# 1.0 INTRODUCTION

JJB 125 Bath, LLC entered into a Brownfield Cleanup Agreement (BCA) (BCA Site No. C546055, BCA Index No. C546055-10-12) with the New York State Department of Environmental Conservation (NYSDEC) in October, 2018, to investigate and remediate a 6.35-acre property located at 125 Bath Street Ballston Spa, Saratoga County, New York. The property was remediated to NYSDEC Part 375 Restricted Residential Use Soil Cleanup Objectives (SCOs).

## 1.1 Site Description

The Site constitutes one commercial business district (CBD) zoned parcel of land totaling approximately 6.052 ± acres in the Town of Milton, Village of Ballston Spa, Saratoga County, New York. The site is located at 125 Bath Street, immediately north of Gordon Creek, and northwest of the intersection of Bath Street and Hamilton Avenue. The site is identified by the Village of Ballston Spa as Tax Map No. 216.32-1-96.2 A mixture of single family and multi-family residential properties exist north, south, and east of the Site. Unimproved wooded land, a bike path of the Village of Ballston Spa and the Saratoga County Fairgrounds exist west of the Site. A tributary of the Kayaderosseras Creek (i.e., Gordon Creek) boarders the southern property line of the Site. The Porter's Auto Body Shop is located south of Gordon Creek. (see **Appendix A**, **Figure 1**). The boundaries of the Site are fully described in **Appendix B**: Survey Map, Metes and Bounds. An electronic copy of this FER with all supporting documentation is included as **Appendix C**.

Improvements at the Site include a ± 80,000 square foot commercial manufacturing structure most recently operated by Angelica which is located along the Bath Street road frontage of the property; as well as a series of foundation ruins historically used by the Former Haight/American Hide Tannery manufacturing facility that are located along the southern and western portions of the Site. All of the buildings are currently unoccupied. With the exception of the northwest portions of the Site, areas not occupied by the above noted structures are improved by asphalt, concrete and gravel surfaces or exist as landscaped green space.

## 1.2 Site History

Historic records document industrial development of the site beginning around 1881. Tannery operations of the Haight and Company, American Hide & Leather, and Howes Leather (Former Haight/American Hide Tannery) reportedly occurred during the period from 1887 to 1960. The most recent operator of the site was Angelica, which acquired the site and the business entity, Linen Systems for Hospitals, Inc. in 1977 and officially changed Linen Systems name to Angelica on or about 1984. Linen Systems acquired title to the site in 1977. Linen Systems and later Angelica performed laundering of garments with detergents on the site and warehoused linens from approximately 1977 through 2011 without the use of dry-cleaning chemicals. Angelica has ceased operations on site.

Environmental contamination associated with the Angelica site was first discovered in July 2010 following an extended rain fall event, in the vicinity of a former 100,000-gallon No. 6 fuel oil above ground storage tank. Upon discovery, the NYSDEC assigned Spill No. 1004405 to the release. In response to the discovery of a petroleum spill, significant petroleum contaminated soil (PCS) removal occurred at the facility from 2010 to 2013. Approximately 3390 tons of PCS was excavated and properly disposed of in four separate events, including PCS interim remedial measure (IRM) work performed during the period from June – August 2013. Site investigation work conducted by Environmental Compliance Incorporated sufficiently demonstrated that the nature and extent of the contaminants warranted the inclusion of the site into the NYSDEC Brownfields Cleanup Program (BCP). The site was accepted in the BCP on January 31, 2013.

Demolition IRM work at the site in 2017 was completed specifically to facilitate the supplemental remedial investigation work below six distinct condemned manufacturing structures, a large smoke stack and foundation ruins located west of the 80,000 square foot commercial manufacturing structure and historically operated as the Former Haight/American Hide Tannery manufacturing facility. The demolition work included the closure of abandoned fuel storage systems, undocumented vessels found to exist in one of the former manufacturing structures as well as the demolition of a pump house and storage buildings located along Gordon Creek. The 80,000 square foot commercial manufacturing structure located along the eastern road frontage of the site was excluded from the demolition IRM work. The demolition work zone comprised a footprint of approximately 2.5 acres of the site. A total of 2,346.15 tons of asbestos construction and demolition debris was disposed of offsite during the demolition IRM using the Albany County landfill and Finch Waste Company landfill facilities. A total of ± 8,500 pounds of petroleum impacted tank bottoms and decontamination derived waste generated during the closure of (2) No. 6 fuel oil above ground storage tanks was also disposed of offsite as a result of the demolition IRM at Veolia ES Technical Solutions, LLC. All recyclable metal generated from the demolition work was transported to Plan It Waste & Recycling.

