Schenectady, New York 12306-2014

Attn: Mr. Daniel R. Lightsey, P.E., Environmental Engineer

Re: Stratus (Tenneco) - North Albany Terminal Co. ("NATCO")
Green Island Terminal
Green Island, New York

Gentlemen:

We acknowledge receipt of your August 13, 2010 e-mail relative to the above site. Your e-mail was in response to our June 20, 2010 submittal of data for the site.

As previously reported, six (6) of the wells on the site have been used for weekly product recovery. The locations of these wells (MW-4, MW-5, MW-8, MW-9, MW-11 and MW-12) are shown on the attached Figure 1. Product measurement data, through May 19, 2010, have been previously submitted to the NYSDEC. In order to review more current data, measurements, from March 19 through August 26, 2010 only, are presented in Table Nos. 1 through 6, which are attached as Exhibit I. In addition, attached as Exhibit II are graphs of the product thickness versus time for these six (6) monitoring wells for this time period.

Significant depths of free product are generally confined to the area near the entrance gate to the facility; i.e., the west side of the property where monitoring well MW-12 is located. In addition, product thickness, during this five (5) month period, greater than 1.0-foot has also been found to be present in monitoring wells MW-4 and MW-11. Both of these wells also are located along the west side of the property. However, recent product thicknesses appear to have generally decreased.

In addition to the above gauging, product thickness measurements were recently performed on August 24 and August 26, 2010; i.e. 5-days following the previous vacuum truck extraction (August 19) and 1-day following an extraction (August 25). Product on these dates was only present

New York State Department of Environmental Conservation

Region 4

Attn: Mr. Daniel R. Lightsey, P.E., Environmental Engineer

September 21, 2010

Page 2

in monitoring wells MW-10, MW-11 and MW-12. Monitoring wells MW-4, MW-5, MW-8 and MW-9 also were gauged on these dates, however no measurable product was present in any of these wells. These data are as follows:

DATE	PRODUCT THICKNESS		
	MW-10	MW-11	MW-12
08-24-10	Trace	Trace	Trace
08-25-10	Extraction Event		
08-26-10	Not Measured	0.01	0.43

As indicated, the product thickness gauging has generally been performed on the day following the vacuum extraction of product. Therefore, these data indicate the 24-hour, or in some cases the 48-hour, recharge rate of the individual wells. As may be seen, from the data and graphs, significant recharge has not been occurring in any of the wells, except in monitoring well MW-12.

Based on this information, it is proposed that the weekly vacuum extraction of product from the six (6) wells, using a local vacuum truck, be discontinued. In lieu thereof, it is proposed that a mobile version of multi-phase extraction be applied on the site. It is proposed to employ the services of EcoVac Systems, Inc. of Woodstock, Georgia, who will furnish a specially designed truck-mounted vacuum and liquid handling system to perform "enhanced fluid recovery". High vacuum will be applied to multiple monitoring wells (MW-11, MW-4 and MW-5 individually or a combination thereof) with down hole apparatuses to control the fluid elevation in each well. Therefore, the vacuum will forcefully induce contaminant liquids and vapors to be simultaneously pulled into the extraction wells from the vadose zone, the capillary fringe and the saturated zone; i.e., mobile multi-phase extraction. Extracted contaminant liquids will be collected in the mobile transport unit, which has a capacity of about 2,700-gallons, and transported from the site for disposal. The impacted water will be transported as a special waste to Albany Tank Service in Selkirk, New York (a transfer facility) for off-site disposal, as is being done at the present time.

It is proposed to continue the gauging only of all accessible wells on the site on a bi-weekly, rather than a weekly basis. Further, it is proposed to conduct two (2) "enhanced fluid recovery" events spaced 1-month apart. Following the second event, the effectiveness will be evaluated and a decision made as to further action, if necessary, in order to close out the site. A report documenting the extraction events and the gauging will be prepared and submitted to the NYSDEC.

Your consideration of this proposal will be appreciated. NATCO would like to implement

Re: Site Assessment
Stratus (Tenneco) - North Albany Terminal Co. ("NATCO")
Green Island Terminal
Green Island, New York

Gentlemen:

We acknowledge receipt of your May 25, 2010 letter relative to the above site and completion of the delineation activities on the site.

