November 2023

EXECUTIVE SUMMARY

Brydges Engineering in Environment and Energy (BE3) completed a Phase I Environmental Site Assessment (ESA) for 295 and 349 Colonie Street, in the City of Albany, Albany County, New York (refer to attached figures in **Appendix A**). The Phase I was completed for Albany Housing Authority, in support of a due diligence property acquisition.

The subject properties are located in the City of Albany less than half a mile southeast of the Tivoli Lake Preserve, less than a mile northwest of the Hudson River and approximately 1 mile northeast of Washington Park. The topography is relatively flat and sloping northeast. The subject properties are 174 feet above sea level and located at latitude 42º 39' 47.28" N; Longitude 73º 45' 17.43" W.

The Phase I Environmental Site Assessment was completed to meet the current Practice E 1527-21 (ASTM Standard). This Standard meets the Environmental Protection Agency (EPA) All Appropriate Inquiries (AAI) rule requirements. This Phase I ESA meets the EPA AAI rule requirements and the updated aspects of the newly revised 2021 ASTM ESA have been included in this Phase I ESA. The goal of the process established by the ASTM Standard is to identify, to the extent feasible pursuant to the ASTM process recognized environmental conditions relating to the property. The standard defines **Recognized Environmental Conditions (RECs)** as *"(1) the presence of hazardous substances or petroleum products in, on or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment."* A **Historical Recognized Environmental Condition (HREC)** is defined as "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities, without subjecting the property to any controls (for example activity and use limitations, or other property use limitations)." A **Controlled Recognized Environmental Condition (CREC)** is defined as "a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of controls (for example, activity and use limitations or other property use limitations)." The standard also identifies **De Minimis Conditions**, which generally do not present a threat to human health or the environment and would not be the subject of an enforcement action (i.e., not RECs or CRECs). The Non-Scope Considerations portion of the standard defines **Business Environmental Risks (BERs)** as a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate.

In addition, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions - ASTM E 2600-10 - was also followed regarding Tier 1 vapor intrusion screening. Tier 1 is an initial screening which primarily includes a database review within certain search radii of the subject properties to identify sites where the conditions are such that vapor intrusion may likely be an issue of concern in connection with the properties.

The Robert Whalen Apartments subject properties (295 Colonie SBL: 65.66-1-1 and 349 Colonie SBL: 65.66-1-3) span two rectangularly shaped parcels and total 4.1 acres. 295 Colonie Street property contains two 3-story apartment complexes (Buildings 275 and 285) and is 1.33 acres. 349 Colonie Street property contains four 3-story complexes (Buildings 295, 305, 315, and 325) and is 2.76 acres. The apartment complexes on both properties are surrounded by green space and asphalt parking. Both subject properties are currently under the ownership of Albany Housing Authority.

A review of historical street directories, aerial photographs and Sanborn maps indicate the subject properties were developed prior to 1892. Sanborn maps show clay pits surrounding the properties until 1935 and the addition of a drill tower owned by the Albany Fire Department. The earliest aerial photographs date back to 1942 and show the 349 Colonie Street subject property developed with several structures while 295 Colonie appears to be undeveloped and moderately forested. The Robert Whalen Apartments appear in aerial photographs in 1952 and have since remained relatively unchanged.

Historically, the surrounding area was mixed use commercial and residential. The area to the northeast remained undeveloped vacant land until the 1960's with the addition of roadways and residential housing. The areas to the south, east and west have remained relatively unchanged over time. Earliest records show the area as developed mixed use city use commercial and residential blocks. Several adjacent properties to the southwest across northern boulevard are historic auto sites or were entered into the US brownfields program due to petroleum impacts with institutional and engineering controls in place.

An additional detailed summary of the subject properties is covered in the body of the report.

Phase I ESA tasks included agency interviews, reconnaissance of the properties and general area, and a review of government and historical records.

A review of readily available government agency records was conducted by BE3 using the government records search firm, EDR. The following record was located on the subject properties:

- Albany Housing Whalen Home AHA – 305 Colonie Street – NY Spills/UST-Spill closed 12/7/94.

A spill (#9408660) of #4 fuel oil was reported in 1994 on the subject properties at 349 Colonie Street (Building 305). The volume of the spill is unknown. The 10,000-gallon fuel tank was removed from 305 Colonie in 1994.

A review of additional governmental records of surrounding properties within the ASTM radius indicated a total of one hundred and thirteen (113) database records within the radius completed for the area around the properties. The records included: one (1) NPL site; one (1) SEMS site; one (1) CORRACTS sites; one (1) RCRA-LQG site; three (3) RCRA-VSQG sites; four (4) NY SHWS sites; two (2) NY SWF/LF sites; eleven (11) NY LTANKS sites; six (6) NY UST sites; two (2) NY AST sites; three (3) NY ENG CONTROLS sites; three (3) NY INST CONTROLS sites; one (1) NY BROWNFIELDS site; one (1) NY ERP site; thirty (30) US BROWNFIELDS site; four (4) RCRA NonGen/NLR sites; two (2) FUDS sites; one (1) ROD site; nine (9) NY Spills sites; one (1) RCRA NonGen/NLR site; one (1) CONSENT site; one (1) FUSRAP site; one (1) FINDS site; one (1) ECHO site; eight (8) NY MANIFEST sites; one (1) PA MANIFEST site; one (1) EDR MGP site; eight (8) Historic Auto sites; and four (4) EDR Historic Cleaners sites.

Specific database findings in close proximity to the subject properties are as follows:

- Murphy's Garage – 229 Northern Boulevard – Historic Auto
- Arbor Hill Gateway – 334 Colonie Street – US Brownfields
- Arbor Hill Gateway Properties – 225 Henry Johnson Boulevard – Institutional/Engineering Controls
- Forlants Garage – 223 Northern Boulevard – Historic Auto
- Arbor Hill Gateway – 221 Northern Boulevard – US Brownfields
- Arbor Hill Gateway – 219/215 Northern Boulevard – US Brownfields

It is uncertain whether any impacts to the subsurface environment exist from these off-site sources, however, some of these sources are US brownfield sites with known BTEX petroleum impacts to soil and groundwater upgradient to the subject properties. Most of the contaminated soil was removed, however, removal was limited by proximity to underground utilities, Northern Boulevard and Colonie Street. Groundwater contamination is above standards, criteria and guidance (SCGs) for benzene, ethylbenzene, and xylene exist at one on-site monitoring well. The remainder of the monitoring wells have been monitored and show reduction in target concentrations due to natural attenuation. All monitoring wells and vapor points have been decommissioned and abandoned as of October 2017. Engineering and institutional controls are still in place.

This Phase I ESA assessed the need for a vapor intrusion assessment (VIA) of the subject properties regarding contaminants of concern (COC) that may migrate as vapors into existing or planned structures on a property. A vapor intrusion screen was performed using EDR's vapor intrusion database report and ASTM radius report as well as a review of the historical documentation. A report was generated for the areas described above (refer to **Appendix E**). The potential for vapor intrusion exists on the subject properties due to adjacent/nearby historical uses in addition to the past on-site use of petroleum. A 10,000-gallon UST was removed from the subject properties in 1994. During site reconnaissance, suspect pipes were observed in the basement of Building 295 and 315. These pipes appeared to not be in use, however their purpose is undetermined. Given the historic use of petroleum, it is possible these observations could indicate the potential for additional USTs at the subject properties.

Findings Summary (note, these will be repeated in the conclusion section of this report)

This Phase I ESA was completed in November 2023 for Robert Whalen Apartments (295 and 349 Colonie Street), located in Albany, NY as listed in this report. The Phase I ESA has been conducted as part of a due diligence review and has been prepared in accordance with the Phase I Environmental Site Assessment Practice E 1527-21 (ASTM Standard).

A lien search was completed, and no environmental liens were found.

Data Gaps

The ASTM standard requires that significant data gaps that affect the ability of the environmental professional to identify RECs be identified and that the sources of information that were consulted to address the data gaps be identified. The following data gaps exist for this Phase I ESA:

- Adjacent properties were not entered.

BE3's professional opinion is that this data gap does not create a significant issue for our conclusions.

Conclusions/ Recommendations

A Phase I Environmental Site Assessment has been completed in conformance with the scope and limitations of the ASTM Practice E1527-21 for the subject properties located in the City of Albany, Albany County, New York. Any exceptions to, or deletions from, this practice are described in Sections 1.4 and 1.5 and data gaps are identified above in this section.

This assessment has revealed the following recognized environmental condition (REC), controlled recognized environmental condition and business environmental risk (BER):

CREC - the Arbor Hill Gateway sites are 300 feet southwest from the subject properties (see **Figure 1** in **Appendix A**) and are US brownfield sites with known BTEX petroleum impacts to soil and groundwater upgradient to the subject properties. Specific locations identified include 215/219, 221, 223 and 334 Norther Boulevard; and 225 Henry Johnson Boulevard. Most of the contaminated soil was removed, however, removal was limited by proximity to underground utilities, Northern Boulevard and Colonie Street. Groundwater contamination above SCGs such as benzene, ethylbenzene, xylene, and various others exist at one on-site monitoring well. The remainder of the monitoring wells have been monitored and show reduction in target concentrations due to natural attenuation. All monitoring wells and vapor points have been decommissioned and abandoned as of October 2017. Though EC/ICs are still in place, there has been historic potential for the likely migration of contamination to the subject properties. In addition, the extent of the cleanup was limited by proximity to underground utilities and proximity to nearby streets. This is defined as a CREC.