# 2.0 SUMMARY OF SITE REMEDY

## 2.1 Remedial Action Objectives

Based on the results of the Remedial Investigation and Supplemental Remedial Investigation work the following Remedial Action Objectives (RAOs) were identified for this Site.

### 2.1.1 Groundwater ROA's

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Restore groundwater aquifer to pre-disposal/pre-release conditions, to the extent practical.
- Remove the source of groundwater contamination

### 2.1.2 Soil ROA's

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.
- Prevent impacts to biota from ingestion/direct contact with soil causing toxicity or impacts from bioaccumulation through the terrestrial food chain.

## 2.2 Description of Selected Remedy

The Site was remediated in accordance with the Remedy selected by the NYSDEC in the Alternative Analysis Report / Remedial Action Work Plan (AAR / RAWP) dated August 12, 2019. The alternatives developed for the Site and the evaluation of the remedial criteria are presented in the AAR / RAWP. The Remedy is selected pursuant to the remedy selection criteria set forth in DER-10, Technical Guidance for Site Investigation and Remediation and 6 NYCRR Part 375.

The selected remedy is a Track 4: Restricted use with generic soil cleanup objectives remedy. The selected remedy is referred to as the Remedy. The elements of the Remedy, Site Cover with ICs are described in the following subsections below.

### 2.2.1 Remedial Design

A remedial design program will be implemented to provide the details necessary for the construction, operation, optimization, maintenance, and monitoring of the remedial program. Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and site management of the remedy as per DER-31. The major green remediation components are as follows;

- considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
- reducing direct and indirect greenhouse gases and other emissions; increasing energy efficiency and minimizing use of non-renewable energy;
- conserving and efficiently managing resources and materials; reducing waste, increasing recycling and increasing reuse of materials which would otherwise be considered a waste;
- maximizing habitat value and creating habitat when possible;

- fostering green and healthy communities and working landscapes which balance ecological, economic and social goals; and
- integrating the remedy with the end use where possible and encouraging green and sustainable re-development.

### 2.2.2 Engineered Cover System

A Site cover will be required to allow for restricted residential use of the site in areas where the upper two feet of exposed surface soil will exceed the applicable soil cleanup objectives (SCOs). Where a soil cover is to be used it will be a minimum of two feet of soil placed over a demarcation layer, with the upper six inches of soil of sufficient quality to maintain a vegetative layer. Soil cover material, including any fill material brought to the site, will meet the SCOs for cover material for the use of the site as set forth in 6 NYCRR Part 375-6.7(d). Substitution of other materials and components may be allowed where such components already exist or are a component of the tangible property to be placed as part of site redevelopment. Such components may include, but are not necessarily limited to: pavement, concrete, paved surface parking areas, sidewalks, building foundations and building slabs.

### 2.2.3 Institutional Control

Imposition of an institutional control in the form of an environmental easement for the controlled property which will:

- require the remedial party or site owner to complete and submit to the Department a periodic certification of institutional and engineering controls in accordance with Part 375-1.8 (h)(3);
- allow the use and development of the controlled property for industrial, commercial and restricted residential use as defined by Part 375-1.8(g), although land use is subject to local zoning laws;
- restrict the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDOH; and
- require compliance with the Department approved Site Management Plan.

### 2.2.4 Site Management Plan

A Site Management Plan is required, which includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details the steps and media-specific requirements necessary to ensure the following institutional and/or engineering controls remain in place and effective. This plan includes, but may not be limited to:

- an excavation plan which details the provisions for management of any future excavations on the site;
- descriptions of the provisions of the environmental easement including any land use, and groundwater use restrictions;
- provisions for the management and inspection of the identified engineering controls;
- maintaining site access controls and Department notification; and
- the steps necessary for the periodic reviews and certification of the institutional and/or engineering controls.

