Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

CON EDISON (Continued) **1018280916**

corrective action activities required under RCRA.

BROWNFIELDS:
Name: FLAMINGO CLEANERS
Address: 149 NORTH AVENUE
City,State,Zip: NEW ROCHELLE, NY 10801
Program: BCP
Site Code: 335220
Acres: 0.122
HW Code: C360078
SWIS: 6010
Town: New Rochelle (c)
Record Added Date: 12/16/2004
Record Updated Date: 01/28/2020
Update By: KJCARPEN
Site Description: Location: The Flamingo Cleaners site is located in an urban area of New Rochelle, Westchester County, at the southeastern corner of the intersection of Clinton Place and North Avenue. Site Features: The site is a one-story commercial building with a full basement. The building is divided into four commercial tenant spaces which have been occupied at various times by a bar/lounge, beauty salon, delicatessen, a travel agency and a dry-cleaner. Current Zoning/use(s): The site consists of four retail spaces. The site is zoned for commercial use. The surrounding land uses include parking lots, commercial establishments, a residential apartment complex, a medical center, and a church. Past Uses of the Site: The existing building was constructed in 1941 and used for retail. Flamingo Cleaners began dry cleaning operations in 1958, and ran until 2005 when all dry-cleaning equipment was removed. Site contamination is a result of the former dry cleaner operations from improper management, disposal, and leaks of tetrachloroethylene (PCE). Prior completed investigations include a Phase I Investigation in October of 2003 and a Phase II Investigation completed in March of 2004. The Volunteer entered into a Brownfield Cleanup Agreement in April 2005. A Decision Document was issued in March 2012 for a remedy involving source soil removal and in situ chemical oxidation treatment of groundwater. Based on the extent of the site contamination, a referral to State Superfund for an off-site investigation was completed in December 2007. The groundwater plume was found to be isolated to immediately behind the building and little to no off-site impacts were noted in groundwater, soils, nor in soil vapor. Site Geology/hydrogeology: The site is underlain by glacial till which sits atop highly weathered bedrock. Bedrock ranges from 5 - 22 feet below ground surface. The water table is between 5 - 11 feet below ground surface. Groundwater flow direction is predominantly to the south-southeast toward Long Island Sound, however, site specific groundwater flow direction is

FLAMINGO CLEANERS (Continued) **1000299848**

	radial, and seasonally affected.
Env Problem:	Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), primarily tetrachloroethylene (PCE or perc) which was present in soils, groundwater, and indoor air. PCE breakdown products Trichloroethene (TCE) and 1,2-dichloroethene (1,2-DCE), vinyl chloride, as well as 1,1,1 trichloroethane (1,1,1 TCA), were also present at the site. Remedial actions have removed source soils, treated groundwater, and have prevented contaminants from entering the indoor air. Residual contamination in the soil, groundwater, and indoor air is being managed under a Site Management Plan.
Health Problem:	Measures are in place to control the potential for coming in contact with subsurface soil and ground water contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in groundwater and/or soil may move into the soil vapor (air space within the soil), which in turn may move into overlying building and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilate/remove the air beneath the building) has been installed in the on-site building to prevent the indoor air quality from being affected by the contamination in the soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

BROWNFIELDS:
Name: OFF-SITE FLAMINGO CLEANERS
Address: 149 NORTH AVENUE
City,State,Zip: NEW ROCHELLE, NY 10801
Program: BCP
Site Code: 414661
Acres: Not reported
HW Code: C360078A
SWIS: 6010
Town: New Rochelle (c)
Record Added Date: 06/03/2009
Record Updated Date: 08/23/2019
Update By: KJCARPEN
Site Description: Location: This site is the off-site component of the former Flamingo Dry Cleaners site (C360078). The site is located in an urban area of New Rochelle, Westchester County, at the southeastern corner of the intersection of Clinton Place and North Avenue. Site Features: The site itself is a one-story commercial building which includes four commercial spaces including the former dry cleaner space. This off-site component is comprised of immediately-surrounding areas. Current Zoning/Uses: Surrounding land uses include parking lots, commercial establishments, a residential apartment complex, a college, a medical facility, and a church. Historical Uses: The on-site building was constructed in 1941 and used for retail.

OFF-SITE FLAMINGO CLEANERS (Continued) **S110043637**

Flamingo Cleaners began operations in 1958 and ran until 2005 when all dry-cleaning equipment was removed. On-site contamination is a result of the former dry cleaner operations from improper management, disposal, and leaks of tetrachloroethylene (PCE). A referral for off-site work was completed in December 2007 and a SSF RI/FS Work assignment was approved in March 2009. The RI field work was conducted in the summer of 2009 and fall of 2009. Additional round of gw analyses occurred in spring 2010. The on-going off-site investigation thus far indicates that PCE is not present in environmental media above standards in the area surrounding the site. Site Geology/Hydrogeology: The area surrounding the site is underlain by glacial till which sit atop highly weathered bedrock. Area bedrock ranges from 5-25 feet below ground surface. The water table ranges from 5-11 feet below ground surface. Groundwater flow direction is predominantly to the south-southwest toward Long Island Sound, but site specific groundwater flow direction is radial and seasonally affected.

Env Problem:	Nature and Extent of Contamination: Based on investigations to date, the primary contaminant of concern at the site is tetracholoroethylene (PCE), a dry cleaning solvent. On-site, PCE has been detected in soils, soil vapor, indoor air, and groundwater. The off-site investigation to date indicates that there are no off-site impacts. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. There are no special resources identified near the site.

DEC Memo: "8-15-14 Spoke with Angela Pimento at CF. She will have John return call to dispatch desk. jm Recv'd callback from Chris Lalak - WCDOH. He has spoken with John. Double wall fiberglass piping from dispensers to tanks. Leak is contained in tanktop sump. System has has been shut down at this time until they figure out what they are going to do. They believe they will probably replace lines. Chris says no leak to environment and he will be taking lead. jm 5-15 new spill 15-01325; Phase 2report 10-15-15 email status request sent to WCHD & Cumby RDB 10-22-15, from Cumby In response to the line failure, CFI engaged Island Pump & Tank (IPT) to perform the repairs. In lieu of replacing the product piping, IPT installed a siphon bar on the regular tanks and removed the submersible pump from the regular tank that had the failed product piping. IPT then removed and capped the regular product piping that had failed. The secondary line was tested and the dispenser pans and STP sumps were hydrostatically tested and passed. RDB 2-16 new SPills 15-10746 3-8-16 during meeting with WCHD, Singh, his att, his consultant, Cumby, their consultant and att, taking place in New Rochelle. Closure was denied on spills 14-05322 & 15-01325and RPs agreed to a scope of work by March 16. RDB 5-4-17 Work completed, waiting for closure report. GHP 12-3-19 Call from HighPoint Engineering. Felix and Sons Contractor installed new tanks in September 2016 and tightness tested October 2016. What do we have to do to close the spill . Sunny Singh for 635 Main Street Realty LLC (516-777-4320) is the client. BTR"

DEC Memo:	"This house is the estate of R Demellia's late mother. Tank failed with only hissing, maybe a line leak but cant be sure. House is being prep'ed for sale....mm 12/08/14: From Envirostar: We pulled a 550 UST at 95 Washington Ave New Rochelle that had previously failed a tank test (spill # 1406916). The tank did have holes and there was contamination in the soil. The home owner is contacting there insurance. Customer info: Chuck LiVecchi 95 Washington Ave New Rochelle NY jod 3/20/15: Update from Envirostar via email: We removed 6 containers of contaminated soil Between march 12th and yesterday we took samples and back filled the hole. We will Submit for closure. jod 4/13/15: Report with request for closure entered into DecDocs. Post-Ex soil samples show contamination in excess of CP-51 Guidance. Additional information being requested from Envirostar. jod 4/14/2015: Envirostar removed and disposed of the leaking UST and a total of 108.96 tons of petroleum contaminated soil. Some residual contamination over CP-51 Guidance could not be excavated from along the foundation and due to safety concerns with buried utility lines. No evidence of ground water impact noted. Based upon information provided, no further action required at this time. jod"

Record Added Date:	06/25/2019
Record Updated Date:	08/29/2019
Update By:	KJCARPEN
Site Description:	Site Location: The Site is located at 10 Commerce Drive in downtown New Rochelle near the Metro North train station. The Site is located in a predominantly commercial, former industrial downtown urban area, which is recently transitioning into more of a residential transit-oriented neighborhood. Site Features: The existing on-site building is vacant. The subject property is currently vacant. The Site is bound by Commerce Drive (Renewal Place) to the northwest with a parking lot across the street that borders the Metro North commuter rail line, a 9-story office building (20 Cedar Street) to the northeast, a 10-story office building (145 Huguenot Street) to the southeast, and a commercial building occupied by a pool supplier (20

10 COMMERCE DRIVE RAIL YARD (Continued) **S125465243**

Commerce Drive) to the southwest. The area is still predominantly commercial but new mixed use residential/commercial projects are being encouraged by the City in the DO Zone area. Current Zoning and Land Use: The Site is currently located in the Central Parking Area Downtown Overlay Zone District (a/k/a the DO Zone). Past Use of the Site: The site housed a former railroad freight yard, complete with sidings and freight houses as well as coal piles. The Westchester Coal & Oil Company also occupied the southeastern portion of the Site and off-Site property as observed on historical Sanborn maps dated 1931 and 1951. Based on a review of Sanborn Maps, it appears the railyard structures and buildings were demolished in the mid-1960 s and the Site was vacant until the current building on the Site was constructed in or about 1981-1982. From at least 1992 to 2003, an electronics manufacturer and generator of hazardous waste, known as MF Electronics Corporation, was present at the Site. This manufacturer is described as both a circuit board manufacturer and manufacturer of quartz chips used in electronic timing devices. Site Geology and Hydrogeology: The elevation of the Subject Property is approximately 71 feet above mean sea level (amsl). The Subject Property slopes to the northeast toward Long Island Sound, located about 3,000 feet to the east-southeast. The Site is not in a flood zone and is not proximate to any water bodies. Bedrock is located approximately 18 ft below the ground ssurface. The site is underlain by the Hartland Formation, which consists of interbedded units of granite, schist, and amphibolite. Groundwater flow is toward the south east toward Long Island Sound. Groundwater in New Rochelle is not used as a potable water source. Potable water is provided to the Subject Property by the SUEZ Water Company and is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.
Not reported

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available. Preliminary information indicates that fill soils contain coal particles, ash, and demolition debris, which may be related to the railyard operations, and which may have resulted in semi-volatile organic compounds (SVOC) and metals contamination on the Site. The most recent subsurface Phase II investigation revealed soils with some black staining and old railroad ties which exhibited a coal tar odor, and associated SVOC contamination. Obstructions were hit at 3 feet in two of the four geotechnical borings suggesting on site landfilling of prior structures, including possible rail lines and railroad ties or timbers from the prior buildings.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"11/12/13: Residential tank test failure. No indication of a release at this time. Message sent to Elite requesting additional information on the owner, or their realtor. jod 11/12/13: Update received from Chris Lalak. This is not a residential tank. This is a 10K #4 Oil tank, PBS 3-600412. Wayne Schneider will follow up on retest. jod 11-13-18 new management co looking for closure; submitted test from 2013- RDB 11-13-18 I asked WCHD for information. RDB 11-15-18 I requested annual tightness tests, they are not able to provide; RDB 11-19-18 I asked when tank will be removed. RDB 11-19-18 email from WCHD- No work permit application has come in. RDB 1/23/19: I spoke to Ray Hilyer at Elite Environmental. Timeline of events: *Nov 2013 tank fails tightness test performed by Elite, Spill 1308221 reported. *2016 Elite is called back to the site to retest. The parking lot or the tank had been patched, another company had excavated and repiped the UST. Tank is retested and passes. Test results sent to WCDOH. *2017 Tank is retested and passes. *Nov 2018 a new owner (management company) Librett Real Estate Group becomes involved with refinancing the property. In order to refinance the open Spill 1308221 needs to be addressed. Elite Environmental is contacted to remove the 10k gallon UST. *Dec2018 the UST is removed, soil contamination is extensive. Spill 180 Elite reports the contamination appears to be older and weathered #4 oil. To date they have excavated approximately 300 tons. jod 8/14/19: The cleanup has been completed by Elite. Closure report for the site was submitted to the Westchester Health Dept. See Spill 1809754 for further information and a scanned copy of the TCR. NFA this spill case number. jod"

DEC Memo:	"6/20/11: This spill initially reported as a residential TTF. Property is actually a commercial office building with apartments on the second floor. Previous Spill number for this site is 1102214 which was reported on May 27th. Owner informed US Tank Tech of the prior Phase I site investigation, but apparently did not inform them of the Phase II which found high levels of contamination. US Tank Tech reports they were hired to test the in-service 550 gallon heating oil tank, and perform a site investigation to locate a second, out-of-service tank. The 550 failed the vaccuum test, petroleum odors evident in the well point. US Tank Tech also reports they believe the second out-of-service tank may be located under the office building. Owner states the second tank is a 275 gallon heating oil, but that can not be confirmed at this time. US Tank Tech also reports there are at least two additional sets of fill and vent pipes, for other out-of-service or abandoned USTs. Tester also noted petroleum odors from the basement sump pit. jod 6/21/11: US Tank Tech reported that the owner says he hired Northeast Environmental to address these two spills issues. Message sent to Northeast asking for confirmation. jod 9/29/11: Northeast reports the owner has hired them to begin investigation and remediation. jod 10/21/11: The UST has been removed by Northeast and contaminated soil is evident. Remediation work is being scheduled. jod 4/26/2012: Closure report from Northeast Environmental entered into eDocs. Based upon information provided, no further action required at this time. jod"

DEC Memo:	"5/29/18 Property has 2 8000 gallon UST, not in use. Both tanks had been for #6 fuel oil, were cleaned out, Tank 1 (in building #70) was filled with #2 oil, Tank 2 was left empty (in building #60). Tank 2 now has 28 inches of water in it. Northeast Environmental has been called and will be on site tomorrow. Property has converted to gas. It's an apartment building. ga 6/12/18 received call from Nanette, indicating that she was waiting for board approval to remove one of the tanks. Tank #1 is being repaired and retested, Tank #2 is being removed. BW 7/17/18 - G C Engineering will be submitted tank removal notification to the WCDOH and DEC. A TCR will be submitted to both the WCDOH and DEC. KAB 7-23-18 G C sent email to Carlos and cc'd me. It talks about their plans with remediation. Forwarded to KB. jc 08-09-18 Site visit during soil remediation. Approx. 120 cu. yards removed from the site. There is fuel oil contamination about 12 feet down. G.C. Environmental claimed they excavated to bed rock but the recent heavy rain washed soil back in. They were dewatering at the time to continue excavating. BTR 10/17/18 - G.C. Environmental, Inc. conduct conducted removal liquid and sludge, two 8K USTs,

60-70 OWNERS CORP (Continued) **S105140483**

contaminated soils and collected soil samples. A vac truck used to remove 8,772 gal. liquid waste and sludge from the tanks and was disposed at Clean Water Of New York, Inc., NY. 884.7 tons of contaminated soils was removed and disposed at Clean Earth of Carteret, NJ. One excavation was generated to remove the two 8K USTs. 23 sidewalls and bottom soil samples were collected and laboratory analyzed. 13 soil sample results showed VOCs and SVOCs in the low ppb range, well below the NYS soil guidelines. There are no significant impacts from the tank. NFA. KAB"

Classification: Not reported
Region: 3
Acres: 3.75
HW Code: 360087
Record Add: 11/08/2005
Record Upd: 07/21/2009
Updated By: RXKEATIN
Site Description: The Baker?s Pride site is located at 30 Pine Street in the City of New Rochelle, Westchester County, NY. The surrounding area is urban with commercial and residential establishments mixed in between the commercial businesses. The Baker?s Pride site is an approximately 3.75 acre flat to severely sloping irregularly shaped parcel. The Baker?s Pride building occupies approximately 111,450 sf of building space and occupies the majority of the property. Baker?s Pride owns the Bakers Pride Oven Company Inc and is engaged in the production of restaurant/commercial grade ovens and broilers. The site is bordered by Metro North railroad tracks to the west and northwest, a mix of commercial and residential properties to the northeast, east, and south. Interstate (I-95) is located to the west of the Metro North railroad tracks. In 2005, a Phase II Environmental Assessment report was completed by Enercon as part of closure proceedings for a 3,000 gallon fuel oil UST that was closed in place and a 10,000 gallon fuel oil UST that was removed. Monitoring wells installed as part of this assessment revealed the presence of PCE in groundwater at levels up to 1,430 ppb. (The State groundwater standard for PCE is 5 ppb.) Also, this report noted chemical storage for cutting oils, lubricants, solvents and paints. No products were indicated that contained PCE. In 2007 a follow up report was conducted which revealed PCE in groundwater at levels up to 1,700 ppb. The site was added as a potential inactive hazardous waste disposal site ("P site") in 2007. A State funded site characterization was initiated in 2008 to determine the source of the PCE groundwater

BAKERS PRIDE OVEN CO INC (Continued) **1004571492**

plume. A total of 9 monitoring wells were installed in the fall of 2008. Groundwater contaminated with PCE showed higher levels of PCE in wells upgradient from the Baker?s Pride facility. The PCE concentrations were as high as 3,700 ppb in MW-13 which is located about 300 feet upgradient from the Baker?s Pride facility. This prompted the State to do a second round of groundwater sampling further upgradient of MW-13. Two additional wells (MW-24 and MW-25) were installed about 150 feet upgradient of MW-13 in the winter of 2009. MW-24 revealed PCE at 5,300 ppb. The second round of sampling further defined a groundwater plume with a source area upgradient from the Bakers Pride site. Since the site information for Baker?s Pride indicates that the plume of PCE is coming from an off-site source, the Baker?s Pride site (360087) will not be listed in the Registry of Inactive Hazardous Waste Disposal sites. A separate site was added to the Registry to address the source of the PCE plume (See site #360109.)

Env Problem: Based upon investigations to date, the primary contaminants of concern at the site include tetrachloroetylene (PCE) and its associated breakdown products. PCE was detected in upgradient groundwater as well as on-site and also in indoor air in residences upgradient of the site. PCE was detected on-site in groundwater from non-detect up to 3,200 parts per billion (ppb) at MW-1) above the respective groundwater standard of 5 ppb. Upgradient off-site levels of PCE were as high as 5,300 ppb. Indoor air was impacted in two residences with the highest level being 530 micrograms per cubic meter (ug/m3) at a property on Bartels Place. Since the highest levels of PCE were identified in the groundwater upgradient of the site this suggests an off-site source that is impacting the Baker?s Pride site. The source of this contamination is the Industrial Overall Service Corp. Class 2 site (#360109)

Click Here:

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"3/26/10 Tyree to go there on Mon. 3/29 to do repairs. dw 4/29/10 Getty 340 Main St New Rochelle line test failed do to faulty check valve. Tyree replaced check valve. Passed retest on 4/12/10 NFA JO'M 10-23-17 SEND OUT 30 day tank letter- RDB 10-25-17 call from Raul Naube @ 5168027171; retuned call; explained the current situation. offered to remove tanks for him. he is waiting for a court case, I advised him that he is in violation of the NYS CRRR pertaining to tanks, he has other sites on Long Island. Never in Westchester, I welcomed him to region; he will move forward with the permits and intends to remove the tanks- RDB 12-12-17 Rahul@lotusmgmt.com 340 Main Street Realty Inc. 25 Newbridge Road, Suite 312, Hicksville, NY 11801 _RDB 12-12-17 called and left another message RDB 12-18-17 email sent, I called your office last week and left a message. The tanks at your facility need to be removed. Please contact me today and discuss the schedule for the tank s removal or this case will be referred to Region 3, Regional Attorney for enforcement. RDB 1-3-18 email from Cider, The owner of the above referenced property has received the permit for removal of the USTs (NR BD/NR FM).We are only waiting on the contractors schedule.In the meantime, we wanted to confirm that there is nothing else required by your department?As soon as the schedule is confirmed, we will let you know. RDB 1-4-18 response, Thanks for the email and call. Who is the contractor for the tank removal? Do you have a guesstimate for the removal date? As I have explained to Rahul, this site is progressing towards enforcement and penalties. RDB 1-4-18, The contractor for the tank removals will be Felik s and Sons. Rahul is pushing them to get out there as soon as possible. My guestimate would be about two/three weeks to begin. As soon as we get the schedule from the contractor/Rahul, I will let you know. RDB Tank removal began. New Spill called in 17-09698 This spill closed- RDB 02-12-18 Spoke with Tim Fisher of Antea Group. Excavation under the northern dispenser island to commence on Thursday. Endpoint samples from both the registered tank removal and ghost tank removal show no exceedances. Sand from inside the ghost tanks is stock piled on site. All soil to be removed upon completion of excavation activities. BTR 4/9/18 pre-work notification from 12/27/17 in D2. BW "

Dispt. Update from WCDOH: greater than greater than greater than Bimonte, Sebastian greater than spb4@westchestergov.com greater than 4/5/2012 9:46 AM greater than greater than greater than John, SSN Realty 210 Webster Ave New Rochelle NY Super Tank product in interstitial space. Manual check during PBS inspection yesterday. Product clear no water or dirt. Diesel Tank product in interstitial space. Manual check during PBS Inspection yesterday. Product clear no water of dirt. Tanks One was hired to test inner and outer tanks. Super, inner wall passed, outer wall failed. Diesel inner wall failed, outer wall passed. Both tanks should be pumped out by today. Sebastian Bimonte jod 5/23/2012 -- After a meeting in NPO among owner, tank maintenance contractor, Mr. Nesci (attorney), WC DOH, and CK last Friday (5/18), Ispoke to Rachel at Hydro Environmental about a site assessment. Work plan to be submitted shortly. ELM 6/05/12: Update received from Sebastian Bimonte of WCDOH PBS: 1200103: SNN Realty in Mount Vernon. This was product in the interstitial during PBS inspection. No release to environment. Tank repaired NOH issued and can be closed. jod 6/5/2012 -- Site assessment being conducted at my request: field work on 210 Webster Ave in New Rochelle on Tuesday, June 12, 2012 per email from Hydro Enviro. ELM 7/31/2012 -- RI report clearly shows groundwater contamination (BETX/MTBE) around the tank field and dispensers. Need further delineation and RAP. Nothing in unsaturated soils. ELM 8/22/2012 -- Contractor working on a Phase II RI work plan. ELM 9/19/2012 -- Approved an RI work plan. Except that they did include the schedule and failed to mention RAP possibilities. ELM 1/22/2013 -- HydroTech informed me that they have the permit needed from the muny to perform the remediation. ELM 2/21/2013 -- Still no word on mobilizing for remediation. ELM 11-6-13 email from county, There is a whole history here.The 1200103 was for product in the interstitial. Sebastian and Carlos worked with Ed Moore on it.Basically double walled tanks leaked into the interstitial. It appear to be the striker plate were missing and from sticking the tanks they wore out. Eastmond lined the tanks and had trouble removing the product from the IS (completely). We requested spill closure and Ed Moore kept the spill open and continued to work on the PBS issues. They are replacing all tanks now. American Petroleum (Ed- Thank You for making this happen)Wayne Schneider is inspected the site this afternoon and will handle the spill. I suggest we close out spill 1200103 and keep 1307998.(Wayne please provide a brief update to all after your inspection today.) 11-6-13 tanks yanked, new spill 13-07998, close this one RDB "

Remarks: "12 oz per product found during investigation on inter.cont., on the super tank and diesel tank."

DEC Memo: "2/3/10 homeowner, Mr. Tahir, is satisfied with cleanup done by Paradise Oil Co., both inside and outside the house. NFA dw 2/12/10: Spill re-opened. WCDOH reported this spill, after complaints by home owner that the oil company had taken no action. Marc Grazioli re-inspected the site today and reports the spill has still not been remediated. jod 2/17/10: Update from Marc Grazioli: The outside portion of the spill was handled before the big snow that came last week. I was only able to look into the basement through an open window since no one was home when I was there. There was absorbent on the ground and I would guess it was the second round of cleanup because it appeared dry. jod 3/22/10: DEC requires no further action at this time. jod"
Remarks: "5gals oil to basement area/10 gals to out side,driveway. Clean up complete"

DEC Memo:	"1/2/14 - WCDOH is oversight the ongoing tank tests. KAB 1/2/2014 -- APECCO hired by new operator (lease signed within past 6 weeks). Piping and dispensers and electronic leak monitoring equipment to be replaced. Based on lack of leak detection records for past 10 to 12 years, DEC requested TT and IS tests and system check of electronics. Tanks are probably suitable for service, but testing required for confirmation. It appears to be loose fittings. Electronics recently rewired at the computer console within past couple of weeks, but wiring ended near the top of the tanks. No probes in the interstitial space, just loose wiring near top of tank. Owner's representative took electronic system wire ends from the site despite WCDOH's request to take custody. ELM 2-13-14 closed and referred to spill 13-10365 which revealed contaminated soils when the failed lines were removed. RDB"

Site Description: Location The Site is located at 78 Echo Avenue in New Rochelle,

CONSOLIDATED EDISON - ECHO AVE. SITE (Continued) **S101008407**

Westchester County, New York. This 3 acre site is bordered to the north by Echo Bay, an estuary of the Long Island Sound. It is bordered to the east and south by residential properties, to the southwest by Echo Bay Avenue, and to the west by a landscaping company (formerly a fuel oil terminal). Site Features All the former structures and underground utility services have been removed, and the whole site has been levelled, top-soiled and grassed. Current Use The site is currently vacant Past Use of the Site Con Edison used the site as an electrical distribution substation until 1981. PCBs transformers were stored and used at the site. Leaks and spills of PCBs may have occurred in the handling or servicing of these transformers. The soil on site and the sediment in the Bay were contaminated with PCBs.