REC – The NYDEC info locator and EDR records indicate that a 10,000-gallon UST was removed from one of the subject properties (Building 305 Colonie Street) in 1994. There is also record of a spill (#9408660) indicating release. There are no records available as to the volume of the spill or remedial action, however, it was identified as petroleum spill, and the file was closed. This is considered a REC.

BER – Two suspect pipes were observed by BE3 in the basement of Buildings 295 and 315, during site reconnaissance. Their purpose has not been confirmed but may indicate the presence of additional USTs at the subject properties.

1.0 INTRODUCTION

1.1 PURPOSE

Brydges Engineering in Environment and Energy (BE3) completed a Phase I Environmental Site Assessment (ESA) for 295 and 349 Colonie Street, in the City of Albany, Albany County, New York (refer to attached figures in **Appendix A**). The Phase I was completed for Albany Housing Authority, in support of a due diligence property acquisition.

The subject properties are located in the City of Albany less than half a mile southeast of the Tivoli Lake Preserve, less than a mile northwest of the Hudson River and approximately 1 mile northeast of Washington Park. The topography is relatively flat and sloping northeast. The subject properties are 174 feet above sea level and is located at latitude 42º 39' 47.28" N; Longitude 73º 45' 17.43" W.

The ASTM standard practice defines a customary process for conducting an ESA on commercial land with respect to CERCLA contaminants and petroleum products. Accordingly, the goal of the process is to identify recognized environmental conditions relating to the property through all appropriate inquiries into the current conditions and previous ownership and activities at the property and adjacent properties. The standard defines specific environmental conditions as follows:

Recognized Environmental Conditions (RECs) are defined in the ASTM Standard as the presence of hazardous substances or petroleum products in, on, or at the subject property; (1) due to any release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

Historical Recognized Environmental Condition (HREC) is defined as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to controls.(e.g., activity use limitations or other property use limitations). A historically recognized environmental condition is not a recognized environmental condition.

Controlled Recognized Environmental Condition (CREC) is defined as a recognized environmental condition affecting the subject property that has been addresses to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls.(e.g., activity and use limitations or other property use limitations).

The standard also identifies a **De Minimis Condition** as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not RECs or CRECs.

The non-scope considerations portion of the standard also defines a **Business Environmental Risk** (**BER)** as a risk that can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate.

1.2 PROPERTY LOCATION AND LEGAL DESCRIPTION

	ADDRESS	SBL	ACRES	OWNER
1	**295 Colonie Street**	**65.66-1-1**	**1.33**	**Albany Housing Authority**
2	**349 Colonie Street**	**65.66-1-3**	**2.76**	**Albany Housing Authority**

Refer to Section 4.3 for a more detailed property description and **Appendix I** for further assessment information on the subject properties. See **Appendix A** for location.

1.3 SCOPE OF SERVICES

The scope of services for this ESA was performed in accordance with American Society for Testing and Materials (ASTM) Standards E-1527-21, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" that incorporates the EPA All Appropriate Inquiries (AAI) rule and allows the user to qualify for landowner liability protections (LLPs). Specifically, the Phase I ESA included the following for the subject property and adjacent properties, as applicable:

- research of the current land-use within 0.5 mile of the site (see Section 3.0);
- identification of known environmental problems within 1 mile of the site (see Section 3.0);
- a property reconnaissance that included visual observations of site and surrounding area;
- research conducted at municipal offices;
- acquisition and review of aerial photographs and historic maps and information;
- acquisition and review of available local, state and city records and documents;
- completion of a vapor encroachment screen.

1.4 SIGNIFICANT ASSUMPTIONS

The following items were assumed during the completion of this Phase I ESA:

- Information obtained from third parties is essentially complete and correct, or stipulated otherwise within the report;
- This report relates to assessment of environmental conditions on or affecting the subject properties;
- As applicable to a property transaction, an inquiry into the ownership and previous uses of the property will qualify an individual for one of the threshold criteria for satisfying the LLPs (assuming compliance with the other CERCLA elements of defense); in addition, an inquiry should not be construed as not 'all appropriate' because it did not identify a REC associated with the property.

1.5 LIMITING CONDITIONS, DEVIATIONS AND EXCEPTIONS

1.5.1 Limiting Conditions

This report is based on information from field reconnaissance and visual observations of the subject properties and the properties immediately surrounding; as well as interpretation of the available information and documentation reviewed and provided in the appendix. The properties and this site assessment are limited to the footprint of the subject properties. This report is intended for the sole use of Albany Housing Authority. The scope of services performed in this assessment may not be appropriate to satisfy the needs of other entities associated with the subject properties, and any re-use of this document or the findings, conclusions, or recommendations presented, is at the sole risk of the user.

The conclusions set forth in this report are based upon and limited by the government data and other available information. As such and within the scope of the project, the accuracy of all data supplied by government entities and third parties could not always be verified. Therefore, we are not responsible for any conclusion contained in this report that is based on, in whole or in part, upon inaccurate data obtained from third parties.

It should be noted that all surface environmental assessments are inherently limited in the sense that conclusions are drawn, and recommendations developed from information obtained from limited research and site evaluation at a specific time. The passage of time may result in unknown site changes that have not been evaluated, and therefore a change in environmental circumstances at this site and surrounding properties or beneath the surface that may be present but undetectable during this Phase I ESA.

1.5.2 Deviations

As stated in the ASTM standard 1527-21 all appropriate inquiry does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained, or the time required to gather it outweighs the usefulness of the information. One of the purposes for completing the Phase I ESA in accordance with the standard is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing ESAs and the reduction of uncertainty about unknown conditions resulting from additional information.

Professional legal or title insurance services are not provided by completing this document, and no guarantee explicit or implied has been made that the property assessment represents a comprehensive delineation of past site ownership or tenancy, land title or lien records. The work performed in conjunction with this assessment and the data developed are intended as a description of available information at the dates and locations given.

Formal interviews of all state/local governments, occupants, owners, operators, adjacent landowners were not conducted, and all adjacent structures or vacant properties were not observed/surveyed during the site reconnaissance as there were locations of inaccessibility. Based on the extent of the other information covered in this ESA, it is believed that the noted deviations do not impair the user's LLPs.

1.5.3 Exceptions

The only exceptions beyond the standard Phase I ESA scope that were assessed in this report include information provided on radon, mold, asbestos containing materials, lead based paint, handling/disposal of PCB containing equipment and emerging contaminants. Additional considerations beyond the scope of this ASTM practice may be addressed in other documents, such as cultural and historic resources or wetland identification. The quality and quantity of material covered meets or exceeds the practice except where otherwise noted.

1.6 USER RELIANCE

This report is intended for the sole use of Albany Housing Authority, who can use for reference and rely upon the information, findings, and conclusions contained in this report. Only at the user's request will this report be granted to other parties for reliance.

2.0 USER PROVIDED INFORMATION

If applicable and available to qualify for one of the Landowner Liability Protections (LLPs) offered by the

Small Business Liability Relief and Brownfields Revitalization Act of 2001, the user must provide information for use in this report. Failure to provide available information could result in a determination that all appropriate inquiry is not complete. The user is defined as the party seeking to use PRACTICE E 1527 to complete an ESA of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager.

BE3 obtained no background information from Albany Housing Authority. BE3 has Freedom of Information Requests (FOIL) into the City of Dunkirk and the NYSDEC. BE3 believes the information obtained during the Phase I ESA together with all the other information assessed for this report qualifies the user for LLPs.

User provided information is shown in **Appendices B and C.**

2.1 TITLE RECORDS

Land title records were not provided. BE3 did obtain recent ownership information from the City/County Assessor and that information is provided within this report. A Lien and Title Search back to 1980 was provided for the subject properties from EDR, however, no deed changes or liens were identified. The report indicates that the properties have been owned by Albany Housing Authority since prior to 1980.

2.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

An environmental lien and activity and use limitations (AULs) search was obtained from EDR with no environmental liens or AULs found related to the subject properties. AULs include engineering controls, land use restrictions or institutional controls that are in place at the properties and/or have been filed or recorded in a registry under federal, tribal, state, or local law. No other information was provided to BE3 concerning environmental liens or activity and use limitations for the subject properties.

2.3 SPECIALIZED KNOWLEDGE

No additional specialized knowledge was indicated. The property user was questioned regarding any knowledge or experience of any environmental lien or AULs encumbering the properties or in connection with the properties or nearby properties.

2.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The property user was questioned regarding any knowledge of any commonly known or reasonably ascertainable information within the local community about the properties that is material to recognized environmental conditions in connection with the properties. No additional information was provided to BE3 concerning any environmental conditions.

2.5 OTHER USER INFORMATION

This Phase I ESA is being performed for due diligence purposes and to obtain a certain degree of liability protection regarding business environmental risk as contractor for future site development.

3.0 RECORDS REVIEW

A summary of the ASTM record search is provided below and in **Appendix D**. Refer to page 2-16 of the radius reports. The subject properties were not listed in any databases.

A review of readily available government agency records was conducted by BE3 using the government records search firm, EDR. The following record was located on the subject properties:

- Albany Housing Whalen Home AHA – 305 Colonie Street – NY Spills/UST

A spill (#9408660) of #4 fuel oil was reported in 1994 on the subject properties at 349 Colonie Street (Building 305). The volume of the spill is unknown. The 10,000-gallon fuel tank was removed from 305 Colonie in 1994.