# 3.0 INTERIM REMEDIAL MEASURES AND OPERABLE UNITS

Prior to NET's execution of the BCA for the Former Haight/American Hide Tannery, on behalf of JJB 125 Bath LLC, interim remedial measures (IRMs) were performed in 2013 and 2017 on behalf of the initial BCA applicant Angelica Textile Services, Inc. and RFID Textile Services, Inc. The information and certifications made in the May 2014 Interim Remedial Measure #1 (Excavation Pit #1, EPl) Construction Completion Report and the April 30, 2018 Interim Remedial Measure Construction Completion Report Demolition of Site Buildings were relied upon to prepare this report and certify that the remediation requirements for the Site have been met.

## 3.1 Interim Remedial Measures

The following IRMs have been completed at this Site based on conditions observed during the RI;

- Petroleum Contaminated Soil (PCS) Excavation
- Demolition of Condemned Site Structures

Each of the IRMs are discussed in greater detail in Section 1.2 of this report.

## 3.2 Operable Units

The Site is divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate, or mitigate a release, threat or release or exposure pathway resulting from site contamination. Operable Unit 1 is the Site itself. Operable Unit 01A is the area of PCS removal on the northeast portion of the Site. Operable Unit 01B is the area of the demolition of the condemned Site structures. PCS excavation and building demolition are complete.

# 4.0 REMEDIAL PROGRAM ELEMENTS

Remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved AAR / RAWP for the Former Haight/American Hide Tannery site (August 12, 2019). All deviations from the AAR / RAWP, if any, are noted below.

## 4.1 Governing Documents

### 4.1.1 Health and Safety Plan

All work performed during the implementation of the selected Remedy at the Former Haight/American Hide Tannery was conducted in full compliance with governmental requirements, including site and worker safety requirements mandated by Federal OSHA. The Health and Safety Plan (HASP developed for the Former Haight/American Hide Tannery was complied with for all remedial and invasive earth work performed at the Site.

### 4.1.2 Community Air Monitoring Plan

The Community Air Monitoring Plan (CAMP), performed during all remedial and invasive earth work, included a combination of continuous ambient air monitoring and periodic visual inspection for particulate matter and volatile organic compounds (VOC) at the perimeter of the site. Ambient VOC air quality conditions as well as particulate's (i.e., dust) were documented upwind and downwind of the Site using properly calibrated hand held PID and a real-time dust monitor (i.e., PID – MiniRae 3000 and TSI Dusttrack II Aerosol Monitor 8530). Visual and olfactory conditions at the perimeter of the Site were also recorded during the CAMP testing services. The visual and olfactory inspection work with the objective of documenting evidence, if any, of dust particulate accumulation on adjacent properties and olfactory nuisance conditions. Each day prior to the invasive ground activities, a base line survey was performed at each of the surrounding properties to establish site specific background readings / conditions. Readings obtained during the invasive ground activities were compared to the base line reading. In the event elevated VOCs and / or physical observations are attributed to work at the site, IRM activities would cease until an appropriate remedy could be implemented.

This CAMP is consistent with the requirements for community air monitoring at remediation sites as established by the NYSDOH and NYSDEC. Accordingly, it follows procedures and practices outlined under NYSDEC's DER-10 Appendix 1A (NYSDOH's Generic Community Air Monitoring Plan) and Appendix 1B (Fugitive Dust and Particulate Monitoring). CAMP results are discussed in section 4.2.5 below and CAMP data is included in **Appendix D**.

### 4.1.3 Citizen Participation Plan

The NYSDEC seeks input from the community on all remedies. A public comment period was held, during which the public was encouraged to submit commented on the proposed remedy. All comments on the remedy received during the comment period were considered by the Department in selecting a remedy for the site. Site-related reports and documents were made available for review by the public at the following document repository:

## 4.2 Remedial Program Elements

### 4.2.1 Contractors, Consultants and Oversight

The following list contains and accounting of the key participants and their roll during the implementation of the Remedy;

- New York State Department of Environmental Conservation as the lead agency
- JJB 125 Bath LLC as the owner
- Northeastern Engineering Technologies PLLC as the engineer
- Northeastern Environmental Technologies Corporation as consultant and project monitoring
- Earth Care Plus, Inc. as tree removal contractor
- W.M. Schultz Construction, Inc. as earthwork contractor
- Zarro Fencing as perimeter security fencing installation contractor
- Ausfeld & Waldruff Land Surveyors LLP as survey contractor

### 4.2.2 Site Preparation

To facilitate the installation of the Remedy secondary woody vegetation located along the northwestern and southwester portions of the Site, targeted for engineered cover systems, was cleared by Earth Care Plus, Inc. The clearing of woody vegetation occurred during the period from November 11-12, 2019.