Env Problem:	Prior to remediation the contaminant of concern was PCBs. Remediation of the site is complete. The cleanup of PCBs and other incidentally detected contaminants has mitigated the threat to the environment, and in particular to the natural habitat in the bay.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DER Facility ID:	402070
DEC Memo:	"4/4/11 - To retest tank. KAB 4/28/11 Morris called in for follow up. Tank failed again. He said tank top was exposed for most of length and one side and some samples taken. Morris said whoever did repairs, sounds like they only put a new vent riser on. Did not check piping, which is heavily crusted. jc 5-6-11 Failed 2nd retest today. Owner giving Kathy a hard time. Morris will retest again next week. Kathy said road name should be Bayview not Dayview, made change. jc 5/13/11 Tank failed for a 3rd time. Plan to pull, according to Tank Tech. dw 8-4-11 Homeowner called dispatch desk. He wants to remove the tank himself and do ALL of the work. He says he would cut open the tank and clean with speedi dri, dispose of tank at scrap yard, etc. I recommended that he hire an environmental consultant to AT LEAST oversee project because the DEC will need a TCR which would include soil samples, manifests, disposal receipts, etc. I told him that this spill will not be closed out until a proper and acceptable Tank Closure Report has been submitted to this office for review. I told him to contact J O'Dee in White Plains for further info. This guy seems bent on doing everything himself even though it was recommended that he hire a consultant to oversee the project. jm 8/4/11: Recieved call from Sandy Perratta 914-557-0142. He is the same individual who called the dispatch desk earlier today. He is not the property owner but a friend of the owner. States he is in the construction business and he can remove the tank himself. He states he has the OSHA 30-hour training and also states he knows that he doesn't need confined space entry training if the tank is less than 4 feet below ground . I again stated he should have a professional contractor do the work for safety reasons. jod 8/8/11: Received voice-mail message from Mr Perratta stating he had removed the tank and it was on the lawn awaiting a DEC drive-by inspection. I met New Rochelle Fire Captain Henry Senno on site. The tank was cut and cleaned and is on plastic. The excavation is open and is not fenced or secured. There is no evidence of any holes in the tank, and no evidence of any leak or contamination. Captain Senno states he will follow up with the owner, as no permits were filed for the removal as required in New Rochelle. DEC Spills requires no further action at this time. jod 9/8/11: I left this spill open after discussing the situation with Capt Senno on either August 9th or 10th. There was still a 55-gallon drum of heating oil and heating oil sludge that was removed from the tank remaining on the site. On either Aug 11th or 12th I spoke with Mr Perrotta and stated the spill would be left open until he submitted a disposal receipt to DEC for proper disposal of that waste drum. To date, Mr Perrotta has submitted a disposal recipt for the tank (entered in eDocs) but has not submitted a disposal receipt for the drum. jod 9/22/11: Letter from Linda Enes forwarded to DEC. She

FIUMFREDO RESIDENCE (Continued) **S111012239**

states she is in posesseion of the 55-gallon drum, and is using it to fuel a space heater. I called her this morning and she states her husband transported the drum in his pick-up truck from New Rochelle to their home in Dover Plains NY. Letter has been entered into eDocs. DEC requires no further action. jod"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Longitude (West):	73.783767 - 73° 47' 1.56''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	602429.0
UTM Y (Meters):	4529333.0
Elevation:	88 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940557 MOUNT VERNON, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

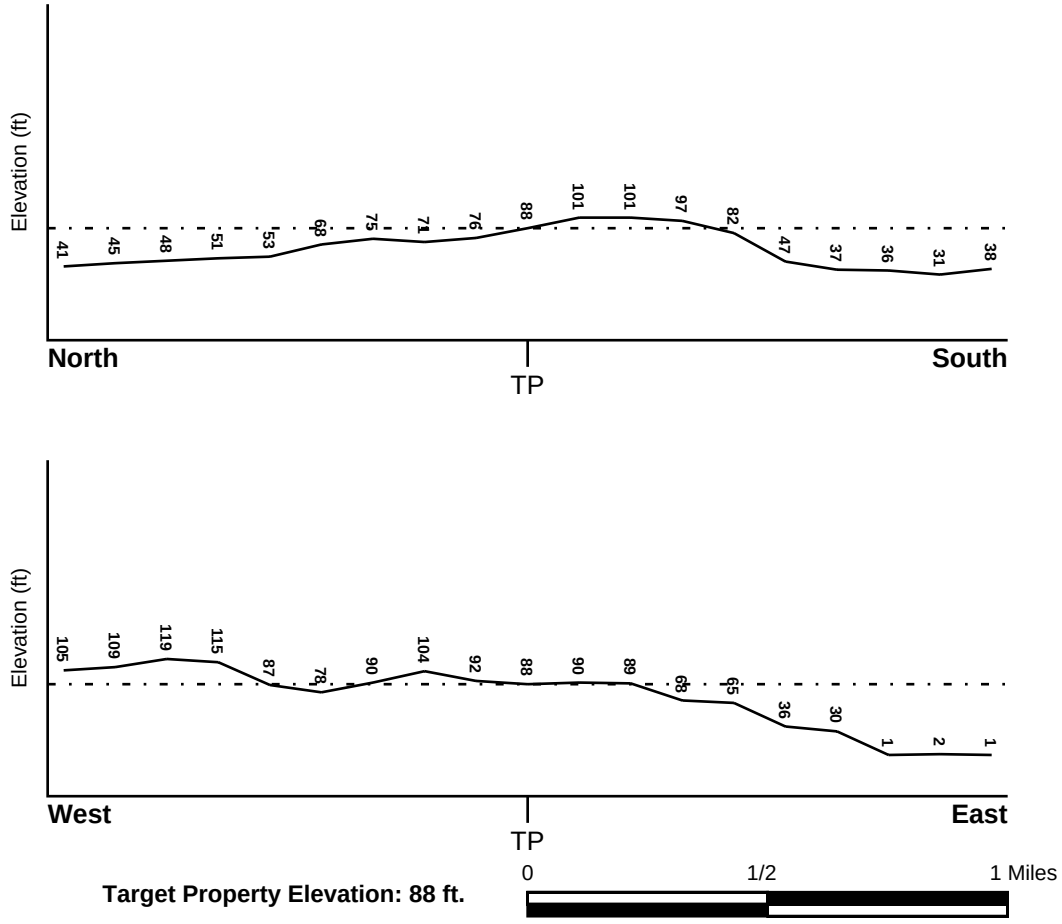
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 88 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36119C0341F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
36119C0342F	FEMA FIRM Flood data

36119C0344F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNT VERNON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: gravelly loam

Hydrologic Group: Not reported

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 127 inches

Depth to Watertable Min: > 38 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5
2	3 inches	72 inches	very gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 42 Min: 0.42	Max: 8.4 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

BLACKSTONE CONSULTING LLC

JOHN O'CONNOR

Senior Project Manager

PROFESSIONAL SUMMARY:

Mr. O'Connor has over 22 years of experience performing environmental site assessments, asbestos and lead-based paint surveys, and other due diligence efforts throughout the United States, and over five years of experience performing property condition assessments on multifamily buildings for various financial institutions. He has successfully managed single and multi-site projects encompassing a broad range of property types including multifamily, retail, office, industrial, hospitality, assisted living and special use, and has performed over 500 dual-scope projects specifically for Freddie Mac and/or Fannie Mae.

PROJECT EXPERIENCE:

- Over twenty-two years of experience in conducting environmental assessments in commercial facilities, industrial properties, single and multi-family housing developments, and schools, and over five years of experience performing property condition assessments.
- Extensive experience in conducting Phase I Environmental Site Assessments and Property Condition Assessments in accordance with ASTM, Fannie Mae and Freddie Mac Guidelines, as well as numerous private lender guidelines.
- Extensive experience in project management of asbestos and lead abatement projects, soil remediation projects and UST removals.
- Experience in conducting Phase II Environmental Site Assessments including materials sampling and soil and ground-water borings.
- Experience in environmental personnel management, project cost estimating, and effective staff scheduling.
- Experience in conducting quality control audits of field personnel for a multi-million dollar federal lead hazard risk assessment project.
- Experience as a Project Manager for a $500,000.00 mold abatement project.
- Knowledgeable in regulatory requirements for, and identification of, environmental hazards associated with commercial and residential buildings. Advises clients in effective management and resolution of the identified concerns.
- Trained in the health effects of lead and asbestos, federal and state regulations, techniques of assessment and abatement, use of protective equipment, assessment record keeping and reporting.

- A highly trained lead inspector, qualified in the use of Niton XL Spectrum Analyzer. Performs lead-based paint surveys in support of public and private multifamily developments and private residences.
- Experienced in conducting Energy Audits for single family residences, multi-family and commercial properties.
- Extensive training in environmental regulations, hazard identification, risk assessment and abatement methods.

EDUCATION AND PROFESSIONAL AFFILIATIONS:

B.S., Millersville University, Major: Occupational Safety and Hygiene Management Manufacturer's Training Course for Niton XL Spectrum Analyzer

EPA/AHERA Annual Asbestos Refresher Course EPA Model

Lead Paint Risk Assessor

EPA Radon Measurement Proficiency Program Listed Inspector

National Radon Proficiency Program (NRPP) Certified Residential Measurement Provider Florida Licensed Radon Measurement Technician

Certified to Collect Drinking Water: Maryland

BLACKSTONE CONSULTING LLC

LAUREN BEYRENT

Project Manager

PROFESSIONAL SUMMARY:

Ms. Beyrent has over 7 years of experience in the environmental due diligence sector with an emphasis on completing Phase I Environmental Site Assessments (ESAs) and Property Condition Assessments (PCAs) at commercial, industrial, manufacturing/warehouse, and multi-family residential properties. Other responsibilities include project staffing and management of large portfolio budgets, communicating findings with clients, and ensuring timely completion of her projects.

SELECTED PROJECT EXPERIENCE:

- Project manager for various environmental and property condition assessments throughout the U.S., Canada, and Mexico. Specific job functions include: communication with clients and property contacts, historic and local/state/federal research, government records/environmental regulatory database reviews, and technical report writing. PCA assessments also include the evaluation of typical building systems such as the building site and envelope, interior systems, roofing systems, mechanical equipment, plumbing, electrical/lighting systems, building structure, life safety/fire protection systems, and ADA compliance. Technical writing skills are utilized to prepare PCA reports, which include cost estimations, capital reserve planning, and engineering data analysis.
- Assessments were conducted for real estate owners, investors, and lending institutions in accordance with applicable American Society for Testing and Materials (ASTM) Standards and Guidelines, U.S. EPA All Appropriate Inquiry rules, and additional project-specific guidelines. Routinely conducts radon and asbestos sampling and mold evaluations during the diligence assessments.
- Performed an ADA accessibility survey and evaluation for an existing facility using the ADA Standards for Accessible Design to determine the property's compliance with applicable federal, state, and local accessibility regulations. The ADA survey included an evaluation of the paths of travel throughout the exterior and interior portions of a property, and the accessible design of parking spaces, ramps, stairs, signage, public spaces, restrooms, signage, and other uses.
- Assisted in several remediation projects for various contaminated properties, which included soil and groundwater sampling, surveying, well-monitoring, and soil removal activities.

EDUCATION AND PROFESSIONAL AFFILIATIONS:

Clemson University – Clemson, South Carolina B.S.- Environmental and Natural Resources, Minor in Biological Sciences
OSHA 10 Hour Occupational Safety & Health Training for Construction
OSHA 40 Hour HAZWOPER
Standard First Aid CPR/AED Level C
Working at Heights, Man-Lift/Aerial Lift Operation Training

BLACKSTONE CONSULTING LLC

AKISHA STAGGERS

Senior Project Manager

PROFESSIONAL SUMMARY:

Ms. Staggers has over 15 years of experience in environmental consulting, with a strong background in HUD related projects. Ms. Staggers has proven expertise in all facets of environmental assessment projects including Phase I and Phase II environmental site assessments, vapor intrusion assessments, environmental compliance investigations, and lead and asbestos investigations. She manages environmental projects for industry and government clients that effectively address due diligence requirements for property transfer.

SELECTED PROJECT EXPERIENCE:

- Managed the preparation and QA/QC of HUD Environmental Review Records and associated NEPA compliance reporting/correspondence, Phase I Environmental Site Assessments (ESA), Limited Phase II Environmental Site Assessments, Asbestos Building Surveys, and Lead-based Paint Inspection Reports.
- Developed reporting protocols to meet NEPA requirements for USDA and HUD
- Managed environmental staff, which included overall coordination of day to day operations and providing technical guidance.
- Developed several training programs for completing Tier 1 Vapor Encroachment Screenings, environmental review compliance reporting, and floodplain management for the project management team.
- Trained environmental staff to complete and coordinate Phase I Environmental Site Assessments, HUD Environmental Assessments, Tier 1 Vapor Encroachment Screenings, Asbestos Inspections and Lead-based paint inspections.

EDUCATION AND PROFESSIONAL AFFILIATIONS

Virginia Polytechnic Institute and State University, VA, Bachelor of Science in Environmental Science

LPA-1 XRF Lead Paint Detection Device Operator Training/ Radiation Safety Training

Advisory Council on Historic Preservation: The Section 106 Essentials -2008 Training Course

Screening for Potential Vapor Intrusion Problems under the ASTM E 2600 Standard – Presented by Anthony J. Buonicore, P.E., BCEE, QEP – November 2009

HUD Multifamily Accelerated Processing (MAP) Training - 2009 Washington, D.C.

BLACKSTONE CONSULTING LLC

REBECCA L. RENICK
Principal, Director of Lending Services
Baltimore, MD
(443) 977-7671
brenick@blackstoneconsulting.com

PROFESSIONAL SUMMARY:

Ms. Renick has over 19 years of management experience in environmental and physical due diligence consulting. She opened Blackstone's Mid-Atlantic Regional Office in Baltimore in 2007, and as Blackstone's Director of Lending Services, she is responsible for directing Blackstone's nationwide lender Fannie and Freddie lending work. Ms. Renick has significant experience in the due diligence industry on a variety of property types, but specializes in the multifamily arena.

As Principal and Director of Lending Services, Ms. Renick is responsible for the management, development, and direction of a specialized group of environmental, property condition, and energy professionals serving the lending community.

Ms. Renick originates new business and services numerous Fannie Mae Delegated Underwriting and Servicing (DUS), Freddie Mac Seller/Servicers, traditional lenders, and equity clients.

SELECTED PROJECT EXPERIENCE:

- Responsible for cultivating, establishing, and maintaining client relationships.
- Develop and execute solutions for Blackstone Fannie and Freddie projects, having worked on thousands of GSE multifamily reports in recent years. Responsible for a range of client and internal presentations.
- Effectively managed client relationships and portfolios with the country's largest multifamily lenders, including CBRE Capital Markets, Inc., Walker & Dunlop, KeyBank Real Estate Capital, Jones Lang LaSalle, Capital One, and Wells Fargo Multifamily Capital, and numerous private equity organizations.
- Successfully executed numerous multifamily portfolio lending transactions nationwide for both the debt and equity interest.

EDUCATION AND PROFESSIONAL AFFILIATIONS:

B.A., Rutgers University, English.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

255 HUGUENOT STREET
NEW ROCHELLE, NY 10801

COORDINATES

Latitude (North):	40.9105400 - 40ˆ 54' 37.94''
Longitude (West):	73.7838360 - 73ˆ 47' 1.80''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	602423.3
UTM Y (Meters):	4529326.5
Elevation:	90 ft. above sea level

EXECUTIVE SUMMARY

NY RGA LF..... Recovered Government Archive Solid Waste Facilities List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/28/2022 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/28/2022 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 4 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/08/2022 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/21/2021 has revealed that there are

2 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 03/15/2022 has revealed that there are 166 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 21 NY UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/28/2022 has revealed that there are 78 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON-CEDAR ST	ONE RAMADA PLAZA	NE 1/4 - 1/2 (0.339 mi.)	343	972

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

247 NORTH AVENUE SITE (Continued) **S127478116**

Record Added Date:	03/27/2020
Record Updated Date:	07/26/2021
Update By:	DJEATON
Site Description:	"Site Location: The 0.57 acre property is found at 247 North Avenue, New Rochelle, NY 10801 (tax map number; Section 1, Block 231, Lot 19). The site is located in a commercial and residential urban area in downtown New Rochelle. The site is bound by North Avenue to the west and LeCount Place to the east. While not adjacent to the site, Huguenot Street is to the north and Main Street is to the south. Site Features: The Subject Property is currently improved with a 1-story commercial building temporarily occupied by a medical clinic (Planned Parenthood) and an employment assistance organization, and also contains an associated asphalt parking lot. The current onsite building was constructed in 1941. The closest surface water body is an inlet of the Long Island Sound, located approximately 0.4 miles east of the site. The New Rochelle Metro-North train station is within walking distance to the west. Current Zoning and Land Use: The site is located in the Downtown Business (DB) District, which contains a Downtown Overlay (DO-2) zone. The surrounding properties to the North include a multi-storied residential building and a one-story commercial building. Properties to the South include a residential building with ground-floor retail and a preschool. The property to the East across Le Count Place is occupied by a Marriott Residence Inn Hotel. Properties to the West include two-story commercial buildings across North Avenue, which are occupied by a bank and retail stores. The closest residential area is the property immediately adjacent on the south side of the site. Past Use of the Site: By 1887, the site was developed with a structure appearing to be a coal and wood yard. By 1896, two more structures appeared on the property, one of them labeled Laundry , from 1903-1931. Various other commercial businesses operated until 1942, when the site appears to be vacant. A 120-gallon gasoline storage tank was noted on the 1911 Sanborn map. By 1951, a commercial building, resembling the current site building was present on the Southwest portion of the site. From 1951 and up until the present, no significant changes were observed. A Phase II ESA conducted in October 2019, indicated the presence of SVOCs (Semi-Volatile Organic Compounds) and metals in soil exceeding applicable soil standards, and the presence of VOCs (Volatile Organic Compounds) in soil vapor outside of the building footprint at levels exceeding applicable screening levels. Site Geology and Hydrogeology: There are no predominant geological surface features such as rock outcroppings on the site. Surface soil at the site predominantly consists of gravelly to very gravelly loam. The general topographic gradient is towards the north east. Under natural, undisturbed conditions, shallow groundwater flow generally follows the topography of the land surface and on this basis, the topography suggests that groundwater flow across the site is in an easterly direction. However, localized conditions can alter flow direction and thus the presumed flow may not coincide with the actual flow in the site area. The site is not located within a floodplain. "
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and this entry will be revised as additional information becomes available."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

BROWNFIELDS:
Name: FIRESTONE TIRE AND AUTO REPAIR SITE
Address: 316 HUGUENOT STREET
City,State,Zip: NEW ROCHELLE, NY 10801
Program: BCP
Site Code: 616446
Acres: 0.281
HW Code: C360215
SWIS: 6010
Town: New Rochelle (c)
Record Added Date: 02/17/2021
Record Updated Date: 04/12/2021
Update By: RDBENDEL
Site Description: "Site Location The 0.281-acre site is located at 316 Huguenot Street, New Rochelle, New York 10801 on Tax Parcel 2-415-13. The site is located in an urban mixed-use area in downtown New Rochelle. The surrounding properties include retail businesses, retail/commercial store fronts, a multi-story apartment structure, commercial businesses, and mixed-use properties. The site is located north of Centre Avenue and east of Huguenot Street. The site is walking distance from the New Rochelle Metro-North train station. Site Features The 316 Huguenot Street Parcel is currently improved with a one-story wood/steel frame commercial structure, which still houses a retail plumbing home improvement business. The building is slab on grade with a partial mezzanine level storage area. The building was constructed around 1957 to house a Firestone Tire & Auto Repair Business. Paved parking areas are located on both the Huguenot Street and Westchester Place sides of the building. The closest surface water body is an inlet of the Long Island Sound located approximately 0.8 miles east of the site. The Metro North Train Station is located within walking distance of the site. Current Zoning and Land Use The 316 Huguenot Street Parcel is currently located in the Downtown Business (DB) District. The parcel is currently or was previously considered commercial / retail space uses. The surrounding properties include retail businesses, retail/commercial store fronts, a multi-story apartment structure, commercial businesses, and mixed-use properties. The closest residential area is a condominium building that is located about 50 feet away from the subject property. The site is also approximately 0.07 miles from the Metro-North rail line, which is northwest of the site. The site is not located in a flood zone. Past Uses of the Site Based on aerial photographs, historical Sanborn maps, and information obtained from the City of New Rochelle Tax Assessor s Office, the historical uses of the site include the following uses. Historical Sanborn maps identified the property as undeveloped from 1887-1911. Between 1911 and 1951, the site was improved with a retail filling station and an automotive repair

FIRESTONE TIRE AND AUTO REPAIR SITE (Continued) **S127478137**

garage. Maps of the subject property from 1931 and 1951 show the filling station and three gasoline tanks within the northern most section of the parcel. In 1957, a Building Permit was issue for the existing commercial structure for Firestone Tire & Auto Repair Shop. The T-shaped building contained a vehicle service area and storage/sales rooms. A 1990 fire insurance map noted that the building was vacant. The building was operated as a retail home improvement business prior to being used by Kent Supply Company, which now temporarily operates a plumbing supply company at the site but is a month-to-month tenant. Prior to 2002, the City of New Rochelle is listed as the owner of the site. McCosker Equities Ltd. purchased the site in 2002. Vinek Holding Corp. purchased the property from McCosker Equities Ltd. in 2009. Allstate Ventures LLC purchased the property in July 2018 from Vinek Holding Corp. and then finally the Requestor purchased the site in October 2019. Site Geology and Hydrogeology A historic fill layer is present under the current asphalt parking lot from 3.5 to 7 ft-bgs. The site s subsurface soils are composed of dark brown and gray coarse to fine grained sand, gravel and clay to depths of 6 to 15 ft-bgs. At 15 ft-bgs, weathered bedrock is present. According to the 1970 Geologic Map of New York - Lower Hudson Sheet - published by the University of the State of New York, the underlying bedrock of the site is of the Hartland Formation and is comprised of primarily basal amphibolite gneiss overlain by politic schists. According to the United State Geological Survey (USGS), the site s average topographic elevation is approximately 107-feet above mean sea level. The site is a relatively flat with regional topography slopping to the west. Groundwater was encountered at depths ranging from 4 ft-bgs to 8 ft-bgs and groundwater flow direction is anticipated to flow with the surface elevation profile to the west. The site is not located in a flood zone."

CON ED STREET EXCAVATION (Continued) **S125359722**

Excerpt from EMIS, Senior Specialist, Sean Egan (04430) with EHS Street Construction, reported .5 gallon of an unknown oil within an excavation. Work immediately stopped and crews will be covering the excavation with a road plate. Samples for PCB, Oil ID and Flashpoint will be taken, however, the CoC was not available at the time of the call. TG 10/22/19 Excerpt from EMIS 275035/3; 10/8/2019 1:00 PM Allstate Clean venture removed 35 cubic yards of soil to permit work to continue. Sent to Clean Earth on 9/12/2019. Reinhart, Kenneth NFA. BROWNFIELDS:
Name: BLOCK 417 NEW ROCHELLE
Address: 327-329 HUGUENOT STREET
City,State,Zip: NEW ROCHELLE, NY 10801
Program: BCP
Site Code: 616464
Acres: 0.344
HW Code: C360216
SWIS: 6010
Town: New Rochelle (c)
Record Added Date: 02/18/2021
Record Updated Date: 01/25/2022
Update By: RDBENDEL
Site Description: "Site Location: The 0.344-acre site is located at 327-329 Huguenot Street, New Rochelle, New York, 10801. The site is located in a mixed-use downtown commercial and residential neighborhood undergoing significant revitalization as the result of the Brownfield Cleanup Program. The surrounding properties are used as stores, restaurants, parking lots, residential buildings, and a church. Site Features: The 0.344-acre site is currently improved as a rectangular parking lot. Two circular asphalt patched areas are located within the site. The patched areas are suspected to be filled potholes. The site is currently used for storage of construction materials, parking, and also contains two temporary office trailers by the site owner. A bus stop shelter location is located adjacent to the site along Huguenot Street. The closest waterbody to the site is Ferris Creek, which is located approximately 0.68 miles from the site. The closest open surface water body to the site is the Long Island Sound, which is approximately 0.95 miles from the site. The site is not located in a flood zone. Current Zoning and Land Use: The site is currently located in the Downtown Business (DB) and Downtown Overlay (DO-2) Gateway Transition Districts. Allowed uses in these districts include stores, retail, offices, and residential units on the second floor and above in buildings. The subject property is currently used as a parking lot. A church is located north of the site. Huguenot Street is located east of the site. Centre Avenue and a parking lot are located south of the site. This is a BCP site being redeveloped.