A review of additional governmental records of surrounding properties within the ASTM radius indicated a total of one hundred and thirteen (113) database records within the radius completed for the area around the properties. The records included: one (1) NPL site; one (1) SEMS site; one (1) CORRACTS sites; one (1) RCRA-LQG site; three (3) RCRA-VSQG sites; four (4) NY SHWS sites; two (2) NY SWF/LF sites; eleven (11) NY LTANKS sites; six (6) NY UST sites; two (2) NY AST sites; three (3) NY ENG CONTROLS sites; three (3) NY INST CONTROLS sites; one (1) NY BROWNFIELDS site; one (1) NY ERP site; thirty (30) US BROWNFIELDS site; four (4) RCRA NonGen/NLR sites; two (2) FUDS sites; one (1) ROD site; nine (9) NY Spills sites; one (1) RCRA NonGen/NLR site; one (1) CONSENT site; one (1) FUSRAP site; one (1) FINDS site; one (1) ECHO site; eight (8) NY MANIFEST sites; one (1) PA MANIFEST site; one (1) EDR MGP site; eight (8) Historic Auto sites; and four (4) EDR Historic Cleaners sites.

Specific database findings in close proximity to the subject properties are as follows:

- Murphy's Garage – 229 Northern Boulevard – Historic Auto
- Arbor Hill Gateway – 334 Colonie Street – US Brownfields
- Arbor Hill Gateway Properties – 225 Henry Johnson Boulevard – Institutional/Engineering Controls
- Forlants Garage – 223 Northern Boulevard – Historic Auto
- Arbor Hill Gateway – 221 Northern Boulevard – US Brownfields
- Arbor Hill Gateway – 219/215 Northern Boulevard – US Brownfields

It is uncertain whether any impacts to the subsurface environment exist from these off-site sources, however, these sources are US brownfield sites with known BTEX petroleum impacts to soil and groundwater upgradient to the subject properties. Most of the contaminated soil was removed, however, this was limited by proximity to underground utilities, Northern Boulevard and Colonie Street. Groundwater contamination above SCGs such as benzene, ethylbenzene, and xylene exist at one on-site monitoring well. The remainder of the monitoring wells have been monitored and show reduction in target concentrations due to natural attenuation. All monitoring wells and vapor points have been decommissioned and abandoned as of October 2017. Engineering and institutional controls are still in place.

3.1 STANDARD REGULATORY/TRIBAL ENVIRONMENTAL RECORDS

A review of readily available government agency records was conducted by BE3 using the government records search firm, EDR.

3.2 ADDITIONAL ENVIRONMENTAL RECORDS

3.2.1 City Offices

The City of Albany offices were contacted through the FOIL process for this ESA. FOIL information has not been returned as of writing this; however, knowledge was obtained through DEC FOIL and other sources.

3.2.2 County Offices

County and City GIS was reviewed to obtain some information concerning the subject properties. County Assessment information was reviewed at the following web pages:

- 295 COLONIE ST / Property Information - Property Information - City of Albany, New York - MapGeo
- Albany County Interactive Map (arcgis.com)

Information obtained is presented in Section 1.2 and included in **Appendix A.**

3.2.3 New York State Department of Environmental Conservation

NYSDEC records were requested through their FOIL system. No records were available for the subject properties but rather adjacent properties; however, government and historical database records were obtained from a property due diligence service, which contains the information available through FOIL. This information is provided in various sections.

3.2.4 Previous Environmental Studies/Historical Data

BE3 was not provided with and did not find any specific environmental reports or data on the subject properties beyond the historical information described in other sections of this report.

3.3 PHYSICAL SETTING SOURCES

Current and historical topographic maps that show the area of the subject properties were reviewed and are presented in **Appendix F**. These maps and the additional physical setting sources from the Radius Map Report provide details of geologic, hydrogeologic, hydrologic, and topographic characteristics of the subject properties and surrounding area to assess the impact of potential RECs relating to the subject properties.

3.3.1 Topography and Drainage

The target properties and surrounding area sit along the Hudson River Valley with an elevation gain of approximately 100-160' over one mile to the south and east of the target properties. General topography in the area slopes northeast towards the Hudson River. Steeper inclines exist approximately a half-mile west of the target properties. The topo maps provided by EDR and observations during the site reconnaissance show on site topography as relatively flat with a gradual overall slope to the northeast. The area is highly urbanized with most of the surface drainage flowing on impervious surfaces along roadways to the municipal storm water sewer system.

3.3.2 Site Geology and Hydrogeology

Bedrock below the target properties is classified as a Middle Ordovician stratified sequence. Primary rock types include limestone shale. The soil map provided in the radius report defines soil on the target properties as urban land. The area has been significantly developed as a dense urban commercial/residential area since at least the late 1800s. These areas typically consist of a mixture of nonnative materials below the surface. Native soils in the surrounding area have been classified as silt and clay mixtures. The depth to native soil on the property is unknown and is dependent heavily on development activities on the subject properties over the last century or more.

Site hydrogeology on the target properties has been inferred based upon professional knowledge and other off-site sources found in the radius report. Groundwater flow direction in the area is expected to be northeast due to the proximity of the Hudson River and topography grade in the area. Groundwater is called

out to be 20 feet below ground surface (fbgs) at an a nearby site. Groundwater depth is assumed to be similar onsite. Based on information provided in the Radius Report by EDR, well data on aquifers in the surrounding area describe aquifer formations as sand and gravel aquifers (glaciated regions). Urbanization and development in the area will greatly influence flow direction. Preferential pathways, such as manmade utility corridors, are most likely present around the target property, which will greatly influence both high-level groundwater flow as well as contaminant and vapor migration.

3.3.3 Hydrology and Waterbodies

Various agencies are involved with wetlands and surface water bodies at the federal and State levels, such as FEMA, NYSDEC, and US Fish and Wildlife. In general, vegetation and saturated soil are observed as critical items for sensitive areas, including the presence of hydric soils that are defined as soils saturated or flooded at least one week during the growing season that develop anaerobic conditions. For the subject properties, no surface water bodies, or overt wetland areas are located within the properties area.

3.4 HISTORICAL USE INFORMATION

Several sources were used to develop a historical use profile for the properties discussed in this report, and included:

- Aerial photographs
- Fire insurance or Sanborn maps
- Recorded land title records
- USGS topographical maps
- Local street directories
- Building
- department records and
- Land/zoning use records
- Other sources from the NYSDEC or additional city departments

3.4.1 General Current Characteristics

The Robert Whalen Apartments subject properties (295 Colonie SBL: 65.66-1-1 and 349 Colonie SBL: 65.66-1-3) span two rectangularly shaped parcels and total 4.1 acres. 295 Colonie Street property contains two 3-story apartment complexes (Buildings 275 and 285) and is 1.33 acres. 349 Colonie Street property contains four 3-story complexes (Buildings 295, 305, 315, and 325) and is 2.76 acres. The apartment complexes on both properties are surrounded by green space and asphalt parking. Both subject properties are currently under the ownership of Albany Housing Authority.

3.4.2 Subject Property Use Summary

A review of historical street directories, aerial photographs, Sanborn maps and information obtained from facility personnel indicate the subject properties were developed prior to 1892. Sanborn maps show clay pits surrounding the properties until 1935 and the addition of the Albany Fire Department. The earliest aerial photographs date back to 1942 and show the subject properties developed with several structures. The Robert Whalen Apartments appear in aerial photographs in 1952 and have since remained relatively unchanged.

3.4.3 Adjacent Property Use

Historically, the surrounding area was mixed use commercial and residential. The area to the northeast remained undeveloped vacant land until the 1960's with the addition of roadways and residential housing. The areas to the south, east and west have remained relatively unchanged over time. Earliest records show the area as developed mixed use city use commercial and residential blocks. Several adjacent properties to the southwest across northern boulevard are historic auto sites or were entered into the US brownfields program due to petroleum impacts with institutional and engineering controls in place.

3.4.4 Aerial Photographs

BE3 obtained a series of Aerial Photograph maps of the general area from EDR including ones from 1942 ,1952, 1960, 1973, 1977, 1986, 1994, 1995, 2006, 2011, 2015, and 2019.

A review of aerial photography is as follows:

1942 – The properties contained 5 structures including the Albany Fire Department.

1955-2019 – The properties contained six buildings with surrounding greenspace and asphalt parking. The property appears relatively unchanged from 1955 to the present.

The aerial photographs are contained in **Appendix G**.

3.4.5 Sanborn Maps

BE3 obtained a series of Sanborn maps of the general area from EDR including ones from 1892,1908, 1934, 1935, 1950, 1951, 1989, 1990, 1992, 1993, 1994, 1995, and 1997. The subject properties were not pictured in the years 1892,1934,1950, and 1990. The Sanborn maps did not provide any additional information that was not already obtained through other historical sources including aerial photographs and street directories.

3.4.6 Property Title, and Lien Information

Current/Recent Title and tax assessor information was reviewed online at the County and City web site. An environmental lien search was completed by EDR for the subject properties and the title was reviewed back to 1980. No environmental liens were identified on the subject properties and no deed was found. The County website identified the current owner as the Albany Housing Authority and has been since prior to 1980.

Additional title information and chain of title/ownership is provided in **Appendix I.**

3.4.7 USGS Topographical Maps

BE3 obtained a series of historic topographic maps of the general area from EDR including ones from 1893, 1895, 1898, 1925, 1927/1928, 1947, 1950, 1953, 1978, 1980, 1994, 2013, 2016 and 2019. These maps indicated that topography slopes northeast toward the Hudson River.