Prior to the implementation of the Remedy subsurface utilities were marked out at the locations targeted for engineered cover systems. Work zones were coned off daily during all invasive earthwork activities.

### 4.2.3 General Site Controls

At the time of the Remedy's implementation temporary perimeter fencing (snow fencing) existed along the southwestern, western, and northern norther perimeter of the Former Haight/American Hide Tannery Site. Site access was restricted by two (2) locked chain link security gates along Bath Street until the engineered cover systems completion and the installation of a permanent chain link perimeter fence was completed.

### 4.2.4 Nuisance Controls

No nuisance conditions requiring control measures occurred during the implementation of the Remedy.

### 4.2.5 CAMP Results

CAMP monitoring activities were completed during all invasive remedial earthwork activities, in accordance with the approved air monitoring plan. In general the CAMP monitoring results conformed to the perimeter particulate differential threshold of 100 ug/m3 and the fugitive organic vapor threshold of less than 5 part per million (ppm), with a minor exception. One short-term particulate exceedance occurred at the upwind monitoring station on November 19, 2019 at 10:15am. The violation was caused by an on-site piece of earth moving equipment, adjacent to the CAMP monitoring station, having created a small exhaust plume upon starting. Copies of the CAMP field data sheets are provided electronically in Appendix D.

### 4.2.6 Reporting

NYSDEC, NETC, NET PLLC and JJB 125 Bath LLC had continual discussions, electronic and telephone correspondence regarding progress throughout the implementation of the Remedy. A photo log of remedial activities is included in **Appendix E**.

## 4.3 Contaminated Materials Removal

The selected Remedy included the implementation of a Site Cover and ICs, consequently no contaminated material was removed during the implementation of the Remedy.

## 4.4 Imported Fill and Soil Cover System

Exposure to remaining near surface soil Site contaminants is prevented by a soil cover system that has been strategically installed in areas of the Site that did not already contain an existing soil cover system (i.e., Site buildings, concrete foundational ruins, asphalt and gravel parking surfaces). The soil cover system, placed over a geosynthetic demarcation fabric, is comprised of a minimum of 2 feet of clean virgin soil, including fill material and topsoil suitable for supporting vegetation; and Rip-Rap in steeply sloping areas susceptible to soil erosion and as cover material at concrete basins. Approximately of 1,978 tons of run of bank gravel and sandy loam (top soil) and 607 tons of fine and light stone (as described on Table 733-21A of the NYS Department of Transportation Standard Specification dated January 1, 2019) were used for construction of the cover system. All imported fill materials met the requirements of NYSDEC's DER-10 Section 5.4(e)and was approved for use at the Site by the NYSDEC..

An Excavation Work Plan, which outlines the procedures required in the event the cover system and/or underlying residual contamination are disturbed, is provided in **Section 2.2** of the SMP. Copies of weight tickets for the imported materials are provided in **Appendix F**. Tables summarizing chemical analytical results for backfill (in comparison to allowable levels) as well as the laboratory analytical reports are provided in **Appendix G**. **Figures 2** show the location of each cover type installed at the Site.

## 4.5 Remaining Contamination

Remaining contaminants of concern that exceeds the Track 4 Restricted Residential Use Standards, Criteria, and Guidance (SCGs) established for this Site for soil are as follows:

PCB aroclor 1254
Benzo(a)anthracene
Benzo(a)pyrene
Benzo(b)fluoranthene
Benzo[k]fluoranthene
Chrysene
Dibenz[a,h]anthracene
Indeno(1,2,3-CD)pyrene
Arsenic
Barium
Cadmium
Chromium
Copper
Lead
Mercury

A contaminant of concern is classified as contaminant that is sufficiently present in frequency and concentration in the environment to require evaluation for remedial action. Not all contaminants identified at the Site constitute a contaminant of concern.