As previously reported, six (6) of the wells on the site continue to be utilized for product recovery. The locations of these wells (MW-4, MW-5, MW-8, MW-9, MW-11 and MW-12) are shown on the attached Figure 1. A vacuum truck is utilized, on a weekly basis, to apply vacuum to these monitoring wells. The dates when the extractions were performed from April 21, 2008 through May 19, 2010 are presented in Table Nos. 1 through 6. These vacuum extraction events were conducted by Hydro-Tech Reclamation, Inc. The removed water/product mixture was transported to the ATS Transfer Facility in Selkirk, New York as non-hazardous waste for disposal.

The other wells (MW-1, 2, 3, 6, 7 and 10) were gauged monthly during this period. No free product was found to be present in any of these wells except MW-10. The thickness of product present in this well did not exceed 0.01-feet, except in September and November 2009. The respective thicknesses in these months were 0.75 and 0.08-feet. These data were previously submitted to your office.

The thickness of the free product in each of these six (6) wells has been plotted for the period from May 21, 2009 through May 19, 2010, the latest one (1) year period available. These graphs are attached as Exhibit I. Although some variation is shown in the thickness of free product in each of

Page 2

these wells over time, the general trend is downward. At the time of the last measurement, May 19, 2010, the thickness of the product in each of these six (6) wells was 0.01-feet, except in monitoring well MW-12. The product thickness in MW-12 was 0.02-feet.

In addition, the depth to water in the well at the time of the measurement of the thickness of the product also is shown on the graph for each well. There appears to be some correlation between the depth to groundwater and the presence of free product. For instance, the depth to water in MW-4 dropped at the end of March 2010 (i.e., the groundwater rose at that time). The depth of free product subsequently rose briefly {1 (one) sampling event] at the end of April 2010. Similar correlations are observed on the charts prepared for MW-8, MW-11 and MW-12.

The gage height of the Hudson River at Green Island also was obtained in order to determine whether or not river level had an impact on the depth of product present in the wells. Only 120 days of record could be obtained from the U.S. Geological Survey web site. This information is presented in Exhibit II. It may be seen that the river was particularly high around March 27, 2010. This rise in River stage is reflected in the depth to water measurements discussed above. Since the depth to water in the monitoring/extraction wells is directly related to the River stage, which also is related to antecedent rainfall, the River stage appears to have an affect on the thickness of product in the wells on the site. Further, stage data might be helpful in further examining this aspect.

As indicated in the attached tables and graphs, the depth to water and/or product in these wells is generally 25-feet or greater. Further, the product thickness has been reduced significantly over the past several years and further vacuum extraction is unlikely, in our opinion, to significantly reduce the product residual. Therefore, it is requested that the NYSDEC give consideration to closing this site. Future use of this site is unknown, however development of the site is unlikely to be affected by the residual product.

Your consideration of this request will be appreciated. If you have any questions or require further information, please contact us at your convenience.

Sincerely yours,

SHIFRIN & ASSOCIATES, INC.

Re: Site Assessment
Stratus (Tenneco) - North Albany Terminal Co. ("NATCO")
Green Island Terminal
Green Island, New York

Gentlemen:

A site assessment of the former bulk petroleum storage facility located at One Osgood Avenue in Green Island, New York was performed in accordance with the October 16, 2008 work plan, prepared by this office. This assessment was completed in order to satisfy the requirements contained in *DER-11 Procedures for Licensing Onshore Major Oil Storage Facilities*, Appendix B - Attachment 3(d), Section 4 - Closure of Facility, Subsection a - Site Assessment. A report dated August 26, 2009 was prepared and submitted to your office. Following your review, additional soil borings were requested by e-mail on November 17, 2009.

The requested soil borings located around borings S-8 and S-17 have been completed. On January 12, 2010, Randy Spencer, of this office, mobilized on the site with a drilling crew from Aquifer Drilling Company ("ADC") of Troy, New York. ADC furnished a Geoprobe® Model 6610 direct-push soil sampling machine. The drilling equipment was track mounted and furnished with a 5-foot long macro-core sampler. Mr. Dan Lightsey/NYSDEC was on-site on January 12 as the investigations commenced.