3.4.8 Local Street Directories & Historical Use

Historic Street directories for the subject properties and adjacent properties were reviewed for the years 1921, 1925, 1930, 1935, 1940, 1945, 1950, 1955, 1960, 1965, 1971, 1975, 1981, 1985, 1992,1995, 2000, 2002, 2005, 2010, 2014, 2017 and 2020. Information regarding subject property ownership is as follows:

- 1921-1955: Various residential owners
- 1955-2020: Apartments – Various residential owners

3.4.9 Building Department and Land/Zoning Records

Building permits were obtained through EDR. No environmentally relevant permits were identified for the subject properties.

4.0 SITE RECONNAISSANCE

4.1 OBJECTIVES, OBSERVATIONS, AND METHODOLOGY

A site reconnaissance was conducted to inspect physical features and make general observations regarding the subject properties and vicinity with respect to the likelihood of identifying REC's. The following tasks were completed:

- visual inspection of the properties and surrounding property was conducted to identify potential environmental impacts existing on the property or from adjacent areas;
- various property features were photographed as the accessible portions of the site were systematically walked to obtain as close to 100% coverage as possible;
- visual surface observations were made to identify any evidence of spills, such as stained soil/concrete or vegetative stress;

The results of the reconnaissance are summarized below to provide a representation of subject property uses and conditions at the time of the site visit. Any limitations that existed during the reconnaissance such as physical obstructions were documented. A photographic record of the site visit is included in **Appendix K**.

4.2 GENERAL SITE SETTING

The subject properties are located in the City of Albany less than half a mile southeast of the Tivoli Lake Preserve, less than a mile northwest of the Hudson River and approximately 1 mile northeast of Washington Park. The topography is relatively flat and sloping northeast. The subject properties are 174 feet above sea level and is located at latitude 42º 39' 47.28" N; Longitude 73º 45' 17.43" W.

4.3 SUMMARY OF EXTERIOR AND INTERIOR OBSERVATIONS

The 295 and 349 Colonie Street subject properties (SBL: 65.66-1-1 and 65.66-1-3) are approximately 4.1-acres in total. 295 Colonie is 1.33 acres and contains two apartment complexes, Buildings 275 and 285, with a laundromat and basement. 349 Colonie is 2.76 acres and contains 4 apartment complexes, Buildings 295, 305, 315 and 325, each complete with a basement. The main office and daycare center are in Building 295 at the corner of Lark Street and Colonie Street. All six buildings are heated with natural gas utilities. Two sets of pipes were observed extending from the basement floor of two of the buildings and not currently in use (capped). Their purpose is unidentified.

Refer to **Appendix K** for further detail.

4.3.1 Treatment, Storage, or Disposal Facilities (TSDF)

The properties are not associated with a TSDF and no areas characteristic of the same were observed. The properties have never been identified as a TSDF.

4.3.2 Hazardous Waste/Substances/Drums/Containers

BE3 did not observe hazardous waste or substances associated with the subject properties. Household hazardous waste is assumed to exist in the occupied apartments.

4.3.3 Aboveground/Underground Chemical/Petroleum Storage Tanks (AST/UST)

Records obtained from NYSDEC Info Locator indicate a 10,000-gallon UST was removed from the property at 305 Colonie Street. During site reconnaissance, suspect pipes were observed in the basement of Buildings 295 and 315 that may be associated with underground tanks.

4.3.4 PCB Containing Equipment

There is little potential for PCB containing equipment on the subject properties. No transformers were observed. Lighting fixtures throughout the properties may contain PCBs.

4.3.5 Stains, Spills, Stressed Vegetation

No stains/spills were noted during the site reconnaissance.

4.3.6 Landfills/Dumping Activities/Solid Waste/Wastewater

No dumping was observed during the site visit.

4.3.7 Pits, Sumps, and Wells

No pits, sumps, or wells were observed during site reconnaissance.

4.3.8 Ponds and Lagoons

No ponds or lagoons are associated with the subject properties or observed during site reconnaissance.

4.3.9 Coastal Areas

The subject properties are not associated with a coastal area.

4.3.10 Odors and Vapor Intrusion Assessment

Odor was not noted on the subject properties. A vapor encroachment screen is addressed in Section 4.4.

4.3.11 Potable Water Supply

Potable water supply is from the City of Albany Department of Water and Water Supply.

4.3.12 Sewage Disposal System

Sewage is assumed to run to municipal combined sewer system.

4.3.13 Heating/Cooling

Heating and cooling are forced air and gas-powered water heaters.

4.4 VAPOR ENCROACHMENT SCREEN

Vapor intrusion is an indoor air quality issue that develops when volatile chemicals from impacted soil or groundwater evaporate into the air of overlying buildings. This is very similar to the process through which naturally occurring radon gas seeps into structures and buildings. Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions - ASTM E 2600-10 is the guideline used to assess the need for a vapor intrusion assessment (VIA) of a property. The goal of a VIA is to identify whether a vapor intrusion condition (VIC) exists or is likely to exist on the property (i.e., presence or likely presence of a COC in indoor air from the vapor of a contaminated soil or groundwater at a concentration that presents or may present an unacceptable health risk to occupants). This should not include de minimis conditions that are trace concentrations or do not normally represent an unacceptable risk and that generally would not be subject to enforcement actions.

The following record was located on the subject properties:

- Albany Housing Whalen Home AHA – 305 Colonie Street – NY Spills/UST

A spill (#9408660) of #4 fuel oil was reported in 1994 on the subject properties at 305 Colonie Street. The volume of the spill is unknown. In addition, a 10,000-gallon fuel tank was removed from 305 Colonie in 1994.

Specific database findings in close proximity to the subject properties are as follows:

- Murphy's Garage – 229 Northern Boulevard – Historic Auto
- Arbor Hill Gateway – 334 Colonie Street – US Brownfields
- Arbor Hill Gateway Properties – 225 Henry Johnson Boulevard – Institutional/Engineering Controls
- Forlants Garage – 223 Northern Boulevard – Historic Auto
- Arbor Hill Gateway – 221 Northern Boulevard – US Brownfields
- Arbor Hill Gateway – 219/215 Northern Boulevard – US Brownfields

It is uncertain whether any impacts to the subsurface environment exist from these off-site sources, however, these sources are US brownfield sites with known BTEX petroleum impacts to soil and groundwater upgradient to the subject properties. Most of the contaminated soil was removed, however, this was limited by proximity to underground utilities, Northern Boulevard and Colonie Street. Groundwater contamination above SCGs such as benzene, ethylbenzene, and xylene exist at one on-site monitoring well. The remainder of the monitoring wells show reduction in target concentrations due to natural attenuation. All monitoring wells and vapor points have been decommissioned and abandoned as of October 2017. Engineering and institutional controls are still in place.

5.0 INTERVIEWS CONDUCTED

5.1 OWNER

The owner was not interviewed.

5.2 SITE MANAGER

The site manager was not interviewed.

5.3 OCCUPANTS

The occupants were not interviewed.

5.4 LOCAL GOVERNMENT OFFICIALS

No interviews were conducted; however, FOIL requests were made to the City of Albany and to the NYSDEC Region 4 office.

5.5 OTHERS/ADJACENT PROPERTY OWNERS

The owners and owner's representatives of adjacent properties were not contacted.

6.0 FINDINGS, OPINIONS, AND CONCLUSIONS

This Updated Phase I ESA was completed in November 2023 for Robert Whalen Apartments (295 and 349 Colonie Street), located in Albany, NY as listed in this report. The Phase I ESA has been conducted as part of a due diligence review and has been prepared in accordance with the Phase I Environmental Site Assessment Practice E 1527-21 (ASTM Standard).

A lien search was completed, and no environmental liens were found.

Data Gaps

The ASTM standard requires that significant data gaps that affect the ability of the environmental professional to identify RECs be identified and that the sources of information that were consulted to address the data gaps be identified. The following data gaps exist for this Phase I ESA:

- Adjacent properties were not entered;

BE3's professional opinion is that this data gap does not create a significant issue for our conclusions.

Conclusions/ Recommendations

A Phase I Environmental Site Assessment has been completed in conformance with the scope and limitations of the ASTM Practice E1527-21 for the subject properties located in the City of Albany, Albany County, New York. Any exceptions to, or deletions from, this practice are described in Sections 1.4 and 1.5 and data gaps are identified above in this section.

This assessment has revealed the following recognized environmental condition (REC), controlled recognized environmental condition and business environmental risk (BER):

CREC - the Arbor Hill Gateway sites are 300 feet southwest from the subject properties and are US brownfield sites with known BTEX petroleum impacts to soil and groundwater upgradient to the subject properties. Specific locations identified include 215/219, 221, 223 and 334 Norther Boulevard; and 225

Henry Johnson Boulevard. Most of the contaminated soil was removed, however, this was limited by proximity to underground utilities, Northern Boulevard and Colonie Street. Groundwater contamination above SCGs such as benzene, ethylbenzene, xylene, and various others exist at one on-site monitoring well. The remainder of the monitoring wells have been monitored and show reduction in target concentrations due to natural attenuation. All monitoring wells and vapor points have been decommissioned and abandoned as of October 2017. Though EC/ICs are still in place, there has been historic potential for the likely migration of contamination to the subject properties. In addition, the extent of the cleanup was limited by proximity to underground utilities and proximity to nearby streets. This is defined as a CREC.

REC – The NYDEC info locator and EDR records indicate that a 10,000-gallon UST was removed from one of the subject properties (Building 305 Colonie Street) in 1994. There is also record of a spill (#9408660) indicating release. There are no records available as to the volume of the spill or remedial action, however, it was identified as petroleum spill, and the file was closed. This is considered a REC.

BER – Two suspect pipes were observed by BE3 in the basement of Buildings 295 and 315, during site reconnaissance. Their purpose has not been confirmed but may indicate the presence of additional USTs at the subject properties. This is considered a BER.

