is provided from a municipal source. Past Uses of the Site: The area of the off-site includes multiple commercial and residential current and historical uses. Site Geology and Hydrogeology: The site is underlain by fill which is underlain by poorly sorted glacial material (silty-clay with sand and gravel). The highly weathered bedrock surface is between 9 and 13 feet below ground surface at site. Groundwater was encountered between 9 to 12 feet below site. Bedrock groundwater flows to the southeast. Only two overburden wells onsite have produced water, therefore a groundwater flow direction in overburden cannot be determined. It is assumed that it flows in the same basic southeast direction as the bedrock groundwater.
Env Problem:	The on-site BCP site, a former dry cleaner, has CVOCs and petroleum contaminants associated with it. Information will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Site Description:	Location: The Schmuckler s Dry Cleaners site is located in an urban area located at 258-364 North Avenue in New Rochelle, Westchester County. The site is 0.21 acres, most of which is covered by a two-story row building with a full basement. Site Features: Site Features: In addition to the former dry cleaners, historically located on the first floor, the site also includes an enclosed backyard area to the immediate west of the building. The backyard consists of lawn, elevated planting beds, concrete pad, and a paved walkway. Current Zoning/Use(s): The site is commercially zoned, and

SCHMUCKLER'S DRY CLEANERS (Continued) **S107787044**

currently has five commercial tenants occupying both the first and second floors. Properties along North Avenue are predominantly zoned for commercial or mixed use, some maintaining residential apartments above. Commercial uses dominate areas within one block east and west of North Avenue with the exception of a multi-unit residential building immediately to the west of the site. Drinking water on-site is provided from a municipal source. Past Uses of the Site: The building on-site was built in 1891, and operated by Schmuckler s Cleaners from 1914 to 2006 on the first floor and basement of the building. Additions were added to the building in 1937, and two in 1987. The site was acquired by the Volunteer, HNJ Realty, LLC, in August 2005, and entered into the Brownfield Cleanup Program in June 2006. Site Geology and Hydrogeology: The site is underlain by fill which is underlain by poorly sorted glacial material (silty-clay with sand and gravel). The highly weathered bedrock surface is between 9 and 13 feet below ground surface at site. Groundwater was encountered between 9 to 12 feet below site. Bedrock groundwater flows to the southeast. Only two overburden wells onsite have produced water, therefore a groundwater flow direction in overburden cannot be determined. It is assumed that it flows in the same basic southeast direction as the bedrock groundwater.

Env Problem:

Based on the investigations conducted to date, the which included the analysis for volatile organic and semi-volatile organic compounds (VOCs and SVOCs), inorganics, polychlorinated bi-phenols (PCBs) and pesticides in soil and groundwater and VOCs in soil vapor, the primary contaminants of concern at the site are chlorinated volatile organic compounds (VOCs), primarily tetrachloroethylene (PCE) and its breakdown compounds, in soils, groundwater, sub-slab vapor, and soil gas; petroleum-related VOCs in soils, groundwater, sub-slab vapor, and soil gas; and semi-volatile organic compounds (SVOCs) in groundwater. In August 2015 an in situ pilot test was performed to assess potential remedial effectiveness of an enhanced biological product. Prior to the pilot injection, the test well contained 27,000 parts per billion (ppb) of PCE, 960 ppb of trichloroethylene (TCE), 2,100 ppb of cis-1,2-dichloroethylene (DCE) and 49 ppb of vinyl chloride (VC). Post injection levels after two months were 8,100 ppb of PCE, 11,000 ppb of TCE, 1,500 ppb of cis-1,2-DCE, and 53 ppb of VC. The decrease in PCE concentrations, coupled with the increase in degradation products, indicate that the breakdown of contaminants (dechlorination) is occurring. SVOC concentrations also decreased in the test well after the pilot. For example phenanthrene levels dropped from 78 ppb to 3.7 ppb two months after the pilot injection. An expansion of the pilot test using the same enhanced biological product was performed in October 2017. This time, the injections occurred in five wells in the basement and outside the building, while monitoring occurred in six wells located around the site. In July 2017, prior to the expansion of the expanded test, the highest concentration of PCE was 17,000 ppb, TCE was 2,100 ppb, cis-1,2-DCE was 1,600 ppb, and VC was 73. Two months after the injections, in December 2017, the concentrations of contaminants in the same well were: 1,300 ppb PCE, 17,000 ppb TCE, 1,900 ppb cis-1,2-DCE, and 61 ppb VC. The highest concentration of SVOCs during the pilot expansion was phenanthrene which dropped from 2,000 ppb to 540 ppb two months after the injection event. In addition, approximately 40-gallons of LNAPL have been collected to date just off-site in the southeast, downgradient direction using both bailers and a sorbent recovery socks left in the well in between monitoring/bailing events. Soils:

SCHMUCKLER'S DRY CLEANERS (Continued) **S107787044**

Tetrachloroethylene (PCE), trichloroethene (TCE), and multiple petroleum related VOCs were detected in onsite soils underneath the building slab. The highest concentration of PCE at 210 parts per million (ppm), exceeding restricted commercial soil cleanup objectives (SCOs), was located underneath the former dry cleaning equipment room. Other contaminants detected in soils only exceeded the Protection of Groundwater SCOs. These exceedences were largely in soils located downgradient of the dry cleaning equipment room and consisted of: TCE at 1.3 ppm, cis-1,2 dichloroethene (cis-1,2-DCE) at 3 ppm, n-propylbenzene at 16 ppm, m+p xylenes at 15 ppm, ethylbenzene at 6.6 ppm, 1,3,5-trimethylbenzene at 63 ppm, and 1,2,4-trimethylbenzene at 99 ppm. There is no indication of off-site soil contamination. Groundwater: Petroleum-based floating product (light non-aqueous phase liquid or LNAPL) was observed in groundwater under much of the on-site building slab, a maximum of 6 inches thick under the former dry cleaning equipment room. Also observed were very high concentrations of select VOCs also under the former drycleaning equipment room. The maximum detected PCE was 830,000 parts per billion (ppb), and TCE at 58,000 ppb. 25 individual VOCs were also detected in site groundwater samples exceeding NYS Class GA groundwater standards. These include the above-mentioned PCE, TCE, as well as other maximum detected concentrations of PCE breakdown products: cis-1,2-DCE at 8,700 ppb, and vinyl chloride at 28 ppb. BTEX was detected, with benzene at 62 ppb, toluene at 130 ppb, ethylbenzene at 150 ppb, m+p xylene at 520 ppb, and o-xylene at 290 ppb. Other significant concentrations of VOCs detected in groundwater include 1,3,5-trimethylbenzene at 890 ppb, and 1,2,4-trimethylbenzene at 840 ppb. Eight SVOCs were detected over groundwater standards in groundwater under the building slab, including napthalene at a concentration of 1300 ppb, phenanthrene at 2400 ppb, acenapthene at 710 ppb, and antracene at 280 ppb. Bedrock wells were installed off-site in the downgradient, sidegradient, and upgradient directions. Petroleum-based VOCs and SVOCs were detected in the bedrock aquifer at concentrations above groundwater standards. For VOCs, total maximum BTEX concentration of 722 ppb was detected in a downgradient bedrock well. 11 individual SVOC contaminants were detected over groundwater standards in the same downgradient off-site bedrock well, including naphthalene at 4100 ppb, phenanthrene at 2800 ppb, acenapthene at 710 ppb, and antracene at 300 ppb. The extent of groundwater contamination is concentrated underneath the on-site building slab, with petroleum-based VOC and SVOC contaminants and LNAPL extending off-site in the bedrock downgradient or southeast direction. Soil Gas/Soil Vapor: The high concentrations of PCE (787,000 ug/m3), TCE (15,200 ug/m3), cis-1,2-DCE (46,000 ug/m3), and Vinyl Chloride (34 ug/m3) in soil vapor under the slab of the on-site building required the installation and continuing operation of a combined soil vapor extraction and sub-slab mitigation system during a 2008-2013 Interim Remedial Measure (IRM) action. PCE (at 91 ug/m3) and TCE (13.4 ug/m3) were also detected in soil gas outside of the building near the location of a former drywell. Benzene (37 ug/m3), toluene (126 ug/m3), ethylbenzene (85 ug/m3), xylene (555 ug/m3), 1,3,5-trimethylbenzene (3 ug/m3), and 1,2,4-trimethylbenzene (14 ug/m3) were also detected in subslab vapor and soil gas. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. There are no special resources identified near the site.

Health Problem: People may contact contaminants in soil or groundwater if they dig

SCHMUCKLER'S DRY CLEANERS (Continued) **S107787044**

below the surface or contact contaminated groundwater. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of the buildings, is referred to as soil vapor intrusion. A combination soil vapor extraction and sub-slab depressurization system was installed in the on-site building to prevent vapors beneath the slab from entering the building. There is a potential for inhalation of site contaminants due to soil vapor intrusion at this building when the sub-slab depressurization system is turned off for a period of time during groundwater bioremediation injection treatments. Soil vapor intrusion sampling at one off-site building did not identify any soil vapor intrusion concerns for that building. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for other off-site buildings.

Environmental Interest/Information System:
COMPLIANCE AND EMISSIONS REPORTING
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110067684303

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

EPA Region: 02
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