The contaminant(s) of concern that exceed the applicable SCGs for soil exist below each of the Former Haight/American Hide Tannery manufacturing buildings razed during the 2017 demolition IRM (Ref, Interim Remedial Measure Construction Completion Report Demolition of Site Buildings dated April 2018). In general exceedances to the SCGs are in most cases limited to cultural fill horizons covered by the concrete floor and foundations of the former manufacturing structures or are contained in a network of abandoned concrete vaults and drains. The concrete surfaces below the manufacturing structure ranged in thickness from ± 3.0 – 6.0 inches and extend from the gravel covered parking surfaces located east of the 2017 demolition IRM work zone, to (in some cases) areas beyond the western property line. The concrete floor surfaces that exist along the southwest portion of the Site contain (4) abandoned concrete vaults and a network of floor drains. The apparent capacity of the vaults ranges from ± 1000 – 5000 gallons and the apparent depth of each vault ranges from ± 4 – 5 feet below the improved slab on grade concrete surface. The cultural fills relative position to improved concrete surfaces suggest its existence on Site is relates to historic grading activities completed during the construction of the Former Haight/American Hide Tannery manufacturing buildings as well as material used to close the network of vaults and drains.

Remaining contaminants in near surface soils which were not already covered by an existing cover system have been capped with a geosynthetic demarcation fabric, a minimum of 2 feet of clean virgin soil, including fill material and topsoil suitable for supporting vegetation, and Rip-Rap as described in **Section 4.4**. The RI and SRI Reports contains a full discussion of the data developed at the Site.

Remaining contaminants of concern that exceeds the NYSDEC 6NYCRR Part 703 groundwater quality SCGs are as follows:

| | |
|---|---|
| Aluminum | Beryllium |
| Cadmium | Chromium |
| Copper | Iron |
| Lead | Magnesium |
| Manganese | Mercury |
| Sodium | Benz(a)anthracene |
| Benzo(b)fluoranthene | Benzo(k)fluoranthene |
| Chrysene | Ideno(1,2,3-cd)pyrene |
| Trichlorofluoromethane | |

In general exceedances to the groundwater SCGs are in most cases limited and low in concentration, relative to their respective SCGs. The most frequent contaminants of concern that exceed the groundwater SCGs are the metals Sodium, Manganese, Iron and Aluminum. **Figures 3** & **4** depict the locations of remaining soil and groundwater SCGs exceedances.

### 4.6 Engineering Controls

Engineering controls installed at the Site include a soil cover system and Site perimeter security fencing. Exposure to remaining near surface soil Site contaminates is prevented by a soil cover system that has been strategically installed in areas of the Site that did not already contain an existing soil cover system (i.e., Site buildings, concrete foundational ruins, asphalt and gravel parking surfaces). The soil cover system, placed over a geosynthetic demarcation fabric, is comprised of a minimum of 2 feet of clean virgin soil, including fill material and topsoil suitable for supporting vegetation; and Rip-Rap in steeply sloping areas susceptible to soil erosion and as cover material at concrete basins. The Remedy for the Site did not require the construction of any other engineering control systems.

### 4.7 Institutional Controls

The Site Remedy requires that an environmental easement be placed on the property to (1) require the remedial party or Site owner to complete and submit to the Department a periodic certification of institutional and engineering controls in accordance with Part 375-1.8 (h)(3); (2) allow the use and development of the controlled property for industrial, commercial and restricted residential use as defined by Part 375-1.8(g), although land use is subject to local zoning laws; (3) restrict the use of groundwater as a source of potable or process water, without necessary water quality treatment as determined by the NYSDOH; and (4) require compliance with the Department approved Site Management Plan.

The environmental easement for the Site was executed by the Department on July 31, 2019, and filed with the Saratoga County Clerk on August 13, 2019. The County Recording Identifier number for this filing is 2019022507. A copy of the easement and proof of filing is provided in **Appendix H**.

### 4.8 Deviations From AAR / RAWP

The Remedy was implemented as proposed in the AAR / RAWP with no significant deviations.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: LCS CE61964

Naphthalene

Sample weight= 15.00g
Volume purged=1.0ml
DF = 1

$$\text{Concentration } (\mu g/kg) \text{ (dry)} = \frac{660343 \times 40 \times 1 \times 1000}{952904 \times 0.959 \times 15.00} = 1927.0\ \mu g/kg$$

Data Review Summary – The SVOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Semivolatile data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCE61964 at the end of the data validation report.