7.0 NON-SCOPE SERVICES

7.1 Radon

Radon is a naturally occurring radioactive gas that is a daughter product within the uranium-238 decay chain and has been associated with an increased risk of developing lung cancer. It is colorless, odorless, and tasteless and can be found in high concentrations in soils and rock in the subsurface. Radon can migrate through small fractures into structures through floors and walls, drains, sump pipes and pores. The concentrations that occur within structures are dependent upon source quantity, radioactive decay, and ventilation.

Surveys across the US indicate that as many as 21 percent of homes may exceed the maximum radon level suggested by the U.S. Environmental Protection Agency (EPA). Exposure levels can be quite variable depending on the amount of time spent in the home and the percentage of that time spent in the high-radon areas. Outdoor concentrations of radon gas tend to be minimal. Radon exposure is typically measured in picocuries per liter (pCi/L). The EPA and NYSDOH strongly recommend that property owners take remedial action if the levels recorded are higher than 4 pCi/L.

The subject properties are located within the City of Albany, Albany County, New York. As of November 2021, The New York State Health Department reports that a total of 1,989 homes have been screened for radon in the City of Rochester. The average radon level in the City of Albany is reported as 0.63 pCi/L. Further, 1,984 of the homes screened were less than 4 pCi/L, 5 had levels from 4 to 20 pCi/l and 0 were greater than 20 pCi/L. (source: www.health.state.ny.us/nysdoh/radon/towns.htm)

7.2 Mold

Mold can germinate and colonize when a food source (drywall, wood, insulation, paper, etc.) is present accompanied by ideal temperatures and moisture content. Structural leaks often lead to accelerated mold growth, and the odor commonly associated with mold is from microbial volatile organic compounds (mVOCs). Some mold produces various mycotoxins that are considered toxic and may have negative health effects on humans.

No mold was observed during the site reconnaissance.

7.3 Asbestos Containing Material/Lead-Based Paint

Asbestos is a naturally occurring material fiber that was once widely used in building materials and products for its thermal insulating properties and fire resistance. EPA defines asbestos- containing material (ACM) as material that contains more than 1% asbestos.

Lead is a soft, bluish metallic element that has been used in a variety of products. According to EPA, paint manufacturers frequently used lead as a primary ingredient in many oil-based interior and exterior house paints through the 1940s and generally decreased its use in the 1950s and 1960s as latex paints became more widespread. The federal Department of Housing and Urban Development (HUD) estimated that 75% of the houses built in the United States before 1978 contain some lead-based paint. Lead from paint, chips, and dust can pose health hazards if not properly managed.

No asbestos containing material or lead based paint was observed during site reconnaissance.

7.4 Emerging Contaminants

Per- and polyfluoroalkyl substances (PFAS) are contaminants used in many products and have been linked to health issues. New York State has been developing drinking water standards, also called maximum contaminant levels (MCLs) to address these contaminants, starting with the two most common PFAS: perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS). Public drinking water with PFOA or PFOS above the MCLs must be treated to reduce the levels below the MCL. Common products containing PFAS include paint and varnish, pesticides and insulation of electrical wires.

No materials indicative of PFAS were observed during site reconnaissance on the subject properties.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in 312.10 of 40CFR312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the target property. I have developed and performed all appropriate inquires in conformance with the standards and practices set forth in 40 CFR 312.

Jason Brydges, P.E. **Date: 11/23**

In accordance with the ASTM Standard, A Phase I Environmental Assessment must be performed by an environmental professional meeting certain minimal requirements. BE3 credentials far exceed these minimum credentials. Resumes for individuals that developed this Phase I Environmental Assessment are provided in **Appendix M**.

Please answer the following questions the best you can; write NA if the question is not applicable.

PROPERTY SPECIFICATIONS

Total Square Feet: **128,832** Number of Units: **108**

Legal Description:

General Description:

Nearest intersection:

Approximate age of onsite buildings: **73 years**

Does site have over 50 acres of undeveloped land:	Yes	No	Unknown
Does site have over 1 acre of naturally vegetated land:	Yes	No	Unknown

960 Busti Avenue, Suite B-150
Buffalo, NY 14213
716.249.6880 be3corp.com

Identify any environmental proceedings involving the property such as any pending, threatened, or past litigation, administrative proceedings relative to hazardous or petroleum substances, or any notices of violations from a government entity regarding environmental substances.
N/A

Provide a property survey and building layout diagrams.

BACKGROUND & USE

Is the property currently used or has it previously been used as an industrial or manufacturing operation, gasoline station, motor repair facility, commercial printing facility, dry cleaner, photo developing laboratory, junkyard, landfill, or waste treatment, storage, disposal, processing or recycling facility?

Yes No Unknown

Are any adjacent properties currently or have previously been used as an industrial or manufacturing operation, gas station, motor repair facility, commercial printing facility, dry cleaner, photo developing laboratory, junkyard, landfill, or waste treatment, storage, disposal, processing or recycling facility?

Yes No Unknown

Are there any surface water bodies on the site (ponds, ditches, rivers, etc.?)
Yes No Unknown

If yes, is there an oil sheen or any discoloration to the surface water?
Yes No Unknown

Are there currently or have there been previously any damaged or discarded automotive or industrial batteries, pesticides, paints or other chemicals in individual containers greater than five gallons in volume or fifty gallons in aggregate, stored or used at the property?

Yes No Unknown

Are there currently or have there been previously any industrial drums or chemicals located on the property? Yes No Unknown

Are there currently or have there been previously any pits, ponds or lagoons on the property connected with waste water, waste treatment or waste disposal? Yes No Unknown

Has fill material been brought to the site, as may or may not be indicated by unusual mounds, depressions or sink holes? Yes No Unknown

If yes is there any evidence that the fill was anything but clean soil (i.e., trash, construction debris, etc.)? Yes No Unknown

Have any demolition debris, hazardous substances, petroleum products, unidentified waste materials, automotive or industrial batteries, tires, trash or refuse been dumped, buried or burned on the property? Yes No Unknown

Has the facility or the property ever generated, treated, stored, transported or disposed of hazardous waste or hazardous substances other than on an incidental basis? Yes No Unknown

If yes, what type of materials and what quantities?
N/A

Has any such hazardous waste or hazardous substance resulted in the occurrence of cleanup costs, liabilities or responsibilities? Yes No Unknown

Are there currently or have there been previously any underground storage tanks (USTs) on the property? Yes No Unknown

If yes, provide permits, closure reports and regulatory agency correspondence; and answer the following questions:

Is the tank still present? Yes No Unknown

Did the current tank replace a pre-existing tank? Yes No Unknown

Was contamination found when tank was closed/removed? Yes No Unknown

Was the tank installed prior to 1988? Yes No Unknown

Has a leak detection system been installed? Yes No Unknown

Has the tank ever been leak tested? Yes No Unknown

Did the tank(s) ever fail the leak test? Yes No Unknown

Has there ever been a reported or unreported release or spill (including failed leak tests from the tank? Yes No Unknown

Are there currently or have there been previously any above ground storage tanks (ASTs) on the property? Yes No Unknown

Has there ever been a reported or unreported release or spill from the AST?
Yes No Unknown

If yes, provide details.

Are there currently or previously to the best of your knowledge been any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property? Yes No Unknown

Are there currently or have there been previously any flooring, drains or walls located within the facility that are or have been stained by substances (or, in the case of drains, used for) other than water or are emanating foul odors? Yes No Unknown

Is there currently or has there been previously any stained soil or distressed vegetation on the property? Yes No Unknown

Is or has the property been served by a private water well? Yes No Unknown

If yes, is groundwater under the property used as a source of drinking water?
Yes No Unknown

Has the water from the well ever been tested? Yes No Unknown

If yes, provide details and submit diagrams/drawings.

N/A

Has the well water been identified as contaminated by any governmental agency or private entity?
Yes No Unknown

Are there any groundwater monitoring wells on the property? Yes No Unknown

If yes, provide details and submit diagrams/drawings.

Does the property discharge waste water on or adjacent to the property or into a municipal sanitary sewer system? Yes No Unknown

Are there any active, dormant or abandoned oil or natural gas wells on the property?
Yes No Unknown

Are there any oil, natural gas, water or sewer pipelines on the property that are not maintained by state or local utilities? Yes No Unknown

Are there any septic systems, dry wells or leach fields on the property? Yes No Unknown
If yes, submit diagrams/drawings.

Have hazardous substances or petroleum products ever been discharged to these systems?
Yes No Unknown

Are the systems properly permitted? Yes No Unknown

Are the systems operating property? Yes No Unknown

Has any monitoring or testing of the systems indicated that contaminants have been found to exceed standards or guidelines? Yes No Unknown

Is there a transformer, capacitor or any hydraulic equipment on the property or related facilities?
Yes No Unknown

Do records indicate the presence of PCBs related to same? Yes No Unknown

Has an environmental or compliance assessment, audit or survey ever been performed on the property or related facilities or structures? Yes No Unknown
If yes, did the environmental assessment indicate the presence of any potential environmental contamination or non-compliance with environmental law? Yes No Unknown
Was the contamination cleaned up or non-compliance corrected?
Yes No Unknown

Are there wetlands on the property? Yes No Unknown

Is the property or related facilities or intended use or development of the property the subject of state, federal or local environmental quality review act determinations or approvals (e.g., NEPA/SEQRA)?
Yes No Unknown

If yes, provide details.

