Remedy Proposed for Brownfield Site Contamination; Public Comment Period Announced

The public is invited to comment on a proposed remedy being reviewed by the New York State Department of Environmental Conservation (NYSDEC) to address contamination related to the ALCO-Maxon Site - Parcel A site ("site") located at 301 Nott Street, Schenectady, Schenectady County. Please see the map for the site location. Documents related to the cleanup of this site can be found at the location(s) identified below under "Where to Find Information."

Based on the findings of the investigation, NYSDEC in consultation with the New York State Department of Health (NYSDOH) has determined that the site does not pose a significant threat to public health or the environment.

How to Comment

NYSDEC is accepting written comments about the proposed plan for 45 days, from **March 17, 2014** through **April 30, 2014**. The proposed plan is available for public review at the location(s) identified below under "Where to Find Information." Please submit comments to the NYSDEC project manager listed under Project Related Questions in the "Who to Contact" area below.

Draft Remedial Work Plan and Proposed Decision Document

The cleanup plan is described in the Former ALCO Site Remedial Work Plan. The proposed remedy consists of:

- * Excavation and removal of contaminated soil
- * Monitoring the groundwater to confirm biodegradation of the solvent plume following the in-ground injection of substrate to oxidize (destroy) the contaminants done in ALCO-Maxon Site Parcel B
- * Institutional Controls (Future property use restrictions, Site Management Plan)
- * Engineering Control (Placement of protective cover)

The proposed remedy was developed by Maxon ALCO Holdings, LLC ("applicant) after performing a detailed investigation of the site under New York's Brownfield Cleanup Program (BCP).

Summary of the Investigation

Based on the results of the investigation activities, ALCO-Maxon Site Parcel A has contaminated soil that needs to be excavated and removed from the site, and contaminated groundwater that needs to be addressed.

Next Steps

NYSDEC will consider public comments, revise the plan as necessary, and issue a final Decision Document. New York State Department of Health (NYSDOH) must concur with the proposed remedy. The draft Remedial Work Plan is revised as needed to describe the selected remedy, and will be made available to the public. The applicant(s) may then design and perform the cleanup action to address the site contamination, with oversight by NYSDEC and NYSDOH.

NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

Background

Location: This site is 20.31 acres and was part of the former American Locomotive Company property located at 301 Nott Street, Schenectady, NY 12306. ALCO-Maxon Site Parcel A has the Mohawk River as its northern border and another BCP Site known as ALCO-Maxon Site Parcel B for its southern border.

Site Features: ALCO-Maxon Site Parcel A is currently vacant as all its buildings were demolished in 2011. This site has large soil piles which were brought to the site to be used as fill for future development. The soil piles are maintained under a Stormwater Pollution Prevention Program permit between the volunteer and City of Schenectady.

Current Zoning/Use: The site is currently zoned as C-3 Waterfront Development District. (The purpose of the C-3 district is to provide unique opportunities for the development and maintenance of water-oriented uses within certain areas of the city adjacent to the Mohawk River.)

Past Use of the Site: The site was used for manufacture of railroad locomotives and military hardware from 1849 through 1969. Small industrial manufacturing and fabrication companies occupied various buildings on the site since 1985. Historic activities have resulted in petroleum and chlorinated solvents contaminating the groundwater and soil.

Site Geology and Hydrogeology: The ALCO-Maxon Site is underlain by fill that is present across much of the site, varying from two to 12 feet. Underlying the fill is a sequence of overburden deposits (sand, silt and clay) from five to more than 25 feet. A silty sand unit overlies a second clay layer (25 to 30 feet). Groundwater is measured in the overburden between two and 12 feet below ground surface. The groundwater flows north-northwest toward the Mohawk River. The Mohawk River is adjacent to ALCO-Maxon Site Parcel A.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's website at:

<http://www.dec.ny.gov/cfm/xtapps/derexternal/haz/details.cfm?pageid=3&progno=C447042>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses include recreation, housing, business or other uses.

A brownfield is any real property that is difficult to reuse or redevelop because of the presence or potential presence of contamination.

For more information about the BCP, visit: <http://www.dec.ny.gov/chemical/8450.html>

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.

Receive Site Fact Sheets by Email

Have site information such as this fact sheet sent right to your email inbox. NYSDEC invites you to sign up with one or more contaminated sites county email listservs available at the following web page: <http://www.dec.ny.gov/chemical/61092.html>. It's quick, it's free, and it will help keep you *better informed*.