As shown on the attached Figure 1, four (4) borings were initially advanced around each of the above locations; i.e., S-8 and S-17. These locations were spaced at 90-degrees on a 25-foot radius around the original boring locations as indicated in the original work plan, which was approved by your office. These borings were lettered "A" through "D" in a clockwise direction from north of the original boring.

Analytical Results

The results of the analyses of the additional soil samples are presented in a January 27, 2010 AES report (Work Order No. 100114031). A copy of this report and the chains of custody are attached as Exhibit II. The data from this report have been tabulated and are presented in the following tables:

1. Results of Analyses of Soil Samples - Volatile Organic Compounds (3 pages)
2. Results of Analyses of Soil Samples - Semi-Volatile Organic Compounds (3 pages)

For comparative purposes, the NYSDEC TAGM 4046 Soil Cleanup Objectives have been included in the appropriate tables.

No exceedances of the TAGM 4046 cleanup objectives for specific VOCs in the soil samples collected from any of the borings were exhibited, except in S-8D and S-17C (Table No. 1). In these samples, the target levels for total xylenes (S-8D and S-17C) and benzene (S-8D) were exceeded. In each of these three (3) samples, the total VOC cleanup objective of 10 mg/kg also was exceeded. In the samples collected from S-8C and S-8C(2), none of the individual analytes exceeded their cleanup targets, however the total VOC cleanup objective of 10 mg/kg was exceeded in both of these samples.

The concentrations of SVOCs exceeded the TAGM 4046 cleanup objectives only in soil samples collected from S-17A (5 - 10-feet bgs) and S-17C(2)(20 to 25-feet bgs). The analytes exceeding the cleanup objectives are benzo(a)anthracene, chrysene and benzo(a) pyrene. In addition, the concentration of benzo(a)anthracene slightly exceeded the cleanup objective in the soil sample collected from S17D(4) at a depth of 5 to 10-feet bgs.

For comparative purposes, all of the data collected from the areas of concern; i.e., S-8 and S-17, have been tabulated in Table Nos.3 through 6, inclusive. The data have been separated into VOCs and SVOCs for each area and include the data developed in December 2008.

In Table No. 3, the VOC data for S-17 and the surrounding borings are presented. Review of this table shows that there were no exceedances of the cleanup target levels for any of these compounds in S-17. The only VOC concentrations greater than the cleanup criteria are total xylenes and total volatile organic compounds in S-17C at a depth of 3 to 5-feet bgs. On the other hand, as shown in Table No. 4, a number of SVOCs were present at elevated concentrations in S-17 (0 to 5-feet bgs) in December 2008. In order to further delineate this contamination, nine (9) additional

February 25, 2010

Page 4

borings were advanced. The samples obtained from these borings had some exceedances of semi-volatile organic compounds - benzo(a)anthracene, chrysene and benzo(b)pyrene - however, all of these concentrations were significantly less than reported for S-17.

Table Nos. 5 and 6 present the results of the analyses of soil samples obtained from boring S-8 and the supplemental borings spaced around this location. As with the samples in the area of S-17, VOCs were generally found at concentrations less than the cleanup target level, except in boring S-8D (10 to 15-feet bgs) and the total VOCs in borings S-8C and S-8C(2). The samples in these later borings were collected at depths of 20 and 25-feet bgs, respectively. The relatively high concentration of n-propylbenzene in several of these samples impacts the total VOCs present. N-propylbenzene occurs naturally in petroleum and bituminous coal. Its presence on the site could be related to the fact that the site is largely composed of fill material.

Review of the data in Table No. 6 shows that the only elevated levels of semi-volatile organic compounds [benzo(a)anthracene, chrysene, benzo(b)fluoranthene and benzo(a)pyrene] were in the sample collected in December 2008 from boring S-8. All other concentrations of semi-volatile organic compounds are less than the cleanup objectives.