N/A

Is the property or related facilities or intended use of the property dependent upon obtaining or maintaining environmental permits or approvals from governmental entities?
Yes No Unknown
If yes, if the permit or approval is not obtained, could this have a materially adverse effect on the intended use of the property or borrower's operations? Yes No Unknown

Is the property or related facilities or intended use of the property dependent upon continued use of any particular chemical substance? Yes No Unknown
If yes, is that chemical substance the subject of any actual or proposed phase-out or ban?
Yes No Unknown
Would the phase-out or ban have a materially adverse effect on the intended use of the property or borrower's operations? Yes No Unknown

Is the property or related facilities or intended use the subject of future expenditures for environmental or pollution control equipment or facilities during the term of the requested loan?
Yes No Unknown

If yes, what type of equipment will be required and what is the estimated aggregate cost of such expenditures?

_____

_____

If the requested loan is a construction loan, please provided details (on separate sheet) of each permit or approval related to the construction; involved governmental agencies; schedule; anticipated review and approval process; and any known opposition to the constructed or intended future use of the property.

Has the soil on the property ever been tested? Yes No Unknown

If yes, have any contaminants been identified which exceed standards or guidelines levels?
Yes No Unknown

Besides soil and groundwater, has there been any sampling and analysis of air or other environmental media at the property?
Yes No Unknown

If yes, did any of the results indicate a release or threat of a release of a hazardous substance?
Yes No Unknown

If yes, did any of the results indicate contamination in any environmental media which exceed any standard or guidelines? Yes No Unknown

BUILDING CONDITIONS

Asbestos-Containing Materials

Is there any evidence of insulation or fire retardant materials such as pipe wrap and wall/pipe spray within the buildings on the property? Yes No Unknown

Are there any residential structures onsite that were built prior to 1978?
Yes No Unknown

Were any Asbestos-Containing Materials (ACMs) observed on the property?
Yes No Unknown

Are any of the building materials friable? Yes No Unknown

Was an asbestos survey ever conducted? Yes No Unknown
If yes, provide details.

_____

_____

Lead Paint

Is any visible evidence of paint peeling, cracking, or flaking noticed?	Yes	No	Unknown
Is there any evidence of lead paint containers being stored onsite?	Yes	No	Unknown
Is lead-based paint present at the structure?	Yes	No	Unknown

Polychlorinated Biphenyls (PCBs)

Are any transformers, electrical devices, fluorescent ballasts, or equipment stored or observed on the property labeled as containing PCBs?	Yes	No	Unknown
Is there any evidence of PCB contamination or leaks observed?	Yes	No	Unknown
Do the structures have fluorescent light fixtures?	Yes	No	Unknown

Other Hazardous Substances

Do You Know the Type Of Insulation?	Yes	No	Unknown

If yes, provide details.

R-17

Does the structure contain urea formaldehyde insulation?	Yes	No	Unknown
If yes, has the insulation been installed for less than ten years?	Yes	No	Unknown
Is there any evidence that radiological materials such as found in laboratories, medical equipment, or industrial operations may be used on the property?	Yes	No	Unknown
Is there any evidence that pesticides (including insecticides, fungicides, and rodenticides) have been manufactured or used on the property?	Yes	No	Unknown
Are you aware of elevated levels of radon present in the site vicinity?	Yes	No	Unknown
Is there reason to suspect radon to be a problem at the site?	Yes	No	Unknown

Radon

Has radon screening been conducted at the site? Yes No Unknown
If yes, provide details.

Has a radon reduction system been installed? Yes No Unknown
If yes, provide details.

Does the local health department have any information on radon onsite? Yes No Unknown

ADJACENT PROPERTIES

Do any of the sites adjacent to the subject site exhibit any of the potential issues identified in the hazards checklist above.
If yes, provide details.

No

SPECIAL RESOURCES

Is there any reason to believe that there are or may be any archaeological resources on the property that have not been destroyed by human activity? Yes No Unknown

Has the property recently been developed, excavated, mined, graded or otherwise disturbed by human activity over all or nearly all of this area? Yes No Unknown

Is this property covered or nearly covered by buildings or pavement that are less than 50 years old? Yes No Unknown

Is this property located in a region known to contain significant fossil collections or remnants of organisms of a past geologic age? Yes No Unknown

960 Busti Avenue, Suite B-150
Buffalo, NY 14213
716.249.6880 be3corp.com

Is there any evidence that the property has a designated natural landmark, buildings that are more than 50 years old, or buildings that are less than 50 years old but may be considered historically architecturally, archaeologically, or culturally significant? Yes No Unknown

Could this property be considered a place where a significant event or pattern of events occurred such as a battlefield or prehistoric settlement? Yes No Unknown

Could this property be considered part of a Historic District (over 50 years old)? Yes No Unknown

Are there any coastal areas, rivers, streams, springs, lakes, ponds, swamps, marshes, or other waterbodies on or immediately adjacent to the property? Yes No Unknown

If yes, is there any reason to believe that the waterbodies are protected under federal, state, or local law? Yes No Unknown

Is the area located within 1,000 feet of a shoreline that is developed with industrial, commercial, or high-density residential uses which have eliminated or significantly degraded any existing coastal or beach resources? Yes No Unknown

Does the property contain natural features which could be used for public recreational purposes? Yes No Unknown

Has any study been done on the property to assess wetlands, the presence of threatened and endangered species or critical and unique habitat? Yes No Unknown

ASTM E1527-13: PHASE 1 ESA USER QUESTIONNAIRE

In order to qualify for one of the landowner liability protections (LLPs), the user must conduct the following inquiries required by 40CFR312.25 and 28-31. The user should provide the following information to the environmental professional.

(1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25).

Did a search of recorded land title records or judicial records (where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? In certain jurisdictions, federal, tribal, state, or local statutes or regulations specify that environmental liens and activity and use limitations (AULs) are filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

(2.) AULs that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi).

Did a search of recorded land title records or judicial records (where appropriate) identify any AULs such engineering controls, land use restrictions, or institutional controls that are in place at the property or have been filed or recorded against the property under federal, tribal, state or local law?

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
N/A

960 Busti Avenue, Suite B-150
Buffalo, NY 14213
716.249.6880 be3corp.com

(5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help identify conditions indicative of releases or threatened releases?

- Do you know the past uses of the property?

N/A

- Do you know of specific chemicals that are present or once were present at the property?

N/A

- Do you know of spills or other chemical releases that have taken place at the property?

N/A

- Do you know of any environmental cleanups that have taken place at the property?

N/A

(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

No

960 Busti Avenue, Suite B-150
Buffalo, NY 14213
716.249.6880 be3corp.com

ADDITIONAL INFORMATION

(1.) Why is this Phase I ESA being performed (i.e., bank request, buyer request, suspected contamination, etc.)?

(2.) What type of property is the focus of this assessment (e.g., residential, commercial, industrial, agricultural, vacant/undeveloped, etc.) and what type of transaction is being performed (e.g., sale, purchase, exchange, rental, etc.)?

Residential

(3.) What is the correct address for the property? Please provide a map or other documentation showing location and boundaries.

305 Colonie St

(4.) Is there any scope of services desired by the user for this Phase I beyond the requirements prescribed by this ASTM practice?

(5.) Who are the parties that will rely on this Phase I report?

(6.) Who is the site contact and how can they be reached?

Mark Edmonds: 518-641-7588

(7.) Are there any special terms and conditions upon which we must agree while performing this Phase I ESA?

No

960 Busti Avenue, Suite B-150
Buffalo, NY 14213
716.249.6880 be3corp.com

(8.) Is there any other knowledge or experience with the property that may be pertinent such as copies of any prior ESA reports, documents, or correspondence concerning the property and its environmental condition?

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: A review of the NPL list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

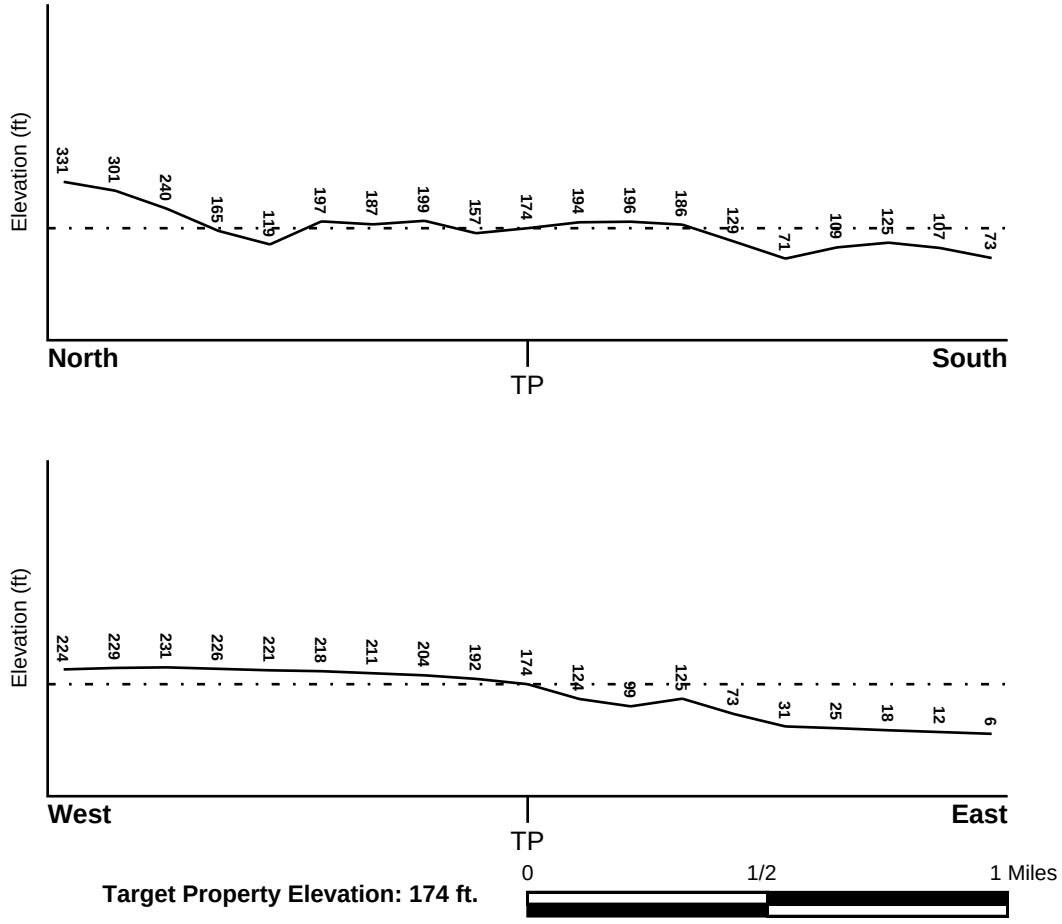
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
36001C0192D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
36001C0211D	FEMA FIRM Flood data
36001C0194D	FEMA FIRM Flood data
36001C0213D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
ALBANY	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Udorthents