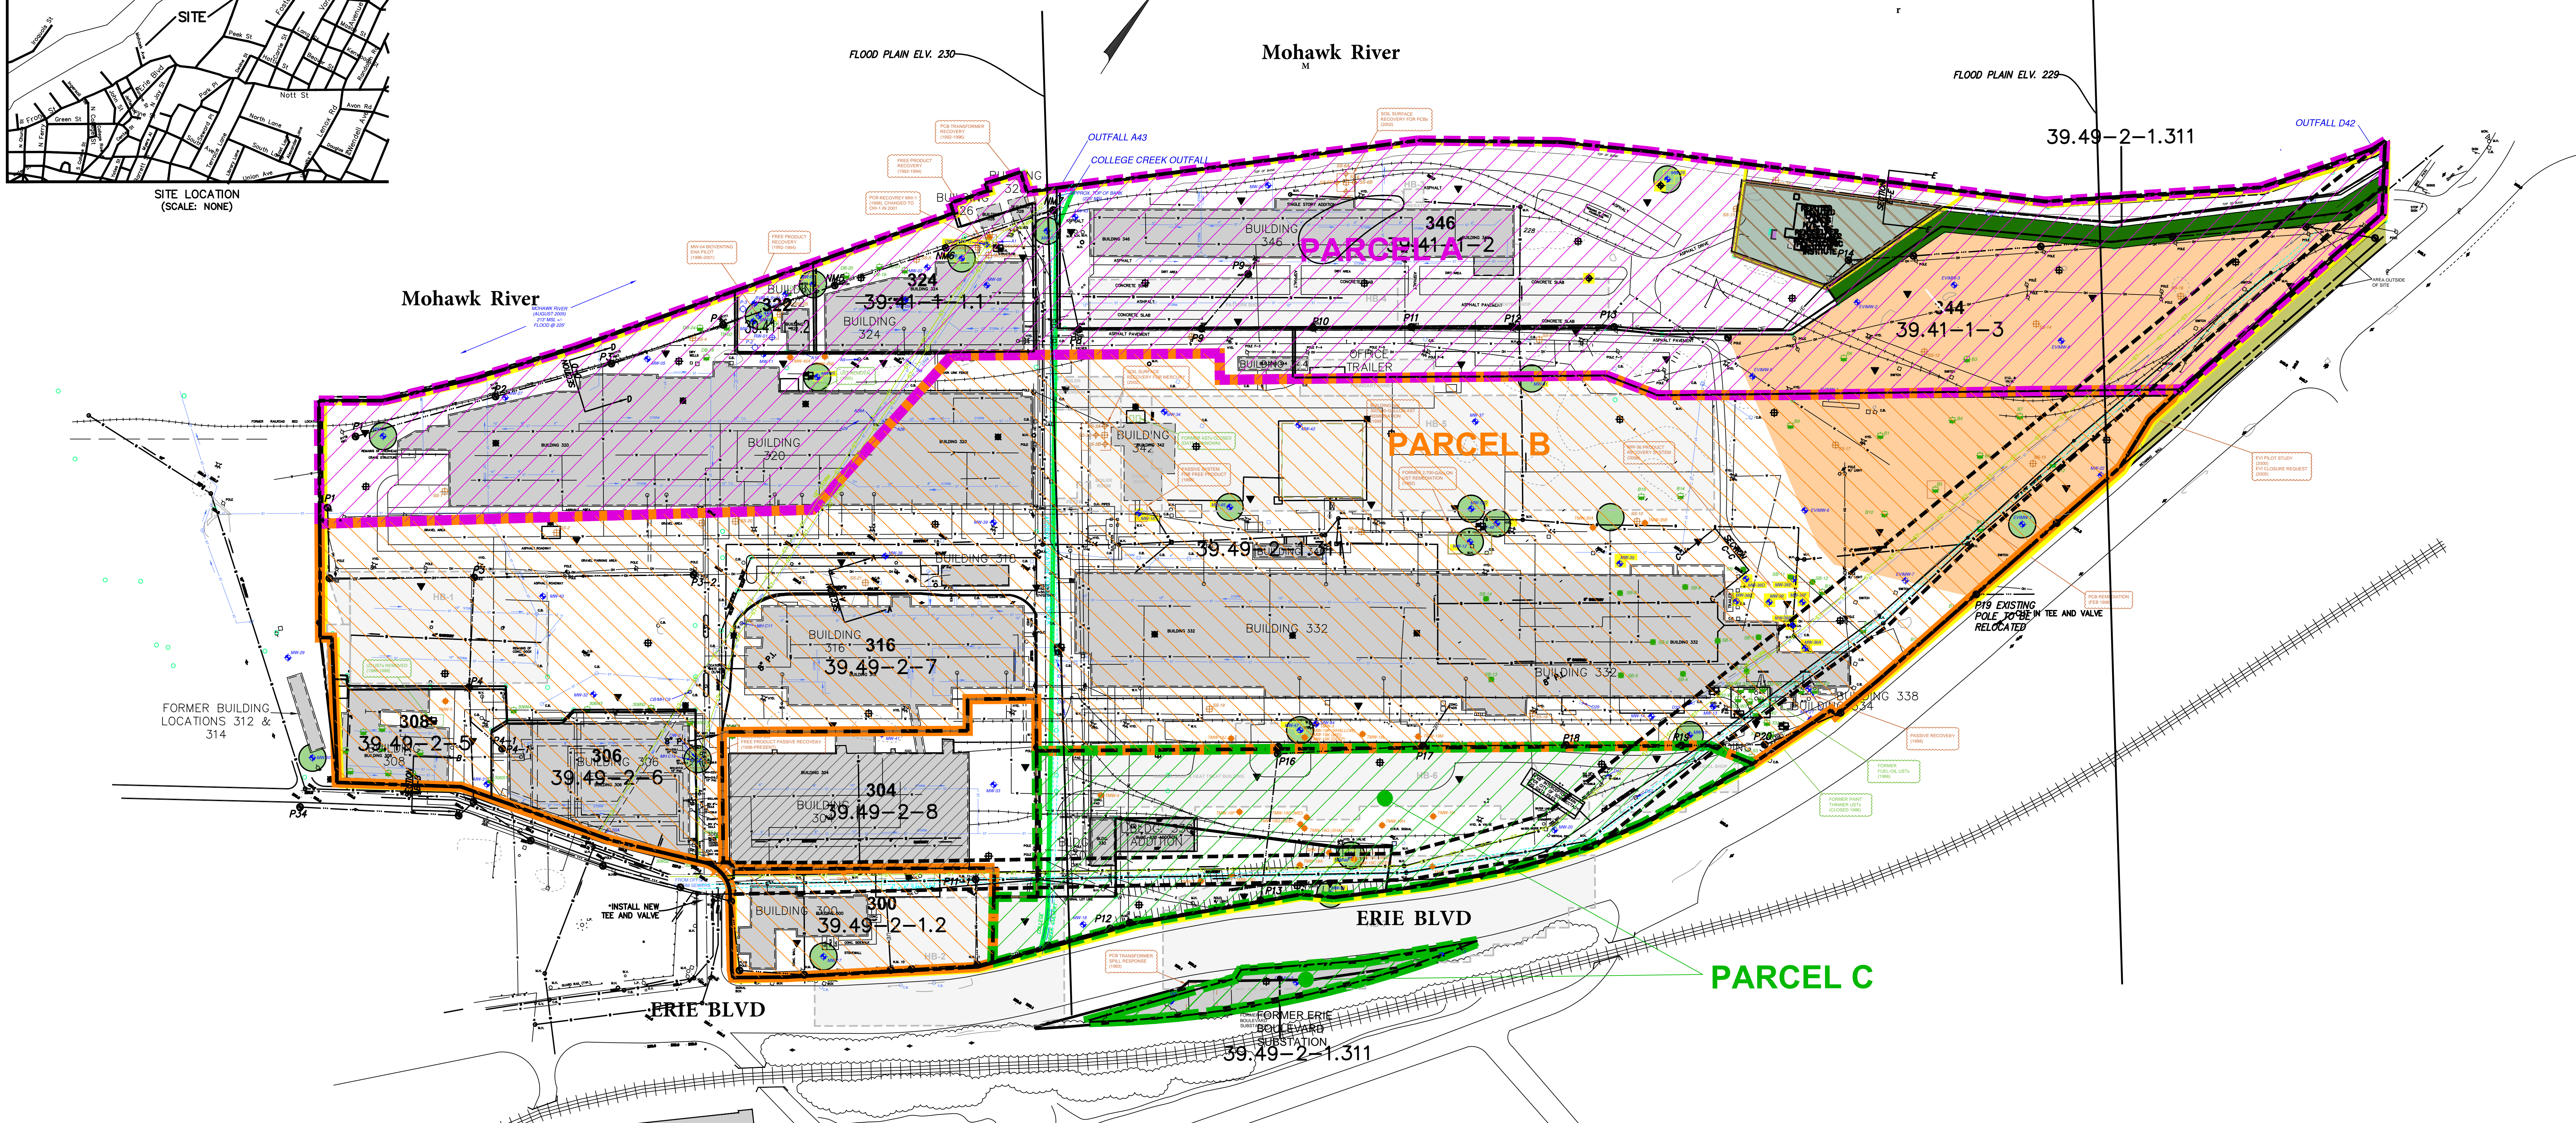

As a listserv member, you will periodically receive site-related information/announcements for all contaminated sites in the county(ies) you select.

Note: Please disregard if you already have signed up and received this fact sheet electronically.