BLOCK 417 NEW ROCHELLE (Continued) **S127478138**

Commercial properties are present to the west of the site. The surrounding properties also include stores, restaurants, commercial buildings, and residential buildings. The closest residential area is an apartment building located approximately 0.083 miles away. The closest rail line is located approximately 0.034 miles away from the site. Past Use of the Site: Based on aerial photographs, deeds, and historical Sanborn maps, the historical uses of the site include the following uses: Maps from 1887 - 1903 depict the site as a vacant lot. D. and L. Building Company recorded a mortgage for the site in May 1910. This may be when the contaminated historic fill soils were placed on the site. In maps from 1911-1951, the site is occupied by apartments and street level stores. The complex is identified as D&L Apartments. In July 1915, Bonniecrest, Inc. purchased the property from Robertson T. Barrett, Referee, at a public auction. Jacob Malakoff became the owner of the site in 1921. The site was purchased by Irene Hendrick in July 1925. Ms. Hendrick sold the site to The Emigrant Industrial Savings Bank in 1938. In June 1939, The Emigrant Industrial Savings Bank transferred ownership of the site to Thelma Portugh, who then transferred the property to Herald Management Corp. Samron Realty Corporation purchased the site in December 1939. In June 1945, 1320-1328 Grant Avenue Corporation purchased the site. Huguenot-Center Corporation purchased the site in June 1946. Maps between 1951 and 1992 show D&L Apartments are on the site, but the buildings were noted to be vacant. In January 1952, Leon Steinman and Sylvia Rubin purchased the site. Harry Crown purchased the site in May 1956, and he sold the property to Ruth Crown in 1960. Salco Holding Corporation purchased the property in February 1962. Residential lists were associated with the site in 1972. In 1986, Huguenot Arms Associates (c/o Danray Development Organization) purchased the site. Residential lists were associated with the site in 1987. The City of New Rochelle acquired the site through a condemnation proceeding in 1990. In the 1993 map, the apartments are no longer present. Therefore, the current parking lot, which is present on the site now, is likely to have been constructed by the City after building demolition. Maps from 1994 to 2003 depict the site as a parking lot. The City of New Rochelle Corporation for Local Development acquired ownership of the site in May 2019. Later in the same month, Huguenot Partners LLC purchased the property. The current owner, RFMCH Huguenot Property Owner LLC purchased the site from Huguenot Partners LLC in August 2019. Site Geology and Hydrogeology: According to the United States Geological survey (USGS) Mount Vernon, 2013, 7.5-minute series topographic map, the site is approximately 96 feet above mean sea level. The site s topography slopes gently to the north. According to the Department of the Interior United States Geologic survey, the site soils are mapped as Quanternary till overlaying bedrock further classified as a geologic ground moraine. The subject property is composed of Uf Urban Land soil. This indicates that over sixty percent of the land surface is covered. surface materials on the site consist of 3 to 5 inches of asphalt. The subsurface geology of the site generally consists of uncontrolled fill from grade to depths ranging from 5 to 11 feet below grade surface (ft-bgs). The uncontrolled fill consisted of red-brown/brown coarse to fine sand and/or coarse to fine gravel with varying amounts of silt, brick, concrete and asphalt millings. some portions of fill were composed off brick fragments or concrete. A concrete slab is present in some parts of the site between 3 and 8 ft-bgs. A decomposed rock stratum begins between 5 to 11 ft-bgs. The natural

BLOCK 417 NEW ROCHELLE (Continued) **S127478138**

	decomposed rock extends to depths between 10 and 22 ft-bgs. Bedrock is present under the natural decomposed rock. The bedrock is part of the Hartland formation defined as mica schist and mica gneiss, medium to coarsely crystalline. The bedrock consists of dark gray, weathered, hard, slightly to intensely fractured Gneiss; overlying dark gray, slightly weathered, hard, slightly fractured to moderately fractured schist, with high angle foliations/banding. Groundwater on the site is primarily derived from precipitation. NP&V estimated that groundwater flowed to the east towards Ferris Creek. However, SESI s Phase I report noted that groundwater flow was expected to be to the south-southwest based on its investigation of the neighboring property to the south (339 Huguenot Street) and on reports for a nearby facility. Overburden groundwater is present at the site ranging between 0.2 to 10 ft-bgs. Groundwater was also found between 16 and 27 ft-bgs throughout the site. The depth of the groundwater indicates that some shallow water-bearing fractures are present in the bedrock. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name:	FRANK LANZELLI
DEC Memo:	"4-9-14 Last night I traded voicemails with Jerry. He said that he didn't know anymore than provided to the Hotline and I should talk to Frank in the morning. This morning I spoke to Frank. Location has a 1500 gallon vaulted tank with a remote fill at curb. There is currently some oil in the basement sump. Sump is unplugged and it doesn't appear any was pumped out. Frank doesn't know where oil came from, but vault sounds inaccessible. Frank is trying to contact management company to let them know tank needs to be tested. Management Company: Sterling Solutions, 914/437-6245, Aurora is Almeada contact Owner: Milka Iwanow, 914/409-6513 jc 4/09/14: Email received this morning from Chris Lalak: Sebastian went to this one and will follow up. It is a block away from my office. The tank in a vaulted AST (1500 gallon from 1931). There is a spill across the floor and in cracks in the floor getting to a sump pump. The sump goes to the sanitary. The spill may have been going on for so time, the super was very vague. The AST is visible except for a small area

CONCRETE FLOORING WITH CRACKS (Continued) **S116554293**

Remarks: that sticks into the floor of the vault. The tank is not visibly leaking. Almeida replaced the underground lines with above ground lines recently. The between the tank, the former underground lines, and the sump is some distance and they will need to excavate the floor. The building has hired Dutchess. Pumping out the tank is not simple. The building has natural gas and oil. jod 04-09-14 followup email, After a second look at this one with a plumber,It looks like the old lines might be leaking. The plumber will uncover the old lines. The tank is not being pumped out at this time. The bottom of the tank is visible for the most part. (the plumber went in the vault, before we were there).Possibly, the remote fill is also an issue. They will replace the tank with an unregulated tank. Sebastian will continue to handle the spill. The floor will be opened up tomorrow to investigate. RDB 7/10/18: Email message received from Sebastian Bimonte of WCDoH: Can you NFA this one. The call from what I can remember was possible sheen in the sump pump located in the basement of an apartment building. As a precaution a section of the floor was excavated and a soil sample was retrieved. Soils below CP-51. *The sample results dated April 24 of 2014 show contamination levels below CP-51 except for the Xylenes which are slightly over the guidance. Municipal water and sewer in this area, WCDoH recommending NFA at this time. Sample results entered into D2 DecDocs. jod" "Caller advised unknown amount of oil spilled onto concrete floor with cracks. Clean up is pending."

SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	01/06/2021
Record Updated Date:	02/25/2021
Update By:	AMOMOROG
Site Description:	"Site Location: The site is located at 285 North Avenue (formerly known at 277 North Avenue and 273 North Avenue), New Rochelle, New York 10801, Tax Parcel Identification No. 1-239-0033 (formerly known as Tax Parcel Identification Nos. 1-239-0029 and 1-239-0033). The site is located in a primarily commercial use neighborhood. Site Features: The site is currently contains a vacant three-story steel frame masonry block commercial office building on the northern portion of the site and a vacant one-story building with a two-story addition present on the southern portion of the site. Paved parking areas are found within the southeastern section of the property and off the northeastern and southeastern sides of the buildings. Current Zoning and Land Use: The site is currently located in the Downtown Mixed Use District. The on-site building was most recently used as

GOODRICH RUBBER 285 NORTH AVENUE SITE (Continued) **S127282809**

commercial office building. The last tenant was a bank in one portion of the building. The bank vacated the site in approximately March-April 2019 and the site is now vacant. The surrounding properties are primarily commercial with some residential uses. The site is located along the northeastern side of North Avenue in the City of New Rochelle, Westchester County, New York. A multi-story mixed use commercial and residential structure are located northeast of the property. To the southeast of the site, there is a restaurant, multi-tenanted retail and commercial office structure, and a United states Post Office. A Chase Bank office building is located to the southwest. Active below grade railway lines are located approximately 109 feet from the site to the north. The site is located approximately 500 feet from the New England Thruway (Interstate Route 95). Past Use of the Site: Historical usages of the site beginning in 1887 includes: a hotel, pavilion, stable(s), beer storage, saloon, restaurant(s), jewelers, tailors, upholsters, plumbing supply shop, machining company, filling station, auto repair garage, rubber vulcanization facility, a materials facility, dental practice, roofing and siding business, locksmith, and law firms. Several of these historical entities were located within two multi-tenanted commercial structures. The first building existed from the 1930s to 1975. The second was constructed in 1975 and presently exists on-site. Of particular relevance to the environmental investigation, from 1911 to the early 1930s, a rubber vulcanization (hardening) facility was present in the southern portion of the site. The facility was run by Westchester Rubber Works. The map noted that the facility has one small gas vulcanizer. In addition, in 1911, a W.F. Vernon Masons Materials facility was located on-site with newspaper articles stating that B.F. Goodrich took over the facility and operated it until the 1950s. It was noted to supply brick, cement, and lime. In 1951, a filling station and auto repair garage were also identified as present on-site. In 1972, Cornwall Automatic and Mawaco Machine Co. were noted as present on-site. Three underground storage tanks (UST) are associated with the site. A 3,000 gallon underground storage tank (UST) was registered on-site in 1930. The status of this UST is unknown. From 1975 to 2007, a 10,000 gallon UST existed on-site. This tank had failed several tightness tests which spurred the opening of NYSDEC Spill Nos. 8912285 in 1990, and 0611580, and 0611648 in 2007. The tank was eventually removed from the site in 2007 along with 356 tons of contaminated soil. The third tank is a 5,000 gallon UST which is currently present on-site. Site Geology and Hydrogeology: The site is approximately 80 feet above sea level. The topography of the area is level. Subsurface materials on the site consist of contaminated historic fill composed of sand with brick, gravel, asphalt, silt and concrete. The historic fill is present to a maximum depth of approximately 20 feet below ground surface (ft bgs). Along the perimeter of the site boundary, native sand with silt and gravel was present under the fill. Presumed weathered bedrock was encountered at depths ranging from 9 to 19 ft bgs. Groundwater was encountered during the subsurface investigation at depths ranging from approximately 13 to 17 ft bgs. Groundwater is assumed to flow in an easterly direction towards Echo Bay approximately 2,500 feet away. "

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the

Spiller Name:	TIM ROFF
Spiller Company:	ST GABRIEL'S CHURCH
Spiller Address:	120 DIVISION ST
Spiller Company:	999
Contact Name:	TIM ROFF
DEC Memo:	"9/17/19 Church had tank removed last week (PBS site), temp tank installed. Temp tank expanded from heat, spilling 7 gallons oil to secondary containment (metal dike with metal floor around tank) and 3 gallons to asphalt. No waterways, drains, soil, or grass impacted. New Rochelle Fire Dept. put down speedy dry, Metro Env. drummed used absorbents & debris for disposal, reports to follow. ga 1/28/20: Tank removal was reported as Spill 1903323. Report submitted under that case number. This was a 10 gallons spill from a temp AST. Cleanup was completed the same day. jod"
Remarks:	"Over explansion of above ground storage tank caused spill into containment and some on blacktop outside of containment. Cleanup is underway."

Site Code:	580085
Acres:	0.459
HW Code:	C360182
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	12/03/2018
Record Updated Date:	12/27/2021
Update By:	AMSERVIS
Site Description:	"Location: The site is located in the City of New Rochelle, Westchester County, New York at 33-35 Centre Avenue on a 0.46-acre lot. The site is located on the northern part of the city block bordered by Centre Avenue to the north, Huguenot Street to the east, Columbus Avenue to the south, and Relyea Place to the west. The site is bordered to the south by multi-story residential and commercial buildings. The site is approximately 1 mile west of Echo Bay. The Industrial Overall Services Corp. (Site No. 360109) State Superfund site is located just to the west of the site (downgradient), on the other side of Reylea Place. Site Features: The site is currently being developed into a multi-story residential building and construction of the building began in July 2020, after all soil above bedrock was removed from the site as part of an Interim Remedial Measure (IRM) completed under the BCP. Current Zoning and Land Use: The site is located within the Downtown Business (DB) (eastern portion) and Light Industry (LI) (western portion) zoning districts. Permitted principal uses of DB districts include stores, retail, offices, and residential units located on the second floor and above.

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990256**

Permitted principal uses of LI districts include manufacturing, offices, medical facilities and parking garages. The current zoning designation is consistent with the proposed development. Past Use of the Site: The site has been used for various residential, commercial and industrial purposes since the 1930s. Starting in 1971, the western half of the site was used as an electroplating and metal-finishing business and the eastern half of the site was used as a parking lot. Industrial operations ceased in December 2018. Site Geology and Hydrogeology: Site soils consisted of historic fill across the site from grade surface to depths ranging from 1 to 7.5 feet below grade surface (ft bgs). Historic fill was generally deeper on the eastern portion of the site. Historic fill predominately consisted of brown and black sand with varying amounts of gravel, brick, organic material, asphalt, metal and clay with an average fill depth of approximately 5 ft bgs across the Site. The fill material was underlain by fine to silty sand followed by a 6 to 12-inch layer of weathered (decomposed) rock overlying the bedrock. All soil was removed from the site as part of an IRM. Bedrock beneath the site consists of metamorphic rock containing high angle features capable of transporting groundwater to depths of at least 70 feet below the top of bedrock. Groundwater underlying the site is present in bedrock and flows to the south-southwest. "

Env Problem:

"Remediation at the site is partially complete. Remedial actions thus far have successfully achieved soil cleanup objectives for unrestricted use. Implementation of In-Situ Chemical Oxidation and In-Situ Treatment using Activated Carbon have resulted in a decrease in contaminant concentrations in groundwater. Groundwater will be monitored during the Site Management phase of the project. Groundwater will be monitored until residual concentrations of groundwater contaminants are below groundwater standards, or there is a bulk reduction to asymptotic levels acceptable to the Department. If concentrations of groundwater contaminants do not decrease to levels that are acceptable to the Department, contingent remedial actions may be required which could include in-situ chemical reduction or groundwater extraction and treatment. Prior to remediation, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in groundwater, and VOCs in soil vapor. Prior to Completion of partial Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, cyanide, and the emerging contaminants per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based on investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in the groundwater, and VOCs in soil vapor. Soil - A total of 36 soil samples were collected during the remedial investigation from 19 borings extending to bedrock across the site. Several constituents were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs). The following is a list of those compounds and the maximum exceedance: trichloroethene (TCE) 0.92 parts per million (ppm) vs USCO of 0.47 ppm, benzo(a)anthracene 64 ppm vs USCO of 1 ppm, benzo(a)pyrene 56 ppm vs USCO of 1 ppm, benzo(k)fluoranthene 25 ppm vs USCO of 0.8 ppm, benzo(b)fluoranthene 69 ppm vs USCO of 1 ppm, chrysene 61 ppm vs USCO of 1 ppm,

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990256**

dibenzo(a,h)anthracene 8.6 ppm vs USCO of 0.33 ppm, fluoranthene 120 ppm vs USCO of 100 ppm, indeno(1,2,3-cd)pyrene 36 ppm vs USCO of 0.5 ppm, pyrene 120 ppm vs USCO of 100 ppm, barium 416 ppm vs USCO of 350 ppm, copper 396 ppm vs USCO of 50 ppm, lead 357 ppm vs USCO of 63 ppm, mercury 2.54 ppm vs USCO of 0.18 ppm, nickel 1600 ppm vs USCO of 30 ppm, zinc 254 ppm vs USCO of 109 ppm, 4,4'-DDE 0.134 ppm vs USCO of 0.0033 ppm, 4,4'-DDD 0.156 ppm vs USCO of 0.0033 ppm, 4,4'-DDT 0.521 ppm vs USCO of 0.0033 ppm, chlordane 0.186 ppm vs USCO of 0.094 ppm, dieldrin 0.0234 ppm vs USCO of 0.005 ppm, PCBs 0.11 ppm vs USCO of 0.1 ppm, and cyanide 74 ppm vs USCO of 27 ppm. Emerging contaminants were detected in soil samples collected from the site. The emerging contaminant 1,4-dioxane was detected in one sample at a concentration of 16 parts per billion (ppb). Perfluorooctanesulfonic acid (PFOS) was detected in 22 out of 30 samples collected throughout the site with a maximum concentration of 21.8 ppb. Perfluorooctanoic acid (PFOA) was detected in 6 out of 30 samples collected throughout the site with a maximum concentration of 1.52 ppb. Concentrations of PFAS in soil were generally higher on the western half of the site compared to the eastern half of the site. All on-site soils were excavated down to the bedrock surface and transported off-site for disposal as part of a soil removal IRM. Therefore, following the IRM, there are no soils remaining that exceed the USCOs. There is no indication that soil contamination extends off-site. Groundwater - A total of nine groundwater wells were installed in bedrock throughout the site prior to the IRM. A non-aqueous phase liquid (NAPL) was encountered in one well on the east half of the site. This NAPL was again encountered during the IRM at the weathered bedrock interface and sampled. Fingerprinting results indicated that the NAPL was characteristic of a highly degraded petroleum. No further evidence of the NAPL was observed on the eastern half of the site after the removal of the affected bedrock and liquids encountered. Prior to the IRM, groundwater samples were collected from monitoring wells and analyzed for VOCs, SVOCs, PCBs, pesticides, metals and cyanide as well as the emerging contaminants PFAS and 1,4-dioxane. No PCBs or cyanide were detected in any groundwater samples. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, benzo(b)fluoranthene, chrysene, and phenol; the metals chromium, iron, manganese, magnesium, and nickel; and the pesticide dieldrin were detected in at least one groundwater sample in exceedance of groundwater standards. The locations where elevated SVOCs were noted in groundwater do not coincide with locations where elevated SVOCs were noted in soil, which suggests that the PAHs may be present in the dissolved phase. The concentrations of sodium, iron, manganese, magnesium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These compounds are typically naturally occurring or related to road salt application. Nickel and chromium, which may have been used during the electroplating process, were detected at maximum concentrations of 12,970 ppb versus a groundwater standard of 100 ppb, and 7,937 ppb versus a groundwater standard of 50 ppb, respectively. The pesticide dieldrin was only detected in one well at 0.005 ppb, marginally exceeding the groundwater standard of 0.004 ppb. The chlorinated VOCs PCE, TCE and 1,1,1-TCA, and their respective degradation byproducts, were detected in groundwater samples collected from the western half of the site in exceedance of groundwater standards and at levels suggesting the presence of separate phase material. The VOC toluene was also detected in exceedance of groundwater standards in the

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990256**

western half of the site and xylene (22 ppb) on the eastern half of the site in one sample. The highest concentrations of VOCs encountered at the site were for TCE (3,400 ppb), 1,1,1-TCA (1,000,000 ppb), 1,1-dichloroethene (28,000 ppb), and toluene (7,200 ppb) compared to a groundwater standard of 5 ppb for each of these constituents. Chlorinated VOCs were not detected in groundwater samples collected from the eastern half of the site. 1,4-dioxane, a contaminant (stabilizer) typically associated with 1,1,1-TCA, was detected at concentrations up to 320 ppb in groundwater samples, where elevated levels of chlorinated VOCs were also encountered on the western half of the site. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 796 and 3,140 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. PFAS concentrations in groundwater were approximately an order of magnitude higher on the western half of the site compared to the eastern half of the site. VOC, PFAS, and 1,4-dioxane groundwater contamination is migrating off-site in the direction of groundwater flow to the southwest. The off-site groundwater plumes from this site are comingled with groundwater plumes emanating from the Industrial Overall Services Corp. (Site No. 360109) State Superfund site. The Industrial Overall Services Corp. site is located just to the west of the site on the other side of Relyea Place. No private or municipal drinking water wells are within 0.5 miles of the site, and Chapter 873, article VII of the Laws of Westchester County, prohibits potable use of groundwater without prior approval. A supplemental remedial investigation (SRI-1) was conducted following the IRM to determine the nature and extent of contamination in bedrock groundwater. The SRI-1 consisted of the geophysical logging at ten locations and the installation of sixteen monitoring wells screened at depths ranging from 75 to 27 feet above mean sea level (ft, amsl) following the IRM. The data collected during the SRI revealed that source level contamination consisting primarily of chlorinated VOCs (max concentration 140,000 ppb 1,1,1-TCA compared to the groundwater standard of 5 ppb) persists in bedrock groundwater following the IRM. Total CVOC concentrations are greatest in the southwest corner of the site and have migrated both horizontally and vertically through high angle features towards the southwest site boundary. PFAS (SRI-1 max concentration 904 ppt PFOS) and 1,4-dioxane (SRI-1 max concentration 294 ppb) concentrations in bedrock groundwater are lower than pre-IRM concentrations, but still well above groundwater standards. A second supplemental remedial investigation (SRI-2) was conducted following SRI-1 to further determine the extent of contamination in bedrock groundwater off-site in high angle fracture features. SRI-2 consisted of the installation of six monitoring wells screened at depths ranging from 55 to 45 ft, amsl and 0 to 20 ft, amsl. The data collected during SRI-2 revealed that elevated levels of contamination consisting primarily of chlorinated VOCs are migrating horizontally and vertically off-site in groundwater through high angle fracture features. PFAS, 1,4-dioxane and CVOCs are present in bedrock groundwater at depths down to 0 ft, amsl. Soil Vapor - A total of nine soil vapor samples were collected from locations throughout the site prior to the implementation of the IRM. Elevated levels of chlorinated volatile organic compounds were detected in soil vapor samples collected from the western half of the site, nearer to where elevated levels of PCE, TCE and 1,1,1-TCA were encountered in groundwater contamination. The maximum concentrations of TCE,

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990256**

	1,1-dichloroethene, and 1,1,1-TCA detected were 184 micrograms per cubic meter (ug/m3), 1,110 ug/m3, 15,100 ug/m3 respectively. Soil vapor impacts may extend off-site and may be comingled with soil vapor impacts from the Industrial Overall Services Corp. site. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site. "

Soil - A total of 36 soil samples were collected during the remedial investigation from 19 borings extending to bedrock across the site. Several constituents were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs). The following is a list of those compounds and the maximum exceedance: trichloroethene (TCE) 0.92 parts per million (ppm) vs USCO of 0.47 ppm, benzo(a)anthracene 64 ppm vs USCO of 1 ppm, benzo(a)pyrene 56 ppm vs USCO of 1 ppm, benzo(k)fluoranthene 25 ppm vs USCO of 0.8 ppm, benzo(b)fluoranthene 69 ppm vs USCO of 1 ppm, chrysene 61 ppm vs USCO of 1 ppm, dibenzo(a,h)anthracene 8.6 ppm vs USCO of 0.33 ppm, fluoranthene 120 ppm vs USCO of 100 ppm, indeno(1,2,3-cd)pyrene 36 ppm vs USCO of 0.5 ppm, pyrene 120 ppm vs USCO of 100 ppm, barium 416 ppm vs USCO of 350 ppm, copper 396 ppm vs USCO of 50 ppm, lead 357 ppm vs USCO of 63 ppm, mercury 2.54 ppm vs USCO of 0.18 ppm, nickel 1600 ppm vs USCO of 30 ppm, zinc 254 ppm vs USCO of 109 ppm, 4,4'-DDE 0.134 ppm vs USCO of 0.0033 ppm, 4,4'-DDD 0.156 ppm vs USCO of 0.0033 ppm, 4,4'-DDT 0.521 ppm vs USCO of 0.0033 ppm, chlordane 0.186 ppm vs USCO of 0.094 ppm, dieldrin 0.0234 ppm vs USCO of 0.005 ppm, PCBs 0.11 ppm vs USCO of 0.1 ppm, and cyanide 74 ppm vs USCO of 27 ppm. Emerging contaminants were detected in soil samples collected from the site. The emerging contaminant 1,4-dioxane was detected in one sample at a concentration of 16 parts per billion (ppb). Perfluorooctanesulfonic acid (PFOS) was detected in 22 out of 30 samples collected throughout the site with a maximum concentration of 21.8 ppb. Perfluorooctanoic

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

acid (PFOA) was detected in 6 out of 30 samples collected throughout the site with a maximum concentration of 1.52 ppb. Concentrations of PFAS in soil were generally higher on the western half of the site compared to the eastern half of the site. All on-site soils were excavated down to the bedrock surface and transported off-site for disposal as part of a soil removal IRM. Therefore, following the IRM, there are no soils remaining that exceed the USCOs. There is no indication that soil contamination extends off-site. Groundwater - A total of nine groundwater wells were installed in bedrock throughout the site prior to the IRM. A non-aqueous phase liquid (NAPL) was encountered in one well on the east half of the site. This NAPL was again encountered during the IRM at the weathered bedrock interface and sampled. Fingerprinting results indicated that the NAPL was characteristic of a highly degraded petroleum. No further evidence of the NAPL was observed on the eastern half of the site after the removal of the affected bedrock and liquids encountered. Prior to the IRM, groundwater samples were collected from monitoring wells and analyzed for VOCs, SVOCs, PCBs, pesticides, metals and cyanide as well as the emerging contaminants PFAS and 1,4-dioxane. No PCBs or cyanide were detected in any groundwater samples. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, benzo(b)fluoranthene, chrysene, and phenol; the metals chromium, iron, manganese, magnesium, and nickel; and the pesticide dieldrin were detected in at least one groundwater sample in exceedance of groundwater standards. The locations where elevated SVOCs were noted in groundwater do not coincide with locations where elevated SVOCs were noted in soil, which suggests that the PAHs may be present in the dissolved phase. The concentrations of sodium, iron, manganese, magnesium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These compounds are typically naturally occurring or related to road salt application. Nickel and chromium, which may have been used during the electroplating process, were detected at maximum concentrations of 12,970 ppb versus a groundwater standard of 100 ppb, and 7,937 ppb versus a groundwater standard of 50 ppb, respectively. The pesticide dieldrin was only detected in one well at 0.005 ppb, marginally exceeding the groundwater standard of 0.004 ppb. The chlorinated VOCs PCE, TCE and 1,1,1-TCA, and their respective degradation byproducts, were detected in groundwater samples collected from the western half of the site in exceedance of groundwater standards and at levels suggesting the presence of separate phase material. The VOC toluene was also detected in exceedance of groundwater standards in the western half of the site and xylene (22 ppb) on the eastern half of the site in one sample. The highest concentrations of VOCs encountered at the site were for TCE (3,400 ppb), 1,1,1-TCA (1,000,000 ppb), 1,1-dichloroethene (28,000 ppb), and toluene (7,200 ppb) compared to a groundwater standard of 5 ppb for each of these constituents. Chlorinated VOCs were not detected in groundwater samples collected from the eastern half of the site. 1,4-dioxane, a contaminant (stabilizer) typically associated with 1,1,1-TCA, was detected at concentrations up to 320 ppb in groundwater samples, where elevated levels of chlorinated VOCs were also encountered on the western half of the site. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 796 and 3,140 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. PFAS concentrations in groundwater were approximately an

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

order of magnitude higher on the western half of the site compared to the eastern half of the site. VOC, PFAS, and 1,4-dioxane groundwater contamination is migrating off-site in the direction of groundwater flow to the southwest. The off-site groundwater plumes from this site are comingled with groundwater plumes emanating from the Industrial Overall Services Corp. (Site No. 360109) State Superfund site. The Industrial Overall Services Corp. site is located just to the west of the site on the other side of Relyea Place. No private or municipal drinking water wells are within 0.5 miles of the site, and Chapter 873, article VII of the Laws of Westchester County, prohibits potable use of groundwater without prior approval. A supplemental remedial investigation (SRI-1) was conducted following the IRM to determine the nature and extent of contamination in bedrock groundwater. The SRI-1 consisted of the geophysical logging at ten locations and the installation of sixteen monitoring wells screened at depths ranging from 75 to 27 feet above mean sea level (ft, amsl) following the IRM. The data collected during the SRI revealed that source level contamination consisting primarily of chlorinated VOCs (max concentration 140,000 ppb 1,1,1-TCA compared to the groundwater standard of 5 ppb) persists in bedrock groundwater following the IRM. Total CVOC concentrations are greatest in the southwest corner of the site and have migrated both horizontally and vertically through high angle features towards the southwest site boundary. PFAS (SRI-1 max concentration 904 ppt PFOS) and 1,4-dioxane (SRI-1 max concentration 294 ppb) concentrations in bedrock groundwater are lower than pre-IRM concentrations, but still well above groundwater standards. A second supplemental remedial investigation (SRI-2) was conducted following SRI-1 to further determine the extent of contamination in bedrock groundwater off-site in high angle fracture features. SRI-2 consisted of the installation of six monitoring wells screened at depths ranging from 55 to 45 ft, amsl and 0 to 20 ft, amsl. The data collected during SRI-2 revealed that elevated levels of contamination consisting primarily of chlorinated VOCs are migrating horizontally and vertically off-site in groundwater through high angle fracture features. PFAS, 1,4-dioxane and CVOCs are present in bedrock groundwater at depths down to 0 ft, amsl. Soil Vapor - A total of nine soil vapor samples were collected from locations throughout the site prior to the implementation of the IRM. Elevated levels of chlorinated volatile organic compounds were detected in soil vapor samples collected from the western half of the site, nearer to where elevated levels of PCE, TCE and 1,1,1-TCA were encountered in groundwater contamination. The maximum concentrations of TCE, 1,1-dichloroethene, and 1,1,1-TCA detected were 184 micrograms per cubic meter (ug/m3), 1,110 ug/m3, 15,100 ug/m3 respectively. Soil vapor impacts may extend off-site and may be comingled with soil vapor impacts from the Industrial Overall Services Corp. site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site. "