Soil Surface Texture: silty clay

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	silty clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 7.3 Min: 4.5
2	18 inches	72 inches	stratified silt loam to clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 7.3 Min: 4.5

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: 0.0015 Min: 0	Max: Min:

Soil Map ID: 3

Soil Component Name: Hudson

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 54 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6
2	11 inches	16 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	16 inches	31 inches	silty clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6
4	31 inches	59 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6

Soil Map ID: 4

Soil Component Name: Udorthents

Soil Surface Texture: loam

Hydrologic Group: Class A/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E1527 - 21 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of BE3 on Oct 06, 2023.

TARGET PROPERTY

295 Colonie St
Albany, NY 12210

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by BE3 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Environmental Lien and AUL Search 1980

The EDR Environmental Lien and AUL Search 1980 report provides results from a search of available land title records for environmental cleanup liens and other activity and use limitations (AULs), such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address and/or parcel information to:

- search for parcel number and/or legal description
- search for ownership information filed between 1980 and the most current publicly available date
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.
- search for environmental encumbering instrument(s) filed between 1980 and the most current publicly available date
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Property Archives, LLC researched and compiled the land title information contained in this EDR Environmental Lien and AUL Search 1980 report on behalf of EDR.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated l.l million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when thelevel of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabili e the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authori e a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action atthe remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for partiespotentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The Click here to access additional FINDS: detail in the EDR Site Report. database contains http://www.edrnet.com/srf2/FinalSiteReport.aspx?ID=4s54UZsNf5NG2gfUCrZ4G9Q9N7qfNl6PWNrnGTA2HbgZqfM63VDCEsrVr3RM4V5GgiAUyQge9TT5t77NHqPd7wbNJKlFA4kCslg57t2NVUAHZ5B8XUNG6fzp3g8NkoGdL2pRgBvfxj2fTCHGrHJ8L64NcGS04T8QTr9Mx5zI7UFq054UdspK5zb37WUPiZDG2KXNyXfF49PpNBCGc06Wggyvf9l8ngCZRrog5gC4ArGth9uQQht93e8Y37F8qrG9XcNmIlvm1TGP4qWJQ4NYrfOnsPun9TQCAjW40Qs5C5tA3epUjKZz82TBNIzfDF3vcNmFGqU2Qog65fUm2mgCEnrSQ6QM4GTG6E9FuQxg9Zj7567RMqQLADtNRDlbQ623PGmWTh9bXrbpnRv9RWT.FAr42 additional records for this site. Tank Info:

Tank Number:	1
Tank ID:	86381
Tank Status:	Closed - Removed
Material Name:	Closed - Removed
Capacity Gallons:	10000
Install Date:	07/01/1974
Date Tank Closed:	09/01/1994
Registered:	True
Tank Location:	Underground
Tank Type:	Steel/carbon steel
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)
Tightness Test Method:	03
Date Test:	01/01/1993
Next Test Date:	Not Reported
Pipe Model:	Not Reported
Modified By:	MJGRIFFI

Site Description:	Location: The site is located in the Arbor Hill section of the City of Albany, Albany County. The property primarily fronts on Northern Boulevard (also known as Henry Johnson Boulevard) and its intersections with Livingston Avenue and Colonie Street. The site area encompasses approximately 0.5 acres. Site Features: The main site feature includes the redeveloped Arbor Hill Gateway Park and the Henry Johnson Memorial in the park. The park area is a mixture of paved and landscaped areas. Current Zoning/Use: The property is zoned commercial and has been redeveloped into a community park. The surrounding properties are a mixture of residential, commercial, and road rights-of-way. Historical Uses: The property was historically used as a gas and service station. Records indicated that there were six registered tanks at the facility. This included five underground storage tanks (USTs - four gasoline and one diesel fuel) and one above-ground storage tank for #2 fuel oil. A maintenance pit, sump, hydraulic reservoir, and the gas dispenser islands were present on the site. Poor housekeeping and leaking storage vessels appear to have led to the soil and groundwater contamination. A Phase I Environmental Site Assessment (ESA) was conducted in November 2003. A Phase II ESA, which included a surface and subsurface investigation, was conducted in July 2004. Subsequent to this investigation the city of Albany removed debris and remaining structures from the site, including an above-ground storage tank, due to the collapse of the service station building. The maintenance pit was also backfilled with soil at that time. The Phase I and II ESAs indicated subsurface petroleum contamination of both the soil and groundwater in the area of the former service station and USTs. Based on the Phase I and II ESAs, the city of Albany was able to enter the Environmental

ARBOR HILL GATEWAY PROPERTIES, 225 HENRY JOHNSON BOULEVARD, ALBANY, NY 12207 (Continued)

Restoration Program to address the contamination at the property. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical reasons can be addressed separately to investigate, eliminate, or mitigate a release, threat of release, or exposure pathway resulting from site contamination. Operable Unit 1 (OU1) is the on-site source area of the former gas and service station. OU2 consists of the off-site groundwater and soil vapor. Site Geology and Hydrogeology: The underlying soil deposits at the site are fine to medium brown sands and silt over silt and clay, and backfill materials consisting of gravel, stone dust, and bank sand. The water table is between 4' and 14' below the ground surface. Groundwater generally follows the topography, flowing east across the site.

Env Problem:

Remediation at the site is complete. Contaminants of Concern at the site prior to remediation were primarily petroleum hydrocarbons (gasoline range volatile organics - BTEX) and small quantities of semi-volatile organics (polynuclear aromatic hydrocarbons - PAHs) associated with the petroleum products. Most of the impacted soil was removed from the site during the Remedial Investigation - Tank and Vessel Closure Action. A small area of residual contamination was necessarily left in place at the site during this action because of its proximity to and around underground utilities and to Northern Boulevard and Colonie Street. The remedial investigations at OU1 and OU2 indicated that there are no current or potential future environmental exposure pathways that require remediation. Groundwater contamination above SCGs (1,2,4-trimethylbenzene, benzene, ethylbenzene, and xylenes) is present in one on-site monitoring well. Concentrations of contaminants in groundwater have shown significant reductions due to natural attenuation. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the groundwater is being managed under a Site Management Plan. The five-year monitoring period in the Record of Decision went through 2014. As of August 22, 2017 the NYSDEC no longer required groundwater monitoring at the site and, as summarized in the NYSDEC-approved October 17, 2017 Well Decommissioning Report. All site related groundwater monitoring wells and soil vapor points have been abandoned. The 2019 inspection indicates that the remedy

ARBOR HILL GATEWAY PROPERTIES, 225 HENRY JOHNSON BOULEVARD, ALBANY, NY 12207 (Continued)

	for the site remains effective. Engineering controls are intact and remain effective. Institutional controls for the site are in place.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code:	333385
Site Description:	Location: The site is located in the Arbor Hill section of the City of Albany, Albany County. The property primarily fronts on Northern Boulevard (also known as Henry Johnson Boulevard) and its intersections with Livingston Avenue and Colonie Street. The site area encompasses approximately 0.5 acres. Site Features: The main site feature includes the redeveloped Arbor Hill Gateway Park and the Henry Johnson Memorial in the park. The park area is a mixture of paved and landscaped areas. Current Zoning/Use: The property is zoned commercial and has been redeveloped into a community park. The surrounding properties are a mixture of residential, commercial, and road rights-of-way. Historical Uses: The property was historically used as a gas and service station. Records indicated that there were six registered tanks at the facility. This included five underground storage tanks (USTs - four gasoline and one diesel fuel) and one

ARBOR HILL GATEWAY PROPERTIES, 225 HENRY JOHNSON BOULEVARD, ALBANY, NY 12207 (Continued)

above-ground storage tank for #2 fuel oil. A maintenance pit, sump, hydraulic reservoir, and the gas dispenser islands were present on the site. Poor housekeeping and leaking storage vessels appear to have led to the soil and groundwater contamination. A Phase I Environmental Site Assessment (ESA) was conducted in November 2003. A Phase II ESA, which included a surface and subsurface investigation, was conducted in July 2004. Subsequent to this investigation the city of Albany removed debris and remaining structures from the site, including an above-ground storage tank, due to the collapse of the service station building. The maintenance pit was also backfilled with soil at that time. The Phase I and II ESAs indicated subsurface petroleum contamination of both the soil and groundwater in the area of the former service station and USTs. Based on the Phase I and II ESAs, the city of Albany was able to enter the Environmental Restoration Program to address the contamination at the property.
Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical reasons can be addressed separately to investigate, eliminate, or mitigate a release, threat of release, or exposure pathway resulting from site contamination. Operable Unit 1 (OU1) is the on-site source area of the former gas and service station. OU2 consists of the off-site groundwater and soil vapor.
Site Geology and Hydrogeology: The underlying soil deposits at the site are fine to medium brown sands and silt over silt and clay, and backfill materials consisting of gravel, stone dust, and bank sand. The water table is between 4' and 14' below the ground surface. Groundwater generally follows the topography, flowing east across the site.