SDG I.D.: GCE61964

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

## Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

# Organic Data Flags

LOD(MDL): Limit of Detection or Method Detection Limit
The minimum reportable concentration that can be measured with confidence.

PQL(RL): Practical Quantitation Level or Reporting Level
This value is at or above the MDL and is supported by the lowest calibration standard.

· · Q Qualifiers:

U - The compound was analyzed for but not detected at or above the MDL. The number immediately preceding the "U" represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.

J - Indicates an estimated value, may indicate one of the following, depending on the situation:
a) The reported value is estimated and below the MDL
b) Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the indentification criteria, but the results is less than the quantitation limit, but greater than zero.
c) QC associated with this analyte is within warning limits.

X - The concentration is not reported. This quantitation file was not evaluated for this compound at this dilution; a volatile purging or related issue may be the cause.

L - Biased Low

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified.

S - This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.

B - This compound was also present in the method blank

D - The reported concentration is the result of a diluted analysis.

E - The reported value is estimated because the concentration exceeded the calibration range.

A - Indicates that the tentatively identified compound is a suspected aldol condensation product. Aldol condensation products are produced during the extraction process.

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

P- Percent difference is greater than 25% between the two GC columns and the lower result is reported.

# Organic Data Flags

LOD(MDL): Limit of Detection or Method Detection Limit
The minimum reportable concentration that can be measured with confidence.

PQL(RL): Practical Quantitation Level or Reporting Level
This value is at or above the MDL and is supported by the lowest calibration standard.

· · Q Qualifiers:

U - The compound was analyzed for but not detected at or above the MDL. The number immediately preceding the "U" represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.

J - Indicates an estimated value, may indicate one of the following, depending on the situation:
a) The reported value is estimated and below the MDL
b) Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the indentification criteria, but the results is less than the quantitation limit, but greater than zero.
c) QC associated with this analyte is within warning limits.

X - The concentration is not reported. This quantitation file was not evaluated for this compound at this dilution; a volatile purging or related issue may be the cause.

L - Biased Low

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified.

S - This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.

B - This compound was also present in the method blank

D - The reported concentration is the result of a diluted analysis.

E - The reported value is estimated because the concentration exceeded the calibration range.

A - Indicates that the tentatively identified compound is a suspected aldol condensation product. Aldol condensation products are produced during the extraction process.

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

P- Percent difference is greater than 25% between the two GC columns and the lower result is reported.

# Organic Data Flags

LOD(MDL): Limit of Detection or Method Detection Limit
The minimum reportable concentration that can be measured with confidence.

PQL(RL): Practical Quantitation Level or Reporting Level
This value is at or above the MDL and is supported by the lowest calibration standard.

· · Q Qualifiers:

U - The compound was analyzed for but not detected at or above the MDL. The number immediately preceding the “U” represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.

J - Indicates an estimated value, may indicate one of the following, depending on the situation:
a) The reported value is estimated and below the MDL
b) Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the indentification criteria, but the results is less than the quantitation limit, but greater than zero.
c) QC associated with this analyte is within warning limits.

X - The concentration is not reported. This quantitation file was not evaluated for this compound at this dilution; a volatile purging or related issue may be the cause.

L - Biased Low

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified.

S - This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.

B - This compound was also present in the method blank

D - The reported concentration is the result of a diluted analysis.

E - The reported value is estimated because the concentration exceeded the calibration range.

A - Indicates that the tentatively identified compound is a suspected aldol condensation product. Aldol condensation products are produced during the extraction process.

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

P- Percent difference is greater than 25% between the two GC columns and the lower result is reported.

# Herbicides Conformance / Non-Conformance Summary

General Comments:
The samples were analyzed using a dual column ECD GC. Data files are labeled date-seq-A for the A channel and date-seq-B for the B channel. Results for this SDG are reported from the A channel. In order to report a concentration, both channels need to have the compound detected.
The reporting levels (PQL) are supported by the lowest calibration standard. The laboratory defines the LOD/MDL as equivalent to the PQL/RL. As a result, there is only one concentration column on the form1. A number followed by a "U" indicates that the herbicide was not detected at that level. A number without a "U" indicates that the herbicide was detected at that level.It is part of Phoenix Lab's procedure to dilute all soil extracts prior to analysis

# Organic Data Flags

LOD(MDL): Limit of Detection or Method Detection Limit
The minimum reportable concentration that can be measured with confidence.