Dt rec updated: 12/27/2021
Updated By: JEBROWN
Site Code: 580085
Site Description: "Location: The site is located in the City of New Rochelle, Westchester County, New York at 33-35 Centre Avenue on a 0.46-acre lot. The site is located on the northern part of the city block bordered by Centre Avenue to the north, Huguenot Street to the east, Columbus Avenue to the south, and Relyea Place to the west. The site is bordered to the south by multi-story residential and commercial buildings. The site is approximately 1 mile west of Echo Bay. The Industrial Overall Services Corp. (Site No. 360109) State Superfund site is located just to the west of the site (downgradient), on the other side of Reylea Place. Site Features: The site is currently being developed into a multi-story residential building and construction of the building began in July 2020, after all soil above bedrock was removed from the site as part of an Interim Remedial Measure (IRM) completed under the BCP. Current Zoning and Land Use: The site is located within the Downtown Business (DB) (eastern portion) and Light Industry (LI) (western portion) zoning districts. Permitted principal uses of DB districts include stores, retail, offices, and residential units located on the second floor and above. Permitted principal uses of LI districts include manufacturing, offices, medical facilities and parking garages. The current zoning designation is consistent with the proposed development. Past Use of the Site: The site has been used for various residential, commercial and industrial purposes since the 1930s. Starting in 1971, the western half of the site was used as an electroplating and metal-finishing business and the eastern half of the site was used as a parking lot. Industrial operations ceased in December 2018. Site Geology and Hydrogeology: Site soils consisted of historic fill across the site from grade surface to depths ranging from 1 to 7.5 feet below grade surface (ft bgs). Historic fill was generally deeper on the eastern portion of the site. Historic fill predominately consisted of brown and black sand with varying amounts of gravel, brick, organic material, asphalt, metal and clay with an average fill depth of approximately 5 ft bgs across the Site. The fill material was underlain by fine to silty sand followed by a 6 to 12-inch layer of weathered (decomposed) rock overlying the bedrock. All soil was removed from the site as part of an IRM. Bedrock beneath the site consists of metamorphic rock containing high angle features capable of transporting groundwater to depths of at least 70 feet below the top of bedrock. Groundwater underlying the site is present in bedrock and flows to the south-southwest. "
Env Problem: "Remediation at the site is partially complete. Remedial actions thus far have successfully achieved soil cleanup objectives for unrestricted use. Implementation of In-Situ Chemical Oxidation and In-Situ Treatment using Activated Carbon have resulted in a decrease in contaminant concentrations in groundwater. Groundwater will be monitored during the Site Management phase of the project. Groundwater will be monitored until residual concentrations of groundwater contaminants are below groundwater standards, or there is a bulk reduction to asymptotic levels acceptable to the Department. If concentrations of groundwater contaminants do not decrease to levels that are acceptable to the Department, contingent remedial actions may be required which could include in-situ chemical reduction or groundwater extraction and treatment. Prior to remediation, the primary contaminants of concern include VOCs, SVOCs,

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in groundwater, and VOCs in soil vapor. Prior to Completion of partial Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, cyanide, and the emerging contaminants per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based on investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in the groundwater, and VOCs in soil vapor. Soil - A total of 36 soil samples were collected during the remedial investigation from 19 borings extending to bedrock across the site. Several constituents were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs). The following is a list of those compounds and the maximum exceedance: trichloroethene (TCE) 0.92 parts per million (ppm) vs USCO of 0.47 ppm, benzo(a)anthracene 64 ppm vs USCO of 1 ppm, benzo(a)pyrene 56 ppm vs USCO of 1 ppm, benzo(k)fluoranthene 25 ppm vs USCO of 0.8 ppm, benzo(b)fluoranthene 69 ppm vs USCO of 1 ppm, chrysene 61 ppm vs USCO of 1 ppm, dibenzo(a,h)anthracene 8.6 ppm vs USCO of 0.33 ppm, fluoranthene 120 ppm vs USCO of 100 ppm, indeno(1,2,3-cd)pyrene 36 ppm vs USCO of 0.5 ppm, pyrene 120 ppm vs USCO of 100 ppm, barium 416 ppm vs USCO of 350 ppm, copper 396 ppm vs USCO of 50 ppm, lead 357 ppm vs USCO of 63 ppm, mercury 2.54 ppm vs USCO of 0.18 ppm, nickel 1600 ppm vs USCO of 30 ppm, zinc 254 ppm vs USCO of 109 ppm, 4,4’-DDE 0.134 ppm vs USCO of 0.0033 ppm, 4,4’-DDD 0.156 ppm vs USCO of 0.0033 ppm, 4,4’-DDT 0.521 ppm vs USCO of 0.0033 ppm, chlordane 0.186 ppm vs USCO of 0.094 ppm, dieldrin 0.0234 ppm vs USCO of 0.005 ppm, PCBs 0.11 ppm vs USCO of 0.1 ppm, and cyanide 74 ppm vs USCO of 27 ppm. Emerging contaminants were detected in soil samples collected from the site. The emerging contaminant 1,4-dioxane was detected in one sample at a concentration of 16 parts per billion (ppb). Perfluorooctanesulfonic acid (PFOS) was detected in 22 out of 30 samples collected throughout the site with a maximum concentration of 21.8 ppb. Perfluorooctanoic acid (PFOA) was detected in 6 out of 30 samples collected throughout the site with a maximum concentration of 1.52 ppb. Concentrations of PFAS in soil were generally higher on the western half of the site compared to the eastern half of the site. All on-site soils were excavated down to the bedrock surface and transported off-site for disposal as part of a soil removal IRM. Therefore, following the IRM, there are no soils remaining that exceed the USCOs. There is no indication that soil contamination extends off-site. Groundwater - A total of nine groundwater wells were installed in bedrock throughout the site prior to the IRM. A non-aqueous phase liquid (NAPL) was encountered in one well on the east half of the site. This NAPL was again encountered during the IRM at the weathered bedrock interface and sampled. Fingerprinting results indicated that the NAPL was characteristic of a highly degraded petroleum. No further evidence of the NAPL was observed on the eastern half of the site after the removal of the affected bedrock and liquids encountered. Prior to the IRM, groundwater samples were collected from monitoring wells and analyzed for VOCs, SVOCs, PCBs, pesticides, metals and cyanide as well as the emerging contaminants PFAS and 1,4-dioxane. No PCBs or cyanide were detected in any groundwater samples. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene,

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

benzo(b)fluoranthene, chrysene, and phenol; the metals chromium, iron, manganese, magnesium, and nickel; and the pesticide dieldrin were detected in at least one groundwater sample in exceedance of groundwater standards. The locations where elevated SVOCs were noted in groundwater do not coincide with locations where elevated SVOCs were noted in soil, which suggests that the PAHs may be present in the dissolved phase. The concentrations of sodium, iron, manganese, magnesium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These compounds are typically naturally occurring or related to road salt application.
Nickel and chromium, which may have been used during the electroplating process, were detected at maximum concentrations of 12,970 ppb versus a groundwater standard of 100 ppb, and 7,937 ppb versus a groundwater standard of 50 ppb, respectively. The pesticide dieldrin was only detected in one well at 0.005 ppb, marginally exceeding the groundwater standard of 0.004 ppb. The chlorinated VOCs PCE, TCE and 1,1,1-TCA, and their respective degradation byproducts, were detected in groundwater samples collected from the western half of the site in exceedance of groundwater standards and at levels suggesting the presence of separate phase material. The VOC toluene was also detected in exceedance of groundwater standards in the western half of the site and xylene (22 ppb) on the eastern half of the site in one sample. The highest concentrations of VOCs encountered at the site were for TCE (3,400 ppb), 1,1,1-TCA (1,000,000 ppb), 1,1-dichloroethene (28,000 ppb), and toluene (7,200 ppb) compared to a groundwater standard of 5 ppb for each of these constituents. Chlorinated VOCs were not detected in groundwater samples collected from the eastern half of the site. 1,4-dioxane, a contaminant (stabilizer) typically associated with 1,1,1-TCA, was detected at concentrations up to 320 ppb in groundwater samples, where elevated levels of chlorinated VOCs were also encountered on the western half of the site. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 796 and 3,140 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. PFAS concentrations in groundwater were approximately an order of magnitude higher on the western half of the site compared to the eastern half of the site. VOC, PFAS, and 1,4-dioxane groundwater contamination is migrating off-site in the direction of groundwater flow to the southwest. The off-site groundwater plumes from this site are comingled with groundwater plumes emanating from the Industrial Overall Services Corp. (Site No. 360109) State Superfund site. The Industrial Overall Services Corp. site is located just to the west of the site on the other side of Relyea Place. No private or municipal drinking water wells are within 0.5 miles of the site, and Chapter 873, article VII of the Laws of Westchester County, prohibits potable use of groundwater without prior approval. A supplemental remedial investigation (SRI-1) was conducted following the IRM to determine the nature and extent of contamination in bedrock groundwater. The SRI-1 consisted of the geophysical logging at ten locations and the installation of sixteen monitoring wells screened at depths ranging from 75 to 27 feet above mean sea level (ft, amsl) following the IRM. The data collected during the SRI revealed that source level contamination consisting primarily of chlorinated VOCs (max concentration 140,000 ppb 1,1,1-TCA compared to the groundwater standard of 5 ppb) persists in bedrock groundwater following the IRM. Total CVOC concentrations are greatest in the southwest corner of the

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

site and have migrated both horizontally and vertically through high angle features towards the southwest site boundary. PFAS (SRI-1 max concentration 904 ppt PFOS) and 1,4-dioxane (SRI-1 max concentration 294 ppb) concentrations in bedrock groundwater are lower than pre-IRM concentrations, but still well above groundwater standards. A second supplemental remedial investigation (SRI-2) was conducted following SRI-1 to further determine the extent of contamination in bedrock groundwater off-site in high angle fracture features. SRI-2 consisted of the installation of six monitoring wells screened at depths ranging from 55 to 45 ft, amsl and 0 to 20 ft, amsl. The data collected during SRI-2 revealed that elevated levels of contamination consisting primarily of chlorinated VOCs are migrating horizontally and vertically off-site in groundwater through high angle fracture features. PFAS, 1,4-dioxane and CVOCs are present in bedrock groundwater at depths down to 0 ft, amsl. Soil Vapor - A total of nine soil vapor samples were collected from locations throughout the site prior to the implementation of the IRM. Elevated levels of chlorinated volatile organic compounds were detected in soil vapor samples collected from the western half of the site, nearer to where elevated levels of PCE, TCE and 1,1,1-TCA were encountered in groundwater contamination. The maximum concentrations of TCE, 1,1-dichloroethene, and 1,1,1-TCA detected were 184 micrograms per cubic meter (ug/m3), 1,110 ug/m3, 15,100 ug/m3 respectively. Soil vapor impacts may extend off-site and may be comingled with soil vapor impacts from the Industrial Overall Services Corp. site. "

Name: CENTRE AVENUE DEVELOPMENT - SOUTH
Address: 33-35 CENTRE AVENUE
City,State,Zip: NEW ROCHELLE, NY 10801
Site Code: 580085
Control Name: Monitoring Plan
HW Code: C360182
Control Code: 31
Control Type: INST
Dt record added: 09/02/2021
Dt rec updated: 12/27/2021
Updated By: JEBROWN
Site Code: 580085
Site Description: "Location: The site is located in the City of New Rochelle, Westchester County, New York at 33-35 Centre Avenue on a 0.46-acre lot. The site is located on the northern part of the city block bordered by Centre Avenue to the north, Huguenot Street to the east, Columbus Avenue to the south, and Relyea Place to the west. The site is bordered to the south by multi-story residential and commercial buildings. The site is approximately 1 mile west of Echo Bay. The Industrial Overall Services Corp. (Site No. 360109) State Superfund site is located just to the west of the site (downgradient), on the other side of Reylea Place. Site Features: The site is currently being developed into a multi-story residential building and construction of the building began in July 2020, after all soil above bedrock was removed from the site as part of an Interim Remedial Measure (IRM) completed under the BCP. Current Zoning and Land Use: The site is located within the Downtown Business (DB) (eastern portion) and Light Industry (LI) (western portion) zoning districts. Permitted principal uses of DB districts include stores, retail, offices, and residential units located on the second floor and above.

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

Permitted principal uses of LI districts include manufacturing, offices, medical facilities and parking garages. The current zoning designation is consistent with the proposed development. Past Use of the Site: The site has been used for various residential, commercial and industrial purposes since the 1930s. Starting in 1971, the western half of the site was used as an electroplating and metal-finishing business and the eastern half of the site was used as a parking lot. Industrial operations ceased in December 2018. Site Geology and Hydrogeology: Site soils consisted of historic fill across the site from grade surface to depths ranging from 1 to 7.5 feet below grade surface (ft bgs). Historic fill was generally deeper on the eastern portion of the site. Historic fill predominately consisted of brown and black sand with varying amounts of gravel, brick, organic material, asphalt, metal and clay with an average fill depth of approximately 5 ft bgs across the Site. The fill material was underlain by fine to silty sand followed by a 6 to 12-inch layer of weathered (decomposed) rock overlying the bedrock. All soil was removed from the site as part of an IRM. Bedrock beneath the site consists of metamorphic rock containing high angle features capable of transporting groundwater to depths of at least 70 feet below the top of bedrock. Groundwater underlying the site is present in bedrock and flows to the south-southwest. "

Env Problem: "Remediation at the site is partially complete. Remedial actions thus far have successfully achieved soil cleanup objectives for unrestricted use. Implementation of In-Situ Chemical Oxidation and In-Situ Treatment using Activated Carbon have resulted in a decrease in contaminant concentrations in groundwater. Groundwater will be monitored during the Site Management phase of the project. Groundwater will be monitored until residual concentrations of groundwater contaminants are below groundwater standards, or there is a bulk reduction to asymptotic levels acceptable to the Department. If concentrations of groundwater contaminants do not decrease to levels that are acceptable to the Department, contingent remedial actions may be required which could include in-situ chemical reduction or groundwater extraction and treatment. Prior to remediation, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in groundwater, and VOCs in soil vapor. Prior to Completion of partial Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, cyanide, and the emerging contaminants per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based on investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in the groundwater, and VOCs in soil vapor. Soil - A total of 36 soil samples were collected during the remedial investigation from 19 borings extending to bedrock across the site. Several constituents were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs). The following is a list of those compounds and the maximum exceedance: trichloroethene (TCE) 0.92 parts per million (ppm) vs USCO of 0.47 ppm, benzo(a)anthracene 64 ppm vs USCO of 1 ppm, benzo(a)pyrene 56 ppm vs USCO of 1 ppm, benzo(k)fluoranthene 25 ppm vs USCO of 0.8 ppm, benzo(b)fluoranthene 69 ppm vs USCO of 1 ppm, chrysene 61 ppm vs USCO of 1 ppm,

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

dibenzo(a,h)anthracene 8.6 ppm vs USCO of 0.33 ppm, fluoranthene 120 ppm vs USCO of 100 ppm, indeno(1,2,3-cd)pyrene 36 ppm vs USCO of 0.5 ppm, pyrene 120 ppm vs USCO of 100 ppm, barium 416 ppm vs USCO of 350 ppm, copper 396 ppm vs USCO of 50 ppm, lead 357 ppm vs USCO of 63 ppm, mercury 2.54 ppm vs USCO of 0.18 ppm, nickel 1600 ppm vs USCO of 30 ppm, zinc 254 ppm vs USCO of 109 ppm, 4,4'-DDE 0.134 ppm vs USCO of 0.0033 ppm, 4,4'-DDD 0.156 ppm vs USCO of 0.0033 ppm, 4,4'-DDT 0.521 ppm vs USCO of 0.0033 ppm, chlordane 0.186 ppm vs USCO of 0.094 ppm, dieldrin 0.0234 ppm vs USCO of 0.005 ppm, PCBs 0.11 ppm vs USCO of 0.1 ppm, and cyanide 74 ppm vs USCO of 27 ppm. Emerging contaminants were detected in soil samples collected from the site. The emerging contaminant 1,4-dioxane was detected in one sample at a concentration of 16 parts per billion (ppb). Perfluorooctanesulfonic acid (PFOS) was detected in 22 out of 30 samples collected throughout the site with a maximum concentration of 21.8 ppb. Perfluorooctanoic acid (PFOA) was detected in 6 out of 30 samples collected throughout the site with a maximum concentration of 1.52 ppb. Concentrations of PFAS in soil were generally higher on the western half of the site compared to the eastern half of the site. All on-site soils were excavated down to the bedrock surface and transported off-site for disposal as part of a soil removal IRM. Therefore, following the IRM, there are no soils remaining that exceed the USCOs. There is no indication that soil contamination extends off-site. Groundwater - A total of nine groundwater wells were installed in bedrock throughout the site prior to the IRM. A non-aqueous phase liquid (NAPL) was encountered in one well on the east half of the site. This NAPL was again encountered during the IRM at the weathered bedrock interface and sampled. Fingerprinting results indicated that the NAPL was characteristic of a highly degraded petroleum. No further evidence of the NAPL was observed on the eastern half of the site after the removal of the affected bedrock and liquids encountered. Prior to the IRM, groundwater samples were collected from monitoring wells and analyzed for VOCs, SVOCs, PCBs, pesticides, metals and cyanide as well as the emerging contaminants PFAS and 1,4-dioxane. No PCBs or cyanide were detected in any groundwater samples. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, benzo(b)fluoranthene, chrysene, and phenol; the metals chromium, iron, manganese, magnesium, and nickel; and the pesticide dieldrin were detected in at least one groundwater sample in exceedance of groundwater standards. The locations where elevated SVOCs were noted in groundwater do not coincide with locations where elevated SVOCs were noted in soil, which suggests that the PAHs may be present in the dissolved phase. The concentrations of sodium, iron, manganese, magnesium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These compounds are typically naturally occurring or related to road salt application. Nickel and chromium, which may have been used during the electroplating process, were detected at maximum concentrations of 12,970 ppb versus a groundwater standard of 100 ppb, and 7,937 ppb versus a groundwater standard of 50 ppb, respectively. The pesticide dieldrin was only detected in one well at 0.005 ppb, marginally exceeding the groundwater standard of 0.004 ppb. The chlorinated VOCs PCE, TCE and 1,1,1-TCA, and their respective degradation byproducts, were detected in groundwater samples collected from the western half of the site in exceedance of groundwater standards and at levels suggesting the presence of separate phase material. The VOC toluene was also detected in exceedance of groundwater standards in the

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

western half of the site and xylene (22 ppb) on the eastern half of the site in one sample. The highest concentrations of VOCs encountered at the site were for TCE (3,400 ppb), 1,1,1-TCA (1,000,000 ppb), 1,1-dichloroethene (28,000 ppb), and toluene (7,200 ppb) compared to a groundwater standard of 5 ppb for each of these constituents. Chlorinated VOCs were not detected in groundwater samples collected from the eastern half of the site. 1,4-dioxane, a contaminant (stabilizer) typically associated with 1,1,1-TCA, was detected at concentrations up to 320 ppb in groundwater samples, where elevated levels of chlorinated VOCs were also encountered on the western half of the site. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 796 and 3,140 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. PFAS concentrations in groundwater were approximately an order of magnitude higher on the western half of the site compared to the eastern half of the site. VOC, PFAS, and 1,4-dioxane groundwater contamination is migrating off-site in the direction of groundwater flow to the southwest. The off-site groundwater plumes from this site are comingled with groundwater plumes emanating from the Industrial Overall Services Corp. (Site No. 360109) State Superfund site. The Industrial Overall Services Corp. site is located just to the west of the site on the other side of Relyea Place. No private or municipal drinking water wells are within 0.5 miles of the site, and Chapter 873, article VII of the Laws of Westchester County, prohibits potable use of groundwater without prior approval. A supplemental remedial investigation (SRI-1) was conducted following the IRM to determine the nature and extent of contamination in bedrock groundwater. The SRI-1 consisted of the geophysical logging at ten locations and the installation of sixteen monitoring wells screened at depths ranging from 75 to 27 feet above mean sea level (ft, amsl) following the IRM. The data collected during the SRI revealed that source level contamination consisting primarily of chlorinated VOCs (max concentration 140,000 ppb 1,1,1-TCA compared to the groundwater standard of 5 ppb) persists in bedrock groundwater following the IRM. Total CVOC concentrations are greatest in the southwest corner of the site and have migrated both horizontally and vertically through high angle features towards the southwest site boundary. PFAS (SRI-1 max concentration 904 ppt PFOS) and 1,4-dioxane (SRI-1 max concentration 294 ppb) concentrations in bedrock groundwater are lower than pre-IRM concentrations, but still well above groundwater standards. A second supplemental remedial investigation (SRI-2) was conducted following SRI-1 to further determine the extent of contamination in bedrock groundwater off-site in high angle fracture features. SRI-2 consisted of the installation of six monitoring wells screened at depths ranging from 55 to 45 ft, amsl and 0 to 20 ft, amsl. The data collected during SRI-2 revealed that elevated levels of contamination consisting primarily of chlorinated VOCs are migrating horizontally and vertically off-site in groundwater through high angle fracture features. PFAS, 1,4-dioxane and CVOCs are present in bedrock groundwater at depths down to 0 ft, amsl. Soil Vapor - A total of nine soil vapor samples were collected from locations throughout the site prior to the implementation of the IRM. Elevated levels of chlorinated volatile organic compounds were detected in soil vapor samples collected from the western half of the site, nearer to where elevated levels of PCE, TCE and 1,1,1-TCA were encountered in groundwater contamination. The maximum concentrations of TCE,

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

	1,1-dichloroethene, and 1,1,1-TCA detected were 184 micrograms per cubic meter (ug/m3), 1,110 ug/m3, 15,100 ug/m3 respectively. Soil vapor impacts may extend off-site and may be comingled with soil vapor impacts from the Industrial Overall Services Corp. site. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site. "

Updated By: JEBROWN
Site Code: 580085
Site Description: "Location: The site is located in the City of New Rochelle, Westchester County, New York at 33-35 Centre Avenue on a 0.46-acre lot. The site is located on the northern part of the city block bordered by Centre Avenue to the north, Huguenot Street to the east, Columbus Avenue to the south, and Relyea Place to the west. The site is bordered to the south by multi-story residential and commercial buildings. The site is approximately 1 mile west of Echo Bay. The Industrial Overall Services Corp. (Site No. 360109) State Superfund site is located just to the west of the site (downgradient), on the other side of Reylea Place. Site Features: The site is currently being developed into a multi-story residential building and construction of the building began in July 2020, after all soil above bedrock was removed from the site as part of an Interim Remedial Measure (IRM) completed under the BCP. Current Zoning and Land Use: The site is located within the Downtown Business (DB) (eastern portion) and Light Industry (LI) (western portion) zoning districts. Permitted principal uses of DB districts include stores, retail, offices, and residential units located on the second floor and above. Permitted principal uses of LI districts include manufacturing, offices, medical facilities and parking garages. The current zoning designation is consistent with the proposed development. Past Use of the Site: The site has been used for various residential, commercial and industrial purposes since the 1930s. Starting in 1971, the western half of the site was used as an electroplating and metal-finishing business and the eastern half of the site was used as a parking lot. Industrial operations ceased in December 2018. Site Geology and Hydrogeology: Site soils consisted of historic fill across the site from grade surface to depths ranging from 1 to 7.5 feet below grade surface (ft bgs). Historic fill was generally deeper on the eastern portion of the site. Historic fill predominately consisted of brown and black sand with varying amounts of gravel, brick, organic material, asphalt, metal and clay with an average fill depth of approximately 5 ft bgs across the Site. The fill material was underlain by fine to silty sand followed by a 6 to 12-inch layer of weathered (decomposed) rock overlying the bedrock. All soil was removed from the site as part of an IRM. Bedrock beneath the site consists of metamorphic rock containing high angle features capable of transporting groundwater to depths of at least 70 feet below the top of bedrock. Groundwater underlying the site is present in bedrock

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

and flows to the south-southwest. "