Env Problem:

Remediation at the site is complete. Contaminants of Concern at the site prior to remediation were primarily petroleum hydrocarbons (gasoline range volatile organics - BTEX) and small quantities of semi-volatile organics (polynuclear aromatic hydrocarbons - PAHs) associated with the petroleum products. Most of the impacted soil was removed from the site during the Remedial Investigation - Tank and Vessel Closure Action. A small area of residual contamination was necessarily left in place at the site during this action because of its proximity to and around underground utilities and to Northern Boulevard and Colonie Street. The remedial investigations at OU1 and

ARBOR HILL GATEWAY PROPERTIES, 225 HENRY JOHNSON BOULEVARD, ALBANY, NY 12207 (Continued)

	OU2 indicated that there are no current or potential future environmental exposure pathways that require remediation. Groundwater contamination above SCGs (1,2,4-trimethylbenzene, benzene, ethylbenzene, and xylenes) is present in one on-site monitoring well. Concentrations of contaminants in groundwater have shown significant reductions due to natural attenuation. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the groundwater is being managed under a Site Management Plan. The five-year monitoring period in the Record of Decision went through 2014. As of August 22, 2017 the NYSDEC no longer required groundwater monitoring at the site and, as summarized in the NYSDEC-approved October 17, 2017 Well Decommissioning Report. All site related groundwater monitoring wells and soil vapor points have been abandoned. The 2019 inspection indicates that the remedy for the site remains effective. Engineering controls are intact and remain effective. Institutional controls for the site are in place.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

A maintenance pit, sump, hydraulic reservoir, and the gas dispenser islands were present on the site. Poor housekeeping and leaking storage vessels appear to have led to the soil and groundwater contamination. A Phase I Environmental Site Assessment (ESA) was conducted in November 2003. A Phase II ESA, which included a surface and subsurface investigation, was conducted in July 2004. Subsequent to this investigation the city of Albany removed debris and remaining structures from the site, including an above-ground storage tank, due to the collapse of the service station building. The maintenance pit was also backfilled with soil at that time. The Phase I and II ESAs indicated subsurface petroleum contamination of both the soil and groundwater in the area of the former service station and USTs. Based on the Phase I and II ESAs, the city of Albany was able to enter the Environmental Restoration Program to address the contamination at the property. Operable Units: The site was divided into two operable units. An operable unit represents a portion of a remedial program for a site that for technical reasons can be addressed separately to investigate, eliminate, or mitigate a release, threat of release, or exposure pathway resulting from site contamination. Operable Unit 1 (OU1) is the on-site source area of the former gas and service station. OU2 consists of the off-site groundwater and soil vapor. Site Geology and Hydrogeology: The underlying soil deposits at the site are fine to medium brown sands and silt over silt and clay, and

ARBOR HILL GATEWAY PROPERTIES, 225 HENRY JOHNSON BOULEVARD, ALBANY, NY 12207 (Continued)

	backfill materials consisting of gravel, stone dust, and bank sand. The water table is between 4' and 14' below the ground surface. Groundwater generally follows the topography, flowing east across the site.
Env Problem:	Remediation at the site is complete. Contaminants of Concern at the site prior to remediation were primarily petroleum hydrocarbons (gasoline range volatile organics - BTEX) and small quantities of semi-volatile organics (polynuclear aromatic hydrocarbons - PAHs) associated with the petroleum products. Most of the impacted soil was removed from the site during the Remedial Investigation - Tank and Vessel Closure Action. A small area of residual contamination was necessarily left in place at the site during this action because of its proximity to and around underground utilities and to Northern Boulevard and Colonie Street. The remedial investigations at OU1 and OU2 indicated that there are no current or potential future environmental exposure pathways that require remediation. Groundwater contamination above SCGs (1,2,4-trimethylbenzene, benzene, ethylbenzene, and xylenes) is present in one on-site monitoring well. Concentrations of contaminants in groundwater have shown significant reductions due to natural attenuation. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the groundwater is being managed under a Site Management Plan. The five-year monitoring period in the Record of Decision went through 2014. As of August 22, 2017 the NYSDEC no longer required groundwater monitoring at the site and, as summarized in the NYSDEC-approved October 17, 2017 Well Decommissioning Report. All site related groundwater monitoring wells and soil vapor points have been abandoned. The 2019 inspection indicates that the remedy for the site remains effective. Engineering controls are intact and remain effective. Institutional controls for the site are in place.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code:	333385
Site Description:	Location: The site is located in the Arbor Hill section of the City of Albany, Albany County. The property primarily fronts on Northern Boulevard (also known as Henry Johnson Boulevard) and its intersections with Livingston Avenue and Colonie Street. The site area encompasses approximately 0.5 acres. Site Features: The main site feature includes the redeveloped Arbor Hill Gateway Park and the Henry Johnson Memorial in the park. The park area is a mixture of paved and landscaped areas. Current Zoning/Use: The property is zoned commercial and has been redeveloped into a community park. The surrounding properties are a mixture of residential, commercial, and road rights-of-way. Historical Uses: The property was historically used as a gas and service station. Records indicated that there were six registered tanks at the facility. This included five underground storage tanks (USTs - four gasoline and one diesel fuel) and one above-ground storage tank for #2 fuel oil. A maintenance pit, sump, hydraulic reservoir, and the gas dispenser islands were present on the site. Poor housekeeping and leaking storage vessels appear to have led to the soil and groundwater contamination. A Phase I Environmental Site Assessment (ESA) was conducted in November 2003. A Phase II ESA, which included a surface and subsurface investigation, was conducted in July 2004. Subsequent to this investigation the city

ARBOR HILL/WEST HILL BRANCH SITE, HENRY JOHNSON BLVD, 1ST ST. AND 2ND ST., ALBANY, NY 12210 (Continued)

Town:	Albany (c)
Acres:	0.620
Record Added:	04/10/2013
Record Updated:	04/12/2013
Updated By:	MJKOMORO
Site Description:	This site is made up of five properties which were originally part of the Henry Johnson Boulevard Properties ERP site (E401049). The five properties were located on Henry Johnson Blvd. between 1st and 2nd Streets. The five properties were investigated with the remaining Henry Johnson Boulevard properties and were subsequently sold to the Albany Public Library (APL) for construction of the Arbor Hill/West Hill library branch. APL signed a consent order with the Department and put a vapor barrier and passive sub-slab venting system beneath the slab of the new building. They sampled the sub-slab vapor after the building was constructed and there were no issues requiring further remediation. APL was issued a Certificate of Completion on April 24, 2012.

Appendix M

Environmental Professional Qualifications

Jason M. Brydges, P.E., MBA

Environmental Engineer

Education

MBA Marketing, Management, and Negotiations SUNY at Buffalo 2005
MS Environmental Engineering and Science Clemson University 1998
BS Environmental Engineering Sciences University of Florida 1995

Mr. Brydges, who will serve as the ESA project manager and primary point of contact, has worked in the environmental engineering field for over 20 years performing a wide variety of environmental assessment, design, and remediation projects. He has been involved with or managed most of the firm's Brownfield projects and is advanced on tax credit/remedial option analysis for site specific needs. Throughout his career, Mr. Brydges has led project teams with increasing levels of responsibility. An overview of projects he has been involved with includes health physics applications; radioactive and hazardous materials remediation; contaminated media sampling design; waste transportation, storage, and disposal consulting; decontamination and decommissioning (D&D) operations design; contaminated site closure engineering; landfill and cover design and permitting; and groundwater, soils, and facility remediation design. As mentioned, he has managed several successful brownfield projects from application through certificate of completion and post remedial monitoring. Mr. Brydges has managed the environmental and civil site work services for dozens of ground mount solar arrays and other energy related projects.

Areas of Expertise

Brownfield Program Site Assessment and Remediation
Environmental Remediation
Radioactive, Solid, and Hazardous Waste Management
Health Physics
Stormwater, Erosion and Sediment Control Design and Installation
Business Development and Marketing
Facility Decontamination and Decommissioning (D&D)

Selected Registration / Certification / Specialized Training

2016: 40-hour HAZWOPER refresher
2015: NYSDEC Erosion and Sediment Control
2015: NCEES Record Completed
2014: 30-hour OSHA Construction Industry
2013: FEMA Training Certification
2013: NYSDOH Asbestos Project Designer Certification
2013: NYSDOT Enhancement Program & Federal Aid Highway Reimbursement Program
2012: Arsenic - Health and Remediation Applications
2012: Hazardous Materials Management
2011: Building Demolition and Environmental Remediation Planning and Execution
2010: AHA Heartsaver First Aid Program Certification
2009: New York State Stormwater Management Certification
2009: Construction Administration for Design Professionals
2002: Professional Engineer, New York, 079402
2001: Multi-Agency Radiation Survey and Site Investigation Manual (MARSSIM)
1998: 40-hour HAZWOPER initial/original course