PQL(RL): Practical Quantitation Level or Reporting Level
This value is at or above the MDL and is supported by the lowest calibration standard.

· · Q Qualifiers:

U - The compound was analyzed for but not detected at or above the MDL. The number immediately preceding the “U” represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.

J - Indicates an estimated value, may indicate one of the following, depending on the situation:
a) The reported value is estimated and below the MDL
b) Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the indentification criteria, but the results is less than the quantitation limit, but greater than zero.
c) QC associated with this analyte is within warning limits.

X - The concentration is not reported. This quantitation file was not evaluated for this compound at this dilution; a volatile purging or related issue may be the cause.

L - Biased Low

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified.

S - This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.

B - This compound was also present in the method blank

D - The reported concentration is the result of a diluted analysis.

E - The reported value is estimated because the concentration exceeded the calibration range.

A - Indicates that the tentatively identified compound is a suspected aldol condensation product. Aldol condensation products are produced during the extraction process.

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

P- Percent difference is greater than 25% between the two GC columns and the lower result is reported.

# PCBs Soil Conformance / Non-Conformance Summary

General Comments:
---
The samples were analyzed using a dual column ECD GC. Data files are labeled date-seq-A for the “A” channel and date-seq-B for the “B” channel. An acid cleanup was performed on all extracts.
The reporting levels (PQL) are supported by the lowest calibration standard. The laboratory defines the LOD/MDL as equivalent to the PQL/RL. It is part of Phoenix Lab's procedure to dilute all soil extracts prior to analysis.

Calibration:
---
As per the method, a five-point calibration of aroclors 1016 and 1260 is used to verify the linearity of all the aroclors. Aroclor 1254 was also analyzed as part of this run for verification. If any other aroclors had been detected, the samples would have been reanalyzed with that aroclor.

# Organic Data Flags

LOD(MDL): Limit of Detection or Method Detection Limit
The minimum reportable concentration that can be measured with confidence.

PQL(RL): Practical Quantitation Level or Reporting Level
This value is at or above the MDL and is supported by the lowest calibration standard.

· · Q Qualifiers:

U - The compound was analyzed for but not detected at or above the MDL. The number immediately preceding the “U” represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.

J - Indicates an estimated value, may indicate one of the following, depending on the situation:
a) The reported value is estimated and below the MDL
b) Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the indentification criteria, but the results is less than the quantitation limit, but greater than zero.
c) QC associated with this analyte is within warning limits.

X - The concentration is not reported. This quantitation file was not evaluated for this compound at this dilution; a volatile purging or related issue may be the cause.

L - Biased Low

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified.

S - This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.

B - This compound was also present in the method blank

D - The reported concentration is the result of a diluted analysis.

E - The reported value is estimated because the concentration exceeded the calibration range.

A - Indicates that the tentatively identified compound is a suspected aldol condensation product. Aldol condensation products are produced during the extraction process.

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

P- Percent difference is greater than 25% between the two GC columns and the lower result is reported.

# Pesticides Soil Conformance / Non-Conformance Summary

Project ID / Client ID: 125 BATH STREET, NETC

General Comments:
---
The samples were analyzed using a dual column ECD GC. Data files are labeled date-A-seq for the A channel and date-B-seq for the B channel. In order to report a concentration, both channels need to have the compound detected.
A Florisil cleanup was performed on all extracts.
The reporting levels (PQL) are supported by the lowest calibration standard. The laboratory defines the LOD/MDL as equivalent to the PQL/RL.It is part of Phoenix Lab's procedure to dilute all soil extracts prior to analysis
A calibration curve for the single component pesticides was analyzed with the samples. The standards for the multi-component pesticides Toxaphene and Chlordane calibration standards are analyzed only if the pattern is detected in the samples. Toxaphene and Chlordane daily standards are provided at the end of the pesticides calibration verification forms.
This data package provides summary forms for the single component pesticides only; please refer to the Phoenix report for the full list. Alpha and gamma chlordane were spiked and analyzed instead of technical chlordane. Gamma chlordane recovery is reported as chlordane in the LCS and LCSD.