Env Problem: "Remediation at the site is partially complete. Remedial actions thus far have successfully achieved soil cleanup objectives for unrestricted use. Implementation of In-Situ Chemical Oxidation and In-Situ Treatment using Activated Carbon have resulted in a decrease in contaminant concentrations in groundwater. Groundwater will be monitored during the Site Management phase of the project. Groundwater will be monitored until residual concentrations of groundwater contaminants are below groundwater standards, or there is a bulk reduction to asymptotic levels acceptable to the Department. If concentrations of groundwater contaminants do not decrease to levels that are acceptable to the Department, contingent remedial actions may be required which could include in-situ chemical reduction or groundwater extraction and treatment. Prior to remediation, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in groundwater, and VOCs in soil vapor. Prior to Completion of partial Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, cyanide, and the emerging contaminants per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based on investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in the groundwater, and VOCs in soil vapor. Soil - A total of 36 soil samples were collected during the remedial investigation from 19 borings extending to bedrock across the site. Several constituents were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs). The following is a list of those compounds and the maximum exceedance: trichloroethene (TCE) 0.92 parts per million (ppm) vs USCO of 0.47 ppm, benzo(a)anthracene 64 ppm vs USCO of 1 ppm, benzo(a)pyrene 56 ppm vs USCO of 1 ppm, benzo(k)fluoranthene 25 ppm vs USCO of 0.8 ppm, benzo(b)fluoranthene 69 ppm vs USCO of 1 ppm, chrysene 61 ppm vs USCO of 1 ppm, dibenzo(a,h)anthracene 8.6 ppm vs USCO of 0.33 ppm, fluoranthene 120 ppm vs USCO of 100 ppm, indeno(1,2,3-cd)pyrene 36 ppm vs USCO of 0.5 ppm, pyrene 120 ppm vs USCO of 100 ppm, barium 416 ppm vs USCO of 350 ppm, copper 396 ppm vs USCO of 50 ppm, lead 357 ppm vs USCO of 63 ppm, mercury 2.54 ppm vs USCO of 0.18 ppm, nickel 1600 ppm vs USCO of 30 ppm, zinc 254 ppm vs USCO of 109 ppm, 4,4'-DDE 0.134 ppm vs USCO of 0.0033 ppm, 4,4'-DDD 0.156 ppm vs USCO of 0.0033 ppm, 4,4'-DDT 0.521 ppm vs USCO of 0.0033 ppm, chlordane 0.186 ppm vs USCO of 0.094 ppm, dieldrin 0.0234 ppm vs USCO of 0.005 ppm, PCBs 0.11 ppm vs USCO of 0.1 ppm, and cyanide 74 ppm vs USCO of 27 ppm. Emerging contaminants were detected in soil samples collected from the site. The emerging contaminant 1,4-dioxane was detected in one sample at a concentration of 16 parts per billion (ppb). Perfluorooctanesulfonic acid (PFOS) was detected in 22 out of 30 samples collected throughout the site with a maximum concentration of 21.8 ppb. Perfluorooctanoic acid (PFOA) was detected in 6 out of 30 samples collected throughout the site with a maximum concentration of 1.52 ppb. Concentrations of PFAS in soil were generally higher on the western half of the site compared to the eastern half of the site. All on-site soils were excavated down to the bedrock surface and transported off-site for disposal as part of a soil removal IRM. Therefore, following the IRM,

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

there are no soils remaining that exceed the USCOs. There is no indication that soil contamination extends off-site. Groundwater - A total of nine groundwater wells were installed in bedrock throughout the site prior to the IRM. A non-aqueous phase liquid (NAPL) was encountered in one well on the east half of the site. This NAPL was again encountered during the IRM at the weathered bedrock interface and sampled. Fingerprinting results indicated that the NAPL was characteristic of a highly degraded petroleum. No further evidence of the NAPL was observed on the eastern half of the site after the removal of the affected bedrock and liquids encountered. Prior to the IRM, groundwater samples were collected from monitoring wells and analyzed for VOCs, SVOCs, PCBs, pesticides, metals and cyanide as well as the emerging contaminants PFAS and 1,4-dioxane. No PCBs or cyanide were detected in any groundwater samples. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, benzo(b)fluoranthene, chrysene, and phenol; the metals chromium, iron, manganese, magnesium, and nickel; and the pesticide dieldrin were detected in at least one groundwater sample in exceedance of groundwater standards. The locations where elevated SVOCs were noted in groundwater do not coincide with locations where elevated SVOCs were noted in soil, which suggests that the PAHs may be present in the dissolved phase. The concentrations of sodium, iron, manganese, magnesium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These compounds are typically naturally occurring or related to road salt application. Nickel and chromium, which may have been used during the electroplating process, were detected at maximum concentrations of 12,970 ppb versus a groundwater standard of 100 ppb, and 7,937 ppb versus a groundwater standard of 50 ppb, respectively. The pesticide dieldrin was only detected in one well at 0.005 ppb, marginally exceeding the groundwater standard of 0.004 ppb. The chlorinated VOCs PCE, TCE and 1,1,1-TCA, and their respective degradation byproducts, were detected in groundwater samples collected from the western half of the site in exceedance of groundwater standards and at levels suggesting the presence of separate phase material. The VOC toluene was also detected in exceedance of groundwater standards in the western half of the site and xylene (22 ppb) on the eastern half of the site in one sample. The highest concentrations of VOCs encountered at the site were for TCE (3,400 ppb), 1,1,1-TCA (1,000,000 ppb), 1,1-dichloroethene (28,000 ppb), and toluene (7,200 ppb) compared to a groundwater standard of 5 ppb for each of these constituents. Chlorinated VOCs were not detected in groundwater samples collected from the eastern half of the site. 1,4-dioxane, a contaminant (stabilizer) typically associated with 1,1,1-TCA, was detected at concentrations up to 320 ppb in groundwater samples, where elevated levels of chlorinated VOCs were also encountered on the western half of the site. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 796 and 3,140 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. PFAS concentrations in groundwater were approximately an order of magnitude higher on the western half of the site compared to the eastern half of the site. VOC, PFAS, and 1,4-dioxane groundwater contamination is migrating off-site in the direction of groundwater flow to the southwest. The off-site groundwater plumes from this site are comingled with groundwater plumes emanating from the Industrial Overall Services Corp. (Site No. 360109) State Superfund site. The

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

Industrial Overall Services Corp. site is located just to the west of the site on the other side of Relyea Place. No private or municipal drinking water wells are within 0.5 miles of the site, and Chapter 873, article VII of the Laws of Westchester County, prohibits potable use of groundwater without prior approval. A supplemental remedial investigation (SRI-1) was conducted following the IRM to determine the nature and extent of contamination in bedrock groundwater. The SRI-1 consisted of the geophysical logging at ten locations and the installation of sixteen monitoring wells screened at depths ranging from 75 to 27 feet above mean sea level (ft, amsl) following the IRM. The data collected during the SRI revealed that source level contamination consisting primarily of chlorinated VOCs (max concentration 140,000 ppb 1,1,1-TCA compared to the groundwater standard of 5 ppb) persists in bedrock groundwater following the IRM. Total CVOC concentrations are greatest in the southwest corner of the site and have migrated both horizontally and vertically through high angle features towards the southwest site boundary. PFAS (SRI-1 max concentration 904 ppt PFOS) and 1,4-dioxane (SRI-1 max concentration 294 ppb) concentrations in bedrock groundwater are lower than pre-IRM concentrations, but still well above groundwater standards. A second supplemental remedial investigation (SRI-2) was conducted following SRI-1 to further determine the extent of contamination in bedrock groundwater off-site in high angle fracture features. SRI-2 consisted of the installation of six monitoring wells screened at depths ranging from 55 to 45 ft, amsl and 0 to 20 ft, amsl. The data collected during SRI-2 revealed that elevated levels of contamination consisting primarily of chlorinated VOCs are migrating horizontally and vertically off-site in groundwater through high angle fracture features. PFAS, 1,4-dioxane and CVOCs are present in bedrock groundwater at depths down to 0 ft, amsl. Soil Vapor - A total of nine soil vapor samples were collected from locations throughout the site prior to the implementation of the IRM. Elevated levels of chlorinated volatile organic compounds were detected in soil vapor samples collected from the western half of the site, nearer to where elevated levels of PCE, TCE and 1,1,1-TCA were encountered in groundwater contamination. The maximum concentrations of TCE, 1,1-dichloroethene, and 1,1,1-TCA detected were 184 micrograms per cubic meter (ug/m3), 1,110 ug/m3, 15,100 ug/m3 respectively. Soil vapor impacts may extend off-site and may be comingled with soil vapor impacts from the Industrial Overall Services Corp. site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site. "

the dissolved phase. The concentrations of sodium, iron, manganese, magnesium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These compounds are typically naturally occurring or related to road salt application. Nickel and chromium, which may have been used during the electroplating process, were detected at maximum concentrations of 12,970 ppb versus a groundwater standard of 100 ppb, and 7,937 ppb versus a groundwater standard of 50 ppb, respectively. The pesticide dieldrin was only detected in one well at 0.005 ppb, marginally exceeding the groundwater standard of 0.004 ppb. The chlorinated VOCs PCE, TCE and 1,1,1-TCA, and their respective degradation byproducts, were detected in groundwater samples collected from the western half of the site in exceedance of groundwater standards and at levels suggesting the presence of separate phase material. The VOC toluene was also detected in exceedance of groundwater standards in the western half of the site and xylene (22 ppb) on the eastern half of the site in one sample. The highest concentrations of VOCs encountered at the site were for TCE (3,400 ppb), 1,1,1-TCA (1,000,000 ppb), 1,1-dichloroethene (28,000 ppb), and toluene (7,200 ppb) compared to a groundwater standard of 5 ppb for each of these constituents. Chlorinated VOCs were not detected in groundwater samples collected from the eastern half of the site. 1,4-dioxane, a contaminant (stabilizer) typically associated with 1,1,1-TCA, was detected at concentrations up to 320 ppb in groundwater samples, where elevated levels of chlorinated VOCs were also encountered on the western half of the site. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 796 and 3,140 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. PFAS concentrations in groundwater were approximately an order of magnitude higher on the western half of the site compared to the eastern half of the site. VOC, PFAS, and 1,4-dioxane groundwater contamination is migrating off-site in the direction of groundwater flow to the southwest. The off-site groundwater plumes from this site are comingled with groundwater plumes emanating from the Industrial Overall Services Corp. (Site No. 360109) State Superfund site. The Industrial Overall Services Corp. site is located just to the west of the site on the other side of Relyea Place. No private or municipal drinking water wells are within 0.5 miles of the site, and Chapter 873, article VII of the Laws of Westchester County, prohibits potable use of groundwater without prior approval. A supplemental remedial investigation (SRI-1) was conducted following the IRM to determine the nature and extent of contamination in bedrock groundwater. The SRI-1 consisted of the geophysical logging at ten locations and the installation of sixteen monitoring wells screened at depths ranging from 75 to 27 feet above mean sea level (ft, amsl) following the IRM. The data collected during the SRI revealed that source level contamination consisting primarily of chlorinated VOCs (max concentration 140,000 ppb 1,1,1-TCA compared to the groundwater standard of 5 ppb) persists in bedrock groundwater following the IRM. Total CVOC concentrations are greatest in the southwest corner of the site and have migrated both horizontally and vertically through high angle features towards the southwest site boundary. PFAS (SRI-1 max concentration 904 ppt PFOS) and 1,4-dioxane (SRI-1 max concentration 294 ppb) concentrations in bedrock groundwater are lower than pre-IRM concentrations, but still well above groundwater standards. A second supplemental remedial investigation (SRI-2) was conducted following

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990308**

SRI-1 to further determine the extent of contamination in bedrock groundwater off-site in high angle fracture features. SRI-2 consisted of the installation of six monitoring wells screened at depths ranging from 55 to 45 ft, amsl and 0 to 20 ft, amsl. The data collected during SRI-2 revealed that elevated levels of contamination consisting primarily of chlorinated VOCs are migrating horizontally and vertically off-site in groundwater through high angle fracture features. PFAS, 1,4-dioxane and CVOCs are present in bedrock groundwater at depths down to 0 ft, amsl. Soil Vapor - A total of nine soil vapor samples were collected from locations throughout the site prior to the implementation of the IRM. Elevated levels of chlorinated volatile organic compounds were detected in soil vapor samples collected from the western half of the site, nearer to where elevated levels of PCE, TCE and 1,1,1-TCA were encountered in groundwater contamination. The maximum concentrations of TCE, 1,1-dichloroethene, and 1,1,1-TCA detected were 184 micrograms per cubic meter (ug/m3), 1,110 ug/m3, 15,100 ug/m3 respectively. Soil vapor impacts may extend off-site and may be comingled with soil vapor impacts from the Industrial Overall Services Corp. site. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site. "

Update By: KABROWNE
Site Description: "Location: The site is located in the area surrounding the Brownfield Cleanup Site Centre Ave Development South (C360182) at 33 Centre Avenue in the City of New Rochelle, Westchester County. Site Features: The area includes multi story residential and commercial buildings. The site is approximately 1 mile west of Echo Bay. The State Superfund Site Industrial Overall Services Corp (Site No. 360109) state Superfund site is located adjacent to and west of the off site area. Current Zoning and Land Use: The off site area includes the Downtown Business (DB) and Light Industry (LI) zoning districts. Permitted principal uses of DB districts include stores, retail, offices, and residential units located on the second floor and above only. Permitted principal uses of LI districts include manufacturers, offices, medical facilities and parking garages. Past Use of the Site: The off site area has documented impacts in the groundwater from plumes originating from the BCP site Centre Ave Development South (C360182) with the historic use of 1,1,1 TCA in electroplating operations. PCE and its breakdown products are also found in off site groundwater emanating from the SSF site Industrial

CENTRE AVENUE DEVELOPMENT - SOUTH - OFF-SITE (Continued) **S123658091**

	Overall Services Corp (360109). Site Geology and Hydrogeology: Site soil at the Centre Avenue Development South site consisted of historic fill across the site from grade surface to depths ranging from 1 to 7.5 feet below grade surface (bgs). Historic fill was generally deeper on the eastern portion of the site. Historic fill predominately consisted of brown and black sand with varying amounts of gravel, brick, organic material, asphalt, metal and clay with an average fill depth of approximately 5 ft bgs across the Site. The fill material is underlain by fine to silty sand followed by a 6 12 inch layer of weathered (decomposed) rock overlying the bedrock. Groundwater underlying the site is present only in bedrock and flows to the south southwest. Groundwater is present at depth between 5 to 15 feet bgs across the site. "
Env Problem:	"Off-site results will be made available once the investigation is complete."
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Control Type:	ENG
Date Record Added:	09/02/2021
Date Rec Updated:	12/27/2021
Updated By:	JEBROWN
Site Description:	"Location: The site is located in the City of New Rochelle, Westchester County, New York at 33-35 Centre Avenue on a 0.46-acre lot. The site is located on the northern part of the city block bordered by Centre Avenue to the north, Huguenot Street to the east, Columbus Avenue to the south, and Relyea Place to the west. The site is bordered to the south by multi-story residential and commercial buildings. The site is approximately 1 mile west of Echo Bay. The Industrial Overall Services Corp. (Site No. 360109) State Superfund site is located just to the west of the site (downgradient), on the other side of Reylea Place. Site Features: The site is currently being developed into a multi-story residential building and construction of the building began in July 2020, after all soil above bedrock was removed from the site as part of an Interim Remedial Measure (IRM) completed under the BCP. Current Zoning and Land Use: The site is located within the Downtown Business (DB) (eastern portion) and Light Industry (LI) (western portion) zoning districts. Permitted principal uses of DB districts include stores, retail,

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990292**

offices, and residential units located on the second floor and above. Permitted principal uses of LI districts include manufacturing, offices, medical facilities and parking garages. The current zoning designation is consistent with the proposed development. Past Use of the Site: The site has been used for various residential, commercial and industrial purposes since the 1930s. Starting in 1971, the western half of the site was used as an electroplating and metal-finishing business and the eastern half of the site was used as a parking lot. Industrial operations ceased in December 2018. Site Geology and Hydrogeology: Site soils consisted of historic fill across the site from grade surface to depths ranging from 1 to 7.5 feet below grade surface (ft bgs). Historic fill was generally deeper on the eastern portion of the site. Historic fill predominately consisted of brown and black sand with varying amounts of gravel, brick, organic material, asphalt, metal and clay with an average fill depth of approximately 5 ft bgs across the Site. The fill material was underlain by fine to silty sand followed by a 6 to 12-inch layer of weathered (decomposed) rock overlying the bedrock. All soil was removed from the site as part of an IRM. Bedrock beneath the site consists of metamorphic rock containing high angle features capable of transporting groundwater to depths of at least 70 feet below the top of bedrock. Groundwater underlying the site is present in bedrock and flows to the south-southwest. "

Env Problem: "Remediation at the site is partially complete. Remedial actions thus far have successfully achieved soil cleanup objectives for unrestricted use. Implementation of In-Situ Chemical Oxidation and In-Situ Treatment using Activated Carbon have resulted in a decrease in contaminant concentrations in groundwater. Groundwater will be monitored during the Site Management phase of the project. Groundwater will be monitored until residual concentrations of groundwater contaminants are below groundwater standards, or there is a bulk reduction to asymptotic levels acceptable to the Department. If concentrations of groundwater contaminants do not decrease to levels that are acceptable to the Department, contingent remedial actions may be required which could include in-situ chemical reduction or groundwater extraction and treatment. Prior to remediation, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in groundwater, and VOCs in soil vapor. Prior to Completion of partial Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, cyanide, and the emerging contaminants per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based on investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in the groundwater, and VOCs in soil vapor. Soil - A total of 36 soil samples were collected during the remedial investigation from 19 borings extending to bedrock across the site. Several constituents were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs). The following is a list of those compounds and the maximum exceedance: trichloroethene (TCE) 0.92 parts per million (ppm) vs USCO of 0.47 ppm, benzo(a)anthracene 64 ppm vs USCO of 1 ppm, benzo(a)pyrene 56 ppm vs USCO of 1 ppm, benzo(k)fluoranthene 25 ppm vs USCO of 0.8 ppm, benzo(b)fluoranthene

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990292**

69 ppm vs USCO of 1 ppm, chrysene 61 ppm vs USCO of 1 ppm, dibenzo(a,h)anthracene 8.6 ppm vs USCO of 0.33 ppm, fluoranthene 120 ppm vs USCO of 100 ppm, indeno(1,2,3-cd)pyrene 36 ppm vs USCO of 0.5 ppm, pyrene 120 ppm vs USCO of 100 ppm, barium 416 ppm vs USCO of 350 ppm, copper 396 ppm vs USCO of 50 ppm, lead 357 ppm vs USCO of 63 ppm, mercury 2.54 ppm vs USCO of 0.18 ppm, nickel 1600 ppm vs USCO of 30 ppm, zinc 254 ppm vs USCO of 109 ppm, 4,4'-DDE 0.134 ppm vs USCO of 0.0033 ppm, 4,4'-DDD 0.156 ppm vs USCO of 0.0033 ppm, 4,4'-DDT 0.521 ppm vs USCO of 0.0033 ppm, chlordane 0.186 ppm vs USCO of 0.094 ppm, dieldrin 0.0234 ppm vs USCO of 0.005 ppm, PCBs 0.11 ppm vs USCO of 0.1 ppm, and cyanide 74 ppm vs USCO of 27 ppm. Emerging contaminants were detected in soil samples collected from the site. The emerging contaminant 1,4-dioxane was detected in one sample at a concentration of 16 parts per billion (ppb). Perfluorooctanesulfonic acid (PFOS) was detected in 22 out of 30 samples collected throughout the site with a maximum concentration of 21.8 ppb. Perfluorooctanoic acid (PFOA) was detected in 6 out of 30 samples collected throughout the site with a maximum concentration of 1.52 ppb. Concentrations of PFAS in soil were generally higher on the western half of the site compared to the eastern half of the site. All on-site soils were excavated down to the bedrock surface and transported off-site for disposal as part of a soil removal IRM. Therefore, following the IRM, there are no soils remaining that exceed the USCOs. There is no indication that soil contamination extends off-site. Groundwater - A total of nine groundwater wells were installed in bedrock throughout the site prior to the IRM. A non-aqueous phase liquid (NAPL) was encountered in one well on the east half of the site. This NAPL was again encountered during the IRM at the weathered bedrock interface and sampled. Fingerprinting results indicated that the NAPL was characteristic of a highly degraded petroleum. No further evidence of the NAPL was observed on the eastern half of the site after the removal of the affected bedrock and liquids encountered. Prior to the IRM, groundwater samples were collected from monitoring wells and analyzed for VOCs, SVOCs, PCBs, pesticides, metals and cyanide as well as the emerging contaminants PFAS and 1,4-dioxane. No PCBs or cyanide were detected in any groundwater samples. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, benzo(b)fluoranthene, chrysene, and phenol; the metals chromium, iron, manganese, magnesium, and nickel; and the pesticide dieldrin were detected in at least one groundwater sample in exceedance of groundwater standards. The locations where elevated SVOCs were noted in groundwater do not coincide with locations where elevated SVOCs were noted in soil, which suggests that the PAHs may be present in the dissolved phase. The concentrations of sodium, iron, manganese, magnesium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These compounds are typically naturally occurring or related to road salt application. Nickel and chromium, which may have been used during the electroplating process, were detected at maximum concentrations of 12,970 ppb versus a groundwater standard of 100 ppb, and 7,937 ppb versus a groundwater standard of 50 ppb, respectively. The pesticide dieldrin was only detected in one well at 0.005 ppb, marginally exceeding the groundwater standard of 0.004 ppb. The chlorinated VOCs PCE, TCE and 1,1,1-TCA, and their respective degradation byproducts, were detected in groundwater samples collected from the western half of the site in exceedance of groundwater standards and at levels suggesting the presence of separate phase material. The VOC toluene

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990292**

was also detected in exceedance of groundwater standards in the western half of the site and xylene (22 ppb) on the eastern half of the site in one sample. The highest concentrations of VOCs encountered at the site were for TCE (3,400 ppb), 1,1,1-TCA (1,000,000 ppb), 1,1-dichloroethene (28,000 ppb), and toluene (7,200 ppb) compared to a groundwater standard of 5 ppb for each of these constituents. Chlorinated VOCs were not detected in groundwater samples collected from the eastern half of the site. 1,4-dioxane, a contaminant (stabilizer) typically associated with 1,1,1-TCA, was detected at concentrations up to 320 ppb in groundwater samples, where elevated levels of chlorinated VOCs were also encountered on the western half of the site. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 796 and 3,140 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. PFAS concentrations in groundwater were approximately an order of magnitude higher on the western half of the site compared to the eastern half of the site. VOC, PFAS, and 1,4-dioxane groundwater contamination is migrating off-site in the direction of groundwater flow to the southwest. The off-site groundwater plumes from this site are comingled with groundwater plumes emanating from the Industrial Overall Services Corp. (Site No. 360109) State Superfund site. The Industrial Overall Services Corp. site is located just to the west of the site on the other side of Relyea Place. No private or municipal drinking water wells are within 0.5 miles of the site, and Chapter 873, article VII of the Laws of Westchester County, prohibits potable use of groundwater without prior approval. A supplemental remedial investigation (SRI-1) was conducted following the IRM to determine the nature and extent of contamination in bedrock groundwater. The SRI-1 consisted of the geophysical logging at ten locations and the installation of sixteen monitoring wells screened at depths ranging from 75 to 27 feet above mean sea level (ft, amsl) following the IRM. The data collected during the SRI revealed that source level contamination consisting primarily of chlorinated VOCs (max concentration 140,000 ppb 1,1,1-TCA compared to the groundwater standard of 5 ppb) persists in bedrock groundwater following the IRM. Total CVOC concentrations are greatest in the southwest corner of the site and have migrated both horizontally and vertically through high angle features towards the southwest site boundary. PFAS (SRI-1 max concentration 904 ppt PFOS) and 1,4-dioxane (SRI-1 max concentration 294 ppb) concentrations in bedrock groundwater are lower than pre-IRM concentrations, but still well above groundwater standards. A second supplemental remedial investigation (SRI-2) was conducted following SRI-1 to further determine the extent of contamination in bedrock groundwater off-site in high angle fracture features. SRI-2 consisted of the installation of six monitoring wells screened at depths ranging from 55 to 45 ft, amsl and 0 to 20 ft, amsl. The data collected during SRI-2 revealed that elevated levels of contamination consisting primarily of chlorinated VOCs are migrating horizontally and vertically off-site in groundwater through high angle fracture features. PFAS, 1,4-dioxane and CVOCs are present in bedrock groundwater at depths down to 0 ft, amsl. Soil Vapor - A total of nine soil vapor samples were collected from locations throughout the site prior to the implementation of the IRM. Elevated levels of chlorinated volatile organic compounds were detected in soil vapor samples collected from the western half of the site, nearer to where elevated levels of PCE, TCE and 1,1,1-TCA were encountered in

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990292**

	groundwater contamination. The maximum concentrations of TCE, 1,1-dichloroethene, and 1,1,1-TCA detected were 184 micrograms per cubic meter (ug/m3), 1,110 ug/m3, 15,100 ug/m3 respectively. Soil vapor impacts may extend off-site and may be comingled with soil vapor impacts from the Industrial Overall Services Corp. site. "
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with residual contamination at the site. "

Updated By:	JEBROWN
Site Description:	"Location: The site is located in the City of New Rochelle, Westchester County, New York at 33-35 Centre Avenue on a 0.46-acre lot. The site is located on the northern part of the city block bordered by Centre Avenue to the north, Huguenot Street to the east, Columbus Avenue to the south, and Relyea Place to the west. The site is bordered to the south by multi-story residential and commercial buildings. The site is approximately 1 mile west of Echo Bay. The Industrial Overall Services Corp. (Site No. 360109) State Superfund site is located just to the west of the site (downgradient), on the other side of Reylea Place. Site Features: The site is currently being developed into a multi-story residential building and construction of the building began in July 2020, after all soil above bedrock was removed from the site as part of an Interim Remedial Measure (IRM) completed under the BCP. Current Zoning and Land Use: The site is located within the Downtown Business (DB) (eastern portion) and Light Industry (LI) (western portion) zoning districts. Permitted principal uses of DB districts include stores, retail, offices, and residential units located on the second floor and above. Permitted principal uses of LI districts include manufacturing, offices, medical facilities and parking garages. The current zoning designation is consistent with the proposed development. Past Use of the Site: The site has been used for various residential, commercial and industrial purposes since the 1930s. Starting in 1971, the western half of the site was used as an electroplating and metal-finishing business and the eastern half of the site was used as a parking lot. Industrial operations ceased in December 2018. Site Geology and Hydrogeology: Site soils consisted of historic fill across the site from grade surface to depths ranging from 1 to 7.5 feet below grade surface (ft bgs). Historic fill was generally deeper on the eastern portion of the site. Historic fill predominately consisted of brown and black sand with varying amounts of gravel, brick, organic material, asphalt, metal and clay with an average fill depth of approximately 5 ft bgs across the Site. The fill material was underlain by fine to silty sand followed by a 6 to 12-inch layer of weathered (decomposed) rock overlying the bedrock. All soil was removed from the site as part of an IRM. Bedrock beneath the site consists of metamorphic rock containing high angle features capable of transporting groundwater to depths of at least 70 feet below the top of bedrock. Groundwater underlying the site is present in bedrock and flows to the south-southwest. "