Free Product Removal

Vacuum extraction continues to be utilized to remove free product from the groundwater surface using the recovery/monitoring wells. A vacuum truck is utilized, on a weekly basis, to apply vacuum to monitoring wells MW-4, 5, 8, 9, 11 and 12, the locations of which are shown on Figure 1. The dates when the extractions were performed during the last two quarters of 2009 and the first month of 2010, as well as the volume of water/product extracted on each date, are shown in Table Nos. 7 and 8.. Thirty-one (31) vacuum extraction events were conducted by Hydro-Tech Reclamation, Inc. during this period. The removed water/product mixture (5,539 gallons during this period) was transported to ATS Transfer Facility in Selkirk, New York as non-hazardous waste for disposal. Copies of the manifests, which accompanied each shipment, are attached as Exhibit III.

The other wells (MW-1, 2, 3, 6, 7 and 10) were gauged monthly during this period. No free product was found to be present in any of these wells except MW-10. The thickness of product present in this well did not exceed 0.01-feet, except in September and November 2009. The respective thicknesses in these months were 0.75 and 0.08-feet.

The depth to water and the depth of free product were measured while on site to advance the soil borings described above. The data from this gauging event are presented in Table No. 9. Review of this table indicates that free product continues to regenerate in the same wells on the site

Page 5

as previously reported. A vacuum extraction event was scheduled to be performed on the day following the gauging.

Path Forward

As indicated above, exceedances of NYSDEC cleanup criteria have been reported for certain borings. Supplemental borings were drilled around borings S-8 and S-17 in accordance with the approved work plan and as directed by the NYSDEC. At this time, it is our opinion that additional bore holes are not necessary to further delineate the contaminants on the site. Your consideration of the data included herein and in prior reports is requested. Following your review, we would like to discuss the procedures required to move forward to obtain closure of this site.

Sincerely yours,

SHIFRIN & ASSOCIATES, INC.

Walter G. Shifrin, P.E., President

RE: Green Island Terminal

Dear Walter Shifrin:

Adirondack Environmental Services, Inc received 15 samples on 1/14/2010 for the analyses presented in the following report.

There were no problems with the analyses and all associated QC met EPA or laboratory specifications, except if noted.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

A handwritten signature in blue ink that appears to read "Tara Daniels".

Tara Daniels
Laboratory Manager

ELAP#: 10709
AIHA#: 100307

Qualifiers:
ND - Not Detected at the Reporting Limit
J - Analyte detected below quantitation limits
B - Analyte detected in the associated Method Blank
X - Value exceeds Maximum Contaminant Level

S - Spike Recovery outside accepted recovery limits
R - RPD outside accepted recovery limits
T - Tentatively Identified Compound-Estimated Conc.
E - Value above quantitation range

TERMS, CONDITIONS & LIMITATIONS

All service rendered by the **Adirondack Environmental Services, Inc.** are undertaken and all rates are based upon the following terms:

- (a) Neither **Adirondack Environmental Services, Inc.**, nor any of its employees, agents or sub-contractors shall be liable for any loss or damage arising out of **Adirondack Environmental Services, Inc.**'s performance or nonperformance, whether by way of negligence or breach of contract, or otherwise, in any amount greater than twice the amount billed to the customer for the work leading to the claim of the customer. Said remedy shall be the sole and exclusive remedy against **Adirondack Environmental Services, Inc.** arising out of its work.
- (b) All claims made must be in writing within forty-five (45) days after delivery of the **Adirondack Environmental Services, Inc.** report regarding said work or such claim shall be deemed or irrevocably waived.
- (c) **Adirondack Environmental Services, Inc.** reports are submitted in writing and are for our customers only. Our customers are considered to be only those entities being billed for our services. Acquisition of an **Adirondack Environmental Services, Inc.** report by other than our customer does not constitute a representation of Adirondack Environmental Services, Inc. as to the accuracy of the contents thereof.
- (d) In no event shall **Adirondack Environmental Services, Inc.**, its employees, agents or sub-contractors be responsible for consequential or special damages of any kind or in any amount.
- (e) No deviation from the terms set forth herein shall bind **Adirondack Environmental Services, Inc.** unless in writing and signed by a Director of **Adirondack Environmental Services, Inc.**
- (f) Results pertain only to items analyzed. Information supplied by client is assumed to be correct. This information may be used on reports and in calculations and **Adirondack Environmental Services, Inc.** is not responsible for the accuracy of this information.
- (g) Payments by credit card are subject to a 3% additional charge.