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990292**

Env Problem: "Remediation at the site is partially complete. Remedial actions thus far have successfully achieved soil cleanup objectives for unrestricted use. Implementation of In-Situ Chemical Oxidation and In-Situ Treatment using Activated Carbon have resulted in a decrease in contaminant concentrations in groundwater. Groundwater will be monitored during the Site Management phase of the project. Groundwater will be monitored until residual concentrations of groundwater contaminants are below groundwater standards, or there is a bulk reduction to asymptotic levels acceptable to the Department. If concentrations of groundwater contaminants do not decrease to levels that are acceptable to the Department, contingent remedial actions may be required which could include in-situ chemical reduction or groundwater extraction and treatment. Prior to remediation, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in groundwater, and VOCs in soil vapor. Prior to Completion of partial Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, cyanide, and the emerging contaminants per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based on investigations conducted to date, the primary contaminants of concern include VOCs, SVOCs, PCBs, pesticides, metals, and cyanide in soil, VOCs, metals and the emerging contaminants PFAS and 1,4-dioxane in the groundwater, and VOCs in soil vapor. Soil - A total of 36 soil samples were collected during the remedial investigation from 19 borings extending to bedrock across the site. Several constituents were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs). The following is a list of those compounds and the maximum exceedance: trichloroethene (TCE) 0.92 parts per million (ppm) vs USCO of 0.47 ppm, benzo(a)anthracene 64 ppm vs USCO of 1 ppm, benzo(a)pyrene 56 ppm vs USCO of 1 ppm, benzo(k)fluoranthene 25 ppm vs USCO of 0.8 ppm, benzo(b)fluoranthene 69 ppm vs USCO of 1 ppm, chrysene 61 ppm vs USCO of 1 ppm, dibenzo(a,h)anthracene 8.6 ppm vs USCO of 0.33 ppm, fluoranthene 120 ppm vs USCO of 100 ppm, indeno(1,2,3-cd)pyrene 36 ppm vs USCO of 0.5 ppm, pyrene 120 ppm vs USCO of 100 ppm, barium 416 ppm vs USCO of 350 ppm, copper 396 ppm vs USCO of 50 ppm, lead 357 ppm vs USCO of 63 ppm, mercury 2.54 ppm vs USCO of 0.18 ppm, nickel 1600 ppm vs USCO of 30 ppm, zinc 254 ppm vs USCO of 109 ppm, 4,4'-DDE 0.134 ppm vs USCO of 0.0033 ppm, 4,4'-DDD 0.156 ppm vs USCO of 0.0033 ppm, 4,4'-DDT 0.521 ppm vs USCO of 0.0033 ppm, chlordane 0.186 ppm vs USCO of 0.094 ppm, dieldrin 0.0234 ppm vs USCO of 0.005 ppm, PCBs 0.11 ppm vs USCO of 0.1 ppm, and cyanide 74 ppm vs USCO of 27 ppm. Emerging contaminants were detected in soil samples collected from the site. The emerging contaminant 1,4-dioxane was detected in one sample at a concentration of 16 parts per billion (ppb). Perfluorooctanesulfonic acid (PFOS) was detected in 22 out of 30 samples collected throughout the site with a maximum concentration of 21.8 ppb. Perfluorooctanoic acid (PFOA) was detected in 6 out of 30 samples collected throughout the site with a maximum concentration of 1.52 ppb. Concentrations of PFAS in soil were generally higher on the western half of the site compared to the eastern half of the site. All on-site soils were excavated down to the bedrock surface and transported off-site for disposal as part of a soil removal IRM. Therefore, following the IRM, there are no soils remaining that exceed the USCOs. There is no

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990292**

indication that soil contamination extends off-site. Groundwater - A total of nine groundwater wells were installed in bedrock throughout the site prior to the IRM. A non-aqueous phase liquid (NAPL) was encountered in one well on the east half of the site. This NAPL was again encountered during the IRM at the weathered bedrock interface and sampled. Fingerprinting results indicated that the NAPL was characteristic of a highly degraded petroleum. No further evidence of the NAPL was observed on the eastern half of the site after the removal of the affected bedrock and liquids encountered. Prior to the IRM, groundwater samples were collected from monitoring wells and analyzed for VOCs, SVOCs, PCBs, pesticides, metals and cyanide as well as the emerging contaminants PFAS and 1,4-dioxane. No PCBs or cyanide were detected in any groundwater samples. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, benzo(b)fluoranthene, chrysene, and phenol; the metals chromium, iron, manganese, magnesium, and nickel; and the pesticide dieldrin were detected in at least one groundwater sample in exceedance of groundwater standards. The locations where elevated SVOCs were noted in groundwater do not coincide with locations where elevated SVOCs were noted in soil, which suggests that the PAHs may be present in the dissolved phase. The concentrations of sodium, iron, manganese, magnesium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These compounds are typically naturally occurring or related to road salt application. Nickel and chromium, which may have been used during the electroplating process, were detected at maximum concentrations of 12,970 ppb versus a groundwater standard of 100 ppb, and 7,937 ppb versus a groundwater standard of 50 ppb, respectively. The pesticide dieldrin was only detected in one well at 0.005 ppb, marginally exceeding the groundwater standard of 0.004 ppb. The chlorinated VOCs PCE, TCE and 1,1,1-TCA, and their respective degradation byproducts, were detected in groundwater samples collected from the western half of the site in exceedance of groundwater standards and at levels suggesting the presence of separate phase material. The VOC toluene was also detected in exceedance of groundwater standards in the western half of the site and xylene (22 ppb) on the eastern half of the site in one sample. The highest concentrations of VOCs encountered at the site were for TCE (3,400 ppb), 1,1,1-TCA (1,000,000 ppb), 1,1-dichloroethene (28,000 ppb), and toluene (7,200 ppb) compared to a groundwater standard of 5 ppb for each of these constituents. Chlorinated VOCs were not detected in groundwater samples collected from the eastern half of the site. 1,4-dioxane, a contaminant (stabilizer) typically associated with 1,1,1-TCA, was detected at concentrations up to 320 ppb in groundwater samples, where elevated levels of chlorinated VOCs were also encountered on the western half of the site. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 796 and 3,140 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. PFAS concentrations in groundwater were approximately an order of magnitude higher on the western half of the site compared to the eastern half of the site. VOC, PFAS, and 1,4-dioxane groundwater contamination is migrating off-site in the direction of groundwater flow to the southwest. The off-site groundwater plumes from this site are comingled with groundwater plumes emanating from the Industrial Overall Services Corp. (Site No. 360109) State Superfund site. The Industrial Overall Services Corp. site is located just to the west of

CENTRE AVENUE DEVELOPMENT - SOUTH (Continued) **S127990292**

the site on the other side of Relyea Place. No private or municipal drinking water wells are within 0.5 miles of the site, and Chapter 873, article VII of the Laws of Westchester County, prohibits potable use of groundwater without prior approval. A supplemental remedial investigation (SRI-1) was conducted following the IRM to determine the nature and extent of contamination in bedrock groundwater. The SRI-1 consisted of the geophysical logging at ten locations and the installation of sixteen monitoring wells screened at depths ranging from 75 to 27 feet above mean sea level (ft, amsl) following the IRM. The data collected during the SRI revealed that source level contamination consisting primarily of chlorinated VOCs (max concentration 140,000 ppb 1,1,1-TCA compared to the groundwater standard of 5 ppb) persists in bedrock groundwater following the IRM. Total CVOC concentrations are greatest in the southwest corner of the site and have migrated both horizontally and vertically through high angle features towards the southwest site boundary. PFAS (SRI-1 max concentration 904 ppt PFOS) and 1,4-dioxane (SRI-1 max concentration 294 ppb) concentrations in bedrock groundwater are lower than pre-IRM concentrations, but still well above groundwater standards. A second supplemental remedial investigation (SRI-2) was conducted following SRI-1 to further determine the extent of contamination in bedrock groundwater off-site in high angle fracture features. SRI-2 consisted of the installation of six monitoring wells screened at depths ranging from 55 to 45 ft, amsl and 0 to 20 ft, amsl. The data collected during SRI-2 revealed that elevated levels of contamination consisting primarily of chlorinated VOCs are migrating horizontally and vertically off-site in groundwater through high angle fracture features. PFAS, 1,4-dioxane and CVOCs are present in bedrock groundwater at depths down to 0 ft, amsl. Soil Vapor - A total of nine soil vapor samples were collected from locations throughout the site prior to the implementation of the IRM. Elevated levels of chlorinated volatile organic compounds were detected in soil vapor samples collected from the western half of the site, nearer to where elevated levels of PCE, TCE and 1,1,1-TCA were encountered in groundwater contamination. The maximum concentrations of TCE, 1,1-dichloroethene, and 1,1,1-TCA detected were 184 micrograms per cubic meter (ug/m3), 1,110 ug/m3, 15,100 ug/m3 respectively. Soil vapor impacts may extend off-site and may be comingled with soil vapor impacts from the Industrial Overall Services Corp. site. "

Contact Name:	CALLER
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was GHIOSAY 11-18-03 P&D Transport trailer carrying 5000 gallons of a hot tar product developed several leaks from seams and holes beneath the trailer. The driver, John Culbreath, pulled the vehicle to the shoulder of I-95 NB at mm 5.4 in New Rochelle. The trailer drained hot tar to the road shoulder where it flowed downhill until it cooled and solidified. Approximatley 200 feet of shoulder where affected before the trailer could be offloaded. DEC called out Castlton Environmental contractors when a company Rep stated that he/she would not sent a second truck to offload the damaged trailer. Castlton contacted Mystic Bulk Carriers and requested their assistance. Mystic provided a heated truck, suitable to offload the cargo and return it

P&D TRANSPORT - HOT TAR (Continued) **S106126552**

to Ownes Corning in Kearny where the load was originally picked up. The P&D damaged trailer was towed off the road to a spot near the I-95 toll plaza. Castlton performed the removal of the solidified tar several days later as they were delayed by heavy rain which created hazardous working conditions on busily traveled I-95. As of 11-18-03, Portland Asphalt indicated that they would pay Caslton directly for the cost of the cleanup. "

Remarks: "material goes into a manhole which leads to a water way. poss hutchinson river. spill not controlled yet. caller req call back from rep"

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

CENTRE CLEANERS (Continued) **1000338662**

redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

CON EDISON MANHOLE: 20274 (Continued) **1016677685**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Code:	601437
Acres:	0.790
HW Code:	C360199
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	02/20/2020
Record Updated Date:	02/12/2021
Update By:	RDBENDEL
Site Description:	"Location: The Main Street Laundry Site (site) comprises four tax parcels, totaling approximately 0.79 acres in size, located in an urban area of the City of New Rochelle, Westchester County, New York. The site is located at 500, 506, and 510 Main street and 12 Church Street. The site is bounded to the northwest by Main Street, to the southwest by Church Street, to the southeast by an access driveway and a three- story brick building, and to the northeast by a two-story brick building and an existing private parking lot. The site is approximately 0.25 miles south of the New Rochelle Metro North train station and approximately 0.75 miles west of Echo Bay. Site Features: The site is currently improved with four buildings located on four contiguous tax parcels. 500 Main Street contains a three- story building (including a basement level) currently occupied by the New York Covenant Church. 506 Main Street contains a two- story building that is currently vacant. 510 Main Street contains a three- story brick building occupied by the Liebman s Children's Uniform Clothing store. 12 Church Street contains a multi-story building occupied by the French Speaking Baptist Church of New Rochelle. The portions of the site outside of the building footprints are paved driveways and parking areas. No surface soils are present on the site. Current Zoning and Land Use: The site is located in the Downtown Business District (a/k/a the DB Zone) and is currently used as commercial property. The surrounding properties are mainly commercial with some residential uses. The site redevelopment plan is a mixed-use commercial and residential housing building. Past Use of the Site: The site was originally developed in 1887 as a meat market and laundry that existed until at least 1896. Additional historical uses included lodging, commercial retail, Fire Department Headquarters, auto storage, fur storage, ice rink, and church spaces. The Fire Department was present from 1903 until the 1990s. Several underground storage tanks (USTs) and aboveground storage tanks (ASTs) were noted on-site associated with past site use. Site Geology and Hydrogeology: Site soil consists of fill material over a layer of varied coarse to fine sand with silt to an approximate depth of 2 to 16 feet below ground surface (bgs). Weathered rock was encountered at depths ranging from about 14 to 38 feet bgs. Area bedrock ranges from 20 to 38 feet bgs based on a geotechnical investigation. Groundwater is found in the overburden. Groundwater flow direction is dominantly to the south-southeast towards Long Island Sound, but is influenced by the tides. Groundwater depth ranges from 7.5 to 12 feet bgs. "
Env Problem:	"Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals, cyanide, pesticides, and the emerging contaminants per- and polyfluorinated substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based on investigations conducted to date, the primary contaminants of concern include SVOCs, metals, and pesticides, in soils, SVOCs in groundwater, and VOCs in soil vapor. Soil: The site is mostly occupied by buildings and the portions of the site outside of

500 MAIN STREET LAUNDRY SITE (Continued) **S126218333**

building footprints are paved driveways and parking areas. No surface soils are present on the site. Samples of subsurface soil (deeper than 2 inches) were collected throughout the site during the RI to document soil conditions. A total of 36 subsurface soil samples were collected from 24 locations to depths extending to 22 feet below ground surface (bgs). No VOCs, PCBs, or cyanide were detected in subsurface soils above Unrestricted Soil Cleanup Objectives (USCOs). Several SVOCs and metals as well as one pesticide were identified in subsurface soil at concentrations exceeding their USCOs. Exceedances of USCOs were encountered beneath the 500 Main Street and 12 Church Street buildings and access driveways. Exceedances of USCOs were not present beneath the 506 Main Street and 510 Main Street buildings. SVOC concentrations above USCOs were found in subsurface soil samples collected from the southeastern portion of the site. The highest SVOC concentrations were found in soil boring 14 (SB-14) at a depth of 6 feet bgs. SB-14 is located in an access driveway and the vertical extent of the SVOC contamination reaches to 6 feet bgs. The highest concentrations of any SVOCs detected were for benzo(b)fluoranthene and benzo(a)anthracene, both at 18 parts per million (ppm) (USCO: 1 ppm). The next highest concentrations were for benzo(a)pyrene and chrysene, both at 16 ppm (USCO: 1 ppm), benzo(k)fluoranthene at 7 ppm (USCO: 0.8 ppm), indeno(1,2,3-cd)pyrene at 6.7 ppm (USCO: 0.5 ppm), and dibenz(a,h)anthracene at 1.8 ppm (USCO: 0.33 ppm). Metals concentrations above USCOs were found in subsurface soil samples collected from the southern half of the site. The highest concentrations for metals encountered were arsenic at 39.7 ppm (USCO: 13 ppm), lead at 194 ppm (USCO: 63 ppm), mercury at 1.9 ppm (USCO: 0.18 ppm), copper at 59.5 ppm (USCO: 50 ppm), and zinc at 686 ppm (USCO: 109 ppm). The deepest exceedance for metals was found at 20 feet bgs. Pesticide concentrations above USCOs were found in subsurface soil samples collected from the southeastern portion of the site. The highest concentration of a pesticide encountered was for 4,4 -DDT at 0.34 ppm (USCO: 0.0033 ppm) found at a depth of 13 feet bgs. No per- and polyfluoroalkyl substances (PFAS) were detected above the screening level of 1 part per billion (ppb). 1,4-dioxane was not detected in any subsurface soil samples. The presence of SVOCs, metals, and pesticides in subsurface soils is related to the historical use of the site and/or was present in fill material added to the site in the past. There is no indication soil contamination is migrating off-site. Groundwater: Groundwater samples were collected from eight monitoring wells throughout the site. Groundwater samples were analyzed for VOCs, SVOCs, metals, cyanide, pesticides, and PCBs as well as the emerging contaminants PFAS and 1,4-dioxane. No pesticides, PCBs, or cyanide were detected above groundwater standards. The VOCs cis-1,2- dichloroethene and hexachlorobenzene were detected in one well each, respectively at 6.4 parts per billion (ppb) exceeding the groundwater standard of 5 ppb, and 0.044 ppb exceeding the groundwater standard of 0.04 ppb. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, indeno(1,2,3-cd)pyrene, and phenol were detected above groundwater standards in several wells. The greatest SVOC concentration in groundwater was for benzo(b)fluoranthene at 0.075 ppb (standard: 0.002 ppb). The metals aluminum, iron, magnesium, manganese, and sodium were detected in groundwater samples collected from the site in exceedance of groundwater standards. These metals are common, naturally occurring and/or associated with road salt application, and were present across the site. The metals

500 MAIN STREET LAUNDRY SITE (Continued) **S126218333**

detected in groundwater are not likely attributed to the site contamination. The metal exceedances found in groundwater were different than the metals that exceeded the SCOs. The SVOCs and VOCs present are attributed to historic site use. 1,4-dioxane was not detected in any wells. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 66.3 and 601 parts per trillion (ppt), respectively, exceeding the 10 ppt screening level for each. PFOA and PFOS were detected in every well above the 10 ppt screening level. The presence of PFAS may be attributed to the historical use of the site as a fire department, the highest concentrations of PFAS in groundwater were near the building (12 Church Street) which was used for fire department headquarters. However, no source of PFOA or PFOS was encountered in subsurface soil. There is a possibility that VOC and SVOC groundwater contamination is migrating off-site. Elevated levels of PFOA and PFOS in groundwater are consistent with concentrations encountered at other nearby Brownfield Cleanup Program (BCP) sites. Soil Vapor: Soil vapor samples were collected at four locations throughout the western half of the site. Two soil vapor samples were collected in the access driveways in the western and southwestern portion of the site at a depth of 5-6 feet bgs, which is approximately 2-3 feet above the groundwater table. The other two soil vapor samples were taken one foot beneath the building slab due to the presence of shallow groundwater. One soil vapor point was located in the basement of 510 Main Street and the other was collected in the basement of 500 Main Street. Soil vapor samples were analyzed for VOCs. There were two VOC detections for one of the constituents listed on the New York State Department of Health (NYS DOH) soil vapor/ indoor air matrices. The VOC trichloroethene (TCE) was detected at 20.8 micrograms per cubic meter (ug/m^3) in a sample collected one foot beneath the 506 Main Street building slab at a location along the northern boundary of the site and at 3.56 ug/m^3 in a sample collected one foot beneath the 510 Main Street building slab along the western boundary of the site. Petroleum related VOCs were detected in several soil vapor points,including, but not limited to, benzene up to 51.5 ug/m^3, methyl ethyl ketone up to 124 ug/m^3,ethanol up to 347 ug/m^3, toluene up to 244 ug/m^3, and m,p-xylene up to 307 ug/m^3. Acetone and chloroform were also detected. Acetone is a common laboratory contaminant, and chloroform is a common byproduct of drinking water chlorination. There are no NYS DOH matrices for these constituents and no action is needed based on the detections. The results of on-site soil vapor sampling indicate further evaluation of soil vapor intrusion for any future buildings on the site is warranted. There are possible off-site sources of soil vapor contamination. Soil vapor intrusion is not expected to be a concern for off-site buildings."

Health Problem: "The site is currently covered with buildings and pavement. People are not expected to come into contact with contaminated soil and groundwater unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil vapor (air spaces within the soil), may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. An evaluation of the potential for soil vapor intrusion to occur is recommended for any new buildings built on-site

500 MAIN STREET LAUNDRY SITE (Continued) **S126218333**

	as part of the expected remediation and site redevelopment. Soil vapor intrusion is not expected to be a concern for off-site buildings."

DEC Memo:	"9/3/2020 just called back and spoke with Mark from Suez, they were replacing a fire hydrant and came across contaminated soil. Mark stated that it appeared to start as a sheen, but was then building on top of itself leading him to believe there may be sludge / free product. He will be sending me over picture shortly that I will forward to you. I also did some research and found that the address listed is in close proximity to a large apartment building. TJP spoke with Beynan, he is going to take a look at this site this afternoon. also spoke with Chris Lalak from WCDOH, he did a search in the PBS database and was unable to find any registered facilities on grand st or Burling Lane where the apartment building is TJP 9/3/2020 Update from Beynan - De minimis sheen on the water surface. No product. There may have been a remote fill pipe at 60 Grand Street but they are on natural gas now. I will follow up with the homeowner regarding the spill and ask if they have a UST. Suez is going to dispose of the water they vac d out and the asphalt, then go ahead with the valve replacement. TJP 09-04-20 No UST was present. Absorbent pads didn't pick anything up on the water surface. Waiting for sample results from Suez to close the spill. BTR"
Remarks:	"caller states crews excavating and unk type petroleum product filling in excavation site. clean up pending."

City,State,Zip:	NEW ROCHELLE, NY 10801
Program:	BCP
Site Code:	588043
Acres:	0.902
HW Code:	C360188
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	05/03/2019
Record Updated Date:	12/30/2021
Update By:	AMSERVIS
Site Description:	"Site Location: The site is located at 11 Garden Street in a commercial and residential area of the City of New Rochelle. The site is a triangular shaped parcel approximately 0.9-acres in size. The site is bounded to the north by Garden Street, to the west by mixed commercial/residential structures and to the south and east by the Hartford Railroad. Site Features: The site is currently being developed into a multi-story residential building and construction is nearly finished. Current Zoning and Land Use: The site is currently located in a Downtown Mixed-Use Urban Renewal District. The surrounding properties include various vendors and retailers (mixed commercial/residential use) and the Amtrak and Metro-North train routes. Past Use of the Site: The first known business on the site was a marble works in 1887. By 1896, a dwelling and barn were constructed on the central portions of the site. Between 1896 and 1903, the marble works was replaced with a three-story commercial building that included a saloon. Between 1903 and 1911, a brick oven baking company was constructed on the south-central portion of the site. Between 1911 and 1931, the site was substantially reconfigured with the addition of a cabinet shop, automotive shop and garages as well as repurposing a dwelling to a blacksmith shop and the bakery to a wood working facility. In addition, a structure labelled oils and another circular unspecified structure were located near the woodworking facility on a 1931 Sanborn map depiction of the site. By 1951, the site was cleared of all but two structures; the former saloon and blacksmith shop had each been extended east and repurposed as a paint store and automotive facility, respectively. Between 1996 and 2003, all remaining site structures were demolished. The City of New Rochelle acquired the site in 1998 and has operated a municipal parking lot at the site since the time of acquisition. Site Geology and Hydrogeology: On-site soils consist of medium to coarse-grained sand and gravel fill ranging from 7-18 feet below grade surface (bgs)

PROPOSED RESIDENTIAL DEVELOPMENT (Continued) **S127063304**

underlain by native soils consisting of silty sand extending to depths of 26-40 feet bgs. Weathered bedrock is present beneath native soils. Groundwater is present within native soils at depths ranging from 18.5 to 24.5 feet bgs. Groundwater flow direction beneath the site is to the north toward the Cottage-Garden Auto Repair BCP (C360180) site. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern included metals and polycyclic aromatic hydrocarbons (PAHs) in soil; and VOCs in soil vapor. Remedial actions have achieved soil cleanup objectives for unrestricted use. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals, total petroleum hydrocarbons (TPH), hexavalent chromium, and the emerging contaminants per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based on investigations conducted to date, the primary contaminants of concern include SVOCs, metals and pesticides in soil, and VOCs in soil vapor. Soil: Surface soil samples to assess direct human exposure were not collected during the RI due to the lack of exposed surface soil (presence of an asphalt parking lot) within the site boundary. A total of 47 subsurface soil samples were collected from 11 locations across the site to document soil conditions. Soil samples were collected at depths ranging from 1 to 20 feet below grade. Two SVOCs, six metals, and one pesticide (4,4'-DDT) were detected in soil samples collected during the RI at concentrations that exceeded unrestricted soil cleanup objectives (USCOs). Compounds were detected at the following maximum concentrations: benzo(b)fluoranthene (1.2 parts per million (ppm) vs a USCO of 1 ppm), indeno(1,2,3-cd)pyrene (0.56 ppm vs a USCO of 0.5 ppm), copper (61 ppm vs a USCO of 50 ppm), lead (878 ppm vs a USCO of 63 ppm), mercury (0.36 ppm vs a USCO of 0.18 ppm), nickel (60 ppm vs a USCO of 30 ppm), zinc (1,370 ppm vs a USCO of 109 ppm), hexavalent chromium (1.24 ppm vs a USCO of 1 ppm), and 4,4'-DDT (0.00409 ppm vs a USCO of 0.0033 ppm). PFAS compounds including Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were detected below their soil guidance values of 0.66 parts per billion (ppb) and 0.88 ppb respectively. Soil contamination is not expected to migrate off-site. Groundwater: Groundwater samples were collected from four monitoring wells installed at the site as part of the RI. The metals iron, magnesium, manganese, and sodium were detected in groundwater samples in exceedance of groundwater standards. These metals are naturally occurringa component of road salt, and are likely not associated with contamination from the site. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were detected in groundwater samples collected from the site at concentrations up to 55 and 23 parts per trillion (ppt) respectively, exceeding the 10 ppt maximum contaminant level (MCL) for each. Detectable levels of PFAS below their soil guidance values in on-site soils indicate the site is not contributing PFAS to groundwater. The levels observed in the on-site groundwater are consistent with the general conditions for PFAS in groundwater in the New Rochelle area. Additionally, the area is served by municipal water. Soil Vapor: Soil vapor samples were collected at seven locations throughout the site. Soil vapor samples were collected from a depth of 5 ft at three locations and from a depth of 15 ft at four locations. The chlorinated VOC (CVOC) tetrachloroethene (PCE) was detected in four soil vapor samples and

PROPOSED RESIDENTIAL DEVELOPMENT (Continued) **S127063304**

	the CVOC trichloroethene (TCE) was detected in one soil vapor sample. The maximum concentration of PCE detected was 17.6 micrograms per meter cubed (ug/m^3). TCE was detected in one soil vapor sample at a concentration of 12.7 ug/m^3. No on-site source was identified for these soil vapor constituents in the soil or groundwater. Across Garden Street to the north of this site is the BCP site Cottage-Garden Auto Repair (C360180). The RI for the Cottage-Garden Auto Repair site documented impacts from CVOCs to groundwater and soil vapor; however, the Cottage-Garden Auto Repair site is hydraulically down gradient of this site. CVOC concentrations in the soil vapor at the Cottage-Garden Auto Repair site border with Garden Street were in the range of hundreds of ug/m3 as compared to the Garden St. Apartments site border with Garden Street had concentrations in the range of 12-17 ug/m^3. Detection of CVOCs at this site may be a result of migration from the off-site BCP site to the north. "
Health Problem:	"Contact with contaminated soil is no longer a potential concern since all contaminated soil has been removed from the site and replaced with clean fill material. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. A soil vapor intrusion evaluation indicates that soil vapor intrusion is no longer a potential concern for on-site buildings. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:

Name:	14 LE COUNT STANDARD PRINTING
Address:	14 LE COUNT PL, 455 MAIN ST
City,State,Zip:	NEW ROCHELLE, NY 10801
Program:	BCP
Site Code:	568962
Acres:	0.927
HW Code:	C360176
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	04/13/2018
Record Updated Date:	06/09/2021
Update By:	DJEATON
Site Description:	"Location: The site is located mixed-use area of New Rochelle, southwest of Le Count Place, northwest of Main Street, and northeast of North Avenue. Land uses within a quarter-mile of the site are predominantly commercial/residential. Site Features: The site used to contain seven buildings, three of which were vacant. Of the non-vacant buildings, one (455 Main Street) was occupied by a beauty salon and a sportswear store on the first floor and professional offices on the second and third floors; another (459 Main Street) was occupied by a travel agency, hair salon, and medical offices on the first floor and offices on the second floor; and the parking lot on 14 Le Count Place was being utilized by Monroe College for parking,

14 LE COUNT STANDARD PRINTING (Continued) **S122449231**

pursuant to a Parking Space License Agreement. There were parking lots on site associated with the existing uses. All buildings on-site have since been demolished, and a new building is under construction. Current Uses and Zoning: As noted above, the site is used for a mixture of retail, residential, and commercial uses. It is zoned for Downtown Business Overlay Zone (DB), which allows for a mix of uses including residential, office, retail, commercial, cultural/entertainment, civic/religious, light industrial, and parking/utilities. Past Use of the Site: Historically, the site has been dedicated to commercial/residential uses. Notable commercial uses include a former printing shop operated by the Evening Standard Newspaper (209 North Avenue), a photo-engraving shop (207 North Avenue) and an undertaker/funeral home (14 Le Count Place). The existing on-site buildings were reportedly constructed between 1903 and 1931. Several Recognized Environmental Concerns (RECs) were identified during Phase I site assessments. The RECs are identified as out of service or previously abandoned USTs and soil contamination as a result of the historic printing operations. Site Geology and Hydrogeology: Beneath an asphalt/concrete surface, surficial historic fill of up to 5 feet deep, consisting of soils similar to the underlying natural residuals, blanket the site. Beneath the fill, the site is underlain by soils formed by the decomposition of the underlying gneiss bedrock. These soils generally consist of silty/clayey sand containing varying percentages of gravel. Weathered gneissic bedrock is typically present at depths on the order of 20 to 25 feet below grade. The regional groundwater flow direction around the site was confirmed during the Remedial Investigation to follow the general topography of the region, which slopes gently downwards towards Echo Bay to the east and southeast of the site. The groundwater depth was measured during the 2017 water sampling event and found to be approximately 18 feet below ground surface. There are two operable units for this site. Operable Unit(OU) 01 is the brownfield-related remedial work and is the subject of this document. OU 02 encompasses the response to a petroleum spill reported on this property. Work on OU 02 is governed by a separate Order on Consent (Index no: CO 3-20190404-74) and is not part of the BCP cleanup. "

Env Problem: "Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Groundwater has not met standards for cis-1,2-dichloroethene and benzene. Residual contamination in the groundwater is being managed with monitored natural attenuation under a Site Management Plan. Prior to remediation, the primary contaminants of concern were metals and PAHs in soil, benzene and cis-1,2-DCE in groundwater and trichloroethene in sub-slab soil vapor. "

Health Problem: "The site has been remediated; therefore, the potential for exposure to contaminated soil or groundwater has been eliminated. In addition, the area is served by a public water supply that is not affected by this contamination. Because the site is vacant, inhalation of site contaminants due to soil vapor intrusion does not represent a current concern. However, a soil vapor intrusion evaluation will be completed and appropriate actions to address exposures will be implemented for any new buildings constructed on the site. Additional investigations are recommended to determine if soil vapor intrusion is a potential concern for offsite buildings."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: KJCARPEN
Site Description: "Location: The Industrial Overall Service Corporation site is located at 10 Bartels Place in the City of New Rochelle, Westchester County. The site is located east of I-95 and west of US-1 (Huguenot Street) and it is bounded by Relyea Place, Bartels Place, Centre Avenue and the Metro North railroad property and tracks. Site Features: The site is 0.53 acres in size and resides on a slightly sloping irregularly shaped property consisting of two tax parcels. The main site feature includes a six-sided building which occupies the majority of the property and a small parking area located to the south and southwest of the building. Current Zoning/ Uses: This property is zoned for commercial use. The building was sold in 2019 and site use remains commercial in nature. The surrounding area is a mix of commercial and residential establishments situated in an urban setting. Past Uses of the Site: Industrial Overall Service Corporation operated at this location as a uniform and industrial clothing dry cleaning/laundering facility, historically cleaning heavily soiled clothing from industrial, auto body and gasoline dispensing businesses from 1956 until 2010. Dry cleaning equipment was reportedly decommissioned in 1980, but water washing continued. From 1980-1998 Workingman s Closet, an embroidery and uniform retail outfit, operated on the second floor of the building. From 2010 until 2016, Apparel Plus Textile Rental LLC ran a rental linen service company on both floors of the building, which involved water laundering. Historically, a precision scale company also operated out of the second floor of the building from sometime between 1932 and 1956 until sometime before 1973 when Industrial Overall purchased the building to occupy it entirely. Based on a Sanborn Fire Insurance Map from 1931, the site previously operated an automobile sales and service business. This site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) is the on-site and adjacent Metro-north property. OU1 consists of the entire site property with the addition of an off-site source area which lies to the northeast of the site on the adjacent Metro-north property. Operable unit 2 (OU2) is the off-site groundwater plume. Site Geology and Hydrology: Groundwater is found in the overburden and in the bedrock. Groundwater is generally found 10 to 15 feet

INDUSTRIAL OVERALL (Continued) **S110043643**

below ground surface and flows in a southwesterly direction. Overburden in the vicinity ranges in thickness from 2.2 feet to 32 feet, and consists of fill material (1-5 feet in thickness) and varied amounts of fine to coarse sand with varying amounts of silt. Below the sandy silt is a till like material. Depth to bedrock is variable across the site from a depth of a few feet to over 35 feet below grade. Bedrock in the vicinity is a highly weathered rock which is undulating in nature and is generally more transmissive than the till-like overburden material directly above. "

Env Problem: "OU1: On-Site and Adjacent Metro North Property Nature and Extent of Contamination: The primary contaminants of concern at the site include the dry cleaning chemicals tetrachloroethene (PCE), trichloroethene (TCE) and their associated breakdown products. PCE and TCE are found in on-site and off-site soil and groundwater. Two primary source areas remain at and adjacent to the site. These include a lint trap within on-site building and an off-site debris and waste disposal area located to the northwest outside the building on the adjacent Metro North Railroad property. Soil: Maximum concentrations of PCE and TCE in on-site soils/wastes located in the remaining lint trap source area exceed 21,000 parts per million (ppm) and 1,200 ppm, respectively. In addition to volatile organic compounds (VOCs), soils on- and off-site were also sampled for semi-volatile organic compounds (SVOCs) and metals. No SVOCs exceeded SCOs, but several metals (barium, cadmium, chromium, lead, and silver) exceeded their respective unrestricted use SCOs directly underneath the lint trap. Also under the lint trap, barium, cadmium, and lead exceeded commercial SCOs, while only barium out of these metals did not exceed protection of groundwater SCOs. Also chromium exceeds the protection of groundwater SCO in one off-site location. On-site and off-site soil contains VOCs mainly in the two source areas, but some soil located under the site parking lot also contained VOCs above protection of groundwater SCOs of 0.47 ppm for TCE and 1.3 ppm for PCE. Generally, however, concentrations of PCE and TCE in on-site soils decrease to below the soil cleanup objectives (SCOs) for the protection of groundwater not far from the actual lint trap. The debris and waste disposal source area on the off-site Metro North property contains a maximum PCE concentration of 500 ppm and a maximum TCE concentration of 11 ppm. Groundwater: Contamination migrating from the two source areas has impacted groundwater in the bedrock and overburden, and created a plume extending downgradient (southwest) more than 1,900 feet from the site. The highest level of PCE in on-site groundwater was 140,000 parts per billion (ppb) near the lint trap, compared to the groundwater standard of 5 ppb. On the adjacent off-site Metro North Railroad property, PCE concentrations in groundwater reached 3,600 ppb. The maximum level of TCE in on-site groundwater was 13,000 ppb near the lint trap, and 1,800 ppb beneath the adjacent off-site Metro North Railroad property, compared to the groundwater standard of 5 ppb. TCE was also detected upgradient of the site at 5,300 ppb indicating a second potential off-site upgradient source. Several breakdown products of PCE and TCE were also noted in the groundwater. The maximum on-site cis-1,2 dichloroethene (cis-1,2 DCE) concentration was 27,000 ppb near the lint trap, and 130 ppb beneath the off-site adjacent Metro North Railroad property. The maximum on-site vinyl chloride (VC) concentration was 1,600 ppb near the lint trap compared to the groundwater standard of 2 ppb.1-1-1 trichloroethane (1,1,1-TCA) was detected on-site at a maximum

INDUSTRIAL OVERALL (Continued) **S110043643**

concentration of 730 ppb beneath the on-site building, compared to the groundwater standard of 5 ppb. However, 1,1,1-TCA was also detected upgradient of the site at 910 ppb indicating an off-site, upgradient source. Soil Vapor, Sub-slab Vapor and Indoor Air: Mitigation of Soil Vapor Intrusion within the on-site building was completed in March 2019. In January 2019, the sale of and plans for occupancy of the on-site building required a soil vapor intrusion (SVI) evaluation to occur. Prior to remediation, the sub-slab soil vapor Samples had maximum concentrations of 19,000 ug/m3 of 1,1,1-TCA, 8,800 ug/m3 of 1,1-dichloroethene, 650 ug/m3 of cis-1,2-DCE, 28,000 ug/m3 of PCE, and 37,000 ug/m3 of TCE. Indoor air contained a maximum concentration of 2.1 ug/m3 of TCE. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. No significant environmental resources have been identified near the site. Based upon the resources and pathways identified and the toxicity of the contaminants of ecological concern at this site, a Fish and Wildlife Resources Impact Analysis (FWRIA) was deemed not necessary for OU 01. OU2: Off-site Groundwater and Associated Soil Vapor Intrusion Impacts Soil: Soil contamination was not yet identified in OU2. Groundwater: Determination of the extent of OU2 groundwater contamination is ongoing. However, contamination migrating from the two source areas in OU1 has impacted groundwater in the bedrock and overburden, and created a plume of PCE and degredation compounds extending downgradient (southwest) more than 1,900 feet from the site. Soil Vapor, Sub-slab Vapor and Indoor Air: Determination of the nature and extent of OU2 soil vapor intrusion impacts is ongoing. However, fourteen residential or commercial structures were sampled during the investigation for OU1. Vapor control measures were taken in two structures, and five structures continue to be monitored for soil vapor intrusion. "

Health Problem: "Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Most of the site is covered with pavement and buildings; however, trespassers or employees walking, digging, or otherwise disturbing the soil on the adjacent Metro North property could come in contact with site-related contaminants. Volatile organic compounds in the soil or groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment. Sub-slab depressurization systems have been installed in two off-site residential buildings to prevent the inhalation of site-related contamination. In addition, air monitoring is on-going at five additional off-site residential buildings to verify further actions are not needed. Sampling indicates soil vapor intrusion may be a concern for additional off-site buildings and sampling is recommended."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Control Code:	34
Control Type:	INST
Dt record added:	12/18/2020
Dt rec updated:	12/31/2020
Updated By:	JEBROWN
Site Code:	574524
Site Description:	"Site Location: The site is located at 20 and 26 Garden Street and 10 Cottage Place in a commercial and residential area of New Rochelle, New York. Residential development is present along Cottage Place, which borders the northeast side of the site; commercial development is present along Garden Street, which borders the southeast side of

COTTAGE-GARDEN AUTO REPAIR SITE (Continued) **S127282799**

the site. Interstate I-95 runs along the west side of the site. Site Features: The site consists of five tax parcels and one partial parcel totaling approximately 0.988 acre. The site was historically occupied by four commercial buildings and one residential building. All on-site buildings were demolished between late 2017 and mid-2018. The site is currently under redevelopment. Current Zoning and Land Use: The site is currently located in the Neighborhood Business District (NB District). Allowable uses in NB Districts include business, professional, or governmental offices, retail stores, dry cleaners, banks, restaurants, houses of worship, animal hospitals, and dwelling units located on or above the second floor only. The site has been most recently used for a variety of commercial and residential uses, including appliance retail, vehicle and tire repair, parking, and an apartment building. The site is currently vacant. All prior buildings were demolished by the BCP applicant upon acquisition in 2017. Past Use of the Site: The lots were historically comprised of four commercial buildings, one residential building, and asphalt parking lots. The residential parcel was constructed in the early 1990s, with conversion to multiple apartments over the years. The remaining commercial buildings have been used as a kitchen and bath dealer, warehouses, retail tire and auto repair facility, a gasoline station with tanks that were closed in place in 2001, and various other commercial, retail, and light manufacturing uses. The auto repair facility, former plastic works manufacturing and/or metal stripping company on the site were likely responsible for the volatile organic compounds (VOCs) and metals contamination. Site Geology and Hydrogeology: The subsurface conditions consist of brown to gray fine to coarse sand, mixed with traces of silt and gravel to depths 20 to 24 ft below ground surface (bgs). Fractured bedrock was encountered on the eastern side of the site at approximately 21 ft bgs. The subsurface conditions of the region do not exhibit unusual geologic conditions to the subject property or to adjoining site properties. The subject parcels are connected to the public water supply system and the property uses the public sewage treatment system for the sanitary waste disposal. Groundwater was encountered at depths of approximately 15 ft to 18 ft bgs in soil borings. Groundwater flows to the west across the site."

Env Problem: "Remediation at the site is complete. Prior to remediation,the primary contaminants of concern include VOCs, metals, and polycyclic aromatic hydrocarbons (PAHs) in soil; VOCs and PFAS in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Residual contamination in groundwater and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for Target Compound List (TCL) and Target Analyte List (TAL) plus 30 tentatively identified compounds (TICs), Total Petroleum Hydrocarbons (TPH), cyanide, hexavalent chromium, and the emerging contaminants PFAS and 1,4-dioxane. Soil vapor samples were analyzed for volatile organic compounds (VOCs). Based on investigations conducted to date, the primary contaminants of concern include VOCs, metals, and polycyclic aromatic hydrocarbons (PAHs) in soil; VOCs and PFAS in groundwater; and VOCs in soil vapor. Soil The following PAHs were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs): benzo[a]anthracene (2 parts per million (ppm) vs. USCO of 1 ppm), benzo[b]fluoranthene (1.2 3.2 ppm vs. USCO of 1 ppm), benzo(k)fluoranthene (1.3 ppm vs. USCO of 0.8 ppm), benzo(a)pyrene

COTTAGE-GARDEN AUTO REPAIR SITE (Continued) **S127282799**

(1.2 2 ppm vs. USCO of 1 ppm), chrysene (1.2 2.3 ppm vs. USCO of 1 ppm), dibenzo(a,h)anthracene (0.4 ppm vs. USCO of 0.33 ppm) and indeno(1,2,3-cd)pyrene (0.56 1.6 ppm vs. USCO of 0.5 ppm). The depth of PAH impacts is within the top 3 ft below ground surface (bgs). The following metals were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCO): barium (396 ppm vs. USCO of 350 ppm), cadmium (7.6 22.9 ppm vs. USCO of 2.5 ppm), copper (95.8 227 ppm), lead (68.9 1900 ppm vs. USCO of 63 ppm), mercury (0.23 5 ppm vs. USCO of 0.18 ppm), nickel (39 252 ppm vs. USCO of 30 ppm), and zinc (115 706 ppm vs. USCO of 109 ppm). The depth of metals exceeding their respective USCOs ranged from 1.5 feet to 24 feet bgs. Perfluorooctanesulfonic acid (PFOS), an emerging contaminant, was detected in site soils at concentrations ranging from 0.72-4.18 parts per billion (ppb). No exceedances of the VOCs or PCB SCOs were identified in any of the soil samples collected. Based on the on-site soil investigation, it does not appear that soil contamination is migrating off-site. Groundwater - The following VOCs were identified at concentrations that exceed the Ambient Water Quality Standards for groundwater (AWQS): trichloroethene (TCE) (8.8 9.8 parts per billion (ppb) vs. 5 ppb groundwater standard) and benzene (1.1 ppb vs. 1 ppb groundwater standard) 1,1,2-trichloroethane (1,1,2-TCA) (1.3 ppb vs. 1 ppb groundwater standard), methyl-tertiary-butyl-ether (MTBE) (29 ppb vs. 10 ppb groundwater standard), and methylene chloride (5.4 ppb vs. 5 ppb groundwater standard). The following SVOCs were identified at concentrations that exceed the Ambient Water Quality Standards for groundwater (AWQS): benzo(a)anthracene (0.017 ppb) at a concentration exceeding its AWQS of 0.002 ppb; this may be an artifact of suspended solids in the sample. PFOS was detected at concentrations ranging from 7.68 72.3 parts per trillion (ppt); one sample exceeded the Environmental Protection Agency s (EPA) lifetime health advisory level (HAL) of 70 ppt., and several samples exceeded the New York Drinking Water Quality Council s proposed maximum contaminant level (MCL) of 10 ppt. Perfluorooctanoic acid (PFOA), another emerging contaminant, was detected in site groundwater at concentrations ranging from 7.27-35.7 ppt; these concentrations are below the EPA HAL of 70 ppt, but above the NYS proposed MCL of 10 ppt. No pesticides or PCBs were detected in any of the groundwater samples. None of the metal contaminants of concern were above the AWQS in any of the groundwater samples. Based on the on-site groundwater investigation, there is a potential for contamination to migrate off-site. Soil Vapor - Elevated levels of chlorinated volatile organic compounds (CVOCs) including, tetrachloroethene (PCE) (45 200 micrograms per cubic meter (ug/m3)), carbon tetrachloride (41 630 ug/m3), trichloroethylene (TCE) (31 810 ug/m3), cis-1,2-dichloroethene (13 - 110 ug/m3), were identified in soil vapor samples collected from the site. Recent soil vapor data was available for an adjacent property on Garden Street with lower detections of CVOCs than the site soil vapor results, indicating that the vapor contamination has likely migrated off-site. "

Health Problem: "Removal of contaminated soil and treatment of groundwater is complete, but low levels of contaminants remain in groundwater. Groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is

COTTAGE-GARDEN AUTO REPAIR SITE (Continued) **S127282799**

similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for inhalation of site contaminants due to soil vapor intrusion will be evaluated for any buildings on the site with actions taken to address exposures. An evaluation has determined that soil vapor intrusion is not a concern for off-site buildings."

Name: COTTAGE-GARDEN AUTO REPAIR SITE
Address: 20 GARDEN ST., 26 GARDEN ST. AND 10 COTTAGE PLACE
City,State,Zip: NEW ROCHELLE, NY 10801
Site Code: 574524
Control Name: Monitoring Plan
HW Code: C360180
Control Code: 31
Control Type: INST
Dt record added: 12/18/2020
Dt rec updated: 12/31/2020
Updated By: JEBROWN
Site Code: 574524
Site Description: "Site Location: The site is located at 20 and 26 Garden Street and 10 Cottage Place in a commercial and residential area of New Rochelle, New York. Residential development is present along Cottage Place, which borders the northeast side of the site; commercial development is present along Garden Street, which borders the southeast side of the site. Interstate I-95 runs along the west side of the site. Site Features: The site consists of five tax parcels and one partial parcel totaling approximately 0.988 acre. The site was historically occupied by four commercial buildings and one residential building. All on-site buildings were demolished between late 2017 and mid-2018. The site is currently under redevelopment. Current Zoning and Land Use: The site is currently located in the Neighborhood Business District (NB District). Allowable uses in NB Districts include business, professional, or governmental offices, retail stores, dry cleaners, banks, restaurants, houses of worship, animal hospitals, and dwelling units located on or above the second floor only. The site has been most recently used for a variety of commercial and residential uses, including appliance retail, vehicle and tire repair, parking, and an apartment building. The site is currently vacant. All prior buildings were demolished by the BCP applicant upon acquisition in 2017. Past Use of the Site: The lots were historically comprised of four commercial buildings, one residential building, and asphalt parking lots. The residential parcel was constructed in the early 1990s, with conversion to multiple apartments over the years. The remaining commercial buildings have been used as a kitchen and

COTTAGE-GARDEN AUTO REPAIR SITE (Continued) **S127282799**

bath dealer, warehouses, retail tire and auto repair facility, a gasoline station with tanks that were closed in place in 2001, and various other commercial, retail, and light manufacturing uses. The auto repair facility, former plastic works manufacturing and/or metal stripping company on the site were likely responsible for the volatile organic compounds (VOCs) and metals contamination. Site Geology and Hydrogeology: The subsurface conditions consist of brown to gray fine to coarse sand, mixed with traces of silt and gravel to depths 20 to 24 ft below ground surface (bgs). Fractured bedrock was encountered on the eastern side of the site at approximately 21 ft bgs. The subsurface conditions of the region do not exhibit unusual geologic conditions to the subject property or to adjoining site properties. The subject parcels are connected to the public water supply system and the property uses the public sewage treatment system for the sanitary waste disposal. Groundwater was encountered at depths of approximately 15 ft to 18 ft bgs in soil borings. Groundwater flows to the west across the site."

Env Problem: "Remediation at the site is complete. Prior to remediation,the primary contaminants of concern include VOCs, metals, and polycyclic aromatic hydrocarbons (PAHs) in soil; VOCs and PFAS in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Residual contamination in groundwater and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for Target Compound List (TCL) and Target Analyte List (TAL) plus 30 tentatively identified compounds (TICs), Total Petroleum Hydrocarbons (TPH), cyanide, hexavalent chromium, and the emerging contaminants PFAS and 1,4-dioxane. Soil vapor samples were analyzed for volatile organic compounds (VOCs). Based on investigations conducted to date, the primary contaminants of concern include VOCs, metals, and polycyclic aromatic hydrocarbons (PAHs) in soil; VOCs and PFAS in groundwater; and VOCs in soil vapor. Soil The following PAHs were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs): benzo[a]anthracene (2 parts per million (ppm) vs. USCO of 1 ppm), benzo[b]fluoranthene (1.2 3.2 ppm vs. USCO of 1 ppm), benzo(k)fluoranthene (1.3 ppm vs. USCO of 0.8 ppm), benzo(a)pyrene (1.2 2 ppm vs. USCO of 1 ppm), chrysene (1.2 2.3 ppm vs. USCO of 1 ppm), dibenzo(a,h)anthracene (0.4 ppm vs. USCO of 0.33 ppm) and indeno(1,2,3-cd)pyrene (0.56 1.6 ppm vs. USCO of 0.5 ppm). The depth of PAH impacts is within the top 3 ft below ground surface (bgs). The following metals were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCO): barium (396 ppm vs. USCO of 350 ppm), cadmium (7.6 22.9 ppm vs. USCO of 2.5 ppm), copper (95.8 227 ppm), lead (68.9 1900 ppm vs. USCO of 63 ppm), mercury (0.23 5 ppm vs. USCO of 0.18 ppm), nickel (39 252 ppm vs. USCO of 30 ppm), and zinc (115 706 ppm vs. USCO of 109 ppm). The depth of metals exceeding their respective USCOs ranged from 1.5 feet to 24 feet bgs. Perfluorooctanesulfonic acid (PFOS), an emerging contaminant, was detected in site soils at concentrations ranging from 0.72-4.18 parts per billion (ppb). No exceedances of the VOCs or PCB SCOs were identified in any of the soil samples collected. Based on the on-site soil investigation, it does not appear that soil contamination is migrating off-site. Groundwater - The following VOCs were identified at concentrations that exceed the Ambient Water Quality Standards for groundwater (AWQS): trichloroethene (TCE) (8.8 9.8 parts per billion (ppb) vs. 5 ppb groundwater standard) and benzene (1.1 ppb vs. 1 ppb

COTTAGE-GARDEN AUTO REPAIR SITE (Continued) **S127282799**

groundwater standard) 1,1,2-trichloroethane (1,1,2-TCA) (1.3 ppb vs. 1 ppb groundwater standard), methyl-tertiary-butyl-ether (MTBE) (29 ppb vs. 10 ppb groundwater standard), and methylene chloride (5.4 ppb vs. 5 ppb groundwater standard). The following SVOCs were identified at concentrations that exceed the Ambient Water Quality Standards for groundwater (AWQS): benzo(a)anthracene (0.017 ppb) at a concentration exceeding its AWQS of 0.002 ppb; this may be an artifact of suspended solids in the sample. PFOS was detected at concentrations ranging from 7.68 72.3 parts per trillion (ppt); one sample exceeded the Environmental Protection Agency s (EPA) lifetime health advisory level (HAL) of 70 ppt., and several samples exceeded the New York Drinking Water Quality Council s proposed maximum contaminant level (MCL) of 10 ppt. Perfluorooctanoic acid (PFOA), another emerging contaminant, was detected in site groundwater at concentrations ranging from 7.27-35.7 ppt; these concentrations are below the EPA HAL of 70 ppt, but above the NYS proposed MCL of 10 ppt. No pesticides or PCBs were detected in any of the groundwater samples. None of the metal contaminants of concern were above the AWQS in any of the groundwater samples. Based on the on-site groundwater investigation, there is a potential for contamination to migrate off-site. Soil Vapor - Elevated levels of chlorinated volatile organic compounds (CVOCs) including, tetrachloroethene (PCE) (45 200 micrograms per cubic meter (ug/m3)), carbon tetrachloride (41 630 ug/m3), trichloroethylene (TCE) (31 810 ug/m3), cis-1,2-dichloroethene (13 - 110 ug/m3), were identified in soil vapor samples collected from the site. Recent soil vapor data was available for an adjacent property on Garden Street with lower detections of CVOCs than the site soil vapor results, indicating that the vapor contamination has likely migrated off-site. "

Health Problem: "Removal of contaminated soil and treatment of groundwater is complete, but low levels of contaminants remain in groundwater. Groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for inhalation of site contaminants due to soil vapor intrusion will be evaluated for any buildings on the site with actions taken to address exposures. An evaluation has determined that soil vapor intrusion is not a concern for off-site buildings."

Name: COTTAGE-GARDEN AUTO REPAIR SITE
Address: 20 GARDEN ST., 26 GARDEN ST. AND 10 COTTAGE PLACE
City,State,Zip: NEW ROCHELLE, NY 10801
Site Code: 574524
Control Name: Environmental Easement
HW Code: C360180
Control Code: J
Control Type: INST
Dt record added: 12/18/2020
Dt rec updated: 12/31/2020
Updated By: JEBROWN
Site Code: 574524
Site Description: "Site Location: The site is located at 20 and 26 Garden Street and 10 Cottage Place in a commercial and residential area of New Rochelle, New York. Residential development is present along Cottage Place, which borders the northeast side of the site; commercial development is present along Garden Street, which borders the southeast side of the site. Interstate I-95 runs along the west side of the site. Site Features: The site consists of five tax parcels and one partial parcel totaling approximately 0.988 acre. The site was historically

COTTAGE-GARDEN AUTO REPAIR SITE (Continued) **S127282799**

occupied by four commercial buildings and one residential building. All on-site buildings were demolished between late 2017 and mid-2018. The site is currently under redevelopment. Current Zoning and Land Use: The site is currently located in the Neighborhood Business District (NB District). Allowable uses in NB Districts include business, professional, or governmental offices, retail stores, dry cleaners, banks, restaurants, houses of worship, animal hospitals, and dwelling units located on or above the second floor only. The site has been most recently used for a variety of commercial and residential uses, including appliance retail, vehicle and tire repair, parking, and an apartment building. The site is currently vacant. All prior buildings were demolished by the BCP applicant upon acquisition in 2017. Past Use of the Site: The lots were historically comprised of four commercial buildings, one residential building, and asphalt parking lots. The residential parcel was constructed in the early 1990s, with conversion to multiple apartments over the years. The remaining commercial buildings have been used as a kitchen and bath dealer, warehouses, retail tire and auto repair facility, a gasoline station with tanks that were closed in place in 2001, and various other commercial, retail, and light manufacturing uses. The auto repair facility, former plastic works manufacturing and/or metal stripping company on the site were likely responsible for the volatile organic compounds (VOCs) and metals contamination. Site Geology and Hydrogeology: The subsurface conditions consist of brown to gray fine to coarse sand, mixed with traces of silt and gravel to depths 20 to 24 ft below ground surface (bgs). Fractured bedrock was encountered on the eastern side of the site at approximately 21 ft bgs. The subsurface conditions of the region do not exhibit unusual geologic conditions to the subject property or to adjoining site properties. The subject parcels are connected to the public water supply system and the property uses the public sewage treatment system for the sanitary waste disposal. Groundwater was encountered at depths of approximately 15 ft to 18 ft bgs in soil borings. Groundwater flows to the west across the site."

Env Problem: "Remediation at the site is complete. Prior to remediation,the primary contaminants of concern include VOCs, metals, and polycyclic aromatic hydrocarbons (PAHs) in soil; VOCs and PFAS in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Residual contamination in groundwater and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for Target Compound List (TCL) and Target Analyte List (TAL) plus 30 tentatively identified compounds (TICs), Total Petroleum Hydrocarbons (TPH), cyanide, hexavalent chromium, and the emerging contaminants PFAS and 1,4-dioxane. Soil vapor samples were analyzed for volatile organic compounds (VOCs). Based on investigations conducted to date, the primary contaminants of concern include VOCs, metals, and polycyclic aromatic hydrocarbons (PAHs) in soil; VOCs and PFAS in groundwater; and VOCs in soil vapor. Soil The following PAHs were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCOs): benzo[a]anthracene (2 parts per million (ppm) vs. USCO of 1 ppm), benzo[b]fluoranthene (1.2 3.2 ppm vs. USCO of 1 ppm), benzo(k)fluoranthene (1.3 ppm vs. USCO of 0.8 ppm), benzo(a)pyrene (1.2 2 ppm vs. USCO of 1 ppm), chrysene (1.2 2.3 ppm vs. USCO of 1 ppm), dibenzo(a,h)anthracene (0.4 ppm vs. USCO of 0.33 ppm) and indeno(1,2,3-cd)pyrene (0.56 1.6 ppm vs. USCO of 0.5 ppm). The depth

COTTAGE-GARDEN AUTO REPAIR SITE (Continued) **S127282799**

of PAH impacts is within the top 3 ft below ground surface (bgs). The following metals were identified at concentrations that exceed their Unrestricted Soil Cleanup Objectives (USCO): barium (396 ppm vs. USCO of 350 ppm), cadmium (7.6 22.9 ppm vs. USCO of 2.5 ppm), copper (95.8 227 ppm), lead (68.9 1900 ppm vs. USCO of 63 ppm), mercury (0.23 5 ppm vs. USCO of 0.18 ppm), nickel (39 252 ppm vs. USCO of 30 ppm), and zinc (115 706 ppm vs. USCO of 109 ppm). The depth of metals exceeding their respective USCOs ranged from 1.5 feet to 24 feet bgs. Perfluorooctanesulfonic acid (PFOS), an emerging contaminant, was detected in site soils at concentrations ranging from 0.72-4.18 parts per billion (ppb). No exceedances of the VOCs or PCB SCOs were identified in any of the soil samples collected. Based on the on-site soil investigation, it does not appear that soil contamination is migrating off-site. Groundwater - The following VOCs were identified at concentrations that exceed the Ambient Water Quality Standards for groundwater (AWQS): trichloroethene (TCE) (8.8 9.8 parts per billion (ppb) vs. 5 ppb groundwater standard) and benzene (1.1 ppb vs. 1 ppb groundwater standard) 1,1,2-trichloroethane (1,1,2-TCA) (1.3 ppb vs. 1 ppb groundwater standard), methyl-tertiary-butyl-ether (MTBE) (29 ppb vs. 10 ppb groundwater standard), and methylene chloride (5.4 ppb vs. 5 ppb groundwater standard). The following SVOCs were identified at concentrations that exceed the Ambient Water Quality Standards for groundwater (AWQS): benzo(a)anthracene (0.017 ppb) at a concentration exceeding its AWQS of 0.002 ppb; this may be an artifact of suspended solids in the sample. PFOS was detected at concentrations ranging from 7.68 72.3 parts per trillion (ppt); one sample exceeded the Environmental Protection Agency s (EPA) lifetime health advisory level (HAL) of 70 ppt., and several samples exceeded the New York Drinking Water Quality Council s proposed maximum contaminant level (MCL) of 10 ppt. Perfluorooctanoic acid (PFOA), another emerging contaminant, was detected in site groundwater at concentrations ranging from 7.27-35.7 ppt; these concentrations are below the EPA HAL of 70 ppt, but above the NYS proposed MCL of 10 ppt. No pesticides or PCBs were detected in any of the groundwater samples. None of the metal contaminants of concern were above the AWQS in any of the groundwater samples. Based on the on-site groundwater investigation, there is a potential for contamination to migrate off-site. Soil Vapor - Elevated levels of chlorinated volatile organic compounds (CVOCs) including, tetrachloroethene (PCE) (45 200 micrograms per cubic meter (ug/m3)), carbon tetrachloride (41 630 ug/m3), trichloroethylene (TCE) (31 810 ug/m3), cis-1,2-dichloroethene (13 - 110 ug/m3), were identified in soil vapor samples collected from the site. Recent soil vapor data was available for an adjacent property on Garden Street with lower detections of CVOCs than the site soil vapor results, indicating that the vapor contamination has likely migrated off-site. "

Health Problem: "Removal of contaminated soil and treatment of groundwater is complete, but low levels of contaminants remain in groundwater. Groundwater at the site is not used for drinking or other purposes and the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for inhalation of site contaminants due to soil vapor

COTTAGE-GARDEN AUTO REPAIR SITE (Continued) **S127282799**

intrusion will be evaluated for any buildings on the site with actions taken to address exposures. An evaluation has determined that soil vapor intrusion is not a concern for off-site buildings."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:

Name:	CHURCH-DIVISION STREET, TOWER A
Address:	26 SOUTH DIVISION STREET
City,State,Zip:	NEW ROCHELLE, NY 10805
Program:	BCP
Site Code:	582599
Acres:	0.992
HW Code:	C360187
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	02/22/2019
Record Updated Date:	12/30/2020
Update By:	AMSERVIS
Site Description:	"Site Location: The site is located at 26 South Division Street in the City of New Rochelle, Westchester County, New York, on a 0.992-acre lot that is bounded on the west by South Division Street and on the east by Church Street. The site is parcel 2-414-0008. Site Features: The site is currently vacant and formerly housed part of a 62,500 square foot municipal parking garage. The parking garage was demolished in 2018. The site is currently undergoing redevelopment construction. Current Zoning and Land Use: The site is zoned DO-2 (Downtown Overlay Zone District) which allows for mixed-use apartment style residential and commercial applications. The property is located between a mixed-use commercial area to the north and single-family residential neighborhood the south. Past Use of the Site: The site was historically occupied from 1891 until 1952 by an auto garage which included a tire repair center as well as several upholsterers. The remaining structures on-site included an apartment building, fur vault, and a Salvation Army store, until the site was developed as a municipal parking garage from 1972 until 2018. Prior to remediation, the primary contaminants of concern included metals and polycyclic aromatic hydrocarbons (PAHs) in soil. Site Geology and Hydrogeology: Prior to the completion of the IRM, site soils consisted of a fill layer which ranges from 6 to 10 feet in depth underlain by a sandy silt layer which extends to weathered bedrock. Fill material consists of sand and silt with varying amounts of gravel, concrete, brick and asphalt. Bedrock was encountered at depths ranging between 8 and 14 feet below grade original grade. Groundwater flows in a southeasterly direction towards the New Rochelle Harbor, approximately 2,000 feet away. Groundwater depth ranges from 9.6 to 12.2 feet below grade original grade. All site soils were removed under the Interim Remedial Action (IRM) for the site. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern include metals and polycyclic aromatic hydrocarbons (PAHs) in soil, and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Completion of Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals, total petroleum hydrocarbons (TPH), cyanide, hexavalent chromium, and the emerging contaminants perfluorooctanesulfonic acid (PFOS), perfluorooctanoic acid (PFOA)

CHURCH-DIVISION STREET, TOWER A (Continued) **S123658107**

and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. Based on investigations conducted to date, prior to the IRM, the primary contaminants of concern include metals and polycyclic aromatic hydrocarbons (PAHs) in soil, and VOCs in soil vapor. Soil: Prior to the completion of the IRM, 48 subsurface samples were taken at 10 locations down to bedrock from depths up to 13 feet. Several PAHs, metals, pesticides, PCBs, and one VOC (acetone) were identified at concentrations that exceeded their unrestricted soil cleanup objectives (USCOs). The following compounds were found to have USCO exceedances: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-c,d)pyrene, barium, cadmium, copper, lead, mercury, nickel, zinc, DDD, DDE, DDT, PCBs, and acetone. PFOS was reported in one sample at 1.41 parts per billion (ppb). Remedial actions as part of the IRM have successfully achieved soil cleanup objectives for unrestricted use. There is no indication that site-related soil contamination extends off-site. Groundwater: Prior to the completion of the IRM, three temporary monitoring wells, located across the site, were sampled. The metals iron, magnesium, manganese, and sodium exceeded groundwater standards in all wells, and one well also exhibited total and dissolved nickel concentrations of 128.9 parts per billion (ppb) and 120.1 ppb, respectively, compared to a groundwater standard of 100 ppb. Another well exhibited a dissolved antimony concentration of 4.06 ppb compared to the standard of 3 ppb. One well contained low-level estimated concentrations of SVOCs at the method detection limit (MDL) and as such their concentration could not be accurately quantified. The SVOC and metals concentrations found in site groundwater are representative of typical urban background conditions associated with the presence of historic fill, are naturally occurring and/or are due to road salt application. The IRM is complete and has removed all soils above bedrock and thus any possible source material for continued groundwater contamination. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 41.6 and 51.2 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for each. Since all soil above bedrock has been removed, the sample containing a low level of PFOS has been excavated, there are no potential on-site sources of PFOA and PFOS remaining, and no potential for PFOA/PFOS contamination to migrate off-site remains. Additionally, the area is served by municipal water. Soil Vapor During a 2018 site assessment, elevated levels of chlorinated volatile organic compounds (CVOCs) were detected in on-site soil vapor samples. Tetrachloroethylene (PCE) and trichloroethene (TCE) were found at 437 and 80.6 micrograms per cubic meter (ug/m3) respectively at the center of the site. During the 2019 remedial investigation, soil vapor sampling along the perimeter of the site found PCE ranging from 3.53 to 27 ug/m3, with no detections of TCE. No detections of CVOCs were identified in on-site soils or groundwater. Since the PCE soil vapor concentration at the center of the site was one to two orders of magnitude higher than near the perimeter, there was likely an unidentified source of CVOCs in unsaturated soils near the center of the site. However, the complete excavation of soils down to bedrock across the entire site as part of the IRM, removed any potentially impacted soils in the unsaturated zone, and has addressed potential soil vapor intrusion concerns for any future buildings constructed on-site, as well as the potential migration of soil vapor off-site. "

CHURCH-DIVISION STREET, TOWER A (Continued) **S123658107**

Health Problem:	"People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by site related contamination. Since all soil at the site was removed to bedrock and replaced with clean fill, people are not expected to come in contact with contaminated soil. In addition, soil vapor intrusion is no longer expected to be a potential concern for on-site or offsite buildings. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Piping failure, need to repair and retest - mm 02/20/2009 Passed retest results that came into PBS to J. O'Dee---BHY 3/3/09: Review of report submitted by WCC Tank Technology. Tank was tested by WCC on 1-9-09 for the property owner. The tank passed the test and documentation was submitted to the owner and the New Rochelle FD. Elite Environmental tested the tank for a prospective buyer on 2-6-09 and failed the tank, resulting in this spill report to the DEC. On 2-12-09 WCC again tested the tank with reps from New Rochelle FD and Royal Environmental. The tank passed this test. All three tests were preformed with the Horner Locator Plus system. Based upon the information received as of this date, DEC is requiring No Further Action at this time. jod"
Remarks:	"550 gal tank failed test/ failure due to bad fitting"

FINDS:
Registry ID: 110002092967

Click Here:

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

RUSH MFG CORP (Continued) **1000238316**

transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Town:	New Rochelle (c)
Record Added Date:	12/29/2005
Record Updated Date:	06/15/2021
Update By:	KJCARPEN
Site Description:	"Location: The Schmuckler s Dry Cleaners site is located in an urban area located at 258-364 North Avenue in New Rochelle, Westchester County. The site is 0.21 acres, most of which is covered by a two-story row building with a full basement. Site Features: Site Features: In addition to the former dry cleaners, historically located on the first floor, the site also includes an enclosed backyard area to the immediate west of the building. The backyard consists of lawn, elevated planting beds, concrete pad, and a paved walkway. Current Zoning/Use(s): The site is commercially zoned, and currently has five commercial tenants occupying both the first and second floors. Properties along North Avenue are predominantly zoned for commercial or mixed use, some maintaining residential apartments above. Commercial uses dominate areas within one block east and west of North Avenue with the exception of a multi-unit residential building immediately to the west of the site. Drinking water on-site is provided from a municipal source. Past Uses of the Site: The building on-site was built in 1891, and operated by Schmuckler s Cleaners from 1914 to 2006 on the first floor and basement of the building. Additions were added to the building in 1937, and two in

SCHMUCKLER'S DRY CLEANERS (Continued) **S107787044**

1987. The site was acquired by the Volunteer, HNJ Realty, LLC, in August 2005, and entered into the Brownfield Cleanup Program in June 2006. Site Geology and Hydrogeology: The site is underlain by fill which is underlain by poorly sorted glacial material (silty-clay with sand and gravel). The highly weathered bedrock surface is between 9 and 13 feet below ground surface at site. Groundwater was encountered between 9 to 12 feet below site. Bedrock groundwater flows to the southeast. Only two overburden wells onsite have produced water, therefore a groundwater flow direction in overburden cannot be determined. It is assumed that it flows in the same basic southeast direction as the bedrock groundwater. "

Env Problem:

"Based on the investigations conducted to date, the which included the analysis for volatile organic and semi-volatile organic compounds (VOCs and SVOCs), inorganics, polychlorinated bi-phenols (PCBs) and pesticides in soil and groundwater and VOCs in soil vapor, the primary contaminants of concern at the site are chlorinated volatile organic compounds (VOCs), primarily tetrachloroethylene (PCE) and its breakdown compounds, in soils, groundwater, sub-slab vapor, and soil gas; petroleum-related VOCs in soils, groundwater, sub-slab vapor, and soil gas; and semi-volatile organic compounds (SVOCs) in groundwater. In August 2015 an in situ pilot test was performed to assess potential remedial effectiveness of an enhanced biological product. Prior to the pilot injection, the test well contained 27,000 parts per billion (ppb) of PCE, 960 ppb of trichloroethylene (TCE), 2,100 ppb of cis-1,2-dichloroethylene (DCE) and 49 ppb of vinyl chloride (VC). Post injection levels after two months were 8,100 ppb of PCE, 11,000 ppb of TCE, 1,500 ppb of cis-1,2-DCE, and 53 ppb of VC. The decrease in PCE concentrations, coupled with the increase in degradation products, indicate that the breakdown of contaminants (dechlorination) is occurring. SVOC concentrations also decreased in the test well after the pilot. For example phenanthrene levels dropped from 78 ppb to 3.7 ppb two months after the pilot injection. An expansion of the pilot test using the same enhanced biological product was performed in October 2017. This time, the injections occurred in five wells in the basement and outside the building, while monitoring occurred in six wells located around the site. In July 2017, prior to the expansion of the expanded test, the highest concentration of PCE was 17,000 ppb, TCE was 2,100 ppb, cis-1,2-DCE was 1,600 ppb, and VC was 73. Two months after the injections, in December 2017, the concentrations of contaminants in the same well were: 1,300 ppb PCE, 17,000 ppb TCE, 1,900 ppb cis-1,2-DCE, and 61 ppb VC. The highest concentration of SVOCs during the pilot expansion was phenanthrene which dropped from 2,000 ppb to 540 ppb two months after the injection event. In addition, approximately 40-gallons of LNAPL have been collected to date just off-site in the southeast, downgradient direction using both bailers and a sorbent recovery socks left in the well in between monitoring/bailing events. Soils: Tetrachloroethylene (PCE), trichloroethene (TCE), and multiple petroleum related VOCs were detected in onsite soils underneath the building slab. The highest concentration of PCE at 210 parts per million (ppm), exceeding restricted commercial soil cleanup objectives (SCOs), was located underneath the former dry cleaning equipment room. Other contaminants detected in soils only exceeded the Protection of Groundwater SCOs. These exceedences were largely in soils located downgradient of the dry cleaning equipment room and consisted of: TCE at 1.3 ppm, cis-1,2 dichloroethene (cis-1,2-DCE) at 3 ppm, n-propylbenzene at 16 ppm, m+p xylenes at 15 ppm, ethylbenzene

SCHMUCKLER'S DRY CLEANERS (Continued) **S107787044**

at 6.6 ppm, 1,3,5-trimethylbenzene at 63 ppm, and 1,2,4-trimethylbenzene at 99 ppm. There is no indication of off-site soil contamination. Groundwater: Petroleum-based floating product (light non-aqueous phase liquid or LNAPL) was observed in groundwater under much of the on-site building slab, a maximum of 6 inches thick under the former dry cleaning equipment room. Also observed were very high concentrations of select VOCs also under the former drycleaning equipment room. The maximum detected PCE was 830,000 parts per billion (ppb), and TCE at 58,000 ppb. 25 individual VOCs were also detected in site groundwater samples exceeding NYS Class GA groundwater standards. These include the above-mentioned PCE, TCE, as well as other maximum detected concentrations of PCE breakdown products: cis-1,2-DCE at 8,700 ppb, and vinyl chloride at 28 ppb. BTEX was detected, with benzene at 62 ppb, toluene at 130 ppb, ethylbenzene at 150 ppb, m+p xylene at 520 ppb, and o-xylene at 290 ppb. Other significant concentrations of VOCs detected in groundwater include 1,3,5-trimethylbenzene at 890 ppb, and 1,2,4-trimethylbenzene at 840 ppb. Eight SVOCs were detected over groundwater standards in groundwater under the building slab, including napthalene at a concentration of 1300 ppb, phenanthrene at 2400 ppb, acenapthene at 710 ppb, and antracene at 280 ppb. Bedrock wells were installed off-site in the downgradient, sidegradient, and upgradient directions. Petroleum-based VOCs and SVOCs were detected in the bedrock aquifer at concentrations above groundwater standards. For VOCs, total maximum BTEX concentration of 722 ppb was detected in a downgradient bedrock well. 11 individual SVOC contaminants were detected over groundwater standards in the same downgradient off-site bedrock well, including naphthalene at 4100 ppb, phenanthrene at 2800 ppb, acenapthene at 710 ppb, and antracene at 300 ppb. The extent of groundwater contamination is concentrated underneath the on-site building slab, with petroleum-based VOC and SVOC contaminants and LNAPL extending off-site in the bedrock downgradient or southeast direction. Soil Gas/Soil Vapor: The high concentrations of PCE (787,000 ug/m3), TCE (15,200 ug/m3), cis-1,2-DCE (46,000 ug/m3), and Vinyl Chloride (34 ug/m3) in soil vapor under the slab of the on-site building required the installation and continuing operation of a combined soil vapor extraction and sub-slab mitigation system during a 2008-2013 Interim Remedial Measure (IRM) action. PCE (at 91 ug/m3) and TCE (13.4 ug/m3) were also detected in soil gas outside of the building near the location of a former drywell. Benzene (37 ug/m3), toluene (126 ug/m3), ethylbenzene (85 ug/m3), xylene (555 ug/m3), 1,3,5-trimethylbenzene (3 ug/m3), and 1,2,4-trimethylbenzene (14 ug/m3) were also detected in subslab vapor and soil gas. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. There are no special resources identified near the site. "

Health Problem: "People may contact contaminants in soil or groundwater if they dig below the surface or contact contaminated groundwater. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of the buildings, is referred to as soil vapor intrusion. A combination soil vapor extraction and sub-slab depressurization system was installed in the on-site building to

SCHMUCKLER'S DRY CLEANERS (Continued) **S107787044**

prevent vapors beneath the slab from entering the building. There is a potential for inhalation of site contaminants due to soil vapor intrusion at this building when the sub-slab depressurization system is turned off for a period of time during groundwater bioremediation injection treatments. Soil vapor intrusion sampling at one off-site building did not identify any soil vapor intrusion concerns for that building. However, the potential exists for inhalation of site contaminants due to soil vapor intrusion for other off-site buildings."

SCHMUCKLER'S DRY CLEANERS - OFF SITE (Continued) **S121933772**

HW Code:	C360088A
SWIS:	6010
Town:	New Rochelle (c)
Record Added Date:	06/13/2017
Record Updated Date:	10/26/2020
Update By:	KJCARPEN
Site Description:	"Location: This is the off-site component to Schmuckler s Dry Cleaners site which is located in an urban area at 258-364 North Avenue in New Rochelle, Westchester County. Site Features: This off-site investigation covers an approximately one city block area encompassing surrounding buildings and downgradient direction of groundwater flow. Current Zoning/Use(s): Properties along North Avenue are predominantly zoned for commercial or mixed use, some maintaining residential apartments above. Commerical uses dominate areas within one block east and west of North Avenue with the exception of a multi-unit residential building immediately to the west of the site. Drinking water on-site is provided from a municipal source. Past Uses of the Site: The area of the off-site includes multiple commercial and residential current and historical uses. Site Geology and Hydrogeology: The site is underlain by fill which is underlain by poorly sorted glacial material (silty-clay with sand and gravel). The highly weathered bedrock surface is between 9 and 13 feet below ground surface at site. Groundwater was encountered between 9 to 12 feet below site. Bedrock groundwater flows to the southeast. Only two overburden wells onsite have produced water, therefore a groundwater flow direction in overburden cannot be determined. It is assumed that it flows in the same basic southeast direction as the bedrock groundwater."
Env Problem:	"Chlorinated volatile organic compounds (CVOCs), Per- and polyfluoroalkyl substances (PFAS) and petroleum-related contaminants are associated with the on-site BCP at levels prompting an on-site significant threat determination. While on-site measures are planned to prevent contamination from leaving the site, contamination in groundwater was known to have migrated off site. Information, including but not limited to the nature and extent of contamination in soils, groundwater, indoor air and sub-slab vapor, will be revised as additional information becomes available. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

MONTEFIORE - NEW ROCHELLE HOSPITAL (Continued) **1000130172**

Waste Code:	D010
Waste Description:	SELENIUM
Waste Code:	D011
Waste Description:	SILVER
Waste Code:	D018
Waste Description:	BENZENE
Waste Code:	D022
Waste Description:	CHLOROFORM
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	P012
Waste Description:	ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE
Waste Code:	P105
Waste Description:	SODIUM AZIDE
Waste Code:	U010
Waste Description:	AZIRINO [2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-METHOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA, 8AALPHA, 8BALPHA)]- (OR) MITOMYCIN C
Waste Code:	U035
Waste Description:	BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL
Waste Code:	U044
Waste Description:	CHLOROFORM (OR) METHANE, TRICHLORO-
Waste Code:	U058
Waste Description:	2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE
Waste Code:	U059
Waste Description:	5,12-NAPHTHACENEDIONE,

MONTEFIORE - NEW ROCHELLE HOSPITAL (Continued) **1000130172**

8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

Waste Code: U150
Waste Description: L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN

Waste Code: U170
Waste Description: P-NITROPHENOL (I,T) (OR) PHENOL, 4-NITRO-

Waste Code: U188
Waste Description: PHENOL

Waste Code: U204
Waste Description: SELENIOUS ACID (OR) SELENIUM DIOXIDE

Environmental Interest/Information System:
COMPLIANCE AND EMISSIONS REPORTING
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ELECTRIC GENERATOR
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
